Venus and its Mysteries.

The most beautiful planet, and the one that comes nearest to the earth, and most resembles the earth in size, is at the same time the most mysterious. Is Venus sliving world or a dead one? That is to say, is it in a condition to support inhabitants, and is it probable that such inhabitants are there, or, on the other hand, is it unsuited for their presence and barren of living forms.

These questions astronomers are at present unable to answer, but their efforts to answer them and the observations that they have made of the mysterious planet. possess

answer them and the observations that they have made of the mysterious planet, possess an almost startling interest.

First, let us briefly fecall what Venus is. It is a globe like our earth, and of very nearly the same magnitude, having a diameter of about 7,700 miles, while that of the earth is a little more than 7,900 miles. So nearly of the same size are the two planets that if we could view them from an equal distance we should be unable, without the aid of instruments of measurement, to dedistance we should be unable, without the aid of instruments of measurement, to detect any difference between them. The substance of Venus is slightly lighter, bulk for bulk, than that which composes the earth; but the difference in this respect is so little that again it would require special examination to distinguish by weight between a cubic foot of the soil of Venus and an equal amount of the soil of the earth. It follows that on Venus the force of gravitation, or the weight of bodies, does not greatly differ from that on the earth. If we could step upon Venus we should find that we had parted with a few pounds weight, but the difference would not be very noticeable, except perhaps on the race-track.

difference would not be very noticeable, except perhaps on the race-track.

But this planet, so like the earth in many respects, is very different from our globe in its situation. The earth's distance from the sun is 93,000,000 miles; the distance of Venus from the sun is 67,000,000 miles. This distance becomes a matter of great importance when we consider the effect which the sun produces upon the two planets. Heat and light, as everybody knows, vary inversely as the square of the distance. When we compare the square of the earth's distance from the sun with the square of Venus's distance, we find that the former is about double the latter. This means that Venus, on an average, gets twice as much Venue's distance, we had that the theorems that yenus, on an average, gets twice as much heat and light from the sun as the eartingets.

But, on the other hand, we know that all forms of life depend for their existence upon the radiant energy of the sun. On the earth, when we pass from the arctic regions towards the equator, we find the number of living forms and the variety and intensity of the manifestations of life continually increasing, until in the equatorial zone, earth, sea, and air are all crowded with animate and growing things. The touch of the sun everywhere produces life, and in the absence of sumbhine is death. It is but natural to infer that Venus, having twice as much aunshine

senshine is death. It is but natural to infer that Venus, having twice as much sunshine as the sarth, should be proportionately more growded with animal and vegetable inhabituits. The proposition of the intensity of life there should be correspondingly greater. Some geolog was have thought that there was a time geolog was have thought that there was a time when the simulate of the earth was so hot that tropical plantage of the earth was so hot that the earth was so hot the ea

Select Ziterature.

Borrowed Plumes.

It was the ideal place for a summer holiwhere lichens grew in patches of yellow, and the stone-crop and house-leek in patches of niture that shone with bees wax and elbowgrease, and beds whose coarse homespun linen sheets smelled of lavender.

There were, indeed, two lavender bushes sweet clove pinks and "old man." The farm was stocked with interesting live creatures -cows, pigs, chickens, turkeys and pigeons there were sheep dotting the downs behind the house, and from the front windows, across the orchard, where the apples were beginning to grow hard and round, you could see the long, shining, blue line of the

almost peevishly. Mahel Roscommon liked that sea line, and His blue eyes turned on her with the apshe liked the garden, the orchard, and the pealing look a child's wear when one whom rest of it—al ut the turkeys. She was a little afraid o these, because she was by it trusts speaks with sudden harshness. profession a high school teacher, and had her patience and her pretty manners giving been taught how to manage children, but way together under the strain of that absurd not how to manage turkeys-an art, by the appeal. "It's only that I came into the way, much simpler. Now she had come to the farm for her summer holidays. To be country to rest, and "alone was new to her, for she was one of a I am very sorry. I never meant to bore large family, and to be for whole weeks in you. It's very good of you to tell me straight this country was new to her too, for she had out." He raised his cap and turned to leave never before been near the sea for more than her.
"Oh, don't!" she said again. "I am so a week at a time. The down country was

to her a revelation. She had a big sitting-room to herself, and shared the simple meals of the farmer and his wife. The laborers and the maids ate at the lower end of the long table. Mabel thought it was such a nice plan-it reminded her somehow of the feudal system. The look about and see things happen, see how dignified simplicity of farm life appealed to the flowers grow, and what the pigs cat, and her. Gradually a passion of love awoke in her for the little, ordinary, useful everyday | der how the chickens know when it's time things-the needful work repeated at the to be fed." appropriate hour, the changing magic of morn and noon and evening, the restful distances of down and sea, the intimate foreground of hedge and orchard. At first she read a good deal, but gradually more and mustn't be angry with me. It was very nore time was spent with Mrs. Fry. Mabel | bad-tempered of me, because I know you followed her in and out to the dairy, to the were only doing it to please me. But you kitchen, to feed the pige, to collect the eggs. | won't any more, will you? It's not neces And the eyes of the faded, middle-aged wom-

To Egyptian Rheumatic Oil Co., Ltd.:—
Dear Sirs.—For ten years my daughter
Barbara Ellen has been a sufferer from the effects of rheumatism; the last two years of which she had not the use of her limbs and has been totally unable to walk.

Early in September I purchased a bottle of EGYPTIAN RHEUMATIC Oil and after the external application of one bottle my daughter was able to walk across the house without any assistance whatever. I could scarcely believe it at first, and if feared a relapse, but after some weeks, she still continued to improve, and is now recovering rapidly the former use of her limbs. It therefore gives me pleasure to testify to the merits of EGYPTIAN RHEUMATIC OIL, which has wrought such a wondrous cure on my daughter. Yours truly,

ISABELLA CHISHOLM (Cutter).

- If a certain class of boys could only rid emselves of the notion that to be " tough " omehow endows them with manly qualities, they would speedily become more hopeful candidates for success in the future and less of a source of present worriment to their families. There are boys in every community who think themselves very smart and yet are not wise enough to recognize the fact that to be mean and cheap and disrepuable, is cowardly and unmanly. Later of here may come wisdom, and with it regret

The reason for the great popularity of Hood's Sarssparilla lies in the fact that this medicine positively cures. It is America's Greatest Medicine, and the American people of the confidence in its merits. ple have an abiding confidence in its meri They buy and take it for simple as we as serious ailments, confident that will do them good.

Hood's Pills cure all liver ills. Mailed fe. 25c. by C. I. Hood & Co., Lowell, Mass.

—An exchange says: A man who does not advertise simply because his grandfather did not, eught to wear knee pants and a queue. The man who does not advertise because it costs money, should quit paying rent for the same reason. The man who does not advertise because he fried it once and failed should throw his cigar away because the light went out. The man who does not advertie because he don't know h w himself should stop eating because he don't know how to cook.

Minard's Liniment Cures Dandruff.

Established 1873. The Weekly Monitor,

At Bridgetown, Annapolis Co. N. S. M. K. PIPER, Proprietor and Publisher JOHN R. PUDSEY, Manager.

Terms: \$1.50 per year, or \$1.00 per year if paid in advance.

the trans Atlantic trade that was formerly thrown into its lap by the comptrollers of government patronage, is now exhibiting a commendable spirit of business enterprise. The city is following in the footsteps of its successful rival, St. John, and its chances for trade expansion are infinitely better, if the business men of the city do but work as heartily as did those of St. John in the days, Atlantic steamers. Halifax is now turning its attention to the establishment of two great industries and there is no reason why Atlantic steamers. Halifax is now turning oth projects should not be successfully carried out, indeed we believe that the names of the promoters virtually guarantee that matters will assume definite shape in a few weeks. The building of iron ships is one of the proposed industries and a large flour mill the other. Both are of tremendous importance not merely to the city but to the province at large. Experts have declared that nowhere in the world are better natural fabe found than right here in Nova Scotia, and that being the case, there is no reason why Halifax capital should not back such an enterprise, particularly as the demand for iron ships in our own country is increasing rapidly. The flour mill would have a large field to supply and with grain elevators of sufficient capacity the wheat of the Northwest could be landed in bulk and converted into flour cheaply enough to permit of successful competition with the product of the Ontario and Western mills. Much more will be heard of these enterprises no doubt within a few weeks; they are links in a great industrial development that is being ned for Nova Scotia and the best of it is that as the plans are made the real work is. progressing so that a rapidly changing industrial condition must now be apparent to everyone. The capital city is assuming its share of the responsibilities of this expansion and while in the cases just mentioned its motives may be selfish they will serve a

-- The Dreyfus scandal has excited the interest of the whole civilized world and outside of France the opinion strongly prevails that he was unjustly degraded and condemned to exile. In Paris the unfortunate man has a few strong friends who have done noble work to secure him a new trial and to fix the responsibility of the crime for which he suffers on other shoulders. In spite of their efforts and in spite of the apparently favorable consideration accorded their pleadings by both civil and military courts, it is now generally believed that the exile will not be placed on trial a second time nor given a further chance to prove his innocence. Now it is not the unwillingness of the military tribunal to submit to a revision of its ruling, that prevents justice from being ly conceived a bitter hatred against the Jews and the nationality of Dreyfus has caused his case to be merged into the widespread demonstrations against his people. A prominent member of the University of Paris, who demanded simple justice for Dreyfus, predicts that if the agitation is continued, it will only result in "an onslaught of unparalleled violence on the Jews, as the masses are convinced that they are at the bottom of the whole trouble." There is small people have no confidence in their gove: nment and for years they have been goaded almost to a revolution by the corruption so prevalent in the stronghold of militarism. The Republic is under military rather than civil rule and it is to maintain the honor of the army that Dreyfus and his countrymen are being subjected to such barefaced indigni-

broad end.

-The Filipinos have spoken, and their protest against American rale is as emphatic as it was against the harsher methods of the Spaniard. Liberty is one thing, serfdom is another, and true to their principles the natives of the Philippines refuse to recognize any intermediate state. The transfer of the island from Spain to the United States has not brought the revolutionists any near er the attainment of the goal of their ambitions. In fact they have been sold to a stronger master, and American civilization will conquer where Spanish semi-barbarity failed. That the contest that is now being the stronger master, and described in Bridgetown, and outside capital will be altered to a considerable extent. waged will be a disastrous one is apparent from the knowledge we already have of the | Stellarton, took place last week and his fuin causpices, is reported as the largest and most impressive ever witnessed in the province. Dr. Johnstone was well known and held in high esteem by many of our residents. His wife, whose death occurred country must be a most unpleasant one for the army of the American Republic to face. The purchase price of \$20,000,000 was but a small item in bargaining for these islands. That was merely the transfer price for the territory alone; the good will of the tenants must be obtained at a sacrifice that will probably exceed the original cost and e formation and extent of the country. include human lives as well as currency.

The anti imperialist may well object to the purchase of a revolutionary territory for the

The Good Roads Question.

Ottawa Free Press: It is stated that one of the first bills to be presented in the Ontario legislature at the coming session will be a "Good Roads" bill. The object will be to give a government grant to maintain "main roads," with government supervision, the lesser roads being left to the townships as now. The government, however, may be authorized to loan money for road improvement to the townships or township debentures at a low rate of interest.

It is to be hoped that the bill may prove to be so framed as to emphasize the principle It is to be hoped that the bill may prove to be so framed as to emphasize the principle of help only for those who help themselves. Massachusetts has been spending hundreds of thousands of dollars on road improvement with splendid effect by a system of co-operation between the state government and the municipalities. If any municipality wishes to improve its roads, and will pay part of the cost, the state will pay its share. This is a safe enough principle, and so is that of the government loaning money for road making to municipalities at a low rate of interest. But if government money were to be given to municipalities at a low rate of interest. But if government money were to be given outright to do work, every township and every county would start clamering for the money and the road grants would become simply a huge party bribery fund. The tobe hoped that any move made in the give provincial aid to roads will be based upon the principle of municipal self-help.

Average, Days Times lost. tardy, long Mabel Banks, 89 2 1 the 4 control of the advanced department of the Bridgetown Schools.

We regret to announce the death of one of our aged and most generally respected neighbors, J. Townsend Thorne, Esq., which sadevent took place at his residence on Thursday last. Mr. Thorne had reached the age of 83 years, and up to within a few weeks of his death had enjoyed good health. He was a man of strict integrity and a genial disposition, and had a host of friends. Politically he was a steady supporter of the Conservative party. Religiously he was a consistent member of the Methodist Church. His funeral took place on Sunday afternoon at the house and was very largely attended. Rev. Mr. Giles conducted the services.

Mrs. B. F. Condon, of Brockton, Mass. came on Saturday to attend the funeral of her father, the late Mr. Thorne.

Mr. Charles S. Thorne, of Boston, is on a visit to his parents.

manner, that we find ourselves entertained by a veritable dancing panorama.

The lofty range of Ray Mountains, which start out at Cape Ray and extend far away into the interior of the island, are near us by the right. Its lofty rock peaks are our land marks and give us a general idea of the course we are running, though we see them in so many different aspects and with such differing combinations between—one moment on the sands at the sea, and then climbing the rock hill, and then a stretch of heath. On our left is the broad waters of the gulf rolling their tidal way to far beyond our vision. These glimpses remind us that we are still by the coast. It is but for a few moments only that we have these assurances,

rolling their tidal way to far beyond our vision. These glimpees remind us that we are still by the coast. It is but for a few moments only that we have these assurances, for the rocky points and massive barren islands are constantly outting off this more extended vision. What rocks! What sharp, unrelenting points pierce the sea! And then, what perfect havens behind! "Its indeed a wonderful portion of God's creation.

An hour sped rapidly since our departure from Port aux Baque, and so far we have had nearly all rock and water scenery, but now are making a plunge inland—a wooded country. The birch and the spruce and the larch are lofty, and the soil must be deep and strong, and not too rocky. What splendid ferns behind the deep evergreens! and such beautiful wild flowers in the open spaces! we never saw richer colouring. The wild weeds are almost gross in their broad, dark leaves. Nature seems to be making a grand effort at a display of rich and strong vegetation. This day—this beautiful day—'mid these bounties of the wild and free, one can hardly admit that this is a country where, for a period of each year, for man existence would be intolerable.

We want to fix these particular spots upon our memory, and thus have something to guide us back to them again. So far, we have found no railway literature to supply any clue to our whereabouts as we journey on. The conductor is polite and apparently very obliging, so we venture to ask him if he has anything in that way. With a countenance beaming with generosity the good fellow produces a very long slip of legal cap, with a type-written time-table, giving all the names of the various stations upon the 548 miles of road over which we are to travel to reach St. John's. We peruse it with much interest, for the names of the stations are quite new, and suggest many queries in our minds as to their origins—what circumiour minds as to their origins much interest, for the names of the stations are quite new, and suggest many queries in our minds as to their origins—what circumstance made them a lasting mark in the history of the country, to be carried on and on. We say still carry them on and on. It is all copied in our diary, while our conductor never makes the first intimation of a protest. This good fellow, we know, has done much already to aborten the hours to many a weary This good fellow, we know, has done much already to shorten the hours to many a weary journier. We wish that we might make the whole trip under his care; luck and happiness go with him though if we cannot. Well, we have come to our first station—42 there are by the route—a 29 hours ride.

Our first station is Codroy, 29 miles out, properly named in some respects. This is one of the spots where farmers are supposed to thrive—the most fertile vale on the island—so the word goes. Since our trip across the country one carload of cattle has been sent over from the Codroy to the St. John's market; the first shipment of any moment. The station is a combination of station, residence, church, school, and now

moment. The station is a combination of station, residence, church, school, and how much more we did not venture to ask. Upon the top is mounted a cross; so much the better for the railway station we are good enough to wish. Horses and waggons are owned here, for we see one. A little bit away is a fit-out, before which is a veritable horse fastened to a tree; the first horse seen since we landed. Quite a number get upon our train at this station; shout 50 labourers and, of particular note, a R. C. Priest and a doctor.

And now we begin to query about who

And now we begin to query about who and what we have for travelling companions; it is an important matter where they are quite limited in number, and may be your companions for several days. The conductor informs me that one of the owners and managers of the road is with us on another than the property of the propert informs me that one of the owners and managers of the road is with us on another car, and there is another distinguished gentleman and his lady; the gentleman a successful merchant or a merchant's confidential agent. Besides, there is a gentleman bound for a point up the coast in charge of a gang of men with appliances for conducting an oil boring enterprise. They tell us that the railway management is a partner in this worthy adventure. The oil man tells us much about his experiences in former undertakings of this kind. He will soon get off and take sail for farther up the coast. How long before this enterprise has sufficiently passed the pioneer stage to be a subject for the clutches of a greedy Rockfeller or his agreeable, and we are soon busy in talk. He tells us that he is on his way to his home at Bay of Islands, and came down here to Codroy to extend his professional services to a young man who had just been seriously injured by a railway accident. A long distance, but doctors are as rare, or rather nearly we find that at the out-harbors the leading members of the communities have to guarantee a considerable amount to the physician or he will not venture to settle among them. We are eager for information about this introvering sect. The doctor understands on the will not venture to settle among them. We are eager for information about this introvering sect.

Series and head a best of firms. Politically he was a study appeared that the study of the Machael Church. He forms, and the study of the Machael Church. First Ride Upon a Newfoundland Railway.

A Journey by the French Shore Upon a September Morning.

(From a Traveller's Diary)
Our train, the "Bruce Train" or "Cross Country Train," is one that performs a considerable number of important functions, and, in it's own way, is equipped for the various needs of a long journey, where little for comfort or convenience is supposed to be found at the stoppings by the road. It's arrangements are peculiar. We note this in a general or a casual way in a few minutes survey only, or as we change our modes of conveyance; for our attention must now be directed to the glimpses of the great work of nature which we have about us on every hand. It is unique, not to be forgotten, though we have, to our regret, but a few minutes given us to gaze upon any particular picture. These rocks and water scenes vary so constantly upon this irregular coast, and our roadway winds in such a circuitous manner, that we find ourselves entertained by a veritable dancing panorams.

The lofty range of Ray Mountains, which start out at Cape Ray and extend far away into the interior of the island, are near us by into the interior of the island, are near us by into the interior of the island, are near us by into the interior of the island, are near us by into the interior of the island, are near us by into the interior of the island, are near us by into the interior of the island, are near us by into the interior of the island, are near us by into the interior of the island, are near us by into the interior of the island, are near us by into the interior of the island, are near us by into the interior of the island, are near us by into the interior of the island, are near us by into the interior of the island, are near us by into the interior of the island, are near us by into the interior of the island, are near us by into the interior of the island, are near us by into the interior of the island.

Port Burwell, Feb. 2ad, 1899.

Editor Monitor:—
DEAR SIR, Since last writing we have had some pretty cold weather, some say 20 below zero, but the weather has been fine, no storms to speak of; no snow since the middle of December to make sleighing, so the weather prophets who were predicting plenty of snow, have been found to be false prophets.

weather prophets who were predicting pienty of snow, have been found to be false prophets.

This is quite an extensive fishing station, the implements employed being the pound net and the fish principally caught are herring, pickerel, white fish, perch, catifish and sturgeon. The catfish must not be put in the same class as our salt water species; these are excellent eating and are valued very highly. The sturgeon are a coarser fish sometimes weighing 200 lbs. and under, but are highly profitable to the fishermen. Sometimes the proceeds from one day's catch alone of sturgeon in their season will bring \$300 to \$400. This may look a little fishy but the two firms here in former years have at times taken as high as 14 tons of fish at one catch, all kinds. They have just completed putting in their supply of ice for the summer in which they pack these fish when they are shipped to Buffalo, Erie and other places in the States. The reader must not get the idea that these are all profits. While the business is a very lucrative one the expenses are also great. The nets complete will cost \$400 to \$500 each. Then they pay \$40 license to fish, each one. There are also two tuge employed costing say \$1500 each, while the men's waces foot us a fice little will cost \$400 to \$500 each. Then they pay \$40 license to fish, each one. There are also two tugs employed costing say \$1500 each, while the men's wages foot up a nice little bill. During the season these nets are liable to damage by storms and other causes and sometimes are lost altogether. The nets are soaked in coal tar in the spring and dried before they are put in to fish; this prevents the action of the water and sediment damaging the twine during the season.

Quite a business is carried on now in the coal. Large ferry boats are built on which 28 cars are placed with coal and brought across the lake from Coneant, Ohio, to different points on the North shore of Erie, whence they are run to different points in Ontario. One of these ferries is now blocked in the ice about six miles from shore and is liable to stay there for some time. Ten of the men walked ashore on the ice and spent a few day having a good time.

La grippe is epidemic here and is keeping the doctors on the hustle. It has played roots with our male quartette, having selections and second have and organist for its vice.

the doctors on the hustle. It has played roots with our male quartette, having selected our second bass and organist for its victims and the first tenor is fortifying for it but the enemy may outflank him for all.

Another of our old residents passed away on Sunday the 29th January in the person of Mrs. Ellen McCounell, relict of the late Lavid McCounell and daughter of the late Lavid McCounell and daughter of the late Thomas Chute. She was born in Bear River, and was in her 77th year. The funo eral took place on Tuesday. She leaves twe daughters and one son. She lived on the first concession of Malahide township.

D. M. CHUTE.

The long expected rupture between the Filipisos and the United States troops occurred last Saturday evening when the natives attacked the American regiment stationed at Manila. The immediate cause of the attack was an advance by two Filipinos to the Nebraska outpost on the north east of the city. When ordered to halt, they refused, and the sentry fired. An insurgent fused, and the sentry fired. An insurgent signal gun was then fired from blockhouse seven, and an attack was immediately begun on the Nebraska regiment, which was encamped. The fighting soon spread on both sides, until firing was in progress on all the outposts around the city. American troops responded vigorously, the insurgent fire being heavy and the attack-evidently hurriedly planned. Firing continued throughout the night, with an occasional cessation of from half an hour to an hour at a time. At daybreak warships Charleston and Callao began shelling the north of the city. Their fire was followed later by that of the Monadnock, on the southern side, the insurgent positions having been previously accurately located.

The Filipinos' loss is estimated to have

not previously advertised.

THE NEW

KINETOSCOPE!

ITS WONDERS, PROPERTIES CAPABILITIES One of the latest scientific marvels is the liscovery by Mr. C. F. Tripler, of the liquiof air, and the wonderful uses to which it can be put. In an interesting paper in Pearson's Weekly Mr. Tripler desribes the uses to which the new agent car be put, and outlines the probabilities of the

process of great pressure, wherein eight hun-dred cubic feet of ordinary air becomes one cubic foot of liquid, and it is in this great concentration that its potency lies. Its ten perature is actually about three hundred and

In its expansion as it returns to its gaseou

state lies a power of the highest efficiency easy to control, ready to be harnessed and utilized. If a tumbler be filled with the liquid it boils vigorously, absorbing a portion of the heat around it, and at the end of half an hour has completely disappeared, indistinguishably mingled with the air about us, oration proceeds. There is no difficulty or danger in handling it, provided reasonable precaution is used, and the gases are not confined. It can be ladled up with a tin cup, "Do you hypno and poured into almost any sort of dish, like so much water. If you chance to drop the cup, however, it will shatter like thin glassware. An oyster dipped for a moment in a bowl of the liquid becomes as cold as if it mental suggestion, but it is like it. The which is the most stimulating plant food had remained in a refrigerator for hours. horse gets to know what you want him to known. Raw beefsteak may be frozen until it rings, While in this condition it may be broken in fragments with a hammer, and pounded into to speak. The horse trainer is born. He powder. Butter, similarly treated, may be reduced to a fine dry dust: fruit and eggs may be pulverized in the same manner ol, under ordinary conditions, will not burn; it merely scorches and crisps, and grated in liquid oxygen, at the touch of a match it flashes up like so much gunpowder, and is gone in a moment. A mass of felt treated in the same manner burns more like dampened gunpowder, with a series of spluttering flashes, but it also is completely con-

ing a contrast of extremes of cold and heat which is without precedent. Pouring some of the liquid into a smooth glass tumbler, he says, I dip the bottom into a vessel of water. A thin casing of ice immediately forms about it, but at once begins to crack with the intense cold. By repeated immersion however, adding coat after coat, I presently get a sort of ice-cup, thick enough to bear handling after the tumbler upon which it has been moulded has been withdrawn. This ice-cup I partially fill with the liquid, and which a lighted match is fastened, the hard which a lighted match is attened, with a properly applied he won't 'whoa.' properly applied he won't 'whoa.' 'Horses differ just as men differ. I have brilliant effusion of sparks, so that the chilly crystal about it glows like a lamp. On inspecting the cup after this display of fireworks is ended, you will find that the sizzling metal has covered the bottom with heads and pellets of steel-we have actually melted iron into a crucible of ice. It remains liquid. I saturate in the azure tinted liquid a wad of oily cotton waste, and place it in a steel tube of great strength, open at both must be done from a safe distance—the tube would exceed that of gun cotton. This comtive agent of terrible efficiency in war; no thickness of armor plate could resist its ruthless energy. Moreover, there would be by concussion. It can be discharged only by contact with a spark; the whole effect is

laboratory and lecture room; its possible and its introduction was said to be due to uses are manifold, and some of them are of incalculable importance. Doubtless the most obvious application is for purposes of refrigeration. Nothing can be imagined better the date of its next appearance, and this adapted for such use, since liquid air furture it lasted eight weeks. While it lacked nishes a clear, dry cold, easily delivered at any temperature required. With its aid the tinguished its first visitation, it proved to nishes a clear, dry cold, easily delivered at transportation of fresh fruits, meat and the | be the most fatal of all the epidemics we like, to any distance, on either steamship or have ever had. Since that time the severity by rail, becomes a simple matter. In hotels of the disease has been gradually declining, and other large establishments, the same but the disease has never been entirely elim motive power which is used for running the | inated. Until the outbreak in December motive power when is a constitution of the smallest turned to account for all kinds of refrigerations of the year 1898 had the record of the smallest turned to account for all kinds of refrigerations. tion; in the heat of summer it would be no the first epidemic first appeared. A distinmore difficult to cool the air of our apart- guished professor of Vienna, who made a ments than we now find it to warm them in | special study of the disease, declares that it is winter-nor would there be any deleterious gases produced, as by combustion, requiring is no specific remedy so far as known, but to be carried off by pipes or, flues. On the the best cure, according to a physician of contrary, the incidental product would be like the purest and most bracing mountain air. The possibilities in medicine and surgery are numerous. By means of this process, air, absolutely free from germs, could be furnished in any amount; and if the stimulating effect of an excess of exygen were desired, it could be had without trouble, quite free from the impurities which now often make this gas objectionable. The temperature of hospital wards, even in the this famous specialist free of charge. tropics, could readily be cooled to any degree prescribed by the physicians in charge, and by keeping the air about yellow fever eases of men and women, and you have but patients down to the frost point, the nurses and the recovery of the patients themselves | who is entitled to the high position be holds facilitated. Again, the cauterizing cold in the medical fraternity. which liquid air is capable of producing might be used in cases of cancer with great advantage, since, while it absolutely de charge. stroys the flesh to which it is applied, its

Its possible use as a high explosive in war has already been adverted to. Further, military authorities are already making enquiries as to its application to the cooling of guns when in action; and there is no obvious reason why it should not prove highly effications and of great value in this way. Still more important, however, will be its service as a motive force on warships—or, indeed, Mention the Weekly Monitor when you write and address The Marschand chemical Co., Detroit, Mich., U. S. A. Mention the Weekly Monitor when you write the Doctor. on any ships. It can be handled with perfect safety in an ordinary engine, in the same pressive heat. Freed from the necessity of ocarrying an immense weight of coal, yet furnished with a motor capable of producing any amount of power needed, vessels would be able to make voyages of any length at a speed equalling that of the swiftest torpedo boats, running at the rate of from forty to forty-five miles per hour. And in submarine boats the motor itself would supply all the air required for breathing, abundant, pure and cool, instead of generating overpowering heat and stifling gases, as is the case at present. It is also worth while considering its application in connection with the difficult problem of aerial navigation, which would probably be solved, since all that is now wanted, practically, is a motor sufficiently strong, and light, and safe. With liquid air no fire would be needed—the heat of the surrounding atmosphere would be entirely adequate; and for which there will be an accounting.

—Oae of the most important duties on the growth of the government without hesitation, and ladies who are sticklers for the rights of property will beat the custom house with exultation. The existance of a conscience fund in Washington is ample testimony to the growth of hundreds of persons into a slow understanding that it is morally just as wrong to rob the government without hesitation, and ladies who are sticklers for the rights of property will beat the custom house with exultation. The existance of a conscience fund in Washington is ample testimony to the growth of hundreds of persons into a slow understanding that it is morally just as wrong to rob the government without hesitation, and ladies who are sticklers for the rights of property will beat the custom house with the most rigid respect for the moral without hesitation, and ladies who are sticklers for the government without hesitation. How Gleason Controls Horses.

Prof. Gleason is a horse trainer of national putation. While in St. Louis recently h was interviewed and asked how he was so successful in training, and he answered: "The first essential is will, the second is patience; the third is some more will and some more patience, and a good big chunk of intelligence. If you are irresolute; if you can't control your temper; if you can't use your reasoning faculties quickly, don't fool but keep away from horses unless you have

you want him to do it." Gleason locks the horseman. Persons who have observed men who handle horses will manure would be greatly increased," says understand what that means. He is purposeful, deliberate and firm. He makes no authority there are two ways to accomplish useless gestures. If he raises his hand to the object: his face it is to remove a fly and not to stroke his moustache. His voice is steady and evenly pitched.

essential that you know what you want done and that you make the horse know. It is earth this absorbs the amonia, so that there also necessary that the horse shall know that is no loss. There will be very little loss if his business is to obey. He must have faith ity. The tumbler, meanwhile, has become thickly coated with frost. It has the apand disobedience brings pain. He must is the best way to insure the immediate efpearance of pure water, except that it shows a pale blue tint, which intensifies as the that you are stronger than he and that you are his protector. If you lie to him ashes with the manure is thus made certain. or play jokes on him your power is gone. A

"Do you hypnotize horses?" "Not in the sense that I paralyze their will. But there is no question that every over the mind of a horse. It isn't exactly will make a nitrate of potash, or saltpeter, or he can't control it.

"Take dogs, for example. I couldn't teach him a dozen tricks, and yet be unable hen houses or ash houses have undoubted to train a horse, and I might train 1,000

horses and never be able to control a dog. "But if you like a horse and can control yourself you can handle the wildest after you know how. The isn't any trick to it. It is simply a matter of of temperament and knowledge. I suppose it's the same with other branches of teaching.
"When you force a horse to do a thing

always use the same way. For instance, if you want to teach him to lay down say 'down' every time you throw him. After being thrown a few times he will drop at the word 'down.' Never use the same word t express two meanings. For example, never say 'whoa' to a horse unless you mean that he shall stop stock still at once. If you wish to steady him use some other expres sion. Some time you may want your horse when I dip it into the end of a steel wire, to to 'whoa' in order to save your neck, and if he has been spoiled by hearing the word im-

handled individually more than 18,000 of the animals and I have yet to find two exactly alike."

An Oid Disease With a New Name. The grippe has been known and described

since the days of Hippocrates, who was born B. C. 460. It was the French physicans who gave it the name it now bears, but in the attempt to locate its origin ends. When a spark is applied-which it has been known as the Chinese catarrh, the Russian pest, the German disease, is rent in fragments. If the wad were first | the Italian fever and the Spanish catarrh wet with turpentine, the explosive force It has always taken the form of an epidemic catarrb, and has been attended with great pound is well suited for use in shells or tor- loss of life in many of its visitations. It is agreed that it is occasioned by some particmosphere, but there is no agreement among medical men as to what the condition is o no risk in the handling, as it is not exploded | in what the contamination consists. The fact that is very largely due to atmospheri by contact with a spark; the whole effect is produced by rapid—practically instantan appearance in London in 1847, where in a single day 500,000 persons were attacked. Liquid air is no mere curiosity of the It appeared in New York in December, 1889, germs conveyed in a letter from Russia. Its course ran for six weeks, and resulted in hundreds of deaths. March, 1891, is fixed as miasmatic, infectious and contagious. There

Potash With Manure.

SMALL ITEM WHICH MAY ACCO "Every farmer knows that when woo ashes are applied to stable manure the effect of the caustic potash on the moist nitrogenou excrement is to get up a violent fermenta with horses. Teach school or practice law, | that will thereby be liberated. Consequent ly this practice is generally and also proper perfect self control and a positively defined ly condemmed. But it is a well known fact idea of what you want a horse to do and how that most stable manure is deficient in pot ash, and that if it could be supplied without The American Cultivator, according to which

One of these is to top dress land with wood ashes where stable manure has been plowed under. As the potash leaches down "In handling horses," he said, "it is by rains to the manure it stimulates fermentation, but as the manure has a covering of the manure is spread and ashes sprinkled orse never trusts the person who has once ing potash with stable manure is to use German potash salts and apply them to the manure directly. This will not hasten their

do. He has become accustomed to doing what you desire and he naturally wants to this in connection with wood-work in stables, There is, however, some danger in doing do it himself. He's got in the habit of it, so for the pitrate of potash in connection with oil often results in spontaneous combustion must have a natural fondness for the animal, Ashes should not be kept in barrels or other wooden receptacles for the same reason Wherever there is ammonia the ashes will train a dog in 20 years. I don't care for absorb it, and if any oil comes in contact them and they don't care for me. We are with the nitrate of potash, a blaze is likely not en rapport. You might take a dog and to be the result. Many unexplained fires in

fermentaion, for the potash in the salts is

not caustic. It is, in fact, one of the best

Conditions for Cranberry Culture.

originated in this way.

The best soil for cranberries consists o eat and muck bottoms, coated with pur sand obtained from adjucent banks, and th ground thus prepared will be best if it can be flooded with clear water during the wir ter and thoroughly drained at other time for it is essential that it should be dry dur ing the blossoming and growing season. PREPARATION OF SOIL.

All wood and rubbish must be cleared off the bog and then the surface removed. This surface must then be provided with drains to lower the water level a foot or so below the surface which is then to be covered with from four to six inches of sand. The chief object of this coating of sand is to retard the growth of the vines and thus increase their productiveness. A small dyke should surround the bog to allow of its being flooded or drained at pleasure.

SETTING THE PLANTS After sanding, the vines are set in row about two feet apart. Some prefer a greater distance to facilitate horse cultivation. They should be ten or twelve inches apar in the row. The plantation should be care fully kept clear of weeds for the first two or three years, after which if well managed, the cranberry plants will cover the surface.

Though not absolutely necessary, flooding is a great help by protecting both rom in- Eng.; sects and from frost. Flooding should be continued from December to May. - Co-oper-

While it does not pay farmers to suddenly change their crops whenever prices go to low for profit, there are often ways of over coming these low prices, and perhaps manu facturing the crop into something that will give a good return for all the labor expended upon it. Two years ago, when there wa the farmers who had evaporators hired en ough help to put up their apple crop in th ery best form for a period of scarcity. This is really doing on a much larger scale what every old-time house wife has always been used to doing: that is, to dry enough apples so that she can have sauce and pies for the time not many months hence when apple pies will be in demand, because most of the apples have rotted. There was a light apple crop through most of the country both last year and this, and the results is that the vaporated apples of 1896 either have been or will be disposed of at a profit. There are ften times when grain damaged by harvest ing, or which for other reasons sells below what it costs, that can be marketed by feedng it to stock. It is in such ways as this that business men learn to change losses in to gains, or at least to mitigate their losses: The farmer who has what he calls "bad luck" should imitate this example.

Boy's Rights. The boy on the farm is not always to be envied. He, is often obliged to work early and late, do the work of any other hand, and not receive any recompense whatever. This is plainly not right, and it is not surprising that so many leave the farm at the first op portunity in spite of father's and mother's

> The boy who is old enough to do mo than the chores, is old enough to receive some remuneration in a money sense is old of thought and action, and should have a

If you conscientiously feel that you can not pay him in money, give him an opport tunity to earn something some other way. Let him have a small plot of ground work for himself outside of the work he does for you, or let him raise poultry, and not only let him do these things but encourage him to earn a little money which will be hi own, which will tend to show him the value of money, and will raise in him ambitions and love of work.

Encourage him and help him all you can. Do not grind him down to a mere existence of servitude. Remember that he has rights, even if he is your son, and you owe him a good chance even if you don't feel inclined to pay him. It is a debt which you owe him as a parent, and for which there will be

Rub the hairbrushes every morning on a pad of paper; it removes the dust. A piece of newspaper rolled into a pad is a good substitute for a saucepan brush. A few newspapers, perforated with small holes for ventilation, tacked onto a blanket.

make a warm and comfortable bed-covering on cold nights.

Torn into shreds—a nice amusement for a hild, by the way-newspapers can be put into washing ticks, and iffrequently change make a good bed for a small child. A few folds of newspaper under the cake

in prevents it burning while in the oven.

Good Speaking Tones Necessary. The importance of a beautiful voice is not generally felt by most women. "It is, however, quite as important as a beautiful face," said a man the other day, "and a woman, no matter how ugly, will, with the utter ance of one sentence in melodious tones, ar-rest a man's attention at once."

A professor of languages says that women particularly those who speak in public, do ot realize the importance of a well placed peaking voice. He says also that while women give so much time and thought to naking themselves fair to look upon he wonders that they do not give a little time to heir voices, so that they may be pleasant to isten to as well. The proper tone is a chest tone, and it

equires a full inhaling of air to produce it. Take a deep breath, and before letting it go begin to speak and the voice will be thrown at rich and sonorous.

Apple and Brown Bread Pudding.

Mix together thoroughly one pint

prown bread crumbs and two-thirds a cup of suet, finely chopped. When well mixed, add one pint of apple, chopped fine, half a

and one pint of appre, cuopped mie, nan a teaspoonful of salt and one cup of raisins, seeded or sultanas, mixed with two table-spoonfuls of flour. Beat one egg, add a cup of milk and stir into the other ingredients. Pour into a buttered mould and steam two hours. Half a teaspoonful of ginger or other spice may be used if desired. Serve with hard or lemon sauce.—Boston Cooking School Magazine.

—Ellen Terry is authority for the statement that beauty may be retained by a few simple rules—work, till tired, sleep till rested, have plenty of fresh air, live in cool rooms, take a sponge bath every day and eat the simplest food.

"What is your namee?" "My name is Mrs. Melville Langdon." "Me no memble all that," said John Chinaman. "Me no sayey Mrs. Membul Lonnon. Me call you Tommy."

Joker's Carner.

A Sure Method.

WHEREBY THE LITTLE MAN PROVED HE WAS Everybody connected with the com house was busy when the dapper little man in the light overcoat entered. "I should like to see some one who can talk to about poultry," he said to the man who approached him as he closed the door.
"Yes, sir," replied the man, and then he

called " Johnson !" A tall, husky chap came forward. "This o which a few drops of ammonia have been dded. This imports built and the distribution of the desired by the de

"Yes, sir-what can I do for you?" asked "Well, you see, it's this way," went on Silver jewelry should also be washed in a the dapper little man. "I run a boarding title warm, soapy water. It may then be house up on Woodward avenue, and you

the ornaments thoroughly in the dust, and "Very well, sir," replied the man of the they will look beautifully bright and clean when taken out. Chains and necklets may corner where lay the cold carcasses of a dozen be treated in this way.

Pearls should never be damped. They

or so chickens. He began examining them.

He tore their wings and pressed down their should be exposed to the air as much as pos-sible. Turquoises must not be wetted and are liable to change color. Opals must be kept from fire and heat, as a high tempera- steel spring, he would throw it aside. Th ture renders them liable to split and fall from their setting. Coral may be washed with beaming out of his eyes. Johnson made the soap and water. Jet must be repaired by poultry up in two piles, one tough, the other means of jeweller's cement. Ivory may be tender. When the last chicken had been washed and exposed to air and sunlight to examined and thrown on the latter pile, he

> The little man looked at the two piles "Are you sure you've selected all the tough

"Dead sure, sir. "Now you're absolutely positive that you and polish with a leather. If the rust has haven't missed any? You are sure that every tough chicken in the original pile is lying over there on that ledge? They're all ough, are they—those over there?"
"Yes, sir, as tough as East Fort street."

"Then I'll take the others. Do 'em up, And more pleasure beamed out of the dapper little man's eyes .- Detroit Free Press

Missed His Chance.

AND PERHAPS HE DIDN'T MIND MISSING IT It was on a Sabbath morn, and George Murgatroyd had just turned over to sleep again, after making his sixth resolution to get up. But the cry, fraught with anxiety

and trepidation, that came from the room below, banished sleep instantly. It was his wife's voice—the dear girl whom he had taken from a parent's—or rather two

"George! Come, quick!" What could be the matter? "George! Why dor't you come? Come! In his frantic haste he had on his trousers hind part before and his shirt was a wreck, but what of that? Like a flash it came to dark browed man who came to read the gas

The man had come again—even per-"George! If you don't come, it'll be too late." What were collar stude now that he should search for them? With one bound he overwith the open door of the wardrobe, at the third step he tripped over his braces and

came down on his elbows and countenance. "Courage, Maud," he cried, "I am com-He was only a pale bookkeeper, and unarmed save with nature's weapons, but not for a moment did he falter.
"You're too late," said Mand with a pretty pout as George dashed into the room with a

fire in his eye that the blood on his nose could not dim. "What-where is he?" he gasped, looking around with an awful faintness at the heart.
"I wanted you to see the baby," said she in a disappointed voice. "He had his foot in his mouth, and you've no idea how pretty

AD TITLES GALORE AND A PERFECT RIGHT The lad was only about four feet high, but he had a coonskin cap and a pair of rawhide boots which looked as if they had been made to order for a giant. The man who was touring through that neighborhood, on government business bent, stopped his horse at the log house to make some inquiries as to the roads. He introduced the conversation with the patronizing inquiry: "What is your name, my little man?"

The boy looked up at him with stern gravity and answered: "Why-how long have you been a doc-After some moments of mental calculation

the boy replied:

"About 14 years." "Are you the head of the family?" "No. I reckon you'd call General Hawkins the head of the family. He keeps store down in the gap. Though Baron Hawkinshe's the brother between General and mehelps a lot. He's mighty good to maw, Baron is."

"Are there any more distinguished people in your family?" said the astonished stranger.
"Well, I dunno as they're so 'nation distinguished; but there's Admiral Hawkins and Perfessor Hawkins in the house now." "They—they are spending a little time at home, are they ?" "Yep. They've got to. They ain't big

enough to go to work yet. Admiral's only 4 year old, and Perfess is just cuttin' his "What's your father's name?" "Paw? His name's Jim. You see, he lowed he wasn't goin' to let his boys go through life without the advantages he'd been deprived of hisself. But at time he wasn't goin' to give up no money to the colleges. So he took time by the forelock and give us our names when we was baptized, which I reckon is about as bindin' and lawful as anything you could fix up. Paw's about

the most prudentest man in the whole country, paw is." -A fashionable woman has been telling of an experience with a Chinese cook. "What "My name is Wung Hang Fo," he answe smiling celestially. "Oh, I can't remember all that," said the woman. "I will call you John." John smiled again, and asked,
