Imports into Great Britain from all Places Eastward of the Cape of Good Hope (except China)-continued

${ }^{\circ}$ Including Mauritius. $\dagger$ Of this, $516,077 l$. was Mauritius. $\ddagger$ Of this, $527,904 l$. was Mauritius; 524,0171 . Mauritius sugar, 1833 ; 533,890l. ditto, 1834. § East Indies alone.

Notwithstanding the great efforts made, since 1814, to procure extensive supplies from the Eastern hemisphere, and although several new islands and stations have been madc marts of cominerce by British merchants, we perceive a stationary or declining trade in almost every article of Eastern production; whereas the supplies from the territories of British India alone ought to have shewn an immense increase. Had it not heen for the supplies received from Sincapore, Ceylon, Java, Australasia, and the whole Pacific and Indian Ocean, a vast decrease would have been seen in this table.

Total Value of the Imports into Great Britain from all Places Eastward of the Cape of Good Hope (except China), according to the Prices at the East India Company's Sales in the respective Ycars.

| Years. | £. | Years. | £. | Years. | £. |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |
| 1814 | 8643275 | 1820 | 5958526 | 1826 | 6730926 |
| 1815 | 8136167 | 1821 | 4775146 | 1827 | 5681017 |

| 1817 | 6865586 | 1823 | 5932051 | 1829 | 6218284 |
| 1818 | 9206147 | 1824 | 5605100 | 1830 | 5679071 |
| 1819 | 6615768 | 1825 | 6178775 | 1831 | 5729810 |

In the ensuing tables the interior trade of Bengal, Madras, and Bombay will he shewn. From 1812 to 1829, the returns were prepared for Parliament in 1832; the subsequent years were collated by myself and my assistant at the India House. Although the data are not as ample as could be wished, they present full scope for the reflecting mind of a philosophic or inerely commercial statesman.

I have not been able to find any returns at the India House further back than 1824－25；a decrease in almost every article is observable in this brief period．Later as well as earlier returns would shew a more marked difference．

VALUK OF MEACHANDISE (SICCA KUPKRS) IMHOATED INTO HOMUAY FROM 1812 to 183.5.

Trade betueen India and the Eatstern Islands.- | traffic at present are British and India piece good;,

In a work of this nature, it would be impossible to enter more fully than 1 have already done into the detail of Indian commerce, but before closing so important a section, it will be necessary to shew the large trade carried on between Bengal, Madras and Bombay, and the Eastern Islands; the articles in
opium, hucligo, spices, grain, salt, hardware, oil, \&e. \&c.; by the following return, which extends over 17 years, it will be observed that the quantity of treasure exported from the Eastern lslands is considerable.

Commeree between Bengal, Madras, and Bombay, and the Eastern Islands.

This table is from Mr. Phipls's book, with additions (in the number of seasons) from other sources. It may not be perfectly correct in all the details, but is, doubtless, very near to the truth. We have omitted to insert the fractions in the average cost of each year. The value of the sicea rupee varies; it is alout 46-100ths of a dollar, or two shillings sterling.

It is now time to close this array of figures, which, however monotonous, is indispensable to shew the valuable commerce which British India carries on-a trade which, however vast at present, is not a tithe of what it may become by England adopting a just and generous system towards the intclligent and industrious myriads so mysteriously subjected to her sway; so long as the two countries are united their interests are identificd, and a partial or temporary benefit snatched at by the one will be certainly succeeded by the punishment, which sooner or later overtakes injustice.
The produce of the United Kingdom is admitted into the ports of India at a very low rate of duty. The following are the rates of duty chargeable on goods the produce or manufacture of the United Kingdom, imported by sea into Calcutta :-

Rates of Duty on Commerce at Calcutta.

| Enumeration of Goods. | British Bottom. | Foreign Bottom. |
| :---: | :---: | :---: |

| 10. Wines - | 10 per cent. . . | 20 per cent. |
| 11. Woullens . . $\cdot$ - | free | $2 \frac{1}{2}$ per cent. |
| Articles not included in the above 11 items | 24 per cent. | 5 per cent. |

XIII. Bengat.-Wpights.-5 siccas-l chittuek$16=1$ seer- $40=1$ maund.
Two manads in use; the factory maund, 74 lha. 10 oz. 10.666 drs. avoirdupois; the bazar maund, 82 lhs. 202.2 .133 drs.

Liquid Measure. 5 siccas-1 chitfuck, $4=1$ pounh or pice, $4=1$ seer, $40=1$ maund, or 5 scers $=1$ pus. saree or measure, 8 measures $=1$ maund.

Grain Meastre:-1 khanuks=1 ralk (or 9 lhs. avoirdupois), $4=1$ paillic, $20=1$ soallie, $16=1$ kahoon ( 1 kahoon $=10$ IB. maunds.)

Long Measure. -3 jows (or barley corns) $=1$ finger, $4=1$ hand, $3=1$ spmn, $2=1$ cubit, $4=1$ fathom, 1000 $=1 \operatorname{coss}\left(1 \cos 8=1\right.$ mile, 1 furlong, 3 poles and $3 \frac{1}{2}$ yards).

Square Measure. - 5 cubita or hauts $=1$ chittuck (45 English square feet), $16=1$ cottah, $20=1$ biggah ( 11,440 square feet), $3 \frac{1}{2}=1$ English acre.
Gold and Silier.-4 punkhos=1 than (a grain), 4 $=1$ rutty, $6 \frac{1}{2}=1$ anna, $16=1$ tolah, $=22 \mathrm{l} .588$ grs. troy ; or 8 rutties $=1$ massa, $13.28=1$ mohur.

Madras-Commercial.-Candy $=20$ maunds. The candy of Madras 500 lbs . avoirdupois. The maund divided into 8 vis, 320 pollams or 3200 pagodas (the vis heing divided into 5 seers), each pagoda weighing 2 n\%. 3 grs. The Commercial Dictionary, from which this statement is taken, ohserves: the garce $=20$ haruays or candies-the baruay $=20$ mannds-the maund $=8$ visay or vis, 320 pallams or 3200 varnhuns, the varabun weighing 523 English grains; therefore, the vis is 3 lbs .3 oz ; the maund, 24 lbs . 2 oz .; the baruay, 482 lhs . ; and the garce, 9645 lbs. avoirdupois, or nearly 4 tons 6 cwt .

Measures of Capucity.-The garee corn measure contains -80 parahs $=400$ marcals, the narcal $=8$ puddies $=64$ ollucks. The mareal $=750$ cubic inches $=27 \mathrm{lbs} .2 \mathrm{oz} .2$ drs. avoir. of fresh spring water ; hence 43 marcals $=15$ Winchester hushels, and the garce nearly $17 \frac{1}{2}$ English quarter. Grain, when sold by weight, $9256 \frac{1}{2} \mathrm{lbs}=1$ garce $=18$ candies $=12$ $4-5$ ths maunds.

Bombay-Commercial. -1 tank $=2.488$ drs., $72=$ 1 scer, $40=1$ maund $=28 \mathrm{lbs}$. avoirdupois.

Grain. -2 tipprees $=1$ seer, $4=1$ pailie, $7=1$ parals, $8=1$ candy $=156 \mathrm{lbs} .12 \mathrm{oz} 12$ drs.
Salt.-101 adowlies $=1$ parah, $100=1$ anna, $16=$ 1 rash $=2,572,176$ cubic inehes ( 40 tons; the anna weighs $2 \frac{1}{2}$ tons).

Pearl Weight.-1 tucka $=0.208$ gr., $133=1$ ruttee, $-24=1 \operatorname{tank}=72$ grains.
Gold and Silver.-1 wall, 4.475 grs., $40=1$ tolah $=179$ grains.

Long Measure.-16 tussoos $=1$ hath $=18$ English jnches; 24 tussoos $=1$ guz $=27$ English inches.

Liquor Measure.-The seer weiglis 60 Bombay rupees $=1 \mathrm{lb} .8 \mathrm{oz}$. and $8 \frac{1}{2}$ drs., and 50 seers $=1$ maund.
XIV. The products of Hindostan are as various as they are valuable. Mr. Forbes Royle, in his interesting and valuable botanical Indian work, justly observes, "In the peninsula of India and in the neighbouring island of Ceylon, we have a elimate capable of producing cinnamon, cassia, pepper, and cardamoms. The coffee grown on the Malabar coast is of so superior a quality as to be taken to Arabia and re-exported as Mocha coffee. The Tinnivelly sema brings the highest price in the London market; and there ia little doubt that many other valuable products of tropical countries may be acclimated, particularly as several are already in a flourishing condition in the botanic garden at Calcutta, such as the cocoa and nutmeg, as well as the camphor, pimento, cajeput,
and cashew nut trees. In the Neilgheries a favourife site might, without doubt, be found for the cinchomit (Peruvian bark) as well as for the different kinds of ipecacuanhe, and as the potatoe has been introduced into almost every part of India, equal success and considerable benelit would probably result from introducing the several kinds of arracarhu so much prized for their roots as food by the natives of South America.
"Along the coast of the Bay of Bengal the cocoa and areca nut palms flourish and abound, and the continent every where produces indigo, cotton, tol bacco, sugar, and opium. The first, hardly of any note as an Indian product 30 yeara ago, is now imported in the largest quantities into England. The cotton is indigenous to India; many provinees seem peculiarly adapted for its culture, particularly Malwa and those to the north-west. The tobacco brought home hy Dr. Wallich from Martaban was pronotureed by competent judges to be equal to the best from America: Patna opium is preferred in China, and that of Malwa bids fair to rival Turkey opium in the European market. The sugar come is cultivated in every part of hadia, hut very inferior sugar has bitherto been produced; lately, however, a manufactory has been established near Calna (Burdwan), a new mine opened in the Burdwan coal formation, and very superior specimens of sugar eent home. Here the occurrence of sugar at the surface of the soil, and coal only a few feet below it, in a country where labour is so cheap, ought to be attended with decidedly favourable results. If from these we tu, no our atten. tion to other products, we shall still see that there are great capabilities every where; we should at least expect them, for though India is generally looked upon as a rice country, wheat is imported into and sold at a profit in lingland, from the northern provinces : and flowr for making starch is now one of the annual exports from Calcutta. Of dyes, medicinal drugs, resins, gums, and oils, there are great varieties, and more might be successfully introduced.
"Timber of every kind is everywhere abundant, the coasts producing teak, ehony, and many others; the interior, saul, sissoo, bamboos, and rattans; while a great varicty of plants yield excellent materials for cordage. The northern ant hill provinces grow at one season European grains, and at another those which are peculiar to the tropies, and many perennials of both these climates succeed equally well in the north provinces. In the hill provinces the forests are formed of oaks and pines. The hill men make their strongest ropes for crossing rivers with kemp, which every where nbounds, and is of the finest quality. Opium, rhubarb, and turpentine, form articles of commerce, as well as musk, Thibet wool, and borav, from the other kingdoms of nature. Somewhere in the vallies at the foot of these hills, or at moderate elevations, the more generally useful productions of European countrics might be successfully introduced, as the olive and hop; the latter would be partieularly beneficial, as a brewery has heen established in the hills, where the climate is excellent. Here also there is considerable prospect of success in the cultivation of the tea plant."
"In the cold seasons," Mr. Royle continues, " there are cultivated (about Saharunpore) of tivi. 14 , wheat, barley, oats, and millet; of the legum, : ${ }^{2}$, peas, heans, vetch, tares, chick, and pigeon-peas; of crucifere, a species of sinapis (mustard) and allied genera cultivated for oil seeds, and of the umbelliferar, the carrot, corimoder, cummin, a species of ptychotis and fami-
culum pann flax, safllow vegetables of cold season different set tion, as rice, species of pe minar, specie cucurbitacear solunum for this scientific with perenni yoclding fruit tropical and well in the Saharunpoor tion above th of Calcutta) a place and nate trees of very China, Caubu longing to ho tard apple, sh tamarind, and part of India. lamgaro, wermp perfectly natu northern coun from the hills o nectarine, and vine, apple, pe Of useful trees

ai. 71 , wheat, peas, heans,
crucifere, a genera culti$r$, the carrot, s and fani-
culum pannorium, is well as of other tribes, tobaceo, flax, snfflower, and succory. Ahmost all the esculent vegetables of Europe succeed remarkably well in the cold season in India. In the rainy season, $n$ tutnlly different set of plants engage the agriculturist's attention, as rice, cotton, indigo, maize; holet/s sorghum, species of panicum, paspoliom, and elusina, of les" mine, species of phaseolas and dolichos; many of the cucurbitacear, as well as sesumum and the species of solinum for their esculent fruit." In another place, this scientific botanist observes, " $\Lambda$ s we have seen with perennials of other kinds, so is it with those yodling fruit of an edible nature. Many, both of tropical nud temperate climes, succeed nearly equally well in the northern parts of India; so that taking Saharunpoor garden (lat. $30^{0} \mathrm{~N}$., long. 77.32 , elevatinn above the sea 1,000 feet, and 1,000 iniles N. W of Calcutta) as an example, we have collected in one place and naturalized in the open air the various fruit trees of very different countries, as of India nud China, Caubul, Europe, and America. Of those belonging to hot countries, we have the plnintain, custaril apple, shaddock, orange, lemon, guava, mango tamarind, and others, which are common to every part of India. Of Chinese fruits, the lechee, loquat longaro, wampee, flat peach and digitated citron, are perfectly natoralized. Of fruit trees from more northern countries, as Caubul and Cashmere, and from the hills of Europe, there are the almond, peach, nectarine, and apricot, plum, pomegrunate, grapevine, apple, pear, quince, mulberry, fig, and walnut Of useful trees of cold countrics which thrive in what
is at some seasons so hot a climate, pincs, onk, maple, dur-wwol, sertice trect, holly, juniper, and luar. Of Amerienn trees, besides those first emmerated, the logwool, mahorany, parkinsenia aculinta, and acer nerrundium, may be instanced as perfectly naturulized. (See large edition of the " Ilstory of the Colonies" for a minute deseription of the principal forest trees of Indin.)

Indigo, from time imınemorial, has been cultivated and manufactured in Itindostnn, and in 16.6 .5 it was one of the exports from India to lingland. The E.I. Company's servants turned their attention to it about 40 years ago, and its snccessful prosecution has been principally owing (alter the circumstance of the destruction of St. Domningo, which, previous to its revolution, sipplied nearly the whole world) to the small duty levied on its importation into Fugland, the duty at first being little more than nomimal: in $1812,1 \frac{1}{2} l$. per lb . ; in $1814,2 \frac{1}{2} l . ;$ and in 1832, $3 d$. per Ib. Its importance to Indin mny he judged of roin the lact, that in the Bengal Presidency the cuicivation of indigo is carried on from Dacea to Delhi, occupying upwards of $1,000,000$ statute acres, yielding an annual produce worth from $2,000,000 l$, to $3,000,000 l$. sterling, whereof one-half, or perhaps more, is expended in India for rent, stock, wages, interest on capital, \&ce. There are from 300 to 400 factories in Bengal, chietly in Jessore, Kishnagur, and Tirhoot. The factories are principally held by Europeans; but many natives have factories of their own, and in several instances produce indigo equal to any manufactured by Europeans.

Number of Intigo Factories in the several Distriets under the B igat i'resideney; also, the Number of European ludigo Planters, Proprietors of Estates, and the Number of European Assistants resident in the several Districis unter the Bengal Government.-1832

The low price which indigo now brings in Europe |profitable limits. The cultivation of tudigo in Madras is diminishing the quantity produced, the exportation some years being $9,000,000 \mathrm{lbs}$; the recent failures in India will tend to bring the trade within more is triffing. There is little or none prepared in the Bombay Presidency. The Indigo produced amually in the East Indies from $1 \times 1 \mathrm{t}$ was:-

The quantity of Indigo imported, in 1834, was $4,155,296$ liss; ; re-exportel, $3,928,226$ lbs.; home use, 2,447,827 lbs. 1835, imported, $4,168,395$ lbs.; re. exported, $4,074,598 \mathrm{lhs}$. home use, $2,590,606 \mathrm{Jbs}$. 1836, imported, $7,710,544 \mathrm{lbs}$; re-exported, $3,691,951$ lbs. ; home use, $2,840,398 \mathrm{lbs}$.
The price of indigo per chest in London was, in 1824, 1116.; in 1825, 140l.; and in 1831 but 456 .; the supply now exceeds the demand, at least in England; but the consumption of Bengal indigo is fast augmenting in France, Holland, Germany, sc.
Silk forms the next most important staple of India, and in conjunction with the former, its production in nur own territorics is of essential advantage to silk and tabbinet manufacturers in England. The total quantity of raw silk imported into England for 1834 was $3,693,512 \mathrm{lhs}$; and the quantity furnished by British India alone to England in the same year was 1,203,658 lbs.
Three sjecies of mulberry trees are cultivated in India, and two species of silk-worm (the comutry worm, and the amnular Italian, or Chinese worm); the latter feeds also on the castor oil plant leaf. The silk is produced in cocoons by the ryots or small cultivators, to whom the E. I. Company's agents make advances; and the Company have 11 or 12 filntures or large factorics for reeling it with machinery on the simple Italian principle. The Gonaten is the best, the Bauleah the worst. The price of silk has risen in India with the wages of labour, and some manufacturers say the quality has deteriorated; probably quantity has been more attended to than quality. The
silk districts of Rengal are, Radnagore, Hurripant, Santipore, Cossimbuzar, Maulenh, Comercolly, Sardhh, Jungypore, Mauldah, Rungpoor, Sumn-Meekhi, and Gonnatea, all between the parallels of lat. 220 and 2f $6^{\circ}$, and long. $86^{61}$ to $90^{\circ}$.

The superior quality of Italian silk does not demonstrate natural inferiority in that of India, for bales of L.. I. to which attention has heen paid have sold cqually well with Italian silk. Elforts are now making in the Bombay Presidency to extend the production of ruw silk, and the commencement pronises sucecss ; we may thercfore look forward to a perioul when we shall be totally independent of every other country for the raw staple of this essential and beantiful branch of our national manufactures.
Cotton, a stnple of Indian Agriculture and of British monufnctures, well deserves nttention, were it only for the important circumstance that our chicf branch of trade is almost totally dependent on a rival, (and with little provoeation) perhaps a hostile state. The importation of American cotton into Fingland is ncarly $300,000,000 \mathrm{lbs}$. yearly, that of India not the onetuentieth part of liritish consumption. If we can be made independent of France and America for indigo and silk, so can we become also of cotton, India producing in itself every variety; the justly celelrated sen island cotton is actually in cultivation in several parts of India, lut owing to negleet it degencrates into an annual, whereas in America it is carcfully cultivated as a triennial plant. The Dacea muslins, so celebrated all over the globe, (ant of which the manufacture is now lost, owing to the imundation of Manclester goods), were made from India cotton, and if the late duty had been kept on American raw cotton, sulficient encouragement would have been given to the Hindoos to attend to its cultivation, as it is we have not only ruined the Indian manulacturer, but in return we have offered no encouragement to the raw prodncer. The cotton grower in India ought to be stimulated to greater efforts on cxamining the consumption of cotton wool in Eng-land:-

Total quantities of Cotton Ynrn produced and consumed in Grent Britain nnd exported.

As the surest means of inducing a more careful attention to India cotton，both in the cultivation， cleaning and packing，a removal of the entire duty on importation into England would be most effectual， compled with an absence of all transit dues in the East．
That England has nothing to fear from admitting the cotton manufactures of the Hindoos to British markets，at a juster rate of reciprocity than is now practised－that is $30 l$ ．per cent．in England，against the Hindoo，and but $2 \frac{1}{3}$ per cent．in India，against the Engtishman is evideot，from Mr．Keunely＇s statement before the Parliamentary Committee，viz．that one spinner by machinery，in Britain，will produce yarn at one－fourth the price that it costs for the same quantity of workmanship in lndia，supposing the wages of the former to be $1 s .8 d$ ，and of the latter $2 d$. per day．
Mr．Kennedy＇s statement was thus corroborated by figures，which shew that，in aldition to onerous duties in England on the Hindoo weaver，the latter was less liable to contend with the former，by reason of the rapid fall of English prices．
Comparison of the cost of labour in proitucing yarns in Britain and india，for one pound weight，from No． 10 to 250 ，and likewise of the value of the labour and inalerial combined．
No．

Sugar may be cultivated and manufactured to an extent in Indin sufficient to supply the whole world； its production at present is inmense，as it forms an ingredient in almost every articte of food or drink used by the Hindoos，and where the manufacture is attended to as at Benares，the grain is large and sparkling and pure as the best Mauritus or Demerara sugar．The soil and climate of Bengul，Madras，and Bombay are peediarly suited to the production of this essential nourishment to man；every village has its patch of cane，and a rough manulacture naned Joghery is extracted trom the Palmyra and cocon－nut tree．It is in evidence before Parliament，that the sugar cane of Bengal is as good as any of the West Indics，and some of a superior quality has been produced In the Appendix，page 2 ，will be found the quantities of sugar exported from the E．I．pos－ sessions since 1816.
Coffee next deserves consideration as an Indian staple，and which like the last article only requires just treatment in England to beeome one of the most valuable exports．In Malabar，Combnatore，\＆c．the cultivation is extensive，and the berry of the finest flavour when attended to in the drying．Upper Ben－ gal and the territories acquired from the Burmese， are peculiarly adapted for the growth of coffee．
The following returns shew the quantity of coffec imported from the East ludies into Great Britain，－ re－exported and retained for home use for 15 years； the return includes Ceylon，avg．2， $2,24,998 \mathrm{lhs}$ ．Sin－ gajore， $3,611,456$ tbs．Mauritius， $26,6,6 \mathrm{ll} \mathrm{lbs}$ ．\＆c． From liengal，Madras and Bombny alone for 1831， $2,780,668 \mathrm{lbs}$.

* The quantity of opium shipped from Calcutta in $1795-6$, was 1,070 chests, and in $1829-30,7,4.13$ chests. The total quantity of opium cxported from Calcutta during the former year was 5,183 chests, and during the latter, 9,678 chests ; the grand total exported during the whole 35 years was 162,273 ehests, which, at the average rate at which it sold, 1,200 dollars a chest, would give a trade in this stimulating drug of nearly two hundred million Spanish dollars I

Malwa opium is considered by the Chinese as having a higher touch, but not so mellow, nor so pleasant in flavour as the Patna opium. The smokeable extract which each quality of opium contains is thus intimated by the Chinese,-(who use opium as we do wine or spirits) I'atna and Benares opium 45 to 50 touch; avg. 48 ; Malwa 70 to 75 ; avg. 72 $\frac{1}{2}$; Turkey 53 to 57 ; avg. touch 55 . The cultivation of opium in India, as explained under the chapter in revenue, is a monopoly as regards Patna and Benares in the hands of Government ; and a revenue is derived from the Malwa opium by a system of passes on shipment from Bombay.
Estimate of Quantity and Total Value of Indian Opium consumed in China during the 6 Years ending in 1832-33.

Pepper is another valunble ludia staple, but its import from the East has considerably fallen off, the
importations of 1815 and 1816 , being $17,863,847 \mathrm{lbs}$. and in 1827 and 1828 , but $14,045,868 \mathrm{lbs}$. bcing a decrease of nearly $4,000, \cdots, j \mathrm{lbs}$, weight

Saltpetre is yielded $\delta y$ the Indian soil in greater abundance than any other country, its importation into England by the East India Company in 1814, was $146,000 \mathrm{cwt}$., but the continuance of peace has much lessened both the price and consumption; both are now again on the rise, but the price is still solow that the saltpetre collected in the East is now heing brought to fertilize the fields of Albion. The import of late years of saltpetre from Bengal has been about 100,000 bags, but the total quantity exported from Calcutta, has averaged 170,000 bags, while in the year 1795 , it did not amount to more than 13,000 bags. The total quantity exported from Calcutta during the thirty-five years ending 1829-30, was $2,202,465$ bngs, of which the United Kingdom received 1,523,655 bags; North America, 278,895 bags; France, 101,237 bags ; and China, 1, 333,615 bags.

The Tobacco of Masulipatam, made into snutt, is much prized in England; the quantity of tobaceo grown in India is enormous; every class, high and low, use it, and if the duty were reduced in England, the variety of soils in India would afford an intinite variety of that fascinating weed for the British market. Very rich lands produre about 160 lbs . per acre of green leaf; excellent Havannah tobacco is grown in Guzerat, Boglipoor, Bundlecund, \&c., and some lrom

the Irrawaddy territories has been reported by the brokers in london as equini to the losst American The want of proper attention in the curing has been a great obstacle to ita nrriving in a marketable state in England atter a hong bast Indinn vogage. Tobacco, like hay, must undergo a heating to be it for use, huld the slightest particie of green vegelable matter left in the tobaceo heats on the voyage, festroys the delicate flavour of the leaf, and even rots it. Experiments nre now making at Bombay in the curing process. The duty on E. I. tobaceo might, without loss to the revenue, be reduced from $2 \mathrm{~s}, 9 \mathrm{~g}$. to 2 s . at least.
Grain is one of the staples of Bengal ; the total guantity of grain exported from Calcutta to coumtries beyond the thrce Presidencies, amounted during the thirty-five years, ending 182!)-30, to 12,36f,571 bngs; for the latter yenrs the export has been on the increase, averaging 600,000 bags a year, and of this quantity Mauritius has of late taken nearly one-half, for instnnce in 1828-29, 332,7.5f bags. Great Britain has received, during the whole thirty-five yours, $1,730,998$ bags; and the export to France is yearly increasing.

Tea of excellent quality, rated by the London brokers at $1 s .10 \mathrm{~d}$. per lb ., which is equal to the Chinese Congo, is now being prepared in Assam, and will toubtless ere long be a large and valuable articte of export.

Silkworms are found in Bengal, and towards the north of Poonah in the Dekhan (see Dr. Ruxburgh's paper on the silkworms of Bengal, in the reventh rolume of the Transactions of the Limatan Society ; and Colonel Sykes account of the Kolisurra silkworms in the Dekhan, Transactions of the Royal Asiatic Society, vol, iii. p. 541, \&e.)

Iron, copper, lead, antimony, plambago, zine, sulphur, silver and gold, together with inexhaustibte supplies of coal, abound in various parts of the country. Boglipoor district is peculiarly rich in iron; and ahout Pointy and Siccary Gully, very large mines have beell worked in former times: the ore is nolular, and yields from twenty to twenty-five per cent. iron. The Syilet hills produce in the greatest abundance fine granular iron ore like sand. At a meeting of the Bengnl Asiatic Socicty, 20th February 1833, specimens of copper ore from Nellore, were presented on the part of Mr. Kerr. The mines appear to lic to the northward of the Pennar river, 36 niles N. N. W. of Nellore, and thirty-seven west from the sea, near a village called Ganypenta in Arrowsmith's map. Coal (see Geology) is now raised in Burdwan in considerable quantities, and it is preferred for the steam vessels at Cnleutta, to Europcan or New South Wales coal, ill consequence of its not so soon filling the fiues, owing to the pureness of the bitumen and the superior quality of the gas.
A coal mine now working at Chirra Poonjee produces a mineral, which does not leave one-fourth as much ashes as the Burdwan coal; the strata are nearly horizontal, requiring no pumps or machincry for drainage; it is delivered at the Sanatarium at 400 lbs . weight for 1s. The coal now worked is of the slaty kind, specific gravity 1.447 , containing volatile matter, 36 ; carbon, 41 ; and a copious white ash, $23=100$; seams of a superior coal, from two to four feet thick, have been more recently discovered contiguous to abundance of excellent iron ore. Coal has been recently discovered at Fatephúr (Nerbudda) which showed near the surface; water separated on a sand heat, 3.5 ; volatile matter not inflammable, 10.5 ; chareoal fixed, 22 ; carthly
residue red, $6,4=100$. Specific ravity $u^{\prime} \int$ foni worked at the mines on the Kosya or Cosyrah hills, 1 . -5 : composition volntile matter or gas, ise bi cartc 1 or coke, 60.7 ; earthy impurities, $0.8=100$ (the $h$ is exceedingly small). The coal found near llurdv ar in the Ilimalayn monataliss, has a njecitic gravicy of 1.968 , composition volatile matter, 35.4; carbon, 50 ; ferruginons ash, $14.6=100$; coal found in Arracan, specitic gravity, 1,308 ; gives out bitumen and gas on Ignition: composition, vointile matter, much 66.4; carbon, 33 ; ash, $0.6=100$.

The iron ore found in the south of India is excellent. Mr. Heath is now producing excellent iron near Madras. The IImalayn mines supply, chietly, varieties of red iron ore, affording from thirty to sixty per cent of metal. Near Kalsi, ou the Jumna, there is an extensive bed of sjecular iron ore; red hematite, associated with micaceous iron ore, oceurs in a large bed in gneis at Dhaniakat. At Rhamghur, on the rond from Bhamouri to Almorah, there are beds of the senly red iron ore, also in gneis; compact red iron ore occurs in clay-slate, contnining beds of limestone at Kitsari, on the Rhanganga. In some places a brown ore of the hydndit species, containing manguntese, nad affording a superior steel, is lomad. Boglipoor district is peculiarly rieh in iron, and about Pointy and Siceary Gully, very Iarge iron mines have been worked in former times; the ore is nodular, and yiclds from twenty to twenty.five per eent. iron. The Sylhet hills produce in the greatest abmudnnce fine granular iron ore like sand. Copper mines are worked at Dhanpur, Mhobri, Gangoli, Sira, Pokri, Khari, and Shor Gurang. The ore found in the Dhanpur mine is grny copper ore, which atfords from thirty to fifty per cent. of copper; it is associated with malachite, or green carbonate of copper. The ores are contained in a compact red-coloured dolomite; hence mining operations can be earried on without the expense of wooden frame-work or masonry, The Pokri mine or nines, are situated in talc slate of a loose texture, and hence the working is more difticult. The ores are vitreous and purple copper, both of them rich in copper. The waters flowing from the mine are impregnated with sulphate of copper or bluc vitriol. The Sira and Gangoli mines are situated in beds of indurated tale, which are enclosed in dolomite. Sometimes the one, sometimes the other rock, form the walis of the mine. The iron is yellow copper or copper pyrites, mixed with iron pyrites and smaller portions of gray copper ore. The Kharl and Shor Gurang mines are similarly situated, the ores are gray copper, yeilow copper, or copper pyrites, and carbonate of eopper. Mines exist to the northward of the Pennar river, thirty-six miles N. N. W, of Nellore, and thirty-seven west from the sea, near a village called Ganypeuta, in Arrowsmith's map. The copper ore prevails over a considerable tract of country ; it consists of malachite, and of black anhydrous oxide of copper, with red and yellow ochre imbedded in micaceous schist. The ore differs from the Engiish coppers essentially, in being frce from iron pyrites and other deteriorating ingredients, as lead, antimony, sulphur, \&c, which make that ore difficult to purify, whereas the Nellore ore becomes quite jure by simple smelting. A specimen of reduced metal sent with the ores to the Asiatic Society is of a very fine colour and highly malleable. On analy. zing the ore, it was found to contain carbonic acid, 16-8; black oxide copper, 60.75; red oxide iron, $19-4$; stlica and loss, $3-0.5=100$. Four different varicties examined by the seeretary, coutaised from
thirteen to forty-seven per cent. of red oxite of irou and silex. Letal, - The most productive of these mines are situnted on the river Tonse, near Deyrnh Joon; The ore (n fine granular galena) is found in clny-slate and chay-limestone. It would he tedious to particularize other productions; two have heen recently discovered. A native sulphate of alumina obtnined from the aluminous rocks of Nepal, used by the native doctors to cure green wounds or bruises, yielding, on nualysis, sulphate of nlumina, 95 ; peroxide of lron, 3 ; silex, 1 ; loss, $1-100$; nud a nutive sulphate of iron is procured from the hills of Behar, and used by the dyers of l'atna, ylelding sulphate of iron, 39 ; peroxide of iron, 36 ; magıesia, 2.3 ; loss, $2-100$. These two minerals, the intural produc. tions of Nepal and Behar, may be had in the Inrgest quantities, and would be found extremely useful in the manufacture of Irussian bue, callico priating and dyeing. Common salt (muriate of aola).-Carbonate of sodin and nitrate of potash oceur in many districts forming the snlt, soila, and nitre soils. $\Lambda$ salt lake, twenty miles long by one nnd a half brond, is situate near Samher at llajpoot Fown, in Intitule 26.63, and longitude 74.57.; it supplies n great portion of the neighbouring country with salt on the drying up of the lake after the rains. In Berar thore is a salt lake, called loonar, lying lis n sort of cauldron of rocks; it contains in the 100 parts, muriate of sodn 20 ; muriate of lime, 10 ; muriate of magnesin, 6 . Natron and soda lakes nre snid to occur in the Himalaya range. Townrls the sources of the ludus snlt lakes were observed by Mr . Gerurd at $\mathbf{1 6 , 0 0 0}$ feet elevntion ahove the sea, and there is an extensive salt mine in the Punjnub.

The valunble diamonds and other precious stones found in Golconds, in Orissa, in lundlecund, \&e., require no detniled notice. Silver ore, of a rich quality, is obtnined in dilferent places. Gold is found in the beds of most rivers, particularly in Neilgherries; but it exists in abundance in the state of ore in Malabar. This precious metal has been discovered not only in Coimbatore, but throughout that tract of the country lying west nnd south of the Nielgherry mountains and Koondanad. It is found also in large guantities in various parts of India.

In Bengal land is now worth 67 years' purchase of the revenue. The increase of wealth through. out llengal has been most rapid; notwithstanding the disadvantages under which the agriculturists labour, by the English markets being shut against their raw and manufactured produce, and the great number of artizans thrown out of employment by the introduction of piece goods, \&c. from England; land purchased in Calcutta 30 years ago for 15 rupees is now worth and would readily sell for 300 . Ten years ago a labourer in Calcutta received two rupees per month, now he is not aatisfied with less than four or five rupees per month, and there is even a scarcity of workmen; 12 field labourers were formerly to be hnd for less than one rupee a day, now half that number could not be had at that rate of wages. Mr. Colebrook says, in 1804, in his Husbandry of Bengal, that "a cultivator entertains a labourer for every plough, and pays him wages, on an average, one ru. pee per mensem, and in some districts not half a rupee per mensem." A cabinet maker was glad to obtain cight rupees a month, for the exercise of his
skill, now he realily obtains 16 or 20 rupees for the saine period. All handicraftsmen or inbourers have risen in $n$ like proportion; and as to the price of food it is sumficient to state one article as a criterionrice, the statl of life in llengal, was wont to be sold at eight nnums (half a rupee) per mand ( $\mathrm{n}_{2} \mathrm{lbn}$.), its price has lucrensed four foll, being now nvernged at two rupees per maund. The wages of $n$ Ilindoo rarpenter at Calcutta mny be estimated at fid., of a Chinese nt 2s., and of the lowest Luropean fix. per day. This incrense in the value of property may be manly ascribed to the fixed settlement of the hand revenue -to the seeurity given to all species of industryand thus inducing the surplus wealth deriven irnan commerce to be invested in the soil: huce the rise in whges, and in the value of all commodities.

It would be extremely desirable to ascertain the rates of wages, the prices of provisions, and the rental of land in the various districts of British India, and in particular to compare the present with the past. Wherever political aecurity has been established, property of all species will rise in value; but where social rights are secured-where the state has no longer the power of taxing at its will and pleasure every apecies of industry-and particularly that basis on which all social prosperity is based (the land) ;there, indeed, with a fertile soil-a genial climate-an industrious and dense population-and great mineral and commercial resources-it would be difficult to fix the limit of social wealth, of political greatness, and of moral happiness.

## CIIAITER II.-CEYL.ON.

Section I. Ceylon (Simghata, Lanka, Sermemith, or Taprobime), situate betweell the parallels of is.sis to 9.50 N . latitude, and from 80, to $\mathrm{N2}$. E. lougitude, is one of the most magniticent mands on the fine of the glohe; the extreme lengel $i$, about 270 miles from north to sonth, with nis extermi breadth of 1.5 miles (annoteritye of 100), and a superficial area of nbout $2 t$, filil square miles.
Favourably situnte at the W . entrance of the Bay of lengal, it is separnted on the N. W. from the Coromamlel coast, by the Gulf of Manarar, 150 miles distant from Cape Comorin; on the S. and E., its bentiful shores are laved by the Indinn Ocean. The interior of the island is formed of ranges of high mountains, in general not appronching nearer to the sea than 40 miles, with a belt of rich allovinl carth, nearly surrounting the island, and well watered by numerous rivers and streams. A picturesque table land occupies the southern eentre, nnd theace, towards the coast is a continuous range of low hills, and elevated that land extencting nearly to the senshore. Tho the west, the country is tlat, and on the northern shore broken into verdnnt rocky islets, and a peninsula named Jafnapatam. The lotty central division of the ismad varies in elevation above the level of the sea, from 1,000 to $d, 000$ fert, but the raage of table land may be estimated ut from 2,000 to 3,000 feet, extending in length bi 11 iles by 30 miles wide. lirom this elevated region arise some conical mountains from 2,000 to 3,000 feet higher above the sen. The mountains run in general in continuous chnins with the most lovely vallies the sun ever shone on between them; the hills clothed to the very summits with gigantic furests, from which issue magnificent cascades and foaming cataracts, that form in the vallies placid rivers and babhling brooks fringed with turfy banks, mud all the beautiful verdure of the tropics. [See "Colonial Library."
11. Of the early colonization of Ceylon, Sclan, Singhala, Lanka or Taprobame, we know little certain. The original Singhalese, or Ceyluneze, are probably teseended from a colony of Singhs, or Rajpoots (to whom, is appearance, even at the present day, chey bear a striking resemblance) 500 years 13 . C. But the Malabars, it is stated, severnl times succeeded in inyading the island 200 years B.C. At an carly era the island scems to have attracted the attention of the western world; thus Dionysius, the geographer, mentions Taprobane, its ancient and classic name, ns famous for its elcphants; Ovill speaks of it as a place so far distant that it could be no advantage to lave his fame extended thither; Pliny thought it the com. mencement of another continent, and extolled it for the purity of its gold and the size of its pearls. In the reign of Claudius, a Roman, who farmed (says the Rev. Mr. Fellow's) the customs in the Red Sea, was driven in his bark by a gale of wind from the coast of Arabia to Taprobane, where he received a most favour-
whle reception, and so extolled the glory of the imperial eity, that the sovereign of Taprobane sent to Rome an embassy of four persons mite the Red sea. We have existing evidence that, in remote uges, Cey. lon was an extensively peopled and civilized country (it hins now only 58 moutis to the sequare mile). Near Mantotte are the ruins of a very large city, constructed of brick and mortar, mal nil immense artilicinl tank or rescrvoir for water, the basis of which is 16 or 18 miles in extent; an embunkment about nine miles trom the tank is formed of huge stones, eight feet lone four feet broat, and three foet thick (these are econented tugether by lime) ; the lengith of the dnm is 600 fect, the breadth nbout 60 , and the height from 8 to I上feet. This gigantic work is said to have been executed by the Hindoos, who made Mantotte the enpital of a hingelom which they established over the northeru parts of the island. Of an antlquity, however, more remote than the foregoing, wre various buildings and worl:s towards the interior, constructed of vast stones, degnntly cut mad dovetailed-like into each other. No mosinr has been used in some of the ediflees, which still exist (as if in deflance ol the ravaging hand of time), with visible inseriptions on then, which no existing !aman being can 'uderstand. Among the works of this remote age is the Late of Kinndely, near Trincomaiee, which is 15 miles in circumference, formed by the arciticial junction of two hills, which, in one part in particular, exbibits a parapet formed of huge blocks of stone, 12 to 14 feet long, and broad and thick in proportion. This parapet is at the bnse 150 feet broad, and at the summit 30 fect. By means of this wonderful structure, the adjoining high lunds are connected.

It is also singular that arehes are to be found in the parapet, and over them conduits, aimilar to those used by the ILomans in Italy, and termed condottori.

Belonging also to this age is a gigantic pagoda, 40 miles S . of Batticalon, the hase of whose cone is a quarter of a mile in circumference, surrounded by an enclosure one mile in cireumterence, consisting of a broad wall of brick and mortar, with numerous cells in it, and an entering colonade of stone pillars 10 fect high.

Mr. Brooke, in tracing the course of the Maha Villagunga, in 1825, came on the ruined tracks of several very extensive canals, one of which he estimated to linve been from 5 to 15 feet deep, and from 40 to 100 feet wide. The natives told him that this canal whs cut by people whose stature was forty feet high! The largest reco'ded bridge was one in the southern part of the isla.d, stated to be 280 cubits ( 630 feet) long; the next in size was 193 feet long, across the Kaloo-Ganga, of. the road from Adam's leak to Bentotte. The remuins of a stone bridge exist near the fort of Kalawo Oyz, the stones of which are from 8 to 14 feet long, jointed into one another and laid in regular lines, the upright pillars being grooved into the rocks telow; this bridge was built

15,000 years ago, and Captain Forhes demonstrates that the Singalese, at that remote period, useel the wedge and chisel for splitting and shaping those luge blocks of stone, after the manner which has only hees introduced into Great Britain in the nineteenth century.

It is recorded in ancient manuscripts, that Anorajhapoora, the ancient Cingalese capital, was surrounded by a wall 16 miles square; and indeed a list of streets of the city is still in existence. To the N . of the ruins of this place are six pagodias of immense magnitude, the form being half $n$ sphere with a spire buitt on it; the two largest are each 270 feet high, of sotid brick-work, once entirely covered with chmman (lime polished like marble) ; the solid contents of one of the largest is about 456,071 cubic yards, and with the materials of which it is composed, a wall of brick might be constructed 12 feet high, two feet wide, and 97 miles long; the roofs are composed of curiously carved rafters of wood, and the expense and labour employed in the whole of the structures must have been immense.

In the aneient histories of Trincomalee, it is stated by Sir Alexnnder Johnston, that two kings of Solismandelum, Manumethy Camdesolam, and his son Kalocarta Maharasa, reigned over the greater part of Ceylon, and over the southern peninsula of India, about the 512th year of the Cali Fug, or 1400 years ago, who eonstructed the great buildings and tanks, the remains of which are yet extant.

But we must leave these remote ages, and come to some later period. In the sixth century Ceyton was the chief mart for eastern commerce. In the sixteenth year of the reign of Praakran.2 Bahoo the 1st ( 1.1 ). 1153), the Singalese monareh sent a fleet of 500 ships, with an army on board, and provisioned for 12 months, to avenge the insults offerel to the Singatese nombassador and to Singalese merchants by the King of Cambodiae and Arramana. This vast tleet was equipped in six months. In the thirteenth century it wis visited by Marco Polo, who pretty accurately narrated the particulars of the island, which he described as "the finese in the world." The central situation of Ceylon had led to its port being frequented by ships from China, Indin, Arabin, \&c. by which means Galle and Colombo, from their favourable situation, became entrepots for the general commerec of the East. When the Portuguese first visited the island, A. D. 1505, they found it had for a long period been declining, owing to intestine wars nad invasions from Malabar and Arabia. The Cingalese Kiny availed himself of the assistance of the Portuguese Admital (Almeida) for the expulsion of the invalers, pro. mising in return an annual tribute in cinnamon. In 1518, the Portugoese, under Alvarenga, began to fortify themselves in Colomhn, Galle, 太c., and soon after they obtained complete possession of the maritime provinces, and drove the King of Kindy to such extremities, that he was glad to retain even possession of the interior provinces.

For a century the Portuguese held their sway, when in 1603, the first Dutch tleet arrived at Trincomalee and Batticalon, and oflered to assist the King of Kandy against the lortuguese. In 1632, n strong Dutch armament, acting in conjunction with the King of Kandy's forces, commenced a series of contests with the Portuguese, ant after a long and sanguinary struggle, which lasted until 1656-7, the latter wero finally driven from an island, of the sea coast of which they had been masters for nearly 150 years.

The Cingalese, however, soon found that they had
exclanged masters to no advantage ; for, from thin to 1796, when the British in their turn came to the aid of the Kandians, the Doteh were engaged in a series of perpetual hostilities with their momata neighbours. Nor were we more fortunate than our predecessors; for, in 1798, on the elevation of a new king to the Kandian throne, we became involved in hostilities, which led to our capture of the Kandian capital in 1803.

We did not, however, long retain the capital, the Kandians attacked us with great violence, compelled our troops to a precipitate retreat, massacred lion sick soldiers in the bospitals, and having surrounded the British force, reguired them to lay down their arms ; the commanding oficer, Major Davie, unfortunately did so, the Malay troops were picked aside, and the whole English force instantly massacred, es. cept three liuropean officers retained as prisoners, and one mutilated corporal, who made his astap to Colombo with the melancholy intelligence. Until 1815 we retained the maritime provinces, while the King of Kandy kept the interior, but in that yoar the monareh being deposed on account of his repated acts of oppression and cruelty (one net was making the wite of his prime minister pound to death her own children in a rice mortar), Gencral Brownigg was invited by the Kinndinn chiefs to take pussession of the interior, and excepting an expensive and tronblesome insurrection, which lasted from 1817 to 1819, Caylon has ever since bad the British sway established ever the whole island.

III Colombo,-Ceylon may not inaptly be termed the Malta of the Indian Ocem. Its eommercial enpital, Colombo, is situnte on the S.W. const, lat. 657. N., long. 80.0. E., defonded by a strong fort (built on n peninsuln projecting into the ocean) measuring onf mile and a quarter in circumference, having seven primeipal bastions of different sizes, connected by intervening curtnins, and defended hy three hundred pieces of cannon. The fortress is nenrly insulnted, two-thirds of the works being almost laved by the sea, and, with the exception of two very narrow and strongly guarded causeways, the remninder proteeted hy a fresh-water lake nnd a hroad and deep diteh with a tine glacis. Four strong bastions are seawnrd, nnd three face the Inke, nud command the narrow approach from the Pettah, or mative town outside the walls. The sen itself is additional strength for the fortress, for on the extensive southern side the surf runs so high on a rocky shore, that any nttempt at landing troops would be attended with certnin destruction; and on the west side, where the sen is smoother, the approach is completely commanded by the batteries; and a projecting rock, on which two compact batteries ate placed, entirely protect the rondstead.
Taincomalee.-Trincomalee, the maritime capital of the island (Colombo is the seat of Government), is, if a political point of view, of the most importance, not merely as regneds Ceylon, but from being,
ns Nelson justly described it from personal knowledge, "the finest harbour in the worfl." Trincomalee is on the E. of Ceylon, lat. 8.32 N., long, 81.17 E., 150 miles N.L. from Colombo (to which a tine road has been upened), $1: 28$ miles trivelling distance from Kandy, nod within two days' sail of Matras. Its plysical aspect is that of a narrow neek of Innd or isthmus, comecting the peninsuln on which the fort of 'lrincomalee is huilt (which juts out a considerable distance into the sea) to the man land. 'Townrds the W. this isthmus gradually expands itself into $n$ plain of consideruble extent, which is bounded on the S. Fi. by a ridge of lofty mountnins, on the N. W. by low wooded hills, nad on the W. nt the distance of about n mile from the fort, by the inner harbour. As far as the cye con rench from the fort, excopting in the immediate neighbourhood of the bazanr, the country is covered with wood.

The scenery of the spot has been compared to Loch Kintrine on a gigantic seale (the vast harbour nppearing land-locked), the grmadeur of which camot be surpassed. 'The fortitications swerl aloug the rocky coast, upwards of $n$ mile in length, encompassing the base of $n$ sterp hill on the sides comnected with the adjacent land. The town nad fort are placed at the bottom of a rock, nud joined to $n$ narow meck of lami running out towneds the sea, nad separating the inner harbours from two outside hays, which lie on either shore of 11 three-sided or corned promentory.
" Duteb" and " Bnck" bays nre enturely commanded by the artillery on the $\mathbf{S}$. and N . side of the fortified rock, and the mouth of the harbour is protected by Fort Ostenhurg, situnte on $n$ mount three miles $W$. of Trincomnlee. No commmication can take place with the promontory (the part that projects into the sen being protected by steep rocky elitls) except through the well-covered gates of the fortress; and the hest engineers have pronomoned their opinion of its impregnability if it be well garrisoned.

Fort Frederick, where the liuropean troops (consisting gencrally of four companies of a kurobean regiment, a comprony of royal engincers and artillery, and detachments of the Ceylon ritles) are stationed, is n fortified neck of land projecting into the sen, separating Back Bay from Duteh Bay. The ground riscs gradually from the glacis to the llag. stalf, $\pi$ height of nhout 300 feet, and then slopes towards the sen, till nhruptly terminnted by a perpendicular cliff, from which a plammet may be dropped to the water, n distance of 240 feet. The depth at the base is so grent, that a line-of-battle ship may puss close to it. None but militury reside within the works. The prospect from the barracks towatds the sen is only bounded by the horizon, whilst towards the land, the eye ranges over the splendid scenery of the inner harhour, furt Ostenberg, nad a long extent of wooded country.

Fort Ostenberg is nearly three miles from Fort Frederick, and is built on the termination of a ridge of hills that partly form the boundary of the inner harbour. 'The fort commnods the entrance, und its base is washed by the sea on three sides; it also protects the doek-ynrd, which is immodiately blow it. A detnehment of Royal Artillery are guartered there, and a company of liuropeans.

The vicinity of Trincomalee is $n$ wild unenltivated country, abounding with game of all kinds, from a snipe to an elephant. Quail, jungle fowl, moosedeer, and monkeys, are found on the Fort Ostenberg ridge. The Mahavilla Gnnga, which runs past Kandy, empties itself into the sea not far from Trineomalec.

It has lately been surveyed by Mr. Brooks, the master attendant, who reporta favourably of its capabilities. It is navigable for some distance; and he is of cpinion, that with a little expense, it might be made so to within 40 miles of Knudy, and thereby open a water communication, by which the coffee, timber, and other produce of the interior could be brought to the sea-coast.

The harbour, beautifully diversified with islands covered with n luxuriant vegetation, is spacious enough for holding all the ships in the world, accessible at all scasons; and the depth of water within the bay of Trincomalee is so great, that in many places, not far from the shore, it is unfathomable, and ves - Is may lie close alongside the rocks in perfect safety.

Point de Galle is another strong fortress and excellent harbour, situate at the very southern extremity of the island, in lat. 6.1 N., long. 80.10 E. , distant 78 miles along the sea shore, S.S.E. from Colombo. The fort is a mile and a quarter in circumference, on a low rocky promontory, commanding the narrow and intricate entrance lending to the inner harbour. The extensive and substantial works are, like those of Colombo, surrounded for the greater part by the ocean, and there is every convenience of water, \&c. capable of enabling the fortress to stand an extended siege. The outer and inner harbours are spacious, and the inner secure at all seasons of the year.

But if the sea-coast be well defended, not less so is the interior; every hill is a redoubt, and the passes in the mountains might be defended by a resolute enemy by rolling the stones off the summits of the heights. Kandy, the capital of the interior ( 85 miles from Colombo) is situate in an amphitheatre commanded by forts on the surrounding hills; the vale has but two accessible entrances well guarded, and the city within four miles is nearly surrounded by a brond and rapid river (the Maha-Villa Gunga) filled with alligators.

The roads in the maritime country me through groves of cocoa-nut trees along the sea const. Carriage roads extend from Colombo as far as Chilaw to the northward, and from Colombo through Galle as far as Matura to the southward. The main road from Colombo to Kandy (the Simplon of the East, on which there is now a " mail coach and jour !") is a work of stupendous magnitude; hills have been cut away, vallies filled up, and (near Kandy) a tunnel fice hundred feet long cut through the mountain, while rapid and unfordable torrents and rivers have had elegant iron and wooden bridges thrown across them. A capital road has been opened between Trincomalee and Colombo, und, before a few more years have clapsed, every town in the island will be connected by roads passable at all seasons.

Paradeinia bridge, which has been thrown over the rapid and unfordable river Maha Villa Gunga, consists of a single arch with a span of 20.5 feet, principally composed of satin wood; its height above the river at low water-mark is 67 feet, and the roadway is 22 feet wide. The arch is composed of four treble ribs transversely, distant from each other five feet from centre to centre; the sum of the depths of these ribs is four feet, which, with two intervals of two feet each, makes the whole depth of the arch eight feet; the arch beams, with the exception of those next the abutments, are 16 to 17 feet long and 12 inchea thick, abutting against each other with an unbroken section, secured at the joints by the notched pieces which support the road-way, the latter being held in their position by means of cross ties below and above the arch, and immediately under the road-way; these cross-ties, with the aid of diagonal braces, which
are also locked into them, serve to give stability and firmness to the whole structure, which has no other material but timber in its construction.
IV. The north division of the island is sandy and calcareous, resting upon madrepore, as it is little elevated above the level of the sea; the surface of the elevated lands of Saffragam and Lower Ouva is much stronger and well adnpted for tillage; the granite soil of the interior , roduces the most luxuriant crops wherever there are a sufficiency of hands to call forth the gifts of industry. The soil of the southern plains is sandy, resting on a atrong red marl termed "Catook," the base of which is granite, and in the neighbourhood of Colombo, the lands are low and subject to inundations from the Mutwal river.

The foundations of the island are evidently calcareous, yet the greater proportion of its soil is siliceous, in many places (as in the cinnamon gardens near Colombo) the surface being as white as snow, and formed of pure quartz sand. The soils of Ceylon are stated to be in general derived from the decomposition of gneis, granite, or clay, ironstone, the principal ingredient being quartz in the form of sand or gravel, decomposed felspar in the state of clay, combined with different proportions of the oxide of iron, quartz in most instances being the predominating substance, and in many places, forming nine. tenths of the whole, the natural soils seldum containing more than three per cent. vegetable matter. The most productive earths are a brown loam resulting from the decomposition of gneis or granite excecding in felspar, or a reddish loam originating from the decomposition of clay ironstone: the worst soils are those where quartz predominates, proceeding from the disintegration of quartz rock, or of granite and gueis, containing a very large proportion of quartz. Regular granite is not of very common occurrence; well formed gneis is more abundant, but sienite is not conmon : pure hornblende, and primitive greenstone, are far from uncommon; and dolonite sometimes of a pure snow white, well adapted for the statuary occasionally constitutes low bills in the interior: limestone is principally confined to the northerly province of Jafnnpatam, and the island appars to be surrounded by an interrupted chain or belt of sand. stone, interspersed with coral.

The coral of the Pamban banks is not the zoophite of the Mediterranean and the Suuth Seas, but a light, porous, crumbling substance, aometimes cut and shaped into bricks by the Dutch, and more frequently burnt into lime. Ot this species of lime the late fort of Negajatam was built ; and so great is the hardness which it acquires by long exposure to the weather, that when Mnjor De Haviland, some years ago, requested a specimen of the masonry of the fort to be procured and sent up to him, the iron crows and other instruments used in detaching the blochs were blunted and hent in all directions by the solidity of the chunam, which is far more adhesive than that obtained from shells. A stone capable of being converted into so valuable a cement, would almost pay the expense. of its excavation. The ridge called 'Adam's Bridge,' consists of a mass of loose sand, with no firm foundation of rock or clay to support it. The sand appears to be transported in great quantities from one side to the other of the ridge, according $+n$ the dircction of the monsoon; for, in addition to the action of the surf, which washes it over to the Ice side, where it is narrow,-in other parts, where it is broad, streams of it, in a dry state, are carried across by the wind itself, and deposited there. The channels through the
strait are for the ar in the $r$ that a D of Adam them. it were the different dry, nad where on

The saud appears from one side to the direction of he action of the side, where it is s broad, streams oss by the wind nels through thestrait are very shallow, and not more than sufficient for the small country boats to pass; but it is stated, in the records of the Dutch government at Ceylon, that a Duteh fleet once passed through the channels of Adam's Bridge to avoid a Danish fleet in chase of them. It has been justly observed, that if such really were the case, the channels must have been in a very different state, as some parts of the 'bridge' are now dry, and a few feet of water is the greatest depth any where on it.

The metallic riches of Cey!on are yet almost unknown. The island is principally composed of granite, with veins of quartz, hornblende and dolomite; rock and shell-limestone are found near Kandy and Jaffnapatam, iron and plumbago (the latter now forms an article of considerable export) are abundant, and gold (some say also rןuicksitver) and silver are found in the hill-streams; amethyst, topazes, cats-eyes, garnet, cinnamon stone, sapphires, rock crystals, shorl, zircon, rubies, and diamonds, \&e. the island has long been famed for. The celebrated pearl fishery in the Gulph of Manaar my limits forbid me here dwelling on. Nitre caves are numerous; alum is plentifol, and the coast from Chilaw to Manaar and Jaffina on the western side, and from Tangalle through the Mahagampatoo to the eastward, contains the most extensive and valuable salt formations which are to be met with in India. The Leways, or natural deposits, at Hambantotte, yield the largest supply of the fincst salt.

The natural history of the pearl oyster is inperfectly known. The banks have been found suddenly to fail when a productive tishery had been anticipated. At certain seasons the young oysters are seen floating in masses, and are carried by the current round the coast; they afterwards settle and attach themselves by a fibre or beard to the coral rocks, and on sand they adhere together in clusters. When full grown, they are again separated, and become locomotive. The pearls enlarge during six years; and the oyster is supposed to die after seven years; they nre fished at a depth of 36 to 40 feet in the calm scason. 'Tise length of time which the divers remain under water is almost incredible by an European.
V. Ceylon is under the complete influence of the monsoons, the N. E. prevailing from November to February, and the S. W. from April to Sr stember; the intervening or equinoctial months liavilig variable winds or calms. The eastern side of the island is hot and dry like the Coromandel coast, oceasioned by the N. F. monsoon ; the opposite division of the isle is temperate and humid like the southern Malabar shore under the influence of the S. W. monsoon; the climate, however, of the southern coast is more congenial to Europeans than perhaps any part of the continent of India. On the whole the N. und N.E. may be said to be dry, and the $S$. W. moist. The S. W. wind is more general all over the island, as both at Colombo and Trineomalee it blows for five months in succession, whereas the N. E. blows at Colombo only in the months of December and Jann. ary, seldom beyond them. Among the momntains of the interior, the winds are modified by local circumstances, according to their proximity to the E. or W. coast : and the highest and most central land have peculiarities of their own. Thus, at Badulla, in Upper Ouva (where there is an excellent hospital and military station), the wind for three-fourths of the year is from the N. E., and in June, July and August variable.

Owing to its intertropical position, the quantity of rain that falls in Ceylon is very great, probably, about
three times that of England. Being less frequent the showers are much heavier while they last, a fall of two or three inches being not uncommon in 24 hours; the average of the alpine region is about 84 inches; on an average however, less rain falls on the east than on the west side of the island; a lofty mountainous ridge often acting as a line of demareation, one side of which is drenched with rain, while the other is broiling unter an unclouded smin: Colonel Colebrook in his valuable report on this lovely island, justly remarks, that the climate and seasons of the north and south districts are strikingly contrasted. On one side of the island, and even on one side of a mountain, the rain may fall in torrents, while on the other, the earth is parched and the herbage withered; the inhabitants may be securing thenselves from inundations, while in another they are carcfully husbanding the little water of a former season which may be retained in their wells and tanks. Thus throughout the southern division where the rains are copious (owing, probably, to its exposure to the southern ocean) canals are not less useful in draining the lowlands, than in the conveyance of produce; and embankments are much required to secure the erops from destruction during the rainy season; while in the north division of the island, tanks and water-courses are in the greatest request, to secure the inhabitants against the frequent droughts to which those districts are liable. At Colombo the anumal quantity of rain is about 100 inches, of which, 80 fall in April, May, October and November.

Owing also to its insular position, no climate is more favoured than Ceylon, its temperature being moderate when compared with the scorching plains of India. Along the sea-coast the mean annual temperature may be taken at $80^{\circ}$ Falreuheit; the extreme range line from $688^{0}$ to $90^{0}$, and the medium from $75^{0}$ to $85^{10}$. The elimate of the mountains is of course cooler, but its vicissitudes greater. At Kandy, which is 1,467 feet above the sea, the mean annual temperature is $78^{0}$; at the top ol Namini Cooli Ǩandia, $5,5 \cdot 18$ feet high, Dr. Dany found the temperature at eight A. м. $57^{0}$. At Colombo (the capital) the mean daily variation of the temperature does not exceed $3^{0}$, while the annual range of the thermometer is from $76^{0}$ to $86^{10}$, Fah. At Galle, the mean daily variation is $4^{0}$, and the annual range $71^{\circ}$ to $87^{\circ}$. Jaffnapatam, mean daily variation $5^{\circ}$, nnnunl range $70^{\circ}$ to $90^{\circ}$. Trincomale $\epsilon$ greatest daily variation $17^{\circ}$, annual range $74^{\circ}$ to $91^{\circ}$. At Kandy, (the capital of the mountain or table land in the interior) mean daily variation $6^{\circ}$, annual range $66^{\circ}$ to $86^{\circ}$. At Newera Ellia, a military convalescent station, mean daily variations as high as $11^{0}$, and annual variation from $35^{\circ}$ to $80^{\circ}$.

The climate of Ceylon, where the soil is not cleared, is undoubtedly subject to pernicious miasmata, arising from stagnant marshes, and dank and noisome jungles, and even when the jungles are cleared, it recpures the sun to act on them for some time before the unhealthy miasmata are dissipated; at certain seasons, therefore, endemic fevers appear in sitoations favourable to their propagation, but the whole island is becoming more uniformly salubrious as it becomes cleared and cultivated. The environs of Trincomalee, which were formerly very unhealthy, have become mach lass so by clearing the jungles in the environs, and if the salt water lake ("Snake lsland,' I think it is termed) to the northward of Colombo were cleared, the maritione capital of Cey-
lon, though within $8^{0}$ of the equator, would he one of the healthiest and pleasantest residences in India.
It is true, that our troops have suffered much in Ceylon, but it should be recollected, that as compared with the Indian army, their wear and tear of duty is much severer than the latter, and they have not the at night.

Census taken in the year 1832 of the Population of Ceylon, and of the Births, Marriages, and Deaths.

Population of Ceylon, 1,009,008.

The followirg table demonstrates that in the Colombo district, at least, population is on the increase ; in the fort and pettah) has been steady for the last five years.

Fopulation of the District of Colombo.

| Town of Colombo. |
| :---: | :---: | :---: | :---: | :---: |

The population of the island, although comprising a varicty of different nations, may be divided into four distinct classes :-first, the Singalese or Ceylonese (descended, as some say, from the Sings ur Rajpoots of Hindoostan, and by others from the Siamese) proper, who occupy Kandy, and the S. and S. W. coasts of the island from Hambantotte to Chilaw. Second, the Malabars or Hindoos, who invaded Ceylon from the opposite coast, and are in possession of the north and east coasts, and of the peninsula of Jaffnapatam. Third, the Moors or descendants of the Arabs, or perhaps, from Mahomedans of Upper India, who are dispersed all over the island (as the Moslems are over Hindoostan) and in Pultam district form the
mass of population. Fourth, Veddas or Beddas, the aborigines of the island, who dwell in the most untutored state (having neither habitations nor clothing) in the great forests which extend from the S. to the E. and N., and also in the most inaccessible parts of the interior, wild fruits and beasts being their sole sustenance, and the branches of large trees their resting place. Therc are some Malays, Caffres, and Javanese, a few Chincse, and Parsce traders, and a good nany desceudants of the Portuguese and Dutch, and even of the English mixed with native blood, scattered over the island. Caste, as respects the Singalese and Malabars, is scrupulously preserved, and very widcly ramificd, almost every occupation having its distinct caste. There are for instance, the gold and silversmith's caste, the fisher's, the barber's, the washermen, the manufactures of jaghery (sugar), the toddy drawer's, the lime-maker's, \&c. \&c. \&c.; but the highest and most csteemed caste, is that of Vellalahs or Goyas, whose occupations are purely agricultural, but as land is assigned for the performance of every description of service, the practice of agriculture is not confined to this class, but is exercised by persons of all castes for their subsistence. By the Kandyan laws the intermarriage of the high and low castes is prohibited, and many distinctions recognized and enforced, by which the latter are degraded and reluced to a servile state, now considered hereditary. While the Malabars professing the Hindu faith, maintain the religious, as well as the civil distinction of caste, the Singalese or Buddhists have abolished the former and retaincd the latter; hence, perhaps, the hostilities which prevailed between both sects, whose sacred dogmas are both apparently based on the creed, and doctrines of Ment, the great Hindoo lawgiver, an illustration for which will be found hy contemplating
the parallel of the Romanists and Lutherans, the essentials of whose religion stripped of externals are the same. The distinctions of custe in Hindoostan as well as in Siam, Birmah, and Ceylon, had their origin in a superabundant population pressing too closely on the heels of subsistence, and it was perhaps thought that the introduction of a minute division of labour
would not only give more extended employment, but also ennble each person to learn more carefully his business ; probably, also, it was politically conjectured that the division of an immense population of so many millions into castes or sects, would render the task of government more easy, by keeping every individunl in a fixed station in society.

Population of Ceyion, and Births, Marriages and Deaths in 1836. [B, B.]

At present I cannot say that the Singalese are superior, if indeed equal, to the Hindoos, in the domestic and fine arts; although many branches of manufactures, such as the weaving of cotton and silk, the smelting of and working in gold, silver, iron, copper, \&c.; the cutting and setting of precious stones, the glazing of pottery, application of lacker, preparation of gunpowder, casting of cannon, distillation of spirits, \&c. \&c. are carried on, it is by the most simple instruments, and with little aid from mechanics, and less from science. In the fine arts they are searcely on a par with the Hindoos, and in their structures of a recent period certainly far behind the latter people, or even less advanced than the Burmese. They however possess great capabilities of instruction, and in the neighbourhood of the principal British stations are beginning to profit by the superior handicraft of the European artizan.
"The peasantry of India, as well as Ceylon, generally possess land, from which they derive part of their subsistence, ano the wages of labour in the neighbouring provinces of the Continent are as low as in $\mathrm{Ce}_{j}$ lon, and in some instances lower; any considerable rise would therefore be checked by the competition of strangers. The wages of common labourers vary in different parts of the islnnd from $6 d$. a day in Columbo to $3 d$. and $4 \frac{1}{2} d$, a day in the country. The government has interfered to fix these rates when requiring labourers; hut higher demands are
made to private employers, according to circumstances. Those who possess small portions of land rarely derive thei support from them exelusively, but employ themselves in the fisheries, in trades and manufactures, and in the petty traffic of the country, and from the small amount of their individual gains there is reason to conclude, that if they could obtain regular employment near their homes, or even at a distance, from $6 d$. to $1 s$. a day would be generally acceptable to them.

The wages of mechanics and artizans are proportionally higher than those of labourers, but still extremely moderate; and from the frugal habits of the natives, and the esource derived from their lands, a slight augmentation of these wages would add materially to their comforts.

The minute suldivision of lands has been accelerated in the maritime provinces by the Dutch law of inheritance. In fields, gardens, and plantations, which are farmed or held in joint ownership, the interest of an individual proprietor is often limited to such fractional portions as are valued at a few pence. For example, the inheritance of one person will consist, in land, of nine-tenths of a seer of rice ; in trees, of five-twelfths of a cocoa-nut tree, and two-thirds of a jack tree.

The attachment of the natives to these possessions is evinced by the fact, that they are often the subject of protracted law suits.

There are district who under the la subdivided. land were gr eight grants thousnund on granted by Book for 18 of the surfne waste land) would be ver of the whole land cultivat session of ind land rent fre the state of cu strougly advi moderate sum them under e vest capitnl it perpetuity at the state woul of roads, the resources of they require b vernment to r

The comman fire (nccessary t ndded, which " The tirst five ar any kind ; 2nd. adultery; 4th. sion ; 5th. Not The meritorious day ; and not $t$ beds, (but on c others inculcat and the practice

There are a few native landholders in the Colomho district who possess about 1,000 acres each ; hut under the laws of inheritnuce these will in time be subdivided. Four thousnnd and sixty-seven acres of land were granted in 1836 , in one hundred and eightycight grants on a pepper corn rent. Seventy-two thousand one bundred and nine acres bave been granted by govermment. It is stated in the Blue Book for 18:36, that " by far the largest proportion of the surface of the island is jungle, (uneultivated waste land) nt the disposal of the Government." it would be very desirable to cause a survey to he made of the whole island, to ascertain the netual aren, the land cultivated and waste, the proportion in the possession of individuals, of temples, \&c., the quantity of land rent frec, or paying a tax to government, and the state of cultivation and produce. It would then be strongly advisable to grant or sell the waste lands at a moderate sum, and thus give every facility for bringing them under cultivation and inducing Europenns to invest capital in the soil. If the land-tnx were fixed in perpetuity at a moderate corn-rent all over the islaud, the state would derive a large revenue for the making of roads, the construction of tanks, bridges, \&c. The resources of Ceylon are numerous and valunble, and they require but a slight attention on the part of government to render them available for the public good.
VII. The religion of the Singalese is Buddhism, the early history of which is little known. Many Hindoo writers agree, that Budh or Boodh, is supposed to be the ninth avatar of Vishnu (the second person of the llindoo Triad, and God of preservation;) having appeared for the purpose of reclaiming the Hindoos from many abominations into which they had fallen, and to teach them more benevolent forms of worship, then through the means of human and unimal saerifiees which they then extensively (nnd with respect to animals now) practised. These doctrines, says Mr. Coleman, being too simple, and therefore interfering too strongly with the privileges of the Brahminicnl priests, a religious wnr ensued between the old and new seets, and the Buddhists were ultimately expelled from the peninsula of India. [Here we find a striking analogy to the incarnntion of our Saviour.] But the Buddhists, in general, will not tolerate the idea of superior antiquity heing vested in the Brahminieal faith; they deny the identity of their doity with the ninth nvatar of Vishnn, which they dec are was a mere manifestation of his power. They do not acknowledge a creation of the universe, but assert that it has been destroyed many times and by some extraorlinary operation as often reproduced. They entimerate twenty-two of these regenernted worlds, each of whish was successively governed by Butdhas, and that the present universe has been ruled suceessively by four, of whom Getutumu or Gand ma (whose doctrines now prevail in Ceylon, Ava, Siam, \&c.) is the fourth; a fifth, Maitree Buddha, is yet to come, previous to which this world will be destroyed.

The commandments of Buddha, were originally fire (necessary toward" salvation) but five others were added, which were meritorious but not imperative. The first five are-1st. Not to kill a living creature of any kind; 2nd. Not to steal; 3rd. Not to commit adultery; 4th. Not to speak an untruth on any occa sion; 5th. Not to use intoxicating liguors or drugs The meritorious commands are-net to eat after midday; and not to sleep on costly, soft, or elevated beds, (but on clean mats) or indulge sensually. The others inculcate, generally, virtue and benevolence, and the practice of individulubstinence.

The hearens of the Buddbists ure 26 , placed one nhove another; which together with their hells are described by Mr. Coleman; and it will be scen that there is much need of the light of educntion and Christianity, to remove such itens from the minds of an otherwise intelligent and tine looking race of human beings.-(See History of the British Colonies.)

Protestant Churehes \&e. of Ceylon in 1836. [11. B.]

* At Cotta Divine Service is hell twlee on a Sunday in English and once in Cingalese. At five of the village schools, once every Sunday, at three once a fortnight, and at three others onee a month.

Western Province, 521 Private Schools. Of these, 59 are under the superintendance of the Vicar-General of the Roman Catholic congregation.

Sonthern Province, $f$ Ditto. Of these, is under the nbove superintendance.
Eastern Province, Dif litto. Of these, are under the above superintendance.
Northern Province. $22 ;$ ditto. Of these, 36 are nnder the nbove superlitendance.

Remarks.-(a) The expenses indude 1007. rent of premises, for the acadeny and the residence of the head-master. The academy consists of a high school and a low school; each boy in the high school pays 71. 4s., and each boy in the low school half that sum. All teachers execpit the chief assistant, are paid out of the income of the head master.
(b) The expenses inctude 91 , salary of the keeper of the sehocl.
(c) Paid as Portuguesc Colonial Chaplain of St. Paul's Chureh, $10 \times l$. yearly.
(d) Paid as Malabar Colonial Chaphin of St. Thomas' Church, 108t. yenrly.
( $\rho$ ) The expenses inchude 4l. 10s. sclool rent; recedlework is also taught.
(f) No school kept, the master enjoys lies snlary as clerk of the church at Morottoo.
(g) The trades of tailor and shoemaker are also
taught. The asylum is under the suprinteniance of taught. The asyluan
the King's Visitor.
( $g$ gr ) This school is muder the superintendance of the elergyman of the Duteh chureh.
(h) The expense inclutes 41, 10s. sehool rent.
(i) The expenses include $12 l$. school rent.
(k) Geography is also taught.
( $l$ ) These sehools were established Iately, and no returns have been received from them.
(m) The expenses include 12I. school-rent.
(n) The its adults are non-commissioned oflicers and privates, who also receive instructions in the school at present. They furnish what is required for themselves.
(o) The boys are regularly taken on the streugth of the regiment hy authority from the Deputy AdjutantGeneral, as 1st, 2d, and 3d class boys; when of age they are taken as privates for life, without bumty. Besides the class hoys (in number 1.46) there are io boys and I girl, children of soldiers of the regienent attencing the school.
( $p$ ) The childen of the Royal Artillery in number

12 boys and regiment.
(q) The $($ to give a suj youths sclec the oflice of sionarics. Society in 1 Ceylon.
The books cicty are not those used it the Cotta pre England by teachers are ally made b monthly exa from month Cotta and Ba and needlewo catcchisms of mode of insti to any genera resident miss mar, arithomet cular care is with the Ho mind Christi hoarded and them.
(r) In the : taught, the cl ments of gram most of the sta missionaries pre of learning, wi are paid by a arice and imprer is examined als of this class receive, amom Mission recei verament. As stations, to rai expenses of $t$ total raised for to about sml. leyan Missiona
(s) Many of their stulies in The intellectua School of Scot The hoys are branches of lea different parts much for the a
(t) There art lst. Class ; 20 history, nuative trigonometry, on the Mind. to the Bible, Tamul poctic, 28 stadents, 13 ment of Tamill doo and Englisl dents; liaglish Soul, abridgm Negondoo, elers 40 students ; fi Xegundoo, Fins

12 boys and $s$ girls, attend the school of the goth regiment.
(q) The Christian lustitution at Cotta, is intended to give a superior education to a limited number of youths selected from out-schouls, to prepare them for the oflice of teachers, catechists and assistant-missionaries. Supported by the Church Missionary Socicty in England, and voluntary contributions in Ceylon.

The books supplied by the Chureh Missionary So. ciety are mot included in the sehool expenses, as all those used in the Cingalese distriets are printed at the Cottn press, and most of them are sent ont from Eagland by the Chureh Missionary Society. The teachers are paid according to the proliciency neturally made by the scholars, which is ascertained by monthly examinations, so that their salaries vary from month to month. In the girls' school both at Cotta and Badegamma, reading in the native langunge and reedlework are tanght, and the girls daily repeat ratechisms or lessons from the lloly Seriptures The ande of instruction in the seminary is not necoraling to any general system, but suchas appors best to the resident missionary, Liglish reading, writing, grammar, arithmetic and geography are tanght, and particulareare is taken to make the youths aequainted with the IIoly Scriptures, and to impress on their mind Christian principles. The seminarists nre hoarded and clothed, anc: a liberal clucation given them.
(r) In the schools in which the English language is taught, the children are also instructed in the rudiments of grammar, urithmetic and geography; and at most of the stations there are a few youths whom the missionaries personally instruet in the highor branches of learning, without any remuneration. The masters are puid by a graduated seale, accorting to the it temelance and improvemont of the chitdren. liach solnool is examined almost daily by a visitor, and the salaties of this class of men, exelosive of what the mastors receive, amounted in 3836 , to $207 l$. 4s. The Wesleyan Mission receives no preuniary assistance from goverament. Associations have been formed at all the stations, to raise contributions towards defraying the expenses of the school department, but the sum total raised for this purpose in 1836, amounted only to about kol. The deticiency is made up by the Wesleyan Missionary Society in Finglam.
(s) Many of the boys and girls of this school pursue their studies in Timol in the morning and altermoon. The intellectual system as pursued in the Highhand School of Scotland, has been alopted on this station. The hoys are making rnpid ndvancement in various branches of learning. 'The extension of the system in different parts of Northern India, promises to do much for the adraneement of mative youth.
(t) There ere 1.10 students arranged in live classes : 1st. Class ; 20 students, Companion to the Bible, history, hutive astromomy, Inmal poctic, grammar, trigonometry, surveying, liuropean astronomy, Whtes on the Minl. 2d. Class ; 29 students; Companion to the Bible, English grammar, algebra, Negundoo, Tamul poetic, Grammar, 'Tamul seriptures, 3d Class : 28 students, Bible history, linglish grammar, abriderment of Tamul grammar, algelsra, geog:apliy, Negundoo and English New Thestament. Ath Class: 23 students; Buglish New Testament, Child's Book on the Soul, abridgment of 'Tamul grammar, arithmetic, Neguadoo, elements of Einglish grammar. 5th. Class: 40 students ; first lessons in arithmetic, Phrase look, Negundoo, Englizh instructor, abridgment of 'Jamil
grammar, Picture Detining and Readng book, and Thmul seriptures; the expense of fool, elothing and instruction is $543 \%$. Ihis does not inelude the salaries of the principal and protecsors.
(il) Contse of study: Remding, writing, common arithmetic and geography in Tamm, also sacres mosic and plain sewing; considerable attention is also paid to readins, writing, and speaking the Enclish latigunge. The whole expense for fooll, clothing and instruction is about 2901.
( $x$ ) These ne designed not merely to supply youth for the seminary at Batticotta, but to raise the character of the native schools, by introducing more thoroughly the study of common arithmetic, geography, and the grammar of the Tamml language. These youths in time $i^{t}$ is hoped, will be qualitiod for sehoolmasters in their several villages

In these the monitorial system is introduced as far as it can be applied, the first ohject is to teach the ehiddren to read and write their own language, and to become familiar with the printed chara.te:. Christian lessous, and portions of the Bible are stadied daily in all the sehools. All the children are required to attend at our churehes with their teachers, at least. once a weok.
(y) The readers in each selool are also assombled weekly at the stations to which the school belonges, tor the purpose of reading the seriptures and tracts, and reciting catcehisms and other Christian lessmens. The masters arcalso formed into bible classes, and mect as the chideren do weekly for instruction; they do not receive a stated salary, but are paid aceording to the progress of the scholars, which is ascertaned by a monthly examination. The total mentioned as the expenses of the schools, inelmes not only the wages of the master, but the expenses of the sehool-room, the wages of the superintendants, and the smail presents made to the children. The sebool rooms are used to a considerable extent as places of prenehing.
(z) This is as near to the ammal expense of the different schools as ean be calculated. Tewehers are, some of them, paid acoorling to the number of seholars, and the charges for books and ofher things vary according to circomstancers. The expense of the sehools is almost exclusively borne by the Missionary Society in England. Nothing has ever been reerived from government in aid of the schools.

The Govermment schools are in number about one hundred, of which the far greater part are in the Singalese or marilime elistricts. They were originally established by the Dutch; and, according to Colonel Colobrooke's report, the numbers eduented have heen as follows :-Drotestants, 83,75t; Roman Catholics, 38,155; total, 121,911. Mahomedans, 11, 2.17 ; Boodhists, 78,602 ; total, $93,4 \cdot 19$. The expenditure amounts to about 3,600/. per anmum ; and it is to be hoped it will be extented to the Mahabar and liandyan districts. The sehoolmasters reccive a small stipend of 6i. 6s, per nunum, and they derive furt ber emolmment from fees received tor registering native marringes.

Ahstruct of Ceylon Missioneny Schmels, - Church Missim. - Schools 56 , containing 1,5,5t boys, 25! girls, and 61 adults ; total, $1, \times 69$. Employs nis mative tenchers and assistants, and has printing and bookbinding establishments at Cotta and Nellore. The number of hogs in the Cotta institution is 16 , of whom 11 are Singalese, mul 5 Tammians.

Wesleyan Misvin' established in IN14, and occupying seven stations, has fi5 schools in Singalese, or southern, and 21 in Thmul, or northern, distriets, this:

The return for 1832 shews, in the S . Ceylon district an aggregate of 69 schools, with 2,896 boys, 427 girls, and 104 male and female teachers; in addition to which, the Wesleyans employ 15 salaried catechists, who assist in the superintendence of the schools, and
conduct public worship on the Sabbath days. The Mission has a printing establishment and two presses at Colombo since its formation.

American Mission, has five stations and a high school or college, at Batticnloa, containing 10 students is Christian theology, and 110 students in fuplinh and the elements of sciences; and 22 in Tamm; all on the charity foundation ; besides six day scholars. A female central school at Oodoorille, with $\mathrm{i} \underline{0}$ rirls on the foundation, and 76 native free schools, with 2,206 boys and 400 girls.

Baptist Mission, instituted in 1812, has two stations and 16 schools, containing about 800 children, in structed in English, Portuguese, Tamul, and Singilese, by 20 tcachers; four are female schools. The annual expense of this nission ( $160 \%$. per annum) is almost exclusively horne by the parent society in Enghand.

Roman Catholif: Mission, established in $16 \times 7$, occupies 12 stations, presided over by 12 pastors.

X. Civil Government of Ceylon.-The legislative administration of the island is confided to the governor, aided by a council composed from anong the ullest and most distinguished European civil servants, appointed by the governor or sometimes by the Secretary of State for the Colonies in England; the duty of the council is, however, only to advise and consult with the governor, (who is also commander-in-chicf of the forces) when convoked by him. The governor may pass a law without the concurrence of his cutucil, who, 'f dissentient, record their opinions. Regulations or 1:ws the government are published in the Official Git ment, in order t passed into law ta ne time before their enactublic discussion, and when $\because$...ediate etlect in the maritime siriets on their pultication, and in the Kandyan districts by the govemor's proclanation, subject in buth to the final approval of the King in council. There is a special loard for the administration of the affiars of the Kandyan Provinces, whom the governor is in the habit of consulting peevious to his extension of an cnactment there, which may have been ordained for the lower or maritime provinces, In the maritime provinces the g.vernor is restricted from authorizing contingent disbursements exceeding $75 l$., without the concurrence of the council; but in the Kandyan provinces he orders expenditure on his own control. In his exccutive capacity the governor refers, or not to the council, as he wills, but his proccedings are recorded in the sceretary for government's uffice or in the departnent charged with the exccution of the measure. The regulations of the govenment are p-blished with the translations, in the native langhages, (Cingalese and Malabar), and widely disseminated.
Three classea of persons are enployed in carrying on the business of government : tirst, the civil servants, who are sent out as "writers" from Eingland, minder the patronage of the Secretary of State for the Colonies; there are 25 principal appointments in the island to which thesc gentlomen are alone eligible. the seniors being exclusively employed as heads of departments, in the revenue, as government agents, thiet secretary, paymister, or auditor-general, \&c. \&c. as collecturs of districts and provincial judges and
magistrates. The juniors as assistants to the collectors or magistrates, and in the chief secretary's department. On its present footing the effective civil service consists of 38 members: an acquirement of one or both of the native languages is iodispensable previous to the holding of a responsible situation. The second class is formed of Europeans (not of the (ivil sertice), or their descendants, from among whom are appointed provincial magistrates, (of which rank there are 16 , and clerks in public oflices. The third class comprises the natives, who hold the situations of modeliars (or licuts.) of korles (or districts), interpreters to the courts of justice, and to the collectors' oftices or eutcheries. The modeliars are still recognized according to ancient custom as command. ers of the lascorgos or district militia, although at present chicfly employed in the civil administration of the country, and in the execution of public works. There are, of course, gradations of native ofticers in authority under them; the assistants of all natives are still regulated in a great degree by their caste. Independent of the numerous gorermment 'headinen.' and the titular 'headmen' who receive no emoluments, there are, in conformity to ancient usage, headmen appointed to each caste or class, some of whon receive certain perquisites as the head of fishermen do of the fish caught, \&c. Since 1828 , no ' headmen' have been appointed who could not read and write the English language; and the headmen form a valuable connecting link in the sucial fabric, as well as an intelligent and respectable body of individuals, from among whom the government can select ofticers for the more immediate scrvice of the state The number of principal headmen in the Cingalese districts amount to 243 , in the Nalabar to 112 , and in the Kandyan to 47 ; these numbers do not include the hradmen of villages, who are, of course, very numerous.

The fourth class consists of officers selected from the regiments serving in Ceylon, for the fulfilment of the post of govermment agents or sitting magistrates in the Kandyan Provinces, the duties of which are performed efliciently and creditably opon small salaries in addition to their military allowatices.

Aharitima districts, Land hernuer-[Ceylon BB.
for 1836.$]$-Tax on Padly.-In the western and southern provinces the tax payable to government varies, being sometımes one-half, sometimes onethird, one-fourth, one-fith, or one-tenth of the pro. dace. In the northern nud castern proviness, it is invariably fixed nt one tenth; the tax is levied on the nuthority of immemorial usage, and it is particularly recognized by a proclamation of the 22 nd of April 1803. The tommutation system originally put into practice in the Kandynn districts, has been introdnced in all the divisiens of the western, eastern, and northern provinces, but Manar, and in the Galle divison of the southern province.

Tax on Fine Grain.-This is not levied in the Colombo, Caltura, and Negomho divisions of the western province. It is however recognized hy the proclamation of the 22 nd of April 1803, which imposes generally a tax of one-tenth on the produce of nll high lands, which means lands not adapted to the production of l'nddy. In those divisions where it is not levied, the exemption is in consequence of specin! causes represented to, and sanctioned by government.

T'ax on Gardens.-This revenue is derived from two different sources, from gnrdens belonging to govern. ment, and the government share of Ratmahare, Nil. Inpalln, Mallnpailn, Mottetto, Divile Parveny, and Accommodessan Gardens.

Tithes Redermed.-A measure adopted in Novem. ber 1813 by Government, under the conviction that proprielors of Paddy lands, would cultivate them more carefully, and with greater advantage to the public, if suljected to one tenth only, instend of to the larger rates of tax, mentioned in the first para. graph. The redemption is effected by the owner paying the estimated value of the difference of Tax for eight or ten years, at one payment; under instructions from the Secretary of state, preparations are being monde for the general redemption of the land tax, upon the same principle.

Duly on Padely Fields.-An anmunl duty in money on government lands, cultivnted by the inhabitauts of the Batticaloa division of the eastern province, under authority trom Government, established when the Dutch first gained possession of that district.

Land Customs -Taxes levied at ferries, bridges, canals, and the lock and cart tolls established from time to time, under the authority of Government, according to the ancient Dutch laws. The regulations No. 17. of 1822, and No. 3. of 1831 , protect this source of revenue.

Turnpike at Macoon.--Established in 1829, and levied on loaded Passengers at the rates fixed by a minute of Council under date 22nd Decemher 182 N , this tax was abolished from 1st January 1837.

Sea customs.-These duties are collected under, and agreeably to the directions, of the Regulation No. 9. of 1825 , No. 1. of 1828 , and No. 4. of 1830 , and an ordinance passed by the Legislative Council No. 7. of 1836. The payment of F'ees on Port Clearances and Pilutage under the 59 and 68 chnuses of the regulation, No. 9. of 1825 , is regulated from Ist January 1835, by ndvertisement of the 29th December, 1834.

Cinnamon.-The proceeds of cinnamon, the collection of the plantations, retained by Government, sold under the instructions of the Secretary of state, and the advertisement of the 9 th March . 833, issued therenpon. The cinnamon is put up to sale monthly, in lots of five bales of one hundred pounds each bale, at the upset prices of $3 s .6 d$. for the first, $2 s$. for the second, and $9 t$. for the third sort, per lb.

Receipls for sorting and embating Cimmemon.-

Under this head are brought to account, receipts for assorting and embnling private cimamon lodged in the Government stores at Colombo and Galle, under the superintendance of the officers of government, at the rate of $2 s$. per bale of one hundred pounds; under the advertisement of the 14 th August 18.33.
hicenses.-Arrack aml Tohly.-Tax on the consumption of Arrack and Toddy or the exclusive privilege of retailing Arrack, formed in the severnl provinces, protected by the ordinance No. 5 . of $18: 4$.
Stills.-This tax was first imposed in January 1821, but it was found expedient to lower the established duty, in the proportion of one-third in March 1826, and again to lower it to '2s. a gallon in May 183:2, which is the rate now levied. The ordinance No. \%. of 1834 , protects this branch of revenue.
Sijting Sand for I'earls.- 1 rivilege of sifting sand for pearls, and is rented at Manar atter the pearl fishery is over.

Weishts and measures.-Annual payments to the Colombo cutcherry for stamping weights, and measures, and hire of dry measures established by government under the 3 rd and 7 th regulations of 1816 , and which system has by the 19 th regulation of 1822 , been extended to liquid, and linear measures and weights.

Auction Duty -Government duty of 2 per cent. on moveable property, levied under the ordinance No. 5 . of 1836 .
Fish.-Government share of fish caught in the sea, rivers, lakes, \&c. This doty is rented in the several provinces and was established under the Dateh government from an enrly period. The duty was generally reduced to one-sixth, from 1st Jnnuary 1834, and has been further reduced to one-tenth from 1 st January 1837.
Under instructions from the Secretary of State, an alteration in the mode of collecting this branch of the revenue, is under consideration.
Chank Fishery.-The exclusive privilege of fishing for Chanks, reserved by government from time immemorial, generally rented. The Duteh proclamation of the 28th May 16655 , protects this tranch of revenue established in June 1836.

Sa't.--Recognized by regulation No. 2. of 1818, and was formerly conducted on the authority of custom and orders of the Dutch government. The Ordinance No. 3. of 1836 , consolidates and amends the laws for the protection of this branch of revenuc.
Stamps.-Amount of stamps sold at the several cutcherries, and by the commissioner of stamps, under the regulations No, 4. of 1827, and No. 2. of 1830, which have been revised by the ordinance No. 6 . of 1836.

Judicial Receipts.-Amount of stamps sold in judicial process and paid into the Cutcherrics, by the several district judges throughout the island, according to the tables of fees, established by the supreme court, under the charter dated the 18th February 1833.

Fines and Forfeitures.-Fines levied and sums obtained for articles, confiscated and sold for the benefit of the Crown, by the supreme court and district judges.
Postage.-Island postage on Letters \&c, regulated by the ordinance, No. 8, of 1836.

Pearl Fishery.-Can only be considered as a casual and not a permanent revenue. The regulation for the pratection of the banks and the Dutch proclamations of the 28th May 1665, and the 15th November 1745 , and the regulation $N(s, 3$. of 1811.

Lands and Houses,-Under this head receipts of the following descriptions are brought to account. The monthly rent of Govermment houses and lands occupied by individuals ; the amount of proceeds of houses, gardens, waste ground and cimnamon plantations, disposed of by goverument, and the collection made at the several government rest houses in the isirnd, from travellers or passengers occupying the same.

Assessmint on houses, \& : - This tax is levied from occupants of hooses at Colombo and Gulie, and was tirst imposed in the year 1820. This as well as the tax on bullock carts (both of which are brought to account under one head) are protected by the ordi. nance, No. 4 of 1834, as amended by No. 3. of 1835.

Gorernment Gazettes, \&c.-Under this head receipts accruing from the sale of, and from advertisements inserted in the " Government Gazette." Also from the sale of the Ceylon almanac; are brought to account by the government agent fior the Western province.

Kandyan Districts.-Land Revenue.-The receipts classed under this head, are derived from the tax of one-fifth, one-tenth, or one fourteenth, on the Paddy (Rice) lands of private proprietors, which is imposed by the 18th, 19th, and 20th clauses, of the Proclamation of the 21 st November 1818, and from the royal lands still possessed, unalienated by the Crown, by a tax varying from twenty-five to fifty per cent. of the produce, which last mentioned lands are annually rented.

In the central province the tax on private property, had till 1826 been exclusively levied by an annual assessment of the crop of each harvest, not had chietly been collected in kind, Within the last eight years in the districts ndjacent to the town of Kandy, this anmul assessment has been commuted, with the consent of the proprietors, for the annual payment of a given quantity of grain, without annual assessment till the end of the year 1830, and that system has been further improved within the last six years, by giving the proprictors the option of paying that commoted fixed assessment, either at a fixed money rate, or in kind. The stimulus given to industry in the aforesaid districts by the completion of the carriage road, between Colombo and Kandy, and other channels of communication have induced and enabled the proprictors to pay that commuted tax since 1831, almost exclusively in money. From the double advantage of an increase in the amount of the tax, and of the saving of the charges of ammully assessing, transporting and storing the revelue grain, a nett increase of upwards of one hundred per cent. was derived under this head, in those commuted districts as compared with the revenue, obtained under the former system, and the proprietors have at the same time been protected from many disadvantages and grievances insuperable from the former system of annual assessment. The term of the first settlement having expired with the year 1832 , the proprietors had the option of either renewing the settlement on the same conditions, for another term of three years, or of reverting to the former system of annual assessment. The renewal of the commutation assessmer:t was accepted throughout the former commuted districts. At the end of 1835 , the renewed commutation also expired, and a notice was issued, that the assessment may either be renewed, for a term of twenty-one years, or that the tax may be redeemed in perpetnity, by paying ten years purchase of the commuted annual
tax. The permission to refleem has been accepted to some extent, each of the proprictors as were not prepared to redeem, have accepted the commutntion assessment for the term of twenty-one years. The commutation system of obtaining for a term of years, a fixed annual payment in grain or money, without assessment of crops, and of renewing the term as it expires, likewise prevails in the kandyan portion of the weatern, southern, castern, and northern provinces.

Land Customs.-The only receipts under this head are those derived from the ferry and bridge toll rents, which are levied under the regulation No. 3. of 1831.

Licenses.-Tax on the consumption of arrack, or the exclusive privilege of retailing arrack protected by the ordinance No. 5. of 1834 .

Auction Duty.-This head requires no explanation beyond what is given above respecting the maritime districts.

Stamps.-Judicial Recript.-Fines and Forfeitures. - Postage.-These heads too require no further ex. planation.

Statement shewing the Amount of Customs Duties collected in each Port during the year 1836.

Expenditure.-From the time of our acquisition of this island, its revenue has been inadec(uate to meet the expenditure, whether wisely or unnecessarily incurred. Certainly much of the expenditure arose from causes which now cease to operate-namely, internal war with the Kandyans, and, in consequence of hostilities in Europe or British India; even at this moment, a larger military force is kept up in Ceylon than is required for the mere protection of the island, in consequence of its being the Malta or Gibraltar of our castern possessions. The following abstract was laid before the linance committee of parliament in 1828.

Shatement shewing every dracription of Currency in the Cash Chests of the Gencral 'ireasury and severn Cutherries

Amount of Paper Currency in circulation. [B. B. 1836.] 40,715 notes of 11 . each, 40,7151 .; 18,375 notes of $2 \%$. each, 36,7506 ; 1,274 notes of $5 l$. each, $6,370 l$. ; 213 notes of 10 . each, 2,1304 . ; 38 notes of 20l. each, $760 l$. ; 27 notes of $25 l$. each, $6756 l . ;$ total, 87,4001 . The value of the paper currency is the same as that of the precious metals in circulation, the same
being always exchanged on demanal at the treasury. I'he guarantee of the Governor for the time being, under the sanction of his Majesty's ministers, is the security on which the paper depends.

On the 31st December, 1836, the amount of paper currency in the several Treasuries of Government was as follows, viz.: Pound notes, as per statement,

25,915t. The amount of precions metaly in eirculs. tion has heen estimated at $157,3 \% \cdot \mathrm{~N}$, The amomet of paper currency is 87,100 t, Probable excess of pre. clons metals beyond paper currency, 69,724l.

Rute of Euchumap, - Fistablished by Covermment order of 7 th July, 1825 : With England (a) 1 s , Gid, per rix dollar; with Madras © 1s, Ild. per rupee; with Bombay (al 1s. $11 \%$, per rupee.
Established by Government order of 7th July, 1825, and 4 th Angust, 1836 : Witlı Calcutta (ii $2 \mathrm{~s}, 1 \mathrm{~d}$. per sicca rupee, ant 100 siccas per $10 i_{i}^{2}$ Company's rupees.

Established by Government order of 7th July, 1825 : With the Mauritius and l'enaug (a) 4s. $4 / l$. per Spanish dollar.

The rates of exchange with Grent Britain and foreign countries have been fixed according to the relative value of the Ceylon rix dollar to the British and foreign coins. The rate of exchange has been the some from January to December, 1836, as lixed by the above orders of 7th July, 1825, and th August, 1836.

Coins.-Guld coinage: Sovereigns; lualf ditto.-llritish silver coinage: Crowns; half ditto; shillings; six-penny pieces; rix dollars of English coinage, value ls. Gul.-Foreign silver coinge: Spanish and Ancriean dollars, value $4 s, 2 \cdot l$; sicea rupees, value $2 s$. ; Compnny's ditto, value $2 s$, ; llombay ditto, value 1s. 10d.; Madrus ditto, value 1s. 10d.; Madras quarter ditto, value $5 \frac{1}{2} d$. - Copper coinage: Penny pieces; half ditto; larthings ; half ditto ; two pice pieces ol English coinage, value $\frac{3}{4} l$. ; one pice titto, value $1 \frac{1}{2} d$. ; half pice ditto, 3u.; Dutch copper challies, taken as prizes in Kandy, value ${ }_{2} d$.

The value of the British silver and the rix dollar must have been fixed by assay in England, None of these coins have been cut, pierced, or defaced. The Madras quarter rupees imported expressly for circulation in the island, have received the impression of a crown, but not otherwise altered.

Weights and Meftsures, - The Singalese, or dry measure is 4 cut chundroons $=1$ cut measure or seer; 4-5ths $=1$ coornic; $21-12$ ths $=1$ maresl; $2=1$ parrah; $8=1$ ammonam ; 9 3.8ths $=1$ last.

The internal measure of a standard parrah is a perfect cube of $1157-100$ th inches; the seer is a perlect cylinder-depth 4.35 inches, diameter 4.35 inches; the weight of the parrah measure, according to the custom-house serount is, for coffee, from 50 to 35 lbs. ; pepper, 27 to 50 lbs ; salt 52 to 55 lbs ; paddy (unhusked rice) 30 to 33 lbs ; rice 42 to 46 lhs ; the Candy or Bahar $=500 \mathrm{lbs}$. avoirdupois, or 461 lbs . Dutch troy weight.

Kandyan Measure of Surface. - Eight lahas $=1$ coornic ( $10 \quad 15$-1 Gths square perches), $10=1$ peyla ( 2 square roods, 298 square perches), $4=1$ ammonam ( 2 acres, 2 square roods, $37 \frac{1}{2}$ square perches). But although the average extent of one ammonam is found to be 2 acres, 2 roods, and 2 perches, the measurement of land is not caleulated for the specific area, but from the quantity of seed required to be sown on it, and consequently according to its fertility.

Weights of ozs., lbs., \&c. are used nlso throughout the islond, British standard. The bale of cinnamon consists of nearly $92 \frac{1}{2} \mathrm{lbs}$.

Liquid Measure.-Gallons and their multiples and sub-multiples: 150 gallons $=1$ leaguer or legger.

Monetary System.-The circulation of late is $£ . s$. nnd $d$, as in England, and accounts are becoming more generally kept in the same. The rix dollar is equal to 1 s .6 d .; it is divided into 12 finama (a thick
copper coin), and each fanam into 4 pice. There is a government bank at Colombo: but I can oltain no returns of its circulation or teposits. Notes are issued by goverument ; but no aunuat returus are published of the amount, nor la there any information within the reach of the Colonial Onfe, in Downing Street, as to the real state of the paper and inetallic circula. tion in the island. It is proposed to eatablish a private bank at Colombo, A savings bank is now lin ope. ration.

## Measures.-Dry Measure.

The parrah measure is a perfect cube of internal dimensions, a table of which, with its sub-divisions, is herewith inserted:-
Internel dimensious of a parrah and its suh-diri. sions. - Parrah, length, 11 57-100th inches ; depth, ditto: Hrcadth, ditto. Half parrah, length, 9 18-100th inches ; depth, ditto; breadth, ditto. Quarter parrah, length, 7 28-100th inches; depth, ditto; breadth, ditto.
The seer is a perfect eylinder, of the depth and diameter described in the table underneath, in which is also stated its sub-divisions:-

Internal dimenyions of a Sper and its sub-divisiona. -Seer, depth, 4 35-100th inches; diameter, ditto. Ilalf seer, depth, 3 45-100th linches diameter, ditto. Quarter seer, depth, 2 74-100th inches; dianeter, ditto.

ness all over the island. Carda nom plants are iqually plentiful. The much sought after arecanut is of the finest succies, and unsurpassed, may, cven uncpualled in any part of the cast. The rice of Cey. lom has a richmess of thavour I have never found in any other eountry. 'Teak forests abomid and excellent masts and yards of the largest size are everywhere procurnble. Calamander, ebony, satin, rose, sappan, iron, jack, ©e., und every speeirs of the most beautiful cabinet making woods, are in rich profusion (ride Ceylon cabinet desks, dressing-cases \&e., so much and so justly udmired in linglabd), Enchanting groves of the Dalmyra palms surround the villages in the northward of the islnend, and like the cocon palms in the south, ure of the greatest value to the feasatry in seasons of draught.

In 1831 it wa calculated that there grew along the coast between bondra Head and Calpentyn (184 miles) ten millions cocoannt tres. The value of these may he julged by an enumeration of some of the articles propared from them.

1. Arw'k (the spirit muder this name, made from the cocoanut blossom, is far superion to the Butavian artack, made tron rice) which is distilled tron the swer jnice of the ineised thower-stock, termed-
2. 'Todily,' in itself' a delicious wholesome beveraye, when drank frest drawn before the morning sun has caused fermentation to commence.
3. Jughery, a conisse, strong grained, but peenliar thavoured sugar (well maphed for erystallization, or refining in linglame), made in abmodane from toddy.
4. Jimerar equal to any male from white wine, also prepared fron the toddy, and used in making esquisite piekles trom the sobing shoots.
5. Coir, or ropes, strong and elastic, and having the preular property of hemer best preserved for use in sea-water (hence their adaption for mooring, and other purposes to which they are now applied in Manritius harbour and elsewhere, as also for roming roging in the India shipping).
t. Brushes antl brooms, of various descriptions.
6. Maltiag of exeeflent quality.
*. Ratters for houses,
7. Oit of much value, and now used in binglant for candles as well as lamps.
8. Gutters or water-spouts, or conveyances, for Which the hollow stem or trink is so well adapted,
9. Thatehing for the peosants' cottages, the shady broad leat being admimaly suited for the purpose.
t?. Alkalme ashes for the burnt leaves, tund used hy washermen.
10. The roots are sometimes masticated in place of areca nut.
11. laskets of the young shoots.
12. Drums of the crist of the trunk.
13. Reticulated cloth cralles or couches for infants.
14. The termilual buds, used insteme of cabhage.
15. Translucent lanteriss of the young feaves.
16. Tablets for writing upon with an iron stylus or pen (after the Roman mamer), from the leallets.
17. An AEolian harp of the stripes of the leat.
18. Stuthey (coir), in plate of hair, for couch cushions, muttresses, sadilles, die.
The list has been extended to 99 dillerent artieles. It may also be mentioned that the natives of the Maldive islands seml an anmual embassy to Ceylon, the hoats conveying whom are entirely prepared from
this tree, the persons composing the entbassy, clothed and fed on its products; and the numerous presents for the Governor of Ceylon are all inanulactured from this yuell of palms.

The laurus rinnamonum, although cultivated in many tropical places, has its principal habitation nt Ceylon, which is eapoble of yielding a sulficient supply for every country in Europe; the tro whence the eimamon hark is derived grows to the heifht of from $t 5$ to 20 fect, with an irrecular and knote's stem, branchy and ligneous roots, tibrous and inodorous wood, erfernal hark, roush, thick, seabrons, and of an ash colour, inner bark reddish, (the youmg shoots areotiten delieately speckled with dark green and light orange colours) ; branches umbrageous inclining horizontally and downwards; leaves ohbong and in bairs, from six to nine inches in length, and three broad, petiolated, colour dark groen; Howers elastered on whe petumele, white, wanting calyx, smell resembline a mixture of rose and lilac; frit an oval berry, larger than a biek corrant, receptache thick, green and hexaugular. Whe roots have the pungent smell of eamphor, and the delicions odomr of cimamom, yidding emmpor by distillation, the leaves have the pungent taste of cloves: the berries, by boiling, yield an unctuons substane like was, comitting an agreeable odour, and formerly used as cambers for the exclusive use of the C'madian Court. Cattle of every kind amerly fed on the luvarinnt foliage while pigeons, erows, nad other birds, desour the berries with nvidity. 'To the industry of man belongs the bark, the varicties of which are depeodent on the mature of the soil, on the skill in cultivating amd peeling, und on the age and healthiness of the plant. Nbout 2,000 aeres of land are laid out in regular cimamon plantations in Ceylon, and about 30,000 persons employed thereon. The predine of the hark begins with May and and emes with October: the peders (chalias a distinet caste in Ceylon) commence the process by striking a sharp bill-hook into a shoot which secms tit for peeling; if on opening the gash the bark separates gently, it is tit for decortication; if otherwise, the shoot is mhonlthy, the gash is carefully closed, and the sucker left for future examibation; shoots thas found fit (gemerally from three to tive feet lone, and threegharters of an inch in diameter) are then cit down, conveyed to sheds, and there cleared of leaves and twigs; by menns of two longitudinal slite the hark prels ofl' in two semi-cireular slips; when a suthicient number are collected, the sections are plaed in close contact (as two guill-halves would be lait one within the other) and the whole lomalle is firmily pressed and bound up together for 21 hours, until a degree of fermentation is produced, which taeilitates the removal of the cuticle ; subsequently the interior side of cach section ol hark is placed upon a comvex piece of wood fitted to its size, and the epidermis, together with the green suceulent matter enrehilly scraped ofl (i) any of the outer pulpy substance be allowed to remain, the cimmmon has an umpleasmat bitterness) ; a few hours after the removal of the euticle, the piecess are again placed in eacls other, and the bark in drying gradu. ally contracts and rolls itself into a quill-like form. During the first elay it is placel umber shetter o: open platforms, subsequently it is tinally dried in the sim, and made up into bundes about 30 pounds weight. A plantation reguires seven or cight years' growth before yielding prodice, the tree is loast advantageously propagated by seds,-layers and shoots, or trmisplanted stumps, are the best means of extend. ing the growth.

* The duty on Importation is Gd, per lb.

The pearl hanks, aceording to Dr. Ruschenherger, are formed by coral ridges from six to ten miles off ahore : their general depth is from five to seven fathoms, but it is on the banks of Arippo, where the cosal rising nearly to the surface of the water forms a shelter against the violence of the monsoons and currents, that the pearl oyster chiefly arrives at perfection. The young oysters, when they first escape from the egg, are seen floating about the sea in immense clusters; a little inerease in size and solidity makes them sink to the botton where they inmedi ately attach themselves to the roeks by means of a beard and a glutinous matter secreted from it. There they remain in security until age has enfeehled the fibres of their beard, or deprived them of their adhesiveness, and then they drop from their coral supports and lie in heaps on the sandy bank beneath. The pearl-divers any that the oyster is about six years and a half old when it drops from the roek; it is supposed to arrive at periection in seven years, and to die soon after. During their elinging period they accumulate on the rocks in henps, sometimes is inches or two feet deep. The hest pearls nre generally found in the most Heshy part of the oyster, near the hinge of the shell, but they are not confined to any part of the fish. Instances have oceurred of a single oyster containing above 60 pearls; yet the rarity of these treasures is manifest from the fact that oysters cost less at Arippo during the fishery than at Faverahain or Colehester.

During the calms of November the bnnks are examined by experienced officers, und samples of the oysters are forwarded to the srat of governinent. If the result of the cxamination prove favourable, then the fishery is announced by an alvertisement, stating when and on what bauk it is to take place, how lons it ia to continue, and how many boats will be allowed to engage in it. These honts are of very rude construction, generally lrom eight to tifteen tons burden, and without deeks. They leave the shore nt inidnight, favoured by the land winds, and anehor near the government guard-vessel and the fishing bank. A little after dnwn in the morning a sigual is given for the diving to hegin, and a gun is fred at noon, on which it ceases. The following description of the mode of proceeding was procured by I)r. Rusehenberger, on the spot.
"The crew of a boat consists of a Tiudal or master, ten divers, and 13 other men who manage the boat and attend the divers when fishing. Each hont has five diving stones (the ten divers relieving ench other);
five divers are constantly at work during the hours of fishling. The weight of the diving stone varies from 15 to 25 lb ., nccording to the size of the diver; some stout men tind it nececsary to have from 4 tas lb . of stome in a waist-belt, to enable them to keep, at the hottom of the sea, to fill their net with oysters. The form of a diving stone resembles the cone of a pine; it is suspended by a duuble cord.
"The net is of coir-rope yarns, is inches dopp, fastened to a hoop is inches wide, frirly slung than single corct. On preparing to commence tishing, the diver divests himself of all his clothes, except a small piece of eloth; after offering up his devotions, he plunges into the sen and swims to his diviurg stone, which his attendants have slung over the side of the bont; he places his right foot or toes between the double cord on the diving stone-the bight of the cord being passed over a stick projecting from the side of the boat; by grasping all parts of the rope he is ennbled to support himself and the stone, ant raise or lower the latter for his own convenience while he remnins at the surface; he then puts hi, left tuot on the hoop of the net and presses it agninst the diving stone, retnining the cord in his hand. The attendants take care that the cords are clenr for ruming out of the hoat.
"The diver being thus prepared, he rnises his body as much ns be is able; drawing a lull breath, he presses his nostrils between his thumb and finger, slips his hold of the bight of the diving stone, and descends as rapidly as the stone will sink him. On reaching the bottor. he abundons the stone, which is hauled up by the attendants ready to take him down again, elings to the ground, nud commences filling his net. To aceomplish this he will sometume's ereep over a spnce of cight or ten fathoms, and remain under water a minute; when he wish's to ascend he checks the cord of the net, whieh is instantly folt by the ntteudauts, who commence pulling up as fast as they are able. The diver remains with the net until it is so far clear of the bottom as to be in no danger of upsetting, nud then begins to haul himsell up by the cord hand over hand, which the atteldants are likewise pulling. When by these mems his body has aequired nul impetus upwards he forsakes the cord, places his hands to his thighs, rapidly ascends to the surface, swims to his diving stone, and by the time the contents of his net have heen emptied into the boat he is ready to go down agnin. One diver will take $u p$ in a day from 1,000 to 4,000 oysters. They seldom exceed a minute under water; the more cominon time is from 53 to $\$ 7$ seconds, but whes requested to remain as long as possible, they ean prolong tneir stay to something inore than N 0 seconds. They are warned to ascend by a singing moise in the eara, and tinally by a sensation similar to hiecup."

The tivers have much faith in the powers of the shark charmer, and many of them will not descend unless he be present: he is therefore paid by government. One fourth of the oysters taken up belong to the divers, the remainder are disposed of by publie sale. The annual nett revenue derived from the pearl fishery is estimated at 14,0001 . ; but in 1833 , when no leas than 1,250 divers were employed, it amounted to more than 25,000 ?

There nre no regular manufactories, mills, \&c., in |the army, and the public offices, containing the oflicial Ceylon, those entered in this return beng, with the records ol the island; it forms a strong hold in the exeeption of the two stem cougines (set up by a mercantile house at Colombos of a very inferior deserip)tion. There is also no regular yard for ship, buidding ia the island, small sloops and schooners are however occasionally built. The description of fish and quantity of each are not stated, mostly all of them bearing native names.
Military Defences of Ceylon in 1836. - The fortress of Colomioo, situate on the west side of the island, is an irregular octagon, defended by eight bastions; the lines of detence fichante, with threc insignificant ravelins. One half of the fortress is surrounded by the sea, the other half or land side, by an exteasive inturdation, leaving only two narrow canseways of approach. There is a covert way to the land fronts; the glacis, however, was never tinished. The revetments are of mnsonry generally composed of cabrok and lime mortar, and are (with some exceptions) in tolerable repair. The profile, from having a wet ditch in front, is respectuble, the ditches are broad, well supplied with water from the inundation, and when cleaned would be sulficiently deep. There sre neither casemated barracks, nor casenated storehouses within the fortress. The wells afford alightly brackish water, but the water fails on a contmuance of dry weather. There are several powder magazines within the fort, the whole of which are in a serviceable slate. The fortress commands the harbour, into which none but vessels of small burthen con enter; it cannot be saill to commund the rondstead, because ves. ids may anchor with safety from one to fifteen miles from the shure; it encloses within its lines of defence the residence ol the governor, the head quarters of

Althourh the trace of the body of the place does not conform to the science of more moden war, being of the days of loonis XIII., and necording to the system of the Chevalier de Ville; still, if good outworks were added, and cascmated cover for troop's stores constracted in the body of the place, and the ramparts \&c. placed in an efficient state of repnir, Colombo, from its situation, und the great ditliculty of njproaching it by land, ought, under an intelligent and intrepid governor, to make a protracted defence; with a naval superiority, the fortress could, umder nny land attack, receive succour from the sen. Trincomale, the principal British naval depot in the Indinn seas :-Fort l'rederick, Trincomale, is situated on the enst side of the island, and on a peninsula, projecting into the Indian ocean. The works of defence consist of three irregular tronts, with the lines of defence fichnute, a cavalier and a citadel, without either casemated barracks, or casemated store-houses ; one front with an unfinished ravelin, oceupies the narrow isthmus, the ditches of this front are dry, und have never been finished; the two other fronts follow the direction of the ground. The cavalier stands on elevited grizand, in rear of one of the bastions of the lnul tront, and is comnected with the bastion by a curtain. The citadel is in rear of the cuvalier, and on still more clevated ground. The prolile has 20 feet of escarp, but the revetments ure of good masomry. The fort is well supplied with water. There ure also several powder magnaines within, which are in a serviceable state.

Fort Osnaburg, Trineomale, situated ut the mouth
of the inner harbour, is a small irregular work, and does not sufficiently protect the entrance; its profile is insignificant without casemnted barracks or store-houses. The fort is supplied with rain wnter, collected in a tank, and has two powder magazines within it. The works of defence now in existence at Trincomale, nre far from adequate to the secure holding of a port of such great importance.

Galle.-The fortress of Galle situated on the south side of the island, and on a peninsula projecting into the sea, commands the only harhour on that side of the island, into which large ships can enter, but it is commanded by a range of hills about 700 yards distant. The lines of defence on the land side, or across the isthmus consist of one bastion with a cavalier, two half lastions with fausse lrays, and two curtains containing each half bastion with the whole hastion, with a half finished diteh in front of the whole, but without casemated harracks or store-houses. The salient angles of the half bastions are appuyed to the harbour and sea. 'The construction of this fort does not follow any regular system. The remaining defences consist of substantial lines buitt on the edge of the outlue of the peninsula, the base of which is constantly wnshed by a heavy surf. The protile is irregulnr, in some parts bold, but from the small height of the faussebraye, requires a wet diteh in order to guard against escalade. The revetments are composed of rubble stone and coral laid in lime
mortar, nud are in tolerable repair. The fort is also tolerably well supplied with water, and there are four powder magazines within it.

Jaffina.-The fort of Jatlina is situnted on the N. W. side of the island, and on an inlet of the Gulf of Mannr. The work is an irregular pentagon, with five bastions connected by curtains, the lines of defence fiehante, and the flanks perpendicular to the curtains, it has four land and one sea front. The former have ravelins, a covertway throughout. With the eveep. tion of the ravelins, to which there is none, the com. munication passing by gallery under the flanks of the ravelins, also a glacis. The body of the place has a wet diteh, but the ravelins a dry one. The profite has 22 feet of escarp, above the level of the wet ditch the revetments nre of masonry, and in a grod state of repair. The fort contains 25 wells, two of which give good, and the remainder brackish water. This fort affords security to a small garrison, stationel in n remote part of the island, and surromuled by a dense native population. Independant of the above four principal posts, there are detached ones on the const, generally with small garrisons, and a field work for their protection. In the interior of the island, the principal post is Kandy, no open town situn'ed in a valley, with four untinished redoubts on the surrounding heights. The militnry works are controuled by the colonial government, and scarcely any expense has been incurred by the colong during the year 18.36

## CHAPTER III.—PENANG, OR PRINCE OF WALES'S ISLAND.

The possessions now abont to be describel, though small in comparison with those delineated in the preceding pages, are of coneiderable importance, whether viewed in connection with the Anglo-easters empire, or separately as commercial stations or poli. tical maritime positions. Beime under one government, their history is given in one chapter, but their di sinct features, geographically and mercantilely, demond a separate consideration for each: to begin :vith the sent of government.

Section I. This pictureseme island (so well adapted for a commercial entreport, is situate on the west coast of the Mabvam penimsula, in latitude from 5. 15. to i. 29 N. mind longitude tuo. E.; its grentest length is 10 stat $:_{i} 2$ miles from $N$ to $S$. , and its greatest treadth 12 miles at the worth, and decreasing to eppht miles at the south, thus forming an irregular four sided shape, with a range of bofty hills in the centre, the whole computed to contain 100 siguare miles. Penang is so eabled from the Malay term for the Areen or betel nut, which the Malays think the isle bears some resemblance to in shape.

The valley of Perang, about three miles in brendth, is the level part of the island on its custern side, extending from the hills to the sen. of a triangular shape, the ranges of mountains forming the base, and the apex, called Thojoner, jutting into the harbour, and having Georgetown (the capital) nud the Fort of Penang huilt on it, of which, for three miles in crery direction from the point, private houses extend. Almost the whole of the morth of the island is motutainons, nad through the centre of the island rans a range of hills, deereasing in height and magnitude as
they reach towards the south. On the west and south of the mountains there is a consideralle fitantity of level ground of good quality for every species of cultivation as is now demonstrated by the gencral enlture thereof. Indeed six-thirds of louang is of level or gentle inctination. The enst, owing to its moistness, is covered with rice fields. 'The south and west vallies, though partly cultivated for the same purpose, are chicfly laid out in pepper gardens and spice plantations. Everywhere close to the coast, $\mathrm{n}^{\circ}$ in Ceylon, rims an extensive belt of cocon nut trees, and scattered over the island in various grouns, apprar groves of the graceful areca palm (or Penang) from which the iste takes its Malay name. The hills and low grounds, where not cultivated, are thickly covered with wood. Vegetation is splendidly luxuriant and for miles and miles the ege rests on one dense mass of mountain forest. Besides Georgetown (the capital) nbove alluded to, there is only one large collection of bonses entitlad famesturn, situated on the sen shore, four miles to the south of the capital, amidst a grove of the lovely palm tribe. The hill called the "Higho lomes of Scotlend" is $\mathrm{t}, 12 \mathrm{t}$ feet abose the sea (and like the other stntions), the sitnation mud climate of which are delightful, Numerous small villages and Malay topes are seattered over the ishand (especially on the south side), often beautifully and romantically situnte on the coast, or amidst spice groves in the vales.
The harbour of George Town, the capital, is capacious with good unchorage and well defented; it is tormed by $n$ strait nbout two miles wide, that separates Penang from the opposite (Quedab) const on the Madayan peninsula. The sea is phaced throughant
the year, and th little felt, the win of land and sea b

## PENANG．－GEOLOGY，CLIMATK：，POPULATION゙，

the year，and the periodical effects of the monsoons months，and November and December the rainy
little felt，the winds partaking more of tine character of land and sea breezes．
II．When first koow to Furopeans the island ap－ peared quite untenanted，covered with forests and considered as a part of the possessions of the king of Quedah on the contiguous const．In 1785 Cipt． light，the commander of a＇country ship＇in India， having married the King of Quedah＇s danghter，re－ ceived a gift of the island as a marriage portion： Capt．Light transferred it to the E．I．Company，who having entered into a treaty with His Quedah Majesty （which was to last as long as the sun and mom gave light 1）agreed to pay six tha mand dollars annually to the King，which in 1800 was raised to ten thour－ sand，in consideration of the Company receising the Wellestey province on the main land opposite Penares， a territory exteuding thirty－five miles along the const， four miles inland trom the S．bank of the Qualla Mudda to the N ．bank of the Krian river，lat $5^{0}$ $90^{\circ} \mathrm{N}$.
111．The mountains are entirely composed of fine grey granite，and the smaller hills are of the same material，excepting some hills near the const formed of laterite as is also Saddle Island on the S．W．angle of l＇enang．A tin mine was worked some years ago in the hills，and doubtless many valuable minerals exist in the mountains，which are probably equal in quality to those of the contiguous Malayan Peuinsula．
The soil is generally a light black mould mixed with gravel and clay，and in some parts there is a rich weetable ground formed by the decayed leaves of the forests with which the island had for ages heen co－ vered，the coast soil is sandy but fertile．
1V．January and February are the dry and hot ones；but excepting the two former the island is selfom a weck withont refreshing showers．The thermometer on Flar－stati hill（two thousand two huntred and forty－eight feet high！never rises beyond $78^{0} \mathrm{~F}$ ．（seldom to $7 \mathrm{l}^{\circ}$ ）and falls to $\mathrm{fif}^{\prime \prime}$ ；on the plain it ranges from $76^{\circ}$ to $90^{\circ}$ ．The island is considered remartably healthy．＇I＇lue climate ot the high land of Penang resembles that of Funchal at Mateira，pos－ sessing the advantage of a very limited range of ther－ mometer，the greatest range in the twent y－tour hours being $11^{4}$ ，and generally only three or foor．The lightness and purity of the atmosphere elevate the spirits and render the step free nul buoyant，while the splendid and varied seenery，the island itself with its hills and dales，the falm occan around studded with verdant isl＇s，and the opposite coast of Quedah with chains of mountains towering chain over chain， combined with the health inspiring breezes，render a resitence among the gardens of lenang of much value to the invalit．

V．When the Company＇s Establishonent was formed at Penang in 1786，the only inhahitants were a few miscrable tishermen on the sea coast．In consequence of the disturbances in the Malayan principalities，and the eneoragement given to settlers by the di．I．Com－ pany，a mative population of various descriptions arose．The population of the Settlement according to all the returns before me has been as follows fluting the years

| $1 \times 21$ number $38,057$. | 1826 number $55,116$. |  |  |

7，19，876

The value of imports in sicca rupees from Calcutt was $10,94,986$ ；from Madras， $16,95,850$ ；Bumbaz 2，65，290；Eugland，1，67，670；China，2，18，440； Sian，1，77，610；Tenasserim，1，77，010；Acheen， $8,08,513$ ；Delhi（a petty atate on the Sumatra shore） $2,0-1,905$ ；and Quedah，2，21，200；the exports value to the same places in succession were $3,57,126$ $2,38,765$ ；2，30，146；50，668；9，65，834；96，093； $1,55,152 ; 10,75,842 ; 1,58,930$ ；and to Quedah， $1,35,930$ ．

Of the importa，opium alone consists of upwards of seven lac of rupees；the other items are comprised of the various produce of the Straits，or of ladia and British goods，the trade being one of transit．Birds＇ nests for Chinese soups is one of the most important articles．

From official statements of the Penang trade fot the years 1834－35 and 1835－36，it appears that the value of the Imports for $1834-35$ ，was Sa ．Rs． $41,12,791$ ；and that for 1835－36，Sa．Rs． $41,17,694$ ， exhibiting an excess in favuur of the latter year of Sa．Rs．4，903；that the exports for $1834-35$ were Sa ． Rs． $41,61,464$ ，and those of $1835-36 \mathrm{Sa}$. Rs． $42,06,758$ ； an excess in favour of the latter ycar of Sa．Rs． 45, e94．The imports under forcign llags for the
official years 1835 － the Portuguese fla 21，062；Americun 7，6ix；making at ports during the s flag were Sa．Rs． Fruch，Sa．Rs．6i， of Sn．Rs． $3,89,9$ ported between 30th April Is：36，i the quantity expor $x, 25,29 \%$ ．
Vill．The botan at the mountains red joon，dammert some superh sper cautchone or ela in a spiral form． isecption of the der sugar cane and pep （the quantity ol ${ }^{\circ}$ $1119.2,025,1000$ avoir well（the former co mits，the latter are one plantation alon spuare miles）colliee if pine apples of de

Srction 1．－Near long Malaynu penins with an average bre： two degrees 14 minut to minutes east，is si Malacen，extending a inland，and containin mounded on the north on the south Jchore， by the Rumbo coun straits of Malacea．
11．The sea coast is islets of cavernous ru places of sepulture． （being a continuatio ruas from the Brahi extremity of the penit vallies，the highest in l．caldang，by the P＇o elcration of 4,000 fee quhar was nearly six part of Mount Ophir， which docs not exced mountain appears to 1 and there thinly cover Stunted firs are fou regetation of the mou that net with on the pal rivera are the Mua streains and rivulets numerous．The extr cluster of small islands south－west monsoon 16 fert of water are se of the fort．Colonel tacea his study） $0^{\text {ha }} \mathrm{er}$
official yenrs 1835-36 are thims particularized. Under the Portugnese flag, Sn. Rs. 2,00,1:33; French, Sn. Rs. 31,062 ; American, Sa. Rs. 1,920 ; Danish, Sa.Rs. 7, fink; making a total of ..... Rs. 2,32,773. 'The ex. forts during the same period under the Portugnese llag were Sa. Rs. 3, 83,991; and under that of the French, Sa. Rs. 6,000; msking an argregate amount of Sa . Rs. 3,89,991. The trantity of specic imported between the 1st of May 1835 and the 30th $A_{p r i l} 18: 36$, is valued at Sit. Res. 9, dil, 500), and the fuantity exported in the same time at Sa. lis. $8,20,295$.
VIII. The botany of the island is rich and varied : on the mountains grow the poon, bitanger, rangas, red poon, thamerlaut, wood oil tree, the cypress and some superb species of arborescent ferns. The cauntchouc or elastic gum winds round all the trees In a spiral form. All the Malacea froits, with the "sepption of the duk", grow in great abundance, the sugar cane and pepper vine are extensively cultivated (the quantity of pepper annually produced nveraged lis. 2,02:5,000 avoirdupois) eloves and nutmegs thive well (the former cover the tops of the eleared summits, the latter are found in every part of the valley, one plantation alone oceupying a space of several suare miles) cothee yiehls aboundantly, extensive fields of pine apples of delicions gout are found at the foot
of the mountsins; the ten plant grows wild ; ginger, cimamon, cotton, tobaceo, and in fact every intertropical production is capable of being bronght to the highest state of perfection.

Beef, motton and perk are of excellent tlavour, and the hazar furnishes a great varicty ol tish.

In $181 \%$, the bearing nutmeg trees on the islnnd were estimated to be bigoo. Since that period spices have been more extensively cultivated. There are now upwards of thirty spice phantations at this settlemesi, including l'rovince Wellesley, and these may be classed as follow:-
live plantations containing from 1000 up to 20,000 treses.

Eight from 500 up to 10,000 trees.
Scventecus from 50 up to 2000 , containing in the argregate about $\times 0,000$ trees, of which number Fri,000 are estimated to be in bearing. Whem Bencoulen was ceded to the Butch, the plantations there were estimated to contains 25,000 bearing trees only.
The gross anmual produee from the plantations may be roughly estimated at 1330,000 the., but young trees are yearly coming into bearing to swell this quantity ; should the enltivation meet with no scrious interruption, it may perhaps in time supply the whole of the English market with spices.

## CHAP'IER N.-MALACCA.

Section 1.-Near the sonthern extremity of the long Matayan peninsula, which is in length 775 miles, witb an average breath of 125 miles; in latiturle two degrees 14 minutes north latitude, 102 degrees 12 minutes east, is situnted the 13 ritish settlement of Malacen, extending about 40 miles along shore by 30 inland, and containing an neren of soo square miles: frounded on the north by Salengore at Cape Rochado, on the south Jchore, at the river Muar, on the enst, by the Kumbo country, and on the west, by the straits of Malacen.
11. The sea coast is rocky and barren, with detached islets of cavernous rocks, which the Chinese used as places of sepulture. The interior is mountainous (heing a continuation of the Alpine chsin, which runs from the Brahmaputra river in Assam to the extremity of the peninsula) ; with several picturesque vallies, the highest mountain (mamed by the natives Lealdang, by the loortugnese Mount Ophir) has an clevation of 4,000 feet above the sea. Colonci varquhar was nearly six hours nscending to the thignest part of Mount Ophir, the table surfnce on the top of which does not excedd 40 yards square ; the whole mountain appears to be a solid block of granite, here and there thinly covered with decayed vegetable soil. Stunted firs are found near the summit, and the regetation of the mountain was quite different from that met with on the plains and vallies. The principal rivers are the Muar and lingtuah, and the small streams and rivulets from the mountains are very numerous. The extreme point of the peninsula is a duster of small islands; the rondstead is snfe, and in the south-west monsoon vessels not drawing more than 16 fect of water are secure in $n$ liarbour under the lee of the fort. Colonel Furguhar (who has made Maheea his study) onerves that violent tempests never
oceur nt its excellent anchoring groumd, that the Sumatru squalls, which are common to the straits, sel dom last above an hour or two, and that for upwards of 25 years while the Euglish had possession of the place no ship bad been lost.
111. The Malaynn perinsula, although the great majority of the inhabitants are Malays (whence it derives its name), is not the original conntry of that aetive, restless, courageous, vindictive, and ferocious people.
The present possessors (or Malayan princes and their subjects) emigrated in the l2th century, from Palembang in Sumatrn (the original country of the Malays) about $A$. D. 12:2, nud founded the city of Malacca. As they extended their colonization, the aborigines of the comntry, who are oriental negroes with woolly hair, jet hlack skin (the Malays are copper coloured), thick lips, and flat nose, like the African, and of diminutive stature, were driven inland to the mountains, where some of their unfortunate posterity still exist.

The Malayan chiefs soon became involved in hostilities with their neighbours, partly, perhaps, because their sultan Mahommed Shah, noloptcel the Mahommedan religion from the Arabs, then the great traders in the enst. Although the Malacea people were able to resist the attacks of the Siamese on their chief city, they were compelted to yield to the conquering Portuguese, who, in 1.511 , compelled Sultan Mohammed Shal, the 12th of his line, and the 7th of the city of Malncea, to fly, after an obstimate resistance, to the extremity of the peninsula, where he founded the principality of Jehore, which still exists. The Portugucse held Malacen inntil lfill, though with great dificolty, against the reperted assaults of the Sultnns of Achecon, when it was assalled by the Jutch, who
captured it after six months＇sicge．In 1795 it was seized hy the British，but restored to the lluteh at the peace of Amiens in inOt．On the breaking ont of the Eiuropean war in［ N07，it was again taken by the English，but again restored at the peace of 1815 ； however，in 1825，it was received by Eingland，togither with the Fort of Chinsurals on the river Ilooghly，20 miles from Calcutta，in exchange for the British settlements on the island of Sumatra．

IV．The elimate is reckoned ore of the healthiest in India，the temperature heing uniform，the thermo－ meter ranging from 72 to 8 is the whole year round． The mornings and evenings are cool and refreshing， and the sultry nights of Hindostan rarely occur． There is no regular monsoon，but the rainiest months are September，October，and Nuwember．The iluc－ tuation of the barometer throughont the year is tri－ fling，the range being 30.3 to 29.53 ，giving an annual variation of only onc－fifth of all inch．The average of casualties in the garrison for seven years wat two in 100，a fact which attests the salubrity of 2 ．e climate．

V．The popmation of the settlement of Mataces was in $1750,1766,1816$ ，and 1817 ，thes，－

In 1822 the population was 22,0010 ．

＊The fuhabitants of Malacca，in 18：an，came to a unanimons rerolution to liberate every slave in the settiement inst Deember， 1841 ．

VI．One of the most valuable British institutions in the east，is the Anglo－Chinese college at Malacen， istahlished in 1818，by the joint efforts of the late Rev．Drs．Morrison and Milne．The object in view is the reciprocal cultivation of Chinese and liuropean literature，and the instruction of native yonths in the priaciples of Christianity．The native Chinese stu－ deats in the college，generally average from 25 to 30 ， all of whom are on the fountation of the college， receiving each a monthly allowance．Several valua－ We aad interesting $t$ ．$\cdot$ Blations have been made from Chiaese books，nud linglish standard works have been translated into Chinese；a foundry for types has been established，paper manmactured，and a periodical commenced．The college is indebted for existence to private contribution，and it is to be hoped that so nseful an institution will not be allowed to languish fur want of support．Attached to the college at Malacea are several schools，the whole of which are supported by the London Missionary Society ；the Chinese schools alone contain nearly 300 boys，ant the Tanul schools are increasing．The female schools at Malacca are doing well，and three schools have beea established by the Malays for the instruction of their countrymen in the linglish language．Schools are also established at Tavoy，Moulmien and Rangoon． At the latter place，the head master is a Chimaman， who has been brought $u_{j}$ ，in the Anglo－Chinese col． loge at Malacca．
Vll．When acquir by the British government， the whole revenue of the settlement was but 20,000 dollars；its revenue accounts are now incorporated with those of the other settlement（vide Penang）．
VIII．Malacen，being situate between the two great emporiams of trade in the castern arehipelago，Penang and Singapore，the one at the north－west，and the other at the south－east of the straits，has neecssarily a trade limited to its own consumption and produce． Before the establishment of the two latter mamerl set－ tlements，and during the monopolizing sway of the butch there，it was a place of considerable traflic．
Tin forms one of the principal items of export，and as the free trade captains may perhaps enter into the trade，it may be well to caution them of the adultera－ tions practised by the Chinese and Malay miners． Lead is the metal usually alloyed with tin，and in order to detect adulterations，buyers may readily ascertain（with sulticient approximation to correct－ aess）the extent of fraind endenvoured to he practised
ly molting a standard muster of pure tin in a large sized bullet mould with a small orifice，and then com－ pare a mould of the tin under exammation，with that of the pure metal；if the former be heavier，the pro－ portion of adulteration may readily be calculated． Antimony has the eflect of hardening the admixture with lead，thereby increasing the didiculty of detec－ tion，as regards exterinal npearances．

The total value of imports in 1828－29，was sicea rupees $10,81,7 \times 2$ ；of exports，sicca rupees $6,72,211$ ． The imports of specie amounted to sicca rupees $4,1!, 717$ ；and the exports amounted to sicea rupees $2,65,239$ ．The value of imports from Calcutta，is sicca rupees $1,12,565$ ；from Madras， $2,43,178$ ；from linyland，1，01，664；and from small native ports， $2,9 \times, 591$ ．

The accounts，however，of this government，as stated by Mr．liullerton，are extremely defective．

1．．Throughout the Straits of Malacen，the com－ mon weights are the pecul，catty，and tael．The Malay pecul，three of which make a bahar，is heavier than the common or Chinese pecul，which is $=133$ ！ lbs．Rice and sult are usually sold by the coyan of toriy peculs nearly，and gold tust by the Bunkal＝ 832 gis．troy．The gantang（hy which grain，fiuit and liguids are sold）$=1 \frac{1}{1}$ English gallon，is tivitled into two bamboos．Twenty gantangs of rice make a bag，and forty bags a coyan．Cloth is measured by the astah or covid of eighten inches nearly．Land， by the orlong of twenty jumbas $=1!$ acre．

The curreney of the straits is Spanish dullars divided into 100 conts．The Dutch rix dollar and guilder （divided into fanams and doits）are also used，chictly at Malacca．One guilder $=12$ fanams $=120$ doits．The rix dollar is a nominal coin of about 20 fanams， 31 or 32 of which make a Spanish tollar．The silver coins comprise dullars of all tescriptions，guilders and half－ guilders．The copper，the cent，half and quarter－ cent；there are also doits，stivers，and wangs，inelu－ ding a great varicty of copper coins，of different countries．

X．Natural Productions．－The staple of the settle－ ment is tin mines（whirh are all within a circuit of 25 miles rombd Malacen），which ${ }^{\text {produce，generally }}$ 4，000 peculs（a pecul is 133 pounds avoirdupois）a y＇ar．In the vallics vegetation is extremely luxuriant ： rice yields from 200 to 300 fold ；the sugar cane is equal to any produced in any purt of the globe；coffee， colton，indigo，chocolate，peppre，and spices，have all
been tried, and thrive remarkibly well. The spontaneous productions of the soil are very numerons, cousisting of an almost endless variety of the richest and most delicious fruits and vegetables. The country is covered with very the and durnhle timber for ships and house building; the Murton tree, which is nearly equal to tenk, is extremely abuadant. Cnues and rattaus form n considerable branch of the exports; the forests yield gums, resins, and oils in great plenty; the camphor tree grows near the sonth-east extremity of the peniusula; a great variety of medicimal plants and drugs are common in the woods; the nutmeg grows wild. If the gold and tin mlnes in the vicinity of Malacea were seientifleally worked, they would prove of great value; at present, the Malay and Chineae miners seldom dig below six or ten fect, and
ns the veins become thin, remove from place to plnee. The gold from Hoolo Pahang, 100 miles inlaud from Mulacen, is of the purest quality; and there are some small mines of gold at the foot of Mount Ophir, called Battang Moring, about 36 miles from Malncen.
Bird's nests, wax, eutel, dammeer, fish maws, and sharks' tins (for Chlnese soups) ruttans, camphor, betelhuts, gold dust, sago, dragon's blood, ivory, hidies, nguilla and sappan woods, Kc., nre naong the principal profuctions. Captains of ships will be glat to hear that fruit anil vegetalles of every variety are nluundant and low priced, and that poultry, hogs, butfaloes, and tish are plentiful and cheap. Durng the progress of the expedition against Jnva in 1811, 30,000 troops, with their followers were nbuadantly supplied with fresh provisions of every variety duily.

## CHAPTER IV.-SINGAPORE (SINGHAPURA.)

1. Tms rapidly rising emporium of trade, is situate on the southern extremity of the peninsula ol Malacen just deseribed, in latitude 1. 17. 2!. north : longitude, 103.51.45. enst, (this is the position of the town); of an elliptical form, nhout from 25 to 27 miles in its greatest length from enst to west; to 15 miles in its greatest breadth from north to south; and contrining an estimated area of 270 square miles, with about 50 small desert isles within 10 miles around it, in the aljncent strnits, whose area is about 60 miles; the whole settlement embracing a maritime and insular dominion of about 100 miles in circum. ference.
II. The Malay annals relate that in A. n. 1252, Sri Iscandar Shah, the last Malay prince of Singapore, being hard pressed by the king of Majopahit, in Java, returned to the main land, where he founded the eity of Malacca. That the Dutch or Portuguese may have settled on the island is probable, from the remains of religious buildings and other structures, which indicate its having been once thickly inhabited. On the design of Sir Stamford Raftles, the settlement of Singapore was first formed in Felruary 1818, and its sovereignty in its present extent wns confirmed to Great Britain in 1825, by a convention with the King of Holland and the Malny Princes of Jehore. There is, 1 believe, a pension of 24,000 Spanish dollars a year paid by the Fast India Company to this Rajah, as an equivalent for the cession.
2. The island is on the north separated from the main land of the Malayan peninsula, by a very small strait, which in its narrowest part is not more than one quarter of a mile wide. On the front, and distant about nine miles, is an extensive chain of almost desert islea, the channel between which and Singapore, is the grand route of commerce between east and west Asia. The aspect is low and level, with an extensive chain of saline and fresh water marshes, in aeveral parts covered with lofty timber and luxuriant vegetation: here and there, low rounded sand hills interspersed with spots of level ground, formed ot a ferruginous clay with a sandy substratum.
The town stands on the south coast, on a point of
lasd near the west end of a bny where there 13 a salt creek or river navigable for lighters nearly a mile from the sea ; on the east side of the town is a deep infet for the shelter of native bonts. The town romsists generally of stone houses of two story high, but in the suburbs called Cumpong-glan, Canpong-Malacca, nud Campong-China, bamboo lints are crectel on posts, inost of them standing in the stagnant water. On the enst side of the harbour enterprising British merchants are erecting substnntial and ornamental houses fronting the sea, presenting at strange contrast to the wretehed tenements of the Malays. The ground is generally raised three feet, nud the mansions have a superb entrance by anl ascent of graite stairs, then an elegant portico aupported by ninguiticent Grecian columna of every order ol architeeture : the rooms are lofty, with Venetian windows down to the floor, and furnished in a luxuriant man. ner; each tenement provided with its baths, billiard tables, \&e., while the grounds are tastily laid out with shrubs of beautiful foliage, the tout ensemble allording a most picturesfue prospect from the shipping in the roadstead.
IV. The principal rock is red sandstone, whieh changes in some parts to a breceia or conglomeratie, containing large fragments and erystals of quartz. The whole contiguous group of isles, about 30 in number, as well as Singapore, are apparently of a submarine origin, and their evulsion probably of no very distant dute.
V. Notwithstnnding its lowness, marshiness, intertropical position and consequent ligh temperature, with a rapid and constant evaporation by a nearly vertical sun, from a rank and luxuriant vegetation, and a profusion of animal and vegetable matter in every stage of putrefaction, Singapore has bitherto proved exceedingly healthy, owing perhaps to its maritime position. Being so near the eguator, there is of course little variety of seasons, neither summer nor winter: Fahrenheit ranges from 71 to 89 deg.; the periodical rains are brielf, indistinctly marked, and extending over about 150 days of the year.

To the foregoing must he added 553 convicts, and military and their followers 600, making a grand total of 22,000 mouths, where a few short years ago there was not 1191 The leuding inerchants, agents, shopkeepers, and auctioneers are linglishmen. There are several wealthy Chinese merchants, and the bulk of
the shopkeepers and most valuahle part of the citizem are Chinese, nearly 5,000 of whom arrive numally from China by the yearly trating jonks, abont 1,040 of whom remain at singapore, and the remainder difyerse themselves over the neighbuining islands, The Malays are chielly tishermen, and the nativen of the Coromandel coast bont-men.
Socicty is divided as at the I'residencies, into fourdis. tinct casten-lst. The civilians of the Company. ?d. The military. 3ul. First class merchants, dth. Siccound clasn merchants, shopkeepers, Rc.; and, as in all small communities, they are exclusive in their coterien.
VII. There is an American missionary and two lloman Catholle priests in the island, but an yet no house of worahip. A Romish chapel is int progress, and near its completion. The humbler classes are uneducated, but honest and faithful to their employers.
VIII. No accomnts of the trate of the island were kept prior to 1824 ; since then the value of the im. ports and exporis have been as follows:

| Vear. | Imports. | Exports. | Both. |
| :---: | :---: | :---: | :---: |
|  | ¢. | ¢. | £. |
| 1821 | 1.15.5509 | 1390268 | 29.55777 |

## BOOK V.-POSSESSIONS IN AU'S'R.II-ASI.

CHADTLK I -NEW SOUTII WAIAS.

Secton. I. The vast ishand of New Ilolland, which was diseovered in the tifternth century (ser" Calonial bitrary," vol. II.), may be snid to exteme betwern the parnllels of : $: 4$, and 10 . S. latitude, and the meri-
 from li.. to W. of 3,000 miles ; a lorendth from N. to s. of 2,000 mikes, a superticial area of more than 3,000, 100 square miles, nat a comes line of $x$, that miles, connecting 'Terra Anstralis with the mavigntion of the vast Ibeitic and Imian Cecans. 'The proporfimes assigned by Capt. In Frocinet to the principat divisions al the globe arr--
fireneh lemenes.

11. In shape it is nu irregutar oval, or it may be ompared to a horse-shoe ; and, so far as we klow, appenss boumded, for the most part, by a riedge of step monntains, of ereater or less elevation, which "tend around the comat, varging in distame from the shore, sometimes npprowhing wiblin: $: 1$ miles of the vecan, at other times extominur moch eo double now perlaps treble that distunce. The eombly lechind this range is, with the exception of the New south Wales territury and a part of the s. Li. eonst, a pertect Prow incomnita; and, from what has beon observed on the $s$. B. shore, it may be informol that it is anst leve platu; it is mome hithal, however, to suppuse that the country consists of extelasive steppes or ter races as in Sollh Africa. |'The topromphy, so lime ns thas been ascertained, will be found in my "rolonial librory.""]
On the return of Caphan Cowk from his vogage in the S. hemisphere, mal discosery of that part of the coast of New Holland named New Sonth Wiales, it was resolved to linem n promal settlement at Botany Bay, whth lle following ohjerts:-1st. 'Io rial the mother comery of the yomily incrosiog mubare of prismers, who were actumulatimg in the pats. Ebul. To athed an proper phace for the satio combaly ant punishment of the eriminals, as well as lor their proenssive and oltimate refirmation; and, :trid, fis form a free colbug out of the materiahs whichs the weformed prisoners would sumply, in indition to finmilies of tree saigrants who might settle in the combley from time to tume. With these hadable abjecte in view, 11 sil of ships, consisting of a frigate (the Sirims), bis ammed tebler, three store ships, and six thansporis, assabled at lorismonth, ill Mareh, $17 \times 7$, having on batel Efridmale, and 192 fimale eonvicts, with a grame consisting of a major-commambant, three captatios, 12 swatteros, 2.1 nom-comminsioned oblieres, and lis parates, all of the Royal Marines, tugether with 40 of the marines' wives and their childres. Coptain Whar Ihilip, R.N., an esporiencod ollicer, was ap-

with two years' provisions on board, sailed form the Mother baik, on the 1:3th of May, $17 \times 7$ : lomethed for supplies and stock at 'lemeritfo, Rio de dameiro, and the f'yure of Good llope ; moll arrived at tadir destination (Bunany Bay) on the Ixth, 19th, and 20 th of Jamary, 17 ks , nftor a voyare of mpands of cioght months, of which lour weeks were spent at the Cape. Captain Ihilip soon fomen that the deseriptions which had heen sent home of botnoy liay hat heen too llattering; in the tirst plaere, the bay was open to the lull swerp of the lid winds, which rolled a tremendoms sea on the beneh: and, in the seeond, the land, though deloghtul for motanizing, was a sories of swnmps nud sterile same, withont water. : ittle suspecting that ons of the limest harbours in the worlal was within a few miles' distance to the morthward, Captain l'hilig grocerded, with buee bents and some of his otheres, to examine what Gaplain (obsh band termed Broken Diay, where the llawhesbury disembernes ; but while proceedng thither, he resolved forexamine ant linket, which, in Cowh's chart, was marked as a boat harbom, but apparently so smatl as mot to bor worlo investigntins: Cook hat, thoreforte, passed the the
 sorn, which was that of the somman at the masthemed, who first deseried it while on the look omt. Coptain Philig entered betwern the lofty hemellands to exnmine this "boat harbour," and his astonishment may bo more masly conceived than deseribed, when he foind, wot a boat creek, but one of the satiest havens ins the world, where the whole of the britinh mavy might secourely ride at anchor. It is masigable for vessels of
 with momerome coves, sholeded from every wind, and whth the timest anchorage. 'rhither the llod was immedintely removed; and the liritish ensiga, on the Etith Jamary, 17 sk, wns loustorl on the shomes of sydury Cowe, then thonly wooded, and abounding in hatgaroos, but onw the infoll capital of an amber empire. The silcome and solitude of the limest were sown boten in unso by the resomating struhe of the Woulana's ase; the gromel was deared, temes gitehed, the lise stock lamded, stores deposited, mat the lithe cobeny establishad, the momber of indisibtals amounting to $1,0: 31$, which, within half a emothry, has been

 must extraordinary perse seramere, aded by that momat and [hysital comrage which Britoms possess in so
 histary al the settlemsth will be lound in my " Capos niml Lihnory,'"

The progress of the colony may be thus summaty stated, in chronolugionl order:-1ix!, wore sulter the establishment of the colong, firsf harvist remped
 possession of the laml ablotled him ; 17!9, first brich building linishod; 170.3, first purehase of colmonal Lrain ( 1,201 bushda) by wevermment ; bigl, firat
chureh built ; 1796, first play performed; 1800, .tirst copper coin circulated; $1 \times 03$, first newspaper printed; 1804, Fort William built; 1805, first vessel built; 1810, first census, free schooi, toll-gates, police, naming of the streets, establishment of Sydney market, races and race ball; 1811, first pounds; 1813, first fair; 1815, first steam-engine; 1817, stpreme court established and first bank; 1818, benevolent society formed; 1819, orphan institution founded; 1820, first spirits distilled, and first colonial tobacco suld; 1821, first Wesloyan and Roman Catholic chapels built; 1822, frectom of the press granted, and first agricultural and reading societies formed; 1824, charter of justice granted, legislative council appointed, and first court of quarter sessions held; 1825, first criminal jury impannelled, first archdeacon ordained, first coroner appointed, and first coustitutional county meeting held; 1827, first daily news. paper established; 1829, first circuit court opened ; 1830, first civil jury impannelled, and first college founded; 1831, first colonial steam-loat launched; 1832, first savings' bank instituted; 1833, mechanies' school of arts formed, and a monthly magazine established; 1834. land sold in Sydney at 20,000l. per acre 1
List of Gorernors of the Colony of New South Hules since its foumdation:-Capt. Arthur Philip, R. N., from 26 th January, 1788, to 10 th December, 1792 ; Capt. Francis Grose (Leut.-Gov.), 11th Decemher, 1792, to 14th Decemher, 1794; Capt. Paterson, N. S. W. C. (Lient. .Gev.), 15th December, 1794, to fith August, 1795 ; Capt. Hunter, R. N., 7th August, 1795, to 27th September, 1800 ; Capt. P. G. King, R. N., 28th September, 1800 , to 12 th August, 1806 ; Capt. William Bligh, R.N., 18th August, 180G, to his suspension on 26th January, 1808. During Gov. Bligh's suspension the government was successively administered by Lieut.-Col. Johnstone, Lieut.-Col. Foveaux, Col. William Patterson, N.S. W. Corps, 2fith January, 1808, to 28th December, 1809. MajorGen. Lachlan Macquaric, Ist January, 1810, to 1st December, 1821 ; Major-Gen. Sir T. Brisbane, K.C.B., 1st December, $1 \times 21$, to 30 th Novemher, 1825; Col. Stewart, 3d regt. (Lieut.-Gov.), Ist December, 1825, to 18th December, 1825; Lieut.-Gen. Ralph Darling, 19th December, 1825, to 21 st October, 1831; Col. Lindesay, C. B. (Lieut.-Gov.), 22d October, 1831, to 2d December, 1831; Major-Gen. Richard Bourke, C. B., 3rd Decenber, 183 1; Sir G. Gipps, 1837.
II. The general features of the New South Waies territory consista of alternate hills, vallies, mountains, aud plains; the sea const has a range of lofty and stee ${ }_{i}$, hills (elevation 3,000 to 4,000 feet) ruming nearly parallel with the coast, at a distance of from ; 0 to 50 miles, and called the Blue Mountains; the intervening space being an undulating plain, intersected by several rivers which have their rise in the elevations just mentioned; beyond which, a considerable extent of table land stretches in every direc. tion, gradually sinking towards the interior.
The territory is divided into 19 counties, and the geography of each will be found in my collonial Libraly.
The British settlement on the 18. shore of New Holland, called New South Wales, has its homdary irnperfectly defined: it may be said, however, to extend coastwise between the parallels of 36 and 29 S . lat., or about 500 miles along the sen shore; while the greatest distanee yet settled inland ean scarcely be said to extrad more than 200 miles. The portion within which hand may be selected, was lixed by a

Government order, dated Sydney, Oetoher, 18:29, and comprised 34,505 square miles, or $22,083,200$ acres the boundaries being, on the east, the sea coast from the mouth of the Murroo River (S. of Bateman's Bay), in 36 degrees to the mouth of the Manning River in 32 degrees ; on the the north, the river Mauning from the sea coast westward to a range of mountaias, ineluding all streams, vallies, and ravines which descend to the rivers Goulbourn and Hunter ; on the west, a line nearly along the meridian of 148 W . long.; and, on the south, from Mount Murray, in thic Iatitude of Bateman's Bay, to the Murroo River, it 36 S . latitude.
Syduey, the cari id of New South Wales, is situate nearly equidistant from the extreme borthern and southern extremities of the county of Cumberland ; it is built partly in a narrow ravine or valley, and partly on the side of a gentle slope extending upwards from the shores of one of the coves of Port Jacksun, and called Sydney Cove on the first founding of the colony. The strects are long (some one mile), wide, and guite linglish in their appearance ; the houses are generally lofty and well constructed, interspersent with cottages fronted by small neat gardens, which in some quarters of the town are attached to every honse.
The houses rise in successive terraces, giving variety to the scene, and conveying ly their neatness anil clegance the idea of a prosperons community. The shops are frequently laid out with great taste-they are not, as in America, 'stores' where every article may be bought under the same roof, but each. arpis or business has its own distinct warehouse. rouse rent is high at Sydney, as may be inferred from the fact that building land has been recently solld in George Street at 20,0001 . per acre ! and sone ground is worth 50l. per foot! Several $\mathfrak{f}^{-i v a t c}$ establish. ments are of considerable size; auctic rooms have been lately buit by one individual at a cost of $5,00 \mathrm{~km}$. and Mr. R. Cooper has expended nearly $20,0(011)$, an his distillery. The firm of Messrs. Daniel Cooples and Levy have expended even large sums it erecting steam-engines, mills, \&c.; and Mr. Barnet l.eyy lias huilt an excellent Theatre on speculation. The hutws and inns are numerous and excellent.
The situation of Sydney adapts it for the capital of a commercial empire. Port Jackson is one of the finest harbours in the world; its entrance is three quarters of a mile wide, it afterwards expands into $n$ capacious basin, 15 miles long, in some places three wide, and navigable for ships of any burthen at the distance of 15 miles from its entrance-i. P. seven miles above Sydney, up the Paramatta River, and which for 12 miles further can scarcely be consitured more than an arm of the sea. Sluips come up closi to the wharfs and stores at Sydney, and the cargoes are hoisted from a ship's hold into the ware-rooms. The town is about three miles in length, with twathirls of its cireuit environed ly the mavigable coves of Port Jackson.
A fine lighthouse was erected on the loftes s. head of L'ort Jackson, by Gen. Macquarie; it is in Lat. 33.51. 40. S., Long. 151. 16. 50. L.: ; the tuwer is admirably built; the beight of the light (a revolving one) from the base being 76 feet, and above the sea 277 feet,--total 353. The inner $S$, heal hears from the lighthouse N. by W. 3 W. distant a mile and a quarter. The outer $N$. head hears from it N . hy b . two miles. The inner S. and outer N. hededs lie N. i.. $\frac{1}{2}$ E. and S. W. $\frac{1}{2}$, of each other distant a mile and one-tenth. The light can be seen from S. bj E. to
N. by E., and fro eight to ten league learings magnetic degrees $\mathbf{E}$.
N B. The N. en the inuer $S$. head $S$ Norfolk Island, contains about 11, hrown mould. It fine tropical scener 1i91, it was coloni Wales, for the pur culony. It is now praved male convi Yew South Wales
IV. The line of New South Walce, bold perpendicular zontal strata. The by sandy beaches, and flat, the high Ia tance.
The strata of sanc upon the other in $t$ their original relati midergone any chan siliceous; sonetime this state it is gene situation it is soft an Among the coal with thin beds of wh stone. In fact th Bass's Straits to 19.

IV．The lint of conat throughout the territory of Vew South Wales，presents in general an aspect of bold perpendicular eliffs of sandstone，lying in hori－ zuntal strata．The clilfs are occasionally interrupted hy sandy beaches，behind which the country is low and flat，the high land retiring to a considerable dis tance．
The strata of sandstone consists of beds lying one upon the other in the most regular manner，so that their original relative situation has evilently never undergone any change．This samdstone is principally siliceous；sometimes indeed it is argillaccous，and in this state it is generally found over coal，in which situation it is soft and very decomposable．
Among the coal measures，are occasionally met with thin beds of what may be called calcareous sand－ stone．In fact the E ．coast of Australia，from Bass＇s Straits to 19．S．Lat．，presents ranges of moun－
tains rising parallel with the coast，and consisting， with few exceptions，of vast conglomerations of sand－＇ stone．Mr．13erry asserts，that there is no granite to be tound in masses near the enast，for an extent of 1,200 geographieal miles．At the 19 th parallel，a chain of lotty granitic or primitive mountains appears， of various elevations，forming the harrier towards the ocean for ahout 300 gengraphical miles，or to the parallel of 14 S ．latitude．Here the sandstone again predominates，the land gradually dipping till it loses itself in the sea to the N ．when coral reefs extend as far as the eye ent reach．An unbroken recf of coral extends 350 milcs in length on the $E$ ．coast of New Holland；and Captain King found the coral forma－ tions to extend through a distance of 700 miles，in－ terrupted by no intervals exceeding 30 miles in length． ［For further details sec Colomial Library，Vol．II．］

V．The scasons of New Soutii Wales are the oppo－ site of those in England－January heing the middle of Summer，and July of Winter．The Summer ex－ tends from the 1st of November to the 1st of March； the Spriog and Autumn are brief，but well defined； the Winter of a bracing coolness，with occasional frosts at Sydney，and snow in the interior．The Spring months are September，Octoker，and Novem－ her；the Summer，December，January，and February ； Autumn，March，April，and May；Winter，June， July，mid August．March，April，and August are generally considered the rainy months．The average temperature of Spring is 65.5 ．，of Summer 72．，of Autumn 66．，and of Winter 55．The baronetrical pressure，is about 29.94319 inches，and the average of the thermometer 64 F ．

The observations thus maked（＊）were made in $1 \times 21$ ，the others in $1 \times 32$.
I. Sydney, the thermometer is rarely below 40: in Paramatta, it is frequently down to 27 . in winter. Of course, as the land rises aloove the level of the ocean, a diffirence of temprature is felt ; the winter nt Bathurst, where the luxury of snow is in its senson enjoyed, being much colder than on the sea shore; while the difference of lat. between, for instance, Sydney in 34 ., and the parallel of Moreton Bay in that of 2x., is considerahle. In fact, every variety of climate may he obtained ; that of Sydney may be in some measure judged of hy the foregoing meteorological table.
During the summer montlis, a regular sea brecze sets in daily, and refreslies much the imhabitants along the coast, who hesi tes are not so much exposed to the hot winds as those residing in the interior. These winds have never yet beern satisfactorily accounted tor. They blow from the N. W. three or four times every summer, like a strong current of air from a heated furnace, rnising the thermometer to 100 F . in the shate, anal 125 when exposed to their inlluence. They seldom last more than in few days, and are cleared oll by a thunder storm.
The salubrity of New South Wales is proverhial ; of a commonity of 1,200 persons, ouly tive or six have heen known to be sick at a time, and at some of the military stations, seven years have elapsel without the loss of a man.
Although New South Wales is not subject to the periodical showers of the tropies, a large guantity of rain falls throughout the year; hitherto the colony has been visited by a drought about every i2 years; the last one continuing from $1 \times 26$ to $1 \times 29$, during which period, little or wo rain fell, in the county of Cumberland in particular. It is, however, more than probable, that as the comntry becomes clearet and cultivated, such limentable visitations will be less frequent.

The prevailing directions of the winds at sydnes are thus indicated:-

V1. The British colony, when established at Sydme Cove, on the shores of l'ort Jackson, e2th Jamary 178 N , consisted of only 1,030 individuals, of whon upwards of 700 were convicts. Emizration was for many years studiously discouraged by some of the nuthorities, notwithstmading which, owing to the number of convicts sent out, fund the fineness of the climate, the population rspilly increased. Vour remsuses have been taken, and the augmentation sime 178 sk , is thus slown:- $-17 \mathrm{xs}, 1.030 ; 1 \times 10,8,29: 3 ;$ $1821,29,783 ; 182 x, 36,29 x ; 1 \times 33,71,070$.

These emmerations are considered very inaceurate by those who know the colony well, especially that ot 1828, when the settlers wer apprehensive of the establishment of a poll tax; that of 1 s 33 , is thus given for each connty, as also fur the pincipal towns in the colony:-

[^9]had been assigne 202,0766 , per ann gang, 1,191 in th anaual expense o were in bondage.

On the 1st August, 1833, the punishment of death ceased for cattle stealing, and stealing in a dwellinghouse above $5 l$., and forgery, by dets of larlimment $2 \& 3$, Gul. IV. caps. 63 and 123 . A great portion of such offences thereafter, were tried by the Courts of Quarter Session. At the close of May sessions, 1536,155 prisoners remained in gaol for trial.
Return of the number of civil cas $s$ lixed in the Supreme Court of New Soutli Wales during 1836. [B. B.] Before Juries; Common, 4 Special, 14. Before two Magistrates assessors; und :fended cases, 177, defended cases, 98, total, 298.

Return of the number of prisoners sentenced to transportation from the colony of New South Wales, by the Supreme Court, Courts of Quarter Sessions, and I'olice Courts.

|  | Supreme Court. | Quarter Sessions. | Police Courts. | Total. |

| 18.37 |  |  |  |  |

In October 1832, the power to transport was withdrawn from the Magistrates in summary jurisdiction, by the Act of Council, 3 Gol. IV. No. 3.

Many cases are now adjudged by the Petty Sessions, that heretotore were decided by the Superior Courts only.

This return includes prisoners whose sentence of death has been commuted by the Governor and Executive Council, to transportation. On 6th July, 1836, tenders were called for in the Ofticial Gazette, for the conveyance of 120 peisons to Norfolk Island.

As the state of crime in our penal settlements is leserving of the most serious attention, I have given every public document under this section which would convey information on the subject.

* These columns are omitted in the detailed statement by me, R. M. M.
$\dagger$ Memorandum.--It will be observed that the number of criminals " executed" in some years exceeds the number sentenced to death in the corresponding year. This is occasioned hy prisoners having been tried, and sentence passed in the latter end of one year, but not executed till the beginning of the year following.

Note.-With regard to sentences pronounced upon convicts, this return (which ineludes only prisoners tried before the supreme court and quarter sessions) is unavoidably deficient for the years 1829, 1830 and 1831. Before the year 1832, any two magistrates, althuugh not sitting at quarter sessions, had power to transport eonviets to a penal settlement under summary jurisdiction. Of the cases in whieh this power was exercised, the Sheriff reports that he has no means of furnishing a return.

Return of the number of conviets maintained by Government in road and chain gangs, gaols, and penal settlements, with the average yearly cost of each; and also of the number of conviets in private service.
Number of prisoners maintained in road gangs, 982 ; average yearly cost of eueh, including every charge, $9 l .9$ s. $10 \frac{1}{2} l l$. ; ditto chain gangs, 1,191 ; ditto $10 \mathrm{l} .3 \mathrm{~s} .6 \frac{1}{2} d$. ; ditto gaols, 646 ; ditto 13 l . 4 s . $6 \frac{1}{4} d$. ; ditto penal settlements, 1,250 ; ditto $10 l$. 16 s . $6 \frac{1}{2} d$. Total number of prisoners, 4,069 .
Prisoners in private scrvice on 31st December, 1834, 18,304; assigned since, up to 13th July, 1835, 1,903; total, 20,207. [Council papers, 1835.]

Return of the average number of convict womenk in the female factory, in each weck of the years 1832 to 1836 , inclusive, together with the number of thelr chlldren, under three years ot age.

* About 30 of the women nursloge childiren are those employed for that purpose, the remainder are mothers nursing the children born to them in the tactory.
N.B.-As the children in the fartory attain the age of three ycars, they are removed to the Male and Female Orphan Schools respectivaly.
X. When the colony of New South Wales was first established, the whole executive powers were vested in the Governor alone; in 18:4, a Council was ap. pointed to assist and controul the Governor; and at present the chief authority is vested in, 1st. a Governor of the territory of New South Wales, and Gover-nor-in-Chief of Van Diemen's Island; 2d. an Exceutive Comeil, consisting of the Governor, the Culonial Secretary and Treasurer, the Bishop, and Lieutenantgovernor; 3rd. a Legislative Council, consisting of the members of the above-mentioned court, with the addition of the Chief Justice, the Attorney-general, the Chief Officer of the Customs, the Autitor-general, and seven private gentlemen of the colony, who are appointed by the Crown for life.
In case of the death, absence, removal, or resignation of a member of the Legislative Council, the Governor may appoint another to aet in his stead, until His Majesty's pleasure be known. With the concurrence of at least two-thirds of the members, the governor makes laws for the colony, if not repugnant to the Act 9 Geo. IV.c. 83, or to the eharter, or letters patent, or orders in council, or to the laws of England. The governor has the initiative of all laws to be submitted to discussion in the council, provided he gives eight clear days' notice in the puhlie journals, or by public advertisement (if there he no newspapers), of the general oljeets of the act proposed to be brought under consideration, uuless in case of emergeney, when such notice may he dispensed with.

Any member of the comucil may request the governor to introduce a bill for the consideration of the council. If the governor deelines, he must lay his reasons in writing, together with a copy of the hill, before the council, and any member, disapproving of such refusal, may enter upon the minutes the
grounds of his dis members dissent fr oftheirdissenton th become law. Evet be transmitted wit court to be enrolle of such enrolment, judges represent th tutes or other puh brought under the c again passed, proece sure of his Majesty aitted the opinions and proceedings of cially published in and Council have th purposes. A Viee-Admiralty Chief Justier of the S zance of civil cases ouly
grounds of his disapprobation. If a majority of the members dissent from any bill, and enter the grounds of their dissent on the minutes of council, the bill cannot become law. Every bill passed by the council must be transmitted within seven days to the supreme court to be enrolled, and after 14 days from the date of such enrolment, it comes into operation. If the judges represent that such hill is repugnant to statutes or other puhlic deeds before cited, it is again brought under the consideration of the council, and if again passed, proceeds into operation, until the pleasure of his Majesty be known, to whom are transmitted the opinions of the judges, \&c. The votes and proceedings of the Legislative Council are officially published in the newspapers. The Governor and Conucil have the power to impose taxes for local purposes. By 3rd Geo. lV., c. 96, continued by 9th Geo. IV., c. 83, s. 26, the Governor is authorized to impose, on importation into the colony, duties not erceeding 10s, per gallon on British or WVest. India spirits, and $15 s$. on all other spirits : not exceeding \&s. per Ib. on tobacco, nor 15 s . per cent. upon goods, wares, \&c., not being the growth, produce, or manufacture of the United Kingdom; and, by 9th Geo. IV., c 83, s. 26, the Governor is also empowered to levy a duty upon colunial spirits, not exceeding that levied on imported spirits.
Laus and Courts.-The statute laws of England are in force in the colony, aided by Acts of Parliament, and local enactments by the Governor and Legislative Council : and an lnsolvent Debtor's Act is in operation, the benefit of which may be obtained by a defendant a second or third time, if he pay 15 s . in the pound (any public officer taking advantage of the provisions of the Insolvent Act, is, by an order of the Secretary of State dismissed the service). The execution of the laws devolves upon a Supreme Court, presided over by a chief and two puisne judges, whose powers are as extensive as those of the Courts of King's Bench, Common Pleas, and Exchequer, at Westminster. The Supreme Court is a court of oyer and terminer and gaol delivery, it is also a court of equity, with all the power, within its jurisdiction, of the Lord High Chancellor of Eingland; and it is a court of almiralty for criminal offences, within certain limits; it is empowered to grant letters of administration, and it is an insolvent debtor's court. From the Supreme Court an appeal lies in all actions, when the sum or matter at issue exceeds the value of 500 l ., to the Governor or Acting-Governor, who is directed to hold a court of appeals, from which a final appeal lies to the King in Council. The Supreme Court is provided with an Attorney and Soli-citor-general. There are nine barristers, and 33 solicitors practising in the court. The sheriff exercises by his deputies the duties of his office over the whole territory. Circuit courts are beld in different parts of the colony; they are courts of record, and stand in the same relation to the Supreme Court as courts of oyer and terminer, and of assize and nisi prius, in England do to the King's superior courts of record at Westminster.
Courts of General and Quarter Sessions, have the same powers as those of England, and also may take cognizance, in a summary way, of all crimes not punishable by death, committed by convicts whose sentences have not expired, or lave not been remitted.
A Vice-Admiralty Court, presided over by the Chicf Justice of the Supreme Court, takes cognizance of civil cases ouly, such as scamen's wages, \&c.

There is an Archdeacon's Court for clerical matters ; but this court has no jurisdiction in testamentary affairs, the charter of justice having empowered the Supreme Court to grant letters of administration, and direct the distribution of testator's eflects. Courts of Requests have been established under authority 9 Geo. IV. c. 83 , for summarily determining claims not exceeding 10 . sterling, except the matter in question relntes to the title of nony lands, tenements, or hereditaments, or to the taking or demanding of any duty payable to His Majesty, or to any fee of office, annual rents, or other such matter, where rights in future would be bound, or to a gene. ral right or duty, and to award costs. The decision of the court is final nnd summary, as in England. One Commissioner, appointed by the Crown, presides in all the Courts of Requests throughout the colony. Juries now sit in civil and crimimal cases; until lately, military and maval officers formed the criminal jury; and civil causes were determined by a judge and two sworn assessors. Law suits are fir. quent in New South Wales, and large furtumes have been made by barristers and solicitors. In the ycar 1834, the number of the unpaid magistracy throughout the territory was 136 .

Police.-This important branch of civil life is well managed in New South Wales. There are Benches of stipendiary as well as unpaid mngistrates in Syducy, and at the principal towns throughout the colony, aided by head constables, and a civil and military police force at each station.

It should be observed, that a large part of the military force is required to guard the prisoners; and troops are seasoned in N.S. Wales for ludian service.

Military Posts and Works.-There are no military posts in any part of the colony of New Nouth Wales; and there are only three military works, viz. Fort Macquarie, Dawes' Battery, and Fort Philip. The two former are situated on two points of land in the harbour of Port Jackson, forming the entrance to Sydney Cove, and were erected for the security of the shipping. The Battery and Fort Philip is situated on an eminence crowning the isthmus or nock of land, which is washed by the waters of Sydncy Cove on the east, and of Darling harbour on the west side.

Fort Macquarie, - Furt Macquaric is a square, the length of each face being 130 fect. It is badly constructed with masonry, on a low site; the base of the rampart is washed by the sea at high tide. The work is pierced for 11 guns and 4 en barbette; 10 twenty-four-pounders and 5 six-pounders are mounted. At each of the angles is a small circular bastion, in which one of the twenty-four pounders is placed en barbette. There is a tower of two sturics in the centre of the land face 99 feet in circumference, with a magazine beneath capable of containing 350 barrels. The tower is appropriated as a store nnd guard room, and through which the fort is entercd by a permanent bridge over a dry ditch. At each extremity of the counterscarp, there is a smaller tower; but, in common with the large one, they are not intended for any military offensive purpose. The platform of the battery is at an elevation of 22 feet ahove the level of the sea.

Daves' Bat'ery.-Dawes Battery is a curved fleche, the length round the crest of the parapet being 120 feet. The interior slope is two feet high, and retained by a stone wall. The remainder of the parapet is formed of earth. It contains 15 guns, viz. 3 sixpounders and 12 twelve-pounds. The whole of them are en barbette. The platform of the battery is at an elevation of 111 feet ahove the level of the sea.

31

Fort Philip.-This fort is in an unfinished state, although commenced in 1804 by Governor King, the faces of the salient angle only being earried up in cut stone-work to the level of the platform, 11 feet 8 inches in height. It is in the form of a pentaron, the length of the sides being 100 feet, and appears to have been intended to mount four guns in cach face. The thickness of the platform is 18 fect 6 inehes, and the parapet (which is not raised) 13 feet 6 inches; in all, 32 feet. The situation commands the whole of the town of Sydney, its cove and Darling harbour; the north face looks into Dawes' battery, at about

400 yards distance; the cast into Fort Macquarie, at about 800 yards. In its present unfinishell state, it is of no use whatever as a military work, and is now only used as a telegraph station. There is a magazine, bomh proof, inmediately under the wall, eapable of containing 200 barrels of guppowder. The elevation is 241 fect above the level of the sea. These works are under the controul of the Master-general and Board of Ordnance. There has been an ordnance establishment in New South Wales sinee 31st Jan. 1836, the expense of which is defrayed out of the military chest.

Return of the Troops* serving in New South Wales and its Depeudeneies on 31st Dec. 1836. [B. B.]

Of this sum the principal items are -pay of men $1,8+2 l$. , and forage for horses $9,281 /$.
XI. Since the colony was established in 178 k , a revenue has heen derived from the importation of spirits, tobacco and mabufactures, ©̌c. us also from liceuses; as the population and commerce of the settlement increased, so did the revenue. The increase which has taken place in the Custom duties at Sydney is remarkable; they now amount to $100,000 l$.; in 1820 they did not reach 10,000 ., the prineipal items being 5,081 gallons of spirits, at $12 s$. God. per gal.; 3,854 gallons of ditto, 11 s .10 d . per ditto; and 2,138 ditto, at 10 s .
The rate of duties levied is, on spirits distilled from grain the produce of the colony, $3 s$. per gallon imperial measure (until 1834 it was $2 s .6 d$.), ditto British, West India, or North American, if imported from the United Kinglom, 7s. 9id.6-tenths (formerly 6s.6\%.) ; all other spirits, whether made within the colony or imported, $9 s .2 d .4$-tenths (formerly 8s.6 $d$. .);
tobaces, manufactured, 2s. $6 d$. per lb., unmanufactured, $1 s$, Gul. ditto; British manufactures free; all others goods 5 per cent. al val. Register fees, if under 40 tons, $2 l$. each register; over 40 tons, $1 s$. per toll. Purmits for the removal of spirits, $6 i l$. each.

Licenses to distil spirituous liquors, 25l. per ann., to sell ditto, $25 \boldsymbol{2}$. per annum. Goods sold ly auction pay $1 \frac{1}{2}$ per cent. duty, nud an auctioneer for his license, 2l. per annum. Butehers, carters and carts, boatinen and boats, and porters, are licensed: dogs are taxed at $1 s$. for one, $5 \%$ for two, 15 s. for three, and los. for every additional dog. The number of auctioneers in the colony is 18 , of whom 10 are in Sydney.

Lach head of cattle in Sydney, Paramatta and Liverpool must be examined by a public inspector before it be slanghtered, for which a charge of $3 d$. is paid. Quit rents are levied on land, nt the following rateif granted prior to 5 th November 1823, 2s. per 100 aeres; prior to 18 th May $1825,15 s$. per ditto; subsequent to 1 sth May $1825,168.8 \mathrm{l}$. per 100 acres. Town allotments in Syduey 6il. per perch; at seaport towns, $5 d$; in towns at the head of navigable waters, $4 l . ;$ and in inland towns, $2 l$. There are also a variety of fees legal, territorial and clerical.

The progress of New South Wales in revenue is equally remarkaible with the advance which the colony has made in other matters; the income derived from land in partieular has been very large. Two years of revenue and expenditure are subjoined, in order that a comparative view may be obtained of the tinancial situation of the colony.

Nit 'The commercent' New South Wales is become an object of great consideration to the mother conntry. The maritime trade of the eolony is now npwards of two million sterling per thm!m; whereas, ten years ago, it amonnted to little more than half a million. The largest portion of the trade is carried on with Great Britain ; the extent for consecutive years will he scen in the following table. The imports are spirits, whes and beer, ten, groceries and tobaco, salt provisions, cottons, linens, silks and woollens; the exports-wool, timber, llas, oil of all kinds, maize, hides, and shin stores.

IMPORTS OF NEW SOUTII WALES,

The number of vessels in sydney harbour on 17th March, 18:k, was $4: 1(12,1,9$ tons), and this is a slack time of the year.

Return of the prinelpal Anicles Ioported into New Sonth Wales since the Year 182N.

Grain imported from 1828 to 1836. [B. B.]

XllI. Previous to 1817, the circulating medium of the colony consisted principally of the private notes of merchants, traders, shopkecpers and publicans, the amount being sometimes so low as $6 d$. To remedy the evils attendant on such a state of things, the-

Bank of New South Wates was in 1827 incorporated by a charter under the seal of the colony, with a capital stock of $20,000 \%$. sterling, raised in shares of 1001 . each. The amount of shares subscribed was $12,600 l$., and notes were issued by the bank for $2 s .6 d ., 5 s ., 10 s ., 1 l$., and $5 l$. In the first year of its incorporation, the bills discounted by the bank amounted to only 12,193l.; in 1818 they rose to 81,6721 .; in 1819 to $107,2566$. , demonstrating fully the necessity that existed for such an establishment, and the advantages that result from it . Interest was not uncommon at the rate of 10 per cent. per annum. The dividends declared in 1818 were at the rate of 12 per cent. ; for 1819, 21 per cent. ; for 1820 and 1821 , 12 per cent.; and for 1822,15 per cent. The charter was granted for seven years, which was of course renewed. Each shareholder is resjonsible for the
whole of the proccedings of the bank, thus giving greater stability to the institution, and securing ${ }^{2}$ more careful management of its transactions.
The Bank seldom advances money upon real securities of any description, nor does it grant cash credits, or allow any interest upon current accounts, or permanent lodgments of cnsh. The nominal capital of the Bank of New South Walcs is about $150,000 \mathrm{l}$, divided into one thousand five hundred 1006, shares, The amount of capital paid up is about 35,0001 .

The affairs of the institution are managed by a president and eleven directors, who are elected by the shareholders from their own number, on account of their influence and respectability. Every 50l. paid up gives a vote.
Almost from its first establishment, it has yichled the shareholders a dividend of from 15 to 20 per cent.; a rate of profit which, considering that its transactions are restricted to the discounting of three months' hills, must be highly satisfactory to its shareholders; and it is a remarkable fact, that the establishment has never sustained any actual losses through the nonpayment of the paper which it has discounted. Up to the year 1824, the bank discounted at the rate of 8 per cent., after which the rate of discount was increased to 10 per cent., at which it has ever since continued. The colonial government pays and receives in specie only; and in consequence of its receipts, from the customs, duties, sales, and leases of land, and other sources of revenue, having considerably exceeded the nmount of its disbursements, it has from time to time gradually withdrawn from circulation nearly all the specie in the colony. In consequence of this and the remittances occasionally made of specie to Canton and other places with which a trade is carried on by the colonists, the bank of New South Wales, though far more than solvent, has more than once been under the necessity of suspending the payment of specie on demand. It is a fact highly creditable to the bank and to the colonists in general, that owing to the last severe drought during the panic which occurred in 1826, and which continurd for thrce years with little intermission, there were bills to the amount of $18,000 l$, over Jue to the bauk,
while the whole capita 29,000l. ; the couthden so great, that by prudt of the over due bills w to pay a dividend all cent. Such, however, lonists in the stability ment, that in no cose sioned any run upon th the inhabitants, with,

Dividend, 30th June 1836, 9 per cent.
The Bank of Australia was instituted in 18:26, with I The establishment has been highly prospervus ever a capitnl of $220,000 l$., divided into several shares, of since its commencement, nud has hitherto paid the which 45,000 l. is puid up. It is managed by a chairman, deputy-chairman, and eight directors, with the necessary assistants. Like the bank of New South Wales, it is one of issue and deposit; and its transactions are limited to discounting bills whieh have not more than three months to run. It ntlords no facilitics for remittances to Europe or elsewhere, nor does it make any advances on real securities of any kind.
The bank of Australin discounts from 10,0001 . to 12,000l. weekly, at 10 per cent., which is the current rate of interest in New South Wales. since its commencement, nud has hitherto paid the
sharenolders an anual dividend of 12 to 15 per cent. upon the capital paid op. The notes issued by this bank are for $11.2 l .5 l .10 l .20 l$. and $50 l$. ; its circula, tion being abont $25,000 \%$.

In the year 1826 , a gang of thieves, having obtained nccess to its strong room from a drain which passed beneath it, robbed the bank of nenrly 5,000 . in cash and notes, but a portion of this was recovered and the actunl loss snstained was not more perhaps than 2,000l. One bith of the nett profits of this bank is reserved for a sinking fiund or "re'st."

Statement of affairs, 30th June, 1836.

Dividend, 8 per cent., with $2 \frac{1}{2}$ per cent. from the accumulating fund, making the dividend for the half year $10 \frac{1}{2}$ per eent.
The flourishing state of these two banks mny be $\mid$ South Wales bnok were recently sold at 95 premium judged of from the faet that, 10 shares of the New and 28 of the bank of Australia at 75 to 80 .

Cominercial Banking Company of Sydney, instituted November, 1834, capital 300,000l., in 3,000 shares.
Statement of affairs, 30th June, 1836.

Dividend, $7 \frac{1}{2}$ per cent. for that half year. Interest at the rate of 4 per cent. per annum allowed on balances of current accounts.

A London company, establishcd March, 1834, has been incorporated by royal charter, called the Bunk If Australasia, with a capital of $200,000 \mathrm{l}$., for the propose of establishing banks of issue and deposit in Sew South Wales, Van Diemen's Land, and other *ttlements in Australasia. One half of the com3 к
pany's capital paid up before the commencement of business, and the entire capital within two years. The stock is divided into 5,000 shares of $40 \%$. each ( 500 of which were reserved for allotment in the colonies), to be paid up as follows :-10l. per share at the time of subscribing, 71 . at three months from
that rate, fil. at six monthes, 3/. nt nine monthes, $4 l$. at twelve months, $5 l$, at fifteen months, and $\$ /$, at eighteen monthis.

The management of the company's affairs is vested In the London Hoarl of Directors, apminted by the proprietors, und the banks in the colones are conducted by local directors nod other persons duly qualifled, appointed by the directors in : indon.

The proprictors nre antitled to vote at the annual meeting, according to the number of shares held by
them reapectively, in the following proportionn five shares had under 10, one vote 10 sharen and under 20, two votes; 20 shares and under fo, three votes; 60 and upwards, four votes, mad not mote, The following slows the progress and the prosperity of the estahlishment.

The bank of Anstrmasia commenced business in the colony lith Decumber, 18:3\%, Capital 200,(0100 paid up. Laterest allowed on current accounts at the rate of 4 per cent. per anninm.

Realized profits to the 31 st December, INi3f, forming the "dividend or dividing fund," $11,79 \times 1$. The profits of the yoar terminating the 31st Hecember $1 \times 37$, after deducting the whole of the ammal expenses, hoth in the colonies and in Lonton, for that year ; and also a forther sum in part liquidation of the preliminary expenses, according to the principle laid down in the previous reports, are 21,9087 . ; inaking a total of $36,636 \%$. Ont of which have been paid to the proprictors-Midsuminer dividend for $18: 17,8,0001$; Christmas ditto, 8,000l.; total $16,000 l$. Leaving the stum of $20,63 t i, 12 s$. $10 /$, as the nmount of divisible fund on the 3 Ist December last. The directors have therefore the satisfaction of unnomacing their intention of declaring a dividend upon the original shares of 4 per cent. for the tirst half year of 1838 , ending the 30th instant; being after the rate of 8 per cent. per annum.

In addition to the above assets, the average amount of the paid "penpitals of the corporation in hands of the court of directors in London, for the use of the colonial establishment, was 95,6301 .
Australian Marine Assurance Company, estahlished January, 1831, capital $140,000 \mathrm{l}$., 14,000l. paid up; dividend, 30 th July, $1836,8 \frac{1}{2}$ per cent. for that half year.

Union Assurance Company of Sydney, established January, 1836, capital $250,000 l$., in 5,000 shares, capital paid up, 2l, per share-12,500l. Profits not to be divided for threc years. Capital increased to $16,659 l .30$ th June, 1836.

Coin in circulation. [13. 13. 1836.] The whole amount of British coin in the colony is estimsted at ahout $445,000 l$., and of this sum there was, on the 31st December, 18:36, in the Colonial treasury, 218,630l.; in the bank of New South Wales, 73,342l.; in the benk of Australia, $44,048 l$.; in the bank of Australnsia, 50,005l.; in the Commercial bank, $39,234 l$. ; total, 425,259l.

The amount of coin in the bank of Australasia is taken from the half yearly average of the weekly liabilities and assets of that bank in New South Wales, from 12th April to 10th October, 1836, published in conformity with the charter of the bank; the board of directors having refused to supply the local government with any other information than that which the charter prescribes.

Amount of paper earrency in circulation. [B. B. 1836.] The paper currency in circulation consists of notes of the bank of New South Walcs, bank of

Total nssets within the colony
E $\times 6,1 ; 1$
Australia, bank of Anstralasia, and Commercial bauh. The nmount of these nutes in circulation on shat December, 1xisf, wis notes of the bank of Nowsiouth
 of Anstrulasia, $11,816 \%$; Commercial bank, $12,7111$. ; total, 99, $7 \times 76$. [The information respeeting the notes in the hank of Austrulasia has been derival from the same source as that relating to coin, explainet in the note imder that head.]

The bank of Nimw Sonth Wales, the hank of Auv. tralia, and the Commercial hank nre Joint Stoch companies, the shares in which are transferable. 'The bank of Australasia is a chartered bank, The notes are all of sterling denomination, and are convertible into British money on dermand.

The great portion of the circulation in this colons is carrided on by dratts or cheques on one of the four banks; the mass of peeunhary transactions centering in Sydney, and almost every individual of property having an account with one or other of the banks, in which for security a large portion of their cash is lodged.

Course of exchumgre. [B, B. 1836.] Bills on the Lort's Commissioners of His Majesty's treasury an drnwn nt par, under a notice issued by the Joputy Commissary General, dated 28th Fehruary, $1 \times 35$ Bijls of private indivichals are negotiated at a dis count vurying from $2 \frac{1}{2}$ to $5^{2}$ per cent. Few if any bills nre negotiated on foreign countries, and no rate of exchange on such bills can thercfore be quoted.

Rute of interest. [13. 13. 1836.] Eight per cent. per annum is allowed in enses before the courts of law or equity when no rate has previously been agreed upon, under authority of the act of council, $5 \mathrm{~W} . \mathrm{JV}$, sec. 10 The bank of New South Wales, hank of Austenlia, bank of Australasin, Commercial hank, and Saviag' bank charge discount upon bills at the rate of 10 per cent, per anuuin. The Saving's bank allows, for money deposited therein, interest at the rate of $\mathbf{a}^{5}$ per cent. per annum. The other banks allow 4 pet ceat per anmum on all current amounts.

Rates of Insurance at Sydncy, N. S. W., March 17 1838.-London and Liverpool, $2 \frac{1}{2}$ to 3 per cent. Hobart Town, 1 per cent. ; Lameeston, $1 \frac{1}{4}$ per cent. Swan River, 4 per cent.; New Zealand, 1 per com. South Sea Islands, 2 per cent.

The value of property annunlly created in Ne South Wales is estlmated at $2,366,664 l$, ; moveable $3,703,000 l$.; immoveable, $19,150,000 l$.

It is not possible to state with exactness the quantity of grain raised, but its prices since the great drought in 1827, are thus shewn:-
Yrs.

The prices of horses, cattle, and sheep, which a few years since had fallen considerably, are now on the increase; and as provisions are becoming a staple export, we may soon see flour one of the imports from Australia.

After wool, whale oil is the chief staple of the colony; this article of commerce is also of recent creation, and its progress is thus indicated:

The black whale is found in abundance along the coast of New South Wales, but the mariners prefer cruizing off New Zealand, and among the beautiful islands in the Pacific.

The sperm fishing is the most valuable, and the extent to which it is prosecuted, may be estimated from the number of vessels engaged in it, and which sailed out of the Port of Sydney in 1834:-namely, 40 vessels, 9655 tons, 1179 men.

The Phormium Tenax, or New Zealand flax, is dressed flax, are then exported to Sydney, where it is another artiele of export yearly inereasing in amount; valued at from $15 l$. to $20 l$. per ton. it is similar in appearance to the English flax, and is chiefly dressed by the native women of New Zealand, who scrape off the outer part of the leaf with muscle

Timber, particularly cedar plank, has been for some time exported; coals also were proving a valuable staple of the colony.

Table of Distanees to and from the several Post Towns $\ln$ New South Wales.*

The figures signify the distance by land, and with the letter $w$, In additlon to water earrlage; $w$, alone, wholly by water. The dlstance ls given by the route the mail travels.

* An examination of this table will shew the extent of surface over which the colonists are spread, and by a refcrence to the map, a more complete idea may thus be formed of the distance and direction of the different settlements or towns from the capital (Sydney). Other post towns have been added since the annexed return was recived, ouring to the rapid spread of population and industry.

There are two treadmills at Carter's barracks for the punishment of prisomers.

The whole of the preceding statements demonstrate the rapid progress which New South Wales has made in population, wealth, and civilization.

# CHAPTER II.-VAN DIEMEN'S ISLAND, OR TASMANIA. 

Section 1. Van Diemen's Island is situate on the S. E. coast of New Holland, from which it is separated by Bass's Straits, between the parallels of 41 . 20. and 43. 40. S., and the meridians of 144. 40. and 148.20. E. It is of an irregular heart-shape: and its greatest extent from N. to S . is estimated at about 210 miles, and from E. to W. 150 miles (calculating the degrees of longitude in that parallel at the average of about 50 miles each), and covering an extent of surface of about 24,000 square miles, or $15,000,000$ of acres; being nearly the size of Ireland.
II. It was in honour of the Governor. General of the Dutch East Indies, Anthony Van Diemen, that the island reccived its name; its occasional appellation of Tasmania, is a tribute to its first discoverer, Tasman, who in 1642 first visited the coast, in the course of an eastward voyage from Mauritius; but it was upmards of 120 years before the knowiedge of its existence was followed by any event of the slightest importance to its annals. Captain Cook, as well as his companion Captain Furneaux, in the course of their royage of circumnavigation in 1773, and again in 1777, visited the shores of Van Diemen's Land without discovering its insularity.
$\ln 1803$, it was formally taken possession of by the English; a small detachment under the command of Lieutenant Bowen, having arrived from Sydney, with a view of forming a penal settlement for conricts transported from that colony. Risdon or Restdown, as it is sometimes callerl, on the eastern bank of the Derwent, a few miles up the river, was the Pot seleeted for the settlement; but beyond this, little was effected at that time.
Early in 1804, Licutenant-Governor Collins, who had recently left England with a considerable expedi-
tion, having in view the formation of a settlement at Port Philip, on the south east coast of New Holland, altered his destination after a short experience of the difficulties attending a settlement at that place, and arrived in the river Derwent, when the island was formally taken possession of in the name of His Britannic Mujesty ; and after various surveys of the Derwent, the present site of Hobart Town was decided upon for head-quarters (the name was hestowed in compliment to lord Hobart, at that time secretary of state for the colonies). Leutenant-governor Collins had about 400 prisoners under him, with about 50 marines to secure them.

The colony at times suffered great hardships; for the first three years the inhabitants being wholly dependent upon foreign supplies for the most common articles of food, were occasionally reduced to great straits; so much so, that we hear of eighteenpence per pound having been given for kangaroo flesh, and that sea-weed, or any other vegetable substance fit for food, was purchased at an equally high rate.

After the island had been settled abont three years, sheep and cattle were introduced. Until 1813, the island was a place of transportation from New South Wales, and ail communication execpt with England or New South Wales interdicted. In 1821 emigration commenced, and the progressive civilizetion of the island will he seen by its statislics.
III. The general face of the interior is very diversificd, but decidedly mountainous, not however in ranges, but rather in isolated peaks, varied hy lofty table land, and extensive fertile valleys or plains.

Around the coast are numerous bays and harbours, that afford secure anchorage. The entrance from the
ncean to the Derwent, on the hanks of which Hohart Town is built, presents two lines of continuous bays or anchorage of unrivalled excellence; the one most commonly used leads through Storm Bay, and the other through D'Entrecastcaux's Channel, which is one string of little bays or anchorages for nearly 40 miles.

Hobart Town, the capital of the island, and the seat of govermment, is an extensive, well laid out, and neatly built town on the River Derwent, about 20 miles from its mouth. The cove or bay, upon the banks of which Hohart Town is built, affords one of the best and most seeure anchorages in the world, for any number of vessels, and of any hurthen

An amphitheatre of gently rising hills, beautifully clothed with trecs, and having Mount Wellington ( 4000 feet elevation) as the highest, defends it from the westerly winds, and bounds the horizon on that quarter : while the magnificent cstua: y of the Derwent, (with its boats and shipping, and picturesque points of land along its winding banks, forming beautiful hays and lakes), skirts it on the $\mathbb{E}$.
The town itself stands upon a gently rising ground, and covers rather more than one square mile. lts streets wide, long and intersecting each other at right angles.

The suburbs of Hobart Town have lately undergone considerable improvement; handsome villas and enclosures occupying ground in every direction, which in some places would have been supposed to bid defiance to the haud of art. A noble wharf has been constructed, so as to allow vessels of the largest burthen to lade or unlade close alongside the shore, without the assistance of boats.

Next in rank and commercial importance is Launceston, on the north side of the island, distant, by a good road, 121 miles from Hobart Town. It is the richest land in the island, backed by gently rising hills, at the confluence of the N. and S. Esk Rivers, which there form the Tamar, flowing about 45 miles, when it disembogues into the ocean at Bass's Straits. The town is thriving greatly, owing to its being the maritime kcy of a large and fertile country, and affording suffieient water for vessels upwards of 400 tons burthen, to load alongside the wharfs.
IV. The geology of the island is very varied; basalt is supposed to be the principal stratum; linestone is almost the only mineral that has yet been brought into general use; marble of a white mixed grey colour, susceptible of a good polish, has frequently been found, though never yet dug up or applied to use. Around Hobart Town, where, in the progress of improvement, the soil is frequently exposed to the depth of two or three yards, strata of soft clayey marl occur, which has been found very useful as a manure. Much of the common limestone is of a yellowish or reddish colour, no doubt derived from the quantity of oxide of iron with which it is mixed, and which is so generally scattered throughout the island. Iron ore is very frequent, both of a red, brown and black colour. In one or two instances it has heen analysed, and found to contain cighty per cent. of the perfect mineral. It also occurs, though more rarely, and in sinaller quantities, under the form of red chalk, with which, mixed with grease, the Aborigines besmear their heads and bodies. Indications of coal have been found across the island.

Excellent sandstone for building, is ohtained in almost every part of the isiand, and most of the houses in Hobart Town are now built with it, instead of badly made bricks, as formerly; it is brought from different parts within halt a mile or a mile of the
town. A quarry of that kind has recently been dis. covered at Port Arthur; where the manufacture of filtering. stones, it is probable, will he found a profita. ble employment.

Of the metallic ores, besides iron, which is most abundant, speclmens of red and green copper ore, lead, zinc, manganese, and, as some say, of silver and gold, have occasionally been met with.
The soil is very varied, in some plaees a rich black, alluvial mould, in others sandy or argillaceous; its fertility is shewn by the excellent crops produced, the land being cultivated for years without refreshment.
V. Allowing for the higher southern latitude, and the coldness and bumidity attending on its insularity, the scasons and weather at Van Diemen's Land may be estimated from the data given in the preceding chapter respecting New South Wales.

September, October, and November are the spring months, when the weather is usually bright and clear, with occasional rain and high winds. The average of the thermometer for these months is from 50 to 60 degrees.

December, January, and February, constitute the summer. In general very little rain falls during these three months. The productions of the earth, such as grass, corn, and vegetables, arrive at maturity about one month earlier than the same kinds would in lingland; that is, in December, which answers to the June of the northern hemisphere, products are gathered which, in England, ripen in July.

March, April, and May are the autumn of Van Diewen's Land, and form by far its pleasantest season. The air is then clear and bright-the sky free from clouds and vapours-the mediuin heat of the day is about 65.-and the nights are cool and refreshing. It may be noticed here, that even in the height of summer, the evenings and nights are gencrally cool.

Junc, July, and August are the Winter. In the interior, particularly upon high and exprosed situations, frosts are sometimes severe, and at times a good deal of snow falls; but it is seldom that the sun so wholly loses its power as to suffer an appearance of either frost or snow to last throughout the day; and the winter of Van Diemen's Land is rather contemplated by the inbabitants as a season of moderate and genial rain, sufficient to replenish the storehouses of the carth against the ensuing suring, and to facilitate the labours of the husbandman, than as the cold and dismal period of the higher latitudes. The average range of the thermometer is from 40 . to 48 .; now and then, however, for a day or two, some degrees lower. The longest day in Van Diemen's Land is 15 hours 12 minutes; the shortest, 8 hours 48 minutes.
VI. When first discovered, Van Diemen's Land was denscly peopled by a tark race of inhahtants, differing somewhat from the aborigines of the adjacent coast of New Holland in the more negro-like caste of countenance, woolly hair, and darker colour. Shortly after our occupation, contests began between the whitc and black races, which continued with occasional interruptions until about four years since, when a general levy of the white colonists took place. The blacks were hemmed into one corner of the island, and finally removed, under the protection of government, to Flinder's Island, in the adjoining straits. Their numbers were, however, very much diminished; small pox, faninc, and the retaliation of the colonists for the murders of their relations and friends, having thinned considerably the aborigines. The following shows the progress of the white population:-

vili. An Abstract of the Report of the State of the Gorernment Schools in December, 1835.

1. Back River.-One daily school, attended by 7 males and 12 females. The number of children admitted from the commencement is 37 . Of the daily scholars, 17 of both sexes also attend on Sundays. Government allows $25 \ell$. per annum towards the rent of a school-house. The mistress receives $25 l$. per annum, in addition to which 8 of the scholnrs pray 1 s . a week each. The children are taught spelling, reading, writing, arithmetic, and English grammar; the girls aso learn marking, netting, and plain needlework. System, Dr. Bell's.
2. Brgdad.—One daily school, 7 m . and 15 f . No. of children, 41 . Of the daily scholars, 12 of both sexes also attend on Sundays. Gov. allows $25 \%$. per an. towards the rent of a school-house. Master 50l., mistress 251 . per an.; in addition to which 19 of the scholars pay $3 l .10$ s. 7 d . a week. Reading, grammar, geography, writing, arithmetic, and the Latin rudiments ; the girls likewise, needlework, \&c.
3. Bothwell.-One daily school, 17 m . and 10 f Xo. of children, 51 . Of the daily scholars, 26 of both sexes also attend on Sundays. The school-house belongs to Gov. Master 25l. per an.; in addition to which 10 of the scholars pay 10 s . a week. Spelling, reading, writing, and arithmetic.
4, Brighton.-One daily school, 5 m . and 6 f . No.
of children, 17. Gov. allows 20l. per an. towards the rent of a school-house. Master 25l. per an. ; in addition to which 7 of the scholars pay $7 s$. n week. Spelling, reading, writing, and arithmetic.
4. Campbell Toum. - One daily school, 5 m . and 13 f . No. of clildren, 37 . Gov. allows 252 . per an. towards the rent of a school-house. Master 25t., mistress $15 l$. per an.; in addition to which 8 of the scholars pay 8s. a week. Spelling, reading, writing, and arithmetic. System, Dr. Bell's.
5. Cartton.-One daily school, 7 in . and 9 f. No. of children, 37 . Of the daily scholars, 13 of both sexes also attend on Sundays. Gov. allows 10l. per an. towards the rent of a school-house. Master $30 l$. per an.; in addition to which 9 of the scholars pay $9 s$. a week. Spelling, reading, writing, and arithmetic. System, Dr. Bell's.
6. Clarence Plains.-One daily sehool, 15 m . and 11 f . No. of children, 99. The school-house is Gov. property, but is in want of repair. Master 50l., mistress 251 .; in addition to which 23 of the scholars pry 1l. 9s. 7d. a week. Spelling, reading, writing, history, gcography, arithmetic, and the Iatin language.
7. Evandale.-One daily school, 9 m. and 4 f. No. of children, 23 . Of the daily scholars, 13 attend also on Sundays. Gov. allows 251 . per an. towards the rent of a school-house. Mastcr 50l., mistress 251. per an.;
in addition to which 21 of the scholars pay 11 s .6 d . a week, Spelling, reading, writhg, arithnetic, and English grammar. System, Ir. Ilell's.
8. George Toun. - One daily school, 10 m . and 8 f . No. of children, 19. Of the daily scholars, 18 of both sexcs also attend on Sundays. The schoolhouse, which is much out of repair, helongs to Gov. Master 50l., mistress 25l. per an.; in addition to which 13 of the chlldren pay 13 s. a week. Sjelling, reading, writing, arithmetic, and geography; the girls likewise learn needlework. Manufactures, mines, and fisheries \&c. in Van Diemen's Land in 1836. [B. B.] Hobart Town-Two saw mills; 4 shipwrights; 1 mast, block, and pump maker; 3 sail makers; 1 rope maker; 1 steam mill; 10 water mills; 2 windmills; 7 engineers; 3 fomderies; 8 cart and plough manufactories; 2 coach makers; 3 cooperages; 2 distilleries; 1 pottery; 1 soap boiler; 4 candle manufactories; 1 hat manufactory; 1 dyer; 3 wool staplers; 4 felt mongers; 8 breweries; 1 furrier ; 1 parchment and glue maker; 1 snuff manufactory; 8 tanneries; 4 printing offices; 1 comb maker; 1 agricultural implement maker. In this distriet lime abounds, the quantity produced this year was 47,600 bushels, value 9681.6 s . 8 ll .-Fish-cries.-There are 2 ships; 2 brigs; 5 sloops and 54 boats employed here in the whale fishery, and the quantity produced this year was:- whale black oil, 424 fish, value $36,800 l$; bore, 123 tons, value 11,564l.; sperm, 26 fish of 120 tons, value 7,200l.; total, $55,564 l$.
Launceston,-1 wind mill; 3 water mills; 3 breweries; 1 distillery; 3 tanneries; 1 tobaceo manufactory; 4 quarries of free and lime stone; Fisheries, -3 ships and 10 boats employed in the fisheries. In 1836, black and sperm whale, 96 fish were caught; value of oil and bone $15,100 l$. George Toun, - 1 wiud mill; 2 quarries of carbonate of lime; 9 boats employed in the fisheries, viz., oysters, value 1002.; salmon trout and rock cod \&e, 300 l . West-bury,-6 quarries of lime stone and pipe clay, worth 1s. Gil. per bushel. Norfolk Plains,-1 tannery; 1 wind mill, and 1 water imill. Campbell Tourn,-5 Hour mills; 13 quarries of lime and free stone. Oatlands,- 2 flour mills; 2 salt pans. Bothwell,-2 flour mills; 1 brewery; 3 quarries of lime and free
atone; 2 boats on the lakes employed fishing for eels of which there are great quantities in the Clyde. Ha-milton,-2 flour mills and 3 quarries of lime stone. New Norfolk,-3 flour mills and 2 quarries of lime worth 9d. per bushel; 7 boats employed fishing. Brighton,- 3 water mills; 1 wind mill; 1 brewery, and 3 lime kilns; several quarrics. Richmond,3 wind mills and 3 water mills; several quarries of lime and free stone. Four sehooners; 3 sloops, and 32 boata employed trading and tishing for salmon, rock cod, eels, \&e. Gt. Suan Pori-1 salt manulactory and 2 flour mills; 3 ships and 13 boats employed fishing. This year 69 whales caught, value $7,760 l$. Circular Heal, Horton District,-1 flour mill.

## CHAPTER III -WESTERN AUSTRALIA on SWAN RIVER.

Section I. The establishment of this colony originated in a proposition, on the part of Thos. Peel, Esq., Sir Francis Vincent, E. W. Schenley, T. P. Maecueen, Esqrs, and other gentlemen, to further the views of Government in founding a settlement, at little or no expense to the mother country, on the western coasts of Australia. These gentlemen offered to provide shipping to carry 10,000 British subjects (within four years), from the United Kingdom to the Swan River, to find them in provisions and every other necessary,
and to have three small vessels running to and from Sydney as occasion might require. They estimated the cost of conveying these enigrants at $30 l$. per head, making a total of $300,000 l$; and they required in return that an equivalent should be granted them in land equal to that anount, and at the rate of 1 s . fild. per acre, making $4,000,000$ acres; out of which they eugaged to provide every male emigrant with no less than 200 aeres of laud, free of all rent.

This arrangement was not carried into cffect, and

## SWAN RIVER.-GEOGRAPHY.

a project for the formation of the new colony (without makling it a penal settlement), was issued from the Coloninl Office in $18: 29$.

By this project his Mrjesty's Government did not intend to incur any expense in conveying aettlers to the New colony on the Swan River; nor supply them with provisions, or other necessaries, after arrivnl there.

Such persons as were to arrive in the settlement, before the end of the year 1830, were to receive, in the order of their arrival, allotments of land, free of quit-rent, proportioncd to the enpital which they were prepared to invest in the improvement of land, and of which capital they were to produce satisfactory proofs to the Lieutenant Governor, at the rate of 40 acres for every aum of $3 l$. which they were preparcd so to invest.

Those who incurred the expense of taking out labouring persons, were to be entitled to an allotment of land, at the rate of 151 ., that is, of 200 acres of land, for the passage of every such labouring person, over and above any other investment of capital. In the class of ' labouring persons' were included women, and children above ten years old. With respect to the children of labouring people under that age, it was proposed to allow 40 acres for every such child, above three years old; 80 acres for every auch child, above six years old; and 120 for every such child, above nine, and under tell years old.
The title to the land was not to be granted in fee simple, until the settler had proved, to the satisfaction of the Lieutenant Governor, that the sum required, (viz. 1s. 6d. per acre), had been natually expended in some investment, or in the cultivation of the land, or in solid improvements,-such as buildings, roads, or other works of that kind.

Any land, thus allotted, of which a fair proportion, at least one fourth, should not have been brought into cultivation, or otherwise improved, to the antisfaction of the local Government, within three years from the date of license of occupation, was to be linble to one further payment of $6 a$. per acre for all the land not so cultivated or improved, into the public chest of the settlement ; and, at the expiration of seven years more, so much of the whole grant as should remain in an uneultivated or unimproved state was to revert absolutely to the Crown. And in every grant there was to be contained a condition, that, at any time within ten ycars from the date thereof, the Government might resume, without compensation, any land not then actnally cultivated, or improved, as hefore-mentioned, which might be required for roads, canals, or quays, or for the site of public buildings. After the year 1830, land was to he disposed of to those settlers who might resort to the colony on such conditions as his Majesty's Government should determine.

Captain Stirling was appointed Lieutenant-Governor of the intended sttlement, with a grant of 100,600 acres ; and Mr . Pcel was to receive 250,000 acres, on condition of taking out 400 emigrants, with liberty to extend the grant to $1,000,000$ aeres, previous to the year 1840, by recciving 40 acres for every child above three ycars, 80 for every child ahove six, up to ten years 120, and exceeding that age and upwaids 200 acres for each person conveyed to the colony. The terms requisite to obtain 500,000 acres have been complied with. Under these circumstances, early in 1829, a number of settlers left England for Swan River, in Western Australia, where they began to arrive in August, and to locate themselves along the banks of the Swan and Canning Rivers, so that by the end of that year there were in the new colony residents 850 ; nols-
residents 440 ; value of property, giving claims to grants of land, $41,550 l$. ; lands actually allotted, 525,000 acres; locations actually effected, $39 ;$ No of cattle, 204 ; of horses, 57 ; of sheep, 1,096 ; of hogs, 106 ; and 25 ahijs had arrived at the settlement between the months of June and December. Such was the commencentent of our new coiony on the shores of Western Australia. The settlers met at first, as must be expected in all new countries, with many difficulties, and great hardships had to be sor. mounted ; the land near the const, as is the case generally in New Holland, was found poor and sandy; but aubsequently, on exploring the interior, fine pas. toral and agricultural tracts have been discovered. A portion of the settlers have been located at King Gcorge's Sound (lat, 35.6.20. S., long. 118.1. E.) near the S. W. extremity of Anstralia.
After this introduction to explain the origin of the settlement, which is dated from the 1 st June, $182 y$, and which through good report and evil report, has proceeded in the path of energy and industry, we may now examine the geographical features of the country.
II. Western Australia, lying between the paraliels of 31. and 35., S. lat., and including all that part of New Holland situate to the westward of the $129^{\circ}$ of longitude, is therefore 1,280 miles from N. to S., and 800 miles from E. to W. It comprises a finc extent of territory, of which the distinguishing features are three distinct parallel ranges of primitive mountains, bordering on the sea-coast, in a N. and S. directiot. The highest and easternmost has its termination near King George's Sound, in 35 S . lat. and 118 . E. long.the second, denominated the Durling Rance, passes behind the Suan River, and nieets the sea at Cape Chitham in 34.40 . S. lat., and 115.20 . E. long.; the thin ridge, which is inferior in altitude and extent, has its southern boundary at Cape Leuu: in, in 34.20 . S. lat., and 115. E. long. ; disappearing nt Cape Nitturaliste, in the same meridian in $\mathbf{3 3 . 3 0}$. S. lat.; and on shewing itself again at Moreshy's Flat-topped Range, about half way between Suran Rirer and Shark's Buy, or about 300 miles to the N . of Cape Lemain.

These dividing ranges give off several rivers, which flow E. or W., according to the dip of the land at cither side-the principal on the sea shore being the Suan and Caming, in 32. S. lat.; the Murray, in 32.30. S. lat.; the Collie, the Preston, and a smalier strenm into Port Leschenault, in 33.12. S. lat.; the Blackucoot, to the castward of Cape Leuusin, and disemboguing into Flinders' Boy; the Denmark, Kent, Hay, and Stecman, on the S. coast, in 35. lat. and nearly 117. long.; and King's River, falling into King George's Sound, in 35.6.20. S. lat., 118.1. E. loag. When the coast is further explored, other rivers will most probably he found.

On erch of those rivers, loeations have been formed hy our hardy settlers; the ftown of Freemamile has been founded at the entrance of the Suon Riter; Perth, about nine miles iriland, on its right or northern bank; and Guildford, about seven miles further E. at the junction of the stream; a town, called Augusta, was founded at Blackwood's River, near Cape Leutwin; and King George's Sound, which has been cceupied by a detachment of troops and convicts from Sydney in 18.26 , has been given over by the New South Wole- Fovernment, aus attached to the Swan River eriony.

The following excerpts from the official report made by the Governor to the Colonial Olice, 15 th Octoher 1837, together with the statistics derived from the Seeretary of state, will give a fair view of the colony.

It appears fro the colony, wit tions, bays, stra finest harbours in some places a tunities thereby ships on shore, existence of an nected with som explored by Kin termined.

tieial report Office, 15th tics derived fair view of

It appears from King's surveys, that the coast of the colony, within the tropic, is fronted by indeuta. tions, bays, straits, and islands, and abounds ill the finest harbours imaginable. The rise and tall of tide in some places amounts to 3.5 feet, affording opportunities therchy for building docks, or for laying ships on shore, without considerable expense. The existence of an interior sea, or of great rivers, conaected with some of the inlets which were not fully explored by King, remains a problem as yet undetermined.
The prineipal ports in the south-western parts of the colony are those in Cockburn Sound and in King George's Sound. The first of these is an exceljeat port, but its entrance is encumbered by rocks, and it is not accessible with safety to large vessels, while there is not an effective establishment of pilots and beacons. The open anchorage at the mouth of the Swan River is therefore in general use nt present. Kiag George's Sound possesses all the qualities which coastitute a good harbour; its position being however to the eastward, and to leeward of Cape leewin, in the vicinity of whieh strong westerly gales prevail, this circumstance detracts from the value of its other qualifications. Shark's Bay abounds in safe anchorages, and affords, as well as Doulitful Island Bay, secure access to the districts in their immediate vicinity. Harbours for boats and small coasting vessels exist near the entrance of Peel's Inlet, Port Leshenault, Augusta, Nornalup, Torbay, Collingwood Bay and Cape Riche.

One of the most remarkable peculiarities on the sonth-western coast of the settlement, is the frequent occurrence of estuarics or inlets of the sea, having aarrow and shallow entrances. Bet een King George's Sound and Swan River, there are no less than 10 of these; they are usually from five to ten miles in length, and from two to three in breadth: they serve as the receptacles of the streams in their vicinity, and will afford hereafter water communication to the inhabitunts. In the summer senson, the water in them is salt, but becomes fresh after the return of the rains.
In the interior, no lakes of any extent have been as yet discovered, but salt marshes, and salt pools of small diameter, are not untrequent.

The absence of considerable mountain ranges forbids the chance of finding any considerable rivers of a perennial character; and it is somewhat remarka. ble, that one of the largest rivers known, whose course is not less than 200 miles, disappears entirely as a stream, and ceases to run, long betore the end of the dry scason. In the country situated to the south of Swan River, there are, however, streams which continued to run throughout the year, as may be instanced in the cases of the Murray, Harvey, Brunswick, Preston, Capel and Donelly; and on the south coast, where the country is more hilly, and the rains later, mill-streams exist in great numbers, and, fortunately, those districts contain an inexhaustible supply of the finest timber.
The chance of discovering a river of great magnitude on the north-west coast, appears to be strengtheaed by the non-occurrence of any considerable stream in those other parts which have been as yet explored.
The supply of water for domestic purposes, in all those distriets which have been oceupied, appears to be sufficient. In the district of York, inconvenience has been found on some farms, from the difficulty of finding water at first, but these inconveniences have
been usually overeome by the discovery of springs, on further inspection. The country at the distnnce of 100 miles from the western coast, does not appear to enjoy its share of the rain brought in by the westerly winds, and it is to be apprehended that a deflcieney in the supply of water, doring the dry season, will be found in that quarter when it comes to be settled.
IV. The whole of the ocenpied portion of the territory appears to rest upon a grnnitic hase; rocks of that description having been found to exist in every district which has been as yet explored. In the neighbourhood of Doubtful Islaul Bay, the granite assumes the stratified form of gnciss, and as red sandstone is found on the north-west const, and tertiary formations on the shore of the Austrnlian Bight, it is probable that the general dip of the country is in a direction a little to the north of east. 'To the south of the 31st degree of latitude there are no mountain ranges of any great altitode; the highest as yet known being that of Koikycumreall, near King George's Sound, which nttnins to the height of 2,500 feet. On the primitive base of the country, none of the the secondary formations have been found to exist ; basaltic rocks are not however unfrequent in almost every district in the country; and in one position in Geograple Bay, there is $n$ columnar formation resembling in its charncter that which exists on the north coast of Ireland. The principal range of litls extends in a northerly direction trom the south coast, near Cape Chatham, for at lenst 300 miles. The only varieties of rock which have been found on this granite range, are occasional portions of roofing slate, and of indurnted clay; but extending from the western base of these hills townrds the sea, upon an average breadth of about 20 miles, there is a low and tolerably level plain of diluvial origin, which hears the marks of having been covered ly the sea at some remote period. The portion of this plain nearest to the sea presents limestone hills, which have a slight covering of meagre sandy soil; the remainder varies from sand to clay, with exception of the lands in the immediate vicinity of rivers, which have been allieted, and rendered rich, hy the overflowing of the streams.

The mineral substances heretofore discovered, are lime, marl, selenite, slate, siliceous and calcareous petrifactions, magnetic iron ore, peacock iron ore, chromate of lead, and chrystnls of cunrtz. The very small portion of the territory which has been inspected being almost entircly of a primitive deseription, a larger list of minerals could not be expected; but when time shall permit the further examination of the northern districts, of the red snnd-stone forma. tion, it is not unlikely that important mineralogical discoveries may be etfected. The discovery of copper ore by Captain King in the vicinity of Camden Bay, corrohorates this expectation.

The surface of the country generally is covered with those substances which are technically ealled earths, in contradistinction to soils. Of the latter, as far at least as relates to those of a vegetable origin, a very small portion exists, and that only on moist grounds. The extreme drought of the climate, and the summer conflagrations, appear to prevent the growth of sueculent plants, as well as any great nccumulation of soil from decayed vegetation. But althongh the comntry is not remarkahle for richness of soil, it is favourable in other respects to furming purposes. In its natoral state there is scarcely any part which does not produce some deseription of plant, and its deteets appear to be ol that elass which
urt, aided by climate, will be emabled hereater to overcome.
V. The wet season commences with light showers in April, which continue to increase in number and force throughout May, June, and July, and from that period to decrease, until they cease altogether in the month of November, when the dry weather begilis, 'These two seasons, with an intermediate spring following the conclusion of each, embrace the circle of the year. It is usual to call the wet scason the winter, and the dry season the summer, but neither of them has the character of the corresponding season in Euroje. The extreme drought and heat of an Australian summer renders it the least agrecable portion of the year, while the winter, with the exeeption of intervals of stormy weather, is only sutticiently cold to he pleasant.

The prevailing wind, in the seas adjacent to Cape Leewin, is from the westward thronghout the year; on the coasts, however, land and sca breezes take place with great regularity in the summer. In the winter season gales of wind from the north-west and south-west are very frequent, and are usually accompanied by heavy falls of rain. At such periods the atmosphere is charged with moisture to a considerable degree, and the quantity of rain that has been ascertuined to fall at King George's Sound, in the course of the six winter months, equals the quantity experienced in the western counties of Eingland. The atmosphere in the summer season retains so little moisture that none but hardy and fibrous plants can withstund the drought. The air is so clear, and the reflection of solar heat so great, that the thermometer occasionally reaches, in the shade near the gromed, 105 ${ }^{\circ}$, but the effect at those times upon the European constitution is not injurious; this can only be accounted for, under so great a licat, by the peculiar dryness of the nir, and the regular succession of cool nights after the warmest days. The experience of the last eight years has established in the minds of the colonists the full belief, that the climate of the settlement is, in a remarkable degree, conducive to health and to comfort : but it certainly is not equally suitable to the growth of those vegetable products which tlourish to great advantage in moister climates. With reference to this point of difference between England and this new colony, it is perhaps fortunate for it that it does not resemble the former country, but may rather be considered in temperature as a supplement to the southern districts of the United Kingdom, and as allording every range of temperature between the Land's End and the equatorial regions for the production of commodities which cannot be raised in the colder atmosphere of the mother country.

The subjoined communications on Climate, Meteorology, rain, \&c., have been drawn up by John Harris, Esq., Colonial Surgeon :-

In compliance with your desire, I give you such information as my experience in the colony has ena. bled me to collect, on the following subjects :

Ist. On the climate, seasons, scale of thermometer, quantity of rain, \&c. 2 d . Diseases, endemic or imported, influence of the climate on the health of men and animals, and a general state of health of the inhabitants. 3d. Diseases incidental to cattle.

On the climate, I beg to remark, that the concurrent testimony of every individual who has spent a round of the seasons in this country, has given to it a celebrity, which increases as we become better aequainted with the steady and uniform chnuges
which those seasons bring. The hottest months are January, February and March; but, although the thermometer has stood in the shade at 90 , and in one instance, in March of the present year, at 105, the mornings, evenings and nights are generally cool and pleasant, and the mid-day heats are tempered by a refreshing sea breeze from the south-west, which sets in with considerable regularity about noon. 'Through the whole summer, a land breeze from the east prevails in the morning; the sky is beautilully clear, and the air pure. Slight fogs occasionally hang along the course of the river, early in the morning; a refreshing dew falls during the night; but as there are no considerable marshes, the country is free from inalaria or noxious vapours. The winter months are June, July and August; the two latter the most rainy. There are sumetimes smart frosts, and now and then a little ice, all traces of which disappear on the rising of the sun. Snow is unknowi. Hail. stones of very large size, occasionally fall. A fire is agreeable during these winter months, mornings and evenings. The rains seldom continue more than three or four days, falling chietly in heavy showers, with squalls, and sometimes storms of thunder and lightring, and now and then severe gales from the north-west. The intervals of fine weather are from' five to ten days. During the other quarters of the year, nothing can be more delightful than the climate generally, and its invigorating influence on the human constitution, especially of the Europeans, renders it more fit for invalids than any other in the world. During the winter months, the greater part of which are remarkably temperate and tine, the changes of temperature are often sudden; but hy ordinary care and avoiding unnecessary exposure, no ill conse. quences ensue to the invalid. Several persons arrived in the colony, suffiring from pulmommry and bronchial affections, asthma, phthisis, hemoptysis, or spitting of blood, hopeless of recovery in Europe, are now perfectly recovered, or living in comparative health.

The principal diseases met with in this colony, are rheumatism, dysentery, scurvy, and catarth, during the winter months; and during the summer, and beginning of autumn, a kind of subacote purulent ophthalmia, which is endemic, and is the only disease that can structly be so considered. Hooping cough was imported in 1833, but has disappeared since $1 \times 34$. Gonorrhea has been also introduced. Small-pox aud measles are unknown. Vaccination has not hitherto succeeded. Cases of fever are seldom met with; and the diseases enumerated as most common, are never of obstinate character, if attended to promptly. Very few cases of ophthalmia have occurred during the past season, owing to the care taken when the first symptoms appeared. Scurvy has ncarly disappeared; indeed, nine cases out of ten, reported of this, and most of the diseases named, occurred during the carly days of the settlement, when the people, especially the labouring classes, were badly sheltered, and badly fed, without vegetables, suffering from fatiguc, ex. posure in wet weather, or to a hot sun, alternately, privations of every kind, and consequent despondency. Intemperance was also a primary cause, in a great many cases, especially of dysentery. The higher classes, being better provided with food and shelter, were generally healthy. Many of the causes no longer operate. Few of the labouring classes are now with out comfortable dwellings; food is plentiful, and vegetables of every kind are raised in great abundance, with a fine climate, therefore obnoxious to no parti-

Hail. - A fire is rnings and more than y showers, hunder and $s$ from the or are from ters of the the climate the human renders it the world. rt of which changes of dinary care ill conse. ons arrived and hron. optysis, or in Lurope, omparative
cular diathesis: the average mean temperature being from 60 to 64, the inhabitants of Western Australia are as healthy a community as any in the world. My range of practice inclurles a population of about 1,000 persons, and it may be well to observe, that at this moment 1 have not a single aick person on my list.
The experience of seven years has brought us to rely on a ateady and uniform return of the seasons; the agriculturist is enabled to carry on his operations in the field, both in seed time and harvest, with less interruption from inconstaney of weather, than in any other part of the world yet known. No excess of rains, or long continued droughts, oceur to mar the fair prospects which cheer his labour; he may snfely calculate on the result. The stock owner sees, in the condition of his sheep, goats, cattle, and horses, in those districts auited for grazing, n reasonable expectation of profitable return. All deseriptions of animals and domestic fowls thrive well. Sheep and eattle, however, have been nttacked by a discase, the symptoms of which, in both, are very similar; and although considerable attention has been given to this disorder, the remote cause has not yet been
clearly ascertained; no particular diathesia is observable. It has chiefly uppeared in flocks recently im., ported and in feehle condition, and in eattle engaged in long journeys in the bush, where the food is scrubby and coarse. Flocks kept on low danp ground near the coast, or in high serubby ground, destitute of henlthy grass, or in driving them across the Darling range of hills into the interior, through acrubby country, have, too, been principally alfected, owing prohably to a deficiency of a requisite bitter stimula. tive quality in this kind of food, of difficult digestion in stomachs so peculiarly formed as those of ruminating animals. Horses are fed on the same ground, without the least injury. 'The disorder seems the most frequent at the commencement of the wet season, the immediate cause heing the condition of the stomachs, overloaded with hard indigestible food, in a state of fermentation, from food eaten alter rain, and consequent pressure on the heart and lungs. The mode of treatment is urgently indicated, mamely, bleeding and stimulants, spirits of turpentine, and afterwards a little salt ; bot, ns death ensues a lew minutes after the attack, which nilects many at the same time, the utmost aetivity is required.

Metcorological Journal for 1834 .

| December | 95 | 70 | 30.32 | 29.69 | S. W. | Generally cool; three days' rain, one day lightning and thunder. |

Fogs are extremely rare; a haze overhanging the scason, and speedily dispelled by the sun's rays at an lagoons and rivers, not unfiequent in the summer early hour; malaria or noxious exbalations unknown.

The land and sea breezes veering round throughout the sear with extreme regularity, and the rainy season remarkably certain. A slight affection of the eyelids is the ouly disease pecular to the clime, generally appearing in the month of March. The cure is simple and eflectual, except with the ignorant and obstinate.
VI. In this part of New Holland the food of the natives embraces a great variety of articles. In the estuaries and rivers, and on the coast, there is abundance of fish at certain periods of the year, and kangaroo of various sorts, together with opossums, dalgerts, and other small animals, are obtained in considerable numbers; roots and gums of several kinds are also used by them, and birds' eggs, lizards, frogs, grubs, and cray-fish from the swamps, are resorted to as varicties, or used in cascs of urgent want. They do not appear to be redueed at any time to very great diflleulties in procuring subsistence, but their hahits preelude the possibility of keeping any accumulated stock of the necessary articles, and therefore their time and attention are nlmost constantly oceupied in the pursuit of their daily food. As they have no fixed habitation, and do not proctice any art tending to increase the supply which nature has provided, it is probable that their numbers are strictly limited by this eirenmstance, and that they have been long stationary at their present amount.
The law which thus forbids any further increase, Is the caise, moreover, of their dispersion throughout the territory, and prevents then from entering into any larger confederacies than those which are necessary for rendering most successful their hunting and fishing oceupations. The tribes, as they are called, usually comprise about 120 persons, of all ages and both sexes; these arc connceted for the most part hy relationship of blood, although it is by no means uncommon to procure wives or to adopt strangers from neighbouring tribes. The only species of control or government under which they live is founded on the influence of the strong over the weak, abal the deference which is shown to the aged, and to the pretended powers of the magician or doctor Certain usages established by eustom are frequently appeated to as rules of conduct. Of these, the principal relate to the right of individuals to certain portions of hunting ground, derived by inheritance from theis immediate ancestors; to the practice of boring the cartilage of the nose of the young men on their admission to the rights of manhood; and to retaliation for injuries received, which all are enjoined as well as entitled to seek, whether the offender belong to the same or to a neighbouring community. It has been found very difficult to ascertain the exact locality or tribe to which individuals belong, in consequence of alliances which are very frequent amongst individuals of different tribes; this species of brotherhood hy adoption, carries with it the obligation of becoming parties to each other's quarrels, and although it appears to be followed by the advantage of mutual protection, as far as such individuals are concerned, it gives rise at the same time to many hostilities. The intercourse between tribus is seldom of a friendly character; but it is remarkable that their contlicts seldom extend to the loss of lives. Almost continually engaged as they are in feuds arising out of the invasion of each other's territory, or the abduction of each other's women, it might be expected, that when they met to fight, the weaker party would be exterminated, whereas these contests, after a great deal of clamour, and a few unimportant wounds, generally
end In the murder of a child or of a female, hy mutual consent ndmitted as an atonement for the olfence or ground of quarrel. Indepentent of these oceasional warlike mectings of tribes, almost every native is under an engagement to avenge at a convenient opportunity, the death of some departed friend, or aniasult previonsly offered to himself ; this purpose, which he cannot forego without discredit, gives rise tos sets of the greatest treachery, and not unfrequently ends in the surprise and sudden teath of some indivilual belonging to the same tribe with the avenger, of of some of his neighbours. They rarely, therefore, sleep a second night in the same place; the spear seldom quits the hand of the man from boyhood till death; and they become accustomed to withess, endure, and practlise the greatest outrages.
The personal qualities of some members of this peculiar race are superior to the condition in which they live; a few of them are remarkable for symmetry of form and countenance, and the natural intelligence of many appears to be in the highest degree acute. The greater part, however, are, from hardship of life, and bodily injuries, disgusting specimens of the human race; and the deformity of old age, whether in the men or women, is usually accompanied by a concentration of all the vicious propensities to which their usages give rise.

In their intereourse with the whites, they accommodate themselves with astonishing readintes to the language, the habits, and even the weaknesses of their new friends. They are remarkably cheorful, and make themselves viry wseful in many employments; but they are not to be relied upon, for in a great many instances it bas heon found, that after living for months in the house of a settler, they have heen atl along employed by the rest of the tribe as spies, for the purpose of conveying intelligence as to the best point of attack on life or property. Living in a constant state of warfare, they are bold, cratty, and persevering, and lay their plans with judgment, equal to the vigour with which they put them into execution. With such qualities as these, they would be too powerful as a nation for the present nomber of colonists, if it were not for their mistrust of each other. They cannot combine their efforts, nor act on a concerted plan; for if they were to do so, there are many of them who would readily betray the rest, and voluntarily lead the whites to their retreat for the sake of a lew pounds of tlom.

It is impossible to give any aceurate account of their numbers; 750 have been known to visit l'erth from the districts surrounding it to the extent of 40 miles each way. The nearest estimate of the population appears to be that which assigns one native to each portion of ground of two square miles.

From the followingreturn, ascompared with a similar document drawn up in 1832, it appears that the popu• lation has increased since the latter period from 1,510 to 2,032 . The increase has been principally owing to the excess of births over deaths; the number of persons who have settled in the colony, since that period, having exceeded only by a few those who have quitted it.

On examining the return, it will be perceived, that the male adult population is limited to 788 , a number by far too few to necomplish, in a short time, the establishment of a new colony; and scarcely sufficient, with che aid of the small military force employed, to irotect themselves, and their property, from the depredations of the natives. It is satisfactory, however, to observe so large a proportion of females, and of
birtha, and that monthes did not the whole popula deaths, 9 ; and $m$

VII．［11．13．1837．］The parochial divisions of the Colony cannot be ascertained．
There are no churches，but divine service is per－ formed every Sunday in the Court House Perth，and will contain nbout 200 persons；the general atten－ dance is ahout 154．The Colonial Chaplain who preaches here has a salary of $£ 250$ per annum and an allowance of $£^{\prime} 50$ per annum in licu of a parsonage house；of dissenting places of worship there is one at Perth helonging to the Vesleyan methodists， lately enlarged and will contain about 100 persons， and one at Guildford，under the patronage of the Western Anstralinn Missionary Society capable of containing about 100 persons．

In the year 1835 an association was formed in London for promoting religion according to the rites of the Church of England，under the designation of the＂Western Australian Missionary Society．＂An Italian gentlemnon of the name of Giustininni was se－ leeted as their first minister；he arrived here in July last yenr，and has erected a chapel and schoolhouse at Guildford，and has commenced the formation of a farm on the Swan River，at which it is understood to be the intention of the society to collect natives，with a view to their instruction and future civilization．

VIll．［13．B．1837．］There are two public schools， one at Perth containing 20 male，and 12 female scholars ：and one nt Freemantle containing 22 male and 11 female scholars．The master of each school is allowed $50 l$ ．per ammm by government．

At＂Albany Plantagenet＂there is also one private school．

There are published in the colony at present，two weckly newspapers，independent of the Government Gazette．The oldest of these has existed under the name of the＂Perth Gazette＂for six or seven years； the other，under the title of the＂Swan River Guardian，＂commenced its publication in last year， as the friend of the people and the corrector of abuses．

If we return from the colony down to a later period，its progress in population，civilization，\＆c． would be more fully shewn：the Secretary of State for the Colonies，has expressed himself perfectly satistied with the improvement that has of late taken place，and looks forward confidingly to the ultimate tlourishing state of the settlement，which has now surmounted its primary difficulties．

IX．Few subjects deserve more serious considera－ tion，than the moral condition of a population．The following Synopsis of the State of Crime，and System of Criminal Jurisprudence，has been prepared by W． H．Mackie，Esq．，Chairman of the Quarter Session， and may，probnbly，indicate the state of morals in this community，in a more satisfactory manner than any commentary on the subject．

Number of persons, charged with crime, convicted, acquitted, and disehurged fir want of promecotion, and against whom no bills were fomm, from the tirst Quarter Sissions of the P'eace, held in the Colony, (July, $1 \times 30$, Inclusive, ) to the termination of the January sessions, 1836, inclusive:-

Remurks.-In the estimate for the proceeding year the grant towarals the erection of public huithings was montted, it beling proposed that such charge should in fiture be aldrayed trom the revenues of the colony.

Shortly after the estimate had been subnitted to Purliment, a report was received from governor sir Janues Stirling, stating that on principles of economy fs well as puhlic convenience, he had been induced to contrnct for the construction of buildings for the whices of the colonial secretnry, the registrar of deeds, \&c., the collector ot revenue, the survey depmrtment the colonial treasurer, and the commissariat. I's eomplete these buildings, the sum of $989 l$. 158.66 . Ins been included in the present estimate, under the hend of cuntingencies. An incrense of $25 l$, is made in each of the salaries of the first nud second clerks in the ollice of the colonial secretary, it haviug heen found impracticable to procure or retain the serviees of competent persons at a lower rate. The sum of gool. which nypeared under the snme hend in the last estimate for nerears ot salary to two ndditional government ngents, has bee. omitted. There is an lincrease on the last yenr's estimu'e of 8.40l. 15s. fiel.; but it is less by 1,229l. 14s. Gil. than the estimnte for the year $18: 36.7$.

Commisarint.-Pay of the troops, provisions, \&c. Amount paid for supplies, 2,7611.; ditto on nccount of altawnaces tor fuel nud light, 1:11.; do. for miscellaneona purchanses, 8l.; to. for land and water trassport, $435 l$; do. for extrn statf of commissarint department, $196 l$; do. for military nllownuces, 50 fl ; do. for special services, $1,0+1$ l. ; do. for contingencies, $787 l$. ; do. for military piny, $2,869 l$; pay of cotnmissarint officers, $552 l . ;$ Greenwich pensions, 92l.; consignment of specic and bills, $1,498 l$. ; special disbursements, $166 l$; total, $11,021 l$.
'The funds for the support of the above-mentioned cerviees were drnwn from the following sources:-

From the commissnrint chest, $11,021 l$.; do. coloaial, 3,912l.; do. parliamentary grant, 6,840l.

The annual cost, up to Mareh 1837, of the civil, judicial, ecclesiastical, and military departments, was in the following proportions:-

Recapitulation of the Establishment, Civil Estab. lishment, 3,525l.; contingent expenditure, 1,449l.; judicial establishment, $1,005 l$.; contingent expenditure, $1+1 l$. ; ceclesiastical establishment, 250l., contingent expenditure, $100 l$.; miscellancous expenditure, $3,98 \mathrm{I} l$. ; pensions, 0 ; grand total, $10,752 l$.

With regard to the public estnblishments, it is neeessnry to observe, that the population is seattered over a ver; wide extent of country. The causes of this dispersion were, in the first place, the unnexation of the sett'ement at King George's Sound, and, in the second phace, the mote in which lands were granted to the colonists. Having the power to select large
grants in districts suitable to their views, the settlers naturally availed themselves of their freedom of choice; and lands being suliject to forfeiture if not improved within a certain number of years, they have been inpelled by the fear of losing them to locute themselves upon their grounds, however remote their position. This dispersion has been further increased by the nature of the country, in respect of its general inferiority of soil, or the absence of water in certain localities.

As all had equal reason to expect protection, and the assistance of the government, it became recessary to form stations at many different points, by which the expenditure has been much increased; and establishments, which would have been sufficient for the wants of a much larger population if confined within reasonable limits, have not sufficed for the wants of this colony, embracing as it does so many separate and distant stations.

In this department, a considerable increase of midi. tary force is requisite for the protection of the colonists. Whatever muty have been the views of the Government on the carlier formation of this settlement, the settlers consider themselves by its declara. tions entitled to be protected, and secured in the quiet enjoyment of the lands nssigned to them, or bought by their outlay. Without this they eannot fulfil the location duties, nor can they make any progress in the extension of the settlement. This protection of the white population is moreover necessary to the sccurity of the aboriginal race; if not given, a constant state of warfare and violence between the two must follow, and while the former is hindered in his progress towards the establishment of the country, the latter will be rendered vindictive and cruel in proportion to the injury which he receives from, and indlicts upon, the settler.

Statement of the stock and erops at King Gcorge's Sound, the Vasse, and Port Angusta, taken December, 1836: Wheat, barley, and oats (aeres), 1NJ; gardens and potatoe crop, $32 \frac{1}{2}$; sheep (head), 409 ; goats, 55 ; horned cattle, 101 ; horses, 25 ; swine, 55.
The further extension of tillage is impeded by the want of labourers; and the very ligh wages demanded, compel those who prineipally depend on bired workmen, in rural occupations, to seck the means of employing their capital in pursuits less dependent on the whims and caprices of the lahouring class. In consequence of this, the raising of wheat will be confined to those families the members of which are sufficient for the work of the farm on which they live; and the higher class of settlers will endeavour to invest their means in the rearing of live stoek. The adaptation of this country to the purposes of wheat growing may be, however, considered as proved beyond all doubt; but this article cannot be protitably cultivated for exportation until there is a greater command of labour. The culture of the vine, fig, peach, and melon tribe, has been carried thus early to a considerable extent ; and if ever it should be desirable for the mother country to possess a winegrowing culony, the soils and seasons of this country afford reasomable ground for anticipating a successful issue to such a speculation. The return of protit on sheep-keeping may be estimated in the gross at 75 per cent. per anuum. The rate is undoultedly higher here, where the price of meat is high, and the value of land low, than it can be in New Sonth Wales and Van Dicmen's Land. After deducting the expenses of shepherding, and allowing a reasonable rent for the land on which the flock is maintained, a net profit remains to the owner of about 50 per cent. per amnum. Such a profit as this, combined with the means of extending indefinitely the number of sheep farms, must attract to this branch of investment, in the course of a few years, a large amount of capital. At present the absener, of funds within the colony applicable to such purposes, and the prejudices which unjustly exist in respect of its eapabilities, together with the mishaps attendant on the importation of sheep from other places, impose obstacles on its exteasion, apart from natural inerease.

Horses and cattle may be expected to multiply rapidly from this time forward. In addition to the number of the latter, stated in the preceding return, there are known to exist four or five wild herts in different parts of the colony, which have maintained themselves without protection against the natives for several years, and are rapidly increasing their number.

Looking to the small number of colonists, and to the few years they have bec: established in this country, the extent of land in cultivation, and the quantity of useful animals in their possession, are highly satisfactory. The settlement is now enabled to feel, that in less than eight years from its foundatioa, it has arrived at the point of producing its own subsistence, and is entirely independent of other places for the support of its inhabitants.

The arts connected with building and agricultural implement making, employ a considernble portion of the workmen of the settlement ; and it is, in consequence, better provided with the products of the first liamed of those arts, than is usual in countries so recently occupied. Many convenient and substantial houses have been erected in the towns, and by the
employment therehy given to artificers, a large number have been induced to remain, who would otherwise have quitted the settlement ; curpenters, masons, plasterers, blacksmiths, painters, and other artisans, have hitherto received high wages; but some of them are begimning to turn their thoughts to rural oeeupations, in consequence of an anticipated diminution of employment in their proper pursuits. Being usually superior in education, and in steadiness of concuct, to labourers in general, the class to which they belong is one of the most valuable in colonies, and therfore it is not to be rerretted that a very large sum has been invested in buildings, by the outlay of which they have been induced to settle in this country.

Since the earliest discovery of this coast, it has been known to abomed in various deseriptions of fish. The Malays have carried on, for at least 200 years, an extensive and profitable tripang and tortoisesbell fishery, on the north-west const. Dampier, Baudin, and King, at different periods, have reported the existence of astonishing numbers of whates in the adjacent seas; and our own experience since the establishment of the colony, and still more recently since whate fishing commenced in its bays, about 12 months ago, contirms the reports of the earlier navigators. This abmudance of fish is probably connected with the existence of a hank, which adjoins the shore from the northern to the southern extremity of the colony. On this shoal, which extends for 30 to 40 miles from the land, and which is composed, for the most part, of calcareous or coralline substances, there exist several varieties of edible fish, which admit of being eured for exportation.
The various descriptions of fishery which may he carried on under such circumstanees must eventually employ a large amount of eapital, and a great number of seamen; markets for their produce are open in China, as well as in Europe.

At present there are only four whaling establishments or associations ; these are not as yet upon an etheient footing, but their suceess has been great enough to ensure their future improvement and extension. The catching of fish for the purposes of lood gives protitable employment to a few boatmen; and the convenience afforded in the estuaries for learning in smooth water the art of managing boats, scems likely to attract to maritime pursuits a large number of young men.

Boat building is earried on with much suecess by two establishments, and some of the native woods are found to be well suited to those purposes.
The operations of the miller, baker, and brewer, tanner, shoemaker, and clothier, are in course of improvement and extension; and the community, ulthough limited to a very small number of persons, suffers no serious inconvenience from the absence of any of the arts and trades which administer to the primary wants of man.

The number of persons exelusively engaged in the civil, judicial, clerical and military branches of the publie service, amounts to 160 .

In other public offices, independent of the government, such as printers, innkeepers, \&c. there are employed abont 34 : as this description of persons, however necessary their labours may be to the general welfare, do not contribute directly to the produce of commodities, their number, together with that of their families, must be deducted from the gross population, in comparing the productive classes with the products of labour.
complas of the want of business in general. The traffic in tea, sugar, spirits, clothing, harness, earthenware, glass, and ammnnition, has been carried on at very high prices, and with great profit. Trnelers being a class of persons whose capital is always available for any speculation which may offer, and colonial farmers being always in aed of advances, the mercantile men in this community, possessed of means, have frequent opportumities of laying them out to ndvantage, either by monopolizing particular commodities, or by giving credits at high interest ; they have therefore had their full share of the general prosperity, even in the rhsence of any consideralle demand for merchandize. They are at this time looking forward to an increase in the exports of the colony, as the prohatile cause of an extension of business; in the meantime, money, in proportion to the reasonnble demand for it, is abundant. A joint-stock hank has been recently estnblished, nnd facilitates the transnction of business. The principles on which it is founded are such as to render it an institution of $n$ most beneficial character, while the names of the subseribers, as well as the cautious system of management adopted, ensure to the public the most judicious and equitable employment of its means. Its discount on bills are done at the rate of $12 \frac{1}{2}$ per cent. per annum, and it allows depositors, under the usual regulations of savings' banks, an interest at the rate of five per cent.
XIII. Amount of coins in circulation, about $15,000 l$. Amount of paper currency in circulation, about $400,000 l$., consisting of $1 \%$, notes issued by the Commissariat on account of Government, mind not yet brought in to be exchanged for British silver money. - [B. B.]

Coins.-British gold nod silver, dollars at $4 s .4 d$. each, find rupees at $2 s_{\text {. }}$ each - [B. B.]

Exchange.-The bills of the Commissariat upon the trensury have been hitherto negotiated at the rate of $1 \frac{1}{2}$ per cent. preminm, but the demand for them is gradually decreasing, and will cease entirely when the value of colonial exports is equal to the value of goods imported, unless an increase of population from without extend the demand for imported commodities. Private bills on England are usually subjected to a discount of five per cent., and this appears to be a reasonable charge where there are no considerable remittances to he effected.

The establishment of a bank had been long an object of desire in the colony. The want of such an institution ocensioned the greatest inconveniences on the transfer of property, as well as in the safe custody of halances in hand. The funds applicable to such purposes could not, however, be ohtained in the colony until this year. On the Ist of June, however, a joint-stock bank commenced tusiness, and is now in effective operation, with the fairest prospect of success. Being supported by 80 imlividuals of respectability, its credit is undoubted; andas it proposes to limit its discounts to actual transactions in the course of business, and to issue notes to a very smnll amount, it will yield a safe and sufficient profit to the proprictors, and promote materially the general interests of the settlement.

Its ostensible capital is $10,000 l$., but its credit is so good that it has not been found necessary to call for
much to create hatits of frugality and temperance amongst the labouring people.

Weights and Measures are British imperial.
Minufartories, Mines and Fisheries.-Brewery at Perth. Two boat builders; 1 -.t Perth and 1 at Fremantle. Three lime burners; 2 nt Perth and 1 at Freemantle. Three brick makers nt Perth. Three Flourmills by water; 2 at Perth and 1 at lipjer Swan River. Two windmills nt Perth; and 1 horse. mills at Perth, used tor various purposes. Two boats employed at seal fishing; 10 ditto recently established for whaling.

There are at present four establishments of this description ; the first at Freemantle, consisting of 30 subscribers, at the rate of $50 l$. each; the second, called the " Perth Fishing Company," is divided inta 60 shares at $15 l$. each. The fishing ground of these two compnnies is near the cntrance of the Swan River. The two other estnblishments occupy stations in Doubtful Island Bay, on the sonth coast; one of these is the property of a gentleman named Cheyne, the other belongs to a Mr. Sherratt; the latter was established last year, and found abundance of employment. It is supposed that the agyregate produce of the fisheries in the present season xill anomut to $4,200 l$. in oil, whalebone, and seal skins.

The following statements will afford informatian as to the actual population, and to the value of buildings and improvements effected in the Towns.

Estimated valuation of improvements in Perth :Number of allotments granted, 422 ; ditto suburbaa ditto, 15 ; ditto miles of fencing, about 35 , value about $5,600 l$.; ditto houses about 350 , value about $30,000 l$. ; Value of suburban improvements, ahout 4,000l.; ditto gardens ditto, 2,000l.; mills, 3,000l.; ditto public works, $15,000 l$. Total value, say about $50,000 l$.

In Fremantle :-Number of allotments granted, 430, ; ditto miles of fencing, about 20 , value about 3,200l.; ditto houses, about 300, value about 25,0001 ; gardens, $500 l$. ; private works of public utility, 5004 ; works undertaken by companies, 800l.; publie works, $2,300 \ell$. Total value, say about, $2 x, 000 l$.

Perth, 50,000l.; Fremantle, 28,000l.; Guildford, 5,000l.; Albany, 5,000l. ; Augusta, 2,000l.; Kelms. ('ntt, York, Peel Town, 1,750l.; Busselton, 800.; King's Town, 500 . . Total value of improvements ia all the towns, say nbout, $93,050 l$.

Agriculfural Sociely.-This institution had its beginning in the first year of the settlement; it comprises almost all the owners of land; its members are admitted by ballot; the regular meetings take place on a fixed day in each quarter of the year, and are usually well attended. The society has promoted good conduct amongst farm servants by giving distiactions and prizes to the best conducted and most efficieat lab. :cers, and in other respects it has tended, ia a very considerable degree, to promote the custumary objects of such institutions.

Condition of the Colomists.-In regard to the condition of the colonists, the most importnnt conside. ration is the aggregate wealth of the communty. The following Table exhibits an accurate statemeat in column A. of the amount of the several descrip. tions of property within the colony at the present time, and in column B , the proportionate or average

$8 s$. to $10 s$.
The aggregate value of property appertaining to the colonists in land granted at $1 s$. per acre, and on rural improvements, buildings in towns, implements, clothes and furniture, value of crop and live stock, and in boats, vessels and fishing gear, may be astimated in the gross at $360,000 \mathrm{l}$., producing, with the labour of the community, after deducting its subsistene, a clear annual accumulation of capital to the extent of $72,000 l$.
On an inspection of the preceding table, it will be seen that each colonist, on an average, possesses a considerable amount of property in land, buildings, and cultivation; that he realizes in grain, and the products of live stock, a large return for his labour ; that, after providing for his own subsistence, he exports in wool and oil to the amount of $8 l .19 s .2 \frac{1}{2} d$., and contributes to the local revenue the sum of 61.2 s .3 d . per annum ; that the comparative morality is very small, while the births and marriages are unusually numerous. In recapitulating these facts, it is not out of place to advert to certain rumours
other colony are the colonists, on an average, in a more prosperous condition than in this, or in possession of larger means for future welfare?

Alter these remarks, it is unnecessary to go into any detailed account of the condition of the settlers at large, as to food, lodging, clothing and general comfort; even those who have the smallest share in the aggregate wealth, or indeed no share at all, may attain to comparative atlluence by their own labour, at the present rate of wages, \&e., and it is undoub+edly in the power of the poorest individual, who is free from bodily infirmity, and from vicious provensities, to procure for himself in this country, by industry, not only the necessaries of life, but future independence ot labour.

The annexed interesting information was collected in the colony in 1836 , every thing now nears a still brighter aspect.

The following vegetables thrive in this colony most abundantly ; turnips, cabbages, cauliflowers, radishes, lettuce, carrots, onions, potatoes, peas, kidney beans, beet, \&c. These vegetables are highly productive, erfual in size, and generally superior in flavour, to those grown in England. Long-pod and Windsor beans, are not productive. The various kinds of potherbs, such as thyme, parsley, \&c. thrive extremely well. The various kinds of melons, such as the rock, cantelupe, romana, and water, bear fruit abundantly, and are of the finest quality, as to size and flavour. Cucumbers grow remarkably tine and good; and pumpkins and gourds are of large size, and very productive.

As regards fruit trees, they are not at present very numerous; those that were introduced at the first of the settlement, were, for the most part, lost to the colony through want of care, and ignorance of the nature of the country, and want of confidence on the part of individuals possessing them, as to the capobilities cl the colony for producing the requisites for the support and comfort of man. These prejudices, experience has happily removed; no one here, now doubts the capabilities of the colony: he is well aware that it can produce whatever is requisite for the weefare of the human race. The fruits most plentiful, at present, are peaches, figs, and grapes; it is not possable for any fruits to be doing better than these are, as regards their productiveness, quality of fruit, and healthy growth. The almond, hitherto, has not done well; the walnut tree thrives well. Within the last year or two, a considerable number of apple, pear, plum, orange, lemon, guava and other trees, have been introduced; these are in a healthy and thriving state. The banana is also introduced, and, where sheltered from boisterous winds, promises to do well, particularly those planted under the protection of Mount El sa, and the high shelving land of Perth, several of $v$, ch are now hearing fruit. The hop plant is also doing well in several places.

The price of vegetables, at the time of their first production, after the settlement of the colony, was very high. The first cabbages were sold at $2 s, 6 d$. each ; they are now worth one penny or one penny halfpenny each, of large size, full hearted, and of excellent quality. Potatoes were first sold at $1 s .8 d$. per lb.; the price is now one penny halfpenny. Peas were sold $2 s$. per quart (unshelled); they were sold, during the present season, at $t s, 6 d$. per peek.
 .

$\qquad$
$\square$

$\square$
$\square$

$\square$

Onions, three yeara ago, were worth $1 s .6 d$. per lb .; they are now, one penny. The first water melons sold as high as $103.6 d$. each; they may now be purchased for $2 d$. or $3 d$, each. Rock melons were $5 s$. each; their present price is Gd. Cucumbers, that at one time produced $9 d$., are now sold at one penny each. Two years ago, the grapes were sold at $2 s$. Gid. each lb .; their present price is $9 d$. Deaches, two years ago, (the first offered for sale,) were one shilling each; they are now sold for twopence each. Figs were four for a shilling; they are now sixpence per dozen.

Perth is now, at all times, abundantly supplied with vegetables, and it will not he any great length of time, before it is equally well supplied with fruit, as a great number of fruit trees have recently been introduced, and they are so casily propagated by cuttings in the colony. Cuttings, in many instances, bear fruit the sccond year after planting; and abumdantly, the third year of their growth. The large vine, in the government garden, u s introduced into the colony, by Mr. Macfaull; it has been planted in its present situation, about four years. Two years ago, it made shoots, upwards of 30 feet in length, in different directions, so as to cover an area of more than 60 feet in one year; it has borne as much as 100 weight of grapes in a season; but not having hitherto been cultivated, with a view of producing fruit, but of cuttings for propagation, it has been cut down very close every year. Had it have been trained, with a viev of producing fruit, it is supposed it would have yielded upwards of three hundied weight yearly. A great variety of grape vines are now introduced into the colony; those introduced by Mr. L. Leake, and planted under Mount Eliza, are of very superior quality, both as regards the size and flavour of the truit. There can be no doubt, but this will prove a fine country for the grow th of the vine, soil and climate being both in its favour. Fruit trees, of most kinds, are of much more rapid growth in the colony than in England. The peach trees in Government Gardes, began to bear fruit when they were little more than two years old, (they were raised from the stone,) and have attained a height of from eight to ten feet; and other trees grow with equal rapidity.

With respect to animal food the following information has been collected; in the latter part of the year 1829, 1830, and 1831, a great number of sheep and cattle were imported from Van Diemen's Land. Not less than 3,500 of the former; but in consequence of the general opinion, then entertained, that there was little land capable of grazing stock, (the land to the east of the larling Range not having then been explored,) nearly the whole of them were killed, to supply the ships of war, during those years moored in Cockburn Sound, viz. the Sulphur, Cruiser, and Success, at $9 d$. per 1 b. , the price to private individuals being at the same time one shilling.

At the same time, Mr. Lord, and Mr. Bryant, imported a number of horned cattle, about 60 head, a great part of which strayed away into the l3ush, where they still continue, many about the unsettled upper country of the Murray River; the rest were killed for the men of war, at one shilling per 1 b . The Government, at this time, had a herd of cattle, which they occasionally killed, and sold at the same price. The quality of the meat was very indifferent, the sheep being nearly all ewes, and in lamb, and in a poor weakly condition, from scab, and effects of the voyage; average weight, about 30lbs. each. The horned cattle were all poor, having been recently
landed. In the year 1833 , a few good wether sheep were landed from the "Dart," from Sydncy, and were sold for thirty shillings each, the meat being sold at one shilling per $1 b$.
At this jeriod, a few settlers were enabled to sup. ply an increase of sheep and goats, for which the butcher would give $1 s$. $3 d$. per 16 ., for retailing it againat $1 s .6 u l$. The contract for the supply to the troops, was taken at 1s. 4d. The colonial bred stock good. In 1834 , a considerable number of horned cattle were imported by Captain Taylor, and sold at $£ 15$. per head. In 1835, the retail price continued to be from 1s. $4 d$. to 1 s .6 d . per lb ., the market being now pincipally supplied with colonial stock. The contract price, for the last quarter of this year, for the troops, was $1 s .2 d$. per 1 b . The colonial bred meat is of excellent quality and flavour. The average weight of lambs, 30 lbs ., and wethers, 45lbs. each. The supply of mutton, up to the present period, has been tolerably abundant; becf is abundant, but the demand too small to enable the butcher to kill, with a certainty of sale.

In addition to the above information, it may be obscrved, that, at several periods, during the first three or four years of the colony, it was almost impossible to obtain fresh meat at any price. The supply of fish is generally good, as well at Perth as at Fremantle, a shilling or eighteenpence being sufficieat for the purchase of a large fish.

The supply of bread, or flour, has been equally precarious and fluctuating, with that of other descriptions of provisions; at times the market overstocked with imported tlour, selling at twopence; at other times difficult to be bought at one shilling per lb. At one perioci, a substitnte for bread was sold at one shilling per lb., composed of a small quantity of bad tlour, rice, and potatoes. For the last fitteen months, however, the supply has been abundant, and the price steady, gencrally from three-pence to fourpence per ll.
The following table has been prepared at Swan River in conformity as stated with the plan laid down in my first colonial work.
A.-Moreable property existing.-Sheep, 5,300 , at 50 s. each, $13,250 l$; Horses, 170, at 35l. each, 6,950l.; Horned cattle, 540 , at $12 l$. each, $6,4 \times 0 l$.; Goats, 500 , at 30 s . each, 750l.; Swine, 550, at 20s, each, 5501 ; Dogs, 5001.; Crafts, boats, and gear, 3,000t.; Furniture in houses, $10,000 l$.; Clothing for 1683 persons, at $5 l$. each, 8,4151 .; Farming implements, machinery, \&c., 5,000\%. ; Merchandize on hand, 15,000l.; Bullion, coin, \&c., $5,000 l$.
13.-Houses, 37.5 in Perth and Fremantle, 30,0001. Land cultivatcd, 1579 acres, at $15 l$. per acre, including farm, 23,685l.; Land granted, and wholly or in part occupied, as shcep or stock runs, 160,000 acres, at 5 s . per acre, $40,000 \mathrm{l}$. ; Land granted, remaining unoccupied, $1,379,616$ acres, at $2 s$. per acre 137,9611 .; Public buildings, jails, \&e., $13,000 l$.; Roads, bridges, and whurfs, $2,000 l$.; Grand Total, $321,541 \mathrm{l}$.
[These tables are exclusive of a considerable property existing at King George's Sound, in four vessels of considerable tomnage, houses, \&c. \&c.]

Estimat : value of property ercated or consumed, whethe of colonial production, or imported during the year 1835. Animal food for 1,892 persons, at 100 lbs. per annum each, $189,200 \mathrm{lbs}$., at 1 s . per lb., 9,460l. ; salted meat, imported beef, pork, and tongues, for 1,892 persons, at 150 lbs . per annum each, $283,800 \mathrm{lbs}$., at $5 d ., 5,912 l$.; fish for 1,000 persons 100 lbs . each per annum, $100,000 \mathrm{lhs}$., at $1 \frac{1}{2} d$. per lb .,
6251.; brca each per an for the ye 3,547l.; en at $0 \frac{1}{2} d$. per ported flou annum, $28:$ estimated butter, egg tea, augar, per day eac swine, 8.c.

## CHAPTER IV.-SOUTH AUSTRALIA.

Another portion of the vast island of New Holland has been recently erectedinto a British colony termed South Auslralia. The couditions under which it was established, will be best seen by the following ahstract of the Act of Parliament framed and passed for the formation of the new settlement.
'The colony to he erected into a province under the name of South Australia, extending from the 132nd to the 141 st degree of cast longitude, and from the south coast, including the adjacent islands, northwards to the tropic of Capricom.
" The whole of this territory within the above limits to the open to settlement by British subjects.
'Not to be governed by laws applying to other parts of Australia, but by those only expressly enacted for this colony.
'The colony in no case to be employed as the place of confinement of transported convicts.
' No waste or public lands to become private property, save by one means only; viz. by pureliase at a fixed minimum price, or as much above that price as the competition of public auction may determinc.
' Subject to the above restriction, and to the necessity of previous surveys, all persons, whether residing in the colony or Great Britain, to be frec to aequire property in waste or public land, in fee, and withont limit, either as to quantity or situation.
"The whole of the purchase money of waste or public land to be employed in convesing labourers, natives of the British isles, to the colony.
'The emigrants conveyed to the colony with the purchase money of waste land, to be of the two sexes in equal numbers; a preference amongst the applicants for a passage cost-free being given to young married persons not having children; so that for any given outlay of their money, the purchasers of land may obtain the greatest amount of labour wherewith to eultivate the land, and of population to enhance its value.
'Commissioners to be appointed by his Majesty to manage the disposnl of public lands, the expenditure of the purchase-money thereof as an emigration fund, and to discharge some other duties relative to the colony.
'Until the colony be settled, and the sales of waste or public lands shall have produced a fund adequate to the want of labour in the colony, the commis.
sioners to have authority to raise money on loan, by the issue of bonds or otherwise, leearing colonial interest, for the purpose of conveying sclected labourers to the colony: so that the first body of emigrating capitalists going out to buy land, may from the first be supplied with labour. The commissioners being empowered, until such loan or loans be repaid, wit! interest, to apply all the proceeds of the sales of land in repayment of such loans.
' For defraying (provisionally) the necessary exper.ses of the commission and of the colonial government, the commissioners to have authority to raise money on Ioan, by the issue of bonds or otherwise, and provided such expenditure do not exceed $200,000 l$. in the whole, the amount thereof to be deemed a colonial debt, and secured upon the entire revenue of the colony.
'The authority of the commissioners to continue until the colony having attained a certain population, shall, through the means of a representative assembly, to be called by his Majesty, undertake to discharge the colonial delt, and to defray the cost of future government; when the colony is to receive such a constitution of local government as his Majesty, with the advice of his Privy Council, and with the authority of Parliament, may deem most desirable. The population of the province must amount to at least 50,000 before it be lawiul for the Crown to frame a constitution of local government for the colony.'
The province contains an area of nearly 300,000 square miles, or $192,000,000$ acres. It was taken possession of and an accessary made by Captain Hindmarsh R. N., as governor, and the following proclamation fixed the site of the capital:- -

## Port Anelaide

" Proelamation by his Excelleney John Hindinarsh, Knight of the Royal Hanoverian Guelphic Order, Captain in the Royal Navy, Governor and Comman-der-in-Chief of her Majesty's Province of South Australia.
" I do hereby direct that the two points at the entrance of the estuary on the castern shore of the Gulf of St. Vincent, in lat. 34 deg .46 min . leading from said gulf shall be called as follows, viz.:-The northern point shall be called Point Gray; the southern point shall be called Point Malcolm; that the
entrance between these points into the port hereafter proclaimed shall be called Light's Passage; that the peninsula bounded on the enstern side by the port hereinafter proclaimed, and on the western side hy the sea, shall be called Iefeard's Peninsula; that the island forming the north eastern boundary of the port hereinafter proclaimed shall be called Torrens Island; that the inlet forming the southern boundary of Torrens Island, and running to the eastward, shall be called Angus Inlet; and that the land lying to the southward of the said inlet, and extending from such inlet to the southern extremity of the port hereinafter proclaimed, and inland to a distance of three statute miles, and forming part of the eastern and south-eastern boundary of the said port, shall be called Fife Angus.
"That the estuary leading out of Gulf St. Vincent from a right line across the same from Point Grey to Point Malcolm, and from such right line up the said estuary to a right line drawn across the same, at the distance of one statute mile ahove the present landing place in Fife Angus, shall be the port of the town of Adelaide; and I do hercby proclaim the snme within the boundaries hereinbefore described to be a legal port, and direct that from henceforth it shall be called and known by the name of Port Adelaide.
" Given under my hand and the seal of the province, this 25th day of May, 1837,
" John Hindmarsh."
Distances of several places from the settlement.

A full description of the country generally, so far as it is known, will be found in my "Colonial Library." The following topographicnl account has been furnished by the South Australian Commissioners :-

The capital of the province of South Australia is situated on the castern side of Gulf St. Vincent, in latitude 34. 57. south, and longitude 138.43. east. All the accounts which have been received from the colony concur in extolling the salubrity of the climate and the fertility of the soil, and go to confirm the opinion expressed by Captain Sturt in the report of his survey of this district of country, that between the eastern coast of Gulf St. Vincent and Lake Alexandrina, from Cnpe Jervis to the head of the Gulf, there are several millions of acres of highly fertile and beautiful land. The following statement respecting the climate, the soil, and the capabilities of the sei.lement, is extracted from a letter from Mr. John Morphett, addressed to several gentlemen in this country who had entrusted him with the management of their land in the colony.

Gulf St. Viscent is without island, rock, reef, or sandbank, and navigable by a stranger in the darkest night by means of the lead. I have heard it stated by conpetent authorities that gnles from the southward and westward do not blow home here; and I
know that some nautical men, besides the Surveyor. general, consider almost any part of it perfectly safo anchorage all the year round; in addition to which there is a snfe and commodious harbour, adapted to adinit, at all times, ships of 300 tons burthen, and, Colonel Light states, capable of being made practicable for vessels of double that tomnage.

The country from Cape Jervis upwards is very picturesque, and gencrally well timbered, but in the disposition of the trees more like an English park than what we could loave imagined to be the character of untrodden wilds ; it is, therefore, well suited for depasturing sheep, and in many places, under present circumstances, quite open enough for the plough.

A range of hills, with valleys opening through to the back, runs down it at an average distance of io or I 2 miles. Most of these halls are good soil to the top, and all would furnish excellent teed during the winter. The country hetween there and the sea is very diversificd, in some places undulating, in others level, with plains both open and elegantly wooded. There are many streams running into the sea, with very deep channels. These in summer are low, and a few of them dry; but the entire range of hills in which these have their sources abounds in gullies and ravines, affording the greatest facilities for damming, whereby an immense quantity of water might be retained from the winter rains. This is important, as a system of irrigation might be applied here with great advantage. The soil is generally excellent; fine rich mould, with a substratum of clay.

The site fixed on by the Surveyor-general for the capital of the colony is in about 34.57 . south. It is situated on gently rising ground on both banks of a pretty stream, commanding a view of an extensive plnin, reaching down to the sea, over which the S. W. breezes blow nine months out of the twelve, with invigorating freshness. As the back is a beautifully wooded country, which extends for about six miles to the base of the first range of hills, which are capped by a high wooded oue, called, by Sturt, Mount Lofty, 2,400 feet above the level of the sca. To the lelt the hills gently curve round, and trend down to the coast at about nine miles from the town, enclosing a plain country, in some places open, in others wooded, having a few small streans and fresh water lakes. To the right the hills run in a northerly and easterly direction, continuing for 30 or 40 miles, where they appear to sink into a plain The country along their base is well timbered : nearer the coast it is open and level.

At the distnnce of six miles from the town is the head of a creek, from 300 to 400 yards wide, communicating with the sea, in which vessels not drawing more than 18 feet water may be moored as easily and safely as in the London Docks.

The creek has two mouths or openings to the gulf, the most southerly of which, in latitude 35.47 ., communicates with a channel formed by the const, and sand-spits dry (at low water) about three miles long, with three and a half, four, and five fathoms water in which vessels may be moored commodiously and securely, having an entrance to the sea more than three fathoms deep at high-water spring-tides.

The coursc of the creck is almost due north and sonth, running parallel to the coast for the first four miles from the entrance; there is three and three and a t.alf fathoms in the middle, and two fathoms close to the banks; afterwards for a mile it deepens to four, and then for a mile and a half it becomes five fathoms deci), and at the point, nbout seven miles from the
mouth, whe communica only a dista

mouth, where it would be most convenient to form a communication between it and the capital, there is only a distance of one mile from the sea shore.

In the winter the creek receives the waters of the river, but, during the height of the summer, the river loses itself in a marsh before it reaches the creek. Nothing will be ensier than to dam the river above this point, noll thus always keep it full; and, as the comntry between Adelaide and the harhour is a dead level, it will not be an expensive work to cut a ennal from one to the other.

The climate is decidedly fine; the heat latterly has been very grent, but tempered by a pleasant sea breeze, which blows regularly through the summer, setting in about nine o'elock in the morning, and continuing till sunset.

As a proof of the healthiness of the climate, I may remark that there has been scarcely a case of illness since we landed, notwithstanding the privations and hardships attendant upon the first settlement of a country, and we think nothing of sleeping in the open air.

The anticipations we formed in England respecting the fall of rain on this const, have been, I am happy to say, realized ; whilst at Sydney they have been very nearly without a drop of rain for the last five or six months, we have had an abundance.

The grass grows at present in tufts, which I helieve to be the case in all natural pastures; consequently the country would not now support half the number of shecp that it would be able to do a year or two years after the lands have been cropped close, and the roots more spread. It is gratifying to find that the country and climnte are admirably adapted to sheep breeding, since wool is the staple commodity of Aus. tralia. In Van Diemen's Land, this branch of farming is calculated to yield an average annual profit of 80 per cent. But I should conceive the returns would be still more satisfactory here, as in the older settlements pasturage is scarce, and most of the sheep-runs are obliged to be rented at a high rate; whereas in this colony a purehaser of land may obtain a square mile (or 640 acres) of pasturage at 40 s . per annum.

I have before alluded to the advantages to be expected from a communication with the Murray, and I now fier to it again as being a point of great importance. There are extensive and rich plains to the westward of the War: ngony Mountains, in which several hundred thousand sheep are depastured. The produce of these flocks is obliged to be earried over these mountains at an immense expense, in order to be shipped at Sydney. The yearly increasing flocks of the settlers of New South Wales will compel fresh explorations to the westward, and the formation of stock settlements still further from the point of embarkation. In addition to which, we may confidently expect the occupancy of that extensive and beantiful tract of eountry still nearer to us, discovered by Major Mitchell, and called Australia Felix. [South Australian Commissioners Report for 1837. House of Commons, January 26, 1838.]

The annexed report is by Captain Martin, of the John Pirie, in August, 1836.
"I landed in a fine bay round Cape Jarvis, about eight miles up St. Vincent's Gulf, in one of the loveliest spots I ever beheld, with a fine stream of whter running through the middle of a level plain, and Colonel Light at once pronomneed it to be one of the
best situations possible for a town. This bay is well sheltered from all winds except those from down the gulf and from the $\mathbf{W}$. and $\mathrm{N} . \mathrm{W}$., but it does not appear that the winds blow home, and, from the appearance of the beach and the shore, I should say there is never nny sen running. The anchorage is good holding ground, and I should not hesitate to ride all the year round in from ten to three fathoms water. Colonel Light pitched his tents on shore, made a garden, and put in his seeds and plants. He set to work surveying the bay.
"The country all about is delightful and well watered. I proceeded up St. Vincent's Gulf, on the cast side, about 75 or $k 0$ miles, till I got into a river sufficient for the John Piric to enter at high water, and when in there is plenty of water. I went about 12 miles up this river, it runs close up to Mount Lofty. The hanks are low, composed of small islets, with low mangrove trees growing in the water; but a little way inland we came to a beautiful open country, fine plains as far as the eye can reach, very moderately wooded, as are also the hills all fine rich dark brown soil, with a yellow clay of from two to four feet under it, runs of fine water in all directions. All from this part to the Cape is a continuation of fine land, plenty of grass for fond for cattle and sheep; fine shady hill, moderately timhered. The principal wood is the oak and mimosa. There are abundance of kangaroos and emus. There is one large plain of fine land between this river and the Cape, with three rivers running through From this to the lake Alexandrina is about 22 miles across the finest country that ever eyes beheld."

All accounts agree in the eligibility of the situntion for a colony, and confirm the impression which 1 entertained when coasting along the southern shore of Australia in 1828.

Although half the land in the colony should turn out to be waste and irreclaimable, and the remainder not even exceed the price which has already been actually realized (from 12 s . to 20 s . per acre), there will still be $50,000,000 l$. worth of land to provide for the expenses of the government, and to plant labourers on the soil. An excellent public spirited association has been formed, termed the " South Australian Company," with a subscribed capital of $300,000 l$., who have already invested abr ut 100,000l. in the purchase of land from the gover ment commissioners, in the conveyance of labor is and stock to the colony, and in the estar .snment of whale fishing vessels, \&c.

We have no accurate census as yet of the colony ; it probably numbers upwards of 3,000 European inhabitants, of whom the females are in proportion to the males larger than is usually the case with infant settlements. The commissioners in their last report state that the total of the sums received for the sale of land up to the present time (l)ecember 22, 1837) has amounted to $43,221 l$. Of this sum, $36,427 l$. were received before the date of the first annual report, and subsequently to that report $3,200 l$. have been paid for land in this country, and 3,594l. have been paid in the colony on account of the 563 town sections sold by auction, after the first 437 town sections had been appropriated to the original purchasers of land orders in this country. The whole of the sales of land hitherto effected is stated in the following tabular form : 一

Return of the Sales of Lands from the commence. ment, on the 15th July, $1 \times 35$, to the 7th December, $1 \times 37$.

No expense has been defrayed from the revenues of this country on account of the colony of South Australia, except the sum of $4,801 l$., paid by the naval departments on account of Her Mnjesty's ship ' Buffalo,' employed in the formation of the settlement. Of this, $1,843 l$. has been repaid from the funds chargeable with the cost of conveying emigrants, and the remainder is to be repaid by the commissioners.

A return of all monies received hy the sale of Public Lands in Southern Australia, in each yenr, from the lst of April 1835, to the latest period for which it can he prepared.-From 1 April $18: 35$ to 31 March 1836, both inclusive, $36,377 l$. (including the preliminary sales, amounting to $35,000 l$., required by the Act 4 \& 5 Will. IV., c. 95). 1 April 1836 to 31 March 1837, both inelusive, 4,092l. (including $3,594 l$. 4 s., received in the colony from the sale of town sections; n return of subsequent seles there has not been received in Englant). 1 April 1837 to 31 March 1838, both inclusive, 4,820 . 1 April 1838 to 27 July 1838 , both inclusive, $12,640 l$. Total, $57,929 l$.
$\Lambda$ return of the number of Ships, and amount of their Tonnage, which hnve cleared out for South Australia from any Port of Great Britain and Ireland, in each year respectively, since 5 April 1835.-Year ended 5 April 1836, 3 ships, 535 tons; 1837, 11 ships, 3,139 tons; 1838,14 ships, 5,171 tons.
Copy of a letter from Robert Torrens, Esq., to James
Stephens, Espl.
South Australian Colonization Office,
Sir, Adelphi Terrace, 16 June 1838.
The Colonization Commissioners for South Australia, have the honour to neknowledge the receipt of your letter of the 6th instant, and, in obedience to the directions of Lord Glenelg therein contained, to
enclose n" Return of the annual charge to be provided for by the Loeal Government of South Aistra. lia, under the severnl heads of Interest on Debts con. tracted on the Credit of the Colonint Revenue; of lixpenses of the Local Eistablishment, and Contingen. cies ; and of Expenses of the Establishment of the Colofization Commissioners in this Country, and Contingencies."

With respect to the debts contracted on the eredit of the colonial securities, the Commissioners heg to remark that the amount has been very considerably enhanced by the necessity imposed upon them, by the provisions of the Sonth Australian Aet, of borrow. ing the sum of $20,000 l$. as a security funct, before any step could be taken towarts the establishment of the colony. Another cause of the large amonnt of the colonial debt has been the necessity the Commissioners were under of borrowing, for the purpose of fitting out a surveying expedition for the purpose of exploring the almost unknown coasts and harbours of South Australia, and for selecting the site of the first settlement

Though these incidental and preliminary expenses bave swelled the colonial debt to twice the mount to which it might otherwise have risen, yet the pro. gress of the colony is such as to give to the Commissioners a confident assurance that the resoures of the colony will be equal to the discharge of all its obligations.

By the 20 th section of the South Australian Act, the public lands, and the monies arising from the sale thereof, are made available for the payment of the prineipal and interest of the colonial debt; and at the actual rate at which, even at this early stage of its progress, the public lands of the colony have been selling during the present month, the amount of the land revenue for a single year would exceed the whole amount of the colonial delet, incluiling all interest thereon.-I have, \&c, Robert Torrens, Chairman.
A Return of the Annual Charge to be provided for hy the Local Government of South Australia ; viz.lnterest on debts contracted on the credit of the Colonial Revenue, viz. Bonds for security fund, $20,000 \%$., interest, $2,000 l$. ; Other bonds to this date, 35,0001 ., interest, 3,540l. Total, 5,540/-Expenses of the Local Eistablishment and Contingeneies from January to December 1838 ; viz. Salaries, 8,250l.; Contingeneies, 1,750l. Total, 10,000l.-Expenses, of the Establishment of the Colonization Commissions in this Country, and Contingencies, from January to Dec. 1838; viz. Salaries, 1,600l.; Contingencies, 1,000l. Total, 2,600l. Grand total, 18,140l.

The wages of labour are from $5 s$, to $f s$. per day. Every account brings more and more valuable intelligence as to the quality of the soil, the extent of navigrable waters, and the salubrity of the climate. I trust that in a future edition I shall be enabled to place before the British public a full statistical account of this new section of the empire.

## BOOK VI.-SOUTHERN AFRICA.

## CHAPTER I.-THE CAPE OF GOOD HOPE.

Saction I. The Cape of Good Hope, situated at the southern extrencity of Afrien, is bounded by the vast southern ocean on the $S .$, on the $W$. by the Atlantic, on the E. by the Indian ocenn, and on the N. by the Gariep or Orange River, and by unexplored territories.

It is difficult to state the exnct aren of South Africa, extending from Cape Point, in S. Intitude 34.23 to Delngon Bny, a Portuguese settlement, on the E. coast in lat. 26. In order, however, to explain the nature of the country, it will be neecssnry to consider the British located territory, which alter its conquest from the Dutch was thus defined (by Mr. Barrow, in his valuable view of the Cape, published in 1801) ; length of the colony, from W. to E. Cape Point to Kafferland, $5 \times 0$ miles; from River Koussie to Zuureberg, 520 ; breadth from S. to N . river Koussie to Cape Point, 315 niles; Nieuwveld mountains to Plettenburg's Bay, 160 ; month of the Tush River to 'Hettenhurg's baaken, 225 miles; which gives a parallelogram, whose mean length is 555 , and mean brealth 233 English miles, comprising an area of $12 x, 150$ square miles. The present boundaries may be considered ns the Keiskamma River on the F., and the Garicp or Orange River on the N., estimated at 600 mites from E.. to W., nund 330 miles from N. to S., comprising nin aren of about 200,000 square miles, with a sea const of upwards of 1,200 miles, from the Gariep on the western or Atlantic shore to the Keishnmmn, on the castern or Indian Ocean coast.
11. The lofty promontory of southern Afrien was discovered by Bartholomew Dinz, in 1487, and called by him Catho dus Tormentos, in consequence of the tempestuous weather experienced. The mutinous state of his erews, and the shattered condition of his ships, prevented Diaz from touching at the Cape; and on his return to Portugal, John II. direeted the Promontory to be called Cabo da boa Esperatrica (Cape of Good Hope), in expectation of future bencficial results. In the confident expectation of discovering the loag desired passage to India, another fleet was fitted out by John, and the command given to the celebrated Viseo de Gama, who, niter contending with the fury of the elements, and the des. pairing, nlmost mutinous, conduct of his companions, doubled the Cape of Good Hope (ten years after its discovery), on the 20th November 1497.
The Caje of Good Hope continued thus to be resorted to as a temporary rendezvous by European mariners for more than a century, mod disputehes for the Directors of the Duteh and English East India Companics were buried by the commnoders of the outward-bound ships, with instructions cut on stone or wood, indienting where letters and the ship and cargo registers were to be found by the homeward bound vessels. In 1620 , two of the English East India Company's commanders (Humphrey Fitzher-
bert and Andrew shillinge, their proclamation is dnted " Bay of Saldanha, 3 ll !uly 1620 ),"), took lormal possession of the Cape, in the name of King James, thirty years prior to the establishment of the Dutch colony. No settlement was, however lormed; and the English, Portuguese, and Dutch continued indiscriminately to resort thither for shelter mud refresh. ment; lut in 1650, the Duteh government, at the suggestion of a surgeon of one of their Last India shijus (Van Rieheck) who viewed the station as an ndmirrable rendezvous, and also with a desire to form n barrier to their Indinn dominions, resolved to colonize the Cape; $n$ determinntion which was shortiy alter put in exceution by sending out 100 males, to whom were subsequently added 100 femaies, from the houses of industry in Amsterdam. From this period, for 1 wo years, the Cape of Good Hope remnined in the possession of Holtand.

The British government in 1795 took possession of the colony for the l'rince of Orange, and it remained in our oceupation for seven years, until the peace of Amiens, when, after various improvements, \&e., and contrary to the profound views of that profound statesman the Marquess of Wellesley, then barl of Morniogton, (see his Lordship's Despatches, vol. i., published in 1836) it was most injudicionsly restored to the buteh nominally, but in reality to the French, who made use of the Hollanders as suited their convenience. On the renewal of the war with France, and its dependencies, it was wisely determined by our Govermment to reapture the Cape of Good Hope: and with this view, a well mppointed foree of 5,000 men, under Sir David Baird and Sir Home Popham, appeared oll the Cape in January 1806. The colony has ever since remained in our possession. [For further details, sce Colowionl Librury, vol. iii.]

The following is a list of the governors of the colony since its establishment in 1652 , under the Inteh gorernment-Joan Snthony vm Rielieck, sth April 1652; Zacharias Wagenaar, 9th May 1662; Cornelins van Gualberg, elth October 1666; Jacob Borghorst, 18th June 166 i ; Picter Hackins, 20 June 16;70; Coerrand van Breitenback, Ist December 1671; Nthert Van Breugel, 23d March [672; lisbrand Goske, ed October 1672; Johan Bat (van Herentals), ad January 1676 ; Hencbrik Crudat, 29th Jone 167x; Simon van der Stell, lith October 1679; Willem Adrinan van der Stell, 11th February 1699; Johan Cornelis d'Ableing, 3d June 1707; Louis van $A$ ssemburg, Ist February 1708; Maurits losques de Chavornnes, 2xth March 1714; Jnn de la Fontaine (Acting) sth September 1724; Pieter Cishert Nood, 25th February 1727 ; Jan de la Fontaine (Acting), elth April 1729; Ditto (Elfective), 8th March 1730 ; Adraan Van Rervel, 14th November 1736; Daniel van den IIengel, 20th September 1737; Hendrik Swellengrebel, 14th April 1739; Ryk Tulbagh, 30th March 1751 ; Joachim van Plet.

Wilhem Jassens (Batnvian Governor), lst March 1803; Sir David Baird, loth Jmmary INOH; llom. 11. C. Grey (Lientenant-governor), 17th Jamury 1807; D" Pre, Liarl of Caledon, 2.d May 1807; 11on. H. G. Grey (Jieutennat-governor) Sith July 1811; Sir John Francis Craloek, oth September 1811 ; Hon. R. Meade (lieutenant-governor), 13th Jecemher $1 \times 13$; Loril Charles IIenry Somerset, fith April 181.1; Sir Rutane Shawe Doukin (acting daring the absence of Lorl C. Somerset), lith January 1820; Lord Charles I1. Somerset (Returned), Ist December 18:21; Richard Bourke (Lieutenant-governor), 8th lehruary 18.38 ; Sir Galbraith Lowry Cole (Governor), G.C.13., 6th August 1826; Sir B. I'Urban (Covernor), 1833; Major-general Nnpier, 1837.
III. Southern $A$ frien is generally composed of chains of lofty mountains and intervening plains and vallies, extending east nond west, excepting one range beginning at Table Bay, opposite to Cape Point, and stretching to the northwnrll along the western const nbout 200 miles, which is as far as Olilant's River.

The first grent chain ruming east null west, lins, along the southern eoast, $n$ belt of undulating land, varying from 10 to 30 miles in width, indented by several bays, nad intersected by numerous streamlets; the soil is rieh, the hills are well wooded, and the climate equable and mild, from its proximity to the ocean.

The next great chnin is the Zwaarte Bergen or Black Mombtions; more lofty and rugged than the coast ehain, (in some plenecs consistinn of double and treble ranges) and divided from it hy an interval of from 10 to 20 miles wide, the surface of which is very varied, in some places barren hills predominating, in others maked and sid plains of elay, termed by the colonists the kurron, while widely interspersed are patches of well watered, fertile and beautilul grounds.

The thitd range is the Nicuwveld's Bergen: between these mountains and the seeond range is the Great Karroo, or Desert, an elevated steppe or terrace, nearly 300 miles in length from E. to W. א0 in breadth, and 1,000 feet above the sen, exhibiting a elayey surface thiniy sprinkled over with sand, studded with oceasional isolnted hills, with here and there a few stunted shrubs which seldom receive n friendly shower.

Along the western coast the country also ascends in successive terraces, the most elevnted of which (the Roggeveldt) unites with the lnst mentioned chain of mountams, (the Nicuwveldt). Indeed the Roggeveldt Bergen range may be said to commence in nearly 30 S . latitude, rumning nenrly sonth for two nnd a half degrees, when its course is bent to the E. and subsequently to the N. F. until the range reaches Delagoa Bay, that part of it forming the north boundary of the Great Karroo, being termed Nicuw. velds Bergen.

At the most southern extremity there are several
eminemeres, the heifhts and names of which areTable Mountain, fret $3,5 \times 2$; Wevil's Peak, 3,315 ; Lion's I leal, 2,760 ; Lion's Rımp, 1, 1 1:1: M1ıyzenberg, nbout 2,000; Elsey Prak, 1,200 ; Simon's Berg, or signal hill, 2,500; l’anlusberg, 1,200; Constantia, 3,200 ; Cape Peak, 1,000 ; Hanglip Cape, 1,800 fret.

Cape Town, built immediately at the foot of Table Aonntain, along the shores of Trable lay, on a plain which rises with an ensy nseent towards the moun. tain, is regularly constructed, with straight and proullel strects intersecting each other nt riyht angles, and shaded with elm or onk trees; the houses chiclly of red brick or stone, of $n$ good size, nud generally with a stomp, or terrace, before the sloor, shaded with trees.

The population of the metropolis of South Africa is at present more than 20,000 , of whom nearly 15,000 are white inbabitants - the majority being Dutch, or of Duteh descent. With the exception of Sylney, New South Wales, there is a more linglish appearance about Cape Town than any colonial station I have visited. The spuares are wed laid out, the strects extremely clean, the public edifices numerous and substmntini.
The castle situnte on the left of the town (entering from Table Bay), is a strong fortification commaniing the nneliorage, antl, if well defended, eapable of suceessful resistance against nuy foree which may be brought against it. The fortress is pentagonal, with a broad losse nnd regular outworks. It contains within its walls most ol the public offiees, and barracks for 1,000 men. There are other works de. fending Cape Toun. Fort Knokke, on the east, is conneeted with the eastle by a rampart called the sea-lines; and farther enst as Craig's tower and battery. On the west side, and surrounding the Lion's Rump, are Rogge, Amsterdam, nud Chavome hatteries, all bearing upon the nuchorage. The antrance of the bay is commended by a battery catted the Mwille:.
The colomists are indebted to the paternal sway of the Earl of Caledon for the lnying down of hydranlic pipes, by means of which a plentiful supply of es. cellent water is furnished to every part of the fown, and ships' boats are supplied at the landing place.

The colony is divided into districts; the topograply ze. of ench will be found in the 3 rd vol. of my Coluninl library.

Port Natal, the locole which the colonists are so desirous that our governnicut should oceupy, was purchased in 1689 , by order of the l)uteh East India Company, for the sum of 20,000 guilders, who directed the (ioverior of the Cape of Good ILope, M. F. de Chavommes, by letter, dated Amsterdam, 23rd Dee. 1719, to form an establishment at Port Natal, and to huli it with the purchased territory in its vicinity, as a dependeney of this colony. In 1814, the Caje of Good llope and its dependencies were formaty ceded by the Duten to Great Britain. Sinee the year | P ? 1 , lort Natal has been almost constantly orrupied by British subjects, who resided there with the express permission of the Governor of this colony.

The pastures of the country are of a claracter highly favournble. It is well wooded with large timber, and watered with upwards of 100 rivers and ruming streums, some of which are larger than the chict rivers of this colony. The soil is fertule, and has produred three crops of Kinffe and Indian Corn in the year. The rains are periodical, and the elimate is cooldr than that of the Cape, and highly salubrious. The bay of

Bort Natal is an exceelingly the harbour, but the entrane is narrow, and has in bar of shifting sand. There are six fiet of water on the har, with a rthe of six teed, and at sprime tides the depth is 1.1 leet. [fromatmemorial to the King in Comeil, prayine that. Natal my be aselgned a small Government establishment.
$\mathbb{N}$. Suthern Afrien is evldently of dilnvian origin; the farmation of the peainsula is sufficiently imbieated by the stracture of Table Mombain, which is eromphased of many strata, piled on each other in hage tahular masses lyng elose together without any intormediate veins of eathy or other extrancous mitter. The phan round the mumatain is a hlue shistus, ruming in parallel ridges N. W. and s. Fo., and interruped ty masses of a hard blue tionty rock.
'The whisties rests on a stratum of stroner ironcoloured elay, varying from a pale yellow to at deep red, abonding with brown foliated mich, and interspersed with immense bloeks of gromita', some of them crambling into fragements, and others ballowed wit as if by the hand of man, but really from the operation of time.
The esperiment of boring in search of eoml which took place under the government of Lord Macartucy at Wynbere, a tongote of land projecting from the Table Mountain, gave the following insight into the strata of the cominty : coul, 2 feet; hue sump!! rock, 5 ; white sortpy rock, 22; ureys somistome with chey, 21; chocolate-brown sambstone, 14; b/weish swatp! rloy, 31, aud striated sand, red and white, containus dhy, 33 ; total $12 x$ fect.

The stratum of coal found on the hanks of a deep rivulet flowing out from the Tirerherse ía hill that terminates the isthmis to the enstward) was borizontal with a sumer-stratum of pipe-clay ard white sandstone, and a sub-stratum of indurated clay. The coaly seam from ten inches to two feet in thickness, dilliered in quality at various places-sometimes it was in large ligneous blocky with visible traces of the bark, knots and grain of timber, and in the very middle of these, imbedded piees of irom myrites nur. ning through them in crooked veins, or lying in irregular lamps. Other parts of the stratum consisted of laminated coal of the nature of turt, horning with a elear flame, and leaving a light white ash; the more compact and heavy coal gave out a sul. phurous smell, and left a slaty cathe with an uchereous cerst. A vein of coal has recently been disen. vered near the month of the Kroom Riter, which is necessible to small eraft.

The most distinguishing feature of the moontains of Kaffreland, is a superineumbent stratum of sand. stone; huge detached masses are bund in many places standing some feet above the surface of the earth. The upper gart of a mountain visited by the Rev s. Kay, presented to the eye immense precipices eapped with large rhomboidal tables and projecting angles, forming a kind of eornice to the lace. On the sides of the deelivities, there was a deseribtion of prismatic quurtz rerystols in a corroled state, and evidently underging the process of decomposition a circumstance wheh is perceptible in almost all the mountains of South Virica, and presenting a fair prospect of a yearly increasing extent of tertile soil.

Iron stone is everywhere observable in Kaftraria, and likewise considerable quantities of ochre of sifferent kinds, some specimens in a state of impalpable powder enclosed in crustaceous coverings of a reddash colon, of the hardaess and eonsistence of baked earthenware; sometimes in singic nodules of ats inch
or two inches in diancter, but more frequently in chasters of two, threr, ar fumer nodules commeded by necks which are also hollow; in these stones every shade of eolenir has bern fonmed exeept the greens. but the most common are those of a pale yellow mind chocolate brown.

In the Graalf Reinet distriet some specimens of tugit and abmelance of limestone are lound; fossil remains have also been diseovered (perfect tossil remains of the Mammoth species have ben found a (ew years since in Beantorl); comman cormelion, topuz nud blmistone have been met with in the Orange river, and in some of the N. fled cornetcies, sellpiffer. The intinite number of large block of isolated stones that are to be foumd in south africa, to the very verge of the Cape promentory, are agerergates of qumitz mut miore, the first in laren irrequar masses, mul the hatter in black lamps, resombling shot; they nlso contain sometimes cuhic pieces of fekmor, and seem to be bound together ley phates of a clayey iromstome; by the action of the nir and wather, they fall to pieces in large concentric lamina, beeome disintherated, and, thatly form a suil, at dirst harsh and sterile, but melorated and enriched by time.

The soil throughont the colong is very varibel, in some phaces a maked smod, in others a still clay, and in many parts a relh dark veretable monld; frequently the surface appears a dry sand, lont on removing it to the elepth of a few inches, a black mould is found beneath; the stifl clayey soil, sometimes red, and sometimes met with of a yellowish colour, is very fertile when irrigated. The: east coast bormer is generally an alfovinl loma, as is the case with many vallies, particulatly noong the ravines and windings of the Fish River:

The surface of the (ireat Karros is diversified; in many places it is a stiff brownish coloured clay; in some parts a had of sandstome, crossed with veins of lat quart\%, and a kind of ponderous iron-stone; in others, a heavy sand, with here und there a blackish loam. Near the bed of the Butfalo River, the whole surface of the comntry is strewel over with small fragments of a deep purple-coloured slate, crumbling from strata of loug puraled ridges, moning E. and W.; senttorid among these fragments are black tamified stones, having the appearance of volcanie strers or the sowtin of an in furnace; several conical hills, some truncated near the top, stand detached from moll other on the plata; an! althongh at lirst appearing as if thrown up by volcanic exposion, yet on a menter view of the altormate state of earth and sambstome, regularly disposed, exhibitine the effects of water, nud not of fire. Some that sundy marshes of the kiaros ar overgmon with rushes, and abomad in sprines strongly inpurgnatel with salt, and a species of sellothe (salt whot), grows here in perfecetion; the sumbe aromid its ronts being generally eoverel with a tine white nitrous powder. It is rom this phant that the mhabitants make excellent soap, in comjunction win sherers liat.

From the Lilln Laurn! fomeyn, in the Great Karroo, to De bere valley, there are neaty 30 miles of a continuel bed of swlis and arid clay, withont a particle of herbage ; when, suldenly, ats by enchantment, the De beer valley, a plain of several miles in diameter at the bise of the Blach Monntains, is entered on, elothed with the mast hasuriant vegetation; the water, howewer, of one of the streans which thow through it, being as briny as that of the Eaylish chanmel. beyond this valdey the karros arain expauls in ail des mathedness.

Of minerals few have yet bern diacovered,-indications of coal, as hefore ohserved, have heen met with at the Kroom liver and other jlaces. Near the Bushman's River (Ultenhage district), an extensive vein of alum has been recently discovered, which is particularly beatiful in Its structure; the colour is perfectly white, of a silky linstre, consistling of delicate fibrea, of six or cight inches in length, which rou parallel, sometines perpendicular, and sometimes in an undulating direction; the vertical course of the flaments being dirceted by small tragments of greyish limestone, and mimute particles of yellow fermginous earth; these are found near the hasis of the tender capillary crystals, which shoot from a thin stratmon of concrete alum, the lower surface of which is encrusted with yellow clay and portions of blue limestone. The alum is very pure and valuable as an article of commerce.

At Cantoos liay ( 20 miles W. of Agoa Bay) a rich lead ore of the species known by the name of gratena (lead mineralized with sulphur), has been found in the steep sides of a depp glen; the masses seen by Mr. Barrow had no appearance of cuble erystallization, hut were gramular or amorphous in some species; the surfaces, in others, made up of small facets, called by miners white silmer are; the vein of the ore was three inches wide and one thick, increasing in slze as it advanced under the stratum of rock with which it was covered. The mutrix, is a quartoze sundstone of a yellowish tinge, cellular and librous, harsh to the touch and casily broken. This ore, when assayed by Major Van Dhen, an otlieer in the Dutch service, yielded from 200 lbs , weight, 100 llis . of pure lead and 8 oz , of silver.

Mineral waters exist in different places; a fow miles from Graff Reinct, there is a spring of cold water, strongly impreguated with sulphurated hydrogen. Ahout tive miles from Cratock, in Somerset, there is a hot mineral spring (thermometer 86 degrees), which issues from the ground close to the bank of the Great Fish River, which is here a small stream about 200 miles from the sea. The taste of the water much resembles that of the llarrowgate or Gilsland spa, and it is resorted to for bathing by invalids labouring under various complaints. The ground in the vicinity is impregnated with saltpetre, and considerable quantities of titre in a pure state may be collected in the neighbouring mountains. At no great distance from Cradock, near the Bamboo Mountains, are three salt lakes, similar to those in the vicinity of AIgoa Bay and other parts of the country, from which the neighbouring colonists supply themselves with salt. There are two warm springs at the village of Caledon, under the Kleine Swartberg, which contain muriate of soda; their heat is 92 degress. These springs are used as baths, and the water is also taken internally; they are found beneficial in cases of chronic rheumatism, diseases of the skin, and scorbutic ulcers. One sjring is private property, where there is gool accommodation for invalids and others visiting the baths; the other belongs to Government, and is Jet on lease,-the teuant being bound to allow the free and gratuitous use of the bath and buildings to poor indigent persons, of whatever description, producing certiticates ol inability to pay. There are two other warm springs in the district ; one at Cogman's Kloof, also containing a muriate of sota, the heat of which is 114 degrees; and one at Roodelserg, containing a small quantity of carbonate of lime, the heat of which is 9.1 degrees.

Several singular salt-pans exist ; nome of them duo miles from the sea-conat, and $5,00 \mathrm{~m}$ to $(\mathbf{i}, \mathrm{smo}$ fiet alswe the level of the nen, the salt heing hata, mat from tive to six inches in thlekneas. The largent ami thest salt-pan is near \%warthops River, Agon liny, The noil on nll sides of the great \%warthops salt-pan is a deep vegetable earth, in some places real, in others black, reathig on in bed of clay, mul withont a vestige of malt in its compusition.

From the Cape of Coobl Ifope along the S. const to Aggoa Bay, a bunk, with various soumetengs, projects to n considerable distance from the lund, called the bank of Lagullas The s. cextromity of this booh is nenrly on the meridian of Cape Vaches. or in fong.
 this part ; but a little to the S , of 36 S . it converges yuickly, and becomes of a harrow conienl fom, with very deep water on its $\mathbf{S}$. end. The somudings to the west ward of Cape Lagullas (to the sunthward of 'si, bi S.) are gemrally of man; to the southward of the Cripe, frequently green of other sund; and on the S.li. and enstern parts of the hunk to the rastwart of Cape Lagullas, mostly coral, or conse samb, shells, mad small stones. This bank is probably the depmsit of the strong current which evts to the s. mall ${ }^{1}$ according to the direction of the bank, and is gene. rally strongest diring the winter months, ruming with the greatest velocity nlong the verge of the bank, or a little outside of soundings. When opporad by adverse gales, a very high sea is thrown up, which sometimes lessens the strength of the curront; the rapidity of the stream is, however, always less towards the shorn, where the sea is smoother. By kepping on the colge of the hank, a ship will be carricd Nomins a day with an adverse wind rombl the Cape into the Athntic ; vessels, therefore, trustiog to their rechoning should be mindtul of this circumstance.

A more minute detail of the geologiend structure of this portion of the Atrican continent will be found in my "Colonial Librury," vol, iii.
V. The seasons at the Cape of Good Hope are the very opposite of those of England, for example:-

The S. E. and N. W. winds are the most prevalent in this hemisphere; the former in summer and the later in winter. The violent gales of wind which were formerly so fatal to European vessels appear to have been diminished in their force or late years, and large icebergs are now seen to the north of the Cape. In the Eastern distriets the mountain tops are occasionally covered with snow, but of course, in such an extent of country, and at diflerent clevations, the heat varies; taking Hottentots Hollond in the Cape district as a fair criterion for the elevated country, the following metcorological register, from the Army Medical Board Office, indicates the state of the weather throughont the year, Cape Town of eourse being wariner.

The healthiness of the Cape district is evinced by fommonly blows cold in summer, at the same time the liet, that in 1830, ont of a population of 1 , 500, that the sum shines powerfully. It is this circumstance at Ilottentots Ilolland, the total number of denths was only five; of which four were coloural persoms, one an old Mozambigucer, nnother an old slave, both of whom died of chronic diseases; the third ? youne chitd, died suddenly; the fourth, a Katlive girl, was lurnt; and the fifth, i European gentleman of 50 , prineipally of a mental affection. The mean temperature of Cape Town (which is heated by its proximity to Table Monntain) inferred from a meteorological joumal kept for several years, is 673 . The mean temperature of the colelest month is, perhaps, 57. ; hattest, 79.; mean ot three recent winters, 58.; of three summer months, 77. ; least heat cluring summer, 63. The temperature of the district of Stellenboseh, deduced from the observations of a single twelvemonth, is $66 \frac{1}{2}$.; Eatremes, 87, and 50.
In this colony, as in the S. of Europe, and most of the warm elimates of a temperate zone, the wi:d
that the sum shines powerfully. It is this circumstance (Sce " Colonial Library.")

V1, South Airica, when lirst visited by the l'urtirguese, butch, and linglish, was, eomsilaring the country and barbarous state of the inhabitants, extensively peopled by a race of Wottentots, who, from beng masters of the soil, became in a short time the servants of the Duteh settlers, and, as in the West Indies and North America, sank before the white race; their mumbers, though still considerable (u)wards of 30,000$)$, being very muth reduced.

The first authentic accomint of the state of the colony is furnished by the Oppratio or tax lists for 179 x , when the Cape was in our possession, and the returns were required to be made for the first time on oath.

According to the Oppgaff returns, the population from 1797 to 1807 had augmented upwards of 10,000 . Its progress at intervals is thus shewn:-

Fopulation of the Cape of Good Hope exclusive of Military.

(a) The old chureh having been found insecure, and having in consequence been pulled down, divine service is performed in the Lutheran Church which will contain ahout 1600 persons. The dissenting places of worship are two belonging to the Independents, and one to the Wesleyans.
(b) Morning and evening service is performed in the English Episcopalian Church (St. George's). The children of the English poor, free blacks, and apprentices are eateehized in the government free school in Kerrom Street every Sunday.
(c) The senior miuister of the Latheran Church receives a stipend from the community of $150 l$. per annum, and enjoys other advantages, the sccond has also an annual allowance of $100 l$.
(d) The Rev. Mr. Moral who had acted as Catholic priest, during the absence on leave of the Rev. Mr. Fishton (since deceased) has left the colony. The living is therefore vacant. The Roman Catholic Chapel, situated in the Bintenkant, Cape Town, has during the late season been reduced to a heap of ruins, nor is there any immediate prospect of its being rebuilt. The arrival of a bishop and two prie.ts who are shortly expected, will probably mature any plan, that may be in contemplation for the erection of a new place of worship.
(e) The dissenting place of worship helongs to the Wesleyans, it is situated near Wynberg and contains 200 persons.
$(f)$ The minister is paid by the community.
(g) The chaplain, has an allowance of $52 l$. per annum from the navy. The service for the Episcopal community at Simon's Town is performed in the Wesleyan Chapel, for which Government pays an annual rent of 500 . It will contain 300 persons. The Episcopal Church, when finished will contain 400 persons.
(h) Three Missionaries officiate alternately.
(i) The dissenting place of worship is supported ly individuals, for the religious instruction of apprentices and personss of colotr. It will contain 400, and 150 usually attend, Mr. Luckof of the German Missionary Socicty gives instruction here.
(k) One of these dissenting places of worship, is situated at the Paarl, and another in Wagonmaker's valley; they were erected by private indiviluals for the instruction of slaves; each will contain 300 persons. Mi. Elliot of the London Missionary Society, officiates at the Paarl, and Mr. Bisseux of the Mis. sionary Society of Paris, in the other. The third dissenting place of worship is situated at Fianscric Hock, it will eontain 100 persons, but there is nc missionary.
( $l$ ) The Wesleyans have a elapel, which will contain 130 persons.
(m) A Missionary resides at Worecster and instructs the coloured population.
(n) Two missionaries reside at'Tulbagh and give religious instruction to the heathen.
(o) There are four Missionary Institutions in the district of Clan.William, one at the Cederberque, one in the Kamisberg, one in Minaquoisland, and one at the mouth of the Oliphant River. They are eoadueted by persons sent out from the different societies in Europe.
( $p$ ) The dissenting place of worship is the chapel at the Caledon Institution, belonging to the london Missionary Society, at which 834 jersons reside.
(q) The dissenting places of worship, are chajels at the Moravian Estahlishments at Guadenthal, where 1,454 persons reside, and at a branch of that Establishment at Elim, to which 310 persons are attacied, and a chapel at the Leper Institution at IIenelen Aardes, where there are generally from 80 to 100
patients, performs

patients, at which a Missionary from Gnadenthal trict, are: I Independenr, I Baptist, and 2 Wesleyan performs Divine Scrvice.
( $r$ ) A church is now building and almost completed, which will contain ahout 1,200 persons. The Dissentiug place of worship is at Pacalkdorp, a station of the London Missionary Society. The chapel there will contain 200 persons. The attendants at divine service are Hottentots.
(s) There is a London Missionary Institution at each of the following places, viz. Bethelsiorp, Port Elizabeth, Uitenhage and Hankey. The Moravians have a Missionary station at Enon. Each of these Missionary Institutions is frequented by Hottentots.
( $t$ ) Previous to the appointment of the present minister, the minister of Graaffe Reinet officiated four times a year to administer the sacrament, when about 1,000 attended.
( $u$ ) The dissenting places of worship in this dis-

Chapels at Grahnm's Town ; 1 Wesleyan at Kat River; 1 ditto at Salem; 1 ditto at Port Francis; 1 ditto at Wesley Mount; 1 ditto at Clumber; 1 ditto at Bathurst; 1 ditto at Manley's Flat ; 1 ditto at Greenfontein, and the London Missionary Society at Theopolis. The Rev. Mr. Heavyside officiates as chaplain at Graham's Town, and receives for that duty a portion of the salary of the minister there.
(v) The minister of Somerset, performs Divine Service for the Dutch community at Albany once a quarter in the English Church at Graham's 'Town.
(w) Mr. Morgan acts as minister of the Dutch Reformed Community in Albany.
( $x$ ) The Dutch ministers, by occasional visits to the distant parts of their extensive parishes, remedy in some degree the inconvenience caused by the remoteness of the residences of the people from the church.
VIII. Schools, \&c., of the Cape of Good Hope. [B. B. 1836.]

* The sums in this column are the salaries paid the masters. $\dagger$ Under this head are included all expenses paid by government. $\ddagger$ The sums here inserted are the contingencies paid by government. § Vacant.

Schools, \&c., of the Cape of Good Hope (continued).

## § Vacant.

## || Undefined

(a) The expenses are defrayed from the funds of the Bible and School Commission, and consist in various petty charges for chalk, brooms, cleaning, \&c.
(b) These masters are engaged in the instruction of free persons of colour, who may be desirous of being baptized, either in the Dutch reformed or Lutheran faith: the schools are open every week day from four to five $\mathbf{P}$. м.
(c) The want of a schoolmaster capable of giving instruction in the English language is much felt. This want might be supplied if funds could be found for the erection of a school-house.
( $d$ ) The expenses of these schools are defrayed by the Moravian Mission.
(e) The teacher receives $27 l$. per annum for house rent, which is included in the expenses.
$(f)$ The school mentioned in the last column is a public school (not a free school) for instruction in the Dutch language : 12 scholars attend.
(g) The expenses are for house rent.
(h) The expenses are for house rent.
(i) The object of the foundation of these schools is to afford religious instruction to children living at a remote distance from any church, and to give elementary instruction in the English and Dutch languages. A few of the inhabitants have private schools.
( $k$ ) The annual expense for house rent has not been incurred. The master is the church clerk, and receives a salary of $30 l$. per annum on condition of kceping a school, which is held in the house occupied by him as church elerk.
( $t$ ) The expenses are for house rent. In addition to the charge for house rent, government furnishes these schools with forms, desks, \&c. Reading and spelling lessons, slates, and other school materials have been supplied by the School Commission in Cape Town. There are Dutch private schools in the village of Swellendam and Calcdon. There are private schools for Hottentots, viz.:-at Gnadenthal, two sunday schools for persons above seven years of age, two
daily schools for girls and boys, and an infant school supported by the Moravian Missionaries; at Elim, one daily school and an infant sehool; at the Caledoa Institution (7uurbrak), one daily sehool for childrea, and an infant school supported by the London Missionary Society. Many persons engage private schoolmasters at their own houses, and the children of the neighbourhood generally attend there for instruction. The number of thesc private school-masters in the district is between 30 and 40, and about 250 childrea attend them.
( m ) The 22l. 10s. is a charge for house rent. Government is also at an expense of $3 l .7 \mathrm{~s} .6 \mathrm{~d}$. per month for the hire of a school room. There is aa infant schoul supported by voluntary contributions. The house and school rooms, being public property, are kept in repair by government. Desks, forms, lie. are supplied when required. There is a sehool at Pacaltsdorp, in the district of George; and one at Bethelsdorp, at Hankey, and at Enon, in the district of Uitenhage, for the children of the Hottentots belonging to those institutions which are supported by the respective missions. In the town of Uitenhage there is also a school for free persons of colour, kept in a building belonging to government. The teacher of it is also chureh clerk, for which he receives $25!$. per annum from the chureh funds.
( $n$ ) The total number of scholars instructed in the private chools is 123 males and 122 females. There are several private schools in the several field cornet. cies of this district, but they are not permanent, a teacher being occasionally employed for short periods in a family. The appointment of teacher has beea vacant since the resignation of the late master in November, 1835.
(o) The expense is for house rent.
(p) The expense is for house rent.
(q) The expense is for house rent.
( $r$ ) The expense is for house rent.

Return of the Gaois and of the Prisoners confined therein throughout the year 1836. [13. B.]

General scale of Prison Rations throughout the excent those at the breast, per day, meat $\frac{1}{4} \mathbf{l b}$., bread Colony.-[B.B.] To each female prisoner, per diem, $\frac{1}{2} \mathrm{lb}$.; to eaeh child between 7 and 14 years, ditto, meat $\frac{3}{} \mathrm{lb}$., bread 1 lb .; to each child under 7 years, ( meat $\frac{1}{2} \mathrm{lb}$., bread 3 lb . ; to each male convict at hard
labour, or each person detained as a witness, per day, either meat $1 \frac{1}{4} \mathrm{lb} .$, bread 1 lb. , or in lien, meat $1 \frac{1}{2} \mathrm{ll}$, bread 3 lb . ; to all other male, criminal or civil prisoners confined for debt, per day, meat 1 lb ., hreat 1 lb. All persons admitted for medical aid, or pri soners under medical trentment, receive such rations only as the surgeon may direct. The daily allowance of rice, vegetables, soup, \&c. in addition to the above mentioned artieles, remain as heretofore eustomary in the several districts, but when the full rations of bread and meat are issued, the allowance of rice does not exceed 2 oz. for each ration.
X. The affairs of the colony are administered by a governor (salary (e,000l. per annsin), nominated by the Crown, aided by an Executive Council, composed of the Commander of the Forces, the Chief Justice, the Auditor general, Treasurer, and Accountantgeneral, the Seeretary to the Government. There is a Legislative Council appointed by the government in England, at the recommendation of course of the Colonial Government. The members of this council (of whom five are offieial) after two yenrs' sitting, hold their seats for life; their debates are carried on with open doors.

At present each district or drostly, has a Civil Commissioner, who acts also as a resident magistrate, aided by a relative number of wnunid justices of the peace : a distriet is divided into severa! smaller divisious, termed Veld Corneteies, over whieh an officer with that title presides. The Veld Cornet is in fact a sort of petty magistrate, empowered to settle trifling disputes within a circuit of 15 or 20 miles, according to the extent of his authority, to punish evil-doers, to call out the burghers (over whom he presides) in the publie service, and act as their officer on commandoes, (reprisals on the frontier tribes for incursions into our territory) to supply government with relays of horses or oxen, when wanted, \&c. 太c. ; he receives no salary (except upon the Kaffre frontier;, but is exempt from all direct taxes.

The municipal hody at Cape Town consisted of a Burgher Senute, under the form of a President, four members, Secretary, and Town Trensurer: the President remaining in office two years, and receiving 3,500 rix-dollars per annum; he was succeeded by the senior member, and the eleetion of a new member took place by the Board (not by the inhabitants or burghers, paying the taxes), three persons were returned by the majority of votes, and their names sent to the Governor, who selected one out of the three.

This Senate, if properly elected and managed, might have been produetive of much good; it had the superintendence of the elennsing and lighting of the public streets, and of preventing encroachinents on publie lands, it regulated their sale, supervised weights and measures, and the reservoirs, waterpipes, and fire-engines; attended to the assize of bread, the slanghtering of healthy cattle by the hutchers, levied and received the town taxes, and the commando tax, when that was necessary, and watched over the prices of various nrticles of prime necessity. Under proper regulation and management sueh a body, duly elected, would have been of considerable assistance to a govermment, by relieving it of all minor details of management, in the concerns of private life; it has recently, however, been dissolved, without any substitute being provided.

When the Cape became a British colony the Dutch eriminal and civil laws were in operation; these, particularly the latter, have undergone some modification, torture has been abolished; the penalty of
death attnches on conviction to murder, rape, coining money, and high treason ; transportation, for theft to n large amount, or crimes of a serious or violent nature, not liable by the Dutch law to death: for minor erimes, the punishment is banishment to Robben Island (at the entrance of Table Bay), with !ard labour; imprisonment in the Tronk (prison), or Hogging. Criminals are tried by in jury, of whom there must he at least seven members present, and when the ollence is capital a majority must agrte in the verdict, if seven ouly be present; if more than seven jurors 2 ttend, and opinions as to guilty or not guilty are equal, the prisioner is acquitted; by the new charter the linglish system has been brought into operation. A criminal is allowed, on his trinl, to employ an advocate to examise and cross examine witnesses, and to argue for him on all points of law in his defence.

The eivil law is modified by that of the Duteh cotle,-the ' Statutes of India,' collected by the Duteh towards the end of the seventcenth century, and deelared to be applicable to the Cape by a Batavian proclamation, dated February, 1715,-and by various colonial laws, or where these are found deficient by the Corpus Juris Civilis. The equal division of property on the densise of a parent, added to the absurd custom of measuring distances ly a man's walk in an hour, or a horse's canter, render li'igation frequent.

The laws are administered by a Supreme Court, presided over by a Chief Justice (salary 2,0001 .), and two Puisne Judges (salary each 1,200l.), who hold four terms in the year-February, June, August, and December. Circuit Courts, civil and criminal, are also held alter the English form (the colonists complain of a great want of uniformity in the law proceedings of the circuit courts; two of the judges being English, act according to that system-whilst the third being Scotch, follows his national customs, hence different procedures prevail, to the no small annoyance of suitors; it is indeed to be hoped that some more suitable qualification were requisite for our colonial judges than mere party influence, or aristocratic connexions) ; for the better execution of the law, the oftice of High Sheriff, with the appointment of Deputy Sheriffs for ench district, was created in 1828. Small debts under 20l., in the Cape distriet, or $10 l$. in the comitry, are recoverable in the Court of the Resident Magistrate, from whose juigment there is an appeal ; in Cape Town if the sum in dispute amount to, or exceed $5 l$., or in the country distriets 40 s . Debts exceeding 20l. sterling in the Cape district, and $10 l$. in other parts of the colony, are recoverable only in the Supreme Court, where, however, smaller sums may also be recovered funder the Charter of Justice of 2 William IV., the jurisdiction of the Court extends to sums not exceeding in amount 40l.) : claims founded on a note, or bond already due, require no witnesses; book debts, and others, not founded on liquid (note of hand or other acknowledgment) documents, require to be proved by witnesses ; and a person, suing in formd puuperis, is nllowed an advocate by the Court, to inguire into his ease.

A court of Vice-Admiralty sits for the trial of offences conmitted on the high sens, and for the adjudication of maritime disputes. The commissioners appointed by letters patent under the Great Seal, dated 13th March, 1832, are the Governor, or lieu-tenant-Guvernor, Members of Council, the Chief and Puisne Judges, the Commander-in-Chief and llag-
offieers of shi commanders o for the settle: granting of ma missioners, wh respective distr leace and the

trial of the ad－ issioners at Seal， or Jieu－ hiel＇and ud llag．
oficers of ships of war，and also the captains and Cape Town，where Commissioners sit to superinteml commanders of ships of war．Matrimonial courts， for the settlement ol conjugal differences，and the granting of marriage licenses，are held by the Com． missioners，who are also resident inagistrates，in their respective tistricts，alded by the local Justices of the Peace and the Veld Cornet．

The temures of land are various；the most ancient are those which are called＂loan firms，＂which were eramted to the early settlers，at an annual rent of 24 riv dollars，the lease being perpetual，so long as the wnt be paid．Three such farms are calculated to con－ tain nine square miles，and there are about 2,000 in the colony．Gratuity lands are n customary copybold， and pay nbout the same rent as＂lonn farms．＂＇They were grants by finvour，and are chietly situate in the neighbourhood of the Cape district．Freehold estates are grants made to the first settlers，of about 120 acres each，and are also situate chotly around the first location made at Tahle Bay．The grenter part of these tenures are held on account of a sum of money being paid down at once，on the primary oc－ eupration of the settlers．Quit rents were derived from the use of waste lands lying contiguous to on estate，the occupant of the latter consenting to pay at the rate of 18 an acre，under a lease granted for 15 years．
The last and most usual system in operation is perpetual guit－rents，the annual payment depending upon the quality and circumstances of the laud； these estates vary upwards to 3,000 morgell，or 6,000 bughish acres．Transfers of land，or mortgages（ex－ cept the bond called Skyisene），are legal only when registered in the debt book，at the Colonial Otfice at
such matters；and no sale or transfer enn be made till after a settlement of all bonds，either by the mort－ gager consenting to continue his lom on the securities of the new purchaser，or by repayment；a fresh transfer is then made，aral the purchasur is placed in possession of a complete title，without the possibility of frand，of claims withheld，or inortgages concenled， at an expense of a coupte of sheets of paper，and $n$ tritling payment－thus avoiding a ponderous mass of conveyance．

There are 12 barristers（1．L．D＇s），nod 17 attorneys in Cape＇Town，and 5 in the country．Many of the attorness are notaries，and some of them practise as barristers．

The Dutch Ianguage，formerly used in the courts of law，is now superseded by the Finglish．

The establishment of king＇s troops in South Afrien is three regiments of infantry－the heal guarters of two being at Caje＇Jown，and ol＇the other at Grahmin＇s Town．There is a strong detnchment of royal artillery， a party of the roynl engineers，and a regiment of mounted ritlemen，termed the Cape cavniry，the pri－ vates and mon－commissioned officers of which are principally Hottentots．

The following was the strength of the corps on Ist January，1837．One major， 3 coptains，+ ticutenants， 3 ensigns；staff－1 adjutant， 1 surgeon， 1 quarter－ mnster；2i sergeants， 12 buglers， 21 corporals， 334 privates， 366 horses．

The military stations nlong the Kaffre frontier，with the st rength of each corps at the respeetive posts，was in 1831 as follows ：－

Cape Town，as head－quarters，gives oft detachments，similar to the above，to Simon＇s Town，and some outposts．
Our naval force is under the command of a Rear－can only acquire the regard and respect of their fellow Adniral，whose anthority extends along the E．and W．consts of Africa，and to Mauritius and St．Helena．

The Dutch established a system of subordinate ma． gistrates at the Cape of Good Hope，which we have retained．The following are the instructions under which they act，dated 5th October 1837：－
Instructions for the Field．Cormets of the Colony of the Cape of Good Hope．－ 1 ．The tield－cornets must，each in his respective ward，be considered as subordinate magistrat＇s，gnd，as sueh，be respected accordingly．
2．They must not forget that，as magistrates，they
subjects by treuting them with propriety，and accord－ ing as they themselves set the example of what they reguire of others．

3．They must cudeavour to obtain a perfect kuow－ ledge not only of the lands within their wards，but of the protuctions thereof，and their capability for other produce．

4．They must take particular hotice of the conduct and deportiment of the inhabitants of ther wards，in order to be at all times prepared to report thereon to superior authotity，when iequired．
5. They must endeavour to settle disputes among the inhahitants which might lead to animosities and litigation, and to reconcile the parties.
6. The field-cornets shall never sutfer either friendship or enmity, pleasure or displeasure, fear or favour, to Intluence their oflicial condact. They would otherwise render themselves unworthy of their situation; they would themselves become culpable; and in cases where evil consequences did result therefrom, they might he found guilty of having violated their oath.
7. Should they find themselves placed within the fourth, or ncarer degree of consanguinity with, or be brother-in-law to a person against whom they are called to act; should they be on terms of close intimacy, or, on the contrary, at enmity with the same, they shall in such cases acquaint the civil commissioner of the district therewith, in order that some other person may be appointed to perforin the duty required.
8. The field-cornets are obliged particularly to watch for the maintenance of order and tranguillity in their distriet, and not to suffer it to be disturbed by any one.
9. All laws, proclamations, ordinances, or other instructions, expedited by, or on the part of, the Government, for the use of the country districts, shall be communicated to the respective field-cornets, in order, by each of them in their duty to see that they are punctually obeyed. 'The field-corncts must endeavour, by example and expostulation, to promote obedience to the same; and they shall, without delay, report any disobedience to the nearest magistrate or clerk of the peace.
10. In addition to the general laws, proclamations, ordinances, or other instructions from Government, they will receive and obey all orders given or addressed to them by the civil commissioners of the district.
11. Every field-cornet must keep an exact register of all the inhabitants of his district above 16 years. This register is, in the first instance, to be formed from personal cxamination; and after that, every youth on having attained the age of 16 years, shali be obliged immediately to rejort himself to the fieldcornet, in order to be entered upon the register.
12. The male population in ench district shall be divided into three classes-first, from sirteen to thirty; the second, from thirty to forty-fire; the third, from forty-fice to sixty years of age. This elassification field-cornets must attend to in calling out the armed burgher forces of their wards, and observe in each class to call for personal service,--first, upon single soen, in proference to those who are married, and on those who have no particular vocation or pursuit, in preference to those who have. Those persons who have attained the age of 60 years are exempt from personal service, except in case of extreme necessity.
13. From these registers they shall form and transmit to the civil commissioner of the district, in the month of October, a list of the young men who have, within the year ending in September, attained the age of 16 , in order that they may be duly enrolled.
14. The field-cornets shall crase from their registers all such persons who have died-wherefore, all heads of families are obliged to report, or cause to be reported, in writing, to the field-cornet of thetr ward, within forty-eight hours, the death of any individual who shall have died in his family above the age of 16 years, on pain of being fined tuenty-five rix dollars.
15. Should any inhabitant meet with an untimely death, either by his own violence or from accident, the body shall not be buried until the fiedd-cornet of
the ward, after having held an inquest thercon, shall have permitted the burial to take place.
16. The field-cornets shall send all prisoners under sumficient guard to the field cornet next on the rond, who is bound to recelve them, and in like manner to forward them on, and 80 on in succession, until they arrive at the place of their destination.
17. And in case that on the road by which the pri. soners are to be conducted no other field-cornct resides, then shall the field-cornet who bas arrested the prisoners, or the one to whom they are delivered over, send the prisoners on to the next inhabitant, although not a field-cornet, who shall, as also the other inhabitant next in succession, be obliged to receive the prisoners and forward them on, until they reach the place of their destination, without any distinction, and whether such inhabitants residing aloug the road belong to such district and wiod, or not. The officers of justice, or such other to whom the prisoners are finally to be delivered over, are to take particular notice that this regulation has been strictly obeyed.
18. No field-cornet shall summon the inhabitants to meet armed, without special orders from the civil commissioner ; except, however, on intormation received by him, that the peace of his ward is endangered by gangs of vagabonds within it, or by hostile assemblages of such persons without. In such cases the field-cornet is enjoined to call out the necessary number of armed men from the ward, to protect the inhabitants and their property from violence and depredation.
19. In such eases the field-cornet shall iminediately report to the civil commissioner of the district, and also aequaint the neighhouring field-cornets with the particulars, who shall be obliged, whenever reguired, to assist him with armed men of their own wards.
20. The field-cornets shall report all extrnordinary occurrences in their wards, not herein mentioned, to the civil commissioner: And whereas every possible ocenrrence cannot be foreseen, it is recommended to the discretion of every field-cornet, in cases when the delay occasioned by the time required for making the report, and to receive orders, which might be attendal with injurions consequences to the public or to individuals, in such cases immediately to chock the evil, and, if necessary, to oppose it by force.
21. In case any vessel on the coast should scmid a bost on shore, the field-cornet shall make himself dequainted with the following particulars, viz. the names of the vessel and the commander; to what nation belonging; whence, and whither bound ; number of the crew and passengers; cargo; how tong from the last port; why put in; crew if healthy; and if not, what malady on board; and whatever additional information he can obtain.
22. In case the vessel be in want of provisions, the field-cornet shall provide a supply of such as may be requisite from day to day on payment being made; but he shall allow no communication betweea the vessel and the shore, further than is necessary, and prevent descrtion of the scainen.
23. He shall prevent the landing of goods of any description from such vessel; and should he suspect the existence of any contagious discase on board, he shall suffer no one to land, but cause the supplies to be handed into the boat, with the utmost cantion.
24. But when any vessel approaches the shore in such distress, that to await orders from the civil commissioner might endanger the ship or cargo, the carso may then be landed; lut the same must then remain
under the join super-cargo, on posal be receiv

nader the joint care of the field-comet and the owner, super-cargo, or commander, until orders for its dis. posal be received from competent authority.
2.). Whenever any vessel is cast on uny of the shores of this colony, the person first discovering it shall forthwith aequaint the lleld-comet therewith, who shall also immediately report it to the nearest magis. trate.
26. The field-cornet shall, until some magistrate shall arrive at the place where the vessel is stranded, endeavour as much as possible to save the persons and property belonging thereto ; and for this purpose the tield-cornet shall order in time a sufficient number of men, and, if necessary, call in the assistance of the acighbouring field-cornets.
27. They are to take care that all letters or papers addressed to, or transmitted by Government, or other public authorities, which may come into the hands of any of the inhabitants, be forwarded by them with the utmost speed.
28. The field-cornets shall watch attentively, that no roving people keep themselves in their wards with their familics and cattle. On discovering such people in their wards, they are immediately to report it to the civil commissioner and the nearest magistrate, and to order them forthwith to depart. The fieldcornets shall in particular not sufter the Uitspan places to remain longer than hemty-four hours at any one time by the same persons, unless the swelling of a river, or other unforeseen circumstance, should prevent their proceeding.
29 . When the state of the country may render it necessary to establish signal stations for the more ready assemblage of the means of defence, the fieldeornet, when informed of the firing of an alarm gun, shall forthwith dispateh a trusty person to the nearest signal post, to wateh that the signals be properly repeated.
30. At the same time he is to take care that all such persons belonging to the armed burghers, or any other corps, and who at that period are within his ward, do forthwith repair to their respective posts : and the shall give the necessary orders for the prescrvation of the peace, and, when required, render such other services as circumstances may demand.
3t. The field-cornets, each in their respective wards, sball pay attention to the improvement and repairs of the public roads, and particularly obey, and cause to be obeyed, the orders they may receive respecting thea, or which the proclamations and ortimances prescribe to them ; and shall use all means in their power to induce the inhabitants to contribute the means of forming and keeping up the same.
32. The field-cornets shall mutually correspond with each other in all matters in which their several wards have a commun interest; and they shall endea. vour to assist one another in all things tending to promote the welfare of the colony.
33. Whenever a field-cornet goes beyond the limits of his ward, he must appoint one of the most able inhabitants of his ward to act for him, who shall be obliged to do so during his absence; and in all things to conform himself to whatsoever is contained in these regulations, for which he will be held responsible.
34. A field-cornet intending to remove to another warl, shall be obliged to acquaint the civil commissioner to whose district he belongs therewith, in order that another person may be appointed to succeed him, And the retiring field-cornet, in such or any other casc, shall give up to his successor all books and
papers belonging to his situation, including these present instructions.
35. The field-cornets shall not, cither themselves, or their wives, children, or immates in their families, receive any presents or gifts from any one who, on account of the field cornet's situation, has any thing to hope or fear of him.

All tleld-cornets holding oflice for 15 years in one district receive the advantages usually accorded to field-cornets after 2.5 years service. No fleld-cornet is obliged to serve more than five years, unless with his own concurrence, and with the approval ot the civil commissioner of the district.
XI. It is diflicult to convey a clear iden of the mode of managing the finances of the colony, owing partly to the variety of items, which enter into the TreasurerGeneral's budget at the Cape. The best mode of explaining the receipts and dishursements will be to give the fo lowing statement of the gross revenue of the colony of the Cape of Good Hope, from 1st January to 31 st December, 1832 :-

Gross Revenue, - Port dues, 1,269l.; stamp dues, 16,837l.; Lumbard l3ank, interest, \&c. 15,633l.; Discount lank, discounts, $4,616 \mathrm{l}$. Customs: Duties, 3 per cent. on English and 10 on foreign, 13,385l.; store rent, $357 l$.; wharfage, $1,48.2 l$.;-total, $15,225 l$. Postage, $3,877 l$.; land rent, $7,310 l$.; fines, $95.4 l$.; advances recovered, 426i.; surcharges recovered, $100 l$. Assessed taxes: Capitation tax, $4,91 \cdot l$.; tax on servants, $177 l$.; tax on horses, $1,362 l$.; tax on carriages, $2,801 l$.; tax on stock and produce, $3,162 l . ;$ tax on income, 2 per cent. 2,561l.; water tax, 1,107l.; house tax, 920l.; tax for keeping in repair the Cradock-hill road, $122 l$.; arrear taxes, lue prior to the 31 st March 1829, $413 l$.;-total, 17,544l. Market duties, 3,727l.; auction dutic:, 12,5081 ; rent of butchers' shambles, 840l.; rent of quarries, 26l. Tithes: On wine and brandy, $2,754 l$.; on grain, $1,619 l . ;-$ total, $4,374 l$. Transfer dues, $7,227 l$.; tolls and ferries, $3,131 l$.; fees of office, $\mathrm{f}, 345 \mathrm{l}$.; pound fees, $182 l$. ; Somerset Hospital, $535 l$.; miscellaneous, $8,113 l$. 'Total revenue, $130,808 l$.

The port dnes are derived from a tax of $4 \frac{1}{3} d$. per ton levied on all vessels entering Table or Simon's Bay (Algoa Bay is exempted), for the purposes of trade, and if for refreshments, or any purposes other than trade, $2 \frac{1}{4} l$. per ton. This is independent of wharfage dues or permits, which are, however, light.

Stump ducs, with the exception of the assessed taxes, form the largest item in the hudget; they are extremely numerous, but appear to be well graduated, and if not pressing on the lower classes of the communit!, they form an unexceptionable item of revenue. At the Cape, stamps are requisite on all transfers of property, on bills, on promissory notes, on bonds passed before notaries, on wills or codicils, on various law papers, and all deeds of contract, \&c., on powers of attorncy, civil or legal appointments or promotions, on licenses for the sale of wines, spirits or beer, for keeping an inn or eating-house, and for excreising the following trades-anctioneers, bakers, retail shopkeepers, pedlars and hawkers, game-killers, fire-wood carriers, brewers or distillers, for waggons and boats, clubs and societies, public billiard tables, marriage licenses, letters of burghership, adoptions, leave to go to the hot baths, and permission to quit the colony. The foregoing is a formidable list, and some petty items might well be excluded.

The Lombarl and Discount Banks, which are govermment establishments (see Monetary System), yield a consiclerable item of the revenue, it the
shape of interest min leans made, profits on hanking, 8.

Thr customs are derived from a duty of 3 per cent. levied on all l3ritish and British colonlal goods, and of 10 per cent. on all foreign goods imported either in British bottoms or in vessels of certain nations in amity with Great Drituin; 10 per cont, is also levied on all goods imported lito the Cape from the East Indies. It has been proposed to increase the import duties, and thus auginent the revenue, ao ns to admit. the abolition of some of the vexatious items of taxation.
l'usturge is not very heavy, considering the slowness of communication throughout the colony. From Cape Town to Sinion's Town, a distance of 25 miles, it is $3 \boldsymbol{d}$. for a single letter; and from Caje Town to Graall' Reinet, 500 miles distant, it is $1 s$. ; ship letters brought Into the colony, aingle, $4 / l$.; double, $8 / l$.; one ounce, 1s. Newspapers sent inland, or from the colony, $1 d$. each. The mails are conveyed throughout the colony by post-riders on horseback; the riders are generally Hottentots, or slaves, in the service of the postholders, who are boors, resiling near the high roads. The post-holders receive an allowance, regulated by the number of hours' journey which they engnge to carry the mails. The improvement of the ronds in the colony, under the ahle superintendence of Major Mitchel, has tended much to facilitate the transfer of the mails; and, with increased knowledge and intercourse, the post-office ought to be a source of revenue, which it can acarcely be considered at present.

The assessed tuxes are payable mader the provisions of ordinance, No. 57, passed March 5, 1829. The capitation tax is levied on every free male above 16 , and on every free female, widow or unmarried, at the rate of 6s. yearly.

Exceptions.-Free male servants taxed as servants at 10 s. yearly ; officers in the King's service on full pay, or employed as military men in the colouy, and their tamilies ; field commandants, field cornets, and provisional ditto; all pensioners not receiving more than 1s. a day, and having no other means of livelihooll ; all persons of the border tribes, for two years after their first entering the colony ; and all apprentices under ordinances 49 and 50 .

On every free male servant, or slave above $16, \mathrm{~cm}$ ployed as coachman or driver of carriage, taxed at 4l. 108 ., or $2 l$.; and every groom or stable servant, porter, footinan, house-servant, or cook, 10s.

Exception.-Military officers' servants.
Horses.-On each riding or draught horse used for pleasure carriages, 10 s . ; on each saddle horse used in trade or agriculture, 1 s .

Exception.-Military men, according to the number allowed to their rank.

Carriages. - On all sorts of vehicles with four wheels, used or hired out for pleasure, $4 l$. ; on all ditto, with two wheels, 2l.: on all four-wheeled vehicles uaed in trade or a; $;$ culture, 5 s .; on all twowheeled ditto, 2s. Gil. Coachmakers, agents, \&e. not liable for carriages not used or lent out.

Income Tux.-Two pounds per cent. on all whose incomes exceed 30l., excepting from farming stock chargeable with Oppgaaf.

Exceptions - Military officers, half-pny ditto, and their wives and children receiving coloniel half-pay, for the amount of such half-pay on!y.
N.B. These taxes were imposed in lieu of former ones, known as the Kaffre Commando, taxes on cattle and grain, levied by the late Burgher Senate, and the extraordina, y assessment on ordinary oppganf, autho-
rised by proclamation of 1st $\mathbf{A}$ pril, 1814, aec. 14. All these were uf course abolished.
Direct Trux's, Ordinance 57.-Capitntion, servants, se. Do. 78. Houses and stores, and water rati., On l'rotuce and stock.-Bach head of black tatle, 3l.; each breeding horse, $\frac{1 d .}{}$; 25 sheep or goats, $2 \frac{1}{4} l$. ; each inuid of wheat, barley, rye, and onts, $\bar{l} t_{0}$; wach leagner of wine, $6 u l . ;$ ditto, brandy, 1s. $1 \frac{1}{2} l$.

The other items explain themselves by their names -the anction duties are large - most sales taking place in that manner. The tithes on wind, and brandy; and grain are derived from duties levied on these articles as they enter Cape Town, whieh it is luw proposed to abolish.

Revenue of the Cape of Good IIope since the confuest by the English. [Found among Lord Welles. ley's pajers] :-
From 1st October, 1795, to 30th September, 1796, R. Ds. $111,264 . \quad 22,2521$.

No steam vessel has yet been introduced into the colony, though the ndaptation of such, for keeping up the intercourse between Cape Town and Algoa Bay, is indisputable; a diligent search should be made for good coals, for if these were discovered, a steam intercourse with India and Australasia, ria the Cape of of Good Hope, would speedily follow. The annual commerce of the colony may be estimated at nearly a million sterling in imports and exports.

An account of the weight of Cape hides imported into the linited Kingdom in ench of the sevell years， ending with $1832 ; 1826,7,520$ cwt．；1827，12，207 cwt．；1828，12，963 cwt．；1829， 15,814 cwt．；1830， 19,957 cwt．； $1831,16,900$ cwt．；1×32，13，193 cw．

The imports at the Cape consiat of every variety of articies of British mannfacture，and the extent to which our trade can be carried，it is diflicult to state， for an outlet has now been opened for calicons，ker－ seys，ironmongery，gunpowder，\＆e．，in exchange for ivory，hides，gums，horns，\＆c．

XIII．The Monetary System at the Cape has beea very imperfect，and its tluetuatious have caused grent distress to private individunls，and much ruin to mer－ chants and others，whose active pursuits require a freguent conversion of capital；a bridf necome of the past，will be，therefore，requisite，in order to form a correct idea of the present state of currency and banking transactions in the colony．

Holland，up to the period of 1780 ，had forwarded every sort of supply，with exact punctuality，to the Cape，but the war between England and America， and the part taken by the Duteh，left the colonists of the latter power in extreme distress．To provide for the exigencies of the occasion，Governor Van Plattenberg was compelled to create a paper cur－ rency，and from 1782 to 1784 （when he resigat the Cape government） 925,219 paper rix－dollars were thrown into circulation，on no other sceurity than the good faith of the Dutch government，and a solemn promise of redemption when peace would permit the accustomed supplies to be sent from IIolland．This stipulation was fulfilled by the ami－ hilation between 1787 and 1789 of rix－doliars 825,904 ， by paying that amount in specic and bills on Hol． land，leaving only 99,326 rix－dollars afloat and in circulation．

A precedent was thus set for the creation of paper rix－dollars on any emergency．In 1793 the colony laboured under a very pressing inconveniency from want of a sufficient circulating medium，the amount not then excceding 200,000 rix－dollars；with a view， therefore，to public relief，and for the purpose of checking those usurious transactions which naturally accompany a contracted currency，the Dutch Com－ missaries－General（Nederberg and Trikennices）formed
the inatitut ris－dollarn than for the vanced by of the lom two commi appointed 1 suthorised t of bonses chandises，o is montlos， more perish nime month：

ation of prper 93 the colony veniency from b, the nmonst ; with a view, 1e purpose of hich naturally Dutch Comnnices) formed
the institution of a l.ombard or Ioan bank; $1,000,000$ rix-dollarn were declared to he an adequate circulation for the colony, and $\$ 80,000$ rix-dothara were advanced hy various instalments to form the capital of the lom bank, under the direction of a president, two commissioners, a cashier, abll looh keeper, all appointed by government. The commissioners were suthorised to lend money at ${ }^{5}$ per cent. on mortgage of houses and landm, gold, siliver, jewels, mad mer. chandises, or other articles that could " lie still " for is months, but not longer ; and on goots of a more perinbable nature for a period not excreding nine months.
In 179\%, the circulation of Cape rix dollars (er.e (lusire of the capital of the Lombard hank) had risen to 611,276 , without resting on a ahadow of real property, or even on a (iovernment engegement, the rix dullar being merely a counter, passing current in all the various purchases and sales within the colony. On the British conquest of the Cape, in 1795, Governor Sleuskens obtained from the humanity of Genersl Craig a stipulation, that the Ciovernment farms and publie buildings should be a security to the holders of 611,276 rix dollars, feaving the loan of the Lombard hank protected by its own mortgages. Thus our capture of the colony gave the paper money. holders the first security they had; and on our evacuation, in 1803, this security was given over in an improved state to the Duteh Government. Even the additional sum of 300,000 rix dollars, created by General Craig, in consefuence of his inability to procure bills on England at par, was accounted for and honourably discharged by the British government, whose conduct formed a striking contrast to the Batavian Government, which, in breach of its faith, received bills and specie for the 330,000 rix dollars, but without cancelling paper to a like amount of rix dollars.

On our evacuation of the colony, in $1 \times 03$, the whole amount of paper in circulation was about $2,000,000$ rix dollars, nearly half of it bottomed on a nomimal security, for the Government lunds and jublic buildings were hy no means worth the sum they were pledged for. This security was, bowever, in a great measure, swept awny by the Dutch Government, in a proclamation of 1804 , ealling in the whole of the old paper money, and issuing a new set of paper ciollars, without any reference to priority, thus setting the question of a preference of security at rest, and gaining 32,000 rix doliars by the non-appearance of old paper on the re-issue.
From this period to 1806, there was an additional coinage of 300,000 six dollars. The Batavian Government, under French allspices, seems not to have been at all scrupulous as to the means by $w^{*} \cdot$ ? money was to be acpuired. A part of the Go ment farms, which were pledged ns a security for the: paper rix dollars, were sold for 80,000 rix dolines, withont the annihilation of the currency, for whose faith it was supposed to be a sccurity; in fret, not a paper dollar was recalled or repaid by tr Bitavian Government nfter 1789. In this snd st ${ }^{-2}$, is regarils the eredit of Government, we agnin isecanie masters of the Cape, when every mercantile transaction was lifeless, and the currency was withheld by the timorous in the apprehension of loss, and by the usurious in the hope and in the exaction of high interest. In order to relieve the public wants (says the cidil serront, who wrote such an admirable account of the Cape, in 1823, and to whom I am indebted for many valusble suggestions and much information;, " Lord

Coledon, in that unceasing endeavour to benefit the colony which marked his Lordship'a conduct through. out bis administration, entablished a bank of diseount In 180 N , and monanced as a capital, without interest, the sum of 100,000 rix dollarm from the treasury. Six pre cerit. was the legal rate of interest at that time: but the hank way allowed to receive deposits, and to pay min interest of tive per cent, on all sums lift there for a year, or more, and the public ofticen were ins. stricted to carry their daily recetpts to the bank, thus making a considerable addition to its flonting balances." In June, 1810, Lard Caledon athorised the creation of $1,000,000$ rix dollars, half of which were to be appropriated to the use of the loan bank, and the remaining 500,000 for the purchase and repair of public buildings. 'This latter anm was not issued until 1814 by Lord Howden, and wholly expended before the close of his government.

Lord Charles Somerset, on his arrival in 1814, changed the wise system of deposits sanctioned by Lord Cnledon. Notice whs given that no more would be received, and that those in hand would be dis. charged at the end of the yenr. Tlon withdrawal of the interest on deposits inflicted a severe blow on the progressive prosperia $y$ of the colony. The measure was adopited on the wen that, on nuy serious alarm, the whole amonnt deposits about $1,000,000$ rix lollar might be whihdrawn, with no other penalty than a forfeiture of the interest, and the capital of the hank being only 10 (1,000 rix-dollars, its ruin would h.4 cert .ai. This was, however, a very problematical event; and to avoid : Sistant, remote, nay
 diate evil, fraught with istress to the whole colony, was mally incurred 1 iin discounts were now pro. curabie with great if liculty-mereantile speculation (the life pond soul of a commers $!$ beople, like the English a it in (ch) ahated-n mr irn was held out to the re sewal of usury, and ma encourng ment to hoarding, iwo oi the most serious disadvanta ers 4 at can take place among a small comounity. ablof enduring all the misfortunes which such an unstates-man-like step may be supposed to have created for seven or cight years, the Cape Government, desirous of remelying the distress which it had caused, notified in 1822 the sasuing of 200,000 rix dollars in (iovernment dehentures, bearing four per cent. interest. Those who have the stightest knowledge of the bearing of tinnncial measures on a mercantile cominunity, will admit that so partial a measme could not restore frecdom of discount and a mpid interchange of the representative of property. whether it be in paper or metallic money.

The progress of the paper circulating medium on: these trunsactions whs, from 1802 to $1 \times 22$, as follows. In 1802, R. Ds. 1,200,000; in 1806, R. Ds. 2,1183,000; in 1811, R. Ds. 2,580,000; in 1814, R.Ds. $3,100,000$; in 1822, R. Ds. $3,005,276$. The paper rix dollars thus created were issued at the rate of $4 s$. sterling, and for a long period maintained this value, being nearly on a par with the Spanish dollar; but, from various causes, a great depreciation took pines in the value assigned to the rix dollar. Some ascrioed this result to an over-issuc beyond the wants of the colony; others to the circumstance of $50.1,000$ heing too suddenly thrown into circulation by Lord Howden, in addition to the 500,000 lent to the bank by Lord Caledon; several thought it was because paper money had no real value, not being hypothecated on land or a portion of the revenue. Perhaps each and all of these causes contributed to lessen the value of the $4 s$.
rix dollar: but to these must also be added the return to cash pryments in lingland in 1819, which of course atfected the rates of exchange between the Cape and Great Britain. The deprecintion was rupid, and its effect on the colony may be seen from the fact, that $3,000,000$ rix dollars at 4 s ., yielding a nominal sterling of 600,0001 ., was reduced in a few years to $3,000,000$ rix dollars at $1 s$. 64 . (the rate now fixed by (iowernment), yielding but a nominal sterling of 225,000 . The result of such a change to a small community may be imagined; many were ruinedthe fuiet transactions of commerce paralysed, and the colony has never since recovered from the shock.
'There is no private bank in the colony, but a lombard (or loan) and discount bank before referred to, under the control of Govermment, who derive protit fiom the discount of bills.

The capital of the Jombard was in $1830-1 n$ the Long lonn Fund, 80,952l.; Short ditto, 1,315t.; Arricultural ditto, $11,643 l$.; total, $93,910 \ell$.

The fuads of the Discount lank, consisting of deposits belonging to Government, and to thase individuals who have opened accounts with the Bank amount to $125,000 l$; its capital being about $30,000 l$., and its average ammal discounts 410,000 .

Amount of Paper Curreme'y in Circulation.- [B. B. 1836.] The amome of red stamped rix dollar notes, created and issued in lieu of old caitoon notes, up to May 1832, as before reported, was-
R. I)s.
£.
$2,667,960$ or 200,097
of which were destroyed to the end of 1834 (and replaced by sterling notes sent from England)
and during 1835 (and replaced as above)
$760,000=57.000$
$1,907,910=143,097$
$1,566,000=117,450$
$341,960=25,647$
In 1836, notes of the same de.. scription (also replaced by sterling notes) have been destroyed to the amount of
$356,200=26,715$
Shewing an excess on Red stamped notes of To which is added Cartoon notes destroyed in $1 \times 35$, and replaced by sterling notes
$6,440=$
483

## Totnl excess . 20,680 or 1,551

The notes which have formed this excess, have undergone the strictest scrutmy of the parties whose signatures they bore, and as there could be no doubt of their being genuine, they could not be rejeeted by the treasurer. Reports have at ditferent times licen made to II. M. gevernment az to the canses of the exerss in the colonial paper currency, and it may therefore be unnecessary to detail them here. As all rix dollar notes, however, of whatever deseription, have now been called in, to be replaced by sterling notes, which do not atfurd the same facilities for forgery as the former paper, and as the present mode of cancellation will totally preclude their framdalent reissue under any circumstances, it may be expected that this speeces of currency will, before long be placet on a permanent footing, as well in regard to the exact amount in circulation, as to seenrity against luture excess. During 1833, a sum of R. Ds. Is,0.12
or $1,156 \mathrm{l}$., consisting of the last instalments of the Stellenboseh lire Loan, and the balance of the short Loan Fiund of the Lombard Bank, in old Cartoon notes, also in excess, was destroyed, but as it was not replaced by other currency, it has been omitted in the foregoing return.

In licu of the rix clollar notes destroyed to the end of 1836 (with the exception of those alluiled to in the preceding paragraph) Govermment promissory notes (sent from England) have ben issued as under: To the end of $183.4,57,0001$. ; in 1835, 117,9331.; in 1836, 26,715; total, 201, 64\%. Of which have been withdrawn from circulation in $1 \times 36$, nud cancelled, $5,1 \times 5 \%$; balance, $196,463 l$; and replaced by new to the same value, $5,185 l$. ; making the ulticial amount of paper currency in circtlation, as far as can be ascertained, $201,64 \times 6$.

There are, however, without doubt, unobjectionable notes of each description of the former currency still outstanding; but as before stated, the amomit must now be inconsiderahle, nithough no estimate can be formed thereof with any prospect of accuracy.

The Government promissory ootes in circulation on 31st December 18:16, consisted in 93 motes of 100l. ench, $9,380 l$.; fi20 ditto of $501,31,000 \%$. 3,027 ditto of $201 ., 60,5401 . ; 4,414$ ditto of 102 ., 44,140\%; 3,393 of $\pi l ., 41,965 l . ; 14,703$ of 11 , $14,703 \mathrm{l}$. ; total, 201,64N .

Amonnt of Coin in cirvulation - [B. B. 18:16.] The 3ritish currency introduced into the colony from the year $18: 25$ (when it became a legal tender) to $1 \times 29$ inclusive, by the Commissariat, to meet the expenditure of the military establishment, amounted at the end of the latter mentioned year to $16!9, \mathrm{Nol}(0)$ in sil. ver ; 2,200l. in copper, and 80,000l. in specic, have been imported by the Commissariat, during the year ending 3 Ist March 1836 . A considerable diminution has, however, undoubtedly taken place in the ammont, nearly 40,000 . having been shipped to Ceylon and Van Jiemen's Land by the Commissarint ; and it is known that remittances have at different periods, been made by neerchants and others to Eingland and elsewhere, in specic. About 16,000 l. in gold has been imported into the colony by private individuals during 1836 The present circulating medium in metal, may therefore be computed at uearly 150,0101 , exclusive of such sums of gold coin as are also oceasionally int roduced by passengers of vessels and others, bot which cannot be at all estimated, the whole heing naturally liable to much lluctuntion from a varicty of causes, which must also prevent any exact or approximate caleulation of the amount.

The coins in circulation are exclusively British, consisting in gold of sovercigas and half-sovercigns; in silver of a few crowns and half-crowns, shillings and sixpences; and in copper of pennies, hadfuenies and farthings ; there is no colonial coin, ller Majes. ty's govermment having established the Iritish coin as the circulating medium of this colony, nad having directed that British silver money should be a legal tender in discharge of all dehts, due to individuals and the public, at the rate of 1 s. Gd . sterling, lor ead paper rix dollar, and so in proportion for wiy greater or less sum; the value of the rix dollar, formerly the only currency in the colony, was necordingly tixal at that rate hy ordinance of the Governor in Conncil, No. 2, bearing date the 5th day of Jume 1825. The coins in circulation have not been ent, piercel or otherwise defaced or altered; neither have their respective values $h$ ?en diminished or augmented.

Finmign Coins-are in very smull quantitics, and are
not used ns a pally Spanish depenels alinost for them. The nislo dollar is 3s. $11 d$, and th Is. Nid. Other of at about 1 s . everetl $1 s .1 \frac{1}{2} d$. All public ac beren remidered $i$ private persons, lars, skillings an use. The prope I stivg

Thus 107 Duteh ter bushieds, or four bushels, and 11 sch
Cloth Meresure. one yard $=3417$.
The proportion varis is generally but the real one is
not used as a circulating medlum. They are principrily Spanish dollars and a few rupees. 'Their value depends alniost entirely upon the occasional demand for them. The usual exchangeable value of the Spanish dollar is from $3 s, 9 d$, to $3 \mathrm{~s}, 10 \mathrm{~d}$., or at most to 3 s . 1 d d , and that of the sicca rupee from 1 s . fird. to Is, s|d. Other rupees when in demand, are disposed of at ubout 1 s . bid. each, but the general price does not exceed ts. $1 \frac{1}{2}$ h. or six skillings.

All public nceounts have since 1st Jannary 1826, ben rendered in British eurrency; although monogst private persons, the old mole of seckoning in rix dollars, skillings and stivers is in many instances still in use. The proportions are as follow:-

> l stiver is
> 6 stivers $=1$ skilling $=0 \mathrm{s.0} .2 \mathrm{fl}$.
> 8 skillings $=1$ rix dollar $=1 \mathrm{~s}$, ficl.

Course of Errhamgr.--[13. 13, 1836.] Prior to the fith June 1825, the exchange between this colony and Groat Britain, was chielly regulated by the average rate at which the Commissariat Department disposed of its bills on the Lords' Commissioners of llis Majenty's 'Treasury. But as on the nbove-mentioned date, the value of the dollar was fixed by law at Is. fid, sterling, by order of the Governor-in-Council, No. 2 ; the exchnage has also in a manner become settecl at that rate, with slight variations, depending upon demand. By the instructions to the Commis. sariat, bills negotiated on the British Trensury, were issud at a pryment of 101 l . 10s. for every bill of 1(00)., being at a preanium of one nud a-bulf per cent. against the colony or remitter; which in some measure regulated the premium on private bills; although the latter were often solil at par, and sometimes even at a discount, according to the eredit attached to the parties, whose bills or endorsements were in the marke. But the great want of funds in the military chest, consequent upon the great increase of expenditure, cansed by the Inte Kaffre war, has for some time past necessitated the sale of Bills on the British treasury at par; and even at this rate, few applications have been made for their purchase. I'rivate bills therefore are at a higher rate of discount than formerly.

The standard measures of this colony are similar to thuse of Amsterdam.
J.iquid Merstare.-A legger $=162$ old gallons, or about 126 7-11ths imperial; a half do. $=76$ do., or ahout 63 7-22 do.; a pipe $=110$ do. or about 91 7.11ths do.; $n$ half do. $=55$ do. or about 459.11 the do. $;$ an num $=38$ do. or abont $312-3$ rds do.; $n$ half de. $=19$ do. or nbout 156 -6ths do.; an anker $=9 \frac{1}{2}$ do. or about $711-12$ this do.; a half do. $=48$ do. or about 323.24 ths do.; a tlask $=19.32$ do. or about 49.16 do.

These can be no lixed proportion between gallons and the bottles in use here, as the latter are of various sizes and descriptions, but generally $n$ gallon is reckoned equal to $4 \frac{1}{2}$ bottles.

Carn Measury-A schepel $=82-107$ old Winchester bushel, or $7.13-1000$ imperial; a muid is 4 schepels $=328.107$ do. or 2972.1000 do. ; a load is 10 muids $=3280.107 \mathrm{do}$. or $2972-100 \mathrm{do}$.
Thus 107 Dutch schepels are equal to 82 Winches. ter bushels, or four sehepel are alout three imperial bushels, and 11 sehepels are abont one quarter.

Cloth Measurp.-One ell $=27$ Rhynland inches; whe yard $=3417 \cdot 20$ ths do.

The proportion between Duteh ells and English Yarils is generally taken at three yarils to four ells, but the real one is 100 yards $=1291.9 \mathrm{th}$ clls.

Lamel Measure.- 144 aquare inches $=1$ square lioot Rhynland; 144 do. feet $=1$ do. rood do. ; 600 do. roods $=1$ do. morgen do.
A morgen is generally taken to be equal to two Finglish statute aeres ; but the true proportion is considered at 49 71-100 morgen to 100 acres.

The weights generally in use in this colony, are of the standard of smsterdan, and wore introduced by the Dutch Government. They eonsist of pounds subdivided into 16 ounces or 32 loots cach. 'lhe proportion generally made use oi here in comparing Duteh with English weight, is ?2lhs. Duteh to Ioolis. English: the true proportion, however, is considered to be 91 t-ilbs. Dutch to loulbs. English or avoirdıpois.
'The pieces of weight admitted to assize, are from solbs. down to ore loot, or the 32nd part of a pound, which is regarded as aquivalent to $\frac{1}{2}$ nu ounce, though slightly exceeding that proportion. [13.13. 1836.]
XIV. Corn, wine, wool, provisions, oil, nloes, and fruits are the stnples of this the colony, but muny other articles are either produced in the country, or obtained from the neighbouring nations. There is an ammal exportation ol corn, nud it brings, as tlour, n higher price at the Manritins, and other markets, than the best imerican.
The eorn of the new settlers in Albany suttered much at tirst from the 'rust,' but it has now almost disappeared, and the introduction from Bengal of a hard tlinty grain, termed 'l'atha whent,' bas been productive of good. liarley, oats, and fudian corn thrive well; the latter is admirably adapted for fortening swine, the export of which, in the shape of hams, bacon, and salt pork, is vearly incronsing. 'Two crops of potatoes are raised in the year, of a succulent and yot menly quality; and the mutritive property of every article of provisions is abundantly exemplifed in the fat and healthy appearance of the people. Agriculture is as yet quite in its infancy at the Cupe: the Duteh boors are so herolless of manure that they allow it io ncommulate until it reaches a monntainous beight, when they set fire to the mass as a menns of getting rid of it; some ol these masses (which would be so valuable in lingland) have been known to continue burning for seven years.

Hïnc has long been a staple export of the Cape, The culture of the vine was introdiced at tirst into the colony by the refuge l'rotestants, after the revocation of the ediet of Nantes, but it received n considerable stimulus, when the dominion or intluence of Napoleon extemied over the greater part of the wine comutries of binrope; the British Government wisely considered it desirable to encourage the growth of the vine in our own colonies, beyond the power of foreign nations, and by a government proclamation of the l!th of lecember, INII, the merchants and coltivators of the colony of the Cape of Good Hope, had their attention directed to the wine trade as " $n$ consideration above all others of the highest importance to its opulenee mad chameter :" this proclamation, aiter methoritatiore!! demanding from the settlement a serious and lively attention to their interests, promised "the most constant support and putronare on the purt of gemernment, and that no menns of assistance should be left unattempted to improve the cultivation, and every encouragement given to honest industry and adventure to establish the success of the Cape commerce in his her grent and nutire superiority." This proclanntion was followed by 3 . ther otlering premitmas to those who planted most lurgely, nud
those who produced the best wines, by the promiae that the old channels of this trade ahould be reopened and new ones formed, and by a variety of regulationa, all atrongly evincing the lively interest which government felt in promoting the trade, and which was fully ratified and confirmed by the Act of July, 1813, admitting Caje wines to the British market at one-third of the duty then payable on Spaniah and Portugal wines. The consequence was a rapid and constant increase from the above period of the quantity of wine produced, so that in the apace of eleven years, the annual produce (as appears from official returns) rose in the wine districts lirom 7,335 leaguers ( 117 gallons imperial) to 19,230 Jeaguers.

In this state the trade continued till 1825, when the duties on all wines underwent an alteration, and notwithstanding the urgent remonstrances of the merchants, and others interested in the trade of the colony, supported by the consistent patronage of Earl Bathurst, who was still the Colonial Secretary, the protection was suddenly reduced from $28 l$. to $11 l$. per pipe, with a further prospective reduction of about $2 l$. $15 s$. per pipe at the end of eight years. The effect of this reduced protection was the immediate ruin of some of those largely engaged in the trade, and the general depreciation, to a great extent, of the property of those who were embarked in it, and from which it was impossible for them to withdraw their capital.

The property embarked in England, and in the colony, in the trade in Cape wine, was rceently estimated as follows :-vineyard lands and growing vines, $1,200,000 l$.; buildings, stores, vats, \&c. in the country, 60,000l.; buildings, vats, \&e. in Cape Town, 300,000t.; brandy, casks, \&c. 100,000l.; wine in Cape Town, 125,000l.; stock in bond, in England, about 10,000 pipes, at $12 l$. each, 120,0001 .:-total, $1,905,000 l$. A very small portion of the immense capital thus employed can be withdrawn under any circumstances, even by its present possessors. In the gradual decay, and ultimate run of the trade, it will perish and he utterly lost to the country.-liven the soil in which the vines are planted, is in general untit for any other species of protitable culture. Wheat camot be raised upon it, and what is now an extensive vineyard would be altogether contemptible as a grazing farm. The fustage, buildings, \&c., might at once be committed to the flames. Cape wines have formerly had in general a pecular raciness which much injured their sale in liuropean markets; this was most probably owing to the avidity of the wine farmers, who attended more to quantity than quality; whenever the latter has been attemed to, the wine produced at the Cape has been equal to that prepared in any part of the world.

The produce of wine and brandy in 1821, and sul)sequent years, is thus given in a manuseript prepared at the Colonial Ollice, and not before printed. The quantity in leaguers (a leaguer being 152 gallons) 1821, 16,254 of wine; 1,205 of brandy; 1824, w. 16,183 , b. $1,326: 1828$, w. 20,405, b. 1,413; 183!, w. 18,467, b. $1,3 \times 2$; i×32, w. 16,973, b. $1,394 \frac{1}{2}$.

Hool will, in time, le one of the greatest and most profitable staples of the Cape; by an maceountable want of foresight it has long been nerlected; but stimulated by the example of New South Wales, the colonista are now actively engaged in endeavouring to rejlace the coarse woolled, or rather hairy sheep (of which they possess $3,000,000$ ) for the fine and pure blood breed of that animal, whose numbers at the Cape now amount to upwarls of $50,000-$ the
wool from which has brought 2s. $6 d$. per lb. in the London market. The British settlers in Albuny have taken the lead, and are at present importing Sason and Merino rams from England and New South Wales, the former bringing $15 \ell$. per head, and the latter 30l. per head. Algoa Bay or Port Elizabeth, as it is now called, has thus increased its exportation of fine wool ; 1830, 4,500 lbs., value $222 l$; $1 \times 31$, 10,600 lhs., value $551 l . ; 1832,1!, 700 \mathrm{lhs} .$, value $935 l$. ; 1833, 44,896 lbs., value $2,649 l$; $1834,59,266$ lbs., value 3,279l. It is a singular cireumstance that some of the original Merino stock of New South Wales were rejected at the Cape, and thet curried on to Sydney, where they were purchased by Mr. M'Arthur: had the Atricans received the protfered boon, they would probably now be exporting a quantity greater than that of their brother colonists (see Niw South Wales.)

The fiseness of the climate, requiring no winter provender, and the great extent of upland soil and park-like downs, with the numerous salsola and saline plants, so adnirably adapted to prevent the tluke or rot, shew the adaptation of the colony for a vast sheep fold, capable of supplying an almost indefinite quantity of the finest wool; and, together with New South Wales and Van Diemen's Land, rendering England not only totally independent of supplirs from Germany and Spain, but really furnishing a much finer and more durable and elastic wool, which will enable us to maintain our superiority in woollens against foreign competition : this is a view of the subject which it behoves a statesman to attend to.

Irorisions, particularly salt beet, ought to be a larger staple than it is, but 1 trust it will angment in quantity as it certainly has improved in quality. I can bear testimony to the excellence of the Cape salt provisions: among other instarices 1 may mention one, namely, that when in H. M. S. Leren, in 1823,1 , as caterer of our mess, laid in six month's salt provisions at Algoa Bay, the price paid fur the beef heing, as well as I remember, $1 \frac{1}{2} d$. perlb.; wewere cruising for the next six months in the tropics, but the last cask of beef was as tresh and as juicy as the first, while the contrast between the Cape and our ration provision from Cork was very great, the adlvantage being decidedly in favour of the former. At present, cured meat is pretty largely exported to the Mauritius, and other places, but it should be used for victualling our navy at the Cape, India, and West Africn stations, the contractors being placed unarr the same supervision as at home, every cask beiog exanined and branded before shipment, and a heavy penalty attending any defanlt. Its importation should be permitted into Eugland at a grndually decreasing rate of duty, until it was perfectly free.

Oil.-The fisheries of the Caje have not yet been sutliciently attended to : during the calving season, whales come into every bay on the const, to bring forth their young, and thus, in some seasous, a good number of these immense creatures are taken; but there have heen no vessels fitted out for whaling aloug the coast, or among the islonis to the nothward of Madagascar, where the sporm whale abounds, and where, under a genial clime, and an atmosphere never trouhled with tempests, the Anserican whalers fill up in a few weeks. Eiven in Delagon Buy, alnost a part of the colony, I have seen 20 whale ships, English and American, but not one from the contiguous settlers at the Cape. A good banking system would afford a stimulus to such profitable muleriak. ings, and the dfricanders in this instance, hs well as
in that of woo example set the bours at New might also be ex luxuriantly whe oil, collected by may be obtained tribes to the east

in that of wool, would do well to profit by the example set them by their more enterprising neighhours at New South Wales. Oil from vegetnbles night also be extensively collected ; the olive thrives luxuriantly where planted, and a rich and peculiar oil, collected by expression, from the sesamum plant, may be obtained in large quantities from the native tribes to the eastward and northwarl.
The Aloe plant grows indigenously in most parts
of the colony, and a considernble quantity of the inspissated juice has been exported for some years, n large portion being probahly used as a substitute for taxed hops in England.

Fruits of a dried nnture, including npples, npricots, peaches, penrs, \&c., have been long in great demand. Hides, horns, ivory, guns, are also valuable branches of produce.

Return of the Produec, Stock, Re., of the Cape of Good Hope. [13. 13. 1836.]

*The guantity in the vieinity of the town is very inconsiderable. $+A$ small quantity of these artieles are cultivated in the bistrict, for which no daty is paid. The quantily raised by the farmers is not stated. I No accurate accounts have hren received of ellher stuck or produce for the tast wo years. Gudefined. The produce raised in the Caje Town Distriet is principally used by the grower. The prices annexed are the average of salea at the public market.

> Manufactures, Mines, and Fisheries. [13. B. 1836.] - Table Bay last year, yielding about 10,000 gallons of Cape Town.-There are seven water mills, one steam oil, valued at $1,200 \mathrm{l}$. Small fish of various descripflour mill, two tanneries, one hat mannfactory, four breweries, three candle manufactories, five smulf manufactories; one soap manufactory; one spirit distillery, two whale fisheries, four brick fields (two brick fields, ovens at the military lines), one steam sawing mill, one iron foundry. There are no mines, but eight quarries of coarse huilding stone at the foot of the Lion's Rump. There are seven boats employed in the whale fishery, \&ic.; four whales were taken in tions are also caught in large quantities, but their value is unknown. Very few whales entered Table Bay during this year. A manufacture of hats of a supierior quality has been recently established in Cape Town; those previously manufactured were of a coarse quality, intended chiefly for the use of the country people. Many articles of Colonial growth or produce are amnually exported.

> Cape District.-There are two breweries near New.
lands, five tanneries, three whale fisheries, seven water mills and 40 wind and horse mills for grinding. No mines, but quarries of coarse building stone and lime stone. There are 17 boats employed in the whnle fishery, \&e. Seven black whales were taken at Kalk Bay last scason, when 10 boats were employed, value of fish, 350l. Smnll fish of every kind are taken along the coast for home consumption.

Stellembosch.-There are two water mills and one horse mill in the village, two tanneries in the village, three tanneries at the Paarl, three tanneries at Hottentots Hollnnd, one water mill at the laarl, two water mills at Hottentots Holland, one water mill at Maddergat, and various water mills and tanneries throughout the district; one tile kiln near Stellenbosch. This is the principnl wine district of the colony ; grain and all sorts of fruit are also produced here in abundance. The aupply of oranges is very considerable, and the finest chestnut trees are found here. The average quantity of wine is estimated at about 10,000 leaguers, and of brandy about 700 leaguers, per annum. There as? no mines in this dis. trict, but stone for building purposes is found in different parts: there are no quarries. Limestone is found near the sea coast at Hottentots Holland, and is burnt by some inhabitants of that place and of Maddergat. The value is $1 s .6 d$. per half aum. There are several boats, employed at Hottentots Holland, in taking small fish, which are either consumed there or sold to persons present on the spot. Seven boats are employed in whale fishing, \&c.; 11 whales cauglit this year, valued at $1,550 l$.

Worcester.-One water-mill in the village, and three hat manufactories. Two hat manufactorics at Clan William. No mines of any description, and one quarry of coarse building stone in the neighbourhood of Worcester. Lime is also found in very great quantities along the Oliphant's river, but is not used. With the exception of the hatteries on a small scale, where coarse hats are made for the use of the farmers, there are no manufactories in this district. Each person is provided with either a water, horse, or hand mill, to grind their corn for family consumption, Two tanneries on a small scale are also met with in this district, one at Worcester and one at Tulbagh. On most of the farms the people tan skins for their own use. A quarry of coarse slate, used for building, has been opened near the town, and is there worked by the builder. No mines of any mineral substanee have as yet been found in this district ; and if mines were discovered, which, from the nature of the country and external appearance of the mountains, is not improbable, the want of labourers, fucl, and a connient sea-port, would render the working of them unprofitahle to the undertaker. This being un inland district, having no communication with the sea coast, and no navigable rivers, no ships or boats are built or employed by the inhabitants; neither are any of them engaged in fisheries. In the division of Clan William, there are also a couple of hatteries of the same description, and for the same purposes as at Worcester, besides a few mills for grinding corn for home consumption, and tanneries for the prepnration of skins for domestic use. There are no manufactories, mills, or works of any description in this division; neither have any mines or mineral substance been found in it. This diviaion borders on the weat, from the Groenwally to the Kousie River on the Atlantic Ocean. The mouths of several periodical and a few constant rivers, of which latter the Oliphant's River is the principal, are met in the tract of this coast; but
are all barred, either by recfs of rocks or by bars of sand, which unfavourable circumstance prevents any commercial enterprize on this coast.
Suellendam.-Thrce water milla at the village; two horse ditto at ditto; three tanneries at ditto; two water mills near ditto; two tanneries in the village of Caledon; one water mill in Caledon; two ditto near ditto; one ditto at Gnadenthal ; one ditto at Elim; one tobacco manufactory at Gnadenthal ; one tannery at ditto ; one tannery at Elim ; one entiery manulactory at Gnadenthal. There are no mines but quarries of atone for building along the coast, particularly in the eastern part of the district. Limestone is also found along the coast. The quantity of lime burnt is very trifling, and only for private use or sale in the village. There are between 40 mad 50 water and horse mills, and as many tanneries, in various parts of this district. Fishing boats me also kept by every farmer residing near the sea coast for fishing for private consumption. Seals are enucht on 1)yer'a Island, near Cape L'Agulhas. The island belongs to Government, and is let for three years at 151l. 10s. per annum. There are four warm springs in the district. Fish of every description are eaught in this district, but for private consumption only.

George.-Three hat manufactories; one saddle manufactory ; three tanneries; one wnter mill; one horse mill; all in the village of George. No mines; but quarries along the coast, one of coarse louilding and mill stones, hut the latter are seldom used, on account of their soltness. There are six hoats employed in the whale fishery, \&c. Only two whales were taken this year, valued at $300 l$., which is ascribed by the proprictors of the fisheries, with great reason, to the number of American vessels constantly fishing on our coasts. There is a seal island int Mossel Bay, which has been let for a term of seven years at 13l. 7s. 6d. per annum. Much corn is annually ex. ported from Massel 13ay.

Uitenhage. - Two hat manufnctorics; two tanneries; also several saw, wind, and water mills. Thern is a lead mine, situate about 12 miles from Port Eilizabeth, but it is not worked. Six boats employed in the fisheries. Quantity caught this year, five whal's, value $660 l$., and 681 seals, value 444 . The annual value of other fish caught averages 4is/. The St. Croix Islands have been let for the term of seven ycars for 187 l . 10 s ., and the Bird and Chmam Islands at an annual rent of $20 l, 1 \mathrm{~s}$.

Beaufort. - One hat manulnctory in the village; one ditto in Nicuwveld.

Gratiff Reinet. - Five hat manufactories in the fown, and several mills and hatteries in various parts of the district.

Colesberg. - One hat manufactory ; one ditto at Camdebo.

Allany. - Two water mills near Graham's Town; one ditto on the Koonap ; two ditto at Bathurst ; one wind-mill at Grahan's Town; two ditto near Bathurst ; one ditto near Kafir Drilt ; one ditto at 'Irappes Valley ; six tanneries in various parts of the diatrict ; one hat manufactory at Grabam's 'Town; two breweries at ditto; one tile-kiln near ditto; two eandle manufactories at ditto. No mines ol any deseription are worked in this district. Several quarries of good limestone are found between Bathurst and the Fish. Abundance of stone for huilding purposes is found in every part of the district, and nuinerous quarries have been opened, the most remarkahle of which is situated near Bathurst. The material here found at a few feet below the surface is a stratuni

of indurated limestone ; it is casily worked when first quarried, hut hardens on exposure to the atmosphere. Many indications of iron ore are met with; lut it has not yet been ascertained whether the ore is suffieiently rich und abundant to hold out the hope of a profitable return for the investment of capita! in the establishment of founderies or iron-works. Small fish are caught here in abundance at the Kourie River.

Somerset. - Two water-mills in the village; two ditto near ditto; two ditto in the Tarka division; two tanneries; one hat manufactory; one brewery. Several parts of the distriet of Somerset abound with limestone, and quarries have been opened near Rodeval and at Cradock, both on the banks of the Fish River. Saltpere is sometimes met with in the fissures of the rocks at the northern end of the district; but it has aever been found in sufficient quantities to attract attention to the collection of it. The quantity of lime produced annually may be estimated at 16,000 bushels; the value to the burner is 100l. Many parts of the Fish River which rums through this district abounds with mullet and ecl; but they are merely taken by the inhabitants for private consumprtion. Somerset is a pastoral district, and trade is oaly engaged in by a small proportion of the inhabitants. The northern and eastern parts of the distriet contain some of the finest pasturage of the colony. From these quarters the Cape Town market is annually supplied with eattle and sheep for slaughter. A few farmers have turned their attention to the production of fine wool.

Quantity of fish caught in 1836 throughout the colony-18 whales, 681 seals and small fish; in value 3,349 . Total number of boats employed, 47.
The value of property has thus been estimated:Property ammally created, and consumed or ronnerted into Moweahle or Immoreabie l'roperty.-Animal food for 150,000 mouths, at 200 lbs. each per anmum, $30,1000,1000 \mathrm{llhs}$. at $1 \frac{1}{2}$ d. per lb. $187,500 \mathrm{l}$. ; fish for 150,000 mouths, at 25 Jbs . per annum, 3,750,000 lbs .
at $1 \frac{1}{8} l$. per lb. 7,800l.; vegetables and fruit for 150,000 montlis at $l d$. per day, for 365 days, $228,12 \mathrm{Ll} . ;$ butter, cggs, milk and cheese for 150,000 mouths, at $1 \frac{1}{2} l$. per day for 365 days, $114,062 l$.; grain raised of all sorts, $6(00,000$ bushels, at 3 sw . fil per hushel, $105,000 t$.; wine, 1,700 leaguers, at 60 s. per leaguer, $51,000 t$; brandy, $1,28 \%$ leaguers, at 180 s . per leaguer, $11,565 \%$.; luxuries, such as tea, sugar, coffec, \&c. for 150,000 mouths, at $1 \frac{1}{3} l l$. per day for 365 days, $114,062 l$. ; wearing apparel, $5 l$. cach, $750,000 \mathrm{l}$.; houschold furniture, at $10 \%$. per house, 100,000 . ; increase of agricultural stock, viz. horses, sheep, isc., 600,0001 ; net income from comuncree, trades, and professions, $550,000 /$. ; value ol exports not included in the foregoing, $100,0001$. ; total annually created, $2,929,114 l$.

Moreable Iroperty: horses, 100,000 , at $10 l$. each, $1,000,000 l$.; horned cattle, 500,000 , at $2 l$. eacl:. $1,000,000 l$. ; sheep, $3,000,000$, at 3 s . each, $450,000 \mathrm{l}$. ; goats, 600,000 , nt 2s. each, $60,000 l$.: swine, 160,000 , at $1 l$. each, $160,000 l$. ; poultry, value $100,000 l$.; furniture for 10,000 houses ( 1 estimate a house for each 15 mouths), at $50 l$. each, $500,000 l$.; clothing for 150,000 persons, at $10 l$. each, $1,500,000 l$; machinery, farming implements, \&c., 800,000l.; bullion, including coin, 150,000l.; ships, boats, \&e., 150,000 l.; merchandize of all kinds, $500,000 l$.; total moveable property, 6,910,000l.

Immoveable Property: houses, 10,000 , at 100 l . each, $1,000,000 l$. ; land cultivated, 300,000 acres, at $45 l$. per acre, $7,500,000 l$; land uncultivated, but valuable, $10,000,000$ acres, at $5 s$. pernere, $2,500,000 l$.; private stores, buildings, \&c., $300,000 \mathrm{l}$; roads, bricges, and wharls, $500,000 t$. ; forts, gaols, hospitals, and other public buildings, $1,000,000 l$.; vines, planthtions, \&e., 800,000t.; total immoveable property, 13,600,000l.; property annually created, 2,92!!, t $1 \cdot 1 l$. ditto noveable in the eolony, (i,910,000l.; ditto immoveable in ditto, 13,600,000l.; total, 23,439,114 .

> CHAPTER II.-MAURITIUS, OR ISLE OF FRANCE.

Section 1. Mauritius, or Isle of France, is situate in the Indian Ocean, 40 leagues to the N. E. of the Isle of Bourbon, and 160 from the great island of Madagascar, between the parallels of 19.58 and 20.32 S. lat, and the meridians of 57.17 and 57.46 E . Long. It is ncarly elliptical $n$ form, measuring in length, about forty miles from N. to S., and 32 from E. to W, and comprises an ares of 432,680 superficial English acres, or 676 stuare miles.
The greatest diameter of the oval is 63,780 yards, and its breadth 44,248 yards. Some estimate the length at 35 and the breadth at 20 miles.
11. The island was discoverec in the year 1507, by Don Pedro Mascarenhas, a navigator of the lortuguese Government in India, under the orters of Governor Almeida. Mascarenhas named the island Cerné. The Portuguese do not seem to huve made any settlements there during the period they were
masters of it, which compreliended almost the whole of the sixteenth centorv; they aprear merely to have placed some hogs, goats, and monkies on Cerné and Bourbon, in the event of any of their vessels being thereon wrecked.

In 1580, Philip II. of Spain having become possessed of the Government of Portugal, uequired the nominal sovereignty of Ceme, but totally disregarded it during the period of his sway, viz. for cighteen years. The Spaniards were unable to maintain the possessions in South America, and the West Indies, originally helonging to Portugal : while the successful Belgic or rather Duteh insurgents of the Castilian Monarchy appeared in India, to dispute with the successors of Vasco De Gama the sovereignty and commerce of the rich territories of the orientul world, and in 1593, the Dutel Admiral, Van Nerk, at the head of a large squadron, landed on the min-
habited Isle of Cerer, toul yossession of it and named the place Murritios, irs honour of the Prince of Orange.

The Dutch do not uppear to have, at this time, settled permanently on Manritius; they, however, oecasionally touched at hae island to water. In 1613, an Englishman, Captain Castleton, commanding ar, English ship, visited Mauritios, and found it still unimbabited; in which state it continuel mutil some pirates in the Indian seas settled on its shores; but nt what precise periond it is impossible to say. The Dutels had, undoubtedly, regu. Inr governors appointed to the island, who resided at Frand lort, from 1644 to 1712, when Matritius whe finally abandoned by the llollanders, and subsequently colonized by the Freneh, with a few settlers from the contiguous island of Bourbon; its formal occujation not taking place until 1721, when the nnme was changed from Mauritius to Isle of frome, and the cerritory given by the King to the French East India Company, under whose sway it remained from 1722 to 1707 . The inhabitants, however, for a long time were chictly composed of adventurers, refugees, or pirates, from all nations, and it was not until 1730, that the Home Government nud the French liast India Company began to pay attention to the island, by sending engineers nad other persons to form a regular establish. ment; the real fomder of the colony, however, was M. de la Bourtomnais, who was sent out as GevernorGeneral of the Iste of France, Bourhom, \&e. in 1734.

I ${ }^{2}$ ) to the arrival of M . de la Bourlommais nt Mauritius in 1735, the French East India Company had been at considernble expense in maintaining the island, which was considered to be solely fit for a refreshing station for their ships, while Bourbon was made a great coflce plantation. Bourdomans, in order to save the Company's finances, introduced the culture of the sugar cane into Mamitius, established manufactures of eotton and indigo, attended to agricuiture and eommerce, destroycd the Maroon negroes, founded a Court of Justice, made roads, fortified the const, formed aqueduets, arsenals, batteries, fortificatiots, harrachs, wharfs, \&e, and in the eleven years, during which his govermment lasted, changed the whole face of the country, laying the foundations of prosperity which subsequent disasters however almost entirely destroyed. [The listory of the Colony during the French Revolution will be found in my Colonial Lilmury, vol. iii.]

The Narquess Wellesley, when Governal-General of India in 1800 , projected and fitted out an expedition destined for the conguest of Mauritius and bourbon-the command of which was given to his brother Arthur then Lieut. Colonel Wellesley, who was to have assumed the governorship on their conquest. [See Jespatches of the Marquess Wellesley, vot. i. to v.] The subsequent expedition of the Indian army to Esypt frustrated that against the Maritius, but it was urgently pressed on the bome govermment by the noble Marpuess that no time should be lost in destroying the nest of lirench pirates which these islands harboured. In all their enterprizes against British commeree the French were materially assisted by a set of desperate American speculators who infested the whole of our possessions in the east; they brought fast-sailing ships to the Mauritius, fitted them out, met them at fixed stations, gave intelligence of the sailing of all our trade; bought not only the cargoes of the prizes tor the American markets, hut the hulls of the ships to carcy heck to war own setthements; and there are strong reasons to lielieve collu-
sive bargains were entered into in antieipation of the captures made in consequence of such intenigence; in short this island was made a rendezvous for all the freebooters of every nation to fit out privateers and commit depredations on IEnglish property.

To put a stop to these proceedings, a strong arma. ment of 12,000 troops, with 20 ships of war, was therefore despatched from India, and from the Cape of Good Hope, for the conquest of Manitims in 1810:-a landing was effected some distnnee from Port fonis, and after the French troops and national guard had sullered several repulses a capitulation was entered into, and the Mauritians hecame subject to the crown of Great Britain. At the peace of $1 \times 1 / 1$, the aequisition was ratified, and the island has ever since remained a colony of the empire.

The foltowing is a list of the governors of the island, French and English, since its colonigation: -Fur the lirench Eust Indi", Company-M. de Myom, 1722; M. Dumas, 1726 ; M. de Maupin, $172 \times ;$, Malú de la Bourclomais, 1735; M. David, 17.14 ; M. de Vozier Bouvet, 1750; M. Magon, 17:5; M. lioucher Desforges, 1759. For the King-M, Humas, 1767 ; M. de Stcinatier, 1768 ; M. Ke ('hevalier Desroches, 1769 ; M. le Chevalier de Jernay, 1772 ; M. le Chevalier Guirand de la Brillanne, lififi M. le Vieomte de souillae, 1779; M. ie Chevalier Brumni dentrecasteamx, 1787; M. le Comte de Conway, 1789 ; M. Charpentier de Cossigny, $\mathbf{3}$ 盟; M. Ic Comte de Malartic, 1792; M. de Magillon de la Morlirre, 1800 ; M. Decnen, Captain-(icheral, 180)3. For his britannic Majesty-M. R. J. Farquhar, 1810 ; Najor-General H. Warde, 1 NlI ; M. R. J. Farguhar, 1811 ; Major-General (i. J. Itall, 1817; Colonel J. Dalrympte, 181א; Major-Gmeral R. Darling, $1 \times 19$ and 1823 ; Sir R. J. Faryular, Bart. $1 \times 20$; lient.-Gen. the Hon. Sir Gallarath Lowry Cole, 1823 ; Major-Gen. Colville, 1827 ; Ma. jor-Gen. Nicolay, $1 \times 33$.
111. The Mauritius is one of the most pieturespuc and romantic looking islands in the eastern hemis. phere; the land rises from the coast to the midlle of the island, and chains of mountans intersect it in various radii, from the centre to the shore; there are however, three principal ranges, in height from 1,800 to 2,800 fect above the sea, mostly covered with timber, and few presentiog, except at their very summits, hare rock.

Extent of the Istand of Manritins and the Hright of its Mowntains.-This isinnd ollers in its outline, so many hays, arms of the sea, and points or promontories, that it is ditlicult to determine exactly its superficies. The following distanees may be consdered ns nearly exact:-From the signal post of the Butte aux Sables to that of the Port la layett, 9,399 fathoms 7 ft ; from the lort La Favette to the sigual of the l'uits des Holloudais, 5,399 fathoms ift.; from the Well of the llollondais to the rock of the Pointe du Jiable, 7,914 fathoms; from the l'ointe du Diable to the Mont Chaour, 10,863 fathoms; from Mont Chaour to the signal of the Savane, $7, \times 3$ fathoms; from the signal of the Savane to the s. W point of the island, 11,286 fathoms 2 ft ; from thin S. W. point to the Pitom of the little Black River, 6,271 frathoms 4 ft ; from the liton of the littlo Black River to the Coral Point, $4,6: 39$ fathoms 2 ft . from the Coral Point to the Point of the riser bellisle, 5,619 fathoms 2 ft .; from the river Didishe tor the Sand I'lain, 1,677 fathoms 3 it. ; from the land loint to the midale of the Grent River, $2,51 \times$ fathoms. from the Grand River to the Canmonier's fons?

lin supposing that the arms of the sea are nearly compensated by the tongues of the land, we must reckon on the supertieies of the island being $4 \times 0$ millions 744,002 (toises carres) or $132,6 \times 0$ roods of ino perches, a perch eonsists of 20 lect.
Height of the Moumtuins.-Signal Mountains of Port Lomis to the foot of Mat de l'avillon, 996 feet ; fong Mountain, at the foot of the Mat, 5.3.; Piton, at the foot of the Mat, 80.1; Summit of the Pouce, $2,1 \times 1$; Summit of the Peterbot, 2,520 ; Piton of the little Black River, 2,i6il ; liton of the Canot, 1,641; The Corps de Garde, 2,214; Rempurt, 2,376 ; Prom the bighest summit to the Trois Mamelles, $2,0,02 ;$ Morne de la Riviere Noire, $1,49 \mathrm{k}$; Morne Brabunt, 1,69x; Montagne de la Savant, 2,130 ; Montagne de Creols, 1,128 ; Morne du Crand l'ort, 2,091; Pointe du Diable, 318; Piton du Bambon, 1,932; P'iton dn Milien, 1,812 ; Piton de lay. ance, 1,338 ; Coin de Mire, JNf; lle Longue, 32.1; lle Bhanche, 162 ; Ile Ronde, 990 ; Darasol, 498.
In the centre of the issand there are platus of table land sereral leagues in circumference, and of different devations, limming the several parts of the districts of Moha and lleins Willems. From anong the ranges of monntains severul streans take their sunce, ruming generally through deep ravines, pervious however to the breeze and sun's rays.

The two principal ports are that of lort iomis, to the N . W. or leeward, and the capital of the island, and the other that of Muhebourir or Grand Port on the S. F.. or windward shore.
Port louis (the seat of Government), with a population of 26,000 , of whom 16,000 are apprentiecs (erst slaves) and 3,000 whites, is a very mat town, well laid out, and now that stone are being substituted for wooden huildings, presents a handsome appearance. 'The shopis are numerous and well ladid out; the markets admirably supplied, and the water is of crystalline purity.
IV. The apmemane of the island and the nature of its material would indiente it to be of voleanic origin. The rocks are disposed in strata, which rising from the sea shore form in the eentre of the island an elevated plain upion whose declivity are several rocky mountains. 'llise may be regarded as the remains of an immense voleano which having exhausted iteclf teth in, cither by the cffect of a violent eroption or by an earthquake, leaving its firmly supported sides standing. These mountains are composed of iron
stone, and a species of lava of a itey colour, the soil produced from the decomposition thereof forming an earthy substance consisting chid fly of argyl and an oxyde of iron.

The tops of the mountains are in general indented with points like the comb of a roek; the few whels have that stmmits present the apperance of a parethent, no signs of a tumel being seen in any part.

A bank of coral surrounds the island for the distance of a fuarter of a leazne from the shore, und the several inlets that appear on the coast have all a coral formation at the base.
'The soil of Mauritius is in many parts execedingly rich; in some places it is a black vegrotable mould, in others a bed of solid clay or quakiug earth, into which a stake of 10 feet in length may be thrust with. out uecting any resistance.

The surface of the phain at Prort homis, is of coralline or caleareous rock, with a slight covering of vegetable soil ; at St. Denis the soil is redhish and lightly spread wer a stratum of stone; at the Fidd of Mars it is a bod of rich chay mixed with tlints ; but most generally the carth is of a reddish colour mixed with ferracinous matter, which often appears on the surface in small orbicular masses; in the dry sorasons it becomes extremely solid, and resembles futters' earth from its hadness ; niter rain it hecomes viscid and tenacious, yet it requites to great lubour in cultivation. Many of the plains and vallies are strewed with hage hlocks of stome, but there is no real sand in the island.
V. The climate is on the whole very salubrious there are four scasons at Muntitios; the lst begins in May, accompanied ly S. Fi. winds, when squalls and rains uecur; the ?ll, with sicpt. or Octulser, when the $S$. E. clanges to the N. W. ; the suln now approaches the zenith, warms the atonosphere, causing the rains and winds, which beyin in Jecember, when the 3 l season commences; this is terminated in March, when the Ith or dry season begins, lusting only ehout eight weeks. These are the seasons as regards the cultivator, but they may be gewerally divided into two, when the winds blow from the S. F., to S., and from the N., E. to N., torming a kind of monsoon. The S.E. winds, although time irver execed a certain degree of force, are always more or less strong and violont; and thongh they give a cer tain fresbuess to the air, yot, while they blow, every thines ceases to segetate. The winds from the S. preval in winter, and are cold; li.. winds are mbrequent, and genetally acompanied by abundmet ranin. the X . W. and W. winds are hot, often weak, interrupted by calms, volent storms, und great rains.

At Black River Post the climate is In general warm and dry, as the rains do not often reach the shore, for the lofty mountains in the neighbourhood arrest and attract the clouds and rain. The months of September, October and November are dry and moderately warm; the mcan of the thermometer 79, and the prevailing winds S. E., N.N.E., and N. W. In December, January, Jebruary and March, (which form the wet season) the hent is greatest; mean 86, winds N. N. W., W. and S. ${ }^{-}$V. April, May, June cool and refreshing ; mean 70, , inds S. and S. E.. in strong breezes. At the Pouder Mills the mean heat throughout the year is at sun-rise 70, afternoon 86 , and sun-set 72 .
The mountains and emincnces make up for the difference of latitude; and although within the tropies, the climate is that of a temperate region.
The S. E. winds prevail for nine or ten months of the year.
The range of wcather round the const is thus shewn; the average being deduced from the different military stations.

Average range of Weather round the Coast-Mauritiua,

Many of the East India Company's civil nud military officers seek and find health at Mauritius; mud I have myself invariahly found the air, cspecially at Moka, exceedingly clastic, and giving a pleasing tlow of spirits to the mind.
The hurricane months are January, February and March, lut these tempests do not occur every year, their return is uncertnin. [Full information on the Physical Aspect, Gcology, Climate, Animal and Vegetable Kingdom, \&c. will be found in my Coloniul Library, vol. iii.]

tent of 18 miles in length and three or four in breadth, it contains but ahout 9,000 acres of arable land; the western coast does not furnish drinkable water. It offers two places for anchorage; the one at the N. is saie and commodious, the other in the $S$. las but a very marrow entrance. It contains 123 inhabitants. 'There is a good fishery.
8. St. Brandon. - Near the bank of St. Brandon, which is 27 miles long, 12 brond, and 72 in circum. ference, are seen 12 small islands, forming five groups, one or two leagues apart from each other. This bank, in latitude 16.26, and longitude 59.35 , is 246 miles from Port Louls. These islands are used only as a place of security for fishing implements belonging to live persons, who thus gain a livelihood. There is no permanent settlement here. In a great hurricane, these islands are totally submerged.
9. Dieso Garria.—Situated in latitude 7.15, and 72.32 E. Longitude, and 1,176 miles from the Mauritius. This island, in the form of a horse-shoe, comprises 12 miles from N. to S., and six miles in breadth, forming a bay capable of holding a large number of vessets. The water is saltish, and is found in wells dug in the sand. Its possession has been conceded to three inhabitants of the Mauritius. It produces an abundance of cocoa-nut trees, and wood for burning. The population consists of 275 individuals.
10. Siz: Ishends.-Thus named from their number; they are situated in latitude 6.35 , and longitude 71.23 , it miles from Dicgo, and 1,188 miles from the Mauritius. These islands, arranged in the form of a horseshoe, present an anchorage of eight or nine miles round, and two fathoms and a half deep. A late inhabitant of the Mauritius is settled there.
11. Three Brotkers. - Between the Six Islands and the Three Brothers, a distance of 18 miles, are two smali nameless islands. The most southerly is very dangerous, on account of the sand banks with which it is surrounded. Those of the N. are accessible at the N.W. The Three Brothers derive their name from their number; they are situated in 6.10 latitude, and $71.2 \times$ longitude, about 1,209 miles from the Mauritias. Cocoa-nut trees, fish, and tortoises are fonnd here; water is procured, similar to that at Diego. These islands have been given into the possession of a planter of the Mauritius, who employs 43 people on them.
12. Istumds of Solomon-are 11 in number; they have been named the Eleven Islands by the French, and are in lat. 5.23 , long. 72.35 , about 1,275 miles from the Mauritius. The soil is in general superior to the other islands of this Archipelago; it produces an abundance of the cocoa-nut tree, and a species of tree affording very good wood, with an elevation of 40 feet. The largest of these islands is seven miles and a half in circumference; the next, four miles; two smaller, three miles cach; the other six, two miles; and the last, one mile and a half. They are arranged circularly, and form a basin, with sale anchorage for vessels of small draught of water.
13. Peros Bamhos.-A collection of small islands, 22 in number, in 5.23 .30 S . latitude, and 72.3 E . longitude, abunt 1,260 miles N.E. of l'ort Louis. These islands, the largest of which is scarcely two miles long, present an extent of 18 miles in length and 12 in brealth, having two passages to the $N$. ; one narrow, the other ciangerous, and a third tolerably good at the S .
14. Legour Island.-This island, tliscovered in 1820 by the proprietor M. l.egour, of l'ort Iouls, from whom it derived its name by the order of his Exceltency Governor Farguhar, is situated in 5.59 S . latitule,
and 72.17 E. longitude, about 1,250 miles N. E. $\frac{1}{4}$ E. . of the Mauritius. Its length is about two miles, and between two and three in width; it is dithenlt of access, without anchorage, and devoid of resourees.
15. The Islands of Cicorge and Ropurpiz.-These islands are said to extend through 6.20 to 7.15 s . latitude, and 60.4 to 63.8 J. . longitude; but they are of very doubtful existence. Some have supposed that they form a part of the bank of Saya de Malha, the position of which is uncertain.
16. Agralegra.--'This island, in 10.29 .50 S . Iatitule, and 06.55 E. longitude, about 561 miles in the N . N. W. from Manritius, is divided in two by a canal, about 500 fathoms in width, fordable at low water. It is about 11 miles frmm No S., and one mile and at half from E. to W.; it is covered with cocon-nut trees in the centre. There is but little vegetable soil; and water, which is saltish, is obtained by digging wells in the sand. It is situated low, and is without anchorage. A merchant of the Mauritid, who is in possession, has established two manufactories ol oil, which employ 199 individuals.
17. Coctiri, in 7.15 S. latitude, and 56.23 E. longitude, is about 768 miles N . of the Maritius. 'This island, about nine miles in circumference, possesses at the N. E. an anchorage for small bonts from 25 to 30 tons, but not a sulficient one for large vessels. Its sand and coral soil is interspersed with 500 or 600 acres of cultivated land, where maize thrives tolerably well. The water, which is procured ly the same neans as in the other isfands, is saltish. A resident of the Mauritius, who is in possession of it, employs 100 persons, who cultivate maize, aud supply him with cocon-nut oil and tortoises.
18. Seycheile's Islmuds.-These islands, 30 in number, of which many are very small, form an archipe. lago, which is the most considerable of the dependencies of the Mauritius. I'hey lie between 3.38 and 545 . S. Iatitude, and between 55.15 and 56.10 k . tongitude, about 915 miles in the N. 1 N.W. of Port Louis. The islands are:-1. L'lle Mahé; 2. St. Anue; 3. Aux Cerfs; 4. Anonyme; 5. Ju Sud Est; (i. Longe; 7. Ronde; $x$. Moyenne; 9. Therese; 10. De La Conception; 11. Aux Vaches Marines; 12. Aux Fregates; 13. La Digne; 14. Praslin; 15. Les Cousin et Cousine; 16, 17, 18. Les Trois Sexurs; 19. L'Ile Ronde; 20. L'lle Aride ; 21. L'lle Felicité; 22. L'lle Marianne; 23. Aux Recits; 24, 25. Les Dense lles du Nord; 2f. Lille Jenis, the most mortherly; 27. L'lle Curieuse; 2K. Les Mamelles; 29. L'Ile Silhonette, the most westerly; 30 . L'lle Plate, the most southerly of the group.

The circumference of Mahé is $\mathbf{7 5}$ or $\mathbf{7 6}$ miles. It contains $72,76 \times$ roods of land; the country is mountainous, intersected with ravines, and interspersed with rocks. The soil, which varies considerably, is generally moist. On the E. coast (near the town of Mahé) there is a bay large enough to contain 30 vessels of considerable size. Mahé contains $5,83-1$ inhabitants.

St. Anne is about a league from Mahc. The soil is tolerably good, and contains about 1,200 roods of cultivated land. The population is in number 246 .

The Aux Cerfs is close to the $S$. end of thic above, much smaller, and contains 33 inhabitants.

The A nonyme lslauds, from the S.E. a very small group of islands near the precediug ones, are not inhabited.
long Island. This islet and the following, Round Island and Moyenne, between the St. Anne and Cerfs Islands, alone possess some little value, and are cultivated by ex individuals.

Ites Therese, de la Conception, des Viches Marines are islets situnted to the west, nud very mear Mahé. They are unimhabited.

The Frigate Island, towards the l : is not hinabited.

La Digne. This smali island, three miles long and half a mile in width, has not more than 2,0 ont rouds cultivated, of which $1,4 i 4$ are granted, and imbabited by $34+$ imdividuals.

I'raslin is the most limpertant of the cluster after Mahe, and lans hardly the third ol its soil cultivated. Its ceusus gives $2,51 / f$ roods granted; it has a good anchorage towards the $N$., near Carion's island. 'The population amounts to los.

The Cousin Islands are two islands inhabited.
The Sisters are three islands of small extent, inho. bited by 15 people.

The Round Island and Barren Island, two islands inhahited, atjoining I'raslin.

Island of Felicity, a small island, having only 31 neres cultivated, and a populations of 52 individuals.

Marian Islana, Aux Recifs, Du Nord, Denis, C'nricuse, and Mamelle, are all small. The two islands Denis and Curiense ure the most important. The first was granted to Captain Jesage for his use, and the secoul to an inhabitant of Mauritius. 'fhese are about three miles loug and one mile and a half wide, and 500 acres uncultivated; the other is only two miles long and one wide, and has not more than 150 acres of good ground.

Ile Silhouctte, very little elevated, about nine miles in circumference; 1,615 acres are divided between six proprictors The population monounts to 136 .
lle l'late; inhabited. 'Ihis islamd, of small extent, has till lately been destined for the quarastine of ships, when infectious diseases bave raged on bund.
13. Le's Amiromids.-This eluster is a collection of seven small islands, joined together by a sand and coral hank. Those islands which have bathis of coral mixed with sand, and very slightly raised above the level of the sea, are-'The African Island, L'lle Remire, I'lle d'Arros, Lille St. Joseph, Lilie Poivre, lille des Roches, L'Ile Lamperiaire, litle de la Boudeuse, L'lle Marie Louise, l'lle des Neuf, L'lle de l'Eitoile

The African Island, the most wortherly, is situated in 4.59 S . latitude, and 53.32 E . longitude. L'lle des Nenf, the nearest to the $S$., is situated in fi.l? S. la. titucte. L'Ite lamperiaire is situated more to the E., in 5.15 S . latitude, and $53.4 t \mathrm{li}$. longitude. L'lle the la Bondense, more to the W., is situated in 6i.12 latiturle, and in 53.4 E. longitude; the mean latitule of this cluster is in $5.35,30 \mathrm{~S}$. latitude, and longitude 53.25 . These islands, without water, and valuable only for their fishery and turtie, are inhabited and frequented in the fishing season by some of the inhabitants from the seychelles, to whom the lollowing islands have been granted for their use and enjoyment, viz. - L'lle d'Arros, L'lle st. Joseph, L'lle P'uivre, L'Ile des Roches, Lille des Neuf, \&e,
14. L'lle Alphonse.-This island 36 miles to the south of the Amirantes is situated in 7.0 S . latitude, and 53.0 cast longitude about 804 miles in the N. $\frac{1}{4}$ N.W. from the Mauritius, a little larger than the other Amirantes Islands, and utfording an abondance of fish ; it has been granted for the use of an inhabitant of Mauritius, but it is wot yet inhabited.
15. Proridence islomel-Situated in 9.12 S . latitude, and 52.17 E. longitude, abonat 726 miles N.N.E: $\frac{1}{2}$ W. of Mauritius. This island 8 miles long, and one wide, has no machorage, it has not any water, and has been granted to an inhabitant ol Amuritius, under
condition of receiving persons aflicted with lignong; it has it: inhabitunts.
16. Je 1 de Nore Islemiss.-These iskets 5 in num. ber, situated in 10.12 S . Iatitude, and 15.5 ti W. fonge
 of small extent, and surrounded by a red is the northern part, where there is a toleralile good s.n. chorage. 'I'seir soil is similar to that of Prosidence, some cocon trees scattered here and there, inulate hat with some cure this valuable tree wouln muecerd there. 'lliese islets have been granted to minhabitan of Mauritins, who died without making any settlement there; they were then given lor the use of the proprictor of Irovidence Island. The establishment tormed by the proprietor employs 7 people.
17. Ile St, Pierre, is sitmated in $9,1 \% \mathrm{~s}$, latituke,
 Mauritins. It is six miles long, and mue nitice mat a half wide. It is inhabited, and nhost matecsmble excepting one plase in the N. Ei. Where there in a little that samdy show, all the conast consists of rocks of coral, upon which the sea brenks with mueh vinlence,
18. St. Laturent Ishimd,--Situated on lislet GeotPrey's Map in 9.44 S . Intitude, and $51.2 \times 1 \%$. Iomgitude is between l'rovidence, Jeall de Nove, and st. I'urre Istands. Its existence is not certain, severnl cuptan, mention its bearing, without having any howledge of it.
19. Astore Ishomt.-Sitmated N.N.F., of Madarasmr, in 10.10 S . Intitucke, and 47.50 E . Jongitude, latis oniy a lew resources for fishing. It has been granted for the use of two planters of Mauritius, who have nut the proprietorship of thens.
29. Cosmoleal lalimi-situnted in 1.45 S . latitule, and $\mathbf{4 7 4 0} \mathrm{E}$. longitude, has been grasted fior the ure of an imhabitant of Mauritius who has mate no suttliment there. It is of little importance, and sur. romaded by reefs.
21. Assomption Ishand-situated in 9.4 s. latitude and $45,40 \mathrm{~F}$. . longitude. It is inhabited, and like the other surrounded by reefs, exeept in the N. L. whew it is accessible.
22. Alduhre Islame.-This islet of little worth, is situated in 8.27 S . latitude, and 34.12 E . lungituke.
23. Seoml Ishond.-A very straill isict situated in 15.53 S , latitude, and 54.43 E . longitude, about $300^{\circ}$ miles N. E. $\frac{1}{6}$ of P'ort Lous.
24. St. L'aul and Amstorilim Istand.-The first is situated in 27.45 S . latitude, the other in 38.15 s . latitude, mean longitude $7 \times .0$, mean distance irom the Mauritius Island 1,410 miles in the southonast, a fow degrees south. These islands are of very ditheult access; they offer very little means of sustaining lite; and exposed to cold and wind, are only frequented by vessels which go in seareh ol sea cows which are fonnd there in abundance. [A minute detail of these islands has been given, because they tie so directly in the track of buast India ships. The facts are obtaind from the Mouritius Almanack for $1 \times 3 \times$.]

Administration of the Sreychelles lshmis.-A the government, Geo. Harrison, xost.; wher-agent and special judge, Mr. Wilson, fovkt.; judge of the peace, G. A. A. Fressanges, 2767. ; police onlicer tilling the ollice of king's solicitor, A. Snvy, 1.1 1 .
VI. Ilse first settiers on the Marritius were pirates, and in 1657 their strength was consilerable. Nfer its colonization by the Freneh, n great number of adventurers Hocked to the island liom Europe, and othor places, and slaves were introduced from Madagascar and Moambigue, but at what precise perien we hate no recond. le. After ber of ndand other ladagascar 4 we hate was more
populons during the period prior to the freneh reve. lution, than subsequent to that event, as it is on record that. in 1792,20,000 persons perished of amall. pur in the Manritius. In 1799 the population was stated, by Baron Grant, at-slaves, 55,000 , whites and muinteves, 10,000 ; total 6. 6000 ; and the armed firce, matlonal geard, blacks and mulatoes, 2,0000, blocks and mulattoes, to serve as chasscurs, and the artillery, 3,0100 ; totul 5,000.
The gtatistice whitl I have derived from the Colonial Ollice, and from the Manritins Almanack for $1 \times 34$, rolative to the progressive linerease of the purpulation for more than 50 years, are very complete. It will be seen by the census of 1827 , that in the whites and slaves, the males preponderated over the fomples ; but in the free coloured there was a larger propertion of females, which, however, may be owing to women slaves leing emancipated in greater nums. ber that men.
The comprative increase of the three elasses of imhatitauts lroun 1767 to $1 \times 382$, is thus shewn:-

* No distinction of colour ; the number of slaves in the island, in $1 \times 30$, is stated by the riturus to lanlinment, to be-males, 41,154 ; females, 26,2493 ; total, 67,7.13.

A complete census of the whole ishand, distinguishing the inhabitnuts according to the pumbiers, or cantons, for 1827:

Population for $1 \times 27$ and $1 \times 32$, of Manritios.

[B. B. Coloninl Ontice.]

X. The athirs of the island are manged hy a Gowroor, as int the Cape of Gow: Dlope, nited by an Exemtive and a lequisative Comed. The Exemotive Conncil consists of four members (the Cowernor), the otlierer secomed in command of the tronps, the Coblanial Seretary, the prowereur and Adweate gemera. The Lagislative comsists of 15 members, 7 of whim hold no othe ind station. When the islanel was in the grossession of the l'rench, a Colonial Commil was created by a deree of the 290 s sptember, 1810. The dewe reciteol, that the colomy was boumb to comeribute its assistance to the expense of providing fios its wwo safity; and, in order to mise the reveme meressary for this purpowe, a Council was created, comsistimg if 11 persons, to be chosen from numg the priacipal inhabitants mal teaders of the different parts of the
island three from the Port Napoleon, mind one from cach of the wher districts. The members of the Commeil were to be namel by the Captuin-temeral, me the presentation of the Collomial Profiet and the Commissary of Jnstice, from a list of candidates dected for the ditrict of lort Kipolow, nad there for each of the other tistricts. Any satancy in the
 dates whense mames remained ypor the list of diverum. biletomal chambere were to be fiemed for the enetem of Hese canlidates lior the Comacil, mill menture off these chambers were to be mamed by the Caftaingeneral, י! oun the presentation of the thmal Pro. Fect and the Cowsmisary of dustios. "This C'mucil has not been comencel since the Bitish moturatun of the island.

Expenditure inenrred by Great Britain for the military protection, and in nid of the Civil Establishment during the year 1836. [3. 13.]

XII. The commoree of the Mauritius is considerable, and widely extended. It wonld have heen tesirable to give an extended tahular view oi the trade for a consecutive series of yenrs; but, unfortmately, the return of the imports and experts in the Bhe books not being given in the same form for two years in succtrsion, it is impossibic to form a correct table from that source of information. From documents obligingly furnished me by Mr. Whaworth, of the from of Reid, Irving, and Co., I am enabled to supply a complete view of the trade of the isfand for four years, and which will serve at a fiture period for comparison.

The duty paid on the export of sugar from Mauritius heing levied according to weight and not to value (no declaration of actunl cost being required), and the import of specie into, and its export from the island, having since $1 \times 34$ been permitted without any entry at the Custom Ilouse, neither the real value of the sugar nor the exact anount of the specie can be there ascertainesl.

The average prices of the sugar exported during the last four years have however been deduced from the nett French weight and total cost on board of shipments constituting peesly two thirds of the quantity annually exported, to the orginal invoices of whei reterence has isen allowed by the principal mercantile houses of Port Lonis ; and a very nearly correct acennit of the specie imported and exported durng

Nature and value of property annually ereated, moveable and immoveable, in Mauritius and its dependencies.

Property annually created and consumed or convertcd into Moreabte or Immovealle Property.-Animal food for 100,000 mouths, at 100 lhs. a year each, $10,000,000 \mathrm{lbs}$. at 3 l . per $\mathrm{lb} ., 125,000 \mathrm{l}$.; fish for 100,000 mouths, nt 100 lbs . a year cach, $10,000,000 \mathrm{lbs}$., at $1 d$. per lb., $41,666 l$. ; eggs, poultry, milk, butter and cheese for 100,000 mouths, at 1 d. per day, 152,083l.; bread-viz. flour, manioc, potatoes, yams, \&c. for 100,000 mouths, at $2 d$. per day, $304,186 l$.; condiments-viz. salt, pepper, spices, \&c. for 100,000 mouths, $5,000 l$.; tea, coffec, spirits, wine, \&c. for 100,000 mouths, at $\frac{1}{2} d$. per day, $76,041 l$.; personal elothing renewed for 100,000 persons, at $2 l$. per ann., 200,000l.; furniture for 10,000 houses, at is $l$. each per annum, $50,000 l$.; food for horses, cattle and live stock, 50,000 head, nt $1 l$. a year each, $50,000 l$.; sugar annually produced, $70,000,000 \mathrm{lbs}$., at $1 \frac{1}{2} d$. per lb . 437,5001 .; rum, molasses, and other articles, $65,000 l$. ; Juxuries consumed by the rich, $50,000 l$.; surplus incomes derived from trades, professions, \&c.,

10,000 persons, at $50 l$. each, $500,000 l$; losses by fire, storm, aecident, \&e., 10,0001 .; total annually ereated, 2,066,476l.

Moveable Property.-Horses, 800, at 20l. each, $16,000 \mathrm{l}$.; mules and asses, 2,500 , at 10 l . cach, $25,000 l$. ; horned cattle, 25,000 , at $5 l$. cach, 125, $000 l$; sheep and goats, 10,000 , at $2 l$. each, $20,000 l$. ; swiue, 20,000 , at 1 l. 10 s . each, $30,000 \mathrm{l}$. ; poultry, valuc, $10,000 l$. ; house furniture in 10,000 houscs, at 25 l . a house, $250,000 l$.; personal clothing of 100,000 , at 51 each, $500,000 l$.; stock of merchandize, value, $600,000 l$. ; ships and boats, value, $200,000 l$.; machinery and agrieultural implements, value, $500,000 l$. bullion, $35,000 l$.; total moveable property, 2,311,000l.

Immoveable Property. $-10,000$ houses, at $50 l$. cach, $500,000 l$.; cultivated land, 100,000 acres, at $20 l$. per acre, $2,000,000 \mathrm{l}$.; meadow mind wood land, 200,000 acres, at $3 l$. per acre, $600,000 l$.; manufactories of sugar, \&c., 200, at 500 l . each, $100,000 l$.; public buildings, forts, churches, \&c., $1,000,0001$.; roads, bridges, aqueducts, wharfs, \&c., 800,0001 .; total immoveable property, 5,000,000l. Property annually created, $2,066,476 l$.; moveable and immoveable, 7,311,000l.

DEPENDENCIES OF MAURITIUS.-RODRIGUE, SEYCHELLES, \&c.
[The position, latitude and longitude, \&e., of the Dependencies, is given at p. 500.]

The island of Rolrigue, the Seychelles Islands, Diego Garcia, \&e., belong to Mauritius, and an agent from the colony is placed on the vast nnd important island of Madagascar. Rodrigue is situate about 300 miles to the eastward of Mauritius, in 19.13. S. lat., about 26 miles long by 12 broad. I passed elose to it in 1823, but did not land on account of the heavy surf which breaks aloug the shore. It is mountainons, or more properly speaking a suceession of hills, clothed with verdure, the vallics are full of roeks and stones, which eover the surface to a great extent, leaving, however, a large portion of fertile soil, whieh is cultivated by a few French colonists from Mauritius, with which a constant intercourse is kept up in transporting turtle from the former to the latter. There is abundance of tish around Rodrigue, but it is singular that those caught outside the recfs in deep water are poisonous, and several sailors have died from eating of them. One sort eaught near the island resembles a whiting, and from its destructive qualities is named hy the French, mort au chien. The existence of joisonous fish has never been properly accounted for; we know of no birds or animals that are poisonous, even the most venomous snake, when dceapitated, is good eating. Some think that the fact is owing to copper banks, on which the fish feed; but it is remarkable that those cauglit on the same bank are at one time poisonous and at another edible. Some sorts are, however, poisonous at all times, and I have seen a dog die in a few minutes after eating one. Mariners ought to rejcet fish without scales; unless they know them to be good, and a silver spoon if boiled with the fish will turn black should it be noxious. The early French scttlers narrate that they found eels of an exquisite flavour on the islend, so large that one of them was a load for tue men to carry. On the N. side of the
island there is a bay affording excellent anchorage, a secure shelter for ships of all dimensions, (the squadron which was collected from India and the Cape, for the conquest of Mauritius, in 1810, rendezvoused here;) and abundance of wood and water. The air is delightful, the water clear, the vegetation luxuriant. In time of peace it is useful as a haven for shipwreeked mariners, and in a period of war as a cruising station (a vessel from Bombay, the 'Eldon,' laden with cotton, took fire at sea in October 1834, and the crew, after being many days in an open boat, reached Rodrigue when almost perishing, and from thence the Mauritius.)

The Seychelles or Mahe Islands, isituate to the northward of Madagascar, between the parallels of 4. and 5. S. lat., were partially explored by M. Lazarus Picault, in 1743, by order of Mahé de la Bourdonnais, the Governor of the Isle of France; but in all probability they were previously known to the Portuguese, as were the Amirantes, a low and comparatively insiguificant group, 80 iniles distant; if, however, the Portuguese saw them, it seems strange that they were not explored, as we should then have had an earlier aceount of the coco de mer peculiar to those islands.

The Seychelles capitulated to the English in 1794, after which their flag was eonsidered neutral by the English and French, when belligerents : on the capture of Mauritius the islands were taken possession of as a dependency of that colony, and have since continued under the superintendence of an agent deputed from Mauritius, who is aided by 25 soldiers from one of the regiments in garrison at the latter place.
The fellowing are the names of the principal islands, with the number of acres contained in each :-- (The total acres are, 50,120 .)

There are upwards of 15 other islands of a smaller size, all resting on an extensive bank of sand and coral, which also surrounds them to a great extent.

Mahé, the seat of government at the Seychelles, and principal island in the group, is 16 miles long, and from three to five broad, with a very steep and rugged granite mountain running through the centre. The town of Mahe is situate on the north side, in a small glen, irregularly built, and containing some good houses; the principal persons being, however, in the environs. It is of course more densely peopled than the others; the total popula. tion, when I visited the group in 1825, was, whites, $58 \%$; free coloured, 323 ; and slaves, 6,058 ; total, 6,963 . There is, however, a scattered population on many of the flat islands spread about those tranquil seas; sometimes on approaching one of these low verdant isles, the recent creation of the coral insect, we have been surprised by a boat pushing off from the shore, and a dark-coloured Frenchman, or Portuguese, coming on board the frigate and presenting us with eggs, milk, and fowls, at the same time informing us that the island we saw was his, and that his family would receive us hospitably if we would land. On several of the Seychelles and Amirante group we found no human inhabitants, but abundance of hogs and goats, as also papaws, cocoa nuts, and other edible fruit ; indeed cruising about this beautiful archipelago is more like romance than reality; while the Italian beauty of the skies, the serenity of the atmosphere, and the purity of the breeze add a peculiar charm to the soft scenery around. The oldest resident at the Seychelles never witnessed there a gale of wind; but the sea breeze is constant, and tempers the heat so as to divest a nearly vertical sun of the ill effects of its fervid rays. I have spent whole days wandering from island to island among the Seychelles group, and revelling in their romantic scenery, with no other protection from a tropical sun than a broad-brimmed straw hat, yet without feeling the slightest bad effect, and with but little fatigue. The thermometer varies from 84. to $64 .$, its mean being 70 . to 72. ; the heaithiness of the station is indicated by the great age and large families of the inhabitants; indeed it is no uncommon sight to sce four generations sitting down at the same table, and forming a numerous party.
Although the bank on which this archipelago is situate is of coral formation, yet all the Seychelles lslands, except two, are of granite, huge blocks of which, generally piled up as it were in a confused mass, form their peaks, which are covered with verdure. Lieutenant (now Captain) R. Owen, R. N., and myself, with a party of seamen, ascended North or Fearn Island, after two hours and a half difficult climbing. Towards the summit, for many feet, there was nothing but huge blocks of granite, piled on each other as a number of paving stones would be on an Irish cearn; several of these rocks were of the magnitude of a small sized house, and so nicely poised that one might be moved with the little tinger.

The Seyehelles possess many excellent harbours, and being never visited by tornndoes, the neighbourhood is frequented by whalers who fill up their vessels rapidly with sperm oil. The inhabitants cultivate cotton of a superior quality, spices, coffee, tobacco, rice, maize, cocoa nuts, \&c., and carry on a luerative trade in the numerous small vessels which they possess, in articles suited to the Indian, Mauri.. tius, and Bourbon markets. (Some ships are afraid to fish on this bank, the whale being so violent when wounded.)
The vegetation around is extremely luxuriant; the most remarkable specimen is the coco de mer, so ealled beeause the nuts were found on the shores of Malabar, and on the coasts of the Maldive Islands, many years before the place of their growth was ascertained, when each nut sold for 300l. or $400 l$. from its supposed medicinal quality. The nut is confined in its growth to the Seychelles, and even there to two islands-Praslin and Curieuse. It springs from a species of palm, 60 to 80 feet high, with full leaves; at their junction hangs the nut, one foot long, cight inches thick, with a light coloured tasteless jelly in each of the compartments; the seed vessel is about two feet long and three inches diameter, studded with small yellow flowers issuing from a regular projection, which resemble those of the pine apple. The smell arising from the flower is by most Europeans considered intolerable, its offensiveness inereasing the longer the flower is kept.

Various spices grow on Mahe, \&c. such as the cinnamon plant, cloves, nutmeg and pepper, which were introduced by orders of M. De Poirre, the intelligent governor of Mauritius, with a view to rival the Dutch in the Moluceas: the cultivation, if persevered in, would probably have rendered the Seychelles, at the present day, as valuable as the far-famed spice islands, but the plantation was burnt on the approach of a ship of war (French), which was supposed to be an English frigate.
Mahe has a British resident from the Mauritins, with some subordinate officers, and there is a petty civil and criminal court, held for the trial of causes and offences. The inhabitants are extremely hospitable; and I would strongly recommend our whalers visiting the Seychelles, instead of leaving the fishing to the Americans and French. The central position of the Seychelles for trade with the Eastern Hemisphere, is thus shewn;-Mahé to Madagascar, 576 miles; Comoros, 828 ; Mauritius, 928 ; Mombas, 930 ; Delagoa Bay, 1800 ; Bombay, 1,680; Arabia, 1,230; Cape of Good Hope, 2,640. Had the settlement which Captain W. F. W. Owen so wisely formed at Mombas, on the E. coast of Africa, not have been given up (the Americans are now establishing themselves on this coast), we should have had a perfect chain of posts, if I may so term it, for the extension and protection of our commerce.

Diego Garcia is situate farther E. about $4^{0}$. from the Equator, and is one of those numerous coral islands with which these seas abound. (The Coco islands in lat. 12.06. S., long. 27.04. E., are a cireular chain of islands and keys lined by coral reef, with a sounding trom 12 to 20 fathoms, where a ship may anchor; there is an extensive harbour on the N. extremity with but one entrance, three miles wide: straggling rocks and a recf project one mile and a half fiom W. side of entrance. The islands are now settled on by Capt. Ross an American.) It contains plenty of turtle, and has a few residents from the Mauritius.

CHAPTER III.-S'I. HELENA.

Sbection I.-St. Helena (celebrated as the prison and grave of Napoleon Buonaparte), is situate in the Soutleern Atlantic in 15.15. S. lat., and 5.49 .45 . W. long , 1,200 miles from the coast of Africa, 2,000 do. from that of America, and 600 from the island of Ascension. Its extreme length is $10 \frac{1}{2}$ miles, breadth, (is, circumference, 28 miles, and area 30,300 acres.
II. The island was discovered by Juan le Nova Castella, a Portuguese navigator, on 21st May, 1502, and named by him in honour of the day of its discovery, Saint Helena.

When first visited, the island was uninhahited, covered hy one entire forest and its shores abounding with turtles, seals, sea-lions, and various sorts of wild fowl; its settlement, and early improvement in 1513 , are attributed to the deharkation of a Portuguese nobleman, who had been mutilated by Albuquerque for crime committed in India, and sent home in disgrace. This gentleman, Fernandez Lopez by name, prevailed on the captain to set him on shore, in preference to the life of ignominy he was destined to lead in P'ortugal, and his wishes being complied with, and abundant supplies forwarded to him by his commiserating friends, he quickly hrought some spots under cultivation, and imported hogs, goats, domestic poultry, partridges, and wild fowl, besides various sorts of fruits and vegetables, all of which increased and throve exceedingly, such as figs, oranges, lemons, peach trees, \&c. Fernandez was removed from his voluntary exile by orders of the Portuguese government in about four years, and the next inhabitants appear to have been four slaves of different sexes, who escaped from a ship, and multiplied to the number of 20 ; these people subsisted on the live stock and fruits which had increased prodigiously; but the Portuguese being jealous of their consuming what was required for the refreshment of the ships, which touched here on their passage from India, finally succeeded in hunting them out, and destroying them. Tavernier informs us that a Franciscan friar had also taken up his abode on the island and led an austere life for 14 years, when he died; though other accounts say, he was removed in consequence of the great destruction he committed among the goats, for the sake of trafficking in their skins.
The Portuguese mariners preserved the secret of the existence of St. Helena from other nations until 1588, when it was discovered by Capt. Cavendish, on his return from a circumnavigating voyage. He gives the state of the island very circumstantially, from which it appears, that the Portuguese had built a town and a church: he found abundance of goats, pigs, and poultry, with game, wild fowl, and various kinds of fruits and vegetables. The settlement was afterwards frequently visited by English, Dutch, Spanish, and Portuguese ships : the salubrity of air, and the abundance of fresh provisions invigorating their exhausted crews.

It sometimes happened that slips of nations at
war with each other visited St. Helena at the same time-accordingly we have aceounts of various sea fights between the Dutel and Spaniards at the anchorage, who are, moreover, aceused of wantouly destroying the plantations, lest succeeding visitors should profit by the supplies which had proved so beneficial to them. From all these causes the island was destroyed by the Portuguese, when they acquired possession of settlements on the eastern shores of Africa, and for some time continued desolate, owing to the wanton excesses which had been committed: however, about the year 1643 , two Portuguese ves. sels being wrecked, their crews got safe to land, and once more stocked the island with cattle, goats, hogs, poultry, \&c. In 1645 the Dutch took formal posses. sion of St. Helena, and established a colony; but they also abundoned it, when settling at the Cafe of Good Hope in 1651.

The homeward bound English East India fleet calling at the island at this period, took possession of St. Helena, and the East Judia Company olstained a charter for its possession from Charles II. ten years after. Under the superintendence in 1658 of Capt. Dutton, the first English Governor, a fort was erected and called Fort James, in compliment to the Duke of York, the king's brother. Settlers were encouraged to emigrate thither, and slaves were imported from Madagascar to work in the plantations. It is reported to have been captured by the Dutch in 1665, but of this event the accounts are vague and doubt. ful, and the writer of Rennefort's voyage, who visited the island in 1666 , makes no mention of such occurrence, but eulogizes Governor Stringer, and his family for the attentions he received, and describes the settlement as thriving, being then composed of about 50 Englishmen, 20 women, and some negroes. Its population was shortly after increased by many, who had been reduced by the great fire of London, seeking relief in the island.

In the latter part of 1672 , the Dutch, through the treachery of a planter, succeeded in landing in the night 500 men from an expedition which had been repulsed the same day; the fort bcing thus attacked in the rear, the Governor thought prudent to abandoa it, and retired, with his garrison and principal effects, on board some ship in the roads, taking, however, the precaution of placing a sloop to cruise to wiadward of St. Helena to warn British vessels of its capture, and a squadron arriving soon after (in May, 1673), under Captain Munden, he succeeded in re. capturing the island, and, by keeping the Dutch flag flying after he got possession of the forts, decoyed six Dutch East Indiamen, as well as a ship from Europe, having a Governor and reinforcements for the garrison on board, into the roads where they were captured. Having formed a British garrison by detachments from the ships, Captain Munden sailed for England with his prizes, and was knighted.

St. Helena remained in the possession of the E. I.

Esq., (2nd actg.) 1828 ; Brigadier Genl. C. Jallas, 1828 ; Major (ienl. Middleton.
111. When first seen at sea, St. Helena presents the appearance of a small barren rock, nearly perpendicular on its northern side, hut gradually shelving to the south. On npproaching, its eminences appear more broken, and the central ones covered with verdure; on a near approach this view is again shut out by the rugged and barren appearance of the shore, which is nearly perpendicular, forming a girdle of inaceessible precipices of basaltic roeks, some of them rent to the bases, exhibiting extensive chasms, and of all the most fantastic shapes that can be imagined. On rounding Munden's Point to the only anchorage that exists, James' Vollcy Bay, on the nortls-west or leeward side of the island, the eye is suddenly relieved by a view of the town and fortifications, James' Town is situated in a narrow valley between two lofty mountains, and presents a leasant and refreshing appearance, from the trees being generally in full leaf -a species of the banian of India, called in Bengal the peepul tree.

There is gnod anchorage in from eight to twentyfive fathoms; the tide rising to the height of five feet at times; the surf upon the shore is generally strong, but about Christmas tremendous. The principal inlets by which the island can be approached are Lemon Valley, James' Town, and Rupert's llay on the northwest side, and Sandy Bay on the south-east; all these, however, are strongly fortified. Even the small raviaes, where it might be possible to effect a landing, are also fortified.
'Ihroughout the whole length of the island there are only two plains, the largest that of Longwood, comprising 1,500 acres of fertile land, sloping to the sonth-west. The island is divided by a ridge of hills, rumning nearly east and west, but bending in a curved direction to the south, at each extremity, and from this chain innumerable valleys and ridges branch off, generally at right angles. The highest point of land in the island is Diama's Peak, which rises 2,700 feet ahove the level of the sea, and is situated towards the eastern extremity. From the summit of this pak the whole island lies nuder the view, no point intercepting the horizon: on the same ridge are Cuckold's Point, 2,672 feet, and Halley's Mount,

2,467 feet, which, from their extreme altitude, are often enveloped in clouds. The other remarkable eminences, the altitude of which have ween ascertained hy Major Rennell, are Flng Staff, 2,272 , and Barnsclifl, 2,215 , nearer the coast nud ove-hnuging the sea; Alarm llouse, 1,260 , in the cent.e of the island; High Knoll, 1,903, to the southward of ladder Hill, and the oflicial country residence of the Governor; Longwood louse, 1,762; most of the central eminences are covered with timber and shrubs, consisting of the cabbage tree, redwood, stringwood, dogwood, \&c., and formerly the green. wood was to be found in grent abundance, but, at present, fow of these trees are to be seen, except about 1,500 acres of an irregular forest at Longwood, preserved by order of the East India Company.

St. Helena is plentifully watered by clear and wholesome springs, abundant in every direction : those issuing from the sides of the hills frequently form picturesque cascades. Ronds have been tormed in a zir-zag direction, with incredible labour, whech now give easy access to the interior of the island. [Sce "Colonial Library."]
IV. St. Helena is probably of volcanic origin, perhaps like the Mauritios, the result of a submarine convulsion; or it is the lofty peak of some vast range of momntains, whose base is beneath the ocean. Limestone is plentiful in some situations, as well as iron ore, lut the scarcity of fuel prevents the latter being made available. There have been appearances ol gold nod copper, but not to the extent to encourage mining. There is a substance called terra puzzolana, found in considernble quantities, which, in conjunction with lime, makes an excellont cement, and is therefore used in forming apueducts, as it sets hard, and is retentive of water, though subject to become speedily foul by vegetable sulsstances adhering to its surface.
$\checkmark$ The climate of this island is not ill adapted to the Furopean constitution; indeed it has been found congenial to the crews of vessels that have been kept for a long space of time on salt provisions, and without vegetables. The thermometer seldom rises above 80. in James Town, and the heat is only excessive when it is reflected from the sides of the valley in calm weather; in the interior of the island the temperature is more even, never so cold as in England, and scarcely so hot. The average temperature throughout the whole year has been found to be at Longwood from 56. to 68., at James 'lown from 66. to 78., and at Plantation House from 61. to 73. Fahrenheit.

The healthy condition of the inhabitants was visible to me in their cheerfal manners, and active rural industry, the cultivation ol the soil being their principal occupation.

It will be seen by the talle in the next page, that in 1833 , out of a population of 5,000 or 6,000 inha. bitants, there were but 80 deaths, and of these nine were above 70 years of age. The proportion of bap. tisms to burials (sce next page) is also very remarkable; in some years the proportion of the former is to the latter as 3 to 1 . For the whole period it is more than 2 to 1 -thus demonstrating that a high degree of temperature merely is not unlavourable to human life.

State of the Thermometer (Fahrenhsit) at jeadwood, St. Helera, taken by 1hr. Short, physician to the forees, from 1st Septemher, 1820, to 31 st Angust, 1822.

Thunder and lightning are rare, and the rains, which fall most abundantly in February, are for the other months more regular than in other tropical situations. The higher peaks and their vicinity from their approximation to the clouds, are generally visited with a shower daily, and cloudy days are more frequent than scorching sunny ones. The atmosphere is, however, generally so clear that a vessel may be descried at a distance of sixty miles.
VI. The population is estimated at $5,000(4,977$ in B. B. for 1836 ), of whon about 2,200 are whites, and the remainder either people of colour, Chinese, or Africans, whom the East India Company's government have for severnl years liberally and gencrously ailed to purchase their freedom. The total number of paupers in the island is 28 , principally old and bind people. Those who are born in the island evince considerable quickness and talent. The baptisms and burials at St. Helena, from the 30th September, 1820, to the 30th September, 1833, ware as follows:-

Total baptisms, from 1821 to 1833, 2,123; burials, 1,076 .
The bill of mortality, ending December, 1833, was 80 ; of whom 16 died under 1 year; 5 under 5 years; 5 under 10 years; 4 from 10 to $20 ; 23$ from 20 to 40 ; 18 from 40 to 70 ; and 9 above 70 years of age.

The head and lower schools are consolidated vinder $\mid$ regiment of European troops, and a strong artillery, the superintendance of the head master. The sums under the head of voluntary contributions are defrayed by the St. Helena Bencvolent Socicty, the funds of which are raised by voluntary subscriptions.
VIII. During the East Indin Company's sway, the chief authority was vested in a governor, aided by a council, composed of the prinepja! and senior civic servants. It is now governed as a crown colony.

The military has hitherto been composed of one
$8 ; 6$ pounders tars 8; $\times$ inch 16; 18 ditto, 3 17; 4 ditto,2 68 pounders, ditto, 1.

IX. Hitherto the charge for St. Helena has been large, unless it be considered in the important view of an invaluahle naval station. The revenue derived from a few licenses and fines is small, but increasing in amount. The following is a statement of the Rereaue and Charges of St. Helena :-

In the [B. B.] for 1836, the cost is stated at $42,104 l$.

* The Company have slnce been repaid by Her Majesty's Government a part of these charges, eredit for the amomit having been allowed to them in their aceount with Government, settled by the Act 3rd Geo. IV. c. 93.
$\dagger$ Add to this sundry expenses paid in England, and at The Cape of Good Hope-1829-30, 11,3891 . ; 1sit10-31, 14,213l.; 1831-32, 10,9291.: 1832-33, 10,2684.; 1833-34, 10,1661.; 1831$35,11,2191$.; 1835-36, 13,304l.

Commissariat.-Fiom the 1st April 1836, to 31st March, 1837 ; supplies for rations of provisions and fornge, $7,784 l$.; tuel and light, $1,000 l$; miscellancous purchases, $39 l$. ; Transport, 193l.; pay of extra statr, 1,554l.; military allowance, $160 l$.; special service 2,287l; contingencies, 61l.; ordnance department, $4,682 t$. ; ordinaries, $6,897 l$. ; pay of conmissariat officers, $570 l$. ; advances to departments, $20 l$.; colonial government, $26,752 l$. ; total, $52,003 l$.

Ordnance-Engineer expenditure, 465l.; storekeeper expenditure, $351 l$. ; pay of barrack sergeants, 89l.; new works, $2 l$. ; buildings and repairs, $1,183 l$.; barrack master's expenditure, 459l.; total ordnance and barracks, 2,550l. Artillery department, 69l.; subsistence, 1,387l.; rations, $850 l$.; total artillery, 2,306l.; grand total, 4,856il.
Estimate of the sum that will be recpuired in the year ending 31st March 1839, to detray the charge of the civil establishment at St. Helena, and of pensions aad allowances to the civil and military officers and
soldiers of the East India Company's late establishments in that islancl.

Salaries of Civil Extablishment.-Governor 2,000l.; colonial secretary, $700 l$; chict and treasury clerk, $400 l$; assistunt clerk, 2006. ; surveyor of rents and lands, 300l.; oilice-kecper, secretary's otlice, 501. ; anditor of accounts, 3 firil.; harbour master, $200 l$.; collector of customs, 400l.; clerk and warehousekeeper, $100 l$.; seareher, $120 l$. ; chief justice, $700 l$.; queen's advocate, 2001. ; clerk of the peace, 200l.; provost marshal, $100 l$. ; gaoler, $35 l$. ; judge of summary court, 200l.; police magistrate, town, $100 l$. ; ditto, country, $100 l_{\text {; }}$; reporter of slave emancipation, $50 l$; civil chaplain, 500 l ; total $7,020 l$.

Miscellameous and Incidental.-Governor for messenger and repairs of residences, 227l.; harbour master and customs departments, for boats and boats' crews, $400 l$. ; judicial department, for constables and incidents, 400 l ; ecclesiastical department, $75 l$.; schools, $500 l_{\text {. }}$; incidental expenses of civil olfiees, 700 $l$; repairs of public buildings and property, $500 \ell$.; re. repairs of roads, $300 \ell$; hospitals and medical department, $450 l$; total, $3,552 l$; pay of the staff and other expenses for training the militia, 300 l .

Retired allowances to Officer's of Eist India Company's late establishments.-Civil $6,3761$. ; military, $7,027 l$.; total, 13,4036.; less, deductions from jen.sions of ofticers re-employed on the present establishment of the islaud, $9-45 l$. ; total, 12,458l.; Non-commissioned Officers and soldiers, 1,555l.; total, 14,013l.; total estimated expenditure, $24,885 l$.; deduct estimated amount of local revenue collections, 8,885l.; leaving, 16,000l.
X. Imports of the island of St. Helena, [B. B. 1836.] There is no export return. From Great Britain, 350 ships, 137,400 tons, value $12,470 l$. From United States, 121 ships, 36,531 tons, value 2,7831. From loreign states, 172 ships, 81,654 tons, value $5,804 /$, From elsewhere, 3 ships, 499 tons, 19,295l. Total, 646 ships, 256,084 tons, value $40,352 l$., men, 16,410 .

Number of vessels that received supplies at the island in 1833; British, 156 ships, 58 barques, 79 brigs, and 7 schooners, total 300 , tomnage, 131,974 , guns 1,666 , men 11,459 ; American vessels 93, tonnage 26,275 , guns 158, men 1801 ; French 51, tonnage 17,478 , guns 139 , men 1,191 ; Dutch 23 , tonnage $9,995^{\circ}$, guns 142 , men 589; Portuguese 3, tomage 883 , guns 14, men 71 ; Swedish 2, tonnage 608, guns 10 , men 40 ; German 2, tomage 541 , guns 8 , men 31 ; Danish 1 , tonnage 145, men 14 . Total, vessels 475 , tonnage $1 \times 7,899$, guns 2,134 , men $15,1!66$; and 162 vessels sighted the island. Of British vessels touching at St. Helena 7 were from Algoa Bay, 9 Katavia, 42 Bombay, 69 Calcutta, 30 Cape of Good Hope, 7 Ceylon, 23 China, 5 London, 17 Matras, ? Manilla, 51 Mauritius, 2 New South Wales, 1 Rio Janeiro, 14 Singapore, 2 Van Diemen's I.and, and 12 from whaling voyages; of the above 300 vessels, 189 were bound to London, and 51 to Liverpool, the re. mainder to different ports in the United Kingdom. If we value the property vested and embarked in 131,974 tons of British shipping at $30 l$. per ton, we shall bave nearly four millions annually ( $3,959,2,20 l$.) indebted for its better sccurity to our possession of St. Helena.

Vessels calling at St. Helena during 1837, 685, aggregating 269,591 tons, from Calcutta 134, Bombay 49, Madras 21, Ceylon 25, Chiua 65, Manilla 23, Singapore 15, Java 110, Sumatra 12, Mauritius 53, Bourbon 36, Cape of Good Hope 27, Whalers 89, London 7, the remainder from New South ilales,

Siam, \&e. 19. The value of the oil in the whale ships nearly $1,000,000 l$. sterling.

Most kinds of tropical or European fruits ripen, more particularly in the sheltered valleys. Vines, oranges, citrons, lemons, figs, pomegranates, mulberries, tamarinds, mangoes, cocoa-nuts, sugar cane, pine apples, \&c. thrive well : apples have succeeded tolerably, but the climate is not congenial to cherries, currants, or gooselerries. The common blackberry increased to such an extent after its introduction in 1780 , as to couse an order for its extirpation. Three successive crops of potatoes are often produced in the year, and garden vegetables, such as cabbages, beans, peas, \&c. are raised on every farm in great abundance. As the principal ohject of the settlement is to provide fresh meat and vegetables for the refreshment of the homeward bound ships, the cultivation of corn and pulse has not been encouraged, neither is the climate congenial to their production on acconnt of droughts. The provisions exported and brought to market in James Town, and solely grown on the islanc during the five years ending in 1833, were-

Potatoes, bags, exported 7,650, consumed 1,960; cabbages, ex. 7,470, c. 16,250 ; vegetables, bunches, ex. 33,800 , c. 42,030 ; pumpkins, ex. 3,800, c. .570; hay, ewts. ex. $380, c, 2,880$; fowls, $e x .27,700, c$. 20,240 ; ducks, er. 4,100, c. 4,000; bullocks, ex. 260, c. 560 ; calves, ex. 30, c. 460 ; sheep, ex. 220 , c. 1,230 ; pigs, ex. $870, c .390$; the total value of the exports of the above was $20,400 \%$, of the consumption, 24,5001.

Cattle produced from English stock are not numerous, owing to the great demand of passing ships; poultry is plentiful and well tasted; and in some parts of the island mbbits abound. The stock in the
island consists of horses 300, horned enttle 1,500, sheep and goats 3,000 .

Fish are numerous, and more than seventy different kinds have been caught on the const. Amongst the most prized are the coal fish, which is very deticate but searce : those cominonly tnken are jacks, congers, soldiers, mackarel, albicore, bulls' eyes, \&c.

The number of fish caught near the island during the live years ending in 1833 were as follow:mackarel, 115,300 ; bulls' eyes, 2,500 ; jacks, 35,$300 ;$ congers, 24,000 ; ohl wives, 72,000 ; soldiers, 8,400 ; sandspeer, 6,000 ; cavalliers, 6,000 ; deep. water buils' eyes, 3,520 ; yellow-tail, 350 ; coal fish, 30 ; cod-fish, 40 ; silver fish, 7,050; stumps, 4,600; long-legs, 35 ; bear fish, 35 ; turtle, 40 ; five fingers, 190 sword fish, 80 (weighing 10 to 80 lbs . each) ; barracontta, 50 ; albicore, 8,300 ( 10 to 80 lbs .).

Prices of stock and provisions at St. Helena, in 1834:-horned cattle, from England, 15l. to 20l.; from the Cape of Good Hope, $7 l .10 s$. to $10 l$.; sheep, Cape, 16.; goats, ditto 10s.; jigs, weighing loolhs. 14. 10s.; turkeys 10 s. ; geese, 7 s. ; fowls, 2s. ; horses, $20 l$. ; tlour per lb. $2 \frac{1}{2} d$. ; biscuits, 112 Ms . $1 /$. Vnglish; $16 s$. Cape ; oats, per muid, Cale, 12s. 6il.; barley, ditto, $11 \mathrm{s} .6 d.$. ; hops, pocket, 30 s. ; malt, per logshead, $4 \ell .10 \mathrm{~s}$. ; rice, bag of 165 ll s .12 s .; English salt, per lh. $1 / l$.; salt fish, jer ewt. $1 l$.; fresh beef, mutton, $\mathbb{N c} .6 d$. to $4 d$. per 1 lb. ; ditto, salt ditto, $3 d$. to $4 d$; sugar, $2 l$. to $3 l$. per lb .; colfee, $5 d$. to $8 d . ;$ tea, 1 s . 3d. to $2 s$. Gid. per 16 .; wine, Cape, 1 s . fid. to 2 s. per gallon; foreign wine, l2s. to 11 . per dozen; brandy and gin, $1 l$. per gallon; Engtish beer, $9 s$. per dozen; Island ditto, 2s. per gallon; servants' wages, 10 s. to $15 s$. per month with board, or 1 s . Gitl. per day without hoard; women, 10 s . to 20 s . per month, with food.

## ASCENSION.

Ascension is contiguous to St. Helena, in lat. 7.57. S., long. 14.28. W. It is a small island of volcanic production, the surface consisting of barren rocks relieved, however, in some places by the verdure on the declivity of the Green Mountain. The island has been of late years well fortified at every accessible part (the sea breaks on the island with tremendous violence) and garrisoned by a detachment of marines and marine artillery, who, nided by artificers, have ereeted a neat establishment for their location. A shaft has been sunk in one of the mountains, abundance of excellent water conveyed to the anchorage by iron pipes and hoses, and good soil was found two feet under the lava on which an abundance of esculent vegetables may be reared. The beach, at first thought to be composed of sand, was found to consist of very small fragments of shells; in some places firmly compacted together. These slabs were formed of several layers, of which the size of the fragment differs in each layer; they are used for tombstones, steps of doors, and are broken and burned for lime; red volcanic ashes prevail, several hills entirely exhibiting that appearance. Of the vegetable kingdom, the euphor-
bia only is found growing in small tufts, distributed not very abundantly about the rugged lava,-a beantiful olject among such barren scenes. Sen lowl are very $n u m e r o u s$, and there are three species of butterflies on the island, of handsome colours.

Ponds are kept stocked with turtle, weighing from 200 to 800 Jbs ench, which may be bought for 50 s. Abundance of fish and marine birds are obtainable. At a place called 'The l'air,' the birds named sea. swallows, as well as numerous other acquatic birds, congregate; the eggs of the sea-swallows, which are of a dirty white witls dark red spots, and about the size of a crow's egg, are collected at certain scasons of the year in thousands, and considered delicate and excellent eating.

Moorings are laid down in the roads, and vessels in want of water and vegetables can be supplied at a moderate price.

During war, these islands in the possession of an enemy, would, as outlying picquets, be a means of serions injury to our commerce; during peace they are refreshing stations, enabling our seamen to have at all times a friendly haven under their lee.

Section I.-N been misrepresen western coast of commercial, aud portant and essen Britain.

## CHAPTERIV.

Section I. - None of the colonies of England have been misrepresented more than those situate on the western const of Africa; few surpass them in moral, commercial, and political interest. They are an important and essential link in the maritime empire of Britain.
The trade between Western Africa and Europe commenced about the middle of the fiftecoth century, for we learn that in 1455, Prince Lenry of Portugal huilt a fort on the island of Arguin. At the beginning of the sixteenth century, the English, Spaniards, Freach, Danes, and Dutch had begun to send private ships to trade on this coast ; hut during the middle of this century the commerce of each nation was organized under the management of chartered companies, who formed establishments on different parts of the const, built forts at the mouths of several rivers, and prosecuted an active trade, the greater part of which was for slaves. The English settled chietly at Cape Coast Castle; the French at the mouth of the Senegal and at Goree Island ; the Dutch on the Gambin: the Portuguese at St. George del Mina; the Danes at Christianborg, \&c. Each of these strong fortresses, mounting from 50 to $\mathbf{b} 0$ pieces of cannon, had subordinate posts and stations, several of which continue to this day. At the present moment our settlements are situate at Bathurst, on the Gambia, at Sierra Leone, Cape Coast: Castle, and Accra, and a brjef description of the sea coast, followed by a succinct account of each settlement, will be therefore neces. sary.
II. In general the coast of Western Africa, extending for 4,000 miles along the Atlantic, with an average breadth of 300 miles, is along the occan boundary a flat country, backed by ranges of lofty mountains, which in some places approach the sea, and as at Cape Verd, project in bold headlands. The great coast chain runs parallel to the coast from west to east, where, atfording a passage for the disemboguing waters of the Nun, one of the mouths of the Niger, teads towarts the north-east to join or form the Gebel el Kumri, or Mountains of the Moon ; sonie of the peaks of this range (those of Cameranca, near Benin) are said to be 13,000 feet in elevation. It is only, however, about the estuaries of the great rivers and along their banks that the country can be said to be flat, in other places it consists of gentle undulations and rising eminences, giving e ensiderable beauty to the landscape, the most conspicuous feature of which are the numerous rivers that disembogue into the ocean, most of them arising in the chain of mountains above described, and running a tortuous course to the coast.
Among the principal rivers are the Senegal, Gamhia, Rio Grande, Rio Nunez, Kokelle, Cameranca, Mesurado, Nun or Niger, Congo and Coauzo. Be-
ginning with the most northerly, the Senegal appears to rise in the kong range of mountains (heights of Foota Jalloos), in nearly $10^{0}$ north latitude, and $10^{\circ}$ West longitude, where the Niger was thought to rise; the Senegal, about $15^{\circ}$ north latitude, is joined by several tributary streams, viz, the Woolery, Faleme, Neriko, \&e., and after passiug Galam and the falls of Felu, mukes a circuitous bend to the north-west along the horders of the clesert, and falls into the Athantic at Fort Louis, its course being 950 miles.

The Gambia has its source in the same mountain range as the Senegal, near the laleme, one of the tributarics of the latter named river, and rolls a powerful and rapid stream, at first to the north-west and then westerly, falling into the Atlantic, after a course of 700 miles, about 13.13 . N. Lat. The country between the rivers Senegal and Gambin, is called by the French the Sene Gambia. The Rio Grande is, as far as we know, a large stream, nor is any river equal to the Gambia net with until we arrive at the Bight or Gulf of Benin, where, for the space of above 200 milcs, there is a succession of large estuaries, now ascertained (throogh the persevering enterprize of the Landers) to be the mouths of the long-sought Niger, whose origin we are still ignorant of, and whose cours? and embouchures are still to a great extent unexplored; the delta of this mighty stream stretching into the interior of Western Africa for more than 170 miles, oceupies, it is supposed, a space of more than 300 miles along the coast, thus forming a surface of more than $25,000 \mathrm{square}$ miles, being a considerably larger area than is embraced in all Ireland. Cajtain Belcher, who surveyed the coast line here in $1 \times 30.32$, in the litna and Raver says that he thinks the whole of the space betwern the Nunez and Rio Grande is one great archipela $\ldots$." "od navigable, at high water, for vessels of four or fi: feet draught, and it is generally believed that canoes can navigate from Isles de Los to the Gambia, within the islands of this (sup)posed) huge archipelago. It is probable that a large river will yet be found here. The Compome, as far as explored, is a very extensive stream. Further S . the Congo or Zaire pours its ample volume of waters into the broad Atlantic, 400 miles having been navigated during Captain Tuckey's unfortunate expedition, leaving its further course and source still involved in mystery. Of the Coauzo, though a large river, we are not yet in possession of sufficient information to speak positively. With a knowledge of the foregoing leading physical features, we proceed to examine the coast more in detail as regards its social as well as geographical divisions, begianing on the north with the river Senegal, where the French established themselves upwards of a century since.

Fort St. Louis, the eapital, is situated on an island in the river, a mere sandbank, without any water
which can be drank withont being filtered, and dependent entircly for provisinis on the southern const, which, however, yidlds them in namblance, St. I,onis never became a large settlement ; Ciolbery, in 1786 , reckons not above fol Fimropeans settled there for the purposes of trade. The militury and civil servants of govermment amoment to foon, the matives to 2,400. The Premel lost st. Lamis during the revolutionary war, but we restored it to them on the fitiondy peace which succeeded in $1 \times 1 / 1$, under a trenty that l'ortendick was always to he open to us for the trade in gum; but whiel treaty the French violated. The disastrons fate, however, of the expedition sent out in the Melusa irigate bas been unfavourable to any attempt to restore and extend the prosperity of the eolony. It is said, however, to have experienced an inercase within the last few years, and to contain now ahout bo0 inlabitants. The original hopes of its greathess were foumed on the supposed identity of the Sencgal with the Nigor, and on the prospect of a communieation by it with the inmost regions of Africa. All the eflorts founded upon this erroneous theory proved of course abortive, and the commercial advantages of the colony (the procuring of slaves not ineluded) have been confined to the gom trade and the gold trade of Bambouk.
The kingdom of Bambouk, situate near the head of the river, and so enclosed between its main steam and the great branches of the Kokora and the Faleme, ns to form almost a complete island, is the next ob. ject of commercial importance to the French on the Seuegal. It is almost entirely a country of mountains, whence flow numerous streams, almost all of which roll over golden sands; but the main depositaries, where the metal is traced as it were to its souree, are two mountains, Natakon and Semayla. The former composes almost an entire mass of gold, united with earth, iron, or emery. The first four feet of depth consists of fat carth, from which the grains of gold are extracted hy agitation with water in a calabash; afterwards the precious metal begins to appear in small grains or spangles, and at 20 feet in small lumps of from two to ten grains. The pieces become always larger as the work descends; but as the natives have no means of propping up the sides, they often fall in and bury the workmen. Semayla, a mountain 200 feet high, presents a different structure. The gold is here embedded in hard sandstone, which must be reduced to powder before the extrication can be effected. Part of it also is found in red marble, a substance which to the native is perfectly unmanageable. Bambouk is said to have been early conquered by a Mahometan force, and afterwards by the Portuguese. Both have been driven out, and the French never made any serious attempt to establish thenselves in it.
The point at which the French attempted to carry on the commerce of the Upper Senegal is at Fort St. Joseph, in the kingdom of Galam or Kajaaga. A voyage thither was reckoned to produce cent. per cent.; but the unhealthiness of the climate, the ditiicultics of the navigation, and the constant hazard of being plundered by a succession of barbarous chiefs, who occupy the banks, rendered it a very precarious speculation. At present the fort is abandoned and in ruins; but the Serawoolies, who inhabit this fine country, are among the most industrious of the African tribes, and have engrossed the trade of Bambouk, Manding, and most of the upper countries on the Senegal and Niger.

In descending the Senegal, there are several popu-
bous nud powerful states, among which is that of Fiouta Torra, extending considerably both to the someth and north of the river, but of which the intertor has not been explored by Europeans. The kine is a zenlous Mahometan, and, muder pretext of making converts, has endeavoured to subdue the nlmost pagain banel or burh of the Jalofs. The latter, however, by the strensth of his country mad a prodent system of warfire, has been alde to batlle his nttempt. On the middle Senegal, the most important fursonuge is the sirutic, who holds his court at Ghiorel, considerahly to the north of the river. Nearer the sea is the kingdom of Huval, governed by a petty prinee culled the Grent Brak, which, in the language of the comntry, signified king of kings. [I give these and severn] other tletails on the authority of Murray's Enesy pre. dia of Geography, who, however, does not state his authority; it appears to be derived from Golhery My object is to stimulate to further investigation.]
The coast between the Gambia und Senegal is ehicily occupied by the kingdom of kayor. It is, stated, by Golberry, to extent 750 miles in length. and to contan 180,000 inhabitants, who are Jalul's, At the little island of Goree, on this coast, the French have estallished the capital of all their African settlements. Its advantages consist solely in its almost inaccessible situation on a roek, three sides of which are perpendicular, and the fourth very steep. The rock is fortified, but not, it is said, in the most skil. ful manner. The town contains 7,000 inhabitants, and presents a very bustling scene, being the entrepot of all the trade with the opposite coast, and also a place of refreshment for French ships on their way to India. It lies on the southern side of the penimsula, which terminates in Cape Verde, the most westerly point of the African continent. Though the soil be sandy, it bears a number of those immense trees called Baobab, which give to the cape that verdant aspect whence it derives its name. On the northerns side, two hills, 600 feet high, mark this striking geographical position, and serve as a guide to mariners.

The Gambia is almost entirely an English river, the attempts to form settlements upon it having, for nearly two centuries, been contined to our own na. tion. Our settlements on the Gambia will be found sulsequently detailed.

The Gambia is bordered on its north bank by several tlourishing little kingdoms. That immediately on the sea is Barra, said to contain 200,000 inhabitiants. The capital is Barra Inding; but the chief place of trade is Jillifrey. In the kingdom of Barra there are seven principal towns, with a family entitled to the crown in each, who succeed to the cap or throne alternately. Boor Salum is a still more extensive kingdom, situated on a small river that falls into the Gambia, and containing, it is said, 300,000 inhabitants. Above it occur successively the two smaller kingdoms of Yani and Wooli. The territory of all these states is flat and fertile, abounding in rice, grain, and other provisions. The inhabitants are chietly of the Mandingo race, and carry on a considerable trade into the interior. At Barraconda, about 400 miles up the river, are falls, or rather rapids, alove which sandbanks and flats soon render the navigation difficult.

To the south of the Gambia nothing of great im. portance occurs, till we come to the alluvial estuarics of the Rio Grande, a river supposed, as its name imports, to be of some magnitude; but Captain Owen found it a mere inlet, receiving some inconsiderable streams. At its mouth occur a num'. $r$ of islado

The inliabitants of the same name, called also Bijugas, are a tall, rohust, warlike prople, who have driven out the penceable race of $t$ a Biataras, the original tenants, and bave compelled them to contine themselves to the continent and the banks of the llio
 hited by the lopels, Ilso warlike and enterprising. In 1792, an assocition whs lormed in Engham, with a view to planting a settlenent in the island oi Bulama; but, though no opposition was made in the first instance, the difliculty of establishing a new colony unter circumstances 80 butiavourable, and especially amidst the hostility of these rude nelghbours, whiget ua to desist. The l'ortuguese have lately made a settlement upon this island, despite the re monstrances of Colonel Findlay, the late governor of the Gambia.
Along the heads of the Rio Grande lies the important kingelom of Foota Jallo, said to extend about 350 miles in length, and 300 in breadth. It appears to be the most improved of all the states in this part of Africa. The inhabitants are Foulahs, and of the Mahometan faith, hut not bigots, and their marnhouts are held in high reputation for learning. They manufacture cloths of cousiderable fineness; they work in iron dug from extensive mines in the country, also in silver, wood, and leather, and they combluct large caravans into the interior, as fir even as limbuctoo and Cassiua. Here, where they are the ruling people, they by no means display that pacific character which distinguishes the tribes on the Gambia and Senegal. They can bring into the fied 16,000 men. Timbo, or Teembo, the capital, is said to contain 7,000 souls, and Laby 5,000 .
To the south of Foota Jallo is Soolimana, also warlike and considerable. It borders on the Niger in the highest part of its course, though the sources of that river are placed i:l the hostile territory of the Kissi. The king is at present Mahometan, but the bulk of the nation pagan. They are a gay, thought less, stirring race. On the eastern side of the Niger is the country of Sangara, still more extensive and more warlike ; the people of which would, it is supposed, have by this time conquered Foota Jallo, had they bect united among themselves. At present, whenever the Soolimas are inclined to go to war, they can easily command 10,000 auxiliaries from beyond the Niger.
In returning to the coast, we pass through the Koorango country, inhalited by the Mandingoes, who, as usual, are gay, thonghtless, hospitable, and enterprising, Farther down are the Timmances, a more depraved race, who were the chief agents in the slave trade. They are described as treacherous and avaricious. Captain Laing met a woman who accused her two children of witcheraft, and on that ground offered to sell them to him at a low price. Their agriculture is peculiarly rude, and the cluths of their manufacture very coarse. They abuse the English as having deprived them of almost their only source of wealth, which consisted in the sale of slaves. This people are oppressed by a singular association called Purrah, who, united by a bond and always supporting each other, have become almost masters of the country, and often exercise their power in a very tyrannical manner.
The country of the Timmanees borders on that part of the coast where Britain, with the most philanthropic views, has founded the colony of Sierra

Leone. Its principal seat at frectown is on the south side of the bay, which recelven the river formerly callod by the same name, but now mere usualiy the Rokelle, and which risea in the Soolimann country; it will be fomed subsequently deseribed.

The space from Sierra Leone to the conmence. ment of the grain coast of Guinea, an extent of about 200 miles, is chielly marked by the entruse into the sea of the considerable rivers of Sberbro and Mesirado. The former is naviguble twenty leazues up, and has a tolerably large island at its mouth. On the banks is found a specios of pearl oyster. The Mesurndo is a still larger stream, nad very rapid. According to the natives, it requires three montlss' Havigation to reach its source, which would appear t" be in the mountains of koug, not very far from that of the Niger. The bunks are described as Bnely wooded, fertile, and, in many places, very well coltivated. The states here are cotircly negro in religion and manners, none of the Nabometan institutions having penetrated sof far. Travellers emmerate the kingtems of Bulm, (Qunja, Nonon and Folgn, which they sometimes even diguity with the title of empires. The sovercigns are, in general, nbsolute, and their obsequies are celebrated with homan sacrifices, though not to the same frightful extent as in some of the countries to the west.

The Americans, in 1820 , formed a settlement on this coast, which was called liberin; while its capital, on an island at the mouth of the Mesurado, was named Monrovia. The object was to obtain an asylum for liherated negroes, who, notwithstanding their emancipation, are, by the prejudices of the Americans, regariled as beings of an inferior order. In spite of disastrous events, which ohstructed its progress, it had attained in 1830, a population of 1500. The population of Monrovia amounted to about 700, the rest were distributed in eight different stations along 1.50 miles of coast from Cnue Mount to Tradetown. The territory is healthy and fertile; the colony was well conducted, and opened a frieudly intercourse with the natives, from which happy effects were confidently anticipated, but we have no recent accounts to determine how far it has succeeded.

From the Mesurado to Cape Palmas extends what is commonly called the Grain or Malaghetta Coast of Guinea. The two rivers of Sesters and Sangwin, near the centre of the const, are rather conside: able, and their hanks are said to be fertile and populous. A settlement, called St. George's, has recently been made at this river by Captain Spence. The state of society seems to be nearly the same as in the countries last described; the sovereigns absolute, human sacrifices prevalent to a certain extent, and also selfimmolation.

Grent sway is in the hands of a peculiar priest. hood, called the belli. The youthful candidate, for a place in this body, must quality himself by a long initiation, during which he is withdrawn from all his friends, and lolged in the deptlo of a sacred forest, where, it is said, be is kept in a state of entire nudity. Amongst the tests of his proficiency is the performance of songs and dances, of a very extravagant nnd often indecent nature; but peculiar knowledge is also supposed to be communieated on various high points; and those who have gone through the course with success, and are called the " marked of' the belli," look upon all the rest of the community as quolgu, or idiots. They not only administer all the concerns of religion, but conduct the judicial proceedings ; most of which are made dependent on
some form of orden. Athough the Portugnese have lost alf their settements in this finrt of Airica, considerable numbers of their prosterity reside there, mixed with the natives, by whom they are treated with some degree of respect.

Beyond Cape lalmas, tending to the north-east, and renching as fir as Cape Apolionia, is called the Ivory Conat. The name is evlilently derived from the quantities of that viluable product, obtalned from the numerous elephants on the sen shore, and in the interior. The tecth are of good quility, and uncom. monly large, weighing sometmes not less than 200 Jhs . Townels the enst, at Assinoe and Apollonin, a considerable guantity of gold is luought down from the conntries behind the (ould Const. There is also a good deal of ivory nt the ports of Cape Lahoo, and Gront and little Bassam. There are no liuropean settlements upon the coast, except an Euglish fort at Apollonin, which perhaps botongs rether to the Gold Coast. Navigation nlong this, as well as the Grain Const, requires much enution, as the shore is that and destitute of may conspicuous Jame marks, while it henvy surf, borne in from the whole breadth of the Atantic, breaks conthually agminst it. Early mavi. gators describe the matives ms the most violent and intractable race on the whole African const. The teeth filed to a point, the nails long, while their harsh and gutternl language, almost resembling the cry of wild beasts, inspired disgust ; they have been aceused of cambibalism; and their suspicion of Europenns is werally said to in ou great, that nothing can induee them to go on board n vessel. Cnptain Aclams, however, the most recent visitor, gives a much more favoursble account: he even says, that alinost all the businessistransacted on board liuropeanslijus, though, when he did go on shore, he was hospitably received.

From Apollonia to the Rio Volta extends what is called the Gold Coast of Airica. It was long the most frequented by European traders, particularly English and Duteh, both for that highly prized commodity which its mane indicates, and for slaves, while so netarious a commerce was permitted. The coast presents the appearance of an innmensely thick forest, only detached spots of which are cleared and cultivated. The soil near the sea, being light and sandy, is searcely fit for any important tropical prodact, except cotton; but six or seven miles inland it improves greatly, and might be made to produce sugar, and others of the richest West India products, if the profits of industry were secured to the inha bitants. Maize is the grain principally coltivated. The gold, which forms the stuple commodity, is chictly brought down from monntamons districts far in the interior. The natives understand the process of smelting the golden ore, bat the pure metal is found in such large quantities close to the surface ns to require the exercise of little ingemuity. In many places, however, even upon the coast, a small quartity may he extracted from the earth by mere agitation with water in a calabash. Little or no ivory is exported. The ruling people on the coast are the Fantees, a clever, stirring, tubbulent race. They exert more ingenuity in the construction of their dwellings, and canoes, than the nations to the west. The form of government is republican, and cach village has a large public hall roofed, but open at the sides, where an assembly is held, and poblic affairs are debated. The pynins, or elders, possess considerable anthority, and the administration of jostice is chictly in their hands.

The copital of the British settlements is at Cape

Coast Castle, subaequently described. To the went of Cape Const, we have Dix Cove mid suecondee, in the Ahanta conntry, a very fertibe tract, and th which parer gold is bronght than to may other purt of the coast. The imhabitunts nre nlso peacenible intil tractable, and the chances of improvement, ns Mr. Meredith concelves, are on the whole finvourable. The British station at Anmabue was formorly the great mart of the slave trade. The fort is compact bud reguhar: nud in 1807 it withastood, with a grar. rison of twolve men, the atask of 15,000 Ashanters, Winnebah, in the Agoonn country, theugh fu mi ngreenble situation, has been nboneloned; bot fort James, nt Acera, would, in penevable times, athord great convenience for trade, ns bo other place un the coast has sucla extensive intercourse with the interior. Cape Coast Castle and Accra are now the only placey where any garrison is mahtained.

The cupital of the Dutch settlements, fir this purt of Africa, is El Mina, or the Castle; Itrst foundeal hy the Portuguese, and taken from them in 16isi7. It is nbout nine miles west of Cape Coast Castle, in ma open country, close to a large dirty town of 11,001 inhabitants. The fort is well built, on a high situa. tion, and vessels of 100 tons can come close to the walls; but its strength has been doubted. The Dutch maintain here a garrison of 100 mcon , and keep their establishment, on the whole, apon a more reputable scale than the British. Iheir torts alony the coast are numerous, but none now are garisumbl except Filmina and $X$ xim. The Innes have a re. spectable fort near Acera, called Christianlorg Castle, and also cone at Ningo, nenr the castern extremity of the const.

The country behind the Gold Coast, when firit known to Europeans, whs divided among a number of considerable kingdoms, Dinkira, Akim, Warsnw, and Adnamboe; but all these lave now sunk heneuth the overwhelming sway of the Ashnutces. Whis warlike power has also reduced the interior countris of Gaman, Inta, Dagwamba, and others, of whilh some are more extensive and populous than itself, Ashantec Proper, is estimated to contain $1,1,000$ square miles, and nbout a million of people; but this last number would be more than quadrupled, if we were to include all its subjects and vassals. The character of the Ashantees is detailed under the bend of Population.

On the eastern side of the Rio Volta commences what Europeans have called the Slave Cuast, because slaves were there procured of the most docite and tractable character. It consisted originally of the two kingdoms of Whydah and Ardrah, forming the most jopulous and the best cultivated part of the African const. The vast and impenetrable forests which cover so much of the continent had bere been cut down, leaving only what was requisite for oranment and convenience. The whole country is said to have been like a garden, covered with fruits and grain of every description. Amid this abundance, the Whydahs, having become laxurious and ofteminate, were quable to make head against the warlike power of Dahomey, in the interior, which invaded and conquered them at the last century. The tirst ravages were dreadful, and rendered their comatry almost a desert, nor has its peaceful submission ever allowed it to regain its former prosperity.

Dahoney, which is thus predominart both over the coast and over the interior, to a depth of about 200 miles, is governed upon the same system as Ashantec, and with all its deformities, which it car-

ries to a still more violent excess. The bloody eus. toms take place on a stiil greater seale; and the bodies of the vietims, instemi of being laterred, are hung 1 unan the walls and allowed to putrefy. Human dulls make the fivourite ornament of the palaces and tomples, and the king is said to have his sleeping apartment paved with them. His wives are kept up to mil equal number with those of the king of Ashantec. All the femmle sex are considered as at the King's disposal, and an annual assemblage takes pace, when, haviog made a large selection for himself, he distributes the refuse among his grambees, who are bound to receive them with the humblest gratitude: in short, this ferocions race allow them. selves to be domineered over In a manmer of which there is no example among the most timill and polished nations. The greatest lorils in approaching the king throw themselves flat on the gronnd, laying their liends in the dust; and the belief is instilled into them, that their life belongs entirely to their sovereign, and that they ought never to hesitate n moment to sacritlee it in his service. The king of Dahomey has been lately worsted in his wars with f.yeo, by whom he is now held in a species of vassalage. His country consists of an extensive and fertile plain, rising from the sea by a gradual nscent. The soil is a redelish clay mixed with sand, and norwhere contains a stone of the size of a wninut. Though capable of every species of tropienl culture, little is actually produced from it that is fitted for a foreign market; so that since the abolition of the slave trade, small advantage has neerued from continuing the intercourse with it, and the English fort at Whydah has been abandoned.
Whydah, now commonly called Griwhee, may be considered the port of Dnhomey, from which a route If about 100 miles reaches through Favies nad Toro to Abomey, the capital. Griwhee is situated in a fertile comstry, still highly cultivated, and is plentifully supplied with all the necessaries and conveniences of African life. Captain Adams, whose estinates on this point are unusually low, represents it as containing about 7,000 inhabitants. The despotic and capricious manner, however, in which foreign residents are trated by the tyrant of Dahomey, has gradually induced the different European powers to withdraw their factories. Ardrah is still larger and more tlourishing, containing, according to the same authority, 10,000 inhabitants. It is situnted about 25 miles inland, on a long and beautiful lake or lagoon, running parallel to the sea, with which it becomes connected at its castern extremity by the river of Lagos. The Ardranese are industrious in the manufacture of cotton, interwoven with silk: they make also soap, baskets, and carthenware, and are skilful in working iron. Their market is the best regulated of any on the coast, and exhibits the manufactures of India and Europe, tobacco from Brazil, cloth from Eyeo and Houssa, and every other artiele that is here in demand. Though so close to Dahomey, the people appear to enjoy a republican form of government. A considerable number of Nahometan residents have made their way hither, and have introduced the management of horses, and the use of milk, to both of which the negroes in general are strangers. Badagry, though it has suffered by recent contests with Lagos, appears by Lander's report to be still a large and populous place, situated in a fine plain, and divided into four districts, each governed by a chicf, who assumes the title of king. Lagos is built upon a small island, or rather the bauk at the point where the channel com-
munieates with the sen on one shle, and on the other with the Cradeo lake, a parallel piece oll water. The town is acaredy a foot above the lake, and is over-rma by water-rata from it. It has 8,000 hinabitants, with a good deal of stir athd tride. Its petty despot inssumes all the airs of the grentest African monarehs, wever allowing his courtiers to approach him unless cruwling on the ground, Nome barbarons customs prevnil, such as impaling alive a young female, to propitlate the goddess who presides over rnin, and hanging the heads of malefictors to some large trees at the end of the town. The currency here consists of cowries, which are imported in large guantities, and transinitted into Houssa nad other interior countries, where they form the universal circulating medium.

At the termination of the Craloo lake commences a large tract of coast, of a peculiar character, which, from the prineipal atate, recelves the nume of Benin. It extends upwards of 200 miles, and presents a suc. cession of brond estuaries, now discovered to be all branches of the Niger, of which this country forms the delta. They communicate with each other by creeks, notl, frequently overtlowing their banks, render the shore for 30 or 30 miles inland, a vast nlluvial wooded mornss. The mutives, having thus very extended water communications, are the most nctive traders nnywhere in Africn; but, exeept slaves, the commodities in which they deal are entirely changed. Gold has disappented; ivory is again found in considerable plenty; but palm oil is the great staple of the eastern districts. A great quantity of salt is made at the mouths of the rivers, both for consumption at home and in the interior.

The tirst leading feature is the river Formosn, two miles wide at its mouth; on a creek tributary to it lies the capitnl of Benin. This city appeared to Captnin Adams the largest he had seen on the coast of Africa; he, therefore, probably under-rates its population at 16,000 ; being irregularly built, and consisting of detached houses, it occupies an immense space of ground. The surrounding territory is well cultivated, though not so thoroughly cleared of wood as that round Ardrah and Whydah. The king is not only absolute; but "futiche", or a god, in the eyes of his subjects; and all offences agninst hitn are punished in the most eruel and summary manner, not only as treason, but impiety. Gatto, about 50 miles below, is the port of Benin; accessible to vessels of 60 tons. The trade on this river has greatly declined.

Warré, or Owarri, is another state and city, situated on another creek, communicating with the Formosa, on its opposite side. It consists of a somewhat elevated and beautiful island, appearing as if dropped from the clouds amidst the vast woods and swamps by which it is surrounded. Here, too, the king is absolute, and carries polygamy to a very great extent. A recent traveller, happening to get a peep into the seraglio, saw about 50 queens, busied in various employments, from the toilette to the washing-tub. New Town, on the Formosn, is the port of Warre.

After doubling Cape Formosa, and passing several estuaries, we come to that of the Brass lRiver, called by the Portuguese, the River of Nun. Though not the largest estuary of the Niger, yet, lueing most directly in the line of the main stream, and that by which Lander entered the Atlantic, it at present enjoys the reputation of being the principal channel. lt is divided into two branches; but the navigation is greatly impeded, and the trade limited, by a dangerous bar at its mouth. Brass Town is built not on either branch, but on one of the numerous creeks
connected with both, and in a country overgrown with impenetrable thickets of mangrove. It is a poor place, divided by n lagoon into two parts, rach of which contains nbout 1,000 inhabitnots. Bonny River forms the next important estunry, having on its opposite sides the towns of Bonny and New Calabar. Being only a few miles up, they are in the midst of the mornsses which overspread all this country. The people support themselves by the manutacture of salt, and they trade in slaves, and polm oil. Bonny, in particular, is become the great mart for these lnst commodities, nad is supposed to export annually about 20,000 slaves ! The dealers go in large canoes two or three days's sail to Eboe, the great interior market. 'The king is absolute, and more barbarons than the rest of his bretaren on this const. ITe boasts of having twice destroyed New Calahar, and ornaments his fetiche house with the skulls of enemies taken in liattle.

To the eastward of Bonny is the estuary of Old Calnbar River, the broadest of all, and navigable for large vessels $\mathrm{f}_{0} 0$ miles up to Ephraim Town, governed by a chicf, who assumes the title of duke. It appears to contain about 6,000 inhabitants, carrying on a considerable trade; and the duke has a large house filled with European manufactures and ormaments of every kind, received by him in presents. This river is iollowed by that of Rio del Rey, and then by the Rio Cameroons. The country yields a good deal of ivory and palm oil. The continuity of $t^{1}$ iat vast wooded flat, which has extended along the coast for more than 200 miles, is now broken by some very lofty mountains, the principal of which is supposed to reach the height of 13,0100 fect.

Several islands lie in the Bight of Biafra. Fernando Po, in 3.28. N. Lat., and 8.40. 15. E. Long., is a fine large island, lately occupied only by a lawless race, composed of slaves, or malefactors, escaped from the neighbouring coast. The British Government, formed, in 1827, a settlement at this island, the mountainous and picturesque aspect of which afforded hopes of a healthy station; the settlement is, I believe, abandoned by government, but I think prematurely, for as the island became cleared, its insalubrity would have diminished; and it would be an extremely valuable colony to Great Britain, from its vieinity to the mouths of the Niger. Prince's Island, situate also in the Bight of Benin, $9 \frac{1}{2}$ miles long by 6 broad, is high (the loftiesi peak, 4,000 feet), and wooded. St. Thomas is large and fertile; towards its south extremity it presents a mass of stecp elevations, with abrupt craggy faces, and two or three pinnacles, resembling gigantic nine-pins; one half the island is mountainous. The pretty little Isle of Annabona is inhabited by a simple native race, to the number of 3,000 ; it is near 3,000 feet high, but its length does not exceed four, nor its breadth two miles; its heights are rounded like those of Fernando Po, rather than peaked and pointed like Prince's Island. These islands run in a chain to the south west from the Rio Cala. bar; and the last three are in nominal subjection to the Crown of Portugal.

The next division of Western Africa consists of Congo and Loango, the coast of which is generally named Angola. The principal feature is the Zaire, or Congo, a powerful and rapid river, which rushes by a single channel into the Atlantic. Its course was traced upwards by Captain Tuckey, in his unlortunate expedition, about 400 miles, yet nothing was ascertained as to its origin and early course; though the hypothesis of its forming the termination of the

Njger is now completely refuted. The population along the river is said to he smail; the largest villages, Cooloo, Embommn, and Insa, containing only from 300 to 600 inhabitants. The interior capital of Congowar, however, mentioned as the residence of the Blindy North Conge, to whom all the chicfs pay a species of vassalage, is probaloly what the lortugnese called St. Salvador; nod where, according to Mr. Bowdich, they still unantain a mission ; hat no recent details have been obtained respecting it. There is regular distinction of ranks, the Chenoo, or chief, hereditary in the female line; the Mafonts, or col lectors of the revenue; the Foomoos, or cultivators; and the domestic slaves, which latter are not numerous.

The slave trade, for which alone this part of Africa is now freciuented, is chiefly carried on nt Maiemba and Cabenda, on the north side of the river. Malemba has been called the Montpelier of r.frica. It stands on a hill about 100 fcet high, commanding a beautiful prospect of the windings of the Loango Louisa, through no extensive plain. Its dry and elevated situntion preserves it from those deadly inflomes which opernte so fatally on the health of mariners. Cnbenda, near the mouth of the river of that name, also n beantiful city, is situated at the foot of a conical wooded mountain, and has been called the Paradise of the Const. It is a great mar: for slaves, who are brought from the opposite territory of Sogno.

The country to the south of Congo is ealled Ben. gueln, and its commerce is still almost entirely in the hands of the Portuguese. They frequent the bay and river of Ambriz, in which there is a tolerable roadstead; but their great settlement is at St. Panl de Loanda, a large town in an elevated situation. It is said to export annually 18,000 or 20,000 slaves, chicfly to Brazil. (It is a disgrace to England to permit the continuance of this infanours traffic.) S . Felije de Benguela, in a marshy and unhealthy site, is now considernhly declined; and its population dees not exceed 3,000 , mostly free negroes and slaves. There is also a smaller port, called Novo Redondo. The Portuguese claim a certain jurisdiction over the native states for several hundred miles in the interior, obtaining fresents and purchasing slaves. Further inland is the country of Jaga Cassanga. The Jagas are celebrated by the writers of travels, two centuries ago, as a formidible devastating tribe, addicted to the most ferocious habits ; and no change is since asserted to have taken place in their character. Behind them, and in about the centre of the continent, the nation of the Molouas, are represented as more numerous, more intelligent, and possessing a higher degree of industry and civilization than any other in Atriea, under this latitude. Of the remainder of the const, towards our own territories, in Southern Alrica, little is known.

Portugal at irst claimed the whole of the coast just deseribed, but was driven from it by the Dutch, who took El Mina in 1643 ; the lntter were in turn com. pelled to retreat by the Englisis, in 1661, who took Cape Coast Castle, and having formed in African Company, commenced the establishment of furts for the protection of trade.

The settlements at present belonging to England in Western Alrica are at Sierrn Leone, the river Gambia, Cape Coast Castle, Aecra, and Annamabae.

Sierra Leone. - The first settlers here were the Portuguese; shortly afterwards, the English esta. blished themselves upon Bance island, in the middle of the river. At the suggestion of Dr. Smeathmane,
the negroes dis the American 60 whites, were with all things year 1787 ; and having bcen pul a town, called 1 mortality shortl one-half, and a weakness, plun drove the colo 1sland. the negroes discharged from the army and navy atter the American war, to the amount of about 400 , with 60 whites, were conveyed to Sierra Leone, furnished with all things necessary to establish a colony, in the year 1787; and a piece of ground 20 miles square having been purchased from one of the native chiefs, a town, called Freetown, was founded. A dreadful mortality shortly afterwards reduced the colonists to one-half, and a native chief, taking rulvantage of their weakness, plundered the settlement in 1789, and drove the colunists to seek for shelter in Bance island. In 1791 and the following year, the African Association having become incorporated and ohtained a charter, conveyed thither a number of settlers, among whoin were the Maroon negroes, who had been sent from Jamaica to Nova Scotia. Freetown was plundered by the French in 1794, and so great was the disaster, and so destitute the condition of the setters, that the company entered into an arrange. ment with the government to place the colony under their jurisdiction.
A charter was granted in 1802 to the Sierra Leone Company; it was subsequently revised and (with sone alterations) confirmed, first, in 1808, when the settlement was transferred to the Crown, and, finally, in 1821, when the forts and possesstons of the late African Company on the Guld Coast were annexed to Sierra Leune.
The boundaries of the settlement are difficult to defiae; in 1787 a tract of the peninsula of Sierra Leone was ceded to England by the native chiefs, cxteading 15 miles from north to south by four from east to west :-the western boundary subsequently advanced to the sea as far as the point of land called False Cape. In the charters granted to the Sierra Leone Company in 1800, 1809, and 1821, the colony is described as the peninsula of Sierra Leone, bounded on the north by the river of that name; on the south hy the Camaranca River; on the east by the River Bunce; and on the west by the sea. The peninsula, as at present known, is bounded on the north by the Sierra Leone river ; on the south and west by the sea at Calmont Creek, and on the east by a line up the Calmnnt to the Watslod Creek, and down this last to the Bunce (which is in fnct part of the Sierra Leone River) constituting a tract 18 miles from north to south, and 12 from east to west. By a convention in 1819 hetween Sir C. M'Carthy and a Timmanec Chief, named Ka Konka, possessing country on the boundary of the peninsula, that chief ceded to Great Britain the unlimited sovereignty of the lands, known by the name of Mar l'orts, and Roe Boness, situate on the banks of the Bunce River. In 1824, Ba Mauro, King of the North Balloms, ceded to Great Britain the islauds of Bance, Tasso, Tombo, and all the other islands on the nurth side of Sierra Leone, between Zogrine Point, and Ka Keeper Creek : as well as the ncrth banks of the river for one mile inland from the river Corray Bay on the west, to the Ka Keejer Creek on the east; with a right and title to the navigation of the River Sierra Leone, \&c. On the north the boundaries touch the River Memgo or Little learciss, in 8.50 . north; on the south as far as the line which separates the King of Sherboro's territory from that of the Gallinos, in lat. $70^{0}$ north embracing the estuary of the Sherboro and its tributaries; on the west the Atlantic, as far north as Sierra Leone River; and on the east an imaginary line, imperfectly defined.
Our possessions at Sierra Leone (so cailed from the district having been the favourite resort of lions)
extend over a mountainons tract of country, formed by two rivers, which nearly intersect it. The general appearance of this Sierra presents an outline of an irregulnr congeries of conical mountains, with vallies and prairies in their interstices; the mountains are covered to their summits with lofty forests, giving to the distant scenery a beautiful, rieh, and romantic appearance; the territory on the north side of the river is however low and that. Many streans of water descend from the hills, and are concentruted in a large basin, called the Bay of Franca, which is considered the best watering place along the whole line of coast.

The river called Sierra Leone is more properly speaking an estuary, about 20 miles in length, and varying in breadth from 10 at its entrance, between Leopard's Island and Cape Sierra Leone, to about four miles at the island of Tombo, where it terminates; it has severnl arms, which extend themselves in different directions ; the Rokell River is, however, the only one which offers the advantage of water cominunication from any considerable distance into the interior ; its source being stated to be within 30 miles of Fallaba, and 200 from Sierra Leone; falls ur rapids intercept its course at Rocon, 50 or 60 miles from Frectown. The Kates River, 25 miles from Frectown, is navigable for buats upwards of 70 miles.

Freetown, the capital, is built upon the south side of the Sierra Leone River, and at the north extremity of the peninsula. It is five miles from Cape Sierra Leone, which is considered to mark on the suuth as Leopard Island, seven miles distant, does on the north the entrance of the river, to which the access is easy and safe. Immediately in front of the town, the river forms a bay, where there is good and commodiuus anchorage for vessels of all classes, and timber ships of 400 or 500 tons burden go with facility nearly 20 miles higher up the stream tor the purpose of taking in their cargoes.

The settlement has the advantage of a modern plan for its formation; it occuplies a large space of ground, extending in a very gentle ascent from the banks of the river, and is about three quarters of a mile long, with spacious strects, intersecting each other at right angles. Most of the houses were at tirst built of mud or wood, not however withuut taste, but many of the natives are now constructing storehouses.

The town is open to the river on the north, but on the south-east and west completely hemmed in by a semicircular range of mountains, from 12 to 1,500 feet high, and wooded to the summit. The distance between the town and the base of these mountains varies from three quarters to a mile and a half, the intervening space broken by mumerous undulations, the outline exhibiting the appearance of a sylvan theatre, replete with highly picturesque scenery. With the exception of the eultivated spots, the hills are thickly clothed to their summit with wood, and ascend almost in regular gradation towards Leicester Mountain, above which the Sugar-loaf is seen to rise at some distance in the rear. The amphitheatre includes, from east to west, a space, the semi-diameter of which is nearly a mile, embracing the town, the Tower Hill, and a small portion of land, called ' King Tom's Point.' The Tower Hill is nearly in the centre of this amphitheatre, and Freetown stretches from the water-side towards its base; about half way up its sides are situate the fort, the barracks, hospitul, and a Martello tower, the whole when viewed from the sea forming a striking coup d'ail.

Mr. Rankin says, the shore is broken into a series of little hays, with moderate hills gently rising above, and waving with palm-trees; in front is the wide Sierra Leone, glittering in constant sunshine, and bordered by the low woods of the Bullom shore. The inland country, to the west, is intersected by the waters of the Port Logo, Rokel, and Bunce rivers, varied with many a green island, and bearing many a little canoe, formed of the trunk of a tree, and paddled by sturdy savages. The aspect of the country immediately behind Freetown is hold and imposing; it is a succession of evergreen mountains soaring one above another.

No site for a town more lovely could have been selected, had charms to the eye been the sole guide; it is not possible that gloomy forebodings should thrust themselves forward when a stranger arrives, and for the first time looks upon the glowing bosom of the estuary, scarcely rippled by the light airs and gentle tides of these latitudes; the quiet Bullom shore, green to the water's edge; the hold sweep of that amplitheatre of undulating mountains which appear to be embracing the capital for its protection, gaping with enormous ravines and dark valleys, and clothed with never.fading forests. The town itself is picturesque. It rises from the water's edge, and gradually creeps up the sides of the surrounding hills, with its white dwellings and prolific gardens; whilst in the distance, emerging from high woods, appear the country mansions of white gentlemen, with patches of ground devoted to the produce of coffee and fruits. The style in which the houses are generally built throws an oriental character over the view; they are as often of wood as of stone, and are washed white or yellow; piazzas, with pillars at due intervals, support the verandahs, and secure a shady walk in the open air even during mid-day; the verandabs exhibit rows of jalousies, a kind of venetian blind painted green; and the roofs, principally formed of layers of thin dry wood, called shingles, project to a great distance, with white eaves. The greater number of dwellings stand in a court-yard or in a garden; causing the extent of space covered by buildings to be much greater than in a European town of equal population, and giving it, from the foliage of luxniant trees, a healthy and fresh appearance. It is flanked on either side by a brook of clear water, which never fails in the most intense weather of the dry senson. The channel of these streams may be easily traced by the abundant vegetation. The prolific bounty of nature, which makes the spot so beautiful and so exciting, and almost invests the busy streets with the charms of the country, is, however, one of the causes of that evil name which pestilence has fixed upon Sierra Leone. The public ways are no sooner watered by the first showers of the wet season, than they appear to be converted into fields; the most frequented thoroughfares become nearly impassable from the dense herbage that rises beneath the feet, particularly the indigo, which is constantly cut down to allow the common movements of the inabitants.
Of the amazing circuit occupied by the buildings of the capital, a very limited portion is inhabited by Europeans,-that which immediately borders the sea. They are not arranged together, but often at long intervals; the intervening space being filled with clusters of the lowest huts or sheds of the lowest blacks. No taste, however, has developed itself so strongly as that which urges the savage to toil, in order to be enabled to build a house like that of the white man; and, where ample renuneration for
labour is joined to a frugality approaching abstemiousncss, the taste is often gratified.
The number of white residents throughout the peninsula of Sierra Leone bears no proportion to that of the blacks. It fluctuates but little: the majority heing stated officers or clerks in the different colonial departments. In 1833, 84 only, including the ladies of such as had married white women, were to be reckoned in the entire colony. Of these 73 dwelt in Freetown, with, however, between ten and eleven thousand hlacks, out of the thirty thousand under British authority in the settlement.

The free blacks, who, at the close of the American war, were transferred by the British Government to Nova Scotia, and thence to Sierra Leone, occupy, on the western side of the capital, the quarter called Settler-town. Next to this, on the east, is Foulahtown, the abode of the Mohammedan trikes, the Foulahs and Mandingos. Then we have Maroontown, Zaloff-town, and Soldier-town; besides the cluster of wicker huts called Kroo-town ; and on the heights above all the rest, the village of the Congoese or Congo-town. But the miscellancous collections of slaves of all tribes, imported here in the captured slavers, defy a minute classification. Some 20 or 30 languages are in use among the inhabitants of Freetown, where a zealous and intelligent inquirer would never want a favourable opportunity of aequiring fresh information respecting the geography and civilization of the interior of Africa.

Throughout the peninsula several villnges have been formed at the following periods: in 1809, Ieicester; 1812, Regent; 1816, Gloucester; 1817, Kissey and Leopold; 1818, Charlotte, Wilberforce, and Bothwell; 1819, Kent, York, Wellington, Waterloo. These villages are generally situate in different parts of the mountain, but all connected by good roads with each other, and witl Freetown, the capital.
The Bannana Islands, two in number, south-west of Freetown, may be termed one island, six miles in length and one in breadth, and were ceded to the crown in 1819 by the family of the Caulkers, who receive for then an annual payment.

The Isle de Los, in north latitude 9. 16., west longitude 16., five in number, are situate about 60 miles to the northward of Sierre Leone, and five or sis miles from the coast, and were ceded to Great Britain by the chief, Dalla Mahomeda, to whom an annual payment is made for them. Factory 1sland, the second in extent, is four and a half long, by half a mile broad; they are however very valuable for the trade which is from them carried on with the rivers of the adjacent continent, consisting in the exchange of British goods for hides, ivory, gold dust, s.e. There is also a considerable commerce in rice on this part of this coast, some of which is exported by the traders at Sierra Leone to the West Indies, but the quality is much injured by the imperfect process in use amongst the natives for cleaning it. British factories have recently been established in several of the rivers between the Gambia and Sierra Leene, particularly at the Rio Punez, Scarces, \&e.
Observations on the Public Works at Sicrra Leone. [B. B. 1836.] Old and New Market.-The old market being situated in the centre of Water-street, caused considerable inconvenience to the public, from its obstructing a large portion of the thoroughfare, and the unavoidable accumulation of filth rendered it also a nuisance to the immediate neighbourhood; a more convenient site has in consequence been purclased (in 183.) near the water side, upon which it is in-

tended to erect the necessary stalls, \&c., the expense of which, including the inclosing with stone walls and iron railing in front, is estimated at $400 l$. The large brick one-storied building, under which a part of the present markets are kept, it is proposed should be converted into a court hall and commercial and other public rooms, and the lower or basement story, into stalls for hawkers, which will yield a considerable revenuse to the funds of the colony.
Congo Bridge and Rood.-This undertaking was commenced in December, 1836, and is an improvement highly desirable, as affording an easy communication with the western districts, which is one of the most populous of the colony, and from whence the largest supplics are daily brought to the markets of Free Town.

Street Drains.-This necessary work is still in progress, and will, when completed, effectually carry off the waters which fall at the bnck of the town, during the rainy season, and would, if left, stagnate to the great injury of the health of the inhabitants.

Freetorn Grol.-Sceral necessary repairs and improvements to the premises have been executed during the year, viz.: a new and more commodious kitchen has been erected at the lower part of the yard, the old and decayed one being contiguous to the side wall of the yard, afforded great facility to the prisoners in escaping over the roof. A separate airing yard for females has been divided off, with stone walls and iron railings for the ndmission of air. The ex. penses of which amount to $73 l .7 \mathrm{~s} .11 \mathrm{~d}$.
III. On the head of Geology, of course, nothing more than isolnted facts can yet be expected. The soil in the vicinity of Sicrra Leone, consists chiefly of a slight stratum of brown gravel on a semivitrified rock of the same colour, containing a large portion of the oxide of iron. This is what is called the brown iron stone; the red iron stone is also found in extensive strata, but the brown appears to be the more prevailing one. Loth these varieties of hrmatites are cellular throughout their entire substance, strongly indicating volcanic origin; they are intersected with yellow streaks, and kidncy-shaped segments. Magnetic iron ore is found in the mountains in small detached masses. Some of the mountains are chiefly composed of granite, large blocks of which are frequently seen studding the surface of the plains. No limestone has hitherto been discovered in the colony, but fortunately there is a large abundance of fossil shells. Gold is abundant, as will be subsequently shewn by the quantities exported to England during the last three years.
There is very little difference in the soil of the coast from Cape Palmas to the River Volta; within five or six miles of the shore it is of a siliccous nature; the clumps of hills which are to be met with in every direction are composed principally of gneis and granite: mica slate is found to enter into the composition of some at no great distance from Cape Coast Castle. These rocks, from containing large proportions of fetspar and mica, nre rapidly passing into decomposition, more especially such as are exposed to the inthence of air and water ; the result of the decomposition is the formation of a clayey or an argillaccous soil.
As the sandy sca-coast is receded from, the soil is siliceous, mixed with decayed vegetable or animal matter, where no granite or micaceous rocks intervene; it is in the valleys where the rich alluvial soil is met with, formed of the disintegrated materials of the surrounding hills (wnshed down by the heary torrents of rain) and deposited along with the vorge.
table decomposition, giving richness to the clayey mould. It is in such valteys, from ten to twelve miles inland, that the nntives delight to make extensive plantations.
IV. According to the distnnce north or south of the equator, and to the elevation of the country, the temperature and seasons of course vary; on the north of the Equinoctial line May, Junc, July, August, September, and October, may be considered the wet winter months; and the remainder of the year the dry or suminer months; harmattans and tornadoes are peculiar to the latter, and fogs to the former. The rains commence with the end of May or berinof June, and terminate in August. October, November, and December are cold, with occasional fogs. The winds along the Gold Coast may be divided into the land and sea breezes, the former from the north north-west genernlly, and the lntter from the southwest, west-south-west gencrally; during the rains the land breezes are irregular. The land breeze gencrally continues from 9 A.m. to 7 р.м.

The range of the thermometer is not great ; during 1819 it did not rise higher than $95^{\circ}$-the minimum being $76^{0}$, making a range of only $9^{0}$. In 1820 maximum $84^{\circ}$, minimum $74^{\prime \prime}$, range $10^{\circ}$. In 1821 maximum $86^{\circ}$, minimum $66^{\circ}$, range $20^{\circ}$. In 1822 maximum $89^{\circ}$, minimum $74^{\circ}$, range $15^{\circ}$-and so on ever since, with this exception, that there is a visible change in the duration of the respective seasons; thus, as Dr. Tedlie in his valuable Report to the Army Medical Board observes, solar heat alone is not a cause of disease.

The range of the thermometer at Sierra Leone is very slight, and the average heat throughout the year is eighty-two. The rains continue for six months, and the torrents which pour down from the mountains deluge the plains beneath. The mountains in the vicinity of Freetown are now, however, generally cleared and cultivated, and the settlement is as hoalthy for Europcan residents as any other tropical climate.

Indeed of late years the salubrity of different parts of Africa has materially increased: and many Europeans residing on the shores of Western Africa enjoy better health than they have experienced in England.

All tropical countries with an exuherant vegetation, necessarily yield a large portion ot deleterious miasma from decomposing matter: but the formation of drains, the clearing of jungle, and the cultivation of the soil, invariably produce a healthy place of residence. If Africa were fully peopled, cleared, and tilled, it would be one of the tinest countries in the world in point of beautilul scenery, abundant produce, and inexhaustible resources. Soldiers and sailors are imperfect criterions of the healthiness of any station, but as there are no other returns available, their statistics have been given in this chapter, as well as elsewhere.
lt were very desirable that accurate returns were transmitted lrom all our colonies, of the deaths of Europeans, specifying whether male or female, the age, number of years residence in the colony, and occupation, A valuable scrics of vital statistics would thus be obtained.

Metcorological Table, kept at the Military Hospital, Freetown.

In the Annual Medical Report from the West African stations for 1832, transmitted to the Army Medical department, I find these remarks :

- Sierra Leone.-This station has continued during this year as during the two preceding years, to maintain its character for salubrity, the total number of casualties in the sick returns is eight; the strength being 446, and the total number of sick treated 230 , of which last number (as in the preceding year) more than one-fifth were cases of sexual disease.'

Not only are febrile and other climatorial diseases less prevalent than formerly, but their type is of far greater mildness, and during the years 1831-32, and 1833, when most parts of the globe were suffering from cholera and other pestilential diseases, the British settlements in West Africa were in the enjoynient of perfect bealth.

The Deputy Inspector of Hospitals at West Africa, states in his otficial report, in reference to the causes of disease in Europeans - " Breakfast is taken at riaing-at eleven a.m. they sit down to 'relish,' consisting of soups, meats, and the highest seasoned dishes; wine is drank as at dinner, and afterwards sangaree, or brandy and water, which too frequently they continue sipping and drinking till late in the afternoon, sometimes to the dinner hour." ( 6 P.M) "In all the countries," says Dr. Nicoll, "which I have visited, I never saw so much eating and drinking."

The wet scason, as in some parts of India, is usually ushered in by tremendous tornadues, or violent gusts of wind, which come from the eastward, attended by thunder, lightning, and in general, heavy rains. The violence of the wind seldom continues longer than half an hour; but the scene during the time it continues may be considered as one of the most awfully sublime in nature. Its approach is foretold by certain appearances, which enatle people
to be on their guard. A dark cloud, not larger than ' a man's hand,' is indistinctly observed on the verge of the eastern horizon. Faint tlashes of lightning, attended sometimes by very distant thunder, are then seen to vibrate in quick succession. The clouds in that quarter become gradually morc dense and black; they also increase in bulk, and appear as if lieaped on each other. The thunder, which at first was scarcely noticed, or heard only at long intervals, draws nearer by degrees, and becomes more frequent and tremendous. The blackness of the clouds increase until a great part of the heavens seem wrapped in the darkness of midnight: and it is rendered still more awful, by being contrasted with a gleam of light which generally appears in the western horizon. Immediately before the attack of the tornado, there is either a light breeze, scarely perceptible, from the westward, or, as is more common, the air is perfectly calm and unusually still. Men and animals tly for shelter; and, while ' expectation stands in horror,' the thundering storm in an instant bursts from the clouds. It is impossible for language to convey a just idea of the uproar of the elements which then takes place.

The temperature of the air is greatly affected by a tornado (it becomes cool nud clear); and it is not unusual for the thermometer to sutfer a depression of eight or ten degrees within two or three minutes after the storm has come on. After a tornado, the body feels invigorated and more active, and the mind recovers much of that elasticity which long continued heat tends to impair.

The harmattan, or north-east wind, generally blows once or twice in January and February ; it is of extreme siccidity, and is near the great desert of Sahara in particular, accompanied by a dense haze, occasioned by a vast quantity of impalpable powder floating in the gusty atmosphere.

[^12]V．Of the numbers，characters，and nlmost of the names of the people of Western Africa（estimated at 26 to the square mile， $1,200,000$ square miles，thus giving $31,000,000$ mouths）we know very little．
Three great negro races inhabit the country ：
1st．The Foulnhs，from Fooladoo on the Upper Senegal，or of the same race with the Fellatahs，in Central Africa，have now spread all over the banks of that river，besides the great kingdom of Foota Jalloo to the S．，and many districts on the banks of the Gambia．

They have not the extreme negro charncteristies； neither the dcep jet hue，the flat nose nor the thick lips，on the contrary，their features are high，with an olive tint，and an agreeable expression．They have embraced the Mahometan faith，but without thnt bigotry which almost universally accompanies it． Their manners are peculiarly courteous and gentle ： they practise the most liberal hospitality，and relieve the wants not only of their own aged and infirm，but even of those beloaging to other tribes．Their em．
ployments are pastoral，and their habits，in some degree，nomadic．Occupying countries where there is no tixed property in land；they drive their flocks， according to the seuson，to the tops of the mountains， or the hanks of the rivers．At night they collect their herds within the circle of the tents，and light large fires to deter the appronch of wild beasts． Such is their good conduct and industry，that it is considered infamous to injure them，and a blessing is said to rest on any territory that contains one of their villages．Their internal government is repub－ lican，under chiefs of their own；and this form they insist upon retaining，even when they settle under a sovereign of another tribe．

2d．The Mandingoes are n race more numerous， and more decidedly negro，both in form nad disposi－ tion．Though capable of great occasional exertion， they have by no means the steady industry of the Foutahs．Their employments are chiefly a slight agriculture，fishing with nets and baskets，and，above all，traffic，in which their enterprise exceeds that of the other negro races．They conduct large kafilas to a considerable distance in the interior，and their lan－ guage is well understood in all the commercial dis－ tricts．They are cheerful，inquisitive，credulous，and so gay，that they will dance for 24 hours，without intermission，to the sound of the drum or balafon． Polygamy is practised to a great extent．

The Mandingoes have some tastes more refined than are usual among Africans，particularly in poetry， the extemporary composition，and recitation of which forms one of their favourite amusements．The original country of these people is the elevated ter－ ritory of Manding；but they are now widely diffused over all this region，and particularly along the banks of the Gambia．

The third great race are the Jalofs，who occupy nearly the whole of the inland territory which inter－ venes between Gambia and Senegal，and the extent of which is estimated，by Golberry，at 4,800 leagues． A number of them are subject to a powerful inland prince，called Burb－y－Jalof，who boasts of himself as anciently the sole ruler in this part of Africa．The Jalofs，though of a deep black complexion，and with the decided negro features，are considered a hand．－ some race．They boast of their antiquity，and in many respects excel their neighbours．Their lan－ guage is softer and more agreeable；they manufac－ ture finer cotton cloths，and give them a superior dye（Mr．Forster presented me with some speci－ mens of the cotton cloths manufactured by the na－ tives of Western Africa；these cloths have a softness， weight and texture，which our manufacturers at Manchester cannot equal；the patterns before me are novel and tasteful，proving that the African is not the degraded being he has been so unjustly repre－ sented）；in horsemanship they are fearless and ex－ pert，and as hunters they rival the Moors．They possess not，however，the invention of writing，and reckon by fives instead of by tens．

The Feloops are a wild and rude race，inhabiting the shores to the S．of the Gambia；their traffic with us is carried on through the Mandingo merchants， and we consequently know little of them．

The Timmanees border on our colony of Sierra Leone．

The Ashantees，amounting，it is thought，to $1,000,000$ people，with $3,000,000$ of dependants，belonging to other nations，inhabit Ashantee Proper，a region be－ hind the Gold Coast，comprising about 14,000 square miles．They are a very superior class of natives to
those on the coast，－manufacture excellent cotton， smelt metals，and build large houses．The country is governed by a king，aided by four chiefs as councillors． Notwithstanding that the manners of the Ashantecs are more polished and dignified than their neighbours， annual hecatombs of unfortunate slaves and captives are offered to propitiate the manes of their ancestors； and on the death of any member of the royal family， thousands of human beings are slain as attendants for the next world．
The Dahomians（who have conquered the fearful and effeminate $W$ ydahs）predominate along what is termed the Slave Coast，and in the interior to the depth of about 200 miles；their rule is equal in bar． bnrity to that of the Ashantees．The Fanters manu－ facture cottons interwoven with silk，earthenware， iron，soap，\＆c．；and enjoy a republican form of go－ vernment．Other trihes and nations exist，of whom we do not know even the names．
It is difficult to obtain corrected statements of the population of our settlements on this coast．The most thickly inhabited，by British suhjects，is Sierru Leone；the census of which，at two intervals，was as follows ：－

* School children.

Out of a total population of 37,463 in the colony, there are but 105 white colonists. The proportion of females to males is, in the whites, scarcely more than one-fourth. In the coloured inhabitants, the sexes are nearly balanced. The number of mouths to the square mile is, in some districta, large (comparatively speaking); but in the whole colony the average is but 96 to the square mile. The proportion of deaths to births is considerable ; and, but for the fact of many of the captured slaves dying soon after their liberation from the ill-treatment they experienced while in the hands of the slave-dealers, the table would indicate a rapidly increasing population.
VI. The following table shews the large extent of religious instruction provided for the liberated slaves, and judging by the column which indicates the number of the congregations usunlly attending the respective places of worship, at least an external observance of the form of religion is preserved. The table of erime at page 540, does not prove a large amount of crime; and it is but fair to conclude, that the Christian efforts of the missionaries are attended with bencficial results.

* The 18 Dissenting Chapels at Freetown have congregations amounting altogether to 3,850, and are supported by voluntary contributions.
† The Gibraltar Hamlet Chapel, superintended by the Rev. T. Raban of the C. Methodist Society.
$\ddagger$ The whole of the Clergymen, as well as the day assistants, receive their salaries from the Church Missionary Society, without any other emolument.
§ The ministers of these Chapels are partly paid from funds raised in the colony from the members, and partly by the Society in England. They are aided by native teachers who are paid in the like manner.
|| These Dissenting Chapels are supported by voluntary contributions, and Church service is performed in them all.

* It is ditheult to state the trade aceurately, because the denomination of the bixports varies to different countries.-l, stands for toms, c. for casks.

The principal exports from Siera Leone in $1 \times 3.1$, wese in quantity and value thus:-arrowroot 4.5,3.1.1 lhs., value $756 t$; dye and hard woods 827 tons, valu:e
 packages 197 , value $673 l$.; hides, no. $16,47!$, value 1,I5Nl.; ivory, 7.10 pieces, value $970 l . ;$ Oil, palm, 92,1087 gallons, value $1,66 i 51$; pepper, $3.3,120$ lhs., value, 5122. ; rice, $1,776,960$ lls., value $7,5901$. ; tobacco, $9,000 \mathrm{Jhs}$, value $110 l . ;$ wax, hees', $6,8333 \mathrm{l} \mathrm{hs} .$, value 276 c .; timber, 13,227 loads, value $: 13,06 \mathrm{~N} /$.; boards and planks, 25,210 feet, valne $16 i l$. ; shingies, no. 100,000, value $5001 . ;$ bullion, gold, 2llis oz, value, $76.4 l$. ; the total value of the exports were G5,55\%l. of which the amount to Great Britain was 51,2:31\%.

1 camot better illustrate the mere commercial importance of the British settlements in West Afrien than by placing before the reater the following luminous and truly patriotic statement, drawn up by M. Forster, Esq., (ol the mereantile firm of Forster and Smith, New City Chambers) in a letter nderessed to the Sceretary of State for the Colonies. The ollicers of the Colonint Onlice are qualithed to judge whether the assertions herein mude are in the slightest degree exaggerated. The letter is dated the !th Jumary, 1832.
"Attempts have been frequently male to deprecinte the commercial importance of our settlements on the west coast of Strica, compared with the cost of maintaining them : and concciving that parliament and the public are not filly aware of the nature and extent of the trade dependent on these settlements, 1 have taken the liberty of drawing up a statement shewing the benetit arising from them to the revenue and mational industry of this country, which I have the homour herewith to amex for your loriship's inspection.
" The annual direct and indirect advantages to the mational industy, from the trade, I estinate ns prom statement No. 1, at $\mathbb{f} 3,234 l$. 19s., and the anmul benefit to the revenue ns per statement No, 2, ut $207,873 l$. 13s, exclusive of ship-building matering and labour, as also of some other minor sources of national benefit not enumerated. The total gain to
the industry and revenne of the mother country can not he less than tion, mond. per ammon.
"Within the last 20 years the inerense in the trate in palin oil, timber, and bes' wax, has been very grent. Attempts are makine in Gambia and derwhere on the const to introduer the cultivation of some artieles of produce new to the trade of atrica; but these emdeavours regnire time, on aceome of the menlightened state of the matives, the vely reent abolition of the slave trade, and its partial continabuce by other mations. In several tases, however, the natives have proved themselves capable of entertaining new ideas of trade and cultivation more radily than might have been expected. The trade in teak timher for ship-building was maknown in Afriea 20 years ago; the ammal importation of that article from Sierralsome at present is from 16,000 to 20,000 tons of llritish shipping munually.
"Fifteen years ago, it was not known that mahogany grew in the Cimbin; since that putiod several thonsands load of mahogany have been imported into Eaghand fro:n our settlement on that river; nod although the uatives would uot at tirst cut and prepare it for shipping, they are now willing to supply any quantity of it which this market may require. The low price of Ilomiarns malogany, however, fellders it impessible to athiorl any encouragement to their indusery in this article at present; but these instances atiord pleasing and conclusive proofs that the matives will turn their attention to trade whenever the opportunity is afforded them.
"The mumal cost of our settlements on the Western const of Sirica, as respects the protection of oir commerec, exelusive of those expenses incidental to the suppression of the slave trade, which ought not to be charged to the account ol those possessions, is Inetere known to his Majesty's Government than to me; but I may venture to assume that it bars hut a trifling, indeed insignifieant, proportion to the ndvantuges derived from the trade: and those settlenants are to be considered not with reference to their present value alone, but to their fiture importane as outlets to British manufactures, when time shall have removed some of those dillicalties which at present
whistruet gowermm ne'hllowl territorin ewer to h pros-emin of manut lumbly s gives faci intimated amount or from it, b toonr ma mut a lats mocessary the anminn memts of t vast impor too limiter persons to " strikin belourging to thinh the at on the west to $30,1000 \%$. the mational per arinum. sotlements pepulation, a revemine su fact is, that for their sulp indispensable ev'l now in! imealeulable v shall lanve cea the native pol

dhatruet the trade. The policy of most furcign gumbmoments is directed agninst our commeree, the achnowledged source of on: bational power. The territoring extont of the Brivish islauls is too limited ser to have raised this empire to its present proud pro-rmineme in the sende of nations, without the nid of mandactures nad foreign trade; comseguently I humbly submit, that every forcign settlement which gives facility to the sale of firtish goods, is to be estimated not only with reference to the direct amount of revenue received on the produce imported from it, but still more by the employment it nliords to our manufacturers, artizans, and shipping. Withwut a large manufneturing population, the revenue necessiry to pay the interest of the nationm debt num the ammal eost of the civil and militnry establishmonts of the country camot be raisels hene the sast inportmone of our foreign possessions, which a tor limited view of our colonial poliey leals some premins to undervilue.
" Striking out of the public estimates every charge homging to the nreount of the shave trade, ifo not think the ammal eost of maintaining our settlements on the western coast of Afrien excerds from 25,000 to 30,0001 , per annum, probubly not so much, white the mutional gain is considerably above hatf a million for ambun, It is a common eror to regard those settements in the light of colonies having in taxable popmation, from which they may be expected to raise a revenne sulficient to maintnin themselves; but the fact is, that mothing can yet be raised from the matives for their support, while the protection they nfford is indispensable to the protection of our trade a trade even now important, and which time mny render of incalculable value, when the effeet of the slave trade shall have censed to exercise its baseful inthence over the native population.
"Neither is it reasonable or politic to require indiviluals trading on the const to contribute towards their maintemuse beyond the duties they at present pay to the colonial finds on the goods they import from tinginnd, and the persomal services they nre called upon to render as militianen in defence of the forts. I humbly submit, that l3ritish subjects nre ns much sutitled to protection in enrrying on " trade, by which the nationul industry is henefited, in Airien ns at home. In applying their indastry, and risking their capital and health in a trade giving employment and profit to their countrymen nt home, nud by which the national reveme gnins so largely, they may surely not only chaim the protection but the gratitude of their country. Besides which, you cannot invest in. dividuals with in property in pablic works necossary for the defence of our trading compnnies in Afrien. ladividuals clange, but the alvantuge is natiomal and permanent, and so should be the grotection.
"By upholding these forts on a footing to command the respect of the mutives, our Governors in charge of them may rouder the most important serviess in earrying into effeet the convention recently conchaded with Firauce, for the suppression of the frade in slaves, the dhe execution of whieh treaty cmanot fail to produce effects as favourable to the trade and civilization of Atrien, as to the canse of humanity, now hourly violated by the continunnee of the trallic. France, Ameriea, Ilollnad, amal Denmark, have each their settlements on the cuast, which they evince the utmost anxlety to retain nold encourm s. Our settlements on the Gold Const cost baty only $\mathbf{d , 0 ( 0 )} 1$., and are now reduced, 1 muterstand, $6,3,6001$. ber mommo ; mal this is the sole
expense of protecting a valunble trade. The Wurch setthement of blminn, whish is ouly seven miles from our sevtlement at Cape Const Castle, costs the Duteh an equal sum to ours, while Ilolinad has not one-t wentieth part of the trate on the Gold Coast that we have.
"It should be borne in mind that cury artiele innported from Africa is in exchange for goods, and that eonsequently it is one of the very fiew legitimate trades remnining to this country. The article of pmom sil, which has increased so much of late years, con be obtainced only in Africo, and is already rxtmisively used as a substitute for Russian tallow ht tia manufneture of soap, Ne. [There are 20,000 stemr: engines in the United Kinglom, nal each engine requires two easks of tallow per nomum. This im...ense consumption of tnllow renders the trade is phlm oil of grent ronseguence to this country, as a substitute for tallow in the manufacture of somp.R. M. M.]
"The recent adelitional duties imposed on British goods imported into the Russinn market, may sugerest to us the policy of cherishing a trade which consumes the products of our national industry without limitation or restraint by hostile tariftis.
"The nbolition of the slave trade took sthet on the lst of Mareh, INON. T'wenty-three yeme is too short a period to elfect a change in the character mod purshits of a people corrupted by three conturies of war and erwelty consequent on that tralle, nud whose kings mad chiefs have been tanght by the sordid slave denders of enlightenal tharope to despise and negleet the pursuits of legitimate commeres, is fivemr of a trade in the persons of their people. laet, however, those chiefs be convinced hy experieme that they will gain more by the Inhour of their poople at bome, than by the sale of their persons for exportation, sud yon hat ance the fomblation of n new system whider whinh war and trachery shall give place to the regenernting intheme of peacrial indastry. liurobe owes to Afrien n heavy delot for the erimes thint have been committed muder the slave trade. lingiand has been the first to nflier payment of her portion of that debt, and she will not only bave the high consolations of humnnity for her reward, but probinty, nt no very distant period, the molvantages of a trade with Afrien, of which it is ditlicult at present to foresee the extent."

## No. 1.

Anmual volue of lexports from C ,ondon, I iverpool, null Bristol, to the West Censt of Afrien, between the Cambin nal Angoln, calculatel from the monont of Shipments by the soveral Merehants truling fo the Const from those places.
A fow int roductory remarks may be necessary to render these tables more chendy understood by those Who have not beon necostomed to estimate the importance of our forcign and colonial trade on the princi, bes on whieh they ure drawn up. Perbops i cmonot more clanly illustrate those primiples than by the following examples:-let us suppose two eargoes of British mannfuetured goods to be sent to Cnuma, ono consisting of cotton fabries, mod the other of hariware articles. In the ense of the former we may assame that the avernge cost of the cotton wool of which the goods are male is about 25 prer cent, of the export value, the remaining 7 pher cont. having been added to the value of the raw material by the application of British eqpital and labour, and is therefore so much value guined to the mational wenlh nud industry. In the case of the hardwam
cargo, the iron of which the articlea are made being a native production, we may assume that the total value is an actual creation of national capital and labour. Many persons limit their notions of the importance of our colonial and foreign trade to the profits of the exporter who ahips the goods abroad, whereas that is a point scarcely worth considering compared with the advantage to the national industry in manufacturing them. Hence the importance of keeping open every possible outlet for the consumption of our manufacturea, without which our capital and artizans must lie idle, the revenue fall off, and the wealth and power of the nation rapidly decay. In addition to this it may be stated, that as every thing which the capitalist and labourer who produce these goods consume, is taxed either directly or indirectly (which tax is included in the cost of production), you virtually obtain the help of the foreign consumer to pay your taxes, or in other words, you make foreigners contribute towards the national revenue.

London and Bristol Exports.-Amount of colonial goods, 58,000 l. ; ditto foreign ditto, $52,000 \mathrm{l}$.; ditto British manufactures, 213,000l. Total, 323,000l.

The principal articles in these exports are Manchester cotton, nnd India piece goods. The freight, insurance, \&cc. particularly of the teak timber, hides, palm oil, and those articles collected in the floating trade, compose a large portion of the gross import value of the returns.

Liverpool Exports.-Colonial goods, 13,000l.; British ditto, $102,500 l$.; foreign ditto, 5,500l. Total, 121,000l.

The exports from Liverpool are chiefiy for the palm oil trade, and the cargoes are differently assorted from those shipped from Bristol and London. The freight, insurance, \&c. of the shipping employed in the trade, constitute a large portion of the returns compared with the value of the exports.

Estimate of National Profit thereon.-On colonial goods amounting to $71,000 \mathrm{l}$. the value of Britiah labour in transit and other charges (including profits) may be estimated at 30 por cent. thereon (on some articles, on rum for inatance, these charges are nearer 70 than 30 per cent. and the average amount cannot be less than my estimate), $21,300 l$.; foreign ditto, $57,500 l$.; ditto, 17,280l.; British ditto, $315,500 l$., the value of the raw material on an average being 25 per cent., leaves 75 per cent. for labour and manufacturer's profit, 236,625 $l$. The shipping cmployed in long voyages in the palm oil and floating trade is about 16,083 tons, which, at the low cstimate of $9 l$. per ton for sailing charges per annum,
amounts to $114,747 l$. The shipping employed in ahort voyages (of six months) in the teak timber and other trades, about 17,000 tons, at $4 l .10 s$. per ton, 76,500l. Deduct for raw material of atores, \&c. 15 per cent. 33,187l. 1s. Total annual gain to the national industry, exclusive of ahip-building, $463,234 l$. 19 s .
N.B. Of this sum of $463,234 l$. 19 s. one-third may be eatimated as paid to the revenue in the consump. tion of exciseable and taxed commodities, consumed by the labourers and artizana to which the trade gives employment, amounting to the sum of $154,411 l$. 13s. carried to Statement No. 2.

No. II.
Estimate of the annual duty on Imports from the British Possessions on the Weat coast of Africa, between the Gambia and Angola.
Imparts, London and Bristol. Gross import value. Timber, 15,000 loads $127,500 l$. Duty thereon $7,500 l$. Bee's-wax, 200 tons $28,000 l$. Excise and Customs 8,000l. Hides, $60,000,12,000 l$. Duty 500l. Ivory, 72 tons 25,200l. Duty 1,400l. Palm-oil, 1,200 tons 36,000l. Duty 3,000l. Sundries, including gum Senegal, \&c. 20,000l. Duty $1,000 l$. Gold, $45,000 \mathrm{oz}$. at 75 s . $168,750 l$. Bills $25,000 l$. Total value 442,450l. Total Dutics thereon 21,450.

Liverpool Imports. Pnlm oil, 9,000 tons 270,0001 . Duty 22,500l. Ivory, 65 tons 22,750l. Duty 2,3001 . Gum copal, 15 tons 200l. Duty 840l. Timber, 3,000 loads 25,500l. Duty $1,500 l$. Bee's-wax, camwood, barwood, \&c. 25,000l. Duty 1,222l. Gold, 3,000 oz, $11,250 l$. Total imports $355,400 l$. Total Duties thereon 27,362l.

Duty on policiea of Inaurance, 3,150l. Duty, Customs outwards, $1,500 l$. Revenue from Lahour, as per Statement No. I. 154,411t. 13s. Total annual gain to the Revenue from this trade, $207,873 l$. 13 s.

Balance.-Gross amount of imports as per No. 2. 797,853l. By direct annual gain to the Revenue, brought from No. 2. 207,873l. 13s. Balance of national industry, being the difference between the sum of $463,234 l$. 19s. as per Statement No. I, and 154,4111 . 13s. charged to the Revenue as above, $308,823 l$. 63 .

Total annual gain to the nation, direct and indirect, exclusive of ship-building, \&cc. 516,696l. 19s. Nett cost of Foreign goods, deducting transit and other charges 89,450l. Cost of raw materials for English manufactures, including Iron, Wool, and other articles wholly of English growth and production, $78,875 l$. Insurance, $35,000 l$. Interest on capital it per cent. returns not in cash on an average in less than 18 months, merchants in England and traders' profit in Africa, 77,828l. Total, 797,850l.

Imports from the Gambia, Sierra Leone, and Cape Coast, by one mercantile house, for the years 1832.33 and 1834 , will indicate the importance of this trade, which has so often been denied.

* The annual importations of palm oil are now upwards of 12,000 tons, which, nt the market price of 28. per ton, amounts to 336,0001 . ןer annum ; giving constant employment to 14,000 tons of shipping.

This table does not include gold dust. In fact, it $\mid$ fashioned system of adventure was resumed by many is very difficult to give correct tables, or returns of the trade of the weatern coast of Africa. A considerable portion of the trade is conducted on the ancient system of " adventures" afloat, or, what is called, the "floating trade." A ship is fitted out, and committed, with her cargo, to the direction of the captain, who acts as aupercargo, and who trades along the coast, backwards and forwards, till he has disposed of his cargo, in barter with the nativec, when he returns home. On the abolition of the slave trade this oldof the captains who had been engaged in that traffic (in which some of them had made considerable sums of money), and who, finding their former occupation gone, turned their attention in this way to the lawful pursuits of trade. It is a system of traffic, however, attended with great risk, and wholly dependent for success on the honesty, sobriety, and good conduct of the captain, and one which the increasing security, afforded by our settlements on shore has already greatly limited, and will ultimatcly supersede.
XII. Amount of Coin in circulation.-The amount of coin in circulntion may be estimated at $25,000 l$.

About the close of the year 1835, the officer in charge of the commissariat department at Sierra Leone, reccived from the treasury, a remittance in dollars to the extent of $14,000 l$., the whole of which, with the exception of from eight to ten thousand dollars, was cut into quarters to prevent its exportation.

TThe eonsequence of this system has been the depreciation of this currency by "elipping," and by cutting doliars into flve pieces in piace of four; a species of fraud so easy that it nught to have been foreseen. Jiy the last accounts, the circulation of this "cut money" at Sierra Lenne was completely at a stand, in consequence of the commissary by whom it was originaliy issued refusing to take it, and the greatest confusion andi inconvenience is the resuit. Unless government take upon itself the ioss, which it ought to do as the cause of the mischief, it must fall, where it can be very iil borne, on the poor inhabitants. This ought to be a lesson to government not to attempt to msintain treasury bilis, at a premium, by artificiai means. It is absurd to think of preventing the exportation of doltars by eutting them, while the mercliant finds it his interest to ship dol. lars in place of remittiog bilis, owing to the extravagan premium demanded on the latter, which on reasonable terms must aiways have a preference owing to the comparative facility of transmission. The moment the commis sary ohserves that dollars are preferred to his hills he may be sure the premium demanded on the latter is too high, and it shouid be reduced aecordingiy until it becomes the interest of the merchant to preter bilis to dohars. This is the legitimate method to keep dollars in a colony, and not the expedient of cutting them in pieces, whieh opens a door to fraud of which the innoccot native is the victim. So obvious and easy is the fraud, and so tempting the profit, that the native blacksmiths, the armourers on board the ships of war, and the Americans (never back ward in turning a dollar, particulariy at a profit of 25 per cent.), have all been busy at the task of cutting dollars and five frank pieees into five quarters! The result of this experiment onght to be a lesson to government not to attempt any thing of the kind again ; and in this instance justice demands that, as the author of the mischief, it shonid receive the depreciated coin at par.]
There was elso during the past year 2,000l. in British silver in the military chest, which at one time ceased to be issued, with a view to induce persons to tender Spanish money for bills on the treasury; and within the last few years there was also remitted to the commissariat for circulation 800 l . in copper coin.

Towards the latter end of the year 1836, a very considerable decrease was obscrvable in the circulating medium, which is partly attributable to the following causes.
lst. Persons returning to Great Britain, taking home with them British silver.

2nd. Strangers (Americans and other transient people) taking away round dollars in return for part of their sales, considering it much more advantageous, than giving the high premium demanded on treasury bills.

3rd. Ships of war, who on leaving this are supplied with round dollars from the military chest, to defray incidental expenses, and for the purpose of purchasing refrcshments for their crews down the leeward coast.

4th. Nntives from the interior, taking the silver coin back with them to be made into ornements.

5 th. To the reduction for a time in the value of the doubloon, from 69s. $4 d$. to 66 s , as the former value could always be got for it at any part of the coast, by which the amount of this species of coin, became considerably diminished.

For some time past the circulation has become more extended in consequence of the great incrense in the shipping, which arrived for cargocs of timber, whose disbursements are all defrayed, by the merchants to whom they are consigned, and who are repaid by Bills drawn on the owners at par.

For bills drawn on the treasury at thirty days sight
the rate of exchange during the year was as follows : Sbanish Money, - Forty nine pence per dollar, or 6䨐 per cent. premiam.

British Money,-One and a half per cent. preminm fixed by the Lords Commissioners of His Majesty's Treasury.

Bills drawn on the owners of Merchant vessels, to defray the disbursements of their ships in the Colony are usunlly paid at par.

No rate of exchange with foreign countries.
XIII. Gum Senegal, is the produce of some scat. tered oases, or verdnnt spots, that occur in the vast desert of sund to the north of the Senegal. The species of acacia from which it exudes has every appearance of a stunted and desert tree : its aspect is crooked and rough, its branches are thorny, its leaves of a dry or dirty green. The mere hlowing of the harmattan causes the bark to crack in numberless places, and the gum to flow in large transparent drops, which remain attached to the surface. The harvest of the gum is in December, when the Moorish trikes, of whom the Trazars are the most powerful, break up from their usual camps, their kings and princes at their head, and proceed in a confused and tumultuous crowd to the forests, of which each claims one or more. After six weeks spent in collecting the gum, they put it in large leathern sacks, with which they load their camels, and proceed in the same tumultuous array to the spot fixed on for the gum market, between Fort Louis and Podor. This plain, which is one of the most desolate spots in nature, is suddenly covered with an innumerable multitude of people enveloped in clouds of dust. The kings nppear mounted on beautiful horses, their wives seated in huskets on the backs of camels, the crowd on foot; the air resounds with the cries of men, women, children and animals. A cannon is fired as the signal for commencing the trade. A dreadful scene of wrangling and higgling immediately ensues. The French accuse the Africans of most dishonest arts in order to enhance the value of their commodity. They themselves, it appears, are not far behind, since they have not scrupled to adopt the policy of insensibly ang. menting the size of the cantar by which the gum is measured, a change which escapes the notice of their rude antagonists. The French take off annually about 1200 tons of gum, which sells in Europeat from $70 l$. to $90 l$, per ton. The returns are taken almost exclusively in East India cotton cloths dyed blue, which are called pieces of Guinca, and lor which it has been in vain attempted to substitute the manufacture of Europe.

From the River Senegal, in about $16^{0}$ north latitude, to the Congo, which is in upwnrds of $\sigma^{0}$ south latitude, there is a remarkable uniformity of vegetation, not only as to principal orders and genera, but even to a considerable extent, in the species in which it consists. Many of the trees, the palms, nod several other remarkable plants, which characterises the landscape, as Adansonia, Bombax pentandrum, Elais guineensis, Raphia vinifera, and Pandanus Candelabram, appear to be very general along the whole extent of coast. Sterculia acuminata, the seed of which is the Cola, mentioned in the carliest account of Congo, exists, and is equally valued in Guinea and Siera Leone, and, what is remarkable, it bears the same name throughout the west coast. The ordual tree, called by Professor Smith Cassa, and by Captain Tuckey, erroneously, Acassia; if not absolutely the same plant as the red water tree at Sierra Leone and the Gold Coast, belongs at least to the same genus. A specics of the cream fruit, remarkable in affording

a wholesome and plensant saccharine fluid, used by the untives of Sierra Leone to quench their thirst, though belonging to that generally deleterious family the Aporynes, is also met with. The Sarcocephulus Afzelius which is probably what he has noticed under the nume of the country-flg of Sierra Leone, is found on the banks of the Congo. Anonu senegalensis, whose fruit, though smaller than that of the cultivated species, is said to have a flavour superior to them nil, and appears to be a general plant along the whole extent of coast : and Chrysobelanus Ictu'o, or a nearly nllied species, is equally common from Senegal to Congo.
The trunk of the Dracana Draco cleaves open in many prits, and distils, at the time of the summer solstice, a fluid, which condenses into red tears, soft at first, afterwards hard and friable: this is the true dragon's blood of the shops, and must not be confounded, though dry, friable, blood-red, and inflammable, with other resinous substances, known under the same name, and derived, the one from a species of Calamus (Rotang), and the other from a Plerocarpus. To the dragon's blood are attributed astringent, desiccatory, and incrassating virtues. It is administered internally for dysentery, hæmorrhage, violent bowel complaints, and inward ulcers; and externally, to dry up running sores, to heal wounds, and to atrengthen the gums. The painters make use of it, in tiee red varnish with which they coluur the Chinese boxes and chests. Mr. Sewel informs me that the castor nut grows abundantly in the neighbourhood of Cape Coast Castle, and also on most parts of the Western Coast.
The esculent plants of the Congo, cultivated, as well as indigenous, are very similar throughont the west coast. On the banks of rivers the principal articles of vegetable food are the Indian corn, or Maize (Zea Mays) Cassana, both sweet and bitter (Jutropha Manihot), two kinds of pulse extensively cultivated; the Cytisus Cajan and a Phaseolus (?), with ground nuts (Aruchis hypogaa). The most valuable fruits are plantains (Musa sapientum,) the papaw (Curica Papuya), pumpkins (Cucurlitu lepo), limes and oranges, pine apples, the common tamarind, and safu, a fruit the size of a small plum. One of the most important plants, not only of the Congo, but of the whole extent of coast, is Elais guineensis, or the oil palm, which also affords the best palm wine. The palm tree is truly called the 'native's friend; ' it supplies wine, oil, fishing-lines, hats, baskets, palm nuts, cabbage, tinder, \&c. \&e. The winc is obtained by driving a hard peg or a gimlet into the cabbage-like head of the palm, when a stream of sweet liquor flows into a calabash suspended heneath, and by the time it is filled (six to eight hours) fermentation has reduced the whole into a milky tinted pleasant beverage; the natives, sometimes, allow it to have a harsh and bitter flavour; the process and liquor is, in fact, somewhat similar to that obtained from the cocoa nut blossom, and ternied tod $d y$. Wine is likewise obtained from two other palms. Among the other alimentary plants, of less importance, or imperfectly known, are the shrubly holeus, the common yam, and another dio. sroren, found wild only, and very inferior to the yam, requiring it is said, four days boiling to free it from its pernicious qualities. Two kinds of sugar cancs, capsicums, and tobacco are generally cultivated, according to the herbarium of Captain Tuckey. A second kind of ground nut, opera (Glycine subterrantea ?), which is extensively grown at Madagascar,
also appears. A species of ximenia (. X . americana?) is likewise found, the fruit yellow, the size of a plum, and acid, but not unpleasant, in the higher parts of the Congo, where it is gencrally planted. An antidesma, perhaps like that mentioned by Afzelius, as having a fruit of the same size and taste as a currant, is met with.

The edible fruits of Sierra Leone are numerous and luscious. The peach of the negrocs (Sarcocephalus esculentus) is a large, fleshy, and solic truit, hard and eatable throughout, and full of small sceds, not much unlike a strawberry in flavour and consistence. The tree grows plentifuily throughout the colony of Sierra Leone, 10 to 15 feet high; leaves large and elliptical, flowers pink, produced in globular heads, and seated on a receptacle, which after wards becomes the fruit. The Anona senegagalensis, or African custard apple, fruit not much larger than a pigeon's egg, and with the same or a superior flavour to the rest of the species. The monkey-bread (Aldansonia digitata) is much used by the negrocs; its fruit, which is of considerable size, and of an oblong shape, is full of secds, and tastes like ginger-bread, with a pleasant acid flavour. The locust tree of Sierra Leone (Inka biglobosa) is a beautiful tree when in blossom, covered with compact biglobular heads of fine vermillioncoloured flowers, which are succeeded by compact bunches of pods, containing a ycllow farinaceous substance, of which the natives are very fond. It is mentioned by Park as affording an agreeable and nutritive food. The country cherry is rare, growing on the mountains, and bearing a small oval reddish fruit, somewhat like a plum in flavour, and produced in clusters on the topmost branches. Anisophyllen laurina, the monkey apple, is a fruit of the size of a pigeon's egg, red on one side and yellow on the other, with a flavour between the nectarine and plum Country grapes are the produce of Vilis ceasia, they are black, austere, and acid; chiefly caten by the negroes. Country currants resemble elder-bcrries, and are found plentifully on the mountains. The shrub (Fiscus Brassii) which bears the large fig, grows about the colony; fruit pleasant; as is also a smaller fig, that bears abundantly, and is the size of a hazel nut. Wild guavas (Psidium pyriferum) are natives of the country: Mr. Don saw and tasted the fruit, but could not exactly identify the plant with the West Indian guava. The hog plum is the fruit of Spondinus Myrobalanus; it is well tasted, and sharper than the plum of our gardens, but the stone forms half the bulk of the fruit. The grey plum tree ( $P a$. rinarium excelsum) is more valuable for its compact and durable wood than for the fruit, which, though Jarge and abundant, is dry and farinaceous, with a very large stone; an allied specics ( $P$. macrophyllum) is called by the colonists, ginger-bread-plum. Of four other fruits, calicd pluns, the small pigeon plum (Chrysobalanus elliplicus), the yellow pigeon plum (C. luteus), the black plum (Vitex umbrosa), and the sugar plum; it mny be said that the first three, though good, are interior to the Jatter, which is sold in large quantities in Sierra Leone, and is one of the very best truits in the colony. The tree is very handsome, 60 fcet high, and bears many fruits of the size of a bullace; at 10 feet from the ground the stem throws out roots like a mangrove or pandanus, but its botanical affinities are not known. From the fruit of the sweet pishamin (Carpodinus dulcis) a quantity of sweet milky juice exudes, the pulp is also pleasant and sweet. The sour pishamin (C. acilus), though sharp, acid, and rather bitter, is much relished
by the natives. The Mammee apple (Mammea africana) is a lofty tree, with useful wood, and a very large fruit. The butter and tallow tree (Pentadesma butyracea) abounds in a yellow greasy juice, to which it owes ita name, and which is given out plentifully when the fruit is cut; this is mixed by the natives with their food, on account of its turpentine flavour, which renders it disagreeable to the European settlers. Two kinds of star apple (Chrysophyllum macrophyllum and C. obvatum) are very inferior to the West Indian star apple (C. Cainito). Tonsella pyriformis hears a rich and sweet fruit, like a bergamot pear. There is a tree, called pomegranate, said to be excellent : but having no affinity to punica. The seeds of Sterculia acuminata are called cola by the negroes, who hold them in great esteem, as possessing the same virtues as Peruvian bark. They are like horsechestnuts, and produced in pods, which grow two to five together. A sonewhat similar seed, named tola, is used in the same way. Velvet tamarinds, the fruit of Codarium acuti,olium are produced in beantifully black velvity puds, and possess an agreeably acid taste, while brown tamarinds differ little, except in the colour and larger size of the pods.

Pine apples both grow wild and are cultivated by natives : they abound in the woods $s 0$ as to obstruct the passage through them in every direction, shooting most vigorously, and yielding fruit abundantly. Two kinds only, the black and white, are grown at Sjerra Leone: though not so large as those cultivated in England, the flavour is superior. The wild varieties are innumerable; and a very pleasant kind of wine is made in the colony from the juice.

Besides the fruits already mentioned as found wild near Sierra Leone, the following are cultivated : plantains (Musa sapientum), bananas (M, paradisiaca); the cocoa nuts are still rare, and papaws (Carica papaya) are only seen near the settlers' houses, Oranges are abundant, and have now grown wild; lemons are rare, but limes plentiful. Cashew nuts have been cultivated in large quantities of late : rose apples (Eugenia Jambos), and tamarinds from the Weat Indies, love apples (Solanum Lycopersicon); melons, water melons, cucumbers, gourds, \&c., of many kinds and qualities ; among the melons some which having the smell of musk, are called musk melons. Two sorts of capsicum are grown.

The Baobab, or Monkey Bread, above mentioned (Adansonia digitnta), may be deemed one of the most valuable productions of Western Africa. It is likewise said to be found in Egypt and Abyssinia, and is cultivated in many of the warmer parts of the world. It is the largest known tree ; its trunk being sometimes no less than 30 feet in diameter. At one year old, its diameter is one inch, and its height five inches: at 30 years old, when the diameter has attained to two feet, the height is but 22 feet; and so on, till at 1,000 years old, the Baobab is 14 feet broad, and 58 feet high; and at 5,000 years, the growth laterally has 80 outstripped its perpendicular progress, that the trunk will be 30 feet in diameter, and only 73 fcet in height. The roots are of a most extraordinary length; in a tree with a stem 77 feet round, the main branch, or tap root, measures 110 feet in length. The foliage is not 80 abundant as to coner al the vast proportion of the trunk ; but it often happens that the profusion of leaves and of dropping boughs almost hide the stem, and the whole forms an hemispherical mass of verdure, 140 to 150 feet in diameter, and 60 to 70 feet high. The wood is pale coloured, light, and soft, so that in Abyssinia, the
wild bees perforate it, and lodge their honcy in the hollow, which honey is considered the best in the country. The negroes on the western coast apply these trunks to a singular purpose. The tree is lialile to be attacked by a fungus, which, vegctating in the woody part, without changing the colour or appearance, destroys life, and renders the part so attacked as soft as the pith of trees in general. Such trunks are then hollowed into chambers, and within them are suspended the dead bodies of those to whom are refused the honour of burial. There they become mummies, perfectly dry and well preserved, without further preparation or embalming, and are known by the name of Guiriots. The Baobab, like all plants of the same order (Malvarea), is emollient and mueilaginous. The pulverised leaves constitute litlo, a favourite article with the natives, which they mix with their daily food to diminish excessive perspiration, and which is even used by Europeans in fevers, diarrhceas, \&c. The fruit is perhaps the most useful part of this tree; its pulp is acid and agreeable, and the juice expressed from it, mixed with sugar, constitute a drink that is deemed a apecific in putrid and peatilential fever. Owing to these circumstances, the fruit forms an article of commerce. Bowdich mentions that it possesses such an agreeable flavour, and is so abundant, that it constitutes a principle article of food with the natives, who season many of cheir dishes with it, especially their corn gruel. The Mandingoes convey it to the eastern and southern districts of Africa, and through tiie medium of the Arabs, it reaches Morocco, and even Egypt.

If the fruit be injured, it is burned, the ashes being mixed with rancid palm oil, and serving for soap. The flowers are large, white, and handsome, and on their first expansion, bear some resemblance, in their snowy petals and violet mass of stamens, to the white poppy (Papaver somniferum). Both the flowers and fruit are pendant. The Baobab tree loses its leaves before the periodical rains come on.

The Arachis hypogæa deserves notice on account of the singular economy of its fruits. It belongs to the very few plants which mature their seeds under ground; the flower stalk, after the blossom hns withered, bending downwards, and burying the germen in the soil, where it soon increases in bulk, and perfectly ripens. The fruit is a pod, containing one or two seeds, the size of small nuts, with a flavour of almonds; the natives of several countries eat them, either boiled or fried, and make very pleasant confections of them, the taste resembling chocolate. A valuable oil is also extracted from the seeds of the Arachis, alike useful in food and for supplying lamps, as it never turns rancid. Many attempts have been made to naturalize this plant in Europe; but the climate is too cold for it every where north of the southern coast of France.

The native names of the different species of timber exported from the River Sierra Leone for shipbuilding and carpenter's work are-1. Co-Tartosar, or African oak ; 2. Tolongah, or brimstone; 3. Bumia, rather scarce ; 4. Cooper ; 5. Kon ; 6. Conta; 7. Roth ; 8. Wossomah; 9. Jumo ; 10. Backam; 11. Topercanico; 12. Mooll, the tree produces vegetable butter; 13. Sop ; 14. Kelill; 15. Cong; 16. African almond; 17. Bombay; 18. Dye-wood; 19. Pissaman; 20. Pissaman, (no marine animal of any kind attacks it); 21. Black oak; 22. Wismore; 23. African cedar ; 24. White wismore; 25. Cronko; 26. Shiu-shinginara; 27. Blue wismore; 28. Arwoora; 29. African mammee apple; 30. Catepy; 31. Lowland box-wood: 32. Singa-singa marah; 33. African pine; 34. Highland hoz-wood; 35. Singuoora; 36. Cabooco; 37. Brimstone; 38. Bessey ; 39. African mulberry; 40. Mangrove. The grain of aeveral of these woods is very rich, and the furniture made therefrom not only durable, but extremely beautiful. In Mr. Forsster's elegant mansion at Hampstead, there are several articles of furniture made from African mahogany, which would vie with the wood of any country in the world: and for ahip-building the African teak is now generally and deservedly esteemed. (For the animal kingdom, \&c., see my "Colonial Library.")
Tho rivers and coasts abound with many sorts of fish, beautiful in their colours, or nutritious for food.
The larve or caterpillars, of all the beetles that feed upon decayed wood, are rich and delicate eating, so that every forest affords the traveller plenty of nourishment did he know where to search for it. The children in Africa, at the proper season, are busily employed in digging out of the ground the females of
a particular aort of cricket, which are then full of eggs, and so enclosed in a bag as to resemble part of the roe of a large fish : these, when roasted, are deemed very delicate.

Manufactures, Mines, and Fisheries in 1836. [B. B.] -There are no manufactures or mines in thla colony. There are many different sorts of fish, viz.-turtle, barracouta, snapper, ten-fish, grouper, mullet, mackarel, ten-pounder, bonetta, crocus, shy-nose, soles, skait, whlte bait, eels, cavalla, flounder and green jar; all averaging in value $\frac{1}{d} d$. per lb ., or $6 d$. per bundle. Also oysters (opened), $6 d$. per pint; cray-fiah, $1 s$. each ; cocklea, $6 d$. per pint ; craba, 2d. each ; shrimps, $6 d$. per pint; perrywinkles, $6 d$. per pint; muscles, 6d. per pint.

There are about 20 boats and 40 canoes employed in fishing.

The exact number of acres of land under cultivation in this colony cannot be ascertained; nor can a correct account of the produce gathered and saved during the year be given. The articles, however, i.sually raised in the colony are-rice, coffee, yams, cotton, arrow root, pepper, cassada, Indian corn, castor oil plant, sugar cane, maize, ginger, ground nuts, end other vegetables and fruits indigenous to a
tropleal climatc. The natives also extract from the jalm tree "palm wine," and manufacture from the same tree palm oil, which forms an article of export to England and elsewhere.

Average Prices of Produce and Merchandize.[B. B. 1836.]-Horaes, 15l. each; horned cattle, $2 l .10 s$. ; aheep, 8s. 8d.; goats, 6s. 6d.; swine, 6s.; milk, 16. per gill; fresh butter, none; "salt ditto, $2 s$. per lb.; cheese, 1s. $6 d$. per lb.; wheaten bread, $2 s$. per lb . ; beef, $5 d$. per lb .; mutton, $9 d$. per lb .; pork, 9 d. per lb.; rice, $3 s .10 d$. per bushel; coffee, 1s. $6 d$. per lh. ; ten, $8 s .8 d$. per lb. ; sugar, 1s. per lb; salt, $2 s$. per bushel; wine, $1 l$. $16 s$. jıer dozen ; brandy, 10s. per gall.; beer, 13s. per dozen; tobacco, ls. per lb.

Wages for Labour.-[B. B. 1836.] Domestic, $17 s$ 4ll. per month; Predial, 4d. per day; Trades, 1s. 9d. per day.

The labourers employed in loading timber vessels, receive on an average, $20 s$. per month.

Mr. Mathew Forster, of New City Chambers, Bishopsgate-street, a British merchant, to whom the colonies in general, and Africa in particular, are under deep obligations, thus writes to me, on applying to him for information on the staples of Africa.
${ }^{\prime}$ It may add some interest to your chapter on our African settlements if you notice the probable discoverles that may yet he made in the products of that quarter of the world, which till very lately, was seldom visited for any more legitimate article of produce than human flesh. The teak timber for the
purpose of ship-building, and mahogany are disco. veries within the last twenty years. The first importation of palm oil is within the recollection of per-
suns now 'alive, and when the slave trade was suns now 'alive, and when the slave trade was abolished in 1808, the quantity imported annunlly did not exceed one or two hundred tons. The anumal inportations now exceed twelve thousand tons 1

- I have lately been attempting to obtain other oils from the coast, and it was only yesterday 1 re. ccived from the hands of the oil presser the result of my most recent experiment on the ground nut, which I am happy to say is encouraging. I send you a sample of the oil extracted from them. They nre from the Gambia. [It is a pure golden coloured oil, with a pleasant flavour, free from the freyuent raucidity of olive oil.] I lately received from Caje Coast a quantity of the palm nut from which the palm oil is previously obtained, for the purpose of examining the kernels to see whether they would not yield an oil worth extracting; I send you a sample of the nuts, and one of the candles made from the styrine ohtained from them, but 1 do not think they have had fair play in the management.
' If I am blessed with health and life for a few years longer, I do not despair of increasing the numher and value of our African imports. It is the surest method of improving Africa and benefiting the mother country, and it becomes a British merchnit to carry his views sometimes beyond the bomilary of sordid gain.' [I trust these sentiments may be widely diffused among our colonial merehants.]

CHAPTER V._GAMBIA, CAPE COAST CASTLE, ACCRA, \&C.
I. St. Mary's Island (our principal settlement on the Gambia) lies close to the continent on the south side, running nearly east and west about fifteen miles, but of very inconsiderable breadth, and commanding the entrance to the river Gambia. The island is an uninterrupted flat, somewhat elevated, and covered with a thick brush of underwood, deno. ting the fertility of the soil. (Cattle can eross over at low water to Cape St. Mary's.)

Bathurst Town is built on the east side of the island, on a point which admits of a strong battery, being surrounded on nearly three sides by the tolerably deep and rapid river. The strata is a gravelly soil, consisting of the brown oxyd of iron strewn over a stratum of rock of the same composition ; the other parts of the island consist principally, of a rich, dark, loamy mould.

The river from which the settlement derives its name, empties itself into the ocean by a mouth about nine miles wide hetween Cape St. Mary on the south and the Bird's island on the north. It was formerly supposed to be a branch of the Niger, but this notion was refuted by Mr. Park. Its sources have never been explored by European travellers, but it has been ascertained to take its rise amongst the lofty range of mountains which form the eastern front of loota lalls. It communicates with the Senegal River by the Neriko, and is called by the natives River Ba Deema in the ujper country. Vessels of 300 tons
navigate it for sixty leagues, and amaller vessels as far as Barraconda, 250 leagues from the entrance; here the obstructions commence which render further navigation impossible. From December to June, which is the dry season, the flow of the tide is felt, but in the rainy season, from June to September, the strcam sets down so strong, that vessels cannot stem the current by ordinary means; though no doubt advantage might be taken of navigating by steam throughout the year.

Colonel Findlay, the late intelligent and hutane Governor of the Gambia, has justly observed to me that it is greatly to be lamented the British goverument have not yet surveyed the various large rivers and creeks which empty themselves into the Gambia; if this were accomplished, there can be no doubt but an extensive inland navigation would follow, whidi would increase the trade, by affording a more ready and friendly intercourse with the natives.

There are two channels into the Gambis, the northernmost of which has six or seven fathoms water, is six miles wide, and lies between the Bird's Island and the Banguion hank; the sinaller, on the other side of the bank and under Cape St. Mary, has about nine feet water. The river is at all times muddy, and is infested with crocodiles, and also inhabited by the hippopotamus. It abounds with fish of various kinds.
The population of this settlement I can only
show as rega was in 1823 ,

V．The administration at the Gambia is under a Civil Lieutenant－Governor，but no council has yet been established to assist him ；and the want of one has been repeatedly complained of by the settlers．
Return of Militia．－［B．B．1836．］Bathurst， 1 lieut．colonel； 2 majors； 6 captains； 4 first－lieute． nants ；\＆second－lieutenants．Staff， 1 adjutant； 1 quarter－master； 1 pay－master； 1 surgcon．Strength， 6 eolour－serjeants； 12 scrjennts； 18 corporals； 12 drummers；and 252 privates．
Fort Bullen， 1 captain； 1 lieutenant； 2 colour－ serjeants； 4 serjeants； 6 corporals； 4 drummers； and 84 privates．
Macauley＇s Island， 3 captains； 5 licutenants； 1 surgeon； 4 colour－serjeants； 8 serjeants； 12 corpo－ rals； 8 drummers； 168 privates．

There are several establishments on the Gambia belonging to Great Britain，as well as Bathurst． Macarthy＇s Island is up the river，more than 300 miles．Fort James is situated on an island ahout thirty miles up the river；it is only 200 yards long and 50 broad，and was，formerly，strongly fortified， hut the French，on capturing it in 1668，destroyed the works which have never been entirely restored． Opposite Fort James on the north bank is Jillifrec， in a healthy situation，and surrounded by a fertile district．On the south bank arc Vintain，Tancrowal， and Jouka Konda，the first two，the second twelve leagues from Fort James，and the last，considerably up the river．About a league above Fort James on the south side，the River Bittan flows into the Gam－ bia，and this is at all times navigable for large boats
to the villsge of that name, inhabited by African Portugues. The sovercignty of a tract of country (one mile inland from the beach between Burragadoo Creck and Junkarda Creek) was ceded to the King of Great Britain by treaty with the King and Chicfs of Barra, signed at Jllifiree, 1 ith June 1826, a small spot of 400 yards by 300 yards called Albredar, near James's Island, excepted. This tract is extremely valuable from its position on the left hank of the river Gambia, opposite St. James' and St. Mary's islands, giving us a control of the navigation of the stream from its entrance to James' Island.

The French have a factory called Albredar, about three miles below Jillifree, which they retain posses. sion of, in defiance of the treaty of 178.3 (contlrmed by the treaty of Paris), and despite the repeated remonstrances of the English Government. 'Ile following is the article of the treaty in question:"Art. X. 'The most Christian King, on his part, guarantees to the King of Great Britan the possessions of Fort James and of the River Gambia.' When Sencgaland Gorce fellintoour hands by conquest, during the last war, in 1809 , the commerce of the Gambia was carried on by the Einglish traders exclusively from Gorec. On the restoration of those places to the F'rench by the trenty of Paris, exclusive possession of the Cambia was reassured to us on the same tooting as by the trenty of 1783 , and our settlement at Cape St. Mary's was immediately formed for the protection of its trade. Shortly alterwarils the French, for the purpose of securing a footing in the river, dispatelied an agent from Goree to establish a trading post, or comptoir, as they call it, at Albredar, under pretence of their having formerly bad a comptoir at that place. Unfortunately this was not resisted ut the time by the English commandant, Col. Grant, for want of sufficient information on the nature of the treaties; and every attempt made since to dislodge them by fair meuns, has failed of success. It is but justice to our government to add, that the most persevering remonstrances have been addressed in vain to the lireneh government on this subject.

Akin to this conduct on the part of the French is their behaviour in respect to our right by treaty to carry on the gum trade with the Moors at Portindic. That right is solemnly guaranteed to us hy the treaty of 1783 (since contirmed by the treaty of Paris), in the following words of Art. XI. "As to the gum trade, the English shall have the right of carrying it on from the mouth of the river St. John, to the Bay and Fort of Pontindic inclusively : provided that they shall not form any permanent settlement of whatsoever nature in the said river St. John, upon the coast or in the Bay of Portindic,"

Nothing can be more elear and definite than this article of the treaty, which has been faithtully adhered to on our part; no permanent (nor even temporary) establishment having been formed by the English within the preseribed limits. But what has been the conduct of the French? 1)uring the gam trade of 1834 , under pretence of a war with the Trazar tribe of Moors, from whom we obtain our supply of gum at Portindic, they sent from Senegal n naval force, and seized our vessels trading there ; which, however, on the remonstrance of Lieutenantgovernor Rendall, they subsequently gave up, and it was supposed that the outrage would not be repeated. In this, however, the English traders have found themselves mistaken: the desire of the French at Senegal to monopolize the gum trade is not to be restrained by the faith of treaties.
'The most valuable part of our traflle is carried on high up the river, above Macartliy's Island, where no protection by government has yet been provided for the trade. This, by means of block houses, might be atforded at a small expense, which the value of the trade would amply repay. The immense extent of the River Gambin, and the thlckly populated and fertile country through which it has its course, will reuler it, ultimately, the most valuable of our posses. sions in that quarter of the world.
VI. Revenue and Expenditure of the Gambia. [B. 3.]

The trade of Western Africa is of considerable importance to this country, and yearly increasing.
VIII. The following shews the prices of different articles in the markets at the Gamhia, 1833:-Yellow bees' wax, 130l. per ton; African teak, 3l. 10s. per load; camwood, 12/. per ton; ivory, 3 s .6 d . per lb . Mahogany of various kinds at $4 l$. currency, or $3 l .9 s .4 d$. sterling (exchange dollar at $4 s .4 d$.) Ebony of very good quality grows abundantly in Salum River, and partially in Gambin. Dittach, a very hard and durable wood, stands well under water, and is used in the construction of vessels, wharfs, \&e. Toulacouna, or bitter oil, 3s. 6d. (currency) per gallon. Cotton, nominal or barter price, in the rough, $2 d$. per lb . Indigo, in the rough cake, $2 s$. Gid. eaeh. Hemp, made into ropes or cords, and sold at about $6 d$. each. Potash, about $5 d$. per lb. Honey, retailed in Mandingo country at $2 s .6 d$. per gallon. Butter, same price as honey. (N.B. The nativea preserve the butter by a process of melting, and retail it in the liquid state at $2 s .6 d$. per gallon). Cola nut, 3s. 9d. per 100. Cardamums, sold in barter among the natives, at about 10s. the 16., and brought from a distance in the interior by the gold merehants. Goat, calf, and bullocks' akins, dressed by the natives, but usually made into articles of use. (The natives dress these skins well by means of potash and banna seeds). Cayemue pepper of all kinds, in plenty. Beef, good, at $3 d$. (sterling) per lb. Fowls, 1 to $1 \frac{1}{2}$ dollar per dozen. Mutton, generally private property, seldom in market. Goats, 1 dollar to $1 \frac{1}{2}$ (with one or more kids).

Wines, claret, 5 dollars the case. 'Tea, 2 dollars the 1 l . 1)ried oysters (good). Eggs, 14 to 16 for quarter tollar.

In the settlement of Bathurst, St. Mary's, Gambia, there are about 20 wax manufactories. Country cloths, \&e., ure manufactured In town, the number of looms averaging from 50 to 60. About 12 goldsmiths have considerable employment in manuficturing rings, and trinkets of various kinds. Bricks are also manufactured by liberated Africans.

There are no boats employed in the fisherics, but a number of ennoes. The different surts of tish are as follow :-Mullet, value $1 d$. each; Soles, ed. tach; Baracuta, ls. 1 d . each; Boncta, ld. each ; Turbot, dso cach; Turtle, 10s. each; Snappers, $1 \frac{1}{2} d$. each; Skates, 5d. each; Ray, 2各d. each ; Captain Fish, 1s. 1d. cach: Cat Fish, ld. each; Craw Fish, Gid. each; Grouper, 1s. 1d. each; Prawns, 2d. per dozen; Mangrove and Rock Oysters, $7 \frac{1}{2} d$. per bushel; Muscles and Cochles, $7 \frac{1}{2} l$. jee bushel ; besides a variety of other fish knowa only by country names. There are also 39 vessels belonging to the port engaged in trade, and upwarls of 200 boats and canoes.

Mac Carthy's Island. - Country cloths are manufactured by small hand looms. There are varions kinds of fish eaught, but the names are unknown.

Return of the Produce, \& © of Gamliat, in $1 \times 36$. [B. B.] Bathurst, Isle of St. Mary, Gambia: Indian corn, 100 acres ; millet, three kinds, 5 s 0 acres; rice, three kinds, 250 acres; ground nuts, 100 acres; beans, 50 acres. ## CAPE COAS' CASTLE, ACCRA, \&c.

The British forts and stations on the Gold Coast are at Dix Cove, Secundee, Comenda, Cape Coust ('astle, Ammanboo, Tantum, Wimebah, and Accra; of these only $n$ few here require notice.
Dix Cove, is a lew miles to leeward of Cape Three points, affording only shelter to bonts of tifteen or twenty tons burthen, but yielding mach gold of a line guality.
Care Coast Castie (long the geat of the lritish goverument on the Gold Coast, and residence of the chief governor daring the sovereignty of the late African Company), stands upon a rock of gneis and mica slate, about twenty feet above the level of the sea, in latitude 5" $6^{\prime}$ north, longitude $1^{\circ} 10^{\prime}$ west.
It may be considered the centre capital between Sicria Leone and the Bights of Benin and Biatra; as also the great emporimm of trade for the introduction of British manu..." ur"s, and the obtaming gold dust, palm oil, and ivory.

The eastle is an irregular figure of four sides, with four bastions at each angle; the whoke monnting about eighty pieces of cannon. Two thiteds of the wails of the fortress are washed by the very heavy sca which invoriably runs along this line of coast, and it is well protected on the land side.
Within the eastle is an extensive line of spacious buildings, three stories high, ruming north and south, dividing the fort into nearly two equal parts, and containing the guvermment-house, \&e.; a nearly similar structure runs east, forming a triangular space of considerable extent.
The Capc, on which the castle stands, is an angular promoutury, bounded by the sea on the south and east sides, It was originally settled by the l'ortu. guese, but the Dutch dispossessed them in a few years, and took great pains to strengthen the fortifications. Admirnd Holmes captured it, and demolished the ctadel in 1661 , since which time it has remained in the possession of Great Britain, having been confirmed by the treaty of lireda. When the Duteh Admiral De Ruyter destroyed all the English factories along the coast in 1665 , this place withstood his utmost endsavours, although he attacked it with thir teen men of war. The Company, who obtained a charter in 1672 , subsequently added greatly to its strength by building some bastions, though the fort is considered to be too neur the town, and com. manded by some of the houses.
Cape Coast Castle was originally surrounded with wool, but a large tract of conntry has been now chared and remelered tit for cultivation.

The native towns on the sea cuast are generally built close to the walls of the limropean forts; the houses are principalty constructed of mud, and covered with Gininea grass, und so crowided together as to render it aimost impossible to pass through the spaces allotted for streets; ventilation is of course quite out of the question, and as the inhabitants nre filthy begond description, their villages are productive of much dlsease, not only to themselves, but to those Europeans who happen to reside near them.

To this description, Cupe Const Town is, however, an execption; strects are now *ormed, immense masses of tlth have been remuved, the surrounding hills buve been cteared of their luxuriant foliage, roads have been cut, aud the toul ensemble presents prospects of gratilying improve.nent.

Ahout itve miles north-west from Cape Const Custle is a small river, ronning in a southerly direc: tion, and empt ying itself into the sea within two miles of Eimina, forming the bundary between the Dutch and British possessions. The number of Linropent stations on the Gold Coast was at one time considerable. F'rom Appolonia to Accra, $n$ distance of 6.4 leagues, there were, in 180 N , of Duteh forts, 13, of Janish d, and of British 10; namely, Appolonia, Dix Cove, succondoe and Commenda, to westward of Cape Coast Castle, and Amnamaboe, T'antum Querry, Wiunchah, Acera, Irampran and Whydah, to leeward of Cape Coast Castle.

At a distance of about two miles to leeward (east ward) a chain of hills, forming tun irregular amphitheatre 160 feet above the level of the sen, commences and runs in a semicircolar direction approaching the castle at some places within a guarter of a mile, and It minating on the shore about a mile to windward. There are $n 0$ mountains within several miles of Cape Coast Castle, the highest land not being more than 200 lect above the sea; nor are there any plains of great extent ; clumps of hills, with their corresponding valleys, are however every where to be seen covered with a most luxuriant foliage throughout the year.

Amamobor, tell miles to eastward of Cape Coast Castle, is a good fortification, of a quadrangular torm, built on the extreme margin of the shore, the sea washing the foct of the southern boundary wall, and the town of Apnamaboe taking the form of a crescent, conbraces it. I'antum and Wimebah require no sepitrate raitice.

Acrena lies in $5^{0} 33^{\prime}$ morth latitude, and $0^{0} 5^{\prime}$ west longitude; there are thrce settlements there, Enclish,

Huteh, and bamish. The siew form semamd is picturespue, the homses white and regularly built, and in their rear a largeplain, studded with 'bush,' or groves of various folinge. As the voynger adrances towards the River Sucomo the prospect widens-and is fimally bounded by high lands, whose slopes yicld exeellent sheep pastiarge. The combtry nroumd is in genemat a fine, opers mad level land, with a samdy, red, and black soil or rich moukl.

Acern enries on a considerable trade with the Ashantees, who bring ivory, gold dust, horses, ke. to exelange for romals, silks, fobaces, and rum, ereatins a considerable extent of bosiness, for the Ashanters ne n shrewd and intelligent people, well acpuanted with the advantages of socint intercourse, and greatly suprerior to the fanters, and ofber watereside people. Inderd, it is a remakhble fact, that the people bearest the shore on the whole line of const, are more trenelserous, cownrdly, and unprincipled, than those of the interior: a striking pront how little the matives have hitherto benefitted by their interoumse with the civilized mations of bumome while slavery existed. But the natives, near the British forts, nee now receiving daily adsantage and improsement from the residene and example of batowans what are no bonger, as formerly, engaged in the slave trade. Mr. Iresident. Anclear, the present exedent governor of Capre Const Castle, has exerted humself with the mose praiseworthy zoal and ability to wem the natives from many of the bablamous costoms (that of haman sacritiees, on the death of their kimes ame elocis in partieular, which were fommerly sometimes performed within sight of the castle walls), in whel he has been comincotly shecessmb, and tor which he morite the thanks of every timol of homanity.

Mr. Suwell, who resided cighteon yeurs it Capo Coast Castle, nut who is now in lomblon, says that be considers the matives an the Guld Gast more remarkable for the hemanity than for their terocity. It is true that moder the intineme of religions tannticism they perpetate (ationgh mow but seldom) lammon sacrilies; hat during the eightern gears be resided on the ceast he sembly ever labal of a mar. der, or any other act of persomal violenee amongst the matioes, mad cortainly fower than amongst ma egual given inamber of the inhabitants of may mation in liarope.

James Fort, Acera, belongs to the English;-not quite a camon shot to leewavd lics the dismantled loutch fortiticatoon of Crevecour ; and nhoot two und a half moles distant from James lort is situated Christimbotg Castle, built on a promontory, nad the chicl settlement in Western Afriea blengeng to the Dames.

Cope Const Castle was ropheed buder the mamagement of the merehmes in Inas. The forts me governed by a I'resident nod Council, ncording to certain rules and regulations agreed upon with government. The business in bobdon is manuged by a committe of thre merchants, appointed by govern. ment, and ncoonntable to the socerctary of state for the due application of the limds, allowed for the maintemane and defence of the settlements, which is 3,50ut, per amum. With this small sum su moll are elothed, armed nud mantained for the defence of the castle; he forts kept in repair ; the President's smary, mid nll ontire expenses prowided for.

The estabishome for the support mot mantonane of Cope Const castle and Accra is-

The proceding charges are now redued to : 1 , solot. abd yot with this frithorg amont the foits are hept in a better state thm when ten times that sum was haid out on them by the colonial unt homites.

The min ndenatares nrising from these forts is the power which they emble us to exereise for the suppression of the slave trade, mad the security which they atherd to our commeres, which increases in pro. pertion to the total suppression of the tatie in human beings. Mr. Janes Swanay, nu oflier in the servio of the late Aficmin Compmis of Morelants, stated in his wevidene before $n$ Coninitter of the lhouse of Commons, ont the lith Jume, istid, that whei he sowed on the comst, from the yemr 17 s 9 10 17!9!, the gopertion of the slave trade, to the other trate of
 thale.

In the same (ommitter, Mr, Swany falon had res sibed to gems on the (Gold Const) whe athed the following yuestion:-of what matere is the aceme Hustabin which the Forts ndiond to trade? "Viry Ereat ; they open the commameat ien with the interior: they are the dopots loe goods; they protee the British subjeets residing neme them: by these meanst he trede is collected, day by das, and a collectum of Mree monthe is shipped in 2y hours, withont which no shipe comble protitatily trade to the Ciohb Const, as shae would otherwise be obliged to stay three mombles at cash point tocollect the same grantity of gemols. I wombl wish to mdel nlso, that these forts give an exchasise trade to a considerabhe extent to the British subjert." Mr. Swmazy was ashed whefher the legitimate trade of the (iold Const had inctensed, or diminished, stime the nbohtion of the slave trade (then only right gars
 Coast produces $t 00,000$ ounces of gold per ammu: during the slase tmbe bot more was colleded than Was sulterent for the eurrenty of the country, and think it maystill he merensed; it repures only exortion to merense it."

The late driten Committer, in a letter to the Lords of the l'rasury, comrectly remank that, "sethio ments on the coast of Arich are vahbable of two grounds, as conferring mi exclusive right of trate ufon the power jussensing them; and second, as the on!! modnem throngh which it can be safoly and atvantageously emrici om." It is a lamentable but cotmin fact, that Afrien lins hitherto ben sactition to our West Indin eotonies: her commeree has hern conlmed to n trme whids seomed to prechade all momasement in civilization: her cultivators hase heres sold to labour on lamels not their own, while all endenvours to promote cultivation, mul improvemat in agientare, have been diseouraged by the gonernment of this comitry, less her produets should intire fere with those of ont more fivoured colonies.

 very great in lioll, as we liml liah llamed, one of Barharossa's contains, shrpised mad pillace dihraltar. During the reign howeser, of (larles V, tho fintitications of the town wore mosemized, and from aditions mado by Banid spechel, the Emprores enpimere, it was thomght to be imprequahte.

While umber the (iovermment of spmin, Gibratme was al place "pon which divers hings of spain hat bestowed special privilages on mesome of its preselte ing the tirst point af atemek from the Msors in Hare bary. Among oblore privileges by Fordinamd $\mathbb{V}^{\circ}$. and Alonza Cl , it was dechated to la a place of refuge for all makefactors, lowing n satognave ame protertion pronter then not only while there, but a mosileme of a year eonferved the same privilege wsowhere. This poltection, hewever did mot extend to trason, to taking $n$ man's wife from him, of to hrahing a troaty made by the kigg; now dith the pootertion extend (1) those committing the nhove mentiomed erimes within the tervtury.
bittle firther is known of dibratar matid the yene 1701, when sur teorge Rowhe, who hat heen sont into the Meditermenth with 1 large thert to nssist Charles Areheluke of Anstrin in reowering the erown of spain, tinding nothing of impotance to be domes called it commed of war on the dith July, 1704, near

Tetuan, where, after several schemes were proposed (such as a second attack on Cadiz) and rejected, it was resolved to attempt the conquest of Gihraltar. On the 21st July, the tleet arrived in the bay; 1,800 English and Dutch were landed on the isthmus under the command of the E'rince of Hesse D'Armstadt; the governor was summoned to surrender, and on his refusal, a cannonade wns opened on the town by the ships, under the orders of Admirals Byng and Vanderdussen. In five or six hours the enemy were driven from their suns, especially from the New Molehead, which the admiral wishing to possess himself of, ordered Captain Whitaker, with the armed boats, ashore; Captains Hicks and Jum. per, however, first pushed ashore in their pinnaces, upon which the Spaniards blew up the fortifications, killing two licutenants and forty men, and wounding sixty. Notwithstanding this slaughter, the British kept possession of their ground, and being now joined hy Captain Whitaker, advanced and took possession of a small hastion, half way between the mole and the town. The Governor being again summoned, thought it prudent to capitulate, for although the works were strong, mounting 100 picces of cannon, well appointed with ammunition and stores, yet the garrison consisted of but 150 men , exclusive of the inhabitants; hostages were therefore exchanged, and on the ? 4 th July, 1704, the Prince of Hesse took possession of the gates of Gibraltar, after a loss on the side of the British,-killel, two lientenants, one master, and fifty seven sailors; and in woundel, one captain, seven lieutenants, one boatswain, and 207 sailors.

Gibraltar has ever since continued in the hands of the English ; not, however, without frequent attempts of their enemies to wrest it from them. For the sieges, \&c. see [Colonial Library, vol. vii.].
Until our occupation of Gibraltar, the following were the principal rulers :-1309-10, Ferdinand IV., King of Castile, took Gibraltar from the Moors, and lived here a short time. The place not of much importance before this time; 1331, Don Vaseo Perez de Meyra was Governor; 1333, Abomelic, son of the Emperor of Fez, took Gibraltar, and added it to his royal titles ; 1349-50, Alhuhacen, son of Albuhacen (of Fez) was in possession of Gibraltar; 14:7, Gib. raltar was under the usurper and tyrant Mahomet, called the little; 146:2, Don Juan de Guzman, first 1)uke of the House of Medina Sidonia, took Gibraltar from the Moors, and Henry IV. of Castile took the title of King of Gihraltar, as Abomelic had done before in 1333; 1462, Pedro de Porras was made Governor by Henry, afterwards Don Bertrand del Cueva. The duke of Medina recove it, and it was added to his titles; 1502, Gibraltar was united to the crown of Ferdinand and Isabella, and had Spanish governors till 1704; 1704, Marquis de Salinas, the Sjanish governor.

Since the British conquest, the following is the succession of governors, commandants, \&c. of the fortress of Gibraltar, from 1704 to the year 18.35 :Prince of Hesse, 170.4 ; Major-gen. Ramos, Gov., 1705 ; Col Elliott, 1706; Gen Stanwix, 1711; Colonel Congreve, 1713; Col. Cotton 1716 ; Major Battereau, 1718; Major Hetherington, 1719; Col. Kane, 1720 ; Lord Portmore, 1721 ; Colonel Hargrave, Commanding, 1722; Gencral Clayton, 1728, General Sabine, Governor, 1730; Gen. Columbine, 1739 ; General Clayton, Governor, General Hargrave, Commanding, 1739; General Bland, 1748 ; Lord George Benuclere, 1751; Colonel Herbert, 1752; General

Braddock, 1751; General Fowkes, Governor, 1751 ; Lord Tyrawley, 1756 ; Earl of Panmure, Command. 1757 : Lord Ilome, Governor, 1758 ; Colonel Tovey, 1761; General Parslow, 1761 ; General Cornwallis, 1762; General Irwine, 1766; General Cornwallis, 1767; General Boyd, Licut.-gov. 1769; General Cornwallis, 1769 ; General Elliott, Governor, 1777; General O'Ilira, Commanding, 1787; Sir Robert Boyd, Governor, 1791 ; General Rainsford, Commanding, 179.4; General O'Hara, Governor, 1793 ; General Barnett, Commanding, 1802; Duke of kent, Governor, 1802; Sir T. Trigge, Licut.egov, 1803 ; Ges. Fox, Licut.-gov. 1805; General Drummont, Command. 1806; Sir Hew Dalrymple, Command. 1806; General Drummond, Command. 183s; Sir J. Cradock, Command. 1809 ; General Campbell, Licut.gov. 1810; Gencral Smith, Command. 1814; Gen. Sir G. Don, Lieut.-gov. 1814; Earl of Chatham, Governor, 1820 ; Gen. Sir G. Don, Lient.-gov, $1 \times 25$; Lieut.-gen. Sir W. Houston, Lieut.-gov. 1831 ; Ma. jor-gen, Sir Alexander Woodford, Lieut.-gov. $1 \times 35$.
III. Gibraltar mountain or promontory (forming with that of Ceuta upon the opposite coast of Barbary, the narrow chamel which connects the Atlantic Ocean with the Mediterranean) is of an oblong form, in a direction from north to south two miles and three-quarters, a breadth no where exceeding three-quarters of a mile, and with a circumference of about seven miles. The grentest length of the peninsula, from Forbes's harrier to the flag-staff of Euroja, is 4,700 yards; the brealth, from the New Mole to the sea, at the back of the Rock, 1,600 yards; from Europa Point, in the south of Gibraltar to Cabrita Point, on the Spanish side, (which two points form the mouth of the bay) 10,945 yards. The area of Gibraltar and the adjacent neutral is thus stated:Neutral ground (including gardens, meadow and arable ground), 106 acres; North Glacis, three and a half acres; Convent grounds, two and a quarter: South Glacis, seven; Alamida and grounds to south barracks, thirty-three and three-quarters; back of south barracks to upper boundary of Commissioners' garden, eight; gardens belind the naval officer's quarters, as high as cultivation extends, twelve and three-quarters; north ditch, about one-quarter; south ditto, one-quarter; farms up the hill, ten; Government grounds below Europa flats, three and a quarter; parterres and gardens attached to houses within the town of Gibraltar, 10 : total, 197 acres, The summit is a sharp, craggy ridge, running from north to south, the greatest clevation being to the southward, where sugar Loaf Point rises to $1,43 y$ feet ahove the sea level; Roek Mortar, the lighest point to the northward, is 1,350 feet, and Signal House, the central point between the two, has an elevation of 1,276 feet.

The promontory is unequally divided by the above mentioned ridge, the side next to the Mediterranean being narrower and much steeper than that next the bay, on which stands the town and fortifications. The west side of the mountain is a series of rugged slopes, interspersed with ahrupt precipices; the east mostly consists of a range of precipices, but a bank of sand, rising from the Mediterrancan in a rapid acclivity, covers one-third of its perpendicular height; the southern extremity of the promontory falls in a rapid slope from the Sugar Loaf summit into a rocky flat called Windmill Hill, forming half an oval, and bounded by a range of preeipices, at the southern base of which a second rocky flat takes place similar in form and extent to Wiudmill Hill, and also like
it surroun terminatio called Eurc tar is conn perpendicu where wha narrow pass Hat, sandy height of wl exceed ten yards; abou and near th from the ol shape of thi the west anc irregular, th the Spanish Bay sides, so at eight to te Gibraltar mountain, is in breadth up between 30 to the fortress al vol. vii.]

ided by the above he Mediterranean than that next the and fortifications. series of rugged ecipices; the rast ices, but a bnuk of n in a rapid acclirendieular height; montory falls in a mmit into a rocky half an oval, and , at the southern takes place similar Hill, and niso like
it surrounded by a precipice, the extreme southern termination of which is waslied by the sea and called Europa Point. The northern point of Gibraltar is connected with the main land and is perfectly perpendicular, except towards the nortls - west, where what are called the lines intervenc, and a narrow passage of tlat ground that leads to the low, Hat, sandy isthmus, or neutral ground, the greatest height of which above the level of the sea, does nut exceed ten feet; its breadth near Gibraltar, 950 yards; about midway to the garrison, 1,200 yards; and near the Spanish Lines, (which are 1,650 yards from the outworks of Gibraltar) 1,750 yards. The shape of this istlimus, which has Gibraltar Bay on the west and the Mediterrancan Sea on the east, is irregular, the sand extending considerably beyond the Spanish Lines, both on the Mediterranean and Bay sides, so that its circumference may be estimated at eight to ten miles.

Gibraltar Bay, situate on the west side of the mountain, is nearly eight miles and a haif long, and in breadth upwards of five; the circumference being between 30 to 40 miles. [A minute descrijtion ol the fortress and adjacent coast, in Colonial Library, vol. vii.]

In 1783, the total number of guns serviceable in the garrison, consisted of 663 pieces of artillery, as follows:-

Cannon.-Thirty-two pounders, 77; 24 and 26 ditto, $149 ; 18$ ditto, $113 ; 12$ ditto, $74 ; 9$ ditto, 16 ; 6 ditto, 31 ; 4 and 3 ditto, 61 . Total, 521.
Morturs,-Thirteen ineh, 29 ; 10 ditto, 3 ; 8 ditto, $13 ; 5$ and 4 ditto, 65. Total, 110.
Howitzers.-Ten inch, $19 ; 8$ ditto, $9 ; 5 \frac{1}{2}$ ditto, 4. Total, 32. Grand total, 663.
There are now more than 1,000 guns mounted
The streets of Gibraltar, which were formerly in a most deplorable state, are now well paved, lighted, and cleansed, and extensive improvements are daily going on. Many of the narrow streets have been widened, several alleys entirely removed, and free ventilation promoted by all possible means.
IV. Gibraltar (according to Major Imrie and Dr. Hennen) is composed chietly of a rock of grey, dense primary marble, the beds or stras of whieh are of various thickness, from 20 to upwards of 40 fcet, dipping from east to west at an angle of nearly 35 degrees. [Sce vol. vii. Colonial Labrary.]
V. The Andalusian atmosphere has long been celebrated for its salubrity, and with some excep. tions, of late years the climate of Gibraltar is decidedly healthy, except for hard drinkers and phleg. matic constitutions. The temperature is decidedly Warm, the hottest months being June, July, August, and September; and the coldest December, January, and February. Snow rarely falls, and ice is seen no thicker than a dollar; and the mercury ranges from $85^{0}$ in July, to $50^{\circ}$ in January: but the winds and the rain affect more acutely the animal frame than the solar heat. From 1816 to 1827, the greatest beight of the barometer was $30^{\circ} 90-100$-the lowest $28^{9} 62-100$. Hail occasionally falls with much violence, and is generally accompanied by a thunderstorm, not unfrequently preceded by brilliant lightning, corruscations and falling stars, and other meteoric phenomena are observable. In 175\%, a fire-ball shot over the rock with prodigious swiftness, in a direction from W. to E., and after the space of a minute and a-half, exploded with a very loud report. lna period of ten years, from 1816 to $\mathbf{1 8 2 5}$, the number of rainy days in each month was-January, 91 ;

February, 71; March, 62; April, 101; May, 61; June, 18; July, 4; August, 9; September, 29 ; Oetober, 57; November, 95; December, 88. 'Tutal, $6 \times 6$.

But although the greatest number of rainy lays is shewn to have been in April, the quantity of rain falling is greatest in Janunry. The heaviest rains are accompanied with south-east winds, those from the south of east being raw, black, and bleak, and termed a " genuine Levanter," dislodging numerous masses of rock, which roll down the hill with prodigious violence.

Winds are divided into east and west; the duration of each may he seen by the following meteorological records from the books of the principal medical officer's office:-

## Winds from 1810 to 1815.

In 1810, wind E. 164 days; W. 194 days; Var. 7 days.

| 1811, | $\cdot$ | 198 | $\cdot$ | 160 | $\cdot$ |
| :--- | :--- | :--- | :--- | :--- | :--- |
| 1812, | $\cdot$ | 159 | $\cdot$ | 189 | $\cdot$ |
| 1813, | $\cdot$ | 233 | $\cdot$ | 114 | $\cdot$ |
| 1814, | $\cdot$ | 219 | $\cdot$ | 133 | $\cdot$ |
| 1815, | $\cdot$ | 200 | $\cdot$ | 161 | $\cdot$ |

The casterly winds are most prevalent in July, Angust, and September, and westerly in December, January, and May. It is probable, from the observations of Ayala, Mr. Carter, and others, that the easterly winds prevailed formerly more extensively than at present, and that Gibraltar, like other places, has experienced a great change of climate ; how far the latter and the rains affect the health of the troops in this important garrison, is a point of the utmost importance.

Memoranda relative to mortality from yellow fever at Gibraltar in five years in which it has appeared, since 1804 inclusive.
1804.-Military (including officers), 869; civilians, 4,86.1. Total, 5,733.
1810.-Military, 6 ; civilians, 17. Total, 23.
1813.-Military, 391 ; civilians, 508. Total, 889.
1814.-Military, 114 ; civilinns, 132. Total, 246.

Greatest number of deaths in September; disease began to decline from 6th October; no admissions or deaths nfter the 20th November.
1828.-Military, 507; civilians, 1,170. Tutal, 1677. Greatest number of deaths on the 16th October; disease began to decline about the middle of November ; last death on the 14th January, 1829

For many interesting points relative to the yellow fever of Gibraltar, see article Yellow Fever, by Dr. Gilkrest (to whom 1 am indebted for the preceding facts), in the Cyclopredia of Practical Medicine; and my " Colonial Library."

This table of the discases from which the greatest mortality usually arises, shews the occurrences among the troops at Gibraltar, during four ordinary (i.e. not epidemic) years.

| Diseases. |  |  |  |  |  |  |  |  |

Occurrences in regard to discases, \&c., in a reyiment stationed for nine years at Gihraltar:-Arrived in the garrison, November, 1823, strength being 533; reinforcements within the periol, 329 ; invalided or sent to England for the recovery of health, 69 ; average strength annually, 507; average deaths annually, $57-10$ ths.

Deaths in nine ordinary (i, e, not epidemic) years, in the regiment referred to :-Fevers (remittent), 3 ; ditto (continued), 9 ; inflammation of the lungs, 3 ; inflammation of the bowels, 2 ; liver complaints, 3 ; phthisis, 21 ; dysentery, 6 ; other diseases and accidents, 10 ; total in nine years, 57.
VI. The earliest census I have been enabled to ohtain is thus given by Colonel James. A list of constant inhabitants, taken March 20th, 1753 :-

Those of Great Britain. Number of men, women, brys, and girls, 331 ; Navy and Vistualling Office, 83; Genoa, 597; Spain, 18.5; Porugal, 25; Jews, 572 ; total, 1,793.

The next census was taken the 28th September, 1754:-

Roman Catholics :-men, 250 ; women, 112 ; boys, 135; girls, 295. Jews, 604 ; British, I have not heard there was any aceount taken; suppose the same as in the year 1753, 414 ; total, 1810 .

The total number of military supposing the four regiments complete, 2,800 ; Artillery, 107 ; Officers, military and civil, to complete the four regiments, 182; number of women, military, and children, 1,426 ; total number of Britons, civil, 414 ; military, 4,452 ; total, 4,866.

The number of Catholies short of the Protestants, 4,074 ; the number of souls of all sects in the garrison, 6,260.

The resident aliens are composed of the following nations:-

| Nation. | Males. |  | Females. |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |
| British Subjects | 402 | 33 | 406 | 33 | 874 |

ing, with a hood and sleeves for wet weather; loose cotton drawers, open at the knees, the legs bare, the feet in clumsy slippers, nud skull-cap of greasy wollen ; this garl is frequently worn night and day until it drops to pieces. Provisions, such as beef, mutton, lainb, \&c , procured from Spain or Barbary, are good, but rather high priced; fish is plentiful, but the chief dish of the lower orders is called gespacho, and is composed of water, vinegar, oil, capsicums, garlic, and salt, into which bread is bruken : all the family sit round the howl, each person helping himself with a wooden spoon. The usual beverage is Spanish wine, from Malaga and Catalonia.
VII. Churches, Livings, \&c., of Gibraltar in 1836. [B. B.] Gibraltar - 1,414 Protestant population: value of living, $300 l$. per annum and $100 l$. allowed for house 1.nt ; church situate on the Line Wall; will contain 1,048 persons; number of persons generally attending, from 900 to 1,000 at 11 o'clock and less than hall that number at six o'clock; chapel situate at the convent, and will contain about 300 . The chapel is at present closed. Dissenting places of Worship—one Wesleyan Methodist chapel, and four Jewish synagogues.

One Roman Catholic Church, called St. Mary the Crowned, at Gibraltar; Catholic population by the late census, 11,900 ; value of living, $100 l$. per annum lrom goverimment and 200l. from funds of the church arising from fees on baptisms, \&c.; the church is situated in the main street of Gibraltar, and, when completely full, will contain 2,500 persons; number
of persons genernlly attending, about 10,000. There is no chapel properly so called. For the accommoda. tion of the troops and inhabitants of the South District, a room is rented in which divine service is performed. This roon will with ditficulty contnin about 70. As will be acen from the foregoing return, the church is quite inadequate to contain the whole congregation at one time. Service is therefore performed several times in the course of the day, by which means the inconvenience is in a great measure though not wholly got over.

A spacious lrotestant church has been erected within the last few years, and a Protestant chapel, in the building called the Convent, the residence of the Governor or Lieutenant Governor ; also a Roman Catholic Church within the walls of the town, and a small Roman Catholic Chapel in the district called "The South;" the clergymen being generally Genoese. There are four Jewish synagogues.
VIII. Of puhlic schools there is one smnll garrison school, nod also regimental schools in each of the corps stationed in the fortress; the numbers attending being 176 males, and 138 females; total, 314. A school for children of different persuasions; the number in 1835 being about 1,200 .

The public library at Gibraltar is one of the finest in Europe; the patriotic Colonel Drinkwater may be considered its founder, in 1793. The medical library, as also thint founded by the inerchants, are of more recent origin.

Schools, \&e. of Gibraltar in 1836. [B. B.]

*The house is granted by Government for the purposes of the school. There are also cight private schools in Gibraltar.
$\dagger$ This school was instituted on the 1st January, 1836, with a view to combine with religious instruction and general education a diffusion of the knowledge of the English language among a very large class of the population heretofore unacquainted with it. For this purpose, it was necessary to provide masters from England, which, with the expense necessarily attendant on the formation of a new establishment, occasioned an outlay greatly exceeding the sum mentioned in the foregoing return. These expenses, as well as the current ones of the school, were defrayed by an extraordinary voluntary collection.
$\pm$ The several regimental schools provided for according to his Majesty's regulations, are under the inspection of the chaplain of the forces.

X. The chicf administration lies in the Governor, who is of course the commander-in-chief of the troops; and the settlement is treated as a garrison town. The laws of England are generally applied at Gibraltar, and the Charter of Justice of 1830 provides that the courts shall administer the law as nearly as may be according to the practice of Westminster Hall.
Mlitary Establishment of Gibrattar.-Major-general, aide-de-camp, colonel of engincers, assistant military secretary, town major, town adjutant, garrison quarter-master, garrison chaplain, provost marshal; 1 company of sappers and miners, 5 companies of royal artillery; 5 regiments of the line at present, bu ${ }^{\dagger}$ subject to variation. Six is the regular peace estahlishment at the present strength of regiments.

The following table shows the military strength of the garrison for eighteen years.
Relurn of the Numbers and Distribution of the Effective
Force, Officers, Nou-commissioned Ofticers, alid Rank and
File of the Britinll Army at Gibraltar, in each year silice 1815, including Artlilery and Engineers.

* Exclusive of two regiments detached to Lisbon, and including one from Malta.

X1. The Revenuc of Gibraltar is raised by means of the following taxes:

Wharfuge Toll.-On all wines and spirits, strong waters or cordials, landed or introduced into the garrison, per butt, $4 s .4 d$. : one moiety of which to be remitted as drawback on re-exportation. On all tobacco landed or introduced into the garrison, $4 \frac{1}{2} d$. per cwt. or per hogshead, $4 s .4 d$. ; one moicty of which to be remitted as drawback on re-exportation. In case of dispute as to weight, to be weighed at the expense of the merchant.
Duties on Wines.-On all wines consumed in taverns, wine houses, canteens or other public houses, per gallon, $4\left(l\right.$. ; gauging do. do. $0 \frac{1}{4} d$. ; total per gallon, 4 d $l$.

Spirits, Strong Wuters and Cordials, intended for consumption in the Garrisun.-For every gallon of such spirits, strong waters or cordials, of any strength not exceeding the strength of proof by Sykes's Hydrometer, and so in proportion for any greater strength than the strength of proof, and for any greater or less quantity than a gallon, $2 s .2 d$.; gauging fee per gallon, $0 \frac{1}{2} d$.; total per galion, $2 s .2 \frac{1}{2} d$. A proportion of six gallons of spirits to each pipe of wine is allowed free of duty for the purpose of infusion, under the superintendence of an officer belonging to the revenue department.

Storage on $H$ ines and Spirits.—On every batasso or large hutt, 5 rs . or 1 s .10 d .; on every pipe, 4 rs . or $1 s .5 \frac{1}{4} d$. ; do. hogshead, 2 rs. or $8 \frac{3}{3} 4$; do. quarter cask, 1 r. or $4 \frac{1}{4} l$., do. 18 gallon barrel, 10 qts. or 23 as. ; do. Demijohn, 10 qta. or 2 e3d.; do. hamper containing 54 bottles, 2 rs . or $8 \frac{3}{3} d$; do. case containing 12 do. 8 qts. or $2 \frac{1}{4} l l$; do. do. 72 do. 2 rs . or 8 ? ${ }^{2}$ d.
Auction Pees.-On all goods sold by auction, allow. ing $\frac{1}{2}$ per cent. to the auctioner, $2 \frac{1}{2}$ per cellt.

Weighing Fees.-On all spices per cwt. 4 dd; oil and other fine merchandize per do. $2{ }_{3}^{3} d$. ; cuarse goods per cwt. 1d.; grain, and articles of measurement per fanega, $0 \frac{1}{2} d$.

Duties and Fees on Licenses and other Potice Matters. -Fees on Documents relating to Crown property and issued from the Croun Land Office.-Origiual grant of ground under seal on paper, $6 l$. 18s. $8 d$ l; ; transfer or partition or confirmation of ditto, $3 l$. $9 s$. ll. ; ap. proval of a deed of mortgage, $3 l .9 \mathrm{~s} .4 \mathrm{~d}$. ; new lease, fil. 18s. 8 d.

narics, 37,294l.; commissariat pay, 1,568l.; advances $6940 l$. ; consignments of specie, $20,841 l$.; hospital supplies, 465l.; total, 114,864l.
XII. The trade of Gibraltar has been of the utmost value to England during her wars, and it is still of considerable importance. Shortly after its capture in 1704, the settlement was wisely made a free port by Queen Anne, and it soon became a most villuable entrepot for the distribution of British manufactures to the Barbary states, and to the different countries bordering on the Mediterranean. Progressively increasing, Gibraltar became at length the centre of commerce, which, considering the number of inhabitants, was perhaps without its equal in the world. An idea of the extent to which it was carried may be judged from the fact, that in one year the value of British manufactured goods imported into Gibraltar direct from England, and exclusive of colonial produce, was nearly $3,000,000 l$. sterling I And during the last war, it is important to add, that Gibraltar was the most abundant and never-failing source for the supply of the British army with cash. Various circumstances have occurred to diminish the trade of Gibraltar ; among the most prominent are the creation of a free port at Cadiz, the establishment of manufactories in the castern parts of Spain, and the various royal orders of the Spanish Govermment, which place Gibraltar almost in a state of commercial non-intercourse with Spain, under the plea of preventing smuggling into the provinces noljacent to the fortress. Gibraltar affiords indeed a good illustration of the value of our transmarine possessions; for at first sight " the Rock" might be considered a useless appanage of the British Crown. It has no soil on which the enterprising emigrant may settle and by prosperity consume double or treble his herctofore supply of English manufactures (such as our N. American and Australasian colonies) ; and it possesses no tropical products (such as the E. and W. Indies), but by its commanding position it gives security to the whole of our trade with the Mediterranean and adjacent coasts of Spain and Africa equal to what twenty ships of war could afford; and it is the entrepot of a trade in itself valued at more than a million sterling
a-year, and employing annually nearly half a millim tons of shipping inwards and outwards. In 18:30, the value of produce of the United Kinglom imported was $988,234 t$., and of Colonial produce $129,3 \times 1 t$; total, $1,117,61 \%$.

The following table will convey some idea of the trade of the port as a depot for the sale of British manulactures:

Cotton and Woollen Goods, \&c. exported from the United Kingdom to Gibraltar, 1820 to 1831.

XIV. Gibraltar is not the barren rock that has been supposed; Colunel James mentions the names of 310 dififerent trees and plants growing on the promontory. Several kinds of fruits are cultivated, and the vine and fig flourish in exuberance; after rains vegetation is richly luxuriant. The olive, almond, orange, lemon, and indeed every tree planted in a proper spot, thrive on Gibraltar ; in the naval garden in the south are some noble date trees; the priekly pear runs wild, the aloe nbounds, and the palmetto was formerly plentiful. Geraniums of almost every species grow in the utmost profusion, and a great variety of wild and uneultivated plants and herbs are found in every part of the mountain. Among the native fruits brought to market are seven or eight kinds of grapes, figs, oranges, lemons, pomegranates, almonds, apples, peaches, plums, apricots, (vulgo "Kill Johns") cherries, strawberries, \&c., and potatoes, eabbages, onions, cucumbers, artichokes, tomatas, peas, kidney beans, spinage, lettuces, radishes, \&c. \&c., are produced in abundance. During the latter part of the last sicge, the quantity of vegetables grown was sulficient for the supply of the garrison, and the quantity of garden ground is now augmented. Different kinds of fishes are brought to market, in former times the bay was so celebrated for its fishing of tunny and salmonettas that coins were struck in which these fish are represented. [See Colonial Library for a specific description of all the fish usually taken.]

Mantfactures, \&C. [1313. 1 1 3 36]. -The garrison is indehted to Messrs. Duguid and Co., for the erection of a steam mill, for grinding whent, sutficient for the consumption of the troops and inlabitants.
"The engine is of 1.1 horse power, on the latest and most approved priuciples, it is caleulated to work 6 pair of stones of 4 feet diameter, and can with ease deliver ground, cleaned and dressed from 35 to 40 quarters of wheat in 24 hours; mure might be produced in cases of emergency, but the quantity mentioned exceeds what the persons coneerned in the mill expect to sell for the supply of the place, to which their attention is alnost entirely confined.
The soft wheat hitherto ground by the mill, has been the produce of the Baltic ports, Weismar and Danzig, and this elass is preferred by the military and British inhabitants. The hard wheat, ground, has been the produce of Tagauroc, Volo, Sieily and Moroceo, and this class is much preterred hy the Italians, Spaniards, Hebrews, and must of the foreign inhabitants. The labour and consequent expense is considerably more in grinding the hard wheat than the soft. The prices at which the mill flour has been sold, sinee the commenerment of the establishment have varied from 5 to 65 dol. per barrel of 196 lbs . net weight, wholesale and retail ; the mill not selling a smaller quantity than 14 llss. United States flour could not now be imported of a quality equal to that made at the mill to sell under $10 \frac{1}{2}$ dol. to 12 per barrel, the last year however has been one of great scarcity in that country, but I may say for many years past, flour could not be imported to sell under $7 \frac{1}{2}$ to 8 dol. in Gibraltar. The quality of the mill flour depends of course upon the quality of the wheat, as it is now perfeetly demonstrated, that the machinery works admirably, and experience is daily benefitting this quite original untertaking in Gibraltar, from the cleaning and separating the grain to the final dressing of the flour ; the pastry cooks and bakers, consider, and pronounce its quality to be quite unexceptionable, and as the supply is constant of freslo ground, and at mexampled moderate prices, the proprietors flatter thensches, the enterprize will prove a great public bencfit, without their being individual sufferers. It is not undeserving of remark that the henefit is fully verified to the garrison by the ample supply of bran, for the cattle, which formerly was entirely imported trom Spain, and is now as part of the produce of the mitl, abundant, at less than half its former price.

## CHAPTER II.-MALTA AND GOZO.

I. Nalla, and its adjacent island of Gozo, are situ. ate between Sicily and the Atrican const, in the mouth of the great bay formed by Cape Bon and Cape Razat, in the parallel of (i. r. Valettn, the capital) 35.54. north, and the moridian of 14.34. cast, the most southerly island in Europe.
II. This island was known eighteen hundred years ngo under the name of Nelite or Melita, Pliny and Strabo both mentioning it under this denowinatien, and there is no doubt that Melita, aud $n^{\prime} t$ an islet on the lllyrian shore of the Adrintic, was the site of St. Paul's shipwreck. It appears to have been at one period a Carthaginian colony, when this singular people held such powerful sway in the Mediterranean; but whether it was the island mentioned under the appellation of Hyperia (by llomer in the Olyssey) and Ogygin, is doubtful.

The Phonicians landed, it is said, on Malta about 1519 years before Christ, and the navigation of the Mediterranean belonging at this period to that commereial people, they forined a colony there which soon rose in trade and wealth. Whether Malta was imhabited previous to the landing of the Phoblicians is doubtful; according to the fabulous history, it was originally tenanted by the Pheacians (qu. Pheenicians), a race of giants. After being in possession of the island for upwards of seven centuries, the Greeks, 736 years B. c. drove out the l'hcenicians settled on the island, and called it Melitas.

Both the Phœenicians and the Greeks, while in the possession of Malta, erected extensive buildings, and struck different coins, "he relics of some of which are still extant.

About 528 years b. c the Carthaginians disputed the dominion of Malta or Melita with the Greeks, and it was for some time divided between these two powerful nations; the latter were, however, finally compelled to abandon the island to the Carthaginians, under whose sway it grew into such magnitude and wealth as to excite the cupidity and enter. prize of the Romans in the first Punic war, where it was plundered by Attilius Regnlus, and scized upon by Cornclius. The Romans, however, were soon expelled from the island, and only recovered it after the naval victory gained by C. Lutatius Catulus, 242 years B. c., when a peace was granted to the Carthaginians on the hard condition of their giving up to the Romans all the islands in their possession between Africa and Italy. The Romans werejustly proud of their acqusition of Melita; they took every precaution to gain
the attachment of the resident Greck nud mixed population, permitted them the comtinuation of their ancient customs, and made it a mmicipium, nllowing the inhabitanta to he governed by their own laws, mader a pro-protor dependent on the praturship of Sicily.

The commerce and manufactures of the island were sedulously encouraged ; the cotton and linen cloths of Melita were so famed for their tineness and the skill with which they were prepared, as to be regarded at Rome as an article of luxury. Great attention was paid toimproving and beautifying the settlement, and the inerchants nad the sailors were then wont to repair to the temples to offer incense to the protecting gods of the island and its trade. On the diviston of the Roman empire, the island of Malta tell to Constantue, but the fends of religious dissensions oceu. pying all parties, the Romans in their colonics, as well as at home, felt the desolating inroads of barbarism. The Vandals seized upon Sicily in 4.14 A. $1 .$, and next took possession of Malta, whence they were driven ten years atter by the Goths. Under the Goths and Vaindals the cominerce of Malta perished; it was, however, partially revived under the reign of Justinian, who sent Belisarius to wrest Africa from the Vandals. Belisarius landed in Malta A. n, 553 , and remited it to the remnant of the empre, but not being allowed the immunities previously granted by its former masters, the island never entirely recovered its ancient splenclour.

Malta became now a prey to feude and dissensions, and for three centuries from the reign of Justinian we are ignorant of the events which mark its history. About the year 870 A . D. the inhabitants called in the Arabs, hut they were driven out the same year hy the bravery of the Greeks, who from thenee remained undisturbed masters for 34 years; but the Arabs again descended in great force, exterminated the Grecks, sold their wives and children for slaves, and established a government, dependent upon the Emir of Sicily. The name of Melitas was then by the Arabs corrupted into that of Malta. To supply the deficiency of taxes which the Arabs would not levy on the Maltese, the former fitted out piratical cruisers, fortified the city of Notabile, built a fortress on the site of the present castle of St. Angelo, and eariched Malta with the plunder acquired on the sea. The Arabs, in their turn, were also driven out of Malta by the Normans, A. D. 1090 , under Count Roger, who established the popular council, which
was compos elected. TV Germans, or stance, heire Rimperor Fr into a count totally ruine mained solel Malta rein rors of Gern Louis IX., F Sicily, made change of so affair of the ful to the $F$ King of Arra the supremac in title of fief servant of the

To supply the is would not levy out piratical cruibuilt a fortress on . Angelo, sand en uited on the sea. Iso driven out of 90, under Count ar council, which
whs enmposed of clergy, nobles, and people freely elected. The island was afterwards given up to the Germans, on account of the marriage between Constance, heiress of Sicily, and Henry VI., son of the Fimperor Frederick Barbnrossa. Malta was erected into a county and marquisate, but lts trade wns now totally ruined, and for a considerable period it remained solely a fortified garrison.
Malta remained for 72 years subject to the emperors of Germany ; and Charles of Anjou, brother of louis IX., King of France, on becoming King of Sicily, made himself master of the island. On the change of sovereigns in Sicily, after the well known gffair of the Sicilian vespers, Malta contisued faith. ful to the French, but was soon conquered by the King of Arragon, who, as well as (his successors in the supremacy in 1414) the Kings of Castile, ceded it in title of flef to some favourite of the monarch or servant of the crown.
The Maltese at this time beheld themselves twice mortgnged for sums lent to their princes; they, therefore, always jealous of their liberty, made a noble effort to retrieve themselves from this thruldom, by twice paying 30,000 florins of gold (a large sum in those days), for which the island was pawned. King Alphonzo, therefore, A. n. 1428, declared and promised that in future Malta and Gozo should never be separated from the kingdom of Sicily. Alphonzo permitted, also, the inhabitants, in case of a breach of promise, to oppose him by force, without such conduct being deemed rebellious.

Charles V., with a view towards commanding the Mediterrancan, and to secure the coast of Sicily, became master of Malta; and aware of its great advantages, and that he might be saved the expense of its garrisen, while at the same time he might prevent his European enemies from making a descent on the possession, located the order of St. John of Jerusalem at Maiu, who heing driven from their principal place of residnace, Rhodes, were glad to accept the aid of a powerful prince, who in 1530 A. D., granted Malta, Gozo and the city of Tripoli, in perpetual sovereignty to the knights.
For a history of the Kinights of St. John and of Malta, during their occupation of the island from 1330 to 1798, when it was forcibly occupied by the French under Napoleon, see my "History of the Culn. nies" and "Colonial Libnary." It will suffice to mention here, that the Maltese rose en masse on the 2d Sept. 1798, against the French troops (6,000 men) then in Valetta. A small detachment of British troops aided the Maltese blockade of the garrison in the beginning of 1800, and on the 4 th Sep. tember 1800, the French eapitulated to the combined Maltese and Bratish troops.

Malta has ever since formed a portion of the British empire. Mr. Cameron was first appointed Civil Commissioner, and was succeeded by Sir Alexander Ball, who died in 1809; General Sir Hildebrand Oakes, was Chief until 1813, when Sir Thomas Mait. land arrived; Sir The mas died in 1824, and was succeeded by the Marquess of llastings, lis lordship died in 1826; and was suceeeded by General Sir Frederick Ponsenhy, who died in 1836; the present Governor ia Major-General Bouverie.
III. The island was formerly placed hy all geographers in Africa, but was declared to be in Europe, as regards the service of our soldiery, by a British Act of Parliament. It is the most southerly island in Europe, the parallel (Valetta Observatory) being in $33^{\prime \prime} .53^{\prime}$. north, and the meridian $14^{\circ} 30^{\prime} 35^{\prime \prime}$ past of

Greenwich. The shape is un irregular oval, whicis has heen compared by some to a flsh-its southern aspect resembling the back, the bay of Marsa Sirocen the mouth, the various indentations on the north aspeet the ventral fins, and the deep indentation of the bay of Melleha, with a corresponding intentation at the back of the island, the tail; the island, in fact, stretches east and west, and is much indented with bays and inlets of the sea on the side which corresponds with the coast of Sicily, while that which looks towards the African coast is nearly a continual curve.

The extreme length of the island is stated by Dr. Henuen at 18 to 20 miles, and its greatest breadth from north to south 10 to 12 miles, and circumference 60 to 70 ; but a chart of the islands under the British crown, furnished me from the Colonial Oftice, makes the extreme length sixteen and three-quarter miles, extreme breadth nine, with an area of 95 square miles (another estimate will be found under the hend of agricullure). The official document makes Gozo (the Island adjacent to Malta, and under the same government) nine and three quarter miles extreme length, five and one-third breadth, with an area of 27 square miles. The following, according to Captain Smyth, are the bearings and distances between several points on the south const of Sicily and Malta: from Cape Passaro to Valetta, south 33.41. west, 56 miles; Alicata to ditto, 21.55 . east, $75 \frac{1}{2}$ miles: Terra Nova to ditto, $10.40 ., 70$ miles; Girgenti to ditto, $\mathbf{3 0 . 0 3}$., 90 miles; Scincen to ditto, $35.51,118$ miles; Cape Granitola to ditto, 42.32 ., miles; Maretimo to ditto, 42.45., 173 miles. Malta is distant from Cape Passaro, the nearest point of Sicily, north, 56 miles, and Cape Bon, the nearest point of the African continent, ls almost 200 miles distant in a south-west direction. It is bounded on the east by the island of Candia, on the west by the islets of Pantelleria, Linosa, and Lampedusn, on the north hy Sicily, and on the south by Tripoli. The sea dividing Malta from Sicily is only 80 fathoms deep in the middle or deepest part, very shallow in other places, and the hottom sandy : it is called the Canal of Malta, and is generally rough, with strong currents setting through it on the north-west side towards the east-south-east, and on the east-southeast side towards the east. Gozo Isle, originally known under the name of "Gaulos" by the Greeks, "Guulum," by the Romans, nnd by corruption in the Arabic language " Gaudese," which in process of time was Italianized into Gozo (pronounced Godso), is situate oll the westward of Malta, distant from thence in its nearest point about three miles, though some parts of the strai+ is five miles broad. In the channel lies the smalı islet of Connino, formerly called "Hephostia," of an oblong shape, and about five miles in circumference, with a still smaller islet or rock called Cominetto, off its north-west extremity. Malta, comparatively speaking, is low, the highest land being estimated at no more than 1,200 fect above the level of the sea, and cannot be discerned until the mariner approaches within 20 to 30 miles of the shore. The hill and dale surface is beautifully diversified, and the natural industry of the Maltese has converted an apparently barren rock into a veiry picturesque country. As a general feature, it may be observed, that the island is furrowed with vallies running from south-west to north east, parallel to each other, and becoming longer and deeper as they extend from the eastern and western extremity. One, termed Melleha, nearly divides Malta into two parts; the most fertile, however, is the vale, which forms at its lowest extremity the Port of Valetta.

A small range of hitls and craggy rocks, called the llen Jemma llills, bearing a morth-west direction from Vnletta, stretch across the entire breadtls of the islami, and from these different spurs branch off, giv. ling varicty to the landscape. The southern shore consists of high or shelving rocks, without creeks or ports, or where a laming could be effected. To the east there is the port of Marsa (Mirsirt, in Arable, signifies port or harbour) Scala, and towards the south-west that of Marsa Sirocco, capable of contnining a great number of veasels. On the west there are two loays, cnlled Antifagn and Magiarro.

The port of St. I'aul Is on the coast opposite Siclly, and is so called from a tradition that the vessel in which St. I'aul was sent prisoner to Rome was Iriven in thither by a storns. St. George's lort, towards the north, is not far ilistant from that of St. Paul ; St. Jilian's Bay is on the same shore. [For the topography of the island, and a description of its forts. \&e., see " Colanial Library, Vol. VII.]

Gozo (or Gan lisch, as the natives call it), as before observed, is separated from Malta by an arm of the aea, four to llve miles wide; with an avernge length of eight miles, six broad, and 20 in circumterence; although fertile and thickly inhabited, it contnins no town, the inhabitants heing scattered in six villages, protected by a strong fort, Raborto, in the centre of the island. The surface of the island is very agrceeably diversitied with hill and dale, some of the more elevated parts in the north-west being bearly 2,000 feet above the sen. A chain of these elevations carcircle the island, embracing a beantifil series of fertile vallies, separated by gently rising grounds; the summits of some of the mountains are tlattened, and form truly table lands; others are rounted or mammillary; and there are four or five remarkably detached hills, perfectly conical in shape, and presenting the appearance of old volcanic productions. The isterior of the island and its shores abound in caves and rocks, leing of the same calcareous nuture as those of Malta, but the country is much more rural and agreenble.

Fort Chambray, commenced in 1749, contains the principal accommodation for troops: it lies on the south-cast side of the island, and is built upon an clevated promontory, forming one side of a little bay in which the Malta boats anchor; the shore all round is very bold especially to the sonth, where it rises into rugged and inaccessible eliffs, with buge masses of rock broken off from them and projecting into the sea; the road gradually winds from the sca to the fort (which is 500 feet above the shore) after a circuit of about 700 yards; the area on which this fortification is built being about 2,500 leet in circumference. The barracks accommodate 250 men, are admirahly arranged, and there is a small but excellent hospital attached.
The oblong islet of Comino, two miles in length, lying between the larger islands, has a few inhabitants, employed in cultivating abont 30 acres of land, and in preserving the numerous rabbits.

Besides Cominotto, which lies off the north-west end of Comino, there are four or five other islets, or rather rocks, belonging to Malta and Gozo. On the south coast of Malta is Filfosa, or Filfla, which contains, it is said, an ancient parish church; nearer the shore, and more to the eastward, is a rock called the Pietra Nera; and at the north-west end of the island, towards Gozo, is another rock, called the Scoglio Marfo. At the north end of St. Paul's Bay is the island of Snimonetta, but the best known of these
appendages ia the fungun rock of Sozu", or " Hitgion tirl apeneral," celehrated for its proluctlon of ('nrollini 0)(thrinulis (Linnaris), or fungur mplitensis, at obe time estecmed as a sovereign panacea for all diseases.
IV. Malta is composed of limestone of different apecies and of imegual density, thou: h gemrrally spakking remarkalily soft, and crimbling down even maler the actoy of the wenther with grent facility Calcareons frcestone is more or less abundint, lime. stone gencrally lying on the fresstone, and the latter incumbent our bed of marl.

The haral stone used in architecture is a spechen of conrse marble of cerystalline structure, of spucilic gra. vity 2.5,-not absorbent of inolsture, anul not liable to decompose or disintegrate on exposure to the atmo. sphere. It consists alinost entirely of earhomate of lime. It is well alapted to all works rempiring strength, and particularly well fitted for pavements abd lloors. It is found in many parts of the island, generally near the surface. (see " Commial Librury,")
V. The climate of Malta is decidedly waron, indeed, almost tropical. The maximum tenyerature for the year may be taken at 90. Fabrenheit, the minimm at 46., and the mean at 63. The barometer may be similarly quoted at 38, 8., 30. 2, , and :30. 5. The hy drometer 87., 30., and 584 . The heat of the smmmer is inoubtless increased by radlation of the solar rays from the rucks surrounding Valetta; but in the conntry around, and in Gozo in particular, the at mos. phere is from 2. to 4 . cooler.

The most prevalent winds are the south.east (the Siracco) and the north-west; the former elaracter. ized by its humidity, accompanied by all exhausting degree of tempernture, producing a damp and suffocating smell to the sick; these Siroccos ure most prevalent in August. September, and October. The Horth.enst wind (" gregule") is brief and violent in its duration, frequently oceasioning serious mischiof in the harbour during the winter months.

Ocensionully sudden and partial gusts of inteasely heated air are felt io Maltn, which are blown from the coast of Africa. Fortunately they seldom exceed half a rumte in duration, for if longer continuel, life would be extinguisbed, owing to the severity of the bent, which is remarkable for blowing in tracts, af. fecting the inhabitnnts of one house and not their neighbours. It is probably a portion of the "Samid" or "Simoom" of Africa. When dry wind blows over the island, especially in summer, volumes of im. palpable dust llont about, which is precipitated in the sliape of a shower of mud, on the recurrence of a damp wind, or when the fogs and dews are peculiarly long.

No regular sen and land breezes are felt in Malta, by which the heat would be moderated; and it is a remarkable fact that Captain Smyth found the temperature of the sea, round the adjacent shores of Sicily, at a depth of 10 to on fathoms, 73, to 76 . Fahrenheit, which was 10 or 12 degrees warmer than the water outside of the Straits of Gibraltar. Sojw only appears at Malta as a luxury imported from Etna, but in the winter months there are frequent hail showers. Rain falls with tropical violence in December, January, and part of February. About March the sky gets settled; an occasional shower may fall in April and May, but during Junc, July, and August not a cloud is to be seen. September and October are cooled with showers, the air is placid and invigorating, and termed "St. Martin's," or the " little summer."

Return of Deaths* \&., Continued.

* The greater number of deaths were in January, February, March, and August, and the principal latal diseases, Diarrhœa, Marasmus, and other diseases arising from debility.

Mortality of infants received into the Foundling Hospital at Malta from 1833 to 1836 :-Entered in 1833, 163 ; Died, 135 ; Survived, 28. 1834, E. 125; D. 112 ; S. 13. 183., E. 149 ; D. 99 ; S. 50. 1836, E. 160; D. 132; S. 28. Total E. 597 ; D. 478; S. 119.

The endemic diseases are few; small pox has been unknown for some years; varicella and scarlatina, occasionally appear, and measles are not unusual. The most important endemic is the plague, which was first noticed in the Maltese annals in 1549, A. D. ; in 1593 it again appeared:-in 2623, 40 persons died of it, and in I 663 it reappeared, when only 20 persons fell vietims to it: but its advent in 1675 was dreadful, for 11,300 persons died of this terrible malady. For 130 years Malta was free from plague, when it broke out with fearful violence in 1813 ; for, from its commencement in April, 1813, to its termination in September the same year, 4,486 deaths took place in the island, of which 1,223 occurred in Valetta, the mortality being about 80 in the 100 attacl:ed: the monthly progress is shewn by the deaths lrom April to Novemher, viz.: April, three cases; May, 110; June, 800 ; July, 1,595 ; August, 1,042; September, 674; October, 211; November, 53 ; maxinum of the thermometer during those months was, $71^{0} 82^{\circ} 84^{\circ}$ $88^{\prime \prime} 86^{\circ} 88^{0} 83^{\prime \prime} 72^{0} \mathrm{~F}$. stiong wints hlew during part of the period, particularly in July. How the plague
originated was never elearly ascertained: it was gencrally attributed to three vessels which arrived in Malta, 29th March, 1813, from Alexandria, where the phage was then raging; some of the crews of these vessels died on the passage, from pestilential diseases.

It is a remarkable fact, that some of the populous villages or casals in Malta totally escaped the disorder, and cases are on record where a woman held her dying husband in her arms, or the husband nursed his dymg wife and children with perfect impunity; nay, even children sucked their dying mothers, and lay inloded in their arms without contracting the disease.
VI. When, or by whom Malta was first peopled is unknown; according to fabular tradition, the island was primarily tenanted by a race of giants. Whea in pussession of the Phœenicians and Carthaginians it was probably thickly inhahited, owing to the extensive commerce carried on; hut the earliest data 1 can ottain are those given by Boisgelin, who says, that in 1559 , after the raising of the limous siege of Malta by the 'Turks, the island contained only 10,000 inhabi. tants: in 1632, without reckoning the kinghts, \&e. of

The following 18:8, has been somby, together
the Order, and ecclesiastics and oflieers of the IInly Brotherhool, the number of inhabitants amounted to : $1,7.50 \mathrm{men}$, women, and children.
According to the records the population of the two islands of Malta and Gozo was in 1590, mouths, $24,86.1 ; 1617,43,798 ; 1670,60,000 ; 1780,100,000$. In 1775 there were computed to be in Malta and (iozo, native Catholic inhabitants, 121,507 ; the regular militia, 16,000 (effective men). The loss during the siege of the Frencl, in Valetta, from 1798 to 1800, amo:mted to 20,000 , including women and clildren; independent of the troops Buonaparte forcibly took with him to Egypt.
The next document I can find gives the population of Malta and Gozo, as extracted from L'Almanacco delle Isole di Maltic e Gozn for the year 1807:-
Catholic Natives of Maltt,-The Capital Notabile (Citta Vecchia, or Medina), and its suburbs, 3,731; Valetta, and its suburb Floriana (city) 24,546; Cospicua (city), 9,224 ; Vittoriosa (city), 3,300; Senglea (city), 4,152 ; Birchireara (1st casal, or burgh), 3,810; Naxaro (2nd do.) 3,020; Curmi (3rd (10.) 3,186 ; Zurrico ( 4 th do.) 3,016; Zeitun, ( 5 th do.) 4,024 ; Gudia ( 6 th do.) 890 ; Siggeri ( 7 th do.) 2.715; Zebug (8th do.) 4,026; Attard (9th do.) 731 ; Musta, (10th do.) 3,003; Micabiba (11th do) 703; Crendi (12th do.) 924; Hasciaek (13th do.) 1,003; Zabbar (14th d).) 2,542; Dingli (15th do.) 140; Tarxien 1 (ith do.) 910 ; Gargur (17th do.) 949 ; Sati (18th do.) 178 ; Chercop 19th do.) 300 ; Luea (20th do.) 836; Balzan (21st do.) 44; Lia (22nd (to.) 88.2 ; total in Malta, $80,225$.
From the registers of the parochial priests:-
Catholic Natires of Gozo. - Castello e Rabato, 5,100; Caccia (casal) 1,469; Garba (ditto) 1,459; N ....'littJ) 1,800; Zendia (diito) 1,3f4; Saimat (ilitt Gn. Zebug (ditto) 768 ; total in Gozo, 1:
in on egisters of the parochial priests :
In : eulla, 80.225 ; in Gozo, 12,829; total native Catholies, 93,054 . Other inhabitants and domesticated strangers, estimated, 22,100 ; absent, estimated by register, 7,650 . Grand total, 122,804 .
The number of foreigners residing in Malta during, the six or seven years preceding the plague of 1813, was estimated it from 30,000 to $\mathbf{4 0 , 0 0 0}$. Many houses were fitted up like ships, with tiers of berths, and several large vessels were converted into tloating hi tels.
ln 1824, the population of Malta alone was estimated by the deputy inspector of police as follows:-
propulation of Malta, Mirch, 1824.- La Valetta and Floriana, 25,546 ; the three cities on the other side of the harbour, 18,649; Notabile and Dingli, 5,166; Zebug, 4,776; Siggieni, 3,373; Crendi, 1,052; Micabilia, 814; Zurrico, 3,618; Safi, 227; Chírcop, 315; Asciach, 1,136; Gudia, 1,040; Zeitun, 5,4-10; Kabhar, 3,537; Tarxien, 1,011; Luca, 1,268; Curm, 4,130; Birehircara, 5,253; Balzan, 633; 1ia, 1,039; Attard, 907 ; Musta, 3,369; Nasciaro, 2,965; Gargur, 1,139; total, 96,404.
The estimate of the population of Valetta, Floriana, and the three cities on the other side of the harbour, is only to the end of the year 1823. The villages are to the month of March, 1824.
The following return of Malta alone, from 1824 to $18: 2 \%$, has been furnished me by Sir Frederick Ponsonby, together with the census of 1834:-

Return of the Population of Malta, during the following years.

During this period of five years, there died each year of apmplexy, about $1: 20$; of dropsy, 200 ; of marasmus, 200; of dentition, 5.50 ; of dysentery, 130; of diarrhcea, 280 ; of miscarriage, 120 ; still born, 30 ; of debility (infants who died soon after birth), 150; of phthisis pulmonalis, 100 ; of nervous and bilious fevers, 170. During this period, of those who died, no one had reached the age of 100 ; the oldest did not exceed 98 years; of this age about four or five in each year: about 30 individuals died annually of 90 and upwards.

The population of Vatetta and Floriana, up to the 31st December, 1826, was

26,100
$\begin{array}{llll}\text { Ditto } & \text { ditto } & \text { at Vittoriosa } & 4,48: 2 \\ \text { Ditto } & \text { ditto } & \text { at Senglea } & 5,250 \\ & & \text { at }\end{array}$
Ditto ditto at Cospicua 9,974$\}$
19,706

Total 45,806
It is difficult to form any estimate of the numher of Maltese who are residing in the Turkish dominions, or in other countrics bordering the Mediterrancan. For the last five years ans account has been kept of the departures and arrivals, by which it appears that about 10,000 have departed in each of those years, and about 9,000 have returned.

The returns to the Colonial Office give the following as the number of inhabitants in both Malta and Gozo :-

Population of Malta and Gozo.

| Years. | White and Free Coloured People. |  | Births. | Marriages. | Deaths. |

It is asserted that the natives of Malta are long lived; but it is to be regretted that we have not in the list of deaths the ages of the deceased. Abela atates instanees of persons living to $80,90,100,105$, 107, and 110 years. He notices one man, a native of Zabbar, who lived to near 120 years of age, and preserved his atrength, his teeth, and in part the colour of his hair; and another, a resident in the civil hospital at Citta Vecchia, completed 120 years, retaining his memory and judgment. It is asserted by the same authority, that some of the ancient inhabitants lived to 130 years of age, owing to the purity of the air, and their temperate mode of living.
The annexed shews the population of Malta and Gozo in $1 \times 34$ classified :-
 which are returned with the native population.

Dr. Hennen constructed the following comparative Table of hirths and deaths among the inhabitants of Malta, from the year 1819 to the year 1823 inclusive.

It would appear from the foregoing, that the population was then slowly increasing, the births prepon. derating over the deaths. The annexed tahle 1 was favoured with by Sir F. Ponsonhy. His excellency did not inform me whether it included Gozo or otherwise. It will be seen that it differs from the preceding; table; in some years the excess of births is very slight.

The Maltese are generally of middle stature, with robust frames, and small hands and feet; the hair black, and sometimes Inclined to frizzle; lips frequently thick, and skin swarthy amung the common people where exposed to the atmosphere; the eye dark and bright, and among the higher classes of females, remarkable for that fulness and languishing beauty which constitutes the great charn of orjental women. In some of the villages, such as the Casal of Zurrico, there are a remarkable number of bluecyed persons to be met with. In general there is throughout the villages a good deal of the Spanish character displayed, but in the cities, and among the higher orders, a sort of French and Greek character is combined. The men are industrious, active, frugal; attached to their country, passive, but yct nowise deficient in courage, as they have often shewn, and they are considered the best seamen in the Mediterranean. Those in easy circumstances dress like other Europeans, hut the lower orders are clothed in a loose cotton shirt, over which is a wide vest, or jacket, with silver, sometimes golden buttons, a long twisted scarf, wound several times round the hody, with very often a sheathed knife placed therein; loose trowsers, leaving the legs bare from nearly the knees downwards, and very peculiar shoes called korch, which is a leathern sole, fastened with strings, or thongs, to the foot and leg, nearly like the old Roman sandal. The head in winter is covcred with a woollen cap of different colours, having a hood attached, and falling down on the back; in summer, large straw hats are worn. The women are attached to their primitive dress, consisting of a short cotton shift, a petticoat (generally of a blue colour), an upper robe opening at the side, and a corset with sleeves. The hair, covered with pomatum and pow. der, is arranged in a high cone in front of the hend, and the face is concealed by a large black silken veil called fuldetta, which the wearer adroitly shifts when exposing her features to a side or full view. Many ladies of the upper class have recently adopted the English costume, except during the time of performing their religious duties, when they appear at chureh in their ancient costume.

The Maltese marry early; instances are not rare where girls have been mothers at thirteen years of age; they suffer little in childbirth; twins are a common occurrence, but no instance of triplets have ever been heard of in the island; and when we speak of such occurrences as not unfrepuent in England, they shake their heads in emphatic silence. Deformity is exceedingly rare, and monstrosity still more so; in early infancy the children are swathed round from the shoulders to the toes, including the arms, which are laid close along the sides, so as to present a striking resemblance to an Egyptian mummy. Notwithstanding this apparently unnatural restraint, the use of the limbs is carly acquired; a crippled or an impotent child is a rare sight; and the activity of the Maltese, especially as swimmers and divers, is very great. In the female hospital there are two preparations of monstrous twins ; one pair joined by the backs, and the other by the bellies.

The upper elass speak ltalian; the language of the common people is a patois compounded of Arabic, German, Italian, and other languages. The Arabic,
however, so far predominates, that the peasants of Malta and Barbary can without much difficulty understand each other. Captain Vella contends that the Maltese langunge, as it is gencrally spoken by the mass of the people, is still the originnl Punic, which lias passed unaltered through the changes and revolutions of so many nations, which have successively occupied and oppressed the island of Malta. Some slight differences may be perceived, chiefly in the pronunciation, in various parts of the island, but without disparagement to the language itself, whose substance is in every place the same. There is no national alphabet, but according to the fancy of the writer those of other tongues are adopted. English is becoming generally understood throughout the island.

The Lord's Prayer in the Maltese language (according to Anderson), " Missierna li inti fis meuiet jitkaddes ismech, tigi saltnatech icun li trit int chif fis sema hegda flart. Hhobsna ta culium atina illum u Ahhfrilna dnubictna chif ahhna nahhfru lil min hhata ghalina u laddahhana fittigrif ta tentazzioni isda ehhlisna middeni. Amen."
VII. A scrupulous attention to the rites of their church is characteristic of the Maltese, whose established faith is that of Rome. The landed property belonging to the church is considerable; and there are about 1,000 secular and regular clergy in the two islands. By the calendar of 1742 , it appears that there were then 2,000 priests and ecclesiastics in Malta and Gozo, exclusive of the members of the order.

Previous to the year 18:27, many of the churches enjoyed the privilege of sanctuary, and ecclesiastics were not under the jurisdiction of the eivil tribunals : but a law was passed in that yenr abolishing those privileges, and the bishop's court has now jurisdicion only in spiritual matters.

There is a Protestant clergyman, and the service is performed in a chapel in the governor's palace; it is not, however, large enough to contain half the Protestants who reside at Valetta, and it is a well founded subject of complaint that a church has not been built A military chaplain performs service for the garrison, in a buiding not very suitable for the purpose; indeed the want of any suitable Protestant church must appear very striking to those who visit the island, when it is recollected that it has been a l3ritish possession 35 years. The chureh service is now performed in Valetta in one of the lower oltices of the palace, formerly either the kitchen or wine cellar of the grand master; and the aecommodation on the other side of the water, in the Borgo, is worse, consisting only of what was a sort of storchouse of small dimensions.

The following table shews the great attention paid by Roman Catholic communities to the religious in. structions of the people. Every parish has its chapel, its curé and its festivals. The value of the livings it will be observed is very small, but voluntary offerings, \&c. douhtless compensate for the deficiency in the fixed stipends of the priesthood (see remarks p. 580.) There is a Roman Catholic bishop at Malta and a very large establishment of ecclesiastical functionaries. The parishes are pretty equally divided. Some of the churches were extremely rich in gold, silver and paintings, until the French got possession of Valetta.

reform. Degrecs in divinity, law, and physic are conferred under certain regulations; and there is a preparatory school attached to it, in which all boys are received upon payment of a trifle. The support of the college devolves upon government, as on the expulsion of the Jesuits from Malta, their property, which now amounts to about 700l. a year, was allotted for the support of the university, and of a church which now costs the government $176 l$. per annum, the remainder being devoted to the university, in which there are 490 scholars; those in higher schools (unless specially exempted by the council) pay 4 . $2 d$. each month, from which is defrayed the salary of the secretary ( $16.15 s .4 d$. per month), and certain pensions to auperannuated professors. To this fund the students in medicine, surgery, and anatomy, do not contribute, but pay $4 s .2 d$. each month to their respective professors.

There are two normal schools, at which more than I, 000 boys and girls are educated free of any expense. these schools, together with a small one at Gozo, are supported chiefly hy government,-private subscriptions are however received. There was for a considerable time much jealousy on the part of the Catholic clergy on the subject of education, as it was feared that it might be made use of as the means of conversion. This feeling has subsided; and in one of the normal schools lately established, a canon of the church is the principal director.

The children are tauglit reading, writing, arithmetic, and the rudiments of Italian grammar, and in some instances, English and Latin; the females are taught needle-work, spinning, and weaving.

Of private achools there are 82 in Malta: viz. 24 in Valetta and Floriana; 25 in Vittorioso. Sanglex, and Cospicua; and the remainder in the different casals, or villages. In Gozo there are six private scminaries ; and a public free school in Rabato, with 35 scholars.

* The univeraity was instituted hy the grand master, Pinto, in 1771, under statutes, which have been modified from time to time. A new arrangement of the university and lyceum was carried into effect from lst January, 1834, having been submitted to and approved of by His Majcsty'a principal Secretary of State for the affairs of the Colony.
$\dagger$ On the expulsion of the Jesuita from Malta, their property, which now amounts to 700l. a year, was allotted by the grand master for the support of the university and the keeping up of the church. The government supports the university, having appropriated to itself the whole of the said property.
$\ddagger$ These schools were established 18 years ago, during which period there have been admitted 2,304 males and 1,651 females. The children generally are taught reading, writing, and arithmetic, the English and Italian languages. The females are taught all sorts of needle-work.
§ This school was established 1st July, 1834.
II In the seminary, the pupils are divided into two classes-the first, called Almuri, pay $5 l$. per annum ; and the second, called Convittori, pay 12l. 10s. per annum. They, as well as the professors, \&e., live in and are fed by the Establishment. The aeminary, independent of the contributions of the pupils, has an annual revenue derived from landed property of ahout $310 l$.
- The children are taught reading and writing and the rudiments of the Italian grammar.
** These schools were first opened in January, 1820, since which period there have been admitted 730 males and 527 females. Reading, writing, and arithmetic taught the children. The females are also taught needle-work, apinning, and weaving. There are also 26 private schools in Valetta; 2 in Floriana; 17 in the Three Cities, Vittoriosa, Senglea, and Cospicua; 1 in Notabile, and the rest in the different casals or villages.
$\dagger$ Intended for 50 boys, belonging to Rubato and the different casals or villages, in proportion to the population of each; of this number 35 are educated gratis, and 15 on payment of a small gratuity to the master. Reading, writing, arithmetic and the rudiments of the English, Italian, and Latin languages are taught. There are also six private schools in this island.

Libraries．－In the year 1761，the Brile De Teneen founded the public library at Malta，which was in－ creased by many gifts from distinguished private in－ dividunls，princes and kings．The King of France contributed a seleet set of books to it ；and it was privileged to receive copies of all works published nt the royal press at Paris．The librny formed at the genernl hospital was transferred to it，mul a regula－ tion was established，by which the hooks of nll the decensed knights became its property；it also had an annuity of 300 crowns left lin perpetuity to it，and derived some additional income by the sale of dupli－ eates，insomuch that in 179 x the number ol books， if we are to credit Boisgelin，amounted to upwards of 60，000．This library was，since the capture of the island from the French，removed to a large building adjoining the palace，formerly called the Conserva－ toria．It is a very respectable fomdation，and con－ thins a number of excellent and some very valuable works．This library is open to the public at certain hours of the day，but no books are lent out．

The garrison have a subscription library，both for referenee and lending out；it was formed in 1806.

The books are distributed under the five following heads，and the number of volumes as they stood in the library catalogue and supplement to February， 1K2 1 ，is thus：－

Divinity，Ethics，Arts and Sciences．．
History，Biography，Voyages，Travels，Mill－ tary Publications ．．
olite literature，Potry and Dramatic
．．
Works
Noyels aul Romence
．． 3 and
There are also books on medieine，surgery，and the accessory sciences．
In the general hospital there is also a good library founded by the medien！officers of the garrison．
The university of Malta grants degrees in medicine and chirurgery；and the Maltese physicians and sur－ geons are now prineipally educnted in the island， many of them being possessed of considernble profes． sional talents，to dispense which they are required to protuce certificutes to the government．

a council of office within commsind for $n$ of the go op ; and the ce unofficial he governor ors and mer altese) born
subjects; and the third from among the principal merchants of the ialand, being a British born subject, and who shall have aetunlly resiled in the island for a prriod of not less than two years.
The supreme court consists of a chief justice or president, and four members; and thare are mhor cuurts, viz. that of apecial cominission, an inferior or magistrates' court ; a court of pirntical offences; a commercinl cuturt, \&c.
The past. state of Maltn has almost annibilnted any thing like a code or lex scriptu, A commission has been nppointed by the Crown to examine into the atate of the law in Malta, and to prepare a criminal, civil, and commercial code.
The law, as it is now ndministered in Malta, is expensive ant tedious. A modifled syatem of trinl by jury has heen introducel tor certain criminal eases. The judges, who were formerly paid by fees, are now indejusdent with fixed salaries, and not removenble by any authority except by an order of the king in council. The language of the courts of law is Itulian.
In the criminal court it does not njpenr that there is much business of a very serious muture. The common offence is stealing and pilfering; hot there is a remarkable absence of all crimes of a very aggravated uature.
The island is protected by a navnl squadron, Malta heing the head quarters of our Mediterranean flect; and by a garrison of British troops, and a regiment of Maltese fencibles, consisting of 25 officers, 41 noncommissioned do., and 468 rank and file, which the Maltese themselves pay for.

Numbers and distribution of the Effective Force, Officers, Non-commissioned Otileers, Hank ind Flle, of the Bratish Army, Artllery and Eugincers, inclutling the Maitese Feacibles, in each year since 1815.

XI. The revenue of Malta averages $100,000 l$. per annum, arising from the tollowing sources:-
Rent of property of the crown in lands and houses in the island of Malta and Gozo, 28,000l.; tax on the importation of ioreign corn, 30,0001 .; castoms and port dues, $14,000 l$.; excise, $16,000 l$.; quaran. tine dues, $5,000 l$. ; judieial fees, $4,000 l$. ; minor taxes, 3,000l.

Pensions at Malta in 1836. [B.13.]-Pensions connected with the Order of St. Jolin of Jerusalem, $2,130 l$. The existing knights of Malta receive of this sum 13631. , and 25 persons conisected with the Order of St. John, 765l., granted during and suhsequent to the siege of Valetta, Granted on reduction of offices, $1,844 l$.; on superannuation and retirement, $3,955 l$.; for military services, $1,432 l$; total, $9,361 l$.
XII. The trade of Malta in former times, and evell during the continental war, was very great; but the plague and the opening of foreign ports tended much to its diminution. It was impossible to deprive Baicelona, Marseilles, Genoa, Leghorn, Messina, Ancona, Trieste, Smyrna, Alexandria, and other places, of some share of a trade which local or other advantages would always command; but neither a teinporary pestilential disease, nor a general peace, which ought to facilitate commerce, could deprive Malta of the advartages which it naturally possesses for trade under the protection of the British flag.

List of vessels of all Nations which have entered the Ports of Malta during the year 1834: Quarantine harboar, above 30 tons, English 249, Foreign 287; under 30 tons, English 16 ; tonnage 86,012 . Great harbour, above 30 tons, English 186, Forcign 457; under 30 tons, English 377, Foreign 2.17; tomage, - 6,089 ; total number of vessels, 1,819 .

Return of the number of vessels, \&c. belonging to Malta nid Gozo, in Janunry, 1835: number of vessels belonging to Malta, 250 tons and upwards, 15 ; 100 to 250 tons, 67 ; 20 to 100 tons, 25 ; 20 tons and uader, 40 ; total number of vessels, 147 ; total number of tons, 16,868; of which were built in Malta, :50 tons and upwards, $9 ; 100$ to 250 tons, $42 ; 20$ to 100 tons, 17 ; 20 tons and under, 40 ; total number of vessels, 108 ; total number of tons, $10,43.4$; crews of the alove, 1,522 ; number of boats of all descriptions, helonging to Malta, 906 ; number of boats, belonging to Gozo, 97 ; total, 1003 : number of men employed, 2,817.
The value of the cottons manufactured in Malta is upwards of 118,000 . Black silk stuff is also made. Ship building is on the increase, the Maltese being good carpenters: the timber employed is chiefly from the Adriatic. About $50,000,000$ of segars are annve, ", male, and find a market in every port of the Medit anean. Stone for paving nud building, is f, w. iced and exported in considerable quantities to Constentio nople, the Black Sea, Esypt, \&c. There are manufactories on a small scale of soap, leather, maccaroni, iron bedsteads, \&c. The Maltese jewellers are remarkable for the elegance of their gold fillagrecwork, neek chains, \&e. Salt is prepared in large quantitics by exposing sca-wnter in the cavitics of the rocks to solar evaporation. As ship builders, the Haltese are highly prized. Large quantities of sofas,
chairs, \&c. are annually cx o.ted to the Ionian Isles, Greece, and othe ilar:s.
X11. Coins.- s.t: : 8:36.] Cold: notemecirculation, Silver: British rown half-crown, shilling and s. צpenny pieces epanish pillared dollar, dollar of that South American States, Sicilinn tollar nad half-crown pieces, Maltese dollar, half-dollar, two scudi, one scudo, six, four, twe, and one tari pieces. Copper: British penny, halfpenny, farthing and grain pieces, the latter of the value of one-third of a farthing.

The Spanish c.a...ar was declared a legal tender at the rate of four saillings and fourpence sterling, by proclamation of the 1 lth Octoher, 1825 ; Issued in consequence of an order of the King in council bearing date the 23 rd of March 1825. The dollar of Mexico, Peru, Bolivia, Chili, and Rio Plata, was made current at the rate of four shillings and four pence sterling, by proclamation of the 27 th May, 1834, issued in consequence of instructions to that effect con... no! in a despatch from his Majesty's principal ary of State, dated 5th April, 1831 . The Sicilime dollar which formerly passed current at the same rate as the Malta dollar, namely at two scudi and a half of Malta, contimues to pass, since the introduction of the British silver money into these possessions, at a proportioned sterling rate. 'The scudo heing equivalent to one shilling and eight pence sterling. The Sicilian dollar consequently passes for 4 s. 2d. 12th of a penny ; the Sicilian half dollar, 28. 1d.; the Malta dollar, $4 s .2 d$. ; half tollar, $2 s$. $1 d_{\text {. ; t two }}$ scudi piece, $3 s .4 d$. ; one scudo, $1 \mathrm{~s} .8 \mathrm{~d} . \mathrm{c}$; six tari piece, 10d.; four do., $6 \frac{1}{4} d$. ; two do., $3 \frac{1}{3} l$. ; one do., $1 \frac{1}{8} \ell$.
The introduction of British moncy into these pos. sessions has not hitherto produced, nmong the commercial body or inhabitants gencrally any alteration of keeping their accounts, and of mahing sales, con-
tracts, \&e, which are continued as fermerly in Maltese curroney, manely, sculli, tati, mad grains ; 20 grains are equal to I lari, i: tari to I semif, cyual to Is. Nd. sterling. The govermment departments (since the 25th lecember, $1 \times 20$ ) heep their necounts nud conduct their cash transactions in sterling, in the same manner ns in Eugland.

Course of erchange.- [B. 18. 1N36i.] The Committer of Merchants decinre a rate of exchange with lingInnd twice $n$ werk founded on the netmal transactions during the intervening days. The commissary in pursuance of his instructions from the l.ords Commissioners of his Majesty's Trensury, grants bills on their Lordships, at the rate of 100 l . in exchange for every 101\%. 10.s. temdered to him in lititish silver money, and advertises for styplies in other than British specic, when he has oceasion so to do. Theaverage rate of the commercial exchange during the last year has been 5t 13 - 100 th pence per dollar of exchange of As. 9 d.

The following are the avernge rates of exchange with the principal ports of the Meditermenn ; upon Sicily, 10s. dit. sterling per ounce of $2 \frac{1}{2}$ dollar; Naples, 3 ss . 5 d . st. per ducat of 100 grains ; 1 ،eghorn, 4. 2. 2d. st. per gold dollar; Genevn, 8d. st. per lira mori banco, and $9 \frac{1}{2} d$. st. per lirn moova; Trieste, 2s. LU. st. per thorin; Marseilles, 9hd. st. per franc.

Amount of Coin in circutation.-[13.13. 1436.] Si]ver and coppor, may be estimated at about 150,0015 . sterling. Amonnt of paper currency in circulation: the only paper currency in circulation consists of the notes of two sepmrate banks, (established en commedite) not nomonting to 20,000 . sterling; they are not reveived by the gowernment departments, nud are issued more for the convenience of the commereinl lredy, than with $n$ view of profit. 'These banks are considered very solid, and are conducted in a safe and regular wanmer.

The Monte di lieta of Malta was estalilished in the year 1507, and like nil institutions of the sort, in other ports of Europe, particularly nt Rome, with the ohject of alloriling pecuniary rulief to the distressed at reasomalse interest, therely preventing them from having recourse to usurious contracts. Any sum of money, however small, is advanced to the nppliennts on the security of property giveo in pawn, such as gold, siber, and :ther precious articles, or wearing npinare, whether worn or new. The period of the lona is for 3 years on pawns of the first description, and never more than two on those of the Intter, risnewalle at the option of the parties, who nre also nt liberty to redecen their pawas, at any time within the period, on peyment of interest in proportion. The rate of interest now charged is $i$ per cent per nunum. The unclamed pawns at the expiration of the periond, are sold hy publie nuction nud the residuc of the proceeds, atter deducting the smine due to the institution, is pnyable to the person problucing the respective ticket. Of the accommodation thas mforded by the "Monte" not unfrequently persons in better circumstances, have availed themselves fornuy momentary uxigency, mudinthis way considerable sums have heen ndvanced. 'Iill the yenr 1787, the operntions of' this institution were conducted by menus of money borrowed at a moderate rate of interest, nud by fimds acguired by donations, \&e. But the grund master Rohan nuthorized the consolidation of the funds of the Monte di Pieti with those of the Monte de Rederrionis, another institution equally batiomal, founded in the year 1607, hy private donations aud beguests, for the philanthropic object, of rescuing from slavery, buy of the matives who might fall into the linuls of

Mahommedens, not having means of rassom. As this instltution had inger funds (mostly in lamded property) than it actually required to meet all demmads, the act of consolidation proved of the greatest adiantrace to the " Monte di lieth." Thus mited the two Institutions, with the new title of "Monte di liota e Redenzione", conducted their separnte duties, under the superintendance of a Bonrd consisting of a president and cight, conmissioners, till the expulsion of the order of St. John from Matra, which happened it the yoar 17!Rs. The Ferench Republienos by whom the isinud was then ocenpied, stripped the "Monte," of every artacle, whether in money or pawns, and the loss sustnined by the institution on that unfortumate orcasion amomed merly to 35,000 , sterling inchuling the share of the proprietors of pawns, in ns moch as the advance they received on that security, never exceded one-half or two-thitds of the value of the artieles pawned. It is nerdess to state that not a shilling of this sum, was repaid by the French government, aftertherestorntionotheirlogitimatemonarchs.
When the British forees took possession of $L_{\text {a }}$ Vallette, in september, 1800 , it was one of the first cares of the head of the goverument to see this useffel institution resume its operations. Accordingly n now bonrd was elected, and nhout $1,001 \mathrm{l}$. advanced to then (without interest) from the locen treasury. A lom was opened to which individuals did not hesatate to contribute, when they were assured that the in. stitution considered itself hound to pry the old loan, though forming part of the nmount carried nway b! the lirench; mul that in the menn time interest womlit be pmid on it. The Monte, possessing landed prepert! to $n$ mueh grenter amoment, could never refiuse such an act of justice. Inppily the cessation of slavery, having pint an end to the old charge for ransams, cembled the institution to devote its revemues to the payment of interest on the old lom, to the evtinetion of pirt of the cupital, to the jmprovement af its pro. perty, nod for the last 13 yonrs to assign a sulusidy of 50 l . per anmum to the llouse of Industiy.
 17,3 till. lent on ilo.; 26.11. Was restored surpins un the sale of prawis.

There is noother "Monte di Pieta" nt Goso, waWished by the Inte Sir Alexnnder Ball, nbout it wars ngo: lout its operntions nor extremely limital, in as murh as it possesses ub funds of its own worth meatiming, nud has no other capital at its disprasnl het $1, \geq$ (h) dollars, borrowed from the Monte di blita e Redenzioni of Malta, at the interest of at pereme. per mintim.

The average prices of wheat sold to the public in Malta, during the undermentioned periods, has been ;

| Years. |
| :--- |
| From |

Cumin speds and anniseeds are successfully cultivated, and exported in considerable quantity to the surrounding countrics in the Mediterranean, as well as to England and America; and the cumin sceds of Malta are as good as any, if not the best, in the world. The squills grown and dried in Malta are found to produce the best oxamel attainable from that bulb; and the quantity of oranges hitherto furnished by Malta to the tables of the luxurious in France and England, might be greatly increased. Indeed, the oranges of Malta are confessedly the finest of the Mcditerranean, and its melons are superior to the best of the southern countries of Europe. There is a variety of other delicate fruits. Vegetation of aroma ${ }^{*}$ ic plants and herbs of every sort, aided by rich pastures refreshed by the regular falling of noeturnal dews, enable the natives to rear considerable herds of eattle and flocks of sheep and goats, whose llesh, aromatized hy excellent food, possesses an exquisite flavour. Poultry is plentiful and excellent. Quails, and a great diversity of other wild fowl, never fail to come in vast flights at the time of their annual migrations.
Much attention is hestowed on the management of bees: a great many hives are kept in several parts of the island, from which they yearly procure a large stock of deliciously-flavoured honcy. Great pains are also bestowed on the breeds of asses and mules, and the qualities of these useful animals have becn highly improved by the inhabitants. The asses, especially, are well known for their unparalleled strength and beanty, and always sell at a high price.
The annexed return of the number of eattle, \&c. in the islands of Malta and Gozo, Ist January, I $\times 35$, has been furnished me by Sir Frederiek l'onsonly.

|  |  | Bullocks. Shcep. | Goats. | Swine. |

Return of the number of carts and calceles in Malta and Gozo, which pay licenses, Ist January, 1835.

|  | Malta. | Gozo. |
| :--- | :---: | :---: |
| Carts $\ldots \ldots, 1137$ | 25 | 1162 |
| Calcches $\ldots 264$ | 1.1 | 278 |
|  |  | $\underline{1440}$ |

Carts employed solely on the farms are exempted from liecnse. The number may be estimated, in the two islands, at about 800. The license on carts was taken off on the 1st April, 183.).

All the domesticated animals thrive in Malta. The Maltese dog, formerly so much celebrated, is now, I believe, extinct. The goats, are of a very tine breed, but the horned cattle are small, and prineipally imported from Sicily, Barbary, and the adjacent coasts. Snakes are to be found, but they are not poisonous. lirds of various kinds migrate to the island at different periods, and the hawks of Malta were formerly much celebrated; the bees were also renowned, and indeed continue to yield such excellent aromatic honey, that it is conjectured the island was thence called "Melitu" by the Greeks.
Fish of various kinds are plentiful. The dory, rochcod, and a species of whiting, popularly called the "lupo," are cxcellent. The eray-fish also, feund oa the rocks in the island of Gozo, are enormous in size, and of very fine flavour. One of the most remarkable fish is the "pholis dactylus," which abounds in the harbour, forming for itself a complete "habitat" in the soft rock, which is perforated as regularly by these creatures as if the perforation had been elfected witis an augur, while they approach each other so closely and so regularly, that several portions of the rock appear like the wood-work of a cartridge box.
The price of the best land is from 500 to 600 ecudi the tumolo ( $50 l$. sterling). Land of moderate quadity sells from 200 to 400 scudi, and the lowest from 200 to 100 seudi, and even less ( $161.138 .4 d$. to $33 l .6$. 8.81.$)$ The best land rents for aloout 15 seudi ( 11.5 s. .) ; the second quality for about 10 seudi, and the inferior from 5 to 2 scudi ( $8 s$. $4 d$. to $3 s .4 l l$.)
A man farming ten salms is obliged to maintain constantly two labourers, who generally receive from 100 to 120 scudi a-year ( 8 l .68 .8 l . to 10 l .) each, and the farmer generally feeds them in whole or in part. His other labourers he pays as he wants them, by the day. The price of labour was in 1816 as high as seven and cight, and even ten tari ( $11 \frac{1}{3} d .1$, $1 \mathrm{~s} .1 \frac{1}{2} d$, and $1 s .4 \frac{1}{2}(l$.$) per diem, in the summer time. In$ 1820 it was reduced to six and five tari (10l. and 81d.) At present the price is about four tari (6ald.) per diem, and for this the labourers are obligel to furnish their own tools. Sometimes they are paid iu money, at others in meschinto (that is a mixture of wheat and barley). When they are paid according to the latter mode, they receive two tumoli caeh a week; and this is the method which is generally preferred both by the labourers and the farmers.

A catalogue of plants which grow in Malta and Gozo, and of the fish found on its coast, with various other particulars, will be found in vol. v. of my "His. tory of the British Colonies."

## CHAPTER III.-IONIAN ISLANDS.

Section I. The septinsular union of the Ionian isles are situate in the Ionian Sea, between the parallels of 36.0 and 40.0 south, and the meridian of 20.0 and 23.0 east of Greenwieh, extending from the A1banian Coast to the southern extremity of the Morean peninsula.
II. The early history of these islands, called by the
 with the mythology of the Greeks and Romans, that it is difficult for sober truth to find a starting point. The islands would appenr to have been early colonized, remained for many years as separate states, were partly in the possession of Corinth, next in alliance with the Greeks, then with Pyrrhus, King of Epirus, during his invasions of Italy ; subsequently Rome gave law to nll the little Grecian republics; and on the fall of the Eastern Empire, the Venetian republic afforded protection to, and claimed the sovereignty of the islands.

In 1737-38, the Turks, who had commenced their efforts for the expulsion of the Venetians from the Morea and other provinces in European Turkey, besicged Corfu, which, not withstanding repeated assnults, remained the chief of the Ionian Isles under the republic of Venice, the fall of which, bencath the nggrandizing conquests of the Gallic republic, immediately aflected the islands, which the French took possession of, but evacuated them on the breaking out of the war in 1798-99, when they were taken under the joint protection of Russia and Turkey ; the former becoming, however, the sole protector.

A constitution was organized at St. Petersburgh, and afterwards promulgated in due form at Corfu, but which the septinsulars were far from being satisfied with; and by a seeret agreement between Alexander and Napoleon, who had then his eyes on Turkey, the islands passed under the dominien of the latter. During the continental war, England took possession of several of the slands, and at the pence of 1815 , the septinsular union was placed under the protection of Great Britain, with whom they have sinee reasined. For ample details of the Ionian Isles, see [History of the British Colonies vol. v., and Colonial Library vol, vii.]
III. The sent of Government of the septinsular union is situate at Corfu, in the parallel of 39.30 north latitude, and the meridian of 19.50 enst longitude, is situate a little to the eastward of the mouth of the Adriatic; the capital being distant from Otranto about 30 leagues, and 200 from Veniee. It stretches from north to south in the form of $n$ semicircle. On the north and west it is bounded by the Mediterranean, and on the north and cast by the channel which separates it from Albanta, or the ancient Epirus. This channcl, which runs nearly south-east and north-west, is about twenty-one Geograplical miles in length; at its narrowest or northerly entance, at Cape liaragol, it is not two miles across: at the southerly, between Cape Bianco and Gomenizza, it is about seven miles broad; and at its willest part, in the neighhourboud of the town of Corfu, it does not much execed ten miles in breadth. The depth of the water in the decpest parts, viuies from 10 to 50 fathoms.

The length of the island of Corfu, is about thirtyfive geographical miles; its brendth, nt the north-eastern extremity, about twelve : from whence it gradually lessens until it terminates in its most southerly point or Cape Bianco.
IV. The mountains of Corfu are composed chiefly of a compact limestone, destitute of any organic remains, hut with occasional strata of flint, precisely similar to the Albanian mountains. In some places carbonate of lime nitermates with strata of vegetalle earth; and it is often met with, tinged with the oxide of iron, and presenting on its surface, when fractured, beautiful arborescences. Fibrous, crystallized, and granulnr gypsum abounds principally, disseminated in argillaceous deposits : breceia in immense masses, either purely calearcous or with a mixture of silex, is to be met in various parts of the island; in some spots carbonate of lime is mixed with nodules of sulphur, or with coarse jasper : and Dr. Benza, in one spot, found the rare mineral, dolomite. There is a quarry of white marble under the western peak of St. Salvador, of a very fine grain, and well adapted to statuary; and variggated marble is found in small masses widely scattered. The substance known on the Continent as alabaster of Corfu, is a fine gypsum. The lesser hills consist mostly of an argillneeous soil, mixed with lime: the substratum to all the low and cultivated lands in the island is principally a stiff tenacious clay, very retentive of moisture, and extremely productive.

The island is not apparently of volcanic production, but would appear to have been separated from the mnin land by some violent convulsion of nature. Earthquakes, however, we not uncommon at Corfu, and are supposed to originate in the island itself, and not to be shocks in relation to other earthquakes; they generally run from north-west to south-east, and are slight; but in 1745, one shock was so severe as to destroy the palace, bishop's house, and many other buildings. In May, 1810, a severe shock in the interior of the island stopped n copious spring, The great earthquake which not long sinee damaged Santa Maura and Zante, was not felt at Corfu.
V. The elimate of Corfu is nearly tropienl, and the animal sensations are influenced more by the winds than by the nlternations of the mereury, in the thermometer. On un average of four years, the thermometer ranged from 44.0 to 91.0 ; the general numual average of rainy days for the four years being 963 . It appears that there is not a month in the year in which rain docs not fall for a greater or less number of days, but November and December, February null March, are the most rainy.

Snow very seldom falls in the island, and when it does it soon melts. Sometimes the summit of $\mathrm{St}^{\text {s }}$ Salvador is covered in patelies, which continues for ten or twelve days. On the Albanian mountains the snow begins to fall, generally speaking, about the end of November, and continues till May.

Fevers, especially of the remittent and intermittent types, nre of trerpuent oceurrence, and form nearly two-fifths of the total admissions into the hospiitals.

The total of all diseases adm tted into the hospitals during seven years ending in 1821，was，15，191，among which were ：－common fevers， 3,299 ；typhus，2；re－ mittants，1，400；quotidians，342；tertians，285； quartans，17；unclassed incu－mittants， 376 ；total， 5,721 ．The mortality by fevers of all descriptions was 170 ，or about 1 in 332 －thirds．

Dysentery is the next most important disease treated in the military hospitals of Corfu．
Diarrhera is also of frequent necurrence；there were treated 605 eases，of which o．lly two died，or 1 in $302 \frac{1}{2}$ ．

Phthisis and pulmonic inflammat ons，ns ihey oc－ curred at Malta，Gibraltar，and Minorea，bear a pro－ portion of 1 to $2 \frac{1}{2}$ of all the other serious complaints． The other diseases do not require notice；the plague has several times appeared，and of twenty－eight cases treated in 1816，only three recovered．

The following return shewing the comparative health of the troops serving in the Ionian islands and other places，was furnished by J．W．Hay，Esq．，（then under secretary of state for the colonies）to the Com－ mittee of the II．C．，on Military Establishments， 9 th July，1834．It does not，however，afford a fair test of comparative healthiness of station，as it is well known a regiment may be very healthy in one year and not in another：residents afford a fairer test of climate than troops，continually shifting，and ad－ dicted to intemperance．

Cephalonia，although second in rank to Corfu，is the largest of the islands composing the septinsular union．It is situate in the parallel of 38.27 ．north lat．，and the meridian of 20.32 ．east of Greenwich， having Santa Maura about six miles to the north－ ward，Zante eight miles to the southward，and the west coast of the Morea 24 miles distant．The area is 348 square miles，the extreme length 32 ，extreme breadth 18，and the circumference following the coast 150 miles．

Cephalonia is extremely rugged and mountainous． The general direction of the mountains is from south to north．At the southern extremity of the range，or opposite the coast of Zante，is the highest momitain in the Ionian islands，the mountain Enos of anti－ quity，the modern Black Mountain，or Montagna Negra， 3,625 feet above the level of the sea．

The harbour of Cephalonia runs inland for eight miles，rather difficult of ingress and egress，owing to its serpentine form，but offering a spacious and con－ venient shipping port．The entrance to the haven is extremely picturesque：on either side groves and plantations，relieved in the back－ground by majestic mountains，meet the eye in varied succession．To the left，on the western side of the harbour，three miles from its entrance，stands the town of Lixuri （olim Palis）．In front of this town the harbour opens into a branch running to the south－east for three miles；and on the peniusula formed by this branch，
and close to the sea，is Argostoli，the capital of the island．
Zante，Zacynthos，or Zacynthus，supposed to be so called from its being the burial－place of one of the Beootian followers of Hercules，（Pliny states it was formerly called Hyria，）is situated in the parallel of 37．47．north，and the meridian of 20.54 ，east of Green－ wich，ten miles distant from Cephalonia，and lying opposite the Gulf of Lepanto or Patras，towards the west angle of the Peloponnesian proviuce of Elis，the nearest point of which，Cape Klarenza，is distant about 15 imiles．
The area is 156 square miles；in its greatest length， which lies north－west and south－cast，it measures 24 miles；in breadth 12；and its circumference，the same which was estimated by Strabo，viz． 70 miles．

From its exquisite beauty，this island is by com－ mon consent called＂Zante，il fiore di Levante．＂In shape it is trapezoidacal，or rather irregularly oval， indented with a deep bay at its south－east extrenity． The aspect is decidedly mountainous，and occupying three－tifths of the island，the elevation varying from 500 to $\mathrm{l}, 300$ fect above the sea．
The city of Zante is very imposing in its external appearance，viewed from the sca．It is an open un－ walled town，and stretches along a gently curved bay for alout a mile and three quarters．At about half a mile from the northern extremity is the point of Crio Nero，jutting into the sea，from whence the town and shipping are supplied with water．

In brendth the town nowhere exceeds 300 yards， except where the houses stretch up the hill，upoin which the castle is erected．In 1819，the city con－ tained 3,730 private houses， 65 churches，five private chapels，two convents of nonks，and two of nuns， and 27 public edifices of various descriptions，includ－ ing two Jewish synagogues．
The soil is of three different kinds ：－a strong clay in the plain，calcarcous on the rising ground，and sandy near the shore．
Zante possesses petroleum and tar－springs，sume－ what similar to those which I have deseribed under Trinidad．

As the substance termed asphalte is coming into use，it may be stated here that according to a recent traveller，the valley containing the bitumen at Zante is the segment of a circle，surrounded on three sides by ahrupt and rugged ridges of hills；and on the fourth，by rocks rising above the water，as if the sca had，at some period，burst in and destroyed the conti－ nuity．In the marsh within the circle are several wells or pits；one examined was about nine feet in diameter，and surrounded by a dwarf wall．The water was two feet below the edge，and one foot deep；the surface covered with a scum，which reflects various iridescent colours，the blue and green are very vivid． A dark，black substance continually forcing its way from the bottom，and boiling up in large globules， which，as they ascended，enlarged，till near the sur－ fare，and then hurst，liberating a quantity of gus， which the peasantry say is highly inllammable．Somt－ times the globules are transparent，and assume a sin－ gular brilliancy，rising to the top and bursting，while a coating of dark bituminous matter in which they were invested is thrown off．This dark suhstance is the petroleum，or rock－piteh，which，being specificully heavier than the water，remains below．covering the sides and part of the bottom．The brilliant globules disengaged from it are pure naphtha，or rock－oil， which forms a light oleaginous stratum above，rellect－ ing various beautiful colours．The intervening water is sweet and fit for use，but strongly impreguated
with a taste liki rious dispeptie with large snoo theace thro ．．． i ing it is summe quantities ；and which is used fo similar purposes
There are mat Zantiotes，and above 90 years o facultics．
Zante abound which is experia delicious llavour owing to the f oil，wine，and f ducts
Santa Maura from $\lambda$ evkog，wh by the artificial from the mainla miles to the sou west，is situate Greenwich，havi extreme length ： 60 miles in ciret
Santa Maura Flias，the highes above the level is somewhat tria forms the base li raising the land level of the sea； larly towards th nearly an castern shle in populati small extent，ow western aspect．
Amaxichi，the ference，is situat long，one broad， contains upwards being seattered a ate on the very $t$

rings，sume－ scribed under
coming into $g$ to a recent nen at Zante in three sides ；and on the as if the sea yed the conti－ e are several nine feet in 1．The water oot deep；the Hects various re very vivid． rcing its way arge globules， near the sur－ intity of gas， lable．Some－ assume a sin－ ursting，while In which they $k$ substance is ng specificully covering the lliant globules ，or rock－oil， above，rellect－ rvening water impreguated
with a taste like tar－wnter，and it is prescribed in vn－ rious dispeptic complaints．The piteh is collected with large snoons into $n$ juit adjoining the well，and thenee thro ．．．into barrels．The best time for gather－ ing it is summer，when it is exuded in the greatest quantities；and they nnnually fill about 100 harrels， which is used for smearing the bottoms of ships and similar purposes．
There are many instances of longevity among the Zantiotes，and several inhabitants are known to be above 90 years of age，in the full possession ${ }^{\circ}$ all their facultics．
Zante abounds in aromatic herbs，the odour of which is experienced some distance at sca；and the delicious flavour of the Zantiote honey is doubtless owing to the fragrance of the herbage．Currants， oil，wine，and flax are the princijal vegetable pro－ ducts
Santa Materr Islaml（olim Neritos，then Leucadia， from $\lambda$ arkos，white，owing to its white rocks）formed by the artificial construction of a channel dividing it from the mainland of Acarnania，with Ceplalonia 10 miles to the southward，and Corfu 35 to the north－ west，is situate in 38.40 north lat．，and 20.46 east of Greenwich，having an area of 180 square miles；in extreme length 23 ，in extreme breadth 10 ，and about 60 miles in circumference．
Santa Maura is a mass of mountains，of which St． Elias，the highest，rises to an elevation of 3,000 feet sbove the level of the sea．The figure of the island is somewhat triangular ；the north－west coast，which forms the base line，runs straight and perpendicular， raising the land to a considerable height ahove the level of the sea；from this the surface inclines irregi－ larly towards the eastern coast，giving the whole nearly an castern aspeet．A part，however，consider－ able in population and productiveness，although of small extent，owing to its narrowness，enjoys a fine western aspect．
Amaxichi，the chief town，about a mile in circum－ ference，is aituate on a very beautiful plain two miles long，one brond，and thickly covered with olives，and contains upwards of 6,000 inhabitants，the remaining being scattered among 32 villages，some of them situ－ ate on the very tops of the mountnins．
lthaca（called Thiaki by the natives，Val de Compare by the Venetians），in lat．38．25．north，long．20．40． east，is bounded on the south and enst by Cephalonia， from which it is distant about eight miles；on the east and north－enst by the channel of 7ante，and $n$ group of smnll islands，the ancient Echinades；on the north by a part of Santa Maura ；and on the north－ west，west and south－west by the chamel which runs between Santa Maura and Cephalonia．It is distant from the main land of Acarmenia about 15 miles at the nearest point，and somewt．at more than 30 miles distant，in a south－east direction，lies the opening of the gulph of Lepanto．The ahape is irregular，the extreme length from north to south heing 18 miles， extrene breadth，five，but in some places not more then one mile and a half；its circumference about 30， and its area 44 square miles．

The appearance of Ithaca is unprepnssessing，the whole island heing a mass of mountains running in an irregular ridge cast and west ；or it may be con－ sidered a single mountain divided into rugged and mis－shapen rocks．
Vathi is little more than a single street，upwards of a mile long，containing from 3 to 4,000 inhahitants； the houses built of atone，and the town remarkable for its cleanliness and health．

Paxo，another of the Ionian islands，in lat．39．12． south，long．20．12．east，with an area of 27 square miles，and 12 in circumference，is of an oval shape， and composed of a single mountain，which probably at one period，formed part of Corfu，from the sou． thernmost point of which it is only seven miles dis－ tant．Purt Gai alfords good nuchorage for a few vessels；but there is an inner har！our formed by an island nlmost in contact with $t$ ise other，having in circular battery commanding the town，which is scat－ tered in an irregular manner on the beach．

Cerigo is the most aouthern island of the Septin－ sular Union，aituate in lat． 36 6．north，long．22．60． east，at the entrance of the Arehipelago：to the north of Cance，and south of the Morea；five miles distant south from Servi，and 14 east－south－cast of Cape Malio．The area is 116 square miles，the extreme length 20 ，the extreme breadth 12 ，and the circum－ ference about 50．The island was anciently known （according to Pliny）by the name of Porphyris，from its possessing abundance of that beautifol narble． Ptolemy attributes the name of Cythera to Cytherns the son of Phoenix，who established himself in the island．According to some，Cerigo was first peopled by the Lacedomonians，who in the eighth year of the l＇eloponnesian war were expelled by the Athenians under the command of Nicias．At a subsequent pe－ riod it passed under the dominion of the Spartan re－ public，and served as a retreat to Cleomenes，who on the approach of Antigonus，king of Macedon，took refuge in the island．Ptolemy，king of Egypt，was afterwards lord of Cerigo ；the Romans next came in possession，then the Venetians，and it lollowed the fate of the other islands of the Union．The relies extant denote the former greatness of the place； ＂l＇elo Castro＂ruin，to the northward of the harbour， stands on the ancient town of Menclaus，whose faithless wile Helen caused the siege of Troy，and whose bath is still shewn．Six miles from the harhomr of St． Nicholas，on the east，was situate the former city of Cythera；and a little further to the south are situate some ruins，supposed to belong to a temple dedicated to Venus Cytheraen．

The island is oval－shaped ：at the north is Cape Sparti，having a chapel on its cxtremity ：to the south is Cape Kapello，close to which is situate the harbour， and immediately above the chicf town called Kapsali， and containing about 5,000 inhabitants，whose tene－ ments offer a marked contrast to the other islanders＇， being mostly of wood，and ill construeted．

VI．We have no early censuses；according to the Colonial Ollice Returns，the following shews the－

Population of the Ionian Islands since 1824.

* Ineluded in the total number of population.

It will be scen from the foregoing, that the present population of Corfu is upwards of 65,000, from which it wonld appear that the number of inhabitants within the present century is on the increase, as shewn by the following census, taken in November 1802:-

## Hithin the Torrn.

Men, Women and Children of the Greek persuasion, 4,700; do. do. Latin, 1,600; do. do. Jewish, 1,229; total within the town, 7,529; in the suburbs of St. Rocco, 508 ; do. Manduchio, do. do. 1,829; do. Potamo, do. do. 2,192; do. Castrades, 2,160 ; total in the town and suburbs, 14,218: population in the 24 midland villages, 7,706 ; do. 44 northern, do. do. 12,660; do. 34 southern, do. do. 5,169; do. Island of Fano and Merlice, do. do. 773 ; total population, 4-4,926.

The classification of the inhabitants in the town was ns follows, according to the same census:-

A curious table of the Roman Cutholic inhabitants of the city of Corfu, for 51 years, viz. from 1770 to 1820, inclusive, was prepared by Dr. Benza, and the following is an abstract of a voluminous series of reports:-Years, 51 ; Born-males, 3,171 ; females, 2,750; total, 5,821. Dead-males, 5,109 ; females, 3,217 ; total, 8,326 . Died more than 90 yenrs oldmales, 35 ; lemales, 36 . Died mure than 100 years old-males, 5 ; females, 3 . Born twins and more, 44. Marriages, 2,235 . So that the marriages were to chil-
dren born nearly as 1 to $2 \frac{1}{2}$, and twins stand to mariages ns 1 to 50 , nnd to births as 1 to 132 .
The deaths in this table hear no proportion to the marringes and births. They exceed the latter by 2,505.
The lonians partake in some general features of the Greck physical configuration. The upper and front parts of the skull are well developed; the lea. tures are, in general, pleasing, and wear an air of intelligence. The complexion, in healthy persons, inclines towards olive; and in some of the females, who are not exposed to the sun, it is clenr and white. The complexion of the peasantry is, of course, much nffected by the sun. Those who reside in the L.ef. chimo district in particular, and in the neighbourhood of marshes, in genernl have a sickly leueophleg. matic cast. The eyes are nimost universally brilliant and full, in both sexes, and generally dark-colonred; the teeth good; the hair genernlly brown or black, and bushy in the men; the beard copious; the figure of the middle standard-sometimes heyond it,-and, if not indicative of strength, promising activity. The constitution sanguinco-choleric; the gestures vivacious; the gait erect and elastic, and the enunciation voluble and emphatic. (See Colonial Library, vol. vii.)
The females, are, in general, well formed, many of them handsome, but they soon fall into years.
VII. The Greek Chureh is the predominant faith of the islanders, the followers of the Latin or Romish taith being few, probably not exceeding 3,000; of Jews there are about 5,000 in the island, all of whom nre cordially hated by the Corfiots. The Romish Clburch was introduced into the island by the Venetians, and nt first was only a bishoprick, but Pope Gregory, in 1600, elevated the see to an archbishoprick; the chief being generally a noble Venctian, chosen by the Senate, whose nomination was at. tended to by the Pope. The cathedrn has a chapter composed of six canons, who eleet a grand viear. The clergy of the Latin Church were heretofore paid by government stipends, but excepting life interests, this system has been now discontinuel.
The Greek Church has for its head a protopapa (archpriest), elected by ballot in an assembly of the clergy and nobles, and confirmed by the patriarch at Constantinople. [For a description of the rites
of the Greek vol, vii.]

Schoots, Re. of the Ionian Indands. [B. B. 1830.]

The whole of the establislument for eduention is under the general direction of the commission for public instruction, revised and improved by Lord Nugent. The number of publie schools in the islands, in 1834, wns 32 , and of private 906 ; the expenditure of Government $6,171 l$. The male scholars in public schools, 1789; of females, 117. Ditto in private schools, males, 4,583 ; females, 826 . Total in all, 7,315. For details see Hist. of the Colonies, vol. v.
Libraries.-A collection of books, originally founded at Messina, in 1810, by British oflicers, nad transferred to Coriu by them, has, since that period, gradually increased into a very respectable library of several thousand volumes, containing many valunble and well-selected books, to which n very rendy access is at all times afforded. All military and naval officers, oflicers of the civil departments, British residents, and respectable inhabitants, may hecome members at a moderate entrance, and a small annual or monthly subscription.
Besides this library, the medical officers of the garrison have a collection of English periodical publications and standard works.
A smnll library was founded by the Canon Carale, from voluntary subscriptions among the nobility, \&c. The books were lodged in the Franciscan Convent of St. Giustina : to this the Ionian Academy added theirs; but on the arrival of the French, the most valuable of the books were abstracted by then. Some few remain at the convent.

A Bible Society was instituted in the summer of 1819, for the purpose of distributing the translations of the Scriptures into the Greek language, without note or comment, and there can be no doubt that much good will be derived from it by the islanders, for whose benefit it is intended.

The goals seem to te well managed; wherever the localitics will admit, the debtors are separated from the folons; the cost tior each prisoner is about idd. per diem; the average of hard lahour is nine hours per dism, regulated according to the season. In Cephalonia those who work at the hand corn mills receive half of their earnings, the gaoler one quarter, and the remainder is paid into the police chest. The prisoners are supplied with coarse clothing.
X. The civil government is now composed of a legislative assembly; of a serate; and of a judicial nuthority. The Leqgistatire Alsembly consists of forty members, inclading the president: of the forty, deven are integral members, and iwenty-nine elected from the various islands in the following proportion: Corfu, seven; Cephatonia, seven; Zaute, seven; Santa Maura, four ; lthaca, one; Cerigo, one; Paxo. one. Each of the three last in the rotation in which they stand fexclusive of that islund whose regent beconies an integral member of the legislative assembly) elects a sccond. The mombers are elected (on a double list formed by a majority of the votes of the primary council) out of the body of the syndita of each island. [Chap. iii. Art. 8. Constitutional Charter, Appendix.]

The elections, and all civil appointments, are valid for five years; and the session of the parliament of the states is held every two years.

The votes are cira coce, and the sittlngs open; ten mensers, and the president, or vice president, constitute a legal meeting; and conferences with the senate, \&c. are managed by the eleven integral members of the assembly, who form, with their president, the primary council. These eleven iutegral menbers in the case of parliament dying a natural death (that is, having run its full course of five years), consist of the president and five members of the old senate; the four regents of the great island during the late parliament; and of one of the regents of the smaller islands; but in case of a dissolution, instead of the regents, the lord high commissioner names five members of the late legislative assembly.

The Sonate, which forms the excentive power, is composed of six, viz. five, and a president, entitled "His Highness;" while the senators are styled the "Most lllustrious" (Prestantissima) ; the schators are elected out of the body of the legislative assembly in the following proportion, viz. Corfu, one; Cephalonia, one; Zante, onc ; Santa Maura, one ; lthaca, Cerigo and laxo, one. The power of placing a meniber of the assembly in nomination for a senator
rests with the president, on an application heing made to lim in writing, signed hy four members of that horly and himself, demanding such nomination; and the president shall place in momination nny person when eight members make a demand; the destion takes place three days at furthest alter the meeting of the asscmbly, and is decided by the majority of votes, the president casting in ease of an equality. The sanetion of the lord high enmmissioner is neces. sary to the valudity of the election. The vacancies thus caused by the election of five members of the assenhly to the eenatorship are filled up hy the trans. missiom of double lists of names from the primary council to the syndita of each island. The scuate remain in oflice five years; his highness, the presideut, half that period, cligible however to be re-appointed by the lord high commissioner. The senate names its own ministeinal otlicers, with several exceptions, and it has the power of nominating to all situations under the general goverument; the regents to the different local governments; the judges in all the islands; and generally to all situations, cxeept merely municipal ones, with certain renovations. During the recess of parliament the senate has the power of making regulations which have pro tempore the force of laws; it has the power of originatiag laws, as well as disallowing any passed by the legis. lative assembly.

The lord high commissioner is appointed by the colonial office, and is generally a military otticer; His Excellency appoints in each island a resident, or representative, of the lord high commissiuner, who is a tied offleer of the regiments on duty in the islands. The regent, alvocate, fiscal, secretay $y$, and archivist of each island, are appointed by the senate, subjeet to the approbation of the lord high commissioner. The munieipal administration of each island consists of five members, independent of the president (who is the regeni), appointed by the syndita of each island; out of the body of the said syndita, from "lists" of names sent in to the regept hy the synulita from these " lists;" and from these ten, five are se. lected by the Regent to form the municipal body. (Sce Ch. iv. Art. 9, Constitutional Charter.)
The qualifications of the syndita, or " noble electors," l have not been able to ascertain with any accuracy; I understand that some votes are hereditary, but that pursuing any trade or business is a disqualification.

To form a legal mecting one half of the syndita of each island must be present. For the other details of

## $f$ the syndita of

 other details ofthis unique form of government, I refer to the Charter. for the respective powers of the assembly and nenate, [Sce Conatitutional Charter in the Appendix.]

The judicial authority in each island consists of three trihumala,-a civil, a criminal, and a commerciat; and there is a court of appeal in each island : the judges heing appointed by the semate, subject to the approval of the lord high commissioner. Independent of these courts, there are in each island tribumals for the trial of minor criminal ottences, and for the adjudication of small civil suits; these are presited over by justices of the peace for the island, appointed by the regent of the same.
At the seat of government there is, in addition to the forcgoing courts, a superior or high ecourt of appeal denominated "the Supreme Council of Justice," and consisting of four ordinary members (judges) two linglish and two Greck, and two extrnotdinary memhers, viz, the lord high commissioner, and his highess the president of the senate. For the power of the courts, sce the Constitutional Charter. Trial by jury does not exiat ; nor are there any assessors to aid the judges. No crimes but those of murder and high trenson are pmishable with death, which infliction is now rarely suffered.
The laws were partly Venctian, partly Greck ;-A co!n hos now heen digested for the ishnds, and is much needed, particularly as regards the law of cntail now abolished, and that singular enactment by which a purchaser was compelled to restore a property to a seller severnd years after the bargain, for the same price at which it was vended, if the vender teuder the original sums; a measure that of course struck a blow at all improvement.

Military Establishment. - Article 1. The military defence of the United States of the Ionian Islands being placed in the hands of the protecting sovereign, the sole regular military establishment shall consist of the forces of His Majesty.

Article 2. Independent of the regular troops of His Majesty the protecting sovereign, there ahall be established in each island a corps of militia.

Article 3. The organzation of the mitit'a of the United States of the lonian Islands shall be left to the Commander-in-chief of the foress of the protecting sovereign within the same, auhject to the approbation of the Senate, and of his Excellency the Lord High Commissioner of the protecting sovereign.

Artiele 4. The general charge of preserving the tranquility of the country being immediately and directly connected with the military establishment, the high police of the United States of the lonian lslands shall be placed under the direct management of his Excellency the Lord High Commissioner of the protecting sovereign and His Majesty's Commander-in. chief.

Article 5. No officer can be appointed to any corps of the militia of the Ionian Islands who is not a native born subject of the same

Article 6. His Majesty the protecting sovereign shall appoint inspectors and suh-insucetors of the militia of the Ioninn Islands, who shall be either British or Ionian officers.
Article 7. The corps of the militia of each island shall be placed under the control of the inspectors or suh-inspectors of the militia appointed by Ilis Majesty the protecting sovercign.
Article 8. The regular forces of His Mujesty the protecting sovereign shall, in all instances of civil suit, be amenalle to the laws of the land within the United States of the lonian Islands.

Article 9. The regular forces of the protecting sovereign in these states shall, in reapect to criminal juriadiction, be alone subject to the martial law of His Majesty.

Article 10. The militia within these states is of course subject to the laws of the land; but when it shall have been duly organzed and called ont, it ahall he nmenable to the martial law of the procecting power, and liable hy it alone, to be tried for criminal offences.

Article 11. The regular establishet number of His Majesty's trocpis for the garrison of these islands shall be considered ns conaisting of $3,000 \mathrm{men}$; hut it shall be competent to lincrease or diminish that number, as H. M.'s Commander - in-clicf may deem fitting.

Article 12. All expenses ol quartering the regular forees of His Majesty the protecting sovereign, nnd, generally ajeaking, all military expensea of any kind to be incurred by these states, (as far as relates to the $3,000 \mathrm{men}$ above named), shall be paid out of the genernl trensury of the same.

Aiticles 5 and 6 betureen Grent britain and Russia, S.r., resprecting the Ionion tslunds, signed wt l'tris oth Norember 1818:-

In order to ensure without restriction to the inhatitnnts of the United States of the Iovian Islands the advantnges resulting from the high protection under which these atates are placed, as well as fur the exercise of the rights inherent in the said protection, His Britamic Majesty shall have the right to occupy the fortresses mod places of those states, and to maintain garrisuns in the same. The military force of the said United States shall also be under the orders of the Commander-in-chief of the troops of Llis l3ritannic Majesty.

His Britamnic Majesty consents, that a particular Convention with the Government of the said United States shall regulate, according to the revenues of these states, every thing which may relate to the maintenance of the fortress already existing, as well as to the subsistence and payment of the British garrisons, and to the number of men of which they shall be composed in time of peace. The same Convention shall likewise fix the relations which are to exist between the said armed foree and the lonian Government.

The military force of the British army in the islands is about $3,300 \mathrm{men}$.

There are six barracks for the garrison nt Corfu, viz. one in the citadel, one at Fort Raymond, one at Fort Neuf, and another for a small detachment at Vido Island. The barrack in the citadel is a very good stone building of four stories, including the basement atory, situated at the foot of the rock on which the citadel is built, and open to the north.

XIII. Amount of Coin in Circulation.--[13. 13. 1836.] -The only eoinage in the States is a small currency to the amount of 11,0001 , sterling; viz.-Silver quarter shillings, 1,000l.; copper quarter-pence, 6,000l.; copper one-tenth pence, 4,000 .
The general circulating medium is in dollars, Spanish, South American and Austrinn, In which description of coins mostly, the States receive for staple produce, exported to the amount of about $275,000 \mathrm{l}$. sterling amually, exclusive of returns from a considerable capital employed by ship-owners in the levant trade; remittances received for the subsistence of the troops, \&c., and in Spanish dollars pay for the article bread corn alone, imported into the States from the Black Sca and in Italy, to the amount of about 170,0001 . st. per annum. The quantity of bread corn grown in the islands being equal to one-fourth ouly of the consumption.
Since June 1825, British silver to the amount of 95,000l. sterling, bas been received from England and thrown into circulation; but judging for the necessity of public duties and rents, and recent state of balances in the respeetive treasuries, the total amount of British silver now remaining in the States, does not exceed 20,000 . sterling ; and there has been withdrawn from circulation of this description of moncy $75,000 l$, sterling for remittances to Maltn, \&c. by regiments returning to England, for payment of articles imported by British trading vessels, and oceasionally for payments of produce of the Morea.
Coins.-[B. B. 1836.]-Gold, Spanish doubloons, subdivision ot coins in circulation, $\frac{1}{2}, \frac{1}{4}, \frac{1}{4}$; Gross weight in grains troy, 4162 ; rate established per tariff, 3l. 6s. British currency, alloy per cent. 62 .3ds. Spanish pillared dollars, $\frac{1}{2}, \frac{1}{4}, \frac{1}{8}, 1-16$ th ; Gross weight
in grains troy, 4164 ; alloy per cent. 93 ; rate established per tarill, 4s. dl. Mexiean, Doliviun, Peruvian, Chilian, aud Rio de In Plata dollars, rate established per tariu', 4s. 4d. Imperial Austrian dollars, subdivision of coins in circulation, 1; rate established jer taritl, 4s. 2d. Venctian, St. Mark dollars, subdivision of coins in circulation, $\frac{1}{2}, \frac{1}{4}, \frac{A}{4}$; gross weight in grains troy, 432 ; alloy per cent. 164 ; rate established per tarill, 4s. 2ll. lonimn currency, pieces of (rate estallished per tariff), $3 . l$. Copper lonian currency, pieces of (rate established per taritt'), 1-10th. There was no paper money in 1 Nab.

The following rates of exchnuge may be quoted as nearly stationary for some months past at Corlu :Loudon, 5! 1-4th per dollar, at 4s. 4d.; Trieste, $21.8 t h$ florius, $4 s$. H. F ; Venice, 6 1-6th lire of Austria, 4s. 4 ll ; Ancona, 1 scudo, 4 s .4 ll .; Naples, 128 grains, As, $4 l$. Govermment bills if paid for in British currency, at the rate of 1001 , for 101l. 10s. currency, when negociated for
dollars at ( dollar.

Weights as estahlished by det af Parlitement, datel 24th May 1828.- [B. B. 1836.] The British imperial troy pound of $\overline{5}, 760$ grains, to be the only standard of weight; 24 of such grains to he a "calco ;" 20 "Caldic," an ounce; and 12 ounces a "Libbra sottile," or pound light weight tor precious metals and trugs; and 7,000 of such graius n "Libhra Grossa" or "Pound great weight," equal to the Eng. lish pound avoirdupois, with the parts and mnltiple of 16 drams an ounce, 16 ounces a pound, and 100 lbs . a Talanto.

Measures, as establishel by Act of Parliament, datel 24th May, 1828.-The British imperial standard yard to be the only stantard mensure of extension; one-
third of the said yard，a foot ；one－twelfth of the sail foot，an inch；five and a half such yurds，a carmaco； 220 such yards，a stadio；amil 1,760 such yards，a mile．
The lritish imperial gallon to he the only standari measure of capacity；the Chilo measure for grain to contain 8 of such gallons，or 6.1 dicotuli；and the Ionian barrel to contain 1 i gallons，or 12 s dicotoli． lioblie Works of the Imbian isinnis．Uudertaken or in Prog eqs darimg latit．

## Charter iv．－hedigoland）．

St．crion 1．－The island of Iteligolame，in the North Sea，is situnted in of．II．N．latitude mul 7．©I．Fi．， longitude of Crerowich，and is from 2.4 fo 20 linglish miles tistant trom the mouths of the bille，the liyiler， the Weser and the Jahde．It is of considerable im promere to vessels bomal to these rivers，mot buly hermase its chard nuil lighthouse nre an mimirnhle brafon，but also because ships may here be suppled with experienced und lierused pilots．
11．In Auqust 1711，the island was compured from the Duhe of Sleswick by the crown of Demomer， Which retainal possession of it till the fith september， 1si17，when it was orempied by the linglisis，and in INA was formally coled to（irent Britain，umder whase govermment it still contimes．

111．The island，which is in the form of an acufi angled tringle，is mow only abont ome Jioglish milo in length from $\mathrm{N} . \mathrm{tos}$ ．，one－third in bremath from Li．to W＇．，and two miles mad ome－third in eiremmed remee．It is certain that it was anciontly of muel grenter extent，but there are now nuthentie records to determine how far it may have sfretched into the

The ishancl comsists of the upher part，called the Oberland，nud the lower，or Unterlmul，which lies in a samberasterly dirertion．＇The boight of the Oher lank，at its most clevated point on the western side， is ？on feet ubow the fered of the sen，the unstern sithe being lower．＂The island is visible at a distame of sif und 20 miles ；its first appearmace is very striking， 1
and it increases in interest on a nearer approach. [For Gcology, \&e., sce "Colonial Library," Vol. V.]
IV. The climate is mild, and resembles that of the milland counties of England, the heat and cold heing tempered by the sea breczes; the air is 1 ure and very salubrious, whence Heligoland has been much frequented by visitors from all parts of Germany, Prussia, Poland and Russia, since the crection of the baths in 1826 ; they are considered by physicians as the most efficacious in the North sea.
V. The number of inhabitants is 2,200 ; namely, 1,000 males, 1,200 females. In 1836 -births, 52 ; marriages, 23 ; and denths, 32. The population, which is increasing, is considerable for so small a suot, especially as many families have emigrated within the last 20 years from the wart of employment at home. They are chiefly engaged in the fishery or navigation, and many also are brought up as pilots. There is a brewery and a distillery, and the number of mechanies and shopkecpers is commensurate to the wants of this small colony. The number of houses is 470. The IIeligolanders are of Frisian origin, and speak a dialect of that language, but at chureh and in the sehool the High German alone is used. They are a tall and strong people, with handsome features and florid complexions; their habits are very simple, and their innctivity and fearfulness on shore as remarkable as their industry and daring courage at seat.
VI. There is onc chureh, Sit. Nicholas, built in 1685 , situated in the Upper Town, capable of containing from 700 to $x 00$ persons ; ahout 2.50 gencrally nttend. The clergyman receives 7.1 ' per ammum, and has likewise a house found him, together with two picces of gromon, one 48 fathoms long and 27 broat, and the other 1.11 fathoms long and 13 fect broad. There is no chapel.

The junior clergyman instructs the upor class in the school; the other two classes being tanght by two schoolmasters. The total mmber of children in the schools is about 3 B 0 .
VII. There is one school, which is publie, situated in the Upper Town, and contains $1: 82$ male and 162 female children. It is conducted by three masters; the head master receiving $74 l$. per nnmum; the scond master, $30 \%$. per annum ; and the thire master, 20 . per annum. The school is supported by voluntary contributions, and a fixed sum of 5\%s. 4/. per annum for each child, which meets the expenses.
VIII. Theres is a building used as a prison, situated near the top of the steps in the l'pper 'Town, which contans four eells, but there have been no prisoners of any description this year. [13. 13. 1836.]
IX. By virtue of the capitulation coneluded with Admiral Russel, in $1 \times 07$, the inhabitants were permitted to retain their ancient constitutions and the banish taws, an agreement which has beon strictly ndhered to. 'The aflairs of the island are administered by a governor (at present Colonel Sir lleury liing, Knight of the Guelphic Order), and under him is a court composel of six municipal councillors, who are chosen from among the inhabitants. 'I'lie fininces and police are superintended by 16 ehters, and $x$ ad. juncts, who with the municipal conncillors constitute the govermment.
X. The local revemmes of this islasd, tuhing nom year with another, are about 1 liol. per manum. The
amount so raised is principally by granting licenses of shopkecpers, pilots, and other persons following any trade or business to enable them to carry on their respective occupations; rating each person in pro. portion to the extent of his business.

The expenditure of the islant is about $160 \%$. per anmum. Its disbursements are principally for the payment of the interest of the island deht, for thi crection and repmirs of bulwarks, and for kecping in repair other buildings the property of the island.

Estimate of the sum which will be required to defray the expense of the Civil Fistablishment of Heligoland, for the period from the Ist day of Aprit, $183 x$, to the 31st day of March, 18:39:-
Lieut.-Governor, $500 l$; Clerk to Lieut.-Governor, 136il.; two Clorgymen, nt 5ol., 100t.; Town Clewh, 60l.; Sigmal Nlan, 60t.; Buoy Kecper, 33l.; Mait Carrier, 69I.; Kecper of Blockhouse, 3l.; total, 9ri/. This estimate is for the same amount as that for the preceding year.
XI. There are cight or nine vessels of 50 or fit tons cach, which perform voyages to England, Franee Norway, and the Baltic Sca; nud about for ofrol fishing boats of three or four tons, and small boats tor the lobster tishing.

NII. Prices of produce in 18.36 ; Beef, 3 d . per 11 .; mutton, $3 l$. per lb .; Potatoes, 1 s . per hushel ; co: from fill. to 1 s . per lb . ; tea, from 1s. to 5 s . per tb . lump sugar, from $5 \%$. to $8 l l$. per ll . ; moist sugar, from 3d. to til. per Ib.; coals, J. fol. per hushel.

There are no mannfactories, mills or works, de. of any kind. There bas been one shir, buit in the co. lony of 5o tons burthon. 'Were are about fo hoats emploged fishing for haddocis and lobsters; luetwen 70,000 and 80,000 of the former and atont 27, , 4 an the latter are eanght anmmilly, the whole of whel are sent to lamburgh and brimen, with the exeep-
 land ; value of hadelocks, 3,333/.; value of lolvefers 67\%\%. ; total, 1,0 ork . "here are no horses and ont 6 horned eattle, 150 stocp, and + goats in the insand.

Huring the system of the continental exclusion from $1 \times 0 \%$ to $1 \times 11$, the possession of Heciaruland was of the ntmost importance to the Binglish Guvernmant, as it cuabled them to watch all the motions of the enemy in the countries lying on the eoast ; and gate them the command of the mouths of the rivers whid permitted them to protect the eommerec of British subjects with the neighbouring states, white the inland nt the same time served as a depot for hatio good, which were offeral for salde, or sent to ditlerent pats of the Contincut. At present IVeligoland is of great sorvice to mavigation from its conspicuous lighthuse from the able pilos who may always be whtaned there, and from the anchorage it afforils to shipyme This anchorage might be converted into nu cevellat harhour, which would peflord shelter to merehantan and the goveroment stemm-boats which touch at this istand durms the winter season to eleliver the mails, which at the breaking up of the ice, are always lorwarted by vessels of small dranght.
[ $A$ traet of ahout ston) square biles on the North comst of the island of Bomed, the island of dimande 1'o, Nden in the Red Son, mul socotra ishand onf Cap Ciardatiui, lanve not been included is the Worh.]

From this it appears that among every 1,000 white troops there have been 1,903 admissions into hospital
man must have been under medical treatment, for some canse or other, about once every six months and $n$ half.
If reference be made to the proportion of admissions among troops in the United Kingdom, it will be found that there every man is under treatment about once every 13 monthe; consequently the cases ol sickness or admissions into hospital among white troops in this command are about twice as numerous as when serving in their native country. There is, however, this marked distinction, that they are of so stevere character, that 1 in 24 proves fatal, wherens in this country only 1 death occurs out of every 67 cases treated.
The rations of the troops in the windward and leeward command during the period embraced in this report have consisted weekly of 7 lbs . of bread, 2 lls . of fresh mcat, 2 lbs . of salt becf, 27 ounces of salt pork, 9 ounces of sugar, 10 ounces of rice, 5 ounces of cocoa, and $2 \frac{1}{2}$ pints of peas, for which the soldier pays $5 d$. Prior to 1830 he was allowed a gill of rum, for which he was charged $1 d$. In most of the corps the soldier has but two meals; breakfast, consisting of a pint of cocon and his ration bread, and dinner, consisting either of the fresh meat made into broth, with vegetables, or the salt meat boiled into soup, with the peas, and eaten with yams or potatoes. In some instances there is nlso a supper meal, but this is not common in the command.
It may be necessary to remark, that the deaths stated in the preceding table are only those which have occurred under medical treatment, or after being ndmitted into the hospital, leaving still to be accounted for a considerable proportion who die suddenly, or from accidental causes. The only means we have of ascertaining the number of these is by a comparison of the deaths in the preceding table with those reported annually to the War Office by the general officers in this command, and which includes the deaths from all causes.

This omission, added to the ratio of deaths in the preceding table, increases it to $81 \frac{1}{2}$ per thousand, to which must be added invalids who died at sea, or on their passage homeward; these have avernged about 14 annually, or $3 \frac{1}{2}$ per thousand, thus making the mortality from all cruses 8.5 per thousand of the mean strength.
This would be a fair estimate of the ratio of mortality among this class of troops during the last 20 ycars, provided the strength in the medical returns had been accurately stated. But as this bas, in most instances, been taken at the highest rate to which it attained in the course of the year, and not on the mean of each month, as it ought to have been, we find, by a comparison with the War Office returns, that the strength has in this way been rated, by the medical authorities, about a tenth part higher than it ought to have been; consequently the above ratio of mortality must have increased in a corresponding
proportion, which will make it $93 \frac{1}{2}$ per thousand of the strength, or, in other words, about an eleventh of the force have died annually.

From this statement, however, no definite idea can he conveyed of the insalubrity of the climate, till we compare it with the mortality which has taken place nmong the same class of troops in the United Kingdom. This has amounted, during a long series of years, to about 15 per thousand annually; but, during the last seven years, it has, owing to the prevalence of influenza and cholera, been sbout 2 per thousand higher. Thus the mortality among troops in the windward nid leeward cominand has been six times as high as in the United Kingdom, though the extent of sickness, as shown by the number of admissions into hospital, has only been twice as great. Even this rate of mortality, high as it appears, is considerably less than during the previous 14 years, from 1803 to 1816, when it was as follows :

Thus, during this period, 138 per thousand of the white troops in this command died annually, which is ahout one half more than on the average of the last 20 years; so that fatal as the climate still is to Europenn troops, it appears sf late years to have materinlly improved, particularly in Barbadnes, Trinidad, and Antigua. In this estimate we have carefully excluded the strength and deaths of the troops serving in the settlements of Surinam, Martinique, Guadnloupe, St. Eustatia, St. Martin's, Santa Cruz, and St. Thomas, which were given up by the British in 1814 and 1815, as a greater mortality occurred in these settlements, than in the others which now constitute the Windward and Leeward Command.

The extent of siekness and mortnlity during the last 20 years being determined, the next question is, by wht diseases was it produced? With regard to those deaths not included in the medical returns, we can supply no specific details.

The proportion corporally punished in the Wind- been very much restricted; while the former extends ward and Leewnrd Command has amounted, on the average of the last 20 years, to 50 per 1,000 annually. This is six times as high as in this kingdom; but the latter ratio has been taken on the average of the last seven years, during which corporal punishment has
over 20 years, during the first part of which it was very common. The following table will show that it has gradually decreased in that command, till the ratio is now as low as in this kingdom:

Black Troops and Pioneers.-In this portion of our iavestigation we labour under the difficulty of possessing no information regarding the mortality to which this class of men are subject in their native country, which is the only correct standard whereby we can estimate with any degree of accuracy the influence of other climates on their constitutions. So far as statistical inguiries have extended, however, there is no country, either temperate or tropical, in which the mortality among the indigenous civil inhabitants hetween the ages of 20 and 40 seems materially to exceed 15 per 1,000 annually; and probably there is no country where troops composed of the indigenous inhabitants are subject to a higher rate. As an instance we may mention, that among the Malta Fencibles, composed of the natives of that island, the average mortality does not exceed 9 per 1,000 annually; and among the Cape Corps, composed of the aboriginal inhabitants of Southern Africa,

it does not exceed 11 per 1,000 : while among the Madras native troops it does not exceed 13, nor among those of Bengal is it more than 11 per 1,000 annually.

Now, were the climate of the West Indies as congenial to the health of the negro troops as that of their native country, it may be inferred that the mortality would not excecd that of the Indian army, which is composed of men about the same age, employed in the same description of military duty, and also in a tropical climate. In so far, then, as it exceeds that rate, it may fairly be attributed to the insalubrious influence of that climate on their constitutions.

It is by no means extraordinary that African troops should suffer as well as the whites from the climate of the West Indies, sceing that they are for the most part natives of the interior of Africa, of which the climate is probably very different: and it is well
known that，though the indigenous races of tropical as well as temperate climates are peculiarly fitted by nature for inhabiting and peopling the respective portions of the globe wherein they or their fore－ fathers were born，the effects of a transition to any other is in general productive of a great increase in the scale of mortality．

This fact is well illustrated by the following table of the admissions into hospitnl and deatlis among this class of troops，serving in the West Indies during the last 20 years ：－
Admissions into Hospital and the Deaths among the Black Troops and Pioncers in the Windward mind Leeward Command．

| Total ． | 40934 | 335.57 | 1645 | － | $\cdots$ |
| Average | 20.47 | 1678 | 82 | 820 | 40 |

Thus，on the average of the lnst 20 years， 820 have been admitted into hospital，and 40 have died，out of every thousand annually；so that the rate of mortality is at least thrice as high among this description of
troops as in the native army of the East Indies． Small－pox and eruptive fevers are the diseases most generally fatal．

It may not，perhaps，be premature here to mention， that the same liabilities to a high rate of mortality scems to affect negro troops in almost every gunrter of the globe where they have been employed．In the Mauritius，they die at nearly the same rate as in the West Indies；in Ceylon，where a considerable number was employed in the Colonial Corps of that island， the mortality was ao high that they nearly became extinct in the course of a few years，not withstanding every care on the part of the military authorities to keep up their numbers；in Gibraltar，where the 4th West India Regiment was stationed for two or three years， 62 per 1,000 of the strength rlied amoully； and even at Sierra Lcone，on the sea－const of their own continent，the mortality has averaged not less than 28 per 1,000 annually，being about doulle the ordinary ratio among other troops serving in their native country．This demonstrates beyond a douht that the constitution of the negro can be but little fitted to adapt itself to foreign climates，when even the transition from the interior to the sea－const of Western Africa has been attended with such preju－ dicial effeets．

The returns of the mortality among the negro slave population throughout the West Indies，sufficiently illustrate the unfavourable character of this climate to the constitution of the negro，the proportion de－ ceasing there，exclusive of Jarnaica，being lin 33 of the population annually；whereas in most other countries，of which we possess accurate statistical de． tails，the mortality among the indigenous inhabitants is only from 1 in 45 to 1 in 50 annually；and this extra mortality among the negro population falls almost entirely upon the adults，negro children being in general remarkably exempt from disease．High as this ratio is among the slave population，however，we shall afterwards show it to be considerably less than among the troops，not in one，but in every colony throughout the command；a sufficient proof that all the care and attention which can be bestowed on that race of men is quite unavailing to counteract the pernicious influence of a climate unsuited to their constitution．

Here，however，as with white troops，it is pleasing to obscrve that there has been a considerable diminu－ tion in the mortality during the period included in this report compared with the 14 previous years， when the strength and deatlis were as follow：－

Thus the mortality among this class of troops on the average of these years was 64 per 1,000 annually， being one－half higher than during the last 20 years， so that to whatever cause it may be attributable，the mortality of the white and black troops within that period has diminished in the same ratio．The latter as well as the former were employed to a very consi－
derable extent in Martinique，Guadaloupe，and the other settlements before referred to，and the strength and deaths there have consequently been cxcluded in this estimate．

We shall now exhibit in the following table，the effect of the climate of Jamaica on the bealth of the white troops stationed there during the last 20 years，

From this table admissions into ho rather less than in mand，being 1812 uually；that is，eve disnase or other， months．

From this table it appears that the proportion of admissions into hospital in the course of the year is rather less than in the windward and leeward eom－ mand，being 1812 per thousand of the strength an－ nually；that is，every soldie．has an attack of some dispase or other，twice in the course of thirteen months．

Though the extent of sickness is less than in the windward and leeward command，the mortality is much greater．The preceding table shows it to be 121 per thousand of the strength annually，but this includes only those who died in regimental and de－ tachment hospitals．
Black troops and Pioneers－it is to be regretted that the materials for estimating the influence of the climate of this island on the constitution of black troops are by no means so ample as in the windward and leeward command．We have already stated that in Jamaiea they consist entirely of military labourers， with the exception of a small detachment of one of the West India regiments．These labourers being less under medical superintendence than regular corps， it is only when their disease begins to assume a serious，or perhaps fatal aspect，that they come into hospital ；at least we are led to suppose so from the extremely low ratio of admissions，as compared with the deaths in the following table ：

Adinissions into lluspltul，nud denths nmonr the Black troops serving in Jamaica．

Thus it appeurs that the mortality among this class of troops in Jamaica is but 30 per thousand of the strength annually；so that the climate must be much more favourable to their health than that of the windward and leeward command，where the mortality among the negro troops was ascertained to have been 40 per thousand on the average of the same series of years．

The superior salubrity of this climate for the negro race is corroborated by the mortality of the slave po－ pulation being only 25 per 1,000 of all ages，whil． throughout the windward and leeward command it ： 31 per 1,000 of all ages．Thus，both in regard to black troops and the slave population，the mortality is about one－third less in Janaica．

By an estimate which has been made of the mor－ tality among this class of troops，from 1803 to 1817 ， it appears during that period to have averaged 49 per thousand annually；but as the garrison at Honduras was then generally included in the returns of Jamaica， this affords no accurate standard of comparison with the mortality in the above table，which refers to Ja－ maica alone．

From the high ratio which the deaths，in almost every instance，bear to the admissions，there can be little doubt that all the slight cases of sickness have been onntted；we therefore decline drawing any con－ clusions as to the relative prevalence of each class of diseases．

The following table will serve to illustrate the vari－ able character of the climate，and the relative influence of mortality in each year，at the principal stations throughout the island of Jamaicn．

Compurative view of the ratio of Mortality among the troops in cach year at these subortinate stations．

Thus it appears，that the most sickly as well as might add，most parts of the northern hemisphere， most fatal period of the year extends from August to Decomber，and that the only months comparatively healthy are March，April and May，which possess the same character throughout the West Indies，and we at least so far as the health of troops is concerned．

Prior to 1825，the number of invalids who arive at Chatham from all the West India stations wen same charneter throughout the West Indies，and wel blended together，and are thus stated：－

As，in this those sent ho billties contr nacrely requir their health， corps，it is im coaclusions．
Since 1825 ， these two Com distinction has sult home and recovered and we are enable that subject．

As, in this table, no llistinction is made between those sent home on account of advanced age, or disabilitics contracted in the climate, and those who merely required change of air for the recovery of their health, and were afterwards sent hack to their corps, it is impossible to draw from it any accurate conclusions.

Since $18: 25$, however, the Returns of invalids from these two Commands liave been kept separate, and a distinction has been made between those who were ant home and ultimately discharged, und those who recovered and rejoined their corps; by which means we are enabled to supply the following details on that subject.

The following Table shows that out of every thousand white troops there are 87 constantly inetfective from sickness in the Windward and Leeward Command, and 63 in Jamaica, though the latter is by far the most unhealthy. This peculiarity arises from four-nfths of the mortality in Jamaica being caused by fevers which rapidly terminate cither in death or recovery, and only one-fifth from lingering diseases, such as those of tie lungs and of the bowels; whereas in the Windward and Leeward Command, scarcely half of the deaths are caused by fever, and almost all
the others are by diseases which detain the patient long in huspi:al.

George Roharts, Patrick Maxwell Stewart, and Alexander Stewnrt, the first 13 other direetors of the sadi earporation, in adilition to the sail Chairmmn and deputy-chnirman ; anil that the sail Snmuel Gurney, Charles Marrynt, nud Tlomas Mooly, shall be the first anditors of the said corporation; and that the said chalman, deputy-chairmnn, and is otherdirectors and nutltors shall eontinue in their respectlve offiees until the half-yearly generni meetimg to be holnen in the month of Janmary 1838 , and nfterwards intil others shalt be duty elected in their stearlin manner herenfter in that behalf provided, unless they or any of them shall sooner tie, resign, or tecome dlsquntified as hereln mentioned; and that if before the salit balf-ycarly general meeting to be hohlen in the said month of January $18: 18$, there shall happen to be miny vaeancy or veaneies in the offiee of directors or andl tors then the eonrt of directors shall from time to time fill up such vneancy or wenncies so as to continme the number of tirec tors at 15, and the number of fuditors nt three: And we do further orrler and ordaln, that noproprietor shatl be eligible or quallifed to act as a dircetor or nuditor of the sald corporation, unless he shall at the time of his clection be the holdec of at least . $£ 2$, oun of the enpital stoek of the said corporation ; nnd if any dircetor or auditor shall at any time after his election cerne to be the hotde of at least $\mathcal{L}^{\prime 2}, \mathbf{n} 00$, stock, such person shall therenpon immedlatety cease toben director or anditor, as the case may be: And we do further order and ordain, that the remuneration to be reecived by the ehadrmm, deputy-chairman, directors, and nuditors for the time being for their services, shatl be fixed by the proprietors assembled at the general meeting to be held In the montl of July $183 \%$, or nt some subsequent half.yearly general meeting, nul that any half-yearly general meeting shall from time to tine have power to vary the same; nnd further, that with the exception of the direetors nud anditors hereinhelore named and of any dircetors or anditors to he appointed by the eourt of directors previously to the lalf-yearly general meeting to be holden in the month of simunry 1838, as hereinhefore is prowided, all direetors nnd anditors sliall he clected at a genera meeting ; not further, that at each of the half-yearly gencral mectings to be holden in the month of Jannary, in the yems 1838 and 3839 respectively, five of the directors nni one of the nititors, to be respectively nominated and selected for tia purpose by the court of tirectors, or (in thefant of the making sueb nomination and selection) by the majority of the fualified propr.ators present nt such half-yenrly general meetings respectively, min mot deching to vote, shall go out of office, n* nive directors nud one auditor shalt he elected or re-clected; provided nevertheless, that in ense the five directors, or any of them or the auditor, nominated and selected to go ont of offiee at the meeting to be holden in the month of Janury $18: 38$, shatl the e-elected at that meeting, such directors or auditor sore-elected ns aforesaid shall mot, mor shall any director or anditor elected in the phee of miy of such last-mentioned direetors or muditors, mon nuy oceaslonal vacaney as hereinafter menioned, be nominated or selected to go out of oftice at the half-yearly general meeting to be holden in the month of Janury 830 ; and further, that at the half-yearly general meeting to be holden in the month of January 1840 , the remainine five dicctors, and the remaining auditor hercintofore appointed, or the directors or auditor (if nuy) elected in the place of them r my of them, on any oceasiomm vacancies as hereinafter mentioned, shall go out of otrice, Bot five directors or one nudito hall he elected or re-dected; and further, that at the half-yearly general meeting to be holden lin the month of Janomry
 retors nod ome of the aulitors who, for the time beling, shall have been the longest in oftice (ruckoning from the time of the ast election of each director or auditor) shail go ont of oftice by rotation, and five directors and one auditor shall be clected or re-elected; and further, that any director or auditor for the time being going ont of office shall, if in other respects duly pualified, be considered immediately, or at any time afterwards, re-eligible to supply the place vacant by the going out of office of himself or of any other dircetor or aunitor ; and further, that upon any racancy in the oftice of director or alulitor after the half-yearly general meeting to be hoden in the month of January 1838, from niny cause whatsoever (except that of coing out by selection or rotation, as aroresail), the same shall be filled up either at the first half-yearly general meeting wheh shall be held after sneh vacancy shail have oceurred, or at a speelal general mecting to be called nint holden for that prpose, or for that and other purposes; and further, that any person who shall, in conseguence of an ncrifental or ocea sonai vacancy, be appointed a director or anditor, shall be a substitute only for the person whose place he may supply, and shall he considered to have been elected at the same time, and shall eontinue in offiee only for the same perlol as the person whose place he mny supply would have continued if he had not vacated his office before the time at which he must necessa ily have gone out of oftice by rotation, or by such selection by the court of tirectors as aforesaid; and that at every general annuai meeting the direetors and auditors going out of office on that tay shall, for all the purposes of sueh meeting, he conidered as continuing in sueh their respective offices until such meeting shall hreak up or adjourn; and further, that no crson shall, after the half-yearly general meeting to be holden in the month of January 1838, be capable of belng eleeted a director or anditor of the said corporation, unless the name of such person shall have been Included in the list which the court of directors are refuired to cause to he posted up as hereinafter mentioned; and that not more than one canditiate shall be proposed by any one proprietor: And we do further deetare and ordain, that upin any vacaney whleh, after the gencral annual meeting to he holden in the month of January 1838, shall happen in the office os direetor or aurlitor, from any cause whatsoever (except that of going out by selection or rotation as aforesaid), the court of directors shall, at least 30 days before the meeting at which such vacancy is to be filled $u p$, give notice of the vacancy, by advertising the same in some daily morning newspaper, printed and circulated in London; and shall state in such advertisement, that every proprietor Intending to become a candidate, or to propose some other proprietor as a candidate for the vacant office of director or auditor (as the case may be, must, within 10 lays from the time when such advertisement shall he inserted, signify, by ge wring ander his or her hand, to be left within the same 10 days at the omice of the said corporation in wondso proposed by him or her ; and that thercupon the court of directors shall, at luat 14 ars before the day on which the election of such director or auditor (as the case may be) is to take place, cause the name of every candidate for the office of director or anditor, (and in every case where any such candidate shall be proposed by any nther proprictor, couplet with the name of the candidate proposed hy him or her), to be fairly written out or printed in obe list, which shall be posted up in some conspricuous part of the oftice of the said corporation io London or Middlesex, and be there kept posted up until the time of the election: And we do further will and ordain, that the chairman and depity chuirman of the eorporation respectively, shall from time to time be eleeted from amongst themselves, by the court of Directors for the time being, and for such period as to them shall seem meet: And we do further will and ordain, that any member of the said eourt of directors, or any auditor, may at any time vacate his oftice, by senting his resignation in writing to the office of the said eor pration; and in case any member of the said court, or any anditor, shall, during the continuance of his respeetive oftice, by trmasfer, forfeiture, bankruptey, or otherwise, reduce the amount of stock held by him in the said comphny helow $\boldsymbol{E} 2,000$, or otherwise shall hecome disqualified to be a member of the said court, or shall be removed by any general meetinp as aforesaid, then, and in every such case, the office of such member of the said court, or of sueh auditor (as the casc may the) shail instantsy become vacant : And we do further will and ordain, that the court for directors of the said corporation shall meet one day In every nonth at the least, and at sueh other times as they shall thlnk fit and proper; and any one of the sald directors may nt any time call a meeting of the said court, by notice in writing sent to the residence, counting-house, or office of every member of the sald court, but no business shall be transacted at any meeting of the said court unless five members shall te present; and that all duestions at any court shall be deeiled by the votes of the majority if umber of members present; and that at every conrt the chairman, or his his absence the deputy chairman of the corposation, shall he chairman of sueh eourt, and in the absence of both those officers some other member of the said cout shall be ehosen chairman of such court, by the members present; and in ease of an efual tivision of votes, such chnirman of the court for the thme heing shall have the easting vote, hesides his own vote; and that the proceetings of every court shall be entered in a book, to be kept for that purpose, and be signed by the member in the ehnir; ant further that the sail court of clirectors sinall have fill power to direct, manape, superiutend, regulate, and control all the affair ad enneerns of the said corporation, and to appolnt all the arents, officers, and serrants thereof, as well in the United Kinglom of Great Britain and Ireland as alroad, and to tix their respective salaries or wages; aud from time to time to emove or discharge any such agents, offieers or servants, nod to appoint others in their stead; and to make such rules orders, and bye-laws for the good govermment of the said corporation, and of their said agents, ofticers, and servants, and generally for the superintendence and management of the said corporation, and from the to time to alter and repeal the aid rules, orders, ndel regulations, or any of them, fir such manner as the sad court shall from thme to time think expedient or proper; provided nlways, that all sueh rises, orders, and bye-laws as shall from timo to time be in foree shall be fairly entered and written in a book or hooks, to be keot for that purpose at the office of the said corporation in landon or Middlesex, and open to the inspection of the sait directors and other proprictors at all seasonable times: And we to further

## 24

ordaio and declare, that in ail cases where the provislons and regulations contained in these presents shall not be applicable to the local situation or elrcumstances of sueh subscribers or proprietors, or other holders of any share or shares in the capital of the sald corporation, as are or shall be resldent in or at any of the several islands and colonics herelobefore mentioned, or elsewhere than In the United Kingdom of Great Britaln and Irehand, it shanll and may be lawfulf for the eonrt of dlreetors, from thme to time, when and as often as oceasion shall require, or they shall thlok fit, to make all such rules on bye-laws, regulations, and provislons relative to any such subseribers, proprletors, or holders as last aforesnid, nut with regard to their respective shares and literests in the enpital of the eorporation, as the circumstances of the case or cases for the time being to be provited for slanl, in the julgment and at the sole discretion of the court of dircetors, appear to demand or require; and from time to time to alter, vary, and repeal all or any of sueh rules, hye-laws, regnhations, and provisions, and to make others in thelr stead: And we further will nud ordaln, that the eourt of directors shall appoint the plaee and hour of holding every half-yealy general meeting, and shall cause nt least 21 days' notice of every half yearly general meeting, and 14 days' notice of every adjourned gencral meeting which shall adjourn for a longer time than two days, to be given by advertisements in manner nforesald; and further, that (subject at nif times to the rules, orders, and direetions of the general meetings of the said corporation) the sald court of directors shalt hinve full power to oriker and dlspose of the eustoly of their common seal, nud the use and npplication thereof, and execute all the powers herely given to the sald corporation ; And we do further will and ordain, that the said eourt of direetors shall have power, from time to time, to eall for the amonnt subseribed by the several subseribers nud proprietors for the time being, whieh anount shall be pald ly the sald subseribers and proprietors at sueb times and places, thd in such sum or sums, as shall be ap. pointed hy the said court, so that no such catl shall exceed the smm of $\boldsymbol{E}^{\prime 2} 2$. for every $\boldsymbol{t}^{\prime}$ too. subseribed; mud 14 days notice, at least, shall be given of every sach call as nforesaid, by advertisements in two or more of the dnily morning news papers printed and clrculated in London: And we do further will and ordahn, that the respective bodles and persons who slath he proprictor or proprietors of any stock in the sald corporation shall pay the sum or sums by them respectively sulsecribed, or such parts and proportions thereot as shall from time to time be called for hy the eourt of directors of the snide enrporation, by virtue of and nerecably to the powers and directions of this charter at such times and places, nul in snch manner, as shall be dlrected by the said court, ; and in case any body or bodies, person or persons, being a subseriber or subscribers, or proprictor or proprictors, of any share or shares of the capital stock of the said corporation, shall neglect or refuse to pay his, her, or their rateable or proportionable part of the money called for as aforesaid, at the tlme and place appointed by such court, or within 30 days next ensuing, he, she, or they so negleetling or refusing shall forfeit and pay the sum of five pounds for every $\boldsymbol{t}^{\prime} 1000$. he, she, or they shall have subscribed or held, or be entilled to, in the capital of the said eorporation. and in case sueh person or persons shall continue to neglect or refinse to pay hls, her, or their rateable call or ealls as aforesaid, for the space of two ealendar months next after the time sif appointed for payment thereof, then and in every soch case it shall be lawful for the said conrt of directors (whether they shall or shall not previously have sued for the same as hereinafter mentioned, if they shall think proper), to declare that the respeetive shares of the eapital stock of the said corporation held by the body or bodies, person or persons, so refusing or neglecting, shall be forfelted, and thereupon the said share or shares, and all the profits and benefits thereof, shall be forfelted to and become vested in the said corporation : And we do further will and ordain, that when any share of the said eapital stoek shall by virtue of this charter have become forfeited to or vested in the sald corporation as aforesaid, then and in every such case it shall be lawful for the said corporation, or the court of directors for the time being, nnd they are hereby authorized and empowered, at any time thereafter to sell or cause to be sold by publie auction or private contract, and by writing under the common seal of the sald corporation to assign and transfer such share unto any person willing to become the purchaser thereof, his or her executors, administrators, or assiens, and sueh assignment and transfer shall be good, valld, and effectual against the owner of every such share, and all prsous claiming under him, her, or them; provided always, that in ease the money prodinced by ee sale of any such slaire shail be more than sufficient to pay any such arrears, as aforesaid, and legal interest thereon, together with the pensties incurred by nonpayment and the expenses attending the sale thereof, then and in such case it shall be lawfui for tine court of directors for the time being, if they shall think fit so to do, but not otherwise, to pay the surplus arising from such sale to the person or persons to whom such shar shall have belonged: provided also, that the said eorporation shall not by virtue of this charter at any time or times sello transfer, or direct to be old or transferred, any more of the stock of such detaulter or defnulters than shall be sufficiout, near as may be, at the time of sueh sale, to phy the arrears due from such defaulter or defaulters, for or on account of suc call or calls, and the interest, penalties, and expenses attendling the same; and from and after the payment of every eall or calls to be made 1,7 virtue of this charter, and the interest, penalties, and expenses as aforesaid, any stoek vested in the sai corporation as aforesaid which shall remain in their hands unsold, shall revert to and again become the property of the person or persons, body or bodies politic or corporate, to whom such stock shall have before belonged, in such mamuer as uch calls had been duly and regularly paid; so, nevertheless, that nothing in this proviso containell shall be decmed or construed to compel the said corporation to sell any fractional part of $\notin 100$. of the said stock: Provided always, nnll w to further will and ordaln, that in rase siny person or persons, body politic or corporate, who shall have subseribed for or b entitied to any share or shares in the eajital of the said corporation, shall neglect or refnse to pay his, her, or their ratenbl or proportionable part of any sum of money to be called for at the time and place and in the manner to be directed for that purpose by the said court of directors as atoresaid, the said corporation are herehy empowered to suc for and recover the same in any of our courts of law or equity whatsoever: And we do further will and ordain, that if any deceased sulseriber or subseribers, proprietor or proprictors, shall not have left assets suffieient, or in case the executor or executors, administrator or administrators, trustee or trustees, committee or committees, guardian or guardians, shall refuse or neplect to answer such call for the space of three calendar months next after notice thereof, by advertisement as aforesaid, slall have been given of such eall, the said corporation shall be, and they are herely authorized and required to admit anly othe person or persons to he a proprietor or propirietors of the stock of such deceased proprietor or proprietors, on condilion that he, she, or they so admitted do and shall, on or before such admission, pay to the executor or executors, administrator or administrators of such deceased proprictor or proprietors, or to the trustee or trustees, eommittee or committees, guardian or guardians of the infant or infants, or other person or persons who may be entitled to his, her, or their effects, the full sum or sums of money which shall have been paid by such proprictor or proprictors, In his, her, or their lifetine, by virtue of any call or calls or otherwise, upon such stock, or such other sum or sums of moncy as the same can be seld for; and in case no person or persons shall be found who is or are wilting to be admitted upon sueh condition as atorcenid, then and in every such case such share or shares shail he forfeited to and become vested in the said corporation : And we do further, for us, our heirs, and successors, grant unto the said Colonial Bank and their successors, and we do will aud direet and appoint, that it shall and may be lawful for the said corporation, for the period of 20 years, commencing from the 1st day of May 1836, to carry on the business of hankers, by dealing in bullion, money, and bills of exchange, and lenting money on conmercial paper and Government securities, and in such other lawful ways and means as are usually practised among hankers; but it shall not be lawful for the said corporation to lend or advance money on the security of lands, houses, or tenements, or upon ships; nor to deal in goods, wares, or merchandize of any uature or kind whatsoever: Amp we do further will and ordain, that it shall and may be lawful to and for the said corporation, during the same period, to cstablish one or more principal bank or banks in the islands of Jamaica and barbadoes, and in such other islands or places in the West lndles and British Guiana, as by them shall be considered expedient, with such branches or agencies as from time to time may be found convenient; and at and from such prineipal bank or banks, branches, and agencies, or any of them, to make, issue, and circulate notes, payalle in dollars to bearer on demand, or otherwise, provided that no such note shail be issued for less than the sum or five dollars; and provided that all such notes be made payable in tollars of ackuman ledged weight and fineness to benter, on demand, as well at such principar bank or lanks, and every of them (if more than one of such princlpal hanks shall be estahlished), as at the branch or apency from which the same shall have issucd; and provided also, that the said corporation shall not dlscount any bills of exehange, promissory notes, or other negotialke paper, on which the name of any director or oficer of the said corporation shall appear as drawer, neceptor, or indurser to an amount exceeding one-third of the whole nmomut of the sum for the time beng under diseount by the snid corperazions
And we do further ordain and declare, that it shall he lawful for the said corporation, not withstanting the Statutes of Morl And we do further ordain and declare, that it shall be lawfin for the saide corporation, notwithstanding the statutes or morl main, or any other statutes or laws, or anything lierein contained to the contrary thereof, to purehase, take, held, and
enjoy, to them and their suceessors, as well in the United Kingdom of Great britain and lreland as in any of the said islands

A.-Bank of British Guiana.

Ordinance hy His Excellency Major-Gpneral Sir James Cormichael Smyth, C. B, \&ic. Gorernor of Brihish Guiana, fe. S.c. Se.-by rnel with the adsire and comsthi of the Honourable Court of Policy of the said Coluny.

## To all to whom these Presents do, may, or shall come, Grecting! he it knowt :

Whereas the several persons hereinafter named, presented to Itis Excelleney the Lieutenant-Governor and the Bonomble the Court of Poliey, their thmithe petition setting forth that a mumerons anm respectable portion of this community having taken into consideration the great advantage likely to result to the colony at darge, from the establishument of $n$ docal banh In British Gniana, had subseribed the deed of settlement of articles of en-partnership, and a meeting of the subseribers heth on the sti October of the present year ( 1836 ), hat elected the said petitioners dircetors for the government of the Conpaily and for the purpose of petitioning for the enactment of an Act of Ineorporation fomnded on the sald leed of settlement; and praying that an orilinance may be enaeted, sanctioning the estallishment of the British Guiana Bank, nad eonferring on the same the rights and privideges necessary to carry into effect the provisions in the said deed of settlement : And whereas the estabisiment of sueh a bolly corjorate, has heen represented by the sald petitioners as likely to be highly advantareons to the eommunity at large :-

1. Be it therefore emeted, by Mis Exeellency the Lieutenant-Governor, by and with the ndviee and consent of the Court of Poliey of British Guiana. That John Croal, John Groseort Reed, Charles Benjamln, Willam Johnston, Atexander Gien, John Lane, Ellis John Troughton, Jun., Abraham Garnett, and James Archibald Holmes, Esfuires, or such of them as shall become subseribers of not less than foorteen thousand guilders each, towaris the eapital, or joint stock, hereinafter mentioned, in the manner hereinafter provided, together with sueh and so many other persons, boolles politie or corjorate, as shall become subscribers of or towards the cajital, or joint stock, hereinafter mentioned, in manner heremntter provided; and surh other persons hodies politie, or eorporate, ns shall from time to time in the manner hereater provided, heeome pra. prietors of any part of such capital, or joint stuek, (not heing a fractional part of seven hundred guiders of such stoek, shall be one body politic and eorpornte, in deed and in name, by the name of "The Jritish (iuiana Bank," and by that name shall and may sue and the sned, implead and the impleaded in all courts, whether of law or Etuity, and shadl have perpetul suecession with a common seal whieh may be hy them ehanged or varied at their pheasure: and serviee of proeess upn the chairman, or any of the directors of the said bank, shall be deemed and adjudged to be good and sufficient serviee.
2. And be it further enaeted by the authority nforesaid, that the said corporation shall be establissied for the purpose of carrying on the business of a banker in British Guiana, subject nevertheless, to such restrictions and provisions as are licreinafter contained.
3. And be it further enacted as aforesaid, that the erpital, or joint stoek of this corporation, shall eonsist in the first instanee of the sum of four million two hundred thousand guidere, to he subseritied in six thousmad shares of seven fiundred guidders each; and that so soon as the said sum of four millions two hundred thonsand guiders shall have been paid up, and not hefore, the said eapital or joint stock, shall or may be inereased and raised to the smm of seven million guiders, by adding to the original sum the further sum of two milion eight handred thonsand guiders, to he subseribed in four thon-and shares of seven hmalred goidders caeh, provided such inerease te deemed ndvisable by the eorporation, and be sanctiono by the votes of two-thirds at least of the proprietors of the original eapital, or joint stack, present either in person or by proxy, at a general merting eonvened expressy tor the purpose of deniberating on such incrense. The vates on this gutstion either in person or by proxy, to he given as in all other enses in the manner hervinafter provided.
4. And be it further enacted as aforesaid, that books shall he opened for taking suhseriptions to the sald eapital or joint stoek, and that of the said original capital or joint stoek of four million two hundred thousand guilders, the sum of the million elght hundred thousand goidders shall be apportioned to snbseribers resident in British Guiana; and the sum 6 fourteen hundred thousand guiders to persons connected with the said colony, or with the said eorporation, as arents, resident elsewhere. But if the sald sum of fourteen hundred thousand guilders be net subseribed for thy persons connectel with the colony or with the said corporation as agents, resident elsewhere, within four months from this date, the remaining shares of the original capital shall be apportioned and distributed as may hereatter he ngreed on at a general meeting of the shareholders. And should it be decided to inerease the eapital or joint stoek of this corporation as herein-before mentioned, the new shares shall tee apportioned and distributed as may be deeided upon in like manner: Provided, however, that in: individual or eompany, or body eorporate, shall hold at any time more than two hundred slares of the capital or joint stori of the saill corporation.
5. And be it further enacted, that the modes and times in and at which the several instalments npon the shares shall te paid, and the nature and form of the notices to be given requiring payment thereof; and also the form of receipts fir pap. ucuts, and the nature and form of notices for meethgss shall be regulated and determined by the directors appointed, of ti be apjointed as herelnafter mentioned
6. And be it further enaeted, that it shall not be lawful for the said corporation to commence or earry on the sail business of banking under and by virtue of these presents, until the sum of two million one hundred thousand guikiers shal have heen sulseribed for, and four hundred and twenty thousnad puidders actunlly paid nj. Provided always, that by thi 31st Deeember, 1837, three fourths of the eapital of the eompmy shall be subseribed for, and not less than one millicu thu hundred and sixty thousand gullders be paid up,

21. And be it further enaeted as aforevald, that the said corporation shall eanse the names and designations of the several persons who shall subseribe for, or hecome entitled to any share of the cajital stock of the sald eorporation, with the amount of such share to be fairly and distinctly entered in a book, kept by their eterk or seerctary; and that the several persons, bodies politic or eorporate, who shall subscribe for, or have, or hold any bare or shares of the said eapital stock shall, nud they nre hereby recinired to pay the sum or sums of money by them respectively suliseribed, at such times and phaces, to such persons, and in such maner as sladl be ordered and directed by any conrt of tirectors for the time being of said corporation, pursmant to the provisions hercin eontainet.
22. And be it firther enaeted, that when two or more persons are jointly entitled to any share or shares of the eapital stock of the said corporution, the party whose name stands first in the book of the said eorporation shall be consitered to be the proprictor of the whole of such share or shares, for all the purposes of the corporation-save only as regards his eligibility to fill the oftice of director
23. And be it further enneted as aforesaid, that it shall be lawful for the several proprietors of the capital or joint stock of the said corporatlon, to sell and transfir any shares of the said capital stock, of which they shall respectively be possessed, or any part thereof, not being less than seven hmidred guilders of such stork-and being either the sum of seven hundred guilders, or some multiple of seven hundred guilders of such stock; provided sueh transfer be in the form herenfter to be settled by the Directors, and be signed by the party transferring, and accepted by the transteree, and registered in the Books of this Company; for which registration a fee to be fixed by the Directors, not exceeding, lowever, Three Ginidders on each share, shall be paid for the benetit of the Corporation: nad that such transfer, when duly exeented, shath convey the whole estate and interest in the stock therein mentioned of the persemon permons transferrimg the same, to the person or persons so taking or needpting the same, which person or persms shall thereby tirthwith become, in all respects, Proprictors of the snid Corporation in respect of such Stock, in the place of such berscns so transferring the same; and an extract from the Register or Book of the said Corporation, signed by a Director and the Manager of the Bank tor the time being shall be sufficient evidence of transier, and be received us such: Provided always, and be it hereby further enacted, that no Share of the said Capital Stock shall be transferred until 'rwo Ilmodred and Edity (iuilders at least shall have been prid hacren; and that no transter of any Share or shares shall be permitted after a eall for money is made by the Directors onder this Act, witil the money ealled for is paid thereon ; and lastly, that if the party transferring be indebted to the Corpration, the Dircetors may retuse to register the transter, until their debt he puid
24. And be it further enacted as atoresaid, the General Meetings of the Proprictors of the said Corporation shall from time to time be assembled in Georgetown, and shal be there held in January and July of each year, at such time mud place as the Directors may appoint ; provided that advertisements thereof be inserted in the colony newspapers Twenty une days at least previous to such Meeting; but should the Proprietors not assemble at these times, the charter of the Company shall not thereby be affected; and it shall be lawful for the Meetings to be held at other times to be appointed by the Directors, in lieu of those here fixed : provided that due notice as alove be first given of such Mecting.
25. And be it further enacted as aforesaid, that at any time it shall be lawfinl fot the Court of Directors to call Special (ieneral Mectiugs, to be held in Georgetown, giving notice thereof at least lourteen Days previously in the publie papers.
26. And be it further enneted, as aforesnid, that it shall he lawful at any time for any Thirty Proprietors, holding, in the aggregate, Thre Hundred Shares, or upwards, by writing under their hands left at the Buak, to require the Directors for the time being to call a Special (ieneral Meeting of the Proprietors, provited their requisition expresses the object or oljects for which the special General Meeting is repuired to be cealled; and in ease the Directors shall refuse or negleet to comply with such requisition tor Seven Days atter the same shall have been jeft as aforesadd, that then a Special General Mceting may be called by such Proprictors on giving Fourteen Days' notice thercof in any one or more of the newspapers and every such advertisement shall express the day and hour, and place in Georgetown for holding the same, as also the delivery of the reduisition at the Bank, and the retusal of the Directors to call such special meeting; and shall eontain the names and residence of the Proprietors signing the said regnisition, and miny also, if sueh Proprietors shall deem it expedient, express the object of sueh meeting ; and all acts of the Proprietors at such speeial general meeting shall be as valid as if the same had been done at any half-yearly general meeting of the said Corporation; provided, nevertheless that at such special general meeting the diseussion shall be strictly limited to the objects mentionet in the reguisition.
27. And be it further enacted, that any General Meeting may be alljountid from time to time, but no other business main be transacted at any adjourned Mecting than that left tommince at the previons meeting, and if such atjournment be for more than two days, then seven days notice must be given previous to such adjourned Meeting being hed.
28. And be it further enacted as aloresain, that no business shall be transacted at any General Meeting, untess Twen-ty-five Proprictors, holding in the aggregate, at least, Two Hundred and litty shares in the Stock of this Corporation, shall assemble and proceed to basiness within one hour after the time appohited for holding sueh meeting.
29. And be it further enacted, that at every General Meeting of the Proprietors of the said Corporation, a Proprietor of Two Shares shall have One Vote; of Ten Slmares, Two Votes; of Twenty Shares, Three Votes; of lifty Shares, Four Yotes; of Ninety Shares, Five Votes: and of One Hundred and Fitty Shares and upwards, Six Votes; and that no person holding less than Two Shares, shall be entitled to any Vote, nt any General Meeting of the Proprietors of the said Corporation, and further, that in the case of Proprictors, of the said Corporation, residing in the Colony ten or more miles from Georgetown, and all resident female Proprictors, sith Votes may be given by proxy, provided such proxy be in the form to be hereatter preseribed by the Board of Directors, and signed by the Proprietor, and provided it be entrusted to a share. to belder in the Corporation ; but no Shareholder shall by prosy represent more than Six Vutes.
30. Provided always, and it is hereby further enacted, that at all future Meetings after the General Meeting in January uext, no Shareholder shall be admitted to vote, cither in person or by proxy, unless he shall have registered as Propricto four months at least before the Mleeting, and shall have paid op all calls for instalments, and unless he shall at the time declare that be is bona fide Proprictor of the shares in virue of which he elaims to vote.
31. And be it further enacted, that at every General Meeting, all duestions submitted shall be decided by a majority of otes taken by ballot; and that the Minutes of the several trausactions at such Mectings shall be prepared during the pro gress of the business, and be signed by the Chairman of the Meeting. And further that the Chairman of the Board of Directors shall be Chairman of Mcetings, or in case of his ubsence, then one of the Directors, or no Director heing present then any Proprictor holding Twenty Shares may be called to the Chair; and if, at any Meeting, the votes on any question he lalaneed, the Chairman of such Necting shall have a casting vote, in addition to lis individual votes, and votes by proxy.
32. And be it further enacted as aforesaiu, that at each half-yearly Meeting, the Chairman and Directors, for the time being, shall lay oyer, for the inspection and consideration of the Shareholders, a full statement of the affairs of the said Corporation, signed by the proper ofticers, which statement the Proprieturs may, if so they decide by votes of two-thirds of he number present, refer to any two of their Body as Auditors, for examination and report at an adjourned Meeting, with all necessary powers to the said Auditors to call in the Onfecrs and servants of the Corporation, and to employ necessary assistants to enable them to make such audit and report. And that at every such half-yearly sleeting or sonue adjourn mellt thereof, a dividend or dwidends shall, if recommemiled by the Court of Directors, be paid out of the profits of the sald Corporation, miless sueh Aecting shall deelare otherwise, but in no ease shall such dividend exceed three.fourths of the apparent proft, and the remaining one-fourth shall be allowed to accmminte as a surplus fund to be disposed of as may bere atter be ayreed on at a General Meeting of the Proprictors of said Corporation.

## APPENDIX J.-SOUTH AMERICA.

20. And for the better ordering and governing the affairs of the sadid Corporation, and for making and establishing a continual succession of persons to be Directors of the said Corporation; be it hereby further enacted, that there shall be from time to time constituted, in manner hereinafter mentioned, ont of the Members of the said Corporntion, a Chairninn who shall also be a Director, nand Elght other Directors, which Nine Directors or any three of them shath constitute nuti he called a Court of Directors, for the ordering, managing, and dlreeting in the mamer num moder the provisions herein contained, the atfuirs of the said Corporntion: nud that the said Jons Choal. shali be the first Chairman, and the said Jous
 Junior, Abaamam Gannett, and James Abchmano Hol.mes, tife first Eight Directors of the said Corporation in addition to the snici Chairman.
21. And he it further enacted as aforesaid, that any Member of the said Court of Direetors may at any time vaente his office by sending in this resigoation, in writing, to the office of the said Corporation, and that in the event of any Member of the snid Court ceasing at any time to hrold Twenty Shares of the Capital stoek of the sald Corporation, hls appointment shall instantly cease, and that in either of these cnses, as also in case of the death or departure from the Colony of any of the Directors, the Court of Directors shall fill up the vacancy, and elect a person to serve for the unexpired term of service of the party who has resigned office, died, or ceased to hold the necessary amount of Stock
22. And he it further enacted as aforesaid, that in case the conduct of any one Director shall at any time be sueh that his continuance in oftice shall appear to his Co-directors for the time being prejudicial or injurions to the interest of the Corporation, it shall be lawfil for the Co-directors at a specinh Court to be convened for thint purpose, by a majority of voter, to suspend such Director from his office, untii a speeial General Meeting can be held, which Meeting must be torthwith summoned. And finther that it shall be Inwful for the Proprietors at any half-yearly or specinl Meeting to remove any Director or Directors, mill eiect in his or their room and stend any other duly qualified Proprictor, and such Director or Directors so elected, shall serve only for such period as the party in whose room he was elected would have iadi to serve by rotation.
23. And be it further enacted, that the remuneration to be received by the Court of Directors for the time being for their services, shall be fixed by the Sharehoiders from time to time, at any General Meeting, payable out of the profits of the Corporation, and such remuncration shall be apportioned among them, the said Directors, as they shall deeide.
24. And be it further enacted, that the Birectors above appointed shall hold office undl the first General Meeting in 1838, when Six of them shall go out in rotation; and further that at the first yearly General Meeting to be held each sitccecding year, the six Directors whose names stand first on the list shall go out by rotation; and further that the vacancics caused by the Directors going out in rotation shall be filled up by the Proprietors at the first General Meeting in eaci yenr from such of their Body as may owo at least Twenty Shares of the Capital Stock of the said Corporation. But the Directors, whose period of serviee has expired, shall always be eligible to be re-elected.
25. And be it further enacted, that the Court of Directors shall choose their own Chairman, andi shall meet one day at least in every week, and any one of the said Directors may at any time call a Neeting of the said Conrt by notice in writing, sent to the residence or office of every member of the said Court ; but no business shall be transacted at any Mecting of the said Court, unless three Members shall be present, and that all questions at any Court shall be decided by the votes of the Mnjority in number of the Members present; und in case of an equal division of votes, the Chairman, or in his absence the Member chosen to act in his stead, slall have the ensting vote ; and that the proceedings of every Court shall be entered in a Book kept for that purpose, and be signed by the Member in the Chair; and further that the said Court of Direetor: slall have fnll power to Direct, Manage, Superintend, Regulate, and Controul, all the aftairs and concerns of the said Cor. poration, and to appoint all the Agents, Ofticers, and Servants of the sain Corporation, as weli in British Guiana, or elsewhere, and at their discretion to remove them and appoint others in their stead, and from time to time to fix the remmeration to be paid to their Manager, Agent, Officers and Scrvants: to use anti dispose of the Seal of the Corporation as they sce fit, and to sign, senl and exeeute all necessary decds, contracts, and arreements on belalf of the said Corporation, and to make all such rules regulations, nod bye-laws, as may be necessary for the pood Governmeot of the Corporation, and the same from time to time to alter and repeal, provided always that such rules, regulations, and bye-laws, as shall from time to time he in force, he fairly entered in a Book kept for that purpose and open to the inspeetion of the Proprietors, and provitel they be not contrary to law or repugnant to the Rules and legulations lierein set forth, and provided the same be not disallowed by the Proprictors nt a subsequent General Mecting.
26. And be it further enncted, that no Director shall be permitted to vote on the propricty of refusing or authorising the advance of any money to himself or partner, or in which he is interested as prineipal or security ; but the propricty of grauting such accommodation shall be decided npart hy his Co-Directors
27. And be it further enacted, that the Court of Directors slall have power, to call for instalments on shares in such sums and at such times ns they think fit; but no such call shall at any one time be for more than One Hundred and Forty Gnilders, for each share of Seren Hundred Guilders, nor shnll the noney called for be payable until one month's previous notice thercof shall have been given in the public papers, nor shall any such subsequent call be made until two montins at lenst aiter the date at which the previous call was payable.
28. And be it further enacted, that all Proprietors who neglect to pay the instalment on their shares as ealled for by the Directors, shali pay interest on the same from the date fined for payment, and in addition thereto, if the same be mot paid within one month thereafter, they shall be aned forty-two guilders tor each share, nut still, not paying within a furtice period of one month, the share shall be forfeited to and vested in the Corporation, but the Directors shall, nevertheless, have power to waive the forfciture, and accept in lieu thereof a further tine of not less than Forty-Two Guilders per siare.
29. And be it further enacted, that the Shares forficited may be sold by order of the Directors, cither by public or private sale, and that transter of the same under the seal of the Corporation, shall be grood and vaide: Provided always, that if there be a surphis from this sale it may be given, should the Directors see fit, to the former holder; and provided also, that mo greater amount of Stock shall be forfeited and sold than what is neeessary to pay the amonnt of arrears on the whole shares held hy the party with the penalties, interest, and cost thereon tue : so nevertheless, that nothing in this proviso contained, shall he construed to compel the said Corporation to sell mny fractional part of Seven Ilundred Guilders of the said Stock.
30. And be it further enncted, that in case any person or persons who shall have subscribed for, or be entitled to any share or shares in the Capital of the said Corporation, shall neglect or refuse to pay the instalment on his, her, or their share or shares, as chiled for by the Directors, the Corporation shall be entitled, if they see fit, to sue for and recover the anomut called for, with the interest and penaltics
31. And be it further enacted, that in ease of the death of any Shareholder, thrce months shall be allowed for the payment of the amount called for in respect of his Shares, and should the amount not then be paid, any other party shail be ail mitted to take over the shares and nake the payment, on showing that he has paid the Executor or other person groperly qualified the amount alrenty advanced on such share.
32. And be it further enacted, that it slaall and may be lawful for the said Corporation, for the period of twenty-one years, to carry on the business of Bankers, by lending money on real and personai securitics, on Bonds, Bills of Exchanke, Banking, discounting bilk of Exchan Accounts, Government Sccurity, and all other Securities whatever combected win change, receiving Deposits at such rate of interest as may from time to time be fixed by the Directors, not exceeding the le gal rate, horrowing or taking up Money on Receipts, Bills, Promissory Notes, or other Obligations; also by luventments, Purchases, Sales or any dealings in Bullion, or Govermment or Public Funds of Great Britain, Navy or Exchequer Bills, or the Stoek of any Chartered Company ; and to enter into and carry on all other business and transactions usual in Banking Establishments; but it shall not be lawful for the Corporation to carry on any other Business or Trade whatever, nor shall anything herein contained anthorize, or be eonstrued to anthorize the said Corporation to make and issue any notes payalle to bearer on demand, or otherwise, for any less sum than Fifteen Guiders; provided that all such notes payable to beare on demand, or otherwise, be made payable in legal currency at the Banking-house or Branch Banks of the sail Corporation And be it furtiner enacted, that the amount of notes payable ou demand, made and issued by the said Corporation under an in virtue of this Act, shall never, at any one period of the actual circulation of such notes, execed the amount of bullion in the Cinest of the Corporation, and the sum belonging to the said Corporation vested, or on its why to be vested in the Pulb lic Funds of Great Britain at the saiue perionl; and further, that every six months a statement, showing the amount of notes

Eleventh Day of November, One Thousant Eight Hundred and Thirty Six, and published on the Twelfth following.
By Command of the Court.
H. E. F. YOUNG, Secretary
[The preceding document was submitted for approval to the Secretary of State for the Colonies; and the following amended urdinance was issued in conformits with instructions from England.]
an ordinance to amend an ordinance entitled an ordinance to incorporate a bank to be Callef the britisil guiana bank.
By His Excellency Colonel Thomns Bunhury, K. H., Aeting Governor, de., of Brilish Guiana, by and with the advice and consent of the Honourable Court of Policy of said Colony.
To all to whom these presents lo, may, or shall eome greeting! be it known :
Wheneas an Ordinance to Incorporate a Bank to be called the British Guinna Bank was, on the 11 til November, 1836, made and passed by His Excellency the Lleutenant Governor, by and with the advlce and consent of the Court of Pulicy of Brltish Guiana:

And whereas it has been decmed expedient by Her Majesty's Government that certain other provisions shonld be made thercin for the better regulation and goveroment of the said bank;

And whereas such further provisions have been communiented to the proprietors of the Capital Stoek of the said Corporation at a Public Meeting of the sald Proprietors, held io George town pin the Nineteenth day of February instant, and lave been duly assented to by the said proprietors;

And wherens it appears from a statement fornished by the Chairman of sail Corporation, and countersigned by the proper efficers, that of the said Capital stuck ot the sald Corporation, there hat been paid into the Bank the sum of One Million Five hundred and seventy-five thousand Guilders, belog one half the Capital subserbed up to the 3 Ist December, 1837; and that sinee that period there hath been paid in the further sum of $f 291,200$, being one half of the capital subseribed aince the 3nst December, 1837 ;

1. Be it therefore enacted by His Excellency the Governor, and with the advice and eonsent of the Court of Policy of the Colony of Dritish Gulana, that the following words, that is to say;

And be it farther enacted as aforesaid, that one half at the least of the Capital subseribed, be pald up immediately' shall be, and shatl form part and pareel of tife 6 th Clause of the said Ordinance.

And be it forther enucted, that the proviso contained in the conelusion of the 10th clause of said Act of Incorporation shall be, and the same is hereby dechared to be repealed, and in lieu thereof shali be aubstituted, the proviso following that is to sny :-
"Provided always, and be it further enacted, that no share of the said Capital Stock shall be transferred from the day of the date of the publication of this Ordinanee, until threc hundred and fifty guilders at least shall have been paid thereon, and that no transfer of any share or shares be permitted after a call for money is made by the Directors ander this Act, until the money called for is paid thereon
"And lastly, notwithstanding auch transfer, the party transferring ahall for the period of one year from the date of registering such transfer, remain liabte fur the amount unpaid to the Cotporation on the shares transferred.'
3. And he it further enactel, that the following words shall form and be part and parecl of the 26 th clause of the said Act of lncorporation, that is to say:-

That the said Corporation shali not discount any Bills of Exchange, Promissory Notes, or other negotiable paper on which the name of any Director or Olficer of the said Corpolation slalt appear as Drawer, Acceptor, or Entiorser, to an amonat exceeding one thirt of the whote amount of the sum for the time being under discount of the said Corporution.
4. And be it further enacted, that the send clanse of the sald Act of lneorporation shall be, as the same ts hereby declared to be, repealed, and in lien thereof the following words shall be inserted and stand and be Chanse Thirty-second ol the said Ordinance, viz. :
'And be it further enacted that it ahall and may he lawful for the said Corporation, or for the period of Twenty-one cears from the Eleventh of November, One Thousand Eight hundred and thirty-six, to carry on the business of lankers by lending money on Bonds, bills of Exchange, Promissory Notes, Acceptances, Open Accounts, Governmeat Security and all other Securlties whatever connected with laanking ; discounting Bills of Exchange, Promissory Notes, or other Commercial paper, buylag and selling Bills of Exchange, recelvios deposits at such rate of interest as may from thme to time to fixed by the Directora, not exceeding the legal rate; borrowing or taking up money on Receipts, Bills, Promis. sory Notes, or other obigations; also by investments, purchases, sales, or any dealiags in Bullion or Government, or
public fands of Great Britaia, Navy ar Exchequer Bills, or the stock of any Chartered Company, save only the atock of thls Corporation; and to enter into and carry on all other business and transactions nsual in Banking Establishments, and to make lssue, and elrculate Notes payable to Bearer on demand, or otherwise, provided that no such note be issued for less than the sum of Five Dollars, and that ail snch notes shall be payable in Dollars of the acknowledged welght and fineness of Spmilah IOLiars at the Banking Honse of the said Corporntion; but it shall not the lawful for the sald Corporation to carry on any other business or trade whatever than that of lanking, and they are bereby strictly forbld. den to lend money or to make mivances on real security, whether the same be lands, houses or plantationa: And further, that the Directors of the sald bank for the time being shall, as they are bereby required to, publish, for the Information of the Proprietors, in the Royal (inzette of thls Colony, in the monthe of Fetruary and Angist, general llalf yearly Accounts ending on the 3ist Decemier and 3uth June last, respectively showing the whole amount of its Dehts ant Assets at the close of each half year, and showing also the total amonot of ils Notes pryable on demand, whimh had been In circuition in ench week of auch half year, together with the amount of the specie, ilstinguishing each kind and other Assets Immediately available in each week for the diseliarge of auch Notes; and that eopies of such Half-yearly Accounta shall be faid before the Governor and Court of Policy by the lifectors aforesaid, and that similar aceounts shall be turnished at any time by sueh Dircetors as aforesail to lils Execlleney the Governor whencver regulred."

Aud lastly, be it further enacted, that Clause 39 of the sald Act of Ineoryoratlon shall be, as it is hereby deciared to be, rquealed.

And that no ignorance ahali be pretended of this our Ordinance, these presents aball be prioted and published in the enstomary manner.

Thus done and Enacted at our Extraordlnary Assembly, held at the Guiana Publle Buildings, George Town, Deme. rars, this 6th April 1838, and publlahed on the 7th foliowlag.

By Command of the Court.

## Thomas Bunbury.

## II. E. F. Young, Secretary.

The ordmanee and the nmended ordinance conatitutes the eharter of the Bunk of Brilish Gitiant, whled waseonfirned by the Queen in Connell on the 6th Octoher, 1838, without any alteration, expept that the hasues of the bank glall nat excedi three tianes that of the pald np capital of the bank. The bank receives the benetit of the orders in council of the 14th September, 1838. The following shews the state of the bank at its hatf-yearly meeting la June, 18, 18:-

The whole capltal of the bank is now anbseribed for in 6,000 shares, which have all been taken up by parties withia the colony, and 50 per cent has been paid thereon, amonnting to the sum of $f .2,100,0010$.

The progressive Increase of deposits from $f .1,153,16210$ cents-to their present amount $f, 1,612,20896$ cents is also a atrong manitestation of public confidence in the bank as well as in colontui property in general.
The firectors submit the following Abstract Summary, exhbliting a (iencral statement of the Affairs of the British

Guiana bank on the 30th of June 1835.

From the foregoing atatement, it appears that the balanee in favour of the Bank it that period was $f .118,036$ cts, for which amount the sum of $f$. $24,858 \mathrm{~g} 9 \mathrm{cts}$. is the poition of surplus fund reserved at the former dividend of protits, lesving therefore an amount of $f .93,177$ \& 1 cents as the apparent nett profils derived by the bank, during the preceding six months.
The Directors can conseguently recommend a divdlend to be deelared at the rate of 6 per eent. per amam, being a per cent. for the half y car ending 30 June, and for this purpose a sum of $f$. $6,3,000$ will be requird, alter the payment of which there will be left an aectumulated surpius fund of $f .55,03637$ cents.

## B.-FORMATION OF THE GOVERNMENT OF BRITISH GULANA.

The following is the authority by which the three colonies of Demerara, Essequibo, and Berbice were united under one government :
Copy of the Commission of Major-General Sir Benjamin D'Urban, K. C. B., as Governor and Commander-inChicf of British Guiana; dated 4th March, 1831.

## WILLIAM R.

William the Fouatit, by the Grace of God, of the Uoited Kingdom of Great Britain and Ireland King, Jefender of the Faith, To our trusty and well beloved Sir Benjamin D'Urban, Knight, Commander of the Most Honourable Military Order of the Bath, Major-General of our Forces: Whereas, for divers good eauses to us appearing, we have deemed it right that our settlements and factories on the northern coast of the continent of South America, comprising the united colony of Demcrara and Fssequibo and the colony of Berbice, should henceforth be united together, and should constitute one colony, in the manner hereinafter provided: Now know you, that we, reposing especial trust and confidence in the prudence, courage, and loyalty of you, the said Sir Benjamin D'Urban, of our special grace, certain knowledge, and mere motion, have thought fit to constitute and appoint, and by these presents do constitute and appoint you, the said Sir Benjamin D'Urban, to be, during our will and plcasure, our Governor and Commander-in-Chief in and over all our settlements on the northern coast of the continent of South America, comprising all sueh territories and jurisdictions as have hitherto been comprised in the said united colony of Demerara and Essequibo and the said colony of Berbice respectively, with their respective dependencies, and all farts and garrisons crected and established, or which shall be crected and established within the same, and which settlements shall henceforth collectively constitute and be one colony, and shall be called "The Colony of British Guiana:' And we do hereby require and command you, our said Governor, to do and execute all things in due manner as shall belong to your said command, and the trust we have reposed in you, according to the several powers and directions granted to or appointed you by this present commission and the instructions herewith given to you, or according to such further powers, instructions, and authorities as shall at any future time be granted to or appointed for you under our signct and sign manual, or by our order in our Privy Council, or by us through one of our principal Secretarics of State: And we do further grant, direct, and appoint that the form of civil government heretofore hy law cstablished in the said united colony of Demerara and Essequibo, shall be and the same is hercby established in and throughout the said colony of British Guiana, and that all such bodies politic and corporate as have heretofore lawtully existcd
in the said un colony of Brit powers and au the united col be, that the nu in the said $u$ augmented an also, and we d abrogate any Essequibo, or constitution an which said con the same hath British Guiana contained exte certain Act of King George th Slave Trade," 0 presents had no said Act of Par shall still conti Sir Benjamin 1 our said colony government of general instruct hereby reserve disallow any suc ment, or with t for the order, made: And we appointed for $t$ here give and g our hehalf, but s instructions, to land to us belo persons, bodies them : And we our name and payable to us, suspend the payn therein shall be authority, as you crime in any cou tional pardon, or unto annexed, or may seem fit : Pr be granted until received the sign Sir Benjamin $D^{\prime}$ U you appearing, to such office under or under our au shall be aignified suspension, to ob aecompanying thi and pleasure is, t such person as $m$ as may be appoi the time of such such Lieutenant. hereby direct tha colony, shall take commission, and t officer shall, durin forces by any seni the said governme from time to time civil and military, obedient, aiding an being, in the exec we do further decl
in the said united colony of Demerara and Essequibo, shall in like manner exist in and throughout the said colony of British Guiana, and shall in and throughout the said colony have, escreise, and enjoy all such powers and authorities as have heretofore been lawfully had, exercised, and enjoyed by them respectively in the united colony of Demerara and Essequibo: l'rovided nevertheless, and we do hereby declare our will to be, that the number of the members of certain of the said bodies politic and corporate heretofore existing in the said united colony of Demerara and Essequibo, shall in the said colony of British Guiana be augmented and enlarged in such manner as by your said instructions is directed in that behalf: Provided also, and we do further declare our pleasure to be, that nothing berein contained shall extend, revoke, or abrogate any law or lawful usage, or custom now in force in the said united colony of beinerara and Fssequibo, or in the said colony of l3erbice respectively, save only hin so far as relates to the separate constltution and form of civil government heretofore established and in use in the said colony of Berbiee, which said constitution or form of civil government we do hereby abrogate and dissolve, and do declare that the same hath become and shall henceforth be extinct and merged in the government of the said colony of British Guiana: Provided also, and we do further declare our will and pleasure to be, that nothing herein contained extends or shall be construed to extend in anywise to alter or interfere with the provisions of a certain Act of Parliament passed in the fifth year of the reign of our late Royal Brother and predecessor King George the Fourth, intitulcd, "An Act to consolidate and amend the Laws for the Abolition of the Slave Trade," or to render legal any transfer or removal of any slave which would have been illegal if these presents had not been made, it heing our pleasure that for the purposes and within the meaning of the said Act of larliament, the said united colony of Demerara and Essequibo, and the said colony of Berhice, shall still continue and be distinct and separate colonies : And we do hereby give and grant to you, the said Sir Benjamin D'Urhan, full power and authority, with the advice and consent of the Court of Policy of our said colony of British Guiana, to make, enact, ordain, and estabiish laws for the order, peace, and good government of our said colony, subject, nevertheless, to all such rules and regulations as by your said general instructions we have thought fit to prescribe in that behalf: Provided, nevertheless, and we do hereby reserve to ourselves, our heirs and successors, our and their undoubted right and authority to disallow any such laws, and to make and establish from time to time, with the advice and consent of Parliament, or with the advice of our or their Privy Council, all such laws as may to us or them appear necessary for the order, peace, and good govermment of the said colony, as fully as if these presents had not been made: And we do hercby grant to you, the said Sir Benjamin D'Urhan, the custody of the public seal appointed for the sealing of all things whatsocver that shall pass the seal of our said colony : And we do here give and grant to you, the said Sir Benjamin D'Urban, full power and authority, in our name and in our behalf, but subject nevertheless to such provisions as are in that respect contained in your said general instructions, to make and execute in our name and under the public seal of our said colony, grants of waste land to us belonging within the said colony to private jersons for their own use and benefit, or to any persons, bodies politic or corporate, in trust, for the public uses of our suljects there reaident, or any of them: And we do hereby give and grant unto you full power and authurity, as you shall see occasion, in our name and in our behalf, to remit any fines, penalties, or forfeitures which may accrue or become payalle to us, so as the same do not excced the sum of $50 l$. sterling in any one case, and to respite and suspend the payment of any such fine, penalty, or forfeiture exceeding the said sum of $50 l$. until our plensure thercin shall be known and signified to you: And we do herchy give and grant unto you full power and authority, as you shall see occasion, in our name and in our behalf, to grant to any offender convicted of any crime in any court, or before any judge, justice, or magistrate within our said colony, a free and unconditional pardon, or a pardon subject to such conditions as by any law in force in the said colony may be thereunto annexed, or any respite of the exccution of the sentence of any such offender, for such period as to you may seens fit: Provided always, that in cases of treason or murder, no pardon, cither absolute or conditional, be granted until the case shall have been first reported to us by you for our information, and you shall have received the signification of our pleasure therein : And we do hercby give and grant unto you, the said Sir Benjamin D'Urban, as such Governor as aforesaid, full power and authority, upon sufficient cause to you appearing, to suspeud from the exercise of his office within our said colony any person exercising any such office under or by virtue of any commission or warrant granted or to be granted by us, or in our name or under our authority, which suspension shall continue and have effect only until our pleasure therein shall be signified to you: And we do hereby strictly require and enjoin you, in procecding to any such suspeusion, to observe the directious in that behalf given to you in and by our said general instructions accompanying this your commission : And in case of your death or absence from the said colony, our will and pleasure is, that this our commission, and the several powers hereby vested in you, shall be exercised by such person as may by us be appointed to be our Lieutenant-Governor of our said colony, or by such person as may be appointed by us under our signet or sign manual, to administer the said government; but if at the time of such your death or absence, there shall be no person within our said colony commissioned to be such Lieutenant-Governor, or administrator of the government as aforesaid, then our pleasure is, and we do hereby direct that the senior officer for the time being in the command of our land forces within our said colony, shall take upon himself the administration of the government thereof, and shall execute this our commission, and the several powers herein, and in the aforesaid instructions contained; and if any such officer shall, during such his administration of the government, be suspended in the command of our said forces by any senior officer, then our pleasure is, that such senior officer shall assume the administration of the said government, and the exccution of this our commission, and of the several powers aforesaid, and so from time to time as often as any such case shall arise : And we do hereby require and command all officers, civil and military, and all other our subjects, and persons inhabiting our said colony of British Guiana, to be obedient, aiding and assisting unto you, or to the officer administering the said government for the time being, in the execution of this our commission, and of the powers and authorities herein contained : And we do further declare our pleasure to be, that the changes established in the constitution and form of civil
land King, ader of the rood causes coast of the colony of hercinafter purage, and ere motion, u, the said hicf in and ng all such merara and 11 forts and and which e Colony of exccute all , according fon and the authorities , or by our do further said united out the said ully existed
goverument in the suid colonies of bemerara and Essequilo, and of Berbice respectively, by this pur commission, shall not take effect until this our commission shull actually have been by yon received in our said colonics or one of them: Aud we do hereby declare, ordain, and appoint that you, the said Sir Benjamin 1)Urban, shall mad may hold, execute, and enjoy the oftice and place of our Governor and Commander-in. Chief, in and over our colony of British Guiana, together with all mad slugular the powers and authorities hereby granted mito you for and during our will nud pleasure. In witness, \&c. \&c. Given at our Court at Brighton, the 4 th day of March, $1 \times 31$, in the first yenr of our relgn.
By His Majesty's Command.
(Countersigned) GODERICII.
Shortly nfter the colonies of Demerara, Vissequibo, and Berhice hat been united under one government the following Orders in Conncil were issued, abolishing the ancient courts, nud appointing jerfectly hew judicial establishments, not only for the colony of British Guiana, but for those of st Luetu and Trinidad. At the end of these orders will be found a summary of the alterations they have effected in the courts for the administration of justice in Britisll Guiana, and this will be aceompranied by the regulations established by the Governor and Court of Policy as to the nppointment of Assessors aud the juristiction of inferior Courts.
C.-Cllarter of justice for british gulana, trinidad, and st. lucia.

Copies of the Orders in Council of the 23rth April and 20th June, 1831, for the Administration of Justice in British Guinna, Trinidul, and St. Lucia.
At the Court of St. James's, the 23 rd dny of April, 1831 ; l'resent, The King's Most Excellent Majesty in Council.

1. Wufatas His Majesty's Court of Criminal and Civil Justice in Demerara nnd Fissequiho, and His Majesty's Courts of Civil Justice and of Criminal Justice respectively in Berbice, and His Majesty's Courts of Criminal Trial, and of First Instance of Civil Jurisdiction respectively in Trinidad, and 1 is Majesty's Royal Court m the island of St. Lucia, are respectively holden hy Judges the majority of whom in each of such courts are persons unlearned in the law: And whereas it is fit that the said courts respectively shoutd henceforth be holden by persons of competent legal education; it is therefore ordered by the King's Most Excellent Majesty, by and with the adviee of his Privy Council, that hencetorth the Court of Criminal and Civil Justice of Demerara and Essefuibo, and the Court of Civil Justiee und the Court of Criminal Justice of Berbice, nad the Court of Criminal Trial, and the Court of First lastance of Civil Jurisdiction in the lsfand of Trinidad, and the Royal Court of St. Lucia, shall be respectively holden by nad before three judges and no more; that is to say, each of the said courts shall be holden by and before the lresident for the time being of the Court of Criminal and Civil Justice of Demerara and Essequibo, and the Chief Judge for the time being of Trinidad, and the First P'resident for the time heing of the Royal Court of St. Lacia, or by and before the persons who, during the vacancy of any such oflices, or during the nbsence or incapacity of any of the said judges, may have received a provisional or temporary appointment to act as nad in the place and stead of any such judges or judge.
2. And it is hereby further ordered that no Judge in any of the several courts aforesaid, and no Vice.-President thereof, shall be the owner of mny slave, or shall have any share or interest in, or any mortgage or security upon any slave, or shall be proprictor of, or have any share or interest or mortgage or security upan, any land cultivated by the labour of slaves, or shall be or act as the manager, overseer, agent, or attorney of, for, or upon any plantation or estate cultivated wholly or in part by the labour of slaves.
3. And it is further ordered, that for the porpose of holding the respective courts aforesaid, the said three judges shall from time to time repair to the said respective colonies of Demerara, Berbice, Trinidad, and St. Lucia.
4. And it is further ordered, that two sessions at the least shall be holden in ench year and in each of the said courts, and that the times of holding such sessions in such respective colonies, and the duration thereof in each, shall be determined by proclamations to be from time to time for that purpose issued in the said respective colonies by the respective Governors thercof.
5. And it is further ordered, that the Governors of the said respective colonies shall, and they nre hereby authorized to arrange with each other the times of holding such sessions as aforesaid in such manner as may best promote the administration of justice therein, and the common convenience of the said respective colonies; and in case of any difference of opinion between such Governors as to the time of holding any such sessions, or as to the durntion thercof, the judgment of the Governor of British Guiana shall prevail and be observed until His Majesty's pleasure therein shall have been signified through one of his principal Secretaries of State.
6. And it is further ordered, that in each of the said courts the President for the time being of the Court of Criminal and Civil Justice of Demerara and Essequibo shall preside and take precedence over such other two judges as aforesaid; and the said Chief Judge of Trinidad shall in like manner, in each of the said courts, take precedence over the First President of St. Lucia.
7. And it is further ordered, that in each of the snid courts the said three judges shall in all civil cases have, possess, exercise, and enjoy such nad the same jurisdiction, powers, and nuthority in every respect as the present judges of the said courts now have or lawfully possess, exercise or enjoy, and that the decision of the majority of such three judges shall in all civil cases at any time dejending in either of the said courts, be taken and adjudged to be, and shall he recorded as, the judgment of the whole court.
8. Provided nevertheless, and it is further ordered, that upon the trial of any persons or person in any of the said courts for any crime or offence with which they, he, or she may be charged, three assessors shall be associated to the said three judges, in the manner thereimafter provided tor, which assessors shall be entitled to deliberate and vote with such julges upon the final judgment to be pronounced in every such

16. And it is further ordered, that in each of the said courts the said three judges and assessors shail in all criminal cases have, possess, exercise, and enjoy such and the same jurisdiction, powers, and authority in every respect as the present judges of the said courts now have or lawfully possess, exercise, or enjoy, and that the decision of the majority of the total number of such judges and assessors shall in ail criminal cases at any time depending in any of the said courts, he taken and adjudged to be, and shali be recorded as, the judgment of the whole court.
17. And it is further ordered, that the Governor of each of the said coionies shall by prociamations to be by him from time to time for that purpose issued within the same, make and prescribe such rules and regulations as may be necessary to determine the qualifications of such assessors, the mode of convening thein, the penalties to be inflicted on persons refuaing to act as such assessors when thereunto lawfully required, and the mode of challenging such asseasors, and what shall be lawful ground of challenge, and how the validity of any such challenge shall be determined, together with every other matter and thing which may be necessary to the effective discharge by snch assessors of the duty thereby committed to them; and every such proclamation shall forthwiti le transmitted by such Governor for His Majesty's approbation, and ahall in the meantime, and unless disallowed by His Majesty, and until such disallowance shali he made known to such Governor, be of the same force and effect as if the same had been contained in this present order.
18. And it is further ordered, that none of the judges nor any Vice-l'resident of either of the said courts respectively, shall be liabje to challenge or recusation in or upon any action, suit, or proceeding, civil or criminal.
19. And it is further ordered, that during the absence of any of the said judges from the colony to which he may belong, for the purpose of holding such sessions as aforesaid, the Supreme Court of such colony shall be holden by a single judge, to he called the Vice-President of such court, and it shall be the duty of such Vice-President to hear and determine all such interlocutory matters arising in or upon any civil or criminal suit, action, or proceeding depending in the saill court, as may be brought before him, and alao to inquire into and report to the said judges in any such seasions as afuresaid upon any queations which may by such judges at their sessions have been apecially referred to any such Vice-President; and in the exercise of such jurisdiction, such Vice-President shall and he is herehy required to conform himself to and observe any such general rules or orders of court as may be made for his guidance in the manner hereinalter men. tioned.
20. And it is further ordered and declared, that it shall be lawful for the sald Supreme Courts respectively to review, reverse, correct, or confirm, as occasion may require, any judgment, sentence, rule or order which may be made, given, or pronounced by any auch Vice-President as aforesaid, in the exerciae of the jurisdiction hereby vested in him, and that in the exercise of auch jurisdiction, such Vice-President shall act alone and without any colleague or asseasor, and shall have all such and the same powers and authority in that behalf as now are or ia vested in the said courts respectively for the said respective purposes.
21. And it is further ordered, that it shall and may be lawful for the judges of the said courts respectively, and they are hereby authorized and required to make and establish such rules, orders, and regulations as to them shall seem meet concerning the forms and manner of proceeding to be observed in the said courts respectively, and the practice and pleadings in all actions, suits, and other mntters, both civil and criminal, to he therein brought, and concerning the duties and jurisdiction of the said respective Vice. Presidents, and concerning the proceedings of the executive and ininisterial olfices of the said courts respectively, and concerning the process of the said courts, and the mode of exccuting the same, and concerning the admission of advocates, barristers, attornies, solicitors, notaries, and proctors in the said courts respectively, and coneerning all other matters and things which relate to the conduct and dispatch of business in the said respective courts; and all such rules, orders, and regulations, from time to time, to revoke, alter, amend or renew, as occasion may require. Provided always, that no such rules, orders, or regulations shall be repugnant to this present order, and that the same shall be so framed as to promote, us far as may be, economy and expedition in the dispatch of the business of the said courts respectively, and that the sane be drawn up in plain, suecinct, and compendious terms, avoiding all unnecessary repetitions and obscurity, and be promulgated in the most public and authentic manner in the colonies to which the same may respectively refer, for 14 days at least before the same shall be binding and take effect therein ; and provided also that all such rules, orders, and regulationa shall forthwith he transmitted to His Majesty, under the seal of the court, by the Governor for the time being of such colony, for his approbation or disallowance.
22. And whereas it may be expedient to establish within the suid colonies courts having jurisdiction in eivil cases of small amount and in cases of breaches of the peace, assaults, and other petty offences; it is therefore further ordered, that it shall be lawful for the Governor of each of the said colonies respectively, with the advice of the Court of Policy in the said colony in Britislı Guiana, and with the advice of the Council of Government in the said colunies of Trinidad and St. Lucia, by any laws and ordinances to be from time to time made for that purpose, to erect, constitute, and establish courts having jurisdiction in civil and criminal cases within the said respective colonies, provided that the jurisdiction of such Civil Courts shall not be extended to any case wherein the sum or matter in dispute shall exceed the amount or value of $20 l$. sterling money, or wherein the titie to any lands or tenements, or the title of any person to his or her freedom, or any fee, duty, or office may be in question, or whereby rights in future may be bound; and provided also that the jurisdiction of such courts in criminal cases shall not be extended to any case wherein any person may be accused of any crime punishable by death, transportation, or hanishment; and that it shall not be lawful for any such Criminal Court to inflict any greater or other punishment than imprisonment, with or without hard labour, for a term not exceeding three months, or fine not exceeding 20l., or whipping not exceeding 39 stripes, or any two or more such punishments within the limits aforesaid.

If. And it is further ordered, that the Judges of the ald supreme Conrts of the anid colonies re. spectively shail be and they are herehy anthorized to make, oriain, and establish all necessary rules, oriters, or regulations respecting the manner and form of proceeding to be ohsurved in the said l'etty Courta, and reapecting the manimer and form of enrrying the judgmenta nud orders of such courts Into execution, with all such other mules, orders, and regulations as may be neceasary for giving full and perfect effect to the jurisdicthon on such courts respectively, and such rules, orders, and regulations from time to the to revoke, alter, and renew, as occasion may reçuire.
17. And it is hereby further ordered, that it shalf and may be lawful for any person or persons, belng a party or parties to any civil sult or action depending in any of the sald Supreme Courta of any of the said colonies, to nupeal to IJis Majenty, his heirs, nnd successors, in his or their l'rivy Council, against any final judgment, decree, or sentence of any of the said courts, or agninst any rule or order made in any such civil suit or action having the effect of a final or deflnitive sentence, and which appeals shall be made aubject to the rules and limitations following; that is to say, in case any such judgment, decree, order, or sentence ahall be given or pronounced for or in respect of any sum or matter at issute above the amount or value of 6006. sterling ; or in case such judgment, deeree, order, or sentence shall lavolve, dircetly or indirectly, any clain or demand to or question respecting property, or any civ.l right amounting to or of the value of suol. sterling ; or in case such judgment, decree, order, or sentence shall determine or affect the right of any person to his or her frecdom, the person or persons feeling ngerieved hy any such judgment, decree, order, or sen. tence may, within fourteen days next after the same shall have been pronounced, made, or given, apply to auch court by petition for leave to appenl therefrom to llis Majesty, his helrs, and successors, in his or their Privy Council; and in case such leave to appeal shall be prayed by the party or parties who is or are directed to pay any sum of money or perform any duty, sueh Supreme Court shall and is hereby empowered either to direct that the judgment, decree, order, or sentence ajpucaled from shall be carried into execution, or that the exceution thereof shall be auspended pending the said njpeal, as to the snid court may in each case appear to be most consistent with real and substantial justice; and in case such Supreme Court shall direct such judgment, decree, order, or sentence to he carrled into exceution, the jerson or persons in whose favour the same ahall be given, shall, before the execution thereof, enter into good and sufficient security, to be approved by the said Supreme Court, for the due performance of such judgment or order ns His Majesty, his heirs and auccessora, shall think fit to make thereupon; or in case the said Supreme Court shall direct the execution of any judginent, decree, order, or sentence to be suspended pending the snid appeal, the person or persons against whons the same shall have been given shall, In like manoer, upon any order for the suspension of any such exccution being made, enter into good and suflicient security, to be approved by the said Supreme Court, for the due performance of such judgment or order as His Majesty, his heirs, and suecessors shall think fit to make thereujon; and in all cases security shall also be given by the party or parties appeliant, to the satisfaction of such court, for the prosecution of the appeal and for the pnyment of all such costs as may be awarded by His Majesty, his heirs and suecessora, to the party or parties respondent ; and if such last-mentioned security shnil be entered into within three months from the date of such petition for leave to appenl, then, and not otherwise, the said Supreme Court shall allow the appeal, and the party or parties appellant shall be at liherty to prefer nnd prosecute his, her, or their appeal to His Mnjesty, his heirs and successors. in his or their Privy Council, in such manner and under auch rules as are observed in appeals made to His Majesty in Council from his plantations or colonies.
18. Provided always, and it is hereby declared and ordered, that nothing herein contained doth or shall extend, or be coustrucd to extend, to take away or abridge the undoubted right or authority of His Majesty, his heirs and successors, to admit and receive any ajpeal from any judgment, decrec, sentence, or order of any of the said Supreme Courts, on the humble petitlon of any person or persons aggrieved thereby, in any case in which and sulject to any conditions or restrictions upon and under which it may seem meet to His Majesty, his heirs and auccessors, so to allmit and receive any such appeal.
19. And it is further ordered, that in all cases of appeal allowed by any of the said Supreme Courts, or by IIis Majesty, his heira and successors, auch court ahall, on the application and at the costs of the party or partics appeliant, certify and transmit to His Majesty, his heirs and successors, in his or their Privy Council, a true and exact copy of all proceedings, evidence, judgments, decrees, and orders, had or made in such causes so appealed, as far as the same have relation to the matter of appeal, such copies to be certified under the scal of the aaid court.
20. And it is further ordered, that the aaid Supreme Courts respectively ahall, in all cases of appeal to His Majesty, his heirs and successors, conform to, execute, and carry into immediate effect such judgments nid orders as His Majesty, his heira and successors, shall make thereupon, in auch manner as any original judg. ment or decree of the said Supreme Court can or may be executed.
21. And whereas there are in the said courts, or some of them, divers unnecesaary officers, being or claiming to be entitled to fees of large amount for scrvices by them rendered to suitora and others concerned in the proecedings of the said courts, to the great charge of his Majesty's subjects, and to the obstruction of the due administration of justice; it is therefore hereby ordered, that the office of Sworn-Accountant, as nt present existing in Demerara and Essequibo, and in Berbice respectively, shall be the same and is herchy abolished, and that the duties heretofore performed by such sworn-accountants shall henceforward, but subject to the rules of court to be made as hereinbefore mentioned, be performed by the Vice-President of the Court of Criminal and Civil Justice of Demerarn and Essequibo, and by the Vice-President of the Court of Civil Justice and of the Court of Criminal Justice of Berbice; and it it is hereby further ordered, that the office of Father-General of Minors, and the office of Defender of the Absent, and the office of DepositarioGeneral, and the office of Taxador, and the office of Judicial Referee, Liquidator, and Partidor, as at present existing in the said lsland of Trinidad, shall be and the same are hereby respectively abolished; and that the dutics of the offices of the said Judicial Referee, Liquidator, and Partidor and Taxador, shall henceforward, but subject to the rules of court to be made as hereinbefore mentioned, be performed by the Vice-President
of the Cuur Curateur au shall be and henceforwar Vice Presida

8. And whereas various jurisilictions have heretufore been exercised by certain courts in the island of Trinidad, which hy reason of the changes introduced lutu the administration of justice therein, it is no longer necessary to retain ; it is therefore hereby ordered, that the several courts or tribumals following, that is to say, the Court of Criminal Lnguiry, the Court of Audiencia, the Complaint Court, the Court of the Alenden In Ordinary, and the Court of the Acaldes de Berria, and all offices in and cotmencted with the said courts respectively, shall be and the same are hereby respectively abolished.
9. And it is hereby further ordered, that all orders heretnfore made by His Majesty, or by any of his royal pretecessors in his or their Privy Council, and all laws, customs, and usage now or at any time beretofore established or in force in aty of the said colonics, so far as such orders, laws, of usiges are in anywise repugnant to or at variance with this present order, shall be and the same are hereby revokell, abrogated, rescinded, and annulled.
10. And it is further ordered, that for the purpose and within the meaning of the present order, any person lawfully administering for the time being the government of the saill colunies shall be deemed and taken to be the Governor thereof.
(Signed)
C. C, GREVILLE:

At the Court of St. Jamcs, the 20th dny of June, 1831;
Present, The King's Most Excellent Majesty in Council.

1. Whereas, on the 23 d day of April, $1 \times 31$, an order was made by Itis Mnjesty, with the advice of his I'rivy Council, for improving the administration of justice in Ilis Majesty's colonies of Britisls Guiana, Tridad, and St. Lucin ; and for that purpuse it was thereby orlered, that the Chief Judges of the said three colonies should from time to time repair to the said colonies, for the purpose of holding in succession therein the Supreme Courts of such colonies respectively: And whereas unforesecu difliculties may arise to delay the execution of the said urder, and it may be necessary to make provision for the administration of justice therein; in the meantime it is hereby ordered by the King's Most Excellent Majesty, by and with the advice of his Privy Council, that it shall and may be lawful for the Governors for the time being of the suid colonics of British Guiana, Trimidad, and St. Lucia, or for any two of them, by a proclamation to be by them issued in His Majesty's name in the said respective colonies, to suspend the execution of the said order of the 23 d day of April, 1831, and the same shall thereupon be and remain auspended, until His Majesty's further pleasure shall be signified to the said respective Governors.
2. And it is further ordered, that during any such suspension of the said order of the 23d day of April, 1831, and no longer, the rules, orders and regulations hereinafter made and contained shall be observed in the administration of justice in the said respective colonies; that is to say, in the first place, it is ordered, that henceforth the Court of Criminal and Civil Justice of Demerara and Essequibo, and the Court of Civil Justice, and the Court of Criminal Justice of Berbice, shall henceforth be holden by and before three judges and no more, and that the first or presiding judge of the said court shall be called and bear the style and title of Chief Justice of British Guiana, and that the second and third of such judges shall be called and bear the respectlve styles nad titles of First Puisne Judge and Sccond Puisne Judge of British Guiana.
3. And it is further ordered, that the court for the trial of criminal prosecutions, and the Court of First Instance of Civil Jurisdiction in the island of Trinidad, sliall henceforth be holden by and before three judges and no more; and that the first or presiding judge of the said court shall be called and bear the atyle and title of Chief Justice of 'Trinidad, and that the second and third of such judges shall be called and bear the respective atyles and titles of First Puisne Judge and Second Puisne Judge of Trinidad.
4. And it is further ordered, that the Royal Court of St. Lucia shall henceforth be holden hy and before three judges and no more; and that the first or presiding judge of the said court shall be called and bear the style and title of Chief Justice of St. Lucia, and that the second and third of such judges shall be called and bcar the respective styles and titles of First Puisne Judge and Second Puisne Judge of St. Lucia.
5. And it is further ordered, that whenever and so often as the office of any chicf justice or puisne judge of any of the said colonies shall become vacant by the death, absence, incapacity, resignation, suspension, or removal of any such chief justice or judge, the Governor of such colony for the time being shall be and is hereby authorized to supply and fill up such vacancy by the appointment of some proper person, by a commission under the public senl of such colony, which commissiun shall be made to continue in foree only until His Majesty's pleasure shall be known.
6. And it is hereby further ordered, that none of the said judges of any of the colonics aforesaid shall be the owner of any slave, or shall have any share or interest in, or any mortgage or security upon any slave, or shall be proprietor of, or have any share or interest in, or mortgage or security upon any land cultivated by the labour of slaves, or shall be or act as the manager, overseer, agent, or attorney of, for, or upon any plantation or cstate cultivated wholly or in part by the labour of slaves.
7. Provided nevertheless, that nothing herein contained shall prevent any such judge from acquiring any such property or interest as aforesaid under any legal process, for the recovery of any debt or demand, or by testamentary or other succession, inheritnnce, donation, or other involuntary title, but all such property or interest as aforesaid which any such judge may so acquire, shall, within one calendar month next after the acquisition thereof, be by him communicated to the Governor of the culony, and shall be alicnated and disposed of within six calendar months, unless His Majesty shall in nuy case be pleased to grant to any such judge a longer period for ellecting any such alienation or disposal thercof.
8. And it is further ordered, that in each of the said courts respectively, the said three judges of the said respectlve colonies shall in all civil cases have, possess, exercise, and enjoy such and the same juriadiction, powers, and authurity, in every respect, as the juiges of the said courts have heretofore lawfully posscrased, exercised, or enjoyed; and that the decision of the majority of such three juiges shall in all civil cases at any time depending in the said resjective courts, be taken and adjudged to be, and shall be recorded ns the juigment of the whole of such court.
9. And it is further ordered, that upon the trial of any person or persons in any of the said courts respectively for any crime or offence, three asseasors shall be associated to the said threc judges, in the manner hereinalter provided fur, which assessors shall be entitled to deliberate and vote with such judges upon the final judgment to be pronounced in every such criminal case, or no person shall be convicted of any crime or offence, or adjudged to suffer any punishment by any judgment or sentence of any of the said courta, unless a majority of the total number of such judges and assessors shall in open court vote in favour of such judgment or sentence.
10. And it is further ordered, that in each of the said courts the said three judges and assessors shall in all criminal cases have, possess, exercise, and enjoy such and the same jurisdiction, powers, and anthority in every respect as the judges of the said courts respectively have beretofore lawfully possessed, exereised, and enjoyed, and that the decision of the majority of the total number of such judges and assessors shall in all criminal cases at any time lepending in any of the said courts, be taken and adjulged to be and shadl be recorded as the judgment of the whole court.
11. And it is further ordered, that it shall be lawful for the judges of any of the said courts respectivily to reserve the consideration of any question of law arising upon any such criminal trial as aforesaid, and to make order for the susjension or arrest of the judgment or sentence of the court, until the decision of such guestion of law, which shall be adjudged nud decided by such judges nlone, or without the concurreace or intes ference of such assessors therein.
12. And it is hereby further ordered, that the assessors of the said courts in Demernen and Berbice shall he chosen and appointed in such and the sume nammer as the members of the Court of Civil and Criminal Justice of Demerara lave heretofore been chosen nod appointed; and that the assessors of the said court lor the trial of crimisal prosecutions in Trinidad shall be chosen and appointed from and out of the members of the Cabildo of the town of Port of Spain in the said island: and that the assessors of the ssid Royal Court of St. Lucia shall be chosen and appointed in such and the same manner as the members of that court, other than the First President, have heretofore been chosen and appointed.
13. And it is hereby further ordered, that none of the judges of either of the said courts shall be liable to challenge or recusation in or upon any action, suit, or procceding, civil or criminal, but that such assessors shall be liable to be challenged on such and the like grounds as mas be alleged as lawful ground of challenge against alny petit juror empannelled for the trial of any indictment in lingland, and the validity of every such challenge shall be decided by the judges presiding at any such trial, without the concurrence or interference of the asseasors or any of them.
14. And it is further ordered, that it shall and may be lawful for the judges of the aaid courts respectively, and they are herchy authorized and required to make, ordain, and establish a tariff or table of fees, to be had, taken, allowed, and paid by the suiturs in the asid respective courts, for and in respect of every sentence, judgment, order and proceeding which may be pronounced, made, or had in any suit or aetign depending therein, or which may or shall be paid or payable to any of the oflicers of the aaid court resjec. tively, or to any advocate, barrister, solicitor, attorney, proctor or notary, or other practitioner of the law therein, and which tariff or table of fees shall, by the Chicf Juatice of each of the said courts respectively, be transmitted to the Governor for the time being of the colony to which such court may belong; and any such tariff or table being ratified and confirmed hy any ordinance to be for that purpose made by the Governor and Court of Policy of British Guiana, or by the Governor, with the allvice and consent of the Council of Government: in the aaid colonies of Trinidad or St. Lucia, ahall be binding upon all persons interested thercin; and all persons recciving any greater or higher or other fec or reward than shall by any such tariff or table be allowed, shall be liable to refund the saine by such summary process or procecding as shall scem good to the aaid courta respectively in that behalf.
15. And it is further ordered, that it shal! and may be lawful for the said Governor and Court of Policy of British Guiann, and for the Governors of Trinidud and St. Lucia respectively, with the advice and consent of the respective Councils of Government thereof, by any ordinances to be by them for that purpose made, *o prescribe the form and manner of proceeding to be observed in the snid respective courts for the prusecution and trial thercin of all persons charged with the commission of any crimes and offences coguizable within the said courts respectively: provided nevertheless, that every such ordinance shall be transnitted for His Majesty's approbation in the manner required by law in reference to all ordinances passed and enacted in the said respective colonies.
16. And it is further ordered, that it shall and may be lawful for the judges of the said courts respectively, and they are hereby authorized and required to make and establish auch rules, orders, and regulations as to them shall seem meet, touching the distribution of the business of the said courts between the respective judges thereof, and concerning the forms and manner of proceeding to be observed in the said courts respectively, and the practice and pleadings in all civil actions and other civil matters to be therein brought, and concerning the process of the said courta and the mode of executing the same, and concerning the admission of advocates, barristers, nttornies, solicitors, notaries, and proctors in the said courta respectively; all which rules, orders, and regulations shall be framed in such a manner as to promote, as far as may be, economy, method, and expedition in the despatch of the business of the said courts respectively; aud the fame shall be drawn up in plain, succinct, and compendious terms, avoiding all unnecessary rejetitions and ebicurity, and shall be promulgated in the most poblic and authentic manor in the colonies to which the sume may respectively refer, for fourteen days at the least before the same shall be binding and take effect thercin. jurladiction, ly possessed, civil cases nt :orded ns the e decision of concurreace

17. l'rovided always, and it is further ordered, that no sach rules, orders, or regulations as aforesald be repugnant to this present order, and that the same he forthwith transmitted under the seals of such respective courts to the respective Governors of the said colonies respectively, to be by them transinitted to llis Majesty for his approbntion or disallowance.
18. And whereas there are established within the said colonies, or some of them, courts having jurisdiction in civil enses of small amount, and in cases of breaches of the peuce and other petty ottences, and it is expedient that provision be mate for the better administration of justice in such courts; it is therefore hercby ordered, that no court within any of the said colonies other than the supreme courts hereinbefore mentioned, shall be competent to hold jurisdiction in any civil case in which the sum or mntter in dispute shail exced the amoant or value of $20 l$. sterling money, or in which the right of any nlleged alave to bis or her freednm, or the title to any lunds or tenements, or nny fee, duty, or oflice, or His Mristy's Roynl Pre. rogative may he in question, or wherehy rights in future may be bound; and that no wenct within nay of the snid colonies, other than the Supreme Courts aforesnid, shall be competent to hold juisdietion in any crminal case wherein nny person shall be accused of nuy crime punishable by denth, transportation, or baishment; nud that it shall not be Inwfol for any court in any of the aaid colonas, other than the Supreme Courts aforesaid, to iriflict nny grenter or ciser punishment than imprisonnent, with or without hard labour, for a term not execeding three months, or fine not exceeding 20b, or whipping not excreding 39 stripes, or any two or more of such kind of punishments together, within the limits aforesnid.
19. And it is further ordered, that it shnll be lawful for the Governor of British Guiann, with the advice and esnsent of the Court of l'olicy thereot; and for the Governors of Trinidnd and St. Lucin, with the ndvice and consent of the respective Councils of Government thereof, to establish, constitute, nad erect within the said respective colonies, inferior courts having jurisdiction in civil and criminal cnses within the limits nforesaid, and for thai purpose may nholish any such interior courts as may be now existing therein, or modify the constitution of such courts ns mny be found expedient.
20. And it is further ordered, that the julges of the snid Supreme Courts of the suid colonies respectively shall be aud they are hereby authorized to make, ordain, nod establish nil necessary rules, orders, and regnlations respecting the manner and form of proceeding to be observed in the said inferior courts, and respeeting the manner and form of carrying the judgnents and orders of auch courts into exacution, with all such other rules, orders, and regulations as may be necessary for giving full aud perfect effect to the jurisdiction of such courts respectively, and such rutes, orders, nod regulations from time to time to revoke, niter, nud renew as occasion may require; provided always, that all such rutes, orders, nud regulntions ns aforesaid shnll be promulgated, and shnll be transmitted to llis Majesty for his npprobntion or disallownnce, in the manner hercinbefore directed and required with respect to the rules, orders, and regulations of the said Supreme Courts.
21. And it is further ordered, that the uffice of Father-Genernl of Minors, and the office of Defender of the Absat, and the office of Depositurio Genernl, as at present existing in the island of Trinidnd, shall be and the same are hereby respectively abolished; and that the office of Taxador, and the olice of Judicial Referee, Liquidator, and Partidor, as at present exssting in the said island, slaall be and the same are hereby consolidated, and ahall constitute one office.
22. And it is further ordered, that the offices of Curateurs aux Successions Vacantes, and Regisseur des Biens des Absens, as at present existing in St. Lucia, shall be and the anme are bercby abolished.
23. And whereas various jurisdictions have heretofore been exercised hy certain courts in the island of Trinidad, which, by reason of the changes hereby introduced into the administration of justice there, it is no longer necessary to retain; it is therefore hereby ordered, that the several courts or trihonals following, that is to say, the "Court of Criminal Inquiry." the "Tribunal of Appeal, in all cases of condemnation to death," the "Superior Tribunal of Appeal of Civil Jurisdiction," the "Tribonal of the Royal Audiencia," and ail olfices in and connected with the said courts respectively, shall be and the same are hereby respectively abolished.
24. And it is further ordered, that the Court of Sénéchaussée, in the island of St. Lucia, and all offices In and connected with that court, shall be and the same are hereby abolished; and that the Royal Court of the said island shall henceforth have an original jurisdiction in all causes arising within the said island, in such and the snme manner and to such and the same extent as such original jurisdiction was heretofore vested in the said Court of Sénechaussee.
25. And it is hereby further ordered, that it shall and may be lawful for any person or persons, being a party or parties to nny civil suit or netion depending in the said Court of Civil and Criminal Justice of Denerarn and Essequibo, or in the snid Court of Civil Justice of Berbice, or in the asid Court of Flrst Instance of Civil Jurisdiction of Trinidad, or in the said Royal Court of St. Lucia, to apjeal to Ilis Majesty, his heirs, and successors, in his or their Privy Council, against any final judgment, decrec, or sentence, or agninst any rule or order made in any such civil suit or action, and having the effect of a final or detinitive aentence, and which appeala shall be made subject to the rules and limitations following: that is to say,
First, Such judgment, decree, order, or sentence shall be given or pronounced for or in respect of a sum or matter at issue above the amount or value of $500 l$. sterling, or ahall involve directly or indirectly the title to property, or to some civil right, amounting to or of the value of $500 l$. sterling, or shall determine or affect the right of some alleged slave to his or her freedom:

Sccondly, The person or persons teeling aggrieved by such judgment, decree, order, or aentence, shall, within fourteen days next after the same shall have been pronounced, made, or given, apply to the court by petition for leave to appeal therefrom to His Majesty, his heirs, and successors, in his or their l'rivy Council:

Thirdly, If such leave to appeal shall be prayed by the party or parties who is or are adjudged to pay any sum of money or to perform any duty, the court shall direct that the judgment, decree, or sentence appealed from shall be carried into execution if the party or parties respondent shall give securtty for the immediate performance of any judgment or sentence which may be pronounced or made by His Majesty, his heirs, and successors, in his or their Privy Council, upon any such appeal, and until such security be given, the execution of the judgment, decree, order, or sentence appealed from shall be atayed:

Fourthly, Provided nevertneless, that if the party or parties appellant shall establish to the satisfaction of the court, that real and substantial justice requires that pending such appeal, execution should be stayed, it shall be lawful for such courts to order the execution of such judgment, decree, order, or sentence, to be suspended pending such appeal, if the party or parties appellant ahall give security for the immediate performance of any judgment or sentence which may be pronounced or made by His Majesty, his heirs, and successors, in his or their Privy Council, upon any auch appeal:

Fifthly, In all cases security shall also be given by the party or parties appellant for the prosecution of the appeal, and for the payment of all such costs as may be awarded by His Majesty, his heirs, and successors, to the party or parties respondent :

Sixthly, The court from which any such appeal as aforesaid shall be brought, shall, subject to the conditions hereinafter mentioned, determine the nature, amount, and sufficiency of the several securities so to be taken as aforesaid :

Seventhly, Provided nevertheless, that in any case where the subject of litigation shall consist of immoveable property, or of any slaves, stock, utensils, or implements, held therewith or attached thereto, and the judgment, decree, order, or sentence appealed from shall not charge, affect, or relate to the actual occupation thereof, no security shall be demanded either from the party or parties respondent or from the party or parties appellant, for the performance of the judgment or aentence to be pronounced or made upon such appeal; but if such judgment, decree, order, or sentence, shall charge, affect, or relate to the occupation of any such property, then such security shall not be of greater amount than may be necessary to secure the restitution, free from all damage or loss, of auch stock, utensils, or implements, or of the intermediate profit which, pending any such appeal, may probably accrue from the intermediate occupation of auch property; and each of the said courts is hereby authorized and required to sequestrate any such immoveable property, slaves, stock, utensils, and implements, in order still further to reduce the amount of such security, if the party or parties by whom such security is to be given shall make application to such court for that purpose, and the other party or parties shall not show good cause to the contrary :

Eighthly, In any case where the subject of litigation shall consist of money or other chattels, or of any personal debt or demaand, the security to be denianded either from the party or parties respondent, or from the party or partics appellant, fur the performance of the judgment or sentence to be pronounced or made upon such appeal, shail be either a bond to be entered into in the amount or value of such subject of litigation by one or more sufficient surety or sureties, or such security shall be given by way of mortgage or voluntary condemnation of or upon some immoveable property or slaves situate and being within such colony, and being of the full value of such subject of litigation, over and above the amount of all mortgages and charges of whatever nature upon or affecting the same:

Ninthly, In any case where the subject of litigation shall be the right of any alleged slave to his or her freedom, the amount of the security for the performance of the judgment or sentence to be pronounced and made upon any such appeal, shall in no case exceed the pecuniary value of such alleged slave, and shall be given either by such surety or sureties, or by such mortgage or voluntary condemnation as aforesaid:

Tenthly, The security to be given by the party or parties appellant for the prosecution of the appeal and for the payment of costs, shall in no case exceed the sum of $300 l$. sterling, and shall be given either by such surety or sureties, or by such mortgage or voluntary condemnation as aforesaid:

Eleventhly, If the security to be given by the party or partics appellant for the prosecution of the appcal and for the payment of auch costs as may be awarded, shall, in manner aforesaid, be completed within three months from the date of the petition fur leave to append, then, and not otherwise, the court from which such appeal is brought shall make an order allowing such appeal, and the party or parties appellant ahall be at liberty to prefer and prosecute his, her, or their appeal, to His Majesty, his heirs, and successors, in his or their Privy Council, in such manner and under such rules as are observed in appeals made to His Majesty in Council from the plantations or colonies :

Twelfthly, Provided nevertleeless, that any person, or persons feeling aggrieved by any order which may be made by, or by any proceeding of any of the said courts respecting the security to be taken upon any such appeal as aforesaid, shall be and is hereby authorized, by petition to His Majesty in Council, to apply for redress in the premises.

I'rovided always, and it is hereby further ordered, that nothing herein contained doth or shall extend or be construed to extend to take away or abridge the undoubted right or authority of His Majesty, his heirs, and successors, to admit and receive any appeal from any judgment, decree, sentence or order of any of the said Supreme Cuurts, on the humble petition of any person or persons aggrieved thereby, in any case in which, and subject to any conditions or restrictions upon and under which it may scem meet to His Majesty, his heirs and successors, so to admit and receive any such appeal.
26. And it is furtber ordered, that in all cases of appeal allowed by any of the said Supreme Courts or by His Majesty, his heirs and successors, such court shall, on the application and at the costs of the party or parties appellant, certify and transmit to His Majesty, his heirs and successors, in his or their Privy Council, a true and exact copy of all proceedings, evidence, judgments, decrees and orders had or made in such causes so appealed, so far as the same have relation to the matter of appeal, such copics to be certified under the seal of the said court.
27. And it is further ordered, that the said Supreme Cuurts respectively shall in all cases of appleal to llis

## INFERIOR COURTS OF CIVIL JUSTICE.

## (This summary is derived from Mr. Clarke's excellent Work on Colonial Law.)

Under the authority of the 19th section of the preceding order, an ordinance was passed by the Governor and Court of Policy on the 13 th day of September 1832, to repeal the ordinance passed on the 23d of May 1832, entitled "An Ordinance to establish and constitute Inferior Courts of Civil Justice in British Guiana," and to make other provisions for such inferior courts. It recites and repeals the former ordinance, and then proceeds as follows :-

Whereas by an order of His Majesty in Council, bcaring date 20th June 1831, His Majesty has been graciously pleased to authorize the establishing of Inferior Courts of Civil Justice within this colony, having jurisdiction to a certain extent as thercin described.
2. Be it therefore further Enacted, that there shall be one Inferior Court of Civil Justice for the district of nemerara and Essequibo, and another Inferior Court of Civil Justice for the district of Berhice.
3. And be it further enacted, that the said Inferior Courts shall be held by and before the Chief Justice or one of the Puisne Judges, at such times as the Judges of the Supreme Court shall dircet and appoint.
4. And be it further enacted, that the said Inferior Civil Court shall have jurisdiction in cases to the amount or value of twenty pounds sterling, all claims in eurrency not exceeding 300 guilders being comprehended in this limitation.
5. And be it further enacted, that the Registrar or Sworn Clerk and Marshal of the respective Supreme Courts of Civil Justice shall attend the sitting of the said respeetive Inferior Civil Courts, and shall be entitled to receive certain fees for scrvices respectivcly performed by them.
6. And be it further enacted, that when the Judges of the Supreme Court shall have made, ordained, and established all necessary rules, orders, and regulations respecting the manner and form of procceding to be observed in the said Inferior Civil Courts, and respecting the manner and form of carrying the judgments and orders of the said Inferior Civil Courts into execution, with all such other rules, orders, and regulations as may be necessary for giving full and perfect effect to the jurisdiction of the said courts respectively, und as soon as the said rules, orders, and regulations shall have been duly promulgated this court shall thereupon frame the tariff fixing the amount of fees to which the respective officers of the said court shall be entitled for services performed by them in their rospective offices; and on promulgation thereof by this court, the said tariff shall have foree of law, and become hinding on all parties concerned.
7. And be it further enacted, that this ordinance shall come into full operation on the first day of November next coming. And that no ignorance may be pretended of the several orders contained in this ordinance, the same shall be printed and published as customary.

## Practice of the Courts.

In eonsequence of the Orders in Council remodelling the Supreme Court, and the subsequent estallishment of Inferior Courts, local regulations were made directing the mode of proceeding in the Supreme Court and in the Inferior Courts of British Guiana. Many of these regulations can be of use only to the practitioners of law in the colony itself; hut there are sume which, as they may affect contracts made in this country, descrve to be extracted. The first three will give some idea of the jurisdiction of the courts now established in the colony.

Manner of Proceeding to be observed in the Supreme Courts of Civil Justice in British Guiana, made and established by the Justices of the said Courts, in pursuance of His Majesty's Order in Council, bearing date 20th June 1831.
Sect. 1. A Court of Civil Justice shall be held in George-town four timea in each year, for the district of Demerara and Essequibo, and twice or three times, if necessary, in each year, in New Amsterdam, for the distriet of Berbice.
2. A Roll Court shall be held in each district before a puisne judge, on such days as ahall from time to time be appointed by the Jodges of the Supreme Courts, and shall be continned from day to day until the business brought before it shall be disposed of. Provided however, that no Roll Court shall be appointed to be held in the inonths of August, September, and October.
3. Before the first Roll Court of every month, in which there shall be one or more Roll Court, shall he returnable all and every citation in civil causea over which the Supreme Court has jurisdiction, except in eases of re-audition from the Roll to the Supreme Court.
27. It shall and may be lawful for the judge of the Roll, and he is hereby required to make, if need be, a
special report to the court, touching the exnmination, and the conduct or absence of any witness or witnesses, or other persons thercin, or relating thereto ; a copy of which report, in the event of any appeal to His Majesty in Council being granted, and the papers taken out shall be delivered with the same; and it shall and may be lawful for the court, after the case shall have been closed on both sides and pleaded, to call up and examine any witness who shall have been examined in the cause.
43. No plantation under execution shall be sold until one year after levy, and the particular description thereof and notice of the sale shall, at least six months previously to the day of sale, have been three times advertised in the London Gazette and Amsterdam Courant.
44. At the expiration of the year after due notice, as in s. 43, the court or chief justice, during non-ses. sion, upon petition of the marshal, shall tix a precise day of sale of such plantation, and after advertisement of such precise day for four successive Saturdays in the government newapaper of the colony, such plantation shall be sold at a credit of three, six, nine, and twelve months from the day of sale, payable in manner hereinafter stated; and in the cvent of the property to be sold consisting of several lots of land, with or without alaves or appurtenances, or of several lots of slaves, with or without buildings, and upon which lots respec. tively there shall be separate or distinct mortgages, liens or claims, the holders of such distinct mortgages, liens or claims, shall be at liberty to petition the court or chief justice during non-session for an order to sell, as it shall seem most advantageous to all partica under the circumstances of each particular case, and to enable the court to ascertain the rights of the respective parties on the decision of preference and concurrence.
55. If the purchaser of a plantation or other immoveable property sold at execution sale, be a holder of a first or second mortgage on the same, he shall not be bound to furniah security, or pay, save and except to the extent of such claims as shall appcar to the court to be preferent to such first or second mortgage, and of the amount for which the purchase-money shall exceed the amount of the sum due on such first or second mortgage, provided auch first or second mortgage, in virtue of which exemption from security or any part thereof shall be claimed, shall be deposited with the registrar.
72. Every barrister, advocate, attorney, and solicitor, upon his admission to practise, shall have administered to him, and shall take the following oath :-
"You shall swear that well and tiuly you ahall serve the King's subjects, according to the best of your learning and knowledge in the law, and you shall truly counsel and advise them that shall retain you according to the best of your skill, and you shall not defer, protract, nor delay their cause willingly, for lucre or hope of reward. So help you God."

And no practitioner at the bar shall be allowed to appear for a plaintiff, without filing at the time of his appearance, a power, ad lites, unless by leave of the court, nor for any defendant without filing, at the time of his appearance, a copy of the citation served upon the defendant, or some other authentic voucher, as evidence of his being employed for and on behalf of such defendant.
73. Whenever the secretary shall be called upon to pass or execute a power ad lites, in favour of any practitioner, care shall be taken to insert tnerein authority to receive monies and to grant reccipts, and unless such authority be inserted in the powers ad lites, the same shall be considered to have been intentionally withheld.
76. Edictal citations at the instance of an executor, administrator, curator, guardian, or trustee, shall be confined to two, that is to say, the first edictal citation shall be issued in the colony within one month after date of the order obtained from the chief justice, and the second, or last, so soon as the marshal shall have made his return of the cdictal citation having been published three times in Europe, as in section 43, or in one month after the first shall have been called at the roll, if the publication in Europe be not required.

Manner of proceeding in the Inferior Courts of British Guiana, as established by the Judges of the Supreme Courts in pursuance of His Majesty's Order in Council of 20th June, 1831.
Section 19. There shall be no appeal from any sentence of these courts, and cight clear days nfter sentence shall have been pronounced, the party in whose favour the sentence is shall be at liberty to proceed in execution thereof.
28. Every one shall be at liberty to appear personally in the Inferior Courts, to conduct his own cause, or to employ by power ad lites a duly admitted barrister, advocate, or attorney, and no other person to appear for him; it being however understood that whenever such barrister, advocate, or attorney is employed, he shall be remunerated by his own client, and no fee or remuneration paid to any barrister, advocate, or attorney, for appearing in the Inferior Courts, shall form any part or parcel of the bill of costs to be taxed against the party condemned.

## Qualifications of Assessors.

The order in Council of the 20th June, 1831, having directed that in certain cases therein mentioned, assessors should sit with the Judges of the Supreme Court, another order in Council of the date of the 15th August, 1832, was issued declaring the qualifications of such assessors. The second order was published in the colony by the proclamation of the Governor, dated on the 25 th Octuber in the same year, and was in the following terms:-
"Whereas on the 20th day of June, 1831, an order was made hy His Majesty with the advice of his Privy Council, for improving the administration of justice in His Majesty's Colonies of British Guisna, Trinidad, and St. Lucia, whereby it was, amongst other things, ordered, that the assessors of the cuurts therein mentioned in Demerara and Berbice should be chosen and appointed in such and the same manner as the members of the Court of Civil and Criminal Justice of Demerara have heretofore heen chosen and appointed, and that the assessors of the said court for the trial of criminal prosecutions in Trinidad should be chosen and appointed from and out of the members of the Cabildo of the town of Port of Spain, in the said island; and that the assessors of the said Royal Court of St. Lucia should be chosen and appointed in such and the
same mann nppointed. respectively mentioned so much of And it is 1 21 years an his own us above repris or who shal for him as a absolute ter or who bein relief of the house of the for the purp reside, and $f$ be considere legislative b clergymen it Scotland, an who shall te occupation e tising, all ott exercising th in the custod diploma, lice army on full actually empl be and are he it is further o he shall have should be ma respective col proper lists of assessors, and on every crim

And it is furt who, by any suc duty, or to do refuse or negle for every such o Court of such
same manner as the members of that court, other than the First President have heretofore been chosen and appointed. And whereas it is expedient to admit to the discharge of the duties of assessors in the said courts respectively, all free adult male inhabitants of the said colonies possessing such qualification as hereinafter is mentioned : it is therefore hereby ordered by His Majesty, by and with the advice of his Privy Council, that so much of the said order as is herein before recited shall be, and the same is hereby revoked and repealed. And it is hereby further ordered, that every free man, except as hereinafter exempted, between the ages of 21 years and 60 years, residing in any of the said colonics, who shall have or be beneficially entitled to, for his own use and benefit, either in his own name or in trust for him, within the same colony, $10 l$. by the year above reprises in any immoveable property either in perpetuity or for the life of himself or some other person; or who shall have within the aame colony for his own use and benefit, cither in his own name or in trust for him as aforesaid, 20l. by the year above reprises in any immoveable property held by lease or leases for the absolute term of 21 years, or some longer term, or for any term of years determinable on any life or lives; or who being a houscholder should be rated or assessed to any direct tax or impost, or to any rate for the relief of the poor, or other local object, on a value of not less than $20 l$. per annum; or who shall occupy a house of the annual value of $20 l$., shall be qualified and liable to serve as an assessor, within the meaning and for the purposes of the said recited order, in the colony in which every man so qualified respectively shall reside, and for the purpose, and within the meaning of that order, all slaves whether predial or personal shall be considered as immoveable property. Provided always, and it is further ordered, that all members of the legislative bodies of the said respective colonies, all jurors of the Supreme Courts of Justice therein, all clergymen in holy orders of the Established Church of England and Ireland, all ministers of the Kirk of Scotland, and of the Lutheran and reformed churches, all priests of the Roman Catholic faith, all persons who shall teach or preach in any congregation of Protestant dissenters, and who shall follow no secular nccupation except that of schoolmaster, all doctors of law, advocates, counsel, and barristers actually practising, all ettorneys at law, solicitors, and proctors actually practising, all othicers of the said courts actually excreising the duties of their respective offices; all jailors and persons actually employed by and under them in the custody of prisoners; all physicians, surgeons, and apothecaries actually practising by virtue of any diploma, license, or certificate granted by any competent authority; all olhicers in His Majesty'a navy or army on full pay, all pilots duly licensed by any competent authority; all officers of customs, and all officers actually employed as deputies or assistants to the marshals, or other executive officers of the said courts, shall be and are herely absolutely freed and exempted from serving as such assessors as aforesaid. Provided also, and it is further orderel, that no man who hath been, or shall be convicted of any crime that is infamons, unless he shall have obtained a free pardon, shall serve as such assessor. And whereas it is necessary that provision should be made for ascertaining the names, places of abode, and descriptions, of all persons within the said respective colonies qualified and liable to serve as such assessors, for making and revising from time to time, proper lists of such persons, and for the due summoning of them in sone settled rotation to serve as such assessors, and for the impartial selection of a sullicient number of persons from those so summoned to serve on cvery criminal prosecution.
lt is further ordered, that the chief justices and other judges of the Supreme Court of the said colonies respectively, shall $b s$, and they are hereby authorized, to make, ordain, and establish all necessary rules, orders, and regulations, respecting the manner in which the names, places of abode, and descriptions of persons within the said respective colonies, qualified and liable to serve as such assessors as aforesaid, shall be ascertained, and respecting the making and preserving in the different districts and quarters of the said respective colonies lists of all such persons, and respecting the public and other notices to be given preparatively to the compiling of any such lists, and the publication of any such lists when so compiled; and respecting the manner in which all persons whom it may concern shall be called upon or permitted to oppose or object to the inserlion or omission of any such list; and respecting the manner in which every such opposition or objection shall he heard, tried, and determined; and respecting the manner of reforming, correcting, or allowing any such list; and respecting the manner and form of all such lists, when corrected and reformed, shall be recorded; and also respecting the manner, order, and form in which all persons, whose names shall be comprised in any such record, shall be summoned to attend at any sessions of any such court, there to serve as assessors, and respecting the times at which, and the manner in which such summons shall be served; and also respecting the mode in which a competent number of assessors shall be chosen, either by ballot or otherwise, from among the number so summoned to serve as assessors in the said courts; and also respecting the proper method of proceeding to preserve a duc rotation amongst such assessors; and also respecting the several ofticers by whom, and the times and places at which the before-mentioned duties respectively shall be done and performed; and all such rules, orders, and regulations from time to time to alter, revoke, and renew, as occasion may require. Provided always, that no such rules, orders, and regulalations as aforesaid be repugnant to this present order, and that the same be forthwith transmitted under the seals of such respective courts to the respective Governors, to confirm or disallow the whole or any part of such rules, orders, and regulations, as to such respective Governors may in their diseretion seem fit; and the same when so confirmed by such respective Governors shall take elfect and be in full force within the said respective colonies until His Majesty's pleasure shall be known; and the same shall be transmitted to His Majesty for his approbation or disallowance, in the manner directed and required by the said recited order of the 20th June, 1831 , with respect to the rules, orders, and regulations of the said Supreme Court therein mentioned.
And it is further ordered, that if any public officer or other person within the said colonies respectively, who, by any such rules, orders, and regulations as aforesaid shall be required or directed to perform any duty, or to do any act in or about or connected with the several matters aforesaid or any of them, shall refuse or neglect to perform any such duty, or to do any such act, every such officer or other person shall, for every such offence, forfeit a sum not exceeding $10 l$. nor less than 40 s , as to the judges of the Supreme Court of such coiony wherein the same shall oceur shall seem reasonable.

And it is further ordered, that every person who, under the provision of this present order, or of any such rulcs, orders, and regulations as aforesaid, shall be duly summoned to serve as an assessor for the trial of any criminal prosecution in any of the said colonies, who shall not appear and serve as such assessor after being openly called three times, and on proof being made on oath of his having been duly summoned, shall forfeit and pay for every such his default, such fine, not exceeding $10 l$. nor less than 1l., as the court shall deem reasonable to impose, unless some just and sufficient cause for sucli defaulter's absence shall be made to appear, by oath or affidavit, to the satisfaction of the court. And it is further ordered, that every fine which shall be imposed hy virtue of this present order shall be imposed hy a summary proceeding hefore the said courts respectively, on the motion of the public prosecutor of and for any such colony, and shall, when so imposed, be levied and recovered in such and the same manner and by all such ways and means as any other fine or penalty imposed hy a judgment of any such court ; and shall, when so recovered, be paid over to the treasurer or other receiver of His Majesty's revenue within such colony, in aid of the expenses of the civil government thercof and the administration of justice therein.
And it is further ordercd, that in all criminal prosecutions before the said courts respectively, it shall be a good cause of challenge of any person summoned to serve as an assessor, that he is not qualified according to the provisions of this present order, or that he is an illiterate person and unable to read or write, and that any other cause which according to the law of England would be a good cause of challenge of any man summoned and returned to scrve as a common juror on the trial of any issue joined between the King and the prisoner on any indictment for felony or misdemeanor, shalt also be good cause of challenge to any assessor summoned to serve on the trial of any criminal prosecution in any of the said colonies, in so far as that part of the law of England is capahle of being applicd in the said colonies; and if any such cause of challenge shall be alleged, either by the public prosecutor or by any such person or persons against whom any such prosccution may be brought, the judges of the court shall forthwith proceed to enquire of, and consider the grounds of any such chailenge, and shall either allow or overrule the same, as may be just ; and upon such challenge being so allowed, another person shall be chosen to serve as assessor in the place and atead of the person so challenged, and so on, until a sufficient number of assessors shall appear agaiust whom no cause, or no just cause, of challenge shall be alleged.
And it is further ordered, that after deducting six from the whole number of the persons summoned and actually appearing to act as assessors on any criminal prosecution, the public prosecutor and the person or persons against whom the prosecution may be brought, shall each have as many peremptory challenges as shall be equal to one half of the remaining number, or should the remaining number not be an even number, then the person or persons against whom the prosecution may be brought shall have one peremptory challenge more than the public prosecutor.
And it is further ordered, that before proceeding to the trial of any such criminal prosecution, each assessor shall, in open court, audibly pronounce and take the oath appointed by the law of Eugland to be taken by petit jurors imparinclled for the trial of any issue joined hetwcen the King and any person or persous arraigned upon any indictment in His Majesty's Court of King's Bench at Westminster.
And it is furt-er ordered, that the assessors so to be summoned and chosen as aforesaid, shall have, exercise, and enjoy all such and the same rights, powers, and privileges, and shall perform all such and the same duties as according to the provisions of the said recited Order in Council might be exercised, enjoyed, and performed by the assessors therein mentioned.
And it is further ordered, that this present order shall take effect and come into operation in the said respective colonies so soon as the same shall have been promulgated within any such colony by the Governor thereof, and not before; and that for the purposes and within the meaning of this present order, the officer administering the government of any such colony shall be esteemed and taken to be the Governor thereof.
And the Right Honourable Lord Viscount Goderich, one of His Majesty's principal Sccretaries of State, is to give the necessary directions herein accordingly.
C. Greville.

## Assessors.

An Ordinance to proride a sufficient number of Assessors to be assoriated with the Judges of the Supreme Courts of Criminal Justice of British Guiana, as enacted by the Gocernor and Court of Policy on the 5th December, 2831 .
Whereas, by an order made and passed by His Majcsty in Council, hcaring date the 20th June, 1831, it was amongst other matters provided that three assessors shall be associated with three judges upon the trial of any person or persons in cither of the Supreme Courts of the colony for any crime or offence, such assessors being entitled to deliberate and vote with such judges upon the final judgment to be pronounced in every such criminal case.
And whereas it was turther provided that assessors shall be liable to be challenged on such and like grounds as may be alleged as lawful grounds of challenge against any petit juror impannelled for the trial of any indictment in England:
And whercas the number of persons to be elected, chosea, and appointed to serve as assessors must be sufficient to provide for cases of challenges held to be valid:
C. I. Be it thercforc enacted, that there shall be for the Supreme Criminal Court of Demerara and Essequibo a number of twelve asscsejrs, and for the Supreme Criminal Court of Berbice a like number of twelve assessors.
2. And be it further enacted, that the right to elect assessors is and shall be vested in the College of Kiezers of British Guiana, and in the exercise of this right the college shall be bound to make a double nomination of persons for the office of assessor, to be transmitted through the hands of His Excellency the Governor to the judges of the Supreme Court, and that it shall be lawful for the said judges to select one of
the persons of a vacancy
3. And b cach person selected for munication person shall shall certify good and val Court of Pol to law.

3. And be it further enacted, that notification shall be sent by the secretary of the Court of Justice to each person who shall be selected in manner aforesaid, and in case of any person who shall have been aclected for an assessor refusing to accept the otlice, or neglecting to signify his acceptance by written communication delivered to the secretary uforesaid, within fourteen days from the date of notification, such person shall be liable to a fine of 1,500 guilders in behalf of the colony, and the judges of the Supreme Court shall certify to the Governor and Court of Policy that such a fine has been incurred, whereupon, unless good and valid reason for such non-ncceptnuce or neglect be shewn to the satisfaction of the Governor and Court of Policy, the said court ahall order and direct the Colonlal Recciver to proceed for the fine according to law.
4. And be it further enacted, that each and every person who shall he selected in manner aforesaid to serve as an assessor, shall, within the period of one week from the expiration of the term of fourteen days allowed to signify his acceptance of office, and whose acceptance shall have been notified to the secretary, or within such period of fourteen days if he shall have accepted the office and desires to he sworn, appear before His Excellency the Governor, the Chief Justice or one of the Puisne Judges of the Supreme Court, and take and subscribe the following oath :
"You shall faithfully and truly discharge the duties of an assessor in the Supreme Court of Criminal Justice for Demerara and Essequibo (or for Berhice, as the case mny be), and shall deliberate and vote on the final judginent to be passed on all criminal trials on which you may sit, without partiality, favour, or affection. So help you God."

After which his appointment shall be publiely notified in the Royal Gazette of the colony; His Excellency the Governor or one of the judges being, nevertheless, empowered to extend the time for takiug such oath, if sufficient reasons be alleged to either of them to grant such extension of time.
5. And be it further enacted, that the Puisne Judges of the Supreme Court shall have the same power to administer oaths in all cases, civil and criminal, as the Presiling Judge of the Court of Justice, styled under the said Order in Council the Chief Justice, now has, and heretofore had.
6. And be it further enacted, that it shall be the daty of each and every assessor to attend the sittings at pach session of the Supreme Criminal Court ; those assessors who are appointed for the Supreme Court of Demerara and Essequibo to attend the sittings to be held in George Town, and those assessors who are appointed for the Supreme Court at Berbice to attend the sittings in New Amsterdam respectively; and the proclamations of His Excellency the Governor for the time being in the Royal Gazette of British Guiana, appointing the time of holding such sessions respectively, shall be due . nd sufficient notice to all such assessors.
7. And be it further enacted, that previous to the bringing up of any person for trial, the names of all the assessors who may be in office for the time being, in the aforesaid jurisdictions respectively, written on similar pieces of paper, shall he placed in a box by the secretary of the Supreme Courts respectively, to be drawn therefrom in succession by the sceond puisne judge, and after three assessors are found to whoin there is no legal ground of challenge or objection, the trial shall proceed.

And that no ignorance may be pretended of the several orders contained in this ordinance, these presents shall be published, affixed, and sent round for general information.

There were two other clauses in this ordinance, but they have been repealed by the following ordi-nance:-

An Ordinance passed by the Governor and Court of Policy on the 23d day of August, 1832, to amend an Ordinance entitled "An Ordinance to pronide a sufficient number of Assessors to be associated with the Judges of the Supreme Court of Criminal Justice of British Guiana."

Whereas we have deemed it expedient to amend an ordinance enacted on the 2lst December, 1831, and published on the $22 d$ following, intituled "An Ordinance to provide a sufficient number of Assessors to be associated with the Judges of the Supreme Court of Criminal Justice of British Guiana :"
Be it therefore enacted that the 8th and 9th clauses of the said ordinance are hereby amended to the effect -that instead of the said clauses, the following shall be and are hereby substituted in lieu thereof respectively :-
Cl. 8. And be it further enacted, that if any person, who having been appointed an assessor and whose name having been drawn as already prescribed in clause 7 , shall not be present to answer thereto, or shall decline to sit as an assessor on any such trial, he shall be linble to a fine of 100 guilders, unless good and sufficient cause be shewn to the satisfaction of the judges that such assessor is absent from unavoidable cause, or has good reason for declining to sit on such trial; and the judges shall, when they see fit, certify to His Excellency the Governor, that such fine or fines has or have been incurred ; and His Excellency may thereupon, if he see fit, either grant authority to the coloninl receiver to proceed by summary execution for the recovery of the said fine or fines, or submit the consideration of this proceeding to the Honourable Court of Policy.
9. And be it is rther enacted, that each assessor shall be liable to serve two years, and until the session is iosed in which such two years may expire, should the same take place during any such session; and after having served for such period of two years, shall not be compellable to accept the office of assessor, until after the expiration of two years from the end of such service, provided nevertheless, that any person who has been elected and accepted the office of assessor may, at any time during such period of two years, be relieved from further service on payment of a fine of $1,500 \mathrm{f}$., or may apply by petition to the Governor and Court of Policy to be relieved from cuch further service without the payment of such fine, and it shall be competcut to the Governor and Court of Policy, on good and valid reasons being adduced, to relieve such person from
such further service. But any person elected an assessor, and who may have paid the fine, shall be liable to be re-elected and to serve at the expiration of two years from the period of his former election.

And that no lgnornnce may be pretended of the several orders contained in this ordinance, these presents shall be published, aflixed, and sent round for general information.

## D.-THE FALKLAND ISLANDS. [See Book II. page 142.]

In consequence of the desire now so generally evinced to settle permanently these islands, and their eligibility as penal settlements being very apparent, the following Information is given in addition to that contained in Book II.-South America. (These documents and many others relating to the subject have been placed in my hands by Henry Moreing, Escq., n gentleman well qualified for carrying into effeet his somed views as to the eligibility of the Falkiand Islands for a penal settlement) :-
The Falkland Islands, called the Malonïne by the French, and the Maloina Islands by the Spaniards, from their pretended discovery by Bouchesne de Gouin, a native of St. Malo's, are situnted between lat. 52. 26., and 51. 6. South, and long. from London 57. to 61. 30. west. They are very numerous; beilug stated by some persons to be 300 and by others 90 in number; most of them are very small; but two, called generaliy enst and west Falkland Islands, are large; the former being about 80 miles long by 50 broad, and the latter 100 by 50 .
These lslands were first discovered by Captain Davis, who sailed under the command of Sir Thomas Cavendish, in 1592; hut he was too much distressed at the time to make any particular observations on them, nor did he even give them a name, which was reserved for Sir Richard Hawkins to do; who having two years after, again discovered them, called them Hawkins's Maiden Land. In 1598, Sehald de Waert who commanded one of Van Nooit's squadrons, fell in with these islanils, and imngining himself to be the discoverer, called thein after himself, the Sebaldine Islands, and by this name they were placed in the maps. For upwards of a century no further notice of this land is to be found until in 1689, Captain Strong, whose M.S. Journal is in the British Museum (ad. M. S. Cotton, 672), in his voyage to the south sea, met with, and gave them their present name in honour of the then Lord Falkland. Dampier and various other navigators subsequently touched at them, but appear to have considered them of too little importance to merit an accurate description.
Lord Anson's "voyage" first publicly pointed out the grent importance it would be of to England to have a friendly port and place of refreshment for her ships nearer to the south than the Brazils. The editor of the "voyage" enters very fully into the subject, and every argument there made use of applies as strongly to the present day, as when it was written. We find that soon after his Lordship was placed at the head of the Admiralty, preparations were made for sending out a frigate to examine with precision the state and condition of these islands; but from some cause or other the expedition never sailed. The design of an establishment on or near the coast of Patagonia was not, however, then a new scheme; Charles the 2nd was fully alive to its advantages, nnd had despatched Sir John Narborough at his own expense to carry it into effeet. The Dutch also long before had attempted to make a settlement in this quarter, but failed for want of proper information. It was not until 1764, or 172 years after we had discovered the islands, that active measures were taken to settle them. In that year, Commodore Byron was sent out for that purpose by Lord Egmont, but after formally taking possession and surveying the harbours, January 1765, he sailed without leaving any one in them.
About the same time, or rather a little before, a spirit of adventure had arisen in France directed to the south sea, and Mons. de Bougainville was encouraged by the French government to undertake at his own expence the colonization of the Falkland, or as they called them, the Malouine Islands.
The jealous policy of the Spaniards could not see a foreign settlement so near the coast of South Ameriea without uneasiness; they accordingly set up a claim to these islands, under the pretence that they had been discovered by Americus Vespucci, and in 1766, Monsr. de Bougainville, having reecived a very large sum of money to compensate him for the expense incurred, the French settlers returned to France, and their places were occupied ly some Spanish troops commanded by a Colonel Catani. The same year the first establish. ment by the British was formed at Port Egmont, on the western island, hy Captain Maebride, and what is very singular, the two colonies seem to have gone on until 1770, a period of four years without either having been aware of the others vicinity; or at any rate without any communication. However in February 1770, two Spanish frigates arrived at Port Egmont, the commanding officer of which expressed much surprise at sceing the English tlag flying, and protested against the occupation, at the same time stating that he would refrain from any other mode of proceeding until he had acquainted his Catholic Majesty with the disagreeable transaction.
These vessels were followed on the 4th of June by a fiect of five frigates having 1,700 troops on hoard and the English were ordered by the commander of the expedition, Don Ignacia Madariaga, immedintely to depart from that port, and totally to evacuate all the islands known by the name of Falklands. The Favourite sloop of sixteen guns, with the crew of the Swift, which had been lost, forming our whole force on the station, were obliged after a show of resistance to capitulate to so superior an armament, and on the 10 th of June, articles were signed by the respective commanders, by which the English were permitted to depart, taking with them as many stores as they could carry, and receiving receipts for the rest, for which the Spanish Governor of Port Solidad became answerable. These proceedings excited a great sensation in England, and very decided measures were taken to avenge the affront which had in a time ot peace been offered to our flag. Party spirit ran high on the occasion, and the sulject gave rise to some brilliant debates, in both Houses of Parliament. An address was moved for and carried in the House of Lords on the restoration of the islands to Great Britain, and a long and ahle protest against leaving open the question of sovereignty was drawn up and signed by Lord Chatham, the Dukics of Richmond and Devoushire, and 15 other Peers.

War, for which great preparations had heen made, was however averted hy the neceptance by the Ministry, of a declaration dated June 22nd 1771, and signed by the Prince de Maserano, the Spanish Ambassador, in which the violence complained of was disavowed by the Spanish government, and restorntion of the islands agreed to [sec next page]. We arcordhagly again took possession, and the Spaninrds returned to Buenos Ayres; we subsequently abandoned the settlement as uscless on the 20th March 1774, leaving the following inscription engraved on a piece of lead aflixed to a conspicuous object :
" Be it known to nll Nations thant FalkInnd Islands with this Fort, the storehouses, wharf, harhours, bay, " nold creeks thereunto belonging, are the sole right and property of His Most Sncred Majesty George the
" Third, King of Great Britain, Frnence, and Ireland, Defender of the Faith, \&c.; in witness whercof this
" Plate is set up, and His Britannick Majesty's Colours left tlying as a mark of possession by S. W. Clay-
" ton, commanding officer at Falkland Islands, A. D. 177.1."
From this time until 1820, a period of forty-six years during which the most extraordinary changes had taken place in every part of the world but particularly in the neighbouring continent, nothing further is to be found mentioned of the Falkinnd Islands. Sealers and whaling vessels of various nations seem occasionally to have touched there, attracted by the immense herds of eattle (which had wonderfully increased from a few left by the Spaniards) and by the numerous marine nnimals on the coasts, but claim to the sovereignty of the islands was not disputed until the period above mentioned; when Captain Weddell an intelligent commander engnged in a whaling voyage, white laying at Port Egmont received a letter from the Commander of $n$ South American Patriot National frigate named the Heroine, saying that the "Supreme government of the United Provinces of South America, had taken possession of these islands in the name of the country to which they naturnlly appertnin."

This communication if made known to our government met with no attention, and in 1825 the BuenosAyrien government procecded to assign to n German named Lonis Vernet the whole of the eastern island with all its cattle and produce as well as the neighbouring island called Staten island in perpetuity upon condition of his discharging certain arrears of pay which had accrued to some military officers in the patriot service. Vernet who appears to have embarked considerable capital in the speculation, took possession of this grant and for five or six years carried on a profitable trade in hides, oil, salt fish, \&c. He endeavoured to encourage settlers, and divided the island into eleven sections, which he offered for sale, one was purchased for a small sum by a Mr. Langdon.

Don Vernet (so enlled) nt length rather injudiciously exercised the powers which he had conferred upon himself. In 1831 in virtue of his nuthority as owner, governor, and commander-in-chicf of the island he took upon him to scize some American vessels, which had contravened his territorial or maritime regulations, and carried them to Bucnos Ayres for adjucticntion. They were condemned, and a garrison placed at Port Louis, this procecding leading to an angry remonstrance and a claim to the Falkland islands, ncarly caused hostilities between the two republics. While the dispute was at its height, Jan. 1833, the English government settled the question by sending the Clio, Commander Onslow, to take possession of the islands on our account, and to remove any strnugers who might be located therc. The wrath of the Argentine rulers was turned from Washington to St. James's, and very strong language used on the subject; but as Lord Palmerston continucd nirm in his views on the subject, the Cabinet of Buenos Ayres did not think it prudent to withdraw its envoy or come to a rupture, and an English vessel of war has ever since continued on that station.

This short account (in addition to the statements at Chapter III. page 142) will scrve to point out the high estimation in which these islands are held by all nations as a port of shelter for their ships. Our rising empire in Austrnlia places us in the position occupied by the Spaniards previous to the revolt of their South American colonies, and every motive which could operate as an inducement to them to occupy the Falklands by violence and the risk of war, becomes of double weight in our case from the isolated position and greater distance of our colonics.
A single glance at the map will suffice to shew the advantages of their situation. In the direct track of our ships-as nearly as possible half way between New South Wales and the mother country-in a boisterous latitude-with numerous and admirable harbours-they seem placed by nature for our especial use. Weddell gives the following Intitudes and longitudes :-Ship Harbour, New Island, lat. 51.42.36. long. 61.9. West Point Harbour, lat. 51. 24. 15. long. 60.36.30. Port Louts, lat. 51. 32. long. 58. 3. 30.

It unfortunutely hapuens that almost every published account which we have of this spot has heen written to serve a purpose, and must be look at with suspicion. The first detailed description of the Falklands to be met with is by Dom Pernetty, an ecclesiastic, who accompanied De Bougainville. The next is given by De Bougainville himself, in his account of his voyage round the world. Both these accounts were writteu after the French had given up the islands, and are evidently intended to reconcile the Spaniards to their purchase.
In the present century, the only persons who have written on the Falklands are three captains of whalers. Weddell, an Englishman, in 1825; and Murrell and Fanning, Americans, in 1832 and 1833.
Weddell, who passed two winters among the islands, says but little about the soil or climnte, confining hinself principally to an account of the harbours; but supposes the seasons to be much milder than they were forty years ago, which be attributes to the immense bodies of ice then found in 50. S. lat. having now alinost entirely disappeared.

Morrell says " It is my opinion that something might be made of these islands; the soil is good, clear of rocks, and susceptible of easy tillage, and high cultivation. luxuriant meadows in the interior afford excellent grazing for cattle all the year round. Though destitute of trees, there is no want of fuel, the low ground producing an nbundance of excellent peat or turf, which burns well. The climate is temperate and salubrious, free from the extremes of heat or cold, though subject to frequent rains and storms of wind."
It will be apparent from these accounts that no obstacles of sufficient importance present themselves to prevent the successful formation of a penal settlement at the Falkland Isles; on the contrary, every circum-
stance secms to point out the peculiar eligibility of the Falklands for this purpose．They combine in them－ aclves almost all the advantages，without any of the inconveniences which attach to Norfoik Island and Tasmnn＇s Penlnsula，the two places recommended by the Select Committee on Transportation to be chosin as the spots on which to carry into effect their views on this important subject．Their healthiness is undoubted；while their comparative proximity to Engiand，the total absence of inhabitants，the great abundance of cattle existing on them，and their insular position and limited extent，offer inducements to their occupation as an asylum for unfortunate criminala not to be met with in any other quarter of the glohe．In fact there is no reason why these islands might not，under judicious management，hecome，as well as a great self－supporting penitentiary，a source of profit to the country，and an incalculable benefit to commerce．As the Eastern and Western Island are 12 miles apart，the one island might be made a place of stricter discipline than the other；and a removal from the one station to the other be a source of punish． ment or reward to the prisoners．There is abundance of building stone；and wood may be obtained in any quantities，and adapted for every purpose，at Staten Island and on the shores of the Straits of Magellan． Water abounda of excellent quality，and admirably aituated for the construction of mills．The coast teems with fish，of which large quantitiea have been exported dried；and amphibious animals and whales yicld oil and whalcbone to a vast extent．Every circumstance therefore combines to favour the immediate coloniza－ tion of these islanda．

## Extracta from State Papers．

Extract of a Letler from Captain George Farmer to Mr．Stephens，dited on boavd the＂Favourite，＂September 2，17\％0．
Sir，－The 4th of June，the＂Industry，＂a Spanish frigate，anchored in Port Egmont Harbour，having heen，they sald， 53 doys from Buenoa Ayrca，put in for water，and bonnd to Port Soledad．On the 7th，anchored here four Spanlsit frigates，whlch hat been 26 tlaya from Bneuoa Ayres，came out in company with the＂Industry，＂and parted with her four days before．On the arrival of these ships，the＂Industry＂hoisted a broad penant．I now ordered nost of the officers and men belonging to the late＂Swift＂＇on shore to defend the settlement，and ordered Captaln Malthy to gat thi ＂Favourite＂nearer in to Jason＇s Cove．One of the frlyates sent an ofticer on board to acquaint Captain Malthy that if welghed they would fire lnto hilm，which be took no notlee of，but got under sail．Tha Spanish frlgnte fired two shots， which fell to leeward of the＂Favourlte．＂Three of them got under welgh，and kept working to the windiward，as dhi tbe＂Favourlte．＂Captain Malthy gent an officer on board the Spanlsh commodore to know why one of the ships under his command had fired two ahots at the＂Favourite．＂His answer was，they were not fired at the＂Favourite，＂but as algoals to him．

Since the first appearance of those shipa，I began to clear the atorea out of the block－house．The four 12 ．poundera at the battery were sunk ao low in water and mud，that they were entlrely useless．I had them transported to the block． house，and had port－holea cut out for them，with a platform before，covered round with the cordage．

We now wrote to the Spanish commodore，desiring，as he harl received the refreshmenta he stood in need of，that he would depart from heuce．His answera，with the preparations they were making，left us no doubt of their real intention． The Spanish commodore in one of his letters desired us to send to view the troops that were ready for landing，which we did on the evenlog of the $9 t$ ．

Our officera reported them to be（scamen and all jocluiled）about 1,600 ，with a train of artillery sufficient to reduce a regular fortification，and five frigates from 20 to 32 toss．By this time the frlgatca had warped in ahore，and moured head and stern opposite to the block．house and battery．

At night Captain Maltby，with 30 of the＂Favourlte＇s＂men，eame on shore，and brought with them two six－pounders， swivels，small arms，ammunition，\＆c．The next morntng，a part of the Spanish troops and artillery landed about half a malie to the northward of us．Wher，they had advanced about half way to us from where they had landed，the rest of their boats，with the remainder of the troops and attilery，put off from one of the frigates，and rowed right in for the cove，covered by the fire of the frigatea，whose ahot went over the block house．

We fired some shot，and（not seeing the least probability of being able，againat such a superlor force，to defend the settlement）holsted a flag of trice，and desired articles of capitnlation，which were in part granted．Their troops then landed，and took possession of the place．

I send you by Mr．Gower（late lleutenant of the＂ Swift ＂），who goes express，copies of all the letteri，articles，and capitulution，recelpts，\＆c．that passed between the Spaniards anit ua．

* For a fo
thons on a Met Exchange of I the whole cur depreciated." the Mctallic C mation contain

United Sta countries ar Britain, Port dwt. ; France For the sake the Upper Ca coins, and the the other gole before the 1st the value of $t$ to its excess o dollars, crown legal tender by

Lower Cana for gold coins, ance to be mac than the given if British, Port per grain, if $\mathbf{F}$ 20l، cy., in gol
ditto, Montreal, 50l.; ditto, Argenteuil, 100l; Roman Catholic bishop, Quehee, 1,000?. Nova Scotia: Bishop, 2,000l. ; archdeacon, 300l.; Presbyterian minister, 75l.; pension of the president of King's College, 400l.; archdeacon of New Brunswick, 300l.; ditto of Bermudn, 200l.; ditto of Newfoundland, 300l.; Roman Catholic bishop, Newfoundland, 75l.; to foreign missionaries of the Society for the Propagation of the Gospel in Nova Scotia, $3,500 l$.; minister at Prince Edward's Island, 100l. Total, 11,790l. 18s. 6d.
This estimate is smaller by $2,350 l$, than that re-
quired for the service of the year 1837-8; the diminution is caused, first, by the sulsstitution of a vote of 1,000l. for the bishop of Moutreal for the 3,000 l. voted in former years for the bishop of Quehec; and, secondly, by the resignation without pensions of two missionaties of the Society for the Propagation of the Gospel, each of whom received $150 l$. per annum, and by the retirement of Dr Porter, whose salary from that society was 150l. . 1006. per annum.
M.-Table of Coins,* Weights, Values, \&c., [by Mr. Carter, Mr. Young, and Mr. Brooking.]

* For a further statement of the coins circulated in Lower Canada, their weights and value by law, see "Observations on a Metallic Currency," published at Montreal in 1837, p. 3 to 7. Mr. Chapman ln his pamplilet on the Money and Exchange of Lower Canath, p. 89, after giving a statement of the coins in circulation, and their valucs, says, "Calling the whole currency 1,000 , oo less than 671 parts are of the sound thereof, the rest being composed of coins more or less depreciated." See tabies of gald and silver coins circulated in Lower Canada, in pases 10 and 11 of Observations upon the Metallic Currency of that Province. These tables are full and elaborate. I refer also to Porter's Tabies for the information contained in the Blue Books.

United States.-The gold coins of the following countries are legal tender by weight, viz., Great l3ritain, Portugal, and Brazil, at $9 \pm 8$-10th dol. per dwt.; France at $931-10$ th, and Spain at 899-10ths. For the sake of comparison, the weights given in the Upper Canada Act are assumed for the British coins, and the weights in the Lower Canada Act, for the other gold coins. The American Eagle, coined before the 1st of July, 1834, although nominally of the value of ten dollars only, sells at a price equal to its excess of weight over the new coinge. Silver dollars, crowns, five franc pieces, and pistareens, are legal tender by tale.

Lower Canada.-The rates given in the table are for gold coins, weighed by the single piece; allowance to be made on every piece weighing more or less than the given standard, at $2 \frac{1}{4} l$. currency per grain, if British, Portuguese, or American, and 2 1.5th l . cy. jer grain, if French or Spanish. In payments above 20l. cy., in gold coins, either party may require it to
be weighed in bulk, at 89s. ey., per ounce troy, for British, Portuguese, or American; and $87 s .8 \frac{1}{2}$ d. cy. per ounce, for French and Spanish, deducting half a grain for cach picce so weighed, to compensate the receiver for the loss in re-weighing separately. The currency law was passed prior to the coinage of Sovereigns and new Eagles. The silver coins are rated by tale. All the higher and lows denominations of gold and silver coin rated above ins to be received in their respective proportions.

Upper Canada.-Gold and silver coins, if depreciated in weight more than one-twenty-fifth part of their full weight, not to be legal money, with this proviso, they are receivable by tale. All the higher and lower denominations of rated gold and silver coins are to he received in their respective proportions. The act is to remain in force until the 20th of April, 1840, and to the end of the then next ensuing session of the Provincial Parliament.

Nova Scotia.-The Curreney Law of this provinee
having expired on the 31 st of December, 1835, I have inserted the rates at which coins are received and paid at the Colonial Treasury by virtue of the Acts 6 Wm . V. cap. 32 and 41, and which are generally adopted in mercantile transactions ; the banks, however, refuse to reccive British silver at the excessive rates given above. About $57,000 \mathrm{l}$. in notes (principally of $1 l$. each) issued by the Province Treasury are in circulation, and as they are not redeemable in specie, they are at a discount in the adjoining province; their credit and circulation are supported in Nova Scotia, by their being receivable in payment of provincial duties, and by an act of the legislature which prohibits the issue of any other notes of less denomination than $5 l$.
New. 3runswick.-British gold and silver coins are not specifically rated by the currency law of this province, and they are inserted in the table at one-ninth more than their sterling value, being the only rate at which they are legal tender. A bill wias introduced into the Provincial Legislature in the Session of 1837, fixing a rate on the sovereign, but I do not know whether it has received the royal assent. The dollar and its aliquot parts, and the French crown, are all legalized by tale, but not the half-crown.

Prince Eduard Island. There is no specific reguIation of the currency in the island, the British coins are consequently inserted at one-ninth more than their sterling value. The money of account has been depreciated by the issue of irredecmable treasury notes, which are in circulation to the extenr of $14,500 \mathrm{l}$., and pass at the rate of 30 s . to 20 s . in British coin. These notes have been sold by auction in Halifax at $11 s$. Halifax currency per pound.
Newfoundlund. - I am indebted to Thomas $\mathbf{H}$. Brooking, Esquire, of London, for the following information upen the currency of this island. From his mercantile intelligence, his local knowledge, and long familiarity with the domestic trade and foreign rela. tions of that island, I am glad to refer to his valuable authority for the following facts:-
"The currency of this island is composed chicfly, almost entirely, of Spanish dollars, which circulate at the rate of $5 s$. each; their sterling value being fixed under a treasury order at $4 s$. $4 l$. cach. (To ahew the unsoundness of this standard, the fictitious sterling value which the dollar has received, the following additional extract from the letter of Com.-gen. Routh is given :-
"The current value of the Spanish dollar in the colonies having been rated at the English mint price of silver, and that price being $2 d$. per ounce more than the market price, has been obviously over valued at 4 per cent,-what is really worth $4 s$. $2 d$. in England payed $4 s .4 d$., in the colonies, equally as well as $4 s$. 4d. British money, which conventionally passes for, and in point of fact can only be had in England in exchange for a value equivalent to $4 s .4 d$. .)
The difference between the two is $15 l .7 s .8 l l$. per cent., and this is considered to he the par of exchange. To reduce the currency to sterling, two-fifteenths are deducted; to advance sterling to currency, two-thirteenths are added. Doubloons have been recently introduced to some extent, and although not generally received, their value may be stated at $76 s .6 \mathrm{~d}$. currency, or $66 s$ sterling. Bills of exchange are bought at a premium, which, supposing it to be quoted at 20 per cent., would require 480 dollars to pay for a bill of 100 l . sterling, and 1 refer to this as the most simple method of computing the rate of exchange in Newfoundland. With reference to the moncy of account,
it may be said generally, that all transactions and contracts between merchants, dealers, planters, tradesmen, fishermen, servants, \&c., are kept in currencysay four Spanish dollars for one pound. Small coins are extremely scarce, and change in consequence dilitcult to be met with in sufficient quantity to meet the demand and carry on the ordinary business of life. Fractional parts of dollars, in proportion to the value of the whole dollar, and British silver, circulate generally; the latter at the following rates:--the sixplenny piece at $7 d$., the shilling at $1 s .2 d$. , sometimes $1 s$. $3 d$., and the half-crown at $2 s$. $9 d$. or $3 s$., according to the demand. They have no fixed rate, so far as I know. There is thus great irregularity in the currency of the island, and the mode of transacting ordinary business is fraught with serious and inconvenient anomalies. The iutroduction of a sound standard, and uniformity in its monetary affairs, would be productive of many benefits in this valuable dependency of the Crown."
N.-Grants and Sales to Individuals exceeding 5,000 acres, with names of township and grantec, number of acres, and date of the patent.
Tract of land to the south of Chaleur Bay and mouth of the River Caraquet in Nova Scotia; John Martieth ; 20,000 acres; 10th February, 1764. Ascot, Brompton, Hatley, and Orlord, IIon. W. B. Felton, Esq., 5,013 acres, 20th November, 1830.

For many years subsequent to 1796 a practice obtained of granting large blocks of the waste lands of the Crown to a leader and associates, as it was termed. In many of these cases, it is believed that the names of the associates were only introduced for the purpose of augmenting the grant to the leader; they having previously arranged with him, for some trifling consideration, to relinquish their shares after the issue of the letters patent, hy which $\mathrm{m}^{\text {ran }}$ a the leader became possessed of the whole grant.
It is thercfore apparent that this return cannot convey a correct idea of the number of persons who have acquired grants from the Crown exceeding 5,000 acres, nor is it possible from the records of this office to give a correct statement of the grants over 5,000 acres which have been thus ohtained.

It is，I believe，generally known that the leaders of townships，or parts of townships，in many instances， did take a reconveyance from their associates to the extent of 1,000 acres，in consideration of the expenses incurred and borne solely by the leaders，for surveys and patent fees，upon the issue of warrants of survey in favour of such leaders and their associates，which warrants were direeted by the Governor to His Ma－ jesty＇s surveyor－general of the provinee，to cause the same to be earried into execution，and contained the condition that all the expenses should be borne by the parties applying．The deputy provincial sur－ veyors，who received the instruetions from the sur－ veyor－general＇s office，to carry those surveys into exceution in the field，were also enjoined to transmit to the said office a faithful and exact report of their surveys，with plans and field books of their operations．

Previous，however，to the year 1＂95 the expenses of survey of the exterior lines of townships were borne conjointly by the Government and the leaders of townships；several of the leaders，however，did not conform to this rule．It is proper here to state， that a township of 10 miles square contains about 44,000 acres of grantable land；and a township of nine miles front by twelve miles depth（being the dimensions of a township fronting on a river）is about 48,000 acres，more or less，according to its locality （exelusive of the usual reservations for crown and clergy）；according to which deta the townships and parts mentioned in the foregoing list will bear a pro－ portion or nearly so．

| Total ． | 11007140 | 5135042 | 5872098 |

The first column of this statement is from eorrect data，and the second and third are calculated from the best general information that could be collected， as well as from correct data in many seigneuries．It appears there remains about the aggregate quantity of $5,872,098$ superfieial arpents of unconceded land in the three distriets，including the whole of the island of Anticosti；but exelusive of that island， about $4,059,098$ superficial arpents unconceded，one third part of which quantity，at least，may be con－ sidered as unfit for cultivation，and at least seven eighths of the island of Anticosti is considered un－ arable．
T.-Statement exlibiting the actual Coudition of the Waste Lands of the Crown enmprised within the Surveged Districts, inctuding tho Rescrvations set apart for the support of a Protestant clergy, as they appear on the 26th day of December, 1835

U.-An estimate of the quantity of waste lands in the Province Unsurveyed, of the quantity fit for Cultivation, of the forest and quality of the timber. North of the St. Lawrence, Montreal district ; in the country north and east of the Ottawa, from the rear of Grenville to a point about 100 miles above the falls of the Chaudiere, in Hull, extending back from the surveyed tract about 30 miles; about 4,500 square miles of waste lands; quantity fit for cultivation, unknown; quality of timber, principally pine of two sorts red and white; extensive lumbering transactions are carrying on in this tract. A strip of land lying
in the rear of the present townships on the margin of the above-described tract, with the average depth of three quarters of a township, or seven miles and a half, making about fifteen townships; quantity fit for cultivation, 900,000 square miles; quality of timber, mixed timber; some white pine, spruce and hard wood.
South of the St. Lawrence, Quebec district, the country on the river St. John, comprised within the disputed territory; $5,000,000$ square miles of waste land; quality of timber, spruce and white pine. In the rear of the seigneuries south of the St. Lawrence,
on the av by a leng unknown quality of North

on the average depth of half a township，or five miles，${ }^{\text {Saguenay country surrounding the Lake St．John；}}$ by a length of about 90 miles ；quantity of waste land supposed about $2,000,000$ square miles of wuste land； unknown； 208,000 square miles fit tor cultivation；elimate supposed to be too severe for wheat；quality quality of timber，principally spruce timber． of timber，spruce．
North of the St．Lawrence，Quebec district，the
X．－Memorandum showing the Amount of Fees taken under the present Tariff，on a Patent granting land； and the Amount that will eventually be payable should the alteration proposed in Lord Goslord＇s Despatch of the 28th of July 1836，be carried into effect．

Fees Payable under the existing Tariff of 1831.

It is proposed to abolish the fees payable to all the officers who now receive them，excepting those of the provineial secretary，allowing，however，a compensation to the present incumbents，taking the fees for a fee－fund so long as they continue to bold office．

Y．－Statement showing the Quantity of Aeres of Clergy Rescrves sold，whether to private Individuals，or to the British American Land Company，with the Average Price per acre，in Counties．

* Varintions of the compass, established in 1829 by Captain Baytheld, R. N., in the surveying schooner Guluare, those laid down in the charts being erronemis. Brably pots $16 \frac{1}{\mathrm{t}} \mathrm{deg}$. W. Island of Bie, 172. Can Chat, 21. Bay of the Seven lslands, 23. West end of Anticosti, 231. Enst end of ditto, $2 \cdot \frac{1}{2}$.

A lighthouse has been erected on Pointe des Monts (or Cape Monts l'elés), on the north side of the River St. Lawrence, nearly opposite to Cinp Clant, the lantern atanding 100 feet above the water.

The lighthouse lays with the outermost part of Caribou Point, morth 52 . east, nad sonth 52 west by compass, and it em he seen over that poont and to the enstward of it. Ships nppronching the light from the enstward, as they draw towards the Caribon Point, must bring it to benr west by south, they will then be in a good liur way, and if necessary they can near the land by their lead. After passing Curibon l'oint, and ns they draw towards the lighthouse, they must come no nearer than 12 fathoms water to nvoid two ledges of rocks, one of which lays E. S E. from the light, with only is feet water on it; the other lays S. W. from the light, and E. S. E. from the western extremity of Pointe des Monts, with 16 feet. water on it ; but these ruchs do not hy liuther from the shore than half a mile at low water.
The lighthonse lays with the west extremity of Pointe des Montes, north 6.4 east, nad south ti.4 west, nad distent about one mile; and when ships are to the westward of the Point ; the lighthouse is in one with the ontermost rocks of the Point; and in the day-time it forms a bold distinct land-matk; and on this line of bearing ships are in the best possible finir way for the general purposes of mavigation, whether boumb upor down. For any priticular purposes of navigation, ships mny safely stand to the northward, until the light bears east hy north, they will then be drawing near the north land, and when it bears enst half north it is time to tack, for when it hears east it will be shut in with the highland, and carnot be seen to the sonthward of east, and then they will be only one mile from the lind, and if they are off Godbut River, Pointe des Monts will benr from them east hy south two leagues distant. When ships are off St. Nicholas Harbour, and the light bearing east hy north, they are in a good finir way from the north land.

The S. W. spitt of Manicougan Great Shoal, the ship, and the lighthouse are then all in one line of bearing.

Lishthouse on s. W. Point of Anticrasli,-Kepper Lt. Harvey, H. 1. Royal Navy. A lighthouse haviug been erected on the S. W. point of the lsland of Anticosti, notiee is hereby given that a grand revolving light, on the Argand primeiphe, was shewn thereon, for the first time, on the esth of August, 1831, and that the said light will continne to be shewn (very night from sum-set to sun-rise, from the gith day of Mareh to the last day of December in cach year. When ships are to the enstwnd of the lighthouse, They may salely stand townet the islmud until it hars N. N. W. by compass, they will then be in a goom finir way, and if they wish to make more free with the Inul, they con do so by their lead. The land trevids from the lighthouse S. E., by south, or nearly so.

Lighthotse on Circen Istimd in the Rirer st. Laur. rence, keeper, Mr. Rohert Noel Lindsy. - The lantern of the lighthouse on Gireen Island shows a light every evening from sum-set to sum-rise the next morning, from the 15 th day of April to 10th day of December, inchasive: and the following are the bearings of it by compass from the respective phaces.

## O O--THE BRITISH AMERICAN LAND COMPANY.

Copy of the agreement concluded between his Majesty's Government and the British American Land Company in the year 1833, with an account of the sums paid by the company under that agreement.
Memorandum of agreement between the Right Honourable Edward Geoffrey Smith Stanley, His Majesty's principal Secretary of Sinte for the colonial deprrtment, on hehalf of his Majesty's government on the one part ; and Gcorge Richnrel Robinson, m.p., governor, Nithanicl Gould, deputy-governor, Patrick Maxwell Stewart, mp., William Petric Crnwfurl, Alexnnder Gillespie, junior, William Inglis, John Kirkland, Edward Wheler Mills, John Shuter, Lewis Stride and James Wilson, the Court of Directors nominated and appointed by the merchants and others who hnve united together to estahlish a company for purchasing, improving, settling and disposing of land in his Majesty's colonics and provinces in North America and their dependeneies, and for other purposes connected therewith, under the bame of the British American Land Company, and intended to be incorporated by royal charter, on the other part.

Whereas the said court of directors having made rpplication to his Majesty's government to sell, grant and convey to the said comprny, for a valunhle consideration, certain lands known hy the name of crown reserves, and certain other crown lands situated in the enstern townships of the province of Lower Cannda, as the commencemcnt of their operations, and his Majesty's government having acceded to the said application, this memorandum, embodying the terms upon which such sale and grant is to be made, bas been concluded between his Majesty's goverıment and the company ns follows:

1. Mr. Secretary Stanley, on hehalf of his Majesty's government, has agreed to sell, grant and convey to the said comprany the crown Innds and crown reserves hereinafter described, situated in the enstern townslips of the province of Lower Canada, in consideration of the sum of mones, and upon the terms and conditions hereinafter mentioned, viz.

The whole of the crown lands in the county of Sherl,rooke nnsurveycd, and as represented on the plan hercunto annexed (exclusive of the territory claimed by the United Stntes), supposed to amount to 596,325 acres; the crown reserves nid surveyed crown lands in the counties of Sherbrooke, Shefford and Stanstead, supposed to amount in all to 251,336 acres : total, 847,661 acres.
Mr. Stanley is willing to tnke one entire sum of $120,000 l$. for the whole of these lands, subject to the conditions hereinafter mentioned respecting the clergy reserves; 75,992l. to be considered us the purchase-money of the unsurveyed lands $44,008 l$. that of the surveyed lands.

Mr. Stanley considers that he is selling the whole of the before-mentioned crown reserves and surveyed lands at $3 s$. $6 d$. per acre, and somewhat more than 500,000 acres of the unsurveyed land 3s. per acre, leaving to the company about 90,000 acres as an allowance for any mavailable land which on survey may be found in the olock, and it is distinctly understood that no claim can be admitted hereater on the ground of lands found unsuitable to the purposes of the company.
2. His Majesty's government, however, excepts from this sale any town lots or sites already haid out or rescrved as such (not exceeding in the whole 10,000 acres), which his Majesty's government may, at any time within a period of two years from the date of the charter to be granted to the company, declare its intention to take up; and for all or any lots which may be so taken up a corresponding deduction, at the rate of 3 s .6 d . per acre, shall be made from the amount of the purchase money hereby agreed to be paill by the said company.

The company shall be debarred from solling any town lots or sites alrendy laid out or reserved, without giving intimation to his Majesty's government; and the goverument on their part shall be bound within a limited period to amounce their decision in regnrd to such lots.
3. If means can be found of legally accomplishing the object, one-seventh of the unsurveyed lands sold in the county of Shcrbrooke shall he deemed a sale of clergy reserves, and the purchase money be set apart, amounting to one-seventh of $75,992 l$. or $10,856 l$., which in that casc will not be subject, like the rest, to the condition that one-half be expended in public works and improvements, as hereinafter mentioned in clause 6. But this modification of the sale will be dependent on the practicability of executing this nrrauge. ment; and unless its practicability be secured within one twelvemonth from the present date, no such modifiention shall have effect.
4. One-tenth pnrt of the whole purchase-money (including the portion proposed to be treated as the price of a sale of clergy reserves) shall be prid within 12 months from the date of the charter. The payments of the remaining amount to be completed within 10 years from the same date, and in the meantime to bear interest at the rate of four per cent. per annum ; the company, however, having the option of ancieipating the whole or any part of the payments.
5. The payments shall be made to such officer, connected with the receipt of the crown revenues in the said province of Lower Canada, as his Majesty's government shall from time to time appoint to rcceive the same, and a receipt under the hand and seul of such officer, attested by one witness, shall be a good and sufficient discharge to the said company for every sum of money acknowledged in any such receipt to lave been recelved by the officer granting the same. And for obviating any doubt as to the proper officer iuto whose hands such money is to be paid, notice will be given by his Majesty's government, informing then of the officer who mny be appointed to discharge this duty and grant the proper receipts.
And upon producing to the governor-in-chief or officer alministering the government of the province a reccipt, signed, senled and attested as abovementionet, a grant will be issued to the saill company for such a portion of the lands as may be equivalent to the purchase money actually paid. And every such grant shall be made to the said company gratuitously without any fee of office, demand or duty being due or payable to any public officer for preparing, expediting, sealing and issuing the same.

To prevent unnecessary trouble, the company shall not be entitled to require a grant to be made out for any portion of lamd less than 5,000 acres.
6. One-half of the money so to be paid by the company shall be expended, at the discretion and on the sule responsibility of His Majesty's Secretary of State, on public works and improvements in that part of the jrovince of Lower Canada in which the land sold to the company is situate. But His Majesty's Governinent will always be ready to receive any suggestions of the company for expending this moicty. By the terms public works and improveinents will be understood canals, bridges, high roads, market-houses, courtloouses, school-houses, the erection of churches and parsonage houses, the clearing and improvement of glebe lands, and any other works undertnken and calculated for the common use and benefit of liis Majesty's subjects, in contradistinction to works intended for the use and accommodntion of private persuns.
7. His Majesty's Government will instruct the Governor-in-Chief or officer administering the government of the province of Lower Canada to direct the proper departmenis of the provincial government to furnish the company with maps and diagrams, showing the sitnation of the lands hereby agreed to be sold, without any fee of office, demand or duty being due or payable to any public officer for the same; His Mnjesty's Government will also instruct the Governor-in.Chief or officer administering the government to facilitate the inquiries of the servants of the company.

Signed by Mr. Secretary Stanley, Downing-street.
(signed)
E. G. Stanley.

Signed by Nathaniel Gould, chairman of a General Court of Proprietors, in pursuance of a resolution passed this day, I, Freeman's-court, Cornhill, 3d December, 1833.
(signed)
Nathaniel Goull, Depy. Govr. Chairman of the Court of Proprietors.

Supplementary Article of Agreement hetween the Right Honourable Thomas Sprins Rice, His Majesty's Principal Secretary of State for the Colonial Department, on behalf of His Majesty's Government on the one part, and George Richaril Robinson, M. p., Goveruor, Nuthaniel Gould Deputy-governor, Putrick Maxwell Stewart, m. p., John Peter Boileat, junior, William Petrie Crawford, Russell Ellice, Alexander Gillespie, junior, John Kirklint, E'lward Wheeler Mills, Juln Shuter, Lewis Strite, and James Wilson, the Court of Directors of the British American Land Company, on behalf of that Company, on the other part.

With reference to the sixth articie of the memorandum of ngreement between His Majesty's Goverument and the company of the third day of December last, which stipulated that one half of the jurchase-money to be paid by the company shall be expended in the public works and improvements therein mentioned; it is further agreed between the parties,
That the company are to prepare, at their own expense and charges, the plans and estimates of the works to be undertaken, whether propused by Government or the company, and submit the same to the governor or person administering the government of the province of Lower Canada.
If the governor or person administering the government approve of the contemplated undertaking, either as originally submitted or as amended upon consideration, the company will then be authorized by the governor or person administering the government, to expend such sum as may be determined upon under any instructions that may be considered necessary.
The company will thereupon proceed with the undertaking, and on its completion lay before the governor or person administering the government, a statement of the actual expense incurred in effecting it, with the vouchers, and if he is satisfied, the company will then either receive payment of the amount, if there is money in the hands of government belonging to the Improvement Fund, provided by the sixth article of the menorandum of agreement before referred to, or be allowed credit for the amount in the next ensuing payment of the purchase-money, according as it may have been previously arranged. It is understood that the company are to make no charge for or on account of their officers superintending the undertaking, or expending the money in the manner authorized by the governor or person administering the government.

In case of such protracted differences of opinion between the governor or person administering the government and the company, on the mode of laying out the amount to be expended on public works, as shall appear to the governor or person administering the govermment to render any further attempt to conclude a mutual agrecment in the colony useless, the question shall be referred to the Secretary of State, whose decision slall be final.

Signed by Mr. Secretary Spring Rice, Downing-street, 6th August, 1834.

## T. Spring Rice.

Signed by Nathaniel Gould, Chairman of a Court of Directors, in pursuance of a resolution to that effect, 4, Barge-yard, Bucklersbury, Gth August, 1834.

Nathaniel Gould, Deputy-Governor,
Ghairman of the Court of Directors.
Amount paid by the British American Land Company, under the agreement with His Majesty's Government of 3d December 1833 :-
20th March, 1835. First instalment, without interest, 6,000l.; 20th March 1836, second instalment, with two years' interest at four per cent, 6,480l.; 20th March 1837, third instalment, with three years' interest at four per cent, 6,7201.; total, 19,2001 .; expended by the company on public works within their land, in conformity with the supplementary article of 6th August, 1834, 15,754l.; grand total, 34,954l.

The above is presumed to he a correct statement of the sums paid by the British American Land Company. As, however, no late accounts on the subject have been received from the Earl of Gosford, His Lordship has been directed to furnish a report forthwith.
Downing-street, 1st April 1837.
The British American Land Company has its location in the Eastern Townslips, or English Lower Canada, which, situated on the south side of the St. Lawrence, hetween 4.5 and $46 \frac{1}{3} \mathrm{~N}$. lat, and 71 and 73 west long., and divided into eight countics or parts of counties: these again are subdivided into about one hundred thousand townships estimated to contain between five and six millions of acres.
The British American Land Company is incorporated and estallished by a royal charter, dated at Westminster the 20th March, 1834, and an Act of Parliainent, to which the royal assent was given on the 22d May following. The capital of the company is declared in the charter to be $300,000 \mathrm{l}$., held in 6,000 shares of 501 . each, but with power to the proprietors to increase it to 600,0001 .:-of this capital a deposit of 31 . per share has been paid by the proprictors, and upon payment of a call of $5 l$. per share, which has been made by the directors, and falling due on the 1st December next, the capital paid up will amount to 48,000 l. By a clause in the charter the proprictors are to receive interest on the capital advanced by them, at the rate of 4 per cent. per amum.
The objects for which the company has been established, and the powers conferred on it, are declared by the charter; namely, for the purpose of purchasing and cultivating Waste Lands, \&c. in Lower Canada, Upper Canada, Nova Scotia, New Bronswick, Prince Edward's Island, and the Island of Newfoundland, in North America, and their Dependencies, and in or upon any such land, to make, erect and build roads, drains, bridges, and other internal communications, houses, schools, chajels, mills, wharfs, and other buildings and works necessary or expedient for the occupation, planting, and profitable cultivation or improvement of any such lands \&c., to open, search for, win and work in or under any of their said lands any mines, pits, Leds, veins and scams of copper, tin, lead, iron, iron ore, stoncs, clay and all other ores, minerals, metals, metallic substances, matters and products, other than and except gold and silver, and also other than and except coal and culm, unless such coal and culm should be grantel or demised to them at any time or times hereafter by His Majesty, His heirs or successors, or should be by them acquired from any person or persons who should have lawfully cousented thereto, \&c. \&c.
In pursuance of these objects the Company have purchased from His Majesty's Government as the commencement of their undertuking, nearly a million of acres situated in the three most southerly counties of the Easten Townshifs, viz. Shefford, Stansteal, and Sherbrooke, and have made arrangements for the sale of the same to settlers already in the country, and to emigrants who intend to procced to Canada.
The lands offered for sale by the Company are of different descriptions.

1. Crown Reserves and surveyed Lands. 300,000 acres and upwards in the surveyed parts of the countics of Shefford, Stanstcad and Sherbrooke.
These lands are situated for the most part in detached lots or farms of 200 acres each, scattered throughout the settled parts of the country, and from their contiguity to villages, mills, shops, schools, and churches, are exceedingly eligible for settlement. In many of the townships, several of ti.ese lots lic together, so that settlers and emigrants may purchase larger farms from 400 to upwards of 1,000 acres in extent. Besides these detached lots the Company have for sale several blocks of surveyed land, which are well suited to partics who may be desirous to possess large propertics. [See Colonial Library, $2 d$ Edition, vol. I., Canada, for a full account of this Company.]

## PP.-TIIE CANADA COMPANY,

is incorporated by Royal Charter, under the provisions of an Act of Parliament passed in 1826, with a subscribed capital of $100,000 l$. sterling.

The company contracted with the government for the purchase of the fine Huron tract, comprising about $1,100,000$ acres, and situnte on Lake Huron; other lands such as crown reserves, and school and church lands have also bcen purchased by the company, amounting in the whole to $2,484,413$ acres, the total amount of purchase money being $348,680 l$., of which about 120,000 . have been paid up to the 31 st December, 1833, and $20,000 l$. is paid annually to Government until the year 1842 , when the whole sum will have been liquidated. $45,000 \mathrm{l}$. of the purchase money for the Huron tract, is to be expended in improving the company's own lands in the Huron tract, or county.

Nearly half a million of acres of tand have been sold by the company, producing $210,000 l$., upwards of half a million acres have heen paid for by the company, and not yet sold, leaving $1,400,000$ acres unpaid for, and of course unsold. Not more than 18l. has been paid on each share, which is now, however, worth 500 . and may be naturally expected to be doubled in a few years, as the colony of Upper Canada advances in prosperity.

The rate at which the company have sold snme fine lands in the Huron county in 1834, averaged 7 s .8 d . per acre, and 50,000 acres of crown reserves brought $13 s$. per acre.

The rate at which the Canada Company first purchased land was 3s. Gd. average per acre, which was then considered high. The terms on which their lands (of which they have allotments in every township in the province) are sold, are one fifth down and the remainder in five annual instalments, bearing five per cent interest.

CANADA COMPANY'S CHARTER OF INCORPORATION. [19TIt AUGUsT, 1826.]
Geonor the Fourth, by the Grace of God, of the United Kingdom of Great Britain and Irelund, King, Defenter of the Finth, and so forth, To all to whom the e proentes shall come greeting: Whereas, in and by a certnin Net of Parliament nade and passed in the sixth year of our relgn, entited, "An Aet to colile inis Najesty to grant to a company, to he heorporated
 company with ecrtaln Powers nod Privileges, and for other Purposes rehating thereto :" After reciting, anomgst other things,

 everal sulscribers, and had humbly besought us to grant to them a chartor of heorporation: It was emacted, That in case we should, within three years ntter the passing of that aet, he pleased, by charter of herorperathen muder the great ecal of
 Euch other person or persons ns trom time to time should be eldy udmitid members hato their eorporation, should be a body politie and corporate by the name of "The Canadia Compmoy," nud to dechre that the sald corprorntion so to be made nad ereated shouki be established fiar the purpose therehbefore mentioned, und fer such other lawtul purposes as to us nught seem meet; then, and in that case, It shonld and might he lawful for the snid eorperathon to held to then and their suceessors sueld lands, tenements, mal hereditaments, within the provinees of Vpier Canada and hower Canada as shond or mifht be granted by as to them and their shecessors within the shid provinees, or as (smbect to the restrict ons heremafter inchioned) should be eontracted for mul purchased or acquired hy them thereln, and to bohd, alienate, sell, and dispore of nil such lands,
 such our charter mipht impose, tirect, or preserihe : nud further provisions were la and by the sald act of parliament made for rating the copital of the saitl Company and transforring the shares, and for other matters the obn mentioned.

Now know ye, that upon the prayer of the several perwons herelingter named, ant others, ny a wo of our espectal grace, certain knowledge, nud mere metion, we have given, granted, made, ordalned, eonst tutet, tectaren, and appointed, and hy these presents, for us, our heirs and suceessors, do give, grant, make, ordain, constitule, declare, and appoint, that Charles
 Easthope, Esq., Edward Fllice, Estl., Jumes Willian Freshitheld, Estl., Johar Fulhartnn, Espl., John Galt, Esif., Charles David

 tugether with such and so many other persen or persoms, bodies politie ror corperate, as have beerme or shall at nay time bereafter heeome, subscribers or sharchilders of or for the eapital stock herehafter mentioned in manner hereinatter provided, and their respective suceessors, executors, administrators, nud assigns, and such other persos or persons, bodies polltic or corporate, as shall from time to time be possessed of or entitled to sneh shares as are hercinatice provided, shall be one body pelitic and corporate in deed and in name, by the name of "The Canada Company," and by that name shall and may sue mid be sued, implead and be inpleaded, in all conrts, whether of haw or eqnity, and shall have perpetual successlon with a common seal, which may by them be changed or varied at thetr pleasure.

And we do dechare, that the said corporation shall he and is established for the purpose of parchasing, holding, iaprovibg, elearing, settling, and disposing of waste and other lands in our province of Upper Canada, nud for making advances of capitat to settlers on such lands, for the opening, making, improving, and maintaining roads and other internal communientions for the benefit therenf, and for promothir the entivation of such arthetes as can nelvantageously be exported from the said province, and for the other purposes herenafter montioned, with nll such powers, privileges, and authorties as are in and by the sald act of parliament contained and expressed.

And we do further deelare and ordain, that the present capital or Joint-stock of the said Company, to be used and applied in establishing and carrying on the said motertaking and for the purposes atoresald, shath he a sum of not execerling one million pounds stering, to be rated in shares of one humdred pounts chel, am that the shares in the said undertaking and ill the profits and advantares thereot, shall be and be deemed personal estate, and as such pertoun estate shall be trans missible aceordingly,

And we do further declare and ortain, that all and cvery person and persons, bodies politie or eorporate, by or from whom any subserlption shall be made or nceepted, or noy payment made pursuant to the provisions herein contained for that purpose, for or towards the raising of the said capital sum of one million pounds as atoresaid, his, her, or their successors, cxccutors, adminlstrators, and assigns, respectivety (to such subseriptim belur less than one hundred pounds) shath have and be entitled to a slare of and in the said capital or joint-stock of the said Company, In proportion to the monles whieh he, she, or they shall have so eontributed towards making up the same, and shall have and lee entifled to a proportionable share of the profits and advmitares nttending the capital stock of the said Company, and shall be admitted to be a proprictor or proprietors of and hin the same.

And we to further declare and ordain, that the satid Company, or the Directors to be appointed by virtue of this our charter, shall camse the names and devignations of the severat persons and bodics politie and corporate who have subscribed for or may ut any time hereafter be entitled to a share or shares in the said Company, with the number of such share or shares, and abo the proper nomber by which every share shall be distinguished, to be fairly and distinetly entered in a book or books to be kept by their clerk or sucretary.

And we do further deelare and ordain, that the several persons, bodies politic or eorporate; who have subseribed for and towards the said eapital, or who shall at any time hereater have or hold any share or dares in the same, shall, and they are hereby required to pay the sum or sums of mothey by them respectively subseribed, or such parts or portions thereof as shad from time to time he called for, pursumt to or by virue of the powers and dircelons of this our charter, at such thmes and places to such persom or persons, and in such manner as shafl be ordered and directed by any Court of Directors, for the time being, of the said Company. Aad in case any person or persons, bodies politic or corporati thall neglect or refuse to pay any such sums of money at sueh times and in vueh mamer as shall be ordered and directed by the Court of Directors as utore aid, it shall be lawful tor the said Company to sue for and recover the same, together with lawtill interent from sueh appointed time of payment, from spel perseth or persons, bodies politic or corporate, or in eases where two or more persons, bodies politic or corprate, shall have jointly subicribed fer or be jointly possessed of any one or mure share or shaves in the said Company, then trom all, nny, or either of sueh persons, hodies politic or corporate.

And we do further declare and ordain, that whenever two or more persons, bodics politic or eorporate, shall be jointly possessed of or entitled to any share or shares in the said Company, the person whose name shall stand first in the buoks of the said Company as proprietor of such share or shares, shall, for all the purposes of the said Company and this our charter, bedeemed and taken to be the owner or proprictor of such share or shares; and all notices refuired to be given to the owner or proprictor of any share or shares in the said Company, shinll and may be given to or served upon snch person or hody whose name shall so stand first in the books of the said Company, and suels service upon such person or body shall be deemed and taken to be a service upon all the owners or proprictors of such share or shares for all the purposes for which such service is intended to be made upon the owners or prophetors of sheh share or shares, nation sheh owners or prisprieters shall be entitled to give their vote or votes in respeet thereof by the person or bexly whone name shall stand first in the books of the Company as such propretor of such share or shares, and his vote shall on alt occasions be deemed and allowed to be the vote tor or in respect of the whole property in sueh share or shares, without proof of the concurrence of the other proprictor or proprietors of sueh share or shares.

And we do furtier order, dechare, and ordain, that it shall be lawful for the several proprietors of the said Company, their excentors, successors, and assigus, to sell and tranter any share or shares of which they shall respectively be possessed, and every such transfer shall or may be in the form and to the effert following, that is to say, [1 or we]
in eonsideratita of

By Writ of Privy Seal,

## Q Q.-THE NEW BRUNSWICK AND NOVA SCOTIA LAND COMPANY

was established in Iondon nhout February, 1832. From the want of information prevailing in the public mind, it may be aimost said, as to the gengraphical position of this province, but eertainly as to the value of its fertile soil, so well adupted for agricuitural purposes, more time than nsual was consumed in forming the company; this point being settled, a contract whs concluded, under which the crown agreed to sell this company about 500,000 neres of land, lying in the centre of the province, at the price of $2 . y$. fid. sterling per acre, the company to pay the money hy instalments in four years, in sums of about $7,000 \mathrm{l}$, haif yearly.

The supreme lloard of Management sits in loudon. The affairs of the company are delegated to a chief and sub-commissioner and other agents resident in the province. The capital is $200,000 \mathrm{l}$. stock, with
 ration from the crown, and on an act of parliament passed in 1833 .

The land included in the grant is found, on examiontion, to be equal in fertility to the best land in New Brunswick; its position is in the centre of the province, from south-west to north-enst ; appronching the St. John's River, within about eight iniles of liredericton, and hounded on the N. F. by the Northumberland county line, a few miles heyond the course of the S. W. branch of the Miramichi, a conslderable portion of which is included in the grant; other streams and branches of rivers running generally in a direc. tion N. W. to S. F. intersect the grant, by which the pine and other timber clenred from the lands may be rafted to the St. Jolu's or Miramichi rivers.

## abstract of tilt charter incorporating the niew brunswick anb nova scotia land company.

## [There is also an Act of Parliament granting certain powers, dated 22nd May, 183.4.]

The Charter, nfter the usual preamble, "William the Fourth, by the Grace of God," \&e., nnil reciting that divers persons had united together for purchasing lands, and beseeching a charter of incorporation, contains (in brief; the following provisions for establishing the company.

1. Ordains, constitutes, declares and appoints, that John Lubouchere, Esq., and others therein named, together with such others as may hereafter become proprietors of the esmpany's capital stock, "shall he one body politic and corporate in deed nud in name, by the name of 'The New Brunsucick and Nora Scotia Lamel Company,' and by that name shall and may suc and be sued," \&e.

That the company " shall and may have and use a commons seal," \&c.; "and that it shall and may be lawful for the anid company and their successors, the same common seal from time to time nt their will and pleasure to break, change, alter or make anew, ns to them shall seem expedient ;" and declares, "that by the name of the New Brunswick and Nova Scotin Land Company, they shall have perpetunl succession."
2. Declares and grants, "that the said colporation slall be and is established for the purpose of purcha. sing, holding, improving, clearing, settling, cultivating, letting, lensing, exchanging, selling and disposing of waste lands and other lands, tenements nod hereditnments in our provinces of New Brunswick, Nova Scotia, inciuding Cape Breton and Prince Edward Island, in North America, and the dependencies of the said provinces."

That the company may invest such part of their capital as may be necessary in purchasing, clearing, \&c. such lands ns may be granted by the crown, or otherwise nequired by them in the provinces; "and build roads, canals, draing, bridges, nnd other internnl communications, houses, schools, chnpels, mills, wharfs and other buildings and works" necessary for the improvement of the lands; " and export, sell and dispose of all such merchandise, matters and things" requisite for the same; " and to import and receive, scll and dispose of all goods and merchandise which may be consigned or remitted to them, or io payment and satisfaction of any rent or purchase-money arising from the occupation or sale of any such lands, and to purchase, hold, hire, build and charter ships and other vessels for the purpose of conveying and transporting persons willing and desirous to emigrate to our said provinces and their dependencies, and also exporting such merchandise, matters and things, and importing such goods, and merchandise and produce from or to our said provinces and their dependencies, to or from any other plnce or places."
3. Further declares and grants, that it shall be lawfil for the said company to open, search for win and work in or under any of their said lands, any mines, pits, beds, veins nnd seams of copper, tin, lead, iron, iron ore, stones, clay, and all other ores, minerals, metals, metallic substnnces, matters and products, other thun and except gold and silver, and niso other than and except coal and culan, unless such coal and culm shall at any time or times hereafter be granted or demised to them hy our heirs or successors, or shall be by them acquired from any person or persons to whom such coal and culm may hnve been so granted or demised, in which cases it shall be lawful for the said company to open, search for, win, and work any such coal or culm in the manner authorized by such grants and demises respectively; the said company paying the rent or rents, royalty or royalties, and performing nad fulfiling the eovennnts, agreements and conditions in such grants or demises to be reserved nad contained; mad to do all other acts for effectually working the said mines. "And that it shall be lawful for the said compnny to receive monies and other deposits of emigrants, settlers or other persons, in or proceeding to or from our said provinces, for the purpose of transmitting the same from or to our said United Kingdom to or from our said provinces," or mnyother of the said provinces; and that it shal! be lawful for the said company " to mak, loans and advances of money to emigrant settlers and others resident within our said provinces," upon lands or other legal security within the provinces, also to contract for and exccute any public works undertaken by or on behalf of government in any of the snid provinces.
4. Further grants the royal license to purchase any lands, tenements, \&c. whatsoever in the provinces

That all transfies of ahares in the eapital stock, shall be registered by some anthorized oflicer of the company in a book, "and a fee shall be paicl to and for the use of the said company not exceeding two shillings and sixpence for every such registry ;" and that until the transier be registered in the company's books no person shall be deemed a proprietor, " or he entitled to any dividend or heneficial interest" therchn; "nor until six calendar months after such transfict shall have been made and registered," be entitlel to vote at nny meeting as a proprictor, \&e.

That after any call for money shall be made, no person can sell or transfer their share or shares in the atock until such call has been paid, "and notwithstanding that the time nppointed for the payment thereof may not have arrived."
b. Further declares and ordains, that persons claiming any shares in the enpital or profits in right of marriage, a copy of the register of such narriage ahall be left with the proper ollicer, and on entry thereof mate "hefore such person, shall be entitled to sell or assign any such stock, or to claim 1 yment of dividend or dividends in respect thereof, or to vote as proprietor of such stock."

That persons claiming uny share in the capitul, \&e," by virtue of any will or b.uluest, or in course of administration, the probate copy of the will or letters of administration, in case the propricior shau: have died intestate, shall be produced," nud an entry made by the proper otheer " of such will or so "nueh thereof as shall relate to the disposition of the share of the testator of and in such stock, or of the letears of deninistration, in case the proprietor shall have died intestate" before any persoms can "ill, claim ". didend, or vote as a proprictor; and that " for every sueh cotry of marriage, will or letters of acministration, a fee not exceeding the suin of ten shillings" shall be paid.
7. Further declares, that the directors for the time being, or so many as shall form socourt, or the majo part of them "shall have full power to make such call or enlls, for money from the several subseribers ani proprictors for the time being," their exceutors, \&c. for their shares, or the court of directors in. "ind ne. cessary, the sums so called for to be paid to the company's bankers, or as the comit shall appoint. "u" vhich time and place, twenty days notice shall be given in the lomdon Gazette, and in such four on more saily newspapers usually published in the eity of London or county of Midellesex, as the said court of directurs shall direct."
And further declares, that if any subseriber, their exccutors, \&e. " shall negleet or refuse to pay" their portion of the money called for by the directors, " cluring the space of three calendar months, next aiter the time appointed for payment thereof, together with lawful interest," in such case the suberibers will be liable "absolutely to forfeit his, her, or their respective share or shares, of, and in, the capital stock of the said company, and all protits and advantages thereot, and of all monies theretofore advanced by him, her. - them, on nccount thereof, to and for the nse and benctit of the said eompany," and that the court of directors may order at any time thereafter, that sueh forleited shares " be sold at a public sale, for the most money that ean be gotten for the same, and the produce shall go to, and make part of the eapital stock of the said company, and such share or shares, so forfeited and sold, shall be assigned and transferred to the purchaser by an in strument under the common seal of the said company," but no advantage of such forfeiture shall be taken till after thirty days notice, under the hand of some duly authorised otlicer of the company, left at their place of abode, nor unless the same be declared forfeited at some general or speeial general meeting of proprietors, to be held not earlier than three calendar months after such forfeiture shall hapnen, whereupon such proprictor is discharged from all further liability in respeet of such share, but this a.e\% wot deprive the power of compelling payment of any unpaid part if the directors prefer so doing.
8. Further declares, that there shall be " out of the members of the said comjany, a governor and a de-puty-governor, who shall also he directors, and ten other directors," also "three auditors," which " go. vernor, deputy-governor, and other directors, or any five of them shall insticute, and he called a court of direetors" for managing the affairs of the comprany.

And further ordains, that the court of directors for the time being, $n, y$ appoint " any one of their own number to be a sitting director," to attend more immediately to thr b .hass of the company, subject to regulations and removal by a court of directors, who shall be competent to appoint another if they see fit, and to make such allowances as they think right as remumeration.
9. Further ordains, that it shall be lawful for "every the members or proprietors of the said company" to assemble together at any places in the cities of London and Westminster for the choice of governor, de-puty-governor, directors and nuditors, and for other purposes, of which, "twenty-one days previous notice" must be given hy advertisement in "the London Gazette, and in three or more daily newspapers," and that such assembly shall be called, "a general court of the said company," and that such court have power to adjourn. That on the second Thursday in Marel 183 i, and every succeeding jear on the same day shall be
yearly chosen, all succecding directors and auditors out of and by the members personally present entitled to vote.
The qunlifleation to vote, being holders of stock $£ 100$ to one vote, f500 two votes, flo00 three votes, £2,000 and upwaris, "fuur votes nud no more." The election to be by ballot or otherwise as muy be determined. It being ordnined that "one half of the directors, and one of the auditors shall go out of othen every yenr, to commence in the yenr 1 Rilli, the directors nud mulitors going ont of ollice, for the time being, are, nud shall nt all times herenfter, be capable of being re-elected." The tirst directors and muditor going out, to be determined by drnwing lots, in such mnner, as the directors shall agree, and that the mames of directors and auditors going out successively, be posted in a conspicuous part of the company's office in london or Westminster, at least formeen days before the day of election.
'Ibat the governor, deputy governor and directors, from time to time ehosen, he elected for two years, and the auditor so chosen, for three yenrs, unless they be chosen in the pace of some other hy death, resis. mation, or otherwise, in which ense, they are chosen for the time such purty had to serve, Ne, but that no person shall be an anditor while he shall be a director, or $n$ director while min mitor.
10. Further directs, that no person shall be chosen governor, deguty-governor, or director, " unless he shall, nt the time of such election, he n natural born or naturnlised subject of the United lingdom, and shall also linve in his own name, and in his own right, five hundred pounds or more, of the capital stock of the sail compnay," nud that no person can be chosen auditor except under the same restrictions, " and having in his own name, nud in his own right, two hundred pounds or more of the eapital stock." And that his director or auditor shall continue in their resporetive offices" longer than the eomtinumee of sueh respective interest, and should any governor, degnty governor, ilirector, or nuditor, be divested of his stock, to reduce it to " $n$ less amount than aforesnid," the directors may at this next meeting, after the knowledge of such fact, declare such oflice vacant, and the vacancy be tilled up at the general court, " which shall be duly held next after such deelaration."

Ald that in ense any governor, deputy-governor, direetor, or auditor, die, resign, or he removed before the nanmal clection, the members qualilied to vote at $n$ gencral eourt, shall choose noy other member qualified to till such ollice, who shall contime therein for the period such governor, \&c. had to serve.
11. Further ordains, that every proprietor intending to propose himself for any ollice of governor, dircetor, \&e, "shall leave notice in writing," with the siting director or elerk of the company, "for the information of the proprietors at lenst 21 days before, and exchusively of the dny of dection," ald a list of the candidntes be tixed uf in the principal office in London or Westminster, "at least 1.1 days before the day of election," and " 10 dnys betore the day of election, monke out a correct and njphabetical list of the manes and residencies of all the then proprietors," with the number of votes eneh is entitled to give, and to which each proprictor may have access.
And ordains, that in case of denth, resiguntion, or failure, to elect directors, an insuflicient number tu compose a court of dircetors "shall not in any manner tend to work the dissolution of the said corporntion," but that the general body of members may be convened by the surviving directors to elect the requisite number of directors.

And appoints that it may be lawful " at any general court to grant such salaries and allowances to be pmid" to the governors, directors, (except the sitting director) and auditors, "as may be deemed expedient," of which notice must be given in the Gazette and three pmocrs, one month at least prior thereto, setting forth the purpose.
12. Further appoints there shall he held " one general court of the snid company at least in ench year on the sceond thursdny in Mareh," at which dividends may be declnred, and in ense a general court fail to be held on such day, " any thre or more of the dircetors for the time being " may smmon the court wthin six weeks ensuing the day on which it should have heen held, giving the proper notice.

And appoints "that upon the refuisition in writing of any fifteen or more of the memhers of the said company, ench having not less than two hundred prounds in the said capital stock," the directors shall within 30 elnys thereof, "call a special general court," with proper notice, "for the purposes to be mentioned in such repuisition," in defnult of which "it shall mad may he luwfil for the snid tifteen or more memhers" as aforesaid, upon fouteen days previous notice " by advertisement under their hands" th the london Gazette und four dinily papers, "and by writing alfixed oif the Roynl Fixchange," to summon a special genernh eourt, and there debnte upon any husiness mentioned in such reguisition but no other, and have power to adjourn the snme to a day then to be fixed upon, nud so trom time to time to determine finally upon the questions to be discussed, \&e.

And further directs that no business shall be done at any genernl or special general court "unless there shall be present within one half of an hour next after the time nppointed for such court, and also at the time or times of making any clection or putting nay question er questions to the vote of at least liftern members of the said company qualified to vote," and in defant, the coart to be adjourned to the next general court or some day not carlier than fifteen days irom the day of adjournment as may be then determined, of which ten days' notice shall be given in the Gazette mud four daily papers.

And further, gives full powers at nuy general or special general court, to make, alter, and repeal noy orders and regulations relntive to the athirs and government of the company, to be recorded in a book which may be accessible to the inembers of the comprany.

And further appoints " that the goveruor, or in his nhsence, the deputy-governor shall preside and act as chairman of the said court of directors, and generni, or specinl general eourts." If either of these be absent, the directors present may appoint a chairman for the occasion, and if no director be present, or they do not npoint, then the members present mny appoint a chairman. The governor, deputy-governor, or other prison presiding at any such comits, "ill cnse of miny equmlity of votes, to have a consting vote."

Amb firther directs that in case the court of directors shat hereafter consider it expedient to enerease the capital alrendy subseribed, that it shald be lawfol for the then members, "in pursuance of any resolution adopted at onee mud contirmed by a sulseduent general or special general court to ruise and contribute anougst themselves in such shares mud proportions an they shall think proper, or by the ndmission of new subscribers, any further or other sum or sums of money nit exceding in the whote the further sum of two humbed thousand poonds sterling." 'That "very subseriber to sueh further sum shall be n proprietor in respect of their slame, shall be fiable to sueh forfoitures, nul be interested in sueh rights and protits in respect thereof, as if they had subseribed to the engital orizinally raised.

Nul firther apoints that "the directors fer the time being shall have the chatody of the commonsen," that the governors and directors, or any tive may nssemble at such phaces as thry may think the fior the mangement of the compnay, nud shall have power to conter inte all contracts, exceite all assighments, conveyances, " and all other aets to which the corporate sent is reguired to be aflived," to npprint seceretaries and other agents or sorvants, to nllow them hirir and reasonable salaries, and tor remove them, nud do ald things necessary for the management of the company,
Provided that in bo cise the corporate seal " he ntlixed to noy instrument whatseever except by order in wating of the court of directors, and in the presence of at least two of the directors" who shall nttest the salne.
14. Further ordering that if the conduct of any director be sush that bis continamice in oflice might appene prejudicinl to the compmas's interests, "it shall he lswful for cuch other of the directors, or any four tifths of them at a special court of dreetors to be eomemed tior that purpose, to remove such diructor from his oflice," and the vacmey to be supplied at the next gencral or nt a special court of proprictors comened as aforesaid.

And further ordains that in all contracts entered into by the goveruar or other ollicers of the compmy in which any such governor or other otherer shall be directly or inelireetly eonerned for doing work or suptplying any articles for the ese of the said company, they shall, " it the option of $n$ court of directors," be deelnred mall nud void, and any such goverion or other ohicer mentering intos such eontracts, "shall ipso facto cease to be such governor or other otlieer, nud n new election take place," Re.

And further appents that it may be lawful for the court of proptietors "onee or twion in every yenr, if the stste of the allairs of the sait compnoy shall warant the same, to dechare such divideme or dividends" as the eourt of proprietors may think proger, laving therein due reyard to the liabilities of the company and contingencies, "and so as no dividend be in any ease paid out of the capital of the said company or otherwise than at a division of the whole or a purt of the goins and protits of the smid compmay."

Abl further directs that the goveroors mud directors linve power and nere reyured to balance the compnay's
 general court may from time to time appoint, nud such balace be exnmined and signed by two or more nuli. tors appointed by the sad governors 太e, and an abstract shewing the debtes mad ctedits of the company, signed by two or more nuditors "slatl be produced at the geueral court of the said company, to be held ou the second Thursiny in the month wi Mareh in every year," for the inspection of the proprietors.

And further directs that for the transfor of shares, the books of the compmy may be closed "from time to time previons to the payment of any divideme for any time bot exceding one month."
15. Grants and deedares that if nt any time it should be thought desirable by the eourt of directors for the time being to increase their number to " not exceding fourteen," they may reommend the samu nt the bext general court, or at a special genemb court for that purpose. Or if the conirt of directors think at any time the number of directors should be derensed to " mot less than eight," the same may be in like mamer recommender, and the proprictors at such coorts may carry such alterations into chect as the casa may be, "reference being had to the change in the number of dacetors manumby to vacute their oflees, nad the order of such vacuting" in consegumene.

And further appoints " that. two sucessive gemeral eourts of the compnoy specinlly called for the purpose," may resolve that the charter maty be survendered to the crown, prowided there be persomally present nt ench such general const at the commencement mad when the whole or may part of the business to be trasacted shall be lecided on, "two-thials at lenst of the proprietors qualified to vote, mud who shall holid amongst them not less than two-thirds of the eapital stock."
 fiths of the votes of the qualitied propictors so present, slatl be reguisite in uriler to eome to nuy decision," and that unon the surremder being made nud acepeted, "so much of the fouds or property of the said company us shall not then consist of money," shall be converted into money, and so math of the finals of the company " as shall remin niter nuswering the claims nad demands therenpon, shall be paid to and distributed hy the directors mangst the proprietors, their executors \&e."' necording to their respective proportions.
Aud firther alirects nul dechares that in nuy of the provisions of the charter whether as to words used importing siugular or pharal, or as to persons whether male or temule, or " bodies politic and corporate as well as individunls," that "these our letters patent" shall be vilid in iaw and neljuged in the "most benetleing sense for the best monatuge of the sad corporntion de." and that these presents shall be made under the great senl, Ne, Ne.

## S S.-NOVA SCOTIA AND CAPE BRETON MINING COMPANY.

The Genernl Mining Association as tenants of the Crown, nnd of His late Royal Highness the Duke of York, are lessecs of all the mines and minerals of every description in the province of Nova Scotia Proper, and in the island and comnty of Cape Ireton.
The operations of the Association commenced there in the year 1827, and bave hitherto been confined to the working of coal mines, and the discovery of iron ore.
The coal mines opened and at work nee three in mumber-the Albion, the Sylney, and the Bridgeport mines.
The Albion mines are situated on the banks of the Fast River, in the district of Picton, or Poictou, and distant about cight miles and a half from the town of that name, a port of safe and easy access on the Gulf of St. Lawrence. A lighthouse has lately been erected on the coast, near pictou.
The strata are similar in their formation to those of the Staflurdshire coal fields, and like the latter produce a coal, hich, good and serviceable as it is for household use, is, however, from its peculinr properties most remarkable for excellence for the purposes of steam, and inanufuctures, and especially for the manufacture of iron, on account of the absence of sulphur in its composition.
The following return shews the quantities of cos.: shipped from the Albion mines, from the begirning of 1828 to September, $1 \times 34$, distinguishing the quantity in each year :-
In 1828, 4,467 chatdrons; $1829,5,841$; $1830,6,426 ; 1831,8,345 ; 1832,12,020 ; 1833,19,890 ; 1834$, 14,927 ; 1835, 18,161 ; $1836,36,322$; 1837, 36,647 .
The coal is raised froin four shafts by the aid of steam pumping, und winding engines.
The establishment at the Albion mines consists of upwards of 400 persons employed in and about the mines, the foundry, and the rail-rond, stean-boat, and barges, the brick kilns, \&e., ned their several appurtenances. The number of dwelling houses and buildings required for these various works is little short of 100, mind the small town of New Glasgow, owes its birth and existence to the presence and operations of the General Mining Association in this part of the country.
The Sydney and Iridgeport Mines are both in the island of Cape Breton, which is separated from Nova Scotia by the Gut of Canso.

The Sydney mines nre situnted on the $N$. W. entrance of Spanish River or Sydney harbour, a harhour equal if not superior to any in British Amerien, nud which is aceessible in a!! winds. It is here that the most extensive operations of the $\Lambda$ ssocintion are carried on.

The establishment at the Sydney mines consists of about 300 persons, and oceupics 50 houses, ineluding the buildings required for the works. Quantities of coml shipped from these mines from the year 18:27:

In 1827, 8,776 challtrons; $1828,10,266 ; 1829,9,903 ; 1830,11,894 ; 1831,13,882 ; 1832,19,949 ; 1833$, 15,$302 ; 1834,11,693 ; 1835,15,459 ; 1836,31,1 \times 6 ; 1 \times 37,35,151$ chaldrons.
The liridgejort mines are situated on the southern shore of Indian Bay, one mile and three quarters from the harbour where vessels loul, and which is perfeetly secure for shipping in the most boisterous wenther. The southern hend of Indian Bay, which is enlled Cape Table, bears by compass from Flint Island N. IV. by W. distance $8 \frac{1}{2}$ miles, and the northern head of the Bay benrs from the lighthouse on Flat l'oint at the entrance at Syducy harbour S. E. distance 4 miles. Vessels may run safely into 4 fathoms water between the northern and southern heads.

The coal from these mines is of excellent quality, of the same description as the Sydney, and not at all inferior to it. A rail-road has been laid from the pits to the shipping place, and along which the coal is carried and deposited at once in the holds of the vessels.

This establishment employs ahout 150 persons; the houses noll buildings exceed 20 in number exchusive of wharfs, saw-pits, \&e. The following quantities of coal have been shipped from the Bridgeport mines from the year 1829 , when they were first opened:
$\ln 1829,1,325.5$ chuldrons ; 1830, 3,425; 1831, 6,851; 1832, 10,$800 ; 1833,9,805 ; 1834,7,142 ; 1835$, 8,$431 ; 1836,12,550 ; 1837,13,121$ chaldrons.

The extent and power of the veins or seams of coal already discovered in Nova Scotia, render them as it were inexhaustible, and when the capabilities of the mines opened by the association are fully developed, they will be cqual to supply any demand.

The benefit and advantages accruing from the presence and operations of the General Mining Association in Nova Scotia have hitherto been exclusively reaped hy the colony and the Mother Country.

The capital of the General Mining Association is $400,000 l$. divided in 20,000 shares of $20 l$. each. Of thls sum $340,000 l$. or $17 l$. per share have already been subscribed, of which $240,000 t$. or $12 l$. per share have been applied to the operations of Nova Scotia. On the other hand the Association possess in Nova Scotia considerable property in mines, machinery, implements, steam boats and other craft, wharfs, and houses, and about 14,000 acres of land.

The rail-road constructed by the Company has cost 40,000l. ; and locomotive engines are now being sent out for the first time to North America.

# T T.-THE ROYAL CIIARTER FOR INCORPORATING THE HUDSON'S BAY COMPANY. 

Charles the Second by the Grace of God, King of England, Scolland, France and Ireland, Defender of the Faith, \& c.

## To all to whom these presents shall come, greeting:

Wheaeas our dear and entirely beloved Cousin, Prince Rupert, Count Palatine of the Rhine, Duke of Bavaria and Cumberland, \&c.; Christopher, Duke of Albemarle; William, Earl of Craven; Henry, Lord Arlington ; Anthony, Lord Ashley ; Sir John Robinson ; and Sir Robert Vyner, Knights and Baronets; Sir Peter Colleton, Baronet; Sir Edward Hungerford, Knight of the Bath ; Sir Paul Neele, Knight ; Sir John Grifith and Sir Phillip Carteret, Knights; James Hayes, John Kirke, Francis Millington, William Pretty man, John Fenn, Eayuires; and John Portman, Citizen and Goldsmith of L.ondon; have, at their own great cost and charges, undertaken an Expedition for Hudson's Bay in the north-west part of America, for the discovery of a new passage intc the South Sea, and for the finding some trade for furs, minerals, and other considerable commodities, and by such their undertaking, have already made such discoveries as do encourage them to proceed further in pursuance of their said design, by means whereof there may probably arise very great advantage to us and our kingdom.

And whereas, the said underiakers, for their further encouragement in the said design, have bumbly besought us to incorporate them, and grant unto them, and their successors, the sole trade and commerce of all those seas, streights, bays, rivers, lakes, creeks and sounds, in whatsoever latitude they shall be, that lie within the entrance of the streights cor:: $: 1$ only called Hudson's streighta, together with all the lands, countries and territories, upon the coasts and confines of the seas, streights, bays, rivers, lakes, creeks and sounds, aforesaid, which are not now actually possessed by any of our subjects, or by the subjects of any other Christian Prince or State

Now know ye. That we being desirous to promote all endeavours tending to the public good of our people, and to encour ge the said undertaking have, of our especial grace, certain knowledge and mere motion, giveu granted, ratified and confirmed, and by these presents for us, our heirs and successors, do give, grant, ratify and confirm, unto our said cousin, I'rince Rupert; Christopher, Duke of Albemarle; William, Earl of Craven; Henry, Lord Arlington; Anthony, Lord Ashley; Sir John Robinson; Sir Rohert Vyner; Sir Peter Colleton; Sir Elward Hungerford; Sir Paul Neele; Sir John Griffith; and Sir Philip Cartaret Jarr.cs Hayes, John Kirke, Francis Millington, William Prettyman, John Fenn, and Jolin Portman; that they, and such othera as ahall be admitted into the said society as is hereafter expressed, shall be one body corporate and politique, in deed and in name, by the name of the governor and conipany of adventurers of England, trading into Hudson's Bay, and them by the name of the governor and company of adventurers of England, trading into Hudson's Bay, one body corporate and politique, in deed and in name, really and fully for ever, for us, our heirs and successors, we do make, ordain, constitutc, establish, confirm and declare, by these presents, and that by the same name of governor and company of adventurers of England, trading into Hudson's Bay, they shall have perpetual succession, and that they and their successora, by the name of the governor and company of adventurers of England trading into Hudson's Bay, be and at all times hereafter shall be, personable and capable in law to have, purchase, receive, posseas, enjoy, and retain lands, rents, privileges, liberties, jurisdictions, franchises, and hereditaments, of what kind, nature or quality soever they be, to them and their successors; and also to give, grant, demise, alien, assign, and dispose lands, tenements, and hereditaments, and to do and execute all and singular other things by the same name that to them shall or may appertain to do. And that they, and their succeasors, by the name of the governor and company of adventurers of England, trading into Hudson's Bay, may plead, and be impleaded, answer, and be answered, defend, and be defended, in whatsoever cuurts and places, before whatsoever judges and justices, and other persons and officers, in all and singular actions, pleas, suits, quarrels, causes and demands, whatsoever, of whatsoever kind, nature, or sort, in such manner and form as any other our liege people of this our realm of England, being persons able and capable in law, may, or can have, purchase, receive, possess, enjoy, retain, glve, grant, demise, alien, assign, dispose, plead, defend, and be defended, do, permit, and execute. And that the said governor and company of adventurers of England, trading into Hudson's Bay, and their successors, may have a common seal to serve for all the causes and businesses of
them and th same seal, fr them shall s do ordain, th such form as pany. And hereafter in committce u pany for the vision of the other things and handling and grant, by their success ever be ruled expressed, an leges, jurisdic And for the and made, by our said cous the said office Prince Ruper after expresse heirs and sue Sir Peter Coll and present c vember then And further and company, for the time general to be time to elect, shall take a 0 the time being company, and excreise and e do. them and their successors, and that it shall and may be lawful to the said governor, and their successors, the same seal, from time to time, at their will and pleasure, to break, change, and to make anew, or alter, as to them shall scem expedient. And further we will, and by these presents for us, our heirs and successors, we do ordain, that therc shall be, from henceforth one of the same company to be elected and appointed in such form as hereafter in these presents is expressed, which shall be called the governor of the said Company. And that the said governor and company shall or may elect scven of their number in such form as hereafter in these presents is expressed, which shall be called the committee of the aaid company, which committee of seven, or any three of them, together with the governor or deputy-governor of the said company for the time being, shall have the direction of the voyages of and for the aaid company, and the Provision of the shipping and merchandizes thereunto belonging, and also the sale of all merchandizes, goods, and other things returned, in all or any of the voyages or ships of or for the said company, and the managing and handling of all other business, affairs and things, belonging to the said company. And we will, ordain, and grant, hy these presents for us, our heirs and anccessors, unto the aaid governor and Company, and their successors, that they the said governor and company and their successors, shall, from henceforth for ever be ruled, ordered, and governed, according to such manner and form as is hereafter in these presents expressed, and not otherwise : And that they shall have, hold, retain, and enjoy, the grants, liberties, privileges, jurisdictions and immunities, only hereafter in these presents granted and expressed, and no other. And for the better execution of our will and grant in this behalf, we have assigned, nominated, constituted, and made, by these presents, for us, our heirs, and successors, we do assign, nominate, constitute, and make, our said cousin Prince Rupert, to be the first and present governor of the said company, and to continue in the said office from the date of these presents until the 10 th November then next following, if he the said Prince Rupert, shall so long live, and so until a new governor be chosen by the said company in form hereafter expressed. And also we have assigned nominated and appointed, and by these presents, for us, our heirs and successors, we do assign, nominate and constitute, the said Sir John Robinson, Sir Robert Vyner, Sir Peter Colleton, James Hayes, John Kirke, Francis Millington, and John Portman, to be the aeven first and present cominittees of the said company, from the date of these presents until the said 10 th day of November then also next following, and so until new committees shall be chosen in form hercafter expressed. And further we will and grant by these presents, for us, our heirs and successors, unto the said governor and company, and their successors, that it shall and may be lawful to and for the said governor and company for the time being, or the greater part of them present at any public assembly, commonly called, the court general to be holden for the said company, the governor of the said company being always one, from time to time to elect, nominate and appoint one of the said company to be deputy to the said governor, which deputy shall take a corporal oath before the governor, and three or more of the committce of the said company, for the time being, well, truly, and faithfully to execute his said office of deputy to the governor of the said company, and after his oath so taken, shall and may from time to time, in the absence of the said governor, exercise and exccute the office of governor of the said company, in such sort as the said governor ought to do. And further we will and grant by these presents, for us, our heirs and auccessors, unto the said governor and company of adventurers of England, trading into Hudson's Bay, and their auccessors, that they, or the greater part of them, whereof the guvernor for the time being, or his deputy, to be onc, from time to time, and at all times hereafter, shall and may have authority and power, yearly and every year, between the first and last day of November, to assemble and meet together in some convenient place, to be appointed from time to time by the governor, or in his absence by the deputy of the said governor, for the time being, and that they being so assembled, it shall and may be lawful to and for the said governor, or deputy of the said governor, and the said company for the time being, or the greater part of them which then shall happen to be present, whereof the governor of the said company, or his deputy for the time being, to be one, to elect and nominate one of the said company, which shall be governor of the said company for one whole year, then next following, which person being so elected and nominated to be governor of the said company, as is aforesaid, before he be admitted to the execution of the said offiee, shall take a corporal oath before the last governor, being his predecessor or his deputy, and any three or more of the committce of the said company for the time being, that he shall from time to time, well and truly execute the office of governor of the said company, in all things concerning the same; and that immediately after the aame oath so taken, he shall, and may execute and use the said office of governor of the said company, for one whole year from thence next following. And in like sort, we will and grant, that as well every one of the above named to be of the said company or fellowship, as all others bereafter to be admitted, or free of the said conipany, shall take a corporal oath before the governor of the said company, or his deputy for the time being, to such effect as by the said governor and company, or the greater part of them, in any public court to be held for the said company, shall be in reasonable and legal manner set down and devised, before they shall be allowed or admitted to trade or as a freeman of the said company. And further, we will and grant traffick by these presents, for us, our heirs and successors, unto the said governor, or deputy governor, and the rest of the said company, and their successors for the time being, or the greater part of them ; whereof the governor or deputy governor, from time time, to be one, shall and may from time to time, and at all times bereafter, have power and authority yearly, and every year, between the first and last day of November, to asseinble and meet together in some convenient place, from time to time to be appointed by the said governor of the said company, or in his absence by his deputy; and that they being so assembled, it shall and may be lawful to and for the said governor, or his deputy and the company for the time being, or the greater part of them, which then shall happen to be present, whercof the governor of the said company, or his deputy for the time being to be one, to elect and nominate seven of the said company, which shall be committee of the aaid company, for one whole year from then next ensuing, which persons bcing so elected and nominated to be a committee of the said company as aforesaid, before they be admitted to the execution of their office, shall take a corporal oath before the governor or his deputy, and any three or more of the said committee of the said company, being their last predecessora, that they, and every of them, shall well and
faithfully perform their said office of committes in all $t$ Ings concerning the same, and that immediately after the said oath so taken they shall and may exccite a"d use their said office of committees of the said compnny, for one whole yenr from thence next following.

And moreover, our will and pleasure is, and by these p.resents for us, onr heirs and successors, we do grant unto the said governor and company, and their sucecssors, that when, and as often as it shall happen, the governor or deputy governor of the said company for the time being, at any time within one year after that he shall be nominated, elected, and sworn to the oflice of the goveruor of the said company, as is aforesaid, to die or to be removed from the said olliee, whle governor or depity-governor not demeaning himself well in his said oflice, we will to be removable at the pleasure of the rest of the said company, or the greater part of them which shall be present at their puhlie assemblies, commonly ealled, their general courts, holden for the said company, that then and so often it shall und moy be lawful to mad for the residue of the said compaay, for the time being, or the greater part of them, witwin a convenient time, after the death or removing of any such governor or deputy-governor to assemble themselves in such convenient place as they shall think fit, for the eliction of the governor or deputy-govern of of the said company; and that the said company or the greater part of them, being then and there presint, shall and may, then and there, before their departure from the said place, elect and nominnte one other of the said company; to be governor or depity-governor for the said compray, in the place and steal of him that so died or was removed; which person heing so elected and nominated to the oflice of governor or deputy-governor of the said company, shall have and exercise the said office, for and during the residue of the said year, taking first a corporal oath, as is aforesaid, for the due execution therrof; and this to he done from time to time, so often as the case shall so require. And also, war will and ptensure is, and by these presents, for us, our heirs and successors, we do grant unto the said governor and company, that when, nutas often as it shall happen any person or persons of the eommittee of the said company for the time being, at any time within one year next after that they oan any of them shall be nominated, elceted and sworn to the office of committe of the said company as is aforesaid, to die or to be removed from the said ollice, which committecs not demeaning thetn. selves well in their said onfec, we will to be removable at the plensure of the said governor and company or the greater part of them, whereof the governor of the saill company, for the time being, or his theputy, to be one ; that then and so often it shall and may be lawful to and for the said governor, and the rest of the com. pany for the time being, or the greater part of them, whereof the governor for the time being or his deputy to be one, within convenicut time after the death or removing of any of the said committee, to assemhle themselves in such convenient place, as is, or shall he, usual and necustomed for the election of the governor of the said company, or where else the governor of the said company for the time being, or his deputy, shall appuint. And that the said governor and company or the greater part of them whereof the goverung for the time being or his deputy, to be one, being then and there present, shall, and may, then and there before their departure from the said phace, clect and nominnte one or more of the said company to be of the committce of the said company in the place and stend of him or then that so died, or were or was so removed, which person or persons so nominated and chected to the oblice of committee of the said company, shall have and exercise the said ollice, for und during the residue of the said year, taking first a corporal oath as is aforesaid, for the due exceution thereof, and this to be done from time to time, so often as the case shall reguire. And to the end the said goverour and compony of udventurers of Eagland trading into Hudson's liay may be encouraged to undertake, and effectually to prosecute the said design, of our more especial grace, certain knowletge, and mere motion, we have given, granted and confirmed, and by these presents, for us, our heirs and successors, do give, grant, and confirm unto the said governor and company, and their successors, the sole trade and commeree ol all those scas, streights, hays, rivers, lakes, crceks, and sounds, in whatsoever latitude they shall be, that lie within the entrance of the streights, commonly called Hudson's Streights, together with all the lands and territories upon the countries, coasts, and confines of the seas, bays, lakes, rivers, crecks, and sounds aforesaid, that are not already actually possessed hy, or granted to any of our subjects, or possesed ty the subjects of any other Christain prince or state, with the fishing of all sorts of fish, whales, sturgeons, and all other royal fishes, int the seas, hays, inlets, and rivers within the premises, and the fish therein taken; together with the royalty of the sea upon the coasts within the limits aforesaid, and all mines royal, as well discovered as not discovered, of gold, silver, gems, and precious stones, to be found or discovered within the territories, limits, and plaess atoresaid, and that the said had be from henecforth reckoned and rephited as one of our plantations or colonies in Americn called Rupert's Land. And further, we do, by these presents, for us, our heirs, and successors, make, crente, and constitute the said governor and company for the time being, and their sucessors, the true and absolute lords and proprietors of the same territory, limits and places aforesaid, and of all wther the premises, saving always, the fath, allegiance, and sovereign dominion due to us, our heirs, and successors for the same, to have, hold, possess, and enjoy the said territory, limits, and places, and all and singular other the premises hereby granted as aforesaid, with their and every of their rights, members, jurisdictions, prerogatives, royalties, and appurtenances whatsocver, to them the said governor and company, and their successors, for ever, to be holden of us, our beir3, and successors, as of our manor of liast Greenwieh, in our county of kient, in free and common soceage, and not in capite or by knitht's service; yielding noll paying yearly to us, our heirs, and soccessors tor the same, two elks and two black beavers, wheusocver and as often as we, our heirs, and successors shall happen to enter into the said countries, territories, and regions hereby granted. And further, our will and pleasure is, and hy these presents, for us, our beirs nad successors, we do grant unto the said governor and company, and to their successors, that it shall and may be lawful to and for the said governor and company, and their successors, from time to time, to assemble themselves, for or about any of the matters, causes, affairs, or bosiness of the said trade, in any place or places for the same, convenient, within our dominions or elsewhere, and there to hold eourt for the said company, and the affairs thereof; and that also it shall and may be lawful to and for them, and the greater part of them, being so assembled, and that shall then and there be present, in any such place or places whereof the governor or his deputy for the time :.ing to be one, to make, ordain, and
it immediately es of the said cessors, we do shall happen, me year after ay, ns is aforecaning himself or the greater courts, holden ue of the said denth or re. place as they I that the said I there, before ec governor or noved; which snid comphny, rst a corporal so often as the irs and succes. en nny person par next after the said com. acaning thenad comprany or deputy, to be est of the com. or his deputy e, to assemble of the governor tleputy, shall vernor for the ad there before the committe emoved, which shall have and as is aforesnid, I require. APPENDIX IH.-NORTI AMEPICA.
constitute such and so many rensonable laws, constitutions, orders and ordinanees as to them, or the greater part of them, being then and there jresent, shall seem necessary and convenient for the good government of the sail company, and of all gover ors of colonics, forts and plantations, factors, masters, mariners, aml other officers employed or to be employed in any of the tertitorics and lands aforesait, and in any of their voyages; and for the better advancement and continuance of the said trade, or traflic and plantations, and the same laws, constitutions, orders, and ordinances so made to be put in use and execute accordingly, and at their pleasure to revoke and altor the same, or any of them, as the occasion shall require: And that the said governor and company, so often as they shall make, ordain, or establish any such lavs, constitutions, orders, and ordinnnees, in such form ns nforesaid, shatl and may lawfully inpose, ordain, liont, and provide such palns, penalties, mind punishments upon all offemders, contmry to such laws, constitutions, orders, and ordinances, or any of them, as to the said novernor mol company for a..e time being, or the greater part of them, then and there being present, the said governor or his teputy being akays one, shall secm necessary, requisite, or convenient for the observation of the same laws, constitutions, orders, and ordinances; and the same fines and amercianents shall and may by their ollicers nud servants, from time to time to be appointed for that purpuse, levy, tuke, and have, to the use of the said governor and company, and their successors, without the impediment of us, our heirs and sucesssors, or of any the officers or ministers of us, our hehrs or successors, and withont any necount thereof, to ns, our heirs or successors to be mate. All and singular which laws, constitutions, orders, and orlinances, so as aforesaid, to be made, we will, to be duly observed and kept, umber the pains nud penalties thercin to be contnined; so alvays as the said laws, constitutions, orders and ordinances, fines nul momeinments, be rensomable, and not contrary or repugnunt, but as near as may be agrecable to the laws, statutes, or customs of this our realin. Aul furthermore, of our ample and ubundant grace, certain knowlolge, and mere motion, we lane granted, and by these presents, for us, our heirs and suecessors, do grant unto the said governor mad company, and their successors, that they, and their successors, and their factors, servants, and arents, for them and on their behalf, and not otherwise, shall for ever hereafter have, use and enjoy, not only the whole, entire, and only trade and traflich, and the whole, entire, and only liberty, use, and privilege of tradiog and traflicking to and from the territory, limits, and places aforesuid ; but also the whole and entire trade and traftick to and from all havens, bays, creeks, rivers, lakes, and seas into which they shall find entrance or passage by water or land out of the territories, limits, or places nforesaid; and to and with all the natives and people inhabiting, or which shatl inhabit within the teritories, limits, and places aforesaid; and to and with all other nations inhabitiog any the coasts adjacent to the said territories, limits, and phaces which are not already possessed as aforesaid, or wherebi the sole liberty or privilege or tinde and traflick is not granted to any other of our subjects. And we, of our further royal fuvour, and of our more espucinl grace, certnin howhedge, and more motion, have granted, and by these presents for us, our heirs num successors, do grant to the said governor and compary, and to their successors, that neither the said teritories, limits, and places hereby granted as nfuresaid, nor any part thereof, nor the islands, havens, ports, cities, towns or places thereof, or therein contained, shall be visited, frequented or haunted, by any of the subjects of us, our heirs or successors, contrary to the true meaning of these presents, and by virtue of our prerogntive roynl, which we will not have in that behalf argued or brought into question; we streightly charge, command and prohibit, for us, our heirs and successors, all the subjects of us, our heirs and successors, of what degree or quality socver they be, that none of them directly or indirectly do visit, hmunt, frequent or trade, traffic or adventure, by way of merchandize, into or from any the said territories, limits, or places herelay granted, or any, or either of thens, other than the snid governor and company, und such particular persons as now be, or hercafter shall be, of that company, their agents, factors and assigns, unless it be by the license and agreement of the sain governor and company in writing first had and obtained, under their common seal, to be granted, upon pain that every such person or persons that shall trade or traffic Into or from any of the countries, territories, or limits aforesaid, other than the said governor and company, and their successors, shall incur our indignation, and the forfciture and the loss of the goods, merchandizes, nod other things whatsoever, which so shall be brought into this reajm of lingland, or any the dominions of the same, contrary to our said prohibition, or the purport or true meaning of these presents, for which the said governor and company shall find, take, and seize, in other places ont of our dominions, where the said company, their agents, factors, or ministers, shall trade, trallic, or inhabit, by virtue of these our letters patent, as also the ship and ships, with the furniture thereof, wherein such goods, merchandizes, and other things, shall be brought and found, the one half of all the said forfeitures to be to us, our heirs, and successors, and the other half thereof we do by these presents clearly and wholly for us, our heirs, and
 cvery the said offenders, for their said contempt, to susfer such other punishonent as to us, our heirs and suceessors, for so high a contempt, shall seem meet and convenient, and not to be in any wise delivered until they, and every of them, shall become bound unto the said governor for the time being in the sum of one thousand pounds at the 'east, nt no time then nfter to trade or traftic into any of the said places, seas, streights, bays, ports, havens, or territories nforesaid, contrary to our express commandment, in that behalf set down and published. And further, of our more especial grace, we have comlescended and granted, and by these presents, for us, our heirs, and successo:s, do grant unto the said governor and company, and their successors, that we, our heirs and successors, will not granc liberty, license, or power to any person or persons whatsocver, contrary to the tenor of these our letters patent, to trade, trallick, or inhabit unto or upon any of the territories, limits, or places ature specified, contrary to the true meaning of these presents, Fithout the consent of the said goverbor and company, or the most part of them. And of our more abundant grace and favour to the said governor and company, we do hereby declare our will and pleasure to be, that if it shall so happen, that any of the persons free or to be free of the said company of adventurers of lingland trading into Hudson's Bay, who shall, before the goiug forth of any ship or ships appuinted for a voyage or otherwise, promise or arree by writing under his or their hands, to adventure any sum of meney towards the fumishing any provision, or maintenance of any voyage or voyages, set forth, or to be sct forth,
or intended or meant to be set forth, by the said governor or company, or the more part of them present at any publick assembly, commonly called their general court, shall not, within the space of twenty days next after warning given to him or them, by the said governor or eompany, or their known ollicer or minister, bring in and deliver to the treasurer or treasurers appointed for the company sueh sums of money as shall have been expressed and set down in writing, by the said person or persons, subscribed with the naine of the suid adventurer or alveuturers, that then and at all times after it shall and may be lawful to and for the sald governor and eompany, or the more part of them present, whereof the said governor or lis depaty to be one, at any of their general courts or general assemblies, to remove and disfranchise him or them, and every such person and persons at their wills and pleasures, and be or they so removed or disfranchisud not to be perinitted to trade into the countries, territories, and limits aforesaid, or any part thereof, nor to have any adventure or stock going or remaining with or amongst the said company, without the special license of the said govenor and conpany, or the more part of then present at uny general court lirst had and obtaned in that hehalf, any thing in these presents to the contrary thereof in any wise notwithstanding. And our will and pleasure is, and hereby we do also ordain, that it shall and may be lawful to and for the said governor and company, or the greater part of them, wheref the governor for the time being, or his deputy to be one, to admit into and to be of the said company all such servants or factors of or for the said eompany, and all such others, as to them, or the most part of them present, at any court held for the said company, the governor or his deputy being one, shall be thought fit and agreeable with the orders and ordmances made and to be made for the government of the said company. And further, our will and pleasure is, and by these presents, for us, our heirs, and successors, we do grant unto the said governor and company, and to their successors, that it shall and may be lawfil in all elections and bye-laws to be made by the general court of the adventurers of the said company, that every person shall have a number of votes according to his stock, that is to say, for every hundred pounds by him subscribed or brought into the present stock, one vote, and that any of those that have subscribed less than one hundred pounds, may join their respective sums to make up one hundred pounds, and have one vote jointly for the same, and not otherwise. And further, of our especial grace, certain knowledge, and mere motion, we do for ths, our heirs, and suecessors, grant to and with the said governor and company of adventurers of England trading into IIudson's Bay, that all lands, islands, territories, plantations, forts, fortifications, factories, or colonies, where the said company's factories and trade are or shall be, within any the ports or places afore limited, shall he immediately and from henecforth, under the power and command of the said governor and company, their successors and assigns; saving the faith and allegiance due to be perfomed to us, our heirs, and suceessors as aforesnid; and that the said governor and company shall have liberty, full power, and anthority to appoint and establish governors and all other officers to govern them, and that the governor and his council of the several and respective places where the said company shall have plantations, forts, factories, colonies, or places of trade within any the countries, lands, or territories hereby granted, may have power to judge all persons belonging to the said governor and company, or that shall live under them, in all causes, whether civil or criminal, according to the laws of this kinglom, and to execute justice aceordingly. And in case any crime or misdemeanor shall he committed in any of the said company's plantations, forts, factories, or plaecs of trade within the limits aforesaid, where judicature cannot be executed for want of a governor and council there, then and in such case it shall and may be lawful for the chief factor of that place and his council to transmit the party, together with the offence, to such other plantations, factory, or fort where there shal: be a governor and couneil, where justice may be exceuted, or into this kingdom of England, as shall be thought most convenient, there to receive such punishment as the nature of his offence shall deserve. And moreover, our will and pleasure is, and by these presents, for us, our heirs, and suceessors, we do give and grant unto the said governor and company, and their suceessors, free liberty and license, in case they conceive it necessary, to semt either ships of war, men, or ammunition, unto any their plantations, forts, fnctories, or places of trade aforesaid, for the security and defence of the same, and to choose commanders and oficers over them, and to give them power and authority, by commission under their common seal, or otherwise, to continue or make peace or war with any prince or people whatsocver, that are not Christians, in any places where the said company shall have any plantations, forts, or factories, or adjaceat thereunto, as shall be most for the atvantage and henefic of the said governor und company, and of their trade; and also to right and recompense themselves upon the goods, estate, or people of those parts, by whom the said governor and company shall sustain any injury, loss, or damage, or upon any other people whatsoever that slinll any way, contrary to the intent of these presents, interrupt, wrong, or injure them in their said trade, within the said places, territories, ant limits granted by this eharter. And it shall and may be lawful to and for the said governor and company, and their successors, from time to time, and at all times from henceforth, to erect and build such castles, fortifications, forts, garrisons, colonies or plantations, towas or villnges, in any parts or places within the limits and bounds g:anted before in these presents, unto the said governor and company, as they in their diseretion shall think fit and requisite, and for the supply of such as shall be needful and convenient, to keep and be in the same, to send out of this kingdom, to the said castles, forts, fortifications, garrisons, colonies, plantations, towns or villages, all kinds of clothing, provision of vietuals, ammunition, and implements neeessary for such purpose, paying the duties and customs for the same, and also to transport and carry over such number of men, being willing thereunto, or not prohibited, as they shall think fit, and also to govern them in such icgal and reasonable manner as the said governor and company shall think best, and to inflict punishment for misdemeanors, or impose sueh fines upon them for breach of their orders, as in these presents are formerly expressed. And further, our will and jleasure is, and by these presents, for us, our heirs, and successors, we do grant unto the said governor and company, and to their successors, full power and lawful authority to scize upon the persons of all such English, or any other our subjects, which shall sail into Hudson's Bay, or inhabit in any of the countries, islands, or territories hereby granted to the said governor and company, without their leave and lieense in that behalf first had and obtained, or that shall contemn or disobey their orders, and send them to England;
and that all company, w for any offer and compan person or pe company, in ilone, ahall said preside prisoners int cause shall $r$ to be done 1 the said voy their respect masters, pur persons, tous so as the sai realm. And tices, mayors subjects wha to their snee in exeenting thereunto be set forth, oril notwithstand at Westmins
