## Our Monthly Prize Essays.

CONDITIONS OF COMPETITION.

CONDITIONS OF COMPETITION.

1.—No award will be made unless one essay at least comes up to the standard for publication.

2.—The essays will be judged by the ideas, arguments, conciseness and conformity with the subject, and not by the grammar, punctuation or spelling.

3.—Should any of the other essays contain valuable matter, not fully covered by the one awarded the first prize, or should any present different views of the same topic, and we consider such views meritorious, we will publish such essays in full, or extracts from them as we may deem best, and allow the writer ten cents per inch (one dollar per column) printed matter for as much of such articles as we publish. By this rule each writer who sends us valuable matter will receive remuneration for his labor, whether he be the winner of the first prize or not.

4.—We invite farmers to write us on any agricultural topic. We are always pleased to receive practical articles. For such as we consider valuable we will pay ten cents per inch (one dollar per column) printed matter. Criticisms of Articles, suggestions How to Improve the Advocate, Descriptions of New Grains, Roots or Vegetables not generally known, Particulars of Experiments Tried, or Improved Methods of Cultivation are each and all welcome.

A prize of \$5 will be given for the best essay

all welcome.

A prize of \$5 will be given for the best essay n "Eradication of Noxious Weeds." Essay to be in this office not later than January 15th.

A prize of \$5 will be given for the best essay on "The Advantages of Windbreaks for House and Farm Yards; the best Trees, when and how to plant, and subsequent care." Essay to be in this office not later than March 15th.

We will give a prize of \$5 for the best essay which will name and describe the six most promising varieties of potatoes grown in the district in which the writer resides, and the mode of culture which has given the best results. Essay to be in this office not later than 15th Feb., 1892.

#### **Prospects for Better Times in** Dairying.

LETTER FROM PROF. ROBERTSON, DAIRY COMMIS-SIONER.

To the Editor of the FARMER'S ADVOCATE.

Sir,—In response to your request that I should send you an article forecasting the probable work of the Dairy Commisioner for the next year, I submit the following brief outline: -

Beginning with the eastern provinces of the Dominion, I find that a wonderfully increased interest has been awakened among the farmers in our work in the province of

NOVA SCOTIA

during the current year. Some eleven new cheese factories were started. All the cheese factories in the province were visited by an expert whom I left in that province during the summer months. Already there is a noticeable improvement in the quality of the cheese from the influence of his summer's work. Besides visiting the cheese factories, he held meetings in a great many districts, where the farmers were seeking information on the best methods of establishing cheese factories and of opening up creameries. At one of the factories of Mr. L. C. Archibald, Antigonish, N. S., 100 cheese were made for export to Great Britain. This plan was taken to demonstrate to Nova Scotians that the cheese from their province would find a ready demand in the British markets at a price not far, if any, below the finest cheese from Ontario. In that province I took occasion under the authority granted to me by the Minister of Agriculture to distribute a large number of three pound sample bags of Indian corn among the farmers, in order to encourage them to test the value of that wonderfully productive forage plant in the feeding of their cows. So far I have had nothing but the most favorable reports from every man who grew a small plot of it. I expect that the acreage of fodder corn in Nova Scotia will be at least a thousand-fold larger in 1892 than it has been in any year previous. We intend to continue the work of itinerant instruction at the cheese factories, and also to establish an Experimental Dairy Station as soon as the conditions of the province are ready for it. Our object in this latter action will be to lead in the commencement and extension of winter dairying. Nova Scotia farmers ought to make large quantities of creamery butter during the winter. That practice would enable them to raise larger numbers of excellent stock and to fatten more and better swine. Then, the milk from the same cows could be diverted to cheese-making during the

summer months.

In the province of

NEW BRUNSWICK work has been done of a somewhat similar nature to that which was undertaken in Nova Scotia; and, of course, action in the future will likely be somewhat similar to that which has been outlined for its sister province. In

PRINCE EDWARD ISLAND

only one cheese factory has been in operation during the season. A number of meetings in different parts of the island have been held under my direction, and a large number of sample bags of Indian corn have been distributed among the farmers. From every recipient I hear nothing but words of satisfaction with the corn venture; and I am sure that next year the farmers of Prince Edward Island will provide abundance of this excellent crop, to enable them to feed their cattle economically during their rather long winters. We expect to have a dairy station in operation on the island for the manufacture of cheese during the summer, and for the manufacture of butter during the winter. I am informed that already 400 cows have been guaranteed in one locality. All that the farmers of that beautiful island province require to enable them to develop a very large and profitable dairy business, is confidence in their own resources, capabilities, and opportunities. The presence of an Experimental Dairy Station, which will be a centre of authoritative and reliable information, will supply the missing link and enable them to turn their natural advantages to the best account.

In the PROVINCE OF QUEBEC

my assistant for the French-speaking sections, Mr. J. C. Chapais, St. Denis, P. Q., and a cheese-making expert, visited every county, and gave lessons to cheese-makers and butter-makers at central factories. The Babcock milk tester was also carried with them to illustrate its use and suitability for preventing fraud, and for establishing a sound basis for the payment of milk according to its quality. At one of the factories in Quebec some experiments in cheesemaking were also conducted, to assist in determining the quantity and quality of cheese that may be obtained from milk containing different percentages of butter fat. About 250 boxes of other cheese were also made at one of the factories to be shipped to England for the purpose of illustrating to the dairymen in Quebec that cheese from their factories, when properly made, will fetch the very highest price obtainable in the British market for any imported cheese.

The holding of the Dominion Dairy Show at Sherbrooke, Que., also gave a very great impetus to the dairy trade of that province. That cheese from the Eastern Townships, in open competition with cheese from the best factories in Ontario, should have carried off the sweepstakes was a surprise to the people of the province themselves. It is to me a most gratifying evidence of the progress they have made during recent years, and of the better things we may expect in agriculture during the years to come. A quantity of the cheese from the exhibition was afterwards sent to London, Kilmarnock and Manchester. Very favorable comments as to their quality and appearance have appeared in the English papers. [TO BE CONTINUED.]

#### Our Clubbing Rates for 1892.

Having obtained very favorable clubbing terms with the publishers of the leading Canadian papers, we are in a position to supply our subscribers with one of the select papers below mentioned

We beg to inform our readers that the three Toronto daily papers have advanced their rates from \$5 to \$6 per annum, therefore, all subscriptions from first of January will be as follows:--THE FARMER'S ADVOCATE AND

By subscribing through us for any of the papers we have mentioned we save you considerable trouble and expense. Remit by post-office order or registered letter; a l'.-O. order is the cheapest and safest.

#### Our Live Stock Premiums.

As in previous years, we continue to give live stock as subscription prizes. All animals sent out by us are good individually, and possess pedigrees. See our advertising columns for full particulars.

#### Superphosphates to be Tested.

In view of the belief that the prairie soil contains nitrogen in excessive quantities, on account of its formation largely of vegetable mould, having a tendency to prolong growth and defer ripening, the FARMER'S ADVOCATE suggested that the application of phosphate, the better to balance the available plant foods of the soil, might hasten ripening. In order to determine if possible the practical utility of this idea we suggested that the experiment stations undertake investigations along that line, and on returning from Ottawa Mr. S. A. Bedford, Superintendent of the Brandon Farm, brought with him a quantity of superphosphates for the purpose in question. Referring to the subject the Winnipeg Commercial says:

"The arguments advanced by the FARMER'S ADVOCATE appear sound and reasonable, and it would seem quite possible that the proposed experiments may prove very valuable. If wheat an be made to ripen a week or two earlier, by the imparting of certain properties to the soil at a reasonable expense, the discovery will be of inestimable value to the country, and the FARM-ER'S ADVOCATE will earn the eternal gratitude of the people.'

#### The Central Institute.

This Institute, organized at Brandon last summer, promises to become an important factor in facilitating institute work. Although but a few months in existence, its influence has already been felt in many directions. The attendance of the delegates at the meeting of the grain examiners for striking the standards, led to a much better understanding between the two bodies, and, doubtless, through the Institute, to a better understanding between a great number of

The resolution requesting Prof. Saunders to undertake a series of examinations with superphosphates, with a view to hastening the ripen ing of wheat, elicited a prompt reply, as will be seen elsewhere in these columns, and the material Farm at Brandon.

during the latter part of February and first part of March. It was the intention of the Executive Elder, to address at least one meeting of each January, but business called him to Ontario and 90 He has, however, consented to undertake the 90 work on his return later in the season, if circumstances will admit. The Minister of Agriculture 50 has also consented to allow Mr. Bartlett, the 30 Secretary of the Central Institute, now Chief Clerk in the Department of Agriculture, to 50 attend as many meetings as possible without 50 interfering seriously with his duties in the

#### FIRST PRIZE ESSAY.

#### How to Get our Young Men to take an Interest in our Institute Meetings.

BY JAMES ELDER, VIRDEN, MAN.

We would answer as the person did about the education of the child, "Begin with the father". If the father does not take an interest in the institute meetings, we need not expect the son to do so. Let the father look forward anxiously to the meeting, and talk about it in the family, both before and after its occurrence; let him think over the subject to be discussed, and be prepared to add his quota to the information given; let him not be afraid to take part in the discussion, and not sit as a neutral person.

2nd. Let him "give the boy a chance." Don't spend two hours in the morning laying out work to keep the boy busy while you are away at the meeting; but, on the contrary, spend two hours the previous day in pushing the work ahead, so that the stock can be fed speedily in the morning, and have the feed convenient, so that they can be quickly fed at night, and then take the horse and cutter, start out in good time, get the horse comfortably stabled, get a good hearty dinner, get to the meeting promptly, take an interest in the meeting, and encourage

Too many fathers never ask their sons to attend the meetings at all, and others are, if possible, worse. No preparation is made the day before, and on the morning of the meeting there is a great hurry and bustle to get away, and then the "governor" takes a notion that he will take out some "stuff" to the mill to get chopped, and thus "kill two dogs with one stone". What is the result? Why, it takes them an hour longer to get ready; it takes an hour longer to go out; then it takes them half an hour longer to get their horses in the stable; they have no time to get dinner; their clothes are all dust and dirt, and neither of them is in a fit condition, either mentally or physically, to take part in the meeting, at which they arrive when the discussion is half over. Then they have to go off with a rush; get out their horses; go to the mill for their chop; trudge away home Then, after they have put through the cold. their horses in and had supper, they have to go out and spend two hours fixing up stock with

Now, how in the name of common sense can we expect a young man to take an interest in the institute under such circumstances, and with such associations? Why, instead of the meeting day being one of pleasant memories, it is looked back to like some borrid nightmare.

So much for the father: now for the members

1st. Let us make the meetings interesting by

attending and contributing our share. 2nd. By sometimes choosing subjects which will be interesting to the young men, such as the care of the team, the management of the build-

ings, planting trees, etc. 3rd. By encouraging the young men present to express their views, and when they do, give them a kindly reception, and avoid severe criti-

4th. Appoint a different chairman for each meeting, and as often as possible get a young man into the position, and having got him there, don't leave him to flounder as even old men sometimes do, but let a man of experience sit by him, and, without being prominent, assist

the young chairman by suggestions.
5th. Have a sociable evening once in awhile, and get our young men and women to take its

6th. Get our young men to fill some of the offices in the institute, which we believe they would fill more successfully than the old men.

Nearly half a million dollars was expended in new buildings in Brandon, Man., during 1891.

## Articles Left Over.

Lack of space compelled us to "lay over" several articles which should have appeared in this issue. They will be published in February.

#### Seed Grain!

During the last six months we have been collecting much valuable information concerning seed grain, corn and vegetables, the pith of which will be published in our February and March numbers. New varieties will be compared with the older and standard sorts; the varieties giving the best results in the different sections will be named. We invite intelligent and progressive farmers everywhere to write us, giving all the information they can on these subjects. We can collect a great deal of practical information, yet our readers can greatly assist us. On the first page we offer a prize of \$5 for the best essay sent us on these subjects. We invite farmers to carefully read the rules governing these essays, especially No. 3.

#### Send Us Information.

Farmers everywhere are invited to write us on practical subjects pertaining to agriculture and live stock. To such as send us articles containing valuable matter we will pay at the rate of 10c. per inch, as explained in rule 3 governing the prize essays.

Criticisms of articles which have previously appeared, reports of experiments, particulars concerning new grains or vegetables, or new and useful farm implements, drawings of new devices, plans and descriptions of buildings, etc., etc.—all are welcome and will be duly paid for if valuable. The Advocate is pre-eminently the farmers' paper. We are determined to make it the best and most useful agricultural journal published; we ask the farmers to assist us.

## Annual Meeting of the Brandon Agricultural Society.

This meeting took place in the City Hall, and was well attended, the President, Mr. Bedford, in the chair. The directors' report was most satisfactory, showing a surplus of over \$200 in the treasurer's hands. The auditors, Messrs. Hughes and Braefield, had prepared a report in which they criticised and gave advice, which cannot help being of use to the management in the future. The following were then elected directors for the ensuing year:—S. A. Bedford, H. Nicol, J. W. Vantassel, T. Harkness, J. Empy, T. M. Percival, J. C. Harrison (representing Brandon branch of the Poultry Association), R. E. A. Leach, T. A. Mansfield, and D. M. Rodick. Mr. Hughes was again appointed auditor. It was decided that the show for 1892 is to begin on July 19th, the number of days it A letter from the Brandon Board of Trade was then read, asking the opinion of the meeting with regard to the advisability of holding an industrial show after the same plan as Toronto and Winnipeg, in Brandon, and, if favorable to it, asking the co-operation of the Society. meeting was unanimous in favor of such a show, and it is now thought that the present society will be absorbed by a large organization before the coming summer fair.

#### Manitoba Dairy Association.

The annual meeting of the above-named Association will be held at Winnipeg on Wednesday, January 27th. The business meeting will commence at 2 p. m., in the City Hall, when the report of last year's proceedings will be read, and the officers and directors for the year will be elected. A public meeting will also be held in the same place in the evening, when papers will be read, and free discussion of those papers will follow. Messrs. Bedford, of Brandon; Struthers, of Russell; Glenne, Portage la Prairie Professor Barré, Thompson and other gentlemen, whose experience and opinions are well worth listening to, will contribute papers and take part in the discussions. It is also expected that the closing session of the convention will be held Thursday morning. Readers of the Far-MER'S ADVOCATE who take an interest in good dairy work should make an effort to be present. Return tickets at one fare will be issued to all parties wishing to attend, provided a sufficient number wish to avail themselves of the privilege. To secure this advantage all who wish to come should apply to the secretary, Mr. Richard Waugh, Winnipeg, as early as possible, so that the number (25) sufficient to secure this benefit may be made up. The directors of the Association have occasionally been blamed for not making greater efforts to popularize their society, but their best efforts can be of little avail unless those who take an interest in dairy work give their support. Interesting matters of business are to be brought up at this meeting in connec tion with the coming Winnipeg exhibition, and there ought to be a hearty response to the call of the directors. If the Association is to be made effective, factorymen, creamerymen and dealers, as well as private butter-makers, within access of Winnipeg, should attend and take an active share in the business and general proceedings of the convention.

#### Horse Breeders' Association of Manitoba and Northwest Territories.

project of organizing a horse breeders organization for Manitoba and Northwest Terr tories, started recently by Dr. W. J. Himman, of Winnipeg, was brought to a successful issue on December 10th, when a number of gentlemen who are interested in stock breeding assembled at the Queen's Hotel and formed an association known as the Horse Breeders' Association of Manitoba and Northwest Territories. Among those present were: Dr. W. J. Hinman, J. M. Ross, D. Hope, C. J. McNearny, W. L. Puxley, A. Patterson, J. Jenkinson, S. J. Vaukansaellaer, D. McGregor, J. J. Johnston, A. Moodie, J. R. Headly, J. A. Moore, J. Lemon, R. Bullock C. Little, and about twenty others. After the Association had been duly instituted, constitution drafted and adopted, and other necessary business transacted, the election of officers was then in order, which resulted as follows: -D. McGregor, Winnipeg, President; Dr. McConnell, Morden, 1st Vice-President; W. L. Puxley, Winnipeg, 2nd Vice-President; Dr. W. J. Hinman, Winnipeg, Secretary; D. E. Sprague, Winnipegs Treasurer. Executive J. M. Ross, Winnipeg: D. Hope, Winnipeg: W. Fares, Emerson; Robt. Edgar, Brandon; T. G. Fer

The organizers of the Association are greatly Canada, but an unsolicited pleased with the result of their efforts, and it is confidently expected that before the next meet—the Woods Milling Company.

ing it will have a membership of over one hundred. It is the intention of the Association to open the following stake races:—

Race for two-year-old and under trotters owned by members of the Association.

Race for three-year-old and under trotters as before.

Race for 2.25 stallions; same conditions. Queen's Plate for three-year-old and under. The races are to take place about July. Stakes will in all probability be opened March 1st, when the first payment will be due, and close June 1st, of which due notice will be given.

It is intended to give races for the thoroughbred trotter and pacer alike. No distinctions will be made. Another result will be that breeders will have opportunity to compete against colts of equal age; heretofore no colt stake has been given. Any breeder owning a good colt was compelled to compete with aged In class races under this system several different kinds of races will be given. No outsider or non-resident will be allowed to enter and bring in a colt and immediately ship him out again. All members must be residents of Manitoba or the Territories, and be bona fide All members must be residents owners of the animals they enter. In this way the Association will seek to promote, encourage and protect the breeding interests of the three classes of horses specified.

#### A Great Canadian Enterprise.

OPERATIONS OF THE LAKE OF THE WOODS
MILLING COMPANY.

To facilitate the prompt sale and removal of such a vast wheat crop as Manitoba and the Territories produced in 1891, is a most important matter to the agricultural community. In this work the Lake of the Woods Milling Company cuts a most important figure, and facts concerning its operations are highly interesting. Its business extends from Halifax in the east to Vancouver in the west. The principal mill, with a capacity of 2,000 barrels of flour per day, and the head offices, are at Keewatin, a second mill with a 350 barrel capacity being at Portage la Prairie; but the latter is to be entirely reconstructed and enlarged for next season. wheat ground is all grown in Manitoba and the Northwest Territories, being purchased from farmers direct and put into elevators, of which with warehouses there are about twenty in number, with capacities ranging from 20,000 bushels to 45,000 bushels, along the line of the the total capacity being greater than that of any other milling concern in Canada. The Keewatin elevators will accommodate no less than 700,000 bushels, and those at Portage 175,000. Up to December 20th over 1,000,000 bushels of wheat had been purchased, and so great has been the crop that buying will go right on until the latter part of August next. The output of flour this year is expected to reach half a million barrels, and M. S. A. McGaw, manager for Manitoba and the Territories, whose headquarters are at 525 Main street, Winnipeg, states that the early receipts of wheat did not produce as strong flour as the wheat of 1890, and with regard to the work of buying and grading at the local elevators, he says that while they have not gained a grade on half a dozen cars of wheat they have lost grades on more than fifty cars. The prices this season have run about five cents higher than in 1890. In reference to the quality of the flour produced, the largest importing house in Glasgow, Scotland, recently wrote the Lake of the Woods Milling Company, stating

"We have bought the best Minneapolis grade at a lower price \* \* \* \* We could not now pay you same prices as we did, but the excellent baking qualities of your flour will always enable us to give you a premium over any flour milled at Minneapolis. The opinion has been expressed to us that your flour on our stand is the finest that has been seen here from any mill on the American continent for years past."

This is not only an acknowledgment of the superiority of the wheat produced in Western Canada. but an unsolicited and well-merited tribute to the enterprise and skill of the Lake of the Weods Milling Company.

## Manitoba Farmers' Institutes

TO BE ADDRESSED BY PROF. JAS. W. ROBERT-SON, DAIRY COMMISSIONER.

Mr. J. W. Bartlett, Secretary of the Central Farmers' Institute, writes us that arrangements have been made for addresses by Prof. Robertson

#### Canadian Farmers and the British Market.

A very successful meeting of farmers was held at Dorchester Station on the evening of Wednesday, she 16th instant, under the auspices of the North Dorchester Agricultural Society. Mr. Richard Venning presided, and the Town Hall was filled in every part with representative farmers from the surrounding country. The deepest interest was manifested in the proceedings, and although the meeting lasted until 11 o'clock, unbroken attention was given to the addresses. By special invitation, given some time ago, Hon. John Carling, the Dominion Minister of Agriculture, and Professor William Saunders, Director of Experimental Farms, were present. Each gave addresses of great practical value.

#### HON. MR. CARLING

in his opening remarks referred to the good which might be expected to follow upon meetings of this character. It was by coming to fully understand matters relating to trade in farm products that they could best advance their interests in that respect. He then spoke at considerable length upon the importance of agriculture in this country, and as a means of quickening general interest in this great industry he urged the teaching of the elementary principles of agriculture in all our public schools. He hoped that a ood use would be made of the text book recently issued by the Education Department of Ontario, and that one of the results would be to keep young men from forsaking the farm and flocking into the city. Coming then to the broad question of a market, the Minister of Agriculture pointed out the position in which Canada was now placed through the

#### TARIFF LEGISLATION

of our neighbors. It was quite evident that a number of articles making up a considerable part of our export trade in farm products would be practically shut out from the United States, and, if our farmers were to continue the growing of these articles for export, a new market would have to be found. Having in view all the circumstances, and having regard to experiments tried during the past season, the market in which our farmers might expect to meet with the best results was Great Britain. It was absolutely true that there were few things produced on Canadian farms for which a profitable market could not be found across the Atlantic. Mr. Carling then undertook an analysis of that market. Taking the articles one, by one he dealt with the conditions under which they were produced in Canada, and then gave the latest trade figures, for the purpose of showing the extent of

for well-bred horses there was a good market both in Great Britain and in the United States. Poor horses, however, are cheaper across the line than in this country. With respect to cattle, it was not necessary that he should do more than point to the enormous trade which we had developed within twenty years, for his hearers to see in which direction they might look for profitable sales in the future. So far as

#### LAMBS

were concerned, now that they had been struck a fatal blow by the McKinley Bill, he was pleased to observe that a fine opening presented itself in Great Britain. He referred to the bulletin recently issued by the authorities of the Agricultural College at Guelph. There is room for a large and profitable trade in fat grade lambs between Canada and Britain, providing they are shipped early in the season. At some length the Hon. Minister dealt with the question of

HOG PRODUCTS. He showed that of hams and bacon alone Great Britain had imported last year 560,001,102 pounds, of which the United States sent 515,344,044 pounds, and Canada but 7,470,087 pounds. We were not getting the share of that trade which our means for the production of superior bacon entitled us to. Canadian bacon and hams readily realized from one cent to one cent and a-half more per pound than the American article, and this increased price compensated for any difference that might exist in the cost of feed. In this connection there was the discouraging fact that we had for years been importing very largely from the United States. To improve this state of affairs the Government had imposed an increased duty on hog products two years ago, as a result of which there had been an important diminution of our imports from

across the I	1110.	ine ngur	es were.	
Racon and 1	ams		1890 17,445,726 lbs. 4,344,200 lbs. 4,882,831 lbs.	11,085,111 $2,564,044$

Here was a reduction in one year of 12,034,603 pounds, which was the measure by which the home market had really been enlarged. In this connection he also pointed to the fact that our imports of beef from the United States had declined from 6,443,315 pounds in 1.90 to 2,698,305 pounds in 1891, or a total reduction in one year of 3,745,010 pounds. Mr. Marshall's name was mentioned in this relation as that of one of the hardest workers in parliament in respect of these meat duties. Mr. Carling said he would like to see every farmer impressed with the wisdom of giving more attention to hog raising as a means of increasing the annual profits from his skill and labor. No one could glance at the figures of British imports without seeing that a market existed for all the pork, bacon, hams and lard we could produce. He had been told quite recently by one of the largest pork packers in Canada that a sufficient number of live hogs could not be procured for his purpose. From this subject Mr. Carling passed on to a consideration of the question of

He pointed to the almost prohibitory duties imposed by the Americans, and drew the conclusion the demand in Great Britain. Beginning with | that if our farmers wished to continue the growing of barley, they must grow that sort which he aptly remarked that it cost no more to raise was preferred by the British maltster, viz., prosperous nations under the sun.

a good animal than a poor one, and showed that | the two-rowed variety. There was no longer any room to doubt the possibility of growing two-rowed barley in many parts of the Dominion at a greater profit than the six-rowed. It yielded more to the acre and weighed more to the bushel. The product of the past two years has been well received by the British maltster, who was willing to pay a high price for it. Mr. Carling explained that in October last he had sent eight sacks to the High Commissioner in London, with a view to having those samples submitted to leading experts and maltsters, so that they might say what price they fixed upon them. He read a number of cables, which clearly showed that a keen demand existed for the better samples, and the High Commissioner declared that certain buyers would take very large quantities if they were available. A cable dated 11th December intimated that barley up to the samples would realize from thirty-five to forty shillings, or as much as the very best on the market. These prices in Canada, it was explained, would be equal to ninety-one cents in one case and one dollar and four cents in the other per bushel of forty-eight pounds, from which should be deducted from twenty-five to twenty-seven cents for all the charges incidental to the transportation of the grain and the placing of it in the hands of the British maltsters. Although the amount of barley available for export during the past year had been relatively small, it was gratifying to know that 739,421 bushels had been shipped from Montreal during the season of navigation just closed. Of that amount nearly 300,000 bushels was made up of the two-rowed sort. Mr. Carling exhibited samples of the grain sent to the High Commissioner in October, and at some length explained the conditions under which two-rowed barley could be successfully grown for the British market. Quality was of the first importance. In the return which had been sent to him from Montreal there was included some gratifying figures with respect to eggs. Nothwithstanding all that had been said about the killing of our

#### EXPORT TRADE IN EGGS

by the McKinley Bill, it turned out that during the past season 2,233,757 dozen had been shipped from that port to the British market. The United Kingdom annually imported 100,000,000 dozen eggs, and it might be said that there was a market there for all we could possibly produce. From this promising beginning he had no doubt that the trade would rapidly increase, until it passed the highest figures ever reached in our exports to the United States. Our facilities for reaching the foreign market were excellent, and would improve with the production. Touching incidentally upon the question of

#### UNRESTRICTED RECIPROCITY,

Mr. Carling declared that he saw the greatest possible danger to British connection in the proposition now before the country. He apprehended that there was no feeling in Canada in favor of annexation, and judging by the applause which followed this remark it could be safely assumed that there was none in that meeting, at least. In concluding, the Minister presented an interesting array of important figures, for the purpose of showing the progress and prosperity of the country at large; and if our people stood shoulder to shoulder in all their efforts, he saw nothing to prevent Canada from becoming one of the most

PROF. SAUNDERS

followed, and after explaining the Experimental Farm system, and dealing with some of the more important features of work undertaken, he entered into an elaborate explanation of the plan which had been adopted by the Department of Agriculture at Ottawa for the encouragement of winter dairying. He gave the details in connection with the Experimental Stations as established for Ontario at Mount Elgin and Woodstock respectively. A cheese factory had been rented at each of these places and furnished with the necessary machinery and appliances for making butter according to the most approved methods. The product from the two factories reached about six hundred pounds per day, and it had been arranged by the Dominion Dairy Commissioner to make shipments every two weeks to the British market. In making these shipments the butter would be placed in special packages, which would be marked with a brand that it was hoped would become a guarantee of quality in Great Britain. Thus far the entire experiment had been a happy success, and it was intended to very largely extend the system of turning cheese factories into winter dairies throughout the Dominion. Itehas been demonstrated that it would pay the farmer much better to have his milk sent to these creameries, than to make butter at home. It was all a matter of dollars and cents to the farmer, and Prof. Saunders remarked that this was a plan which gave every promise of putting many dollars into the pockets of our farmers. We should build up a trade in butter with Great Britain, based on the quality of our goods. The Director also explained that at these dairies the plan had been adopted of paying each farmer for his milk in proportion to the amount of butter fat it contained. Prof. Saunders's remarks were of an eminently practical character, and the attention that was given them showed how fully they were appreciated.

#### The Hackneys and Other Stock at Hillhurst.

Under date of Dec. 17, 1891, Mr. Jas. A. Cochrane, Compton, P. Q., writes as follows:-

"I am pleased to say the newly imported Hackneys are doing well and taking kindly to their new surroundings. In my opinion there is no class of horses more suitable for the farmers of the Dominion to handle, since they have proved their adaptability to our soil and climate, besides being a capital cross for our good roadster mares; for they are at once a general purpose sort, the mares being all the better for doing work on a farm, and nothing commands a better price at the present time than the very type which they represent. The Hackney has been bred as long as any other horse for a particular purpose, and is capable of stamping his produce with his own characteristics.

"The cattle at Hillhurst have gone into winter quarters in capital condition, and the young things look as promising as any of their prizewinning predecessors, which have followed up their victorious career in Canada by taking the highest honors during the past season at some of the leading fairs in the U.S., finishing up with the sweepstakes for beef herds at St. Louis. Having so abundant a supply of ensilage and swedes, we have put in 46 head of steers for feeding, in addition to 57 Aberdeen-Angus Polls, 22 Herefords, 24 Jerseys, 35 grades and crosses, and 206 sheep, of which 81 are registered Shropshires.'

#### Timely Notes for January.

GRAIN.

Have you arranged for your seed grain yet? If not, don't delay any longer, but get the best that experience has proved and money can buy. One bushel of good, heavy, clean seed, will sow more land and give a better crop than two bushels of indifferent grain. Read the reports from the experimental farms of Brandon and Indian Head, and then see if you cannot afford a few bushels of the most promising new varieties. Try a bushel of Ladoga wheat; some Duckbill or Danish Chevalier barley, and some Prize Cluster or Banner oats, or some other good, reliable varieties. On the question of oats, it is wonderful how many farmers sow mixed seed, when they know perfectly well they can only sell the produce for feeding purposes. Sow either black or white oats—the white ones have paid me best—and give good cultivation.

HIRED HELP.

In laying our plans for the coming season, and preparing our seed grain, we are again confronted by the scarcity of efficient hired help. How many can say that they can afford to pay \$20 to \$40 per month for six months for even a good man, without mentioning the ignorant "omadhawns" that are often the only material available? I know of men who during the past season paid their men \$20 and more per month, only to find themselves in debt as the result of their season's work, owing to frosted crops. Cannot some practical plan of immigration be devised to induce the rural population of Britain, Norway, Sweden and Germany to come to us? for they are the people we want. Instead of that we seem to get the city and town population. There is work here for all the men who will came from southern Scotland, from western Ireland, from southern England, etc. We don't want Russian Jews, Italian laborers, Hungarian miners, nor English and Scotch cotton operatives We must have population if Manitoba is to progress as it ought, and we want people who will stay. "Bonus" the incoming and genuine settler, instead of "bonusing" railways, mills and factories, and if we can only secure a hundred thousand good settlers, the factories, mills, etc., will need no bonus.

## THE WINNIPEG JULY FAIR.

By all means have it in July about the middle of the month, so as not to interfere with hay making, which generally commences about 25th. Let it be well advertised, good prizes given, and as good a board of directors as this year, and a great success is assured. May I suggest to the city members of the board that in the cattle classes they might do worse than adopt Mr. Robinson's suggestion of putting the cattle on the bridges in "those cattle sheds". Give special inducements to farm horses and less to trotters. Manitoba-bred farm and carriage horses are what we want; not a let of useless, pampered weeds, whose only merit seems to be that they can scramble over the ground at a 2.40 or 2.30 gait. Give prizes for dairy cows, open to any cows, whether pure-bred or not, and for performance only. Make more classes for pigs ate composed of farmers who are making farming pay; and also pay all the directors a reasonable

FARMERS' ORGANIZATIONS.

I think the time is opportune for the formation all over this western country of farmers' cooperative and mutual benefit organizations, whether known as clubs, alliances or patrons of Every other trade and occupation industry. Every other trade and occupation has its guild or society, some even going so far as to forbid the practice of their calling without permission from the society. Fancy the present farmers of Manitoba forbidding any from practicing farming within the province without having first obtained a permit from the "Governor and Council of the Farmers' Alliance '! What an outcry there would be of monopoly, etc., etc.! The question of interest on mortgages might be advantageously discussed by these societies, and joint action taken to boycott those companies who demand more than 7 per cent. This new country is getting sadly mortgaged, and the high rates of interest charged are bringing many a poor man to ruin.

Get out pickets for fencing. Bring home and cut up green wood for next year's fire-wood.

Make preparations for fencing in a good pig lot for your pigs to run in during the summer.

Renew your subscription to the ADVOCATE. Clear off all your debts. Buy no more machinery "on time". Don't buy a binder now, however great a bargain it may be; July is early enough to buy one. Hire your help for the year-if possible.

## A Summer Fair Recommended.

Believing it to be in the true interests of the farmers and stock breeders of the province, and of the exhibitions as well, the Farmer's Advo-CATE has steadily contended in favor of holding our large agricultural and industrial fairs in the summer season. It is not necessary to reiterate the reasons therefor; but the force of them has found weight with the directors of the Winnipeg Exhibition, for at a meeting held on Nov. 30th they unanimously placed on record a recommendation that the fair of 1892 be held in the latter part of July or early in August. The annual meeting will be held on Jan. 14th, and it is believed the new board will act along the line of that recommendation. All breeders of live stock, of whatever class, who contemplate being exhibitors should govern themselves accordingly, in order that the herds, flocks and studs of the province be thoroughly represented, in which case, as far as can now be judged, the display should be the finest this province has ever seen. Farmers should also select now, and carefully preserve their very finest samples of grains of all varieties, for exhibition purposes. The farmers and breeders of the province favor a summer fair, and should do their share towards making the exhibition of 1892 a success in every sense of the word. Large prizes are promised for grain of the

The Canadian Pacific Railway has agreed to offer the same passenger and freight rates as prevailed last year, viz: Passengers at a single fare for the round trip to points now taking a \$4 ticket, and one cent per mile, each way, for distances beyond. Exhibits of all kinds will be carried free both ways, if they do not change hands. It is expected that similar rates will be granted by the other railways.

In view of the expected change of date for holding the Winnipeg Industrial such prelimi-nary arrangements will necessarily be made as will prevent any clashing of dates with other exhibitions in this province which in the past have demonstrated their usefulness and succe

In the interest of the stock-breeders of the province and the Territories the Advocate desires to see the dates of the leading fairs arranged in a circuit, so that there will be no unnecessary travelling nor needless expense for herds and owners. This was the views of the Cattle Breeders' Association about a year ago, and the reasons for it are now more than ever apparent.

#### The Chief Exhibitors of Horses at Winnipeg Exhibition.

The short sketches given below, together with the plate page of photo-engravings, will make our readers more familiar with the name and fame of the principal horsemen of Manitoba and the West:-

JOHN A. TURNER, CALGARY, ALBERTA, N. W. T. Mr. Turner settled in Alberta, N. W. T., in March, 1886 and after deciding what he thought Alberta was best adapted for he made up his mind to breed Clydesdale horses, and from what experience he has had he thinks that country and climate have everything that is desired to raise draught horses. The young stock bred on the ranch from Clydesdale sires and dams give promise to surpass their dams both in size and symmetry. A two-year-old Clydesdale filly called Clydes dale Star [1564], bred in Alberta, and owned by Mr. Turner and his brother Robert, took 1st at the Calgary show in 1890 and 1891, beating a strong class of horses that had been bred in Ontario. The firm has several Canadian and imported Clydes dale mares on the ranch. They have raised fourteen healthy foals from fifteen mares that had colts this season, showing a very good percentage. The prizes won at Winnipeg Industrial Exhibition this fall were: 1st with Fitz Maurice (7714 [1331] in the three-year-old class; 1st with Balgreggon Hero (8446) [1591] in the two-year-old class, and also the diploma for the best Clydesdale horse, any age, on the ground. Fitz Maurice being placed 2nd for this. After the Winnipeg show they both took 1st in their classes at the Calgary show, and Balgreggon Hero took the sweepstakes for the best horse on the ground of any age or breed. Prior to last season they won many other valuable prizes. Since the Winnipeg show Fitz Maurice has been sold to go down to Moncton, New Brunswick. Although he has left a good many promising colts in Alberta, his departure will be a great loss to that dis-

MR. W. L. PUXLEY, WESTBOURNE, MAN. Another portrait in our engraving is that of Mr. W. L. Puxley, Westbourne, Man., a native of England, and an enterprising and enthusiastic breeder of some six years residence in this province. He is the owner of the two valuable thoroughbred stallions, St. Emmanuel and Leon. The former is a three-year-old bay stallion by Victor, Emmanuel, out of St Mary, by Cathedral, out of Euphrosyne by The Miner, Victor Emmanuel being by Albert Victor, out of Time Test. The beautiful bay stallion, Leon, was foaled 1889; got by Paradox; his dam, Lioness, by Uncas; out of Queen of the Forest, by The Ranger. This most promising young horse won the three-quarter mile dash at the Winnipeg fall meeting, and captured first prize as a two-year-old stallion at the Winnipeg Industrial Exhibition. He is a young horse of great symmetry and undoubted merit, needing only the development of age and good care. Mr. Puxley intends raising carriage and saddle horses from a thoroughbred cross on heavy mares.

#### MR H. A. MUSK, SOURIS, MAN.

Mr. Musk, of "Riverview Farm," Souris, Man., whose Shire mares were so successful in the prize ring competitions at has been in the province for years. He enjoys the honor of being a member of the Eng lish Shire Horse Society, and has been breeding Shires and thoroughbreds, latterly importing a Hackney also for trial. At Winnipeg fair he won first on brood mare with foal at side, first on three-year-old filly, and diploma and \$20 for best mare of any age. The two Shire mares Blonde, by Lincoln shire Lad, and Stetchworth Skark, by Rubert, by Spark were bred by Lord Etlesmere's Nateby Champion and Normoon Conqueror before importing. Mr. Musk owns Normoon Lawson, by King Charles, by Maple Lawson, a grand four year-old, travelled last season round Ely and Chatten's district, England (the best part of England for horses). He also owns three imported thoroughbred blood stallions two, three and six years old; two of these are for sale. At the outset of his career as a breeder Mr. Musk appears to have laid the foundation for future success by starting with good stock.

### BOUVERIE & ROUTLEDGE, VIRDEN, MAN.

Mr. T. Routledge, whose portrait appears in our group of horse owners, has been a resident of Manitoba for some I years past. His firm are bringing to bear the knowledge gained by long experience and careful observation in the breeding of Hackney, saidle and carriage horses, of which their commodious stables now contain about 410 head. spicuous among their stallions are Dean Switt and Bushfield the former standing at the "Bass Hill Farm", Virden, and the latter at "Elphinstone Farm", Newdale. Both are im ported horses. Dean Swift is a dark chestnut thoroughbred got by Dalmacardock, or Gnossia Carona, his dam, Rapidity by Scottish, being out of Potias, by Weatherhit. In England he ran 6t cases, bying placed in 30 and, winning 15 stakes worth in all 1,856 pounds sterling. Bushfield, buy stallion likewise boasts a pedigree containing many famous; race horses, his sire being Umpire, by Fom King, by King Tom, by Harkaway; Umpire's dam, Acceptance. Bushileld's dam was Lady Newman, by Crater, out of Shipwreek. The firm have a lot of tillies breeding to these two six six horses as Mikado, Sharpcarcher, Fred Henry, sen et War Cry, Vespucius, Big Sandy and The Tester and rooslate ults in the progeny are looked for

MR. WILLIAM MOON, GLENBORO, MAN coming to Manitoba, Mr. Wm. Moon, of Clenboro brought with him two Cleveland Bay stallhous, the successful

show ring career of which would naturally indicate them as being of the right sort. Their names and pedigrees are Rillington Lad, sire Welham, he by Lord Lancaster, g. sire General Benefit, dam by Emperor 387, g. dam by Emperor 102, dam Yorkshire May, she by Blooming Heather, dam Blondin, g. dam Fencole Lad, g. g. dam Forester. Welham, bred by John Lett, of Rillington, York, England, is rising five years old, sire Lord Lancaster, g. sire General Benefit, dam by Emperor 387, g. dam by Emperor 102. Entered in American Cleveland Stud Book. They have won prizes at the Toronto Industrial Exhibition, Brampton, Woodbridge and several other fairs in the years 1889-90, and at Winnipeg in 1891. Wel ham won first in the aged carriage class 16 hands and over Billington Lad, first in the three-year-old carriage class

CHRISTIE & FARES, EMERSON, MAN. The members of the above firm whose portraits adorn our illustration of prominent horse owners, are among the early settlers whose enterprise in live stock interests has not only helped Emerson district, but the province more generally They farm on a large scale, and are making a specialty of breeding standard-bred trotters. Their principal stallion, Wildmont, a prize-winner at the Winnipeg exhibition, was described in the FARMER'S ADVOCATE of October 1891. A son of the famous Egmont and out of Advance, a speed produc ing dam, he couples with such great trotting lineage, actual speed and the superb form, style and action that should characterize the true carriage horse. As might be anticipated, he is getting a lot of most superior foals. Among the brood mares owned by Christie & Fares are Jennie Balfour by Black Timoleon, he by Blackbird. They have two fillies out of this mare, one by Swift Current, the other by Wild mont. There are also Lady Bullock, dam of Trego, record 2,21; Madelon, by Geo. Sprague (record 2,21, and sire of ten in the 2.30 list), by Governor Sprague. In the latter young mare is united the blood that produced the mighty Stamboul Ruby, Bell, Bay and others. There is also Lady Hunt, and a number of others by such sires as Egmont, General Staunton Canada Southern, T. J. Logan, etc., besides a number of romising youngsters by Wildmont, and by sons of George Wilkes and other noted sires. At the Winnipeg fair their stock were first on two-year old stallion, second on yearling stallion, first on foal, second on single roadster in harness, and first for best four colts from one stallion Christie & Fares are this winter importing for sale a number of trotting-bred stallions and brood mares

#### E. H. E. WEBB-BOWEN, BRANDON, MAN.

Brandon has the honor of claiming another progressive norseman and successful farmer, a portrait of whom appears in our engraving-Mr. E. H. E. Webb Bowen, owner of the justly popular imported thoroughbred stallion Comrade illustrated and described at length in the FARMER'S ADVOCATE for September last. That a horse of such grand breeding individuality and stamina, should leave in his course foals of a superior type is not to be wondered at. Such horses are most valuable acquisition to any agricultural community. Mr. Webb-Bowen's stock was represented at the Winnipeg Exhibition, taking 2nd on Comrade, 1st on brood mare any age, 1st on brood mare with foal, and 1st on foal.

#### P. D. ROWE, BRANDON, MAN.

Another portrait in our engraying is that of Mr. P. D. Rowe, of Brandon, Man., an Englishman by birth, of some eight or nine years residence in the prairie province, an enerintelligent and enter prising horseman. His farm and stock barns are about three niles from Brandon. He is the owner of two superior Thoroughbred stallions, Picolo illustrated and described in he December Advocate) and Nuremburg, the latter a strong weighty horse of fine action that has had several successful years in the stud. Picolo is not only a good animal individu ally, but a race horse of great speed. These two stallions should, crossed with properly selected mares, tend to greatly improve the standard of horses in this locality. Nuremburg was a prize winner at the Winnipeg Exhibitic ran in a race a full mile on a half-mile track 1.481-2, the astest time ever made on a half-mile track in the Northwest

#### MR. J. JENKINSON, WINNIPEG. IMPORTER OF THOROUGHBREDS.

Mr. J. Jenkinson, of Winnipeg, whose portrait appears in our engraving, is a native of East Lothian, where he was long engaged in stock farming. He finally took leave of Scotland and some six years ago cast in his lot with Winnipeg and the prairie province, latterly embarking in the business of importing and handling English Thoroughbred horses. years ago he brought out three, a bay stallion, Bedford Lodge, now reported doing well in the stud near Prince Albert; a bay mare, Never Despair, owned by Mr. Lacelle near Regina, and a bay stallion, Sir Henry, now in Montana for whom his owner is reported to have refused \$20,000. Later importations were St. Emmanuel and Leon, which were purchased from Mr. Jenkinson by Mr. W. L. Puxley of Westbourne, Man. References regarding their breed of Westbourne, Man. References regarding their breeding, etc., appear in an article regarding Mr. Puxley's stock, Last of Mr. Jenkinson's stallions we note Regalis, a handsome chestnat horse. I6 hands high, of good substance and action, though not now in show condition, fooled in 1886, got by Springfield, his dam Wood Anenone, by King of the Forest, out of Crocus, by Thormanby. He was imported in May last, and If not sold will remain in Winnipeg for stud purposes in M season. At the Winnipog Industrial he was awarded first as a lour year old, also winning the diploma and Six as the best Thoroughbred stablion of any age. Dr. Santon, of Claude love, out., who was judge at the show writes in warm terms of Mr. Jenkinson's horses, which he comments as exceptly the Type now wanted in Canada. These horses and of course, all recerbed in the British Stud Bigok. Bissiles his cannot brooding Regalis has the speed, being in that Ascort to the Safe Tremma Stakes of 621 pounds stering, with twelve strictes, he look second; at Leicester was amplaced in the France of Wales stakes of 11,000 pounds stering, wen by Proneer. He has always run in first class races.

#### Veterinary Questions.

ANSWERED BY W. A. DUNBAR, V. S., WINNIPEG.

I have a cow which was served by the bull in July, she did not come in season again before December 30th, 1890. I also have a horse twelve years old. When I feed him red top hay, which grows beside the river, he is always taken bad. He kicks and jumps, and there is no holding him. I keep his yard clean and sheath. He did not want to roll the last time he was taken bad. We let him loose out side because he broke the door of a loose box.

#### SAMUEL GREEN, Yorkton, Assa., N. W. T.

1. Your statement regarding the cow is too vague and indefinite. It does not contain, and scarcely implies, a question. You do not state whether your cow was served by the bull in July, 1880, '89 or '90. If she was served in July, 1890, and did not come in season again until December of the sams year, there is nothing mysterious about it, as it is quite probable that the cow had been impregnated and had aborted without your knowledge. It is not, however, uncommon in cows and some other animals for that length of time to elapse between the periods of æstrum even when impregnation has not taken place.

2. The fact that your horse is taken ill after eating a certain kind of food, and at no other time, would indicate quite clearly that the food is the cause of his sickness, and I would advise you to withhold such food from him. The horse, however, may be suffering from chronic indigestion, and I would advise you to feed him ex. clusively on bran mash for at least sixteen hours, and then give him the following:-Barbadoes aloes, 7 drachms; ginger, pulv., 2 drachms; treacle, sufficient to form a ball. Give no hay while the purgative is operating. When purgation has ceased, give the following in a bran mash, morning and evening, for a week: Sulphate of iron, gention, pulv.; nitrate of potass, of each 1 drachm. Examine the horse's teeth.

#### Western Canada at the World's Fair.

The Dominion Government has taken time by the forelock in the matter of securing suitable samples of grains in the stalk and otherwise from the Brandon and Indian Head Experimental Farms, to be displayed at the World's Fair at Chicago, in 1893. Suitable selections of fodder and grasses will doubtless also be made. This is not only right from patriotic motives but desirable for Canada from a business standpoint.

Surely where work is already systematically in progress for a display of Northwest Indian wigwams, tomahawks, leather jackets and other aboriginal relics, there is need for still greater activity and co-operation along other lines, in order that no one sided or unfair representation be made of this essentially agricultural country, by means of which in the past the reputation of anada abroad has suffered no little injury.

The World's Fair of 1893 will probably attract such a gathering of foreigners as America has not before entertained, and their number will include commissioners from European and other countries, whose special business it will be to examine and report back upon exhibits made, particularly those of countries in which there are large areas of desirable territory for settlement. In this view, a good all-round representation, as far as practicable, setting forth the magnificent capabilities of this province, is most desirable, in order to make a proper and the best possible impression, and promote the continued settlement and development of this immense and highly favored land. The people will doubtless look to the provincial authorities to do their share in mainring and carrying out effective measures in this direction.

#### Prominent Ontario Sheep Breeders.

Our plate pages in this number are of more than usual interest, presenting as they do photoengravings of Ontario's best known and most popular sheep breeders. Many of our readers are familiar with some, if not all, of these gentlemen, and will appreciate our efforts to bring them more prominently before the public. Those of our readers who have not heretofore known all, may now become acquainted with each by means of the engravings and the short sketches we now present. If any of our readers desire to purchase pure-bred sheep of any breed, we can heartily recommend to such the breeders whose portraits appear on our pages.

#### COTSWOLDS.

has been breeding Cotswold sheep for thirty-five years. In 1871 he had a large and good flock of Canadian bred sheep, but that vear decided to add some imported animals to his flock. Accordingly, he bought two imported ewes from Mr. Arthur Johnston. The first year these ewes reared three ewe lambs and one ram. I'he next vear they reared five lambs. In 1872 Mr. Ward purchased and used the Duke of Burford, then a lamb, imported by Mr. Johnston, bred by Mr. Jacobs, England. After using him one season Mr. Wards old him to Mr. Wady, of Kentucky, for \$200. He previously paid \$160 for him. After showing him two seasons in Kentucky and adjoining states, Mr. Wady sold him to another Kentucky breeder for \$1,200. It is said \$1,600 was afterwards refused for him. This sheep possessed a fleece of wonderful length, finaness, evenness and beauty. He was long, large, showy and upstanding—just such a sheep as at that time caught the eye and fancy of the American buyers, but not thick and fleshy enough, nor possessing enough constitutional vigor to suit English or Canadian breeders of the present day. The next ram used by Mr. Ward was bred by Mr. Gillet, of England, and cost Mr. Ward \$150. About this time five ewes were bought from James Johnston, Cannington, the dams and sire of which were by Robert Jacobs, Gloucestershire, England. Next a ram bred by Mr. Arthur Johnston, and out of a Jacobs ewe was used The next ram used was bred by F. W. Hodson, sire his noted Gray Prince, winner of many first prizes at all the leading exhibitions in Canada and the U. S. A., including the Ontario Provincial, St. Louis Exposition, Indiana and Illinois State Fairs, besides all the leading exhibitions in Canada and the United States. The dam of Mr. Ward's ram was bred by Jas. Walker, Gloucester, England, and was a very successful prize-winner both in England, Canada and the United States, finally winning the silver medal in her class at the Centennial in 1876. The next sheep used was imported by James Main. Mr. Ward's flock now numbers 110, fort nnaily winning the silver medal in her class at the Centennial in 1876. The next sheep used was imported by James Main. Mr. Ward's flock now numbers 110, forty-three of which were imported by him last season, being selected in person from the flocks of the leading English breeders, and are an exceptionally good lot, both rams and ewes.

importer and breeder of Cotswold sheep, is a native of Devonshire, England, who emigrated to Canada about forty years are more and the property of the prizes and the property of the prizes and the property of the prizes and property of the design of the prizes and import for them, and has invariably given good satisfaction to those who have pince their orders with the best is none too good he will have only such as the property of the prizes and import for them, and has invariably given good satisfaction to those who have pince their orders with this possibly property of the prizes with the best is none too good he will have only such as come fully up to the them and the prizes with the best is none too good he will have only such as come fully up to the prize with the best is none too good he will have only such as come fully up to the prize with the best is none too good he will have only such as come fully up to the prize with the best is none too good he will have only such as come fully up to the prize with the best is none too good he will have only such as come fully up to a such as the prizes with the best is none too good he will have only such as come fully up to the prize with the best is none too good he will have only such as come fully up to a such as the prizes will not have full not handle inferior stock at any price. Believing that the best is none too good he will have only such as come fully up to a such as the prizes will not have a such as the prizes will not have a such as the prize will not have a such as the prizes will not have a

prizes at the great shows above named might fairly be called a clean sweep, though it was by no means a walk-over, the competition in Cotswolds being stronger than for many years previously. Mr. Main has some of his last importation still on hand, some of which he purposes to carry over for next year's fairs to be supplemented by another importation next summer. He also has young rams and ewes for sale at fair prices.

#### MR J. C. SNELL,

rams and ewes for sale at fair prices.

MR J. C. SNELL,

senior member of the well-known firm of John Snell's Sons, of Edmonton, Ontario, breeders of Cotswold sheep, has long held a prominent place amongst the advocates of this standard old breed. The Messrs, Snell may be fairly numbered with the pioneers in the introduction of Cotswolds into Canada, having secured a portion of the first importation of these sheep which ever reached the shores of this continent. This was in the year 1854, and built upon that foundation, strengthened at intervals by new importations from the leading flocks in Britain, the Willow Lodge flock has been steadily maintained to the present day without a break in a period of nearly forty years. The frequent importations which have been incorporated into the flock during these years have included a large number of the prize animals at the Royal and other leading shows in England, and it has always been the rule to maintain the use of first-class rams at the head of the flock. The records of the old Provincial Exhibition and of the late fair associations will show the high position this flock has held in the list of prizes won, and from the past few years selection from the Willow Lodge flock in the hands of customers of the Messrs, Snell have largely made up the list of winners at the great Western State fairs. Mr. Snell baving through a long series of years in the show ring made himself a continental reputation as a breeder of high repute has ceased to show his stock at the fairs, but makes a point of preparing a good lot every year for his customers to show in their different provinces and states, and most of his sales are now made through orders, his patrons trusting his judgment and integrity to filt the bill for them, and so great has been the demand for Cotswolds during the past year that it has taxed the flock to its utmost to supply them; indeed several orders for ewes have been returned as they could not be spared without weakening the flock below the standard to which it is ai

### MR. JOHN PARK'S

flock of Cotswolds was established in 1870; since that date nothing but the choicest imported and registered rams have been used. These have been principally selected from the pens of Mr. J. C. Snell and Messrs. Laidlaw & Jackson. During the last five years Mr. Park has won upwards of 700 prizes with his sheep. His flock at present numbers 40 beard.

#### WM. THOMPSON, ESQ.

Mount Pleasant flock of Cotswolds, the property of Mr. Wm. Thompson, Esq., was founded about twenty-five years ago, when he began sheep-raising with a few fairly good Cotswolds. He always kept in use rams bred by such breeders as Snell of Edmontor, and Stone, of Guelph. About seventeen years ago he bought an umber of imported ewes and a ram, keeping only the best ewe lambs for breeding. Again in 1877, along with his brother, he imported several from such flocks as Jacob's, Tom's a d Gillett's. Those first imported were f om the Walker flock. Since then he has always used rams bred by Jacob's, Ecker and Gillett, until the present year, when he imported another bunch which came from the flocks of Bagnal', Hu bert and Gillett's, several of these, and also those of the former importations, being winners of prizes at the Royal shows in England. The flock numbers now about sixty head, all of which are registered. Ever since beginning to raise sheep he has shown at local fairs, and always carried off a good share of the prizes. This year he showed at the Toronto Industrial in company with Mr. Ward, and at the Peterborough Central and Lindsay Central, winning at the latter two all the prizes, while at Toronto he won first on shearling eves and third on ewe lambs, also second on shearling ram and third on ram lamb, also second on the pen. At the North Ontario county fair held in Uxbridge he took first on shearling ram, and first and second on ram lamb; also first on aged ram, first again on shearling ewes, second conewe lambs and a ram of any breed, he took first. Since beginning to breed sheep he has shipped them to all parts of Ontario, and to different parts of the U. S. A. even as far west as Oregon. Mount Pleasant Farm is situated about three miles north of Uxbridge, a thriving town through which passes the Midland Railroad.

arge importation of Lincolns and Shropshires, and since then by smaller importations. Both the above breeds were for several years shown at the provincial fairs in Ontario by Mr. Geary with success, having carried off a great many prizes, medals and diplomas. Many breeders, both in Canada and the United States, have drawn largely from these flocks for their show sheep.

#### MESSRS. WM. WALKER & SON'S

flock of Lincolns was established in 1840. It now numbers 50 head of imported and Canadian bred sheep. The first direct importation from England was made in 1853, and comprised one ram and seven ewes. Since that date stock rams have been imported every two or three years. In 1897 two rams and four ewes were imported. In 1890 further additions were received from England. Ever since the foundation of the flock it has been very successful in the show ring. In 1891 representatives from this flock won a large share of the prizes offered to this class at the Toronto Industrial and Western Fair. At the latter they carried off the bronze medal for best flock of sheep any breed. On September 11th, 1891, the show flock was weighed. A yearling ram tipped the beam at 324 pounds, a ram lamb 168 pounds, a breeding ewe 236 pounds, and a ewe lamb 154 pounds. pounds.

#### MR. WM. OLIVER,

the well-known breeder and exhibitor of Lincoln sheep, resides on the farm taken up by his father nearly fifty years ago, who soon after commenced to breed improved sheep. About thirty years ago six Lincoln ewes and two rams were received from Mr. Thomas Wilkinson, of Dumfriesshire, Scotland. The progeny from this importation was bred to rams imported from the flock of John Bellirvew, Lockerby, Scotland, up to the year 1881. Since that d. te the rams have been bought from Mr. John Gearv, of London. Mr. Oliver writes that the demand for Lincolns is very good, frequently greater than he can supply.

#### MR. J. T. GIBSON

MR. J. T. GIBSON

was born in England, emigrated to Canada in 1860, but returned again to England. He has had much experience both in Canada and the U. S. A as a breeder of Lincoln sheep. He was manager of the New York Mills farms some years, and later for Colonel King. of Minnesota. At each place Lincolns were bred. He visited England in 1891. After inspecting the flocks of several of the Lincoln breeders, he selected a number of choice specimens from the flock of H. Dudding, which is said to be the largest and best in England. The ram selected was, Mr. Gibson thought, the best that could be bought, in fact he experienced considerable difficulty in persuading the owner to put a price on him. Mr. Gibson also choose what he thought were the best from among a flock of 700 breeding eyes. A number of the ewes selected were in lamb by a ram for which Mr. Dudding paid \$525, the highest price paid in 1890 for a Lincoln ram. The balance of the ewes bought were in lamb to a very large upstanding sheep, which has since won the first prize at the Royal Show of England. Mr. G. now has one ram and four ewe lambs got by this ram. ram.

#### LEICESTERS. MR. WM. WHITLAW,

one of the most highly respected Canadian breeders, came to Canada from Mertoun, the home of the celebrated Border Leicesters of Lord Polewarth. He was naturally partial to that breed of sheep, so in the year 1841 or 1842 he bought from the late George Millar, of Markham. a young Leicester ram to improve his then small flock of ewes, and some years afterwards bought another ram from the same gentleman; after that he bought from various breeders the best rams he could find until the year 1871, when, being in Scotland on a visit, he brought home with him to Canada 12 shearling ewes and 4 rams. Some two or three years afterwards he made another importation of rams, and has continued importing at intervals ever since. The last importation made, four years ago, was five shearling ewes from the flock of Lord Polewarth; also two shearling rams from two of the most noted breeders of Border Leicesters in Great Britain. His present flock consists of about 50 breeding ewes, besides a number of ewe lambs and ram lambs, which he intends to keep for shearlings. In a recent letter he says:—"I have always had a good demand for my sheep; greater at times than I could supply."

doubt grow in favor in Canada. The entire flock now numbers 76. Mr. Kelly writes that he has not sold an animal for breeding purposes since 1883 for less than \$30. In 1890 the sheep sold by him averaged a little over \$38: in 1891 the average was \$43. The success of the flock is the show rings of Canada and the United States has teen phenomenal. At the principal exhibitions te has won no less than 33 sweepstake prizes given for best pen, often winning the first and second. The prizes won in the various sections are correspondingly numerous. Among Canadian live stock breeders there are few indeed who understand the science of producing and rearing good stock as well as Mr. Kelly. He is a breeder, not a dealer. His judgment on all matters relating to his business is to be relied upon, and his honesty is unquestionable.

#### OXFORD-DOWNS.

MR. PETER ARKELL'S

MR. PETER ARKELL'S
flock of Oxford-downs was founded in 1880 by an importation of fifty head selected in person from the renowned flocks of William Arkell and Charles Hobbs, of Gloucestershire, England. Since then he has made six importations of the best he could find, including the first prize pen of shearling ewes at the Bath and West in 1883, the second prize Royal winners at Norwich, and the second prize pen of shearling ewes at the Royal Show held at London in 1889. He has been a very successful exhibitor, his flock winning seven silver medals and over thirty diolomas and pen prizes. His flock was also awarded the gold medal given by the American Oxford-down Record Association at the Toronto Industrial for the best flock of Oxfords, and the silver medal given as a sweepstake prize at the Central Canada Exhibition held in Ottawa in 1890, for best pen of any breed. The flock consists at present of 150 head. During 1891 there was sold upwards of sixty head which were scattered over all parts of Canada and the United States. The demand for Oxfords this year was greater than ever before, exceeding the supply.

JAS. TOLTON.

#### JAS. TOLTON.

was born on the 21st of January, of the year 1839, in the township of Eramosa, in the county of Wellington, within about four miles of the then village, but now the Royal City, of Guelph. Residing with his father (who kept a flock of Leicester sheep) on the farm until the year 1861, when having heard through the press and otherwise of the natural productiveness, and the comparative ease of the cultivation of the prairie lands of the Western States, he determined to see them before settling down for life, and visiting and remaining in different parts of the States of Illinois and lowa for two years. Returning he commenced to make himself a farm out of the bush in the township of Brant in county of Bruce. As soon as some of the bush was cleared away, and the land under grass, he commenced to keep sheep, starting with a small flock of Leicesters, then, as well as now, a very popular breed. Soon after this a brisk demand having sprung up not only in Canada but also in the U.S. A. for the Cotswold, then a comparative new breed of sheep in America, he commenced a flock of this breed by the purchase of a few ewes from the late Thos. Arkell, Esq., of Arkell, continuing to keep both breeds until 1881, Mr. Peter Arkell, of Teeswater, the veteran breeder of Oxford-down sheep, in that year having made his first importation of Oxfords of this, then quite new, but since getting to be a popular breed of sheep, Mr. Tolton Teeswater, the veteran breeder of Oxford-down sheep, in that year having made his first importation of Oxfords of this, then quite new, but since getting to be a popular breed of sheep, Mr. Tolton being pleased with the sheep made a small selection from this importation of two shearling ewes and a ram lamb, thus founding his present flock. Mr. Arkell making a second importation the following year, he made another selection of two shearling ewes, and in 1883 making another selection of a shearling ewe and a ram lamb out of an importation made by Mr. Arkell in that year. In the year 1890, his eldest son went to England and brought out for his father's farm, forty shearling ewes and four rams of this breed, amongst them being the first and second prize pens of shearling ewes and first-prize shearling ram at the Royal Show of that year, the same sheep also being the winners of the sweepstakes over all breeds in their respective classes at the Oxford show. The flock now comprises upwards of forty breeding ewes, making with the ewe lambs on hand, and a few ram lambs unsold, a total of seventy-five.

HENRY ARKELL,

#### HENRY ARKELL,

Farnham Farm, Arkell P. O., pioneer importer and breeder of Oxford-down sheep, whose farm of three hundred acres is situated in what is called "The Plains of Puslinch", five miles from the city of Guetph, and five minutes walk from Arkell station, C. P. R. and G. T. R. It is the family homestead, his father, the late Thomas Arkell, settling there in 1831. He was a successful breeder of Shorthorn cattle and Cotswold sheep for many years, and the subject of our sketch has all his life been among high class stock. His first importation of Oxford-downs was in 1881, and comprised eight ewes and ten rams. In the following year he imported lifty ewes and fifteen rams, and since then an occasional ram, until 1891, when Mr. Jas. Main selected and imported for him fourteen ewes and three rams, among them being several Royal winners. He exhibited those at Toronto, Montreal and Ottawa, where he won many honors, including the pen prizes, amid very strong competition in Toronto. Mr. Arkell has not exhibited until this year since 1886, when he was also very successful at Toronto, 'the Provincial',' and at Guelph. Again in 1881, 1882 and 1883 his sheep won many prizes at Toronto, Loudon, Guelph and Provincial at Kingston. In 1887 he sold his show flock to Frank Wilson Jackson, Mich., in whose hands they won the pen

prize at Michigan State Fair, Toledo, Ohio, and at St. Louis, also sweepstakes for ram and five of his get. Each year since 1888 Mr. Arkell has sold to George MacKarrow, Sussex, Wis.. a show flock, with which Mr. MacKarrow has captured a large number of prizes at many of the leading fairs in the U.S. Mr. A.'s flock was founded on importations from the flocks of Messrs. Hobbs, Arkell, Brassey and Adams, well known British breeders.

#### SHROPSHIRES.

J. & J. SMITH'S

J. & J. SMITH'S

flock of Shropshires was established in 1888 by an importation of twenty-five ewes, chiefly from the flock of Richard Thomas, Shrewsbury, England. It has now increased to ninety-five head bred from this importation, and a few valuable ewes from the flock of Jno. Miller & Sons, Brougham. The young stock are sired by Royal Uffington 11116, bred by Arthur Gibson, Nottirgham, England. This ram has proved a valuable sire, and was sold to the States for exhibition at the fall fairs. He has been replaced by a fine imported ram, bred by the Messrs. Bradburne. The Messrs. Smith are natives of Cumberland, England, where they formerly carried on a farm of 400 acres. In 1879 Mr. Smith, jr., emigrated to this country, and immediately engaged as head herdsman at Bow Park, where he continued until May 1891, when he joined his father who had previously established a flock of Shropshires as above mentioned. Their flock has already become noted because of the large size and fine quality of the lambs each year exhibited at Ontario's leading exhibitions by the proprietors. proprietors.

W. H. BEATTIE.

Shropshire Park Farm, the property of the above named gentleman. is situated four miles south of London, Ont. Mr. Beattle commenced breeding shropshires in 1878. He made his first importation from England in 1887. Each year since that date he has made large importations, selecting the animals in person from the test British flocks. That good judgment has been used in choosing his stock has been shown by its success in the show ring. Animals selected by him have been very successful winners, not alone in Canada, but also in the U.S.A. His flock, among other honors, has captured the first prize given for the best flock of Shropshires at the Western Fair for three years in succession, viz., in 1886, 1887, and 1888; in 1891 besides many other prizes they won the same high honor at the Detroit International Fair, as well as sweepstakes given for best ewe. This flock is one of the largest in Ontario, numbering 94 head, 75 of which are ewes in lamb, nine are ewe lambs, seven ram lambs and three imported rams.

#### MR. R. GIBSON'S

flock of Shropshires are principally imported, and number about 40 head. They are even in quality and very well bred. Three imported rams are kept so that suitable crosses can be made. Burwell Prince, a royal winner, is one of these rams. No reasonable expense has been spared in laying the foundation of this flock. Nothing but choice specimens have been imported, the best of each importation being retained by the importer.

#### MR. J. P. PHIN,

of Hespeler P. O., Ontario, was born in the township of Waterloo in 1841, in which township he has continued to reside ever since. His father, a native of Roxboroughshire, Scotland, emigrated to Canada and settled in the wood of Waterloo in 1832. Mr. P. was brought up on the farm, and has been engaged in agricultural pursuits all his life, except three years (in early youth) spent in teaching the public school in the S. S. in which his father resided. He has had considerable experience in public affairs, having been a J. P. for over twenty years, school trustee, superintendent, member of the County Board of Education, license commissioner, reeve of the township for several years and warden of the county in 1890. Mr. Phin has always been an admirer of good farm stock of all kinds, preferring to see a good show of animals to the best equipped circus or best rendered theatrical performance. He is now making a specialty of importing and breeding Shropshire sheep. His flock, which was started in 1881 by an importation bred by the Earl of Zetland, now Lord Lieut., of Ireland, consists of over sixty breeding ewes, mostly imported, selected carefully (some of them personally) from the flocks of some of the most noted breeders in England, such as Mr. Bowen Jones, President of the English Shropshire Down Association; W. Thomas, Alfred Tanner, R. Barber and Mr. J. E. Farmer. Mr. Phin reports his sales as very satisfactory for the past season. He has still some ewe lambs and a few ram rambs for sale, His flock is always open for inspection, and visitors are made welcome. of Hespeler P. O., Ontario, was born in the town-

W. D. REESOR'S

flock of Shropshires was added to the well-known Elm Park Jersey herd in the winter of 1889, by the purchase of ten selected imported ewes from the well-known flocks of T. & S. Bradburne, Thomas Dickens and M. Williams, a number of them being daughters and grand-draughters of the great ram The Rector 1769, E. F. B., and all in lamb to Messrs. Jno. Miller & Sons' first prize ram at Toronto of that year. In the spring of 1890 he had the good fortune of raising eighteen lambs, selling the ram lambs and keeping the best of the ewe lambs to add to the flock, Mr. Reesor, being so impressed by the hardiness of the Shropshires, that he concluded to add still more to the flock, which he succeeded in doing by securing five very fine shearlings, bred by Mr. H. Williams, and in lamb to the prize-winner Royalist, in addition to above. Mr. R. also secured ten more imported shearlings from the flocks of Joseph Everall, R. Jones and T. & S. Bradburne, and had them all served by Binningham, 1st at Toronto in 1890, As may be supposed from such sires as Royalist and Binningham, good lambs were to be expected, but the result was ahead of expectations, and Elm Park flock showed as even a lot of lambs of extra quality as could be found among any of the older breeders. Since disposing of the ram lambs and a few ewe lambs, the flock goes into winter quarters in fine condition, numbering some flfty head. Though this flock is comparatively young we must say it has been started right, and from present appearances must rank among the best in Ontario.

W. S. HAWKSHAW.

The Shropshire flock belonging to Mr. Hawkshaw W. D. REESOR'S W. S. HAWKSHAW.

The Shropshire flock belonging to Mr. Hawkshaw The Shropshire flock belonging to Mr. Hawkshaw was started ten years ago, but a few years ago, seeing the demand for a better class was on the increase, he visited England with the object of buying the best, and brought out a consignment of the choicest ewes from some of the leading flocks, since that time his sales have doubled themselves every season. Sheep from his flock can be found in most of the neighboring states and from Halifax to British Columbia in the Dominion. He has now a large flock of imported ewes in lamb to the stock ram which proved himself a grand sire last season.

MR. D. G. HANMER,
of the firm of D. G. Haumer & Sons, has given particular attention to sheep breeding for twenty-five years, the last ten of which has been devoted to the production of high class Shropshires. The present flock was founded from an importation selected from the flock of Mr. Evans, of England. Yearly additions have since been made from some of the following British flocks:—Bradburne's, Barber's, Evereil's, Nevell's, Blautern's, and Sir Wm. Ward's. Messrs. Hanmer's flock numbers over 60 head, and has won over 200 prizes at Ontario exhibitions during the last five years. Mr. G. D. Hanmer writes:
"The success of our sheep is largely due to the attention of my son James H., who will in future have the chief management of the flock, and will spare no pains in keeping it up to the present high standard." Mr. H. and his sons occupy a high place among the sheep breeders of the Dominion. MR. D. G. HANMER,

#### JOHN MILLER

JOHN MILLER
came to Canada in 1835, bringing with him sheep and pigs. Shortly afterwards Shorthoms and Clydesdales were added to the other breeds of pure stock. In 1865 Shropshires were tried, but the fleece was then getting nearly all the attention from the breeders of sheep. Quality of mutton was so little thought of that no medium wooled sheep would pay. Cotswolds were bred and imported extensively until the people were ready for a change. This season their importation of sheep was the largest that came to America, containing animals that won more premiums at the leading shows in Canada and the States than have ever been won by the animals of one importation. They have also imported the whole of the bull calves and half the heifers from the Cruickshank cows still in Scotland, except one bull calf retained by Mr. Duthie. These cattle are now in quarantine at Halifax, and will be home about the 20th January. They now have 40 horses, 70 Shorthorns and 260 Shropshires. Shropshires.

#### SOUTHDOWNS.

MESSRS. ROBERT SHAW & SONS

are the owners of the Glanford Station Flock of Southdowns which was established in 1856, and from that date until the present it has been the am from that date until the present it has been the aim of the proprietors to breed only from the best. The first importation was made by this firm in 1883 and comprised one shearling ram and six yearling ewes. Since that date several selections have been made from the most noted flocks of England. At present the flock is headed by the imported ram Duke of Cambridge 2944, bred by Mr. Geo. Jonas. Ever since its establishment sheep from this flock have been among the successful winners in their class at the leading Canadian shorts. the leading Canadian shows.

#### MR T. C. DOUGLAS

founded his fine flock of Southdowns in 1869. The present high standard has been maintained by careful breeding and occasional purchases of selected animals from the best flocks in Canada, and subsequently by frequent additions drawn from such English flocks as that of H. R. H. the Prince of Wales, Messrs. Jonas, Colman, Lucas and Ellis. The rams used in the flock have always been of high individual merit and breeding. At present the flock numbers 35. The rams now in use are an imported two-shear, bred by Mr. Jonas, the winner of ten first and five second prizes. The sweepstakes yearling ram at the Bath and West of England Show and at Detroit in 1891, bred by Mr. Ellis. Also a ram lamb of grand character, bred by Mr. Lucas. This last is also a prize-winner.

#### MR. ANDREW TELFER.

Mr. Andrew Telfer (of A. Telfer & Sons), of Springfield Farm, Paris, came from Scotland in the year 1845 with his parents, and settled along with them 1845 with his parents, and settled along with them on the farm where he now resides, on the banks of the Grand river, two and a-half miles north-east of Paris. He commenced breeding Southdown sheep over thirty years ago. During the last five years he has secured over 350 prizes at the leading fairs of Ontario. The breeding flock consists of about thirty head, selected principally from the noted flocks of Messrs. Jonas, Colman and Ellis, England. A stock ram, the Duke of Summersbury, bred by Mr. Edwin Ellis, stands at the head of the flock.

#### MR. JOHN JACKSON.

The Woodside flock of Southdown sheep, the property of Mr. John Jackson, has been established thirty years. It now numbers 55 head of breeding thirty years. It now numbers 55 head of breeding sheep. It has been entirely renewed in the last twelve years by importations of rams and ewes from the most fashionable flocks in England. In the last three years at the largest shows in the United States and Canada sheep from this flock have been awarded 156 first prizes, being 94 per cent. of all offered. During the last twelve years they have won over 1,200 prizes, including a large number of diplomas, sweepstake and champion prizes for best flock. Also a champion silver cup and ten gold and silver medals. The importations have been from the flocks of H. R. H. the Prince of Wales, Messrs H. Webb, Geo. Jonas, J. J. Colman, Chas. Chapman, F. M. Jonas and Edwin Ellis. The stock rams at the head of the flock the present season are the noted prize-winners Norwich Beau 2919, and Ellis No. 84 Mr. Jackson takes pleasure in showing his flock to all interested in this famous breed of sheep. Orders are now being booked for next season's trade. The aim of the proprietor is to supply to his customers at moderate prices sheep possessing the highest individual merit and good pedigrees combined.

#### HORNED DORSETS.

JOHN TAZEWELL,

is of the firm of Tazewell & Hector. These gentlemen are the largest breeders of these sheep in America. They have been importing and breeding America. They have been importing and breeding them for the last nine years. Their flock now numbers 140, all of which were selected from the pens of the leading English breeders of Dorsets. Many of the animals in this flock have been successful prize-winners both in England, Canada and the U. S. A. Mr. Tazewell is an Englishman reared in Somerset, where he resided until about ten years ago. He has had a long experience with the sheep of his choice. Knowing intimately many of the best English flocks he was in a position to secure the best specimens. Mr. Hector, his partner, is a Canadian, a gentleman of pleasing address and upright character.

#### JOHN A. MCGILLIVRAY, Q. C.,

Toronto, has for the last seven years, in addition to practising his profession, carried on farming on his farm adjacent to the town of Uxbridge. During these years he has reared Shropshires, Cotswolds, and Dorsets, experimenting with a few to discover which he would select as most suitable. He concluded, finally, to keep the Dorsets, and for the last five years has bred nothing else. He considers them hardy, easily kept, and very prolific. He has now a flock of fifty-eight, at the head of the flock being Dougall, a shearling which he bought from Mr. Beattie, his importer, for the sum of \$125. Of his sheep about forty are imported. He has great confidence in his favorites, and proposes to keep at least 100 breeding ewes. these years he has reared

#### MERINOS.

G. & B. DEO,

Messrs. G. & B. Deo, Evergreen Stock Farm, are importers and breeders of the highest type of registered American Merino sheep. They exhibited this fall at Toronto, Montreal, Ottawa, London and other fairs, taking over 90 prizes, including 38 firsts, 39 seconds and 5 diplomas, capturing all the diplomas offered. They started breeding registered Merinos by purchasing the prize-winning flock of Mr. Rock Bailey, Union, Ont., which was established by Mr. Bailey's careful, personal selections from such noted flocks as A. D. Taylor, Goyer Bros., Partch's, Beal's, Deihl's and Randall's, of Michigan: J. W. Peck, of Vt., and L. E. Shattuck, of Mo. These trace back to the flocks of H. Taft, Batavia, N. Y., and F. H. Dean, of Vt., Mr. Dean being one of the greatest importers of the Spanish Merino. The flock also traces direct to the earliest importations made by Col. Humphries, Jarvis, Crowinshield. Cuff, Heaton and Cook's flock. This flock is recorded in the Michigan Sheep Breeders' Association as flock No. 298. this fall at Toronto, Montreal, Ottawa, London

#### PAT SHEEP.

MR. JOHN RUTHERFORD

so well known as the most successful exhibitor of fat sheep on the continent, commenced to breed Leicesters and Lincolns in 1864. In 1881 he took another farm, and on it he commenced to breed Southdowns. At various times he has imported Hampshires, Shropshires and Cotswolds. Each yearhefattensspecimens of each of the above breeds.

He now keeps all the breeding stock on one farm, and those being fattened on another. Mr. Rutherford has been an almost continuous exhibitor of fat sheep since 1864, and has won the sweepstakes in his class at all the provincial fat stock shows but one. He commenced to exhibit at the American Fat Stock Show in 1885, since then he has won at the annual shows held at Chicago 123 first prizes, 65 seconds, and 42 thirds, 20 sweepstakes given for best animal of each of the various breeds, 25 sweepstakes for best wether, and each year for the heaviest sheep, and also for the one making greatest gain per day. Six times he has won the prize given for best carcass, and twice the grand sweepstake for best carcass any breed—1887 a Leicester yearling won this coveted honor, and 1891 a Southdown yearling was successful.

#### Wisconsin Farmers' Institute.

BULLETIN NO. 5.

We have just received a copy of bulletin No. 5, issued by the Wisconsin Farmers' Institute. We could not help comparing it with the report of the Central Farmers' Institute of Ontario which we recently received, and which falls very far behind the splendid volume issued by our Wisconsin friends. The following is a partial list of the topics and speakers :-

"The Dairy Temperament in Cows," ex-Gov. W. D. Hoard; "Science and the Clover Patch," "Wisconsin System of Agricultural Education," Prof. W. A. Henry; "Shall We Have Pure Food?" Hon H. C. Thom; "The Construction of the Silo," Prof. F. H. King; "Manure and Fertility," "Sheep Husbandry," Grain Raising," George McKerrow; "Plowing, Cultivation and Tillage," Thomas Convey; "Swine Husbandry," A Selle; "Hog Pens," George Wylie; "Noxious Weeds," W. H. Cole; "Pastures and Meadows," "How I Feed Dairy Cows," Buttermaking on the Farm," C. P. Gooderich; "Cheese Making," T. J. Flemming, W. H. Phiilips; "Advantages of the Creamery," N. G. Williams; "Creamery or Cheese Factory?" S. Faville; "Steps in the Progress of Extracting Butter Fat from Milk," J. A. Smith; "Potato Raising," George Martin; "Common Sense in Farming," A. X. Hyatt; "Now and Then in Farming," T. J. Van Matre; "The Farmer's Reading," Frank S. Grubb; "Public Highways," Dr. S. L. Marston; and a number of others pertinent to the occasion.

We would advise our readers to obtain copies of this work. Apply to W. H. Morrison, Madison, Wisconsin, U. S. We notice that 12 cents in postage was required to bring the volume to us. At least that sum should be enclosed by each applicant.

### The Mulberry as a Wind-Break.

To the Editor of the FARMER'S ADVOCATE.

Sir,-Having read the article, "Poplars and Willows for Manitoba and the Northwest," in the December number, I beg leave to suggest an opinion that the Russian mulberry would make a good wind-break. 1. It is said to be hardy in Manitoba and the Northwest, and hardiness is the first requisite. 2. It is easily propagated. hence the plants are cheap enough in quantities. 3. It is tenacious of life when once rooted. 4. It grows rapidly in fairly fertile soil. 5. It grows with low branches when unpruned, and when pruned the limbs droop some what. 6. It will grow quite tall and with interlacing branches, with numerous small limbs, making a dense shade when planted close together. 7. It affords fruit that is much relished by our feathered friends, as well as shelter for their nests. These seven reasons in its favor are worthy of attention. What are its most prom-

#### Our Scottish Letter.

INBREEDING.

In the annals of scientific investigation the name of Charles Darwin will ever occupy a prominent, if not the first, place. The patience with which he prosecuted experiments during lengthened periods of time, the breadth of the area within which he collected his facts, the shrewd inductions which he derived from these facts, and above all, the modesty, that unfailing test of true greatness, with which he advanced his opinions, entitle him to rank as one of the greatest benefactors of the race, and especially of all who are dependent on or interested in the rearing of stock. His views, therefore, on that method of breeding which has proved the most potent of all means in developing our modern breeds, are worthy of careful attention, and in now giving some notes as to what these views were I am not to be regarded as identifying myself with opinions and results which have sometimes been asserted to be the corollary of Darwin's investigations and opinions. I merely wish to state, as clearly as I may, what I have gleaned from various quarters regarding these

It has often been a source of speculation to us whether a herd of wild horses would exhibit so much variety of character as an equal number of the same genus in the domestic state; and it is interesting to find Darwin setting forth that as a matter of fact animals in the domestic state are marked by a greater variety of individual characteristics than those in the wild state. Changes can be made in the conformation and constitution of animals when in captivity in a way that one never sees in wild animals. The size can be increased apart from all other considerations by the amount of food that is consumed. The same race of animals in the plains of South America and in the Falkland Islands vary in size; and the further north, as well as the further south we travel, animal life becomes more and more stunted. Iceland ponies are smaller and less comely than Shetland ponies, and the latter cannot be kept down to the desired size on the more luxuriant herbage of the low country so easily and so surely as on their native heather. The Clydesdales of the bleak western islands of Scotland-Mull, etc., cannot be grown to the same size as in the Lowlands of Galloway; and Clydesdales reared in the Midlands of England are larger than in the Highlands of Scotland. The pasturage accounts for most of the difference. The color of a race can also be modified by the nature of the food on which its members are reared; and as we all know the thickness of the skin and hair is greatly affected by the climate. It is not an exaggeration to say that placed under the same climatic influences, the Galloway and the West Highlander would soon become as thin and soft in the skin as the Aberdeen Angus or the Shorthorn, and vice rersa; and it is easy in a spring show yard to distinguish the animal that has been wintered out and the one that has been reared in the house. This susceptibility to change from comparatively simple causes when carefully observed may become a most important factor in the improvement of a breed.

There is, however, a more powerful means of improvement at hand. The influence of environ-

ment is greater than may sometimes be supposed, but there can be no gainsaying the influence of heredity. On this point it is of importance to note, that inheritance of every characteristic should in Darwin's opinion be the rule, and noninheritance the anomaly. Why, then, it will perhaps be asked by some unfortunate breeder, does it happen that the anomaly is so painfully in the ascendant? Perhaps it is because when one is engaged in improving an indifferent race by the use of a member of an improved race, he is very apt to forget that both parents have influence, and unless he has been careful in selecting a representative of the improved race, not improbably the influence of the older and inferior race may be the stronger. The wish here may be father to the thought. The desire is to reproduce the features of the better animal, and the thought is that these will certainly be produced. Hence the disappointment when the opposite result is obtained. Another source of disappointment is to be found in a mistaken notion that by crossing two animals one may infallibly secure progeny having something of the nature and characteristics of each. That is to say, one mates a very fine animal with an indifferent one, and looks for produce better than the worst, although probably not so good as the better parent. Regarding this Darwin says :- "Many cases are on record showing that a race may be modified by occasional crosses if aided by careful selection of the individuals which present the desired character; but to obtain a race intermediate between two quite distinct races would be very difficult. Sir John Sebright experimented with this object and failed. The offspring from the first cross between two pure breeds is tolerably and sometimes (as I have found with pigeons) quite uniform in character, and everything seems simple enough; but when these mongrels are crossed with another for several generations, hardly two of them are alike, and then the difficulty of the task becomes manifest."

How then, it may be asked, is improvement at all to be brought about ! It is for one thing clear that a violent cross will fail, and it is further clear that breeding from the result of a violent cross will also fail. Price, the great Hereford improver, has placed the opinion on record that he never arrived at any good result by crossing a medium-sized cow with a very heavy, large bull. All such experiments signally failed. The one safe method is to advance step by step; the American word "grade" is in this connection most apt, and he who uses mediumsized Clydesdale sires on Morgan or Texas mares will reach the goal more speedily than the breeder who uses great gross horses, which undoubtedly have their uses but are out of place in attempts to improve stock. An inbred sire is always the most impressive. There is, however, a danger to be guarded against in the use of such, and concerning it Darwin gives no uncertain warning. He says that having collected a large body of facts, and made so many experiments, he has arrived at results which show in accordance with the almost universal belief of breeders, that, with plants and animals, a cross between different varieties, or between individuals of the same variety, but of a different strain, gives vigor and fertility to the offspring, whereas on the other hand he has found that close interbreeding diminishes vigor and fertility. He, | therefore, concludes that it is a general law of a perpetuity of generations, but that a cross with other individuals is occasionally, although perhaps at long intervals, indispensable.

No doubt the naturalist has in these words chiefly in view such extreme cases as those of hybrids and hermaphrodites, but in another place and in further development of the same line of reasoning, he says: "Both with plants and animals, there is the clearest evidence that a cross between individuals of the same species which differ to a certain extent, gives vigor and fertility to the offspring; and that close interbreeding continued during several generations between the nearest relations, if these be kept under the same conditions of life, almost always leads to decreased size, weakness, or sterility."

These opinions, although stated in quiet language, are not the less on that account strongly put, and it is interesting to find that the writer at a later stage, so far from modifying these opinions seems to have found himself under the necessity of stating them with even greater point. In an interview with a prominent breeder, towards the close of his life, he said that the prevention of free crossing-by which, I suppose, he meant breeding within herd or stud book lines, and the matching of individual animals whose relations to each other were thoroughly understood were the cornerstones of the breeders' art; but he added that with the evidence before him he was convinced that it was a great law of nature that all organic beings profit from an occasional cross with individuals not closely related to them in blood, and that on the other hand long continued interbreeding was injurious. Close interbreeding, he thought, might with some animals be carried on for a considerable period with impunity by the selection of the most vigorous and healthy individuals, but sooner or later evil would follow. The visibility of the evil effects might not in such cases be readily recognized because the deterioration was gradual, but of its existence there could be no doubt. Barrenness was one of tion manifested itself, and blindness and idiocy has also been known to result from prolonged inbreeding. Now, of course, it would not be difficult to show that many very eminent breeders, whose praise is in all the histories, have acted on lines contrary to those suggested by Darwin's views, but I question whether there has been such a general departure from his principles as on the surface might be supposed. For example, it must not be overlook that he includes the similarity of the conditions under which inbred animals are reared as one of the determining causes towards the deterioration against which he warns us. I would understand him to indicate by that, that good results might flow from the mating of an inbred male reared in Aberdeenshire with an inbred female reared in Galloway or Yorkshire, even although they were of the same family and closely related. Change of air is a most important element in promoting convalescence, and it is an illustration of the same law, although we might regard it as operating in an opposite direction, that certain animals although in perfect health will not breed in captivity. Farmers and gardeners are frequently found changing seeds, tubers, etc., from one soil or climate to another, and back again, and in this way without any interference with the individual seed or plant interested its nature that no organic being fertilizes itself for | health and constitution may be strengthened.

I have not a sufficiently intimate acquaintance with Shorthorn history to warrant me in affirm. ing that this actually was the means whereby the Aberdeenshire Shorthorns were improved as they have been; but it seems to me from the little that I have read that the conditions under which they have been reared have had a great influence in determining their highly appreciated characteristics.

The testimony of Mr. Richard Booth in favor of the principle of line-breeding is an interesting contribution to the discussion. He said : "It is clear that the only consideration which would justify me in having recourse to a cross would be the discovery of a tribe which, besides possessing in an equal degree with my own the good qualities we have been aiming at, are superior to them in utility and symmetry. Where is this tribe? The result of the last three crosses upon which I ventured-Walter King, Exquisite and Lord Stanley-has made me distrust the policy of any further step in that direction. Nor have the results I have witnessed of the experiments of others in crossing animals of my blood with the most fashionable bulls of other strains tended in any instance to remove that distrust." These opinions are not to be confounded with the foolish utterances of gentlemen who are unable to see merit in any animals but their own, They are the matured views of a gentleman who was not averse to experiment, who as a matter of fact did experiment with outside crosses, and as such they must be carefully weighed and compared with Mr. Darwin's views. I imagine that the more one reflects on the whole question the less disposed will he be to dogmatise; and while it is impossible at this time to give the reasons for the view, I cannot close without declaring that after a careful investigation the conclusion has gradually taken shape in my mind that Clydesdale breeders have in this country with a very few exceptions during the past ten years been observing the golden mean-neither going to the extreme against which Darwin warns us, nor neglecting the benefits to be derived from judicious linebreeding. SCOTLAND YET.

#### A Wonderful Dairy Record.

To the Editor of the FARMER'S ADVOCATE: I foolishly took Massena around to the exhibitions. She was travelling for one month, and suffered so, at her age, in a crowded car that I thought I would lose her. I did not think when she came home she would make one pound per day, but resumed her test with the following

Butter. 1891. Oct. 7 to Nov. 6, inclusive. Lbs. Milk. Lbs. Oz. 50 634 Previous to going to the fairs, Mar. 6 to Sept. 5, inclusive....5,4131/2 416 10

Total in seven month..........6,0401/2 467 034 The cow is nearly 16 years old. She is due to salve again in 4 months. She has travelled nearly 2,000 miles by rail in the past 10 months. Before going to the fairs she was making 70 lbs. butter a month, and after returning 50 lbs. If during September she had been left at home, the would, at the very least, have made 60 lbs., which would have been in 8 months 527 lbs. butter. What would this cow have done 10 years ago on high feed? Her persistence is remarkable. She has now been  $8\frac{1}{2}$  months milking, and will calve in 4 months, yet she is averagng 21 lbs. milk daily, and 111 lbs. butter a week. And it only takes 12½ lbs. of milk to make I pound of butter on moderate feed.

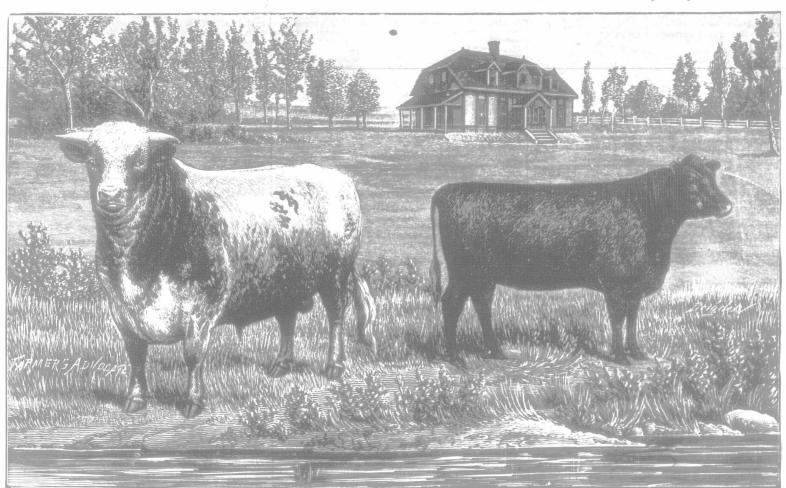

#### Our Illustration.

The accompanying illustration represents the magnificent bull Gravesend Heir 2nd (imp.) and the grand heifer calf Rosabella, owned by Mr. W. S. Lister, Middlechurch, Man. Gravesend Heir 2nd was bred by the Messrs. Redmond, of Peterborough, Ont., and imported by Mr. Lister to Manitoba in September of 1890, when two years old. Since his arrival in this country he has made a steady and continuous growth, and put on the flesh just where it was most required to develop him into one of the very finest animals ever shown in the country. Gravesend Heir 2nd is a roan in color, and is a good handling.

#### Mrs. E. M. Jones' Prize-Winners.

You have not got the prizes stated correctly, and a California gentleman who is purchasing my famous pair of first prize calves naturally wishes the mistake corrected. At our three great exhibitions I showed a bull and a heifer calf younger and smaller than any I ever remember to have shown before, and they, of course, competed against animals up to one year old. So beautiful were they, and with such dairy promise, that they were the centre of attraction, though only "babies"; and no wonder. Both were sired by my great bull, Signal of Belvedere, whose sire was a son of old Signal, and his dam a grand-daughter of Signal, the most perfect cow I ever saw, and she made me, on second calf only, He has won all the prizes for which he has 20 lbs. 6 oz. butter a week, and milked 20 quarts Massena's Son headed my first prize herd there,

made. I may add that my four-year-old bull, Massena's Son, took first prize at Toronto in the grandest ring of aged bulls I ever saw, and he also took silver medal as best of any age, and stood at head of my first prize herd there, Mr. Crozier being judge. Some disappointed exhibitors criticised the awards, so I felt well pleased when, at Montreal, with two judges, and different ones, Massena's Son again took first prize and silver medal and headed my first prize herd! Then, at Ottawa, Mr. Crozier, judged again, and saw, for the first time, Mr. Burgess' beautiful bull Carlo, the living image of old Carlo, from whom he is descended. As Mr. Crozier has always been enthusiastic about old Carlo, he gave first, on this occasion, to his handsome descendant, and second to Massena's Son. But

THE BULL GRAVESEND HEIR 2ND (IMP.) AND THE HEIFER CALF ROSABELLA, PROPERTY OF MR. W. S. LISTER, MIDDLECHURCH, MAN.

his owner's intention to have him in the ring dams of these calves? again next year, if all is well.

The grand calf, Rosabella, was a winner at the but now at the head of the herd of Messrs. Sanger & Sons, Waukesha, Wis., whose herd won so many honors last fall in the Western States. Rosabella is a beautiful red, and will no misfortune.

Province of Manitoba.

send us at least one new name. The larger our first at Ottawa. subscription list the better paper we can furnish

The bull calf, Massena's Combination, is out of Massena's Maggie, an elegant grand-daughter late Winnipeg Exhibition. She is by the well- of my famous cow Massena, while the heifer, known imported bull Vice-Consul, formerly Juliana of St. Lambert, is out of Miss Judy of St. owned by the Messrs. Miller, Brougham, Ont., Lambert, a daughter of Rioter's Pride and a grand-daughter of Stoke Pogis 3rd. Juliana was only ten weeks old when shown, and such udder development was never seen, I think, on anything of her age, or so yellow a skin, nor was develop into a grand animal if she meets with she at all fat, but rather the reverse. She took first prize at Toronto and first at Ottawa, and Mr. Lister's herd is a credit to himself and the she well deserved them, Wm. Crozier, of Northport, Long Island, judging. The young bull, Massena's Combination, half-brother to Juliana, We request each one of our old subscribers to | took first at Toronto, second at Montreal and

It is only due to me, and to the intending our readers. See our list of subscription prizes. purchaser of these calves, that this correction be

competed since he came to the province. It is | a day Sired by such a bull, what were the | and he also headed my herd that won the special gold medal donated by the Mayor of Ottawa. And even young Carlo would not have gained the one advantage he did over Massena's Son had the latter been in his usual form, but it was then his third week in cars and on the fair grounds, and the heat and worry, and change of water, purged him terribly, while Carlo only came a few miles and made his first appearance.

Also, after showing at Toronto and at Montreal for two weeks, my cattle were led out to Mile End, only to find mismanagement about the cars, and, from 5 p.m. till 9 o'clock next morning, my 20 head of cattle stood on the roadside, 16 hours, without food or water, in the dark, the females tied to the fences and my men holding the bulls. It is a wonder they were alive; but in spite of all they made a pretty clean sweep at Ottawa, as at both Toronto and Montreal.

MRS. E. M. JONES,

#### Reports of the Meetings of Canadian Live Stock and Agricultural Associations.

#### THE WORLD'S COMMITTEE.

The World's Columbian Exhibition committee for the province of Ontario met in the rooms of the Agriculture and Arts Association at 2 o'clock, p.m., November 25th, 1831. Members present: Ira Morgan, J. C. Snell, Edmonton; Albin Rawlings, Forest; Robert Vance, Ida, President of the Agriculture and Arts Association; R. Gibson, Delaware, President of the Shorthorn Breeders' Association; John Jackson, Abingdon; Mr. N. Awrey, M. P. P., Binbrock, and F. W. Hodson, London. Mr. Awrey, the chairman, called the meeting to order. After much discussion and deliberation the following preamble and resolutions were unanimously adopted, and addressed to the board of the Agriculture and Arts Association: The World's Columbian Exhibition committee

#### PREAMBLE.

Whereas the members of the World's Columbian Exhibition to be held in Chicago in 1893 will in all probability be the greatest aggregation of live stock and agricultural products that has ever been brought together on the American continent, it is of the utmost importance to this province that a good representation of its products should be made on that occasion. The selection of Chicago, the great live stock emporium of the world, as the place for holding the exhibition is one especially favorable to the interests of Canadian stockmen, as the demand for our improved stock is mainly from the great Western States and Territories, and in making preparation to exhibit at Chicago our stockmen will be taking their stock right into its natural market Canada has long been and is likely to be in the future the principal breeding ground from which the farmers and breeders of the United States look for first-class animals to replenish their herds and flocks, and this exhibition will afford an opportunity which may not occur again in a century to demonstrate to the world the facilities of this country to produce animals of the highest merit as to breeding, quality and vigor of constitution. as well as our ability to exhibit in all departments products unexcelled for excellence. Be it therefore resolved that in order to carry our efforts to a successful issue the following recommendations be adopted:

#### RESOLUTIONS.

1st. That the Dominion Government be asked to provide for all expenditures in connection with the transportation, care and maintenance of all the exhibits from the time of shipping until the return of

the same.
2nd. That the Dominion Government be asked to

2nd. That the Dominion Government be asked to provide for the insurance of the live stock from time of shipment to return.

3rd. That the Ontario Government be asked to appoint a Provincial Commissioner, who shall devote his attention to securing a complete exhibit in every department, and who shall represent the province at Chicago.

where at Chicago.

4th. That the Ontario Government be asked to appropriate at least \$19,000 to be offered as prizes to live stock and poultry from this province, the ove sum to be divided amongst lasses in the same proportion as at last Provincial

5th. That the Ontario Government be asked to

classes in the same proportion as at last Provincial Exhibition.

5th. That the Ontario Government be asked to confirm the appointment of sub-commissioners elected by the Board, one for each of the following classes, namely: Horses, cattle, sheep, hogs, poultry, agricultural products, horticultural products, and the dairy, who shall select the exhibits to represent their various departments, said sub-commissioners to be selected either from this Board or some one of the existing live stock association, all expenses incurred by the sub-commissioners in their duties to be paid by the Ontario Government.

6th. All entries to be made through the Secretary of the Agriculture and Arts Association on forms provided for the purpose.

The members of the committee were very enthusiastic and unanimous in their work. All the gentlemen present regretted very much the fact that they were not allowed to recommend as Commissioner one of the gentlemen present. That gentleman was the chairman of the committee, Mr. N. Awrey. Some of the members were quite determined to move a resolution recommending the Ontario Government to appoint that gentleman, but he stedfastly refused to have his name brought forward, and insisted that the Ontario Government be left free to select their Commissioner where they pleased. Notwithstanding, the prominent gentlemen present were unanimous in their opinion that Mr. Awrey should be appointed. He possesses in a marked degree the qualities to make a successful Commissioner. His executive abilities are very good—one of the prime requirements in filling such a position. He is eminently a fair-minded man, and honorable. Though gentlemanly, his inclination to handle "boodlers" without gloves is well known. He is a man of strong convictions and possesses the moral courage to carry out these convictions. The farmers of the province have long recognized him as a man worthy of trust. He has for several years ably represented a rural constituency in the Local Legislature, and for three years he has represented

Commissioner to represent this province at the great fair soon to be opened would be received with satisfaction. The appointment of sub-commissioners is also an important task. None but practical and honorable men who possess much executive abi ity should be selected.

The World's Fair Committee of the Agriculture and Arts Association, together with representatives of the various stock breeders' associations, met again at Guelph Dec. 9th. The following were present:— N. Awrey, Binbrook (chairman): R. Gibson, Delaware; A. Rawlings, Forest; R. Vance, Ida; J. C. Snell, Edmonton; Ira Morgan, Metcalfe; F. W. Hodson, London; J. Fetherston, Streetsville; J. C. Rykert, St. Catharines; J. Jackson, Abingdon, and Henry Wade, Secretary, Toronto.

The minutes of former meeting were read and confirmed.

The Secretary submitted prize lists for Ontario live stock at the World's Columbian Exposition to be held in Chicago in 1893, which he had prepared under instructions given at a former meeting of the Committee. The prize list was discussed section by section, and after some amendments were made, it was adopted.

The sum of \$1,220 was given in prizes to each of

under instructions given at a former meeting of the Committee. The prize list was discussed section by section, and after some amendments were made, it was adopted.

The sum of \$1,220 was given in prizes to each of the following breeds of horses:—Thoroughbreds, Hackneys, Coach horses, Clydesdales, Shires and Suffolk Punch; \$945 each to breeds of cattle, viz.. Shorthorns, Herefords and Ayrshires, and \$703 each to Galloways, Devons, Jerseys and Holstein cattle; \$330 to each of the following breeds of sheep:—Cotswolds, Leicenters, Lincolns, Southdowns, Shropshires, Oxford Downs and Dorset Horns; \$330 to each of the following breeds of swine:—Berkshires, Improved Yorkshires, Poland China, Chester Whites, Essex, Tamworths.

It was moved by C. Rykert, seconded by J. C. Snell, that the words "and poultry" be struck out of the resolution passed at the last meeting wherever they occur. Carried.

The chairman called upon Mr. Gibson to give a report concerning his interview with Hon. John Carling, Minister of Agriculture, respecting the World's Fair. In reply, Mr. Gibson said: "I heard that Mr. Carling was in London and I took the opportunity to meet him. He expressed himself in this way: That until we presented our views to him in definite shape he would not give any answer as to what the Dominion Government were prepared to do. When we were ready and had arranged what we wanted he would be glad to meet a delegation to learn what was really required. He seemed to think it a little premature to talk about the matter now, 1893 being a long time to look forward to. But when I see the stockmen, not only of this continent, but the whole world, working hard to get their stock into proper condition, its seems to me if the men of Ontario are to win prizes the work must begin at once." After discussion on the subject, it was moved by A. Rawlings, seconded by J. Jackson, that N. Awrey, R. Gibson and R. Vance be a committee to wait upon Hon. Mr. Carling and present to him the wishes of the Committee concerning the Dominion Governme

#### AGRICULTURE AND ARTS ASSOCIATION

AGRICULTURE AND ARTS ASSOCIATION
met at Guelph, Dec. 10. Members present: Ira
Morgan, Metcalfe; Joshua Legge, Gananoque;
James Haggarly, West Huntingdon; Robt, Vance,
Ida; J. C. Snell, Edmonton; N. Awrey, M. P. P.,
Binbrook; J. C. Rykert, St. Catharines; Wm. Dawson, Vittoria; James Rowand, M. P., Dunblane;
C. M. Simmons, Ivan; Albin Rawlings, Forest;
Jonathan Evans, Crown Hill, and the Secretary,
H. Wade, Toronto. Correspondence was read
from the city of Kingston, Midland Central Fair
and county of Frontenac agricultural societies,
as well as a long petition from thirty-seven reeves
and deputy-reeves from counties adjoining Kingston, asking that the Provincial Exhibition be held
in Kingston in 1892. A deputation consisting of
the Mayor of Kingston, Mr. Drennan, Ald. Hardy,
representing the merchants, and Robert Meek, late
secretary of the Midland Central Fair, was then
introduced. They stated their case, asking that
the Provincial be held there, and that the cattle be
chosen at it togo to the World's Fair at Chicago.
The delegation then left, and a resolution was
carried asking the Provincial Government for
\$5,000, four members voting against it; if the
Legislature vote this grant the next Provincial will
be held in Kingston. The following report of the
finarce committee was presented by Mr. N. Awrey,
M. P. P.:
Your Finance Committee, after careful consideration, have decided to ask the following appropria-

W. P. P.:

Your Finance Committee, after careful consideration, have decided to ask the following appropriations. Your Committee have kept our ordinary expenditure within the narrowest possible limits, but realize that in view of abnormal expenditures in the near future our wants will be largely augmented. You will notice that an apropriation rechicago's World's Exposition is being asked for; but at the same time you will bear in mind that the bulk of the amount will not be required until the year 1893. In order to ensure confidence amongst breefers throughout the province, your Committee have deemed it advisable to ask the Legislature to make apropriation for the incoming year, as an inducement to exhibitors to prepare exhibits for the Columbian Exposition:—

Spring and fat stock shows. Ploughing matches Expenses of Council. Printing.

\$1,250 Your Committee would recommend that a sum |

not to exceed \$1,000 be granted to the Dominion Shorthorn Breeders' Association to complete the printing of old pedigrees.

Your Committee would further recommend that the following sums be asked reexpenses:—Columbian Exposition, selecting stock, etc., \$2,000; for prizes to be given in Chicago or elsewhere from Ontario, per scheoule proposed by World's Fair Committee, \$19,00, all of which is respectfully submitted.

A committee, consisting of J. C. Rykert, N. Awrey, M. P. P., R. Vance, Richard Gibson and the Secretary, were apointed to wait on the Hon. John Carling rea grant from the Dominion Government for World's Fair as to transport and maintenance.

## EXECUTIVE MEETING OF THE DOMINION SHEEP AND HOG BREEDERS' ASSOCIATION.

SHEEP AND HOG BREEDERS'
ASSOCIATION.

The Executive of the Sheep Breeders' Association met in Guelph, December the ninth, and instructed the Secretary to request the following gentlemen to prepare papers to be read before their next annual meeting, to be held in Toronto early in the month of February. The exact date is not yet fixed:—Mr. Henry Arkell, Teeswater, Ont; Mr. Beverley Jeffs, Bond Head; Mr. John I. Hobson, Mosborough; Prof. James, Toronto; President James Mills, Guelph, Ont.; Mr. Richard Gibson, Delaware; Mr. James Tolton, Walkerton; Mr. J. C. Snell, Edmonton; Mr. W. S. Hawkshaw, Glanworth; Mr. T. C. Douglas, Galt; Mr., Andrew Telfer, Paris; Mr., John A. McGillivray, Toronto; and James Phin, Hespeler, Ont.

The Executive of the Dominion Hog Breeders' Association met at the same place, and on the same date, and decided to hold their annual meeting the day before or the day following that of the above named Association. The Secretary was instructed to request the following gentlemen to prepare papers to be read before their next annual meeting:—Dr. Cowan, Galt; J. C. Snell, Edmonton; J. J. Payne, Chatham, Out.; Danl. DeCourcey, Bornhom; C. H. McNish, Malkham; John Ackland, Delaware; Jos. E. Brethour, Burford; R. H. Harding, Thorndale; James Grant, Ingersoll; and E. D. George, Putnam.

HEREFORD BREEDERS' ASSOCIATION.

#### HEREFORD BREEDERS' ASSOCIATION.

HEREFORD BREEDERS' ASSOCIATION.

On December the 9th the annual meeting of the Canadian Hereford Breeders' Association convened. The president being absent Mr. F. A. Fleming was requested to take the chair. In his annual report the secretary stated that enough pedigrees were already received to warrant the Association in publishing their first volume. The following were elected officers for the ensuing year:

President, F. A. Fleming, Vice-President; J. R. Martin, for Ontario; Hon. H. M. Cochrane, for Quebec; Sir Donald A. Smith, for Manitoba. Directors—Messrs, A. Waldie, A. Stone, Jas. Cairns, Geo. Brent, H. D. Airth, D. Jackson, M. M. Boyd and James Cochrane. Secretary-Treasurer, H. Wade, Toronto.

Boyd and James
H. Wade, Toronto.
CLYDESDALE.

CLYDESDALE.

A meeting of the Executive of the Clydesdale Association was held Monday, Dec. 21st, 1891, at Agricultural Hall, Toronto. Present, J. Bell, L'Amaroux; D. Sorby, Guelph: J. Duff. Everton; Robt, Miller, Jr., Brougham; Robert Graham, Claremont: Wm. Smith, Columbus, the President in the chair. A letter was read from Col. Otter, D. A. G., promising the use of the drill shed for the Stallion Show if used prior to March 15th. It was resolved that F. M. Tuckett, of Toronto, has in the opinion of this committee been found guilty of fraud in connection with the pedigree of the mare Gip, and that Mr Tuckett be expelled from membership of this Association, and that his signature be not taken as authority in connection with pedigrees handed may for registration.

This motion, subject to the approval of the an-

us for registration.

This motion, subject to the approval of the annual meeting, was adopted.

it was resolved to ask the Agriculture and Arts Association to grant the sum of \$200 and a gold model towards the prize list for Clydesdale horses to be awarded at the Spring Show, and that the additional amounts be made up by this Association. The appointment of judges was left till the annual meeting, which is to be held about the second week in February.

#### SPRING STALLION SHOW,

A joint meeting of the Agriculture and Arts Association stock show committee and a committee from the Clydesdale Association met at 2 p. m. Present, J. C. Snell, Edmonton, in the chair; J. Legge, Gananoque; Albin Rawlings, C. M. Simmons, Robt. Vance, N. Awrey and J. Gardhouse and the Clydesdale committee as above. A vote of condolence was tendered Mrs. Morgan, and J. Legge and H. Wade were delegated to attend the funeral. The prize list was then gote over. It will remain the same as last year with the following exceptions:—Roadster stallions must either be recorded in, or satisfactory evidence be given that they are eligible for entry in Wallace's Trotting Register.

Percherons were struck out.

The section for Clydes is almost the same as last year, except that in Canadian-breds, a class for 3-year-olds was added.

The show will be held on the 9th and 10th of March in the Drill Shed, Toronto. A committee was appointed to meet at the Queen's Hotel to appoint judges the first or second week in February.

A meeting to form a Hackney Association will be held about the second week in February, due notice of which will be given.

#### Chatty Letter from the States.

The packers are taking in the big crop of hogs just as if they were making a rich harvest, and that is what they are doing. Prices for hogs are low, but feeders are not losing anything. Uncle John Start, who used to buy hogs for Canadian pork packers, thinks no money is being lost in hog feeding at present prices. Years ago he weighed in a lot of 120-lb. pigs of poorer quality than the present average. They ate 15 lbs. of corn each in sixty days, an averaged 280 to 300 lbs. The following packers are operating in the Chicago hog markets this winter: - Armour & Co., Anglo-American P. Co., C. P. & P. Co., Swift & Co., International P. Co., N. Morris & Co., Underwood & Co., T. J. Lipton & Co., Jones & Stiles, J. Cudahy & Co., Allerton P. Co., J. C. Hately & Co., J. Moran & Co., J. Healy &

In some parts of Texas the grass is long and rich, while in other places the grass is dead from drought. In the southern part of the state three-year-old steers have been offered at \$1.50 @ \$3 per head, but in such cases the cattle are usually too poor to stand a trip to where feed is more plenty. It looks as if it would pay in some such cases to ship feed to them, at least enough to give them strength to stand a journey.

Christmas cattle sold this year at \$6 (a \$6.75, with twenty head of extra fine Polled-Angus steers at \$7 (a \$7.15. A lot of rough, but very fat 1.822-lb. steers sold at \$5.10, while in an adjoining pen a lot of 1,209-lb. steers sold at \$5.25, and still another lot of high bred steers, 1,177 lbs., sold at \$5.50. Still another lot of 1,474-lb. steers, fat but old-fashioned, sold at \$4.25. Its an awfully threadbare tune, but the fact remains that blood does tell. S. P. Clark, Dover, Ill., marketed one 1,970-lb. Galloway steer at \$6.

There were some good sheep on the holiday market. L. B. Bacon, of Chrisman, Ill., received 85.60 for 72 head of black-faced sheep of his own feeding which averaged 126 lbs. A bunch of choice fed Western sheep, averaging 142 lbs., sold for \$5.20. C. D. Hudson, of Marshall, Mo., marketed two loads of choice Christmas sheep. which sold for \$5,65. They averaged 139 lbs.

#### Among the Implement Men Who Will Supply Manitoba and the Northwest During 1892.

MASSEY-HARRIS CO. (LTD.)

During 1892 the offices and immense ware rooms in Winnipeg of the Massey-Harris Co., which now comprises the Patterson (Woodstock) and Wisner (Brantford) concerns, will, no doubt, be the scene of activity altogether unprecedented in the handling of harvesting machinery, mowing machines, general farm implements of every description, together with wagons, lighter vehicles, and supplies of all kinds. As a result of this consolidation in management, experience, factories, patent rights and agencies, the company claim to be able to give their customers throughout Manitoba and the Northwest direct and substantial benefits owing to the saving effected in production and distribution, and the perfection to which the manufacture of the best known types of implements has now been brought. Furthermore, they do not propose to stand still, but with each year's experience in the fields of the world to combine the most desirable features found in various machines for further improvement. Customers will now have a still wider range than ever of superior implements to select from, whether it be reapers, mowers, plows, drills, seeders, wagons or sleighs, in addition to which mention must be made of fanning mills and threshermen's complete outfits of which they make a specialty.

#### FROST & WOOD.

Recognizing the present to be an age of progress Messrs. Frost & Wood, Winnipeg, have applied to their business of agricultural implenent manufacture the very best knowledge that long experience, careful observation and enquiry could give. The general satisfaction given their customers has been followed by an increasing business. They are especially well pleased with the result of last season's crucial test of their Single Apron Binder, very favorable reports coming in from all directions as to its complete work in the tremendously heavy grain everywhere harvested. Their model buckeye mowers, too, gave excellent satisfaction in all sorts of heavy grass, clover or timothy. They sold a large number of them and the demand for mowers, as well as binders, in 1892, will be Other specially meritorious lines which they handle are the Tiger and Ithica hay rakes, angle steele frame spring tooth harrow, Coulthard & Scott's, Oshawa, Ont., drills, seeders and harrows, sleighs and wagons (which it might be remarked are giving the best of satisfaction to Manitoba farmers) manufactured by Patterson & Jolly, London, Ont., and the famous John Abel threshing machine, manufactured, as ADVOCATE readers are aware, in Toronto, Ont. Frost & Wood's plows seem to increase in popularity, five different styles being handled. Apart from the warerooms and offices in Winnieg they have from thirty to thirty-five agencies throughout the province.

#### H. S. WESBROOK.

"The best is always the cheapest" is the motto with which Mr. H. S. Wesbrook, the veteran and popular implement man of Winnipeg, prefaces his annual price list of farm machinery. His long and successful experience peg, prefaces with the people of Manitoba and the Northwest is now extending into another year, and the results of 1891 are most encouraging for the future. He continues to handle the "Old Reliable" McCormick binders and mowers, J. I. Case threshers and engines. Moline and Wilkinson plows, the celebrated American champion road machine (so advantageous for municipalities). the American Rushford wagon. Ajax and White engines, and the following lines of goods: Harrows, hay presses, hay rakes, road scrapers, "It is the best monthly American Van Brunt and Wilkin's seeders and take, I guess, half a dozen.

shoe drills, Sylvester broadcast seeder and drill combined, safes for farmers, merchants and others, farm sleighs, Stearn's wind mills, and in fact practically everything that either a settler or an old experienced Northwest farmer requires. Special inducements are offered to new settlers or persons buying at wholesale. Intending purchasers should communicate at once with Mr.

#### ANDERSON & CALVERT.

Among the many superior lines of agricultural implements handled by Messrs. Anderson & Calvert, of Winnipeg, the foremost is undoubtedly the "Warrior Mower" manufactured by Elliott & Co., successors to John Elliott & The farmers of Manitoba who have tested it on all sorts of land, and under almost every possible condition, report in most favorable terms upon its work. In fact a machine so wellknown to Manitobans scarcely needs any written introduction, as wherever tried it always speaks its own merits on the field. Anderson & Calvert state that they are having a large number manufactured for the season of 1892, and will wholesale as well as retail them, so that jobbers and dealers would do well to call or write for terms at once. They also handle a full line of good plows, including the Wilkinson (Canada make) and the Rock Island Burford (American). The wagons sold are those made by the well-known firm of Adams & Son, Paris, as well as the sleighs. For spring goods they handle the Dowagiac shoe drill, both thirteen and nineteen shoes, and Stratford harrows, and in threshers represent the Cornell engines, and have a full line of Moody & Son's tread powers and threshers, as well as the latest and most improved harvesting machinery

#### STEVENS & BURNS.

The immense annual grain crops of Manitoba that of last year being larger than ever before) makes the question of speed, coupled with general efficiency in threshing in order to prompt delivery, probably the most important consideration in selecting machinery for that purpose, This province and the Territories must have efficient threshing machinery. The widely known firm of Stevens & Burns feel more than ever justified in congratulating themselves on the result of last year's operations, the reports from threshers and others being most satisfactory on the points of safety, durability, speed and general utility. It is evident that their output for 1892 will be greatly in excess of 1891, and those who propose securing engines or separators should place their orders as soon as possible They manufacture both straw and wood-burning portable, stationary and traction engines; the iron-clad improved J. I. C. Agitator Separator, saw-mill machinery, horse-powers, chaff-cutters, engineers' brass goods and fittings, iron pipes, hydraulic machinery, and a great variety engines and boilers besides those specified. Stevens & Burns, in their interesting and instructive (especially to threshers and engineers) catalogue, which may be obtained from the office, Winnipeg, lay it down as their policy never to build "cheap" machinery, for, as everybody knows, that is the dearest in the end.

## What Readers Say.

S. Whitlock, Glen Adelaide, Assa.: "We are all pleased with the FARMER'S ADVOCATE."

Jas. Gillespie, of Oak Lake, Man., writes in renewing for 1892: "No farmer should be without the Advocate.

"Times are hard, but I must have the Abvo-CATE," writes an esteemed Carberry, Man., subscriber who renews for 1892.

Mr. Thos. Scaborne, of Barnsley, Man., in handing in a two years' subscription says: would not be without the ADVOCATE under any

John J. Ring, Crystal City: "I like your paper very much. Keep on the course you are pursuing. It is a great rest to get a paper to read that can keep clear of party."

Samuel Green, Yorkton, N. W. T., writes wishing the Advocate every success, and adds: "It is the best monthly paper I take, and I

will be found that on applying tension to the

## Cattle Breeding and Feeding at the Brandon Experimental Farm.

What was obviously a want in the equipment of the Manitoba Experimental Farm at Brandon has been supplied by the arrival of a shipment of pure-bred cattle, selected by Mr. Bedford, the superintendent, from the herds of the Central Farm at Ottawa and those of leading Ontario breeders. Four breeds are represented, viz., Shorthorns, Ayrshires, Holsteins and Galloways, fifteen in all; but besides these there are six grades for feeding purposes, in addition to the cattle previously on the farm. In accordance with the popular tendency of the times, the Shorthorns were chosen with a view to stronger milking qualities. In other words, Mr. Bedford was after representatives of what are styled the "milking strains". The importation is as follows:-

#### SHORTHORNS.

Bull calf, ten months old, purchased from W. S. Hawkshaw, Glanworth, Middlesex county, Ont.; sired by the bull ——————————————, at the head of Shore Bros'. herd, White Oak, Ont., and out of a superior milker.

Cow—Rose of Sydenham; bred by Thos. Guy, of Oshswa, Ont.; calved Feb. 6th, 1886, sire Sampson = 8787 =, dam Red Rose = 4450 =, by Enterprise Second.

Two heifers—Cowslip 4th, calved March 7th, 1890; bred at Central Experimental Farm, sired by Rosy Prince 8th, dam Cowslip 3rd; and Rose of Darlington, calved July 24th, 1890, sire Rosy Prince, dam Countess Darlington 12th.

A calf—Fashion 9th, dropped in March, 1891; bred at Central Farm, Ottawa, sire Earl of Kinsale, dam Fashion Book.

#### AYRSHIRES.

Cow-Jewel, from D. Morton & Sons, Hamilton, Ont.; calved June, 1889, bred by Hugh Jack, of Irvine, Scotland, sire Dandy Jim, dam Judy.

Dandy the 2nd, from D. Morton & Sons; bred by Hugh Jack, calved April, 1889, sire Dandy, Jim, dam Dandy 1st. Took second prize at Toronto Industrial, and was in the first prize herd

Bull two years old from Kains Bros., Byron, near London, Ont. First prize London, 1891.

#### HOLSTEINS,

Bull—Holland Prince, calved Aug., 1890, bred at Central Experimental Farm, sire Netherland Pythias, dam Aaggie Cornelius 2nd Netherland.

Cow—Queen of Waterloo, bred by A. C. Hallman, New Dundee, Ont.; calved April 12th, 1888, sire African Prince, dam Mina Rooker 2nd. African Prince was sold by Hallman & Co. to the Ontario Agricultural College. Queen of Waterloo won 1st as a two-year-old at London and Toronto exhibitions, and was a member of the first prize herd of 1890.

Princess Leda 2nd, calved June 4th, 1889, bred by Smith & Powell, of Syracuse, N. Y., whose milk and butter producing herd is one of the most famous in the world; sire Netherland Monk, dam Princess Leda 1st. Imported by Hallman & Co., took 2nd at Toronto fair, and was in the 2nd prize herd.

#### GALLOWAYS,

Bull—Chester, calved March 12th, 1887, bred by Thos. McCrae, Guelph, Ont., sire Stanley 3rd; imported by Agricultural College, Guelph, dam Chrissy, imported by Mr. McCrae. Cow—Violet 3rd of Tarbreoch, calved March, 1886, bred by James Cunningham, of Tarbreoch, Dalbeatie, Scotland; sire Scottish Borderer, dam Maid 3rd of Tarbreoch. Violet 3rd was a prizewinner at the Highland Agricultural Society's Show, and was imported by Mr. McCrae.

Hannah B of Guelph, calved Feb., 1888, bred by Mr. McCrae, sire Stanley 2nd, dam Hannah 3rd of Castlemilk.

Bull calf, dropped March, 1891, dam Violet 3rd. The two main objects in view are the improvement of the stock of the province, and experimental work in feeding. Purity of blood within the breeds will, of course, be preserved by the avoidance of cross-breeding. In due time whatever surplus of stock there may be above the requirements of the Farm, will be sold to the farmers of the province at auction. Farmers will also be privileged to secure the services of these bulls at the Farm, for the improvement of their own herds, at the discretion of the Superintendent.

The purchase of an even, representative lot of native cows is contemplated, in order to be bred to the bulls of the various breeds, by which some indication will be given of their respective prepotency. It would be well not only to note the variation in color, conformation, etc., but to determine the extent of improvement or otherwise in the dairy qualities of the daughters as compared with their dams.

Mr. Bedford has begun the systematic weighing of milk; but to make the record complete, he should inaugurate weekly tests for butter fat on the Babcock principle.

The values of frozen wheat, wheat chaff and other foods, are to be made the subject of test, and the Galloways are to be tested as to their capacity to "rustle" through a Manitoba winter.

At the time the Farm was visited by the Advocate representative, the stock were all in healthy, vigorous condition.

One of the two silos in the barn which were filled with corn and other fodder last fall was opened on that occasion, and the ADVOCATE is pleased to be able to announce that the experiment was a success, the contents having kept perfectly. Mr. Bedford purposed commencing to feed ensilage at New Year's.

#### Sound, Clean Wool.

BY D. M'CRAE.

The Canadian farmer, to get the best results from wool growing, must see to it that his wool is sound and clean. This is a point that is almost self-evident. At a meeting of the sheep breeders, held during the "Industrial Fair" at Toronto, a leading dealer in wool declared that Canadian wool was lacking in these two points, and that year by year it was, instead of improving, growing worse. We can grow good wool in Canada, and if it is not sound and clean it is not the fault of the climate so much as the fault of the grower. Soundness of staple is a very important point. For the worsted spinner it is an essential. He cannot possibly make good level yarn with unsound wool. When you consider that in the process of manufacture each fibre of the wool is drawn till it is very much longer than when it came from the sheep (say to three times normal length), it will be evident that if there be a weak spot in the fibre, it will break at that place and cause imperfect yarn. For making worsted yarns wool must be sound and of a uniform strength. For carded yarns it is not so important, but no manufacturer can make good yarn from weak, unsound wool. Careful, regular feeding, and good, uniform care, will give good wool. Irregular feeding, careless attendants, allowing the sheep to be chilled, and overfeeding, or surfeit, will cause a stoppage of the wool growth, and a weak place in the wool will be the result. If the fleece be carefully examined it

fibres they will break just at this place. Such weol is useless for worsted, and not nearly as valuable as sound wool for carding purposes. In the past there has not been any large proportion of Canadian wool sent to market in this unsound condition, and when there was, few of the ordinary buyers knew enough of the trade to detect the imperfection. It was only when it came to be graded by the wool sorter that it was noticed. Such fleeces should then be thrown among the "rejects" and have the company of the "cotted" fleeces. A sheep giving a cotted fleece should be marked, and at once put in the lot for feeding off. When once a sheep has given a cotted fleece, in the majority of cases the next and all the succeeding ones will be of the same character. Sheep out of condition, or in ill health, will sometimes give brittle or "brashy" wool. The fibre has a harsh feel and breaks readily. This is very poor wool. A very small percentage only of this kind of wool has been marketed in Ontario, but a good deal of the wool from the Northwest has had this character, especially from those flocks with ranch blood as their basis. Sheep sent from Ontario to the Northwest, and their immediate descendants, have not this very objectionable feature. From this it will be seen that only sound, healthy sheep, will grow good, sound wool, and that any breed of sheep if carelessly attended are apt to produce inferior wool. The fleece should not only be sound, but it should be clean—we Canadians are very remiss in this particular. Much of the wool is taken to market in a very bad shape; clean wool is wool free from foreign substances, such as the many kinds of burrs grown on the average Ontario farm, bits of hay and straw, and other foreign matter. Grease and dirt are not as objectionable as are foreign substances; the grease and dirt can be readily washed out, but these other foreign substances require much more elaborate treatment, and all injure the wool more or less. Careless weeding is to blame for many of the burrs ; roadside pasturing may count for a few more; anyway, our wool has a bad reputation in this respect. The small, hard burr is most easily removed; the very common burdock is, perhaps, the worst. Recently, by a country roadside a sheep was seen by the writer with a good deal more burr than wool visible; each of these burrs when the wool comes to the sorters' table has to be removed by hand. The usual way is to clip out the burr, leaving as little wool with it as possible. These bits of wool and burr are then chemically treated to destroy the vegetable fibre, but in doing this the wool is always more or less injured. The remedy for this is evident; destroy the weeds before they go to seed; clean farming in this instance will help to give clean wool. But burrs are not the only trouble; bits of straw, chaff and hay-seeds are very common in our wool; they are difficult to remove. English wools are free from this, and the difference is caused by different treatment. Our climate causes us to feed our flocks under cover in the winter. Feeding from racks they get these bits of straw, etc., into the wool at this time, and once in they stay there. This is not so easily avoided, but some of the modern feeding racks have closed troughs for the hay above the sheep, and only a narrow feeding space at the bottom, which prevents much of the Watch this point; feed getting into the wool. see that as far as possible the wool is kept free from these impurities, and in so doing you will help to raise the standard of the Canadian clip.

#### Berkshires vs. Yorkshires.

To the Editor of the FARMER'S ADVOCATE:

SIR,-The following extract from the Irish Farmers' Gazette of the 14th November appears to be so confirmatory of the views of Mr. W. Davies, as opposed to those of Mr. Snell, Mr. Benjafield and others, who wrote in favor of Berkshires, that I have no hesitation in asking you to be good enough to give it in your next issue. Last week I had a native gentleman from the Philippine Islands here to purchase some Improved Yorkshires to breed pure, and to cross on the native pigs. It appears that as many as two thousand pigs are sold each week at Manilla, the consumption of pork being very large owing to there being so many Chinese in the district. The native pigs are small, coarse and lean, and very like wild hogs, whilst the Chinese like their pork to be very fat. I sold a boar and four young sows to be shipped about Christmas, but I recommended Senor Manuel Amor to purchase some Berkshires, as they would produce meat so much fatter; but the reply was that the Berkshires were too much of the same size as the native pigs. The desire was to breed a quickgrowing, early-maturing pig, as everything matured at an early age in that country. Last week I shipped some pigs to Austria, and have now an enquiry for ten boars from Germany and some pigs from Holland.

Yours, etc.,

SANDERS SPENCER.

Holywell Manor, Eng. PROVISION CURERS' ASSOCIATION OF ULSTER. We have been favored with a copy of the second annual report of this Association, which was submitted at a meeting of the members recently held in the offices, Garfield Chambers, Belfast.

The chairman, Mr. W. F. Biggar, J. P., moved the adoption of the report, which referred in grateful and complimentary terms to the Pig Improvement Association, as well worthy of encouragement.

McCartney (Ballymena), in seconding the Mr. McCartney (Ballymena), in seconding the adoption, said the quality of pigs brought to the market was of the utmost importance. They did not get as fine a class in the north as they did in the south, as those here had a greater tendency to fat, and they all knew they would not accept fat meat on the other side of the channel as they did formerly. This matter should again and again be brought more forgilly before the farmers and they

meat on the other side of the channel as they did formerly. This matter should again and again be brought more forcibly before the farmers, and they should be pressed to pay more attention to the class of pigs they raised. A circular had gone out amongst them, containing the wishes of the Association; and, if it were attended to, and if they brought a better style of pork to the market, they would, no doubt, secure better prices.

Mr. Burnett said that some rules had been drafted for the government of the Pig Improvement Association. Prizes had been offered, and influence had been brought to bear on the Royal Dublin Society, with the result that these rules were adopted, and all with the view of having better animals for commercial purposes raised. Their association took the matter up, and issued circulars on similar lines. Prizes were also given locally, and the North-East Agricultural Association agreed with the suggestions, and they also altered their conditions. They wanted the judges in the local society to be the same as those in the Royal Dublin, so that the same quality of pigs might be raised in the north as in the south. In the south of England they gave a premium of half a crown for every pig that was lean. Fat pigs were now no use; American pigs, even, must be lean. Unless the farmers of the north did the same as in the south, the merchants would get the bacon left on their hands. If the curers all joined and supported the Association liberally, the existing state of affairs in the north would soon be changed. The Government had promised £200, a year, to be distributed in prizes over the country, and he looked upon this as one of the best things that could happen to improve the breed in the north.

Mr. Thomas Singley soid the page and the provides of the same as in the north would soon be could happen to improve the breed in the north. that could happen to improve the breed in the north.

Mr. Thomas Sinclair said the most important

north. Mr. Thomas Sinclair said the most important work to which the committee could direct their attention was the improvement in the breed of pigs. They had not realized yet how far in that respect they had fallen behind other parts of Ireland. There were too many Berkshires oftered for sale here, and their farmers should be made aware how undesirable these fat, short, thick pigs were. The buyers from his own firm were told to avoid all such, and he believed others were doing the same. If they could get the Large White York introduced here, it would be an advantage both to farmer and curer.

The report was adopted, and the proceedings

The report was adopted, and the proceedings terminated with a vote of thanks to the chairman. Of that mixture each animal of age of fifty-eight pounds daily.

Extracts from an Address to the Listowel Dairymen's Board of Trade, by Prof. Jas. W. Robertson, Dairy Commissioner.

VALUES OF CORN.

In the growing of corn for cattle feeding it has been settled clearly that when the stalks have reached the tasselling stage, they do not contain much more than a quarter of the feeding substance per acre which they afterwards possess when the ears are almost mature. Hence the advantage of planting corn in rows from three to three and a-half feet apart, in order to permit the stalks to carry ears and to bring them to maturity. If a crop of corn at the tasselling stage be valued at \$16 per acre, a similar crop at the stage when the ears are nearly mature will be worth \$72 per acre for feeding stock.

BENEFITS FROM SILOS.

The most economical plan for the storing of corn for winter feeding is found in the use of a silo. A few years ago when the speaker first commenced to agitate this matter in good earnest, the silos in Ontario could almost be counted upon the fingers of one's hand. Now it is estimated that there are about 5,000 silos in Canada; and the people of Ontario, with all their vaunted advantages, have not made so much progress in this matter as have the farmers of Quebec. About one-half of the number of silos in the Dominion are outside of the premier province of Ontario. Silos can be constructed inside of an ordinary barn in the country at a cost not exceeding \$75 for each silo of one hundred tons capacity. Ensilage provides the cheapest, most convenient, and suitable feed for milking stock during the winter. The use of succulent fodder during that period would enlarge the yield to the average cow about 30 per cent. more than it would be in the case where dry fodder, hay or straw, is fed during the winter.

BETTER COWS WANTED.

Not only should farmers increase the number of cows in their herds, but a serious and persistent effort should be made to enlarge the capacity of each animal which is kept. One farmer in the province of Quebec who kept an this statement :- In 1888 the average yield from each cow in his herd was 78 pounds of butter for the season. In 1889 it had increased to 121 pounds; in 1890 to  $204\frac{1}{2}$  pounds. That was accomplished mainly by the growing of corn and feeding of succulent feed during the winter season.

FEEDING FOR BEEF,

In the matter of feeding steers last winter at the Central Experimental Farm, Ottawa, some information of great value to the farmers was brought out. Three sets of steers were put up brought out. Three sets of steers were put up to fatten. The ration of one lot was composed of hay, roots and meal. The ration of the second lot was made up of corn ensilage and meal; in the third lot the ration was a mixture of hay, roots, corn ensilage and meal. The animals of each lot were allowed to consume as much of the mixture as they would eat up clean daily. The ration of the first lot was composed of

Turnips Straw... Chopped barley... Chopped peas ... Oilcake Cotton-seed meal. Of that mixture each animal consumed an aver age of fifty-four pounds daily.

The ration of the second lot was

Corn ensilage Chopped barley.
Chopped peas
Oilcake.
Cotton-seed meal.

Of that mixture each animal consumed an aver-

The ration for the third lot of steers was

Corn ensilage. Turnips Hay Chopped barley. Chopped peas. Oilcake. Cotton-seed meal.

Of that mixture each animal consumed an aver-

age of fifty-three pounds daily

The steers fed upon hay, roots and meal cost nineteen cents each per day. Those upon corn ensilage and meal cost 11.6 cents each per day. Those upon the mixture of hay, roots, corn ensilage and meal cost 15.6 cents each per day. The steers which were fed upon corn ensilage and meal gained over thirty pounds each more than the others, and the cost per head was only eleven cents per day against nineteen cents, the cost of those that fed upon hay, roots and meal. That points to the economical production of beef by dairymen, as well as cattle raisers when they se ensilage generally. In my judgment every dairyman should keep on an average half as many fattening steers as he keeps milking cows, and but few farms have at all sufficient help to attend to as many cattle in the form of milking cows as a farm should keep of stock. On most farms enough corn ensilage can be produced to feed all the milking cows which can be attended to by the help available on the place, and half as many steers besides. There is still room for very large increase in the number of live stock, since we send to Great Britain now only about twenty per cent. of the cattle which she imports. To grow steers to advantage, the cows, as far as they can be controlled, should be made to come in in the fall of the year. By that means a sufficient supply of skim-milk and whole milk will be available on the farms to raise calves of the best constitution and form. So far as has yet been learned in cattle husbandry, there is no cheap and efficient substitute for milk and skimmilk in the raising of calves and young pigs within reach of the ordinary tarmer.

ECONOMICAL FATTENING OF SWINE.

The supply of milk during the winter would also make it possible to engage in butter-making upon an extensive scale in creameries; but one most important advantage would be the increase in the number and the improvement in the quality of the cattle and swine kept upon the

farm where that practice prevailed.

In the matter of feeding swine to advantage, the experiments which were made on the Experimental Farm last winter were full of advice to dairymen for guidance in this branch of their business. In feeding 24 swine in six lots of four each, it was found that there was no additional profit from the steaming of feed or the feeding of it warm. The pigs fed upon steamed and warm feed gained in weight more rapidly than the others, which received a similar diet fed raw and cold; but the former consumed so much more feed than the latter, that there was no extra profit. Another point brought out was that the largest returns for the feed consumed were realized when the pigs weighed from 50 to 125 pounds live weight.

The following table shows the average weight of the swine at the commencement of each

month :-First month.

Second month.
Third month.
Fourth month.
Fifth month... Sixth month.

During the feeding period of six months the swine were fed upon a mixture of equal parts of ground rye, barley and peas. The following table shows the quantities consumed during each month for every pound of increase in live weight : -

First month. Second month Third month Fourth month Fifth month

This shows that the lowest cost of production was during the second month of the feeding period. Every pound of increased live weight during the third month cost 31 per cent. more than during the second month; and the increased

cost during each of the three following months over the cost during the second month was 86, 110 and 125 percentages respectively. Dairymen who support cheese factories would make better returns from the by product of whey, if the young pigs were reared liberally on skimmilk during the winter and early spring. The extension of the economical feeding of swine in the country would be a source of increased income and profit to dairymen. This practice would also enable them to fatten and market hogs at the season of the year when the prevailing price is higher than during the fall or winter, which is too often the selling time for the fattened swine in Ontario. The average price in the Toronto market for six years has been almost \$5.50 per hundred pounds live weight; while the average price between July and September has been \$5.78. The average price between November and January has been \$4.92. The average price paid for Canadian fed hogs in the Toronto market has been quoted at \$1.10 higher than the average price paid on the same dates in the Chicago and St. Louis markets. As yet Canada sends to England only about one and one half percent. of the bacon and others wine products which is imported there. Our proportion might be raised to compare favorably with the quantities of cheese and live stock which we export.

#### EXPERIMENTAL DAIRY STATIONS.

Most of the dairymen in Ontario are now familiar with the commencement of the work of the Dominion Experimental Dairy Stations. Every experimental action has within itself a two-fold power of service. It has the possibility of discovering some fact that was before unknown; it also has the function of illustrating and teaching in an impressive way the advantages that result from the best practices of procedure. The work of the outside branch stations during the past summer has been mainly investigations of matters connected with the manufac-ture of cheese. The work of the experimental dairy at Ottawa has been directed towards butter-

#### CHEESE-MAKING.

In the investigations which have been carried on in cheese-making, an effort has been made to discover the relation that exists between the percentage of butter fat in milk and the quantity and quality of the cheese which can be made from it. Full particulars of that work will be given in the annual report, and also at the annual conventions of the dairymen's associ ations. Meantime, it might be said with safety, that a very large number of experiments point to the conclusion that the percentage of butter fat in milk may be taken as a basis for rating its actual value for the manufacture of cheese, Milk containing four per cent. of butter fat on an average is worth for the manufacture of cheese one-third more per hundred pounds than milk containing three per cent. of butter tat. In short, the experiments all point to the conclusion that the total quantity of butterfat in the milk which the several patrons furnish to a cheese factory might be used for determining with equity what share of the total proceeds from the sales of cheese should be distributed to each patron. The use of a Babcock milk tester makes it easily possible for every cheese-maker to test the milk of every patron twice a week. milk furnished by the several patrons should be paid for according to its real quality and quantity. By the adoption of this practice the irritating, although present unavoidable, prosecutions in connection with cases of adulterated milk, would have no cause for existence. every patron is paid for his milk according to its real quality there will be no incentive towards dishonesty in the matter of skimming, watering or retaining strippings. The conduct of a large number of patrons of cheese factories will be made decidedly more creditable when it has been arranged so that the curnishing of honest

premium the other way, the cheese, the profits and the men will all be improved by the same act and at the same time. I hope to see the Babcock milk tester in every cheese factory during next season, and to see most factories pay ing for milk according to its true value as revealed by the percentage of butter fat which it contains.

#### "CANADIAN" BRAND.

Many tests have been made during the year to discover the effect of rennet upon the curing and the keeping of cheese. A discussion of this will be more suitable for a convention of cheesemakers than for a general audience of farmers. However, in this connection one matter is of importance and concern to every Canadian. While cheese buyers and exporters have during an average of five years paid the highest possible price which could be afforded by the English market for cheese in this country, our best factories have not realized their rightful share of the prices which have been paid by the English consumers for cheese of fancy quality. A large proportion of our fancy cheese are still retailed over the counters in England as fancy English cheddars. All the best factories in the country should brand on the cheese as well as on the boxes, the word "Canso that it could not be mistaken in Engadian,' land. The difference on the retailers' counters in England between cheese of the common quality and cheese of a fancy quality is from four to six cents per pound. The difference here seldom exceeds half a cent per pound. Our best factories would receive the higher price, provid-ing this extra profit, which is retained by the English retailer, could be brought to this side. The persistent and general use of the word "Canadian" on the cheese, as well as on the boxes, will help to remedy the matter complained The cheese from the Dominion Experimental Dairy Stations are branded "Canadian Full Cream Cheese " on the cheese as well as on the

#### WINTER BUTTER MAKING.

An effort is being made through the Experimental Dairy Stations to change the practice of the dairy farmers of Canada, from having their cows dry all winter to having butter-making carried on during that period of the year. One of the advantages that would accrue from winter dairying would be the increased quantity of milk that would be realized from every cow. will give about 30 per cent. more milk during ten months if she calves between October and and December, than if she calves between April June. By winter dairving a large sun milk would be available for use during the time of the year when the price of milk and its products is highest. On an average, milk is worth from 50 to 100 per cent. more during December, January and February than it is worth in June and July. Winter dairying would provide a liberal quantity of skim milk to the farm for raising larger numbers of calves. The common practice for killing calves from dairy cows is a nost wasteful one. A well-bred calf has in its life the possibility of leaving \$20 of profit for somebody, even if the life be cut short at the end of two years, as a well-fattened steer. The more calves that can be raised for the dairy and for the feed in stalls, the more chance of profit is there for the farmers who adopt the practice. Then, winter dairying will make it possible for Canada to develop an export trade in butter, which may by and by exceed her present export of cheese. During the past year, the total value of our exports of cheese in round figures was nine millions of dollars. Great Britain imported altogether about \$20,000,000 worth sheese. From this country we sent altogether about 42 per cent. of the total quantity that Great Britain purchased abroad. Of butter, Great Britain imported about \$40,000,000 worth. we Canadians contributing to her supply a little milk pays the patron in direct cash better than the furnishing of dishonest milk. The present practice of pooling widely different qualities of milk at precisely the same rate per hundred trade in butter to a greater magnitude than that trade in butter to a greater magnitude than that more than one half of one per cent. pounds puts a premium upon dishonest practices. | presently attained by our cheese trade. | During patron are not always equal to resisting the attraction of that premium. By putting the

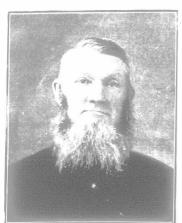

a cream-gathering creamery. Cream alone will be collected and the skim-milk will be left at the farms for such uses as have been suggested. At Mount Elgin the whole milk will be taken to the factory and run through a centrifugal separator. The skim-milk will be carried home by the farmers while it is still sweet. These two factories will be operated under the direct supervision of the Dairy Commissioner and will be managed by his assistants. The butter product will be shipped regularly to the British markets for the purpose of calling attention to the possibility of a Canadian supply of fancy fresh-made creamery butter for the winter months. Cheese makers from all districts will be welcomed at these factories, where they will have an opportunity of learning the methods of butter making and using the milk-testing apparatus at the season of the year when they will have leisure time. It is expected that operations at both places will begin about the 20th of the current month (November). The probability is that 30 or forty factories will be altered into creameries for next winter, and the cheese-makers who are first and heet equipped for this work will secure first and best equipped for this work will secure the best places. The milk from over 700 cows has been promised at the Mount Elgin creamery from within an area of 3½ miles around the factory. In the Listowel district there are several factories that could adopt this winter dairying with advantage during the next year. Every help and encouragement towards making the change will be given by the Dairy Commissioner's office. Cheese-makers, salesmen, patrons and all others interested are invited to correspond there for information on the subject. It is to be hoped that the Listowel district will not be behind the Oxford and London districts in this regard in the course of next winter. When the Listowel Dairymen's Board of Trade continues its market the year round, and has an offering of butter equal in quantity to its offering in the cheese branch of the industry, the whole district will feel the effect of the increased prosperity among the dairy farmers.

#### American Pork Abroad.

American hog producers have expected much from the removal of the German embargo on their pork products. The two great hog killing establishments located near Boston have not increased their output, nor is there any liability that they will until our government provides money enough for the sufficient maintenance of much larger corps of inspectors than is now the case. The present number employed at the port of Boston is but fifteen, only enough to inspect about 800 per day, about one-eighth of the number killed. If the export included the whole carcass, perhaps this number would be sufficient, but as only certain parts of the carcass can be exported, it is obviously plain, that about all the animals killed will need inspection. If the truth was known, our great American pork packers care little whether the embarge was removed or not, for it was only necessary in order to reach the German citadel to send their products through the doors of Denmark or England, then to be rebilled to Germany. These two latter countries are not prohibited in their exportations, consequently, after pork was received there, Germany did not know whether it was raised there or not. It would probably be a little cheaper to send direct to Germany, but since the price there was sufficient to cover the roundaboût course, American packers are not beholden to the sufficient inspection force of this country, or the provisions demanded by the new order of things in Germany.

Secretary Rusk, of the United States Board of Agriculture, in his annual report asks for an increased appropriation, so that the Bureau of Animal Industry may provide means to maintain a sufficient force of inspectors to fully comply with Germany's demands; but it is thought that the increased appropriation will not be available until the commencement of the new fiscal year, July 1st, 1892. In the meantime our exporters will be content to reach their goal through the

#### Weeds.

Means by which weeds are distributed :-

- 1. Grain imported from other districts. 2. Animals transplanting seeds attached to their bodies.
- 3. The nature of seeds aids greatly in their distribution; some plants bear great numbers, e.g., purslane, thistle; some possess great vitality, e. g., mustard may be buried fifty years and yet germinate; some have forms well suited to aid in spreading rapidly-burrs, dandelions, etc., whose seeds can be readily carried long distances by the wind.
- 4. Threshing machines often carry seeds from one farm to another.
- 5. Manure from city stables.
- 6. Renting farms aids to some extent in spreading weeds, especially where the tenant is utterly careless as regards the condition in which he will leave the farm when his lease is up.

Classification of weeds based on the nature of their roots :-

1. Annuals complete the period of their existence in a year; they generally have fibrous roots (see fig. 1), and produce many seeds; when young they are weak and tender, consequently they are more easily destroyed at this period. If annuals are kept from seeding we must soon get rid of them. In some the seeds are very hardy, and possess great vitality, often reappearing when you think all danger is pastwild oats, twenty years old, have germinated.

Examples : - Shiph rd's purse, mustard, penny cress, cockle, wild oats, lamb's quarters, climbing buckwheat, chess, foxtail, groundsel, purslane, ragweed, chickweed, mayweed, sow thistle, pigweed, red root, pepperwort, false flax, small burr.

2. Biennials complete their growth in two years, the first being spent in storing up food, usually in a taproot (see fig. 2), for the produc tion of seed in the second. Unless these plants are cut below the surface, cutting increases their vigor and intensifies the trouble.

Examples: - Wild carrot, blueweed, burdock, mullein, coarse burr, bull thistle, teasel, evening

3 Simple perennials continue growth from year to year (see fig. 3), and will reappear till the root is utterly destroyed. Some of the hardiest weeds are in this group:

Examples: Ox-eye daisy, mallow, sorrel, plantain, St. John's wort, bladder campion, chicory, dandelion, golden rod, vervain, motherwort, common campion.

4. Creeping perennials embrace some of the worst weeds we find. Their reproduction by largely increased.

seed is less to be dreaded than by root. The root is apparently jointed (see fig. 4), each joint capable of growing, if separated. Continual cultivation and smother, so as to exclude light, are necessary to destroy plants of this class.

Examples :- Couch grass, Canadian thistle, toad-flax, milkweed, sow thistle (perennial form), yarrow and bindweed.

- General rules for the destruction of weeds :-1. Never allow weeds to seed. This will certainly kill out the annuals.
- 2. Cultivate the land thoroughly, especially when the weeds are young and tender.
- 3. Keep the roadsides and fence corners clean.
- 4. Never allow weeds to have the benefit of sunlight, especially the perennials. The absence of light will certainly result in death to the
- 5. In dealing with biennials, cut them well below the surface.
- 6. Cut the weeds at a time unfavorable for growth, either in the condition of the plant or the weather.
- 7. Secure, as far as possible, the co-operation of fellow farmers.

The principles involved in these rules will be carried out to a great extent where a system of farming is followed in which green manuring, hoeing, soiling and summerfallowing are leading factors. It such a course is adopted there is no doubt but clean fields will result, and much better returns be obtained. All weeds must perish either by cutting, rooting or smothering, if done in a proper way and at the proper time. ANALYSES OF WEEDS.

Weeds furnish us with a knowledge of the soils in which they grow, and what useful elements they take from the soil at the expense of other plants among which they are found. A chemical examination of weeds shows great diversity in their composition, as seen in the following tabulated statement

	Ash.	Silica.	Sulph. Acid.	Phos. Acid.	Potash,	Soda.	Lime.	Magnesia.	Alumina.	Iron.
Blueweed	4.09	4.8	2.2	2.8	16.6	1.4	22.4	3.5	3.6	5.1
Purslane	1.53	2.46	3 2	5.2	60.9	3.5	10.7	9.5		5.4
Ragweed	1.93	3.16	8.0	7.9	31 4	.8	33.8	11.7		4
Mullein	1.01	3.26	7.3	6.1	50.1	3.3	19.0	5 5	1.15	1.0
Dock	1.50	4.3	8.3	7.0	52.6	7.2	8.6	3.4	.45	
Dandelion							14.3			2.7
Cockle							29.3			1.2
Bnttercups										
Ox-eve Daisy										
Plantain										
	1.86									

From the above we can see that weeds gather phosphates and alkalies from the soil in considerable quantities, and thus rob useful plants of their food.

#### Evading Quarantine.

When on a visit to British Columbia, Mr. D. W. Davis, M. P. for Alberta, N. W. T. learned that the Canadian ninety days' quarantine regulations were being violated by direct importations of United States cattle. Steps were taken putting an immediate stop to the practice. As stated in the Ft. McLeod Gazette, British Columbia consumes about 20,000 head of beeves per year, of which that province produces only about 8,000. In summer the price of bee is about  $4\frac{1}{2}$  cents per lb. live weight, and from 5 to 6 in winter and spring. The freight on live cattle from Calgary is \$163 per car, and on dressed meat \$1.12 per 100 lbs. With proper encouragement and attention, it is estimated that Columbia annually should reach over 12,000 and other industries in British Columbia, the consumption of meat and other products such as the Territories and Manitoba produce will be

### Mr. W. C. Edwards

APPOINTED A MEMBER OF THE BOARD OF THE AGRICULTURE AND ARTS ASSOCIATION.

Just as we go to press, we learn that Mr. W. C. Edwards, of Rockland, Ont., is appointed to fill the vacancy on the Board of the Agriculture and Arts Association caused by the death of Mr. Ira Morgan. This appointment is a most happy one. Mr. Edwards is a very suitable man in every respect. His appointment will strengthen the Agriculture and Arts Association very materially. The Hon. Mr. Dryden could not have made a better choice.

### Tanning Hides with the Hair On.

Gentlemen,-Will you tell me how to tan hides so as to retain the hair. I wish to do the work myself. S. K., Lansing, Ont.

We have found the receipts given in Dr. Chase's book good; we therefore give following selected therefrom.

TANNING SHEEPSKINS, ETC., APPLICABLE FOR

selected therefrom.

TANNING SHEEPSKINS, ETC., APPLICABLE FOR MIITENS, DOOR MATS, ROBES, ETC.

For mats, take two long-wooled skins, make a strong suds, using hot water; when it is cold enough wash the skins in it, carefully squeezing them between the hands to get the dirt out of the wool; then wash the soap out with clean cold water. Now dissolve alum and salt, of each half a pound, with a little hot water, which put into a tub of cold water sufficient to cover the skins, and let them soak in it over night, or twelve hours, then hang over a pole to drain. When they are well drained, spread or stretch carefully on a board to dry. They need not be tacked if you will draw them out, several times, with the hand, while drying. When yet a little damp, have one ounce each of saltpetre and alum, pulverized, and sprinkle on the flesh side of each skin, rubbing in well; then lay the flesh side stogether, and hang in the shade for two or three days, turning the under skin uppermost every day, until prectly dry. Then scrape the flesh side with a blunt knife, to remove any remaining scraps of flesh, trim off projecting points, and rub the flesh side with pumice or rotten stone, and with the hand; they will be very white and beautiful, suntable for a foot mat, also nice in a sleigh or wagon of a cold day. They also make good robes, in place of a buffalo if colored, and se wed together. And lambskins for sheepskins, if the wool is trimmed off evenly to about one-half or three-fourths of an inch in length), make most beautiful and warm mittens for ladies and gentle-men. eautiful and warm mittens for ladies and gentle-

### TANNING FUR AND OTHER SKINS

First.—Remove the legs and other useless parts, and soak the skin soft; then remove the fleshy substances and soak in warm water for an hour;

Take for each skin, borax, saltpefre, and glauber-salts, of each ½, oz., and dissolve or wet with warm water sufficient to allow it to be spread on the flesh side of the skin.

Put it on with a brush, thickest in the centre or thickest part of the skin, and double the skin together, flesh side in, keeping it in a cool place for twenty-four hours, not allowing it to freeze, how-

twenty-four hours, not allowing it to freeze, how

together, flesh side in, keeping it in a cool place for twenty-four hours, not allowing it to freeze, however.

Second.—Wash the skin clean, and then:
Take sal-soda, 1 oz.; borax, ½ oz.; refined soap, 2 ozs. (Colgate's white soap is recommenced as the best, but our "White Hard Soap" is the same quality); melt them slowly together, being careful not to allow them to boil, and apply the mixture to flesh side as at first—roll up again and keep in a warm place for twenty-four hours.

Third.—Wash the skin clean, as above, and have saleratus two ounces, dissolve in het rain water sufficient to well saturate the skin, then:
Take alum, 4 ozs.; salt, 8 ozs.; and dissolve in hot rain water; when sufficiently cool to allow the handling of it without scalding, put in the skin for twelve hours; then wring out the water and hang up for twelve hours more to dry. Repeat this last soaking and drying from two to fe ur times, a cording to the desired softness of the skin when finished.

Lastly.—Finish by pulling, working, etc., and fine sandpaper.

This works admirably on sheepskins as well as on furskins, dog., cat, or wolfskins also making a durable leather well adapted to washing.

A man paid fifty dollars for this recipe, and has made his money out of it many times. It is very valuable.

#### **Choice Flower and Vegetable Seeds** as Premiums for New Subscribers.

We have made arrangements with Messrs. John S. Pearce & Co., seedsmen, of London, to supply us twenty packages each of flower and vegetable seeds. These have been carefully selected by an expert and are the best seeds of the choicest sorts, all of which have been extensively tested, and are known to be good. Carefully read pages 28 and 29, where full descriptions are given.

We will guarantee these goods to give entire satisfaction when given proper care.

This is a grand opportunity for any one who wants a choice selection of seeds, to procure such at about half price.

#### Injurious Insects—No. 1.

BY JAMES FLETCHER, F. L. S., F, R. S. C., DO-MINION ENTOMOLOGIST, OTTAWA, ONT.

In response to an invitation from the editor, I have promised to prepare a series of illustrated articles for publication in the FARMER'S ADVO-CATE upon injurious insects, and the best remedies for their attacks. In these articles, the most injurious insects which attack the crops in Canada will be treated of as nearly as possible a little before the season of the year when it is most advantageous to apply the best known remedy. It will be impossible always to carry out this plan closely, but I hope to warn farmers who read the ADVOCATE, before the injuries occur, so that they may be on their guard to protect their crops on the first appearance of the enemy.

ture of insects, is known by the name of entomology, which is a compound word derived from the Greek, and means a discourse on insects. Economic entomology deals particularly with injurious insects, and its object is the discovery of remedies for their attacks, or of means to protect our crops or other property against their depredations.

To the question, What is an insect? many people would probably answer, "Oh! an insect is a bug." Speaking accurately, this is not the case, although, on the other hand, it is true that a bug is an insect. The name bug properly belongs only to the members of the small order Hemiptera, which are known by the nature of their wing, by their mouth parts being always in the shape of a hollow tube, and by their generally having the power to emit an

unpleasant odor. Examples of true bugs are shown enlarged at fig. 2. and 3. The first of these, the Tarnished Plant-bug, is an exceedingly njurious pest, attacking almost all kinds of vegetation, and the latter has the delectable habit of feeding upon its relative, the common bed bug. Most people know in a general sort of way that a certain object, as a locust (fig. 1), a bug (fig. 2), a fly (fig. 3), or a beetle (fig. 4d), is an insect, but it may not be amiss to give a proper definition of the word. An insect is a small animal having its body divided (insected, -whence the name insect) into rings, with an external skeleton, and breathing not through its mouth like other animals, but by means of air tubes running through its whole body, and which generally have external openings along the sides. An insect passes through four distinct stages of development, in all of which it may present very different aspects. In the perfect state it has the body divided into three main divisions, viz., (i) the head, bearing the mouth parts, the eyes and the sensitive organs called the feelers; (ii) the thorax, which bears the organs of locomotion—the wings (generally two pairs) and feet (three pairs); and (iii) the abdomen, the seat of the organs of digestion and reproduction.

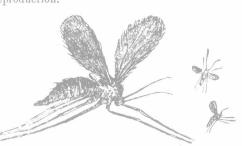

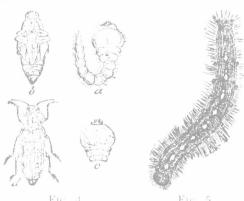

Fig. 3. Hessian Fly.-Enlarged and Natural Size.

Insects are never, as some people think, generated spontaneously from decaying animal or vegetable matter; but all are produced from eggs (fig. 6 a, c, d,) laid by a mother insect, to which when they are mature they will be exactly similar. From the egg hatches the larva or second stage of an insect's life. The word larva means a mask, and signifies that the true form of the perfect insect is hidden from view in this stage of its growth. It is in this second stage that most of our insect enemies commit their depredations. The larvæ of the different orders of insects vary very much. The larvæ of moths and butterflies are caterpillars (fig. 5); of flies, maggots; of beetles (fig. 4 a) and wasps, grubs; the word worm should never be applied to in-

The third stage of an insect's life is called the

terflies in this stage are frequently ornamented with golden marks. The word pupa signifies a mummy or a baby trussed in bandages, as was formerly the custom amongst the Romans, and is to-day still practised by some Indians. It is appropriately applied to this stage, as may be seen at fig. 4 b, where all the parts of the future beetle are recognizable; but as yet they are soft and weak. From the pupa in due time the perfect insect emerges. At fig. 4 the grub, pupa, and perfect insect of the Flatheaded Apple-tree Borer are shown, and at fig. 6 a is a cluster of the eggs of the Forest Tent Caterpillar. At c and d enlarged views of the eggs are given. Fig. 5 shows the caterpillar, fig. 6 b the perfect moth.

Few farmers recognize the true extent even of their own losses from the attacks of injurious in-

Fig. 6.

sects; but they see enough to convince them that of all the enemies against which they have to contend, there are none which demand such constant attention as these apparently insignificant foes. The study of insects has assumed an importance second to no other department of natural history, on account of its direct bearing upon agriculture, horticulture and forestry. The amount of damage done to crops every year is so vast, that the figures excite incredulity from those who do not study crop statistics. The following figures will illustrate this: In 1864 the loss from the attacks of the Chinch bug on cereals in the one state of Illinois was \$73,-00 000. In Missouri in 1874 it was \$19,000,000 and in 1887 in Iowa \$25,000,000, and lastly, in nine states which were infested by this insect in 1887 no less than \$60,000,000 worth of grain was destroyed. This is only one example of what serious injury a single kind of insect can do when it is allowed to increase in undue numbers. It has been stated that there is probably no crop grown which is not reduced every year one-tenth by its insect depredators, and that each plant supports an average of 4 or 5 different kinds of insects. Many forest and fruit trees are particularly liable to attack by insects. Dr. A. S. Packard says that the oak harbors between five and six hundred species; the hickory, 140; the birch, over 100; the maple, 85; the poplar, 72; and the pine over 100, while the apple tree affords maintenance to over 200 different kinds.

Now, this loss is going on around us every year, and comparatively little is being done to prevent it. For most of the troublesome injurious insects remedies have already been discovered, and this great loss is, therefore, unnecessary. It is my wish to make known as soon as possible any remedies which may save the farmer from loss. I shall, therefore, be pleased to answer, through the columns of the ADVOCATE, any questions about injurious insects and their chrysalis or pupat. The first of these names treatment which may be sent in either through means golden, and was given because some but- the editor or to me direct to Ottawa.

Method in Institute Work. The farmers of Manitoba as well as those of Eastern Canada are to be congratulated upon the heartiness with which they have co-operated in the institute movement, which has for its object the increase and diffusion of agricultural knowledge. Some institutes adopt the plan of holding only one, two or three meetings during the season, in which case it is wise to make the programme sufficiently long and general in character to meet the conditions or needs of the locality. In other cases monthly and sometimes semi-monthly meetings are held, and for such the ADVOCATE would recommend specialized programmes, that is to say, programmes devoted to one general topic. For instance, suppose the subject to be "Wheat Culture." According to prior arrangement let one member give a ten minute paper or address on "Soil Preparation and Sowing"; another, "Seed Selection and Varieties"; a another, "Seed Selection and Varieties"; a third, "Preventive Measures against Frost and Smut"; a fourth, "Harvesting"; and a fifth, "Marketing." If the subject of the evening was Dairying, the subdivisions might be, for example, "Selection and Breeding of Cows," "Food and Water Supply," "Stabling," "Dairy Room Appliances," and "Methods in Marketing." There is a danger of trying to deal with too many subjects in a programme of deal with too many subjects in a programme at the expense of thoroughness. The plan suggested will provide for special preparation on each subdivision, bringing out accurate, clear-cut knowledge, which will lend additional interest to the general discussion which should always follow the papers or addresses.

## Patrons, Commercial Travellers and Merchants.

In looking over the November number of the Farmer's Advocate, I noticed an article by Uncle Tobias. Who is he? Is he a man who understands what he reads? He says: "The organizers are making rich out of the farmers whom they profess to serve." This is a mistake. As a patron, I do not think they are paid in proportion to the services rendered; they are promoting an honorable cause, and enlightening the farmers in matters of vital importance to them. Tobias states the merchant cannot live if only allowed twelve per cent. over invoice prices after paying rent, interest, breakage account, etc., etc. We claim merchants pay travellers too high salaries, viz., from \$500 to \$1,500 per year and all expenses. Who pays these salaries? Why the merchants' customers.

The aims of our organization are not to rob any man out of what belongs to him. Our motto is "fair and equitable terms to all men." We consider agents and commercial travellers unnecessary and burdensome, taking the cream from off the producer's milk and appropriating it to their own use. Mr. Tobias is mistaken when he says merchants who sign contracts to sell at an advance of twelve per cent. are fools, and that such have no capital and are not ranked among the foremost and best business men. Does Tobias remember the season when farmers throughout Ontario threshed from five to eight bushels per acre of wheat, and sold at from 70c. to 95c. per bushel. In many cases the crops were never harvested. Did the merchants then sell their goods to farmers and laborers at a reduction? The manufacturer and merchant did not ask the producers whether they could afford to pay thirty, fifty or ninety per cent. advance over cost in these depressed times. What profits does the farmer receive on the capital he has invested? Stop and consider! Few, indeed, are making three per cent. over expenses. Many are just making both ends meet, and hundreds of hard-working men are yearly losing money. Few, if any, are receiving fair wages for themselves and families, after allowing say five per

cent. on money invested in their business.

What merchant would be willing to pay the farmers for produce twelve per cent. over actual cost of production?

Tobias instanced butter, and asked: "If it cost eight cents per pound to produce, how would farmers like to sell it for nine cents?" If the questioner knows anything about farming, he must know that if it were not for the calves that are reared, butter would not pay for the food the the cow cats. Concerning the Grange, alluded to by the writer, this was and is a grand organization, but it was not supported by the farmers as it should have been.

There are too many farmers who do not think for themselves. These men allow others to transact business for them. Tobias states the farmers are getting too big for their boots. Not so; farmers are entitled to far more consideration than they have ever yet received in America. They are the pillars of our country. The time has come when they should and will demand their rights.

#### FIRST PRIZE ESSAY.

#### Would it be Wise to Increase the Indemnity to Members of the Legislative Assembly to \$800 per Annum?

FROM HULLETT GRANGE.

The question is one of vital importance to the people of Ontario. We are of opinion that in the social, as well as the political and moral interests of the province, it would not be wise to increase the said indemnity to \$800 per session. To consider this problem of interest, it will be necessary to note closely the ability of members of the Assembly—the time which is spent in political matters and which is lost to his own private business, and consider whether or not they are at present overpaid. We think that the majority of our members are men who could not command a salary approaching \$800 for a short portion of the year, or do a business that would give such good returns. A large number of the members can procure the services of a substitute to prosecute their business at a much lower rate than they enjoy. Of course there are exceptions to that, such as an editor, physician or lawyer, very few of whom enjoy a seat in the Assembly. The farmer, who forms 75 per cent. of the rate-paying population, and who is the backbone of our noble country, cannot realize \$800 above expenses for the whole year. The objection may be raised, "Farmers have not the ability to legislate for us". We say, if the farmer represents 75 per cent. (and he does) of roters, let us have a like proportion of them in the Assembly, and we venture to say we will have a more economical and just as efficient government.

Every man should be amply remunerated, if possible, for the labor done. A farmer often labors long and hard and has scarcely anything to show for it. A lawyer or doctor, too, may spend all the year at his business, and will be well pleased if \$800 appears on the right side of his balance sheet.

Let us consider two and a-half months to constitute the average length of each session, and about one and a-half months as the aggregate loss of time outside of the session, that would really interfere with his business, either in thought or action, thus making a total of four months lost time, besides, of course, that lost during elections. This, then, would be at the rate of \$2,400 per annum. We feel certain that there are very few M. P. P.'s whose incomes exceed the half of that sum.

exceed the half of that sum.

In the three ridings of our county (Huron) we are represented by two farmers and a lawyer, the united incomes of the former being, so far as we know, less than that of the latter, who is a leading barrister of the province. Now, when we average the incomes of these three men we feel sure the average net income would not be \$500 for a year. Of course part of this \$500 is paid out in expenses; but most of the members are at an unnecessary expense while in session, and even then it would cost them something to board at home. Then there is a certain amount of honor connected with the office for which the holder might sacrifice a little.

Other countries carry on their government on a cheaper plan than we do. The members of

the Congress of the United States do not receive as much as the members of our Assembly would receive at \$800 per session. While trade and business are so much depressed as at present, every means should be employed to lessen expenses.

#### Manitoba Crops in 1891.

Bulletin No. 13, issued by the Department of Agriculture and Immigration for Manitoba, contains the following statement of comparative crop yields, based on the returns of acreage and average yields for the respective years of 1890 and 1891:—

ESTIMATED AV	ERAGE YIEL	D.		
	1890.	1891.		
Wheat	21 1 bush.	25.3 bush.		
Oats Barley	Dec. I	(31), (3		
Potatoes	200.0	180.4		
ESTIMATE	D PRODUCT.			
	1890.	1891.		
Wheat 14,6	65 769 bush, 23	,191,599 bush.		
Birley 2,0	69 415 " 3	197.876		
Birley	40.820 " 2	291.982		

Wheat 14,665,769 bush. 23,191,599 bush. Oats 9,513,493 14,762,605 18 rley 2,669,415 2,540,820 2,291,982 Great difficulty was experienced in getting returns, as the pressure of work in securing the enormous crop has been almost unprecedented. Out of about five hundred correspondents, only one hundred and eighty replied to the circulars asking for information. Fortunately, however, the reports are fairly representative, most of the divisions having sent a fair proportion of reports. It is on the other hand rather unfortunate that the exceptions, though few, comprise two such districts as North Brandon and Morden. There is every reason to believe that the threshers yield will be greatly in excess of the estimated yield by the crop correspondents. In view of this fact, it is the intention of the Department to issue a supplementary bulletin later in the

season when these returns are in.

The real significance of an aggregate wheat yield of say 24,000,000 in Manitoba is hardly appreciated, especially by eastern people, till the fact is considered that there are only about 18,000 farmers in the province, showing for each an average production of over 1,300 bushels!

On the sulject of frost, says:—"The aggregate there will be, as nearly as can be determined from the reports, forty per cent. at least affected, and this will grade all the way from 'No 1 regular' to chicken feed."

These crops do not seem to be grown in sufficient quantities to be of general interest and the returns are very meagre, so much so that it is impossible to form a safe estimate of the yield. No reports of peas are below eighteen bushels to the acre, while rye goes from twenty to thirty five. Flax is reported by only one correspondent, who places it at

16.5 bushels per acre."

The turnip crop was fairly good. Large quantities of hay (in some townships 100 per cent. over 1890) were put up, and the quality was also superior.

The weather during early harvest, or that portion of the season in which harvesting operations are usually completed, was very good, but the unusually heavy crop and great scarcity of farm help protracted the harvest until wet weather set in, in September, which retarded the work in all parts of the province. Crops were slow in ripening on account of the very favorable conditions existing for continued growth in the month of August. In the northwestern district, where more stock is kept and mixed farming followed, the supply of labor has been much nearer equal to the demand.

The total consumption of binding twine is put at 3,795,193 pounds, which, at an average of 15 cents per pound, makes an expenditure on that

item alone of \$569,278.95.

Live stock are reported in much better condition than usual, and the year 1891 was very

favorable for dairying.

\*\* FALL PLOUGHING. — While in some townships a fair amount of ploughing has been done, there is on the whole much less than at the same time last year, for the same reasons that the grain is not threshed and marketed, viz., heavy crop to harvest, with a scarcity of help."

#### Manitoba Herds, Flocks and Studs.

ROBERT HALL'S POLLED ANGUS.

Returning from Bradwardine we halted at the "Griswold Stock Farm," the property of Mr. Robt. Hall, just long enough to catch a glimpse of his large herd of thrifty grade cattle, then drinking at the river that flows a few hundred yards below his residence and mann. limited water supply, grand grass and grain producing soils, are only a few of the many natural which this farm possesses. With the yards below his residence and farm. An unreconstruction of his stock barns, now being planned, Mr. Hall, by piping and a wind-mill, which will also furnish power for root pulping, grain chopping, etc., proposes to bring the water supply right into his stables, where it will always be "on tap," so to speak, for the use of stock. He has as fine a site for building purposes as the writer remembers seeing in a long time. The few moments at our disposal were spent looking over his herd of pure-bred Aberdeen-Angus cattle, which would certainly please any one with a weakness, if a weakness it could be called, for the comely "doddies." Mr. Hall has certainly secured a treasure in his young herd bull Sir John, two years old next June, his choice out of a lot of 13 at the famous Pope stock farm at Cooksville in the province of Quebec. He has the breeding, and what is still better, the individuality, and counting the bull as "half the herd" he is certainly in every way a fitting mate for the superior lot of imported and Canada-bred black-polled matrons Mr. Hall has got together in his foundation stock. If Sir John and his progeny are not heard from in the future we shall greatly disappointed. Speaking of the Angus cattle recalls those seen a few days later by the writer at the Indian Head Experimental Farm. Though out in the yards every day, and subjected to cold and snow, they were in the very best of condition, and Mr. Angus Mackay, superintendent, expressed himself as highly pleased with their experience with the Polled Augus cattle which have been on the farm since October, 1890. As to their hardiness and suitability for the climate he expressed no doubt, and indeed their sleek, robust appearance was strong testimony on that point. Mr. Hall recently sold a fine four-year-old cow, Victoria, in calf to Sir John, and an excellent milker, to Mr. J. A. Martle, Indian Agent at Birtle, and a very choice young bull. Sir Richard, eight months old, to Mr. T. C. Patterson, also of Birtle. At that age he weighed 830 lbs. He is out of an imported cow of the Pride family, and from Pope's celebrated bull J. H. P. Mr. Patterson proposes to and judging from experience elsewhere along that toba as a country in which beef can be quickly with practical experience, last fall selling steers coming three years old off the grass at \$30 per head, fat without the advantage of stall feeding

#### Manitoba Jottings.

Mr. John Caldwell, of Galt, Ontario, who purchased some 20 acres of choice land near Virden, Man., purposes going into the nursery business, handling the various varieties of small fruits and forest trees that do well in the province. During the past season he thoroughly prepared five acres for that purpose prior to go ing to Ontario for the winter. In the spring he will return with his family, making this province his home and place of business. Success should attend his efforts. More trees and fruit is one of the present needs of Manitoba farms.

Wm. Anison, one of our readers at Dugald, Man., has been devoting considerable attention to dairying. With suitable stables, proper foods, and cows dropping their calves from January onward, he contrives to keep up a supply of milk most of the year. In the fall and winter he finds great advantage from mangels, sugar beets, etc., in keeping up the milk flow. He has no trouble in finding sale

The Fort McLeod Gazette reports that last summer's experience has demonstrated the perfect adaptability of Southern Alberta for cheesemaking, and predicts a great future both for butter and cheese dairying there. The Carston cheese factory shipped over nine tons to British Columbia this fall.

The Pilot Mound Sentinel does well to warn farmers against the operations of shoddy cloth operators and swindlers of various kinds who are continually on the move through the country. The local press is deserving of commendation and support in thoroughly exposing all these itinerant humbugs.

T. D. Miller, the widely-known cheese man, of Ingersoll, Ont., writing on his travels to Medicine Hat, N. W. T., says:—"Nothing is wanting in that great country but population to make it the most productive country in the world. To look at the vegetables grown in the Northwest is wonderful, and land can be had by the millions of acres that you only require to turn over the sod to let it mellow down, which will become the finest and richest soil to be found in the world. Canadians know very little of the vastness of that great Northwest country."

Mr. H. Sorby, of Portage la Prairie, Man., in sending in his subscription for the ADVOCATE, reports that his wheat turned out well, having 40,234 bushels from 1,100 acres. The best yields were:—160 acres, at 43 bushels per acre; 25 acres white Fyfe, at 50 bushels per acre; 12 acres red Fyfe (imported seed), 60 bushels per acre; and the worst 16 acres Ladoga, 30 bushels per acre.

## The Boston Market Gardener.

With the advent of Thanksgiving (November 26th) the Boston market gardener ends his business year. At that date all preparation has been made for the early spring work. Celery is in its pit, hot bed plants are all set, land has all been plowed, and from now until the first of February men and teams will have a two months' season of comparative rest from the hurry and drive incident to the market gardener's life.

The intervening time between seasons will afford time for preparation of hot-bed mats, repairing of glass and implements; for as time waits for none, work that can be prosecuted now will be to the gardeners' advantage two months hence, when every moment is needed to enable him to keep pace with his competitors, as well as to take every advantage possible of "Old Sol's" increasing influence.

We have time now for recapitulation. With note-book in hand we review the past season's work, and how often do we note, if we had calculated otherwise, the results would have been pecuniarily to our advantage; but the lesson has been bought and paid for and as we grapple with the new season's work we do so with the examples of the past vividly before our mind, governing us accordingly.

The seasons of 1890-1 in this latitude have been marked with many extremes. The extremely late spring frost was very damaging to semi-tropical vegetation, necessitating the replanting of our spring beans. The spring and early summer drouth retarded growth of seasonable truck to the extent that prices received were extremely high, but the latter end of the season, owing to copious rains, has been marked by ex tremely low prices; and it is a query, when the average is struck, whether prices have not been lower than usual. Surely, with some it is a fact.

A dry year is the market gardeners' salvation.

gardener is in a condition to conserve moisture : and while his crops have the appearance of abundance of moisture, his less advantageously situated neighbor, located, as they are, too far distant from a centre of a city's manure supply, their crops are brown and sere. As I walked through Boston's great vegetable mart, the streets around the Quincy and Fanueil Hall markets during the drouthy season, it could be plainly discerned upon viewing the different loads of truck, those that had been grown upon wellfertilized soils. These soils have in many instances been reclaimed from practically barren sandy wastes, where thirty years ago an acre would not afford grazing for but a single goat. So barren was this territory that it went under the name of "poverty plains." By the aid of the excremental droppings of the great city stables, this territory has been transformed into a veritable "Garden of Eden."

It would be supposed with a soil as above described, the path of the owner might be "strewn with roses." Not so altogether; a soil with such a large amount of vegetable matter with such a large amount of vegetable matter affords the lurking place for criminal parasites and vegetable fungi, which at times is very troublesome. Fall plowing tends to obviate the difficulty, by exposing to the weather the annual parasites, but it has no effect upon vegetable funcional. Since the light of edible vegetables is a fungi. Since the list of edible vegetables is so large, some of them can be found, however, which are not affected, at least not destructively so. Among the list can be mentioned early cabbage, spinach, lettuce, string beans, parsley, beets, celery, onions and parsnips. The vine family is badly infested with one annual parasite and another. Cucumbers cannot be grown except under glass; melons grow luxuriantly until the first fruit is about formed, after which the vine drops its foliage, dying away, and leaving myriads of half-formed fruits; squashes some years are affected, but generally speaking not badly so; turnips, both flat white and ruabaga cannot be grown, and radishes are often affected with worms, especially those harvested after the middle of June; cauliflowers are a treacherous crop, often not paying for its cultivation; tomatoes are not a paying crop. The abundance of nitrogenous fertility in our market gardens forces luxuriant crops of foliage, which obscures the small number of fruit produced from the influence of the sun's ripening influence, until it is so late in the season there is no price received for the crop.

The bordeaux mixture is proving an agent for the remedy of the vegetable fungi difficulty, but as yet our gardeners have not become perfectly familiar with its use; still, the possibilities that will accrue appears to be unlimited.

Many of our market gardens at this date (December 1st) are clothed with the green of the spinach and shallots. Spinach some years is a very remunerative crop—when it winters well. The greatest difficulty comes during March and early April. The continual freezing and thawing at that time throws out the plant from the soil. Another difficulty is experienced by covering up the plantation with litter too early. This covering up is done, not to prevent the soil from freezing, but to prevent the sun's action thawing the ground the latter end of cold weather. Litter should not be put on until the ground is well frozen, which in this latitude does not occur until soon after the new year, and even then there is a possibility of the January thaw softening up the ground and sweating the spinach plants under the covering, thus destroying them.

The cultivation of the shallot is quite profitable when too many do not go into their cultivation. The sets, which look like small onions, are planted September 1st, in rows 12 inches apart and 3 inches apart in the row. Considerable growth is made before the end of the growing season. Upon being overtaken by the cold weather, they remain in winter in a green condition, starting to grow again as soon as the frost leaves the ground in the spring. starting to grow again the bulb, instead of confining itself to one sprout divides, sending up sometimes as many as five sprouts, which, attain ing sufficient growth May 1st, is pulled and milk flow. He has no trouble in finding sale for good butter. It is not good butter that ever gluts the market, but the "axle-grease" variety.

A dry year is the market gardeners salvation. This seems difficult of association, but it is a fact. The well-fertilized acres of the market scullions of the season.

Lansdowne Farmers' Institute. The inaugural meeting for the season of 1891-2 of the above organization was held at Rowan's school house, Bradwardine, Man., with Mr. Edward Hunter, President, in the chair, Mr. Wm. J. Hudson, Secretary, and a large attendance of members present, notwithstanding the fact that many were busy threshing out the splendid wheat crop with which that locality was favored in the past season. The subject for discussion was "mixed farming," introduced by Wm. Thompson, of FARMER'S ADVOCATE, who set forth the advantages to be derived from more or less diversity in farming operations, according to the circumstances and conditions of the farmer and his farm, such diversity to be secured by the introduction of live stock. Among the advantages noted were these :- That it would do away largely with the element of uncertainty and hazard associated with exclusive wheat growing, distribute farm work more evenly over the year, afford a variety of products to meet the world's consumptive demand, afford current revenues for current expenses, provide many necessaries and luxuries for the table and home that would otherwise have to be purchased or done without, and stimulate the acquisition of knowledge by a more general study of plant and animal life and the relations sustained by one to the other. The members of the Institute are to be complimented upon the free, courteous and searching discussion that followed, pro and con the following taking part: Messrs. T. R. Todd, G. Clendenning, H. Todd, Jas. Hayes, J. Parr. Chas. Clendenning, J. Foster, and the chairman. Mr. Hunter. Many intensely practical points were emphasized, such as the necessity of steadily battling against the ingress of weeds, the utilization of coarse grains and frozen wheat by profitable stock feeding, the advantage arising from carefully studying the natural adaptability of farms for specialized or general farming, care in seed selection, rotation and the best methods of soil treatment, which, however, are found to vary greatly with different seasons plainly indicating the necessity for the closest possible observation and thought, and keeping fully abreast with the latest available information upon the subject. As against mixed farming it was thought by some to involve more labor and expense than grain growing, while the care of stock would interfere with seeding and harvesting operations especially; but, as the nted out diversity would reduce the labor at those points. Several thought that stock would pay equally well with wheat without such risks, at the same time providing a safe guard against soil deterioration, and the general consensus of opinion was that even the Bradwardine district, where wheat is so remarkably successful, would be all the better of more diversity in its lines of agriculture. Mr. Thompson expressed a word of caution against too great a "mixture" in farming operations, and indicated the importance of having sufficiently large quantities of first-class products, in order to secure the most advantageous marketing. He was tendered a hearty vote of thanks, with a request that the paper be published in full.

### Veterinary Questions.

ANSWERED BY W. A. DUNBAR, V. S., WINNIPEG. Please inform me as to the best method of treating ringbone on a colt rising three years old. It has been noticed about a year ago, and is getting worse, is also lame, and favors his leg

while standing in the stable.

D. McIntyre, Campbellville, Man. If the growth of bone is large and the lameness considerable, the most effectual treatment would be the application of the actual cautery (firing), which should be done only by a properly qualified person. You may, however, try the following:—Hydras biniodide, 2 drachms; cantharides peelo, 1 drachm; vaseline, 1½ ounces, mix. Cut the hair closely from the part, rub this ointment well in with the fingers for the space of ten minutes, let it remain for fortyeight hours, wash off and grease the part with lard or vascline. Repeat every three weeks until the enlargement is reduced and the lameness

#### How Shall we Improve our Dairy Herds?

BY W. J. PALMER.

The average dairy farmer does not, as a rule, take into consideration what a great share his cows have in determining whether his profits shall be great or small at the close of the year. Although much has been written and said during the last few years in regard to the handling of milk and cream, the making of butter and cheese, and the use of improved appliances with which to make these articles cheaper and better. still the very foundation stone upon which the dairyman must necessarily build his future success-yes, and his present success also, has, until the last year or so, been comparatively little understood except by dairy scientists. I refer to the dairy cow. This is chiefly due to the fact that until very recently there have been no accurate tests within the reach of the farmer by which he could determine whether his cows were paying for their board, or simply boarding at his expense. Much has been written on the individual points of good dairy cows, and on the best foods for milk production; but the farmer needs more than this. He should understand how to test his cows, to find out which are bringing him in a profit, and which are kept at a loss. Thus he can gradually weed out the unprofitable ones and greatly increase his ulti-

The profits in dairy farming, whether devoted to the making of butter or cheese or the sale of milk, must necessarily depend largely on the kind of cows that are kept; not on the breed alone, but on the individuality and producing power of each cow in the herd. Each separate breed, however, has its own distinct characteristics, and the dairyman should consider what he requires before introducing new blood into his herd. To make butter or cheese at a profit we must have cows that will produce milk rich in the elements that go to make up these products, at the same time consuming the least amount of food.

It is computed that there are about 800,000 cows in Ontario, and that the average cow produces about 3,000 lbs. (300 gals.) milk per year. It will take at least 25 lbs. of this milk to make 1 lb. of butter, or a total of about 120 lbs. butter per year for each cow. Taking this at 20c. we find a return of \$24 per year for each cow-very little, if anything, over what it cost to feed and care for her. Or reckoning 10 lbs. of milk to 1 lb. cheese, the milk from each cow would make 300 lbs. cheese, which at 10c. would bring in \$30, still a very small return, especially when the amount of fertility sold off the farm in the 300 lbs. cheese is considered. While the average cow in Ontario is said to give only this amount of milk, there are many cows that give much heavier yields, while some do not give nearly that amount. The Americans are somewhat afraid of us in this respect. There are many herds across the line which a few years ago produced not more than 120 lbs. butter per year per cow, but which have been so improved that they now produce from 250 to 300 lbs. and over; and how is this done? Simply by careful and systematic breeding and feeding, and by gradually weeding out of the herd all those cows that do not produce a certain amount of milk of a certain quality.

During a trip through portions of Ontario this summer with the Travelling Dairy, I was especially struck with the lack of knowledge among the farmers as to what their individual cows were producing. Some seemed to think it necessary to keep a certain number of cows in the herd to keep up the supply of milk, regardless of the fact that some produced double the quantity of milk with the same consumption of food. By the use of the Babcock test (the practical value of which is now thoroughly proven) we tested at our different meetings nearly 500 samples of milk from as many cows, which shapes of finite from as many cows, which showed all the way from under 2 per cent. to over 8 per cent. of fat. A cow giving milk testing as low as 2 per cent. fat would hardly prove a very profitable butter cow, or cheese cow either, unless the owner was making "skim cheese."

Still the owner of that cow was keeping and Still the owner of that cow was keeping and feeding her with the rest of his herd in blissful ignorance of the fact that she was "eating up," and not "adding to" his cash returns. Many people seem to think that the quantity and quality of the milk is regulated altogether by the feed, no matter what the cow is like. Feed certainly does exert a great influence in increasing the quantity of milk, and the quality also to a lesser extent, but the cow must have the ability to apply her food to the production of milk or she will make use of it in some other way, with the result that the milk pail suffers.

The question now arises, how are we to handle our dairy herds so that their productive power will gradually increase from one generation to will gradually increase from one generation to another? My answer is, weed out all the poor cows systematically, and keep only those cows that produce at least 5,000 lbs. of good, rich milk per annum—milk that tests from 3½ to 4 per cent. fat, and gradually raise the standard till every cow in the herd gives her 6,000 lbs. milk per year. Cultivate the "habit" in the cows to milk 10 or 11 months in the year instead of six or seven and the profits will be greatly of six or seven, and the profits will be greatly increased. It is not a very difficult matter nowadays to find out which are the unprofitable cows by the use of the Babcock or Beimling test. This can be done at a very small cost. Even those who are supplying milk to cheese factories will find it to their advantage to "grade up" their cows, for in a very short time milk delivered at cheese factories will be paid for according to its quality, to a certain extent at least. Supposing a number of farmers clubbed together and bought one of the testers. They could keep it at some farm house centrally situated, and take samples of milk from their different cows, say once a week, and test them, to find out the percentage of fat. Then by weighing the milk of each cow and knowing the percentage of fat, it can easily be calculated the amount of butter each cow will make in the course of a week, Balance that against the food consumed and it can be roughly calculated whether the cow is profitable or not. Of course, there is the skimmilk and manure to be placed to the credit of the cow also. Then having found out which are the best cows in the herd give them good nourishing food and breed them to some good thoroughbred dairy bull. The calves from such cows if well fed and properly cared for will turn out profitable dairy cows -- cows that will help their owner to make a success of his business.

In regard to taking samples of milk it has been clearly proven at the Illinois Experiment Station, and also at the Guelph Experimental Dairy, that just as accurate results are obtained by making a weekly test of a "composite" sample of milk of each cow as by making daily tests. This composite sample can be obtained by putting in a bottle (a quart glass flint jar is a convenient receptacle) a small quantity of the milk given by the cow each day. At the end of the week the jar contains a mixture of the milk given during the seven days, and a test of this mixture will give the same results as the average of seven daily tests. The jars must be kept in a cool place so that the milk will not become very sour and thick.

Both the Babcock and Beimling tests are very easy to manipulate, but the former is generally preferred owing to its being the simpler of the two. Any person with an ordinary amount of brains can manage this test successfully after one or two trials.

## Poultry on the Farm.

Read at the Farmers' Institute at Minnesota State Fair by Mrs. Ida E. Tilson, West Salem, La Crosse county, Wis.

(Continued from November Issue.)

Ideas differ on size of nest boxes. I like 13 inches square by 16 inches high. If any intelligent hen (mine are all intelligent) chooses a nice quiet barrel or manger in which to set up for herself or sit down by herself, I let her be, for the God-created maternal instinct has never been improved on by human contrivance. Since one hen from a shelf in the barn, and two others out of mangers, have brought me respectively 18, 16 and 12 chicks, I have ceased sprinkling eggs. Sitters that get their wings and feet in the morning dew carry back sufficient moisture. I do not even clean nest and eggs where a breakage has occurred, unless they are very soiled. After hatching I leave a brood undisturbed on the nest as long as they are quiet. When there begins to be music and dancing I remove them to a coop. Although the mother herself would still do well enough in a state of nature, she needs some help in training a parcel of giddy little chicks. The coop used is an improvement on a plan from that excellent paper, The American Agriculturist. A floor, perpendicular walls and a high window, are calculated to discourage skunks and rats. If not the best coop in the world, it is good enough for any fowl, however blue-blooded. About the third day Mother Biddy is given an airing. On good behaviour, liberty is daily increased, till soon the coop is occupied only nights, dewy mornings and rainy days. A slat dining-room, resembling an overturned and open work box, gives chicks a chance to eat unmolested by greedy "grownups." For the first few days no food excels bread and milk, varied with stale bread crumbs, custard and milk curd, Cooked potato and hardboiled egg each may be fed once a day. Wheat is freely given as soon as it can be swallowed, and, with meal pudding, replaces the early and more expensive bill-of-fare. Chicks are fed five. three, and finally two times a day, according to age, weather and range. For neither chicks nor hens is meal mixed with cold water, but is always scalded and swelled outside the fowls. To them, also, life is "flat, stale and unprofitable" without some seasoning. Such ingredients are mixed through the dry meal before wetting. Even salt thus treated can safely be added to the extent of a half or level teaspoon per quart of meal, and is an excellent preventive of gapes. As experiments at various agricultural stations show, corn is favorable to plumpness and warmth, but lacks the elements of growth; its meal is improved when reduced by one-third bran, ground rye, beans or oats. So many ambitions mothers desert broods but three or four weeks old that I am compelled to hasten the education and graduation of their offspring. Chicks must be taught to lodge in the hen-house while still accompanied by their valiant mother; able to command respect and to "show who is who." Sometimes the brood may be driven in, but "if they won't. they won't." Then I wait till they are settled for the night and carry them there within the coop or within my big apron. Some temporary little ladders guide t'eir young feet upwards; and though they will soil nests such cleaning is easier than handling coops. Pullets car'y accustomed to the house seldom abandon it, nav. no' even to steal their nests. Our trees are never I am no tairy to put a girdle about it in twenty decorated with chickens, as I have often seen them 1 minutes.

on autumn's leafless branches, looking decidedly like over ripe fruit that needed gathering. One friend told me some of her fowls did not so much as know there was a hen-house. Another lost half a fine flock because of their irregular habits at night. It is a waste of time and food to raise chicks for such a fate. One had better be painting placques, or taking a Chatauqua course. My houses are locked every night, and have inside slats or wire at all doors or windows. Neither four nor two-footed intruders have troubled. The middle of May is a popular hatching time. Early chicks, if not chilled and stunted, command high prices and make fall or winter layers. Later chicks, with warm weather, grow rapidly, and in size overtake earlier ones, but are not apt to lay till spring, since size and maturity are not identical—a musk melon is ready before the big pumpkin is. The eggproducer, perhaps, will want some of both ages, so that her eggs will not all be laid in one day, or put in one basket, as the saying is. Given the house, hens and wherewithal, she who finds no eggs upon arising and searching diligently, should go away by herself and think. Egg production can be made to vary but little from month to month by studying the fine art of feeding. My accounts for two Novembers showed a difference of one egg solely. A gentleman, hearing this statement, said such was the case with hens, excepting that the first November they laid only one egg, and the next year's November none. The hen is, as often remarked, a good "egg machine," but any machine needs the careful and constant oversight of some person to see that it runs as intended to do. Nature largely provides for poultry in the season of warmth, verdure and life. When these disappear, the fowls should feel, as they welcome a faithful, thorough, sunny keeper

"Now is the winter of our discontent Made glorious summer.

I use the following programme in winter:-One day, gravel and cooked meat; next, crushed bone and meal pudding; third day, crushed charcoal and chopped vegetables; and so round and round There are in addition to grain rations daily -about a pint each time to every 8 or 10 Some corn on the cob and clever hay are given to promote exercise. Raw ground bone is obtained for two cents per pound from the North Western Fertilizing Co. Union Stock Yards, Officago. Pressed cakes of lard or tallow scraps cost 12½c. per pound at packing houses, and \$1.25 worth lasts eighty towls all winter, as a small chunk coaked, cooked and thickened with table leavings develops unexpected possibilities. From a convenient place a few miles distant there s drawn every fall a wagon load of gravel, wholesome "filling," and cheap. Twice a day m winter the hens have water about as warm as old ladies like their tea. The person kind to animals elevates and blesses both himself and them by such treatment. He who is not pitiful to dumb, helpless greatures in his harge usually shows little humanity and much selfishness elsewhere. A great change of sentiment has indeed taken place since those old time when Biddy roosted on a fence, stole her food from the other stock, and was beset on every side by dogs and other terrors. Intelligent enthusiasm, which will dignify any pursuit, is the great requisite in poultry culture. Be assured, whatever of brains and of real liking one puts into this business can be drawn out again cashed, Let poulterers, therefore, read and learn; but above all, watch and remember their own experi ences. In the noble army of poultry lovers have shown a Queen, Marie Antoinette, and a Presi dent's wife, Mrs. Hays, while individual fowlof distinction antedate the one that reminded Peter. An old teacher of mine gave an account of a hen semporarily buried under hay which outdid even Dr. Tanner in fasting. But you will all agree this is a large subject, and you will see

#### Family Circle.

#### A PATIENT WAITER.

"Be sure you sweep it clean, Lily."

"Yes, 'm. I ain't leavin' a single stone on it." "I'm 'most afraid to trust you. I think likely as not he may come to-day, an' not wait to write. It's so pleasant, I feel jest as if somebody was comin'.

"I'm a-sweepin' it real clean, Aunt Fidelia." "Well, be perticler. An' you'd better sweep the side-walk a little ways in front of the yard. I saw a lot of loose stones on it yesterday."

"Yes, 'm."

The broom was taller than the child, but she was sturdy, and she wielded it with joyful vigour. Down the narrow path between the rows of dahlias she went. Her smooth yellow head shone in the sun. Her long blue gingham apron whisked about her legs as she swept.

The dahlias were in full bloom, and they nodded their golden and red balls gently when the child jostled them. Beyond the dahlias on either side were zinnias and candytuft and marigolds. The house was very small. There was only one window at the side of the front door. A curved green trellis stood against the little space of house wall on the other side, and a yellow hone; suckle climbed

Fidelia Almy stood in the door with a cloth in her hand. She had been dusting the outside of the door and the threshold, rubbing off every speck punctil-

Fidelia stood there in the morning light with her head nodding like a flower in a wind. It nodded so all the time. She had a disease of the nerves. Her yellow-grey hair was crimped, and put up carefully in a little coil, with two long curls on either side. Her long delicate face, which always had a downward droop as it nodded, had a soft polish like ivory.

When Lily Almy, who was Fidelia's orphan niece, whom she was bringing up, had reached the gate with her broom, she peered down the road; then she ran back eagerly.

"O Aunt Fidelia." she said, in a precise slow voice which was copied from her aunt's, "there's a man comin". Do you s'pose it's him? "What kind of a lookin' man?" Fidelia's head nooded faster; a bright red spot gleamed

out on either cheek.

"A real handsome man. He's tall, and he's got reddish whiskers. And he's got a carpet bag."

"That's the way he looks."

"O Aunt Fidelia, do you s'pose it's him?"

"Taint very likely to be."

"Taint very likely to be."
"Here he is."
Here he is."
Fidelia ran into the house and knelt down by the parlor window, just peering over the sill. Her whole body seemed wavering like her head; her breath came in great gasps. The man, who was young and handsome, walked past.
Lily ran in. "'Twa'n't him, was it?" said she.
"I didn't much expect it was. I've always thought he'd come on a Tuesday. I've dreamed 'bout his comin' Tuesday more times than I can tell. Now I'm goin' to fix the flowers in the vases, and then I'm goin' down to the post-office. I feel jest as if I might git a letter to-day. There

vases, and then I'm goin' down to the post-office. I feel jest as if I might git a letter to-day. There was one in the candle last night."

Fide ia moved, nodding, among her flowers in her front yard. She gathered up her purple calico apron, and cut the flowers into it.

"You run out into the garden an' git some sparrow-grass for green," she told Lily, "an' pick some of that striped grass under the parlor window, an' some of them spider-lilies by the

window, an' some of them spider-lilies by the

fence."
The little white-painted mantle-shelf in Fidelia's parlor was like an altar, unon which she daily heaped fioral offerings. And who knows what fair deity in bright clouds she saw when she made

fair deity in bright clouds she saw when she made her sacrifice?

Fideha had only two vases, tall gilt-and-white chita ones, with screlling tops; these stood finely in the centre. holding their drooping nosegays. Beside these were broken china bowls, cream-jugs without handles, tumblers wine-glasses, saucers, and one smart china mug with "Friendship's Offering "in gold letters. Slighty witherd flowers were in all them. Fidelia threw them out, and filled all the vessels with fresh ones. The green asparagus sprays brushed the shelf, the striped grass over-topped the gay flowers.

"There," said Fidelia, "now I'm goin' to the post-office."

"If anybody comes I'll ask him in here, an' tell him you'll be right back, sha'n't 1?" said Lily.

"To'l him I'll be back in jest a few minutes, an' rive him the big rockin'-chair."

The post-office was a mile away, in the corner of a country store. Twice a day, year out and year in, Fidelia journeyed thither.

"It's only Fidelia Almy," people said, looking out of the wincows, as the poor solitary figure with its nodding head went by through summer suns and winter winds.

suns and winter winds.

Once in a while they hailed her. "See if there's anything for me, won't you Fidelia?"

anything for me, won't you ridella?

At last it was an understood thing that Fidella should carry the mail to the dozen families between her house and the post-office. She often had her black worked bag filled up with letters, but there was never one of her own. Fidelia Almy never had a letter.

"That woman's been comin' here the last thirty years, "the postmaster told a stranger one day, "an' she ain't never had a letter sence I've been here, an' I don't believe she ever did before."

ridelia used to come in a little before the mail was distributed, and sit on an old settee near the door, waiting. Her face at those times had a wild, strained look; but after the letters were all in the boxes it settled back into it's old expression, and she travelled away with her bag of other people's letters, nodding patiently.

people's letters, nodding patiently.

On her route was one young girl who had a lover in a neighboring town. Her letters came regularly. She used to watch for Fidelia, and run to meet her, her pretty face all blushes. Fidelia always had the letter separated from the others, and ready for her. She always smiled when she held it out. "They keep a comin', "she said one day, "an' there don't seem to be no end to it. But if I was you, Louisa, I'd try and git him to settle over here, if you ain't married before long. There's silps, an' it ain't always safe trustin' to letters."

The girl told her lover what Fidelia had said, with tender laughter and happy pity. "Poor thing!" she said. "She had a beau, you know, Willy, and he went away thirty years ago, and ever since then she's been looking for a letter from him, and she's kind of cracked over it. And she's afraid it'll turn out the same way with me."

Then she and her sweetheart laughed together at the idea of this sad, foolish destiny for this pretty, courageous your g thing.

pretty, courageous young thing.

To-day Fidelia, with her black broadcloth bag, worked on one side with a wreath and the other with a bunch of flowers, walked slowly to the office and back. As the years went on she walked slower. This double journey of hers seemed to tire her more. Once in a while she would sit down and rest on the stone wall. The clumps of dusty way-side flowers, meadowsweet and tansy, stood around her; over her head was the blue sky, But she clutched her black letter bag, and nodded her drooping head, and never looked up. Her sky was elsewhere.

elsewhere. When she came in sight of her own house, Lily, tho was watching at the gate, came running to

"O Aunt Fidelia," she said, "Aunt Sally's in there."
"Did she take off her shoes an' let you brush

'em before she went in ?

"She wouldn't. She went right straight in, She jest laughed when I asked her to take her shoes off. An', Aunt Fidelia, she's done something else. I couldn't help it."
"What?"

"She's been eatin' some of Mr. Lennox's plum-cake up. I couldn't stop her, Aunt Fidelia. I told her she mustn't."

"You didn't say nothin' 'bout Mr. Lennox, did

vou No I didn't Aunt Fidelia. Oh, did vou get a letter?"
"No: I didn't much think I would to-day. Oh
dear! there' Sally eatin' cake right in the front

ear: there Sally eatin' cake right in the front entry."

A stout old woman, with a piece of cake in her hand, stood in the front door as Fidelia and Lily came up between the dahlias.

"How d'ye do, Fidelia?" cried she, warmly.

"Pretty well, thank you. How do you do, Sally?" Fidelia answered. She shook hands and looked at the other with a sort of meek uneasiness.

"Hadn't you just as soon step out here whilst you're eatin' that cake?" asked she timidly.

"I've just swept the entry."

"No; I ain't goin' to step out there an inch, "said the other, mumbling the cake vigorously between her old jaws. "If you ain't the worst old maid, Fidelia! Ain't seen all the sister you've got in the world for a year, an' wantin' her to go out doors to eat a piece of cake. Hard work to git the cake, too."

"It don't make any difference." said Fidelia.

the cake, too."
"It don't make any difference." said Fidelia.
"I'm real kind o' used up every time I sweep
nowadays, that's all."
"The real kind o' used up every time I sweep

"I'm real kind o' used up every time I sweep nowadays, that's all."

"Better stop sweepin', then; there ain't no need of so much fussin'. It's more 'n half that's got your nerves out of kilter — sweepin' an' scrubbin' from moinin' till night, an' wantin' folks to take off their shoes before they come in. as if they was goin' into a heathen temple. Well, I ain't goin' to waste all my breath scoldin' when come over to see you. How air you now,

"I'm bout the same as ever." Fidelia following her sister into the parlor, stooped shyly to pick up some crumbs which had fallen on the entry floor.

Just as shaky, ain't you? Why, Fidelia Almy, what in creation have you got this room rigged up

so fur?"
"Rigged up how?"
"Why, everything covered up this way. What hev you got this old sheet over the carpet fur?"
"It was fadin' dreadfully."
"Fadin'! Good land! If you ain't got every chair sewed up in caiker, an' the pictures in old piller-cases, an'—Fidelia Almv, if you ain't got the solar lamp a settin' in a little bag!"

"The gilt was gittin' real kind o' tarnished." "Tarnished! An' every single thing on the table—the chiner card-basket and Mrs. Heman's Poems pinned up in a white rag! Good land! Well, I've always heard tell that there was two kinds of old maids—old maids an' consarned old maids—an' I guess you're one of the last sort. Why, what air you cuttin' on so fur?"

Why, what air you cuttin' on so fur?"

Fidelia gathered up all her trembling meekness and weakness into a show of dignitv. "Things are all fadin' and wearin' out, an' I want to keep 'em decert as long as I last. I 'ain't got no money to buy any more I 'ain't got no husband nor sons to do for me, like you, an' I've got to take care of things if I hev anything. An'—I'm goin' to."

Her sister laughed. "Well, good land! I don't care. Cover up your things it you want to. There ain't no need of your gittin' riled. But this room does look enough to make a cat laugh. All them flowers on the maniel, an' all those white things. I declare, Fidelia Almy, it does look feet as if 'twas laid out Well, we won't talk no more about it. I'm goin' out to hev a cup of tea. I put the teapot on, an' started the fire. "

Poor Fidelia had a distressing day with her

Poor Fidelia had a distressing day with her visiting sister. All her prim household arrangements were examined and commented on. Not a closet nor bureau drawer escaped inspection. When the guest departed at length, the woman and the child looked at each other with relief. "Ain't you glad she's gone?" asked Lily. She had been pink with indigation all day.

"Hush, child; you mustn't. She's my sister, an I'm always glad to see her, if she is a little tryin

sometimes."
"She wanted you to take the covers off an' let the things git spoiled before Mr. Lennox comes, didn't she?"
"She don't know nothin' about that."
"Are you goin' to make another plumcake tonight, Aunt Fidelia?"
"I don't know. I guess we'd better sweep first."

I don't know. I guess we'd better sweep first."

The two worked hard and late that night. They swept every inch of floor which that profane dusty foot had trod. The child he'red eagerly. She was Fidelia's confidante, and she repaid her confidence with the sweetest faith and sympathy. Nothing could exceed her innocent trust in Fidelia's pathetic story and pathetic hopes. This sad human experience was her fairy tale of childhood. (hat recreant lover, Ansel Lennox, who had left his sweetheart for California thirty years ago, and promised falsely to write and return, was her fairy prince. Her bright imagination pictured him beautiful as a god.

"He was about as handsome a young man as

him beautiful as a god.

"He was about as handsome a young man as you ever see," said poor Fidelia. And a young Apollo towered up before Lily's credulous eyes. The lapse of thirty years affected the imagination of neither; but Lily used to look at her aunt reflectively sometimes.

"I wish you could have some medicine to make you stop shakin' before that handsome Mr. Lennox comes," she said once.

"I'm in hopes that medicine I'm takin' will stop it," said Fidelia. "I think, mebbe, it's a little better now. I'm glad I thought to put that catnip in; it makes it a good deal more quietin'."

On the narrow ledge of shelf behind Fidelia's

On the narrow ledge of shelf behind Fidelia's kitchen sink stood always a blue quart bottle of medicine. She prepared it herself from roots and herbs. She experimented and added new inmedicine. She experimented and added new ingredients, and swallowed it with a touching faith that it would cure her. Beside this bottle stood another of sage tea; that was for her hair. She used it plentifully every day in the hope that it would stop the grey hairs coming, and bring back the fine color. Fidelia used to have pretty golden bair.

Lily teased her to make the sage tea stronger. You've been usin' it a dreadfue long time, Aunt idelia, "said she, " an' your hair's jest as grey as was before."

Lily teased her to make the sage tea stronger.

"You've been usin' it a dreadfu long time, Aunt Fidelia," said she, "an' your hair's jest as grey as 'twas before."

"Takes quite a long time before you can see any difference," said Fidelia.

Many a summer morning, when the dew was heavy, she and Lily used to steal out early and bathe their faces in it. Fidelia said it would make people rosy and keep away the writkles.

"It works better on me than it does on you, don't it?" asked pink-and-white Lily, innocently once. The two were out in the shi aing white field together. The morning lit up Lily as it did the flowers. Her eyes had lovely blue sparkles in them; her yellow hair, ruffled by the wind, glittered as radiantly between one and the light as the cobweb lines across the grasses. She looked wonderingly at her aut, with her nodding grey head, plunging her little yellow hands into the dewy green things. Those dull tints and white hairs and wrinkles showed forth so plainly in the clear light that even the child's charming faith was disturbed a little. Would the dew ever make this old creature pretty again?

But "You can't expect it to work in minute,"

again?
But—"You can't expect it to work in minute," replied Fidelia, cheerfully. And Lily was sat-

isfied.
"I guess it'll work by the time Mr. Lennox comes," she said.
Fidelia was always neat and trim in her appearance, her hair was always carefully arranged, and her shoes tidy; but summer and winter she wore one sort of gown—a purple calico. She had a fine hlack silk hung away in the closet upstairs. She had one or two good woollens, and some delicate cambrics. There was even one white muslim, with some lace in neck and sleeves, hanging there. But she never wo e one of them. Her sister scolded her for it, and other people wondered. Fidelia's

child-confidante alone knew the reason why. This poor, nodding, enchanted princess was saving her gay attire till the prince returned and the enchantment ceased, and she was beautiful again.

"You mustn't say nothin' about it, "Fidelia had said; "but I ain't goin' to put on them good dresses an' tag 'em right out. Mebbe the time'll come when I'll want 'em more."

"Mr. Lennox'll think that black silk dress is beautiful," said Lily, "an' that white muslin."

"I had that jest after he went away, an' l'ain't never put it on, I thought I wouldn't; muslin don't look half so nice after the new look gits off

don't look half so nice after the new look gits of it."

So Lily waited all through her childhood. She watched her aunt start forth on her daily pilgrimages to the post-office with the confident expectation that one of these days she would return with a letter from Mr. Lennox. She regarded that sacred loaf of plum cake which was always kept on hand, and believed that he might appear to dispose of it at any moment. She had the sincerest faith that the time was coming when the herb medicine would quiet poor Fidelia's tremulous head, when the sage tea would turn all the grey hairs gold, and the dew would make her yellow, seamy cheeks smooth and rosy, when she would put on that magnificent black silk or that dainty girlish muslin, and sit in the parlor with Mr. Lennox, and have the covers off the chairs and the mantelpiece blooming with flowers.

So the cuild and the woman lived happily with their beautiful chimera, until gradually he vanished into thin air for one of them.

Lily could not have told when the conviction first seized her that Mr. Lennox would never write, would never come; that Aunt Fidelia's grey hair would never turn gold, nor her faded cheeks be rosy; that her nodding head would nod until she was dead.

It was hardly until she was a woman herself,

would never turn gold, nor her faded cheeks be rosy; that her nodding head would nod until she was dead.

It was hardly until she was a woman herself, and had a lover of her own. It is possible that he gave her the final overthrow to her faith, that it had not entirely vanished before. She told him all about Mr. Lennox. She scarcely looked upon it as a secret to be kept now. She had ascertained that many people were acquainted with Fidella Almy's poor romance, except in its minor details.

So Lily told her lover. "Good Lord!" he said. "How long is it since he went?" "Forty years row, "said Lily. They were walking home from meeting one Sunday night." "Forty years! Why, there ain't any more chance of hearing anything from him—. Did he have any folks here?" "No. He was a clerk in a store here. He fell in love with Aunt Fidelia, and went off to Caifornia to get some more money before he got married." "Didn't anybody ever hear anything from him?" "Aunt Fidelia always said not; but Aunt Sally told

n r 'Aunt Fidelia always said not; but Aunt Sally told "Aunt Fidelia always said not; but Aunt Sally told me once that she knew well enough that he got married of there right after he went away; she said she heard it pretty straight. She never had any patience with Aunt Fidelia. If she'd known half the things—Poor Aunt Fidelia! She's getting worse lately. She goes to the post-office Sundays. I can't stop her. Every single Sunday, before meeting, down she goes."

"Why, she can't get in."

"I know: she just tries the door and comes

"I know; she just tries the door and comes

back again. "
"Why, dear, she's crazy, ain't she?"
"No. she ain't crazy: she's rational enough about everything else. All the way I can put it is, she's just been pointed one way all her life, and going one way, and now she's getting nearer the end of the road, she's pointed sharper and she's going faster. She's had a hard time. I'm going to do all I can for her, anyhow. I'll help her get ready for Mr. Lennox as long as she lives."

Fidelia took great delight in Lily's love afiair. All that seemed to trouble her was the suspicion that the young man might leave town and the pair be brought to letter-writing.
"You mind, Lily," she would say, "don't you let Vatentine settle anywhere else before you're married. If you do, you'll have to come to writin' letters, an'letters ain't to be depended on. There's sips. You'd get sick of waitin' the way I have. I 'ain's minded it much; but you're young, an' it would be different."

When Valentine Rowe did find employment in a town fift miles away, poor Fidelia seemed to have taken upon herself a double burden of suspense.

In those days she was much too early for the mails, and waited, breathless, in the office for hours. When she got a letter for Lily she went home radiant; she seemed to forget her own disappointment.

Lily's letters came regularly for a long time, back again. "
"Why, dear, she's crazy, ain't she?"

home radiant; she seemed to forget her own disappointment.

Lily's letters came regularly for a long time, Valentine came to see her occasionally, too. Then, one day, when Lily expected a letter, it did not come Her aunt dragged herself home feebly.

'It 'ain't come, Lily, 'said she. 'The trouble's begun. You, poor child, how air you goin' to go through with it?'

Lily laughed. "Why, Aunt Fidelia!" said she, 'what are you worrying for? I haven't missed a

rough with it?"
Lily laughed. "Why, Aunt Fidelia!" said she,
what are you worrying for? I haven't missed a
ttar before. Something happened so Valentine

Fidelia looked at her fiercely. "Lily Almy," said she, "whatever else you may do, don't you do that. Don't you force yourself on any feller, when there's a chance you ain't wanted. Don't you do anything that ain't modest. You'd better live the way I've done."

"He may be sick, "said Lily, pitifully.

"The folks he's with would write. Don't you write a word. I didn't write. An' mebbe you'll hear to-morrow. I guess we'd better sweep the parlor to-day."

This new anxiety seemed to wear on Fidelia more than her own had done. She now talked more about Valentine Rowe than Mr. Lennox. Her faith in Lily's case did not seem as active as in her

own.
"I wouldn't go down to the post-office, seems to me," Lily said one morning Fidelia tottered going out the door; "you don't look fit to. I'll go by an' by."

"I can go well enough," said Fidelia, in her feeble, shrill voice. "You ain't goin' to begin as long as I can help it." And she crawled slowly out of the yard between the rows of dahlias, and down the road, her head nodding, her flabby black bag hanging at her side.

That was the last time she ever went to the post-office. That day she returned with her patient, disappointed heart for the last time.

patient, disappointed heart for the last time.

When poor Fidelia Almy left her little house again she went riding, lying quietly, her nodding head still forever. She had passed out of that strong wind of Providence, which had tossed her so hard, into the eternal calm. She rode past the post-office on her way to the little green graveyard, and never knew nor cared whether there was a letter for her or not. But the bell tolled, and the summer air was soft and sweet, and the little funeral train passed by; and may be there was one among the fair, wide possibilities of heaven.

The first day on which Fidelia gave up going to

The first day on which Fidelia gave up going to the post-office, Lily began going in her stead. In the morning Fidelia looked up at her pitifully from her pillow, when she found that she could not tries.

not rise.
"You'll have to go to the office, Lily," she whispered, "an' you'd better hurry, or you'll be late for the mail."

That was the constant cry to which the poor girl had to listen. It was always, "Hurry, hurry, or you'll be late for the mail."

Lily was a sweet, healthy young thing, but the contagion of this strained faith and expectation seemed to seize upon her in her daily tramps to the post - office. Sometimes, going along the road, she could hardly believe herself not to be the veritable Fidelia Almy, living life over again, beginning a new watch for her lost lover's letter. She put her hand to her head to see if it nodded. She kept whispering to herself, "Hurry, hurry, or you'll be late for the mail."

Fidelia lay ill a week before she died, and the week had nearly gone when Lily flew home from the office, one night, jubilant. She ran in to the sick woman. "O Aunt Fidelia?" she cried, "the letter's come!"

Fidelia had not raised herself for days, but she sat up now erect. All her failing forces seemed to gather themselves up and flash and beat, now the lifeward wind for them blew. The color came into her cheeks, her eyes shone triumphant. "Ansel's —letter!"

—letter!"

Lily sobbed right out in the midst of her joy: "O poor Aunt Fidelia! poor Aunt Fidelia! I didn't think—I forgot. I was awful cruel. It's a letter from Valentine. He's been sick. The folks wrote, but they put on the wrong state—Massachusetts instead of Vermont. He's comin' right home and he's goin' to stay. He's goin' to settle here. Poor Aunt Fidelia! I didn't think."

Fidelia lay back on her pillow. "You, dear child," she whispered, "you won't have to." Valentine Rowe came the morning of the day on which she died. She eagerly demanded to see

Valentine Howe came the morning of the day on which she died. She eagerly demanded to see him.

"You're a-goin' to settle here, ain't you?" she asked him. "Don't you go away again before you're married; don't you do it. It ain't safe trustin't oletters: there's slips."

The young man looked down at her with tears in his honest eyes. "I'll settle here sure," said he. "Don't you worry. I'll promise you." Fidelia looked up at him, and shut her eyes peacefully. "The dear child, "she murmured.

Along the middle of the afternoon she called Lily. She wanted her to put her head down, so she could tell her something.

"Them dresses." she whispered, "upstairs. You'd better take 'em an' use 'em. You can make that white one over for a wedden' dress. An' you'd better take the covers off the things in the parlor when you're married, an' cat the plumcake."

cake."

Near sunset she called Lily again. "The evenin' mail," she whispered. "It's time for it. You'd better hurry, or you'll be late. I shouidn't be—a bit—surprised if the letter came to-night."
Lily broke down and cried. "O dear, poor aunty!" she sobbed. The awful pitifulness of it all seemed to overwhelm her suddenly. She could keep up no longer.

all seemed to overwhelm her suddenly. She could beep up no longer.

But Fidelia did not seem to notice it. She went on talking. "Ansel Lennox—promised he'd write when he went away, an' be said he'd come again. It's time for the evenin' mail. You'd better hurry, or you'll be late. He -promised he'd write, an' "-she looked up at Lit's suddenly; a look of triumphant resolution came into her poor face—" I ain't goin' to give it up yet."

#### Why Christmas Comes.

Minnie May's Dep't.

Hang up the holly and the mistletoe, Build up the fires and let them redly glow, Set out good cheer in all your happy homes, For this is why the Christmas yearly comes.

Renew old friendships and forgive all wrongs. For loving kindness to the time belongs. Be generous to the poor and needy ones, For this is why the blessed Christmas comes -Lillian Grey.

#### MY DEAR NIECES :-

During the holiday season when everyone is looking forward to fun and frolic, we shall discuss the possibilities of a real old fashioned New Year's festivity. It need not be held on that night, but any time during the two weeks of the New Year, and though some rules will be given you, they can be altered to suit almost any company or circumstances. You must choose the number of your guests according to the room you have and the number of your company; but twenty is a good many at once, and we will provide for that number. First let me impress upon you the importance of having your house in shining array, the windows bright, and curtains white; stoves polished and floors spotless; and from attic to cellar all should be neat and clean. All this will cost a little time and trouble, but you are well repaid by the bright, cheery aspect of your home. Have all the fires warm and glowing, for warmth imparts such a sense of hospitality. Be ready dressed in your best before the hour of your guests' arrival, and put every other feeling but that of enjoyment far have the enjoyment of your guests secured, but if not you must secure music.

Now we have attended to all that is necessary in this part of the house, unless you will decorate it with evergreens, and what so pretty or festive looking as wreaths of hemlock and cedar everywhere. Your supper may be just what you can afford-sandwiches and coffee only-but let them be good and abundant, and the coffee hot, sweet and strong; or you can provide a substantial supper for your guests at a very little trouble and cost. All can be cold, cooked before the day, and nicely decorated with green leaves, or the tender tops of turnips or cabbages as they sprout in the root cellar. You can provide salad if you like of celery, chicken or beet root, and so many sweet dishes can be made by my bright girls from the delicious cream that only a farm home can supply, that there need not be any difficulty to select them. Lay your table with a clean white cloth, and put the dishes tastefully upon it, the largest at each end, and in the centre you might put a plain fruit cake—the recipe for making and icing was given in the last number of the ADVO ATE. This centre piece can be made to look very gala by dipping small sprigs of cedar in gum water, then rolling in fine sugar and drying. Arrange these all around the cake, and a piece out of the top of it, or a small flag may be placed there. You can make the flags from colored tissue paper. Believe me, a plain supper, well cooked, will be much better relished than a more claborate one badly done. A cup of hot coffee saved to each guest upon their arrival will just begin the evening, and be relished after a long drive perhaps. If you serve only refreshments the sandwiches can be placed upon large plates with a white cloth beneath, and this will make them look very appetizing. I am only offering temperative beverages, as there is no need of any thing else among my happy young people.

MINNIE MAY.

Brooms before using should be dipped in hot suds and hung up to dry by the handle; treated thus they wear longer.

Kitchen Hints.

Granite ware can be cleaned of anything sticking to it by scouring with coarse salt.

A special saucepan should be kept for boiling onions; if obliged to use another, fill with hot water and wood ashes to cleanse from the smell.

Brush out the flues of your cooking stove at least once a month. On the morning of your scrubbing day is the best.

Do not use old pieces of shirt or corsets for dishcloths. Unbleached muslin is so cheap and will last so long. There is a suggestion of nattiness about using old clothing about your kitchen, and except for floor cloths should not be done.

Butter cloths should be of new cloth. A piece of old shirt around a butter print is enough to spoil the sale of it. Many a woman has turned in disgust from it. Soap and water will not wash away memories.

Try a spoonful of sugar in your pancakes before cooking, and you will have an agreeable

Peel apples before baking them; there is not half so much waste, and they look better.

Cheese that has become too hard to use, can be grated and put between slices of bread and butter for sandwiches for tea.

Bread need not be wasted if too hard to use; stew apples and sweeten; put a layer of apples and one of bread; another of apples until the dish is full; put some little bits of butter on the top and bake for one hour; after pouring one cup of sweet milk over it; a wholesome and delicious pudding. Serve with cream.

When you use the white stalks of celery, tie up the green part and hang in a cool place to flavor stew or soup with.

Baked quinces are delicious served with cream and sugar.

Treat the family to coffee, or cocoa, for a variety at breakfast.

Cold meat, thinly sliced, looks far more tempting if a few sprigs of parsley or celery tops are put around the edge of the dish.

Parsnips fried are good with roast meat; cut in slices long ways and fry in hot lard.

Vary the shape of your loaves of bread and they will taste nicer. Make them in twists, or rolls, or bake in long, fancy cake pans. When they come out of the oven, brush over with milk and sugar or butter.

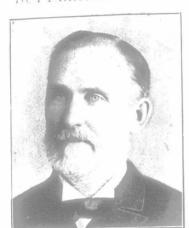

Save all your brown paper; use it for setting pots and kettles upon the painted dresser, or wiping the face of smoothing irons upon, on putting under and over a pan of cake in the oven to prevent scorching, or over a roast of beef or poultry; and when dressing poultry for the table do it on a big sheet of brown paper.

See that your kitchen stovepipes and chimney are clean; it will save you the discomfort of smoke, a slow oven, or, perhaps, the fright of a blaze out some breezy morning.

Throw a liberal supply of fresh lime into closets and sinks, or drains; or common salt is a very good purifier, and boiling water will carry away any grease that may accumulate in the pipe. If the pipe does choke, light a roll of newspaper and hold the blaze under the pipe until it heats it and the grease will go through with a rush; follow it with a deluge of boiling water and seda, so as to carry it away into the drain.

Treat the family to stewed celery occasionally; it is a little more trouble than ordinary vegetables, but it is a delicious relish with beefsteak. Stewed cranberries are good also.

#### The Challenge of Thor.

"I am the God Thor!
I am the War God!
I am the Thunderer!
Here in my Northland,
My fastness and fortress,
Reign I forever!"

Such is the nature of man that some form of belief relating to his being and future state are essential to him.

The Christian doctrines prevailed in the south of Europe about the year fifty, and spread into Britain about the middle of the second century;

from thence they extended over the north of Europe from the fifth to the twelfth century. Thor and Odin were the principle gods of the Norseman, who were a wild and quarrelsome race of warriors. In 826 Lewis the Pious, Emperor of Germany, sent "Ausgar," called the "Apostle of the North," to Denmark to preach the Gospel, and confirm and promote the faith there and spread it more widely. Ausgar obtained great influence over Horick, King of Denmark, from whom he obtained a letter of introduction to Olaf, King of Sweden. Horick wrote to the effect that "He had never in his life seen so good a man; that he never found one so trustworthy; and since he had found so much goodness in him, he had permitted him to undertake what he wished in reference to Christianity in his own land, and he hoped that King Olaf would also permit him to publish the Gospel in his kingdom." When Ausgar arrived in Sweden he found the l'agans greatly opposed to him. He invited the King to an entertainment, and made him a great many presents, and so won him over to the cause that he was ready to do anything to promote it.

The following lines by Longfellow describe the incident portrayed in the illustration:—

"There in the temple, carved in wood,

The image of great Odin stood,

And other gods, Thor supreme among them! King Olaf smote them with the blade

Of his huge war-axe, gold inlaid,
And downward shattered to the pavement flung

them.

King Olaf from the doorway spoke: Choose ye between two things, my folk:

To be baptized or given up to slaughter!' In their temples Thor and Odin

Lay in dust and ashes trodden, As King Olaf onward sweeping

Preached the Gospel with his sword."

Christianity is the grandest and most deeply bake, whip egg interesting subject that can engage our atten-

tion. Recollections of its antiquity go back to the creation of the world. It has dispelled the dark shades of heathenism, and is the most humane, the most favorable to liberty, and to the arts and sciences that ever existed. Wherever Christianity has gone she has carried civilization with her, and elevated the people to refinement, intelligence and happiness.

A relic of the old paganism still remains with us in the names of the days of the week—

> "Over the whole earth Still is it Thor's-day."

THE CHALLENGE OF THOR.

## Odds and Ends.

Venezuela has 56 holidays. On these occasions the people clean out their stores, indulge in chicken fights and other amusements of tropical climates.

An average hive of bees will contain 30,000 workers, all of the female sex.

A stick of celery rubbed on the hands after peeling onions will take away the odor.

A doctor says that one person in nine is lefthanded, but the left hand can be trained to iron, bake, whip eggs, in fact do anything that the right hand can.

#### The Brotherless Girl.

The girl without a brother is especially to be pitied, writes Ruth Ashmore in the December Ladies' Home Journal. She is the girl who is never certain of getting the pleasures of life unless she is very attractive. Of course, she has no brother who she is certain will take her everywhere; she is apt to get a little bit vain, for she has no brother to tell her, as only a brother will, of her faults and mistakes. It is only the somewhat doubtful tact of a brother that announces "I wouldn't walk up street with you in that frock," and the girl whose brother says this to her may be certain that he is only

expressing the opinion of other girls' brothers. He may do it in the most gentle way, but he does tell the truth, and if you ask him why paying a visit to another girl is more desirable than to one you know, he will sit down and look at you, and then he will say: "Well, you see, it is just this way: From the time you get there she is a nice girl who gives you a pleasant welcome and yet doesn't gush over you. She is entertaining, and yet she has a fashion of putting down nasty gossip or silly talk among whoever is there. She is a restful sort of a girl, she is not always wanting to do something that tires you half to death, and where the game isn't worth the candle, and when she says good-bye to you, you feel certain that she is pretty glad you came, and that she will be glad to see you another time, but that she doesn't look upon you as the one and only man in the world;" that is the kind of a description that the brotherless girl can't get. Then she doesn't hear of men that a fellow would rather not have his sister go with. Probably the wisest course for her to pursue is for her to choose as her most intimate friend a girl who has a wise brother; then she can reap the benefit of his

AMOUNT OF SLEEP REQUIRED.—Dr. Cold, a German specialist, gives us his opinions concerning the amount of sleep required at different periods of life as follows:—"A new-born child finds its want of sleep completely satisfied; when in good health it sleeps almost during the whole of the first weeks of its life, and it wakes up only for the purpose of nursing. In the first years people are very much disposed to let children sleep as much as they like, the time being that of tranquility for the parents.

tranquility for the parents. But from six or seven years, which is the time for going to school, things are reversed. When ten or twelve years old, the child has no more than eight or nine hours' sleep, while it needs at least ten to eleven hours, and the more the child progresses in age the more its resting time is curcialled. The author is convinced that an adolescent up to twenty years of age requires nine hours of sleep, and that even an adult still needs eight or nine hours. If the time devoted to sleep is insufficient, the brain has not a sufficient repose, ceases to perform its functions in a normal way. Exhaustion, excitability, intellectual troubles take gradually the place of the love of work, of general ease and of the spirit of initiative."

#### PRIZE ESSAY.

## The Lights and Shadows of Country Life.

BY MISS FLORENCE B. M. COLLIER, ORANGE-VILLE, ONT.

Were we permitted to carefully examine the picture of country life portrayed by the immagination of each individual, whose own peculiar tastes and opinions lend a coloring to the whole, we should frequently behold a picture dark and gloomy, and a prospect distasteful and repulsive.

But all are not equally uninviting, for we might find many who would willingly exchange their city life for a more retiring and quiet one.

The lights and shadows of a country life vary in particulars, according to the wealth and industry of the individual. In Canada the typical occupation of the countryman is farming; in England we have the wealthier and more scientific agriculturist; in Europe and Asia we have the fruit and spice grower, the vine dresser and the shepherd. However, though the countryman's employment differs according to the nation in which he lives, and his position in the trade world is important or unimportant according as he is poor or wealthy, peasant or farmer, nevertheless there are common advantages and drawbacks belonging to country life as seen in the old or new world.

Let us in the first place consider his daily employment. Is it not invariably peaceful and quiet? Free from the noise and bustle of a city life, where the rolling of carts in the street, the ceaseless tramp of the busy multitude, the buzzing and whirring of factories and mills, almost drive us wild, and make us long for a secluded nook into which we may creep to escape from from the turbulent crowd, and commune with our own thoughts. Fresh air, out-door work, and plenty of bodily exercise, are looked upon as some of the greatest benefits of rural life. Ought we not, then, to value that path in life which will most fully develop man's bodily health and strength?

We have spoken of pure air, healthy exercise and quiet surroundings as advantages, all tending to strengthen and bring to perfection man's physical nature; but that is, perhaps, the least mportant element of man's person; for there is the intellect needing careful and diligent training that it may efficiently perform that work for which it was designed. But far before even this comes the soul—God's Kingdom. To purify and elevate this most valued part of our being is the chief duty of every human creature; and the lights and shadows that pass across that creature's soul are the lights and shadows of the human life.

What does a life in the country do for our mental qualities! We have seen its benefits to the physical man, but what are they to the intellectual? A fine constitution, a strong, vigorous and symmetrical body, backing a healthy and active mind, is a human creature only half developed. Here the townsman will declare the ountryman must necessarily be deficient "for," he will say, "where are his books, his schools, his society, to cultivate his mind?" But stop! hasty citizen; from what does the delicately wrought mind obtain its nourishment? From what source does the poet derive his What subtle charms and strange influences imbue the poet's mind with dreamy pictures, weird music and odd fancies that pass hrough his busy brain and lend a magical touch

to his poetry? It is pure healthy nature, the poet's companion; it is nature with whom the refined mind ever delights to associate; it is God's own handiwork, displaying in its every mood and aspect the Creator's wonderful skill. And who has a better chance to study the beauty and picturesqueness of nature than the rustic Instead of the profane language caught in a passing word, the ill-natured remarks, the noisy laughter, the dust, mud and dirt, that daily greet the ears and eyes of the business man as he hurries to his work, there is the delicious notes of the little bird pouring forth sweet melody from a neighboring elm, the gentle lowing of the cattle, the busy bee humming in the scented clover, the bright flower shedding its fragrance abroad, the soft bubbling of the brook as it rolls merrily over the pebbles in its tiny bed, with the glorious sun o'erhead pouring down a flood of warmth and heat on the beauteous scene below.

Oh! if there is any poetry in a man's nature will not this daily companionship with things pure and beautiful nourish and strengthen it? Will not our thoughts be raised to contemplate the Maker of this glorious scene around us. But you will say, this is not all; there are schools, books, colleges, libraries and society needed to bring man's intellect to perfection.

Certainly; but cannot a country child obtain a public school training in the country? In our highly favored nation he can, and if he has not sufficient money to obtain a higher training in a college he can surely get books, and himself assist nature in bringing mental abilities nearer to perfection.

Again, you will say newspapers are delayed. Books' can only be procured at long intervals, and the world will get ahead of this self-educated man. But newspapers seldom obtained will be carefully read, and you will very often find that a farmer who only gets a paper once a week will know much more about the world's doings than the man who hastily glances over his daily paper before beginning his work.

So it is with books; they are diligently read, and reread: they become wholesome food to the mind, and instead of hurriedly devouring their contents, to read the latest novel, we read slowly and thoughtfully, gradually assimilating our knowledge and making it a part of ourselves.

As for society I do not think we need lament

its absence, for the countryman may create a better, purer and holier atmosphere around his own hearth than was ever breathed in the highest literary and most fashionable circles. Society has its good and evil influences, both of which the countryman escapes. Nevertheless, were he ever living in the town, and possessing the same abilities, he might still be unable to gain that right of mingling in cultured society, which is so zealously guarded. And last of all let us remember that the countryman, whatever nation be his home, holds by no means an inferior position in the commercial world. The farmer s Canada's most valuable workman, the peasant of European nations is a steady, industrious and important workman. The fruit grower and vine dresser fill important places in the crowd of France's busy workers, as well as among those of other nations. Then comes the shepherd of the east, the mountain dweller of Switzerland; their position in the world is, perhaps, not very high, but on what picture does the mind love to dwell more than on that of the wild scenery of a Swiss peasant's home, or the peaceful night scene of an eastern shepherd's watch. Thus, while one occupation towers far above the others in the nation's trade and commerce, the other touches he chords of a human heart, delights the mind with romantic fancies, and soothes the soul with peaceful and holy thoughts suggested by the surroundings of a humble and solitary work man's calling.

Thus after earnest consideration of the lights and shadows which east bright or dark rays across a country life, we are lead to the conclusion that a man with moderate wealth, and a fair share of natural abilities, will develop a stronger and more vigorous manhood were his abode in the country, than if it were in a town or city. In the latter his manners might be more polished, and his mental activities become sharper, but I am sure he could not unfold so pure and noble a soul.

#### Uncle Tom's Department.

MY DEAR NIECES AND NEPHEWS :-

A new year begun. A new book of three hundred and sixty-six pages, all clean and white, lies open before you. On it the title page is written in indelible characters--1892. In some of my young friends' diaries for the past year there are marred and blotted pages, and some cut out altogether, as if the writer had grown ashamed of what was therein written. There are records, too, of other days, which are simply regrets for misspent time, and longings expressed for something better, truer and nobler, to satisfy the heart. These are the wandering, if not the wanton, desires which like tongues of flame in the evening firelight reach out into the unknown, the quality of which soon affects my boys and girls, and goes so far in the building of character for after years.

It is these desires which take a young man from a home of luxury to bear the brunt of the hardest of lives in the outposts of our country—this desire which takes possession of a boy, and makes him, if he really love the sea, submit to insults, do menial work, to be, indeed, a slave without a murmur, if he be but allowed a home on the ocean wave. It is this which makes the earnest student laugh at impossibilities in the lack of money to educate him, and to work on, hope on, pray on, till his end is accomplished—his goal reached.

Nor is this lacking in the training of my nieces. Where there are several girls in the family the liking for dressmaking or millinery, for nursing or for studying, will, with patient watering and airing of the project, often bring it to pass.

It is a sad thought to many parents the amount of money spent on the education, musical or scholastic, of their children, with such small returns. Years of practice in music, and numbers of lessons, spent on a boy who by his own voluntary will lives where no instrument is at command, or, in the case of so many of our elder nieces who have married, and allowed the household duties to crowd completely out the practice which one requires to keep up if she play at all.

But we have wandered far from our new book. Let me see, we had it named, but every page was yet white and clean. What the future holds we know not. What changes have been made in the past year! Some who then were so bright and clever and beloved—who seemed the most needed, and the least!ikely to be taken away, have gone, and already, like the stone that sinks in the water, the place is filled.

On this January evening as you look at the leafless trees in their sober winter attire, do you think, my nieces and nephews, how there, hidden from view, the preparations for the coming spring are going on. Let us learn the lesson. In these long, quiet winter evenings, when the ice has bound lake and river, when the robe of white is over earth, when, aside from school lessons, a little feeding of stock or splitting kindling wood, snow-ballings, sleigh riding, skating, or playing shinty, there is little to take up the attention of my farm boys and girls, so, like the trees, be quietly busy making preparation of mind—food that will carry you through the coming summer, and through your after life.

Your loving Uncle Tom.

P. S.—I am sure you will all be looking to see who were the lucky prize winners as soon as the Advocate arrives this month, although you might guess, I fancy, who have worked faithfully all through the year. For puzzles—Jet, Miss Ada Armand; 2nd, Henry Reeve; and 3rd, Fair Brother; and for answers, 1st, Henry Reeve; 2nd, Miss Ada Armand; 3rd, Miss Mattie Wood-

Now, these worth; 4th, I. Irvine Devitt. names must be familiar to you all, for they have worked earnestly for prizes for years, and, of course, by this time ought to be good at puzzling. Now, I propose to make a change, and for this year we will exclude all who won prizes last year, though we still hope to hear from them; but, remember, none of them are to compete for prizes. This will give all new comers a chance, and I hope there will be lots of them.

For best original puzzles, I offer: 1st, \$2.00; 2nd, \$1.50; 3rd, 75 cts. For the most correct answers: 1st, \$1.00; 2nd, 75 cts.; 3rd, 50 cts.; 4th, 25 cts. Answers must accompany all puzzles. Write on one side of the paper only; all correspondence to be in our office not later than the 18th of each month. Now, I hope to hear from a great number of new nephews and nieces, whom we shall gladly welcome to our

I think you will agree with me that children's stories are quite played out, or run out, I don't know which; however, if anyone has something very interesting I shall try and find a corner Your loving UNCLE TOM.

#### Puzzles.

1-DOUBLE LETTER ENIGMA. I'm in the "soft and fleevy snow"
That falls against the pane:
I'm in the "ocean billows", too—
I travel o'er the main.

You'll find me in a "lady's fan", Upon a summer's day; I also stay with "gentlemen" She meets upon the way.

On "New Year's" day I doff my hat To ladies and to gents; And everyone who guesses me Will get just fifty cents. FAIR BROTHER.

2-A GAME OF NATIONS. What nation has reached the highest point?

What nation has reached the highest point?
Which crowns both kings and queens?
What nation shows the greatest light?
Which but a little means?
What nation has a purpose firm?
What nation is an evil scheme?
What nation clears all doubt away?
What nation ends this little theme?
ADA ARMAND.

3-Numerical.

My 1, 2, 3, 4 you'll find
Travelling by rail will bring to your mind.
If you are always my 5, 6, 7, 8
The doctor you'll never have cause to hate.
My whole's a word that's hard to say.
I'll not say it, dear cousins, but Au Revoir.
HENRY REEVE.

4-NUMERICAL ENIGMA.

My 9, 12, 13, 15, 5 is an Anglo-Saxon title. My 6, 2, 17, 16, 7 is a carousal. My 1, 8, 4, 11, 18, 14 to make fat. Total is an old adage.

ADA ARMAND

6-CHARADE.

Dear friends and puzzlers, one and all, I'll take TOTAL for my text;
And preach a sermon? did you say.
Ah! FIRST; I feel perplexed.

I'll something out of nothing make. A tale to you I'll tell; 'Tis older far than Noah's ark,

And lived ere Adam fell.

I was long before time began; I travelled on through space I had no place to lay my head. My tracks I'll now retrace.

The miser covets all but me. And Satan passed me by; nd now perchance you'll say to me, This LAST is in your eye.

But if this puzzle you read aright, With me you'll all agree; I've something out of nothing made,

And had a jubilee.

FAIR BROTHER.

Answers to November Puzzles.

1. Plum pudding, roast turkey. 2. Make someone else happy. 3. Fun which gives pain to others is a very mean kind of sport. 4. "Deceit for the deceiver is fair dealing." 5. Tour.

J. E. SMITH, Box 274, Brandon, Man.

STOCK GOSSIP. In writing to advertisers please ment on the Farmer's Advocate.

Mr. H. O. Ayearst, of De Clare, Man., offers a valuable Shorthorn bull for sale. See advt.

valuable Shorthorn bull for sale. See advt.

About 1.300 birds were shown at the late poultry show in Chicago. It was a grand success.

There has never been a time when the best steers did not pay for raising. It is the scarcity of the best steers that occasious the trouble.

Mr. Fred. G. J. McArthur, of Winnipeg, 724 Logan street, is making a specialty of breeding homing pigeons, and elsewhere in this issue offers eleven pairs of choice young birds for sale. Write him.

Mr. M. May one of our poultry advertisers, re-

mr. M. Maw, one of our poultry advertisers, received the following letter from Mr. Walter James, of Rosser P. O.:—"Received chickens safely; I find them a fine lot; the pullets are extra good. Thanking you for your prompt attention."

The Shortborn cow Starlight, purchased by Mr. H. O. Ayearst, at the Binscarth disperson sale, dropped a beautiful red heifer calf on the 12th Dec., by Marquis Neidpath. This is the first pure-bred Shorthorn ever born in the municipality of Archie.

by Marquis Neidpath. This is the first pure-bred Shorthorn ever born in the municipality of Archie. In the course of transcription the following errors crept into the published poultry prize list. Winnipeg Industrial Exhibition:—Breeding pen Laced Wyandottes. "W. Mann" should be "M. Maw," Brooder in operation, "W. Mann" should be "M. Maw." At the "Coulee Ranch," St. Jean, Man., comprising 740 acres of land well adapted for the purpose, Mr. Wm. Clougher, of Winnipeg, purposes going extensively into the breeding of heavy horses, having already a foundation stock of 20 brood mares and one stallion, which farmers of this locality will have the privilege of using. He expects to import a car load of Clydesdales in the spring.

Messrs Robert and John A. Turner, Calgary, N. W. T., took 1st with the Collie dog "Scotland Star" (imp), 1st with the Collie bitch "Lass o' Ardentining" (imp.), also the diploma with them and two of their produce for the best kennel of non-sporting dogs at the Winnipeg Industrial Exhibition. Those dogs are both registered, and bred from the most fashionable strain, being descendants of the celebrated winners, viz.: The Metchely Worder, Christopher, Caractacus, Charlemagne and Eclipse.

Daniel F. Boissevain, Cannington Manor, Man., writes: My cattle are in very good order and

Worder, Christopher, Caractacus, Charlemagne and Eclipse.

Daniel F. Boissevain, Cannington Manor, Man., writes: My cattle are in very good order and doing remarkably well on green oat straw, mangolds, hay and oat chop, with a small admixture of bran and rye. Old Mistletce 1st was lately slaughtered, and her last son, a very promising, even youngster, went to Mr. H. Y. Hex. of Elkborn, where he will stand for service next year. First Duke of Hilversum is a beautiful red with a dainty white star in his forehead that sets off his beautiful head to perfection; his general appearance is very pleasing. His mother was the largest Shorthern cow I ever saw, and was bred by Mr. Brockie, in Ontario. Hilversum's Roastbeef, now a year past, has captivated the eve of Mr. Whelpton, of Glen Adelaide, whose stable door will soon open for this cronie of useful, deep-milking Twia Primrose. The success Mr. Wm. Metcalfe had with my cross-bred bull from the Holstein Finette and Blythewood Duke, has induced Mr. Fred. Courbarron, of Whitewood, to buy his full broother; both are jet black, growity, fleshy fellows, who get fat on what would render their red and roan brethrem mere skeletons. Finette made one pound of butter out of 20½ Br. of milk last July on grass alone. At the time of testing she was failing in milk yield, but still averaged 49 lbs, per day. My helter calves I call a decidedly superior lot, so that Blythewood is likely to stay with me yet, as this section abounds in purebred bulls, to which I can mate my helfers as they come along, notably amongst them are Weather-old's Westward Ho! and A. E. Summers' Western Heir Apparent.

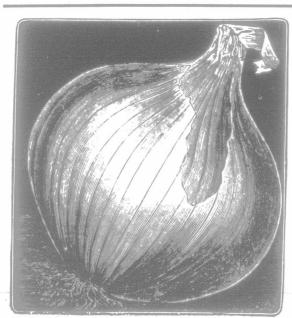

J. D. McGregor & Co., Brandon, Man., importers Heir Apparent.

come along, notably anlongs, them are weatherold's Westward Ho! and A. E. Summers' Western
Heir Apparent.

J. D. McGregor & Co., Brandon, Man., importers
of English Shire, Cleveland Bays at d Thoroughbreds, have recently made the following sales:— fo
Mr. Manby Creighton, of McGregor, the imported
two-vear-old Cleveland Fay stallion Haddeal (2:1),
C. B. S. B. Radical stands now 16.1½ hands, and
weighs 1,350 fbs., and is a good representative of the
breed: his breeding would be hard to improve on,
being by Reform (653), by Sport-man 299, by Brilliant
(2), by Yatton Lad 364, by Wonderful Lad :61, by
Cleveland Lad 69, by Cleveland 60, by Champion 50,
by Summercock 304, by Skyerocket 280. Radical's
dam was Becky sharpe 304, by Encouragement 605,
by Fidus Dius 107, by Roseberry 264, by Wonderful
Lad 361, by Cleveland Lad 69, by Cleveland 60, by
Champion 50, by Summercock 304, by Skyerocket
280. Radical will make the season of 1892 between
Austin and Po-tage la Prairie. We have also sold
to Mr. David Munroe, of Nepawa, the two-year-old
Shire colt Ring Leader 11544, and the two two-vearold fillies Jessica and Flora. Hing Leacer is a
grand young horse, weighing 1,750 fbs. now, and will
when mature weigh 2,100 fbs.; such feet and legs as
his are seldom seen outside the best English show
rings. He is sired by Mr. Sutton Nelthorpe's grand
old stock horse St. Hybald 4068, by Ling-nsoire Tom
1367, by Honest Tom 1111, by Honest Fom 1105, by
Thumper 2123, by Thumper 2119, by Major 1447, by
Honest Tom 1073, by Honest Tom 1060, by Milton & Cooley's
Brown Horse of Bassingham, foaled in 1800. Ring
Leader's dam was Depper, by Newstead 1632, etc.
The fillies are also a grandly bred pair, and should
breed something that will do credit to Manitoba in
the show ring. Ring Leader will make the season
of 1892 in the vicinity of Nepawa.

#### ADVOCATE. THE IN

# OUR GRAND SEED OFFER!

THE OREGON LONG KEEPER ONION.

# Vegetable Seeds.

We will send the "Farmer's Advocate" for one year and twenty packages of seeds described below for \$2.00, or we will send the twenty packages post-paid to the address of the person sending us the names of two new subscribers and \$2.00.

These seeds are put up for us by John S. Pearce & Co., seedsmen, of London, and were selected from among the sorts that have proved most satisfactory when tested on their trial grounds. They are not CHEAP SEEDS, but in every case are the choicest varieties selected from the best stock, and if given proper attention will give entire satisfaction. We hope every one of our old subscribers will take advantage of this offer and send us the required new names. This selection would cost in the regular way \$1.50; it is put up for our exclusive use as a premium to our subscribers, and cannot be procured in any other way. men, of London, and were sel-

IMP. LONG BLOOD BEET -A favorite with all, and really the best all-round beet in cultivation; skin dark; flesh nearly black; fine quality and excellent flavor.

THE GOLDEN EYE WAX BEAN.—Has already passed the ordeal of public opinion, and earned for itself the first place among wax beans. It is early, a vigorous grower, and yields a great profusion of tender, succulent rods of a beautiful waxy appearance; pods long, very brittle, of a rich golden color, and entirely stringless and of excellent flavor.

THE SCARLET MODEL CARROT is, without a doubt, the finest stump-rooted variety in the market. The roots, which are about six inches long, regular in shape, thick at the shoulder; skin smooth and even, of a bright scarlet color; flesh sweet and of fine flavor.

CAULIFLOWER, ERFURT (first quality)—There is nothing so annoying as to go to the trouble of raising plants and then have them fail to head. Having this fact in view, we have imported a strain of Cauliflower from Denmark, its native home, which we have found to have the following good qualities:—First, it is the earliest of all Cauliflowers; second, under the conditions of an ordinarily favorable season, nearly every plant will form a perfect snow-white head, averaging nine inches in diameter.

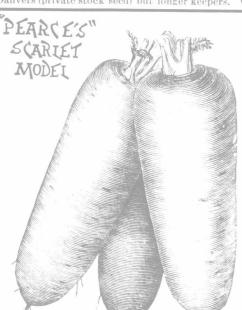

DILKE'S MANY-HEARTED CELERY is very distinct in appearance, being much stouter, thicker and heavier near the root than any other variety. This celery has never shown a burnt or dry leaf, or soft or spongy stalk in the most trying seasons. Excellent keeping quality.

THE ROSEDALE LETTUCE has proved one of the best all-round Lettuces in the market to-day. Its shape is very distinct, heading up like a pointed cabbage, and almost as solid; of a beautiful light green shade, almost white; tender, crisp, and of a rich, buttery flavor.

THE OSAGE MUSK MELON is a very early variety, of large size, flesh deep and thick;

THE FORDHOOK WATER MELON has been grown side by side with all other early sorts and has proved itself to be the earliest of all. The form is nearly round, the average weight being about fifteen pounds each.

THE ROSEDALE LETTUCE. THE OREGON ONION is a selected strain of the Yellow Globe Danvers, being fully as large and by far a better keeper than that favorite variety. The introducer says:—"My stock of the Oregon Long Keeper is a selection made twenty years ago from the best Buxton stock, and by selecting each year the largest and ripest onions for seed, I now have an onion that will keep in our climate until April, and sometimes as long as May, and I will guarantee my onion to keep longer than any other strain of Yellow Danvers Onion grown in America." In size, color and shape it is identical with our strain of Yellow Globe Danvers (private stock seed) but longer keepers. We found the past season in our test of this variety that it was the truest type in our large test of onions.

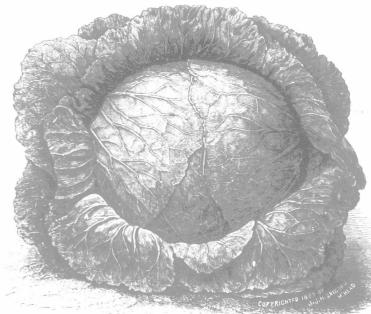

SCARLET MODEL CARROT.

THE RUBY KING PEP-PER.-The finest exhibition variety grown, being of a beautiful shape, enormous size, of a bright ruby-red color, and very productive

THE LONDON MARKET THE LONDON MARKET CUCUMBER was first introduced a year ago, and we find it to give good satisfaction. It is very smooth, prolific, of good flavor and very long; is a very desirable variety for table use.

IMPROVED HOLLOW CROWN PARSNIP.—A carefully selected strain of this well-known Parsnip. The roots do not grow as long as the common Hol-low Crowned, but are of greater diameter and more easily gathered.

THE SCARLET BUTTON RADISH is one of the earliest forcing varieties in cultivation, being ready to pull within three weeks after sowing. It is of round form, shout leaves, with deep searlet skin and white flesh. For crispness and tenderness it surpasses all other strains of Scarlet Turnip Radish.

ALL SEASONS CABBAGE.

THE ALL SEASONS CABBAGE derives its name because at is just as good for late market or to keep over winter as it is for the early market. Many market gardeners say that they prefer it to the Henderson Early Summer, as it is just as early and grows a third larger.

CORN—Talbot's First and Best or White Cory—One of the earliest of all Sweet Corn. The cob and kernels are white as any other variety of sweet corn. This is a White Cory obtained by selecting nothing but the whitest corn and cobs.

#### VEGETABLE SEEDS.-(CONTINUED.)

BUSH VEGETABLE MARROW SQUASH is a decided improvement on the old trailing Vegetable Marrow. The fruit is larger, handsomer, more ribbed or flated than the ordinary kind. It is very prolific.

THE WHITE EGG TURNIP.—A quick grower; thin skin, sweet and delicious flavor, with grain as firm and hard as the Swedish varieties.

BISHOP'S LONG POD PEAS is a well-known English variety; good stiff straw, about two feet high; pods long, round, and well filled with from eight to ten large, plump peas. A first-class variety.

THE ATLANTIC PRIZE TOMATO is one of the earliest of all tomatoes. The vines grow strong, stiff and very rapidly, setting the crown fruit when young. The fruit is borne in immense clusters.

KING OF THE MAMMOTH PUMPKIN, also called Genuine Mammoth, Large Yellow Mammoth, True Potiron, Mammoth \$50 Pumpkin and Jumbo Pumpkin.—The great interest taken in growing the largest Pumpkin, and the great demand for the seed explains the reasons for the multitude of names given to it, as no other Pumpkin ever introduced has reached such enormous weights and been awarded as many prizes.

#### SEED OFFER! UR GRAND

BALSAM.

#### FLOWER SEEDS.

We will send the "Farmer's Advocate" for one year and twenty packages of

We will send the "Farmer's Advocate" for one year and twenty packages of seeds described below for \$2, or we will send the twenty packages post-paid to the address of the person sending us the names of two new subscribers and \$2.

These seeds are put up for us by Messrs. John S. Pearce & Co., Seedsmen. of London, and were selected from among the sorts that have proved most satisfactory when tested on their trial grounds. They are not CHEAP SEEDS, but in every case are the choicest varieties selected from the best stock, and if given proper attention will give entire satisfaction. We hope every one of our old subscribers will take advantage of this offer and send us the required new names. This selection would cost in the reguar way \$1.50; it is put up for our exclusive use as a premium to our subscribers and cannot be procured in any other way.

ASTER-Mixed Varieties. - For beauty and variety of habit, form and color the Aster stands unrivalled, and with every lover of floral beauty it is a favorite.

BALSAM (Lady Slippers)-Rose-Flowered Double Mixed.—Old favorites with every one owing to their handsome double flowers, brilliant color and stately growth.

CANDYTUFT (Mixed Colors).—Yields an abundance of fragrant flowers throughout the whole season: deserves to be cultivated in every garden.

DOUBLE DAISY—Fine Mixed.—One of the prettiest dwarf hardy perennials in culti-tion. It flowers the first year from seed.

POPPY.

ZINNIA.

DIANTHUS CHINENSIS, fl. pl. (Double Indian Pink)

— A magnificent genus, which embraces some of the most popular flowers in cultivation. Their rich and varied colors in beds or masses are remarkably ettractive.

HELICHRYSUM (Ever-sting flowers).—They are lasting flowers).—They are generally cultivated for their rich and varied colored flowers, which are disirable for boquets, &c. Easily cultivated.

GODETIA - Mixed Colors.—Ornamental hardy annual, two feet high; flowering in a great many shades; grows in any soil.

ICE PLANT .- A pretty little trailing plant, the ered with crystalline globules, thus giving it the appearance of being

ASTER.

MARIGOLD-Mixed Colors.—Popular hardy anial; border plants of magnificent effect, varying height, form and color of flower.

MIGNONETTE—Large Flowering (Resida Odorata).—The delicious fragrance of the Mignonette makes it indispensable for boquets and cutting. Sow seed early in the garden; will bloom first of June.

NASTURTIUM - Dwarf Mixed. — For showy and constant bloom few garden flowers equal the old Nasturtium. They are sure to bloom in any situa-tion, hot or cold. wet or dry

PANSY-Large flower ing Splendid Mixed. Everybody knows, loves, and cultivates the Pansy. They give such a profusion

DIANTHUS.

PORTULACA — Mixed Colors. — About six inches high, covering the ground in a beautiful carpet-like form of most vivid colors. No matter how dry the weather, they will grow and flourish even on very poor soil.

SWEET PEAS Mixed Colors.—Among the most popular garden flowers, their pretty colors and delightful perfume making them one of the most charming flowers. Eight different shades.

PETUNIA-Very Large-flowering.—A ted of Petunias is a mass of gay colors from early spring to late fall. PHLOX DRUMMONDII- Fine Mixed.—Little need be said in favor of this grand annual. Everybody knows and cultivates it for its brilliant colors. This mixture contains sixteen distinct shades.

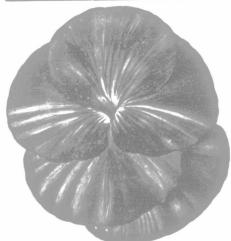

SCABIOSA—Fine Mixed (Mourning Bride).—Among the easiest of all flowers to grow, and sure to bloom well; contains a great variety of colors and one of the most beautiful flowers for boquets, &c.

STOCKS-Large-flowering Dwarf German, 10-Week Mixed. - With great variety of fine colors and large spikes of beautiful double, sweet-

its great variety of fine colors and large spikes of beautiful double, sweet-scented flowers, the Stock is suitable either for garden or pot culture. Twenty-six beautiful shades mixed. FOPPY-Finest Mixed.—This grand old flower is fast gaining the universal popularity which it justly merits, and is to day occupying a place beside the Chrysanthemum, and even the Rose.

ZINNIA ELEGANS-Double Mixed.—A bed of Zinnias makes a grand show, and is always greatly admired, being constantly in bloom.

ALSO AN EXTRA PACKET OF ONE OF OUR NOVELTIES OF GREAT BEAUTY: CLIANTHUS.—A flower of the Pea family, and sometimes called the Glory Pea of Australia. Has gorgeous scarlet flowers, with large glossy black in the centre, very distinct. Prefers sandy or gravelly soil. Can be sown in the open ground from May 15th to 24th with excellent results.

PANSY.

STOCK. THIS COLLECTION IF BOUGHT IN THE REGULAR WAY WOULD COST \$1.25, AND WOULD BE GOOD VALUE AT THAT MONEY.

Any of our subscribers who would prefer half of each of these collections, viz., 10 packets of vegetables and 10 of flowers, can make their own selection from these lists by writing out a list of what they want, but in no case can this be done unless the parties make out a list of what they

Any person sending us \$3 will receive the "Advocate" for one year and both collections, viz., 20 packages of each (vegetable and flower seeds), want and mail with the order. or to the person sending us four new names and \$4 we will send both collections.

We also offer as subscription prizes pure-bred live stock. See page 494, December number, 1891.

## TEMPERANCE AND GENERAL LIFE: ASSURANCE: COMPANY

Offers the most desirable policies farmers can possibly secure. Speaking of its ordinary life policy, a prominent agent of one of the largest and best of the American companies truthfully said: "It is the safest and fairest policy I have ever seen."

Every farmer who can possibly get it, should proteet his home by having one of these policies for such an amount as will save his family from em barrassment, in case of his premature death.

HON. G. W. ROSS, H. SUTHERLAND, 809-y-OM President. Manager.

#### NOTICES.

S. Mills & Co., of Hamilton, are advertising in another column farm barn plans, fur robes, and cross

Our readers' attention is directed to the advertisement in another column of The Grange Wholesale Supply Cc.

Messrs. J. F. Millar & Son's advertisement will be found in another column. We understand they are making a number of improvements in the new model Disc Harrow, also their Spring Tooth Harrow.

Bear in mind Mr. W. A. Freeman's prize of \$150 in gold for the best five acres of fall wheat and best acre of potatoes, grown from the use of fertilizers manufactured by Freeman's Fertilizer Works, Hamilton, Ont.

Mr. Frank Wilson, 33 St. Peter street, Montreal, advertises DeLeval cream separators in this issue—read his advertisement. Mr. Wilson reports the demand for these machines satisfactory; they always give good satisfaction wherever used.

ways give good satisfaction wherever used.

The steam threshers are all laid up. The snow and frost have put a stop to almost all threshing operations, except were Moody & Sons' Tread Power Threshing Machines are in use, for which Anderson & Calvert, Winnipeg, are agents. These latter machines are independent of the weather.

weather.

W. A. Peirce, 278 James St. west, Winnipeg, who has been in business in the city nearly two years, keeps well to the front with a large and well-selected stock of hand-made harness, collars and saddlery. He makes a specialty of giving careful attention to country-orders, and sells at most reasonable prices. Mr. Peirce holds three prize medals—two from the International Extibition, London, England, for the years 1885 and 1886; also one from the Exposition Universal, Paris, for the year 1878. Farmers might find it to their interest to give him a call.

There is, no doubt, a great field for successful

Universal, Paris, for the year 1878. Farmers might find it to their interest to give him a call.

There is, no doubt, a great field for successful dairying in Manitoba, many localities being peculiarly well adapted for that industry, and the experience of 1891 was very satisfactory. For the private dairyman, as well as the creamery and factoryman, one of the chief steps towards success is the use of improved utensils, etc., that will save labor, prevent waste and improve the quality of the products. The attention of Advocate readers is, therefore, directed to the advertisement of Prof. S. M. Barre, whose long, practical experience and intimate knowledge of the necessities of the dairy room qualifies him especially to supply the requirements of this branch of farming or to give information to intending purchasers. He regards the cream separator as at the foundation of the most successful development of butter dairying, and is handling the Danish Separator for large creamery use, and the Alexandra, a British machine, for small creameries or private dairies. In his advertisement he makes several very reasonable claims on behalf of the latter supplying creamery or cheese factory outfits complete, he makes a specialty of his business. For any additional jurformation address, S. M. Barre, box 953, or Grand Central Hotel, Winnipeg, Man.

Mr. Manson Campbell, the manufacturer of the famous Chatham Fanning Mill, writes:—"I manu-

Winnipeg, Man.

Mr. Manson Campbell, the manufacturer of the famous Chatham Faming Mill, writes:—"I manufactured and sold 4,5(0 fanning mills and 3,000 baggers in 1851 At this date we are turning out eighteen mills per day; the demand is equal to the supply. I enclose you a testimonial which I would like you to publish."

MR. MANSON CAMPBELL.

Dear Sir,—The mill and bagger I bought from you has given me good satisfaction, I had a few loads of wheat that was nearly one quarter wild oats, and after running it through I sold the wheat in London to a grain buyer for seed. There was no oats in it, so you see I made it clean, and I can also make a clean job of smut. And the bagger I consider the very thing for any farmer to have.

Yours truly,

R. H. Scott,

Vanneck P. O.

In writing to advertisers please mention the Farmer's Advocate

Farmer's Advocate.

"Experience is the best teacher," and 30 years, six of which has been spent in Manitoba, coupled with intelligent, persevering effort, has secured for Mr. Jas, A. Mullen, of Cypress River, Msn., an enviable reputation as a poultry breeder. As announced elsewhere his specialties are Game fowls and Emden geese, but he breeds choice Plymouth Rocks and Pekin Ducks as well. He won 1st prize on Games and Emden geese at the Winnipeg Fair of 1891, and has choice young birds and eggs from prize winners for sale. Intending purchasers should write Mr. Mullen at once. He aims to supply the best always, and we commend him to our readers. readers.

Mr. C. Arthur Rea, of Rapid City, Man., has imported two very fine thoroughbred racing stallions from England. They came through very well, notwithstanding a rough trip across the ocean. The horses have been brought to this country at a great expense, and it is hoped that Messrs, Rea & Hickling will have luck with them; they are very well bred, with strength and substance, and should make first rate sires. "Canova," brown horse, 5 years old, by Rostrevor, out of Cascade "Wellgate," dark brown horse, 3 years old, by Cavation, out of Chaff. The latter is a particularly fine horse, and has the Ton blood strong in his veins through the wiid Dayrell breed. Both horses are winners of races and closely related to some of the best race horses in England.

**CENTS** 

WEEK.

The plans of insurance operated by the Manufacturers' Life are universally admitted to be not only the most popular but also the most liberal and comprehensive now offered to the public. For a premium not very much larger than is charged for a \$5,000 policy, where the entire insurance is to be paid in one sum down, this Company will give a policy of \$10,000, payable in twenty annual instalments of \$500 each. That's the instalment plan. By insuring on the ten-twenty plan a man may carry \$1,000 for the insignificant sum of twenty three cents a week!

No other company in the world can give cheaper insurance than this.

THE MANUFACTURERS' LIFE INSURANCE CO., COR. YONGE & COLBORNE STS., TORONTO.

491/2 King St., W. Toronto.

#### FOR SALE.

The entire Oakdale Herd of Registered Holstein Cattle. Although considerable sales have been made lately the herd now numbers 55 head, including bullar imported cows, heifers and calves. This is undoubtely the finest lot of Holstein cattle in the Dominion. We have no pen and ink records for our cows, but we invite farmers and others wanting to buy Holstein cattle to go to the farm, spend a day there and test and weigh for themselves the milk produced. The herdsmen will gladly afford them every facility for so doing.

The bulls in use up to this season were the great prize-winning animals Presto and Adanac. Presto was the only bull ever brought to Canada that was a first prize-winner at the great Alkmar Fair in the Netherlands and was a great prize-winner in Canada. Adanac, whether judged by Canadian judges or an American expert, always took first.

judges or an American expert, always took first. He was never beaten, and was so perfect as a show bull that Mr. Stevens, the expert, said he would score a full hundred points. This is a dispersion sale and all animals not disposed of by first of March will be sold by auction, as the farm will be sold or rented by first of April next. Catalogues will be issued in a few days, for which, address John Leys, 18 Court street Toronto.

This herd at the large exhibitions of '87, '88 and '89 won more diplomas, more gold and silver medals and more money prizes than was ever won by any herd of any breed of cattle at same number of exhibitions in the Dominion. At the Industrial in 1889, when F. C. Stevens of Attica, an American expert, was judge, this herd literally swept the show ring, taking first for aged bull, sweepstakes for best bull of any age; first for yearling bull; first, second and third for cows and first herd prize for bull and four females.

This was enough glory, and the herd was not exhibited in 1900 and 1901.

This was enough glory, and the herd was not exhibited in 1890 and 1891.

## NOTICES.

Winter is at its height, therefore it would be well for farmers and their wives, when in Winnipeg, to call at W. P. Huff's, Main street, opp. pcst office, for a warm oyster stew, cup of tea or coffee. See ad-vertisement in another column.

vertisement in another column.

In Winnipeg, Manitoba generally and the Northwest, "Waghorn's Guide" has come to be a household word. It is published monthly at Winnipeg at \$1.00 per year, and contains about 125 pages per issue, packed full of information for everybody more especially the commercial and travelling public, "You'll find it in Waghorn's Guide" has come to be a truism. Its railway and steamship time tables, corrected to date, postal guide, stage routes, land regulations, legislative, municipal and civic information, game regulations and business announcements, are all specially valuable You cannot travel or do business properly without the "Guide".

The "Ever Ready Fire Extinguisher," advertised

"Guide".

The "Ever Ready Fire Extinguisher," advertised elsewhere in this issue, is the invention of Mr. O. McRobie, formerly of the Winnipeg and Montreal Fire Departments. Having spent over thirty years in that service, Mr. McRobie had innumerable opportunities of seeing valuable property and valuable lives lost simply for the want of a little necessary precaution in providing some means of coping with incipient fires. The greatest conflagrations have had small beginnings, and to check such effectually and in a perfectly simple manner is the design of the "Ever Ready Extinguisher." It was only placed before the public after the most careful study, many practical experiments and crucial tests. In the stables of stockmen, as well as in all mercantile and industrial establishments in cities and towns, it is a needed protector from danger and loss.

Mr. E. F. Hutching's new harness and saddle fac-

the sades of stockmen, as well as main fercarrille and industrial establishments in cities and towns, it is a needed protector from danger and loss.

Mr. E. F. Hutching's new harness and saddle factory, 519 Main street and 191 to 195 Market street, Winnipeg, is a standing monument to his energy and enterprise as a business man and manufacturer of horness, saddles, horse collars, fine turf goods, &c. &c. Although Mr. Hutchings is only a young man, he has made his cusiness a life study, and his twenty years experience has so well fitted him for his business that it is little wonder he has been so successful. It is only a few years ago Mr. Hutchings was working at the bench; now he owns one of the finest blocks in Winnineg, and employs an average of fifty hands the year round, which means a large distribution of money for farmers' broduce, &c. on which all these employees must live, making a larre, ready cash home market. Mr. Hutching's new factory and store is a large four story building, corner Main and Market streets, the first flat being the retail department, where every kind of harness and saddlery for farm frs' use is kept in stock at the most reasonable paces. The second flat is the wholesale hardwise department, sample rooms, general offices, private offices and backing rooms. The third flat is the leather and general stock room, collar department. &c., where thousands of collars and harness, horse blankets. &c., are constantly kept in stock. The fourth flat is the manufacturing department, filled with the best skilled mechanics that are to be found, under direction of the most experienced force an. Space precludes extended reference to his wonderful success at the Winnipeg Exhibition of 189, and the establishment of large branch stores throughout the province, in order to meet the requirements of the flourishing trade.

The STANLEY BLADE is probably the best tempered lance tooth cross-cut saw made, or ever made in the Dominion. The temper is warranted. They are perfect in temper, that part of their manufacture being done on the most modern principles, that of the absolutely even electric light process. The lance tooth pattern is well known to be the fastest tooth ever made. These "Stanley Blades" require very little setting, as they are four guages thinner on the back than at the teeth. The price is very low, 50c, per foot. A five-foot saw costs only \$2.50 each; a five and a-half-foot saw only \$2.75, and a six-foot saw only \$3. Patent handles, 25c, per pair extra. For ten cents in silver, or in postage stamps, we will mail to your nearest post office one of our patent guages for drag teeth. Every owner of a cross-cut saw should have one of these drag tooth guages.

We cannot say too much in favor of these "Stanley Blades." They are superior to every saw heretofore put on the market. We will send these saws by express, C. O. D., to any express office in Canada; that is, the buyer pays the money into the Express Company when he receives his saw.

FUR ROBES.—Our Australian Bear robe, size 52 x 66 inches, has met with remarkable success. The price is \$12 each, and for downright durability they are not outdone by the old buffalo robe, They are handsome and well made, the lining being of figured plush. An Australian hear is a species of kangaroo, and nature has endowed it with one of the toughest of hides, which tans beautifully, and as a Canadian winter robe has few equals, if any. They are strongly recommended and are giving good satisfaction wherever used. We will send these robes also by express, C. O. D.

FARM BARN PLANS ONLY \$1.00.—A first-class barn

class barn planin every particular, showing front view, side views and rear

shows many improve-ments, which are entirely new, and each one of which is easily worth the price of the plans. These plans are professionally drawn up by an architect of experience. Size of plan, 24 x 36 inches; size of barn, 40 x 80 feet. The whole is drawn to a working scale, and shows silo, feed room, cistern, windmill, hen house, tool house in addition to mows, stables, etc. This plan would be of very great assistance to every farmer who is about to build, every amateur architect and every carpenter; all should possess one. Mailed to any address. Postage paid on receipt of \$1.00.

### FROM ATLANTIC TO PACIFIC

Herbageum has the reputation of being the premier Animal Spice. It secures pure and invigorating blood; it strengthens digestion and helps assimilation. Cows yield more, purer, and richer milk from the same food. Fresh "whey" or skim milk fed with Herbageum raises calves and pigs as well as pure milk. Horses out of condition are rapidly restored to vigor and efficiency, and are protected from "Epizoo." Colts and calves fed Herbageum will improve all winter. Fed to one half of a litter of pigs they will grow much faster than the others. Hens will lay in winter as well as in summer. Small feeds make it cheap to the feeder. Thousands of business men from sea to sea report their customers testify that it pays to feed Herbageum. Enquire for it of General Merchants, Druggists, Grocers and feed stores. They have it or can order it for you. BEAVER MFG. CO., 312-c-OM Herbageum has the reputation of being the pre-
