The copy filmed here has been reproduced thanks to the generosity of:

National Library of Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol → (meaning "CONTINUED"), or the symbol ▽ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom; as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Bibliothèque nationale du Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole → signifie "A SUIVRE", le symbole ▽ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

PROTECTION OF PATENTS.

The following Letters and Certificates have been received from the Board of Trade:—

BOARD OF TRADE,
12th January, 1886.

Sir,

Referring to your recent letter, asking, on behalf of the Royal Commission for the Colonial and Indian Exhibition, for information as to the protection that will be granted by this Department to Colonial Inventions to be exhibited, I am directed by the Board of Trade to state that the only protection that can be afforded to such Inventions is that prescribed by Section 39 (copy herewith) of the Patents, &c., Act, 1883.

It may, however, be suggested that the attention of the Colonial Commissioners should be drawn to the question whether Colonists exhibiting inventions unpatented in the Colonies might possibly deprive themselves of the right to obtain patents in their respective Colonies.

I am, Sir,

Your obedient Servant,

(Signed) HENRY G. CALCRAFT.

The Secretary, Royal Commission for the Colonial and Indian Exhibition, South Kensington, S.W.

BOARD OF TRADE,
15th January, 1886.

Sir,

I am directed by the Board of Trade to acknowledge the receipt of your letter of the 14th instant; and in reply, to transmit, herewith, a Certificate of this Board, as required by the Patents, Designs and Trade Marks Act, 1883, in respect of the Colonial and Indian Exhibition to be held this year at South Kensington.

I am at the same time to enclose copy of sections 39 and 57 of the Patents, &c., Act, and to draw attention to the steps that will have to be taken by intending exhibitors who wish to avail themselves of the protection afforded by these sections of the Act.

I am, Sir,

Your obedient Servant,

HENRY G. CALCRAFT.

PATENTS, DESIGNS AND TRADE MARKS ACT, 1833.

Upon the application of Sir Philip Cunliffe-Owen, K.C.M.G., &c., &c., of South Kensington, made to the Board of Trade, on the fourteenth day of January, 1880, the Board of Trade do hereby certify that the Colonial and Indian Exhibition proposed to be held in the year 1880, at South Kensington, in the county of Middlesex, is an Industrial Exhibition.

Signed by order of the Board of Trade, this fifteenth day of January, 1880.

HENRY, G. CALCRAFT,

Assistant Secretary, Board of Trade.

PART II.
PATENTS.

Exhibition at industrial or international exhibition not to prejudice patent rights.

39. The exhibition of an invention at an industrial or international exhibition, certified as such by the Board of Trade, or the publication of any description of the invention during the period of the holding of the exhibition, or the use of the invention for the purpose of the exhibition in the place where the exhibition is held, or the use of the invention during the period of the holding of the exhibition by any person elsewhere without the privity or consent of the inventor, shall not prejudice the right of the inventor or his legal personal representative to apply for and obtain provisional protection and a patent in respect of the invention, or the validity of any patent granted on the application, provided that both the following conditions are complied with, viz. :—

- (a) The exhibitor must, before exhibiting the invention, give the Comptroller the prescribed notice of his intention to do so; and
- (b) The application for a patent must be made before or within six months from the date of the opening of the exhibition.

The notice referred to in (a) must be made upon Form O of the Patents Rules; and the application for a Patent (b), which may be made either before the Exhibition is open or subsequently, but not after 6 months from the date of the opening, upon Forms A and B or A and C of the same Rules.

Exhibition at industrial or international exhibition not to prevent or invalidate registration.

57. The exhibition at an industrial or international exhibition, certified as such by the Board of Trade, or the exhibition elsewhere during the period of the holding of the exhibition, without the privity or consent of the proprietor, of a design, or of any article to which a design is applied, or the publication, during the holding of any such exhibition, of a description of a design, shall not prevent the design from being registered, or invalidate the registration thereof, provided that both the following conditions are complied with, viz. :—

- (a) The exhibitor must, before exhibiting the design or article, or publishing a description of the design, give the Comptroller the prescribed notice of his intention to do so; and
- (b) The application for registration must be made before or within six months from the date of the opening of the exhibition.

The notice referred to in (a) must be made upon Form L of the Designs Rules; and the application for a Design (b), which may be made either before the Exhibition is open or subsequently, but not after 6 months from the date of the opening, upon Form E of the same Rules.

CANADIAN NATURALIZATION, PASSPORTS, AND OATHS OF ALLEGIANCE.

CIRCULAR.

DOWNING STREET, 18th May, 1882.

SIR,

Her Majesty's Government have had under their consideration the position of Aliens naturalized in a Colony, when travelling beyond the limits of the Colony in which naturalization has been granted, and they have decided that Aliens naturalized in British Colonies shall, as regards their claim to British protection out of Her Majesty's Dominions, be placed, in future, on the same footing as Aliens naturalized in this country under the Naturalization Act of 1870.

2. To carry out this object, Aliens naturalized in British Colonies will be allowed to receive from the Governor of the Colony in which they have been naturalized a passport unlimited in point of duration, instead of a passport for one year, as is now authorized. These passports will also be issued by the Foreign Office in London, on the recommendation of the Secretary of State for the Colonies.

3. If, however, an Alien naturalized in the Colony, and not possessing such passport, finds himself in need of one when in a foreign country, a British Minister or Consul will be empowered, on such evidence as he may deem sufficient, to grant him a Provisional Passport, limited in duration, in order to meet the immediate requirements of his case, and to enable him to return to his Colony or to the United Kingdom, and so establish his identity beyond question, and obtain a Permanent Passport.

4. I enclose an amended Regulation, which will be substituted in the Colonial Regulations for the present Regulation No. 404, in Chapter XIV.; and also an amended Form of Passport, which will be inserted in the Appendix, in place of the Form and Memorandum now in use.

I have the honour to be, Sir,

Your most obedient, humble Servant,

KIMBERLEY.

The Officer Administering the
Government of Canada.

Form of Passport.

This Passport is granted to A. B., naturalized as a British subject in this Colony, to enable him to travel in foreign parts.

This Passport is granted with the qualification that the bearer shall not, when within the limits of the Foreign State of which he was a subject, previously to obtaining his Colonial Certificate of Naturalization, be entitled to British protection, unless he has ceased to be a subject of that State in pursuance of the laws thereof, or in pursuance of a Treaty to that effect.

INTRODUCTION.

THE DOMINION OF CANADA

Occupies the northern half of the North American continent. It covers an area of 3,500,000 square miles, and is territorially about equal in extent to the continent of Europe. Reaching from the Atlantic to the Pacific Ocean, the western half has a Southern frontier which, if extended across the Atlantic Ocean, would strike the latitude of Paris, while the southernmost point of the eastern section of the country is in the latitude of Rome. Canada is thus the physical equivalent on the continent of North America of the great empires and kingdoms of Germany, France, Italy, Russia in Europe, Sweden and Norway, Belgium, and the British Islands; it is, above all, an integral portion of the British Empire, containing natural resources as varied and as great as of those countries.

Nineteen short years ago Her Majesty's possessions in North America entered upon a corporate existence, and the change that has since taken place in the general development and the prosperity of Canada cannot but be accepted as a remarkable proof of the sagacity of the imperial and colonial statesm^{en} who directed the movement. The confederation of the provinces grew out of the natural desire of the people of the disconnected provinces to unite for their mutual benefit. To the demand for the privilege of confederating, the British Parliament responded, in 1867, by passing the "British North American Act," providing for the voluntary union of the various provinces in North America under the name of the "Dominion of Canada," and for the cession to the Dominion of all the vast unsettled area of British America formerly dominated by the Hudson's Bay Company, with power to create new provinces and admit them into the union when sufficiently populated. The Act came into operation on the 1st of July, 1867—the provinces of Nova Scotia and New Brunswick uniting with Upper and Lower Canada, or, as thereafter known, Ontario and Quebec. This union of the inland and maritime

provinces gave to Canada an importance she had never before possessed. In 1870, the Province of Manitoba was created, having been carved out of that portion of the territory lying on both sides of the Red River of the North, embracing the city of Winnipeg and the old Red River settlements of the Hudson's Bay Company. In 1871, the large and prosperous Province of British Columbia was added, comprising all that region lying between the Rocky Mountains and the Pacific, including the numerous large islands fringing the coast, and extending from the United States to and beyond the southern limit of Alaska; and in 1873 Prince Edward Island joined the confederation.

This political bond has been strengthened by the construction of the Canadian Pacific Railway, the great national undertaking which has now been brought to a successful termination, and by means of which the extreme eastern and western ends of the Dominion are brought into close relationship with each other and with the hitherto scarcely known interior. The completion of the new line must largely stimulate travel, immigration, settlement, and commerce, and draw the attention of the people of every nation to the enormous area of the Dominion, its large population, and the great variety and magnitude of its natural resources.

The population of the Dominion approximates 5,000,000, which is augmenting at a rapid rate, and which, notwithstanding the diversity of origin, has, under the force of circumstances, been welded into a homogeneous whole. About one-half are of English, Scotch, and Irish extraction; one-fourth are of direct French descent; Germany is well represented; and every nation in Europe has contributed its quota to swell the population. Of Indians there is an estimated population of 100,000. About one-third of these live in the older provinces, and have been long since gathered into settlements under the care of officers of the Indian Department, in some cases having industrial schools and other organisations to aid them in their progress toward a higher civilisation; and it is only necessary to glance at the products of Indian industry in the Exhibition in order to learn how marked that progress has been.

The Government of Canada, as at present constituted, is a representative one, the executive authority being vested in the Sovereign of Great Britain and carried on in the name of the Crown by a Governor-General, assisted by a Privy Council. The

legislative branch consists of a Dominion Parliament, composed of two houses. The Upper House, or Senate, consists of members who are appointed for life by the Governor-General in Council. The House of Commons is a purely representative body, elected by the people, the representation being apportioned to the various provinces in the ratio of their population. Each province enjoys local self-government, having a provincial legislature elected by the people, and a Lieutenant-Governor appointed by the Federal Government. There is also a very perfect system of municipal government throughout the Dominion. Both the counties and townships have local governments or councils, which regulate their local taxation for roads, taxes for schools and other purposes, so that every man directly votes for the taxes which he pays. This system of responsibility, from the municipalities up to the General Government, causes everywhere a feeling of contentment and satisfaction, the people, with truth, believing that no other form of government which can be devised on earth can give them greater freedom.

The utmost religious liberty everywhere prevails in Canada. Persons coming to the Dominion from Europe, of every religious persuasion, will find their own churches and abundant facilities for the practice of their faith among neighbours who will sympathise with their views.

Before School Boards were established, in England the Dominion had a well-organised system of public or common schools in operation, in which instruction is not merely confined to the rudiments of education. In many cases the higher branches are taught, and the children receive a sound practical education, fitting them for any ordinary position in life. Both in the country districts and in the towns boards of trustees, elected by the people, manage the affairs of the public schools. Provision is also made for the establishment of separate schools in districts where the inhabitants are divided in their religious opinions, and mixed schools are not possible. The public schools are absolutely free, and are supported partly by a local tax and partly by a grant from the Provincial Treasury.

In addition, there are grammar schools in all parts of the country, managed like the public schools, at which, as well as at the many excellent private schools, pupils receive a good classical and modern education. Above these again are the high schools, collegiate institutes, and universities, the latter liberally endowed with scholarships, where the cost of attendance is comparatively

so small as to place the facilities for education they offer within the reach of all. There are also schools of surgery and medicine in the larger cities, and the religious denominations also have colleges at which young men are prepared for the ministry. The higher education of girls is also met in the fullest manner by numerous high schools, generally denominational in character. In fact, means of education, from the highest to the lowest, everywhere abound in the Dominion.

The variations of the Canadian climate are less than in many countries of much smaller extent. But throughout nearly its whole area Canada is characterised by a greater heat in summer and a lower temperature in winter than in corresponding European latitudes. The climate of the eastern and especially of the western provinces is moderated by the Atlantic and Pacific Oceans respectively, while the great water system of rivers and lakes, which extends throughout the Dominion, helps to preserve an equable climate in the interior provinces. The degrees of latitude, therefore, are a very imperfect guide to the character of the Canadian climate as compared with that of the British Isles, and any statement of the mean temperature of the two is deceptive. The severity of the winter, as tested by the thermometer, leads to a very exaggerated impression of Canadian experiences. Owing to the dry, clear, bracing atmosphere which generally prevails, the sense of discomfort produced by the raw easterly winds and damp fogs of England suggests an idea of cold such as is rarely experienced in a Canadian winter. There are, indeed, every winter a few days of intense cold, as in the summer there are brief periods of equally intense heat, when the thermometer ascends, or descends, through a scale unknown in the English climate. But throughout the greater part of the winter season in Canada the sky is bright and clear, and the weather thoroughly enjoyable. Skating, snow-shoeing, tobogganing, and other outdoor exercises, are in universal favour, and the sound of the sleigh-bells in the open thoroughfare adds to the exhilarating sense produced by the pure bracing atmosphere. Everywhere the appearance of the snow is hailed as seasonable and beneficial. It protects the wheat sown in autumn from the frost, affords facilities to the farmer for bringing his produce to market, aids the lumberman in collecting the fruits of his labour in the forest at suitable points for transport, and so contributes alike to business and pleasure. In short, the Canadian climate is marked by the striking contrast of two seasons—summer and

winter—bringing with them alternations of fruitful labour and of repose intermingled with profitable industry and pleasure. This characteristic prevails, with slight variations, throughout the greater part of the Dominion.

While it is impossible, within the limits of this introduction, to speak in detail of the agricultural capabilities of Canada, it may be stated generally that its soil and climate are such that the country produces a greater variety of grains, grasses, vegetables, and fruits than is usually grown in Great Britain and Ireland. It possesses the largest extent of cultivable land yet opened for settlement, adapted to the growth of productions of the temperate climates, not only on the American Continent, but in the world. Canada is pre-eminently a country of yeoman farmers. The land is held in possession and tilled by the settler on his own account; and, with every addition to the numbers of its industrious population, fresh acres are recovered from the wilderness and added to the productive resources and the wealth of the Dominion. By patient industry and frugality it is in the power of every Canadian to become owner of a house and proprietor of whatever amount of land he can turn to profitable account. The majority of the farms are small, tilled by the proprietor with his own hands, with the help of his sons and occasional hired labour in the busy season of harvesting. But capital is also successfully applied to farming, and large stock farms in the eastern provinces, and latterly in the ranching country at the foot of the Rocky Mountains, are now carried on with great success.

The forests of Canada abound in fine timber, adapted to almost every variety of useful or ornamental work, and furnish- ing one main element of wealth. Their value is becoming more apparent every year. At present the produce of the forests exceeds in value any other yield of the growth, produce, or manufacture of the Dominion. The total value of the annual exports of timber products approximates £6,000,000, for which Great Britain and the United States are the principal markets.

The mineral resources are represented by coal fields of immense extent, both on its Atlantic and Pacific coasts; and there are large deposits beneath the surface of its prairie lands east of the Rocky Mountains. It has iron, gold, silver, copper, lead, and other mines of great richness, together with almost every description of the most valuable building materials; also petroleum, salt, and phosphates.

Looking to the native fauna of Canada from an economic point

of view, it is abundantly evident that the animal life of its seas and rivers is one of its great and inexhaustible sources of wealth. Alike on the sea coasts, in the estuaries, and throughout its great inland lakes and rivers, the most valuable fish abound. Canada has been esteemed from its earliest discovery for its valuable fur-bearing animals, and has been the trapping and hunting ground for two centuries for the Hudson's Bay Company and other organisations. For sportsmen the country offers unusual attractions, both in the abundance and variety of its game—which is well distributed over the backwoods of the eastern provinces, the districts immediately west of Lake Superior, the prairie region, and in British Columbia. The northern sections of Canada are the breeding grounds of an infinite variety of the feathered tribe.

Thus, with an advantageous geographical position, with a climate and resources not widely dissimilar to those of the mother country, with institutions calculated to secure law and order, civil and religious liberty, and the best traditions of the mother country, no great keenness of vision is required to foresee that Canada must, in the not distant future, become the home of one of the most populous and powerful peoples of the earth.

1. The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that proper record-keeping is essential for the integrity of the financial system and for the ability to detect and prevent fraud. The document also notes that records should be kept for a sufficient period of time to allow for a thorough review if necessary.

2. The second part of the document outlines the specific requirements for record-keeping. It states that all transactions must be recorded in a clear and concise manner, and that the records must be accessible and retrievable. The document also requires that records be kept in a secure and confidential manner, and that they be protected from unauthorized access or disclosure.

3. The third part of the document discusses the role of the auditor in the record-keeping process. It states that the auditor is responsible for verifying the accuracy and completeness of the records, and for reporting any discrepancies or irregularities to the appropriate authorities. The document also notes that the auditor should maintain a separate record of all audit findings and recommendations.

4. The fourth part of the document discusses the consequences of non-compliance with the record-keeping requirements. It states that failure to maintain accurate records can result in the imposition of penalties, including fines and imprisonment. The document also notes that non-compliance can damage the reputation of the individual or organization involved, and can lead to the loss of business or other opportunities.

5. The fifth part of the document discusses the importance of training and education in the record-keeping process. It states that all individuals involved in the process should receive appropriate training and education to ensure that they are able to perform their duties accurately and efficiently. The document also notes that ongoing education and training are essential to keep individuals up-to-date on the latest developments in the field.

Geological Charts:—

- Reynold's Table showing the order of succession of Stratified Rocks.
- Reynold's Table of British Strata.
- Morris's Geological Chart.
- Set of Models of Crystals in glass.
- Set of Models of Crystals exemplifying the primary forms.

CLASS 18.—PHILOSOPHICAL CHARTS.

Johnston's Philosophical Charts (set of 7).

CLASS 19.—PHYSICAL AND CHEMICAL APPARATUS.

Matter, Force, and Motion:—

Mercury Tube and Cup for Porosity.
 Inertia Apparatus.
 Apparatus for illustrating Curvilinear Motion.
 Bent Lever.
 Double Inclined Plane.
 Collision Balls.
 Model of Screw.
 Model of Lock.
 Gyroscope.
 Centrifugal Machine.
 Set of Mechanical Powers.

Gravitation and Molecular Attraction.—

Centre of Gravity Apparatus.
 Physical and Chemical Balance, in glass case.
 Guinea and Feather Apparatus.
 Coulomb's Torsion Balance.

Hydrostatics:—

Haldat's Liquid Pressure Apparatus.
 Equilibrium Tubes.
 Capillary Tubes.
 Apparatus to illustrate Spouting of Fluids.
 Hydraulic Ram.
 Hydraulic Press with lever.
 Bramah Press.
 Cartesian Divers.
 Hydrometers.
 Specific Gravity Flasks.
 Model of Archimedes Pump.
 Under and Overshot Wheel.

Properties of Gases:—

Air Pump with two glass cylinders, syphon gauge, and bell glass receiver, mounted on a table.
 Air Pump with brass cylinder.
 Condensing Syringe.
 Copper Globe for Exhaustion to form Fountain.
 Model of Suction or Lifting Pump.
 Model of Force Pump.
 Magic Funnel.
 Transfer Jar for Exhaustion under Bell Glass.
 Fountain in Vacuum, with Jet, &c., for producing an Artificial Fountain.
 Magdeburgh Hemispheres.
 Daniell's Hygrometer.
 Reynold's Chart of Barometer.
 Mariotte and Boyle's Instrument for Measurement of the Elastic Forces of Gases.
 Apparatus for Mixture of Gases and Liquids.

Acoustics:—

Bell in Glass Globe to show that sounds are not produced in vacuo.
 Sliding Rod and Ball, with Glass Receiver.
 Water Hammer.

Heat (see also Chemical Apparatus):—

- Tyndall's Apparatus—Multiplying Wheel.
- Ingenhouz's Apparatus.
- Tyndall's Apparatus to show Unequal Expansion of Metals.
- Gravesande's Ball and Ring Pyrometer.
- Ferguson's Pyrometer.
- Wollaston's Cryophorus.
- Differential Thermometer.
- Gridiron Pendulum.
- Franklin's Experiment (Pulse Glass).
- Radiometer.
- Psychrometer (Wet Bulb Thermometer).
- Thermo-electric Battery or Pile.
- Mellom's Thermo Multiplier with concave reflector
- Concave Reflectors.
- Model of Locomotive Engine.
- Model of Beam Engine and Boiler.
- Miniature Working Model of Steam Engine.

Light:—

- Large Binocular Microscope with movable diaphragm, fine adjustment, two sets of eye-pieces, nine objectives, achromatic condenser, rotating prism, &c., &c.
- Public School Microscope for Botanical purposes.
- Magic Lantern with 3½-in. lenses.
- Polarising Apparatus for Magic Lantern.
- Solar Lantern.
- Photogenic Lantern for Electric Light Apparatus.
- Condensing Lenses.
- Terrestrial Telescope on Stand.
- Davey's Safety Lamp.
- Revolving Disc for Decomposition of Light.
- Camera Obscura.
- Kaleidoscope.
- Oxy-hydrogen Lamp.

Magnetism:—

- Inclination Compass for Measuring the Magnetic Inclination or Drop.
- Horse-shoe Magnets.

Frictional Electricity:—

- Carre's Electrical Machine.
- Plate Electrical Machine.
- Holtz's Electrical Machine.
- Electrophorus, consisting of a 10-inch plate with brass cover and glass handle.
- Electric Battery of Leyden Jars, with quadrant electrometer.
- Electrical Discharger.
 - Do. Plate.
 - Do. Orrery.
 - Do. Sportsman.
- Electric Egg for showing Spark in Rarefied Air.
- Electrical Vane.
 - Do. Head of Hair.
 - Do. Pistol.
- Cuthbertson's Balance Electrometer.
- Dancing Image Plates.
- Glass Globe for Dancing Images.

- o Coulomb's Ellipsoid (see Heat).
- Apparatus for Light in Vacuo.
- Illuminated Egg Stand.
- Globe for Electric Spark.
- Diamond or Luminous Jars.
- Leyden Jars.
- Spiral or Spotted Tubes.
- Harris's Unit Jar for charging Leyden Jars, &c., with known quantities of Electricity.
- Thunder House.

Dynamical Electricity:—

- Bunsen's Battery.
- Carbon Battery.
- Grove's Battery.
- Smee's Battery.
- Decomposition of Water Apparatus.
- Electric Magnetic Bell.
- Electric Pump.
- Electro-magnetic Machine.
- Electrotyping Apparatus.
- Geissler's Tubes.
- Apparatus for revolving Geissler's Tubes.
- Mirror for Geissler's Tubes.
- Hoffman's Apparatus for Electrolysis.
- Helix and Bar.
- Large Ruhmkorff Coil.
- Commutator or Contact Breaker for ditto.
- Ruhmkorff Coil with commutator.
- Oersted's Galvanometer.
- Stand for Carbon Points for Electric Light.
- Revolving Electro Magnet.
- Revolving Armature and Magnet.
- Model of Electric Telegraph with index.
- Model of Electric Telegraph for Sound.
- Home and School Telegraph.
- Telegraph with Paper Reel.
- Mariner's Compass.

Chemistry:—

- School Laboratory.
- Apparatus for Experiments with Gases.
- Apparatus for applying Heat.
- Miscellaneous Chemical Apparatus.

Map and School Supply Company, Toronto.

(See also School Furniture and Map Departments.)

- Public School Air Pump with 8-inch plate—an excellent and reliable instrument for all ordinary purposes.
- Bell Glass for ditto.
- Air Pump with 6-inch plate.
- Bell Glass for ditto.
- Guinea and Feather Apparatus.
- Magdeburgh Hemispheres.
- Model of Lifting Pump.
- Model of Force Pump.

Ramsden's Electrical Machine. This is an improvement on one of the earliest plate machines invented, and is the cheapest that can be obtained for Public Schools.

Leyden Jars.
Spiral or Spangled Tubes.
Electrical Discharger.
Dancing Image Plates.
Electrical Flier.
Electrical Pendulum.
Insulating Stool.
Electrolysis Apparatus.
Induction Cylinders.
Gyroscope.
Archimedes Principle.
Conductometer.
Ball and Ring Pyrometer.

CLASS 20.—PUPILS' WORK—KINDERGARTEN.

Provincial Model School, Toronto.

(Pupils' Work.) Conducted by Miss Hailman.

Beads (Miss Hailman's 2nd gift)—
