# CIHM/ICMH Microfiche Series. 

> CIHM/ICMH Collection de microfiches.

Canadian Institute for Historical Microreproductions / Institut canadien de microreproductions historiques
(C)

The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming, are checked below.

Coloured covers/
Couverture de couleur

Covers damaged/
Couverture endommagbe

Covers restored and/or laminated/
Couverture restaurbe et/ou pelliculée

Cover title missing/
Le titre de couverture manque
Coloured maps/
Cartes geographiques en couleur
Coloured ink (1.e. other than blue or black)/
Encre de couleur (i.e. autre que bieue ou noire)
Coloured plates and/or illustrations/
Planches et/ou illustrations en couleur
Bound with other material/
Relié avec d'autres documents
Tight binding may cause shadows or distortion along interior margin/
La re liure serrée peut causer de l'ombre ou de la distortion le long de le marge intérieure

Blank leaves added during restoration may appear within the text. Whenever possible, thase have been omitted from filming/ II se peut que certaines peges blanches ajoutces lors d'une restauration apparaissent dans ie texte, mais, lorsque cola útait possibla, ces pagas n'ont pes itc filmóes.

Additional commente:/
Commentaires supplómentaires:

L'Institut a microfilme le meillour exemplaire qu'il lui a óté possible de se procurer. Les détails de cet exemplaire qui sont peut-dtre uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qul peuvent exiger une modification dens la méthode normale de filmage sont indiqubs ci-dessous.

Maps, differe entirel beginn right require metho

The copy filmed here has been reproduced thanks to the generosity of:

Netional Llbrary of Canada

The images appearing here are the best quality possible considering the condition and leglbility of the original copy and in keeplng with the filming contrect specifications.

Original coples in printed paper covars are filmed beginning with the front cover and ending on the last page with a printed or Illuatrated Impresslon, or the back cover when approprlate. All other original coples are filmed beginning on the first page with a printed or Illuatrated impres. sion, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microflche shall contain the symbol $\rightarrow$ (meaning "CONTINUED"), or the symbol $\nabla$ (nicaning "END"), whichover applies.

Maps, plates, charts, otc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, es many frames as required. The following diagrams illustrate the method:

L'oxemplaire filmé fut reprodult grâce à la généroelté de:

Bibliothèque nationale du Canada

Les images sulvantes ont été reprodultes avec le plus grand soin, compte tenu de la condition et de la nettete de l'exemplaire filmb, ot en conformite avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmbe en commençant par le premier plat et en terminent soit par la derniere page qui comporte une empreinte d'Impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la premid̈re page qui comporte une empreinte d'impression ou d'illustration et en terminant par la derniére page qui comporte une telle ompreinte.

Un des symboles suivents apparaitra sur la dernière Image de chaque microfiche, selon le ces: le symhole $\rightarrow$ signifie "A SUIVRE", le symbole $\nabla$ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent dtre filmés de des taux de réduction difforents. Lorsque le document est trop grand pour atre reproduit on un seul cliche, il est filmé a partir de l'angle supérleur gauche, de gauche ầ droite. et de haut en bas, on prenant le nombre d'Images nócessaire. Les diagrammes suivants illustrent la méthode.

## REPORT.

The Colonial Office, in Downing Street, has received annually for a series of years a "Blue Book" in manuscript from each Colony, containing a variety of commercial, financial, ecclesiastical, and general information for the use of Government. The "Blue Books" were commenced about the year 1828. Three blank books, with ruled columns and printed headings, are sent to each Colony every year ; the blank columns are filled in by returns from the different departments, under the authority of the Colonial Secretary in each settlement; these returns are then sent in duplicate to Downing Street, and one of the three copies is retained in the Colony for the use of the Governor. In 1836-7, a Committee of the House of Commons, then sitting to inquire into the financial condition of the Coionies, examined witnesses with reference to the feasibility and expense of reducing these "Blue Books" into a form adapted foi publication. In consequence perhaps of the time and expenditure, which the arrangement and publication of a vast mass of documents would occasion (about $£ 10,000$ ), nothing was done by Government; and, in pursuance of an object which has occupied a third of my life at home and abroad (namely, to make the condition of the Colonies of the Empire fully known to, and their importance appreciated by, the British public), I solicited permission from the Secretary of State to prepare, with my own assistants, and at my own expense, such a work as the Committee of the House of Commons was desirous of possessing. His Loidship's reply to my application was as follows :-

## From Sir George Grey, M.P., Under-Secretary of State for the Colonies.

" Colonial Office, Downing Street.
" Sir, 7th February, 1838.
" I am directed by Lord Glenelg to acknowledge the receipt of your letter of the 2nd instant, and to acquaint you in reply that his Lordship has much pleasure in complying with your request for access to the information in this office, comprised in the "Blue Books" annually transmitted from the respective Colonies. Mr. Meyer, the librarian, has received his Lordship's directions to submit them to your inspection, on your application to him for that purpose. Lord Glenelg will also be happy to afford you access to any other statistical information in this office respecting the Colonies.
" I am, Sir, your most obedient servant,
" To Robert Montgomery Martin, Esq., \&c. \&c."
' Grorar Grex.
An office was assigned for my use in Downing Street, and, by the courtesy of Mr. Meyer, I was supplied with upwards of two hundred and fifty volumes of "Blue Books," and with various documents of a public nature. The materials which these books contained were carefully examined, and the facts which I deemed it useful to publish were collated and arranged in a tabular form, together with an inmense mass of facts collected from every public department, and from every quarter deemed authentic, so as to present consecutive views of the progress or decline of each Colony in population, education, religion, crime, commerce, shipping, staple products, finances, and in every thing which can portray the physical, moral, and intellectual condition of so large a part of the British Empire.

At the East India House also an apartment was assigned me, and the commercial returns from Bengal, Madras, and Bombay for forty years, were, by the urbanity of Mr. Peacock, placed before me. Mr. Melville, Secretary to the East India Company; Mr. Irving, Inspector-General at the Custom House; Mr. Woodhonse, of the Plantation Office; Mr. Covey, Registrar-General of Shipping; Mr. Brown, Registrar-General of Merchant Seamen; Mr. Porter, of the Bourd of Trade; and the Courts of Directors and Secretaries of
the different public Companies connected with our transmarine possessions, all granted me their invaluable aid towards the preparation of this work.

The Colonies are arranged geographically, and divided into Books, thus :-
Book I.-Poserssions in the West Indies.-Jamaica, Trinidad, Tobago, Grenada, St. Vincent, Barbadoes, Antigua, Dominica, St. Lucia, St. Christopher, Montserrat, Nevis, Tortola and the Virgin Isles, New Providence, and the Bahamas, the Bermudas, \&c.

Boox II.-Possessions in South America.-Denerara, Essequibo, Berbice, Honduras, and the Falkland Islands.

Book III.-Possessions in North America.-Canada (Upper and Lower), New Brunswick, Nova Scotia, Cape Breton, Prince Edward Isle, Newfoundland, Labrador, anc' $\because$ Hudson Bay Territories.
jk IV.-Poserssions in Asia.-Bengal, Madras, Bombay, Ceylon, Penang, Malacca, aua Sincapore.

Book V.-Possessions in Austral-Asia.-New South Wales, Van Diemen's Island, Swan River, and Southern Australia, \&c.

Book VI.-Possessions in Aprica.-Cape of Good Hope, Mauritius and Seychelles, St. Helena, Ascension, Sierra Leone, the Gambia, Accra, Cape Coast Castle, \&c.

Book VII.-Possessions in Europe.-Gibraltar, Malta and Gozo, Corfu, Cephalonia, Santa Maura, Ithaca, Zante, Paxo, Cerigo, and Heligoland.

Each Colony forms a separate chapter, which is again subdivided into numbered sections, according to a system which will shew at a glance under each head of Population, Commerce, Finances, \&c. all the information which could be obtained relative to these subjects. In the Appendix a similar plan has been adopted, the documents belonging to each Book being classified according to their respective geographical arrangement.

In the West India Appendix will be found the general trade of the West Indies in the aggregate, and of each island for a series of years as regards the exports to England, and the duties levied there on sugar, coffee, rum, \&c. Full details of the recent reports relative to education among the emancipated negroes, of sickness in the West Indies, of the prices of tropical produce, \&c., will also be found in this Appendix. The Appendix to the book on North America contains several important statements relative to the lands granted in Canada, aggregate statements of the trade of the Northern Colonies, the value of Spanish dollars, \&c. The Asiatic Appendix supplies a great variety of information, some of which was obtained at the East India House after the text was printed. The documents respecting the British feudatory, stipendiary, and dependent chiefs-the classified population of different districts-the rates of pay and regulations of the army-the commerce, coins, weights and measures, \&c. of the Anglo-Eastern Empire, are all of the highest value. There will be found in the Austral-Asian Appendix copious details relative to population, crime, the treatment of convicts, secondary punishments, \&c., in addition to the abundant facts given in Book V. The juricial, mercantile, and banking charters are given in the Appendix of the book to which the Colonies belons possessing such charters. Thus the Colonial Bank charter is in the West India Appendix, the British Guyana Bank charter under South America, the Hudson Bay charter under North America, the East India Company charter under Asia, and the Ionian Islands charter under the Europe Appendix. An Emigration Appendix, with a variety of data as to emigrants, rates of wages, regulations, \&c., has been added, and at the conclusion is given a General Appendix of several documents relating to shipping, finances, \&c. not applying specifically to any one Colony.

In order to render the work more complete for reference, a brief view of the manner in which each Colony has been acquired by Great Britain, and of its chief physical features,
has been prefixed each settlement w octavo volumes, an chart shews, in an by the memory, t$]$ Books" are compl columns, viz. those in place of actual $\mathbf{r}$

has been prefixed to the vital statistics. A full account of the history, geography, \&c. of each settlement will be found in my "History of the British Colonies," in five large octavo volumes, and in my "Colonial Library," in ten smaller volumes. A large statistical chart shews, in an aggregate form and in round numbers, as being more easily retained by the memory, the condition of the Colonies in 1836, the latest year in which the "Blue Books" are complete, and as accurate as existing documents will permit. In some of the columns, viz. those of religion and property, estimates have been obliged to be resorted to, in place of actual returns to Government.

A map of the world coloured, to shew the geographical position of our Colonies, has been appended by Mr. Wyld, geographer to the Queen.

The seals of each Colony, chastely designed by Mr. Wyon, chief engraver of the Royal Mint, are now, for the first time. laid before the public. The centre of the colonial seal is alone given: it is surrounded by the royal arms, as observed in the engraving of the Upper Canada seal, plate 1. I am indebted to Mr. Freebairn's skill with the patent anaylyptograph for the beautiful engraving with which this branch of the work is illustrated. My principal assistant, Mr. Frederick Medley, bestowed great care on a work which required unremitting industry, attention, and zeal-qualities which were rendered more useful by his personal knowledge and appreciation of the value of the Colonies. While adverting to the different individuals who have contributed towards the preparation of this work, I should not omit to mention the excellent typographer, Mr. Nicol, of the Shakspeare Press, Pall Mall.

A tabulur Index, after a new and compendious plan, will enable the inquirer to find in a moment the pages in the Book and in the Appendix relating to any subject on which he may desire information.

With respect to the numerous tables and data, which the following pages present, they may be relied on as the nearest approximation to truth yet attainable. The "Blue Books" are, of late years, more perfect than when they were first established; and great credit is due to the gentleman in the Colonial Office with whom the statesman-like idea originated, and to those also who, undeterred by difficulties or disappointments, have succeeded in reducing the plan to a system, which every future return will bring to a greater degree of accuracy. It may be observed, perhaps, that the gaol returns from several Colonies shew sometimes a great and sudden change in the annual number of prisoners. This can only be accounted for by supposing that occasionally the whole of the gaols in the Colony are included in the return, and in some years, only those prisoners confined in the chief town.

There are about three million figures in the volume, and a nearly equal number was required to form the additions, subtractions, \&c. In order to get as much information as possible into a given tabular space, shillings, pence, and fractional parts, have been excluded, which will account for any slight apparent discrepancy in the summing up of the totals, and which it did not appear advisable to alter.

As the work may be deemed an official record, I have considered it right to abstain from all comment on the multiplicity of facts now collected and printed, and to suppress even an Introduction which I had prepared on ancient and modern colonization, and on the political and cominercial importance of Colonies to England.

The statements contained in the following pages speak for themsclves: they constitute the most extraordinary record of a Colonial Empire that man ever witnessed-an empire which has been the growth of ages, yet is still in its infancy, and on whose extension and improvement, so far as human judginent can predict, depends the happiness of the world.

London, Junuary, 1839.
ROBERT MONTGOMERY MARTIN.

# THE COLONIES, \&c. 

## BOOK I.-POSSESSIONS IN THE WEST INDIES.

## CHAPTER I.-JAMAICA.

Section I.-The Island of Jamaica is situated between the parallels of $17^{0} 35^{\prime}$ to $18^{0} 30^{\circ}$ north latitude, and $76^{\circ}$ to $78^{\circ} 40^{\circ}$ west longitude, 4000 miles southwest of England, 90 west of St. Domingo, the same distance south of Cuba, and 435 north of Carthagena on the South American continent. It is $\mathbf{1 5 0}$ miles long, 55 broad, and contains about 4,000,000 acres.
II. Jamaica was discovered by Cristopher Columbus, on the 2nd May, 1494, during his second expedition. It was called Xaymaca in the Florida language, signifying abundance of wood and water; and St. Jago, alias St. James, by Columbus, in honor of the patron saint of Spsin. Columbus took formal possession of Jamaica for his sovereign ; but owing probsbly to the apparent hostility of the aborigines, by whom it was then densely peopled, the Spaniards formed no settlement. In 1503 the Spaniards first hegan to colonize Jamaica. In 1558 the sborigines had entirely perished, and slaves were then introduced. In 1605 Sir Anthony Shirley made some predatory incursions on the Spanish settlers then scattered in various parts of the island, and in 1638 Col. or Capt. William Jackson made a descent on Jsmaica, beat the Spaniards at Passage Fort, and compelled them to pay a iarge sum of money for the preservation of their capital. The island remained in the possession of the Spaniards until the 3rd May, 1655 , when Jamaica was conquered from the Spaniards by a large armament, fitted out by Oliver Cromwell, and commanded by Gen. Venables and Admiral Penn. From thence to the present period Jamaica has remained in the possession of Great Britain.

The following is a list of the alave insurrections in the island: 1678. Rebellion caused by the prolongation of martial law. 1684. Ditto-first serious one. 1686. Ditto-sanguinary at Clarendon. 1702. Ditto. Eastern districts. 1717. Ditto-causing great alarm. Not to mention districts or particular events, it may be sufficient to name the years in which the insurrections occurred:-In 1722, 1734, 1736, 1739, 1740, $1745,1758,1760,1765,1766,1769,1771,1777,1782$, 1795, 1796, 1798, 1803, 1807, 1809, 1824, 1832. During the latter relsellion 200 ware killed in the field, and about 500 executed. The expense of putting down the rebellion of 1700 , was $£ 100,000$. It is estimated that the expense of 1832, (exclusive of the value of the property destroyed, viz. $£ 1,154,583$ ) wss $£ 161,596$. The British parliament granted a ioan of $£ 500,000$ to assist the almost ruined planters.

The following are the names of the Governors, Lieut.-Governors, \&cc., of Jamaica, with the years when they commenced their administrations: Gov. Col. D'Oyley, 1660 ; Gov. Lord Windsor, 1662 ; Lieut.-Gov. Sir C. Lyttleton, Knt., 1662 ; Pres. Col. Thomas Lynch, 1664 ; Gov. Sir T. Modyford, Knt., 1664 ; Lieut. -Gov. Sir T. Lynch, Knt., 1671 ; Lieut. Gnv. Sir H. Morgan, Knt., 1675 ; Gov. Lord Vaughan, 1675 ; Lieut.-Gov, Sir H. Morgan, Knt., 1678; Gov.

Charles Earl of Carlisle, 1678; Lieut.-Gov. Sir. H. Morgan, Knt. 1680; Gov. Sir Thomas Lynch, Knt. 1682 ; Lieut.-Gov. Col. Hender Molesworth, 1684 ; Gov. Christopher Duke of Albemarle, 1687; Pres. Sir Francis Watson, 1688 ; Gov. William Earl of Inchiquin, 1690 ; Pres. John White, Esq., 1692 ; Pres. John Bourden, Esq., 1692 ; Lieut.-Gov. Sir W. Beeston, Knt., 1693 ; Gov. William Selwyn, Esq., 1702 ; Lieut.-Gov. P. Beckford, Esq. 1702 ; Lieut.Gov. T. Handasyd, Esq. 1702 ; Gov. Lord Archibald Hamilton, 1711; Gov. Peter Heywood, Esq., 1716; Gov. Sir Nicholas Lawes, Knt., 1718; Gov. Henry Duke of Portland, 1722 ; Pres. John Ayscough, Esq., 1722; Gov. Major-Gen. Robert Hunter, 1728 ; Pres. John Ayscough, Esq., 1734; Pres. John Gregory, Fsq., 1735. Henry Cunningham, Esq. was appointed Governor in 1735, but Pres. Gregory was succeeded by Gov. Edward Trelswny, Esq. 1738 ; Gov. Charles Knowles, Esq 1752 ; Lieut.-Gov. Henry Moore, Esq. 1756 ; Gov. George Haldane, Esq. 1758 ; Lieut.-Gov. Henry Moore, Esq. 1759 ; Gov. W. H. Lyttleton, Esq. 1762 ; Lieut.-Gov. R. H. Elletson, Esq., 1766 ; Gov. Sir William Trelawny, Bart., 1767; Lieut.-Gov. Lieut.-Col. J. Dalling, 1773; Gov. Sir Basil Keith, Knt., 1773 ; Gov. Major-Gen. J. Dalling, 1777 ; Gov. Maj. Gen. Archibsld Campbell, 1782 ; Lieut. Gov. Briga-dier-Gen. Alured Clarke, 1784 ; Gov. Thomas Earl of Effingham, 1790 ; Lieut. Gov. Major-Gen. Williamson, 1791 ; Lieut.-Gov. Earl of Balcarras, 1795; Lieut.-Gov. Lieut.-Gen. G. Nugent, 1801 ; Lieut. Gov. Lieut. Gen. Sir E. Coote, 1806; Gov. Duke of Manchester, 1808 ; Lieut.-Gov. Lieut.-Gen. E. Morrison, 1811; Gov. Duke of Manchester, 1813; Lieut. Gov. Major-Gen. H. Conran, 1821 ; Gov. Duke of Manchester, 1822 ; Lieut. Gov, Major-Gen. Sir John Keane, 1827 ; Gov. Earl of Belmore, 1829 ; Pres. G. Cuthbert, Esq., 1832 ; Gov. C. H. Earl of Mulgrave, 1832 ; Gov. Marquis of Sligo, Dec. 1833 ; Lieut. Gen. Sir Lionel Smith, 1836.
III. Jamalca is somewhat of an oval shape, with an elevated ridge called the "Blue Mountains," (towering in some places to nearly 8,000 feet above the level of the sca, ) running longitudinally through the isle E. and W., and occasionally intersected by other high ridges, traveraing from N. to S.; approaching the sea on the S . coast in gigantic spines, of sharp ascentdifficult of access, and clothed with dense and sombre forests ;-on the N. declining into lovely mounds and round-topped hilis, covered with groves of pimento, and all the exquisite verdure of the tropics,- the coup d'aeil presenting a splendid panorama of high mountains, embosomed in clouds, and vast savannahs or plains, hills and vales, rivers, bays, and creeks. The middie part, called Pedro's Cockpit, lying between Clarendon and St. Ann's Parishes, is spread for an extent of many miles, with an infinite number of round-topped hills, whose surface, covered with loose lime-stone, or honey-comb rock, is ciothed with fine
cedar and other trees, of enormous bulk; the dales or cockpits meandering between these hummocks contain a rich soil, of great depth, where the succulent Guinea grass forms a perfect carpet of eververdant beauty.

From Fort Morant (conspicuous under a steep hill,) to Port Royal, there is a narrow spit of land, called the palisades, composed of sand, overgrown with mangroves; behind this is the harbour of the chief commercial town. St. Jago de la Vega, or Spanish Town, Co. Middlesex, on the S.W. side of the island, about 16 miles from the sea, and 16 from Kingston, is the seat of Government, but Kingston is in reality the capital of the island. Kingston is situated on a gentle slope of about one mile in length, which is bounded on the $S$. by a spacious basin, through which all vessels must advance bencath the commanding batteries of Port Royal. The extended inclimed plane, on the verge of which Kingston stands, is enclosed on the N . by the loftiest ridge of the Blue Mountain chain, termed Ligualıa, which, forming a semi-circle, terminates in the E. at the narrow defile of Rock Fort,-from thence a long neck of land stretches far away to Port Royal, forming the $S$. barrier of a beautiful haven; in the W. the semicircle terminates at a contracted pass upon the edge of an impracticable lagoon, from thence the main land sweeping round to Port Henderson, and the projecting saltpond hills secure an harbour, in which the navies of Europe may safely ride. The entrance is defended on the $E$. point of the delta of Fort Royal by the formidable ramparts of Fort Charles, thickly studded with heavy ordnance; on the W. side, by the cannon of Rock Fort, while the low raking shot from the long level lines of Fort Augusta, which face the narrow channel, would sweep a hostile navy off the ocean. For nine miles around Kingston is an alluvial plain, surrounded by a series of irregular mountains, qome of which to the $E$, and N. E. are of considerable elevation,-constantly cloud-capped, and appearing as if made up of several hills piled one upon another, with various elevations, picturesque valleys and chasms, impressing the mind with an idea of volcanic origin, or that some convulsion of nature had caused the strange irregularity displayed.

The streets in Lower Kingston are long and straight, with a mathematical regularity like the new town of Edinburgh, the houses in general two stories, with verandahs above and below. The English and Scotch churches are really elegant structures, particularly the former, which is built on a picturesque spot, commanding a splendid view of the city, the plains around it, the amphitheatre of mountains, and the noble harbour of Port Royal.

On a plain at the top of the declivity on which Kingston is built sre the fine barracks, called Up Park Camp, and not far hence on a atill more conspicuous spot, is the residence of the naval com-mander-in-chief on the station, called the Admiral'a Pcr. The heighta of the principal places above the level of the sea, are thus computed :-Blue Mountain Peak, 7,770 feet; Ridge of ditto, 7,163; Portland Gap ridge, 6,501; Portland Gap, 5,640; Catherine's Peak, 4,970; Abbcy Green House, s.d. 4,233; Clifton House, s.A. 4,228; Flamsted House, 3,800; Sheldon House, 3,417 ; Middleton House 2,340 ; Stoney Hill, Bucks, 1,360; Green Castle, 1,328; Hope T'avern, 699.

It is asserted, however, that the threc very remarkable peaks on the grand ridge of Blue Monntains at the eastern part of the island called the Coldridge, have their respective summits $8,184,7,656$, and 7,576
above the level of the sea, and there are other mountains in this ridge exceeding a mile in height. Catherine's Peak, about seven miles and a half N. of Kingston, is stated to be 5,075 feet, and Hardwar Hill to the westward of it nearly of equal elevation, forming the summits of another grand ridge which crosses the island diagonally. The mountains to the W. in the counties of Middlesex and Cornwall do not reach to the height of a mile, rarely exceed half a mile ; Leman's mountain, in the county of Middlesex, six miles $N$. of Spanish Town is $2,28.2$ feet high, and the Bull's Head, in Clarendon, near the centre of the island on the meridian of Carlisle Bay, is 3,140 feet. In the W. the Dolphin's Head, S. of Lucea is 3,450 feet. On the S. E. coast Yallah's Hill, which is within the point of the same name, is only 2,706 feet. The greater proportion of the mountains are of conical form, with steep declivities, approaching very near the shore on the $N$. coast, and leaving plains of about 12 miles wide on the $S$.; the dark and deep ravines between the lofty mountains, denominated Cockpits, are closely shut in by dense woods, and offer a marked contrast to the lower mountains, which are cultivated with coffee, pimento, cutton, capsicums, \&c., in all their variety, affording delightful country retreats from the coast.

The beauty of the island is further enhanced by its numerous rivers, upwards of 200 of which have been enumerated; few, however (owing to the mountainous and hill and dale nature of the country), are navigable for vessels of any burthen, although they might be made so by means of locks, \&c. In St. Elizsbeth parish, Black River, which flows for the most part through a flat country, is the deepest and least rapid, and is navigable for flat-bottomed boats and canoes for ahout 30 miles. The other chief rivers on the $S$. side are the Rio Cobre and Rio Minho, and on the N., Marthabræ, Whitc, Ginger, and Great River, \&c.The precipitate current of the streams renders them the better adapted for mechanical purposes, their quick agitation over the falls preserves their zest and sprightlineas for animal drink, and prevents the too great evaporation and formation of damps and mista, which would otherwise be occasioned.

Springs are extremely numerous, even in the highest mountains ; about Kingston, and on the N. side, they are generally impregnated with calcareous earth, and in the latter stalactites are met with. Several are of a medicinal nature in Vere and Portland; the most celebrated is one of a sulphureous nature in the $E$. parish of St. Thomss, giving name to a village called Bath. There is a cold and a hot spring; the latter runs by many rills out of the side of a rocky cleft that confines the iniddle part of the sulphur river to the E., as it fiows towards the S.; it is very hot at its source, naturally light, and plentifully charged with volatile particles of mineral acid, combined with sulphureous steam, slightly engaged in a calcareous basc. The cold spring differs only in being more abundantly charged with sulphur; the use of both is exceedingly beneficial is cutaneous disorders, obstructions of the viscera, \&c.

Of the harbours it may be sufficien; iu 'tate, that the Jamaica shore has 16 principa! secure havens, besides 30 bays, roads, or shipping stations, which afford good anchorage.

The island is divided into three counties-Middlesex, Surrey, and Cornwall, each of which is subdivided into parlshes, nine, seven, and five. Cornwall, contains $1,305,235$ acres, 3 towns, 5 parishes, 6 villages; Middicsex, 672,616 acres, 1 town, 9 parishes, 13 vil-
lages; Surrey, $1,522,149$ a villages. Total, $\mathbf{3 , 5 0 0 , 0 0 0}$ 27 villages.

Middlesex contains St. $J$ Town, situate in a noble many fine buildings in the tains Kingston and Port $F$ lages of Port Morant and considerable importance o Portland parish, in this cou one of the most commodio St. George Parish contain county has Montego Bayo coast Falmouth, 20 miles situate. The jrarallel lines of building (that to the S., or scaw quarters), two stories his excellent hospital, a splen four deep, containing 70 , This tine bath is suppl estate, four miles and a ing it is six inches in dia inches, and discharging 4 plentiful supply of so it ables the soldlers to irrig sre laid out in the camp son with a constant sup cantonment, at 60 fcet wall of six feet high, su ing ; 1,284 European so
lages; Surrey, 1,522,149 acres, 2 towns, 7 parishes, 8 villages. Total, $3,500,000$ acres, 6 towns, 21 parishes, 27 villages.

Middlesex contains St. Jago de la Vega, or Spanish Town, situate in a noble plain, and adorned with many fine buildings in the Castilian atyle; Surry contains Kingston and Port Royal, and likewise the villages of Port Morant and Morant Bay, the latter of considerable importance on account of ita shipping; Portland parish, in this county, contains Port Antonio, one of the most commodious and secure in the island; St. George Parish contains Annotto Bay; Cornwall county has Montego Bay on the N. W. coast, on which coast Falmouth, 20 miles east of Montego Bay, is also aituate. The other places worth notice are Carlisle and Blucfield Baya on the S. and Marthabre and Lucea harbours on the N. coast. The chief headlands of the island are Port Morant, at the east end of Jamaica, and two promontories on the W. end, the const along which is bold and high.

The roads through the island are in general narrow but good. By the old laws the width of the roads was ordered as follows:-Width in standing wood, 60 feet; width of wood in one side, 40 feet; width of open ground, 24 feet. The making of some roads in the island have cost $£ 700$ per mile.

It may be necessary to say a few words respecting the position of the military stations, \&c. in Jamaica, especially on the south side of the island, where four out of five regiments are stationed. To begin with-

Fort Augusta.-Thia strong fortress is built upon a low neck of land, or peninsula, joined to the hills at Port Henderson by a narrow isthmus of sand, having a coral formation for ita base. The buildings of the fort occupy the whole area of the point of the peninsula, which is surrounded by the sea, except to the west, the south face of the port being washed by the deep water of the ship channel, while the east and north fronts are environed by the shallow waters of a lagoon. The fort is considered healthy, owing to the prevalence of the wind from the $S$. and $S$. E. The barracks are two stories high, well ventilated, and contain generally four service companies.

Up-Park Camp contains the only government barracks in Jamaica, and they are indeed highly creditable to the island. They are situate about two miles north of Kingston, at the extremity of the plain of Liguana, which gradually rises above the level of the sea, is well cultivated, extremely fertile, about one mile and a half south of the Long Mountain, with an elevation of 800 fect, covered with brush wood, and exceedingly steep towaids Kingston. The height of the cainp above the sea shore is about 200 fcet, and it covers an irregular square of between 200 and 300 acres, sloping towards Kingston. The barracks consist of two loug parallel lines of buildings, extending from E. to W. (that to the S., or seaward, comprising the officers' quarters), two stories high, and six-feet hasement, an excellent hospital, a splendid bath of 40 feet clear and four deep, containing $\mathbf{7 0 , 0 0 0}$ gallons of running water. This tine bath is supplied with water from lapine estate, four milea and a half distant; the pipe convey. ing it is six inches in diameter, with a velocity of 12 Incher, and discharging 4,500 gallons per hour. This plentiful supply of 80 indispensable an element enables the soldiers to irrigate their ncat gardens, which are laid out in the camp, and which furnish the garrison with a constant supply of vegetables. The whole cantonment, at 60 fcet distance, is surrounded by a wall of six feet ligh, surmounted by an iron palisading ; 1,284 European soldiers are encamped with com-
fort, and the attached offices are spacious, lofty, and. commodious.

Stoney Hill garrison, capable of holding 500 menis situate 2000 feet above the level of the aea, on the ridges of a chain of mountains (in a depression between a more elevated chain), running in a curved direction from E. to W., and enjoying a most beautiful and picturesque view f the inclined alluvial plain of Liguana, of the city of Kingston, of Port Royal, of Fort Augusta, and of the adjacent country. The barracks, hospitala, \&c. are, generally speaking, situate on small detached eminences, and are nine miles north of Kingston, seven of which cross the plain of Liguana; the remainder of the road is rather an abrupt ascent to the garrison, but practicable for wheeled carriages of every description. This post commands the grand pass, which intersects the island from N. to S., and is thercfore justly considered of great importance. The government ground at the station amounts to 83 acres.

Port Antonio, situate at the extremity of the island, 80 miles from Kingston, is nearly insulated;-ita fort exhibiting a half-moon battery, with a magazine in the rear, 144 feet long, by 21 wide. The barracks are placed upon a kind of peninsula, forming on either side a bay, and capable of containing upwards of 50 men. The buildings are new and elevated, commodious, and commanding a fine view of the sea.

Falmouth, or Marthabre, 15 miles E. of Montego Bay, has a small fort at Point Palmetto, with a good set of artillery barracks, and an hospital, stores and quarters, open to the sea breeze. It is a bar harbour ; channel very narrow, intricate, not more than 16 or 17 feet deep, but within a regular depth of from five'to ten fathoms. The town of Falmouth is built on the W . side of the harbour.

Maroon Town is situate in the interior, between the parishes of Westmoreland and St. James, on a very high mountain, affording a most desirable station, in a military as well as in a sanatory point of view. The barracks, delightfully placed in the midst of verdant mountains and springs of the most delicious water, are capable of accommodating upwarda of 200 men, with an excellent hospital for 20 patients.

Montego Bay is situate at the foot of a range of mountains which nearly surround the town, except on the sea side. The barracks for 100 men , and an hospital for 40 patients, are complete and comfortable. The N. point is in Lat. $18.30 \frac{1}{2}$ N. It is a goud bay, sheltered from all winds, from the N.N.E. round to E. and W. and open to those. from N. and W. It is distant 15 miles from-

Lucea, or Fort Charlotte, which is built on the N. E. extremity of a jeninsula, bounded on one side by the heautiful bay and accure harhour of Lucea, and on the other by the sea. The mountains of Hanover and Westmoreland rise abruptly and majestically high immediately bebind the town of Lucea, about one mile frem the garrison. The highest peak, termed the Dolphin's Head, serves aa a good lund-mark to the mariner.

Savannah Le Mar. This is a fine station, in the midst of a highly-cultivated country. From the seashore the ground springs a little towards the N . pretty level, and intersected by several fine rivers; towards the E., at the distance of 12 miles, the mountains begin to rise near the coast, running nearly northerly upwards of 16 miles, when they turn to the W. and incline, after running several miles further, towards the S., where they terminate not far from the
ocean, and embrace within their border a beautiful and highly-cultivated amphitheatre. The town of Savannsh le Mar is situated on the beach, from which a low alluvial flat extends for several miles; in this plain, about one mile from the town, is an excellent range of barracks. The station is now healthy, and the harbour good; but requiring a pilot, on account of its intricate entrance.

Apostles' Battery is a small fort, erected on a high rock, on the shore opposite to Port Royal.

Port Royal, situate nearly at the extremity of a tongue of land, which forms the boundary of the harbours of Kingston and of Port Royal. Towards the sea, the tongue is composed of coral rocks, covered with sand, which the tide frequently inundates, as a great part of the town of Port Royal is only a few feet above the sea level. The royal naval yard lies to the N., the naval hospital to the S. W., and the works of Fort Charles, and the soldiers' barracks, to the southward. The fortifications are extremely strong, and the situstion (though low) healthy from its openness to the sea-breeze. The harbour is capable of containing 1000 large ships with convenience. The European reader will remember that it was on this spot the former Port Royal stood ere it was overwhelmed by the earthquake of 1692 , and with 2000 houses buried eight fathoms under water.

Spanish Town. The capital of Jamaica is situate at the extremity of an cxtensive plain, extending far to the S., S.E., and W., but with the mountains closely approaching the town on the N. and N. W., and distant from the sea at Port Roysl Harbour six miles. The Cobre, a river of considerable depth, passes the city at the distance of about a quarter of a mile on the N. E. The birracks are good, well situate, and capsble of holding 317 men; the hospital, however, will not accommodate more than 36 patients. The buildings of the capital, as before observed, are in the magnificent style of Spanish architecture, and the city has an imposing appearance. The population is about 5000 . The King's Housc is one of the most splendid buildings in any of our colonies; it was erected and furnished by the British Colonists at a cost of $£ 50,000$. It is situated in the $S$. of the grest square, facing an immense pile of buildings, containing under one roof the House of Asscmbly, the Supreme Court, and almost all the Government offices of the island.
IV. Jamaica presents every indication of volcanic origin, but there is no volcsno in action; a small lake of blackish water, about 3000 feet above the ses, and entirely encircled with hills, has the appearance of an extinct crater. The precipitous cones, conical tumuli, abrupt declivities, and irregular masses of enormous rocks scattered over the island, sufficiently denote the powerful operation of fire. The soil is generally deep and fertile; on the north of a chocolate colour, in other parts a bright yellow, snd everywhere remarkable for a shining surface when first turned up, and for staining the skin like paint when wetted; it appears to be a chalky marl, containing a large proportion of calcareous matter. There is a soil in the island termed "Brick Mould," which is deep and mellow, on a retentive under strata; this, next to the ash mould of St. Christophers, is considered the best soll in the W. Indies for the sugar cane. A red eartlı abounds most in the hilly lands, and a purple loam sometimes mixed with a sandy soil in the savannahs and low-lands; but the highest mountains are remarkable for having on their summits a deep black rich soil. The principal soils on the interior
hills and mountsins of Jamaica may be enumerated thus :-A red clay on a white marl; a ditto on a grit ; a reddish brown ditto, on marl ; a yellowish clay mixed with common mould; a red grit; a loose conchaceous mould; a black mould on a clay or other substrate; a loose black vegetable mound on rock; a fine sand; and the varieties of all the foregoing. The mountain land in general, when first cleared of its wood, possesses more or less a deep surface of rich black mould, mixed with shell, a soil which will grow any thing.
The brick mould soil of Jamaica (which is a compound of very fine particles of clay, sand, and black mould, ) is of very great depth, and is considered by far the best for cultivation; it is always easily laboured, so inexhaustible as to require no manure, in very dry seasons it retains a moisture sufficient to preserve the cane root from perishing, and in very wet it suffers the superfluous waters to penetrate, so that the roots are never in danger of being rotted. Next in fecundity is the black shell mould, previously mentioned, which owes its fertility to the mineral salts and exuviæ intermingled with it. The soil about Kingston on the alluvial plain, consists of a layer of deep mould, chiefiy composed of decayed vegetable matter, with a portion of marl and some carbonate of lime, entirely free from gravel, and highly absorbent of water: the substratum varies, being sometimes of a compact aluminous earth alone, in other placcs mixed with gravel ; in sinking a shaft, layers of aluminous earth and gravel are found, running horizontally, approaching to pure clay at the bottom, and at four feet from the surface a strata of finely divided silica. About Stony-hill garrison, the surface is similar to whst is frequently met with in elevated situations in Jamaica, namely, a superstratum of rich dark mould, varying in depth from two to 20 inches, with a substratum of argillaceous and red earth, evidently containing a mixture of carbonate of iron; and in many parts the surface of the ground studded with lime stones of a very large size. Silver and gold mica is frequent, especially among the hills between St. Catherine's and Sixteen Mile-Walk, and when washed down with the fioods mistaken for gold sand :-near Spanish Town it is found incorporated with Potter's clay. Mixed and purplish schistus are common in the mountains of St. John's, and about Bull Bay, and the hard lamellated amianthus is found in large detached masses, having all the appearance of petrified wood. The lower mountains E. of Kingston are principally composed of a whitish bastard marble, with a smooth even grain, taking a good polish, and frequently used in Jamaica for lime stone. Long Mountain, near Kingston, is entirely composed of carbonate of lime. White free stone, quartz of different species, and lime stone are sbundant,-subcrystalline spar is found in small detached masses, and rock spar, very clear, may be seen formed into rocks of prodigions size in the mountains of St. Ann's, where it is observed to constitute whole strata. When exposed any time to the weather the surface grows opaque, and of a milky white. Friable white marl and clammy marl, or aboo earth, (of an apparently smooth, greasy, and cohcsive nature, are found, and the latter sometimes eaten by the negroes when they are diseased, to the great detriment of health.

The lead ore of Jamaica is extremely rich and heavily impregnated with silver; several varietics have been found, and indeed, worked at Liguana, where also striated antimony is obtainable; in the lower moun. tains of Liguana every variety of copper ore ( 14 dif-
ferent species) is in prot and livid, and the shini more mellow matrices, $y$ is largely mixed. ferent species) is in profusion, in particular the green and livid, and the shining dark copper ores; in the more mellow matrices, yellow mundick (marchasites), is largely mixed. In the mountains above Bull Bay, a dark iron sand, attracted by the magnet, is found : neither gold nor silver ore has yet been discovered, though it is certain the natives possessed those metals in abundance when first visited by Columbus and the early Spanish settlers. In the river Minho in Clarendon particles of gold have been found after heavy rains. Brown states that gold and silver ores have been discovered at Liguana; and Gage speaks (in 1655) of the mines producing " some gold, though drossie."
V. The heat of Jamaica ls by ro means so fearful as has been represented; even on the coast it is temperate, the medium at Kingston throughout the year being 80 F . and the minimum 70. As the country is ascended the temperature of course decreases; eight miles from Kingston the maximum is 70 , and at the distance of fourteen miles, where the elevation is 4,200 feet, the average range is from 55 to 65 F . the minimum in winter 44, and a fire in the evening not only agreeable but necessary. On the summits of the mountains the range in summer is from 47 at sunrise to 58 at noon, the minimum in winter 42 . The heat of a tropical climate is materially mitigated by unremitted breezes from sea or land, and by vast masses of clouds, which, interposing between the sun's rays and the earth, provent any great inconvenience therefrom. The air is remarkably light and enlivening, producing great cheerfulness even in old age, and so equal in its pressure that it rarely varies more than an inch at any time of the year. Although the temperature alternates eight or ten degrees on the south side of the mountains, and more so on the north, it is not subject to the sudden and detrimentsl transitions experienced in South Carolina, and other parts of the United States. From July to October is the hurricane season, but severe storms at the Windward Caribbee isles are not felt at Jamaica. The quantity of rain falling in the year is nearly 50 inches. For two or three months preceeding the May rains, lightning and thunder are prevalent, but not very mischievous; and from November to March, when the sea-breeze is irregular northerly winds blows, becoming colder as they recede towards the west; during this season the air is delicious, resembling the finest English vernal weather. The seasons are divided into four,-viz. vernal or moderate rains, in April and May, lasting six weeks; the second, hot and dry, inciuding June, July, and August ; the third, hurricane and rainy mothe, embracing September, October, and November; and the fourth, serene and cool, comprising December, January, February and March.
There is, however, considerable difference of climate on either side of the island; on the south it may be said that spring ranges through the months from November to April; summer from May to August, and winter from September to October; while on the north side winter ranges from October to March ; the north has a larger supply of rain than the south, but distributed in smaller and more frequent showers, and it is cooler, and with a vegetation of greater bulk and height. At Stony Hiil garrison, nine miles from Kingston, and 2000 feet above the sea, the thermometer ranges during the hot months from $74^{0}$ to $82^{\circ}$, and during the cold months from $66^{\circ}$ to $73^{\circ}$. The following Meteorological Register for Up-Park Camp is from Sir J. Mc. Gregor's office.-Militaty Med. Dept.

On the southern side of the isiand, the sea breeze from the south-eastward comes on in the morning, and gradually increases till noon, when it is atrongest; at two or three in the afternoon its force diminishes, and in general it entirely ceases by five o'clock. About eight in the evening the land breeze begins ; this breeze extends to the distance of four leagues to the southward of the island. It increases until midnight, and ceases about four in the morning.

The sea and land breeze are pretty regular from the latter end of January until May. In the middle of May the sea-breeze generally prevails for several days and nights, especially about the times of full and change of the moon, and thus they continue throughout June and part of July: from that time the seabreeze diminishes, and veers round to $S$. by W. or $S$. S.W., with frequent calms. August, September, and October, have generally strong gales of wind, with much rain.
In. Dccember, January, and February, when the north winds predominate, their force checka the seabreeze. The southern coast is that, which, of course, is least exposed to these winds, being sheltered in a great measure by the mountains. When combined with the land breeze they render the air very cold and unhealthy.

On the northern side of the island, during the greatest part of July, and the whole of August, the southerly or ses.breeze, generally blows hard of the land, with frequent squails; but in October northeriy winds prevail, and frequently extend over all the Bahamas and Cuba; and for some time on the north side of Jamaica, where the current of air is forced upwards by the mountains, and its strength spent in the heights; but it occasionally reaches the southern coast, particularly in the neighbourhood of Kingston, and has been known to continue for some days.

During the winter season the land-breeze is more general off the shore than in summer; and it sometimes continues through the day as well as night. Westerly winds prevail also all over the whole space between Jamaica and Cuba, and even so far as the Island of Hayti.

On the south side of the island, during the month of November, southerly winds generally blow, and have been known to extend from the Mosquito shore. These winds are usually falnt; nor do they reach the land until it be heated by the sun, and soon after mid-day are often expelled by a fresh land-breeze, which also abates in a few houra.

The return of the sea-breeze in autumn is gradual; it first approaches the east end, then advances a little, not unfrequently reaching Morant Point a fortnight or more before it is felt above Kingston. It also continues to blow a week or two later on the east end of the island than at Kingston ; and has been known in some years to prevail there in the day-time, during the whole time it was unfelt at the former place.
That the climate of Jamaica has undergone great change since the cultivation of the isle is most true. From Mr. Needham's journal, kept at Mount Olive, in the parish of St. Thomas in the Vale, I find that the thermometer is noted January 5th at $50^{\circ}$-" whole day cold." Governor Modyford, in a letter to Lord Arlington, then, in 1665, Secretary of State, obscrves, with regard to the healthiness of the island, that " the officers of the old army, from strict saints, are turned debosht devils;" and, "really, my Lord," he adds, " no man bath died but an account hath been given- $\mathrm{y}^{2} \mathrm{e}$ gott his decease either by surfeitts or travelling at high noone in a hott day-or being wett with rain, and not changing in season. The Spaniards, at their first coming, (I mean those who trade with the Royall Company) wondered much at the sickness of some of our people; but when they understood of the strength of their drinks, and the great quantity they charged themselves with, and the little observation of time and scasons, they told me they wondered more they were not all dead. Their health and cheer. fulness depending upon their temperance, which being my natural disposition, 1 doubt not, but will continue me capable to serve his Majestie," \&c. \&c. Of late years the yellow fever has almost, if not quite, disappeared from Jamaica and the other West India Islands.
That the climate is not inimical to the human constitution is evident from the long lives and good health which Europeans and negroes enjoy who live tempe-rately,-and indeed intemperance, which in more tenperate climates would be punished with death, here too often and too long escapes with impunity. A negro and a negress recently died at Jamaica, aged each 140 years!
At Trelawney-Maroon Town, which is situate on a very high mountain in the interior of the island, be. tween the parishes of Westmoreland and St. James the thermometer seldom or ever rises higher than 71 or 72 at noon, falling during the night and early part of the morning as low as 50 and 52. The troops stationed here have for several years enjoyed as good if not indeed a better state of health than they would perhaps have experienced in any other part of the world; and, in 1795, when the yellow fever was at its acme in Jamaica, the men and officers of a newly-raised regiment (83rd) did not lose a man by fever at this station. That there have been periods of great sickness and mortality in Jamaica is too true. The comparative health of the different Military stations at a period of unusual sickness-namely, for six years
ending in 1822 , is thus sliown :-

| station. ${ }_{\text {st }}$ | Average <br> Streogit. | Deaths. | Ratio. |
| :---: | :---: | :---: | :---: |
| Up Park Camp | 5543 | 1100 | 1 in 5 |

The following detail shows the strength of the European troops employed in Jamaica, the number of deaths, and the annual ratio of decrement by death per cent. per annum, from the year 1818 to 1828 inclusive; by which it wili be observed that, in 1828, the ratio of loss was small, owing to the judicious arrangements of Sir James M'Gregor, seconded by the Medical Staff.

The strength, mortaity, and centesimal ratio of mortality of the Britisl. toops employed in Jamaica and Honduras, as also of the Colonial Troops employed in Jamaica, Honduras, Windward and Leeward lslands, from 1810 to 1828.

VI. We have no authe population on the island lumbus; all accounts a densely peopled-within ceased to exist! Las 9 these unfortunates by 13 , tles ;-I have beheld then to their dogs,-1 have hea limb of an human being day return a quarter to the nish colony conslsted of were rapidly increased by of the main land caused neglected, and the incursi property insecure checked pear that the Spaniards b slaves, but on the capturc in 1655 , Venables stated not more than $1,500 \mathrm{Spa}$ an equal number of negro Spain had been 146 years The troubles in England and the early years of t materially to pcople our following is a census of th] years after the conquest :-

In the year 1658, wh 1670, whites, 7,500 ; s! 7365 ; slaves, 40,000 . 86,146 . 1746, whites, 10 whites, 17,947 ; slaves 12,737; free coloured, 40 whites, 23,000 ; free colou

From the year 1702 800 , to 1774 , when the $i$ number of slaves import million, of which 130,00 those retained in the is were alive in 1775 . For puted that Jamaica rec 10,000 slaves to provide life that went on.

The number of slaves of each year, from 1800 1801, 307,094; 1802, 30 308,542; 18C5, 308,77 119,351; 1808, 323,82 313,683; 1811, 326,8: 317,424; 1814, 315,38 314,038; 1817, 346,1

VI．We have no authentic accounts of the Indian population on the island when first visited by Co－ lumbus；all accounts agree in representing it as densely peopled－within half a century they had all ceased to exist！Las Casas says－＂They hanged these unfortunates by 13，in honour of the 13 Apos－ tles；－I have beheld them throw the Indian infants to their dogs，－I have heard the Spaniards borrow the limb of an human being to feed their dogs，and next day return a quarter to the lender ！＇The original Spa－ nish colony consisted of 70 persons，whose numbers were rapidly increased by emigration，until the riches of the main land caused Jamaica to be comparatively neglected，and the incursions of frecbooters rendering property insecure checked population．It would ap－ pear that the Spaniards began carly to Import negro slaves，hut on the capture of the island by the British in 1655，Venables stated the whole population to be， not more than 1,500 Spaniards and Portugucse，and an equal number of negroes and mulattoes，although Spain had been 146 years in possession of the island． The troubles in England during the commonwealth and the early years of the restoration，contributed materially to people our western colonies，and the following is a census of the whole island about seven years after the conquest：－

| Divisions． | Men． | Wo． men． | Chil． dren． | Ne． groes． | Stuidof Arnis． | Acres planted |

The B．B．（blue books）at the Colonial Office afford no details of the present state of the population． The anly return given is the following，in which the births arc out of all proportion to the burials，parti－ cularly if the above table of the increase by birth and decrease by death of the slave population be examined； where the deaths（especially of the males）preponde－ rated so much over the birtha．A complete censis of Jamaica，made yearly，is much to be desired．

A Statement of the Number of Slaves for whom Compensation has been claimed，and of the $\mathbf{N}$ ：umber of Clalms preferred for such Compensation，zald of the Amount of Compensations awarded in each of the classes of Prædial－attached，Predial－unattached， and Non－Predial．［Parliamentary Return to the House of Lords，March，1838．］

Number of ciaims having referenee to each division． Preedial attached，5562；Preedial unattached，1798：Non－ predial，9075．The average value of each slave sold from 1822 to 1830 was $44 l$ ． 158 ． $21 d$. ；and the average compensa－ tion awarded was 19l．15s．43d．on each elave．
It is impossible to state with accuracy the actual population of Jamaica；no recent census has been completed；the number of whites is estimated at 35,000 ；of inaroons，about 1,200 ；of free coloured， 70,000 ；and the apprentices，olim slaves，as above． Half a million of mouths，would give seventy－eight persons to the aquare mile，a remarkably amall pro－ portion，particularly in comparison with Barbadoes， where there are six hundred to the square mile．

VII．The efforta for the extension of religion have been great ：the outlay by the colonial government for the purpose is considerable，viz．，nearly 25,000 ． per annum．The Bishop of Jamaica（whose see ex－ tends over the Bahamas and Honduras）has 4,000 ． sterling per annum，and the Archdeacon 2，000l．ditto． There are 21 rectors，and altogether of clergymen of the established church，57．The Scots Presbyterian clergymen are in number four，the Wesleyan ditto， about 24，the Baptist ditto 16，and the Moravian 8. The crown livinga in Jamaica were in the gift of the governor，in virtue of hia station as such．They are now in the gift of the bishop．Pluralities are not pernitted．The apprentice is entitled to demand the gratuitous services of the clergy．

No return in the Colonial Office of the Dissenting Missions；the following relates to the Established

Note. The value of the Livings are expressed in Jamaica currency, and include the fixed salaries, fees, value of parsonage houses and glebes, or the allowances made for the same by the Parochial Vestries. The letter L. indicates that the place is only licensed for Divine Worship, and not a consecrated chapel. In some cases the congregations far exceed the accommodation, vide Portland.

The Church Expenditure amounted, in 1832, to 41,928l.; 1833, 37,998l.; 1834, 40,009l.; 1835, 37,616l.; 1836, 59,859l. Total, 217,410l.
VIII. Education is rapidly extending under the aid of the home and local government, as well as with the assistance of private individuala. In the expenditure budget of the island for 1831, there is nearly $10,000 l$. allotted for free schools. In 1821, the public or free schools and scholars were, Schools, 23 ; Male Scholars, 1,125; Female, 912 ; Total, 2,037. In 1827, the numher of Scholars was 3,500 .
The Expenditure for the Schools, in 1832, was 9,034l.; 1833, 9,595l.; 1834, 9,592l.; 1835, 9,776l.; 1836, 10,692l. Total, 48,689l.
A detailed rejort of the state of Education in Jamaica in 1837, was made to Government in 1838 by J. C. Latrobe, Esq. who was sent out by the secretary of State to enquire into the subject. From this report the two following tables are derived. The number of persons receiving instruction stated in the first table-" gives rather too favourable an impression of the state of education"-(Rept. p. 15).

Three-fourths of the scholars in attendance upon day achools, are free childen of apprentices-and onefourth children of poor frec coloured people and of Maroons. Mr. Latrobe remarked universally throughout his tour of the entire island, that the children of the coloured classes of every shade, evinced a remarkable facility for the attainment of the rudiments of auch branches of instruction as are taught them-particularly in writing and arithmetic-their progress in these being "truly extraordinary"-[p. 11 Rept.] Many of the country achools are carried on almost entirely through the agency of the more advanced day scholars.
The great majority of the Sunday and Evening schools are attended by young or adult apprentices. The want of private schools of a superior order, in which the higher classes of the island could receive a liberal education, is much dwelt on by Mr. Latrobe, and the absence of a college, or some institution sanctioned by the legislature, deplored. The private seminaries are little better than the dame schools in England.

Number of Scholars receiving Instruction in the various Schools throughout the Island of Jamaica, and the Amount of Apprentices attending the Day Schools in 1837. (Mr. Latrobe's Repert to Lord Glenelg, House of Commons, February 5, 1838.)

*For these years the returns are not given for all the gaols.-R. M. M.
Note.-There are three Gsols in Jamaica, viz. County Gaol of Middlesex, at St. Jago de la Vega; the County Gaol of Surry, at Kingston; and the County Goal of Cornwall, at Montego Bay. The hours of labour are from 6 to $10 \mathrm{~A} . \mathrm{m}$, and from 12 to 4 p.m. Debtors are allowed 2 s . 6 d . per day. Free Criminals 1s, 3d. per day, and apprentice criminals 58. per week. There is also a workhouse in each parish.
X. A Governor, or Captain-General, (appointed by the Crown), aided by an Executive and Legislative council of 12, and a House of Assembly answering to the home House of Commons, (first convened in 1664 ,) form the government of the island. The Council is appointed by the King, from among the most respectable colonists. The Licutenant-Governor, Chicf Justice, Attorney-General, and the Bishop, are all ex-officio Members of the Council, each member of which is removable at the pleasure of his Majesty. The Assembly consists of 45 men:bers, each of the parishes sending two representatives ; and Spanish Town, Kingston, and Port Royal, one additional memher each; a reqresentative should possess a frechold of $\mathbf{£ 3 0 0}$. per annum in any part of the island, or a personal estate of $£ 3000$; an elector must be of age, and possessed of a frechold of $£ 10$ per annum in the parish for which he votes. Persons of colour are now admitted to all the privileges of white persons, and there are no civil disabilities from religious differences. The Governor has the title of his Excellency, and is invested with the chief civil and military authority; he is also Chancellor, Ordiuary, and Vice-Admiral. On his death or absence, the government devolves on the Deputy or LieutenantGovernor, if there be any; otherwise on the senior Councillor, who rises in rotation to the presidency, and has a salary of $£ 1000$. per annum. The Governor whose salary is about $£ 4,200$ per annum, has the disposal of such appointments as his Majesty docs not rescrve to himaelf or his Ministers; and as to such offices so reserved, whenever a vacancy occurs by death or removal, the Governor may appoint to them till they are filled up from home, and his appointec, till superseded, takes all the emoluments.
The Council, who are by courtesy aeverally addressed in the colonies by the title of Honourable, consists of 12 members. They are appointed by mandamus from the King, and hold their offices during his Majesty's pleasure; but if' at any time by death, ubsence from the island, or suspension, the Council should be reduced to less than the number limited by the instructions to the Governor, he may appoint as many persons out of the principal freeholders, inhalitants of the island, to be Members of the Council, as will make up such number; which persons so appointed may act as Councillors until they are disap. proved, nr others are appointed by his Majesty. The Gievernor may, howeser, suspend any of the Members
of the Council from sitting, voting, or assisting therein, i: he find just cause for so doing; but he must, by the first opportunity, signify to the English Government any vacancy in the Council, from whatever cause it may arise.

The duty of the Council is to give advice to the Governor or Commander-in-Chief for the time being, when required; it stands in the same relation to the Governor in the colony as the Privy Council in England does to his Majesty ; it is also a constituent part of the Legislature of the colony, corresponding with the British House of Peers; and it sits as a Court of Error or Appeal.
The General Assembly are the Representatives of, and chosen by, the people, and correspond with thic British House of Commons; its utmost duration is seven years. The laws and statutes of Eugland passed previously to the settlement, unless they are from their enactments inapplicable to the local circumstances of Jamaica, apply to the colony. Statutes passed in England since 1728, unless they relate to trade and navigation, are not in force there. The Assembly have all the privileges of the House of Commons in England; they have the sole power of levying taxes, and the distribution thereof, with the exception of an annual permanent revenue to the Crown of $£ 10,000$.; the salary of the Speaker of the Assembly is $£ 1000$. per annuin.
The Governor, with the advice and consent of the Council, may, from time to time, as occasion requires, summon the General Assembly together, and may, of his own authority, adjourn, prorogue, and dissolve it.
The Council and General Assembly, with the concurrence of the King, or his representative the Governor, may make laws, statutes, and ordinances for the public peace, weifare, nual good government of the colony, so that they be not repugnant, but as near as conveniently may be agreeable to the laws and statutes of Great Britain.
By an order in Council, lated 15th January, I800, it is declared, that in all cases when his Majeaty's confirmation is necessary to give validity and effect to any act passed by the legislature of any of his Ma. jesty's colonies or plantations, unless his Mujesty's contirmation thereof be oltained within three yeurs from the passing of such net in any of the said colo. nics or plantations, such act shall be cousidered dis. allowed.

By the English statute, British colonies are declar the Imperial Crown and Pa who have full power to culonies in all cases what Geo. III. c. 12, the King that thenceforth they wo payable in the colonies, ex commerce, the produce $w$ applied to the use of the co Kingston is a corporate to mayor, 12 aldermen, and chosen on the second We fullowing is a description o side, the arms, crest, supp -"Sigillum commune ciu maica." Reverse-Britann holding in one hand the $\operatorname{tr}$ mirror reflecting the rays Heaven on the produce of $t$ British lion supporting her her feet, and at a distance -"Hos fovet, hos curat ser Britain, the mother countr these fruits.

The jurisdiction, both civ preme Court is co-extensiv of King's Bench, Common B Insolvent Debtors), in Engla it has also the power of hear mations for the breach of an scmbly relating to trade and may duties or customs on $t^{\prime}$ and merchandizes into, or 0 from the island; also on int the quit rent nets, and all court of appeal from the in Pleas.
This Court sits in the Vega, or Spanish Town, tho three consecutive weeks eac speetively on the second I first Monday in June, and th ill each year.

The Chief Justice is nomi in England, and has a paten seal of the island; and the pointed either by his Majes Governor of the island. I sistant Judges, who sit in Justice; they have each in s West Indian currency. A offices during his Minjesty's nble by the sign-manual en sulficient cause, be suspende the consent of a majority 0 till his Majesty's pleasure Attorncy and Solicitor-Gen Clerk of the Court, and : attached to the Court; a twelve barristers in practi and seven Deputies, act in tricts.
The jurisdiction of the Assl respective counties of Surt Justices in the Courts to bo them have the same power tion that the Justices of A tices of Oyer and Termine Delivery have in Englamo.
The Justices of Assize r

By the English statute, 6 Geo. 11I. s. 12, all the British colonies are declared to be dependent upon the Imperial Crown and Parliament of Great Britain, who have full power to make laws to bind such colonies in all cases whatsoever. But by the 18 Geo. Ill. c. 12, the King and Parliament declared, that thenceforth they would not impose any duty payable in the colonies, except for the regulation of commerce, the produce whereof should always be applied to the use of the colony in which it is levied. Kingston is a corporate town, since 1802, having a mayor, 12 aldermen, and 12 common councilmen, chosen on the second Wednesday in January. The fullowing is a description of the city seal :-On one side, the arms, crest, supporters and mottos, legend -"Sigillum commune civitatis de Kingston, in Jamaica." Reverse-Britannia, in the dress of Minerva, bolding in one hand the trident, and in the other a min ror reflecting the rays of the benign influence of Heaven on the produce of the island; behind her the British lion supporting her shield; a conclse shell at her feet, and at a distance a ship under sail; legend -"Hos foret, hos curat servatque Britannia muter." Britain, the mother country, cherishes and protects these fruits.

The jurisdiction, both civil and criminal, of the Supreme Court is co-extensive with those of the Courts of King's Bench, Common Pleas, and Exchequer, (and Insulvent Debtors), in England, taken collectively, and it hus also the power of hearing and deciding on infor. mations for the breach of any act of [Parliament or Asscmbly relating to trade and navigation, or for laying any duties or customs on tho import of gonds, wares, and merchandizes into, or on the exportation thereof from the island; also on informations for land under the quit rent acts, and all escheats. It is likewise a court of appeal from the inferior Courts of Cummon Pleas.
This Court sits in the capital of St. Jago de la Vega, or Spanish Town, three times in the year, for three consecutive weeks each time, cummencing respectively on the second Monday in February, the tirst Monday in June, and the first Mon ty in October in cach year.

The Chief Justice is nominated hy the Government in lingland, and has a patent of office under the great seal of the island; and the Assistant Judges are appointed either by his Majesty's Ministers or by the Governor of the island. There are eight or ten Assistant Juilges, who sit in rotation with the Chief Justice; they lave each in salary of $£ 500$. per annum West Indian currency. All the judges hold their ofllees during his Mnjesty's pleasure, and are removable by the sign-manual cinly; but they may, upon sufieient cause, be suspeniled by the Governor, with the consent of a majurity of a bourd of the Council, till his Majesty's pleasure be known. There is an Attorney and Solicitor-General, Clerk of the Crown, Clerk of the Court, nnd Solicitor for the Cruwn, attached to the Court; and from eight to ten or twelve barristers in practice. A Provost Marshal, and seven Deputies, act in the like number of dis. tricts.
'Ihe jurisdiction of the Assize Courts is limited to their respective counties of Surry and Cornwall; and the Justices in the Courts to be held respectively before them have the same power, authority, and jurisdic. tion that the Justices of Assize and Nisi l'rius, Justices of Oyer and Terminer, und Justices of Gaol Delivery have in Eingland.

The Justices of Assize receive no salary, ate no.
pointed by the Governor, by a commission under the broad seal of the istand. They, like the Judges of the Supreme Court of Judicature, hold their placea during his Majesty's pleasure (quamdiu se bene gesserunt), and can be removed by his sign manual only ; but, upon sufficient caose, may be suspended by the Governor, with the consent of the majority of a Board of Council, till his Majesty's pleasure be known.

The several inferior Courts of Common Pleas in the island of Jamaica have jurisdiction over all causes (wherein any freehold is not concerned) to tho value of $£ 20$. with costs and no more, but by the aid of a justicirrs from the Chancellor, who is the Governor, they may hold Pleas to any amount. They are, however, absolutcly restricted from intermeddling with or determining actions where the title to land is concerned. These Courts are held at the same time, and in the same piace of the respective preeincts, as the Justices of the Peace hold the Quarter-Sessions, once in every three months ; some of them have the privilege of sitting oftener. The appointment and removal of the Judges of these Courts are under the control of the Governor, and an appeal lies against their decision to the Supreme Court of Judicature.

Every precinct has a Court of Sessions, held quarterly. All manner of delts, trespasses, and other matters, not exceeding the value of $40 s$. wherein the titles of land are not concersed, may be heard and determined by any Justice of the Peace of the island within their respective precincts, without appeal; and after judgment, the Justice may grant a warrant of distress, and, for waist of sufficient distress, miav imprison the defendant in the common gaol of wep:ecincts till he pay the delst and charges.

The Governor holds a Court, with the same powers of judicature that the Lord High Chancellar has in England, and the proceedings of the Court are similar to those of the English Court of Chancery. The Court is held about three times a-year.

The Court of Error is held by the Governor nnd Council for hearing Appeals, in the nature of Writs of Error, from the Supreme and Assize Courts. These Appicals, or Writs of Error, are allowed and regulated by his Majesty's instructions to the Governor. An appeal also lies from the judgment of the Court of Chancery, to his Majesty in his Privy Council. On an nppeai to the King in Council, the proceedings must be transmitted, and the party appealing must proced, within a year atter the pronouncing of the deeree or order appealed against.

The Court of Vice-Admiralty has two distinct jurisdictions; by one of which it is an Instance Court for decidlng all maritime causes, and by the other a Prize Court: its practice is similar to that of the High Court of Admiralty in England, to which Court, or to the King in Council, aa appeal lies from Its decision. The Judge is appointed by the Government In Eugland, and holds his ollice during his Majesty's pleasure; but may he auspented by the Governor for good cause, with the consent of a majority of a board of Council, till hls Majesty'a pleasure be knowil.

The Court of Ordinary is for determining eecleslastical matters and probates of wills, and the Governor alone presides In lt as juige.

The Ifinglish Hankruptey Laws are not in force in Jamaica, but there is nn Insolvent Debtors' Act, by which a delstor, on muking oath that he is possessed of no property nhnve bare necessaries, and delivering his books, it he has any, into the hancle of the Deputy

Marshal, is exonerated from all demands against him in the island after suffering three months' imprisonment. Any person leaving the island must give three weeks' notice on account of creditors. The parishes, which are more like counties as to their exient, are under the supervision or government of a chief magistrate (tern:ed the Custos Rotulorum) and bench of justices, who hold sessions of the peace every month, and Courts of Common Pleas, for trying actions to the extent of 206 .; debts not exceeding 40 s . are determined by a single justice. Each parish has a rector and church officers, according to the number of churches or chapels in the parish; the vestries consist of the Custos, two magistrates, ten vestrymen, and the rector (the vestrymen are elected annually by the freeholders); the vestries have the power of assessing and appropriating local taxes, allot labourers for repairing the lighways, appoint way-wardens, nominate persons called constables for the collection of public and parochial rates, and regulate the police of their several parishes. Their powers correspond with the civil duties of Lord Lieutenant and Custos Rotulorum of an English county. There is a lloard of Forts and Fortifications, a Board of Public Accounts, and a Board of Public Works, all managed by commissioners. The Council and Assembly are ex-officio Commissioners of Correspondence. There is a Coroner for each parish, elected by the freeholders.
The laws of the Coiony may be judged of generally by the preceding remarks.-On occasions of pressing emergency the Commander-In-Chief may summons a general Council of War, in which the Members of the House of Assembly alt and have votes, and with their consent yroclaim Martial law: his power is then dictatorial, and all the inhabitants are subject during the exercise of thls power to martiai Jaw. The Governor lias no power of staying exeention or auspending proceedings in civil cases, he can pardon all criminal offences but those of murder and high treason 1 his power herein consists in reppiting untll the pleasure
of the King is made known. In criminal proceedings-the of the King is made known. In criminal proceedings-the
learned Queen'a Counsel, Wm. Burge, Esq., lute Atorney. General, and now Agent for Jamaica, saya that the Go. vernor, as representative of his Sovereign, may direct the Attorncy-Generai to enter a Noli Prosequi, or hy virtue of Her Majeaty's prerogative he may sispend the execntion of any sedtence. The writ of Habeas Corpns is granted under the same circumstances as in Engiand, excepting in cases of aliens, who must in the first instanice ajpeal for redress to the Governor in Connell, and if remaining nubeard for 14 days, the Writ of Habers Corpus may thes be applied for. All frec-born subjects in Jamaica are from their birth free. born denizens of Engiand. Aliens may receive letters of naturailization from the Governor under the provision of 33, Chap. II, e 9. The law of descent and tise law governing the distribution of personal property in cases of intestacies are in unison with those of England.
Lands in the hands of the heir or devisee are assets for the payment of ail classes of delit owing by the ancestor or testator by means of a suit in the Court if Chancery: and they also stand ciarged with specialty and simple contruct they aiso stand eharged with specialty and simpie contruct
debts when the latter have been pat on juigment, and debts when the latter have been pat on juigment, and
notice of a writ of extent lana heen served pursuant to the $24 \mathrm{Geo} .11, \mathrm{c} .19$. Personal assets, unlegs specialiy exempted, are always applied ta the first Instance in the exoneration of the real estate. A judgment recovered in England or elvewhere by defant, or in coniradiclorio ngalnst a person reaident in the colony is received as evitence in the colony without goling finto the merits on whicil it was pronounced: the onus of impeaching the juilgment devoives on the defentant. There ia no ontlawry lin the colony. The forelgn appointment of Guardians to Minors, and Committees or appointment of Guardians to Minors, and Committees or
Curators to idiots or Lunatics gives ao control over property In the colony, as the Colonlal Court of Cimacery ex. ercises original jurisdiction in such eases. The Colonial Cuurts give no effect to an assigninent and certificate under an English or Fojeign Commission of Dankruptey ngainst a creilitor not ciaiming under the cominission,-and they would prevent the ciciftor ciaiming under it from puraing the bankrapt nersonally. An Enkilish certifiente is held to bear the recuvery of a diebt owing in respect of a consign. ment made by a plaintift to a delendant resident $\ln$ Eugiand:
and it is supposed that a similar effect would be given to a certifeate when the debt was contracted In England. A foreign certificate is no bar to the suit of any colonial cre. ditor desirous of proceeding personaily against the bankrupt (then in the colony) for debts proveable but not proved unter the foreman commisaion. With respect to the claims of foreign and cotonial creditors, if the bankrupt were resident in the island or represented there, the coloniatcreditors would obtain preference both as to the personat and real property, by putting the demand in suit , but if the bankproperty, by putting the demand in suit, but if the bank-
rupt be absent and unrepresented by Attorney, then preferrupt be absent and unrepresented by Attorney, then prefer-
ence would be ohtained by attachment under 23 Car. II. ence would be ohtained by attachment under 23 Car. II.
c 23 . The notice of an Insolvent debtor that he Intended to c 23. The notice of an insolvent debtor that he Intended to
take the benefit of the insolvent act not sufficient for the protection of forelgn cretitors. There is uo law in force in the colony similar to 21 James 1, which makes personal property left in the possession and apparent ownership of a commercial person or trader (not the real owner) liable to the creditor of such person in case of insolvency : nether is the above statute ever acted upon in the coiony. Arrests on Mesne Process in all actions upon civil contract or intent, are authorized, except upon Members of the Legislature: are authorized, except upon Members of the Legislature: persons possessing a frcehoid of five acrea planted or a
house worth $£ 10$ per Annum, and gencrally such as are exhouse worth elo per Annztin, and gencraily such as are ex-
empted by the law of England. Special bail required in all casch of arrest on Mesne Process. No proceeding can be sustained in the Colonial courts upon process lasued by them, but served npon the party out of the Colony.
Persons having property in tbe islaod, who have once resided in the colony, and are unrepresented, may be proceeded against by forelgn atlachment under the 33d. Car. 11 . c. 2:1-but no remedy lies if they have never been in the island and are unrepresented. The British statutes of frauds and limitationa extend to the colony. The island frauds and limitationa extend to the colony. The isiand
Acts 10 Anr, c. 12 and 29 , Gen. 11 . c. 13, s. 4, declare, that Acts 10 Anf, c. 12 and 29, Gen. II. c. 13, s. 4, deciare, that
honds, Judgments, bills, mortgages and other writings obligatory, to be vold if no payment has been made, or if not demanded within 20 yeara from the time they became due or from the last day of payment: Infants, persous nader coverture or of unsound memory, may bring their action within three years after the removal of their disability.
Mortgages are conventional -an estatea generally conveyed in fea to the Mortgagee, and the requisite forms and solemnities are the same an in Engiand. Deeds to be valid mist be recorded in the Secretary's office, and in certain casea as between the Vendee and Mortgagee within 90 dayz, cases asise priority wili be lost. Wills are generally regisotherwise priority wili be lost. Wills are generaly regis-
tered as aiso Deella. Personal property in the Island wonld pass under a will executed In a foreign country according to the laws of tint country. There is no jurisdiction in the colony competent to pronounce a sentence of divorce. Counsel must previonsiy have been called to the bar in Engiand before entitled to ptead in the island. The pubilic laws are collected nud printed under the anthority of Commissioners appointed by the Colonial Legislatire: Private Acth remain in manuseript. The originals of ail acts are recorded in the isiand secretary's office, and coples nre sent to the Secretary of state for the Colonles in England.
XI. The military establishment of the island generally comprises the head-quarters of four European regiments ol the line; one West India regiment, composed of Caffres or W. Coast Afriean negroes; a strong detachment of Artillery, altogether comprising about 3000 men ; and of colonial militia, from 10 to 12,000 men at arms, comprising in Midillesex County, a regiment of horse of 11 troops, well equipped and mounted, and nine infantry regimeuts; in Surry County, a regiment of horse of eight troops, and six regiments of infantry, with artillery; in Cornurall County, a regiment of horse of six troops, and six regiments of infantry; and to each regiment are attached two field-pieces and a complany of artillery; with a major-conmandnut of artillery to each county; the whole well appointed, and proving a most elhicieut force in case of internal insurrection or forcign aggression. All white males, from the age of 15 to 16 , are obliged by law to provide themselves with suitable clothing, and to enlist in either the cavairy or lisfantry of the militia. Substitutes are not allowed. When on permanent duty (which occurs on the proclamation of martini inw) the militia receive pay $2 s$. Gid. a day unil rations; aroms rad anunuation nre found by the governucut.

［The Blue Books for Jamaica are the worst returns） in the Colonial Office；there ls a slovenliness，a total want of decorum to the home authorities manifested in every document；almost invariably there is no summing up of the totals．This conduct is not con． fined to the Colonial Office returns：the Registrar General of Shlpping lias stated a similar negligence prevails in his returns．The foregoing table must
therefore，I fear，be considered only as an approxi－ mation to correctness．Some of the years are derlved from the Custom House documents，or parliamentary papers；others from the Blue Books at the Colonial Oftice，and others from the Board of Trade returns．It is to be hoped that the authorities of Jamaica will in future pay more attention to the important aubject of statistics．－R．M．M．］

Custom House, Kingstol, Jamaica, December 30, 1837.
XII. The monetary system in the West Indies is very irregular. In no two islands are the denomina. tion and value of the coins alike; and these, again, vary in proportion to the aterling money-thus:

| Jamaica | Steriling. Cur. $100 l .=140 l .$ | 1onll. Cur. $1=$ fis. $8, ~$ |
| :---: | :---: | :---: |
| luarbadoes | 100l. 1351. | 1 6s.3d. |
| WIndward Isles, ex cept Barbadoes | 100l. 175l. | 1 8s. 3 l. |
| Leeward Isles | 100l. 200l. | 1 9s.0d. |

As resards Jamaica this is the nominal par of exchange. In real transactions of buying or selling
bills, the exchnnge is thus adjusted : If bills bear a premium, say 20 per cent, then a bill for $100 l$. sterling is snid to be equal to $120 l$. sterling; this latter sum, turned into Jamaica currency at 40 per cent. makes a bill for 1001 . sterling re!fuire about $168 l$. currency. Gold-Doubloons, equal to 16 dollara; half doubloons, 8 dollars; pistole, 4 dollars; Joe, $16 \frac{1}{2}$ dollars; half joe, $8 \frac{1}{4}$ dollars; dollar, 1 dollar ; sovereign, 5 dollars; half aovereign, $2 \frac{1}{3}$ dollars; half pistole, 2 dollars. Silver-Dollar cqual to 6s. 8d. currency ; half dollar, 3s. $4 d$. ; mąccaroni, 1s. 8d.; shilling sterling, $1 s .8 d_{1}$; sixpence sterling, $10 d_{1}$; half crown ater. ling, 4s. 2d.; two bits piece, 1s. sd. tenpenny plece

10:l.; fivepence, $5 d$. ; bit, $7 \frac{1}{2} d$. No copper cuins in circulation in this island, silver and gold alone. Paper currency.-Amnunt in circulation bearing interest, none. Amount in circulation not hearing interest, $239,518 \mathrm{l}$. stg. Metallic currency estimated at $100,000 \mathrm{l}$.
The distribution of the certificates in circulation, from 1822 to the year 1832, is as follows:-Of 1822, 645l.; 1825, 6535i.; 1826, 41,20:31.; 1827, 79,928l.; 1828, $61,741 l$.; $1829,39,9651$. ; $1830,96,4991 . ; 1831$, 10,8251 . ; 1832, 12,0001 .; and of 1832 , comprising 11 . $2 l$. and $3 l$. certificates in circulation, was $49,864 l$.
Amount of paper money in circulation in 1833 :Certificates not bearing interest(A.) (checks for circulation of various denominations as low as 1 l.currency, purporting to be payable in cash to bearcr on demand at the puhlic treasury of the island. There is, however, no specie in the chest to cover any part of the sum.), $28.5,713 l$. 11 s . $5 d$. ; certificates bearing interest (B.) (certificates of $50 l$. currency each, issued under the authority of commissioners. They bear interest at ${ }_{6}{ }^{6}$ per cent., but have no time specified for payment.), 32,700l. 6 s. 9 d .; certificates bearing interest (C.) (certificates of loans which have fallen due, and are payable to bearer on demand at the public treasury.) $24,857 l$. $2 s .10 \mathrm{~d}$. ; total, $343,271 \mathrm{l}$. 1 s . sterling. The lcgal rate of interest is six per cent.; the Government borrow at five.

Course of Excliange paid on Merchants drafts on London, at 90 days, during the year 1836. In January, 16 per cent. premium ; February, 15 to 16 ; March, 14 to 15 ; April, 14 ; May, $13 \frac{1}{2}$; June, $13 \frac{1}{2}$; July, 12 to 13 ; August, 12 to 13 ; September, 16 ; October, 161 ; November, $16 \frac{1}{2}$ to 17; December, 19.
The Colonial Bank for the West Indies, which has its head quarters in Jamaica, was incorporated by charter on the 31st May, 1836, with a capital of $2,000,000 l$. stcrling, in 20,000 shares of $100 \%$. each, 25 per cent. paid up before commencing business. Its management is confided to a chairman, vice-chairman, thirteen other dircctors, and three auditors.
Five directors and one auditor retire in rotation annually, each however being eligible to be re-clected. Five shares give one vote; ten shares two votes; twenty shares tinree votes; forty shares and upwards four votes, for a director, \&c. ; and twenty shares form the qualification for a director.

All the business and proceedings of the bank managed and directed under the immediate orders of these directors, at yearly stated meetings, and at public general mectings of the proprietors, called by at least twenty days' notice in the public newspapers in London. Special general meetings may be called in a similar manner by any ten subscribers, cach possessing 1000l. stock or upwards. Subscribers entitled to vote may vote by proxy, but which proxy must be a subscriber, and produce a written authority to the secretary for that purpose. The practical banking operations of the Colonial Bank are confincd to the British West Indies, and its capital can only be applicd to the legitimate and defined system ol banking. The words of the charter itself, which are-
"To carry on the business of bankers, by dealing generally in hullion, money, and bills of exchange, and lending money on commercial paper and government securities, and in such other lawful ways and means as are usually practised among bankers; but it shall not be lawful for the said corporation to lend or advance money on the security of lands, houses, or tenements, or upon ships, nor to deal in general wares or merchandise of any nature or kind wlatsoever ;" moreover, " and further, that the sald corporation shall be bound to make up and publish in somenewspaper or newspapers, circulating in each of the colo-
nies, where a bank shall be established, and also in the London Gazette, once in every year, an account or statement shewing the whole amount of its debts and assets at the close of the past year, and ahewing also the amount of its notes payable on demand, which had been in circulation during such month of every year, together with the amount of specie, distinguishing each kind, and other nssets iminediately available in every such month for the discharge of such notes; and that the said corporation shall furnish copies of such yearly amount or statement to the respective Governors of such Island or Colony, in which a principal bank or banks shall be established."
According to the terms of the charter, the bank is allowed to possess lands, houses, and tenementa, and ships, so far as may be necessary for carrying on the business of the establishment every where, but for that purpose only; and of course it has the power to purchase and to sell the same.
The shares are of course transferable, and the charter lays down simple rules in order to save expense in this operation. Silver, not gold, is taken as the standard of value. The notes of the bank are payable "in silver of acknowledged weight and fineness," and dollars are taken as the foundation and medium of payment, those being the almost universal currency of the whole Western World. The lowest note that the bank can issue is to the value of five dollars. The head quarters of the bank is in Lendon.
The system upon which the bank is established is wholly that which is designated the Scotch system. One peculiar feature of which is lending money at legal interest in what is denominated cash credits, granted on adequate personal security; these credits are not things of a day, a month, or a year, they exist for a life time at the will, or on the life and the solvency of the individual holding them, or of his securitics. If a security dies or becomes insolvent another is required and procured, and the credit proceeds. It is gone about thus: the individual in any business or in any station requiring such a credit, comes to the bank and says, I want a cach credit for $100 l$, for $1000 l$. or for 10,000l., and here with my own personal security, is that of two or more friends to your satisfaction. Satisfied with the security offered, a simple bond is entered into, the credit is granted, and from that moment the individual operates upon it; he draws out as he wants, and lie pays in as he is able, and at the end of the year if the balance is against him, he is merely charged the interest for that sum, according to the time in which such balance has erisen.
The rate at which the Colonial Bank discount mercantile bills, and advance money on loans, is five per cent. per annum. Besides this, the bank allow interest on deposit accounts, according to the Scoteh system, which is of two kinds-First, money deposited by any one to day, and which may be drawn out tomorrow, or when the depositor pleases, in order to meet his engagements; Secondly, sums lodged on receipt accounts, which it is generally known will run for a year, when the depositor comes and receives his interest, adds it, and probably more or less to the sum, dejosits the whole, and gets another receipt, bearing interest. This system is most extensively followed by the peasantry and labouring population in Scotland, beginning from 51 . or $10 l$., and running up to 200l. In 1826 it was ascertained that the amount of money thus deposited in banks by this portion of the population of Scotland was upwards of 13000000 l. sterling. On such deposits a higher rate of interest than the other can he allowed.

The following are the sta Bank have already estal) branches, Barbadocs, St. branches, Demerara, Tohag Vincents, St. Lucia, Domi Santa Croix, and Porto Ric dent or minor branches in branch in Kingston, viz. Savannah la Mar, and St intended to establish branc and St. Jago de Cuba. Thet Quehec, Halifax, and St. Jo

This bank is chiefly ind Queen for its projection,
for its establishment. It is for its establishment. It is good in the West Indics.

There are two local hank
XIII. At an early period sively cultivated by the Spa 1671 Traphan speaks of $t$ sugar works, like a town or the island. In 1788, M. M introduced the Otaheite can tinico, from the Isle of $\mathbf{F}$ brought by Bougainville.

Although the Spaniards a tivation of sugar, it was st the year 1743, the chief pr cocoa, iudigo, and hides; th just rc-commenced. The i this staple article of the iska 1722, 11,000 hogsheads wer $1744,35,761$; 1768, 55,00 105,400; 1802, 140.000; 1 Knowles'a calculation, in ungranted, out of which these, 100,000 are fit for $g$ for coffee ; the remaining 1 , mountains, \&c. A return 1755, of properties in the p their produce, to the Boa estate called Norbrook, the Fisq., is thus entered :-" 2 sugar, nine puncheons of producing 2972 cwt.; 100 $\mathbf{5 0 0}$ in pen and pasture; and 86 head of cattle. In rocky and mountainous." or 1793 , is put at sixty he of Jamaica in 1818, acco survey, was, in sugar plan breeding farms or pens, 280 , ginger, \&c. 181,000. Tota

The quantity of sugar nc great, and the importation for some years averaged 1, so low as 21 s. per cwt., wo and a half sterling. The fine quality; and by the in and manufacture coming in doubt but that the quant more extended. The quar sugar is also very great ; $t$ tions to England may be which may be estimated in The Jamaica rum is an and that too of excellent , in Jamaica is very great; Great Britain nearly 20,00 the low value of 1s. per sterling. The coffee-plan Jumaica by Sir Nicholas 1.

## JAMAICA.-STAFLE PRODUCTS, PRICES AND PROPERTY.

The following are the stations where the Colonial Bank have already established branches:- Head branches, Barbadoes, St. 'Thomas, Jamaica; Minor branches, Demerara, Tohago, Trinidad, Grenada, St. Vincents, St. Lucia, Dominica, Autigua, St. Kitts, Santa Croix, and Porto Rico. There are four dependent or minor hranches in Jamaica, besides the head branch in Kingston, viz. Montego Bay, Falmouth, Savannah la Mar, and St Thomas in the East. It is intended to establish branches in Cuba, at Havannah and St. Jago de Cuba. There are agents in New York, Quehec, Halifax, and St. John's New Brunswick, \&cc.

This bank is chielly indebted to Mr. James Mc Queen for its projection, and to James Irving, Esq. for its establishment. It is calculated to effect great good in the West Indies.

There are two local banks in Jamaica.
XliI. At an early period the augar cane was extensively cultivated by the Spaniards in Jamaica; and in 1671 Traphan speaks of the numerous complicated sugar works, like a town or village, in various parts of the island. In 1788 , M. Martin, a French botanist, introduced the Otaheite cane into Cayenne and Martinico, from the Isle of France, whither it had been brought by Bougainville.

Although the Spaniards at first attended to the cultivation of sugar, it was subsequently ncglected. In the ycar 1743, the chief productions of Jamaica were cocoa, indigo, and hides; the cultivation of sugar had just re-commenced. The increase in the growth of this staple article of the island has been as follows :1722, 11,000 hogsheads were exported; $1739,33,155$; 1744, 35,761; 1768, 55,000; 1774, 78,304; 1790, 105,$400 ; 1802,140.000 ; 1832,1,200,000$ cwts. Gov. Knowles's calculation, in 1755 , was $2,128,431$ acres ungranted, out of which 400,000 are plantable ; of these, 100,000 are fit for growing sugar, and the rest for coffee ; the remaining $1,728,431$ consist of barren mountains, \&c. A return was made about the year 1755, of properties in the parish of St. Andrew's, and their produce, to the Board of Tradc. In this, an estate called Norbrook, the property of Charles Long, Fisq., is thus entered :-" 2222 acres, 55 hogsheads of sugar, nine puncheons of rum; five acres in coffee, producing 2972 cwt.; 100 acres in provision ground; 500 in fien and pasture; five scrvants, 153 negroes, and 86 head of cattle. Indifferent land-some parts rocky and mountainous." This estate, in the rcturn of 1793 , is put at sixty hogsheads. The cultivation of Jamaica in 1818, according to Mr. Robertson's survey, was, in sugar plantations, 639,000 acres; in breeding farms or pens, 280,000 ; and in coffee, pimento, ginger, \&c. 181,000. 'Total, 1,100,000.

The quantity of sugar now made in Jamaica is very great, and the importations into great Britain have for some years averaged $1,400,000 \mathrm{cwts}$; which, rated so low as 21 s . per cwt., would give nearly one million and a half sterling. The Jamaica sugar is of a very fine quality; and by the improved systems of culture and manufacture coming into operation, there is little doubt but that the quantity and quality may yet be more extended. The quantity of rum made from the sugar is also very great ; the annual average exportations to England may be taken at $3,500,000$ gallons, which may be estimated in value at $1,000,000 l$.sterling. The Jamaica rum is an excellent spirit. Of coffee, and that too of excellent quality, the quantity grown in Jamaica is very great; and the importation into Great Britain nearly $20,000,000 \mathrm{lbs}$. yearly, which, at the low value of 1 s . per pound, is annther million sterling. The coffee-plant was first introduced into Jamaica by Sir Nicholas Lawes, in 1728, where it was
cultivated on an estate called Temple Hall, In Lingua nea. An act of legislature of the island was passed, to encourage its growth; and in 1732, coffee was advertised in a Jamaica paper at a pistole a pound. In 1752 , there were exported $60,000 \mathrm{lbs}$.; and in 1775 , $440,000 \mathrm{lbs}$. Until 1788, little attention was paid to this singular berry. In the four years ending 30th September, 1794, the average exportation of coffee was $1,603,066 \mathrm{lbs} . ;$ in 1804 , it amounted to $22,000,000$ Ibs.; and during three years ending 30th of September, 1807, the average exportation was more than $28,500,000$ lbs., which, at $6 l$. per cwt., its cost in Jamaica, produced more than $1,700,000 l$.

The coffee plant thrives in almost every soil about the mountains of Jamaica, and in the very driest spots has frequently produced very abundant crops. The produce of sugar, coffce, \&c., may bc seen under the head of exports.

Cotton, indigo, and cocoa were at one time extensively cultivated; but they have principally given place to sugar and coffee. Blome, who published a short account of Jamaica in 1672, mentions the existence of sixty cocon walks. At present there can scarcely le said to be a plantation in the whole island. Various drugs, dye stuffs, and spices, are of excellent quality. Aloes, cochineal, spikenard, canella, liquorice root, castor oil nut, vanilla, peppers, arrow root, ginger, ipecacuanha, scammony, jalap, cassia, euphorbia, senna, \&c., all attest the fruitfulness and capabilities of the soil and climate. The cultivated vegetables of Europe arrive at great perfection. Maize is the principal corn grown, and together with calavances, the yam and sweet potatue, cassava, \&c., form the chief food of the negroes. Various grasses thrive, but Guinca grass abounds; and, in consequence of its indispensable importance in feeding the cattle which supply manure for the sugar plantations, it is considered next in importance to the sugar cane. It was introduced into the island in the early part of the last century by accident, having been forwarded with some Guinea birds that were sent as a present. The birds dicd, the seed was thrown away, the grass sprung up, and the cattle were observed to devour it eagerly. Attention was accordingly pald to the subject. It now grows all over the island, thriving in the most rocky places, and rendering (like sainf, sin) lands productive that were heretofure considered barren, and making good hay, if salced or sprinkled with sea-water when being ricked. The native and exotic grasses are excellent for cattle and horses; in particular that called the Scotch grass, which vegetates rapidly, and grows to the height of five or six feet, with long and juicy joints. Five horses may be fed for a year on an acre of this vegetable, allowing each, every day, 56 lbs. of grass.

Of vegetables, potatoes (Irish and sweet), yams, cassava, peas and beans of every variety, artlchokes, beet-root, carrots, and parsnips, cucumbers and tomatoes, radishes, celery, choco, ochro, Lima beana, Indian kale, calalue, v.rrious salads, cabhage trees (200 feet high !) \&c., all flourish in abundance; and indeed, it may be said that autumn is perpetual in Jamaica, for every month presents a fresh collation of fruits and vegetables, and some species are at maturity all the year round. The bread-fruit trce, cocoanut, plantain and banana, alligator pear, the delicious mellow fig, pine, cashew, papaw, and custard apples, orange, lime, lemon, mango, grape, guava, pomegranate, soursop, shaddock, plums, tamarind, melon, wall and chestnut, mulberry, olive, date, citron; and many other delicious fruits, all arrive at perfection.

The following is a summary for 1833 of the number of stock, or horned cattle, and the quantity of land in cultivation and pasture; these returns are given in on oath :-

The Jamalea Almanac for t833, whence । derive this statement, is so lmperfectly printed that whole colnmis are illeglble, and even the summing $11 p$ are lieorrect, 1 Lave chdeavoured to com. plete the return by a referched to the Ieturns ful 1832 .

Prices of Proluce in 1836. [B. B.]-Horned cattle, $20 l$. each; sheep, $3 l$. ; goats, $2 l$.; swine, $2 l$. ; nilk, 1s.3d. per quart ; salt butter, 2s. 6 id . per lb ; cheese, 1 s .8 ll .; wheaten bread, $7 \frac{1}{2} \cdot \mathrm{l} .17 \mathrm{oz}$. ; beef, 10 d . per lb ; mutton, 2s. 1 ll .; pork, 1 s. ; rice, 10 d . per quart; coffee, 1 s . 8 d . per quart; tea, 15 s . per lb .; sugar, 10 d .; salt, 5 d. ; wine, per bottle, from 3s. $4 d$. to (is. $8 d$. ; brandy, $1 l$. per gation ; beer, 1s. $8 \mathbf{d}$. per bottle; tobacco, $5 l$. per ewt.
Wages for Laluar. [B. B.]-Domestic, per week, $16 s 88 l$; ; predial, per day, 2 s . Gill. to 3 s . $4 l l$.; trades, 5 s .
It is difficult to form a definite idea of the amount of property in any place. Mr. Colquhoun, in 1812 , estimated Jamaica thus:-Negroes, 19,250,000l. ; eultivated lands, ( 809,450 acres) $16,189,0 c 01$; ; uncultivated, ( $1,914,812$ acres) $1,914,812 l$; buildings, utensils, \&c., on estate3, 12, 709,4501 . ; stock on esta:es, $4,800,0001$.; houses, stores, merchandize and furniture, $0,000,0001$; colonial shipping, 42,0001 ; metallic money, $220,000 t$; ; forts, barracks, \&c., $1,000,000 l . ;-$ total, $58,125,2981$. sterling. The same authority estimated the produetions anmually raised, including cattle, esculents, \&c., at 11,169,661l.; exports to the United Kingdom, $6,885,3391$.; and to the other places, $384,322 l$. It will be obscrved, therefore, that in the following atatement I have undervalued the yearly ereation and total amount of property in Jamaica.

Nature and value of property annually created, moveable and immoveable, in sterling money (1834).

Mr. Bridges estimates the 'internal value and intrinsic cost of Jamaica,' in 1826, thus :-"Slaves, 24,000,000l.; lands, patented, $18,000,0 c 0 l$. ; forts and barracks, $1,000,000 l$.; private buildings, $12,000,000 l$.; stock, \&c., $5,000,000 l$.; gold and silver coin, 200,000l.; tutal, $60,200,000 l$. sterling." There seems to be no calculation for roads, wharfs, bridges and other items.
property annually created or prepared.-Sugar, $1,500,000$ cwt. at $20 \mathrm{~s} .1,500,0001$.; rum. 3,000,000 gallons, at 1s. $6 d ., 225,0001$. ; molasses, 50,000 gallons, at $10 d .2,08.3 \mathrm{l}$.; coffee, $20,000,000 \mathrm{lbs}$. , at $7 \mathrm{ll}$. . $500,08: 3 l$.; pimento, $5,000,000 \mathrm{lbs}$., at 4d., $83,000 \mathrm{l}$.; cotton, 50,000
lbs., at $6 d ., 1250 l$. : vegetable food, at 31 . per annum each [I take the total population of Jamaica at 400,000 , some say it is nearer 500,000 .] $1,200,0001$; ansmal food and fish, at $5 l$. per annum each, $2,000,000 l$.; Domestic manufactures - Carpentering, tailoring, smithing, \&c., $2,000,000 l$; income and sundries, $1,000,0006$.

Property movealle and immorealle.-Land: Acres cultivated or patented [There are 2,235,732 acres of land in Jamaica for which quit rents are paid to the erown. Mr. Burge thinks that at least $2,000,000$ acres are cultivated.] $2,240,000$, at $10 l ., 22,400,000 l$. ; acres ungranted, or waste, $2,000,000$, at $5 s ., 500,000 l$. Publie property, viz., forts, barracks, roads, wharfs, hosyitals, gaols, huildings, \&c., $10,000,000 l$. Domestic property : dwelling houses, stores, furniture, plate, clothes, equipages, \&c., $5,000,000 l$. Horned cattle, norses, ahcep, swine, poultry, \&c., $1,000,000$. Machincry, agrieultural and manufacturing implements, ships, hoats, roads, \&c., $5,000,000 l$. Metallic money in cireulation, 100,000 l.

Total amount annually crcated property, $8,581,2 \mathrm{f} 3 \mathrm{l}$. Total amount of moveable and immoveable property, $44,900,000 l$. Taking the number of alaves in the island, in round numbers, at 300,000 , and valuing them at $30 l$. each, there would be a sum of $9,000,000 l$. to add to this. Happily, however, it is no longer neeessary to make such calculations.
XIV. The Caymans which are a dependency of Jamaica are three small isles, in lat. 19. 20. N.; from thirty to forty leagues N. N.W. from Point Negrill, on the westward of Jamaica, the Grand Cayman being the most remote. Cayman-braque and Little Cayman lie within five miles of each other, and about 34 miles N. from the Grand Cayman, which is about one mile and a half long, and one mile broad, and containing about 1,000 acres. Grand Cayman (the only island inhabited) is so low that it cannot be seen from a ship's quarter-deck more than 12 or 15 miles off, and at some distance the lofty trees on it appear like a grove of masts emerging from the ocean. It has no harhour, but the anchorage on the S.W. eoast is moderately good; on the other, or N.E. side, it is fortified with a reef of rocks, between which and the shore, in smooth water, the inhahitants have their cranls, or pens, for keeping turtle in. The soil towards the middle of the island is very fertile, pro. dueing corn and vegetables in plenty, while hogs and poultry find ample provender.

Columbus discovered these islands on his return from l'orto Bello to Hispaniola, and observing the coast swarming with turtle, like ridges of rocks, he called them Las Torlugas.
The Caymans were never occupied by the Spaniards, but became the general resort of adventurers or rovers, (chielly French,) for the sake of the turtle.

In 1655, when Jamaica was taken by England, the Caymans were still uninhahited. Mr. Long states them to have reckoned in 1774 to the number of 106 white men, women, and children. The bishop of Jamaica in 1827 cstimated the inhabitants at 1,600 .

The present race of inhabitants are said to be descended from the English Buecaneers, and, being inured to the sea, form excellent pilots and scamen: they have a elief or government officer of their own choosing, and they frame their own regulations; justices of the peace are appointed from Jamaica, but in no other way are the inhabitants interfered with hy the authorities in the chici' settlement to which they undoubtedly belong.

Section I.-Trinidad ex 10.51 N . and Long. 60.31 froin the province of Cuman tinent, by the gulf of Paria; with an area of 2400 square

## CHAPTER II.-TRINIDAD.

Section I.-Trinidad extends from Lat. 9.30 to 10.51 N , and Long. 60.30 to 61.20 W . separated from the province of Cumana, on the $S$. American continent, by the gulf of Paria; 90 miles long by 50 broad, with an area of 2400 square iniles, or 1536000 acres.

1I. Christopher Columbus, was the discoverer of this fertile isle, on the 3lst July, 1498, during his third yoyage. According to some, it was named Trinida: $\boldsymbol{l}$ by Columbus, while distant 13 leagues $S$. E. from it, on account of the three mountain tops seen in that position : according to others, in conformity to the picty of the times, in honour of the Holy Trinity. The island was then densely peopled by Caribs of a mild disposition, of much industry, finely formed, and of a lighter colour than the aborigines or inhabitants of the other islands. These people remained unmo. lested until the Spaniards took possession of Trinidad in 1588 , when they fell a sacrifice to the cupidity and religious bigotry of the Castilians, who, as in Jamaica, drafted off to the mines those who escaped a more sanguinary death by fire or the aword; but a few, indeed, were saved by the apostle of the New Worldthe benign, the eloquent, the heroic Las Casas. The occupying Spaniards forced the Indians to cultivate, as servants, that which they once held as masters, and negroes were brought in from Africa to aid their labours. Sir Walter Raleigh visited Trinidad in 1595, and states that the inhabitants then cultivated excellent tohacco and sugar canes. The Spaniards, to divert his attention, described to him the EI-Dorado, where the rivers were full of gold dust; but, on Kaleigh's return from exploring the Orinoco, heentered into a treaty with the Indians (then at mortal enmity with the Spaniards), marched with them, attacked and carried by assault the capital of San Josef, and put the garrison of 30 men to the sword : the English Government disowned this action of hostilities. Spain paid little attention to her valuable possession, being then fully occupied with conquests on the contiguous continent. In 1676 Trinidad was captured by the French, but almost immediately restored to Spain. The population and trade of Trinidad were subsequently almost extinguished, and, in 1783, the island contained hut a very small number of inhabitants considering its long settlement; viz. whites $: 26$, free coloured 295, alaves 310 , and Indians 2,032; while its sole commerce consisted in bartering cocoa and indigo for coarse cloths and agricultural implements with the smugglers from St. Eustatia.

The number of inhabitants, as will be seen under the head of population, rapidly increased; and, as a mixed society, containing the germs of so many evil passions, required vigorous control, a strong government was formed under Don Josef Chacon, a naval captain, one of whose earliest measurcs was the expulsion of the dissolute monks, the prevention of the demonjacal inquisition, the granting of fertile lands to new colonists, with advances from the royal treasury to purchase cattle and implements of husbandry, and the providing freedom and safety for mereantile speeulations. The revolution in France, and the disturbances in her colonies, added numbers and wealth to Trinidad; the whole face of the island was changed; and, in four years, the magnificent capital of Port of Spain usurped the place of a few miserable fishers' palm-leaved huts. Trinidad was then a sixth dependant on the government of Caraceas.

On the 16 th of Felbruary, 1797, Admiral Harvey, with four sail of the line, appeared off Trinidad; the Spanish Rear Adiniral, Apodaca, who then anchored at Chagaramus with three first rate ships of the line and a fine trigate; instead of giving battle to Harvey, burned his ships,-and retreated to Port of Spaill. General Sir Ralph Abercrombie, with 4,000 men, marched to Port of Spain, and, after a few discharges of artillery, Trinidad became a British colony.

The following is a list of the Governors of Trinidad since its occupation by the British :-1801. General (then Colonel) Sir Thomas Picton. 1802. Three Commissioners for the office of Governor and Com-mander-in-Chief,-ColoneI Fullerton, Gencral Picton, and Commodore Hood. 1803. Major-General Hislop. 1812. Sir R. Woodford, Bart. 1828. Major-General Sir L. Grant. 1833. The Right Hon. Sir G. F. Hill, Bart. [The appointment of three Commissioners in 1802 did not succeed as was expected, for they soon disagreed in the measures necessary to carry on the government.]
III. Trinidad appears, at a distance, like an immense ridge of rocks along its whole N . front : but, on entering the Gulf of Paria, one of the most magnificent. variegated, richly linxuriant panoramas that nature ever formed, is presented to the eye of the voyager ; To the E. the waves of the mighty Orinoco dispute for the empire of the occan with contending billows; the lolty mountains of Cumana rise from the bosom of the horizon in atupendous majesty; and on the W. appear the cape, headlands, mountains, hills, vallies and plains of Trinidad, enamelled with eternal verdure, and presenting a coutp d'ail of which the old world affords no parallel. The view from the blockhouse is magnificent, the deep blue waters of the gulf with the white-sailed light canoes in the dis. tance; to the left the splendid capital of Trinidad, in front the mountains of Cumana; and, on the right, the picturesque valley of Diego Martin, extending across the island to the Atlantic, with its carefully cultivated fields and deep foliaged woods. The batteries of Fort George rise in succession from the gulf shores to the barracks, 1,200 feet above the level of the sea,-a range of slightly elevated mountains occupy the N. coast; a group of finely wooded flat or round topped hills the centre; and a chain of fertile evergreen downs the S. coast of the island. The fecundity of the soil, its gigantic and magnificent vegetation, (compared with which the loftiest European trees are like dwarfish shrubs, and our loveliest tlowers appear pale and inanimate,) its beautiful rivers, enchanting slopes, forests of palms, groves of citrons, and hedges of spices and perfumes,-its succulent roots, delicious herbs and fruits, abundant and nourishing food on the earth, in the air, and in the water;-in fine its azure skies, deep blue seas, fertile glades, and elastic atmosphere, have each and all combincd to crown Trinidad with the appellation of The Indian Paradise.

Puerto D'Espana, or Port of Spain, the capital of Trinidad, embosomed in an amphitheatre of hills, is one of the finest towns in the West Indies. The numerous buildings are of an imposing appearance, and constructed of massive cut stonc. No houses are allowed to be erected of wood, or independent of a prescribed form : the streets are wide, long, (shaded with trees), and laid out in parallel lines from the land
to the sca, intersected, but not intcrcepted by cross streets, thus catching every brecze that blows; and as in most tropical countries, there is a delightful embowered public walk. Among the principal buildinga the Protestant church stands conspicuously and beautifully situate, with a large enclosed lawn in front, surrounded on tiwo aides by the best houses of the capital ; the interior of the church is superb, and at the same time elegant, its aweeping roof and aisleless sides being variegated with the various rieh woods of the island, tastefully arranged; there is also a splendid Roman Catholic chureh, and well situate ; and an extensive market-place, with market-house and shamHles, all built since the burning of the town in 1808, of handsome cut stone.
The Port of Spain is divided into barrios or dis. tricts, each under the superintendance of alcaldes or magistrates and ofticers, who are responsible for the cleanliness of the streets, for the regulating and order of the markets, and for the due execution of the law in their several divisions; hence the policy and good order established in the capital is admirable. The St. James' barracks for the accoinmodation of 600 men are aubstantially, and I may add, beautifully erected, on a fine plain, about a mile from the capital.

Fort George commands the pass leading to Diego Martin's valley, and in the event of war, a few judiciously disposed fortifications at the other entrances to the interior of the country would render the island impregnable. The entrenchmenta are elevated along several ridges and round backed divisions, with a variety of surface : acme parts of which are sufficiently fat for the erection of military works, and on the best of these, at the elevation of 1000 feet, is the Blockhouse barracks, calculated for 200 men. Fort George is inaccesaible from behind, and not commanded by any hill in its neighbourhood, it is admirably fortificd by batteries that are disposed, as it were, along the two aides of an acute angled triangle terminating on a point at the Blockhouse redoubt, each commands the other, according to the situation in which they are placed.

The highest range of land (about 3,000 feet) is to the N , near the sea; in the centre of the isle is a less elevated group of mountains, to the $S$. a series of lovely hilla and mounds appear in delightful contrast to the northern shore; and as on the eontiguous coast of Cumana, the chain of mountains in the N. of Trinidad runs E. and W. Las Cuevas las a double aummit, with a magnificent platform in the centre, from which there is a view of the ocean E. and W.; four delightful vallies, watered by numserous rivulets, add beauty to this charming landscape.

On the W. coast the principal navigahle streams are the Caroni, Chaguanas, Barruncones, Cou'a, Guaracara, and Sissaria; the firb is navigable from its mouth in the gulph, to its junction with the Aripo, (also navigable) a distance of six leagues; the Guanaba, like the Aripo, flows into the Caroni, but has less water; there are many other streams on the W. coast, which being navigable for small trading vessels, afford great facilitics for the cultivation of land, and the transport of its produce. The N. and l., coasts are well furnished with rivers and rivulets of pure and crystalline water; the principal on the E. coast are the Rio Grande, Oropurhe, and Nariva, (cailed by the Creoles Mitan, from its tlowing through a grove of cocoa trees). This latter has been sailed up seven and a half leagues, and found navigable for a 250 tons ship, at less than a league from its source. Guatano, to windward of the island, is lurge, but not navigahie
to any great extent, for more than small boats ; further S . is the fine river Moruga, while in every direction limpid brooks run murmuring over pebbly beds to the occan, through lofty forests and the most picturesque scenery.

The gulf of Paria, formed by the W. shore of Trinidad, and the opposite coast of Cumana (which is 30 leagues long and 15 ditto from N. to S.), may be said to form one vast harbour, as ships may anchor all over the gulf in from three to six fathom water, on gravel and mud soundings. The prineipal ports are, first, the liarbour of Port Royal, Chagaramus, on the N.W. peninsula of the island, at the entrance of the N. mouth, three leagues W. of Port of Spain, and comprehending a space of about seventy square miles; it ia esteemed the best and safest purt in the island, is capnble of receiving the largest ships of war, has from four to 40 fathoms soundings of gravel and mud, or ouze, with bold and steep northern shores.

Port of Spain, on the W. coast, which gives its name to the capital, is the next best harbour, and has one of the most extensive bays in the world; the aurrounding fortified heights completely command the town, and a fine stone quay, running several hundred yards into the sea, has a strong battery at its extremity. All the $W$. coast is a series of bays where vessels may anchor in safety at all times. The Ca reenage, not having more than from two to four fathoms, is only fit for small veasels; and Gasper Grande is an islet within the mouths, where the Spanish ships of war were wont to anchor under the safeguard of a battery intersded for the protection of the passage. The N. and E. coasts are not equally well furnished with harbours and roadsteads, which is the more to be regretted, as the wind blow'a for threefourths of the year from the $\mathbf{E}$. and N . The principal ports to the N. are the Maqueribe and Las Cuevas, (where fort Abererombie is situate); to the N. l:. are the ports of Rio Grande, Toco, and Cumana; on the E. is Balandra Bay, or Boat Island, where safe anchorage may at all times be found for small vessels; further E. are Guiascreek and Mayaro Bay; the safest port on the E. coast is Guaiguaire, from its being sheltered by a point of land against E. winds, and its entrance to the $S$. from which the winds are neither frequent nor violent.

Trinidad, as viewed from the Gulf of Paria, presents an alluvial country in an active state of formation ; the primitive foundutions of the land arranged in a form nearly semilunar, incline as with outstretched arms to reccive into their bosoms the greater portion of the alluvies from the moutha of the mighty Orinoco; the currents, deeply charged with this alluvial soil, drive along the clitly sides of the northern ridge and southern shures, (from which they borrow in their course), to depusit their Inding nt the bottom of the gulf where the metropolis, at the hase of its beantiful mountain stands. The tides, (which there rise higher by several feet than in any other part of the West lndies,) fiow muddy and foul, and cbl with clear waters, which may be seen at some distance from the shore; cach extent of new formation heing marked by muddy hanks of Mangrove bushes; in this way Port of Sprain-like, as Dr. Ferguson says of the ancient Ostia, that was built upon the sca, may become in time an inland city, the metropolis of many other towns crected on the fertile and Hourishing country. It has been observed, that the land eneroaching on the sca un the coast $S$. W. of Trinidad increases the territorial extent of the island; and, at
some distant day, the Gulf channel for the conveyance $d$ noco and Guarapiche to the

some distant day, the Gulf of Paria will he a mere channel for the conveyance of the waters of the Orinoco and Guarapiche to the ocean.
IV. The island (as also Tcbago) is evidently a section of the opposite continent, formed either by a volcanic eruption or oceanic cruption-the same strata of earth, the game rocks, fossils, \&cc. are common to both. The nucleua of the mountains is a very dense argillaceous achistus, becoming laminated and friable when exposed to the atmosphere, and changing to the micacenus schistus in the inferior layera and near the beda of rivers; in the interstices of which latter, particularly to the northward, are found great quantities of sulphureous pyrites in cubie ca*. ${ }^{-1} \mathrm{~s}$. There is no granite on the island (while tha cern $n$ chain of mountains are principally composea of that substance) ; but blocks of milky quartz, of different sizes, are found in every valley, beneath which there is frequently to be found a light layer of sulphate of lime; on the precipitous sides of the mountains, washed by the torrenta, may be seen layers of a coarse argile, mixed with ferruginous sand. Thus the absence of calcareous masses in Trinidad, Tobago, and Cumana offers a strong geological contrast to the Antilles, or Caribbean Mountains. Gypsum and limestone are rare in Trinidad. One quarry of calcareous carbonate, situate at the foot of a hill ncar the Port of Spain, is mixed with veins of silex and heterogeneous substances. Considerable quantities of pulverating feldspar are found on the rising ground, washed by the rains, near the Guapo mouth and on its left banks. The micaceous schistus hns sometimes a transition into talcous sehistus; thus giving an unctuous appearance to the soil. Near the coast are found rocks of a bluish calcureous nature, veined with white calcareous carbonate, chrystalized, rather hard, and resting on coagulnted elay, with pebbles of primitive rocks. The magnetic needle indicates the presence of iron in many rocks; bat volcanic convulsions have produced different effects from similar eruptions in Europe: thus gypsum is found abounding in sulphur and pyrites, mingled with granite. No vestiges of organic bodies have been discovered; maritime and land ahells (many of unknown and extinct species) are found in the great alluvial plains; and, although madrepore are drifted on the coast, no coral banks exist. On the surface of the soil of the vallies where rivers run, rounded pebbles are observed; but in the plains they disappear : this is particularly the case on the $E$. and very rare on the $W$. coast. There are several extensive vallies and plains of a deep and fertile argillaccous vegetative earth, without a rock or even pebble to be scen.

There are acveral craters in Trinidad. S. of Cape Dela Brea is a submarine volcano, which oceasionally hoils up, and dischnrges a quantity of petrcolum; in the E. part of the island and Bay of Mayaro is another, which, in March and June, gives several detonations resembling thunder,-these are succeeded by flames and sinoke, and, some minutes after, pieces of bitumen, as black and brilliant as jet, are thrown on shore. Near the forest of point Icacos, on the summit of a hill of argillaccous clay, M. Levyasse found a great number of little mounds, about two feet high, whose truncated and opell-coned tops exhaled a gas sinelling like sulphurated hydrogen; one cone, of six fect high, on the most elevated part of the hill, continually discharged whitish matter, of an alıminous tnste; a sound was herrd, indicating a flutd in $n$ continual state of agitation, and globuies of an elastic gas evnporated continunily; tise scum at the
top was cold; four poles, measuiing ely:y fcet, did not touch bottom, and disappeared on bcing let go. There is neither stone nor sand within the circumference of a league of the cone; but handsome rounded pebbles were found round the hill, together with amall calcareous stones, encrusted with sulphur of a prismatic form. Contiguous to this crater, and encompassed by a marsh of mangroves, which communicate with the sea, is another hillock, with a eircular shallow cavity full of a boiling liquid like alum; a dull subterraneous sound was heard, the earth was found to tremble under the feet of the explorers, and two poles pushed into the crater disappeared in an instant; detonations like distant cannon are heard every year in the month of Mareh. It is re. markable that carthquakes, felt violently in the Antilles in 1797, were not perceived at Trinidad or in Cumana, and when the latter province was shortly after desolated by terrible earthquakes, the shocks were slightly felt in Trinidad, but not at all in the Antilles.

Forty miles S. of the Pitch Lake are several mud volcanoes, in a plain not more than four feet above the general surface; the largest is about 150 feet in diamcter, and has boiling mud constantly bubbling, but never overflowing, remaining constantly within the surface of the crater. When the old craters ccase to act, new ones invariably appear in the vicinity; thus resembling the mud voleanoes witnessed by Humboldt. Some of the mud volcanoes throw out aalt water, heavily loaded with argillaccous earth :during the hottest months of the dry season, cold mud is thrown to the height of thirty feet, and the volcano is unapproachable to within fifty paees.

The precious metals have not been found in Trinidad, but the magnet discovers iron in the greater part of its rocks and pebbles; a very brilliant white metal, (specific gravity ten), more ductile and malleable than silver has been found, and M. Vauqueline thought it either a new metal or composed of several others; crystals of sulphate of copper have been found encrusted with alum among flints, as also arsenic with sulphurated barytes for a matrix; sehistose plumbago has been discovered, and near it a mine of coal, about five miles from the sca-shore; but the most remarkable mineral phenomenon is the Asphaltum, or Pitch Letke, situnte on the leeward side of the island, on a small peninsula, jutting into the sea about two miles, (opposite the Parian Mountains on the Continent,) and elevated 80 feet above the level of the ocenn. The headland on which it is situate, when seen from the sea, resembles a dark seoriaceous mass; hut, when more closely examined, it is tound to consist of bituminous scorixe, vitrified sand, and earth, all cemented together. In some places beds of einders are found; and a strong sulphureous smell pervades the ground to the distance of eight or ten miles from the lake, and is felt on approaching the shore.
The lake is bounded on the N. W, by the sen, on the $S$. by a rocky eminence, and on the E. by the usual argilinceous soil of the country; It is nearly circular, and better than half a league lin length, and the same in breadth, occupying the highest part of the point of land which sheives into the sen, from which it ls separated ly a margin of wood; the variety and extrorilinnry mobility of this phenomenon is very remarknble, groups of beantiful shrubs and tlowers, tufts of wild pine apples and nloes, swarins of magnifleent butterflies and brillinnt humming birds enliven a seene, which would be an carthly representation of Tartarus without them. With regard to mobility,

## TRINIDAD,-CLIMATE

where a small islet has been seen on an evening, a gulf is found on the following morning, and, on another part of the lake, a pitch islet is sprung up to be in its turn adorned with the most luxuriant vegetation, and then again engulphed.

The usual consistence and appearance of the asphaltum, (except in hot wheather, when it is actually liquid an inch deep, ) is that of pit coal, but of a greyish colour, melting like sealing wax; ductile by a gentle heat, and, when mixed with grease, oil, or common pitch, acquiring fluidity, and well adapted for the preserving the bottoms of ships against the destructive effects of the worm termed the teredo navalis. Sometimes the Asphaltum is found jet black and hard, breaking into a dull conchoidal fracture, but, in general, it may be readily cut, when its interior appears oily and vesicular.

Deep crevices or funnels, inclining to a conic form, and sometimes six feet deep, are found in various parts of the asphaltum, (pitch), filled with excellent limpid running water, and often containing a great quantity of mullet and small fish. Alligators are said to have been seen in these extraordinary chasms. The bottom of some of these canals are so liquid that marked poles thrust in disappear, and have been found a few days after on the sea shore. Near Cape La Brea, to the S.W. (the place where this lake is) Capt. Mallet observed a gulf or vortex, which, in stormy weather, gushes out, raising the water five or six feet, and covering the surface, for a considerable space with the bituminous substance. A similar gulf is said to be on the coast, at the bay of Mayaro.

Pieces of what was once wood, are found completely changed into bitumen; and the trunk of a large tree, on being sawn, was entirely impregnated with petreolum; where the petreolum mixes with the earth it sends greatly to fertilize it, and the fincst fruits in the colony come from districts bordering on this singular lake; the pine apples, in particular, being less fibrous, larger, more aromatic, and of a decper golden colour than are to be had any where clse. [For a detailed account of the pitch lakc, and mud volcanoes see Vol. VI. of my Colonial Library.]
$V$. The dry and rainy seasons into which the tropical year is distinguished is more marked in Trinidsd than in the Antilles. The dry season commences with the month of December, and ends with that of May, the E. N. E. and N. winds then become less cool; the heat increases and it is at its height by the end of June, storms commence and augment in frequency and violence during August snd Scptember, and in Octoher they occur almost daily, accompanied hy torrents of rain ; there is seldom any fall of rain during the night, but a heavy shower without wind usually precedes su!n-rise by half an heur during the scason. Hurricanes ure unknown in Trinidad or Tolsago.

The hygrometer varies much in different seasons; during the rainy season it is usually between 85 and 90 ,- in the spring between 36 and 38 in the day, and about 50 at niglit; on an average there falis about sixty-twoinches of water during the winter, and about ten inches (including the heavy dews, which may be estimated at six inches) during the spring. The October rains are very gentle; in November they are less frequent and more slight ; and from the end of December to the beginning of June of some years, there does not fall a drop of rain during the day : as the island has become cleared, the quantity of rain falling has diminished.

During even the hot and stormy season the thermometer rarely stands at Port of Spain before sinn.
rise, so high as 74 and in the country occasionally as low as 68 ; from sun-rise to sun-set 84 to 86 , falling in the evening to 82 or 80 ; in Augustand September when the sir is saturated with moisture, the mercury rises sometimes to 90 -rarely above that height. When during the winter there is wind with the rain the mornings are less hot, as are also the evenings, when the rain has been preceded by thunder during the day ; but the temperature of the whole island varies with the elevation above the sea and the aspect of the place, especially in spring, when the thermometer descends to 60, and somctimes to 50 , in places of moderate elevation ; on the whole it is less moist than Guyana, and not so dry as Cumana, and being an island, the winds are more constant, and the atmosphere therefore more fequently renovated; the vallies of Santa Anna, of Maraval, Diego Martin, Aricagua, and the heights of St. Joseph, to the N.W., as also the vallies on the $N$. coast, enjoy a mild temperature, and their inhabitants breathe duriug nearly the whole year a fresh, pure, and very elastic air, by reason of the simultaneous action of the evaporation of rains, dews, and winds, on the well-known eastern principle, by which liquids are cooled, and even ice formed, by solar evaporation or exposure to a current of air. From the coolness of the night, it is the ordinary custom to have a blanket folded up at the foot of the bed tu draw up when necessary, during a residence in the country or in the high lands. The beneficial and abundant dews (arising from the numerous rivers of the island and surrounding ocean) cool and invigorate the atmosphere, and give a vigorous luxuriance to the vegetation of an isle, which, were it otherwise, would be nearly barren. The following table affords a Meteorological Register of Port of Spain :-

The Slave Pojn

VI. When Trinidad was first discovered by Europeans it had a dense Indian community, who, on ita occupation by the Spaniards, were murdered or transported to the Hispaniola mines, to make room for the new occupiers, who seized on the lands of those they had slain or sent into a captivity worae than
death. In 1783, the number of mouths was onlywhites, 126 , coloured free, 295, alaves, 310 , and Indians of all ages, 2,032 ; total, 2,763 . The population thus increased since the British occupation of the island.

Abstract of the Annual Population Returns.

* These natives of the castern hemisphere were brought to the west for the purpose of cultivating rice, and perhapa with the idea of forming a free labouring population; no Chinese women were induced to accompany them; the men soon became discontented, and there now remain but a few of them as fiabermen.

The Slave Population, according to a Parllamentary Return, was in numbers,
from 1816 to $18: 8$, as follow:-

Geaeral Return of the Population of Trinidad for the Year 1831：－

X. The administrative functions are vested in a Lieutenant-governor and an executive and legislative committee. The executive council consists of three official members (viz. the Colonial Sccretary, the Colonial Treasurer, and Attorney-general), selected from the legislative councils; they have no powera, and no other functions than counsellors of the Governor, who may follow their advice or not, as he pleases. The legislative council consists of twelve members, six of whom are styled official, holding offices and salaries at the pleasure of the Crown, viz. the Chief Justice, the Colonial Secretary, Attorneygeneral, Colonial Treasurer, Public Prosecutor, and Collector of Customs, and six are styled non-afficial, selected from amongst the inhabitants, the whole removable at the pleasure of the Crown. The Governor presides at the board, has a :ote, and a casting vote in addition, and no measure can be introduced or proposed at the board which he objecta to.

The Cabildo, in its authority and functions, resembles our municipal corporations ; it has power to raise revenues which are derived from licenses to the dealers in spiritunus liquors, to hucksters, \&c., and from a tax on carts, and on meat and fish sold in the town of Port of Spain, thus realizing about $10000 l$. per nnnum, with which the streets and market-house are kept in repair, and the salaries of the police offcers paid, All other salaries are paid out of the Colonial Treasury. The laws are principally Spanish, executed after the Spanish form, with some modifications; the titles of Alcalde, Alguazil, \&c., are always used instead of the corresponding terms in English.

The Cabildo is composed of the Governor, two Alcaides In Ordinary, the Procurator Syndic, and ten Regidors. Of the latter two are perpetual; the remaining elight serve in snccession as the Aicaldes, four going out of office artubally. After having in conjunction with the remainder of the Cahilin) elected four others as thelr successors, whose names are then submitted to the Governor tor his approval. The oftice of Coroner does not exist. Thera is no power of arrest In the colony upon mesne process except on the rinthority of the Roman Law, when a person is suspectus de fuga. Evcry Individual about to leave the imland must obtain a pass from the Governor, and advertize his intention to leave, ally creditor may then apply to tha Colonial Secretary's Officer, and stop the pass.

The Alguacil, Maynr or Provost Marshal, is appolnted hy the Governor, and removabie by him. He gives vecurity in 2000L. He exccutes processes, \&c. by deputies, and recelvas fees according to a tariff. In each district there are Alculdes de Barrio clected by the Cahilds Board from among the free. holders for one year. They recelve no saiary or emulumente, entertain clvil causcs or pleas of debt to the amount of 20
dollars (with an appcal to the Chief Judge if made within five days after sentence), and they are also entrusted with the government of the police of their respective districts. There is no jury in the "Court of Criminal trial" which has under its jurlsdiciion all criminal offences committed in the island with the exceptinn of petty thefts, \&c. The Court is compnsed of the Chief Judge (with a salary of 2000 l . per annum) as President; of the Assessar of the Governor: of the Alsaldes in ordinary, and the Escribanos (Secretaries) of the civil tribnal (who act in the same capacity herein). The Attorney Gcneral prosecutes; counsel is heard for the prisoner, the Chief Judge sums up the evidence, and takes the opininn of each member of the Court individually, beginving with the junior member. The judgment in all cases is final, excepting death sentences, when an appeal lies to tha Governor in Council

Every freeman of the island is enrolled in the militia, which is composed of artillery, cavalry, and infantry, with a very numerous staff. Their appearance on the great plain before St. Anne's is really superb; the muster is about 4500 , and a more efficient atate of discipline is kept up than perhaps in any of the other islands. The Governor is of course Com-mander-in-Chief; there are two Brigadiers-Generals, an Adjutant, Commissary. Paymaster, Mustermaster, Provost-Marshal, and Judge Advocate-Generat, with deputies to each; Physician, Surgeon, and Apothecary General ; and of Field Officers, two Colonels, twenty-one Lieutenant-Colonels, twelve Majors, and fifty-seven Captains.
The militia strength for 1835 was as follows [B. B. Colonial Office]: 1st. Division.-Cavalry, 23 staff, 13 officers, 2.5 non-commissioned officera and privates. Infantry, 8.5 efficers, and 1485 non-commissioned officers and privates. 2nd Division.-Cavalry, 5 staff, 3 officers, 31 non-commissioned ofticers and privates. Infantry, 40 officers, and 856 non-commissioned officers and privates. 3rd Division.-Cavalry, 4 officers, and 28 non commissiened officers and privates. Infantry, 11 ofticers and 271 non-commissioned officers and privates. 4th Division.-Cavalry, 10 officers and 36 non-commissioned officers and privates. Infantry, 11 officera and 22.5 non-commissioned officers and privates. 5th Division.-No Cavalry. Infantry, 3 officers and 61 non-commissioned offlecrs and privates. Total. Cavalry, 28 staff, 30 officers, 120 noncommissioned officers and privates. Infantry, 150 officers, 2898 non-commissioned officers and privates. The uniforms are various and splendid. The artillary is blue, with red facings and gold lace; the royal Trinidad light dragoons bluc, facings huff, and lace silver ; mounted chasseurs and light infantry, green
uniform; and the sea fe, ings ; and so on through The fines for non-attend the resolutions for the forces of this island areColonel, 50 dollara; Maj dollara; Lieutenant, Ens Quarter-Master, 8 dollars ter-Master Sergeant, 8 d Corporal, 5 dollars ; Priv second, 6 dollars; and fo liable to be brought to tr court martial, which cour tence of fine and impris ceeding twenty dollars, an inent. XIV. The vegetation of Trinidad is of the same splendid character as that found on the main land. Botanists speeify on the island aspen rush, or Cyperus haspan -Commelina hexandra, panax chrysophilla-Vitex capitata, Justicia secunda, solanum hirtum, cestrum latifolium, Allamanda cathartica, Macroeneum coccineum, freelichia paniculata, spathodea corymbosa, robinia rubiginosa lupinis villosis, glycine picta, Bigonia humilis, tabernamontana undulata, Zapogomea tomentosa, croton gossypifolium, tragia corniculata, tontelea scandens, \& \&. \& c. The forests contain the finest wood for ship building and for ornamental porposes, amongst which the red cedar, and a great varicty of palms are conspicuous. The nutmeg, cinnamon and clove, have been introduced into the island and flourish, particularly the former. The cacao, or cocoa, (whence the delicious thea broma, or divine beverage is made) is indigenous to the new world; in Mexico, the beans served, even in Humboldt's time, for small coin, as cowries do in India-six beans being equivalent to one halfpenny English; and the Castilians, whether in America or Spain, soon learned to consider chocolate a necessary of life,-indeed, it was seriously disputed for some time among the churchmen of Rome whether it were lawful to consume so nourishing a beverage on a fast day; but the inclinations of the palate naturally prevailed over scruples of conscience, and it was even finally scrved to the Creole ladies by their slaves in the chapels of Mexico during divine service. The cocoa tree somewhat resembles that producing the English cherry, fifteen feet in height, delighting in a new and productive soil near the margin of a river, and requiring shelter from strong sunshine or violent winds, for which purpose the plantain trees, Musa Paralisiaca, or coral hean tree, Erythrina, (which the Spaniards call Madre di Cactoo are planted between every second row, giving a most luxuriant appearance to a plantation, the long bare stems of tropical trees being strongly contrasted with the rich green of the cacaos below, and here and there brilliant and burning with the golden foliage of the Bois immortel, a lofty umbrageous tree, which in the flowering season is covered with elusters of scarlet blossoms of exceeding brigltness, and shining like brilliant velvet in the sun-rays; while the lovely buttertly plant (so called from its perfect similitule to the insect) fluttering on its almost invisible stalk, adds beauty and variety to the prospect.

As it would be advisable to extend the cultivation of cacao to Ceylon and other of our Eastern settlements, the following description of the cultivation of this nutritious nut is given. Seedling plants should be raised in the dry and sheltered spots of a nursery ground. The seeds are sown in small raised mounds, at regular Intervals, two seeds being deposited in each mound, lightly covered with mould, and sheltered
from the scorching aun with plantain leaves, or some other cool and umbrageous canopy. If the season be dry moderate watering should be used, and if both aeeds germinate, the weakeat plant must be destroyed. When the shrub attains fifteen or eighteen inches in height, (which will be the case in ten or twelve weeka) its tranaplantation to the fixed location is necessary. The plants muat be arranged in straight rows, in a quincunx form, with a distance between each of sixteen feet, should the soil be rich, and of not less than thirteen if less fertile. Transplantation in dry weather, earth removed with the plants and the tap root deep set when replaced. The cacao delights in the ahade; a vertical sun destroys it, therefore it ls imperatively neceasary to plant between every second row either the plantain tree or the coral bean tree, (erythrina). When the tree is about two years old it usually puts forth from five to seven branches from the top, all beyond five are cut away ; in about six montha more flowers commonly appear, which must be alao destroyed; indecd, it is usual to repeat this abscision annually, until the fifth year, in order that the productive power of the tree may be finally perfected in greater atrength. A great number of flowers fall without fructifying; the fruit, while growing, is green, but as it ripens the pod changes to a bluish red, approaching to purple, with pink veins; in some varicties the fruit pod becomes of a delicate yellow or lemon colour. When over ripe the poda sometimes burst, and the seeds fall from their geiatinous pulp. The crop may he said to last throughout the year, but the principal gatherings of the fruit are in June and towards the end of December. No unripe pods must be gathered. The ripe pods are broken with a mallet or cut open, and the seeds separated from the pulp with a wooden spatula; to separate the seeds entircly from the pulp, they are placed in a hole with some dry sand, and left until a very slight fermentation comes on the sand, being frequently stirred and replenished to absorb the maisture from the sceds; when at the end of three or four days the process is completed by spreading out the cacao nuts on rush mats, or upon a platform in the sun to dry, care being taken to prevent rain reaching the aceds. When quite dry and hard the nuts may be lightly packed in bags or boxes, and kept in a dry or airy place for use or exportation.
The following calendar of the fruits of Trinidad for the year, will demonstrate the variety of delicious food which this valuable colony yields. January produces sappidilloes, pomegranates, snur-sops, plantains, bananas, papas, or papaws. The vegetables areokros, capsicums of all kinds, which indeed are common every month in the year; cocoa nuts, which are seldom used but for cakes and puddinga, ground down; pigeon or Angola peas, sweet potatoes, yams of different sorts, and tanias. February, the vegetable called chicon, or christophini comesan. March, grenadilloes are added to the former list. April, Java plums, mangocs, mamme sapoctas, pines of acveral varictics, the Ote'..citan gooseberry, Jamaica pluma, cerasees, and hread truit. May, water-melons and cashew apples. June is much the same in her productions; pigeon peas are now ncarly out of season. In July, the avocado pear comes in ; it is also known by the name of the alligator pear, or subaltern's butter, from its inside resembling very yellow fresh butter both in consiatence and colour.

In August, the only new fruit is the yellow hog plum; the other fruits in season are the mamme sapoetas and avocado pears. September produces
sugar and custard apples，sea－side grapes，and Portu－ guese yams．The fruit and vegetables of October are nearly the same as September；and the only differ－ ence in November is the bread fruit being ripe again． December brings in guavas，and that most excellent production，sorrel．This plant haa a succulent atalk， and grows from three to four feet high．There is a blossom，not unlike the common English columbine； there are two varieties，white and red ；the blossoms， when alightly fermented，produce a delightful beve－ rage，or，stewed with augar，make tarts or jam．All the orange and lemon trihe，ahaddocks，and forbidden fruit，plantains，and bananas，may be had every month in the year，but they abound most from April to Sep－ tember．Mountain cabbage is always in season，and is a most delicious vegetable．

Previous to 1783 the whole produce of Trinidad was a very small quantity of cocoa，vanilla，indigo， arnotto，cotton and maize，not more than sufficient to employ a small achooner two or three times a year for ita conveyance to St．Eustatia．In 1787 the first sugar plantation was formed，and in 1802 the cultiva－ tion and produce of some of the principal articles was as follows：－192 sugar plantations yielding 15461 hogsheads；（the hogshead in 1802 weighed $1200 \mathrm{lbs} . ;$ it has since been made to contain 1400 to 1500 lbs ．） 128 coffee ditto， $358660 \mathrm{lbs} ; 57$ cocoa ditto， 97000 lbs．； 101 cotton ditto， 263000 lbs．；employing ship－ ping annually to the amount of 15000 tons．In 1807 there were exported to England，British America，and to the United States， 18235 hogsheads of sugar，or 21234600 lbs ； 460000 gallons of rum；and 100000 gallens of ayrup；there were nade besides in the same year， 500000 lbs ．of coffee； 355000 lbs ．of cocoa，and 800000 lhs ．of cotton．

Produce of TrInidad from 1799 to 1837.

The annals of no country present such an extraor－ dinary increase of cultivation，and consequent pro－ duction of wealth．
The resources of the island are in fact very great ； the mountainous portion which cannot be cultivated forms less than one thirtieth of the surface；by a measurement in 1799 it was found that there may he formed on the territory 1313 augar， 945 coffee， 304 cocoa，and 158 cotton－plantations of 100 squares，or 320 acres each．

## CHAPTER III.-TOBAGO.

Section I.-Tobago is situate in 11. 16 N. lat. 60.30 W . long. the western end distant but six miles from Trinidad, and the eastern 24 leagues from Granada; it is the most southerly of the Caribee islands; in length it is about 32 miles, in an E.N.E. direction ; and in its greatest breadth 12 miles, embracing a mountainous area of 44 square miles.
II. Tobago, or Tobacco, was discovered by Columbus in 1496, and thus named after the pipe used by the jslanders in amoking the herb now so extensively used in the Old World, and then termed Kohiba.When first visited it was found to be peopled by a race since well known under the denomination of Caribs, who were continually at war with another nation called Arrawaaks, residing on the main land. The Tobagians sometime after left the island and retired from the pursuit of the Arrawalis to St. Vincent; where, it is said, they lived in peace with the Indians inhabiting that isle. In 1580, the British flag was planted on the island; in 1608, James the First claimed its sovereignty ; no effectual coloniza. tion however then took place. A small British Colony is said to have settled on the island from Barbadoes, in 1625 ; but it was subsequently abandoned. A description of Tobago is said to have suggested the scenery of Crusoe's Island to De Foe. The isle was granted to the Earl of Pembroke in 1628, by Charles the First. Some Dutch navigators visited Tobago on their return voyage from the Brazils, and, struck with its advantageous situation for trade with the continent, as also with the beauty of its climate and the richness of its soil, a company of Flushing traders formed an establishment ous the almost deserted isle in 1632, founding the colony with 200 persons, and naming it New Walcheren in honour of their native home ; but, in 1634 , before the Hollanders had time to fortify thenselves, the jcalousy of the Spaniards of Trinidad
was roused, and, aided by some native Indians, the Dutch were attacked, and those that escaped the onalaught were conducted as prisoners to Trinidad, the rising walls of the fortress of New Walcheren razed, the cannon and stores carried off, and the plantationa utterly destroyed. Eur nearly 20 succeeding years, the island remained untenanted, but occasionally frequented by seamen from Martinique and Guadaloupe to fish for turtle, or by the Indians of St. Vincent and the other Antilles, who touched there on their frequent expeditions against the Arrawaaks of the Orinoco. Some say that the Courlanders arrived on the N. coast of Tobago, in 1648.

In 1654, some neerchants at Flushing, named the Lampsins, obtained a charter from the government of the United Provinces, authorising the occupation of Tobago, for their sole use, with the privilege of appointing a Governor and Magistrates, but giving a veto to the Dutch government at home, on the nomination of the former. The spirit of conımerce was then at its height in Holland, and Tobago, and New Walcheren, soun became not merely an agricultural colony, but one of the most thriving coinmercial emporiums in the West Indies. Shortly after the Dutch occupation, a vessel arrived at Tobago with colonists from Courland, James the First of England having previously granted Tobago to his godson the Duke of Courland. Nearly 100 families were thus landed on one of the most beautiful parts of the island termed Courland Bay; in a few days the contending colonista came to blows, but the belligerents at length agreed to leave each other quiet until their respective governments at home should decide to whom the island be. longed. The Courlanders were neglected, partly owing to the Duke being imprisoned and deprived of his territories by the King of Sweden, while the Lampsins strongly re-inforced their friends; the re-
sult was that, in 1659, the Iatter foreed the Courlanders to relinquish Fort James, which they had built in Courland Bay. The efforts of the Duke of Courland to recover Tobago, on the restitution of his states, were ineffectual, notwithstanding the manifesto of Charles II. in hls favour, 17 th November, 1664, when declaring war against Holland;-the Lampsins therefore remained in peaceable possession for some years. No mention was made of Tobago at the treaty of Breda; and during the interval of the first and second war betwcen England and Holland, the Governor, Hubert de Beveren, and the colonists, amounting to 1200 , placed Forts James and Lampsinberg in a good state of defence, while the commeree and cultivation of the island rapidly increased.

Nevertheless Tobago was shortly afterwards plunlered, and sacked by Sir Tobias Bridges, at the head of the Barbadian privateers, and subsequently the Dutch having declared war against the French, the Duke D'Estrees attacked and defcated Admiral Binkes, in Scarborough Bay, and pillaged the island. Four months after D'Estrees again appeared off Fort Lampsins, landed his infantry, and attacked Binkes in the fortress, who, after a gallant defence was, together with a great part of his little garrison, blown up by the explosion of a powder-magazine, and on the 24 th Dec. 1677, the Hollanders were compelled to abandon a colony which they had commenced under sueh favourable auspices, in 1654. In 1678, the Duke of Courland renewed his pretensions, and for many years strenuous, but unavailing efforts were made to induce colonists to settle in the island. In 1737, the house of Kettler, sovereigns of Courland, being extinct by the death of Ferdinand, son of James, England claimed the reversion of Tobago. In 1748, by the treaty of Aix-la-Chapelle, it was stipulated that St Lucia should belong to France, and that Tobago, Grenada, St. Vincent, and Dominica should be considered as neutral islands, that the subjects of all European powers should have the right to establish themselves, and carry on commerce in and with those islands, but that none of the contracting parties should place garrisons in them. Whether Tobago was then inhabited or not, it is hard to say. The ehronielers of the island assert, that, in 1757 the ship Stirling Castle, touched at Tobago; and on Mr. Thompson, a midshipman, landing, he found an old French hermit on the island, who had been living alone on it for 21 years.

At the peace of 1763 , Louis the XV. ceded Tobago in perpetuity to England, and on the 20th of May, 1765 , a commission was appointed for granting lands on the island. The prosperity of the island dates from this period, large capitals were invested by enterprising British colonists, and agriculture and commerce rapidly progressed; but the miseries of war had not yet terminnted; during our contest with North America, In 1781 , Tobago was captured by the Marquis de Bouiile, and ceded to France by the treaty of Versailles, in 1783 . While Tobago remained in the possession of France, a few French settlers esta. blished themeelves in the island, and on the breaking out of hostilities between England and France, General Cuyler, in March, 1793, at the head of 2,000 men, took possession of the island for great Britain, in whose possession it has ever since remained.
III. Tobago has been termed the "Melancholy 1sle," because when viewed from the N . it seems to be only a mass of lofty, gloomy, mountains, with black precipices, descending abruptly to the sea; on nearer approach the island exhibits a very irregular aspect; it is prineipally composed of conical hills of
basaltic formation, and of ridges which descend from the interior, (where they rise in a dlatinct manner from a common base or dorsal ridge 1,800 feet high, and running 20 miles out of the 32 that the island is long,) toward the sea, terminating sometimes in abrupt precipices; the ravines are deep and narrow, and end generally in small alluvial plains. The N. W. part is the least mountainous, terminating in the $N$. in abrupt precipices, with the dark island of Little Tobago, and the dangerous rocks called St. Giles's. The S. terminates in broken plains and low lands, the whole aspect, like Trinidad, being calm and magnificent, with occasional beautiful mounds of isolated hills, so close that few levels for marsh or swampa present themselves, the delightful vales everywhere exhibiting the effects of a rotatory and undulating motion of vast currents of water, and forming with the contiguous mountains truly picturesque scenery. The island is well watered by rivulets and atreams arising in the interior, and passing over the low lands to the coast, where they are occasionally obstructed, which however a little attention would prevent.
Scarborough, the principal town, is situate on the S. W. side of Tobago along the sea shore, (at the base of Fort George Hill), and extends, with little uniformity, easterly towards the Fort, the distance from the latter place being upwards of half a mile. On the $S$. and S. W. the descent to the sea is gradual, and at the base of the hill approaehing the town are several scattered country houses. Fort George Hill, (the road to which is steep and towards the W.) rises to the height of 422 feet, of a conical shape, and crowned by " Fort King George," the chief military station in the island. On the windward side are numerous excellent bays, and on the northward is situate "Man-of-War Bay," capacious, safe, and adapted to the largest ships. At Courland Bay (on the N. side, six miles from Fort King George), which approaches the leeward extremity, the hills, covered with rich forests, are bolder and more abrupt than on the $S$. side, and consequently, the cultivation more scattered; the " Richmond," a large river, passes through the district. Extending from Courland to Sandy Point, on the S. side, are several estates on the low lands in good cultivation, owing to the number of rivulets watering the shore. Sandy Point district (or as it may be termed Garden), forms the western extremity of the island, and is the only level land of any extent in Tohago. The eastern district is chiefly composed of high mountains, clothed with noble trees, and but thinly cultivated.

Man of War, Courland, Sandy Point and King Bays, are adapted to the largest sized ships ; Tyrrells, Bloody, Mangrove, Englishman's, and Castara's Bays, have good anchorage for vessels up to 150 tona burthen; Halifax Bay admits vessels of 250 tons-but a shoal at the eutrance requires a pilot.

1V. On a complete view of the island, as compared with the adjacent continent, the observer is impressed with the belief that it formed, at some distant day, a bold promontory of main land, from which it has been violently dissevered. There is, in fact a general physiognomical resemblance between Tobago and Trinidad, exeept that there are not seen those large blocks of hyaline quartz in the former that are found almost everywhere in the latter, on the summits of mountains as well as on the plains; the rounded pebblea found in the beds of rivers are generally of quartz or freestone, some of hyaline quartz, others of amphiobolic schistus, \&e. Neither sulphur nor corbonate of lime have been seen. The hill above Scarborough appears to be a bed of basalt and sehistose rock, with a loose
and heavy super-stratum. mould, and resembles ( pa that of its neighbouring the vegetative earth bein Tobago.
V. Though moist, by bei partieles, Tobago is not proper attention were paid the mountain streams. I June, and gradually becom the violence of the rains tinuing, at intervals, to the ning of January, when the begins. The island is out ricanes-the winds are S.E part of the year ; in Decen vail from the N .-often decidedly salubrious are the that Dr. Lloyd the prineipa to Sir James M'Gregor, in estates in the interior, no H buried for upwards of ten $y$

The currents round the espeeially in the Trinidad moon the rise of the tide

The Slave

The large proportion
In 1833,-whites, males, females, 6257 . Total, mal the return was, whites, $m$ labourers, males, 5373; fem

Births, Marriages, and Established Churches-Blac 49 ; Deaths, 27. Coloured, Deaths 13. Whitea, Births 57. Moravian-Births 29; Wesleyans-Births 22; Ma Birth 715; Marriages 65;
and heavy super－stratum．The soil is a rich dark mould，and resembles（particulariy in the E．part） that of its neighbouring isle，with the advantage of the vegetative earth being deeper on the hills of Tohago．
$\mathbf{V}$ ．Though moist，by being impregnated with saline particles，Tobago is not unhealthy，particularly if proper attention were paid to preventing the exits of the mountain streams．The rainy season begins in June，and gradually becomes heavy until September， the violence of the rains then abate，showers con－ tinuing，at intervals，to the end of December or begin－ ning of January，when the season termed＂croptime＂ begins．The island is out of the usual range of hur－ ricanes－the winds are S．E．and S．during the greater part of the year；in December and January they pre－ vail from the N ．－often very strong and cold．So decidedly salubrious are the high lands of the interior， that Dr．Lloyd the principal medical officer，reported to Sir James M＇Gregor，in 1827，＂that on some of the estates in the interior，no European resident had been buried for upwards of ten years．＂
The currents round the island are very uncertain， especially in the Trinidad channel．At new and full moon the rise of the tide is four feet．The N．E．
trade blows all the year about the island．The island being seen towards evening，the mariner cautious of approaching，should stand under easy sail to the southward，as the current sets to the N．W．；coming from the E．steer for the S．coast，and keep well to the southward to stem the N．W．current，which al－ ways sets round the lesser Tobago．On entering any of the bays to leeward，ships may approach quite close to St．Gilea＇s rock There is nothing to fear at the S．W．Bay of Courland but rocks above water， except the Chesterfield rock．Tobago is free from hurricanes，though Grenada，the most southward of the Antilles，and only 30 leagues from the continent， is as much under the influence of squalls as the other Antilles．
VI．In 1727，Tobago had it is said a population of 2,300 whites，and 10,000 negroes；in 1776，2，397 whites， 1,050 free negroes，and 10,752 slaves ；in 1787， whites， 1,397 ，free－coloured，1050，slavea，10539，and the import of slaves，in a medium of four years， 1,400 ； in 1805，whites 900 ，coloured people 700，slaves， 14,883 ；in 1830 ，the whites were estimated at 450 ，the free coloured，males 477，females 686，slaves 12,556 ． The following Table shows the numbers，increase and decrease，of the slave population from 1819 to 1832.

The Slave Population，according to a Parliamentary Return，was in numbers，
from 1819 to 1832，as follows ：－

|  | No．of Slaves Registered． |  |  | Increase by Birth． |  | Decrease by Death． |  | E．．．ase by Manumission． |  |

The large proportion of deaths to births throughout the whole or the period is very remarkable．
In 1833，－whites，males， 248 ；females， 56 ．Free blacks，males， 506 ；females，760．Slaves，males， 5371 ； females，6257．Total，males， 6125 ；females，7073．Baptisms，868；marriages，8；burials，27．In 1834， the return was，whites，males，250；females，30．Free black，males and females，3000．Apprenticed labourers，males， 5373 ；females， 6348.

Births，Marriages，and Deaths．－［B．B．1836］． Fstablished Churches－Black＇s，Births 612；Marriages， 49；Deaths，27．Coloured，Births 39；Marriages 4； Deaths 13．Whites，Births 13；Marriages 3；Deaths 57．Moravian－Births 29；Marriages 9；Deaths 25. Wesleyans－Births 22；Marriages 0 ；Death 10．Total， Birth 715；Marriages 65；Deaths 132.

A statement of the Number of Slaves for whom Compensation has been claimed，and of the Number of Claims preferred for such compensation，and of the Amount of Compensations awarded in each of the classes of Prædial－attached，Prædial－unattached， and Non－Prædial．［Parliamentary Return to the House of Lords，March，1838．］

Number of Claims having reference to each Diviaion. Predial Attached, 99; Predial Unattached, 14; Non-predial, 259.
VII. Churches, Livings, \&sc. of Tobago in 1836.-2 Churches, 1 at Scarborough, in the parish of St. John, having a congregation generally of 300 persons. 1 at St. Paul; valued $£ 400$ per annum; having accommodation for about 500 persons.-There are also 2 chapels; 1 at Plymouth, which will contain about 400 persons; of whom 300 generally attend: 1 at Goldsbro; which will contain about 300 persons, 200 generally attend. There are likewise 5 dissenting places of worship. Note.-The congregation varies much at Scarhorough, and still more in the country, according to the state of the road and the weather, and the number of children to be baptized; at Scarborough, in absence of the rector, divine service is performed only twice in the month; at Plymouth once, at Goldsborough once; in fine weather the chapel at Plymouth is insufficient for the congregation. [B. B.]

There are besides the above, four private schools, one connected with the Moravians in Sandypoint; one with the Wesleyans in Scarboro'; another with the Wesleyans at Mr. St. George's, and a school at Mr. Pelier's estate, open to all, supported at the expence of the estate.

At Plymouth and Goldsbro', and Sandy Point, the scholars are generally apprenticed labourers on Sundays, and the children of apprenticed labourers on week days, about 15 apprenticed, belonging to Golden Grove Estate attend the school there in the evening; evening school is not yet kept at Plymouth and Goldsbro', for want of lamps; the number at Plymouth varies from 20 to 120 on Sundays. The estates in the neighbourhood have contributed $£ 40$ to the enlargement of Plymouth school. [B. B. for 1836.]
IX. Number of Prisoners in the Goals of Tobago throughout each year. [B. B.]

This return of produce is derived from the Exports as the Colonists refused to make any return to the Colonial Office. There are 72 sugar estates worked by steam, water, and wind mills.

Prices of Produce and Merchandize during 1836, in Tobago. -Horned Cattle 13l. each; Horses, 30l.;

Sheep, 1l. 4s.; Goats, 1l.; Swine, 1l. 5s.; Milk, 8d. per quart; Fresh Butter, 4s. per pound; Salt Butter, 2s. 6d.; Cheese, 1s. do.; Wheat Bread, 4 d. do.; Beef, 9 d. do. ; Niutton, 1 s. do. ; Pork, 8d. do.; Rice, 1l. 12s. per cwt.; Coffee, 1s. per pound; Tea, 7s. do.; Sugar, $1 l .5 s$. per cwt; Salt, $6 s$. per bushel ; Wine, $50 l$. per pipe; Brandy, 8s. per gallon; Beer, 6l. per hdd.; Tohacco, 2l. 8s, per cwt.

Wages for Labour.-Domestics, 1l. 12s. per month; Prædial, 1s. 4d. per day; Trades, 4s. per day. [B. B.] There is no paper currency, and but little coin in the island.

Almost every kind of plant that growa on the Antilles, or on Trinidad, flourishes at Tobago. The orange, lemon, and guava, pomegranate, fig, and grape are in perfection; the two latter yield fruit twice a year, (if pruned three weeks after the fruit has been gathered) and all the culinary planta of Europe arrive at perfection. The cinnamon and pimento (some say also the nutmeg) trees grow wild in different parts of the island-and the cotton of Tobago is of excellent quality.

## CHAPTER IV.-GRENADA.

Section I. Grenada, the most southerly of the Antilles, is situated between the parallels of 12.20 and 11.58 N. Latitude. and 61.20 and 61.35 W. Long., nearly equi-distant from Tobago ( 60 miles ) and the nearest point of the continent of South America; its greatest length, N. and S. about 25 miles, (and at either extremity narrowing to a point)-in ita greatest breadth 12 , in circumference 50 miles, and containing about 80,000 acres.
II. Christopher Columbus, during his third voyage in 1498, discovered Grenadn, and found it fully oceupied by a warlike race, (the Charibs) among whom the Spaniards never attempted to form a settlement, and who remained for a century after in peaceable possesssion of their native home. In 1650 the French Governor of Martinique, Du Parquct, collected 200 hardy adventurers, for the purpose of seizing on the island, which from the manly character of the natives, was considered an enterprize of difficulty and danger.
The natives received and entertained the French with the utmost kindness and cordiality, who pretended to open a treaty with the chiefs of the Charibs for the purchase of the country; "some knives and halchets, and a large quantity of glass beads, besides two bottles of branily for the chief himself were given to the Charibs; and it was then asserted that the island was fairly ceded to the French nation, by the natives themselves, in lawful purchase I
Du Parquet thua established a colony in Grenada, built a fort for its protection, and left the government of the island to a kiusmani, named le Compte. Within eight months after this period we find a war of extermination carried on by the Frenels against the Charibs, Du Parquet, sent a rcinforcement of 300 men from Martinique, with orders to extirpate the natives alto. gether ; but Le Compte seems not to have wanted any Ineitement to acts of barbarity ; for Du Tertre admits that he had already proceeded to murder, without mercy, every Charib that fell into his hands-not sparing even tise women and children.

The manner in which the unfortunate aborigines
were destroyed may be judged of by a circumstance which Father Du Tertre relates of one expedition. ' Forty of 'the Charaibes were massacred on the spot. About forty others, who had escaped the sword, ran towards a precijice, from whence they cast themselves headlong into the sea, and miserably perished. A beautiful girl, of twelve or thirtcen years of age, who was taken alive, became the object of dispute hetween two of our officers, each of them claiming her as his prize; a third coming up put an end to the contest, by shooting the girl through the head. The place from which these barbarians threw themselves into the sea, has been called ever since le Morne de Santcurs, (Leapers' Hill.) Our people, having lost but one man in the expedition, proceeded in the next place to set fire to the cottages, and root up the provisions of the savages-and having destroyed or taken away every thing belonging to them, returned in high spirits.' No wonder that the whole native population was soon extirpated. Du Parquet sold the island to Count Cerillac for 30,000 crowns.
It may well be imagined that cultivation made but little progress. So late as 1700 the island contained no more than 251 whites and 525 blacks, who were employed on three plantations of sugar and fifty-two of indigo.

After the peace of Utrecht, the government of France began to turn its attention towards her West India possessions. Grenala, however, for many yeurs, partook less of its care than the rest. By a smuggling intercourse with the Dutch, the Gromudians changed their circumstnnces for the better-increased their unmbers-and a grent part of the country was settled. In 1762 Grenada and the Grenadines are said to have yielded ammaily, in clayed and muscovado sugar, a yuantity equai to about 11,000 hogsheads of musco. vado of fifteen cwt. each, and about 27,000 pounds of indigo.

Grenada aurrendered on copitulation in February, 1762 , and, with ita dependencies, was finaily ceded to Great Britnin, by the definitive treaty of I'mis, on the 10th of l'ebruury, 1763 -St. Lucia being restored it
the same time to France. favour of the inhabitants, the articles of capitulation as they would become, by $t$ Great Britain, they ahould privileges, and pay taxes, in His Majesty's subjects of $t$ Islands. Secondly, With were put on the same foo Canada-viz. liberty was $g$ according to the rites of th as the laws of Great Bri Such of the inhabitants of the island, should have libe montha allowed them to dis
A Legislative assembly and the Grenadians resisted per cent. duties. The Crow its claim, and the inhabita was joined before the judge Bench in England. The ca in Westminster-hall four seve mas Term, 1774, Lord Chi nounced judgment against quence was, that the duty not only in Grenada but al cent and Tobago.

On the 2nd. of July, 179 consisting of a fleet of twen ten frigates and 5000 troops the Count D'Estaing, appen town of St George : the w was composed of 90 men ot militia of the island, and 1.5 chant ships ; and its fortific of an entrenchment, which up round the summit of the trenchment the Count D'E day, at the head of 3000 of 1 led up in three columns, an fict and the loss of 300 men did so amall a body of men ngainst auch inequality of n (Lord Macartney) and the $r$ son immediately retired into of the harbour, which, howev being commanded by the $H$ guna of which, having been unspiked, were now turned break the l'rench opened a ba poundera against the walls o situation, the governor and alternative but an unconditi Count d'Estaing became mas
Grenada and the Grena Great Britain, with all the o the West Indies, (Tobago e pacification which took plac insurrection, fermented it Revolutionists, broke out Mn firully terminated until July tinuance of the disturlance vailed, and the most horrid m by the infatuated relels; wh vastation followed them; and of theit crucity and rapine coverel the flourishing state eujoyed.
List of Governors, Lieut..C held the Government of Gren the Culony to Great Britain, is
the same time to France. The chief stipulations in favour of the inhabitants, as well by the treaty as by the articles of capitulation, were these :-First, That as they would become, by their surrender, subjects of Great Britain, they should enjoy their properties and privileges, and pay taxes, in like manner as the rest of His Majesty's subjects of the other British Leeward Islands. Secondly, With respect to religion, they were put on the same footing as the inhabitants of Canada-viz. liberty was given them to exercise it according to the rites of the Romish Church, as far as the laws of Great Britain permitted. Thirdly, Such of the inhabitants of Grenada as chose to quit the island, should have liberty to do so, and eighteen months allowed them to dispose of their effects.
A Legislative assembly was granted by England, and the Grenadians resisted the imposition of the $4 \frac{7}{2}$ per cent. duties. The Crown, however, persisting in its claim, and the inhabitanta in opposing it, issue was joined before the judges of the Court of King's Bench in England. The case was elaborately argued in Westminster-hall four aeveral times; and in Michaelmas Term, 1774 , Lord Chief Justice Mansfield pronounced judgment against the Crown. The consequence was, that the duty in question was abolished not only in Grenadn but also in Dominica, St. Vincent and Tobago.

On the 2nd. of July, 1797, a French armament, consisting of a fleet of twenty-five ships of the line, ten frigates and 5000 troops, under the command of the Count D'Estaing, appeared off the harbour and town of St George : the whole force of the island was composed of 90 men of the 48 th regiment, 300 militia of the island, and 150 seamen from the merchant ships; and its fortifications consisted chicfly of an entrenchment, which had been hastily thrown up round the summit of the Hospital-hill. This entrenchment the Count D'Estaing invested the next day, at the head of 3000 of his best forces, which he led up in three columns, and, after a desperate conflict and the loss of 300 men carried the lines. Never did 80 small a body of men make a nobler defence ngainst such inequality of numbers. The governor (Lord Macartney) and the remains of his little garrison immediately retired into the old fort at the mouth of the harbour, which, however, was wholly untenable, being commanded by the Hospital-hill battery, the guns of which, having been most unfortunately left unspiked, were now turned against them. At day break the lirench opened a battery of two twenty-four pounders against the walls of the old fort. In this situation, the governor and the inhabitants had no alternative but an unconditional surrender; and the Count d'Estaing became master of the island.

Grenada and the Grenadines were restored to Great Britain, with all the other captured islands in the West Indies, (Tobago excepted) by the general pacification which took place in 1783, In 1795 an lisurrection, fermented it was said by the French Revolutionists, broke out March 1795, which was not finally terminated until July 1796. During the continuance of the disturbance the grentest distress prevailed, and the most horrid murders were perpetrated by the inlatuated rebels; wherever they appenred de. vastation followed them; and from the direful effects of thei cruelty ind rapine Grenada has never recoverel the flourishing state which it had previously enjoyed.

List of Governors, Lieut.-Governors, \&c, who have held the Government of Grenada, since the cession of the Culony to Great Britain, in the year $1763:-$ Brig.-

Gen. Robert Melville, Capt.-Gen. Commander-inChief in and over the southern Charibbee Islands of Grenada, Dominica, St. Vincent, and Tobago, 1764 ; Ulysses Fitzmaurice, Sen. Lieut.-Governor of St. Vincent, 1768 ; Brig.-Gen. R. Melville, again, 1770 ; F. Corsar, Esq. President, 1771 ; U. Fitzmaurice, Lieut.-Gov. of St. Vincent, again, 1771 ; Brig.-Gen. W. Leybourne, Gov. S. C. Islands, 1771 ; F. Corsar, Esq. President again, 1775 ; W. Young, Lieut.-Gov. Tobago, 1775; Sir G. (afterwards Lord) Macartney, K. B. Gov. 1776; Lieut.-Gen. E. Matthew, Gov. 1784 ; W. Lucas, Fsq. Pres. 1785 ; S. Williams, Esq. Pres. 1787; J. Campbell, Esq. Pres. 1788; S. Williams, Esq. again Pres. 1789 to 1793 ; N. Home, Esq. Lieut.Gov. 1793 ; K. M'Kenzie, Esq. Pres. 1795 ; S. Wil. liams, Esq. again Pres. 1795 ; A. Houston, Esq. Lieu.Gov. 1796 ; Col. C. Green, Gov. 1797 ; S. Mitchell, Esq. Pres. 1798 ; Rev. S. Dent, Pres. 1801; G. V. Hobart, Esq. Lieut.-Guv. 1802; Rev. S. Dent, again Pres. 1802 ; Maj.-Gen. W. D. M'Lean Clephane, Lt.Gov. 1803 ; Rev. S. Dent, again Pres. 1803 ; A. C. Adye, Fsq. Pres. 1804 ; Brig.-Gen. F. Maitland, Gov. 1805 ; J. Harvey, Esq. Pres. 1807 ; A. C. Adye, Esq. again Pres. 1808 to 1809; Major-Gen. F. Maitland, Gov. 1810 ; A. C. Adye, Esq. again Pres. 1810 to 1811; Col. G. R. Ainslic, Vice-Gov. 1812 ; J. Harvey, Esq. Pres. 1813 ; Maj.-Gen. Sir C. Shipley, Gov. 1813 to 1815; G. Paterson, Esq. Pres. 1815; Maj. Gen. Phineas Riall, Gov. 1816; A. Houstoun, Esq. Pres. 1817 to 1819; Maj.-Gen. P. Riall, (resumed) Gov. 1821; G. Paterson, Esq. Pres. 1821 to 1823 ; Sir J. Campbell, K.C.B. Gov. 1826 to 1831 ; A. Houstoun, Fsip. Pres. 1829 ; F. Palmer, Esq. Pres. 1831.
III. The general aspect of Grenada is extremely lovely, but mountainous and picturesque; the interior and N. W. coast consist of successive piles of conical hills or continuous ridges, rounded in their outline, and covered with vast forest trees and brushwood; from N. to S . the island is traversed by one continued though irregular range, rising in some places to a very considerable elevation, often to 3,000 feet above the level of the sea, but everywhere accessible. From this chain, but particularly from one very re markable and magnificent spot in the centre of the island, N.E. of St. George's called the Grand Etang, numerous small rivers and streamlets have their souree irrigating the country in every direction. One of the most prominent features in this wild romantic district is Mount St. Catherine (Morne Michel) which, clothed with a splendid vegetation, towers to an altitude of 3,200 feet above the occan level. Several mountain ridges extend from the great chain towards the winilward or S. E. side, forming rich and picturesque vallies, but nearly the whole of the windward coast from the $S$. termination of the range of mountains at Point Callevigny, about five miles from St. George, till it reaches the leeward boundary, loses the rugged and precipitous features and deep bold shore (as seen on the leeward side), and consists of a level alluvial plain with numerous eoral reefs.

The rivers, as before observel, are numerous, but not large ; the principal are those of Great Bucolet, Duguisne, and Antoine on the windward, and St. John's and Beau Sejour, on the leeward. Several hot clanlybeate and suiphurous springs exist, the former being the most numerous; one of these, at Annandale in St. George's parish, is very remarkable for its heat and strong metallic impregnation; the mercury rises to 86 , and since the carthquake of 1825 , both the temperature and impregnation have been very sensibly increased. A hot spring in St. Andrew's
parish emits considerable quantities of carhonic acid gas, possessing analogons qualities to the famous grotto del cane : it contains iron and lime, and possesses a atrong petrifactive quality. Some of the warm sulphurous springs in the hilly parishes of St. Mark and St. John's are hot enough to boil an egg. Near the centre of the island, at an elevation of 1,740 feet, amidst the mountain acencry, is situate the Grand Etang, an almost perfectly circular fres'ı water lake, two mile and a half in circumference, and fourteen feet deep, with a bottom composed of a super. stratum of soft mud, arising from decayed vegetable substances, (especially Loti, which grow in great profusion around the margin, over a light cold argillaceous bed). Around this singular lake is a superb sylvan amphitheatre of mountains, clothed in all the verdant grandeur of a tropical forest. Another lake (Antoine) of nearly similar size, (covering sixty English acres), and form, is situated on the E. coast only half a mile from the sea, and but 43 feet above its level. It is about 50 feet in depth, having no communication with the sea, constantly increasing towards the centre, in the shape of an inverted hollow cone, and increasing in size for the last sixty years: from these circumstances, and the formation of roeks, and the quantity of scorie found near its brink, there is every reason to suppose it the crater of an exhausted voleano. The inhabitants state that there are subterraneous communications between this lake and different parts of the islami, and that during the great eruption of the Souffriere in St. Vincent, in 1812, the waters of Lake Antoine were not only in continual agitation and undulation, but that considerable quantities of lava and suljhur were thrown upon the surface of the water from beneath. On the $S$. shore, near Point Salinc, there are extensive salt pouls.

This island is divided into six parishes or districts, Sts. Patrick, Andrew, John, Mark, David und George. The three first named are the least mountainous, and the most productive in sugar, cocoa and coffee. St. John and Mark are momitainous; and the two latter named rather less so. St, George contains the capital of that name, and the fortifications and military posts of Richmond Hill, Fort King George, Hospital Hill. and Cardigan Heights; it is also the chief scaport, the residence of the Guvernor, and the station of the Courts of Judicature, \&c. The district is situate on the $S$. and W. part of the island embracing 26 square miles, and extending along the King's high-roadll miles and 28 chains from the river Douce to the river Cliemin. It has 28 sugar estates, 20 coffee acttlements and eight coffee plantations. The population of the capital and parish ia about 10,000 . St. Dar'id's lies towards the S. E., and forms aeverui points and some bays capable of receiving small craft; it extends from the river Chemin to the river Crochu nine miles and 50 chains along the King's high road, and contains 12 sugar and several provision estates. SI. Anilreu's, situate on the E. aide, extends from the river Crochn to the river Antoine, 11 miles and 66 chains along the high-road, it comprises the town and port of Grenville, formerly called La Baye, and contains 37 sugar plantaciuns, and cight coffee and cocon settlements. St. Patrick, situate on the N. E., containing 16 square miles, extends nine miles and 44 chains atong the ligh road, from the river Antoine to the river Duguesne. In this parish is the town of St. Patrick, formerly, and now known by the name of Santenrs; it contains 26 of the richest sugar plantations ind he island.. St. Mark, the smallest and least considerable
in the island, is situate on the N. W. extending four miles and 43 chains along the high-road, from the river Duguesne to the river Maran, which separates it on the $S$. side, from the parish of St. John. St. John's, on the W. side, extends from the river Maran, to the river Douce, six miles and 36 chains; Charlotte town is situate in this parish, whiel is the next in magnitude and population to the town of St. George. It contains sixteen sugar estates, and eleven cocoa and coffee settlements. St. Georire, the capital, is situate within an amphitheatre of hills. Were it not for the military works on Richmond Hill, which are seen at a great distanee, it would be difficult to ascertain from the sea where George Town and harbour are placed, but on appronching the base of the fortified hills an opening is discerned into a spacious and excellent harbour. The houses are well and tastefully built of atone or brick, with sashed windows and tiled roofs, with the streets well ventilated, and a spacious handsome aquare in the centre, and the shops equal to many in London. The town is divided into upper and lower, the latter or carenage, being principally occupied with stores, ship-yards and wharis. The streets leading from the one to the other are extremely rugged and steep. Constitution Hill, leading to the market-place, is at an angle not far removed from the perpendicnlar. 'The carenage of Grenada is one of the best that can be conceived both for the convenience and securing of shipping; it is completely land-locked; there is a sufficient depth of water and good holding.ground; it is protected by the batteries on shore, and it is exempt from hurricanes. The harbour is said to he capable of containing 1,000 ships, of 350 tons each secure from storms. The military posta and works under the controul of the Ordnance Department, consist of Fort George', and its citadel, which protects the anchorage in in the Bay, defends the entrance into the harhour, and commands the 'lown. Ilospital HillA position to the $N$. of the town, fortified by three redonbts which lefend the approaches from that direction and overlook Fort St. Gcorge. Richmond Hill, a chain of forts to the E. in rear of Fort George, viz., Fort Mathenc, Fort Frederick and its citadel, Fort Lucas, Fort Alolphus, and Cardigan Buff, which defend the approaches to the town from the E. and $S$. and also from the town to Richmond Hill.

The following public work was commenced in 1836: Water Works for supplying the Town of St. George, the water rising in the glehe land commonly called the Priest's Spring, hrought in cast iron pipes to town, the shipping to be supplied at l'rince's Wharf, and the inlabitants by branch cast iron pipes, atreet wells, and fountain at the market-square, with a reservoir at the spring heads, and a rescrve cistern near the long room. The estimated expense is $4,600 l$. currency, or $1,8.10 l$. sterling. The amount of expenditure up to the present date is about 600l. sterling. The work is in an advanced state, the main pipe laid, the ahipping recelving supply, and wells supply the inhabitants on the caremage side of the town, on 31st December 18:36. [13. 13. p. 51.]

The population consists of 4,000 . of whom 320 are whites, and 2,000 free colonred. The depeniencies of Grenada are, the island of Carriacou, and such of the snitithislantla called Grenadines, as lay hetween it and Grenada. Curriacon constitutes a parish, containing, according to estimate, 6,913 acres of lanil ; it is about 19 miles in circumference. In the town of Hillshorough is a church and rectory. The lsland is, in general, fertile, and well-ciltivated.

Cotton was formeriy the chief article of cultiva.

## GRENA

tion, and about $1,000,000$ Eight of the principal estat sugar; and the average pro good season, is upwards of 2 is, however, greatly exposed which mars the best efforts cause of this calamity is suf wood, which has gradually out proper means having b planting.

1V. The geology of the Simpson in his Report to th is very complicated and irreg different parts of the low la been examined, consist of s portions of red and grey irregular alternations of hom schist, and a variety of gneis Richmond Hill) an imperfe nodules of the same, interbed sandstone are frequently ine argillaceous schist; a very sometimes seen ; immediatel on the estate of Mount Parna and a quarry was at one tim jurposes. Basaltic rocks at coast, and it is said magnes Point Salines (the extremit carth, of the very fiuest abundance; and at La Furt l'atrick, numerous apecimen sulphur in its native state, almost every where met with. that the great mass of mount greywacke, hornblende, anda stratification is so diversitio country so rugged and abru any regnlar definition. In zontal, in another vertical, a suddenly and abruptly interso pearing as if they had been 3 gled together by some grea One remarkable cliff on th one mile and a hulf from a curions arrangement, whi clined to ascribe to volean under the soil is a stratum of succeeds one of iron pyrit prisms), then one of alluvi one of hrown sanulstone ; i vated situntions, the strata merous, and more regular; it ment Honse, (not more tha running from S. E. to N. W with the horizon, at least 60 grey, and brown sandstone sand and gravel, and near alluvial soil. The bed of point of the island is compos or a species of coralline, but servable on the surface of th found in any of these format stone of Girmil MIIl and Cal St. George (which is much thickly studded with beautif of iron; and i: the Callevi remains, such as the leaves an unconmon. Neither the san perfect species of granite fou The soil varies with the exter try ; in the low iands, consi
tion，and about $1,000,000 \mathrm{lbs}$ ．annually exported． Eight of the principal estates are now cultivated in sugar；and the average produce of that article in a good season，is upwards of $2,000,000 \mathrm{lbs}$ ．The island is，however，greatly exposed to suffer from droughts， which mars the best efforts of industry．The chief cause of this calamity is supposed to be the want of wood，which has gradually become exhausted，with－ out proper means having been used to renew it by planting．

IV．The geology of the island，（aceording to Dr ． Simpson in his Report to the Army Medical Board， is very complicated and irregular ；the mountains，and different parts of the low lands，so far as they have been examined，consist of strata，or rather mingled portions of red and grey sandstone，greywacke， irregular alternations of hurnblende，hard argillaccous schist，and a variety of gneiss．In various spots（as at Richmond Hill）an imperfect species of granite，or nodules of the same，interbedded in a coarse loose red sandstone are frequently met with，and sometimes in argillaceous sclist；a very coarse porphyry is also sometimes seen ；immediately behind Richmond Hill， on the estate of Mount Parnassus，limestone is found， and a quarry was at one time worked for agricultural purposes．Basaltic rocks are met with on the N．W． coast，and it is said magnesian limestone also．At Point Salines（the extremity of the island）fuller＇s enth，of the very fincst quality，is procurable in abundance；and at La Fortune，in the parish of St． Patrick，numerous specimens of the nutural magnet； sulphar in its native state，but not crystallised，is almost cverywhere met with．In fine，it may be said that the great mass of mountains consist of sandstone， greywncke，hornblende，andargillaccous sehist，but the stratification is so diversified，and the lace of the country so rugged and abrupt，as to bid defiance to any regular definition．In one place they are hori－ zontal，in another vertical，and in almost all they are suddenly and abruptly intersected by euch other－ap－ peariug as if they had been separated mud again min－ gled together by some great convulsion of nature． One remarkable elitr on the river St．John，about one mile and n half from St．George＇s presents a curious arrangement，which Dr．Simpson is in－ elined to ascribe to voleanic origin；immediately under the soil is a stratum of pudding－stone－to that succeeds one of iron pyrites，（exhihiting regular prisms），then one of alluvial formation，and lastly one of trown samulstone；in some of the less cle－ vated situations，the strata are extremely thin，nu－ merous，and more regular ；in one cliff near Govern－ ment House，（not more than 25 feet high，）nre seen ruming from S．E．to N．W．，at a very obtuse angle with the horizon，at least 60 distinet strata of white， grey，and brown sandstone，altermating with loose sand and gravel，and near the surface mixed with alluvial soil．The bed of the sea on the S．IV point of the island is composed of phosphate of lime or a species of coralline，but its eflects are not ob－ servalile on the surface of the water．No shells are found in any of these formations；but the rell sand－ stone of Grimd Mill and Callerigny，in the parish of St．George（whieh is much used for building），is thickly studded with benutiful chrystals of carburet of iron；and ia the Callevigny sundstone vegetable remains，such as the leaves and stalks of trees，are not uncommon．Neither the sandstone，nor the very im－ perfect sjueeies of granite found eflervesce with aelds． The soil varies with the extermal lentures of the comm－ try；in the low lands，consisting of rich black mould
in a substratum of light－coloured clay，while in the high and central situations the soil is of a dingy red or brick colour．
V．Locality，as may be supposed，influences mate－ rially the temperature and health of Grenada； 82 F．may be considered the medium heat throughout the ycar in the low country；but in the high landa the mercury，whieh at St．George，stands at 86，will be 10 degrees lower at the Grand Etarig at the same moment．The quantity of rain which falls is very considerable，and throughout the year showers are frequent ：hurricanes are comparatively mild and un－ frequent，but earthquakes，or shocks，are sometimes felt．The climate is much improved in common with the whole of the West Indies of late years．

Rain Gauge，Belle Vue，Parish of St．Andrew．

In order to extend the blessings of religion as generally as possible, under all the disadvantages we are placed in, the missionary makes regular rounds of pascoral visits to the several parishes in due order. Upon
1500 these visits the greater part of the Sabbath is occupied in in. 1500 culcating religious instruction amongst thenumerous attendants
900 who consist almost wholly of apprenticed labourers. The hearcrs
are taught to repeat the Ap. creed, the commandments, and other elementary prayers by heart, before and after the celebration of the liturgy. Then iminediately follows a sermon, which is delivered both in English and French, inculcating the inoral precepts of the gospel. After the sermon, one hour is devoted to catechetical teaching, in which the pastor is assisted by competent members of the congregation. Finally, the religious duties close by the performance of the baptisms and marriages.

The number of baptisms during the year was 374, the great majority of persons baptized being the children of apprentices. The number of marriages was 37, of which 27 took place amongst the appren. tices. With regard to marriages, the R.C. pastor
deems it right to observe that there is no doubt it would tend much to facilitate and encourage the inerease of marriages amungst the apprentices, if a law was passed empowering the clergy of the different denominations to administer the marriage rite to the members of their congregations respectively.

Even though Roman catholic priests can now perform this rite legally, still it does not secure civil rights to the parties ; and Roman catholics are conseouently obliged to have their marriages solemnized both by the rectors of the established chureh and their own pastors, which operates as no small obstacle to the general reception of this religious rite, which is one of the best promoters and supporters of all moral fecling. [B. B. for 1836.]

* There are eight private sciools. There are also twelve estate schools, one other private school, and a Sunday school. $\quad+$ At present there are no day schools established in Carriacou.
$\ddagger$ There are here two private schools. There is rcgularly a Sunday in the Presbytery open to all classes, and Sunday schools would be opened in every parish if there were some means.
X. The people are ruled by a Lieutenant-Governor, Council and House of Assembly, whose powers are similar to those described under Jamaica, \&c. The Council consists of 9 members, and the Assembly of 27. A frechold, or life estate of 50 acres in the country, and of $50 l$. house rent in the capital, qualifies for a representative. An estate of ten acres in fee, or for lifc, or a rent of 106 . in any of the country towns; and a rent of $20 \%$. out of any frcehold, or life estate in the capital, gives a vote in the election of the representatives. The law courts, besides those of Chancery, in which the Governor presides, are the Court of Grand Session of the Peace, held twice a year, in which the person first named in the commission of the peace presides; the Court of Common Pleas, in which a professional judge, with a salary of 600\%. presides; the Court of Exchequer, lately fallen into disuse ; the Court of Admiralty, and the Court of lerror, composed of the governor and council, for trying appeals. In all cases the common statue law of England is the rule of justice, unless when particular laws of the island interlere.

The Revenue of Grenada for 1836 as regards internal taxes and levies on property, was as follows :Fixed taxes raised pei inoncy bill, viz. on 3750 unattached apprentices at 3s. 4 il. $=625 l . . ; 338$ saddlehorses and mules at 29s. 4tl. $=495 l$.; 18696l. rents of houses at $2 \frac{1}{4}$ per cent, $=421 \mathrm{l}$. $20,369,805$ lbs. sugar, valued at 162,9581 ; 733,087 gallons of rum, $32,582 l$. ; 238,183 gallons of molasses, $7939 l$. 13,714 lbs . of coffee, $457 l . ; 215,567 \mathrm{lbs}$. of cocoa, $2,395 \mathrm{l}$. ; 43,84 lhs. of cotton, $731 l$.; total, $207,062 l$. Taxed at $2 \&$ per cent. 4659l. Total out of 7,017l. fixed revenue, $6,200 l$.
There are seven regiments of Militia, viz:-St. Genrge's consisting of 21 Officers anl 389 NonCommissioned Officers and Privates. St. John's,

14 Officers and 108 Non Com. Officers and Privates. St. Patrick, 14 Officers and 70 Non Com. Officers and Privates. St. Andrews, 15 Officers and 94 Non Com. Officers and Privates. St. David, 15 Officers and 68 Non Com. Officers and Privates. Carriacou, 11 Officers and 68 Non Com. Officers and Privates. Troop of Light Dragoons, 7 Officers and 29 Non Com. Officers and Privates; Total 97 Officers and 826 Non Com. Officers and Privates. The Militia meet for exercise oncc a month. They retain possession of their arms and accoutrements, and in case of attack or alarm, would at once assemble by regiments, in their different parishes, and be available in aid of the regitar troops. The Island Treasurer has charge of the ammunition, which is dcposited in a magazine, in the principal town. From him Commanding Officers of regiments receive their supplics half yearly, retaining always a sufficient quantity for any emergency. The arms and accoutrements are in good order. [B. B. for 1836 .]
XI. Colonial taxes and duties, (payable at the Treasury, by virtue of acts of the legislature), are levied oll all wines imported, (wines for the use of her Majesty's service excepted), per pipe, 3l. 6s. In bottles per dozen, $2 s .3 \mathrm{~d}$. on all brandy and gin, per gallon, 18s.; on each and every saddle horse, or mule, $3 l$. 6 s. for evcry $100 l$. of actual rent of houses, stores, buildings, and sheds, (not used in the manufacture of produce, ) or of the estimated rental thereof, when occupied by the proprictor, $3 f$.; on each and every slave, $18 s$; on every $100 \%$. value of produce, grown or manufactured in the year 1831, estimated as follows:Muscovado sugar at 40 s , per 100 lbs ; Rum, 2 s , per gallon; Molasses, 1s. 6d. do.; Cotton, 6d. per lb.; Coffee, 1s. do.; Cocoa, 4d. do.; 3l. per cent.; Harbour duty on all vessels clearing, per ton, $4 d$.; canal duty on all vessels clearing, per ton, $2 d$.

Paid by the Colony in Sterling Money in 1836. [B. B.]-Civil Establishment, 2,605l. ; Judicial Establishment, 2,732l.; Ecclesiastical Establishment, 1,880l.; Miscellaneous Expenditure, 7,128l. ; Pensions, 264l.; Military Disbursements, 287l.; Total 14,896l.

Commissariat Deparlment.-Provisions and Forage received from England 2,490l.; purchased in the Command, $3,454 l$. ; amount in Pounds sterling, 5,944l.; Fuel and Light received from England, 142l.; purchased in the Command, 412l.; amount in pounds sterling, $554 l$.

Miscellaneous Purchases. - Transport, 120l.; Pay of extra Staff, (including under the head of Ordinaries, from 1st of April 1836, the payments for the Commissariat and Ordnance excepted) 175l.; Military allowances, 599l.; Special Services, 58l.; Contingen. cies, 77l.; Ordnance, 2,823l.; Ordinaries, 7,186i.; Pay of Commissariat Officers, $513 l$. ; Total $18,050 l$.

Deduct Re.payments, - Commissariat, 320l.; Ordnance, 275l.; Total 595. Net charge 17,455l.

Ordnance.-Military Works, 526l.; Barracks, 723l.; Total 1249l. incurred by Great Britain. [B.B. for 36 , page 46$]$.
XII. In 1776 the exports from the island and its dependencies were $14,012,157 \mathrm{lbs}$, of muscovado, and $9,273,607 \mathrm{lbs}$. of clayed sugar ; 818,700 gallons of rum ; 1,827,166 lbs. of coffec; 457,719 lbs. of cocoa; $91,943 \mathrm{lbs}$. of cotton; $27,638 \mathrm{lbs}$. of indigo; and some smaller articles, the whole of which at a moderate computation was worth at the ports of shipping, $600,000 l$. sterling. The sugar was the produce of one hundred and six plantstions, worked by 18,293 negroes, which gives rather more than a hogshead of muscovado sugar of 16 cwt . from the labour of each negro; a return, which Mr. Edwards affirms to be unequal to any other British island in the West Indies, except St. Christopher'a. In 1787 the exports were 175,548 cwts. of sugar ; 670,390 gallons of rum; $8,812 \mathrm{cwts}$. of coffee ; $2,062,427 \mathrm{lbs}$. of cotton, and $2,810 \mathrm{lbs}$. of indigo. In 1831 the principal articles of cxport were, sugar, $11,908 \mathrm{hgds}$. ; rum, 6,634 pchs.; molasses, 2,464 phs. ; coffee, 6,103 bags. Total value of exporls, 118,761l.; of imports, 81,8351 . In 1836, exports, $216,125 l$.; inports, $145,950 l$.

A Joe, value 31 . 12s., has a G. stamped in the middie of the face side. A Joe, value $33.6 d$., has a $G$. stamped in three places near the edge of the face side. When a Joe ls plugged, the initials of the workman's name are stamped upon the plug.

The British and Solonial currency, established by proclamation in May, 1797, consisting of British half. crown, 6 s .3 d. ; shilling, 2 s .6 d. ; sixpenee, 1 s .3 d. ; Colonial Moneta, marked IV, 2s. 6d.; VIII, 1s. 3d.; XVI. $7 \frac{1}{2} d$. No paper eurrency. The coin in circulation estimated at $50,000 l$.
XIV. In 1700, more than twenty years after the sovereignty had been vested in the crown of France, there were found on the whole island only 64 horses, 569 horned cattle, three plantations of sugar, and 52 of indigo. About 14 years afterwards, however, an active commercial intercourse was opened with the island of Martinique, cultivation was rapidly extended, and notwithstanding the interruption which these improvements sustained by the war in 1744, Grenada was found in 1753 to contain 2,298 horses or mules, 2,556 horned cattle, 3,278 sheep, 902 goats, 331 hogs, 83 sugar plantations, \&c. ; and in 1762, when it surrendered to the British arms, it is said to have yielded annually, together with its dependencies, the Grenadines, a quantity of clay and Muscovado sugar, equal to 11,000 hogsheads, of 15 cwt. each, and $27,000 \mathrm{lbs}$. of indigo.

Produce made in Grenada and the Grenadines in 1830.

Average prices throughout the year. Horned cattle, 8l. each; horses, $24 l$. ; sheep, 11.10 s ; goats, 15s.; swine, $11.5 s$; milk, $4 d$. per quart; Iresh butter, 2 s . $6 d$. per lb.; salt butter, $4 l$. per firkin; checse, 1 s . 3 d . per lb.; wheaten brcad, $4 d$.; beef, $8 d$.; mutton, $9 . l$.; pork, $6 d$. ; rice, $16.5 s$. per 100 lbs ; coffee, 9 d . per lb .; tea, 6 s. ; sugar, refined, $8 d$.; salt, 2s. per bushel; wine, Madcira, first quality, 55l. per pipe; lrandy, $8 s$. per gallon; beer, $5 l .5 s$. per hogshead; tobacco, 2t. 10s. per 100 lbs.

Wages for Labour.-Domestic, 1l. 5s. per month ; prædial, $1 l .5 s$. ; trades, $2 l$. [B. B.]

Commencing with the year antecedent to the abolition of slavery, we have the amount of the chief staple commodity of the colony-sugar-as returned into the Treasurer's office, as follows, viz.-1×33. $24,554,638 \mathrm{lbs} .1834 .22,577,543 \mathrm{lbs} .1835 .20$, 249,188 lbs. 1336. 19,051,563 lbs. 1837. 18,811,371
lbs. This diminution has been gradual, and in five years amounts to $5,743,267 \mathrm{lbs}$., equal to one-fourth nearly of the crop made in 1833. It must be admitted that the previous effects of the cane-fly have had some Influence in the falling off ; but it must also be borne in mind that $\ln 1833$ and 1834, the blast was at its height, and that it was gradually disappearing in 1835 and 1836; yet the reduction continues, for the crop of the latter falls off $1,197,625 \mathrm{lbs}$. The rum and molasses, made in the same years, we quote from the same source, as follows, viz. - 1833. 814,046 gallons of rum, 491,058 gallona of molasses. 1834. 814,299 rum, 392,273 molasses. 1835. 749,735 rum, 226,101 molasses. $1836.516,958$ rum, 160,178 molasses. 1837. 670,761 rum, 223,968 molasses. Exhibiting a difference on rum of upwards of one third, and on molasses three-fourths, comparing the years 1833 and 1837.-Grenada Free Press.

## CHAPTER V.-ST. VINCENT.

Section 1. This most beautiful of the Caribbee Islands, about $18 \frac{1}{2}$ miles long, and 11 broad, containing 84,286 acres, is situate in 13.10.15. N. Lat.; 60. 37. 57. W. Long, nearly equidistant from Grenada and Barbadoes.
II. St. Vincent was discovered by Columbus, during his third voyage, on the 22d day of January, 1498, [St. Vincent's day in the Spanish calendar]; but it does not appear that he took any formal possession of it ; the native inhabitants, the Caribs, being very numerous and warlike. In 1672, this island, with Barbadoes, St. Lucia, and Dominica, was included in one government, by King Charles II., although no steps were taken to occupy St. Vincent, unless occasional visits, both by English and French, for the purpose of obtaining wood and water, may be deemed such. About 1675, a ship from Guinea, with a cargo of slaves, was wrecked, either on this island or on $\mathrm{Be}-$ quia, and a number of the negroes escaped into the woods; these intermingled with the natives, and hence, as it is supposed, originated the black Caribs. In 1719, the French sent over some settlers from Martinico, a few of whom succeeded in establishing themselves in the leeward part of the island. In 1723, George I. granted this island and St. Lucia to the Duke of Montague, who made a feeble attempt to take possession of it, but his expedition failed; and, by the treaty of Aix-la-Chapelle, in 1748, it was declared ncutral, and the ancient proprietors left in unmolested possession. The French, however, continued in their settlements until 1762, when it was taken by General Monkton and Admiral Rodney; and in 1763, by the peace of Paris, the island was ceded in perpetuity to Great Britain, without much consideration for the native proprictors. The lands were directed to be sold to defray the expenses of the war, and 20,538 acres produced 162,5841 . sterling. In 1772, a war with the Caribs commenced, which was terminated by a treaty in 1773, when certain lands were allotted them. In 1779, the island was taken by a small body of troops from Martinico, who were joined by the Caribs, which circumstance, coupled with unfortunate political differences, caused the surrender to be made without a struggle. The con-
querors, however, made no alteration in the government, probably contemplating only a temporary possession. In 1780 the drcadful hurricane occurred, which destroyed the church, and a great proportion of the buildings in the island, besides occasioning serious loss to the planters. St. Vincent was restored to Great Britain at the general peace in 1783; at which time it contained 61 sugar estates, besides other small plantations of cotton, coffee, and cocoa. In 1795, the doctrines of liberty and equallty, which prevailed in France, were disseminated in the West India Islands, through the infernal agency of Victor Hugues, whose emissarics excited the Caribs, and some of the French inhabitants, into an insurrection, which continued for upwards of two years. Many sanguinary contests took place, with various auccess, which cannot be detailed within the limits of this work ; but, ultimately hy the judicious measures of Sir Ralph Abercrombie, and General Hunter, the French were subdued, and the Caribs removed to Ruattan, an island in the Bay of Honduras. The devastation occasioned by the enemy, cost the proprietors, at least onc-third of the value of their properties; but uninterrupted tranquillity has since pre. vailed, and the fine tract of land in Charlotte parish, called the Carib country, consisting of 5,000 acres, has been put into cultivation, and greatly increased the prosperity of the island.

In 1812, the island suffered from an eruption of the Souffriere volcanic mountain, which had been tranquil for ncarly a century (from 1718.) It was about 3,000 feet high, with a crater half a mile in diameter, and 500 feet in depth; in the centre was a conical hill, 200 feet in diameter, and 300 in height, the lower half skirted with luxuriant vegetation, the upper with pure virgin sulphur; various evergreens, and aromatic shrubs, covered in exuberant fertility, the sides of the capacious crater, the interior of which presented a scene of Alpine seclusion and peacefulness that can scarcely be imagined. From the fissures of the cone, a thin white smoke exuded, occasionally tinged with a light blue flame; at the base were two small lakes, the one sulphureous and aluminous, the other pure and tastcless. At noon, on the

27th of Aprii, 30 days afte Carraccas, by an earthquake tions in the vallies of the M a severe concussion of the black column of smoke burs was followed by volumes of for three days. [See Col. L
The following is a list Governors, \&c. who have ment of St. Vincent, since to Great Britain, in 1763:-Capt.-Gen. and Gov.-In-Chie Charibbee Islands of St. Vin and Tobago, 1763 ; Brig.-Ge of the Southern Charibbee V. Morris, Esq. Gov. 1776 1783 ; J. Seton, Esq. Gov. Gov. 1798 ; D. Ottley, Esq. tinck, Esq. Pres. 1805 ; Sir 1806; R. Paul, Esq. Pres. Knight, Gov. 1812; R. Pa C. Brisbane, K.C. B. Gov. Knight, Pres. 1829; Right Gov. 1831; Capt. Gcorge T III. The mountains of St . and abrupt in their termin vening romantic glens, and rocky coast. Mr. Shephard thinks, is de strata which have undergo visible everywhere, and $h$ placed from their origina powerful agency which a such a change; there is $n$ island, an opinion which is trees and other substance vered in large masses of ro which must at one time ha a remarkable instance is at Grand Sable.
The famed botanic gards ston, occupies 30 acres of oblong square, the lower $p$ a gradual ascent until it to beautiful mountain stream dary, near the upper part centre stands the Govern

27 th of April, 30 days after the destruction of the Carraccas, by an earthquake, and during the commotions in the vallies of the Missisippi and of the Ohiu, a severe concussion of the earth took place, and a black column of smoke burst from the crater, which was followed by volumes of favillæ, which continued for three days. [See Col. Lib. West Indies, vol. ii.]

The following is a list of the Governors, Lieut.Governors, \&c. who have administered the government of St. Vincent, since the cession of the colony to Great Britain, in 1763:-Brig.-Gen. R. Melville, Capt.-Gen. and Gov.-in-Chief in and over theSouthern Charibbee Islands of St. Vincent, Grenada, Dominica, and Tobago, 1763 ; Brig.-Gen. W. L. Leyborne, Gov. of the Southern Charibbee Islands, as above, 1771 ; V. Morris, Esq. Gov. 1776 ; E. Lincoln, Esq. Gov. 1783; J. Seton, Esq. Gov. 1787 ; W. Bentinck, Esq. Gov. 1798 ; D. Ottley, Esq. Pres. 1799; H. W. Bentinck, Esq. Pres. 1805 ; Sir G. Beckwith. K. B. Gov. 1806 ; R. Paul, Esq. Pres. 1807 ; Sir C. Brisbane, Knight, Gov. 1812; R. Paul, Esq. Pres. 1816; Sir C. Brisbane, K. C. B. Gov. 1817 ; Sir W. J. Struth, Knight, Pres. 1829; Right Hon. Sir G. F. Hill, Bart. Gov. 1831 ; Capt. George Tyler, K.H.,R.N., 1834.
III. The mountains of St. Vincent are bold, sharp, and abrupt in their terminations, with deep intervening romantic glens, and bound by a lofty and rocky coast. The connected chain of high mountains runa from N. to S., clothed with immense trees, breaking into subordinate masses towards the sea, of a less elevated description, and intersected by deep ravines in the interior, which gradually widen on the approach to the shore, and become vallies capable of cultivation, as they are generally well aupplied with water; this feature is principally descriptive of the north-western side of the island. The delicious Valley of Bucament is five miles long and one wide, entirely open to the sea, with lofty mountains at the upper part and sides-and throughout the vale a clear and rapid river. On the $N$. E. the surface is more level and less broken, and there is a large tract of land at the base of the Souffriere mountain, gradually declining towards the rea, which forms an extensive plain of upwards of 6,000 acres, and is the most productive land in the colony. The soil in the vallies is a rich tenacious loam, and occasionally a fine black mould; on the higher regions it assumes a more sandy character, and is less fertile; the lands adjoining the Souffriere are also clay at the bottom, but the surface having been covered with the aand ejected by the volcano, in 1812, it presents the feature of a loose porous superficies. The character of this island, Mr . Shephard thinks, is decidedly volcanic, traces of strata which have undergone the action of fire, are visible everywhere, and huge masses of rock, displaced from their original situations, indicate the powerful agency which alone could have eftected such a change; there is not a primitive rock in the island, an opinion which is aupported by branches of trees and other aubstances, being frequently discovered in large masses of rock at considerable depths, which must at one time have becn in a state of fusion ; a remarkable instance is to be seen at the tunnel at Grand Sable.

The famed botanic garden, about a mile from Kingston, occupies 30 acres of ground, in the form of an oblong square, the lower part level, but soon becoming a gradual ascent until it terminates in a steep hill, a beautiful mountain stream forming its northern boundary, near the upper part of the garden, and in the centre stands the Governor's house, commanding a
splendid view-immediately below, the capital of the island-in front of the deep blue sea, and the Grenadine isles-in the distance a magnificent vista, bounded on each side by a long and spacious avenue of lofty forest trees.

The roads on the windward coast are tolerably good for thirty miles, their track in gencral is near to the sea-side, except in cases of high land, when it is necessary to pass along the indentations of the vallies. On the leeward coast, for a distance of 23 miles, they are much inferior, the hills being much higher, the circuity of the track is proportionally increased; the latter are little frequented, the passage by sea in canoes being more easy and commodious. The highways are kept in repair by the proprietors of the estates who have adjoining portions allotted them by an Act of the Legislature, on which they are required to expend an estimated quantity of labour, and for which they are allowed a certain aum from the treasury, on a certificate from the Way-wardens of the parish, who are noininated by the Justices at the February Scssions in each year.
The island is divided into five parishes, St. George, Charlotte, St. Andrew, St. David, end St. Patrick. Within the first, stands the capital, Kingstown, which is situated in 13.8 N. Lat. 61.17 W . Long., near the S. W. extremity of the island, about a mile along the shore of a deep and beautiful bay protected by a battery on the S., or Cane Garden Point, and by Fort Charlotte on the N. W. which are the chief defences of the island. The fort (distant one mile from Kingstown, in a direct line, and two miles by the circuitousness of the road), is situated on a rock above the level of the sea, and well fortified, it contains barracks for 600 men , and has 34 pieces of artillery of different descriptions, besides several outworks, for the protection of detached buildings.

The road to Fort Charlotte is very steep-so much so, that in looking from the mess-room windows, the aea is seen perpendicularly below, with the Island of Becquia and the Grenadines in the distance;-Old Woman's Point, forming the opposite horn of the Bay of Kingstown and Dorsetshire Hill, about two miles of gradual ascent to windward from the town of Kingston, which it overlooks with an imposing aspect. The garrison was formerly stationed here, but latterly removed to the opposite promontory, as a more commanding site. Bcrkshire Hill, on which is placed Fort Charlotte, is a promontory or high projecting neck of land, overhanging the sea, and ncarly perpendicular on three of its sides. It completely commands the Town and Bay of Kingston, and can be easily aeparated from both should it be necessary to cut ofl the intcreourse.

The town, behind which the mountains gradually rise in a semi-circle, terminating at the greatest height in Mount St. Andrew, consists of three streets, intersected by six others. There are about 300 of the larger sized houses, the lower stories of which are in general built with stone or brick, and the upper of wood, with shingled roofs, while the close adjoining sugar plantations form (particularly when viewed from the harbour), a very beautiful prospect. The public buildings are substantial, but not elegant. The church is a large heavy brick building, capable of containing 2,000 persons, it has an excellently toned organ, a splendid chandelier, and very handsome pulpit, and bishop's throne. The expenses of this building, which was opened for divinc service in 1820 , amounted to upwards of $47,000 \%$. currency, of which Government contributed $5,000 l$. steriing, out of the
purchase money of the Carib lands. The old building was destroyed by the hurrricane in 1780 .

The Court house is built of stone, and contains two rooms on the upper story appropriated for the sittings of the Council and Assembly, with two Committeerooms; below the Courts of Justice are held. Here also are the Public Offices of the Registrar and the Marshal ; this building stands in front of the Market Place, and is inclosed with an iron railing; behind it the Gaol, the Cage, and the Trendmill are placed. In the front, clese to the sea-side, stand the MarketHouse, and the depot for the Militia Arms. The Wesleyan Missionarics have n commodious wooden Chapel, and the Romanists have commenced a brick Church.

St. George's parish extends from Kingstown N. to the river Jnmbou, and contains 9,337 acres of land in sugar estates; it has seven rivers capable of turning mills. The different ridges in this parish having been cleared of their wood by the earlier settlers, the clouds arc attracted by the more lofty mountains in the interior; and it has been decmed prudent to preserve the timber on an elevated situation, called the King's Hill, from future destruction, by an especial Act of the Legislature.

At three miles from Kingstown is the small town of Calliagua, consisting of 59 houses, and 400 inhabitants, its chicf attraction is the commodious harbour, and very convenient beach for shipping produce. There is a singularly insulated rock on the northwestern side, 260 fect above the level of the sca, on the top of which, Fort Duvernette is constructed; it ascended by a staircaze cut out of the solid stone. On Dorsetshire Hill there are barracks for troops, but in such a dilnpidated state, as not to be habitable. Some distance above Calliagua, towards the interior is the Vigic, (or look out) a very commanding situation. The different ridges are here concentrated into one elevation with three conical hills, where the Caribs fixed their camp. Eastward is the very extensive valley of Maniaqua, which has only one singular cleft, or opening, with almost perpendicular sides, through which the river Jambou flows to the sea. Some persons have conjectured that this valley is an exhau' ${ }^{\prime}$ d crater, which has bcen thus drained of its waters; the position is too low to mairitain this hypothesis, is the volcanic craters in all the Islands, ure situated on the most lofty mountrins.

Cherlotte Jarish is bounded on the S. by Saint George's, and northerly hy uncultivnble lands, it contains 11,849 acres in cultivation, ant? that prart of it called the Carib country, which was only partially settled in 1804, is the most productive in the ivland. The southern part consists of a portion of General Monckton's grant of 4000 acres, which he sold for $30,000 l$, sterling, and which was subsequently disposed of in lots by the speculators. This parish is so well supplied with rivers, notwithstanding several were absorbed at the time of the cruption of the Soulfice : that all the mills are worked by water; and the estates are generally larese then in the other parishes. A tunnel goo feet lorg was cut through Mouni Foung, In 1813, whicin greatly improved the menns of commu. niention with the newly settled comintry: and a stupencious work was nfterwards undertaken by the owner of the Grand Snble estate, in eutting another tunnel through the same mountnin, lower down and nearer the sea, for the convenience of shipping the produce. The muterial to he perforated proved to be stone instead of terrass, as was expected-and 3 fio feet in length wore nccordingly biasted by
drilling in the solid rock, at an expense of about 5,000l. currency.

St. Andrew's Parish is the first on the leeward side adjoining the town, it contains 4,096 acres and the vallies being narrower, the estates are small and more compact, neither is it so well supplied with water, except in Bucament Valley, which is one of the most extensive and fertile in the island. In this parish is the small town of New Edinburgh, where the depot for the commissariat stores is erceted.

St. Patrick is the next in order, on the western coast, containing 5,426 acres, with the two small towns of Layou and Barouallie; here the land becomes much more precipitous and difficult of cultivation, and the fertility decreases.

The last is St. David's, containing 4,198 ncres, whose characteristic fcatures are the same as the preceling; in Washilabo Valley, and also at the $S$. point near to the entrance of Chatcaubclair Bay, are some finespecimens of basaltes; the vicinity of the Souffriere and other lofty mountains ensures the planters in this quarter plenty of rain, and the facilities of shipping produce, compared with the bold castern coast, are very great, and reduce the expense and risk of an estate considerably.
IV. The island stands high in reputation as a healthy stntion; hills and vallies, wood and water in abundance, arc so disposed as to contribute to its salubrity ; the hills being of a conical shape, there are no livid surfaccs of uncultivated shrubs to harbour minsm, and be swept down occasionally on the inhabitants below with destructive etfect. The vallies are not deep or filled with jungle and brushwood, impervious to the sun's rays, but the woods heing composed of large trees, and growing from the hase to the summit of the mountains, form an' agreeable shade, cooling the breeze as it passes through them. Composed as St. Vincent is, with sloping surfaces, and gravelly subsoil, there is hardly any tint ground in the island, and the perpetually flowing streams from the momntains and hills, while they tend to temper the air, make the general scene ever verdant and cheerful. Hurricanes have been severely felt in this island. On the morning of the IIth August, 1831, St. Vincent was visited by a severe gale of wind or hurricane, which did very great injury to the plantations on the N. and W. sides of the island, destroying the greater part of the sugar works, and other buildings in the beautiful vale of the Charnib country, to windwarll, as well as at Chatenubelair and other places in the leeward quarter. Nineteen vessels were driven on shore in Kingston hay, of which the greater part were got off in a few weeks, nnd seven others were totally wrecked in different parts of the government. The gale commenced in kingstown from the N. shortly after dnylight and went round to the N.W.; it then shilted to the S. W., and subsided about one o'elock, in the atternoon; but in other parts of the island it commenced much carlier, and its violence was much greater. 'The estimate of the losses, ns taken by the Comnittecs of the legislature, amounted to 163,4201 .

There are nt the disposnl of the Crown in St. Vincent, of land saleable and fit for inmediate colture nhout 2,500 neres in the N. S. quarter ; nt the N -nd about 500 ; at the N.W. 600; and in the interior of the parishes of St. Gcorge, St. Patrick, St. Andrew, end St. David, 500 ;-in all 4,100 , and as much more remotely situnted and difficult of access.
V. The following complete meteorological table though given for Kingstown in St. Vineont, wiil ennble the liuropean i"ter to form a general idea of the elimate of the Carnbee islands:-

The aborigines of the island were undoubtedy the yellow Caribs, probably emigrants from Guyana. When St. Vincent was visited by Europeans, two distinet races of men were discovered ; they were of different origins, and their appearances and manners plainly corresponded wiih those of different portions of the globe. One of these tribes had evidently descended from the aborigines of the island, those of the other tribe were evidently intruders, and the great difliculty consists in accounting tairly and fully for their introduction. It is supposed that about I 675 , a ship from Goinca carrying out negroes from that country for sale, foundered on the coast of liequia, a small island near to St. Vineent, and that the slaves who eseajed from the wreck were received by the inhabitants as brethren. But this was not all, the proprictors of the island gave their daughters in marringe to these strangers, and the race which sprang from this mixture were called Black Caribs, laving prescrved more of the primitive colour of their fathers, than the lighter hue of their mothers. The yellow Caribs are of a low stature, the black are tall and stout, and this doubly savage race speak with a degree of vehemence which scems like auger.

At length some difference arose between these two classes, of which the French in Martinico resolved to avail themselves, and as is asunl to profit by the ruin of both parties; but the smallness of the numbers sent against the Black Carils, and the defection of the Yellow Carils, who refused to supply such dangerous allies with miy of the succours which they had promised them to act against their rivals, together with the impossibility of coming up with enemies who kept themselves concealed in the woods, were eircomstances which combined to diseancert this rash and violent enterprize; the Gallic invaders were therefore forced to reimbark, nfter losing nuny valnable lives:-but the triumplis of the Black Caribs did not prevent their suing for peace, they even subsepomilly lavited the F'rach to come and live with then, swearing simere fremblaip: the proposal was aceepled, and in the gear 1719 many of the French
inhabitants of Martinico removed to St. Vincent. When the French came, they brought their slaves with them to clear and till the ground; the Black Caribs, shocked at the idea of resembling persons who are degraded by slavery, and fearing that in process of time their own colour, which betrayed their origin, might be inade a pretence for enslaving them, took refuge in the thickest part of the woods, and in order to create and perpetuate a visible distinction between their race and the slaves brought into the island, and likewise in imitation of the practice of the Vellow Caribs, they compressed, so as to flatten, the loreheads of all their new born infants, and this was thereafter coneluded as a token of their independence. The next generation thus hecame $s$ it were, a new race, they gradually quitted the woods, crected huts, and formed little commonitics on the coast; by degrees they claimed a portion of the territory possessed by the Caribs, and having learned the use of tire-arms, which they procured from the French traders, 0 , being refused a friendly participation in the landed property, established themselves as a separate tribo, elected a chief, re-commenced hostilities agninst the Yellow Caribs, and by force brought their adversaries to terms of accommodation, by which it was agreed to divide equally the lands situated on the lecward coast. It happened, however, after this division, that the Black Caribs experienced a most mortifying disappointment, for most of the new planters from Europe, and from the French settlements in the West Indics, landed and scttled near the Vellow Carils, where the coast is most accessible. This dechled jreference occasioned a new war, in which the Yellow Caribs were always defeated, and at length ohliged to retire to the windward part of the island, some lled to the Continent, and some to Tohago, the few that remaned lived separately from the blacks, who became the sole masters of ull the lands on the leeward shore, assumed the right of eonquerors, and ohliged the buropemo planters to re-purchase the lands, for which they had alrendy pad the Vellow Caribs. A Frenchman having produced to a Black C'arib Clisei a deed of

ST．VINCENT．－POPULATION．
land that he had purchased of a Yellow Carib，was told he did not know what the paper contained，but pointing to his own arrow，said if he did not give him the sum he demanded，he would set fire to，and burn down his house that very night．Shephard＇s St． Vincent．

While these differences were in progress，and while the French was gradually gaining a footing in the island，George the first granted it to the Duke of Montague，who in 1723，sent out a small armament to take possession，but the English on their arrival found the French influence under the appearance of protection so predominant，and the determination of the natives to admit no Europeans to a permanent settlement there so fixed，that they were glad to aban－ don their alleged proprietorships；and when the Duke，at a subscquent period endeavoured to es－ tablish his claim before the Privy Council it was disallowed．

Notwithstanding the difficulties created by the Caribs，
the French prevailed by means of continual reinforce－ ments of men and money，and superior skill in agrieul－ ture and commercial affairs；so that in less than 20 years， 8010 whites，and 3,000 black alaves，were employed in the cultivation of the commodities for exportation， which yielded a sum equal to $63,625 l$ ．sterling．The expedition which was sent against Martinico in 1762 ， under General Monckton and Admiral Rodney，subse． quently captured St．Vincent，and a war between the British and Caribs soon followed．The result of several severe contests was（as stated under the general history of the island）the final subjugation of the Yellow and Black Carilss，and their deportation to the number of 5,080 from the island to Ruattan in Hon．． duras Bay，after costing the colonists in expenses and losses $900,000 l$ ．sterling，and a considerable sacrifice of European life．

V1．The following ahews the population of St．Vin－ cent and its dependencies at several intervals：－

The Slave Population from 1817 to 1831 was ：－

* Thls is a return oniy for one prison, the others not being procurable.
+ No Returns for 1834 and 1835, and for 1833 only the last four inoaths of the year.
X. The Government of the Island, is in the Governor, Council and Assembly, the former is Chancellor, Ordinary and Vice Admiral. His dutics are regulated by instructions from Her Majesty, which arc said to have been originally framed in the time of Charles 11, for the Island of Jamaica, and have been adopted for the other Islands; to these may be added His Majesty's Proclamation of the 7th of October, 1763, which may be called the foundation of the insular constitution, by this authority the general assemblies are summoned, and the powers of enacting laws, as near as may be to the laws of England, are given, the authority for erecting Courts of Julicature, with the liberty of appeal, is also recognised in this document, which was promulgated after the treaty of Paris.
The Council consists of twelve Members, five or six of whom are usually named in the Governor's Commission, and the remainder supplied by the recommendation of the Governor, or by mandamus; five in number constitute a board, and when the original number is reduced to seven, the Governor has the power of nomination to supply the vacanries.
The council sit in two capacities, Privy and Jegislative, in the former the Governor presides, in the latter the senior member, under the title of President, on whom also the temporary Government devolves on the absence, or death of a Governor. Since the appointment of a Bishop, he has been sworn in exotticio a nember in Council in all the Islands composing his diocese, and where the dateof his appointment has preceded that of a Governor, he is also Ordinary.
The Assembly consist of nincteen members, three for each of the five parishes, two for the town of Kingstown, and the like number for the Grenadines ; the qualification of Members for the Parishes and Islands, is 50 acres of land in cultivation, or producing an income of $300 l$. currency a year, and for the town, a house of the ycarly value of 100 l. ; the titles of the eandidates to their property must appear to have been registered in the office twelve months, except in cases of wills, and conveyance of property exccuted in Great Britain. Electors must have a freehold of ten acres, or a house in Kingstown of twenty pounds yearly value, or of ten pounds elsewhere, registered in like manner. Elections take place under the authority of a writ issuing from the Governor and Council, on an application from the Speaker, to the Provost Marshal Gencral, and the whole regulations, on this subject, are preseribed by an Act of the Legislature, which passed in 1786; these three branches assimilate their proceedings as near as possible to those of Great Brtain; their meetings are quarterly, and the Acts that are passed proclaimed by the Marshal, and enrolled in the Registrar's Office. These Acts may be divided into three classes, the first temporary and purely colonial, which take effect immediately on their publication; the second, sueh as have a clause annexed suspending their operation until Her Majesty's pleasure be known ; and the third, the permanent jaws, which if not contirmed in two years from their enactment, are to be considered as disallowed. In strictness the Governor is not allowed to pass any law, repealing one which may have received the royal approhation, without a suspending clause; but this in the cases of the old laws, has been frequently overlooked. The Attorney-General has a salnry of 500l. currency per annum, which is in part given to him for lruming the bills, which may be required, but he is not obliged to introduce them to either house, und in considerable diflculty has fre-
quently occurred from the want of an accredited person, as the organ of Government, who might introduce the measures proposed by the crown through the Colonial Sccretary to either house. At present the Governor communicates by letters with the President and Speaker, but no member is intrusted with the charge of carrying any bills through the differcut stages prescribed by the Legisiature.
The supreme court for civil causes is called the Court of Queen's Bench and Common Pleas, where the Chief Justice presides; his salary is $2,000 \mathrm{l}$. currency. There are three other Assistant Justices, who are not professional persons, and act without any salary. This court holds its sittings for the trial of causes once in every month, from March to August, when exccutions for debt can be obtained in about ten weeks, from the entering day. The proceedings are regulated by a Court Act. The Court of Sessions for the trial of criminal offences is held twice a year. The Chief Justice is President, and the Members of Council and Judges sit according to seniority. The Court of Error for appcals from the Qucen's Bench and Common Pleas, is composed of the Governor and Council. The Governor is also sole Chancellor, and from these two last Courts an appeal lies to her Majesty in Council.

The Registration of real property is requisite, and the decis of conveyance must be acknowledged either personally, or by attorncy, before the Registrar. The Provost Marshal General executes an office corres. ponding to that of Sheriff, and inquests are regularly held by the Coroner in all necessary cases.
The commerce of the Island is regulated by the officers of Her Majesty's Customs; a Collector, Comptroller, and three Waiters constitute the estabishment; the regolations of trade have been much simplified, and nimended of late years, by the repeal of several hundred Acts, and consolidating their provisions under six or cight distinct heads. The fees on shipping are now abolished, and the salaries of the officers are defrayed from the dutiable articles imported from foreign ports.

The Militin consists of all the free inhabitants between the ages of eighteen and fifty-five, as follows: Southern Regiment-1 Colonel ; 1 Lieut.-Colonel; 1 Major; 8 Captains; 11 Lieutenants; 5 Ensigns; 1 Adjutant; 1 Quarter Master; 1 Surgeon; 8 Stafl Sergeants; 28 Sergeants; 7 Drummers; 479 Rank and File. Northern Regiment-1 Colonel; 1 Major; 4 Captains; 3 Lieutenants; 3 Ensigns; 1 Adjutant; 1 Quarter Master ; 1 Staff Sergeant; 6 Sergeants; 162 Rank and File. Qucen's Company-1 Major; 2 Captains; 2 Lieutenants; 2 Ensigns; 1 Adjutant; 1 Quarter Master; 2 Surgeons; 3 Sergeants; 1 Drummet ; 90 Rank and File. Bequia Company-1 Cap.taln; 1 Licutenant; 1 Ensign; 1 Surgeon; 2 Sergeants; 1 Drummer; 34 Rank and File. Troop of Cavalry-1 Major ; 1 Captain; 1 Lieutenant; 1 Ensign; 1 Adjutant; 1 Surgeon; 2 Drummers: 20 Rank and File. Tutal-2 Colonels; 1 Lieut.-Colonel ; 4 Majors; 1f, Captains; 18 Lieutenants; 12 Ensigns; . Adjutants; 3 Quarter Masters; 5 Surgeons; 9 Staff. Scrgeants; 39 Sergeants; 11 Drummers; 78.5 Rauk and File. Grand Total 909. These assemble for exereise once in every month, at the different stations in the island. The legislature has endeavoured to keep up an elfective force of white persons by requiring the planters to keep one white person for every fifty slaves, under a penalty of $50 l$, for each deficiency.

The garrison of British regulars for the protection of
the Island, since the peace wing of a regiment, with a $f$ the war two regiments werd the Government undertook tion of the assistance that wal different periods, towards barracks, and of maintaining public expense of the colony

The Police is excellent, $G$ Kingstown; it is regulated who are annually appointed, with very extensive powers; efficient mode of punishment St. Vincent.

The dependencics within Vincent, are the islands of a very fine harbour, called 2,150 acres; Mustique, 1,2 acres. There are also the le and Battawia, Myera, Pctit St Isle of Wash, Church Island,

the Island, since the peace has been reduced to one wing of a regiment, with a few artillery men, during the war two regiments were the complement, which the Government undertook to furnish, in consideration of the assistance that was given by the Colony at different periods, towards building the forts and barracks, and of maintaining the roads thereto at the public expense of the colony.

The Police is excellent, especially in the town of Kingstown; it is regulated by three Town Wardens who are annually appointed, and a Chief Constable, with very extensive powers; the tread-mill affords an efficient mode of punishment, heretofore unknown in st. Vincent.
The dejendencies within the Government of St. Vincent, are the islands of Bequia, 3,700 acres, with a very fine harbour, ealled Admiralty Bay; Union, 2,150 aeres; Mustique, 1,203; and Canouan, 1,777 acres. There are also the lesser islands of Balliceaux and Battawia, Myera, Petit St. Vincent, Islet a Quatre, Isle of Wash, Church Island, Petit Nevis, Three Ra-
miers, Pillorics, Savan, Petit Bermuda, Petit Canouan, Barbaroux Island, or Petit Curacua, Two Taffia Quays, Two Baleines, Two Catholies, Prune Island, Four Tobago Quays, Umbrella Quay and Petit Martinique. Thecultivation in all these islands is very mueh reduced, from the woods having been cut down, and the consequent decrease of rain; the seas aloound with fish; many whales make their appearance in Felruary and March, and the air is remarkally fine and salubrious.
XI. The revenue of the island raised by an annual tax act, by which assessments on all the staple commodities of the island are made, and a proportionate per centage on the incomes of merchants and other persons, which a poll tax on unattached slaves; Commissioners to carry the act into execution, are named for each parish, and the returns are directed to be given in to the 'Treasurer in January, from whence the rates are calculated according to the estimated expences of the island, and submitted to the Assembly.

To Elsewhere in 1824, 1200 ,

Statement of the quantity and value in sterling money of various articles of merchandize exported from the colony of St. Vincent during the year 1834. Arrow root, $62,160 \mathrm{lbs}$. value $3,014 \mathrm{l}$.; cocoa, colonial, $5,460 \mathrm{lbs} ., 1171$.; copper, old, $7,717 \mathrm{lbs} ., 1871$. ; cotton wool, colonia!, $102,000 \mathrm{lbs} ., 1,8681$.; fruit, value 31l.; hides, number 171, 1061 .; molasses, 382,880 gallons, $28,023 l$.; spirits, rum, 278,785 gallons, $16,309 l$. ; spirits, shrub, 475 gallons, 433 .; succades, value 2741 .; sugar, colonial, $24,661,168 \mathrm{lbs}$. ? $256,8061$. ; tortoiseshell, $12 \mathrm{lls} ., 12 l$. ; wine, 263 gallons, $179 l$; wood, value $72 l$. ; misceilancous articles, 210l. Total, 307,2511.

In 1834, the value of the imports was 384,3871 . stg. The value of the exports, in 1832 , was $255,343 l$, , of which sugar was $21,917,056 \mathrm{lbs}$., value $200,454 l$, ; rum, 369,877 gallons, value 26,6981 .; molasses, 391,190 gallons, value $21,594 l$.
XIII. Current value of coins in circulation within this government. Silver Coins.-Spanish dollar, 10sc, half dollar, $5 s$. ; Carolus, $2 s$. ; Pistareen, $1 s .6$. $c_{4}$; Quarter Colonial coin, 4 dwts. 9 grains $2 s .6 u l_{\text {. }}$; English shilling, 3 dwts. 16 grains 2s. $3 \frac{1}{2}$.
Gold Coins.-Doublom 17 dwts. 8 grs. 16 dol. $£ 800$ Hall do. 8-16-8-400 Guinea 5 - $8-445$ thas 280 Sovereign 5 - $34-43$ ths 26 6 $1 \frac{1}{2}$ Cupper Coins.-English penny-piece and stampee, $2 f l$. each; ditto, halfipenny, $1 \frac{1}{8} d . ;$ dog, 1 ded.

The gold coins in circulation are exclusively Spanish and Portuguese, the Doubloon at the value of sixteen dollars with the alifuot parts in proportion; the Johannes pass by weight at 9 shillings the pennywelght; formerly this coin was the most common throughout the islands, cach Colony mutilating their own by plugs and various marks, to prevent exportation ; from these practices the coin became so deteriorated, that in 1818 it was called in at a considerable loss, and Doullouns came into more general circulation. The silver coins are the dollar which passes at

10 shillings curreney, and Colonial coins of one.fourth, one-eighth and one-sixteenth : the British silver occasionally forms part of the commissariat issues, from which source nearly all the bullion of the country arises, but it is speedily collected by the merchants for remittances to Europe, and is therefore of little benefit as a general circulating medium; the English copper money, and Colonial coin, named Stampees and 13lack Dogs, complete the cataloguc. The sterling value of the dollar heing four shillings and four pence, gives 230l. 10-13ths, as the currency value of 100l. The cxchange in 1836 was gencrally 2351 . cur. ( 470 dollars $)=100 l$, stg. There is no paper currency in the island, and the amount of coin in circulation is not ascertainable.
The following cnumeration of the fruits, esculents, \&c. in season throughout the year will demonstrate the great varicty of vegetable food which our West Indian islauds atlord :-

- Jcnuury. - Sappadillos, pomegranates, papaws, sour-sops, plantains, okros, peppers, cocoa-nuts, pigeon or angola peas, svect potatoes, yams creole ditto, tanias, cotton. February.-Sappadillos, soursops, chicou. March.-Sappadillos, sour-sops, granadillos, custard apples, guavas, plantains, cr rasees, Ceylon ditto, sweet potatoes, yans. April.-Sappadillos, Java plumbs, mangoes, mamme sapotas, pinc-apples, Otaheite gooseberries, Jamaica wlumhs, cerasces, Ccylon ditto, bread-fruit, silk cotton, galbaseeds for fences. May.-Sappadillos, mangoes, granadillos, water-Melons, cashews, pine-apples, Otahbite gooseberries, Jamaica plumbs, Ceylon ccrasees, silh cotton. Jiune.-Mangoes, Java plumbs, Jamaica ditto, cashews, Ceylon cerasces, pigeon peas, (ncarly out of season) cloves. Jrely.-Mangoes, namme-sapotas, granadillos, cashews, avocado pcars, cerasees. Au-gusl.-Mangoes, mainme-sapotas, avocado pears, hog plumbs. September. Sugar-apples, sea-side grapes, granadillos, hog plumbs, pompions, portuguese yams, tanais. October. - Sugar-apples, guavas, sea-side

## CHAPTER VI.-BARBADOES.

Section I. The Island of Barhadoes is situate at the extremity of the great American Archipelago in lat. 13.5 N. long. 59.41. W. extending ahout 22 miles in length and 14 in breadth, with a surface of 106,470 acres.
11. The early discovery of Barbadoes is involved in obscurity; the island remained unknown and unnoticed for a century alter the discoveries of Columbus, and the tirst indication of its existence in the charts of European navigators, was A.D. I600. It is said to have been first visited by the Portuguese, who, finding it uninhabited, and rude in appearance, named the isle Los Barbutos, or as some say in reference to the number of fig trces which from their spreading hranches were likened to luxuriant beards. The original discoverers left some swine and plants on the isle and abandoned it. In 1605, an English ship, the Olire, returning from Guinca, accidentally touched at Barbadoes, landed a part of the crew on the spot, where the Hole Toun was afterwards built, erected a cross, took possession of the island, and inscribed on several trees, 'James, King of England, and of this island.' Finding no refreshments the crew was reimbarked, and the adventurers proceeded to St. Christopher, where an English colony had recently been formed. The island was then neglected for nearly 20 years, when some Duteh men-of-war having visited it, reported favourahly of its adaptation for cultivation. These particulars having reached Sir Win. Courteen, an enterprising London merchant, he enifenvoured to elfect a settlement on Barbadoes. The beanty and fertility of the island became also much talked of in England in consecurence of a ship of sir Wm. Courteen's having put in there, in stress of weather, and the mariners, in returning home, expatiated on the advantages of the place. The spirit of colonization was at this time exceedingly active in England, and the Earl of Marlborough (aiterwards Lord Iligh 'Treasurer), obtained from James 1, a patent for the island to him and his heirs for ever. Sir WM . Courteen having olitaincel the sanction of the noble patentee, fitted out two large ships with men, arms, and ammunition, and every thing suited to the establishment of n now colony. One vessel only arrived at Barbadoes, and a town was copsmenced in Febuary 1625, at the
spot where the Olive had touched twenty years before, and named James's (by some called Hole) town. In 1627, James llay, Earl of Carlisle, stimulated by the representations of Thos. Warner, who had been engaged in forming a settlement at St. Christopher applied to and olstained from Charles I. (who had then liewly ascended the throne), a grant of all the Caribbee islands, to be formed into a palatinate or proprietary government, under the name of Cariola. The Earl of Marlborough strenuously opposed this grant, as affecting his prior right to Barbadoes, and litigation commenced between the two noblemen, which was compromised on lord Carlisle agreeing to settle on the Earl of Marlborough and his heirs for ever, an annuity of 3001 . in lien of his claim. The Earl of Carlisle's patent passed the great seal the 2nd of June 1627, and the preamble of this singular charter runs as follows :-

- Whereas our well-beloved cousin and counceller, James Lord Hay, Baron of Sauley, Visconnt Doneaster, Earl of Carlisle, endenvouring, with a landable and plous design, of propagnting the Christiau Refigion, and also of the enargement of the territuries of our dominions hath humblyafernimed lying towards the north part of the worid, as yet vold and jultiated by savages, who have no knowletge of the diant juthibitedoy savage, who have no kmonly calied the Cariblice fstands, contalning vine power, commonty calted the Cariblice stands, containing

hurthening, or tuking nway, eith chuttels.'
' We also of our princely grace cessors, will stralghtly charge, suid province be of our allegianc jeet and liege peopie of us, on brought or to he brought, and th born, or afterwards to be bo subjects of us, our heirs and s as thry who were born ln Eing ritance within our kingrom of dominions, to seck, receive, ta autl use and enjoy them as the alien and bequeath them at thei quietty, ant promerthbly, to have " franchises aut priviloges of this as tiege people of Engthad, wh without impediment, niolestation ble of us, our heirs and suecess the contrary notwithstanding.

Charles soon forgot that grant to Lord Carlisle, and much pressed by the earl of ate monareh male over Barb berlain, the linel of Pemhero Courteen, who, really for his to have had the island beste instance. Searcely had this the Earl of Carlisle returned and to appense his lordship's of finth evineed towards his revoked the charter or pate lembroke, and restorell the favourte, Carlisle. The pro
province, or the greater part of them thereunto to be calted, and in such form, and whea and as often as he or they, in his or their diseretion, shall think fit and best. And these laws most all men, for the time being, that do llve within the limits of the said province observe, whether they be bound to sea, or from thenee retarning to England, or any other of our dominions, or any other place appointed, upon such imposition, penalties, imprisonments, or restraint; and if it behoveth, and the quality of the offenee requireth, either upon the body or death itself, to be executed by the said Jataes Earl of Carlise, and his heirs; or by his or their deputy, judges, magistrates, officers, and ministers, according to the tenure and true meaning of these presents, in what case socver; and with such power as to him, the said James Earl of Carlisle, or his helrs, shall deem best. And to dis pose of all offences or riots whatsoever, either by sea or land, whether before judgment received, or after remitted freed, pardoned or forgiven. And to do and perform all and every thing or things; which, to the fulfilling of justice, courts, or manner of proceeding, in their tribunals may or doth belong or appertaia, althongh express mention of them in these presents he not made; yet we have granted full jower, by virtue of these presents, them to be made; which laws so absolntely proclaimed, and by strength of rigitt supporled, as they aregranted, we will enjoin, charge and contmand, all and every subjeet and liege penple of us, our heirs and suceessors, as far as them they do concern, inviolably to keep and observe inder the pains therein expressed: so as, notwithstanding, the aforestid laws be ngrecuble, nut nat repugnant unto reasm ; aor agumst, out customs and rights, of aur kingdom of Englant.

And beeause in the government of so great a pruvince oftentimes sudien occasions do fall out to which it shall位 neelful to apuly a remedy before the frec inhabitants of the said province can be cailed; and for that it shall not always be needful, in soch cases, that all the people be called together; we will and ordaio, and by these presents, for us, our heirs and successors, have granted to the sald James Eari of Carlisle, and his heirs, that he by himself, or his magistrates and officers, in that casc lawfully preferred, may make decreea and ordinances both tit and pro. fitabie from time to time, that they may be esteemed, kept and observed, within the said province, as well for keeping the peace as for the better governinent of the people ther living, so that they may be pilbicly known to all whom they do concern. Whieh ordinanees we will, within the said provinces, inviolably to be kept, upon pain in them expressed; so that these laws be agrecable to reasoo, and not repugnant nor against it, but, as far as may be, agree. abic to the laws and statutes of onr kingilom of England and so thet those tuus extend nat ta the hurt or discommodity of thy person or persoas, either to the binding, constraining, burthening, or tuking awoy, either their tiberty, goods, or :hattels.'

We also of our princely grace, for us, our heirs and successors, will sirabiltly eharge, make and ordain, that the suid province be of our allegiance; and all and every subcet and liege peopie of us, onr heirs, nind snecessors, hrougit or 10 be brought, and their chindren, whether then born, or afterwards to be born, becone natives and silijects of us, our heirs ant successors, and be as frree As thpy wha were born in Englant, and so their inineritance within our kinghom of England or other of our ominions, to scek, receive, take, hold, bny and possess, and use and enjoy them as their own; and to rive, sell. alien and bequeath them at their peasure: and alsa fresty, unictly, and mon'erhty, to hare and passess all the liberties, franchises and prividrges of this kingdom and them to pajay as tiege peapte if Engtand, whether born or to be born, without Impediment, nolestation, vexation, injury or troubie of us, our lieirs and snecessors ; any act or statute to the contrary notwithstanding.'
Charles soon forgot that he had ever made this grant to Lord Carlisle, and in l'ebruary 1628 , being much pressed by the earl of Pembroke, the unfortunate monarch made over Barbadoes to his Lord Cham. berlain, the Earl of Pembroke, in trust for Sir W'm. Courteen, who, really for his zalous energy, leserved to lanve bad the island bestowed on him in the first instance. Scarcely had this grant been made when the Earl of Carlisle returned from a foreign embassy, and to appease his lordship's resentment at the breach of faith evineed towards hinn, the irresolute monareh revoked the charter or patent, granted to the Earl of l'embroke, and restored the proprietary rights to his favourte, Carlisle. The proceedings just mentioneal
had the good effect of stimulating the Earl to improve the territory bestowed on him, he contracted with a company of London merchants for a grant of 10,000 acres of land, on condition of receiving from each settler forty prounds of cotton annually, and the privilege of nominating a governor, or chief. Wolferstone, a native of Bermuda, was commissioned by the Earl of Carlisle as governor, with the power of Governor-Commander-ill-Chief and Captain, to do justice, decide controversies, keep his Majesty's peace, and punish offenders, according to the laws of England and the nature of their crimes. Sixty-four settlers (each entitled on landing to 100 acres of land) arrived in Carlisle Bay 25th of July, 1628, commenced the erection of wooden houses, threw a bridge across the river whi h intersected the ground, and laid the foundation for Bridgetown, the present capital. The Earl of Pembroke's men, who were settled on the leeward of the island, refused to obey the windward, or Carlisle Bay Sctllers. Arms were ultimately had recourse to, the windward men triumphed, and while the latter were asserting their right of jurisdiction in Barbadoes, the Earl of Carlisle had a new royal patent, nade ont in Eingland, confirming in the most explicit and unequivocal manner the former grant. Sir Wm. Tufton was appointed Governor-Commander-inChief, in February, 1629. A military force was sent out to keep the leeward men quiet. A council of twelve settlers, appointed to assist the Governor in holding a Courts General Sessions of the Peace, laws were enacted suitable to an infant settlement, and the cultivated or occupied parts of the isle divided into six parishes, viz. Christ Church, St. Michael, St. James, St. Thomas, St. Peter, and St. Lucy.

In 1645 the island, under the prudent rule of Mr . Bell, was divided into four parishes, (George's, Philips,' Joln's, and Andrews, were added to the before-men tioned) a church built in cac?., and an officiating minister appointed. A general assembly was instituted, composed of two deputies clected in each parish from the majority of freeholders. The island was divided into four circuits, in each of which a court of law was constituted - defensive fortifications erected around the isle-the militia constituted a formidable force of 10,000 infantry and 1000 cavalry -the total population of the island had increased to 150,000 persons of all colours and sexes, and the value of property was quadrupled in seven years. This prosperity was not owing to sugar culture, for Ligon who visited the island in 1647, says, that the plantation of the cane had only then recently begun ; but it would appear that Barbadoes carried on an unrestricted foreign intercourse with Holland and other countries. The number of slaves in the island at this period is not on record, yet here, as elsewhere, the evils of the system were early felt, for in 1649 a formidable insurrection tonk place at Barbadoes, and a general day was appointed for the massacre of all the white inhabitants. The plot was discovered by a begro, in gratitude to his master, the day before its contemplated execution, and twenty-eight of the leading negroes were gibheted, according to the eustom of the times.

In 1650, Lord Carlisle, (the son of the first patentee), hearing much of the wealth of the island, which he cousidered patrimonial property, and desirous of renping some ndvantages from the same, exccuted a lease to Franeis Lord Willoughhy, of Parham, an aetive royalist ofticer, conveying to his Lordship, all his riyht and title to the colony for 21 years, upon condition that the protits arising from

## BARBADOES.-HIISTORY AND ACQUISITION.

the proprietary right should be mutually shared be. tween them. Charles II., (then in exile), desirous of securing the West Indies for his crown, appointed Lord Willoughby Governor and Lieutenant-General of Baruadoes, and of all the Caribbee Islands; and the Legislature of Barbadoes on his Lordship's arrival, passed an Aet, acknowledging his Majesty's right to the sovereignty of the island, and that of the Earl of Carlisle, derived from his Majesty, and transferred to Lord Willoughby. Barbadoes, al ways distinguished for its loyalty, exerted itself on this occasion, and equipped several ships of war, which compelled the neighbouring islands to submit to the authority of the crown, as emanating from the chief W. l. Government at Barbadoes. Cromwell, as it may be supposed, clid not quietly permit this refuge to his royal opponent, and a formidable squadron, under the command of Sir George Ayscue, containing a large body of troops, was dispatched for the purpose of reducing the refractory colonists in obedience to the Commonwealth, and with a view of crippling the power of Holland, with which Barbadoes and the other W. I. possessions carried on a lucrative traftic; the far-famed navigation laws were passed, by which the ships of any toreign nation were prohibited from trading with any of the English plantations, without a license from the Council of State.

The Barbadians for some time gallantly defended themselves against Cromwell, and it was not until the Parliamentary forces had laid waste a large portion of the island, the defection of Col. Moditord, and that many had been slain on both sides, that the island was subdued by the Cromwellian power. Sir George Ayscue was appointed Governor, after the reduction in 1652 , and proceeded to subdue the other islands that had maintained their allegiance to the royal authority. On the restoration of Charles 11., Lord Willoughby, who had been banished for life from the island, appointed Col. Humphry Walround, a faithful old royalist, superseding Col. Modiford, who proceeded to Jamaica, to be Deputy-Governor, and President of the Council of Barbadoes. Charles II. conferred the dignity of Knighthood on 13 gentlemen of Barbadoes, in testimony of their attachment to the royal cause.

Lord Willoughby, in $166{ }^{2}$, as lessce of the Earl of Carlisle, renewed his claims on the island. Lord Kinnaird, the kinsman and heir of the Earl of Carlisle, brought forward demands on the settlers amounting to $60,000 l$., and the heirs of the Earl of Marlborough, who were entitled to a perpetual annuity from the saine quarter, claimed a large sum for arrears. To satisfy these claims, now urgently made, a large number of the Barbadians, (by Mr. Kendal) agreed to lay a duty of $4 \frac{1}{2}$ per cent. on all native commodities, the growth and produce of Barbadoes, when exported from the island. This impost was estimated at $10,000 l$. a-year. Many Barhadians protested against the perpetual rent-charge of 10 per cent. on their plantations; but alter being suhmitted to the decision of the Privy Council, it was tinally agreed, that the $4 \frac{1}{2}$ per cent. fund should be applied towards providing a sufficient compensation to the Earl of Kinnaird, for surrendering his right to the Carlisle charter,-to provide for discharging the Earl of Marlborough's annnity-one moiety of the surplus to be paid to Lord Willoughby for the remainder of his lease, the other moiety to the Creditors of Lord Carlisle, until the expiration of Lord Willoughby's contrac ${ }^{+}$, when, aiter a salary of $1,200 l$. a-year for the future Governor of Barbadoes, the creditors of the Earl of Carlisle were to receive the
entire balanee, until their demands were liquidated. Under these conditions (agreed to by all partles), the proprietary Government was dissolved, and the sovereignty of Barbadoes annexed to the British crown. Some of the inhabitants of Barbadoes long protested against the imposition of the $4 \frac{1}{2}$ per cent. duties, but the rigorous and prudent administration of Lord Willourlaby brought internal peace to the island, while his lurdship extended the power of Britain in the western hemisphere. Lord Willoughby was lost in a hurricane, near Guadaloupe, while employed in reducing several islands to subjection. Col. Christopher Codrington became Deputy-Governor in 1668, and his administration was distinguished by vigilance and circumspection. In 1669, the windward and leeward isles were formed into distinct governments, Guadaloupe being the line of demarcation, and the commerce of the leeward isles was given to Sir W. Stapleton, while Lord Willoughby retained that of Barbadoes and the windward islands, which he kept until 1673 .

In 1722, on the appointment of Governor Worsley, a salary of $6,000 l$. sterling per annum was fixed on his Excellency, and provided for by a capitation tax of $9 s .6 \mathrm{~d} d$. on each slave-and by a tax on lawyers, patentees, and public officers, \&e.-a burthen which the colonists soon found themselves unable to defray. The administration of Lord Howe (commencing in 1733), seems to have been generally applauded; under his auspices a free press was established in Barbadoes, and he died at his goverument in 1735, beloved by all who knew him. In 1780, Barbadoes was ravaged by a terrific hurricane, which lasted for 48 hours, and devastated the island: such was the violence of the wind, that a 12 pound carronnade was blown from the pier-head to the wharf, a distance of 140 yards. Of 11 churches and two chapels only three were left standing; and not more than 30 houses of the extensive capital of Bridge-town; the Mole-head, which cost the colonists 20,000 l. was destroyed, and the castle, battery, forts, town-hall, prison and cells demolished; the loss of lives amounted to 3,000 , and of property to $1,018,928$ l.

The events which have since occurred do not require detail.

The following is a list of the rulers of Barhadoes since its establishment as a colony: 1625 , W. Deane, Gov. ; 1628, C. Wolferstone, do. ; 1629, J. Powell, do. ; 1629, R. Wheatly, do.; 1629, Sir W. Tufton, do.; 1630, H. Hawley, do.; 1633, R. Peers, Den.Gov.; 1636, Hawley, do.; 1638, W. Hawley, do.; 1639, H. Hawley, Gov.; 1640, Sir H. Hunks, do.; 1641, P. Bell, do.; 1650, F. Lord Willonghby, do.; 1651, Sir G. Ayscue, do.; 1652, D. Searle, Dep.-Gov.; 1660, T. Modiford, Gov.; 1660, I. Walrond, Pr.; 1663, Franeis Lord Willoughby, Gov.; 1666, II. Willoughby, H. Hawley, Samuel Barwick, Joint Govs. ; 1667, William Lord Willoughby, Gov.; 1668, C. Coddrington, Dep.-Gov.; 1670, W. Lord Willoughby, Gov.; 1670, C. Coddrington, Dep.-Gov.; 1679, W. Lord Willoughhy, Gov.; 1673, Sir P. Colleton, Bart., Dep.-Gov.; 1674, Sir J. Atkins, Gov.; 1680, Sir R. Dutton, do.; 1683, Sir J. Witham, Dep.-Gov.; 1684, Sir R. Dutton, Gov.; 1685 , l¿. Steed, Dep.-Gov.; 1690, J. Kendall, Gov.; 1694, F. Russell, do.; 1696, F. Bond, Pres.; 1698 , R. Grey, Gov.; 1702, J. Farmer, Pres.; 1703. Sir B. Granville, Gov.; 1706, W. Sharpe, Pres. ; 1707. M. Crowe, Gov. ; 1710, G. Lillington, Pres.; 1711, R. Lowther, Gov.; 1714, W. Sharpe, Pres.; 1715, R. Lowther, Gov.; 1720, J. Frere, Pres.; 1720, S. Cox, do.; 1722, iI. Worsley, Gov.; 173i, S. Bar-

Bishop, Pr; 1801, Francis Humberstone, Lord Seaforth, Gr.; 1803, J. Ince, Pr.; 1804, F. II. Lord Seafoth, Gr. 180G, J. Spooner, Pr.; 1810, Sir G. Beckwith, K. B. Gr.; 1814, J. Spooner, Gr. ; 1815, Sir J. Leith, K. B Gr. 1816, J. Spooner, Pr.; 1816, Sir J. Leith, Gr.; 1817, J. F. Alleyne, Pr.; 1817, Stapleton Lord Combermere, G. C. B. Gr.; 1817, J. F. Alleyne, Pr.; 1817, S. Lord Combermere, Gr.; 1820, J. B. Skete, Pr. 1891, S. Hinds, do.; 1821, Sir H. Warde, K. C. B. Gr.; 1825, J. B. Skeete, Pr.; 1826, Sir 1H. Warde, Gr.; 1827, J. B. Skete, Mr. ; 1829, Sir J. Lyon, K.C.B., Gr.; 1829, J. B. Skeete, Pr.; 1829, Sir J. Lyon, Gr.; 1832, Sir L. Smith, do. 1836, Sir E. J. Me Gregor.
III. Barbadoes, although generally level, except in the N. E. quarter, called Scolland (which is about 1,100 feet above the sea) has a very beautiful appearance, owing to its extent of cultivation, and sloping fields or terraces. In some deep vallies there are the remains of the primitive forests which formerly covered the whole island. The base of the island is calcareous rock, formed of madrepores, and other marine concretions, and is probably of volcanic origin like the greater number of surrounding isles. Bridgetown the capital extends along the shores of the beautiful Bay of Carlisle for nearly two miles in length and half a mile broad, with about 20,000 houses. The handsome and spacious barracks of St. Ann's with their fine parade, are at the southern extremity of the town. The square, with Nelson's statue, is well laid out, and many of the houses are handsome. The Government-house, called Pilgrim, is about half a mile from Bridge-town. The fort of St. Anne, though small, is capable of making a good defence; it contains several excellent magazines stored with ammunition, and an armoury, with many thousand stand of arms in perfect order. The soil varies much; in some districts it is sandy and light, in others a rich black eartl;, and in several places spongy. Here and there is found a red elay of considerable depth, and the light whitish carth broken into a grey mould, or hardened into lumps resemble chalk, but actually consist of indurated argille, by exposure to the weather.

1V. Owing to the flatness of the island, leaving it open to the sea-breeze, and its extensive cultivation, Barbadoes is peculiarly healthy; and the details given of the range of the thermometer, \&c., under St. Vincent will, with some modifications, answer for Barbadoes.
The returns under the section on elimate in Jamaica shew the mortality of the troops on that island; the following document, drawn up by Deputy InspectorGeneral of Army Ilospitals, Henry Marshall, Esq., will also to some extent indicate the elimate of Barbadoes and the Windward islands.

Strength of the British army serving in the Windward and Leeward islands, from 1796 till 1805, and from 1810 to 1828 inclusive, together with the annual centesimal ratio of mortality from 1796 till 1828, being a period of 33 years.

Total D. 24,916. Total C. R. 100:0

According to the above, March is the healthiest, and October the most unhealthy month of the year in the Windward and Leeward Island command, which comprehends the islands of Barbadoes, Trinidad, Grenada, St. Vincent, St. Lueia, Dominica, Antigua, St. Christopher, the Bahamas, Guyana on the continent, and all the other tropical British possessions in the West Indies and Continent of South America, except the island of Jamaica and the settlement of Honduras, which form a separate command. The troops in the Bermuda lslands, which lie in about $33^{0} \mathrm{~N}$. latitude, report to the commander of the forces in Lower Canada.
V. The inhabitants of this colony rapidly increased from its first settlement. In 1676, Barbadoes, on 100,000 acres, contained 70,000 whites and 80,000 blacks : total 150,000 souls. This great population was effected hy granting out land, in lots of 10 acres cach, to poor settlers and white servants who had

## BARBADOES．－POPULATION．

fulilled the term of their indentures．Some，perhaps many，of these lots were subsequently sold when the laland became too populous for the extension of sugar plantations；and the late occupiers，with the par－ chase money，proceeded to settle in other islands， where land was cheap and plentiful．In 1674，their numbers were calculated at 50,000 whites，and 100,000 coloured or negroes，thus giving 500 mouths to every square mile；while China，with its $350,000,000$ ，has not more than 288 to the square mile．
The population at different periods of the last century was，as far as we have returns－ 1724. Whites，18，295；blacks，－．1753．Whites，－； blacks，69，870．1786．Whites，16，167；blacks，62，953． 1788．Whites，16，127；free coloured，2，229；blacks， 64，405．

The slave population from 1817 to 1832 ，was－

VIII. Schools of Barbndoes, 1834. [B. 13.]

The situation of Codrington College is one of the most delightful that can possibly be conceived; surrounded by hills on every aide, possessing the superior advantages of the sea breeze, an unbounded view of the Atlantic, and refreahed by a clear stream of water, collected in front into a small lake. The students receive their board and education for 35\%. per annum, and are examined and ordained by the bishop if intended for the church.
At the central school, abnut 160 white children are educated precisely upon the plan of the national
schools in England; all of them are fed during the day, and the major part are well clothed. The bencficial effecta of this charity are already confessed on all hands; principles of sobriety and devotion are instilled into their minds, and habits of regularity and peaceful subordination are enforced. From this class of boys the master tradesmen, mechanics, overseers, and even managers, are now supplied. A girl's schaol has also been foundel, under the auspices of the Bishop; they are hoth favourite institutions, und the chief people in the colony spure neither pains nur
expense in strengther is also a large scho coloured managers, superintendence; an by the Biahop, at t colour are admittedliness and constant taitous.
IX. The governmer manner aimilar to Jamaica; namely, a and a Representative gislative authority is recommend subjects fo and his concurrence is come law ; each concu beyond three years, un firmation. In his execu entitled to nominate, cers of militia ; the ri cised beyond the choi their Licutenant-Colon in turn appoint their s the consent of the Cou General Assembly, and tion; with the concur suspend any member traordinary occasion power is absolute, sul If there he leas than o dent in the island, $t$ number (to twelve,) $p$ business. As Chane custolly of the great sc of Error and Equity, in Council, he only sits $?$ opinion being of no gr any other inemier. A all testamentary writin blishes or annuls the w appointed by the tes letters of administratiol As Vice-Admiral he iss of the Vice-Admiraty privatcers. Barhadoes, bago, are consolidated and Antigua, Montse Tortola and Dominicn ment ; the former calle ment, nnd the latter thi Governors are oppointe Chief at llarbadoes amo is strong and well nppo of several battalions life guarts, and a num 1666, 3arbailoes had ath intantry and 3,000 cava

expense in strengthening or maintaining them. There is also a large seliool for coloured children, with coloured managers, established under the Bishop's superintendence; and several morc have been opened by the Bishop, at the Government expense;-every colour are admitted- the only conditions being cleanliness and constant attendance. Instruction is grataitous.
IX. The government of the island is constituted in a manner similar to that already described under Jamaica; namely, a Governor, a Legislative Council, and a Representative Asscmby. The Governor's legislative authority is entirely negative, he can only recommend subjects for consideration to the $\Lambda$ ssembly, and his concurrence is required before any bill can become law ; each concurrence, however, not being valid heyond three years, unless sanctioned by the royal confirmation. In his exccutive capacity the Government is entitled to nominate, and of course remove the officers of militia; the right, however, is seldom exercised beyond the choice of Colonels, who nominate their Licutenant-Colonels, Majors, and Captains, who in turn appoint their subalterns. The Governor, with the consent of the Council, has power to dissolve the General Assembly, and to issue writs for a new election; with the concurrence of five mombers he may suspend any memher of Council, unless it be an extraordinary occasion requiring secrecy, when his power is absolute, snhject to explanation at home. If there be less than seven Members of Council resident in the isinnd, the Governor may fill up the number (to twelve,) pro tempore, for the dispatch of business. As Chancellor, his Excellency has the custorly of the great seal, and presides in the Courts of Error and Equity, in which courts the Juiges being Conncil, he only sits $p$ rimus inter pares, his vote or opinion being of no greater conseruence than that of any other memher. As Ordinary he takes probate of all testamentary writings ; in cases of litigation establishes or annuls the will ; and in defanlt of executors appointed by the testator. His Excellency issues letters of arlministration according to the rules of lnw. As Vice-Admirul he issues his warmant to the Judge of the Vice-Admirality Court to grant commissions to privateers. Barbadoes, St. Vincent, Gremada nnd 'Tobago, are consolidated into one general Government; and Antigua, Montserrat, St. Christopher, Nevis, Tortola and Dominica into another geueral Government ; the former called the Windward Island Govern. ment, nnd the latter the Leeward Island, LieutenantGovernors are oppointed to each; and Governor-inChicf nt Barbadoes and Antigua. The militia force is strong and well appointed; there are six regiments of several battalions each, together with a corps of life guards, nud a numerous and brilliant staff. In 1666, 13nrbacloes bad an effective ınilitary force of 20,000 inlantry and 3,000 cavalry composed of the colonists.
$X$. The income is raised as in the other islands. The following was the Barbadoes' gross Revenue and Expenditure, in $£$ sterling from 1821 to 1830 :-

## CHAPTER VII.-ST. LUCIA.

Section I. This very beautiful island is in lat. 13.50 N ., long. 60.58 W ., about 32 miles in length, from N. to S., and 12 broad, and contains 37,500 acres of land.
II. It was discovered on St. Lucia's Day, and first settled on by the English about 1635, since which period it has undergone various changes, being sometimes declared neutral, (as by the treaty of Aix-la-Chapelle, ) next in the possession of the French, then captured or transferred to the British, and vice versa. By the treaty of Paris in 1763, St. Lucia was allotted to France; and Dominica, St. Vincent, Grenada, and Tobago to England; during the American war, in 1779, it was taken by the British, but restored to the French by the peace of 1783, it was conquered at the commencement of the French revolutionary war in 1794, evacuated in 1795, and retaken in 1796; by the treaty of Amiens it was restored to France in 1801, and recaptured by us in 1803. The detail of the hard fought battles for the acquisition of this isle would be out of place, it may suffice to state that the fortune of war, in 1803 finally left it an English colony, with a French population, manncrs, language, and feelings.
III. The first approach to this island, (which is divided longitudinally by a ridge of lofty hills, from the $\mathbf{S}$. is very remarkable.
Two rocks, called Sugarloaves, rise perpendicularly out of the sea, and shoot to a great height in parallel cones, which taper away towards the summit. These mountaina, which are covered with evergreen foliage, stand on either side of the entrance into a small but deep and beautiful bay. Behind this, the mountains, which run N . and S . throughout the island, rise in the most fantastic ahapes.

When sailing along the shore the variety of scenery is exquisitely beautiful; the back ground continues mountainous, but every three or four milea appear the must lovely little coves and bays, fringed with the luxuriant cane-fields, and enlivened by the neatly laid-out mansions of the planters; while the flotillas
of fishing and passage, or drogher boats, with their long light masts and latteen sails, add life and animation to the scene. On the west coast there is an excellent harbour, called Little Careenage with three careening places, one for large ships, and the others for frigates. It is accessible only to one vessel at a time, (the entrance defended by several batteries) but capable of holding thirty ships of the line.

The plains throughout the island are well watered, and the mountains clothed with fine timber.

Castrics, the only town in the isle, is situate at the bottom of a long and winding bay of the same name. The fort is situate on the summit of Mornefortune, which is about two miles of exceeding steep road, or path, from Castries.

Pigeon Island is six miles distant from the harbour of St. Lucia, and, in a military point of view, is of great importance to the colonies, being within a short distance of Martinique, and commanding a view of every ship that may enter or depart from that island; -it is moreover valuable for a very fine and extensive anchorage between it and the N . part of St. Lucia. The iale is about half a mile in length $N$. and $S$. and a quarter broad, the side towards the sea (W.) is a perpendicular cliff, from the ridge or crest of which there is a gradual descent to the opposite shore, and level ground enough to crect a barrack for 500 men . A barrack and hospital has been constructed on this healthy spot, and it is one of the most salubrious that can be expected in a tropical clime. St. Lucia is divided into Basseterre, the low or leeward territory, and Capisterre, the high or windward territory. The former is well cultivated and most populous; but the climate is unwholesome from the abundance of stagnant waters and morasses. The latter division is also unwholesome, hut it becomes of course less so as the woods are cleared away. Indeed the health of all tropical countries will be found to be in proportion to their cultivation.
IV. In 1777 the island containcd whites, 2,397; frec coloured, 1,050 ; glaves, 10,752; total, 14,199.

The Slave Population, according to a Parliamentary Return, was in numbera,
from 1816 to 1831 , as follows :-

The Board of Trade returns for 1831 state the inhabitants at-whites and free coloured males, 1,690; females, 1,838 ; slaves, males, 5,242 ; females, 6,129
for the year, 451 ; deaths, 430 ; and marriages, 19. 4,190 persons engnged in agriculture; in manufac--total, males, 6,932; females, 7.967. The births

Population of St. Lneia in 1836. [B. B.]

The foregoing taken from returns received from justices of peace, lit the several quarters, being the only source of informstion. The quarters in the district liave been changed slnce the last return, for the better accommodation of the specilal magistrates.

A statement of the number of Slaves for whom compensation has been claimed, and of the number of claims preferred for such compensation, and of the amount of compensation awarded in each of the classes of predial-attached, predial-unattached, and non-predial. [Parliamentary return to the House of Lords, March, 1838.]

Number of elalms having reference to each division. Praedisl Attached, :132; Predial Liatinclicil, 641 Nonprreilial. 494.
V. Churches, Livings, fec. in 1836 [B. B.].-In Castries the population is ahout 150 souls. The value of the living is ahout 300l. aterling. The church will contain about 200, of whom from 20 to 60 generally attend. This churen is Protestant.

In Castries also a population of 3382 Roman Catholics. The value of the living is not fixed. There is a Parsonage House nllowed. The church, when finished, will contain ahout 800 persons. There is also a small house serving as a chapel, which will contain about 2.50 persons.
Soufricre-Population ahout 3517 Roman Catholics. Value of living, 5,000 lives per annum. The church is generally full.
Vieux Fort-Population 1094 Roman Catholics. Value of living 6,000 livres sterling. There is a Parsonage House allowed, to which is attached 18 acres of uncultivated land. This church will contain about 200 persons. The foregoing is taken from returns received from the curates of the different parishes.
VI. Schools of St. Lucia in 1836 [B. B.].-Castries. -A National School, containing 41 male scholars. The mode of instruction is the plan generally pursued in National Schools. The Master receives a salary of 50l., paid hy the Bishop of the Diocese, and the rent of the school room is paid loy voluntary subseriptions until a house can be erceted.
Soufricre.- $\Lambda$ National School, containing 24 male and 8 female scholars. (Mode of instruction as above). The Master receives 40l, sterling, paid ly the Bishop of the Diocese, and the rent of the school room is paid by voluntary sulscriptions.
Gros-Islet.-A National School, containing seven male scholars. The Master receives 40l. per annum from the Bishop of the Diocese. (Mode of instruction as above). The officiating Minister of St. Lucia at present bears the expenses of this school, which has been established but a slourt time. [There are no other returns in the B. B.]

VIII. The inhabitants have their affairs administered ances for Stationary, \&c. These expenses are paid by a Governor and Council, with French laws, where they are not adverse to the British.
St. Lucia Militia in 1836.-Northern Battalion: Regimental Officers-1 Lieutenant-Colonel; 1 Major; 9 Captains; 10 Ist. Lieutenants; 9 2nd. Lieutenatits. Staff Officers-1 Pay-Master; 1 Sergeant-Major; 2 Assistant Surgeons; 1 Adjutant ; 1 Quarter Master. Staff Sergeants-1 Sergeant Major; 1 Assistant Serjeant Major: 1 Quarter Master Sergeant; 22 Sergeants; 14 Buglers and Drummers; 494 Rank and File. Southern Batt.-Regimental Officers-l Lieu-tenant-Colouel; 2 Majors; 8 Captains; 8 1st. Lieutenants ; 8 2nd. Lieutenants. Staff Officers-1 PayMaster; 1 Surgeon; 1 Adjutant; 1 Quarter Master; 1 Sergeant-Major; 22 Sergeants; 16 Buglers and Drummers; 447 Rank and File.
The Expenditure of the Militia consists in the payment of contingencies; viz :-Companics ; Drummers; Buglers and Fifers; Camp Colour; Adjutant Allow-
from a fund established in each Battulion; which is created by the payment of Fines on absentees from Parade; and the fees of Officers' Commissions. The Army, and accoutrements of Soldiers are furnished by Government. The Soldiers pay for their own elothing, and those that are unable to pay, the Colony provides for them.
The forces of the Alien Corps, which is composed of Martinique Refugees, consist of 1 Captain Commanding; 5 Lieutenauts; 15 Sergeants; and 369 Rank and File. This Corps is unarmed, it not being considered advisable to place arms in their hands; they clothe themselves, and are no expense to the Colony. (From B. B. for 1836, page 45.)
IX. The income is derived from custom duties, a capitation tax, licences, fines, stamp duties, \&c. The poll tax is 20 livres on all adults between the ages of 16 and 60.

## CHAPTER VIII.—DOMINICA.

Section I. The island of Dominica is situated in 15.25. N., 6I.15.W., about twenty-uine miles in length, and sixteen in breadth, and containing 275 square miles, or 186,436 acres.
II. Dominica was the first land seen by Columbus on his second voyage, after having been 20 dsys at sea from the Canaries: it was made on Sunday, the 3rd. of November 1493, and so named by the great navigator; but its right of occupancy was claimed by the three kingdoms, of England, France, and Spain. The right of possession remained undecided, and Dominica was considered a neutral island by the three crowns, till the year 1759, when, by conquest, it fell under the dominion of Great Britain; it was afterwards ceded to England by the treaty of Paris, February 1763. On the cession of the island to the English, commissioners were appointed under the great seal, and sent out tbere with suthority to sell and dispose of the lands by public sale, to English subjects in allotments ' of not more than 100 acres of such land as was cleared; and not exceeding 300 acres of woods to any persons who should be the best bidder for the same.' These allotments were disposed of for the henefit of the crown, and were confirmed to the purchaser by grants, under the Great Seal of England, with conditions in each grant, 'that every purchaser should psy down 20 per cent. of the whole purchase money, together with sixpence aterling per acre, for the expence of surveyin the land; and that the remainder of the purchase money should be secured by bonds, to be paid by equal instaiments, in the space of five years, next after the date of the grants. That each purchaser should keep on the lands, 80 by him purchased, one white man, or two white women for every 100 acres of land, as it became cleared, for the purpose of cultivating the same. Or, in default thereof, or non-payment of the purclunse money, the lands were to be forfeitel to llis Majesty, his heirs,
and successors.' The commissioners were alsu cm powered to execute leases to the Frouch inlsabitants, of such lands as were found in their pussession on the surrender of the island; which lands were again leased to those inhabitants, who were desirous of kecping them in possession, on consideration of their taking the oaths of allegiance to his Britaunic Majesty.

These leases were exccuted for a term not less than seven, some 14 years, and others for 40 years absolute, renewable at the time limited for the expiration of the same. With conditions in every lease, 'That the possessor, his heirs, or assigns, should pay to his Majesty, his heirs, or successors, the sum of two shillings sterling per annum, for every acre of land of which the lease should consist. And that they should not sell or dispose of their lands without the consent and approbation of the Governor, or Cominander inchief of that island for the time being.' The Commissionera were likewise enipowered to make grants, under the Great Seal of lots to poor settlers, to such English subjects as should be deemed fit objects of his Majesty's bounty, in allotments of not more than 30 acres of land to any one person. With authority also, to the said commissioners, to reserve and keep, such lands, in the most convenient parts of the island as they should think proper, for furtifications, and the use of His Majesty's army and navy; together with a boundary of 50 fect from the sca shore, round the whole island; and reserving all mines of gold and silver, which might thereafter be discovered there, for the use of his Majesty, lis heirs, and successors.

By these measures $96,3+4$ acres (hall the island,) were disposed of in lots of from 50 to 100 acres, which produced $312,090 l$. sterling. The prosperity of the island rapidly increased under a system of free trude; but the happiness of the iuhuhitants was interrupted on the capture of the island, hy a large French
force, from Martinique, under the Marquis de Bouille, in 1778, after a gallant resistance on the part of the British colonists, by whlch they secured for themselves highly honourable terms; these advantages were, however, frustrated by the tyranny and rapacity of the new French Governor, the Marquis Duchilleau, whose memory is deservedly held in the deepest scorn. After five ycars, our colonists were rejoiced on the restoration of the island to England at the peace of 1783. During the war of 1805 , a devastating descent was made on the Island of Dominica by a formidable French squadron; and although Roseau, the capital was burned, the colony was preserved to Great Britain by the skill of Sir George Prevost, and the gallant behaviour of the colonists. The island has ever since remained under the dominion of Grest Britain.
In 1802, the 8th W. I. (black) regiment mutinied took possession of the Cabrites, and from the lower fort opened a fire on H. M. S. Magnificent, then at anchor in Prince Rupert's bay. The marines were landed, joined the royal Scotch and 68th regiments, and, after two days skirmishing, the 8th W.I. was subdued with great loss.
III. Dominica is one of the volcanic isles of the West, with lofty rugged mountains, and fertile intervening valleys, watered by about 30 fine rivers, and numberless rivulets, springs, and waterfalls, which descend with great impetuosity from the hills, and, under the umbrageous canopy of lofty and magnificent forests, form the most romantic cascades. The height of the elevations have been thus noted:-Morne Diablotin, or Terre Firme, 5,314 fect above the sca; Laroche, 4,150; Coulisboune, 3,379; Outer Cabrite, 542 ; Inner ditto, 430; Morne Crabier, 485; Morne Bruce, 465 ; Daniole, 329. The heights of the forts and batteries are Scots' Head, 231 feet; Melville's, 147 ; Magazine Bat. 320; Hospital ditto, 440 ; Fort Young, 440 ; Fort Shirley, 153; Barracks at Douglas Bay, 126; Grand Savannah, 170; Layon, 160. About six miles from Roseau, almost in the centre of the island, and on the top of a very high mountain, surrounded by other more lofty hills, is a large lake of fresh water, covering a space of several acres, and in some places unfathomable; it spreads into three dis. tinct branches, and has a very extraordinary appearance. Roseau, the capital, is situate in the parish of St. George, (about seven leagues from Prince Rupert's Bay), on a point of land on the S.W. side of the island, which point forms two bays-Woodbridges to the $N$. and Charlotteville to the $S$. 'The landscape behind the town is beautifully grand; indced the whole prospect from the edge of Morne Brucc, a lofty table-rock occupied by the garrison, is one of the very finest in the West Indies. The valley runs up for many miles in a gently inclined plane between mountains of irregular heights and shapes, most of which are clothed up to their cloudy canopies with rich parterres of green coffee, which perfumes the whole atmosphere, even to some distance over the sea; the river rolls a deep and roaring stream down the middle of the vale, and is joined at the outlet of each side ravine by a mountain torrent, whilst at the top, where the rocks converge into an acute angle, a cascade falls from the apex, in a long sheet of silvery foam. Beneath, the town presents a very different appearance from what it does at sea; the streets are long and spacious, regularly paved, and intersecting each other at right angles ; there is one large square, or promenade ground, and the shingled roofs of the houses, tinged with the intense blue of the heaven
above them, seem like the newest slates, and remind one of that clear and distinct look whlch the good towns of France have when viewed from an eminence.

The roadstead of Roseau (it can scarcely be called a harbour) is very capacious and safe, except in the hurricane months, (from the end of August to October), when the sea, from the southward, tumbles into the bay in a terrific manner, sometimes rising to an alarming height. On the last day of September, 1780, the sca suddenly rose to the height of 21 feet perpendicular above its usual level, destroying several houses in front of the beach and wrecking many vessels. The fortifications of Roseau, namely Young's Fort, Melville's Battcry, Bruce's Hill, and Fort Demoulin, are very strong and commanding positions. Prince Rupert's Bay, on the N. W. of the island in St. John's parish, is three miles broad, one and a half decp, and safe and commodious enough for the whole British navy at all seasons : it is surruunded by two high mountains, called the Cabrittes, the inner of which is about 500 , and the other 600 feet in perpendieular height, both out of the reach of any other elevated land. Fort Shirley lies betwen the two Cabrittes, with a rich plain of 100 acres in extent at its base, and in time of war the fortifications on these heights might be rendered as strong as Gibraltar. The grand Savanna, nine miles from Prince Rupert's Bay, and twelve from Roseau, is a fine fertile elevated plain, upwards of a mile in extent, and at a good distance from the ncighbouring mountains, whose terraces jut out from their breasts: around whose deelivities flourish the richest verdure, while murmuring cascades of babbling brooks, burst through the Juxuriant vegetation, or roll along the hilly avenues, surrounded by magnificent piles of rocks, zometimes black and bare, sometimes green, with countless traceries of lovely creepers, interspersed with gigantic ferns and lofty palms.
IV. Dominica, is volcanic : the soil in some places is a light brown coloured mould, which appears to have been washed down from the mountains, mixed with decsyed vegetable mattcr. In the level country, towards the sea cosst, and in many districts of the interior, it is a fine, deep, black, mould, peculiarly adspted to the cultivation of the sugar cane, coffee, cocoa, and all other articles of tropical produce. The under stratum is a yellow, or brick clay, in some parts ; in others, it is a stiff terrace, and frequently very stoney. Large quantities of excellent frcestone have been quarried in the Savanna, and at one time it formed an article of export to Guadaloupe and elsewhere.
Several of the mountains of this island are continually burning with sulphur, of which they emit vast quantities. From these mountains issue various springs of mineral waters, (whose virtues are extolled for the cure of many disorders) which in some places are hot enough to cook an egg in less time than boiling water. The sulphureous exhalations from these springs are very strong, often too intensely penetrating for continued respiration, while the soil, or sulphur and sand, around them in the Souffrieres, is too hot for the feet, and scarcely firm enough to tread upon. Owing to the dense vegetation of the island, and the general apathy of W. I. planters for any thing but sugar and coffee, we know nothing further of the geology of Dominica. It is stated that gold and silver mines exist, and that the latter metal was at one time to be found in abundance.
V. The following Roseau, the capital ( but in the interior an much reduced, and woollens indispensabl covering.

|  | 忍 |  |

The wet season commonly sets in about the end of August，and continues till about the beginning of January，but with frequent intervals of fine westher． The severity of the rainy aesson is usually in the months of September and October，when very heavy continual rain falls for days together；sometimes for two or three weeks．The island，indced，is seldom without rain in some part or the other；and often， during a promising day，the traveller meets with such sudden and heavy showers，that almost in an instant wet him to the skin，in spite of either umbrella or great coat．When the rains are violent and of long continuance，they do great mischief in the island among the plantations，carrying away large tracts of land，with coffee，plantain trees，sugar canes，and ground provisions，which are all hurried into the sea． To the towns also they do great damage，causing the rivers to overfiow their banks，or breaking out in fresh places，swecping off houses，or whatever else stands in the way of these destructive torrents．

Thunder and lightning is seldom so severe in Do－ minica as in many parts of the Weat Indies；neither sre earthquakes so frequent or so destructive．It has been asserted，that soon after the English first took possession of the island，it was split in several places by one of those awful convulsions of nature；and in particular，a large chasm was made in a mountain
called Demoulins，so decp，that，although it was seversl times attempted，it never could be fathomed； the traces of this remarkable circumstance have， however，long since disappeared．

VI．Dominics，in 1692 ，contained 938 Caribs，and 349 French occupied the part of the const which had been abandoned by the natives，and which they cul－ tivated by the aid of 23 free mulattos，and 338 slaves． At the peace of 1763 ，the island contained 600 whites， and 2，000 blacks；in 1773， 3,350 whites， 20,000 negroes；and，in 1788，the population consisted of 1,236 whites； 445 free negroes ；and 14,967 slaves． Total， 16,648 ．In 1792 ，the negroes were－males， 6,438 ；females， 6,214 ；male and female children， 4,462 ；total， 16,244 ．In 1798，the number of slaves was 14,967 ．In $1805,1,594$ whites， 2,822 free co－ loured， 22,083 slaves．

The slave population since 1817.

The militia in 1836 consisted of 10 Lieut.-Colonels; 3 Majors; 17 Captains; 21 Lieutenants; 8 Enaigns; 1 Surgeon; 1 Quarter Msster; 54 Serjeants; 13 Drummers; 864 Rank and File; Total, 1092. An excellent body of men.

The laws in force in the island are the common statute law of England, so far as is applicable to circumstances; acts of parliament deelsred or manifestly intended to apply to the island, or to the colonies in general ; and the acts of the island house of assembly, when not repugnant to the laws of Great Britain and aanctioned by the crown. The courts of civil jurisdiction are those of chancery, common pleas, complaints, error, admiralty, and the merchant court.

This latter court was revived and regulated by the law of Dominica, number 74, passed in 1817. It is a court of record, and the process and proceedings are conformable to those of the court of common pleas. The complsint court is for the recovery of debta, up to 251 . The court of common pleas consists of a chief and four other judges. The court of grand sessions of the peace consists of the Lieut.-Governor (not being commander-in-chief), the Members of Council, the Speaker, and all the Justices of the Peace who are Members of the House of Assembly. The Chief Justice presides, and the other judges seldnm interferc. The court sits twice yearly. Any three Justices of the Court (heing Memhers of Council) may at any time take bail, as in the English Court of King's Bench. The preceding and the Court of Queen's Bench.have alone criminal juriadiction in the island.
XI. The revenue is raised generally as in the other West Indian colonies.

- The diminution between 1832 and 1833 must have been owing to the cessation of a parliamentary grant for military protection. There is a local assessment of $2 \AA$ per cent. on the rental of houses in Roseau, which produces $\mathrm{E} 3 \mathbf{3 0 0}$ per annum. There is a paper currency of 2,000 dollars $=£ 360$ sterling, in notes of two snd four dollars each, payable in coin on demand at the Colonial Treasury. The annount of coin in the island is not ascertainable.

Recapitulation of the Establishment.-Paid by Great Britain in sterling moncy : Civil Establishment, 2600l.; Judicial Establishment, 1800l. ; Eicclesiastical Establishment, 1801.; total, 4580l. Paid by the Colony in sterling money: Civil Establishment, 1032l. ; Judicial Fstablishment, 120l.; Ecclesiastical Establlshment, 280l.; Pension, 39l.; total, 1:171l. [B.B. 1836.]
Commissariat Expenditure by Great Britain.-Provisions and forage : received from England, 22191.; purchased in command, $28681 .=50881$. Received from England, 71l.; purchased in command, 144l.= 216l. Miscelianeous purchases, 10l.; transport, 236l.; pay of extra staff, 1601 ; military ailowances, $813 l$.; special licenscs, 7il.; contingencies, 48l. ; ordnance,

XII. Dominica is one of the best watered of the Caribbee islands, and, with its rieh soil, may be naturally expected to have a luxuriant vegetation. The woods afford a large supply of excellent timber, consisting of locus-wood, bully-tree, mastic, cinnamon, rose-wood, yellow-sanders, bastard-mahogany, iron wood, several species of cedar, and various other sorts useful for building houses, vessels, and canoes, -for furniture, for dyeing, and other necessary purposes. The trees are of uncommon licight, and by far exceed in loftiness the tallest timber in lingland; their tops seem to touch the very clouds, which appear as if skimming swiftly over the upper branches. Many are of enormous girth; and the seeds of etifferent trecs, being scattered by the wind, fall into the heart of the same plant, and thus become incorporated with the tree on which they are scen growing. The circumference of the body of the gam-tree is generally very great, and its timber is, on that account, made into canoes, by digging or burning out the insite, and shaping the log into form. The gam falls from the body and branches of the tree in great quantities, in substance like white wax: it was found very serviceable to the planters of that island, during the time it was in the possession of the French; the gum being used instead of oil (which could not then be had) to burn in lamps in bolling-houses when making sugar. The Romish priests of Dominica use lt likewise in their censers at funerals, and other ceremonies of their church, on account of its delightful aromatic smell when burning. It is supposed to contain virtues which might be valuable in medicines, were they better known.
The timber also of this trec, as well as that of several others in the woors, make good ahingles for covering houses, and staves for sugar and collee casks. Several fine aloops and schooners have likewise been built here, and esteemed for their strength and durability. Cahbage-trees are in great plenty, and serviceable, as their trunks, sawed or aplit, make gond laths or rails for cattle-pens, being very durable. The brancher and leaves are used for thatching of houses;
and the calsbage part of them is excellent eating; when boiled, it tastes much like the bottom part of all artichoke. It also makes $n$ good pickle.

The size of the ferns, whole forests of which are found in the dips and recesses of the hills, is very remarkable; some of them rise to the height of 25 feet, with their branches as fincly pinnated, and their colour as vivid and fresh, as the dwurfish and lowly, hut lovely, English fern. In 1792, there were 31,695 acres in netual cultivation ; 26,770 acres adjoining, and 30,175 acres partly cleared. There were 62 sugar and 291 coffee estates. The value of the landed property and buildings thercon was $3,100,000 l$, sterling.

W. is ut part the hills are oc forming numerous $r$ being extremely irr other times conical, a of the Island may, as sist of broad slopes, tions.

No island in the $V$ excclient bays and it
prising a surface of 20,000 acres, covered with the most valuable and durable timber, nearly on the same level, and watered by a great number of small streams, forming the Mahout and Lazon rivers on the W. side, and the Quanary and Pagoua rivers on the E. of the island. This land is stated by the intelligent Sur-veyor-general of the island, Mr. Finlay, to be admirably adapted to the cultivation of cocoa, coffee, and all
kinds of provisiona. Large pastures might casily be formed for cattle: its elevation above the level of the sea is from 800 to 1000 feet; the general temperature 68 to 75 Farenheit; and there are no local impedlments but a want of funds, or it may be said of population, to demonstrate the advantages which would arise from Europeans colonizing this delightful West Indian island.

## CHAPTER IX.-ANTIGUA.

Section 1. This fertile island is situate in lat. 17.3 N. long. 62.7 W. 40 miles N. of Guadaloupe, 25 N. E. of Montserrat, 30 S . of Marbuda, extending in parallel lines from Friar's Head in the E. to Peyrson's Point in the W., 153 miles; containing from Shirley's Ileights in the S. to Boon's Point in the N. $11 \frac{1}{2}$ miles, being about 20 miles long, about 54 in circumference, and containing 108 square miles, equivalent to 69,277 acres.
II. Antigua was discovered by Christopher Columbus, on his second voyage, in 1493, and named by him, from a chırch in Seville, Santn Marin de la Antigua. Next to Jarbadoes and St. Christopher it is the oldest liritish colony in the leeward isles, having been settled by Sir Thomas Warner, with a few English families in 1632. Antigun was granted to lord Willoughby, of Jarham, by Charlea 11. in 1663. In 1666 a Frencls armament from Martinique ant Gua. dalouje, assisted by some Carilos, got temporary possession of the island, and plundered the planters unmercifully. By the treaty of Bredn, the island was in 1688 finally settled under the British dominion, and by means of free trade, and beneatlo the auspices of the Codrington family, rupidly prospered.
III. Antigua is ncarly of an oval shaje, with an extremely irregular coast, indented with numerous bays, and almost surrounded by islets, rocks, and shonls, which render the approach to it very dangerous on every side except on the S . W. More than one half of the island on the N. F., is low, in some places rather marshy, and interspersed with gentle acclivities and swelling emineners, which, if less denuded of trees, would present the benutiful hill and dale scenery of England. Towards the S. and S. W. the elevation of the land gradually increnses, forming round backed hills of a moderate height, generally running E. and W. intersected by cultivated valleys, sad partially clothed with small trees and brush. wond. The greatest elevation (computed at 1210 feet) is on the Sheekerley range of mountains, culled Boggies Hill, nbout six miles to the W. of Monks Hill. The highest district may be suid to take its rise from Falmouth, and to continue with various elevations to Five Island Harbour. The height to the N. E. and S. W. is not considernble, hut on the latter part the hills are occasionally hold and precipitons, forming numerous rnvines and vallies, their sunmits being extremely Irregular, sometimes round, - at other times conical, and occasionaliy tabular; the rest of the island may, us a general feature, he said to consist of broad slopes, and repeatedly occurring unilulations.

No island in the $W$. Indies ean bonst of so many excellent bays and harbours, but they are all, except
those of St. John, English Harbour, and Falmouth, (which require pilots) difficult of access. The other bays and harbours are St. lireeman's (at the entrance of English Harbour), Rendezvous Bay, Morris Bay, Five lsland Harbour, Lydesenfis Bay, Parham, Nonsuch, and Willoughby harbours, and Indian Creek, contiguous to Fremman's Bay. St. John's, the capital, is irregularly laid out, pretty large, and built on the N. W. side of the island, at the head of a large but not deep harbour, the $N$. side of which is partly formed liy an elevated roek, called Rat lstand, about midway $u$, the liarbour, and connected with the main land by a causewny, which is submerged at highwater. From St. John's to the extreme N. aud N.E. of the island the land is generally very low, interspersed with numerous joads and marshy hollows; but, with these exceptions, the surface of the whole is sufficiently varied to prevent the accumulation and stagnation of water on its surface. Monks-hill (a military station) gradually rises from the bottom of Falıonth Bay, and, ns it ascends, becomes precipitous till surmounted by Great George Fort, at the height of G25 feet, commanding to the N, and N. E. an extensive view of a highly cultivated country, overlooking the bay below the peninsula of Middle Ground, English Harbour, mid the Ridge, whilst in the distant horizon are to be seen Guadaloupe, Montserrat, and in clear weather Nevia and St. Christopher. English llarbour is a very complete dock. yard, on a small scale, surrounded by hills, cn one of which at the N. F. the naval hospital is situate. With the exception of a few scanty rivulets amongst the liills, the whole island is destitute of running water, and the wells, heretofore dry, have proved brackish; ponds, and tanks are, therefore, the mainstay of the planters. The plan of boring for water should be adopted.
IV. The soil of the high lands is of a red clay, argilInccous, with a substratum of marl; in the low lands it is a rich dark mould, on a substratum of clay. The most superflelal strata occupy the N. and E. parts, and are of a calcarcous formution, and the outline of the district is in round hills and knolls, similar to those foum in the chalk districts of England. Through the stratum of marl which appears on the surface run layers aud irregular masses of limestone, containing a variety of fossil shells, nodules of calcareons spar, cellular anil chrystalized quartz, chalcedony, ngate, and coral-lines, both in a calcureous and silicious state. A calcurcous sandstone is also found in this marl formation, composed of silicious particles, carbonate of lime, anil it little oxyde of iron. A breccia aiso frequently appears, consisting of an agglutination of iragments of different coloured porphy.
rics．No bones of the larger animals have been found in this formation．The coarse chert，or flint，is seen in irregular masses on the surface，breaking into sharp angular blocks，and containing a great quantity of petrified wood and casta of shells．Petrified wood is also found on the surface of the conglomerate and marl formations，often so delicate and beautiful，that the colour of the wood and the distinctive form of its fibre are perfectly preserved．Agate，cornelian，and chalcedony，are frequently seen intermingled in the same specimen．Nitrate of potass，like a hoar frost， covers the flat oozy shore which bounds the bay of Falmouth on the N．and E．On a general view，the geological formation of the island may be said to con－ sist of marl，conglomerate chert and trap．Marl forms the greater part，and extends over the whole N．and N．E．part ；trap，the S．W．；conglomerate， an intervening seetion，extending inland from St． John＇s Harbour，and chert，embracing a section with the latter segment．Dr．Nugent divides the island into four distinct classifications．The range of moun－ tains，or rather highlands，in the S．W．quarter， consisting of unstratified conglomerate，composed of masses of trap，breccia，wacke，porphyry，greenstone，\＆e． which are embedded in a clay matrix with brownish decomposing chlorite baldage．Parallel with this range inland，a different formation appears，consisting of a claystone conglomerate，containing silicified wood， coralline chert，agate，amygdaloid，porphyry slate， bloodstone，\＆c．in a matrix of an intense green colour． The $\mathbf{N}$ ．and E．districts have a calcareous formation subordinate to the lowest beds，of which，and nearly in the centre of the island，are extensive irregular masses of coarse chert，containing a prodigious quan－ tity of casts of shells．The fossils and petrified woods found in Antigua，when polished，are exquisitely beautiful．

V．Owing to the elevation of the land，and the absence of dense and lofty woods，visible in Jamaica，Domi－ nica，\＆ce．，the climate of Antigua is dry，and the rainy season so uncertain，that sometimes a great part of the hurricane season passes away without rain．The dry season generally commences in January，continu－ ing to April or May，and from June to the end of the year the rains are usually abundant．In consequence of the dryness of the climate，the temperature is less subject to the variations observed in the other islands； heavy dews are not often experienced，and the ther－ mometer seldom ranges more than 4 degrees in the 24 hours．On the ridges，or lills，the temperature is considerably modified by the sea breezes，or trade winds，which occasionally shift a few points to the N．and South．

A meteorological table for 1836 shewing an annual medium of temperature of 79.68 ，and a total annual fall of rain of 35.58 ．The most severe huricanes were those of $1681,1707,1740,1772,1780$ ，and 1792. A dreadful earthquake occurred in 1689，and com－ mitted great destruction in Antigua．

Metenrological Table．－From a joarnal kept in St．Peter＇s parish，in latitude 17 deg． 8 min ．N．longitude 61 deg .48 min ． W．，from 1st．December，1833，to 18 st December， 1834.

Note.-These returns would appear to be for the established church alone, except in marriages.

The average population to the square mile in Antigua may be taken at 334. The greatest bulk of the population is employed in agriculture; there are none employed in manufactures, excepting of sugar, molasses, and rum. There has been no census of the population since 1821. The disproportion between the burials and the baptisms is accounted for from the circumstance, that many of the Wesleyans bring their children to the church to be baptized, but generally inter their own dead. The population may be estimated at $\mathbf{3 5 , 3 0 0}$ persons.

Antigua totally abolished slavery in August, 1834, without walting the intermediate apprenticeship, as in the other slave colonies. Every fact, therefore, relative to the island must prove interesting. It will be perceived that the tables of education and religion are very complete. All accounts agree in a favourable representation of the progressively improving moral character of the negroes. Their physical condition is not deteriorated; and the value of property in the isiand has risen.

A statement of the number of Slaves for whom compensation has been claimed, and of the number of claims preferred for such compensation, and of the amount of compensation awarded in each of the clssses of predial-attached, predial-unattached, and non-predial. [Parliamentary return to the House of Lords, March, 1838.]

*There has been no change in the parochial division in the isiand for mora than $\mathbf{1 0 0}$ years.

+ Re-opened, nfter repair and enlargement, on ist January, 1837.
\# This chapel has lately undergone considerable repaira in consequence of the hurricane of 1835.

The amount of population given in this return appears to be in a great measure conjectured; there being no recent census to refer to. St. George's church has been enlarged this year, at the expense partiy of the parish and partly of the Society for the Propagation of the Gospel in Foreign Parts.

Fees to the Clergy.-The vestry assemhles, when the acting churchwarden lays before them an estimate of the ways and means for the year. The number of acres and of slaves in the parish show the amount of the tax on each. This amount, with ali items, is settled by the majority; the churchwarden delivers the accounts and collects the money. One of the principal disbursements is the minister's salary; whout 200l. sterling is provided by an act of the island, and it is customary for the vestry to make a volun-
tary addition to it, generally from 60l. to $100 l$. per annum. This, with a parsonage house, and sometimes a horse, is sufficient to make a clergyman comfortable; and the minister is under the necessity of avoiding conduct which would be offensive to his parishioners, while a portion of his income depends on the good will of his flock. The salary of the cierk is also on a liberal scale, being from 75l. to 120l. per annum; he acts as vestry clerk in keeping the accounts and collecting the taxes. The aurplice fees are liberal; three guineas is a common fee to a clergyman, and not unfrequently one guinca and a half to the elerk, as a wedding fee. This, with 3l. 13 s . 6 d . to the governor for a license (few white people being married by banns), makes matrimony an expensive business. [B.B.]

VIII. Sebools of Antigua in 1836. [B. B.]

Private schools: besides those under the direction of the Wesleyans and Moravians, there are about eight private schools; at one of which, eight poor girls are boarded and educated at the expense of the parlsh of St. John. None in St. Paul's, St. Peter's, St. George's or St. Philip's, but one for the more wealthy in the parish of St. Mary.

The national school houses belong to the Christian Faith Society; books for the schools generally, are supplied by a district committee of the Christinn Knowledge Society, and the Ladies' Associntion in England. The publicly endowed central schools in

St. John's Town, ccased to exist in August last, when the Act by which they were estahlished expirell ; they have since been restored with some changes, but were not re opened until January 18:37. St. Paul's, which is used also as a temporary chapel-of-case ; the infant school-house at English Harhour, is lent hy the hon. Lady Guy, and the infant schools are supported partly hy a grant of $25 l$. sterl. from the Ladies Association In England, partly by local contributions, partly by assistance from the Christian Faith Society St. Peter's; the schools on the estates of the Rev. N. Gilbert, are supported entircly hy himself. The as.
sistance received from the local, or branch association of the Christian Faith Society, in 1836, amounted to nearly 20l. sterl.; but besides this, the assistance given to each separate school by private individuals in the logn of houses, allowances of provisions, \&c. would, if calculated, amount to a considerable sum. The principle of small payments from the scholars, has been tried with some, but not general success. In the national schools in St. John's Town, the sum of about 20 guineas, or rather more, was thus received in 1836, by payments from the senior classes of threehalfpence, sterl., and from the junior of half that sum weekly. In some, also, of the rural schools, the plan has succeeded. It will probably become general by degrees. The total number under school instruction, by this return, is less than by the last; there has bee ' 'alling off of about 200, or about one in eleven; wr alay be accounted for from various incidental cr. , but chiefly from the temporary failure of certain pecuniary supplies, on which the remuneration of the teachera depended; these supplies are now returning, and the schools in consequence are beginning to flourish again. Besides regular schools, there is also much desultory instruction going on, by means of which, individuals unnoticed in the parochial returns, are learning to read on estates, at the intervals of their work, from their acquaintance or friends or some private teachers. On the whole, education is spreading in Antigua, as fast, probably, as is desirable. More excitement might unsettle the moral and industrious habits of the people and give rise to dis. content, though there is still room for the quiet and
gradual extension of Christian instruction, so that all may read the scriptures and worship the supreme Being intelligently.
There is a very general countenance of religious instructors and instruction in most of the islands, and in Antigua particularly.

There are Sunday and infant day schools carried on by the Church of England, the Moravians and the Methodists. The majority of the clergy are intent on the grest duties of their calling : of the miasionaries too much can scarcely be said. A too rigid adherence to high church principles has done much injury to the establishment, and exhibited the inadequacy of the episcopal system to the religious requirements of the slave population. The abandonment of the West $\ln$ dies by the Church Missionary Society, has been of essential disservice; still there is much doing by exemplary and devoted men in the establishment, by going about on the estates, and preaching in the negro houses in a truly missionary spirit. The appointment of ascistanta or helpers (called by the negroes " God. fathers,") to exercise a certain surveillance over their Hocks on the plantation, has tended very much to give effect to their ministrations. By these and other meana, the character of the negroes has been much improved, and their outward attention of religion greatly increased; add to this, the refusal of all the ministers and missionarics to bury any whose names are not inserted as membera in their books, produces an anxiety, on this, if on no other account, to be enrolled among the professors of religion. [B. B.]

Note.-No return for 1830. An augmentation of prisoners in the two last years is given in all the gaol returns, owing probably to some mistaken mode of filling up the Bluc Book columns.
X. Antigua is legislated for by a Governor, Legislative Council ( 10 members), and House of Assembly, consisting of a Speaker and 25 members, representing the capital town (St. John's) and twelve divisions, or aix parishes, into which the island is divided. The Governor of Antigua is also Governor and Comman-der-in-Chief over Montserrat, Barbuda, $\therefore$ Christopher, Nevis, Anguilla, the Virgin Islands and Dominica ; he, however, generally remains atationary at Antigua. The Governor is chancellor of each island by virtue of his office, hut commonly holds the court in Antigua. In hearing causes from the other islands he acts alone; but in cases which arise in Antigua he is assisted by a council, and by an act of the Assembly of this island, the President and a certain number of the Council may determine chancery causes during the absence of the Governor. He has an Fxecutive Council of 12 members to assist him in his government. The other courts of this island are a Court of King's Bench, a Court of Common Pleas, and a Court of Exchequer.

The militia consists of a brigade of artillery, a squadron of light dragoons, and a windward and leeward regiment of infantry.

Return of Militia [B. B.]-Artillery.-l Colonel; 1 Licut.-Colonel; 1 Major; 4 Captalns; 8 Lieutenants; 1 Adjutant; 1 Quarter-Master; 1 Surgeon; 8 Serjeants; 8 Corporals; 3 Buglera; 170 Gunners; 1 Assistant Quarter-Master. Total, 208.

XIII. Antigua is most bountifully supplied with a variety of edible vegetables and fruit. The yam, sweet potatoe, cassave, cabbage, turnips, carrots, radishea, eddoes, aquash pumpkin, cucumber, plantain, ochro (spinnage), \&c. are among the former; and among the latter are the orange, mango, guana, shaddock, aweet lemon, pine apple, aapadillo, pomegranate, grenadilla, plum, grape, almond, alligator (and other) pears, men, citron, banana, cashew, dildoe, redcaps, soursop, bread, and jackfruite, \&c.

Sugar is the ataple of the island; but other productions are now being attended to. Among the medicinal plants, spices, and trees, are a species of abainthium, aloe perfoliata, amomum zinziber, anisum vulgare, dolichas pruriens, datura stramonium, feuiculum dulce, glycirrhizza glabra, guaicum officinale, several specica of menthæ, rosmarinus officinalis, quassia excelsa, and ricinus communis. Guinca grass is extensively cultivated.

The coast, bays, and harbours are plentifully oupplied with excellent fish. Among the most numerous are the herring, mackarel, baracouta (of great size) ; glouper (sometimes 50 pounde) ; toad (poisonous); mauget, hedgehog, hog-fish (poisonous); jew-fish (large and dear) ; snapper, Hatfork, squerrel, chubb, snitt, flounder, mullet, parrot (coloured like the bird),
eel (like a serpent); silver, luck, and ink (shedding ink when caught) fishes; abacore (a large size) ; shark (plentiful); doctor (has a lance in the tail) ; sprat (two varietics, one poisonous) ; king, fry, whitening (poisonous) ; wattec, hind, comaree, convalby, old wife, queen mullet, cobbler, ten pounder, garr, bolalwe, reay, shew, and crawfish cat (a curious fish with five prongs, which, if left on the skin, sucks blood). The king fish taken young is termed coramour, and, when kept in a fish pond, or crawl for gome time, is esteemed a great delicacy, as is also the mud fish (resembling tench), commonly found in the water-courses. The mangrove oysters are considered a tantalizing dainty, and trunk lobaters, cockles, \&c. arc excellent.
Barbuda.-This island, the property of the Colrington family, is situated 36 miles N . of Antigun, about 20 miles hroad, with 1,500 inhabitants; the interior is level, the soil fertile, and the air of great purity. It was first settled by a party of colonists from St. Kitt's under Sir Thonas Warner, whom the Caribs at first compelled to retreat; but the English finally returned, and quickly began cultivation. The chief trade of the colonists consist in raising cattle, swine, poultry, horses, and mules, for sale in the neighbouring islands. There is a good roadstcad; but the coast is dangerous.

## CHAPTER X．－NEVIS．

Section I．This delightful little island，one of the leeward Caribbees，is separated from St．Kitt＇s by a strait，almost two miles broad and full of shoals，in latitude $17^{0} 14^{\prime} \mathrm{N}$ ．longitude $63^{\circ} 3^{\prime} \mathrm{W}$ ．It was first colonized by a few Englishmen，in 1628，under Sir Thomas Warner ：and it is termed by Smith，in his amusing natural history of Nevis，＂the mother of the English Caribbec Isles．＂

II．Nevis is a single mountain，about four miles in length，three in breadth，eight leagues in circum． ference，with an area of 20 square miles，springing by an easy ascent，as it were，out of the sea，and evidently of volcanic origin．The summit has the appearance of a crater．At a short distance from Clarke＇s hill there are several hot springs，containing neutral salts in solution．Their heat varies from 100 to 108 Farenheit．At the base of the mountain is a border of level land，extremely fertile and well planted． The appearance of Nevis is perhaps the most capti－ vating of any island in the West Indies．From the $S$ ．and W．it seems to be nothing but a single cone rising with the most graceful curve out of the sea， and piercing a fleecy mass of clouds which sleep for ever round its summit．It is green as heart can con－ ecive，perfectly cultivated，and enlivened with many old planters＇houses of a superior style，and churches pecping out in the most picturesque situations ima－ ginable．A complete forest of evergreen trees grows like a ruff or collar round the neck of the high land，
where cultivation ceases．On the $N$ ．and the E．the cone is not so perfect ；it falls off in one direction in a long slope，which terminates in a plain towards the Narrows of St．Kitt＇s，and is broken to windward into one or two irregular hills．Columbus is said to have given the present name to this island，from the moun－ tain of Nieves in Spain．Edwards supposes that a white amoke issued in that age from a volcano now extinct，but perhaps the vapours which rest on the summit may more probably have suggested the notion of snow．

Charlestown，the seat of government，is a larger， smarter，and more populous place than the capital of Montserrat．It lies along the shore of a wide curving bay，and the mountain begins to rise immediately behind it in a long and verdant acelivity．The court house is a handsome huilding，with a square in front； it contains a hall on the ground floor for the assembly and the courts of law，and another room up stairs for the council．

The island is divided into five parishes，and it has three tolerable roadsteads．

Nevis at one time had a very large white population． In 1673，there were 1,411 men able to bear arms，and 1，739 negroes．In 1707， 1,104 whites， 3,676 negroes． In 1720， 2,358 whites， 5,689 negroes．In $1730,1,296$ whites， 5,646 negroes．In 1788，1，514 whites， 140 free coloured， 8,420 slaves．The white population is now estimated at 500 ．

III．Slave Population from 1817 to 1831.

No census has been taken for many years，but the present is the population as near as can be calculated． Nearly all persons residing in the country are em－ ployed in the manufacture of sugar and rum，and in preparing the lands for the cane and provisions．［B．B．］

A statement of the Number of Slaves for whom Compensation has been claimed，and of the Number of Claims preferred for such compensation，and of the Amount of Compensations awarded in each of the classes of Prædial－attached，Prædial－unattached， and Non－Predial．［Parliamentary Return to the House of Lords，March，1838．］

Number of Claims having reference to each Division. Predial Attached, 77 ; Predial Unattached, 331 Non. predial, 289.
IV. Churches, Livings, \&c. [B. B. 1834.] Populatlon of each parish, about 1,275 . Value of each liv. ing, $18,000 \mathrm{lbs}$. of sugar, or 1266 . sterling.

St. Paul's, Charles Town.-One parsonage house, one and a quarter acres of glebe; church situated conveniently in the town, will contain 600 persons; about 450 generally attend. No chapel. Two dissenting places of worship.

St. Thomas.-No parsonage house, but 1,500 lbs. of sugar allowed as an equivalent, equal to $13 l .10 \mathrm{~s}$; about eight acres of glebe ; church situated in a central part of the parish, will contain 140 persons; about 100 generally attend. One chapel, erected on the property of T. P. Huggins, Esq.; service just now discontinued.

St. James.-No parsonage house, but same allowance as St. Thomas ; about eight acres of glebe; church situated in a central part of the parish, will contain 170 persons; in general fully attended. One chapel, erected on the property of T. J. Coull, Esq.; 40 persons generally attend. One dissenting place of worship.

St. George.-Church situated in the centre of the parish, will contain 250 persons; about 120 generally attend. Two dissenting places of worship.

St. John.-Church situated in the centre of the parish, will contain 200 persons; about 100 generally attend. [No return at the Colonial Office for 1836.]
V. Schools, \&c. of Nevis, in 1836. [B. B.]

The domestic affairs of Nevis are managed by a Lieut.-Governor, an Executive Council of 12, a Legislative Council of 11 , and a House of Assembly of 15 members. The laws and regulations of the island do not require especial notice.

The chief production of the ialand is sugar, the cultivation of which adds much to the richness of the scenery when contrasted with the mountain forests. There are five steam-engines, 40 wind, and 45 cattle mills for the manufacture of augar, rum, molasses, \&c.

## CHAPTER XI.-MONTSERRAT.

Section I.-Montserrat in 16.47. N. lat., 62.13.25. W. long., $22 \mathrm{~S} . \mathrm{W}$. of Antigua, the same distance N.W. of Guadaloupe, and S. E. of Nevis, is about 12 miles long, $7 \frac{1}{2}$ broad, and 34 in circumference, containing 47 square miles, or about $\mathbf{3 0 , 0 0 0}$ acres.
11.-The isle waa discovered and named by the sailors of Columbus, Montserrat, a name expressive in the Spanish language of its broken and mountainous
appearance. In 1632 it was first settled on by Sir Thomas Warner, under the protection of the British Government; about 1664, in the beginning of the reign of Charles II. it was taken by the French, but restored to the English at the peace of Breda, and has continued ever since under our flag.
III.-Like many other islands in its vicinity, Montserrat most probably owes its origin to a volcanic
eruption ；like them it runs from S．E．to N．W．，is equally mountainous，broken，and intersected；on the N．the extremity of the mountain chain terminates in a bold head－land coast，close to which vessels may approach with safety，but there is no landing，and scarcely any anchorage along the coast ；the land slopes gently down to the shore，or rather ascends from it，like the $\mathbf{W}$ ．side of the island，by a succession of round conglomerate hills，overtoppugg each other in pleasing undulatisus until they reaeli the mountain base．
On the $\mathbf{S}$ ．there is no approach for vessels of any description until they get to the westward；the sea for a mile or two is studded with immense rocks and shelving banks of coral，which prohibit even the ap－ proach of boats；at this point the island springs up at once，and nearly perpendicular，to the height of 1500 fect；from thence the mountains begin to ac－ cumulate，throwing out branches nearly at right an－ gles E．and W．，of unequal magnitude，as if for sup－ porters，to those originally formed；subsequently they advance and shoot up to 2500 fect，stretching across to the N ．extremity，and terminating in the abrupt head－land above mentioned．
The mountains in many places are totally inaccessi－ ble in consequence of their declivities forming steep precipices of clay－stone，and beng separated from each other by immense perpendicular chasms，several hun－ dred feet deep．These gullies，and the mountains，are richly clothed to the very summit with lofty woods， and all the variety of beautiful shrubs and plants pe－ culiar to a tropical mountain region．On the S ．W． side of the chain is a small souffiere，sitiste 1000 feet above the sea in a dell，formed by the approximation of three conical hills；the scenery around which ia grand and beautiful．No marshes exist，but a small lake is situate on the top of a ligh hill on the west
side of the mountains，about two miles from Plymouth， which remaina full the whole year．
Plymouth，the capital，is small，but extremely well built，and the houses constructed of a fine grey－stone， have a substantial and comfortable appearance．

IV．The same geological features mark Montserrat as are to be found in the neighbouring isles；many of the rocks might be termed vast masses of clay of vari－ ous hues and colours．The conical hills abound with carbonate of lime，iron pyrites，and aluminous earth． The superstrative soil is in general dry，light，thin， gravelly，and thickly covered with blocks of clay and sandstone，except in the vallies where the loamy earth is deposited by rains．
V ．The Montpellier of the W ．is the term given to this Indian isle，which has long been celebrated for the peculiar clasticity of its atmosphere，the majestic grandeur of its picturesque and lofty mountains and bewitching scenery．The temperature of course varies according to locality．On the windward and leeward sides，and according to the elevation above the sea，the air is generally cool and dry；the seasons are similar to those of the neighbouring isles ；it is subject to hur－ ricanes，but their visitation are not severe or frequent．
VI．This island，like many of our W．I．posses－ sions，was at one time more densely peopled by Eu－ ropean colonists than it is at present．In 1648 there were 1000 white families，with a militia of 360 effec－ tive Europeans．In 1673，there were 1,175 men able to bear arms，and 523 negroes ；in 1707，whites， 1,545 ， negroes， 3,570 ；in 1720，W．1，688，N．3，772；in 1724， W． 1,000 ，Militia， 500, N． 4,400 ；in 1730，W．1，545， N．5，616；in 1733，N．6，176；in 1787，W． 1,300 ， Free coloured， 260 ，slaves， 10,000 ；in 1791，there were about $1300 \mathrm{~W} .$, and $10,000 \mathrm{~N}$. ；in $1805, \mathrm{~W}$ ． 1,000 ，free coloured， 250 ，slaves， 9,500 ．

The increase and decrease of the Slave Population，since 1817，was－

those who are best acquainted with the fact，that great mortality has prevailed among the children on plantations since the year 1834．The return below， of births and deaths，is not to be taken as complete， because some of the negro children die before they are baptized，and others of the negroes who live at a dis－ tance from the clergyman，bury their dead without any application to him．Another hindrance to the completion of this information，is，that of there not being any minister appointed for the new parish church of St．George．

The correct number of persons employed in agri－ culture，will not be ascertained until after the year 1840 ；because they are now the preedial unattached， who are sometlmes employed in ngriculture，and at other times at different occupations．

V11. Number of Churches, Livings, \&c. in 1836. [B. B.]-In the united parishes of St. Anthony and St. Patrick, there is one Protestant church, which will contain 750 persons, and is generally well filled ; the value of the living is about $\mathbf{2 0 0 l}$. sterling. In the parishes of St. Peter and St. George, there is one Protestant chureh, which will contain, when the enlargement is completed, 350 persons, it is generally well attended; the value of the living is about 200l. sterl. There are also three Dissenting places of worship, one in town and two in the country, belonging to the Wesleyans. The Wesleyan chapel in town contains 400 persons; that in the country to the east, 700 ; and that to the north, 150 . There is an infant day sehool in town, attended by 126 scholars; and two in the country, attended by 130. They have also three Sunday schools, which are well attended.
VIII. In 1831, there were six public or free schools, with 298 males and 390 female seholars.

CHAPTER XII.—ST. CHRISTOPHER.

Section I. In 17.18. N. latitude, 62.40. W. longitude, 72 miles in circumference, and containing 68 square miles, is situuted St. Kitt's or St. Christopher, called by the Caribs Liemuign, or the fertile isle, and in shape somewhat like ltaly-as an outstretched leg.
II. This singular looking but beautiful spot was discovered by Columbus, in 1493, and, as stated by some, received its name from the grent navigator himself, hy reason of his being so pleased with its fertile appearance; others say its name is lerived from a part of Mount Misery, bearing a resemblance to the statnes common at that period on chureh porches, of St. Christopher carrying our Saviour on his shoulders. The isinnd was then densely peopled by Caribs, who remained for some time after its discovery in possession of their native home, subject to the occasional visits of the Spaniards for water, with whom they are stated to have heen on terms of friendshlp-a very doubtful fact, anless the Spaniards did not require the land or persons of the Caribs.

In 1623, Wnrner (afterwards Sir Thomns) settled on the island, with his son and fourteen Londoners, and found three Frenchmen residing in trancuillity with the natives. Warner returned to England for more recruits, and, on his return in $\mathbf{t 6 2 5}$, landed the same day with M. 1)'Jnambinc, who hat nrrived from France with n party of colonists. The Caribs took alarm-mnte war on the European invaders-were discomilted with the loss of 2,000 in killed and wounded, leaving 100 foes dend from their poisoned arrows. The English and French agreed to divide the island hetween them, and neticles of partition were signed 13th of May, $16 ; 27$. The islund was divided into upper and lower portions-the former and most extensive, called Cupisterre, belonging to the French; and the lower, called Basseterre, alone inhabited by the linglish.

Don Frederick de Toledo, a Spuniard, proceeding to Ilavannah, with 15 frigates and 2.4 ships of burden, nttacked the colonists in 1629, burned and plundered in every direction, and carried ofl 600 Englishmen as prisoners; but the flow of emigration was so great to the West Indies at this period, that in the following year the number of lenglish settlers amounted to (i,000). Jealousies, bickerings, and nt length hostilities began between the English and Freneh settlers, which were stopped by the latter eompelling the former to returu within their line of demareation ; but, nlthough it was ngreed that if France and bingland went to war the colonists of St. Christopher should remain neutral, the resolation was broken on the commencement of hostilities in Europe, and $n$ terrible mittic, whieh lasted several dinys, ended in favour of the French colonists, who nssumed the mastery of the whole islinnd, and galluntly defended their acquasition in the following yem agninst a large Finglish force (sunt to recover possession), lin the contest for which Lord IVelmont and Colonel Lanvren wert slain, nil their alleers wounted, cight colours lost, 700 Iritish troops killed and drowned,
and many taken prisoners. At the peace of IBreda, the English colonists were restored to their portion of the island-and for 20 years the French and English lived in peace; but in 1689 the former entered the territory of the Intter, put to death all who opposed, and, by the aid of fire and sword, forced the English to fly from the colony. In the following year General Codrington and Sir F. Thornhill, with a large foree from Barbadoes, drove the French from St. Christopher's, and for several years the English, in turn, remained masters of the whole island; but by the treaty of Ryswick, restitution was made to the French of the part they had formerly possessed-this they retained until 1702, when the island was captured by the Figlish; and by the treaty of Utrecht, in 1713, entirely ceded to the British crown. Most of the French removed to St. Domingo, and the sale of the crown lands produced a large sum for government, of which $40,000 l$. wns voted as a marriage portion for the daughter of George II. St. Kitt's rapidly increased in prosperity, notwithstanding the effects of a terrific hurricanc in 1722, which destroyed $500,000 l$. worth of property. In 1782, the Marquis De Bouillé, with 8,000 troops, and supported by the Count De Grasse with 29 sail of the line, captured the island ere Sir S. Hood, with 22 sail of the line, could effect any thing for its relief. The treaty of pence, signed at Versailles in the following year, restored St. Christopher's to Great Britain, in whose possession it has since remained. In 1805, a large French force Inneled at Basseterre without opposition, levied $18,000 \mathrm{l}$. as contribution, and sailed away with six merchant ships which they found at anchor in the bay, and burned as soon as they got out to sea.

11I. St. Kitt's presents to the eyc an irregular oblong ligure, through the centre of which runs a regular series of mountains from N . to S . in the midst of which stands Mount Miscry, 3,711 feet in perpenilicular height, and, although evidently a volcanic production, clothed with the tinest wood and pasture, almost to the very sunnmit. lirom the foot of Mount Misery and the adjoining hills the country has $n$ uniform sloping direction, stretching from a centre to a circumference, bounded by the coast, every inch of which is in $n$ high state of cultivation. There is no plain in the lsland deserving the name of a swamp, and the great declination of the land towards the sea carries off any super bundant moisture. On the W. side, Brimstone hill rises gradually from the sea to a height of 750 feet ; its E. prospect for two thirds of its nltitude lus a somewhat conicul appearance, and then suddenly projects into two penks, the $N$, one being called Fort George, the S. Fort Charlotte or Monkey Hill. At the foot and between these prominences is a plain of gundrangular shape, compass ing about an nere of land, hnving on its li. skirts the barracks (lenominated Bellinm), for 220 men. The fortilications ure very strong, and there is a tank within the rumpurts eapable of containing 90,000 gallons of witer. Monkey hill is the S, termination
of a range of great mountains，which increase in height towards the N．，and thicken together in enor－ mous masses in the centre of the island．The apex of this rude pyramid is the awful crag of Mount Misery，which is bare，black，and generally visible whilst the under parts of the mountain are enveloped in clouds．It may，indeed，be termed a tremendous precipice of 3,000 feet，shooting slantingly forward over the mouth of a volcanic chasm，like a vast aerial peninsula．The vale of Basseterre is exquisitely beau－ tiful when viewed from the hills of Mary Cayon，it has been said that there is no place on earth which can surpass the richness and cultivated beauty of this lovely scene．Nothing can be better disposed for completing the effect than the plantations are；the tall and moving windmills，the houses of the proprie－ tors，the works and palm－thatched cottages of the negroes embosomed in plantain groves，present the appearance，as indeed they are the substance，of so many country villages in England．On one side is Basseterre，with the ships，on the other the ocean to windward，the mountains behind，in front the broken peninsular termination of the island to the $\mathbf{S}$ ．，the salt lakes gleaming between the opening of the rocks， and Nevis towering majestically over all．
There are four rivers in the isle，two at Oldroad，in the parish of St．Thomas，middle island；another at the small village of St．Mary＇s（Cayon），and the fourth（Pelhans）at Palmetto point，Trinity parish． In rainy weather few plantations are without their running streams．In the low lands springs are plen－ tiful，but some of their waters unfit for drinking， owing to strong saline impregnations．The water in common use（as is the casc in most of our West India possessions）is rain water，collected from the houses，preserved in large tanks，and of wholesale quality．
IV．This isle is unquestionably of igneous origin ； immense layers of volcanic ashes are found in every parish，and the soil is chiefly of a dark grey loam， extremely porous．At Sandy Point，St．Ann＇s parish， there are alternate layers of this loam and ashes，to
the depth of 75 feet，on a substratum of gravel．This compost is considered the best in the West Indies for the cultivation of sugar．Clay is found in consider－ able quantities in the high or mountain land，while the low lands are entirely deficient of it．Among the mountains in the centre of the island there is one which contains mines of sulphur，and there is another not far distant from Fort Charles，in which there is said to he a mine of silver．In the N．E．there are very fine salt ponds，which produce most excellent salt；one of these is more than 100 acres in extent， surrounded with several lesser ponds．The structure of Brimstone Hill consists of granite，limestone，pri－ mary rock，schistus，voleanic ashes and madrepores， with a very small proportion of alluvial deposits on a few spots．

V．From the smallness of the isle and its elevation alhove the sea，St．Kitt＇s is extremely dry and healthy； the mean temperature on the coast is 80 ，but the mornings and evenings of the hottest days are agree－ ably cool．The coldest month is February－the warmest August．The winds for the greater part of the year are from the N．E．and S．E．；and although the isle is，from its position，within the range of the hurricanes，yet by these storms the air is tempered and purified，and health is the natural result．The rains that fall are more frequent than heavy，and the bracing qualities of the atmosphere are pourtrayed in the ruddy complexions of the inhabitants and the vigorous strength of body which they possess．
Vl．The number of inhabitants was at one period， particularly as regards whites，very numerous．In 1673，there were in the island 496 men able to bear arms，and 352 negroes ；in 1707，whites 1,416 ，negroes 2.861 ；in 1720 ，W． 2,740, N． 7,321 ；in 1724 ，W． 4,000 ，militia $1,200, \mathrm{~N} .11,500$ ；in 1730，W．3，677， N．14，663；in 1733，W．3，881，N．17，335；in 1787， W． 1,912 ，free coloured 1,908 ，slaves 20,435 ；in 179x， slaves 20,435 ；in 1802，by computation，W． 4,500 ， free coloured 500，slaves 25,000 ；in 1805 ，W． 1,800 ， free coloured 198，slaves 26,000 ．

X. There is a Lieutena
and House of Assembly with a depuly from Anguil

Remarks on the preceding Table by the Moravian Missionaries, - St. Peter anil St. George's Basscierre. On aceount of the severe aflietions, and the loss of two valuable ministers, which our mission in St. Kitts has sustained in the past year, we are sorry to remark, that the schools in the Basseterre district are, at present, not in that order which formerly was maintained, only one minister havirg been here for nine months, which never has been the case before.
cerning defraying the expenses of these schools, that the negroes themselves pay a small part. Some assistance is alforded by the several estates on which schools are established, and the rest is made up from the mission fund.

St. John's, Capisterre,- On account of the poor state of the parents here, we have no support from them for being able to keep private schools.-There is also one private night school.

St. Mary, Cayon.-It is to be remembered, con-
Return of the Number of Schools under the Wesleyan Methodists.

Respecting the expenses of the schools: the cha- $\mid$ raised by voluntary subscription. There are several pels being used as school-houses, generally throughout the island, and school-books, cards, scriptures, \&c. being furnislied in various ways gratuitously, the expense cannot be ascertained, and is not entered; 61. 14s. sterl., has been collected in the different chapels; the remainder is received from England, chiefly small evening schools, where the young people especially, are instructed in reading and writing, and a knowledge of the first principles of religion by catcchizing. And on alt estates visited by the missionarics, amounting to between 40 and 50 , efforts are made to teach the young apprentices the rudiments of religious knowledge.

XIII. The cuins of the island are principally English, with some Spanish ; and there is also a colonial coin sent from England, consisting of the following pieces :-

Pieces $t$ dollar Currency 2s. 3d. Sterling 1s. $1 \frac{1}{2} l$.

The copper coin used, (hesides the English penny,) is the dog, which passes for three farthings sterling, 72 making the Spanish dollar; the litt is a nominal coin, value $4 \frac{1}{2} d$, sterling. The coin in circulation is about 12,0001 . There is no paper money. The course of exchange is 200l. currency $=100 l$. British.
XIV. The Staple Products are similar to those of the neighbouring isles already described. Among its numerous fruits, the cilrus aturantium, or China orange-tree (as also the Seville) grows in great luxuriance; it rises from 12 to 20 feet in height, distinguished by the beautiful deep green of its foliage; stem upright and ramifying in every direction, forming a regular and beautiful head. The fruit is excellent, and may be improved by grafting on the Seville orange stock, but the best is to be obtained by grafting on the pomegranate. The flowers are highly odoriferous, and yield their flavour to rectified spirits by infusion, und to both spirit and water by distillation. The ciltus acrus, or lime tree, as also the citrus or sweet lime resembles the orange. From the latter the perfuine called burgamot is obtained, which is, in
fact, the essential oil fruit, and casily extrac There are varictiea al but the most elegant or citron tree, the fru agreeable tlavour. The of the citrus tribe. Tt been transplanted fro tain Shaddock, whose the West Indies. Th belonging to the orang same manner, by a ti but it is as large as a and refreshing flavour, outer coat or skin is taste and a pale yellov appearance, to the ski syecies of the shaddocl white-that of the oth is considered the most ropean may indulge in the only one in this o that will not injure hin bidllen fruit is a specie and more delicate, whi Its juice and the flavo cious in a West Indit

Section I.-The Vi Columbus in 1493, and of the 11,000 virgins of ing Anegada, they are rocks, to the iNo. of 50 Islands, extending abou 16 N . and S. Tortola, Lat., and 64.39 W. Lor
II. The Virgin Isles lish, Danes and Spania longs to the former, and are named Tortola, Virg times corrupted into Guana isle, Beef and Th Prickly Pear, Camanas Peter and several other

fact，the essential oil that reaidea in the rind of the fruit，and easily extructed by expression or distillation． There are varieties also of the lemon，citrus limon； but the most elegant of this genus is citrus tuberosa， or citron tree，the fruit of which imparts to spirits an agreeable llavour．The shrthlock and forbidden fruitare of the citrus tribe．The shaddock is aupposed to have been transplanted from Guinea，in Africa，by a Cap－ tain Shaddock，whose name it still bears throughooit the West Indies．The fruit has all the nppearance of belonging to the ornnge species，and is divided in the same manner，by a thin skin，into several quarters， but it is as large as a melon，and of a most agreeable and refreshing flnvour，between aweet and acid．The outer coat or skin is extremely thiek，of a bitterish taste and a pale yellow，or citron colour，very like，in appearance，to the skin of a lemon．There are two species of the shaddock ；the pulp or inside of one is white－that of the other a beautiful pale red ：the last is considered the most wholesome．This fruit a Eu－ ropean may indulge in with aafety－and it is almost the only one in this climate，excepting the orange， that will not injure him on his first arrival．The for－ bidden fruit is a species of the shaddoek，only smaller and more delicate，while the outer skin is less coarse． Its juice and the tlavour of the inside are quite deli－ cious in a West Indian climate．The grenadella is
another excellent fruit，containel in a suft husk， which is produced by a large passion flower；the husk is filled with a sweet and most agreeable liquid；and the manner of cating it is to cut off one of the ends， and mix up in it Madeira wine and augar，stirring it all up together；this renders it safe and wholesome for the stomach．It is of the aize of a small melon． The luurus persea，or avocato，vulgarly called alligator pear，comes to fine perfection here；it is a pulpy fruit，resembling in appearance a large－sized swan＇s egg；the pulp，or vegetable marrow as it is called，is enclosed in a light green papyraceous akin，and con－ tains a large irregularly－formed aced，that ia immedi－ ately aurrounded by brownish membraneous coverings．

## CHAPTER XIII．－TORTOLA AND VIRGIN ISLES．

Section I．－The Virgin Isles were discovered by Columbus in 1493，and so named by him in honour of the 11,000 virgins of the Roman ritual．Except－ ing Anegada，they are a cluster of lofty islets and rocks，to the No．of 50 ，to the N ．W．of the Leeward Islands，extending about 24 leagues $E$ ．and $\mathbf{W}$ ．，and 16 N ．and S．Tortola，the capital is in 18.20 N ． Lat．，and 64．39 W．Long．

II．The Virgin Isles are divided between the Eng－ lish，Danes and Spaniards；the Eastern division be－ longs to the former，and the islands in our possession are named Tortola，Virgin Gorda，or Penniston，（some－ times corrupted into Spanishtown，）Jos van Dykes， Guana isle，Beef and Thatch islands，Anegada，Nichar， Prickly Pear，Camanas，Ginger，Cooper＇s，Salt，St． Peter and several other smaller islands．
The earliest occupant of the British Virgin Isles， were a party of Dutels Buccaneers in 1648 at Tortola． A stronger party of English Buccaneers expelled the Dutch in 1666 ，and took possession of the Dutch fort in the name of Enginnd，and shortly after Charles II． annexed them to the leeward islands Government，in a commission，granted to Sir William Stapleton．

III．Throughout the Virgin Isles a serles of pre－ cipitous and rugged mountains and rocks run E．and W．The shores are indented with hays，harbours， and creeks，affording shelter for a large extent of ahipping．Large tracts of waste land，with pasturage accessible by mountain tracks，occupy the interior， and are therefore of difficult access．

The chief town，Tortola，is situate on the S．side of the island，close to the water＇s edge，in the western bight of a magnificent harbour or basin，and forming one long street，curving at the base of a projecting point of land．In front of the town and harbour is a chain of small islands，extending far to the southward， and forming the passage called Sir Francis Drake＇s Channel．The harhour of Tortola，extending thus in length 15 miles，and in brendth 31，perfectly land－ locked，has been seen in war time affording shelter to 400 vessels waiting for convoy．

IV．The population in 1720 was，of whites， 1122 ； negroes， 1509 ．In 1787，whites， 1200 ；free negroes， 180；slaves， 9000 ．In 1805，whites，1300；free coloured， 220 ；slaves， 9000 ．

The slave inhabitants were，from 1818 to 1828 ．

100 TORTOLA AND VIRGIN ISLES.-RELIGION, EDUCATION, GAOLS, \&c.
Population in 1835 of Tortola and Virgin Isles.[B. B.] Free, Males, 1678; Females, 1902. Apprenticed, Males, 1944; Females, 2207. Total, Males, 3622; Females, 4109. Births, 123; Marriages, 57 ; Deaths, 67.

A statement of the number of Slaves for whom Compensation has been claimed, and of the Number of Claims preferred for such Compensation, and of the Amount of Compensations awarded in each of the classes of Predial-attached, Pradial-unattached, and Non-Prodial. [Parliamentary Return to the House of Lords, March, 1838.]

Number of claims having reference to each division. Preedial attached, 58; Predial unattached, 93: Nonpredial, 231.
V. Churches, Livings, \&c. of Tortola and Virgin Isles. -There is one Church in the parish of St. Gcorge, (comprising the Virgin Islands). The value of the Living is $250 l$. sterling. The Church will contain about 200 persons; 40 of whom gencrally attend.
There is no Chapel connected with the establishment, but divine service is performed by the rector, in the gaol on the Sabbath morning, and nt King's Town in the evening; and since February, 1836, at which time a catechist was appointed for Spanish Town, Divine service is performed there twice on the Sabbath day in the sehool room.
There are also three Methodists Chajels in the island of Tortola. [B. B.]
VI. Schools, \&c. 1836.-In the parish of St. George, (comprising the Virgin Islands,) there are two free schools, containing 95 scholars, viz., 60 inales and 35 feniales. The master receives 30 l . sterting, which is paid by the Society for promoting the Cospel in toreigu parts. One school is at King's 'Town, which is supported by Guvernment, to which is attached an Infant School, containing 52 scholars-also one free school at Spanish Town containing 65 scholars. [B.B.]
VIII. Up to 1773 the government of these islands was entrusted to a Deputy-Governor, with a Council, who exercised in a summary manner both the legislative and exccutive authority; but, in the latter year, a local legislature, similar to that of the other islands, was conterred on them, with courts of justice, in consideration of the inhabitants voluntarily (1) offering to pay an annual impost of $4 \frac{1}{2}$ per cent. to the crown upon all the natural productions of the islands. They are now under the Government of St. Kitts, but possessing in Tortola a Council and Assembly of their own.

Return of Militia in 1836.—Infantry.-1 Colonel; 1 Lieut. Colonel; 4 Captains; 6 Lieutenants; 4 Ensigns; 1 Adjutant; 1 Surgeon; 1 Judge Advocate; 1 Provost Marshal ; 32 Non-Commissioned Officers; 300 Privates. Cavalry.-1 Captain; 1 Lieut. ; 1 Cornet; 4 Non commissioned Offices, and 17 Irivates, composing n company of Horse. [B. 13.]
IX. Re'rinue', 1836.-Amount received for liquor, sugar, bread, hawker's licences, \&c, 120l.-Duty on exportation of cattle, horses, nnd sheep, 20l.-Amount received for stamp duty, 113l.-Amount of duties received from collector of Her Majesty's customs, 8:44.
-Received for auct sales, 22l.-Reccived penalties, 20l.-Rece flour, $9 l$.-Received -Received for warr sale of sugar, spirit 122l.-This sum rece General Tax Bills, 6 poll tax on apprentic 8191.-Nett Revenue

In 1827, nett rever $508 l$.
Expenditure of 183 arrears, 1659l.-Paid 200l. per annum, 167 871. - Paid various Marshal, if month's sa 50l.-Paid keeper of $62 l, 10 s$, sterling, per a salary at 50 l . sterlin prison, 6 month's sa

The principal articles of Export in 1828 were, sugar, 9.59 hogsheads ${ }_{1}$ rum, 4 puncheons ; molasses, 20 punchenns; cotton, 980 bales , employing a slilpping inwards of $3,6: 32$ tons, and outwards of 3,181 tons. In war time these islands afford a valuable retreat for silpping.
XI. The Virgin Isles are celebrated for a great variety of fish, viz., rock îsh, groopers, barracoutas, hoge and jar fish, bonetas, albacore, congo eels, bone fish or 10 pounders, colonels, whippers, snappers, pangics, old wives, angel fish, rock leveromous, mango, swapers, silver fish, diamond, gold laces, bass lish, turtle, hedge hogs, rainbow, grunts, margarets, grass fish, \&c. Fish is generally sold at 3 d . sterling per llo., but the salue principaily depends on the quantity and quality in the market. [3. B. for 1835.]
In Spanish Town there are between 30 and 40 mines which have heen opened, some of which are at present filled up; the mines appear principally to be eopper, and black lead, some gold and copper have many years back been taken out, the ore of some appear to be copper ; they are principally situated on the East part of the valley, at a place called Red Point. None have ever heen disturbed for upwards of 80 years, except occussionally by a few persons, who may go there through curiosity to see them, and take n
little of the ore. The lead is of a superior quality. There is an arscnic mine at Collins Hill. The silver mine has been worked until it was stopped by government. Upon the top of Red Point Hill, there are a quantity of quartz. There have been a quantity of chrystals taken out of this minc. There is no person alive at this day, who is able to state the quantity of gold and silver taken out of the mines. [B. B. 1835.]

Prices of Produce and Merchandize in 1836.— Horned cattle, 6l. each; horses, $10 l$. ; sheep, 1l. 4 s . goats, 10s.; awine, 11. ; milk, $1 d$. per pint; fresh butter, 1 s . per lb. ; salt butter, 2 s . per lb .; cheese, $1 \mathrm{~s} .6 d$. per lb.; wheaten bread, $4 d$. per lb.; beef, $6 d$. per lb . ; mutton, $7 \mathrm{z} d \mathrm{l}$. per lb . ; pork, $6 d$. per lb . ; rice, $4 \frac{1}{2} d$. per lb . ; coffee, $1 s$. per lb .; tea, $8 s .3 d$. per lb.; sugar, $9 d$. per lb. ; salt, $1 d$. per lb .; winc, $2 l .10 s$. per dozen ; brandy, 8s. 3d. per gallon; beer, 12 s . per duzen ; tobacco, 1s. 9tl. per lb.

Wages jor Lalmur.-Domestic, 12l. 10s. per annum;
preedial, for extra labour, 1s. per day ; trades, $2 s$. per day. [B. B.]

Coin in circulation, about 1,0001 . No paper money.
Area of the several Virgin isles in acres-Anegada 31,200; Tortola 13,300; Spanish Town 9,500; Jos Van Dykes 3,200; I'eter's Island 1,890; Beef Island 1,560 ; Guana Island 1,120; and 40 other isles, with areas varying 900 down to five acres each, comprising in the whole 58,649 acres; of which there were ill 1823 under sugar canes 3,000 acres; cotton gruunds

1,000 ; provisions 2,000; pasture land 33,500; forest or brushwood land 11,440 ; and of harren land but 7,257 acres. The quantity of stock on the island is given at horses 240 ; mules and asses 529 ; horned cattle 2,597; sheep 11,442; goats 3,225; pigs 1,825; poultry 44,050 ; and of fish caught within the ycar $15,837,371 \mathrm{lbs}$; and yielding altogether an annual production of property to the extent of $100,000 l$. sterling; and with a total aggregate of moveable and immoveable property of nearly one million sterling.

## CHAPTER XIV.-ANGUILLA.

Section I. Anguilla, or Snake Island (so called from its tortuous or eel-like form), is situated between $18^{\circ} \mathrm{N}$. latitude and $64^{\circ} \mathrm{W}$. longitude, 45 miles to the N. W. of St. Kitts, and separated from St. Martin's by a nairow channel. The island is in length about 30 miles, and in breadth scarcely more than three miles.
11. In 1650, it was discovered and colonized by the English, in whose possession it has ever since remained, subject, however, to transient incursions from the French and from pirates, and to a brutal attack and pillage from the marauders under Victor Hugues, in 1796 ; in every instance, however, the islanders have displayed a noble spirit of independence and bravery. In 1745, the colonists, although then only about 100 strong, repulsed a body of 1,000 French who came to attack them, and obliged them to retire with the loss of 150 men . In 1796 , the latter retaliated in a manner worthy of the atrocities of the revolution. Two ships of war were sent with 400 picked troops, by Victor Hugues, of " red-hot memory," with directions to burn every settlement, and exterminate the whole of the inhabitants (British) in the island. These emissaries set abont their work in good earnest, and committed the most barbarous atrocities on the defenceless inhabitants, but were happiy interrupted by the arrival of Captain Barton, in the Lapwing man-of-war, who brought the French ships to action, sinking the one and taking the other.
III. Anguilla is flat, without mountains or rivers, and with a deep chalky soil. It presents a very singular appearance for a West Indian island. A little wall of cliff of some 40 feet in height generally rises from the beach, and, when you have mounted this,
the whole country lies before you, gently sloping inwards in a concave form, and sliding away, as it were, to the south, where the island is only just above the level of the sea. The Flat island and St. Martin's terminate the view in this direction. Nine-tenths of the country are entirely uncultivated; in some parts a few coppices, but more commonly a pretty species of myrtle (called by the negroes, maiden herry) seems to cover the whole soil ; the roads are level grassy tracks, over which it is most delightful to ride, and the houses and huts of the inhabitants are scattered about in so picturesque a manner, as to bear a great resemblance to many scenes in Kent and Devonshire. Indeed there are scarcely any ol the usual features of West Indian landscape visible; neither of those prominent ones, the lively windmill or the columnar palm, are to be seen, and there is a rusticity, a pas. toral character on the face of the land, its roads, and its vegetation, which is the exact antipode of large plantations of sugar. In the centre of the island is a salt lake, yielding annually $3,000,000$ bushels, a great part of which was wont to be exported to America. The soil yields freely sugar, cotton, maize, and provisions, and many cattle are reared. The climate is extremely healthy; and the people (amounting, in 1819 , to, whites, 360 ; coloured, 320 ; and slaves, 2,451 ) strong and active. At one time the islant was more densely peopled. In 1673 it had 500 men capable of bearing arms; in 1724 there were 360 whites and 900 negroes. The colonists have a chief, or head magistrate, who is confirmed in his oftice by the Guvernment of Antigua, and a Deputy is sent to the St. Kitt's Assembly.

## CHAPTER XV.-THE BAHAMAS.

Section I. This singular group of isles, reefs, and quays, termed the Lucayos, from the Spanish words los rayos (Anglice, the keys), or Bahamas, extend in a crescent like form; from the Matanilla reef in 27.50 . N. latitude and 79.5. W. longitude; to Turk's Island in 21.23 . N. latitude and 71.5. W. longitude, a distance of about 600 miles, not including various sand banks and coral reefs, stretching to a great extent castwards.
II. One of the Bahama isles, St. Salvador (Guanahani), is celebrated as being the first land discovered by the immortal navigator, on the 12th of Octolser, 1492, when he made this advanced post of a new world. The Bahamas were then densely peopled by the Indian race, who were soon slipped off to work in the mines of Peru and Mexico, when the Spaniards began their search for gold. In 1629, New Provitence was colonized by English (the natives were then to-
tally extinct), who re Spaniards drove them Governor, and comm 1666, the English as and New Providerice 1 when the French and and destroyed their hecame a rendezvous so hurtful to comme by Capt. tally extinct), who remained there till 1641 , when the Spaniards drove them from the islands, murdered the Governor, and committed many acts of cruelty. In 1666, the English again colonized in the Bahamas, and New Providetice remained in their hands till 1703, when the French and Spaniards again expelled them, and destroyed their plantations. The Bahsmas now hecame a rendezvous for pirates, whose proceedings, so hurtful to commerce, were only finally suppressed by Capt. Woodes Rogers, of the British uavy, who was established as Governor, and soon reduced the outlaws to obedience. After this some of the other islands became inhabited, and remained quietly in our possession until the $\Lambda$ merican war, when, in 1776 , Commodore Hopkins, with a squadron from Philadelphia, attacked and plundered the settlement, and carried off the Governor. In 1781, the Spaniards took possession of the isles, but they were restored to the British crown by treaty in 1783, having, however, been previously captured for England by the enterprising Col. Devaux, of South Carolina. The Bahamas have ever since remained in our possession.
III. Amidst a group of several liundred islets none are elevated; they are evidently the work of the coral insect, who, with all his apparent insignificance, has created many beautiful and habitable spots for the dwelling and culture of man. Some of the Bahamas are inhabited, others present to the eye a few plantations, the remainder are tenantless, though doubtless suited for culture, if there were an abundant population desirous of obtaining food. Generally speaking, the Bahamas are low and fiat, indeed little elevated, even in their highest points, above the level of the sea, nevertheless, their verdant appesrances render them extremely prepossessing. The ocean close to the isles is of an unfathomable depth; reefs of rocks, or rather walls of coral, bound the islands after the manner observable in the South sea isles. It will be sufficient to particularize a few ol the principal of our possessions in the group.

New Providence, from its harbour and relative situation with respect to the Florida channel, is considered the most important of the Bahamas, and on it is situate Nassau, the seat of government for the isles, and the head quarters of the naval and military establishments. The island is ahout 21 miles in length from E. to W., and seven in breadth from $N$. to S., mostly flat, and covered with brushwood and extensive lagoons; a range of hilly rocks runs along part of the island, at a very short distance from the sea, in a direction $E$. and $W$. On this ridge many of the buildings of Nassau are constructed, including the government house, and at its extremity to the $W$. are the barracks and Fort Charlotte; another ridge, ealled the Blue Hills, runs in a direction nearly parallel with the former, and at about two and a half miles distance.

The principal works of defence in the Bahamas are at Nassan, in the island of New Providence, constructed to protect and defend the harbour and town, it being the seat of government of the Bahamas.

Fort Charlotte is the main work, having an attached work on the west front, called Fort D'Arcy; it is situated at the western extremity of a ridge of hills, which run nearly parallel to the bay or harbour, with the town of Nassau between. This work is built of the natural porous stone of the islands, and of its superstructure by that cut from the ditch ; a portion of the height of the escarp and contrescarp being formed by slopes given to the cuttings in the natural rock. It is of a bad construction, with an unfinished
open ditch, with low contrescarp on the south front. Fort D'Arcy has no ditch or contrescarp, and an escarp is completely exposed to its base; its area is occupied by a splinter proof magazine for 500 barrels, and a general store for the ordnance service. In Fort Charlotte are several casements, with galleries of communication to them, cut out of the solid rock, but they are very damp and unfit for habitation. There is also a large powder magazine in the north front ; it is capable of maintaining near 30 guns and three or four mortars. In case of necessity it could only be maintained for a few days, according to the force brought against it, since its faulty construction would be taken advantage of by an enemy.

Fort Stanley.-The main ohject of this work, in conjunction with a detached stone casemated battery, called Fort Stanley on the hill, and eastward of Fort Charlotte and the water battery of four 24 -pounders, on traversing platforms at the foot of the hill on the sea shore, having its rear open, is to defend the western entrance to the harbour; it also commands a part of the town, and the main western road which runs along at the foot of the hill. It may be considered as the citadel of the garrison.

The next work of defence is Fort Fincastle, situated on the same ridge of hills and immediately in the rear of the town, which it completely commands. It is a stone work, mounting four 18 -pounders on traversing platforms, and two short guns on platforms, of splinter proof casemated, for the troops and magazine, both of which are very small. It has no ditch, and the escarp towards the W. is of an inconsiderable height and exposed to its foot ; its ohject is to defend the harbour and town, and to occupy, in connection with Fort Charlotte, from which it is distant between 1,700 and 1,800 yards, the high and advantageous ground in rear of the town. Upon these two forts are established signal stations, by which the town and garrison are apprized of the approach of vessels of every description.

Commanding the eastern entrance to the bay or harbour of Nassau is Fort Montague, situated on a point of land about two miles eastward of the town, it is a low quadrangular stone work of old construction, without a ditch, mounting four heavy guns on traversing platforms, at the angles; having a small building in the area for troops, and another over the entrance as a magazine.

On Potter's Key, a small island in the harbour, was formerly crected a two-gun battery, closed in the rear by a double block house; the latter has fallen into a ruinous and quite irreparable state, and the battery is not kept up. The intention of this work was to rake any vessel, on passing Fort Montague, and by a musketry fire prevent boats passing upward on either side of the island. There are now the remains of a block house on Hog Island, opposite to the town, long since disused and now uninhabitable. At the water's edge stands the old Fort Nassau, in the town; it is a dismantled square fort, having regular sides, with bastions connected by curtains, formerly was the only defence in the place, and gave shelter to the garrison. It has for many years past been in a ruinous and condemned state; there has been a project to take it down, and on its site to build iron barracks; but it would be more desirable to remove the materials, and employ them in carrying out an embankment, and forming a wharf or quay, which would open Heming's Square to the influence of the sea breczes. There are barracks enough for the garrison required, at head quarters; and it will become essentially necessary to
form posts for the protection of the inhabitants and their property in the out island settlements，where at present they are exposed to depredations from pirates， slaves，and adventurers．［B．B．for 1836．］

Hoo Islann is little more than a reef of rocks， which forms part of the N．harbour of New Provi－ dence．Rose Islann，to the N．point，and E．of New Providence，is about nine miles long and a quarter broad．It affords protection to＂Cochrane＇s An－ chorage．＂Harnour Island is five miles long and two broad，lat．25．29 N．long． 76.34 W. ，very healthy， and a favourite resort for convalescents．Turk＇s Islann，lat． 21.32 N ．，long． $71.05 \mathrm{~W} .$, principal mart， for salt－making，peculiarly healthy，and a point of military importance in regard to St．Domingo．Nortn and South Biminis．These isles are about seven miles long，in lat． 25.40 N ．long．， 79.18 W ．，healthy， well wooded and watered，capacious anchorage，and in the event of a war，highly important for the pro－ tection of the trade of the gulf of Florida，to the E． of which they are situate．The anchorage on the gulf side can admit any class of shipping．Those not mentioned above are in chief－Andnos，long （22 leagues）and irregular，to the W．of New Pro－ vidence eight leagues．Between then a tongue of ocean water runs in S．E．as far as lat．23．21，called the Gulf of Providence ：access difficult from reefs．Off its S．E．end are the Espirito Santo Isles．The Bee ry Islands，an irregolar group．Several small harbours formed by them，where refreshments may be had． The S．E．of these islands are denominated the Frozen Keys，and the N．the Stirrup Keys．Off the northern－ most of the latter there is anchorage on the bank，in lat．25．49．The Great and Little Isaaes．W．$\frac{3}{4}$ N．， 48 miles from Little Stirrup Key，is the easternmost of three small keys，called the Little Isaacs，and five miles further is the westermmost key of the same name：these are from 50 to 60 or 70 feet in length； the middle key is not so large．These keys are situated on the western end of the Gingerbread Ground，which extends five leagues E ．hy S ．from the weathernmost rock，or Little Isaac，is about five miles wide near the cast end，and has some dangerous sharp rocks upon it，with only seven to nine feet water．The Naranjos， or two Orange Keys，lie four miles within the edge of the bank，in lat．24．55，and long．79．7．Eleuthera extends E．nine leagues，S．E．four ditto，and S．$\frac{1}{2}$ E． twelve leagues．Guanailani，or Cat Island，N．W． eight leagues and a half E．$\frac{1}{2}$ S．from Fowel＇s Point， in Eleuthera；it thence extends south eastward 15 leagues，huving a breadth of three to seven miles． Eleven miles S．E．from Cat Island is Conception Is． land，of about seven miles in length，N．E．and S．W．， and three miles in breadth．Yuma，or Long Island， 17 leagues in length from S．E．to N．W．S．by W．， $17 \frac{1}{2}$ lengues from the S ．point of Long Island，is Cayo Verde，or Green Key．From Cayo Verde the edge of the hank forms a great and deep hay to the N．W．，in the S．W．part of which is Cnyo de Sal，at the distance of 10 lengues from the former．Egi Isiand is simall， in lat 25,31 ．There are many smaller keys and rocks too numerous to inention．

Total acres
Remaining in possession of the Crown，2，431，000 acres in the Bahama Isles．
IV．The Bahamas are formed of calcareous rocks， which are composed of corals，shells，madrepores，and various marine deposits，hardened into solid masses in the revolutions of ages．The deposits appear to have been thrown up in regular strata，at various periods； and their upper surface，deeply honey－combed，bears evident marks of having been long covered by the waters of the occan．No primitive formation has been found，and the bases of the islands are evidently coral reefs，originating with the Moluseæ，which， unpossessed of locomotive powers，have organic functions destined for the secretion of the lime re－ quired for their calcareous coverings．Marl is formed on many of the out islands，and here and there strata of argillaceous earth may be met with．Meteoric stones have been discovered rudely sculptured with human features by the aborigines；but whether found on the islands or brought thither，it is impossible to say ；and at Turk＇s lsland a great number of calcarcous balls have been found，all bearing an indentation，as though they had been suspended to a pedicle．Their origin or nature is equally unknown．In confirmation of the idea that these islanis have been raised from the bottom of the ocean on jillars of coral，after the manner of the eastern and southern hemisphere，it may be stated many of their salt－water lakes and ponds communicate with the ocean，as shewn by their sea lish．Some of them are so deep as not to allow soundings；and the water in them rises and falls with the tides on the coast．
V．Situated at the mouth of the gulf of Florida， placed by geograplical position withunt the troples， removel from the excessive heat of a vertical sum，and the intense cold of a northern winter，the Bahamas enjoy a climate mild，equable nom delightiol．To the islants within the torrid zone they are nearly akin－ in the little viriety of season，the natural proluctions of the earth，und the manners and customs of the perple；bit the thecided diflerence in the memenmum temperature，and the more robist and healthy ap－ penrance of all elasses of the community，gives to the

VII. Churchrs, Livings, \&ic. in 1836. [B. B.]Christ's Church, in the Ishand of New l'rovidence; value of living, $340 i$., Church will eontain from 700 to 800 persons, from 400 to 500 generally attend. There is a parsonage-house, a chapel which will contain 400 persons, about 250 generally attend. St Mathew, in the Island of New Providence; living $340 \%$., Church contains from 300 to 400 , about 250 attend. St. Jolin's Harhour, Egg Current Island ; living, 2701 ., Chureh contnins 410 persons, a Chapel which will contain 60, nbout 50 attencl. St. Patrick Eludlein; living, vaeant, the Chapel will contain 400 persons, from 50 to 60 attend. St. Sal vador, vacant. St. Aulrews at Exuma and Rugged Island, vacant. St. l'aul's at Iong lsland, vacant. St. David's at Crooked Islund, vacant. St. George at the Caicos, vacant. St. Thomas at Turk's Island, 270l., Church will contain 260 persons. House rent is allowed. St. l'eter at Abueo, vacant. St., Christopher, district of Watling's Island and Rem's key, vacant. St. Stephen, distriet of St. Audrew's Island, vacant. Grand Bahamas, and the Beng Islands, vacant. Most of these Churehes are Protestant. There are nine Dissenting places of worship, including the Scotelı Kirk.
VIII. In 1832 the number of male scholars in the Bahamas was 5.19 ; females, 568 ; total, 1117 . Four were public sehools; four Sundlay schools; two day and one free sehool for infants. The publie schoolroom in the town of Nassau is capable of containing 200 pupils. The Wesleyans have two Sabbath and two Catechetical schoois in New Providence. In the former, (in 18:32) 2.4 white and 281 coloured ehildren and adults receive gratuitous instruction in realing nuld writing, by 10 white and 18 coloured teachers. They have also 10 Sunday schools in the out-islands, where 630 whites and coloured children are in. structed.

X. As in the other West India possessiona, the government of the Bahamas is modelled after that of England ; viz. a House of Assembly or Commons, consisting of 30 members, returned from the several islands; an Executive and Legislative council of 12 members, approved by the crown, and a governor, who is com-mander-in-chief of the militia, and has the power of summoning and dissolving the legislative body, and of putting a negative on its procecdings. The electors are free white persons of 21 years of age, who have reaided 12 montlis within the government, for six of which they must have been householders or treeholders, or in default of that have paid duties to the amount of 50l. To become a representative, the person must have 200 aeres of eultivated land, or property to the value of $2,000 l$. currency.
There are several courts at law, such as the Supreme Court, which holds its sessiona in terms of three weeks, with the powers of the common law courts at Weatminster, and its practice modelled on that of the King's Bench, the Courts of Chancery, Error, ViceAdmiralty, \&e.
Nassan, in New Providence, as before observed, is the seat of government and the centre of commerce; it possesses a fine barbour, nearly land locked, and on the $S$. side of which the capital extends over a rather stecp acelivity to the summit of a ridge, the $W$. of which is crowned by a fortress of considerable strength, where the garrison is kept. The island is divided into parishes, each of which has its church, clergy, and school, liberally provided for. The streets are regularly laid out, the public buildings good, and activity and cleanliness immediately attracts the eye of a stranger.

XIII. Coins of Balamas as in 1836.-[B. 13.] Rates and weights at which gold and silver coins pass current in the Bahamas, by virtue of two several Acts of Assembly, passed in the 28th and 52nd year of his late Majesty's reipn.

Silver Coins.--Spanish milled dollar, 8s. Cur., 4s. 4d. St.; half ditto, $4 s .=2 s .2 d$. ; quarter ditto, $2 s .=1 s .1 d . ;$ eighth ditto, $1 \mathrm{~s} .=6 \frac{1}{2} d$; sixteenth ditto, $6 d .=3 \frac{1}{d} d$; pistareen, $18.6 d .=9$ quarter ditto, $4 \frac{1}{d} d .=2 \downarrow d$.

Rates at which gold, silver, and copper coins pass current in the Bahamas, by act of Assembly passed in the sixth year of his late Majesty's reign.--Sovereign, 1l. 16s. 113d.; half ditto, 18s. 5d. 7-13ths; sllver crown, 9 s .2 de . 11-12ths ; half ditto, $4 \mathrm{~s} .7 \mathrm{dd} 5-$.13 ths ; silver shilling, 1s. 10d. 2-13ths; ditto $6 \mathrm{dl} .=11 \mathrm{~d}$. 1-13th; $9 l .=5 d$. $1-26$ th ; half ditto, $2 d .1-52 \mathrm{nd}$; copper pemy, $2 d$. ; half ditto, $1 d$.

The amount of gold coin in circulation, may be estimated at, in sterling $10,000 l$. ; silver coin in circulation, estimated at 26,0002 .; coplyer coin, 506.: total, $36,050 l$. In the publie bank there is in cash and notes about 12,000 . sterling. The debt of the eolony is $18,297 l$. at six per cent interest. [B. B. for 1836.]
XIV. European and tropical vegetables and fruits thrive and are abundant ; beef, mutton and poultry good and plentiful ; the shores abound with fish, and there is turtle enough among the Bahamas to supply all Europe; almost every island has pretty good water; ambergris is occasionally found; cotton was formerly an abundant article of exportation, and there is scarcely a spot in any of the islands that is not covered with a luxuriant vegetation.

Ship timber of a most excellent quality, is ahundant ob many of the Bahama islands; logwood, brazilletto, fustic, green cbony and satin wood, are produced in considerable quantitics for building or planking vessels; the cedar, horseflesh, madeira, mastic, and other durable woods, in great plenty, and there is an inexhaustible supply of very superior firewood;
sponges of good quality abound on the istand shores, and the water from the wells at New Providence, has the desirable quality of keeping good at sea for any length of time.

The agricultural stock in the Bahamas in 1831, consisted of 1,165 horscs, asses, and mules; 3,250 horned cattle; 5,975 sheep and goats; and 3,755 swine. The quantity of produce raised was 30,350 bushels of Indian corn (at 4s. 4d. market price per bushel); $74,250 \mathrm{lbs}$. of potatoes and yams (at $6 s$. per cwt.); 3,225 bushels of peas and beans (at 5s. 10rl. per bushel) ; 38,465 dozen of pine apples (at $2 s$. per dozen) ; 22 tons of cotton (at $5 l$. per pound); 30,500 melons and pumpkins (at 3 s . per dozen); $31,300 \mathrm{lbs}$. of ocre (at $2 d$. per lb.); and 19 tons of cassada or cassava, at 10 s . per ewt.

Return of the Produce, Stock, \&c., in 1832.

Number of Ships buill in the Colony in 1836. [13. B.] -In New Providence, 7, of 240 tons burthen, regis. tercd according to law; Harbour 1sland, 3, of 119 tons; Abaco, 4, of 98 tons; Exuma, 1, of 16 tons; Rugged Island, 1, of 6 tons ; Rum Key, 1, of 4 tons; Andur Island, 1 , of 18 tons: total, 18 ships, 501 tons.
Exuma.-Salt is manufactured on this island in a pond of 223 acres; in Rugged Island in a pond of 42 acres; in Turks Island in a pond of 130 acres; on Gunn's Key, and in a pond of 212 acres on Long Key: on Rum Kcy, in a pond of 650 acres; and in scveral ponds on Long lsland, extent together, 308 acres. There are no mines in this colony.

On the Island of New Providence, are several private quarries of porous limestonc, used in building houses, \&ce., and also for dripstones. It is in great abundance throughout the colony, and its value at the quarry is about $6 \frac{1}{2} d$. per square foot. Smacks and boats are employed in fishing, varying in size from 12 feet to 20 tons. Fish and turtle are worth, on an average, about $3 \frac{1}{2} d$. per lh .
There are a great abundance and variety of fish
within the Bahamas Islands; there are no established fishuries, properly so called; many persons, however, get their livelihood by fishing nad turtling on the cuast of Cuba, and obtaining sponge en the Bahama hank

## CHAP「ER XVI.-THE BERMUDAS OR SOMER ISLES.

Section I. The Bermudas, or Somer Isles, exceeding 300 in number, lie in the Atlantic Ocean, in latitude 32.20 . N. longitude 64.50 . W. about 600 miles E. of South Carolina, the nearest point of North America, and containing about 12,000 acres.

I1. They were discovered in $152 \%$, by J. Bermudez, a Spaniard, who found them uninhabited. May, an Englishman, is said to have been wrecked there at an carlier period, and, with his companions built a vessel, in which he returned to England. Sir George Somers was wrecked upon them in 1609, and made his way to Virginia in a vessel constructed of cedar, which did not contain an ounce of iron, excepting one bolt in the keel. They were aettled shortly after from Virginia and England, but disputes for some time prevailed respecting the rights of the Virginia Company. They have ever since remained in the uninterrupted possession of England, and at one time attracted great attention for their salubrity and picturesque scenery.
III. When viewed from a ship at sea, the Bermudas appear to have but a trifing elevation compared with the bold and lofty aspect of many of our West India Islands; indeed the surface is very irregular, seldom presenting any lofty elevations, the lighest land not exceeding 200 feet. The principal islands (St. George' $a$, Ireland, St. David, Somerset, Paget, Longbird and Smith's), together with the minor islands, lie in such a manner as to form several bays, some of which are capacious and deep enough to afford harbour for the whole British navy, but difficult of ingress and egress; St. George's, the main island, Somerset and Ireland, form a chain, with very little interruption, for about 30 iniles long, seldom exceeding in brcadth two miles (resembli.ig a shepherd's crook), running nearly E. and W., St. George's being the E. and Somerset and Ireland the W.; it appears, in fact, as if an extensive island had disappeared in some convulsion of nature, leaving above water only a long narrow ridge, without either mountains or vallies, rivers, forests, or plains. Groves of cedars are here and there detached on little plateaus of rising ground; and the numerous basins (some sixteen miles in circuinference) formed by the islands give very much the appearance of lake scenery. The island of St. George, the military station of the colony, and formerly the seat of govermment, is about three miles long, and at no part exceeding half a mile broad: it lies at the entrance of the only passage for ships of burthen. The harbour of St. George, when once entered, is said to he one of the finest in the world, and capable of containing the whole British uavy. It is completely land-locked. The entrance to the harbour of St. George is narrow, and is protected by a fort called Cunninghanı. After passing this entrance, the town presents one of the most beautiful laniscapes the eye ever "rested on. The square tower to the little chureh-the white and yel. low houses-the clear and clondless sky above, with the dark foliage of the cedar-clad hills in the rear,combine to make the scene most enchanting. To the westward of the town is a hill called Fort George, where is situated the telegraph, The streets are
extremely narrow, which, however, is undoubtedly an advantage in all warm climates, as it creates much pleasant shade, and without which, walking in the middle of the day would not be bearable. The houses are low, scarcely ever exceeding two stories, and huilt substantially of Bermuda stone. The barracks are situated on a hill to the eastward of the town, and are very coinmodious, and would probably comfortably accommodate 2,000 troops. Therc are few springs in the island, and consequently the people depend on rain, for the purpose of catching which they have large tanks, built of stone, and covered with Roman cement. The air being free from smoke, and the roofs of the houses newly whitewashed, the water thus caught is very pure, and is really as delicious as any I ever tasted. The government have large reservoirs of water on the north side of the town, for the supply of the navy. The fortifications for the protection of this end of Bermuda, are the already mentioned Fort Cunningham, at the mouth of the harbour, and a fort called Catherine, not quite completed, situated at the N. E. extremity of St. George'a Island. The dock yard is situated at the W. end of Ireland Island, and distant about 15 miles from St. George's. For about three miles the course lies between St. George and Long-bird Islands; after passing which we arrive at the westernmust outlet of St. George's Harbour, a narrow passage about the eighth of a mile wide, called the Ferry. To protect this opening, a Martello tower, with one gun, erects its head. The ferry is so seldom used for the ingress or egress of vessels, from the ahallowness of the water and strength of the current, that the above mentioned fortification is quite as strong as necessary. The tide runs with much force. The rocks on the N. of the island present a very formidable appearance, and certainly do away with the necessity of the work of man's hands, for no vessel could approach within 10 or 15 miles of this side of Berminda without the certainty of being shipwrecked, and the lives of its crew placed in the greatest jeopardy. Nine miles $N$, is a rock, which, at low tides, presents a surface of about 40 feet in circumference, called the North Rock. Shoals surround it for many hundred yards, and the water, when the wind is boisterous, breaks over it with a terrific noise. This rock, placed as it were as a beacon, seems to say, "Hitherto shalt thou come, and no further;" for it must be a miracle indeed if a ship gets nearer shore than it, for the coral shoals lie thick in every direction in its neighbourhood. It is not often that vessels are wreeked on the North Rock, because careful mariners know the danger of passing Bermuda to the northward, as all books of navigation recommend the south side as being the safest. The shore presents rather a aterile appearance, and even the cedars, which have the misfortune to be growing near the water, have a dead dingy appearance. The sterility arises from the spray of the sea, the aalt from which, acted upon by the sun, cansea the grass, \&c., to wither and die away. The ahore is principally inhabited by tishermen and shipbuilders; the produce of the occupation of the former

THE BERMUDAS．－GEOGRAPHY，GEOLOGY，CLIMATE．
being the principal austenance of，and the business of the latter，in ita various ramifications，affording employment to ahop－keepers，mechanics，labourers， and sailors．About midway between the Ferry and the dock yard is one of the houses appropriated as a residence for the governor for the time being；it is acarcely seen from the water；but near it is a hill called Mount Langton，on which is a flag staff，by which communication ia kept up between St．George， Somerset，and the dock yard．A few miles bcyond this is the residence of the admiral，King＇s Hill，or Clarence Lodge．Ireland Island，on which the dock yard is，is about one mile in length，and perhaps a quarter broad，and is nearly all occupied by the buildings required for the officers，artizans，and for storehouses． The hospital is situated on the highest part of the island，and is very large and commodious．The officers＇residences are built in the English style，and are very comfortable．The most important work is a breakwater，similar to that at Plymouth．Several hundred convicts are employed on it．The dock yard is kept in fine order．

The Bermudas are，in fact，the Gibraltar of the West Indies，and Washington was very desirous of annexing them to the Republic，to make them，as he said，＂a nest of horneta to annoy English com－ merce．＂

IV．A atone called＂Bermuda rock，＂and peculiar to the place，forms，with few exceptions，the basis of the islands and minor rocks；it is extremely po：ous － 80 much so as to be unfit for filtering stones；at firat sight it closely resembles loose sandstone，but on minute inspection it will be found to consist of a congeries of comminuted shells cemented together， and occasionally including larger and tolerably per－ fect portions of shells；the layers of this stone are stratified，and the dip varies very much in the direc－ tion it takes and the angle it forms with the horizon； the stone is easily wrought with axes and saws，is naturally friable，but becomes harder when exposed to the atmosphere，and changing from a whitish to a bluish grey colour；it is used in the principal build－ ings；for when covered with cement 0 ：lime it is impervioua to the rain or damp，and was therefore at one time an article of extensive export to the United States of America．

Lieut．Nelson says that the whole group is com－ posed of calcareous sand and limestone，derived from comminuted shells and corals，and the different varieties are associated without any definite order of
poaition，the harder limestones occasionally resting upon loose sand．The arrangement of the beds is often dome－shaped，but in many instances the strata are singularly waved．

The bottom of the basin within the zone of coral reets is stated to consist of corals，calcareous sand， and soft calcareous mud resemhling chalk，and con－ sidered by the author to have been derived from the decomposition of zoophytea．

Under the head of encroachments，he describes the banks of detritus thrown up by the sea，and the progress which，under certain circumstances，the loose sand makes in overwhelming tracts previously fertile．He states that wherever the shrubs and creepers have been destroyed，the sand has apread rapidly，but that it is invariably stopped as soon as it arrives at a plantation or row of trees．

The soil is of a reddish brown colour，and in some places，as at Ireland Isle，bearing strong marks of oxyde of iron．Round the coast there are some dis－ tricts with a strong tenacious blue clay；in others a micaceous，kneadable brick earth ；and again，an ar－ gllaceous soil，with luxuriant pasturage．There is no other point in the geology worth noticing．

V．The climate is favourable to European liealth， and may be said to be a perpetual summer．The meteorological register for the year is－

Adranced on account of the Expenses of the Commissioners of Compensution under the Act for the Abolition of Slavery, and to be replaced from the Fund upon which such Expenses are specially charged by that Act, 40 fl . Total Amount, $41,828 \mathrm{l}$.
British Expenditure for Ordnance Departinent, 1836. [13. B.] Money Allowances, 113l. Drafts drawn for -Pay and Allowances Royal Artillery and Royal Engilicers, 2,910l.; Rations and Stoppages (litto), 1,140l; Barrack Department - ray, Rent, Repars, and Contingencies, $647 l$. ; Imprests for Storekeepe's Department, 907l.; Military Works, 5,354l. ; Total, 1u, 2591. Grand Total, $0,971 l$.

Bills are not drawn by the Commissariat expressly for the pay and allowances of the troops, who are usually paid in dollars received from Jamaica and other stations. Those that are drawn are almost entirely to pay for mavy and army supplies. In the course of the year 1836, bills to the extent of 9,000 . for mavy, and 6,5181 . for army services, were drawn, at the fixed periud of $1 \frac{1}{2}$ per cent. The amount of ordnance drufts on the military chest is stated above.
The par of exchange is $1: 00$ per cent. There is no paper tnoney, and the nmount of coin is not ascertainable.

XIII. The cedar grows to a great height in many also all the fine fruits and vegetables of the tropics. places, and would seem in several parts to spring from the bare rock; it is used for ship-building; the palmetto is much cultivated for the making of straw hats, but arrow-root seems to be the staple of the island, and maehinery has recently been imported for its preparation ; coffec, cotton, indigo, tobacco, \&cc., There are no wild animals, the feathered tribe is confined to a few varieties, but the sea around teems with fish, viz. the mackarel, mullet, hamlet, hine, grouper, porgy, rocktish, \&e., and the whale is pursued with great animation, and killed for the sake of his oil and bonc. are grown as good as in the West India islands, as do

Iroduce, Stock, \&e., of Bermuda, in 1836. [B. B.]

Manufuctures, Mines, \&c. 18:36. [B. B.] There were $\mid$ all scasons, it constitutes a considerable portion of eight ships built in the colony this year, of $6: 31$ tons burthen. The only manulactures are arrow-root, straw and palmetto plat and hats, and other such articles, made of straw or the palmetto Icaf. There is an inconsiderable whale fishery carried on in Bermuda, that employs about 12 whale boats, and their crews, three months in the year. The number of whales seldom exceeds 20 in the season, yielding about 1,000 barrels of oil. This fishery being carried on very near the land, is capable of considerable extension, at small risk, by the employment of additional capital. The reefs that surround the islands abound in fish of great variety; and the inhabitants being in general exceedingly well supplicd with it at
their food; there is not, however, any fish cured for exportation.

# BUOK II.-POSSESSIONS IN SOUTH AMERICA. 

## CHAPTER I.-BRITISH GUIANA.

Section I. British Guiana, embracing the settlements on the rivers Essequibo, Demerara and Berbice, and covering an aren of nearly 100,000 square miles. Under the Demerara and Essequibo districts, 70,000 square miles; and within the Berbice territory, 25,000 ditto. Extends ahout 200 miles from E. to W. along that alluvial portion of the South American Continent termed the ' Main,' which is formed by the deltas of the rivers Amazon and Orinoco, having for its boundaries on the E. the mouth of the river Courantyn, in latitude 6.10. N. longitude 56.25. W.; on the W. the boundaries of Colombia, between the Baryma and Pomeroon rivers, ahout latitude 8. N. longitude 60. W., and to the southward, or inland, abont 100 leagues, or perhaps to a mountain range (the Cordilleras) extending on the eastward to within two degrees of the equator. Sorne consider the river Baryma , in latitude 8.35 . N. longitude 60.10 . W., the Western boundary; others the Pomeroon river, latitude 7.40. N. longitude 58.50 . W.; but the limits have never yet been completely settled.
II. The territories on this coast are called, 1 st, Spanish; 2nd, British ; 3rd, French, and $4 \mathrm{th}_{\mathrm{i}}$, Portuguese Guiana. The lst lying on both sides of the Orinoco, and extending S. and S. W. to the Rio Negro, and the Portuguese settlements, is bounded on the E. hy the river Baryma in 8.50 . N. Jatitude, 60.5. W. longitude. 2nd. British (formerly Duteh) Guiana described in the text; and 3rd, French Guiana (called Cayenne, from the name of the island on which the chicf town stands) extends from the boundary of British Guiana on the W. to Vincent Pincon's Bay, near Cape North, in latitude 2.35. N. longitude 51. W. ; (this bay the Portuguese have confounded with the bay of the great river Oyapoko, which joins the sea in N. latitude 4.35., W. longitude 51.20 .) and 4th, Portuguese Guiana, it is alleged, extends from Cape North, between the parallel of 1 and 2.25 N . latitude, to the junction of the grent river Amazon with the Rio Negro or black river, thus eutting off the southern parts of French, British, and Spanish Guiana, from 51. to nearly 65. W. longitude, 800 miles, and having for its S. and S.W. boundary the great river Amazon.
A detail of the early history of this part of the South American Continent would be out of place in a work whose chief object is to enable the British public to form a correct view of the position, magnitude and importance of our colonies; the leading points of the European settlement and English aequisition will therefore suffice. So early as 1580 , the Dutch attempted to form small settlements along this coast on the banks of the $\Lambda$ mazon, Orinoco, and Pomeroon rivers (for trading purposes), on the latter named river they had a factory called Nieun' Zealand, and in 1581 the States-General of Holland privileged certain individuals to trade to the const. These proceedings were viewed with a jualous eye by the Spaniards, who, aided by the lndians, drove the Zea-
landers from their station; the persevering character of the Dutch would not allow a first check to daunt their efforts, their commander, Joost Van Den Hoog, succeeded in gaining possession of a small island at the junction of the Mazerooni and Cayuni, called Kykoveral ; and in 1602, Jan Van Peere, a native of Flushing, attempted to open a trade with the Indians of the Orinoco, hut was defeated by the Spaniards; the Zealanders, however, about this time, effected a settlement on the banks of the Essequibo, in 1613 they reported their colony to be in a flourishing condition, and in 1621, the Duteh government undertook to supply the colonists with negro slaves from Africa; for the prosecuting of which trade a company was formed and a monopoly granted. Jan Van Pcere, with his companions, when driven by the Spaniards from the Orinoeo, commenced colonizing on the banks of the Berbice river, and cleared a large extent of territory between the rivers of Berbice and Courantyn. In 1657, the Zealanders colonized on the river Pomeroon and the creek Morocco, and erected thereon the towns of New Kealnand and New Middlehurgh. Essequibo, in 1665, was taken by the English, and afterwards plunilered by the Freneh; but both were expelled from the Dutcli settlements, in the following year, by an expedition from Holland. It is said that, in 1662 , after its settlement, the whole coast was ecded by Charles II. to Lorl Willoughby, the then Governor of Barbadoes, who named the principal river wherein Paramaribo is situate, and, in fact, the whole colony. Surryham (in honour of the Earl of Surry, the term being afterwards changed into Surrinam), and that the colony was purchased from the heirs of Lord Willoughby by the British crown, and exchanged with the Dutch Government for New Holland, in North America (now New York). In 1669 the whole of Dutch Guiana was transferred from certain gentlemen in Amsterdam, Flushing, \&c., who claimed to be proprietors, to the Dutch West India Company. In 1712 , the French took possession of Berbice, hy force, from the Dutch proprietors; but, in 1714, returned it to its former owners, on the payment of a sum of mones. At this period, the StatesGeneral contracted for the supply of negroes to the colony, in the proporion of two-thirds male and onc-third female, at the zate of $250 l$. each.

In 1720, the proprietars of Serbice, not having a capital equal to the cultivition of which the colony was capable, raised a fund of $3,200,000$ florins, divided into 1,600 shares of 2,000 florins cach, to be employed solely in cultivated sugar, cocoa, and indigo; 50 per cent. was to be repaid in 1724 , the remainder when required by the directors, who consisted of seven proprictors (afterwards inereased to nine) of 20,000 Horins each, residing at Amsterdam ; the former proprietors of Berbice were also to be paid 800,000 florins, or allowed to purehase 100 shares. From this period the colonies rapidly flourished and extended;
coffee cultivation was introduced from Surinam, and a fort built at the junction of the Canje. A passage from the river Amazon to the Essequibo was discovered in 1735, by a Portuguese, named Silva de Rosa, who had been private secretary to the Viceroy of Brazil; but, having killed a nobleman in a duel, he fled with some negrocs in a canoe along the Rio Branca, Tacusa, Moall, and across the lake Amuca; thence entering the Rippanouny, and finally reaching Essequibo.

In 1741, the planters at Essequibo, thinking the low lands near the sca more productive than the upper country, over which they had previously settled, began emigrating to the former; and, in 1745, the Directors of the Chamber of Zcaland gave permission to form plantations on the uninhabited coast of the river Demarara. A most disastrous negro insurrection took place in Berbice, in 1763, from which the colony was not relieved until after eleven months desolation, and only then by the arrival of a strong squadron from Holland. Courts of policy and of civil and criminal justice were established for Demerara 1773, on an island named Borsden, about 20 miles up the river; but, the following year, the seat of government was removed from thence to the east point of the mouth of the river, and named Stabroek, now George Town. In 1781, the colonics on the Essequibo and Demerara were placed under the protection of Great Britain, by a squadron of Admiral Lord Rodney's fleet; but, in 1783, the French took temporary possession of the whole Duteh settlements, which, in 1796, surrendered to the British forces under the orders of Sir Ralph Abercrombie, and commanded by Major-Gen. White. These settlements were, however, restored to the Dutch by the treaty of Amiens, in 1802, but again taken possession of by England on the breaking out of the war in 1803; since which period they have belonged to Great Britain. In 1812, all distinctions between the colonies of Essequibo and Denierara, whether of juristiction or otherwise, were abolished-the office of commander of Essequibo was done away with, the courts of civil and criminal justice of both colonies united at Demerara, anis the judicial established at Fort Island discontinued; the name of the capital was also changed from Stabroek to George Town, and a board of police appolnted for its interual management, the financial representations of Demerara and Lissequibo combined with the College of Kiezers, and the right of suifiage extended to all persons paying income tax on 10,000 florins, or possessing 25 slaves. In 1807, the slavetrade was only finally abolished. By an additional article to a conventlon signed at London, August 13, 1814, Demerara, Essefuibo, and Berbice were finally ceded to Great Britain, with the condition that the Dutch proprietors had liberty, under certain regulations, to trade with Holland. The year 1818 witnessed the first introduction of trial by jury and the commission of oyer et terminer. In 1820, alter much angry dispute relative to the enormous and illegal exactions of fees, a tariff of the same was fixed, and a petition to the crown, praying for an enquiry into judicial abuses, agreed to, which enuuiry was ordered. A serious irsurrection of the slaves took place on the cast coast of the Demerara river, in 1823, which was finally suppressed, and Mr. Smith, a Missionary of the London Society, condemned to death for Inciting the negroes to rebellion-a sentence which was commuted at loome to total hanisliment from the West luties: Mr. Smith died in prison pending the sentence. In 1831, the colonies of l)e-
merara, Fssequibo, and Berbice were united into one government, and called British Guyana.

Governors of British Guyana-Demerara and Es-sequibo.-Gov. Bcaujon, from capture in 1796 to restoration in 1802 ; Lieut. Col. Nicholson, Acting Gov. from capture in 1803 to arrival of Gov. Beaujon, 1804; Gov. Beaujon, from 1804 to October, 1805 ; Brig. Gen. Montgomery, Acting Gov., from Gov. Beanjon's death, in 1805, to arrival of Lieut. Gov. Bentinck, 1806 ; Henry Bentinck, Esq., Lieut. Gov. from 1806 to August, 1807 ; Brig. Gen. Montgomery, and Col. Nicholson, Acting Govs. during absence of Lieut. Gov. Bentinck, August, 1807, to end of 1808 ; Henry Bentinck, Esq., Gov., January, 1809 to 1812; Major Gen. Carmichael and Major Gen. Murray, Acting Govs. 1812 to 1813, on absence of Gov. Bentinck; Major Gen. Murray, Lieut. Gov., 1818 to 1824; Major Gen. Sir B. D. Urban, Lieut. Gov., 1824 to 1831; Major Gen. Sir B. D. Urban, Gov. of British Guiana, 1831 to 1833 ; Lieut. Col. Chambers and Col. Sir C. F. Smith, Acting Govs. 1833, on resignation of Sir B. D. Urban ; Major Gen. Sir J. C. Smyth, Gov. June, 1833, to March, 1838; Major Orange, Acting Gov. 1838, on death of Sir J. C. Smyth; Henry Light, Esq. from May, 1838.

Berbice.-Gov. Van Batenburg, from capture in 1796 to restoration in 1802 ; Licut. Col. Nicholson, Acting Gov, from capture in 1803 to 1804 ; Gov.Van Batenburg, from 1804 to 1806 ; Lieut. Col. Nicholson and Brig. Gen. Montgomery, Actirgg Govs. from end of 1806 to 1809 ; William Woodley, Esq. Lieut. Gov. from March, 1809, to January, 1810; Major Geu. Dalrymple, Acting Gov. 1810 ; Robert Gordon, Esq. Lieut Gov. end of 1810 to middle of 1812; Brig. Gen. Murray, Acting Gov., 1812 to 1813, oll governor's absence ; Robert Gordon, Esq. Lieut. Gov. February to June, 1813 ; Major Grant, Acting Gov., 1813, on Lieut. Gov. Gordon's resignation; Major Gen. Jolin Murray, Licut. Gov. August to December, 1813 ; Major Grant, Acting Gov. Decemher, 1813, to January, 1814 ; H. W. Bentinck, Esq. Licut. Gov. January, 1814, to November, 1820; Major Thistlethwayte and Col. Sir Jno. Cameron, Acting Govs. November, 1820, to March, 1821, on death of Lleut. Gov. Bentinck; Harry Beard, Esq. Licut. Gov. March 1821, to Mareh, 1895 ; Major Gen. Sir 13. D. Urban, Acting Gov. March, 1825, to July, 1826, on Lieut. Gev. Beard's absence ; llenry Beard, Esq. Lieut. Gov. July, 1826, to union of the colony with Demerara and Esscyuibo, in 1831, as British Guiana.
III. With the exception of ranges of saudstone hills, (some on the west bank of the Demerara river from 100 to 150 feet high, and nearly perpendicular) extending 20 to 30 miles intand, and rarely more than 40 or 50 feet above the level of the rivers and creeks; the whole country inhabited by the liuropeans is perfectly flat and alluvial, bearing a striking resemblance to Hollant and Flanders, and, like those countrics, drained by canals mud sluices, with lotty dikes or mounds of mud, of considerable thickness, umbanking each estate, and kept, together with the numerous bridges, in repair by the proprietors of the land in which they are situate.
As the country is ascender from 80 to 100 miles inland, its tine savannabs are interrupted by, in some places, a heautiful hill and dale teritory, varied with high and frequently rocky land-presenting a strong contrast to the rather monotonous scenery which a dead flat possesses, and which those who have visited Bengal mid the delta of the Ganges, as tontrasted with the upper provineer, will reudily understand.

Further southward, Essequibo), the gra Cordillera rises to t level of the sea, at 3

British Guiana, are t Berbice, with their my with the most westerly miles west of the Dem from one side of the n 15 to 20 miles wide, an low, and bushy islands, tending from the north ble distance to seawar into four separate chan is termed Leguan, (coll tween which and the e clannel, a wide passago shoals; to the westwar called Wakenaam, con dimensions are about ni the north-west of the ln is a small islet, termed sugar estates). Hog Is sequibo ; its south end A succession of other is about 15 miles from the ward and further up th between all of which thi extenslve deposits of m soundiugs for any lengt

Further southward, at the Coomarow Fall (vide river Essequibo), the granitic table-land belonging to the Cordillera rises to the height of 6,000 feet above the level of the sea, at $\mathbf{3 , 0 0 0}$ miles distant from the ocean.

The whole face of the coast of Guiana, from the Maranon to the Orinoco, is low, and generally bordered with a sandy flat, extending far out to seaward; moreover the various large rivers by which it is intersected, continually bring down from the upper country vast quantities of alluvial matter, which, on depositing, form a margin of low ground, covered with mangrove bushes, appearing an inaccessible barrier at low water, but complere! : hidden at full tide. About 500 paces within these inins, yes, the low and level savannahs commence, extending irregularly inland, and every where intersected by rivers, rivulets and creeks, with a dense, luxuriant and magnificent vegetation. The alluvial flat may be considered to terminate at the sand-hills, the general breadth from the sea being about 30 miles, although the first indications of rock are about 70 miles inland from George Town, consisting of apparently a porphyritie sandstone under water. The plantations are regularly ranged on either side of the great rivers, or along the coast, in allotments of from 500 to 1,000 acres each. The Dutch West India Company parcelled the allotments out into 500 acres conditional grants, with an additional 500 acres behind the first allotment, when two-thirds of the latter were cultivated. Sales and divisions of patrimony have caused some changes in the area of the estates. The dwelling-houses, elevated on piles of timber, are generally close to the river's brink, with a wharf or landing-place, opposite, for the convenience of shipping produce; buildings of different deseriptions are seattered about in every direction; sugar-mills driven by wind, or by steam, and on the coffee plantations, logies or barns, three storics high, form a picturesque prospect, in addition to the numerous boats sailing up and down the rivers and creeks; while the insulated, well-tilled plantations, excellent brick-made and avenued roads, with numeroua white bridges, afford a most pleasing indication of an industrious and intelligent community. The physical aspect of the colony may be further judged of by its Rivers. The three great rivers within British Guiana, are the Essequibo, Demerara and Berbiee, with their numerous tributaries: to begin with the most westerly, the Essequibo, situate nine miles west of the Demerara river, at its embouchure from one side of the main land to the other, is from 15 to 20 miles wide, and covered with many beautiful low, and bushy islands, with shoals or sandy spits, extending from the north parts of the isleta a considerable distance to aeaward, and dividing the navigation into four separate channels. The most eastern island is termed Legruan, (containing 24 sugar estates), be. tween which and the east side of the river is the ship channel, a wide passage, but much encumbered with shoals; to the westward is a long and narrow Island, called Wakeuaam, containing 18 augar estates, its dimensions are about nine miles long and 3 broad; to the north-west of the latter and near the west ahores is a small islet, termed Tiger Island (containing three sugar estates). Hog Island, is the largest in the Essequibo ; its snuth end extends nearly to Fort Isiand. A succession of other islands (one termed Fort Island about 15 miles from the mouth), extend to the southward and further up the river, from 2.5 to 30 miles, between all of which there are channels, but from the extensive deposits of mud, it is diffienlt to state the suundings for any lengtis of time, the depth of water
on the whole coast being continually undergoing a change, according to the beaviness of the rains or the duration of the winds that blow on the shore. From Fort Island, the Essequibo runs nearly south for about 30 miles, where it is joined by the large river Cayuni, which runs nearly south west, afterwarda north weat through the province of Colombian Guyana, where it is supposed to join some of the interior branches of the Orinoco ; a little further, or inland, the Essequibo is joined by the Mazarooni river, which makes a considerable sweep to the north west, and then returns so as to form a large peninsula, inclosing lofty mountains and considerable creeks or rivulets; indeed for 80 miles inland the breadth of the Mazarooni is so great, and the wooded islands and creeks so numerous, that it has more resemblance to a like than a river, and the influence of the tides is felt, at least in the Essequibo, 100 miles from the ocean.

The Demarara River, is situate to the south east of the Essequibo, 16 miles from Leguan island, and about 57 miles westward of the bar of the Berbice river, in 6.40. N. Lat. and 57.45 W. Long. nearly three miles broad at its mouth, and becoming narrower as it is ascended. The capital of British Guiana, in lat. 6.49.20. N. long. 58.11.30. [Light-houae] W. formerly called Stabroek, now called George Town, is situate amidst a dense foliage, on its E. or right bank, about one mile and a half from a amall fortification, built of mud and fascines, with two low platforms, and termed Fort William Frederick. If it were not for the tropical seenery around George Town, it might be mistaken for a Dutch city ; except elose to the river the housea, raised on supports to prevent damps, are widely scattered, built of wood, after the Dutch style with a stoup, coloured according to the fashion of the owners, aurrounded by a garden and lofty trees, and separated from each other by canals, dykes, or lofty mud embankments. The most ancient part of the capital Stabroek, runs back from the river towards the forest, consisting of two rows of houses full a mile long, with a broad and shaded road between them, and a canal in the rear of each line of houses, communicating with the river. In consequence of the scarcity of fresh water, each house is provided with a large cistern, and pipes leading into it, for the preservation of rain water. The barracks, hospitals and public buildings in Demerara, are in evidence of the taste and munifleence of the colonists, at whose cost they have been erected. George Town, is divided into districts, thus: Kingston, joining Fort William Frederick; Cumingsburgh, North and South; Vlissengen, which is subdivided into Robs Town and Lacey's Town. Stabroek, a district in itself, and aneient part of the Dutch capital ; also en Rust and Charles Town, which are bounded by plantation La Penitence; to the eastward of Fort William Frederick, is situated Camp House, the reaidence of the governor, a few hundred yarda to the east of which is the residence of the ordnance store. keeper. Between Camp House and the ordnancce department, a little to the south, are placed two splendid hospitala, with kitchens, eisterns, \&e. for the military ; nearly opposite to which, the new military barracks have been lately erected; they caunot be surpassed in aecommodation in any part of her majesty's dominlons; two for the men and offieers, with kitehens, servants' apartments, cisterns, \&c, \&c. To the east of the orduanee department, are the quarters of the engineers'; and adjoining the engineers' quarters are the York and Albany harracks, built by the colony, for the accommodation of 200 men and ofti-
cers. Facing the river, in the district of Stabroek, new public buildings of bricks, stuccoed, have been erected by the colony to accommodate all the public officers; they have cost the colony upwards of $50,000 l$. sterling: near to the latter is ihe Scotch church, a very handsome modern building, to the eastward of which is the town guard-house, \&c. The river is navigable by ships of burden for 100 miles up, as far as the cateracts, and affording an excellent harbour, capable of holding the whole navy of Great Britain; but unfortunately the bar will not allow vessels that draw more than 18 feet to go over it. For 30 miles inland, along the banks of the Demerara river, the country consists of extensive level meadows or savannahs; several sand-hills then appear, and as the river is ascended, the country becomes more broken and mountainous.
The general direction of the river, ascending it, is south, with a slight inclination to east; the rapids in a straight line, being not more than 70 English statute miles south by east of Gcorge Town, but 106 by the course of the river. The difference of level between the water ahove and below the raplds is only 12 fect, and the river describes at them a very considerable arc of a circle, the chord of which is about one mile and a half; the rapids are tlescended safely in small canoes.

The Berbice River. Fifty-seven miles east of the Demerara, reaches the Atlantic in 6.24 N. Lat. ; at its luxuriant looking entrance, a little to the north of Fort St. Andrew, it is about three miles wide, with low cleared land on both sides, covered with trees, and at a distance resembles a number of islands. In the middle channel lics Crab island (so called from its numerous crabs), about one mile in circumference, with a spit of land running out to the north and aouth dividing the river into two navigable channels; the cast with 17 to 20 fect, the west with but eight to 13 feet water. Eight miles north of Crab island is a bar of sand, with only seven feet on it at low water, thus lessening the importance of the harbour. Neap tides at Berbice rise from eight to nine feet, and aprings 11 fect; in September before the equinox, they rise 15 feet; the flood sets strong to the west, and the ebb to the east. The times of high and low water at full and change of moon along this coast are, seven miles off Bram's point 5 h . ; at Bram's point, 5 h .30 m .; off Fort Amsterdam, 6h. 10m.; Fort Zeclandia, 7h.; at Demerara bar, generally at half-past four ; and at Fort Frederick, at flve.

There are several sinall creeks on the coast, but navigable only by boats, and a shallow flat extendlug along the shore renders it impossible for vessels, except those of small draught, to approach within a league of the coast. Moderately sized ships call go up the river Berbice as far as Fort Nassau, which is at the distance of 50 miles in a straight line from the entrance, and vessels drawing 14 feet water may, it is said, sail 200 miles up the Berblce. The Canjee river, or creek, waters the Berbice diatrict, and is navigable for achooners, for 50 miles, but its course is then lin. peded by falls and cataracts. About 40 milea below its head there is a creek, communicating with the Courantyn river, by which despatches have been con. veyed from Surinam to British Guiana by the Indians. The banks of the river are low, and covered with numerous plantations, as also along the 60 miles of sea coast territory of Berbice, the roads through which, close along the sea const, communicating with Demerura, are kept in excellent repair at the expense of the individual proprietors through whose estate they
pass, and may be said to be almost entirely formed of brick. The early Dutch aettlers constructed a fortress 50 miles up the river, called Zelandica, but this was subsequently abandoned, and New Amsterdam built on the side of the river Canjee, at its confluence with the river Berbice, two miles above Crab island, on the cast bank of the river, where it is intersected by canals, and has all the advantage of the tides.

Thrce strong battcries protect the entrance of the river ; two on the E. side, and the other, York Redoubt, on the W. side, opposite Crab Island. Fort St. Andrews, nearly four miles from the entrance of the river, and two from New Amsterdam, is like Fort William Frederick in the Demerara river, a small, low fortification, consisting of four bastions, surrounded by a ditch or fosse, and mounted with 18 twelvepounders. An extensive savannah or swamp extends in the rear of the fort (which is separated from New Amsterdam by the Canjee river or creek), ao that it cannot be commanded from any adjacent point. Sixty miles E. of Berblee river lies the Courantyn, about three miles wide at its entrance, with the navigation obstructed by many small islands and quicksands. The islets are fertile, covered with trees, and having on the W. side good clean anchorage in five fathoms. The W. banks of the river (which form the E. boundary of Berbice) are under British jurisdiction, and have a smiling appearance of cultivation. Besides the foregoing, there are numerous other rivers, which in Guiana are termed creeks, though they would be considered large rivers in Europe. Among the principal is the Mahaica creek, about 20 miles to windward or eastward of the Demerara, between that and Abary creck; the Mahaicony is also on the E. or winitward coast, not far from the Mahaica; the Boesary is on the leeward coast, near the Essequibo. Along the interior or southern portion of the colony there are numberless small rivers and creeks, intersecting wild and almost impenetrable forests, which, during the rainy season, empty themselves in torrents into the larger rivera, Easequibo, Cayuni (of which we know very little), Mazarooni, Demerara, Berbice, \&c., which latter rivers generally flow towards the ocean in discoloured streams at the rate of six or seven knots an hour.
IV. Little is known of the geological stata of Gulana. An alluvial flat, as before observed, extends along the sea coast for about 30 miles inland, terminating at a range of aand lills. Lifforts have recently been made to obtain water by boring at George Town. In 1830 Major Staples sunk a shalt of 140 feet at Cumingsburgh; on arriving at the micaceous substratum, indicating a primary formation, a clear spring of water, atrongly impregnated with iron, burst forth, At 12 feet below the alluvial surface, an irregular stratum of fallen trees (of a kind called the Courita, and still known on the coast) was discovered, in a semi-carbonized state; antl, at 40 feet depth, blue clay; at 50 lect below the surface, another similar stratum of decaying wood, 12 feet thick; nine feet deeper, a compact of whitish grey clay; 31 ditto, yellow sand, mixed with clay ; six ditto, violet-coloured clay, diminishing in shades to ycllow light straw, and agnin merging into slate-coloured clay; the remainder to a depth of 120 feet from the slurface, is argile, the lower part being of that amooth sonpy surface indlcating the pureat welgewood clay, Mr. Hillhouse says, that it seems cvident from this, 'that some agea ago, this continent was habitable 50 fect below the present surface, and that it was then covered with un inimense forest of Couridas, which was de-
stroyed by conflagrat sub-stratum. The se confined to the blue or nine fathoms; and comparative level bet this side of the Isthm have been then 50 fee obtained by boring is for culinary purposes to the air. Wells ha parts of the colony, varying from 100 to 14 a great advantage to t

stroyed by conflagration, as appeara by the ochrous sub-stratum. The sea must, at that time, have been confined to the blue water, where there is now eight or nine fathoins; and, whatever may have been the comparative level between the Pacific and Atlantic, on this side of the Isthmus of Darien the surface must have been then 50 feet lower than now.' The water obtained by boring is perfectly good for washing and for culinary purposes (except for tea) after exposure to the air. Wells have since heen sunk in various parts of the colony, and water obtained at depths varying trom 100 to 145 feet. This supply has proved a great advantage to the inhabitants.

The delta of the Essequibo (and, to a considerable extent, along all the rivers) is decayed vegetable matter, forming a fertile black mould, on a clayey substratum. As the Essequibo is ascended, the alluvium of the estuary changes to white sandstone, with scattered appearances of black oxyde of mangancze ; to the sandstone felspar succeeds, and then granite The mountain ranges scen on passing from the Essequibo into the Mazarooni, appear to be white quartz, 5,000 fcet high, having the appearance of gold, from the numerous shinining pnrticles of mica in the quartz, which give to the mass the appearance of the precious metals, thus forming the far-famed El-Dorado of the chivalrous and ill-treated Raleigh. Raleigh's peak is supposed to be volcanic, and, according tu the Indians, several volcanoes exist in the interior, particularly between the Siparoonce and Ripanoone rivers.

On the Demerara river, the first indiention of rock is met with at 70 miles from George Town, under water; it appears to be porphyritic sandstone. At the Postholder's ( 94 miles from George Town), there is a large bed of rocks of granitic nature, with some hornblende, and at the rapids, 106 miles up (or 70 miles, as the crow tlies, from George Town), there is abundance of stratified green-stone.
The structure of the mountains is prineipnlly granite, with a large proportion of ironstone. The Wnrow land of Poomeroon, and the coast lands of the whole colony, are deseribed by an accurate ohserver as principally composed of an alluvial bluc clay, intermixed with narrow strata of sand-and, on the Mahaica coast, with sand and shell reefs.
This tract is particularly adapted to the cultivation of sugar, cotton, and plantains, to which it is mainly devoted; nor does there exist in the known world a soil pussessed of such amazing richness and fertility. It is never mannred, thongh an nere has been known to produce upwards of $6,000 \mathrm{lbs}$. of sulgar, or 20,000 lbs, of farinaceous food (the phantain), in a year. As we go decper into the interior, the clay loses its blue tinge, and gradually becomes yellow; at this stage, it is always covered with a stratum of vege. table residuum, called pegas, which is the half-decayed vegetable mould from dead grass and leaves, and is, in many places, several feet deep, forming a grent inpediment to cultivation.

Plantains do not thrive in this land; but it is peculiarly favourable to the growth of coflec, for which it is principally cultivated, and the returns are ample, and of superior quality.

Behind the pegas lands, come high ridges of sand, interspersed with vallies, in which is a slight admixture of clay. These sand recfs present many fertile spots for the cultivation of coffec, cocon, arnotto, fruits, and ground provisions of all kinds; and extending in their direction paraliel with the sen coast, ure oceupied excluslvely by the Arawank nation.
To the smitli of this belt the rocky region com-
mences, consisting of clevated ridges and detached conical hills, resting on bases of sand, stone, granite, and siliceous crystal, containing a great variety of ochres and iron ores, mica, prismatic, hexagonal crystals, and, in scme instances, slight indications of the precious metals. Though it is fully as probable that gold and silver exist in the primitive mountains of the west, as well as in those of the eastern coast, yet no native specimens have ever been produced by the Indians within our territory. Two or three attempts at mining were made by the Dutch, on their first settlement in Essecןuibo, but the ore was not found worth the expense of working. The most probable site of the precious metals, is in the mountains of the Attaraya and Attamacha nations.
The rocky region is possessed by the Accaways and Caribisec, interspersed with small settlements of Macousi and Paramuna; but these latter are principally found in the debateable land at the foot of the mountains, where they become the alternate victims both of the coast tribes and the mountaineers.

Dr. Hancock who resided long in the interior of the countryof Demerara, says that nothing of petrifactions, sea shells or the organic remains of marine animals has been observedin the mountains of the interior of British Guyana. The principal component parts of the interior mountains, he supposes to be granite, porphyry, and their various modificatious, all denoting a primitive formation, while exterior ranges towards the coast of a minor elevation, are chiefly eomposed of indurated clays, with sand nnd gravel stones; indicating a secondary order of furmation. The great rocks of the interior are chiefly of a conoidal figure; on a savannah in 2.50 . N. Lat. there is a moontain called Weire, composed of one entire solid block of granite, 700 fect high, and about 40 miles to the N. E. is another still higher, ealled Tarlpoor, (devil's rock); they are both of the cone or pyramill shape, much exceeding the Egyptian piles in elevation and magnitude. Veins of quartz are very common traversing the great masses of granite, and most perspicuous along the channel of the rivers in the dry season, the direction of all the strata in Guiana being almost unitormly from N. E. to S. W. Vast quantitics of iron are met with in the mountains, the soil of which (us also that of many parts of the interior), consists of a strong and fertile loam, being a mixture of clay, sand, and vegetable mouk, with little calcarcous carth, but much ferruginous matter, giving to the soil a reddish tinge in some places. The soil of sume of the upland savammahs is composed of clay and gravel very close, and though apparently sterile, yielting food for the immense herds of cattle nod horses that depasture along the Rio Branco. Of a very pure white clas. This clay may be similar to the khuri found in the Bhagulpoor district of Hindostan. (See vols. 1 \& 2 of "Enstern India.") There nre immense masses forming the high banks of the Essequibo alove the falls, which wonld probably prove a valuable article in the manufacture of stone-ware or porcelain, us would also the huge blocks of milk-white quartz found in various places. Some indurated ciays, of great hariness, have been found nixel with sand, miea, calcarcous earth, oxyde of iron, \&c, anorphous and full of particles of a metallic brillinney. I'hese indurations, which are of varions degrees of hardness, lie in horizontul strata, breaking into dingonal plates; they are found nong the edge of the water, and Dr. Hancock thinks ure caused from the altemnte intluence of the sun and water, assisted by a deposition ol heterogeneous curtliy matters. Sulistances of a motndic
nature which have the appearance of ores are alao very abundantly met with in the mountains, but still more plentiful among the falls and rapids of the river. Rock crystal is found upon several mountains of Demerara, growing, (if it may be so said) out of beds of quartz ; Dr. Hancock only met with one species, and that always crystallized into hexagoral columns, and generally terminated by a single pyramid with from three to six faces. These columns are commonly found solitary, hut are sometimes met with in groups standing together as it were agglutinated. They are perfectly transparerit, of a water colour, taking a fine polish, and nearly as hard as agate. Red agate is found in the Rio Mow opposite, and not far distant from a crystal mountain. Much of the land at Moroko is thickly scattered over with siliceous gravel stones of an iron colour. At this range of mountains primitive rock in smaller or larger portions is every where to he seen ; no traces of a secondary formation are visible; cn most of them are found large masses of indurated clay scattered in loose masses amongst the granite, hot no calcarcous matter or organic bodies are to he found, and they appear as if undisturbed since the creation of the world. The Conoko mountains (belonging to the chain of the cataracts of the Orinoco) form an insulated group, seated on the elevated plains, which separate two great aystems of rivers ; the tributary streams of the Essequibo flowing N. E. and those of the Tacutu, Baranco, \&c. S. W. towards the Rio Negro and Amazon. From the summit of these mountains can be seen the spot where the Tacotu and Rajanooni take their rise. The soil here is also of a pure white clay, (not chalk) giving to the Rio Branco and other rivers a milky colour, owing to the quantity of clay therein diffused, and in such a minute state of subdivision as to require several days before the waters becone transparent by deposition. In finc, as regards geological science, British Guigna presents a wide field for the geologist, and in reference to the agriculturist a great diversity of soil, the three leading features of which are first, the clayey alluvial soil of the coast, extending eight to ten miles inland; second, hills of siliceous sand or gravel, which with intervening fertile aavannahs extend to the falls 50 miles inland; third, a rich primi. tive soil; and, lastly, a nountainous country, with divers coloured ochres, indurated clays, and various mixtures of loamy earth and vegetable mould on beds of granite to a vast extent, all offering food and the means of obtaining every necessary and comfort of life to the hand of the industrious and skilful emigrant.
V. The mortality of Europeans, on the early scttlement or colonization of Guiana, was very great, partly owing to torrid heat acting on a moist goil and luxisrions vegetation pregnant with animal and vegetable decomposition, and partly owing to the intemperate habits of the settlers, and their non-eonformity with the customs of the country and the dietates of nature. Of late years, however, as the coast became cleared, and $n$ free circnlation of air was admitted, the health of British Guiana has materially improved, and may now be considered as good as the nature of a low country will permit in any zone, particularly when we consider the extraordinary quantity of rain which falls annually. In 1880 there lell, in five months, six feet eight inches of rain at George Town. It is ditficult to ascertain accurately the quantity of rain throughout the year, not only hecause Demerarn is subjert to two rainy seasons, hut from the variation which takes place in cleared and drained lund, on the sea.coast or
in the interior. In the dry season, and when the sea breeze prevaila, there is rarely any moisture observahle in the morning, the thermometer $F$. averaging about 82 duririg the night, with no very material difference in the shade during the day. At the distance of 20 miles from the aea, or where the country is not extensively cleared, the trees and plants will be found every morning dripping with dew, the thermometer falling to 76 or 78 ; and a blanket is acceptable at nights. As the country is ascended (or southernwarid towards the Equator), the vicissitude of climate is yet greater; and on the table land, 300 miles inland, the climate is described to be delicious, and the influence of the monsoons regularly felt in the periodical fall of rain. Two wet and two dry seasone niark the revolutions of the year, each continuing for three months: the wet embrace the months of December, January, and Fehruary ; and then June, July, and August, during which periods the thermometer is lower than at any other time, and the land winds (which are, of course, less healthy than the sea breeze) prevail. The dry season is exceedingly delightful; the morning twilight commencing at four, gradually unveils a deep azure sky, over which the sun crosses cloudlessly from the oceans to the inland mountains, hehind which it seta. The invigorating sea breeze sets in at ten, giving animation to nature, and continuing to blow with increasing vigour till sunset, at six p.m., when it gradually dies away, but frequently returns again during the night.

During the wet season the wind is often from S. to W., and the rain then descends in torrents, sometimes for two or three days without intermission, in the interior and on the coast. At these periods, our sailors say it only leaves off raining to commence pouring. It appears to be admitted that the moisture, and consequently the fertility, of British Guiana is greater than that of the contiguous coast of the Orinoco, and may be accounted for hy waters of the Easequibo, Demerara, and Berbice having less declivity than thuse of the mighty Orinoco. Yellow fever (if in reality it ever did exist there) has for aome years been unknown in Guiama; but agues, and what we terin in India jungle fevers, are prevalent atnong new comers, if they rashly expose themselves to the night air or vertical sun. Demerara has been cited as une of the strongest instances of a deleterious atmosphere, particularly anoug our West India colonies; but when we come to examine facts, it turns out otherwise. The range of inortality, even among the labour. ing slave population, is about 1 in 37 to 40 ; but in London and France it is equal as regards the whole population, rich and joor ; and in other countries it is even more : thus, in Naples, 1 in 34 ; Wirtembergh, 1 in 33 ; Paris, 1 in 32 ; Berlin, 1 in 34 ; Nice, 1 in 31 ; Madrid, 1 in 29 : Rome, 1 in 25 ; Amsterdan, 1 in 24; Vienna, I in $22 d$ ! Thus that which is termed our most unhealthy West India colony has, even as regards its working population, a greater duration of life than the rich and poor of some of the principal purts of Europe 1 On six years, ending l832, the increase on 40,892 Creole population was 3,678 , or nine per cent. The following compariaon will put this point more clearly. In the Appendix to the Re. port of the Committce of the House of Commons on the Factory Bill, it appears that in a numher of 10,000 deaths, in a bealthy county (Rutland), under 20 years of uge, 3,756 died; under 40 years of age, 5,031 died; lived to 40 years and upwards, 4,969. In Lonilon, under 20 years of age, 4,580 died; under 40 years of nge, 6,1ll died; lived to 40 yeara and upwards,
3.889. In the town nge, 6,083 died; un lived to 40 years and Leeds, under 20 yea years of age, $7,441 \mathrm{c}$ wards, 2,559 . In the of age, 6,113 died; 1 lived to 40 years and with Demerara, wher tion, that the deaths 7,016, of whom died died, under 40 years upwards of 40 years number of deaths to 7,016 , the result wou age, 2,749 ; died und ived to 40 and upwar of the duration of life compared with a healt and a 8 till greater and of the colony, as co mentioned.

At the Portngnese fort Nigro (lat. 3 N., loug, if

3．889．In the town of Preston，under 20 years of age， 6,083 died；under 40 years of age， 7,462 died； lived to 40 years and upwards， 2,538 ．In the town of Leeds，under 20 years of age， 6,213 died；under 40 years of age， 7,441 died；lived to 40 years and up－ wards， 2,559 ．In the town of Bolton，under 20 years of age， 6,113 died ；under 40 years of age， 7,459 died ； lived to 40 years and upwards， 2,541 ．Contrast this with Demersara，where it appears，by the last registra－ tion，that the deaths during the triennial period were 7，016，of whom died，under 20 years of age， 1,929 ； died，under 40 years of age， 3,359 ；and 3,657 lived to upwards of 40 years of age．Supposing，then，the number of deaths to have heen 10,000 ，instead of 7，016，the result would he－died under 20 years of age， 2,749 ；died under 40 years of age， 4,788 ；and lived to 40 and upwards， 5,212 ；being 243 in favour of the duration of life in the colony of Demerara，as compared with a healthy county（Rutland）in England， and a still greater and increasing difference in favour of the colony，as compared with the towns before mentioned．
In the hurricane months，when the Carribbee islands sre ravaged with terrific tempests，vast masses of clouds advance towards the south；the mountains inland reverberate with pealing thunder，and the night is illumined with faint lightning coruseations；brief storms succeed ；but，happily，the Barbadian hurricane is unfelt．The length of the day in Guyana is about 13 hours．In the hot season，the thermometer ranges from 84 to 90 ，on the coast；and， 20 miles inland， seldom exceeds 80 ，during the warmest part of the day，falling at night to 60 ，or even 50.

At six，A．M．，the water was generally from eight to ten degrees warmer than the air ；at two，p．M．，air one to two degrees warmer than water；at six，p．m．， water two to three degrees warmer than air．

According to Mr．Hillhouse，who has repeatedly visited the interior，the climate of the region inhabited by the Indians is much more salubrious than that of the coast ；though，approaching nearer to the line，its superior elevation causes a decrease of temperature， and the surface of the earth is always kept cool，from the thick shade of the forest with which it is univer－ aally covered．

It is a common observation，that the air of the rivers is unhealthy ；but this only spplies to that part of them which runs through the awainp land and level with the sea coast．Here the exlialations and vapours accumulate，and the sea breeze is not ulways suf－ fieiently constant or powertul to dissipate them． Throughout the whole extent of the salt or brackish water，fever and ague predominates；but，beyond the influx of the tide，the banks of the rivers are so pro－ verbially healthy，that，were the population ten times more numerous than it is，there would be little em－ ployment for a physician．

As we approach the high sand hills of the interior， the natural drainage is so perfect，and the torrents of fresh water aupplied by the creeks form so strong a current，that all impurities are quickly drained from the vallies，and the surface water is instantly absorbed by the sainds．The water of those creeks that are uniformly shaded from the sun，is about five degrees colder than that of the river．

The breadth of the river，by exposing a great surface to the intluence of the sun，causes its increased tein－ perature．During the night，therefore，which is seven or eight degrees cooler than the day，the water of the river becomes comparatively a warm bath；and the time of its lowest comparative temperature is about noon，when the heat of the air is greatest，and the river has not yet reeovered the hent it lost during the uight．lanthling，therelore，in the heat of the day，is more brucing to the system；but buthing in the morning is most congenial to the leelings，as there is senreely any difference hetween the temperature of the nir and the witer，for two hours after sun－rise．

The evaporation in the neighbourhood of the line being supposed ten times greater than near the poles， the rains nre in proportion mueh more heavy und fire． quent．In these regions vegetation would cease，were the supply of moisture mily equal to that of temperate climates；and，upon the hills，where the wnter rulls
off more rapidly，a greater quantity of rain is required than in the vallies，where it stagnates，and is absorbed in superior proportion by the earth．We accordingly find that，upon the hills of the interior，the clouds discharge three times as much rain as falls upon the coast，and without causing any inconvenience．This disproportion between the rains of the coast and the interior，would not be so great，but from the circum－ stance of the vast tract of low land，from which the forest has been cleared for cultivation．Woody countries are always the most humid；and，in a plain without trees，the clouds will pass over without dis－ charging any rain，from the want of points of attrac－ tion．The importance of this fact has not bitherto met with sufficient consideration．A plain in the tro－ pies，without rain to moisten it，soon becomes a sterile desert；and nothing will attract the elcetricity of the clouds，and cause them to burst，but the intervention of groups or rows of tall trees．It is a point，there－ fore，worthy the consideration of the colonial legisla－ ture，to preserve a portion of bush standing on the coast for the attraction of rains，or to oblige the uif－ ferent estates to plant tall fruit or forest trees on their side－lines，as there is no doubt that the more the comntry is cleared of bush，the drier it becomes，and the less fertile，and this more particulary with regard to the sugar cultivation．

In the interior，the direction of the winds is by no means so uniform as on the coast．From the month of April to July，they blow more from the S ． than from any other point；and these land winds， whieh occur at intervals throughout the year，by im－ peding the course of the clouls as they are propelled by the sea breeze，are another cause of the increased rains．

From the superior salubrity of the climate，and the simple habits of the Indians，it is reasonable to sup－ pose that，prior to the introduction of rum，they enjoyed great longevicy．The native intoxicating beverages are so mild and diuretic，that little incon－ venience results from their excesses with them；but their system of computation is so defective，that they can neither calculate their own age，or those of their offspring．

Early puberty is common in all hot latitudes；but it does not seem to shorten the period of existence， though the appearance of age comes on sooner．The Indian girls are marriagenble at 12 or 13，and the boys at 15 or 16 ．At 25 years the women lose all the appearance of youth；but the men at 40 are not older in appearance than Europeans of the same age．

Upon the whole，there is no doubt，that if the hand of cultivation reached to the hills of the interior，and a few artificial improvements were added to the ad－ vantages of local situation，the climate of the Indians would be the most healthy and agreeable of any within the tropies－with fish，flesh，fowl，and vegetables in abundance，pure water，no fevers，and no mosquitoes．
V1．In estimating the population of births and deaths in the African population of the West India Colonies， it must be remembered that the African is as much a stranger to the West India climate and soil as the Eu－ ropean is，and，indeed，experience teaches that the superior civilization and food of the European renders him much better enabled to withstand vicissitudes of climate than his dark coloured brethren．The de－ crease of the African slave population（especially when we consider manumissions，the prevailing disparity of the gexes，and the arts to which the African women resort to prevent their being mothers）is not therefore to be wondered at，but it will be found to be over balanced by the increase of the creole population，or Colonial born African descendants．

Demerara and Essequibo contains 11 parishes， whose names and extent are，St．Mary＇s，extending from Abary Maicony，and to Mahaica，thence to Plantation lowlands inclusive，and embracing the settlements on the banks of the Maicony and Mahaica creeks；St．Paul＇s，from plantation Northbrook to Cuming＇s lodge，inclusive；St．Ceorge and St．An－ drew united，embrace George Town and the planta－ tions on the Cumingsburgh canal ；St．Mfatthew，from George Town up the cast bank of the river as far as the settlements extend，including those in canai No． 3；St．Mark，from plantation Mindenburgh along the $\mathbf{W}$ ．hank of the river as far as the settlements ex－ tend，including those on canals No． $1 \& 2$ ；St．Swithin， from plantations La Grance to Jalousic inclusive； St．Luke，from plantation Blakenburgh inclusive to the Essequibo river，and along the E．bank upwards as far as the settlements extend；St．Peter compre－ hends Leguan and Hog islands，in the mouth of the Essequibo river；St．James，Waakenham and Troolic islands，in ditto；St．John，from Schoeven creek to Capoey ditto，on the W．const of Essequibo river，in－ cluding the settlements on the intervening creeks and on Tiger island；Trinity，from Capoey creek to the Pomeroon river，and as far as the British settlements extend．

Summary of the Slave Population of the united Colnny of Demerara and Essequibo，from the year 1817 to the year 1832，at intervals of three years．

Number of claims having reference to each divislon. Pradial Attached, 429 ; Pradial Unattached, 831 ; Non. preedlal, 1,608.
The native Indians of this coast have long engaged the attention of Europeans, and received the protection of the British government. When this part of the South American continent was first visited hy the
mariners of the old world, it was found densely peopled; but few now renain of the aboriginal inhabitants.
The principal tribes in and around British Guiana, are, the 1. Arrawaks; 2. Accawai ; 3. Caribisce; 4. Warrows, and 5. Macoosies. The first mentioned border on the coast line; the sccond are removed further inland, and in atature, colour and some other respects, are like the first; the third, inhabit the upper country between the Essequibo and Cayuny, they are described as having the manliness and intrepidity of all highland tribes, and as being fairer than the Arrawaks or lowlanders. According to tradition, they once inhabited the W. I. islands; it is more prcbable, however, that the W. I. islands were originally peopled by the Carabisce from the main land. The fourth or Warrows, occupy the coast between the Pomeroon and Orinoco, and are a black, short, hardy race of fishermen and sailors, subsisting chiefly hy boat-building. The fifth or Macoosies, reside in the deep recesses of the forests of the intcrior, and are numerous, very industrious, extremely cunning, and implacable in their revenge; probably they are the aborigines of the country, and fleeing before more civilized tribes, as we find to be the case in every part of the eastern hemisphere.
It is difficult, if not impossible, to estimate the number of Indians south of the Rippanooney; about 5,000 consider themselves under the protection of the British government, receiving triennial presents and annual supplies ; about $20, \mathrm{c} 00$ are migratory, unattached to any particular governneent, and moving at pleasure from the Orinoque to the Brazils, Cayenne or Surinam, as necessity (i. e. want of food) or inclination way dictate. [A full description of the nativea will be found in the popular edition of this work; vol. i. West Indies of Colonial Library.]
There are six protectors of Indians in British Guiana, under whom are six postholders and assistants, on the different rivers. The postholders receive $158 l$. a year, and a house; their assistants each 72l. per annum. The protector's duty is to overlook that of postholders in the performance of their duties, to endeavour to make peace between the Indian tribes when

## BRITISH GUIANA.-RELIGION.

at war, and to transmit quarterly returns to the Lieutenant-governor. They receive no salary, and are generally merchants and planters along the coast. The postholders are instructed to keep their posts or stations in good order, to attach the Indians to their posts, to prevent, as far as in them lies, quarrelling or fighting between the tribes, to obtain passes, signed by the Lieutenant-governor or Protector of Indians, for all persons passing the station, and to give in quarterly returns of all occurrences at their posts.
VII. Throughout theWest India colonies considerable efforts have been made by the local governments and legislatures, for several years back, to promote religion and education, and by none more so than Guiana; in Demerara and Essequibo (independent of

Berbice) there are attached to the Established Church of England, seven rectors and one curate; to the Church of Holland, two ministers; to the Church of Scotland, five ministers ; and to the Roman Catholic Church, two priests; twelve catcehists, or schoolmasters, one being attached to each parish church of the English and Scotch persuasion; besides four schools in George Town for free boys and girls, and slave boys and girls, to which there are two masters and two mistresses. The annual sum paid to the clergymen, catechists, schoolmasters and mistresses, from the colonial fund, amounts to 135,450 guilders, equal to about $10,000 l$.; the Roman Catholic clergyman is placed on the same footing as the clergy of the Established Church, or those of the Dutch or Scotch persuasion.

Return of the Number of Churches, Livings, \&c. of Demerara and Essequibo. [B.B.]

* 157!. allowed for house-rent.

There have been expended between the years 1824 and 1831, up wards of 350,000 guilders, equal to about 26,000 ., on tite building of churches and parsonages; independently ot which, large sums have voluntarily been contributed by individuals for that purpose. On the estimate for the year $18: 2$ a sum of 200,725 guilders, equal to $14,337 l$. was placed for the support of the establishment for that ycar alone. The expense for 1827 (which, with several other documents, I have heen fayoured by the Hon. H. E. F. Young, Government Secretary at British Guiana) was 221,350 guilders $=15,810 l$.

These expenses are borne solely by the inluabitants, by taxes levied on them by the Court of Policy, combincd with the financial representatives of the community. There are 36 paid clergymen of the Church of England, Scotland and Rome. The parishes are exclusively designated Episcopalian or Presbytcrian, and are allotted to those persuasions nearly equal. From England, through the Bishop of the diocese, by means of the Parlianentary Grant or otherwise, there has bcen received in 1837, about 5,000 l. towards chapels and schools. From the colonial funds in 1837, there has been paid 3,407l. towards the erec. tion of schools or the procuring of teachers. The amount raised from private contributions or defrayed
by the Missionary socicties, has been, during 1837, very considerable, not less than that raised by the colony, but it is difficult to arrive at a correct estimate. There were in 1837, 1,516 marriages. One church, in the parish of All Saints district of Berbice, extending about four miles along the cast bank of the River Berbice, and all along the left bank of Canje Creck, as far as the settlement extends, the cultivation on which docs not extend beyond eight miles; the population is about 4,700 souls, and the living is worth 7,000 guilders per annum. The church will contain about 400 persons, and is gencrally well filled. Their tencts are thoroughly Protestant of the old school. There rere likewisc 10 chapels, which will contain from 450 to 850 and are generally well attended: Protestant.

Among the English Colonists the Episcopalian is the principal crced, and each parish has its rector, under the diocese of Barbadoes; the Dutch have their Lutheran church and minister, the Romish their chapel and minister, all paid (as I have before said) and supported by the colony; and there are 13 active and useful missionaries endeavouring to instil Christianity into the negro population.
VIII. Schools, Demerara and Essequibo.-There are two public schools in the parish of St. Gcorge, one

There is a sheriff in each of the three districts into which the colony is divided. The sheriff and three justices of the peace constitute an inferior criminal court. Not less than three inferior courts are required by law to be held in each district every month. The convictions in ${ }^{\dagger} 1837$, were 345 . There are 15 special justices; the punishments inflicted by them during 1837, amounted to 5,170 , of which 40 were cases of corporal punishment by flogging. From Ja. nuary 1835 to December 1837, floggings by sentence of the inferior courts, have amounted to the follow-
ing numbers, each number denoting a period of three months ; $60,85,48,26,42,46,29,27,15,28,8,8$. From July 1835, (when the power of inflicting finggings was vested exclusively in the special justices appointed from England,) to December 1837, the apprenticed labourers so punished, werc, according to the subjoined numbers, which denote also a period of three months, $167,153,127,84,140,71,21,6,10,3$. From 1835 to 1837 , there have been but five or six cases of floggings under sentence of the supreme criminal court. There are upwards of 90 ordinary jus-

TERBICE-CRIMES AND GAOLS, GOVERNMENT AND MILITARY.
tices of the peace, they have no jurisdietion unless assembled collegialiter, with a sheriff as president; they have power however, to commit for trial. Fach special justice has two paid constables. Ihere are 76 paid policemen resident in the two towns, and they are plaeed under the respective sherifis. There are 1,561 unpaid special constables, selected in 1834, chiefly from amongst the labourers in the country by the special magistracy; they are called upon to aet in
cases of emergeney only. There are 325 unpaid headboroughs, selected about the smine time, from amongst the managers and overseers, by the special magis. tracy as above. George Town is divided into 11 wards, in each of which a town councillor is selected by the inhabitants; the town councillors select a mayor; the mayor and town council have the distribution of the town funds, and constitute a court for the trial of petty offences within the town.

No returns for 1830 or 1835 .
X. Form of government,-Dutch and English. At the period of the capture of Demerara in 1803, the form of government of the colony was peculiar ; it consisted of a Court of Policy of eight members-four official appointed by the Sovercign, and four from amongst the inhabitants by the College of Kiczers. Official members-the Governor, the Commander of Fissequibo, the Fiscal of Demerara, the Fiscal of Essequibo ; two members returned from the district of Demerara, and two from the distriet of Essequibo. Each district had a College of Kiezers, consisting of seven members. The College of Kiezers for each district was elected by the inhabitants. They held the situation for life, or during their residence in the colony; qualification, 25 slaves, and three years' residence in the colony; qualification of elcetors, the possession of 25 slaves. Vote by ballot. Votes sent, into the Governor's Secretary's office, and deposited in a sealed box, and openeil in the presence of the Governor and not less than two other members of the Court of Policy.

The College of Kiezers nominated two persons to fill vacancies in the Court of Policy. The Governor und the Court selected one from the nomination, and notified in the Gazette the person selected. The senior momber of the Court went out after the meeting of the Combined Court, which assembled anmually for levying the taxes.

Financial Representatives. The College of Financial Representatives, nominated by the inhabitants, the same as Kiezers, and consisted of six; three returned by the district of Demarara, and thrce by the district of Essequibo. Term of service, troo years; qualification, same as Kiezers; duties, to sic with thi Court of Policy annually, for the purpose of levyir', taxes and regulating the expenditure, which was thin called the Combined Court-" the Courl. of Prisy combined with the Financial Representativis." $\Lambda$ t this combined meeting the Court of Policy submitted nn estimate of the expenses for the year, which had previr asly been prepared and diseussed in that

Court. In the Combined Court every item of the estimate was discussed, and every member, whether of the Court of Policy or Finaneial Representatives, had an equal vote. At this mecting the public accounts of the preceding year were examined and audited, which was the peculiar province of the Financial Representatives.

The Court of Policy passed all laws for the internal regulation of the Colony, it required four members to constitute a Court. No law binding without the concurrence of one member of the representative section of the Court. Qualification for a member of the Court of Policy, the owner of a plnntation, and threc years' residence.

Judicial Department.-Each district had a court of civil and criminal justice, which eonsisted of six members and a president. The members (colonial) elected by the Kiczers in the same manner as the Court of Policy; the two senior members retiring every year; qualification, possession of 25 slaves, and three years' residence in the colony. The commander was president of the Court of Justice of Essequibo; the governor president of the Court of Justice of Demerara ; the lnw of Demerara was the law of Holland or Roinan law. Each member of the court an equal vote on both law und fact: all cases decided by a majority of votes.

In 1812 the courts of justice of Essequibo and De. merara were united by proclamntion of the AetingGovernor, Major-General Carmichael ; and the court of justice of Demerara became the court of both districts ; and consisted of eight colonial members and a president, the president appointed by the Crown.

The colleges of Kiezers and Financial Representa. tives existing in 1812 were dissolved by General Csrmichnel's proclamation, and a College of Kiezers and Financial Representatives was established, in which the functions of both colleges were united; this college consisted of seven members : term of service two years; and elected by the inhabitants of both districts, paying tax on an income of 10,000 . per annum, or
possessing 25 slaves united.

In July, 1831, the abolished, and a new c Council, by which Be and Essequibo; and t members, five official ( Sheriff, Sheriff, and A nial ; the governor, in having a casting vote

posscasing 25 slaves; all the courts having been united.
In July, 1831, the ancient court of justice was abolished, and a new court constituted by order in the Council, by which Berbice was united with Demerara and Essequibo; and the Court of Policy formed of ten members, five official (Lieut.-gov., Chief Justice, High Sheriff, Sheriff, and Attorney-general) and five colonial; the governor, in case of an equality of votes, having a casting vote as formerly.

The Colleges of Kiczers and Financial Representatives were separated in 1831. The members of the College of Kiezers are now for life, and consist of seven members; the Financial Representatives of six members, term of service two years; one college eaeh of Kiezers and Financial Representatives for the culony of British Guiana, being Demerara, Essequibo, and Berbice ; and the qualification, possession of 25 slaves, as previons to 1812 .

The Court of Policy now consists of the governor, chief justice, attorney-general, collector of customs, and government-sccretary, and of an equal number of unofficial persons selected by the College of Electors. The College of Electors consists of 7 gentlemen, elected by the inhabitants for life. The unoflicial members of the Court of Policy serve for three years, and may be re-elected. The governor, in the Court of Policy, has a casting vote, all other members have each a vote. All laws, with the exeeption of the Annual Tax Ordinance, are enacted by the governor and Court of Poliey. The Queen in Council, may enact or disallow any law. The Combined Court is composed of the governor and Court of Policy, and of five financial representatives. The financial representatives, are chosen by the votes of the inhabitants. The Combined Court, diseuss the annual estimate, examine the expenditure and reecipts of the past year, and raise the annual taxes by ordinance. There are three professional judges who constitutc the Supreme Civil Court, there is an appeal to her Majesty in Council. The Roll Court, at which documents are filed, evidence taken and recorded, transports and mortgages of property executed, and all civil cases referred for adjudication by the Supreme Court, is held once a fortnight before one professional judge. Appeal or re-audition, may be obtained before the Supreme Court. A Petty Debt Court is held once a month, before one prolessional judge. The justices of the peace have also a petty delst jurisdiction. The three professional judges with three colonists, as assessors, constitute the Supreme Criminal Court, there were seven convictious in 1837. In criminal cases, three assessors, qualified by certain regulations, and open to challenge as jurors, are associated with the judges, and punishment can only be inflicted by sentence of the majority delivered in open court. In each of the above-mentioned colonies, courts of inferior jurisdiction in civil and criminal causes are established, subject to the appeal and revision of the superior court of assize.

Each male freeman between the ages of 16 and 50 is compelled to enrol himself in the militia, which is liable to be el lled out at the pleasure oi the governor, for service, not extending beyond the preservation of internal tranqui lity. The strength of the militia may be reckoned at $5,000 \mathrm{men}$. The senior officers in the country are justices of the peace, and exercise a jurisdiction over certain districts, each of which is distinguished by different coloured banners. They are termed burglier oflicers, and their duties ill geneml consist in promulgating proclanations, taking depositions upon tax schedules, carrying into ellect publie
and local laws, and putting down any disturbances which may arise within their jurisdiction.

Stuff.-One commander-in-chief, 1 brigadier and inspector-general, 1 adjutant-general, 3 adjutant ad-jutant-generals, 3 aides-de-camps, 2 brigade majors, 2 judge advocates, 3 lieut-colonel commandants.

One lieut.-colonel, 11 majors, 44 captains, 47 first licutenants, 50 second licutenants, 12 adjutants, 12 quarter-masters, 10 surgeons, 21 assistant-surgeons, 155 sergeants, 19 drummers and bugles, 2,969 rank and filc. In Berbice there are four regiments, containing 46 officers and 411 non-commissioned officers and rank and file.
XI. The income of the colony is from the following sources:-

Table of Taxes and louties received at the Office of the Colonial Receiver-general, under the authority of the Honourable Court of l'ulicy, combined with the Financial Representations of the Inhabitants of the Distriet of Demerara and Essequibo.

The shlpping which entered the ports of British Gulana in the year 1837 were, in number, 653 , tons, 110,093 ; seamen, 6,375.
XIII. The monies of account in British Guiana are guilders, stivers, and pennings; 16 pennings one stiver, 20 stivers one guilder.

| Englisl. | Guilder. | Stivers. | Pennings. |
| :--- | :---: | :---: | :---: |
| Half-a-crown | 1 | 15 | 0 |
| One shilling | 0 | 14 | 0 |
| Sixpence | 0 | 7 | 0 |
| One penny | 0 | 1 | 4 |
| Half-penny | 0 | 0 | 10 |
| Farthing | 0 | 0 | 5 |

Pass at these rates by virtue of a proclamation of the Governor. There are no gold or copper coins (British or Foreign) current in this colony.
Colonial Currency-Pieces of three guilders, equal to 60 stivers; two ditto $=40$; one ditto $=20$; half ditto $=10$; quarter ditto $=5$.
Foreign Currency - Spanish dollar, equal to 60 stivers or three guilders; half ditto $=30$ or $1 \frac{1}{2}$; quarter ditto $=15$ or 3 .
Amount of Coin in circulation-19,116 pieces of one florin each, 19,116 florins; 37,958 pieces of 10 stivers each, 18,979 florins; 76,384 pieces of five stivers each, 19,096 florins; 58,528 pieces of two and a half stivers each, 7,316 florins; total, 64,507 florins $=4607 \mathrm{I}$. 12 s . $10 \ddagger \mathrm{~d}$. sterling.
Paper currency in circulation-13,258 notes of one joe or 22 florins each, 291,676 florins; 8,189 of two joes or 44 florins cach, 360,$316 ; 4,201$ of three joes or 66 florins each, 277,266 florins; 3,150 of five joes or 110 florins each, 346,500 florins ; 1,700 of 10 joes or 220 florins each, 374,000 florins ; 1,250 of 20 joes or 440 florins each, 550,000 florins ; total, 2, 199,758 florins $=157,1 \geq 5 \mathrm{l}$. 11 s . 5 l . sterling. In Berbice the paper currency on the 31st December, 1834, was 426,092 guilders, issued on the security of the revenues of the colony.
Course of Exchunge - The rate of exchange in all government or public transactions is fixed, by an order in council, at 4s.4d. sterling for the Spanish dullar of three gullders; which is equal to 13 guilders and 11-13ths of a guilder to the pound sterling. This exchange does not vary. The rate of exchange in private and mercantile transactions fluctuate from 13 to 16 guilders per pound sterling, according to the demand for or scarcity of bills on Great Britain. It is nuw (December 31, 1836,) at 13:15 guilders to the pound sterling. [B. B.]
Banking.-There is a branch of the W. I. Colonial Bank, at Demerara; and there is a local establishment called the "British Bank of Culana," the first half yearly meeting of which was held 31st December,

1837, at George Town. The following is an abstruct statement of the affairs of the "British Bank of Guiana and the Berbice Branch, 31 st December, 1837 :Dr.

4,500 shares subscribed from the colony, and held by 360 proprictors. Instalments of 50 per cent. have been paid up.

The bank has reccived a charter, among the conditions of which it is stated are the following:-Half the subseribed capital to be paid up. Liability of each shareholder to be continued for one year after his displosing of his share. Full accounts for each week to be published every half year. Bank precluded from purchasing or holding its own stock. No advances on sccurity of real property. Notes not less than five dollars, and payable in silver. Amount of paper discounted, bearing the names of directors or officers of the bank, not to exceed one-third of the total amount discounted.
XIV. Sugar, rum, coffee, and cotton, form the principal articles of growth and export. The following return, given on oath, shews the production of Demerara and Essequibo for three periods of three ycars ench.

In the first period (1823, 1824, and 1825), $213,478,633$ lbs. ( 112 lbs .1 )itch $=112 \mathrm{lbs}, 4$ ounces Avoirclupois) sugnr ; 17,779,473 lbs. coflee; $6,808,913$ lbs. cotton. In the second ( 1826,1827 , and 1828 ), $239,556,975$ liss. (1)uteh) sugar ; 13,807,083 lbs. coffee; $7,389,373 \mathrm{lbs}$ cotton. In the thiril (1899, $1 \times 30$, and 1831 ), $262,709,559 \mathrm{lbs}$. (Duteh) sugar; $7,059,431$ lhs. cotfee ; 2,252,557 liss. cotton.
It will be seen from the foreguing, that, while coffe and cotton cultivation diminished, sugar increased. A return of produce from 1810 tu 18.11 is given on the next page.

A steam－ship company has been formed at Berbice for carrying on a communication with Demerara and the rivers of 13ritish Guiana．

Weights.-Principally steelyards, from 1 to 3,500 lbs.; 110 lbs. Dutch $=100 \mathrm{lbs}$. English, or 10 per cent. difference. Of measures, 1 Dutch ell of 26 inches Rhyland, is equal to 27 inches.

According to Mr. Peter Rose, (Evidence before W. I. Parliamentary Committee) of Demerara, the following is the cost of producing $10,769 \mathrm{cwt}$. of sugar, and 58,334 gallons of rum, on an estate in the best part of Demerara, with 500 negroes or workmen, on it : salt fish, 677 l . 1 s .; clothing, 750l.; plantains purchased, 1,143l.; coals and sugar hogsheads, 1,205l.; drogherage, 300l.; salaries, medical attendance and taxes, $1,500 l$.; pork, rice, port wine, bricks, lime, timber, lumber, nails, temper-lime, lamp oil, tar, pitch, cordage, canc, punts, \&c. 1,096l.; machinery, implements (employed in the manufacture of sugar and rum), repairs of buildings, negro houses, \&c. 1,000l.; insurance on buildings, 248l.; total, 7,919l. 1s. Cost of production: $10,769 \mathrm{cwt}$. sugar, at 12 s ., $6,461 \mathrm{l}$. 8 s .; 58,334 gallons rum, at $6 d$. per gallon, 1,458l. 7s.; total, 7,919l. 15s. These calculations are without reference to the invested capital: this estate cost the proprietors 120,000 . aterling. The foregoing atatement is given, that it may serve for future comparison with a syatem of free labour.
Prices of Produce, \&c. at Berbice in 1836. [B.B.]Horned cattle about 12l. each; horses, 40l. each; shecp, $3 l$. each ; swine, $3 l$. each; salt butter, $2 l .10 \mathrm{~s}$. per firkin; cheese, 2 s . per ll .; wheaten bread, $4 \frac{1}{2} l$. the 1 lb . loaf; beef, from $6 \frac{1}{2} l l$. to $8 \frac{1}{2} d$. per lb .; mutton, $1 \mathrm{~s} .5 \frac{1}{2} d$. per lb. ; pork, 9 l . per ib.; loaf sugar, 1 s. per lb.; Madeira wine, $60 l$. per pipe; brandy, from 12 s . to 14 s . per gallon; beer, about 7 ll . 10 s . per hds.; porter, from $8 s .8 d$. to $10 s$ s. per dozen.
Domestic Labour.-About 2l. 12s. for men, and 1s. $6 d$. for boys.

Value of Property Annually Crcated, and Moveable and Immoveable, in British Guyana, calculated in sterling Money, and excluding Slaves.-The value of property expended in purchasing slaves, has actually amounted in the aggregate, at 120l. each, to 9,960,000l.! Sugar, $1,000,000$ cwts. at 20s. $1,000,000$ l. Rum, $4,800,000$ gall. at $1 s .6 d ., 360,000$. Molasses, $3,000,000$ gall. at $10 d ., 125,000$. Coffee, $4,000,000$ lbs. at $7 d$. ., 116,6666 . Cotton, $3,000,000 \mathrm{lbs}$. at 7 ll ., $87,500 l$. Plantains, value at $4 l$. per annum all round, 400,000 . Animal food and fish, at $5 l$. per annum all round, $500,000 \mathrm{l}$. Vegetable food, at 11 . per annum all round, 100,000 l. Merchandize made, 500,000 . In. come and sundries, $600,000 \mathrm{l}$. Land cultivated and granted, $2,000,000$ acres, at $7 \mathrm{l} ., 14,000,00 \mathrm{n}$. Ditto uncultivated, $32,000,000$ acres at $2 s .6 d$., $4,000,0001$. I estimate the productive uncultivated land in British Guiana at 50,000 square miles; thus excluding nearly one-half the territory as barren, a circumstance which is over estimated, in order not to exaggerate the value of property. Public Property-Wharfs, Forts, Barracka, Churches, Gaols, Roads, (full 250 miles of public roada, averaging 600 l . a mile) Canals, (some idea may be formed of the labour employed in drainage, and the capital required to establish it, when it is stated that 30 miles of private canals, 12 feet wide by five deep, and 200 miles of drains, 2 feet wide by 18 inches deep, are required for the drainage and transportation of the canes to the mill of an estate producing 700 hogsheads of sugar.), \&c. 1,000,000l. Private Property - Dwelling-houses, Clothes, Plate, Furniture, \&c. $1,500,000$. Wharfs, Boata, Rafts, Merchandize, Canals, Roads, \&ce. $3,000,0001$. Cattle, Horses, Swine, \&c. 500,000l. Gold and Silver Coin in circulation, 20,000l. Total of Property Annually Created, $3,789,1661$. Total of Moveable and Immoveable Property, 24,020,000l.

Since the foregoing pages were printed, the following document has been laid before the House of Commona, in continuation of the papers ordered to be printed 2 March 1838, No. 180 ; the statement is subjoined, as illustrative of an important fact in relation to the future prospects of the colony.
Statement of the Average Annual Mortality on Five Estates in Berbice under Superintendence of Davidsons, Barkley and Co., compiled from monthly returns sent home during the last thrce years. The previous returns (as well as those on other estates during the same period; did not distinguish the free persons from the apprentices, and therefore afforded no criterion of the deaths among the latter class.

## CHAPTER III.-HONDURAS.

Section I. The British settlement of Honduras, in the province of Yucutan, is situate in the southern part of the Amcrican continent, between the parallels of 17 and 19 N . lat. and 88 to 90 W . long., on a peninsula extending from the west side of the Bay of Hondnras (that either gives or takes its name from the settlement) to the sea, northwardly forming the Bay of Campeachy on the west, and the Bay of Honduras (Hondure, depth of water) on the east side of the peninsula, the coast line extending about 270 miles; the inland boundaries are ill-defined. According to Henderson, the line which includes the settlement commences at the mouth of the RioGrande, or Hondo, whose course it follows and afterwards rons parallel with, for 30 miles-then, turning south, passes through the New River Lake, in a straight line, to the river Balize, up which it ascends for a considerable distance-and then again proceeds south till it reaches the head of the Sibun, whose windings it pursues to the sea coast-the whole settlement embracing an area of 62,750 square miles. The Mosquito shore-the Indians of which are in alliance with, and, in some respects, subject to the Crown of Great Britain, extends from Cape Gracios a Dios, southerly to J'unta Gordo and St. Juan's river; N. W. and westerly, to Romain river; and S. E. beyond Boco del Toro to Coclec or Coli, near the river Chagre and Porto Bello.
11. Tte Honduras coast was discovered by Columbus in $150 \%$-its period of carly settlement is very vague. At first it was occasionally resorted to by mahogany and other wood-cutters, whose chicf place of residence was then a small island called St. Gcorge's Key, about nine miles to the N. E. of the town of Balize, the present capital of the settlement. The first reguler establishment of British logwood cutters was made at Cape Cartoche by some Jamaica adventurers, whose numbers increasel so, that in a short time, they occupied as far south as the river Balize, in the Bay of Honduras, and as far west as the island of Triste and the Laguna de los Terminos, adjacent to Campeachy. The territorial jealousy of the Spaniards was soun roused, and the Governor of Campeachy fitted out several expeditions against the logwood cutters, in which he not only failed, but on two occasions, in 1659 and 1678 , the cutters actually took possession of the town of Campeachy, without a single cannon, and aided only by the seamen engared in the trade.

By a treaty enncluded with Spain in 1670 , by Sir W. Godolphin, the seventh article generally, though not specifically, entbraced the territorial right of Buitish oceupancy at llonduras-and in consequence the English population fast augmented, the number of whites (no negroes were introluced) being then 1700. The jealousy of the Spanish monarch at the success of the English, led to a renewed discussion of the territorial right of our settlers, which the imhecile ministers of the pusilhusimous Charles 11. so finr admitted, as to direct the Governor of Inmaicn (Sir 'Thomas Lynch, in lifi, to inquire into the same, and had it not heen for the spinited and patriotic coudnet of Sir

Thomas Lynch, the conduct of Spain would have been sanctioned by the court of St. James'. The Spaniards, at all events, tletermined to trive the woodmen from the Cainpeachy shore, and by 1680 , they succeeded in confining the English to the limits now occupied.

From this period the establishments on the other side of Cape Cartoche were entirely abandoned by the settlers. [n 1718, the Spaniards sent a large force to try to dispossess the English from the Balize river, as they harl done from the opposite coast, but the bold front of the logwood cutters deterred the Castilians, who contented themselves with crecting a fortification in the N. W. branch, of which they held possession for a few years, and finally abandoned it. The logwood cutters were left for 36 years in peace, until the attack on Truxillo by the English in 1742, which led to the long projected expedition of 1754 , to exterminate the latter from Honduras. By the treaty of peace in 1763, the Spaniards were compelled to give a formal permission of occupancy to the British colonists, though they subsequently endeavoured to annul it.

The Spaniards made another attack on the settlements in 1779, destroyed a great deal of property, and marched off many of the English settlers of both sexes, blindfolded and in irons, to Merida, the capital of Yucutan, and thence shipped them to the Havannah, where they were kept in captivity until 1782 ; but, in 1781, a commission from the crown of $S$ pain was anthorized " to make a formal delivery to the British nation of the lands allofted for the cutting of logwood," \&ic. It is necessary to state this explicitly, because many jersons are nut only ignorant whether Honduras is an island or part of the continent, but very many, who are aware of the position of the settlements, think the British have merely a right to logwoorl and malogany cutting in the Bay of Honduras, and that it is not a territorial occupancy of the British crown, which in fact it is, as much as Jamaica or any other settlement. The last Spanish attack on the settlements was during the war in 1798, and consisted of an expedition of 3,000 men, unter the command of Field Marshal O'Ncil, who was gallantly repulsed by the "Bay Men" (as the Honduras settlers are termed), for which they received the thanks of his Majesty. This act of conquest is a perfectly good title of oceupancy.
111. The sea coast of our territory at Honduras is that, and the shore studded with low and verdant isles (keys). From the land the coast gradually rises into a bold and lofty country, interspersed with rivers and lagoons, and covered with the noblest forests. The bay reaches from Cape Cartoche, in 21.31, the N. point of the peninsula of Yucutan, to Cape Honduras, in If S. lat, und 86 W . long. From thence the coast, comprebending Cape Gracias a Dios, and extending between 500 and 600 miles to the month of the Rio de San Juan as it flows from the Nienragua lake, is known by the name of the Mosquito shore. Within these linits lie the settlements whiel lave been considered the deprodencies of Jumaica.

The town of Balize (culled by the Spaniurds, I'alize;
corrupted from the original, Wallis, the noted English buccaneer), the capital of the Honduras settlement, is divided into two parts by the river Balize, which empties itself by two mouths in a tortuous manner into the sea, at the western side of the Honduras Bay, where, as before observed, the shore is extremely flat, with numerous keys or small islands dispersed along the coast, and densely covered with trees or shrubs, so exactly resembling each other as to puzzle the most experienced sailor, and rendering navigation exceedingly difficult. That part of Balize which is situate on the S . or right bank of the river, along the easiern edge of a point of land, is completely insulated by a canal on its western side, which runs across from a small arm of the sea, and bounds the town on its S. side.

The number of houses are nearly 500 , many of them convenient, well built, spacious, and even elegant; they are chiefly constructed of wood, and raised 10 feet from the ground. The streets are regular, rumning parallel N . and S., and intersected by others, the main one running in a N.E. direction (to a bridge crossing the river, and facing the chief quays and wharfs) from the government-house, which is situate on the S.E. point or angle of the islamd, on the right bank of the river, and bounded on the $S$. and E. by the sea. The church is situated behind the government-house, on the E. side of the main street, and the whole town is shaded by groves and avenues of the cocoa-nut and tamarind trees. To the N. of Balize is an extensive morass, three miles in circumference, now being drained. Fort George is situate ahout half a mile from the river on a small islet; it is low, 600 feet long and 200 broad, principally formed of the ballast from the shipping, every vessel being obliged to deposit a portion of ballast proportioned to its tonnage.

The lighthouse of Honduras, situate on Half Moon Key, or Isle, is about 43 mites E. by S. southerly from Balize. Like all the islands with which the Bay of Honduras is studded, its appearance at a distance is flat; but, on a nearer approach, it is found to he more elevated than the keys in the neighbourhood. On this bay stands t'.e lighthouse. In 1821 this highly useful building was erected on the N.E. point, the most elevated on the island, which is a rocky promontory, nearly 30 feet above the low-water mark; and from its base, which is 22 feet square to the lanthorn, it rises about 50 feet. It is in lat. 17.12 N , and long. 87.28 W. It is built in a pyramidal form to within nine or ten feet of the top. There is a fixed reflected light from sun-set to sun-rise, for which the public of Honduras allow the contractor the sum of 400\%. currency per annum. By day the lighthouse, leing painted white, serves as an excellent beacon. In days of yore, this spot was much resorted to, and at several periods was the residence of the buccancers when they infested these seas.

This key is now the chief residence of the branch pilots. They are a set of men remarkable for their ahstemious halits, aetivity, and humanity on all occasioms; and there hardly can be remenbered an instance of their deviation from duty.
IV. The first geological feature requisite for the knowledge of man is the capahility of the sail to grow food. In this respeet Honduras is not behind hand in fertility to any spot in the Old or New World. The soil of the Cahoun ridge consists of a deep loam, produced by deconiposed vegetable matter, and capable of growing every European, as well as tropical aliment. The Pine-ridge land has a substratum of luose reddish
sand, and ita indigenous products exhibit those varieties of the vegetable kingdom whose assimilative powers are strong and perennial. Extensive natural prairies, or pastures, spread over this aoil. An inexhaustibly rich alluvial soil exists on the margin of the numerous creeks and rivers which stud the country.
Veins of fine marble, and mountains of alabaster, are known to exist. Valuable crystals have been found within 180 miles of Balize; and fine pieces of transparent feltspar lie along the banks in many places, which are used in ormamental stucco work. Gold has, at various periods, been found in the Roaring Creek (a branch of the Balize river), but no trouble has been taken to ascertain from whence it proceeded. Quantities of lava and volcanic substances have been found in different situations. Labouring Creek, about 100 miles inland, on the Balize, is remarkable for the petrifying properties which it possesses; its waters have a powerful cathartic effect on strangers, and a healing property when applied externally to an ulcer.
V. The climate about Balize is generally moist. In July, the dryest and hottest month of the year, the average maximum heat is 83 F ., the medium 82 , and the minimum 80; but, thongh the absolute heat appears so great during the hot months, yet it is so tempered by the sea breezes, which almost constantly prevail from the N.E., S.E., or E., that the air feels pleasant and often cool ; but, on the wind shifting to the N. or W., the atmosphere becomes sultry, and olten oppressive. During the wet seasons, which last five months, the mercury sinks to 60 . The variation in the temperature is very great, sometimes 15, between six A.m., and two P.m., and at night 20 or 25 less than in the day.

Meteorolozical Register at Balize, Honduras.

X. Homburas is governeal by anmpintendant mominnted by the Crown to watil over the interests of the sethers, to secter them from nuy improper intrusiom of forvigures, mal to regulate all athairs which more particulaty allent the dignity of the Crown. There is a mixed legishative nad excentise pwow, termed the Magistrate of Honduras, by whom chatments are madre, which, oll receiving the assent of the King's representative, berome laws to be cafored by the excentive power. The magistrates in whom the power is thus rested arr seven in mmber, wheted mumally ty the inhabitants, homs-a poll is opened on the order of the bemed toshe Provost-marshal-general, and remmins so 21 days, at the expiration of which a scrutiny takes place, and the Provost-marshal-genemi returns those duly dected, who ner sworn inta oflice on being approved of by the Suprintembunt. They are the Comisellors of His Majesty's Superintendant. the Guardians of the Public: Perace, the ludges of all the Lower Courts; they form the Court of Ordinary, they are the Guartians of Orphans, hand can delegnte their power in the manaemant of the propirty to such persons whom they consider worthy of their trust. They are the protectors of all properties of
intestate or insunc bersons, or of those incapatale of managing thir own nflairs; they settle nil sulvage on wreched vessels, stores, mad merchandize; they mange the public funde, nul control the treasurer ; and no money en be paid without the sandion of four, who nign all orters for the issue; and previons to retiring from oflies, thry wamine nll his accounts, and sign them, if approved. No cmolument arises to then: servicers ure entircly gratuitulns. Trial by jury is estublishatd; nud from the decisions of the court an npeal lics divert to the Sing in Cometh, which, however is rasely made.
The mititin of llouduras is a very the beoly of men, nhout 1, , ino strong, and consists of a brigade of royal nrtillery, mad a regiment of the line; there is also a Lowal maritime force, termed the Prinee Rugent's Royal Honduras Flutilh. The Superintembant of the settlement is, of course, commmeler-in-chicf of the militin, with a fair propewtion of nides-lle-canm and slatr.

XIV. The agricultural produce of this settlement consists of Indian corn, rice, yams, and plantains, raised merely for the internal consumption of the country, not being permittell by his Majesty's government to export them to the United Kingdom The soil is eistremely well adapted for the culture of coffee, cotton, and sugar ; cocoa grows spontaneously and in great quantities in the thicketg but from the cause above mentioned, no care is taken of it. A few horses, and many horned eattle are bred in the settlement, the latter are principally used in drawing the mahogany out of the woods. [B. B. 1836]
Oranges, (which are unifornly of excellent quality,) shaddoeks, lime, mangoes, melons, pine apples, water melons, avocato pears, cashew, cocoa-nuts, and many others too numerous to mention, are very abundant during their respective seasons. They all grow in the neighbourbood of the town, but are also brought in large quantities from higher plantations. The country aloounds with game of every variety, whether fish, flesh, or fowl. The Spaniards, who trequent Balize from Bacalar in open crafts, carry on an extensive trade in poultry, eggs, corn, \&c., and, except in very rough weather, the supply of salt water fish is abundant and excellent.
The mahogany tree and logwood are the present staples of Honduras : another valuable timber covers the country for many thousand acres, and would prove a useful article in England, the pinus ocridentaLis, grows to 60 feet high, with irregular branches and serrated edged leaves, and which, owing to the quantity of tar and turpentine which the best sort contains, will sink in water when felled.

The pinewood is of course highly inflammable, a property which, to the poor, renders it very valuable; a torch of this wood, one end inserted in the earth, and the other ignited, emits a clear and powerful light. Owing to its durability it is, of course, much used by builders. It not only resists the action of the atmosphere, but it is also proof against the chemical influence of the earth even in the dampest situations. It is not uncommon to see posts extracted from the ground in which they have been fixed for years, in as high a state of preservation as when they were first put down; and the only difference they exhibit is increased solidity and hardness, and a strong bituminous smell.

The cahoun (locally pronounced cohoon) tree is chiefly valuable for the elegant vegetable oil it yields; which when unadulterated is almost colourless, being paler than the cold drawn castor oil. It is entirely free from any empyreumatic or fetid taste, possessing a slight and rather agreeable flavour. It emits a beautiful palish flame without smoke or smell, a property which renders it as a lamp oil, not equalled by any other known, and therefore much in demand in genteel society. Its affinity for oxygen is so remarkably strong, that steel smeared with it very soon rusts. Indeed its caloric is so easily abstracted, that at the temperature of $60, F$. it condenses into a white waxlike sulstance, but when heat is applied it immediately expands and resumes its original appearance. There are several little known woods, of beautiful vein and close texture, which might be turned to a profitable account, such as the iron-wood, claywood, rosewood, palmaletta, dark and beautifully figured, Santa Maria, which possesses the properties of the Indian teak, caoutchouc, or Indian rubber, sapotilla, and innumerable others.

Many other valuable products of the territory would be developed with an increased population. [Sce Colonial Library, vol. IV.]

## CHAPTER III.-FALKLAND ISLANDS.

Section I. The Falkland islands which are about 90 in number, are situate between the parallels of 50.58 . and 52.46 , south, and the meridian 57.20 . and 61.29 west, contiguous to the Straits of Magellan. The two largest are nearly 100 miles in length and 50 in breadth. They were first diseovered by Sir Richard Hawkins during the reign of Queen Elizabeth, in the year 159.4, or, as some think, by Captain Davis, an English navigator under Sir Thomas Cavendish, in 1502. Subsequently they were visited by a ship belonging to St. Maloes, from which they were called by the French, 'the Malouins;' and afterwards by the Spaniards, 'the Malvinas.' Little, however, was known of them until Commodore Byron, when on a voyage of discovery to the South Seas, visited them in January, 1765, and formally took possession of them for his Majesty Geo. III. under the title of 'the Falkland Islands,' though others say this name had been previously given them by an English navigator named Strong, in 1689 . After being there about 14 days,
he left Port Egmont on Sunday, 27th January, and described it as being the finest harbour in the world, capacious enough to hold nll the navy of England in full security. Geese, ducks, snipes, and other fowl were found in such nbundance, that the sailors were quite tired of eating them; and in every part there was a plentiful supply of water.

When the French lost the Canadas, a colony of farmers was transported hither by M. de Bougainville, and about the same time a British colony was established at Port lgmont by Capt. M'Bride; but their right being disputed by the Spaniards, M. de Bougainville surrentered the possession of his part to the latter in April, 1767. Great Britain, however, by virtue of her original discovery, claimed the sovereignty, which led to a rupture with Spain in the year 1770, and the point was warmly and strongly contested for a considerable period. Spain, however, finally conceded our tight to the islands.
11. The two largest of the islunds are about 70 leagues

The country, in th
in circumference, and divided by a channel 12 leagues in length, and from one to three in breadth. The harbours are large, and well defended by small islands, most happily disposed. The smallest vessels may ride in safety; fresh water is easily to be obtained ; there is seldom any thunder or lightning, nor is the weather hot or cold to any extraordinary degree. Throughout the year the nights are in geueral serene and fair; and upon the whole, the climate is favourable to the constitution. The depth of the soil in the vallies is more than sufficient for the purpose of ploughing.

Since 1767 they fell into comparative insignificance; and, for many years past, little notice has been taken of them by our government. Ships of war, on their passage round Cape Hlorn, have occassionally touched there for supplies of water, \&e. and South Sea whalers and other merchant vessels; but the navigation being little known, they have not, until lately, been much frequented, although very nearly in the track of ships homeward hound from the Pacific.
latterly, however, circumstances arose which induced the last commander-in-chief on the South American station (Sir Thomas Baker), to send down a ship of war for the purpose of reclaiming that possession, which lapse of time scemed to have rendered almost absolutely abandoned, as the Buenos-Ayrean Government endeavoured to set up a clain to the islands; the Spaniards having formerly used the islands as prisons for South American deliruflents.

In the month of December, 1832, Commander Onslow, in H. M.S. Clio, proceeded to lort Egmont, and found on Saunders' lsland the ruins of our former establishment. The town stood on the south side of a mountain not less than 600 feet high. The settlers had extended their gardens to the westward, the remains of which are still perceptible. Not finding any inhabitants, an inscription was left there, attached to a signal staff, on a spot which appeared to be Fort George, stating, "That these islands had been visited by lis Britannic Majesty's ship Clio, for the purpose of exercising the rights of sovereignty, 23d December, 1832. "

During their stay of ten days, the boats were employed in examining Brett's Harbour, Byron's Sound, Keppel's Sound, and to the westward to Point Bay, a distance of 60 miles from the Clio's anchorage.

At Port Louis, on East Falkland Island, a BuenosAyrean schooner of war was lying, and a small party of soldiers under the same flag occupied the shore, where there was an inconsiderable settlement of foreign persons, chiefly Buenos-Ayreans, who were engaged in catching wild cattle, \&c. for the supply of such ships as uccasionally touched there. Lieut. H. Smyth, of H. M. shiן Tyne, was subsequently sent down with a boat's crew to settle on the islands.
l'ort Louis, at the head of Berkley Sound, is admirahly adapted for vessels to refit at, under any circum. stances; it is well sheltered, and has an inner harbour for vessels drawing 14 feet of water, where they may heave down with safety if requisite. Water is also good and plentiful; and rellecting on the number of vessels passing and repassing Cape Horn, and the accidents they are liable to, from the tempestious weather frequently experienced off that Cape, the advantages of a port of refuge becomes apparent.

East Falkland Island possesses large and secure harbours for first rate ships of war, with facilities for exercising the crews on shore without the risk of losing them, and with abundance of wild cattle, antiscorbutic herbs, and fish, for their support.

The country, in the northern part of the island, is
rather mountainous. The highest part was called San Simon, at no great distance from the bottom of Berkeley Sound. The tops of the mountains are thickly strewn with large boulders, or detached stones, of which quantities have fallen, in some places, in lines along their sides, looking like rivers of stones; these are alternated with extensive tracts of marshy ground, descending, from the very tops of the monntains, where many large fresh-water ponds are found, from one to two feet deep. The best ground is at the foot of the mountains, and of this there is abundance fit for cultivation, in plains stretching from five to fifteen miles along the margin of the sea. In the southern peninsula there is hardly a rising ground that can be callcd a hill. Excellent fresh water is found every where, and may be procured either by digging or from the rivulets, which flow from the interior towards the sea, through vallies covered wilh a rich vegetation.
III. The climnte on the island is, on the whole, temperate. The tempernture never falls below 26. Fahrenheit in the coldest winter, nor rises above 75. in the hottest summer; its general range is from 30. to 50 . in winter, 50. to 75 . in summer. The weather is rather unsettled, particularly in winter; but the showers, whether of rain, snow, or hail, are generally of short duration, and their effects are never long visible on the surface of the ground. Thus lloods are unknown; snow disappears in few hours, unless on the tops of the mountains; and ice is seldom found above an inch thick. Thunder and lightning are of rare occurrence; fogs are frequent, especially in autumn and spring, but they usualiy dissipate towards noon. The winter is rather longer than the summer, but the difference not above a month, and the long warm days of summer, with occasional showers, produce a rapid vegetation in that season.

The wind blows commonly from the north-west in summer, south-west in winter, and seldom long from the eastward in cither senson. The finest weather in winter is when the wind draws from the west or north-west, and in summer when it stands at northwest or north-east. A north wind almost always brings rain, especially in summer, and east and southeast winds are constantly accompanied by thick and wet weather. Snow squalls generally come from the south-south-cast, south, or south-south-west. Storms are most frequent at the changes of the seasons, and hlow commonly from south-south-west to west-southwest; but they seldom last ahove 24 hours.
IV. Of the geology of the islands we yet know little. There are marks of copper ore with some pyrites, and the rocks are chiefly quartz. Ores of different colours are common, and red and grey slate is plentiful. There is abundance of excellent clay and stone adapted for building.
The soil of East Falkland Islnnd has been found well adapted to cultivation, consisting generally of from six to eight inches of black vegetable mould, below which is either gravel or clay. The meadows are spacious, well watered, and producing excellent grasses. Wheat and flax were both raised of quality equal, if not superior, to the seed sown, which was procured from Buenos Ayres; and potatocs, cabbage, turnips, and other kinds of vegetables produced largely, and of excellent quality. Fruit trees were not tried, the p.ants sent from luenos Ayres having perished belore they arrived.

The soil also produces dilferent kinds of vegetables wild, as celery, cresses, \&c., and many other esculent plants, the proper nanies of which were not known
to the settlers, but their palatable taste and valuable anti-scorbutic properties were aburidantly ascertained by them. Among others is one which they called the tea-plant, growing elose to the ground, and pro. ducing a berry of the size of a large pea, white with a tinge of rose colonr, and of exquisite flavour. A decoction of its leaves is a good substitute tor tea, whence its name. It is very abundant.

No trees grow on the island, but wood for building was obtained tolerably easy from the adjoining Straits of Magellan. For fuel, besides peat and turf, which are abundant in many places, and may be procured dry out of the penguins' holes, three kinds of bushes are found, called fachinal, matajo, and gruillera. The first of these grows straight, from two to five feet high, and the stem, in proportion to the height, is from half an inch to one inch and a half in diameter ; small woods of this are found in all the vallies, and form good cover; it bears no fruit. The second is more abundant in the southern than in the northern part of the island; its trunk is nearly the thickness of a man's arm, very crooked, never higher than three feet, and bears no fruit. The gruillera is the smallest of the three, growing close to the ground, and abundant all over the island; being easily ignited, it was chicfly used as fuel when the people were a way from the settlement, and to light the peat fires in the houses. It bears a small dark red herry of the size of a large pea, of an insipid taste.

The most curious of the vegetable productions is a resinous plant, or rather excrescence, for it grows from the earth without stalk, branch, or leaves, called the resinous gum plant. It is frequently six feet in diameter, and 18 inches high, and so strong as to bear the weight of a man. Its surface cjects drops of a tough resinous matter of a yellow colour, and about the size of peas, having a strong odour like torpentine. Great quantities of water cresses, sorrel, and wild parsley, are found in every direction, as well as a small shrub of the nature of spruce, which, being made into beer by the help of molasses, has proved an excellent antiscorbutic to seamen afllicted with scorvy after a long voyage on salt provisions. Scarcely any fruits are found, indeed only two fit for use, which grow upon creeping plants, and are similar to the mulberry of Europe, and the lucet of North America. Though there are numerous tlowering plants, only one, which had a smell like that of a rose, appeared to yield any perfume.

Only one species of animal was found in the island, a kind of wolf-fox, which Byron deseribes as extremely fierce, running from a great distance to attack the sailors when they landed, and even pursuing them into the boat. It is about the size of a shepherd's dog, and kennels under ground, subsisting on the seals and birds, which it catches ulong the shore. Sea lions, wallruses, and seals, are abundant about the coast, many of them of great size, and very ficrec. Swans, wild green ducks, teal, and all kinds of seafowl, are found in great numbers; and so tame were some of the lirds when the first settlers landed there that they would suffer themselves to be caught by the hand, and often perch upon the beads of the people. There is a bird called the grele, of heautiful plumage, and a kind of gentle note, whose flesh is much estecmed, and which suffers itself to be approached so as to be knocked down with a stick; there are also falcons, suipes, owls, curlews, herons, thrushes, \&c. Fish are not so plentiful, but they consist of mullet, pike, sardini, gradlaw; and, in the fresh water, a green trout, without scales; all sorts of small shell-
fish are found around the coast, but it is difficult to get at them, or indeed for a boat to land, on account of the prodigious quantity of sea-weed with which the shore is loaded. The tides produce a curious phenomenon, they do not rise at the settled calculated periods, but just before high water the sea rises and falls three times; and this motion is always more violent during the equinoxes and full moons, at which time several corallines, the finest mother-of-pearl, and the most delicate sponges are thrown up with it; and amongst other shells, a curious bivalve, called la poutette, found no where else but in a fossil state.

Herds of wild horned cattle, to the extent of many thousands, exist on the island, suffieient to maintain a great many settlers; and wild hogs are abundant in the northern peninsula. Wild horses are also found there of small size, but very hardy, which, when broken in, as some were without difficulty, were found of great service to the settlement. Rabbits are in great numbers, of a large size and fine fur. Foxes, too, are found, but differing considerably from those of Europe, having a thick hearl and coarse fur; they live chielly on geese and other fowl, which they eatch at uight when asleep.

Game is extremely common, especially wild geese and ducks; of the former two kinds were distinguished, the lowland or kelp.geese, and the upland geese; the latter were much soperior in flavour, the former being of a fishy taste, living chiefly on muscles, shrimps, and kelp. Both were very tame, und the upland geese were easily domesticated. They are finest eating in autumn, being then plump, in consequence of the abundance at that scason of tea-bernes, of which they are very fond; the rest of the year they live on the short grass. They have a white neek and breast, with the rest of the body speckled of a fine brown marbled colour. The lowland gander is quite white, and the goose dark, with a speckled breast. Of ducks there are several kinds. The loggerheaded are the largest, and almost of the size of the geese; their flesh is tough and fishy; they cannot fly, and when eut off from the water are easily caught. The next size is also of inferior quality, tough and fishy, but the smaller kinds, which are not larger than young pigeons, are deliciously good, and are found in large flocks along the rivulets and fresh water ponds. Snipes are found so tame that they were often killed by throwing ramrods at them. In addition to these, a great variety of sea birds freguent the shores, of which the most valuable to sailors and settlers, from the quantity of eggs they deposit, are the gulls and penguins. These birds have their fixed rookeries, to which they resort in mumerous flocks every spring; the gulls generally in green places near the shore, or on the small islands in the bay; the penguins chielly along the steep rocky shores of the sea. The eggs of both are eatable even with relish, after long confinement on hoard ship, the penguin's heing, however, the best, and less strong than that of the gull. So numerous are these eggs, that on one oecasion eight men gathered 60,000 in four or five days, and could easily have doubled that number had they stopped a few days longer. Both gulls and penguins will lay six or eight each, if remored, otherwise they only lay two and hatch them. The gulls come first to their hatching places, the penguins a little later.

Fish alounds in all the bays and inlets, especially in spring, when they come to spawn at the moutha of the fresh water rivulets. A company is now forming: for the colonization of the islands.

# BOOK III.-POSSESSIONS IN NORTH AMERICA. 

## CHAPTER I.-LOWER CANADA.

Section 1. The term Canada is supposed to be derived from the Indian word Kanata, signifying a collection of huts, and which the early European discoverers mistook for the name of the country. This important section of the British empire is bounded on the E. by the Atlantic Ocean, the Gulf of St. Lawrence and a part of the Labrador coast (which is separated by the Straits of Belleisle from the island of Newfoundland), on the N. by the Hudson Bay territories, on the W. by the Pacific Ocean, and on the S. by the United States, by part of New Brunswick, and by the unexplored territories of the Indians. The division line on the $S$. from the grand portage on Lake Superior (vide general map) runs through the great lakes and down the St. Lawrence river to latitude 45 ., and thence along that line to Connecticut river, from whence it follows the high lands which separate the waters running into the $S t$. Lawrence and the Atlantic, till it reaches due N . of the St . Croix river, the boundary between the United States and New Brunswick.

The boundary is thus described in the 2nd article of the treaty between Great Britain and the United States. "From the N. W. angle of Nova Scotia, viz. that angle which is formed by a line drawn due N . from the source of St. Croix river (the claim set up by the Americans is based on the pretence of their being two 'St. Croix' rivers, and next as to the 'highlands' specified) to the highlands along the said highlands, which divide those rivers that empty themselves into the river St. Lawrence, from those which fall into the Atlantic Ocean, to the north-westernmost head of the Connecticut river; thence down along the middle of that river, to 45 . N. latitude; from thence by a line due west in said latitude, until it strikes the river Iroquois or Cataraquy ; thence along the middle of said river into Lake Ontario; through the middle of said lake until it strikes the communication by water between that lake and Lake Erie; through the middle of said lake, until it arrives at the water commınication between that lake and Lake Huron; thence along the middle of said water communication into Lake Huron ; thence through the middle of said lake to the water communication between that lake and Lake Superior ; thence through Lake Superior northward to the Isles Royal and Philipeaux, to the Long Lake; thence through the middle of said Long Lake and the water communication between it and the Lake of the Woods, to the said Lake of the Woods; thence through the said lake to the most north-western point thereof; and from thence on a due west course to the river Mississippi ; thence by a line to be drawn along the middle of the said river Mississippi until it shall intersect the northernmost part of 31 . north latitude;-south, by a line to be drawn due east from the determination of the line last mentioned, in the latitude of 31 . north of the equator to the middle of the river Apalachicola or

Catahouche; thence along the middle thereof to its junction with Flint River; thence straight to the head of St. Mary's River ; and thence down along the middle of St. Mary's River to the Atlantic Ocean;east, by a line to be drawn along the middle of the river St. Croix, from its mouth in the Bay of Fundy, to its source; and from its source directly north to the aforesaid highlands, which divide the rivers which fall into the Atlantic Ocean from those which fall into the river St. Lawrence ; comprehending all islands within 20 leagues of any part of the shores of the United States, and lying between lines to be drawn due east from the points where the aforesaid boundaries between Nova Scotia on the one part, and East Florida on the other, shall respectively touch the Bay of Fundy and the Atlantic Ocean, excepting such islands as now are, or heretofore have been, within the limits of the said province of Nova Scotia."

England's admission of the boundary claimed by the United States, on the frontier of Maine alone, would be a loss of 10,000 square miles of one of the finest sections of the British North American territory, namely, $6,918,410$ acres from Lower Canada, and 2,372,010 acres from New Brunswick; and it would bring the United States to the very seaboard of Lower Canada, and destroy the internal communication between each of our provinces, from the coasts of the Atlantic to the shores of Lake Huron.

This extensive country was, in 1791, by His Britannic Majesty's order in council, divided into two governments (entitled Upper and Lower Canada), the boundary between the provinces commencing at Pointe au Brudet, on Lake St. Francis, about 55 miles above Montreal-running northerly to the Ottawa river-up that river to its source in Lake Temiscaming, and thence due N. to the Hudson's Bay boundary. The words of the order in Council are-" to commence at a stone boundary on the N. bank of the lake of St. Francis, at the cove W. of Puinte au Baudet, in the limit between the township of Lancaster and the seigniory of New Longueuil running along the said limit in the direction of N. 34. W. to the westernmost angle of the said seigniury of New Longueuil ; then along the N. W. boundary of the seigniory of Vaudreuil, running N. 25 E. until it strikes the Ottawa river; to ascend the said river into the lake Temiscaming, and from the head of the said lake by a line drawn due N . until it strikes the boundary of Hudson's Bay, including all the territory to the westward and southward of the said line, to the utmost extent of the country commonly called or known by the name of Canada." The want of clearness in the above delineation, added to the imperfectness of the map on which it was drawn, particularly as regarded the westwardly angle of the seigniory of New Longueuil, and the S. W. angle of Vaudreuil, which are represented as coincilent, when, according to Col. Buuchette, Surveyor Gen. of Lower Canada,
they are nine miles distunt from each other - has naturally caused discussions as to the houndaries between Upper and Lower Canada.

The territory oi Lower Canada, or seaward portion, is comprisel within the 45 th and 52 nd of N . latitude, and the parallels of 57.50 . to 80.6 . of W. longitude, emhracirg, so far as its boundaries will admit an estimation, an area of 205,863 sfuare statute miles, including a superficics of 3,200 miles covered by the numerous tukes and rivers of the province, and excludiner the surface of the St. Lawrence river and part of the gulf, which occupy 52,000 square miles; the entire province, water and land, being a quarter of a million of srpuare miles, or one hundred and sist:y millfion of acres. The boundaries of Lower Canada are the territories of the Hudson Bay Company, or East Maine, on the N.; on the E. the Gulf of St. Lawrence and a line drawn from Ance au Sablon, on the Labrador coast, due $N$. to the 52 nd of N. latitude; on the S. by New Brunswick and part of the territones of the United States, viz. Maine, New Hampshire, Vermont, and New York; and on the W. by the line separating it from Upper Canada as before described. This houndary was fixed by the 6 Geo. IV. c. 59, which also reannexed the Island of Anticosti to Lower Canada. The whole territory is divided into three chief districts-Quehec, Montrert, and Three rivers, and two inferior ones-Gaspé and St. Francis; these again further divided into 40 counties (ride population section), with minor subdivisions consisting of sciguiories, fafs and townships, \&c.

I1. The discovery of the coast of Canada, aceording to the most authentic statements, was made by the celebrated Italian adventurers John and his son Scbastian Cabot, who received a comnission from Henry VII. of England to discover wh: Columbus was in search of-a N.W. passage to the East Indies or China, or, as the latter country was than called, Cathay. The adventurers sailed, in 1497, with six ships, and, early in June of the same year, discovered Newfoundland; Whence, continuing a westerly courso, the continent of North America was arrived at, which the Cabots consted (after exploring the Gult of St. Lawrence) as far N. as 67.50 N . lat. They returued to England in L298. In 1502, Hugh Elliott and 'lhomas Ashurst, mercimants of Bristol, with two other gentlemen, ohthined a pateut from Hemry VII. to establish colonies in the countries lately discovered by Cabot; but the result of the permission granted is not known. In 1627, als ther expedition was fitted out by Henry VII]. by the advice of Robert Thome, a nucehant of Bristol, for the purpose of discuvering a N. W. passage to the East Ludies, and one of the shijs in making the attempt was lost.

Franeis I, of France, piqued at the discoveries of Spain und Portughl, and having his ambition roused by the monopolizing pretensions of these two powers to the possejsione in the New World, authorized the fitting ov's of an cajpelition, the command of which he gave to John Verrazani, in Italian, whe discovered Florida, nud thence sailing back round the American const to the 15 degree wi lat., took formal pussession of the country for" his roynl muster, and called it "LA Nuibselle lrunce." On Vemmani's return to Europe 1624, withont gold or silver or valuable merchandize, he was at flrst coldly received, but subsequently sent. out with moro partlcular instructions and alrections to open a conmmnication with the natives, in entleavouring to fulfil which lic lost infs Iffa in a fray with the lndians, and the object of the expeciliten was frustrated; while the cupture of liratueis I. at the battle
of Pavia, in 1525, put a temporary stop to further exploration of the coast of Canada. When the Government, however, ceased to follow up the result of Verrazani's formal acquisition of Canada, the Frenchmen of St. Maloes coinmenced a successful fishery at Newfoundland, which, so carly as 1517, had had 50 ships belonging to the English, Spanish, French and Pertuguese engaged in the cod fishery on its banks. Jaccuues Cartier, a native of St. Maloes, engaged in Newfoundland fishery, took the lead in exjuloring, at his own risk, the N. coasts of the new hemisphere. This hold and experienced nevigator at last received a commission from his sovereign, Francis I., and left St. Maloes on the 20th April, 1534, with two vessels, neither of which were more than 20 tons burthen! He coasted part of the gulf which he named St. Lawrence; sailed 300 leagues up the river to which he gave the same name; contracted an alliance with some of the natives; built a small fort, in which he wintered; took formal possession of the country, and returned to lrance with a native chiet named Donuaconna, and two or three of his principal attendants (all of whom were foreed from their country ly treachery), but without any of those precious metals which were then the great objects of European cupidity. The enterprizing character of his royal master induced him to despatch Cartier in the following year with three larger vessels, and a number of young gentlemen as volunteers. Cartier sailed up the St. Lawrence, found the country densely propled, and the Indians every where friendly. Quebec (or, as it was termed by the natives, (quilibek) was touched at, and an Indiun village found there. Cartier pursued his route until lie reached an island in the river with a lofty mountain, which he named Mont Royal, now called Montreal. (There is a diserepancy in the public records as to whether Montreal was visited in the first or second voyage.) After losing many of his followers from seurvy, Cartier returned to France in 1536 ; and the French court, finding that no gold or silver was to be had, paid no further attention to La Nourelle Fran'e, or Canadn, until the year 1540, when Cartier, alter much exertion, succeeded in getting a royal expedition fitted out under the command of Francois de la Rogue, Scigneur de Roherval, who was commissioned by Jrancis 1 . as Vieeroy and Lieut-general in Canada, Hochela (or Montreal), \&c. Roberval despatched Curtier to form a settlement, which he did at St. Croix's Habour. The Viceroy himself proceeded to his new colony in 1542 , where he huilt a fort and wintered, about four lragues above the isle of Orleans (tirst called the Isle of Bacchus) ; but, for want of any settled plans, und trom the rising and deadly hostility of the Indians, owing to Cartier's having carried ofi the Judim chief in 1535, little was accomplished, Roberval's attention was called from Cunuda to serve his sovereign in the struggie for power so long waged with Charles V. of Spain ; and Jacrues Carticr, ruined in health and fortune, returned to France in 1549, where he died neglected hy his tickle countrymen. Roberval, on the death of Eruncis 1., embarked for Canalit, with his brother and a numerous train of enterprizing young men; but, from having never afterwards been heurd of, they are supposed to have perished at sea, For 50 yenrs, France paid no attention to Canada, und the few settlers or their descondants lett by Cartige or leoberval, were unhueded and uns:ecoured; bitt, in 15!98, Henry LV. appointed the Mar, is de la Rocho his Joisut.ngeneral lis Cannala, with power to partition ilscoverecl lands into scig. niorics and ficis, to bo hold under fuddul teuture, and

as a compensation for military service when required. Such was the origin of the Canadian seigneuries. The further history of the province will be found in the "Colonial Library," vol. $\mathbf{i}$., in which is detailed the struggles and disasters of the colonists until the British capture of Quebec by Gencral Wolfe, on the 12th September, 1759.

The determined and loyal conduct of the Canadians of all classes, whether of English or French origin, in Lower Canada, effectually prevented the Americans making an impression on that province; and our oceupation of both the Upper and Lower Provinces has been uninterrupted for nearly 80 years

The following is a chronological list of Governors and Administrators of the Government of Canu.!a, since the province was erceted into a royal governmont, in 1663, and the time when they began to govern. French-Sicur de Mésy, May, 1663; Sieur de Courcelles, 23rd Sept. 1665 ; Sieur de Fronte. nac, 12 th Sept. 167: ; Sicur de la Barre, 9th October, 168: ; Sicur Marquis de Nonville, 3rd August, 1685; Sieur de l'rontenac, 28th November, 1689; Sieur Chevalier de Callieres, 14th September, 1699 ; Le Sieur Marquis de Vaudreuil, 17 th September, 1703 ; de Sieur Marquis de Beauharnois, 2nd September, 1726; Sieur Conte de la Galissoniere, 25th September, 1747; Sieur de la Jonquière, 16 th August, 1749 ; Sieur Marquis du Guesne de Meneville, 7th August, 1752; Sieur de Vaudreuil de Cavagnal, 10tlı July, 1755. (Gov.-general), 30th July, 181*; Hon. James Monk (President), 20th September, 1819 ; Sir l'eregrime Maitland, 20th September; 1320; Earl of Dalhousie, G.C.B. (Gov.-general), 18 th June, 1820 ; Sir Francis M. Burton, K C.G. (Licut.-governor), 7 th Jume, $1 \times 24$; Earl of llahousie, G.C.I3. (Gov.-general), 23rd September, 1825; Sir James Kemp, G. C. B., sth September, 1828 ; Lord Ayhmer, July, 1830; Lord Gosford, July, 1835; Earl of Durham, June, 1838.
111. The natural features of the teritory of lower Canada are extremely pieturespue-mountain ranges, noble rivers, magniticent cascades, lakes, mairies, farms and forests, alteruating in every direction with sudden and beautitul variety. On the ocean boundary the eastern parts of the river St. lawrence are high and mountainous, and covered in most parts with forests. On the northern side of tho St. Lawrence the mountadus run parallel with this vast river as fir up as Quohec, when tho range quits tho parnled of the copital, anel runs in 11 S. WV. and S.F. elirection fito the United States. 'Lhere nomitnins, which are known
by the name of the Alleshanies, rise abruptly trom the Gulf of St. Lawrence at l'erce, between the Bay of Chaleur and Gaspé Cape, and in their course divide the Atlantic coast from the basin of the Ohio, their loftiest elcvation being from 3,000 to 4,000 feet above the sea. The country between these two ranges of mountains and the S. boundary line of Lower Canadia in $45^{0}$ of N . lat., is marked by mumerous risings and depressions into hill and dale, with many rivers running from the N . and S . into the great valley of the St. Lawrence. In order to give a clear view of this valley, it will be well to divide it into sections, and then treat brielly of the rivers and lakes throughout the province; to begin with the sea coast :-

1. The most northerly and casterly scetion of the province of Lower Canalla, extending from Ance au Siblon on the Labrador coast to the Saguenay river, Lat. 48.5 Long. 69.37, occupies a tront of 650 miles, of which we know little more than the appearance of the coast, as explored from time to time by fishers and hunters. A bold mountainous country, in general characterises the coast line; in some places the range recedes from the shores of the Gulf and river St. Lawrence to the extent of 12 or 15 miles, leaving a deep swampy flat or moss bed nearly three feet in depth,-in other parts (as at Portnenf 40 miles E. of the Saguenay) the shores are of moderate elevation, composet of alternate eliffs of light coloured sand and tufts or clumps of evergreens.

The country between the two points just stated, is well watered hy numerous rivers, among which may be mentioned the Grande and Petit Bergeronnes, the Portneuf, Missisiquinak, Betsiamites, Bustard, Mani. cougan, Ichimanipistic (or seven islands) St. John, St. Austins and Esquimaux. It can scarcely be said that we know any thing more of these rivers than their embouchures. There are no roads along the coast, and the only settlement of any consequence is at Portneuf, a trading mart belonging to the Hudson Bay Company, who possesses under lease from the crown until 1842, the exclusive -:ght of bartering, hunting and fishing over this vast teritory and even to the westward of the Saguenay. The tract is termed the ling's domain and formed part of the "United farms of France," according to the Ordomance of 1733.

The country around lake St. John and the head waters of the Saguenay, has all extent of about $6,000,000$ acres of (it is asserted) cultivable land, better watered thm any known comitry. It is protected by a range of momentains to the N. E., and it is alleged has a milder climate than Queboc. The Siguchay is stated to be navigable for a slip of the line of the largest size, for a distance of 27 leagues, and the port of 'ladoussac at the mouth of the Saguenay, is open two to three weeks carlier than Quebec.

1 give this on the nuthority of Captain Yule, R. Enginesers, who surveyed the country, and favoured me with his notes. Captain lule speaks in high terms of the Saguemy as an eligible, social, and military station.
2. The second geographical division of the province N. of the river St. lawrence, is that comptised within the mouths of the Snguenay and St. Manrice rivers, which form the great highways to the northern terti. tories and ramify in various directions with nuabcrote lesser streams mind lakes. The distance between the Saguenay mud St. Manrice is nemly 200 milles; Quebee City being nearly equidistant from each river. From (रuebec to the Stuguonm! there is a bold and "trongly defind ringe of mountains; from Capo Dorment the rilge is unbroken (sive wiove rivers find

## 1.OWLR CANADA.-GEOGRAPHY.

their exits to the St. Lawrence) to 15 miles below the Saguenay. Beyond this coast border, the country is flat and undulating with chains of hills of moderate height, well watered by numerous lakes and rivers; among the latter are the St. Charles, the Montmorenci, the Great river or St. Ann's, the du Gouffre, Black river, \&c.

The sountry N. W. of Quebec, between that city and the St. Maurice, is not so bold as it is to the S.E. towards the Saguenay ; the land rises in a gentle ascent from the St. Lawrence banks, presenting an extremely pieturesque prospect, with alternations of water, wood, and rich cultivation, bounded in the distance by remote and lofty mountains. The rivers Jacques Cartier, Portneuf, St. Ann's and Batiscan with their numerous tributaries, add fertility and beauty to the landscape.
3. The third territorial section N. of the St. Lawrence, embraces the country lying between the St . Maurice river and the junction of the Ottawa and St. Lawrence, where Upper and Lower Canada mect. The aspect of the country from five to fifteen miles from the river's bank is slightly elevated into table ridges, with occasional abrupt acelivities and small plains.

The islands of Montreal, Jesus and Perrot, situate in the river St. Lawrence, come within this section. Montreal (the principal) is a beautiful isle of a triangular shape, 32 miles long by 10 broad, lying at the confluence of the Ottawa and St. Lawrence, and separated on the N. W. from isle Jesus by the riviere des Prairies. Montreal exhibits a nearly level surface with the exception of a mountain, (Coteau St. Pierre) and one or two hills of a slight elevation, from which flow numerous streams and rivulets. The island is richly cultivated and tastefully adorned. Isle Jesus N. W. of Montreal, 21 miles long hy six broad, is every where level, fertile, and admirably tilled; off its S.W, end is Isle Bizard, about four miles in length and nearly oval, well cleared and tenanted. Isle Perrot lies off the S . W. end of Montreal seven miles long by three broad; level, sandy and not well cleared; the small islets de la Paix are annexed to the seigniory of isle Perrot, and serve for pasturages.
4. Before proceeding to deseribe the physical aspect of the S. side of the St. Lawrence, it may be proper to observe that but little is known of the interior of the portion of the province bounded by the Ottawa or Grand River; so far as it has been explored it is not distinguished by the boldness which characterizes the E. section of Lower Canada ; now and then small ridges and extensive plains are met with receding from the bed of the Ottawa whose margin is an alluvial tlat, flooded often by the spring freshes and antumnal rains to the extent of a mile from the river's bed. Beyond the first ridge that skirts these flats the country is little known.
5. let us now view the provinee of the $S$. of the St. Lawrence, heginning as hefore at the sea coaston which the large comnty and district of Gaspé is situate. This peninsulated tract more properly ielong. ing to the New Brunswiek than to Lower Canadi, lies between the parallel of $47.1 \times$ to 49.12 N. L.nt. and 64.12 to 67.53 W. Long., bounded on the $N$. by the river $S t$. lawrence, on the E., by the Gull of the sa'ne name, on the S. by the Baty of Chaleurs adjoinng New Brunswick, and on the W. by the Lower Cnnadit territory; having ita grentest width from N . to S . bbout 90 miles, aud with a sea coast extending 350 miles fiom Cape Chis round to the head of Ristigoucle Bag, 'This tange tract of lerriong hins hoen as
yet but very superficially explored; so far as we know the face of the country is uneven, with a range of mountains skirting the St. Lawrence to the N., and another at no remote distance from the shores of Ristigouche river and Bay of Chaleurs; -between these ridges is an elevated and broken valley, oceasionally intersected by decp ravines. The district is well wooded and watered by numerous rivers and lakes, the soil rich and yielding abundantly when tilled. The sea beach is low (with the exception of Cape Gaspé which has lofty perpendicular cliffs) and frequently used as the highway of the territory; behind, the land rises into high round hills well wooded. The chief rivers are the Ristigouche into which falls the Pscudy, Goummitz, Guadamgonichone, Mistoue and Matapediac ; the grand and little Nonvelle, grand and littlcCascapediac, Caplin, Bonaventure, East Nouvelle, and Port Daniel that discharge themselves into the Bay of Chaleurs;-giand and little Pahos, grand and little River, and Mal Bay river flowing into the Gulf of St. Lawrence :-the river St. John and N. E. and S. W. branches fall into Gaspé Bay : there are also many lakes.
6. The country comprized between the Western boundary of Gaspe and the E. of the Chaudiere river, has a front along the St. Lawrence river to the N. W. of 257 miles, and is bounded to the S. E. by the high lands dividing the British from the United States territories. These high lands are 62 miles from the St . Lawrence at their nearest point, but on approaching the Chaudicre river they diverge Southwardly. The physical aspect of this territory, embracing about 19,000 square miles (of which the United States claim about 10,000 square miles), is not so mountainous as the opposite bank of the St. Lawrence; it may more properly be characterized as a hilly region abounding in extensive valleys. The immediate border of the St. Lawrence is flat, soon however rising into irregular ridges, and attaining an elevated and extensive tablean: at the distance of 15 to 20 miles from the shores of the St. Lawrence, the tablean gently descends towards the river St. John, beyond which it again reascends, acquiring a greater degree of altitude towards the sources of the Allegash-finally merging in the Connecticut range of meuntains.
7. The last section of Lower Canada S. of the St. Lawrence is that highly valuable tract W. of the river Chaudiere, fronting the St. Lawrence, and having in the rear the high lands of Connecticut and the parallel of the 45 degrees of N. Lat., which constitutes the S. and S. E. boundary of Lower Cnnada, where the latter is divided from the American States of New Hampshire, Vermont and New York. The superficial extent of this trnct is $18, \times 64$ miles, containiug 17 counties and a population numbering 200,000 . The physical aspect varies thronghout this extensive section; at the mouth of the Choudiere the hanks of the St. Lawrence still retain the charncteristic boldness for which they are remarkable nt Quebee and Joint Levi, but proceeding Westwnrd they gradually subside to a molerate elevation till thev sink into the Ints of laaie du Febre, anil form the marshy shores of lake St. Deter, whence the country becomes n richly luxuriant plain. I'roceeding from Lake St, beter towards Montreal, the boldness and grandeur of the country nbout Quebee may be contrasted with the picturespue champagne beauties of Itichelien, Vercheres, Chambly and La Irairi. districts. In the for. mer especially the eye of the spectator is delighted with a succesmion of rich and fraitful tieles, linxuriamt meatown, flourishing settements, neat homesteads,
gay villages and banks of the Riche rence, whilst in $t$ mountains of Ro Mount Johnson an above the commo from the St. Lawr gradually swells i more hilly, and fin racter towards lake beyond which the or less that boldne Chandiere and the sources. This is th by the name of the British American Le ate.
It is probable tl Bolton, Orford, \&c. mountains which $f$ from $S$. to W. thro bold and conspicuc manner from the $v$ Chambly, adding a This territory is a rivers and lakes an tion. The chief ri the boundary to th let (two branches), (or Chambly), Chat three last have th The chief lakes are nada, part in the Tomefobi, St. Franc and many smaller or

gay villages and even delightfi!! villas adorning the banks of the Richelieu, the Yamaska and the St. Lawrence, whilst in the distance are seen the towering mountains of Rouville and Chamhly, Rougemont, Mount Johnson and Boucherville, soaring majestically above the common level. As the country recedes from the St. Lawrence banks to the E. and S. E., it gradually swells into ridges, becomes progressively more hilly, and finally assumes a mountainous character towards lakes Memphramagog and St. Francis, beyond which the country continues to preserve more or less that boldness of aspect to the borders of the Chaudiere and the height of land at the Connecticut's sources. This is the section of the fine country known by the name of the Eastern Townships, in which the British American Land Company's possessions are situate.
It is probable that the range of hills traversing Bolton, Orford, \&e., are a continuation of the Green mountains which form a conspicuous ridge running from S. to W. through the state of Vermont. Several bold and conspicuous mountains rise in an isolated manner from the valleys or plains of Yamaska and Chambly, adding a delightful interest to the scenery. This territory is abundantly watered by numerous rivers and lakes and rivulets winding in every dirce. tion. The chicf rives are the Chaudiere (forming the boundary to the Eastward) the Beçancour, Nicolet (two branches), St. Francis, Yamaska, Richelicu (or Chambly), Chateauguay and Salmon : all but the three last have their sources within the province. The chicf lakes are the Memphramagog (part in Canadn, part in the United States), Scaswaninipus, Tomefobi, St. Francis, Nicolet, Pitt, Williain, 'Trout, and many smaller ones,

Quebec, in Lat. 46.48. I.on, 70.72. is situated upon the N. E. extremity of a rocky ridge or promontory, called Cape Diamond ( 350 feet above the water's elge), which runs for seven or cight miles to the westward, connected with another cape called Cape Rouge, forming the lofty and left bank of the river St. Lawrence, which is but for a short space interrupted by a low and flat valley to the N. F. adjoining the level in which the rivel St . Charles now runs to the N. of the city. The sue of the town on the N. of the promontory has apparently been chosen from its more gradual slope on this side than to the southward, whieh is precipitous. To the N. and W. of the city the ground slopes more gradually, and terminates in the St. Charles valley. The large river St. Jnw. rence flows to the southward of the city, washes the base of the steep promontory of Cape Diamond, and unites its waters with the small river St. Charles, flowing along the N . side of the city, the junction being in front of the town, where they expand into a consisiderable basin, forming the hurbour of Quebce.

The city is nominally divided into two, catted the $l^{\text {pper and }}$ Lower Towns; the latter being built at the base of the promontory, level with the high water, nod where the rock has been removed to make room for the houses, which me penorully constructed in the old style, of stone, two or three stories high, with narrow and ill-ventilnted strcets, from the Iower to the Upper Town there is a winding street (Mountainstrect,) extrenely stcep, which is commanded by well planted cmuon, and terminntes at an clevation of 200 leet above the river, at the city wills; or by ' 3reak Neck Stairs,' where the Uppor 'lown commences, extending its limits consideralaly to the westward, along the slope ol the rifge and up the promontory towarls the Cape wiblin lifty or sinfy juble of it sumanit.

The aspect is N. , and well placed for ventilation, although the streets are narrow and irregular. There are suburbs to each town; in the upper, they extend along the slope of the ridge called St. John's ; in the Lower, they extend along the valley from the St. Charles, called the Rocks. The influence of the tides, which extend several leagues beyond Quebec, raise the waters at the confluence of the two rivers many feet above their general level, and overflow the St. Charles valley, which rises gradually from the river to the northward, in a gentle slope for a few miles, until it reaches the mountains. This valley and slope is wholly under cultivation and extremely rich and picturesque. The ridge on which Quebec stands is also cultivated as far as Cape Rouge to the westward.

As a fortress, Quebec may be now ranked in the first class; the citadel on the highest point of Cape Diamond, together with a formidable combination of strongly constructed works extending over an area of forty acres: small batteries connected by ramparts are continuel from the edge of the precipice to the gateway leading to the lower town, which is defended by cannon of a large colibre, and the approach to it up Mountain Street enfiladed and flanked by many large guns: a line of defence connects with the grand battery, a redoubt of great strength armed with 24 pounders, entircly commanding the basin and passage of the river. Other lines add to the impregnability of Quebce ; the possession of which, (if properly defended) may be said to give the mastery of Upper as well as of Lower Canada. [For a complete description of the topography of the country, see Colonial Library, vol. i.]

Montreal, in 45.46. Lat. N., is situate upon the N. or left bank of the St. Lawrence ( 160 miles S. W. from Quebec), upun the Southernmost point of an island bearing the same name, and which is formed by the river St. Lawrence on the S., and a branch of the Ottawa or grand river on the N. The island is in length from E. to W. 30 miles, and from N. to $S$. eight miles : its surface is an almost uniform flat, with the exception of an isolated hill or mountain on its W. extremity, which rises from 500 to 800 feet higher than the river level. Along its foot, and particularly up its sides, are thickly interspersed corn fields, orchards and villas, above which to the very suminit of the mountain, trees grow in luxuriant varicty. The view from the top, though wanting in the sublime grandeur of Cape Diamond ut Quebec, is romantically picturesque : on the $S$. the blue hills of Vermont, and around a vast extent of thickly inhahited, cultivated and fertile country embellished with woods, waters, churches, cottages and farms,-beneath the placid city of Montreal-its shipping and river craft, and the fortified island of St. Helenn, altogether exhibiting a scene of softly luxuriant beauty. Within a mile to the N . W of the town, the range of the monntain gradually dectines for $n$ few miles to the $W$. and N , to the level of the surrounding country. The bank of the river upon which Montreal is built, has a gradual elevation of 20 to 30 feet, shoping again in the rear of the town, where there is a canal to carry off any aceumulated water: the land then again unduIntes to the N . to $n$ higher range. The streats are parallel with the river, and intersect each other at right angles; the houses ary for the most jart of a greyish stong, roofed with sheet Iron or tin : many of them are handsime structures, gisl would he consfo lered as auch in Istindon.

Is the extent aisel linportance of her trade-in the
beauty of her public and private buildings-in the gay appearance of her shops, and in all the extrinsic signs of sealth, Montreal is far a-head of the metropolitan eity of the province. Its population in 1825, was 22,357 ; and in 1831, 27,297; at present it is about 35,000 , if not more. The whole island is com-
prized in one seigniory, and belongs to the Roman Catholic clergy, who are consequently wealthy, but very liberal in exacting the tods et ventes due to them on the nutation of land,-they usually compound for these fines (see Section VII.).

IV. So far as we know, the geologicul structure of Canada exhibits a granite country, accompanied with calcareous rocks of a soft texture, and in horizontal strata. The prevailing rocks in the Alleghany mountains are granite in vast strata, but sometimes in boulders between the mountains and the shore; greywacke and clayslate also occur with limestone occasionally ; various other rocks, usually detached, present themselves. The lower islands of the St. Lawrence are mere inequalities of the vast granitic strata which occasionally protrude over the level of the river; the Kamouraska islands and the Penguins in particular exhibit this appearance, and in Kamouraska and St. Anne's parishes large masses of primitive granite rise in sharp conical hills (one is 500 feet bigh) with in some places smooth sides and scarcely a fissure, in other places full of fissures and clothed with pine trees which have taken root therein-the whole country appearing as if the St. Lawrence at one period entirely covered the land. At St. Roch the post road leads for more than a mile under a perpendicular ridge of granite 300 feet high. The banks of the St. Lawrence are in many places composed of a schistus substance in a decaying or mouldering condition, but still in every quarter granite is found in strata more or less inclined to the horizon, but never parallel to it. In the Gaspe district there have been obtained numerous and beautiful specimens of the quartz family, including a great variety of cornelians, agates, opals, and jaspers; coal indications have also heen traced.

Among the mountains to the N. W. of the St. Lawrence have been obtained iron felspar, hornblende, native iron ore, granite, (white, grey and red) and a kind of stone very common in Canada, called Limestone Granite, it being limestone that calcinates to powder, yet by fracture apparently granite : marble is in abundance and plumbago of the finest quality. The iron mines of St. Maurice have long been celebrated, and the metal prepared (with wood) is considered equal if not superior to Swedish; there is no doubt that Canada is rich in copper, lead, tin, and other mineral productions.

The beautiful spar peculiar to Labrador, whence it derives its name, has long been celebrated; some specimens are of an ultra marine or brilliant sky-blue colour-others of a greenish yellow-of a red-and of a fine pearly grey tint. Marble of excellent quality and of varied hues (white, green, and variegated) is found in different jarts of the country, and limestone, so uscful to the agriculturist, alnost everywhere abounds.
'The quantity of good soil in Canada compared with the extent of country is equal to that of any part of the globe; and there yet remains locality for many millions of the human race. The best lauds are those on which the hardest timber is fuund-such as oak, maple, beech, elm, black-walnut, \&e. though hass-wood when oi' luxuriant growth, and pine when large, clean and tall, also indicates good land. Many of the celar swramps, where the celars are not stinted and mingled with ash of a large growth, contain a very rich soil and are calculated for the finest hemp grounds in the world. So great is the fertility of the suil in Canada, that 50 bushels of wheat per acre are froquently produced on a farm where the stumps of trees which prohably occupy an eighth of the surface, have not leeen erndicated - some instances of tio hughels ger acre occur, and near York in Upiper Cas mada, 100 bushols of wheat woro nblainer firm a single acro! In 80 mo distuicts wheat has been ringed successively on the sinie ground for 20 years without manure.

Along the Ottawa there is a great extent of alluvial soil, and many districts of fertile land are daily brought into view which were before unknown. [See Geology-" Colonial Library."]
V. In Lower Canada, the temperature of the season may be considered severe rather than mild: the winter divides the year,-commencing in November, and terminating in May. In Upper Canada the winter is shorter by two months.

*The mininum for Jatuary, February, and March, of course, indicates below zero.

The greater severity in the eastern or lower province is owing to its more N. E. position, and to the contiguous N. E, range of uncultivated mountains. In the N. E. the snow commences in November; but seldom continues many days on the ground before December, when the whole country is covered for several feet deep, which does not entirely disappear before the beginning of May. The frost during this period is generally intense, with N. W. winds and clear atmosphere during the greater part of the winter ; but on a change of wind to the southward and eastward, the weather is overcast, the atmosphere becomes damp, sometimes accompanied with thick fog and snow-falls, with a considerable rise in the thermometer, -which usually ranges, during the months of December, January, Fehruary, and March, from 32 to 25 below zero, Fahrenheit.

Below Quebec the St. Lawrence is not frozen over, but the navigation is impeded by the large masses of ice which are floated down the river from the upper districts, and kept in motion by the combined action of the current at the narrows opposite Quebec, and the dimmal influence of the ocean tides.
1)uring the noonth of April the influence of the sun on the ice and snow begins to be felt, and about the first week in May the snow has all disappeared in the neighbourhood of Quebee, (the spring is three weeks earlier at Montreal, distant on the St. Lawrence ahout 180 miles) and the ice which had been accumulating in the grent lakes and rivers that pay tribute to the inighty stream, rushes down in vast masses and almost incredihle quantities towarts the ocean, which again dashes it inland with the impetnosity of the gulf tides, presenting an exfroordinary and almost terrific scene: sometimes the St. Lawrence is choked up from bank to bank with masses ol lee from 1 to 500 yards in diameter,- tho sca-tide and land carrent forces these on one another, and breaks them into small pieces, forming fiantnstic groups of figures lifgh above the surfince of the river: - the effect of the wind and water on these musses may well be lmagined. The navigation
of the river is not said to be completely open until। $1813 . .51 .41 ; 1814 . .60 .45 ; 1815 . .65 .87$; 1816. they have all disappeared, which is about the second week in May; vessels attempting to get out of, or to enter the St. Lawrence while the ice is forming or disappearing, are frequently lost by being embayed and crushed to pieces during a severe storm, when the running rigging, and even the rudder becomes immoveable.
The climate of Canada has undergone a change as sloown by the mean height of the thermometer at 8 A. m. for the month of July, from 1799 to 1818 conse-cutively:-
1799..66.87; 1800..66.70; 1801..66.51; 1802.. 68.35 ; 1803..69.38; 1804..72.19; 1805..67.93; 1806..65.96; 1807.. 75.18; 1808..73.35; 1809.. 60.60; 1810..59.16; 1×11..65.32; 1812..62.16;
$58.65 ; 1817 . .62 .19 ; 1818$. . 64.00 .
The warmest of the foregoing years in July was 1807, and the coldest 1813 . Since 1818 the climate of Canada has undergone considerahle change, partly owing to the motion of the Magnetic Poles and the clearing consequent on the cultivation of the country, the effect of which is mainly observable in the lengthened duration of summer and consequent shortening of winter. The state of the weather during the height of summer and winter at Cape Diamond, Quebec, (lat. 46.48 N ., long. 71.17 W .) will be yet further seen by a Metcorological Register for January and July, taken in the year 1828, a year of rather remarkable high and low temperature.

During the summer months there is a great deal of bec) often causes a change in the $n$. mospheric current. electric fluid in the atmosphere, and the vividness of the lightning and loudness of the thunder are sometimes appalling in the extreme. As a general rule it may be observed that the prevailing winds (viz. N.E., N. W. and S. W.) have considerable influenee in the temperature of the atmosphere and state of the weather. The S. W. (the most prevalent) is generally moderate and accompanied by clear skies,-the N. E. and $E$ bring continued rain in summer and snow in winter,-the N. W. is dry, cold and elastic, owing to the ice-bound region it springs from. Winds from due $N_{1}, S$. or W, ure not frequent, and the direction of the tide (which is felt for nearly 60 miles above Que-
[See " Colonial Library," vol, 1: -2nd Edn.]

V1. Canada, as well as the other portions of the American continent, was comparatively densely pcopled by a dark race, termed Indians, w! in first discovered by Europeans; and as colonization extended, the coloured population perished before the civilization of the whites.

The earliest European census of Lower Canada was in 162:, when Quebec, then a small viliage, did not contain more than 50 persons. A general capitation took place in 1676, since which the increase, necording to Charlevoix, La Potheraye, and public documents, has been as follows :-

The progress of females), from 182 lonial Office Return

Choler

The progress of population (dividing males from females), from 1822 to 1831 was, according to a Colonial Office Return, as follows :-

The rapid increase observable of late years is evidently ascribable to emigration from Europe :

| Years | Males | Females | Total. | Births. | Marriages | Deaths. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Rate of Increase in the General Population of Lower Canada, from 1760 to 1836, iuclusive.
Increase.

In a general view, the French and French-descended population are estimated at 400,000 ; and the British and British-descended, at 200,000; the latter, however, are rupidly increasing by births and immigration.

The last complete census of the Colony was in 1831, but the births, marriages, and deaths of the districts of Quebec, Montreal, and Three Rivers, have been returned to the Colonial Ofilee thus :- [See B. B. Lower Cadada, 1836.]

Province of Lower Canida in 1831.

VII. The prevailing, or most numerical creed in Lower Canarla, is the Roman Catholic faith, the clergy of which are elucated in Canada, and have no connexion with the Pope; they are not paid by government, but have for their support the 26 th part of all the grain raised on the lands of Catholics. Hay and potatoes are exempted from the charge, and if the Catholic turn Protestant, or sell his lands to a Protestant, the estate is nolonger subject to this moderate tythe. The chureh is governed by a Romish Bishop (a Canadian born and elucated), who receives, in addition to the rent of some lands of little value, the sum of $1,000 l$. per annum from Great Britain, which is the only charge for the Catholic Church establishment. The income of the Curés, whose numbers are about 200 , average $300 l$. per annum, by which they are enahled to live respectably, and even hospitably. In aid of the bishop or primate, there are two coadjutors or titular bishops, and four vicars general, and there are upwards of 200 vicaries, cures, \&c. Several religious communitics, exists, viz. the Hotel Dieu de Montreal, founded in 1664, and containing 37 religieuses professes; the Congregation de Nôlre Dame à Montreal (in 1650), with 81 professes; the Hópital general de Montreal (1753), with 29 professes; the Hôtel Dieu de Quebec (founded in 1637, "pour les panvres Malades"), with 34 religieuses professes; the Ursulines de Quebec, with 56 professes; the Hópital greneral de Quebcc (1693), with 50 professes; and the Ursulines des trois rivieres (founded in 1677, " pour l'instruction et pour les pauvres Malades"), with 34 professes: all these establishments have novices and postulants.

The Church of England establishment consists of a hishop (of Quelsec) and 40 elergymen; the Presbyterians of the Chureh of Scotland are about $1+$ in number, and there are 12 Wesleyan ministers.

The ecclesiastical charges, voted in the parliamentary estimates for the term from lst April 1834, to 31st March 1835, are, bishop of Quebee's salary $3000 l$. ; archdeacon ditto, $500 t$.; rector ditto $400 l$., and house-rent, $90 l$.; minister of Trinity Chapel, Quebec, 200 l ; Montreal rector, $300 l$. ; Three Rivers, ditto, 200l.; William Henry ditto, 150l.; Durham ditto, 100 .; Chatham titto, 100l.; Caldwell manor ditto, 100 l. ; St. Armand, ditto, 100 l .; Evening lectures at Quebec, 100l.; Verger of ditto, $150 l . ;$ Quehee Presbyterian minister, $50 l$.; Montreal ditto, $50 l$; Argenteuil ditto, $100 l$.; Roman Catholic bishops of Quebec, $1000 l$. In addition to the foregoing, there is a charge of $4,000 l$, to the Society for the Propagation of the Gospel in all our North American provinces, making a total of $10,690 \ell$.

The number of churches in Lower Canada is about thirty. One-serenth of the whole of the lands in the townships, is set apart as a provision for the Protestant Church.
Vill. A Committee of the Canadian House of Assembly, thus reports on the subject of education in 1832:-
' In 1830, there were 981 schools; in 1831, 1216 ; teachers in 1830, 947 ; in 1831, 1305; scholars in 1830, 41,791; in 1831, 45,203. [In 1829, the total number of children reported as receiving elementary education, was only 18,410 , of which 3,675 were under the Royal Institution.]

The nuniber of scholars taught gratuitously, has Increased from 21,622 , to 23,805 . Those who pay, from 16,591 to 26,016 .

1 ic whole amount of expenses for elementary schools, paid ont of the public chest, in 183n, was
about $20,000 l$.; in 1831 , it will be about 26,000 ., giving an average for cach scholar in 1830 , of $10 \mathrm{~s} . \mid \mathrm{U}$. ; in 1831, of $11 s .2 d$.

The proportion which the number of children, zeceiving instruction, bears to the whole population, th about one in twelve throughout the province, instead of one in four, the proportion in the adjoining state of New York. The counties of Montmorency, Stanstead, Sherbrooke, and Lotbinière, are the only counties out of forty-one where nearly all the children, of a fit age to attend school, are reciving a school education. In some counties only one child in twelve, and one in ten, are at school. The average throughout the province, of the children at school is one out of three.

Your Committee has observed with satisfaction, that, out of the whole number of schools, viz. :1216, 142 (chiefly in the towns of Montreal, Quebee, Three Rivers, and Laprairic), have 6,281 scholars, who pay for their education, or receive it in convents, or at a low rate in institutions which derive no support from the public money. In Quebec there are no les. than 2,525 scholars at elementary schools, and whose parents pay for their education and entirely support forty-one schools, at a rate of payment from 1s. to 2s. $6 d$. per month."

The money paid towards public schoois by the House of Assembly was, in 1829, 6,43؟l.; 1830, 18,088l.; 1831, 17,317l.; 1832, 23,324l.; nuaking in four years 65, 1681 . sterling, or 72,409l. currency, distributed through upwards of 2,000 schools annually.

The lands granted to the Jesuits by the old French goverument, and which fell into the Crown on the demise of the last of the Jesuits, in 1800, have been granted by the government for purposes of education.

Retirn of the Institutions for the Instruction of Youth ia Louer Cansda. [Canadian Commissioners Report, 1836.]-Protestant. 1.Royal GrammarSchool, Quebec ; 200l. a year, and $90 l$. a year school-house rent, from Jesuits' estates. Twenty free scholars, 11 pay for their tuition; all day-scholars. Terms, under 12, $8 l$., above 12 and under $13,10 l$. per an., ahove 13 , 12l. per. an. French and English taught; course of instruction as in the grammar schools in the United Kingdom.
2. Royal Grammar School, Montreal ; 200l. a year, and 54l. a year school-house rent, from Jesuits' estates. Twenty free scholars admitted, 15 scholars pay for their education ; all day schola.s. Terms, highest $10 l$., lowest $8 l$. per an.; instruction as in gram-mar-school at Quebec ; and this school is in possession of an extensive apparatus for experiments in natural philosophy.
3. Seminary at Chambly; contributions of students; a private institution lately established under the patronage of the Lord Bishop of Quebee. Board and tuition according to age of student, $40 l ., 50 l$. and $75 l$. per an.; day-scholars, $15 l$. and $20 l$. per an. There are 17 boarders and 9 day-sholars. Those who pay 75l. per an. are young men studying for holy orders, and others finishing their education.

Catholic.-1. Seminary of Quebec; no revenues specifically appropriated to the purposes of education, but possessed of several estates. Value, mate many year; ago, computed at 1,2491 . a year, hesides large contributions in gain, and the lods et ventes on mutations of property, which amount to a considerable sum. Attended by 188 students; the terms for tuition and board, 176 . 10s. per an.; for tuition only, $I l$. per an. Poor children instructed grutis. The seminary

|  | Ditto No. 1. | 12 | 11 | 23 | 20 |  |  |

Some altcrations have been recently made for the purpose of more equally distributing the elementary schools over the Province. The number of achool districts, in 1833, was-
Bonaventurc, 22; Gaspé, 14 ; Rimouski, 35 ; Ka. mouraska, 34; L'Islet, 25 ; Bellechassc, 49; Dorchester, 37 ; Beauce, 67 ; Megantic, 17; Lotbiniere, 41 ; Nicolet, 41 ; Yamaska, 27 ; Drummond, 10 ; Sherbrooke, 51 ; Stanstead, 62 ; Missiskoui, 48; Shefford, 25 ; Richelicu, 29 ; St. Hyacinthe, 31 ; Rouville, 47; Vercheres, 17 ; Chamhly, 35 ; Laprairie, 34 ; L'Acadie, 30; Beauharnois, 59 ; Vaudreuil, 24; Ottawa, 19 ; Two Mountains, 49 ; Terrebonne, 23 ; Lachesnaye, 21 ; L'Assomption, 36 ; Montreal, 18; Berthier, 48 ; St. Maurice, 36 ; Champlain, 27 ; Portneuf, 45 ; Quebec, 23 ; Muntmorency, 19; Saguenay, 19; Orlesns, 10. Total, 1,205 school districts.
There are French colleges also at Quebec, Chambly, Nicolet, and St. Hyacinthe ; and there are many high class puilic and private schools.
In several of the colleges there are professorships
of divinity, medicine, anatomy, phllosophy, mathematics, \&c., and the chairs are all ably filled.
The fine arts arc making no inconsiderable progress. The Museum of Natural History, of Montreal, is increasing rapidly; and the Literary and Historical Socicty, ci Quebec, is rising into notlce; hopes are entertained that, when the existence of these institutlons are more generally known in England, books, tracis, and manuscripta, \&c., will be aent from the muther country. There are several public libraries: one in Quebec contains upwards of 6,000 volumes of standard and valuable works, and the Montreal public library is fast overtaking lts elder brother of Quebec ; and there are the mechanic'a institutions, school socicties, and agricultural associations, \&c.

Intlmately connected with education is the state of crime. The following is the latest return at the Colonial Office. By comparing the returns with those of Upper Canada, or an equal amount of population in another colony, the state of crime and morals may in some degree he eatimatel.

Diel of the Prisoners in the Gaol of Quebec.-One pound and a half of the best brown bread per day, with one quart of gruel, or two pounds of potatoes. The weekly cost per head for each prisoner is about 2s. 2dd. The sick receive whatever may be ordered by the physician. Destitute prisoners are provided with such clothes as are absolutely necessary, on an approved estimate. The bedding consists of a straw palliasse, one sheet, two blankets, and a rug. The prisons are under the superintendence of the sheriff.

Number of Officers, and how appointed.-A gaoler, a superintendant of works, and a matron appointed by the sheriff, and two turnkeys appointed by the goaler. The employment of the prisoners consists in picking oakum, teazing hair, sawing and splitting firewood, \&c. The females sew, wash, knit, spin, card, weave, \&c. The hours of labour are from seven to twelve and from one to six. Prisoners not for hard labour are allowed the use of the airing-yard until four, p.M., in summer. The amount of earnings are credited to Government, and go towards the maintenance of the establishment.
The building is in a very dilapidated state, and has been reported to be very insecure by each succesaive grand jury which has visited it during the last 10 years. [B. B. for 1836.1
X. The constitution of the Lower Province, until the late insurrection suspended it, may be thus summarily stated. The authority of the sovereign of Canada, limited by the laws of Great Britain and by the capitulations of the Province. The supreme legislative authority in His Majesty and the two houses of the Imperial Parliament; this authority again limited by the capitulations and its own acts; the most remark. able of which, the Act 18 George III. cap. 12, confirmed by 31st George III. cap. 13. declares that no taxes shall be imposed on the colonies but for the regulation of trade, and that the proceeds of such taxes shall be applied to and for the use of the Province, in such manner as shall be directed by any law or laws which may be made by His Majeaty, his heirs or successors, by und with the advice and consent of the Legislative Council and Assembly of the Province.

The Provincial Legislature consists of His Majesty, acting by the Governor of the Province for Hia Majesty; of a Legislative Council of 34 members, the Chief Justice and Protestant Bishop, appointed by His Majesty for life; of a House of Assembly, of 88 members, elected for four years by His Majesty's subjects resident within the Province, and possessed, for their own use and benefit, in the counties, of real property to the yearly value of 40 s . sterling; in the towns of the yearly value of $5 \%$. sterling, or paying rent to the amount of $10 l$. stcrling. No religious disabilities exist as to electors, hut clergymen or Jews are not cligible as representatives. The Assembly is empowered to make laws for " the peace, welfare and good of the government" of the Province, such laws not being repugnant to the Act of 31 George 11I. c. 31, elections by open voting. Members of the House of Assembly allowed, by grant of the Legisiature, an indemnity of 10 s . currency per diem, and 4 s . per lesgue from their places of residence to the town or capital where the sittings of the Legislature are heid, which is Quebec. Session of the Pariiament of Lower Canada generally lasts three montha, seldom more than four, and is held during the winter. Saiary of the Speaker of the House of Assemhly 9000 . voted annualiy by the Provincial Legislature.
The constituency of Lower Canada is very widely diffused-among the half inillion of people there are
at least 80,000 electors, of whom nine-tenths are proprietors of the soil; several counties have from 4 to 5,000 electors, all of whom are landed proprietors. The total number of proprietors of real property in 1831, was 57,891 ; and of persons holding property not otherwise than real, 25,208 . Of families employed in agriculture, 50,824 ; and of families engaged in commerce, only 2,503 . The number of farm servants employed was 7,602 , which shows what a large proportion of the agriculturists are small farmers. The number of persons subsisting on alms, in a total population of upwards of half a million, was only 1,282; and which, I suppose, included a large proportion of 408 deaf and dumb, 334 blind, and 924 insane persons.

The Governor, in his Majesty's name, assembles, prorogues, and dissolves the two houses, which must be called together once in every twelve calendar months. All questions arising in either of the two houses, are decided by the majority of the members present by open roting. The Governor gives, withholds, or reserves for the further signification of His Majesty's pleasure, the royal sanction to bills proposed by the two other branches. Laws assented to by the Governor, may be dissllowed by His Majesty within two years. His Majesty cannot assent to any act or acts affecting the enjoyment of the dues of the clergy of the Church of Rome, or affecting the establishment of the Church of England within the Province, or the provisinns made for the same, or the enjoyment or exercise of any religious form or mode of worship, or creating penalties, burthens, dissbilities, or disqualifications on that account, or granting, or imposing any new dues in favour of any ministers of any former form of worship, or affecting the prerogative, touching the granting of the waste lands of the Crown; without such acts having been 30 days before both houses of the British Parliament, and neither of the houses having addressed His Majesty not to sanction the same.

When Canada was in possession of the French, the government was nearly pure despotism.
Shortly after the cession of the province of Lower Canada to the British Crown, the King of England, in a proclamation dated the 7 th of October, 1763, declared, that "all the inhabitants of the province, and ail others resorting to it, might confide in his royal protection for enjoying the bencfit of the laws of England." In 1774, the first Act of Parliament was passed, fixing the boundaries of Canada, making provision for the better government of this part of the British dominions, and vesting the anthority in a governor, aided by a council of not less than 17 persons, and not exceeding 23 in number, who had power to frame ordinances, but not to levy taxes, except fur making of public roads and erecting a few local structures. By this Act the English criminal law was preserved ; but it was enacted, "that in all matters of controversy relative to property and civil righta resort should be had to the rule and decision of the laws of Canada," excepting, however, in this concession to French law: "lands which had been or should be granted in free and common soccage." The Roman Catholic religion, with all its immunities and rights, was aecured to the Canadians.

After 17 ycars' interval, this Act was followed by Mr. Pitt's, or rather Lord Grenville's Act, styled the Constitution of 1791, under the provisions of which Canada was divided into upper and lower provinces. This Act gave to Lower Canada a Constitution, consisting of a Governor and Executive Council of II
members, appointed by the Crown (similar to the I'rivy Council in England); a Lesislative Council, appointed by mandamus from the King, forming the second estate, and then consisting of 15 members (but since increased to 34, Including the Protestant Bishop of Quebec and the Chief Jistice, who is Speaker) ; and a Representative Assembly, or third cstate, composed of 50 members, and consisting of four citizens from each of the cities of Quehec and Montreal ; three burgesses (being two for the town of Three Rivers, and one for William Henry, so called in honour of the visit of his late Majesty), and the remaining number divided over the province as knights of the shire, representing 22 counties, into which Lower Canada was divided. Population was partly made the hasis for regulating the division: thus a small and thickly-populated territory on the banks of
the St. Lawrence was found aufficient to form a county; and in the more distant parts large arcas were included in one county, in order to combine the requisite amount of population necessary to a representative election.

The unequal manner in which this diviaion of counties, with regard to population, and not to area, was felt after a few years, and a new county division proposed and adopted by the Provincial Act ix., Geo. IV.; but in order to understand the change which took place in the extension of the representation, it will be requisite to show the division as it stood according to the Act of 1791. This I can best do by the following return of the census of Lower Canada in 1827 and 1831 , with the number of Members returned to the Assembly.

| COUNTIES. |  | Area in square Miles. | Inhabitants in |  | Population. |  | Menbers. |  |

The Inws in force in Lower Canada are: 1st. The nets of the British Parliament which extend to the Colonies: 2nd. Capitulations and treaties: 3rd. The lawa and cuatoms of Canada, founded principally on the jurisprudence of the Parliament of Paris, as it stond in 1663, the edicts of the French kings, and their colonial authorities, and the Roman civil law: 4th. The criminal law of Engiand as it stood in 1774, and as explained by subsequent statutes: 5 th. The ordinances of the Governor and Council, established by the act of that year: and 6th. The acts of the I'rovincial Legialnture since 1792. These laws are
exccuted in His Majesty's name, and, in virtue of his commission and instructions, by the Governor, or person administering the government, by the means of a number of inferior officers, all of whom are ap. pointed during pleasure. The Governor also possesses all other powers and prerogatives, gencrally, which, His Majcsty may legally enjoy, and delegates to him. The Governor of Lower Canada is Governor General of all the British Colonics in North America, and Commander-in-Chief of all the forces in those Provinces. The judiciary consists of a High Court of Aplienl, a Court of King's Bench, presided over by
a Chief Justice Justices for the King's Bench for three Puisné Jus Courts, with a J the Court of Kin Judge for trials and one for the $d$
There is also Sesaions, and oth With respect to vince, the Courtd (ex-officio Presid Justice of the Prc and the Member whom, including rum to hear and pronounced in t mattera. Should value, an appeal il cil; if below tha Appeal decision is
The Canadian jurisdiction simila Pleas at Westmin ual terms, and a jurisdiction ; app decisions of the over each of whic jurisdiction, in th to 101 . sterling ( $\mathbf{w}$ in St. Francis, to its distance from to 1000 .

The other cour those of the same planation. The p by unpaid justices 110 in the Quebec 44 in Three Rivers exclusive of the $m$ lative councils, th everywhere justic universal in all $\mathbf{c t}$ the appeal to tria certain cases, viz. ling, the parties, n ject natter groun sad agrecments, of the cause of the wrongs, to be com cases the Bench an ine the repre. division к., Geo. e which ation, it ood ac$t$ do by Canada lembers
a Chief Justice of the Province, and three Puisné Justices for the district of Quebec ; another Court of King's Bench for Montreal, with a Chief Justice and three Puisne Justices; there are also three Provincial Courts, with a Judge for Three Rivera, and terms of the Court of King's Bench, including the lprovincial Judge for trials of causes above $10 l$., one for Gasjué and one for the district of St. Francis.

There is also a court of Vice Admiralty, Quarter Sesaions, and other minor tribunals for civil matters. With respect to the highest legal tribunal in the Province, the Court of Appeal, it consists of the Governor (ex-officio President), the Lieutenant-Governor, Chief Justice of the Province, the Chief Justiceof Montreal, and the Members of the Executive Council, five of whom, including the President, are a competent quorum to hear and determine appeals from judgments pronounced in the courts of King's Belich in civil matters. Should the suit in dispute exceed $500 l$. in value, an appeal lies before the King and Privy Council; if below that sum, the Canadian High Court of Appeal decision is final.

The Canadian Court of King's Bench combines a jurisdiction similar to the King's Bench and Common Pleas at Westminster; it has distinct civil and crimiual terms, and an appellate as well as an original jurisdiction; appeals lying, in certain cases, from the decisions of the provincial judges, or inferior courts, over each of which a Puisné Judge presides; whose jurisdietion, in the district of Three Rivers, is limited to 10l. sterling (with the exception before explained) ; in St. Franeis, to $20 t$.-but in Gaspe, by reason of its distance from the superior tribunals, it is extended to $100 l$.

The duties of the Vice Admiralty Court devolve, by commission, on a Judge Surrogate, who is also a Judge of the court of King's Bench; this union is rightly considered objectionable, as the Court of King's Bench possessea a controlling power over the Admiralty Court; and, owing to the increasing commerce of Quebec, it is necessary that the Vice Mdmiralty Judge should be unconnected with any other office.
The Court of Eschents was created by the 10 th sec. 6 Gcorge 11. ch. 59-Inperial l'arliament ; it consists of Commissioners appointed by the Governor to inquire, on information being filed by the AttorneyGeneral, into the liability of lands to be escheated by reason of the non-performance of the conditions on which they were granted. The decision is by a verdiet of a jury eomposed of 12 men, summoned in the usual way, and the lands forfeited become revested in the Crown.

The other courts, being similarly constituted to those of the same name in England, require no explanation. The police of the country is administered by unpald justices of the peace, of whom there are 110 in the Quebec district; 215 In the Montreal ditto; 44 in Three Rivers, 23 in Gaapes, and 19 in St. Francis, exclusive of the members of the exceutive and legislative couneils, the judges, \&c., who are ex-oficio everywhere justices of the peace. Trinl by jury is universal in all criminal cases; but in civil matters, the appeal to trial by jury is confined by statute to certain cases, viz., the demand nuat excced $10 l$. sterling, the partles, merchants, or traders, and the subjeet matter grounded on debts, promises, contracts, and agreements, of a mercantile nature only; or clse the cause of the action must ariae from personal wrongs, to be compensated in damnges; in all other cases the Bench are judges buth upon the law and the
fact,-a very small proportion of these cases are tried by jury. Law proceedings are in French and English, and it is not unusual to have haif the jury Fonglish and the other half French. There are about 200 lawyers on the rolls of the Courts of King's Bench, who are solieitors and proctors as well as barristers. The notaries, who are the conveyancers in the country, now form a distinct class, and are upwards of 300 in number. In the Quebec district there are 45 advocates, or barristers, 43 advocates, or solicitors, and 128 notaries. In Montreal district, 26 avocats, 60 advocates, and 164 notaries; and Thrce Rivers, St. Francis, and Gasjé, 72; making a total of 538 lawyers.

Of the laws it may be said that the criminal is linglish, with some provincial statutes not repugnant thereto; the udmirally is wholly English; the commercial laws of evidence are Euglish. Quebec and Montreal are corporate cities, having each a mayor and common council.

Intimately connected with the laws of the country are the tenures by which land is held; all lands granted since the conquest are in free and common soccage; in the French districts, lands are held according to the old Norman law.

French Landed Tenures.-It may be necessary to advert to the peculiar state of the lauded tenures in lower Canada. When the country was first settled by the French, the leudal tenure was in full vigour on the continent of liurope, and naturally transplanted ly the colonizers to the New World. The King of France, as feudal lord, granted to nobles and respect. able famlies, or to officers of the army, large tracts of land, termed seigniories, the proprictorsof which are termed seigniors; these possessions are held imme. diately from the King, en fief, or en roture, on condition of the proprictor rendering fealty and homage, on accession to the seignorial property; and in the event of a transfer, by sale, or gift, or otherwise, (except in hereditary succession), the seiguiory was subject to the payment of a quint, or filth part of the whole purchase money; and which, if paid by the purchaser immediately, entitled him to the rabat or a reduction of two-thirds of the quint. This eustom still prevails; the Kings of Great Britain having succeeded to the claims of the King of France.

Estimating the number of acres of land under culltivation in Lower Canada at $4,000,000$, alld the seig. norial grants of good and bad land, at $10,000,000$ acres, it will be perceived that a large portion of territory is embraced under the seigniories. On this aceount it will be necessary to give some explanation of the different terns used in relation to this property.

Quints are a fifth part of the purchase-money of an cstate held en ficf, which must be paid by the purchaser to the feudal lord, that is, the King. If the feudal lord believes the fief to be sold under value, he can take the estate to himself, by paying the purchaser the price he gave for it, together with all reasonahle expenses. Reliefe is the rent or revenue of one year for mutation tine, when an estate is lnherited only by collateral descent. Lods et ventes are tines of alienation of one twelfth part of the purchasenoney, paid to the scigacur by the purchaser, on the transfer of property in the same manner as quints are paid to the hing on the nutation of fief; and are beld en rolurr, which is an estate to which heirs sueceed etirally. Frane alue noble is a fiff, or frechuld estate, held subject to no seipnorial righta or duties, and acknowledging no lurd but the king. The succes-
sion to fiefs is different from that of property held en roture or by villenage. The eldest son, by right, takes the chateau, and the yard adjoining it; also an arpent of the garden joining the manor-house, and the mills, ovens, or presses within the seigniory belong to him ; but the profit arising from these is to be divided among the other heirs. Females have no precedence of right, and when there are only daughters, the fief is equally divided among them. When there are only two sons, the eldest takes two-thirds of the lands, hesides the chateau, mill, \&c., and the younger onc-third. When there are several sons, the elder claims half the lands, and the rest have the other half divided among them. Censire is an estate held in the feudnl manner subject to the seigniorial fines or ducs. All the Canadian habitrns, small farmers, are censitaires. Property, according to the laws of Canada, is either propre, that is, held by descent, or acquits, which expresses, being acquired by industry or other means. Communité du bien is partnership in property by marriage; for the wite, by this law, becomes an equal partner in whatever the husband possessed before, and acquires after marriage, and the husband is placed in the same position in respect to the wife's dowry. This law might operate as well as most general laws do, if both mari and femme died on the same day; but very unhappy consequences have arisen when one has predeceased the other. For instance, when the wife dica before the husband, the children may claim half of the father's property, as heirs to the mother; and the mother's relations have often persusded, and sometimes compelled them so to do. [It has been justly observed, that it would have been almost impossible to have formed a law more fruitful of family discord, or more destructive of that affection which ought to subsist hetween parents and children. So fully sensihle, in fact, are the most simple habitans of the unhappy operution of this law, that scarcely any of them marry without an ante-nuptial contract, which bars the communité du bien.]
The dot, or dowry, is the property which the wife puts into the communité du bien: moveable or immoveable property, falling to her by descent, is a propre, and does not merge in the comnunité. Dower in Canads, is either customary or stipulate. The first consists of half the property which the hushand was possessed of at the time of marriage, and half of all the property which he may inherit or aequire-of this the wife has the use forlife, and the children may claim it at her teath. If they be not of age, the wife's relations, as guardians of the children, cuII take it out of the father's hands, and may compel him to sell his property and make a division. Stipulated dower is a portion which the hushand gives instead of the customary dower.

Those farmers who hold land from the seignieur en roture, and who may he termed tenanciers or cen. sitaires, are subject to certain conditions, viz. a small nnnual rent, from $2 s .6 d$. to $5 s$. (or perhaps more of late years) for each arpent in front; [The Cansdian farms are remarkable for the small brealth of the farm on the bank of the river, and its great depth inland; the latter being often in proportion to the former as sixty to one; namely, balf an arpent broad in front of the St. Lawrence, or other river, and 30 arpents in depth.] to this are added some articlea of provision annusily, such as a pig or goose, or a few fowls, or a bushel of wheat, according to the means of the farmer, who is also hound to grind his corn at the moulin lanal, or the seignieur's mill, when onefourtenth is taken for the lord's use, ns mouture or
payment for grinding. The luds et ventrs furm another part of the seiguieur's revenue : it consists of a right to one twelfth part of the purchsae-money of every estate within his seigniory, that changes its owner by sale, or other means equivalent to sale: this twelfth to be paid by the purchaser, and is exclusive of the sum sgreed on between the latter and the seller, and if promptly paid, a reduction of one.fourth is usually made, in the same manner as two-thirds of the quints due to the Crown are deducted on prompt payment. On such an occasion, a privilege remains with the seignieur, but is aeldom exercised, called the droit de retrait, which confers the right of preemption at the highest price offered, within 40 days after the sale has taken place.

All the fisheries within the seigniories contribute also to the lord's income, as he receives a share of the fish caught, or an equivalent in money ; the seig. nieur is also privileged to fell timber any where within his seigniory, for the purpose of erecting mills, constructing new or reparing old roads, or for other works of public nnd general utility. In addition to the foregoing burdens on the farmer, he is, if a Roman Catholic, bound to pay to his curate one twenty-sixth pritt of all grain produced, and to have occasional nssessments levied on him for building and repairing churehes, parsonage houses, \&c.
The duties of the seignieur to his tenants are also strictly defined, -he is bound in some instances to open roads to the remote parta of his fief, and to provide mills for the grinding of the feudal tenants' corn; he eannot dispose by sale of forest lands, but is bound to concede them; and upon his refussl to do so, the applicant may obtain from the Crown the concession he requires, under the usual scigoorial stipulations, in which case the rents and dues sppertain to the King.
The Position and Extent of the Selgnorial Grants, are :-

Territorial Division.

Quebec, Including Antlcosti and other licles.... Montreal and 1slands. ........ Three Rlvers and St. Firan-

Total

For innds granted on free and common soecage tennres since 1796, see Appendir.

Lower Canada is in the possession of an extensive militia. In 1807, the militin men bearing arms, consisted of 50,000 alle-borlied soldiers, with a due proportion of officers; and belonging to themselves, (i. e. independent of the arms furnished by government) 10,000 muskets. From this period to 1815, their numbers were little increased; but from a report of a special committec of the Assembly appointed to enguire into the state of the militia, which report, prinited at Quebec, is now before me, I find the state of the militia to be, in 1897, as follows:-

Muskets in pos district of Quebec, Francis, 1,567; 5,479 ; total mumb Militia Men, 10,40

| Gaspé | 3 | 26 | 2147 | － |
| Total | 92 | 1067 | 93210 | 8892 |

By the Militia Act，every able－abodied male inha－ bitant，from 18 to 60 years of age，after six months＇ residence，is liable to scrve as a militin man，unless specially exempted by law ；the exemptions embrace the elergy，eivil and military officers of Her Majesty＇s Government，physicians，surgeons，notaries，land－ surveyors，ferrymen，millers，schoolmasters，stewards of religious communitics，and students in seminaries， colleges，\＆c．，and persons who had served as officers of militia previous to the act．Otticers are appointed ly the government，the qualification for those above the rank of eaptain being a bond fide possession of an estate yielding $50 l$ ．currency per annum；half the sum qualitics for a captain or subaltern＇s commission． There is an annual muster by companies（29th June） throughout the province．The light cavalry，artil－ lery，and rifte corps，would do honour to any body of men under arms in Europe；and there is an esprit du corps throughout the service highly honourable to all engaged in a force which，with readiness，could turn out nearly $\mathbf{1 0 0 , 0 0 0}$ armed men to repel invasion， if the Anvericans should ever again feel disposed to attempt the conquest of Canada．A new militia levy took place during the recent insurrection；i．e．by calling into active service those only who were dis－ posed to suppress rebellion．

The Queen＇s troops，in Lower Canada，generally amount to three regiments of infautry，two compa－ nies of foot artillery，and two conpanies of the royal engineers；the head－quarters of two regiments are Quebec，and one at Montreal．The ：：oops of the line stationed in Canada since 1816，$\because$＂ting artil－ lery and enginecrs），taken at four inc，＂is，in order to shew the average number，were as foi，sws ：

The fortifications of Quebee are now impregnable； the island of St．Helen＇s，near Montreal，is also strongly defended，and there are some posts near the Ainerican frontler on Lake Champlain．Quebec，how－ ever，is the key to Lower and also to Upper Canada． The Guvernor of Quebec garrison is a major－general， and the Lientenant－governur a licutenant－general．

The head－quarters of the Commissariat，and other military departments，for Upper and Lower Canada， are in the Lower Province．The naval station of our North American colonies is Halifax，Nova Scotia．
The barracks at Quebec（formerly the Jeauit＇a Col－ lege，）which the troops at present occupy，are situate nearly in the centre of the Upper Town，forming the west aide of the Market－square，of a quadrangular figure，built of stone，three stories high，with a con－ siderable open space in the centre，and capable of containing $1,500 \mathrm{men}$ ．The armoury at Quebec is
very extensive，and In excellent order；and the seve－ ral departmenta of the army，medical，commissariat， \＆c．are well attended to．

XI．When conquered，the income of Lower Canada was very trifing；in 1807，it amounted to about 30,0001 ．；in 1821－22，to about 60,000 l．；in 1825，to about 90,0001 ．；and for the 10 years ending with 1836，the Blue Books at the Colonial Office，afford the following return，as accurately as can be collected from annual returns often varying．

Comparative Yearly Statement of the Revenue Collected in Lower Canada．

In addition to the above revenues, the sum of 5000l. sterling per annum is permanently appropriated to the expenses of the administration of justice, under the Provincial Act 53 George III. c. 9.

The local revenues of the city of Quebec, for 1836, were $4477 l$., derived from tolls, licenses and fines; ditto of Montreal, 5,3491 , derived from tolls.

The following articles pay a duty of $\mathbf{7 l} .10 \mathrm{~s}$. per cent, ad valorem :-Alabaster, anchovies, argol, annisced, amber, almonds, brimstone, boturgo, currants, enpers, cascacoo, corks, cinnibar, dates, essence of bergainot, lemon, citron, roses, oranges, lavender, rosemary, emery stone; fruits preserved in sugar or brandy, figs, honcy ; iron in bars, unwrought and pig iron, juniper berries, incense of frankincense, lava and malta stone for building, marble rough and worked, mosaic work, medals, musk, maccaroni, nuts of all kinds, oil of olives, oil of almonds, orris root, ostrich feathers, ochres, orange buds and peel, olives, pitch, pickles in jars and bottles, painting, pozzolana, Parmesan cheesc, pumice stonc, punk, prints, pearls, precious stones (except diamonds), quicksilver, raisins, sausages, sponges, tar, turpentine, vermillion, vermicelli, whetstones.

Ditto 30 per cent. Clocks and watches, leather nuanufactures, linen, musical instruments, wires of all sorts, books and pajeers, silk manufactures.

Ditto 20 per cent. Glass manufactures, soap, refined sugar, sugar candy, tobacco manufactured, cutton manufactures.

Ditto 15 per cent. Goods, wares, or merchandize (being foreign), not otherwise charged with duty by 3 and 4 WIlliam IV. c. 59.
The other duties paid at Quebec on British produce may be thus summarily stated:-Sugar, $1 \frac{1}{2} l l$. per lb .; ditto refined, $1 d$. ; tea, per lb.-Hyson, $6 d$. ; Bohea, $2 d$. ; all other sorts, $4 d$.; coffee, per $1 \mathrm{~b} ., 2 d$. ; wine, rum, brandy, or geneva, per gallon, 6il.; whiskey, $3 d . ;$ tobacco manufactured, per $1 \mathrm{~b} ., 3 d$.; snuff, $4 d$.; pimento, $1 \frac{1}{2}$ d. ; cocoa, per cwt., $5 s$.; salt, per pk. 2d.; and upon all other goods, wares, or merchandize (not included under the free trade gocds or otherwise), $2 \frac{1}{2}$ per cent.

Upon such of these goods as are liable to the provincial duty of $2 \frac{1}{2}$ per cent. that duty is payable under the provincial law, but its amount is deducted from the duty payable under 3 and 4 William IV. c. 59.

If any of the articles enumerated in the list of goods which are subject to the duty of $7 \frac{1}{2}$ per cent. should come properly under any of the general denominations (such as drugs or guma, \&c.) of articles duty free, such enumerated articles will nevertheless be free, notwithstanding their having been named in that list.

Free goods, under the Imperial Acts, the goods being of foreign produce or manufacture :-Asses, bread or biscuit (I), beef, bacon, bullion, cattle, carriages of travellers, coin, corn, cotton wool (2), cabinet makers' wood (1), diamonds (1), dye woods (1), drugs, fruit and vegetables (1), fiour, flax, fresh meat, fresh fish, gums or resins (1), grain, hay (1), hams, hemp, raw hides, horses, live stock, mulea, meal, pork, straw (1), salt (1), tallow (1), tortoiseshell (1), tow (1), wood and lumber (1), East India goods (1).

Any sort of craft, food, or victuals (except spirits), and any sort of clothing or Implement, or inaterials, fit and necessary for the British fisheries in America, imported into the place at or from whence such fishery is carried on, in British ships (1).

Also the following goods when imported from the
warr stones (1), urr stones (1), cheese, cork (1), cider (1), dogstones (1), fruits (1), hops (1), oakum (1), ochres (1), oils, vergetables (1), pitch, pickles (1), seeds, spices (1), sago (1), sponge, sulphur (1), sausages (1), tar, tapioca (1), tallow (1), turpentine (1), wax (1), wheat flour, woods of all sorts (1).

Free goods under the provincial laws :-Apparel for private use, beef salted, butter (2), barley, beans, cattle, live stock, oats, oil (fish oil) (3), pork salted, peas, pitch (2), checse (2), fish salted (3), fish oil (3), flax, flour, furs (2), grain of all kinds, horses, hogs, honey (2), hemp, Indian corn, potatoes, packages containing dutiable or free goods, rice, rye, resin, seeds, skins (2), tar (2), turpentine (2), wheat.

Household goods and neccssaries of all kinds which any person or persons coming into this province, for the purpose of actually settling therein, shall Import or bring with them for their own use, and for the use of their families.
(1) Liable to provincial duty.
(2) If forcign, liable to the foreign duty.
(3) If forcign, prohibited.

Prohibitions under Imperial Acts-the goods being of foreign produce or manufacture, and from foreign countries.

Arms, ammunition, and utensils of war, books for sale (1), base or counterfeit coin, tish dried or salted, gunpowder, train oil and oil of all sorts, blubber, fins, or skins, the produce of fish or creatures living in the sea (3).
(1) First composed or written and printed in the United Kingdom, and printed or reprinted in any other country, imported for sale, except books not reprinted in the United Kingdom within twenty years; or being parts of collections, the greater part of which had been composed or written abroad.
(3) Unless taken by British ships.

Schedule of the duties at the ports of Lower Canada, in the year 1835, distinguishing whether under Acts of the Imperial Parliament or the Colonial Legislature. Imperial Act 4th George III. cap. 15.Wines of the Madeiras or any other island or place, and from whence such wines may be lawfully imported from such island or place, per ton, 71 .; all wines, except French wincs imported from Great Britain, per ton, 10s. * Miscellaneous includes, for 1836, 3,677l., the purchase money of Grosse Isle as a quarantine station; 675l. care of sick mariners; 374l. for Montreal gaol ; 720l. for relief of distressed inhabitants; and 1,7031, expenses out of British American Land Company receipts. In 1835, the miscellany includes 9,674l. for the same object ; and 1834 has $7,877 l$. for relief of distressed inhabitants.
$\dagger$ Partial payments made only-the House of Assembly having refused the necessary supplies; the estimated amounta required were for $1833,39,687 l . ; 1834,40,130 l$. ; 1835, $40,717 l$.

The accounts which we have of the past are vague and imperfect; according to the best materials to be collected, the Civil expenditure of Lower Canada from 1794 to 1826 was :-

| 179 | 768 | 1804 £39364 | 1814£186106 |  |
| :---: | :---: | :---: | :---: | :---: |
| 1795 | 26276 | 180542177 | 1815 | 147203 |
| 1796 | 27225 | 180642862 | 1816* | 8874.5 |
| 1797 | 26013 | 180751497 | 1821 | 79901 |
| 1798 | 23343 | 180853104 | 1822 | 58294 |
| 1799 | 28967 | 180950067 | 1823 | 101062 |
| 1800 | 12105 | 181059560 | 1825 | 64194 |
| 1801 | 39707 | 181160042 | 1826 | 71098 |
| 1802 | 43390 | 1812114983 |  |  |
| 1803 | 44708 | 1813207712 |  |  |

The increase in 1812 to 1815 was owing to the American war.

An annual sum is voted, in the British Parliameritary estimates for the Indians, which is thus divided between Upper and Lower Canada, for 1835. According to the Parliamentary estimates, the expense of the Indian establishment for Lower Canada, for the year ending 31st March, 1835, is $1,813 l$. namely, secretary, 239l.; superintendants, 239l.;
interpreter, Quebec, 107l.; do. do., 102l.; missionsry, $75 l$. ; do. do., 50 ..; schoolmaster, 20l.; a superintendant at Montreal, 231l.; three interpreters, $102 /$. each; a resident, 131l.; two missionaries, $50 l$. each; and one at $45 l$. There is nearly a similar establish. ment from Upper Canada, of which the saluries are $1,757 l$.; and the pensions for wounds and long services, $572 l$.; The total expense of Indian presents, stores, \&c., for the year ending Apili, 1835, is 15,8.j6l.; making a grand total, in the misceliancous British Pariiamentary estimates, of $\mathbf{2 0 , 0 0 0}$.

The expenditure of Great Britain on aecount of Canada is thus given in the $\mathrm{B} . \mathrm{B}$. for 1836 .
Expenditure incurred by Great Britain for military protection, and in aid of the civil establishments.

Commissariat. Pay of the troops, provisions, \&.c. Provisions and forage, 24,107l.; fuel and light, 11,430l; miscellaneous purchases, 4,370l.; transports, 3,736l.; pay of assistant clerks, issuers, \&c., commissariat, $0,950 l$.; military allowance to commissariat and ordinunce department, $3,273 l$.; local services, including $6,250 l$., being the amount of salaries to the Ecclesiastical Establishment of Lower Canada, 7,5411.; Indian department, 17.880l. ; contingencies, 4,039l.; ordnance department, (exclusive of the pay of mili.

The duties 1833, 106,118 At Montreal,

Having now demonstrated the amount of shipping $\mid$ series of years, in quantities, and not according to and the value of the trade at Canada, I proceed to values. give the principal articles of inport and export for a

The export column for 1832 is extremely defective. During the panic consequent upon the prevalence of cholera, several cargoes were left out of the Commercial

List, and never aubsequently supplied. The list gives only 24,000 barrels of ashes exported, whilst the inspector's store account gives 34,576 as shipped.

Principal Exports from Quebec, 1827 to 1833.

Estimated Stock of Lumber at Quebec, at the close of the Shipping Season, since $\mathbf{1 8 2 8}$.

*These years are taken from the Quebec Gazette, 2; th December, 1837.
XIII. English weights, viz. lb., troy, and avoirdupois. The standard wine gallon is the liquid measure of the province; the Canada minot for all grain, \&c., except where specially agreed on to the contrary; the minot is an eighth larger than the Winchester bushel. The Paris foot for all measures of land granted pre-

English.
Chains. Links.
Dimensions of a Lot Linear $\frac{\left\{\begin{array}{l}73 \\ 28 \times 18\end{array}\right.}{\begin{array}{c}210 \text { acres. } \\ 10 \text { deduct } 5 \text { per cent. }\end{array} \text { is } . ~}$
vious to the conquest ; the English for all since that era. The arpent is for all other measures English, unless it may be otherwise agreed on.
The following is a table of English and French superficial measure used in Canada.

Accounts are kept in Halifax currency, by which a guinem (weighing 5 dwts, and 6 grs.) is equal to 23s. 4d. currency; a sovereign to 22s, 3d. a Joannes (a gold coin, weighing 18 dwts.) to 4 l .; a moidore (weighing 6 dwts, and 18 grs .) to 2 l .; and an eagle (weighing 11 dwts. and 6 grs.) to 508. The gold Spanish and French coins are-a doubloon ( 17 dwts.) 31. 14s. 6d.; Louis-d'or, coined before 1793, ( 5 dwts. 4 grs.$) 11.2 \mathrm{~s} .8 \mathrm{~d} . ;$ the pistole, ditto ( 4 dwts. 4 grs .), 18s. 3d.; the forty-franc piece, coined since 1792 ( 8 dwts. 6 grs .) 16. 16s. $2 d$. ; the twenty-franc piece ( 4 dwts. 3 grs ), 18 s .4 d . In silver coins the crown is equal to 5s. 6d.; Spanish and American dollar to $58 . ;$ English shilling, 1s. 1d.; pistareen, 10d.; French crown, roined before 1793, 5s. 6d.; French piece of
six francs, 5s. 6d.; five-franc piece, 48. 8d.; Americun dollar, 5s.; and so on. The coins in most general circulation are doliars of various denominations, the weight and pure metal of which will be found in the Appendix.
The rates of exchange during the year 1836, for bilis on His Majesty's Treasury, were from 4s. to 48. $1 \frac{1}{8} d$. per Spanish or American dollar.

Accounts kept in £. s. d. To change Halifax currency ( 4 dollars $=1 l$. currency) into British sterling, deduct one-tenth. To change British sterling into Halifax currency, add one-ninth.

According to the report of the House of Assembly in 1830, the basis of the metallic circulation was then in doilars and half doliars, valued as follows :-

|  | Public Chest. | Quebec Bank. | Montreal Bank. | Total. |
| :---: | :---: | :---: | :---: | :---: |
|  | £. | £. | £. | £. |
| Dollars | 44452 | 4132 | 2140. | 50725 |
| Half ditto | 12834 | 4354 | 22215 | 39403 |
| Basis of circulation | 57286 | 8187 | 24355 | 90128 |
| French crowns | 11976 | 16.50 | 3976 | 17602 |
| Ditto half ditto | 3876 | 357 | 5684 | 9917 |
| Pistareens . - | 6205 | 865 | 1129 | 81.99 |
| Five-franc pieces . | - | 21 | 188 | 209 |
| Quarter dollara | 3709 | 417 | 1733 | 5859 |
| Eighth of ditto | 571 |  | . | 571 |
| Shillings - | .. | 27 |  | 27 |
| Small change | . $\cdot$ | . $\cdot$ | 32 | 32 |
| Total | 83623 | 11824 | 37097 | 132544 |

Since the foregoing statement was prepared, a con.siderable portion of British coins have poured Into the colony, by means of the emigrants. The metallic circulation may be, therefore, estimated at about 250,000 l. sterling; this sum being independent of a balance of from $\mathbf{1 0 0 , 0 0 0}$. to $150,000 l$. sterling in the military chest.

We come now to the paper circulation. There are no notes isaued by the government, or on the credit of the colony, nor have the government any share in the private banks, which exist to the number of three -viz. the Quebec, Montreal, and City banks, which are authorized by charter to issue notes from one dollar in value to any amount, payable on demand in specie, and subject to the proviso of having cash in their vaults to the extent of one-third of their clrculation: a full account of each bank is required to be printed and laid before the Legislature annually.

The Blue Book for 1836 gives the following account of the paper circulation in 1836 :-
Amount of Quebec Bank notes in circula-

The above mentioned are the only banks at preaent established by Act of Parliament in Lower Canada, and their notes are the chief circulating medium. There is also another bank, called the "Banque du Peuple," which is not incorporated either by act or charter.

The following abstracta from the books of the different banks, exhibit a general statement of their affairs :-

General State of the Funds of the Quebec Bank, 27th October, 183".

The sliares of the Quebec Bank are in number 3,000, divided among 76 stockholders, who each hold a greater or lesser number of aharea. The Fire Insurance Company hold 500 ; Savings' Bank, 221 ; Col. Fitzgerald, 224 ; Jcan Fortier, 200 ; L H. Hart, 110 ; and the remainder are in small numbers from 5 to 50 .

XIV. The princi and ashics. The pro espable of being e an idea may be to that the cnpital e establishments and Quebee, is $1,250,0$ ing saw-mills thro ponds, building er forming a secure tide-way of the St bers. The lumber poorer inhabitants, support during the larly after seasons c provisees), and by lers most readily to lands. The Anserl tion of pure potash
There are manuf hlished at Montreal now being exported

There are several amaller banks, viz. the " Banque du Pcuple," which is a Société en Commandite. The "Commercial Bank" (Mills and Co.), a private establishment. "St. Hyacynthe Bank," like the "Banque du Peuple." The " Bank of Britlsh North America," whose head-quarters is in London, npplies to all the North American Colonies. [See Appendix.]
The following is a statement of the amount of stock in the public undertakings of the district of Montreni, held by the inhabitants of the two races composing the population of Lower Canada.
This statement has heen drawn op by the Constitutional Association at Montreal, in order to show the couparative enterprize of the British and French descended population : the former carry on 19-20ths of the inaritime commerce of the Province.

XIV. The principnl exportable articles are timber and ashes. The productlon of timber is very great, and capable of being continued for many years to come: an idea may be formed of its extenl, from the fact that the enpital employed in the luinher (timber) establishinents and saw-mills in the neighbourhood of Qucbec, is $1,250,0001$. ; this sum is laid out in erecting saw-mills throughout the country, forming logponds, building craft for the transport of deals, and forming a secure riding for the shlpsin the strong tide-way of the St. Lawrence, while londing the timsbers. The lumber-trade is of the utmost valueto the poorer inhabitants, liy furnishing their only means of support during the severity of a long winter, partlenlarly after seasons of ball crops (frequent in the lower provincea), and by enabling young men and new settlers most readily to eatablish themselves on the waste lands. The American ashes contain a larger proportion of pure potash than those of Dantzic or Rusela.
There are manufactories of lifferent articles estahlished at Moutreal and Quebec; soap anil candles are now being exported; in 1831, soap 81,819 lbs., and
candles $31,811 \mathrm{lbs}$, almost entirely to the other northern colonics, and the corn and flour trade of Canaila promises to be a great souree of wealth to the colonists.
A manufactory for making cloth is situated in the towuship of Ascot, which keeps in constant employment 20 persons. The number of domestic looms in the provinee, is supfosed to be 13,500 , which it is computed, inanufacture annually of coarse cloth $1,500,000$ yds, liannel 990,000 yards, linen $1,370,690$ yards. The number of mills in the province is, Carding, 90 ; Fulling, 97 ; Paper, 3; Grist, 395 ; Saw, 737.

Whiskey is distilled to a considerable extent, but there are not any means of ascertaining the quantity. Sugar is made in large quantities from the maple tree, but the quantity cannot be ascertained.
Iron worka are carried on to a very great extent at st. Maurice, in the district of the Three Rivers. There is one fron foundery in the district of Quebec, and six in the district of Montreal.

Fisheries.-Description of fish, and value in aterling money: Codfish, 107,060 cwt., 71,132l.; Salmon, 141 tierces, 137 barrels, 124 half-barrels, $1,172 l$.; Pickled fish, 11,196 barrels, 20 half-barrels, 46 boxes, 7,274l.; Codsounds, 7: gs, 26l.; Fish oil, 26,200 gallons, $2,25 \cdot 4$. ; total ,858l. The above quantities imported from sec, Gaspé, North Carlisle, and the Magdalen 1slands. Codfish, 93,467 cwt., Cod oil, 37, 162 gal., whale oil, 19,360 gal. 74,414 l. This is the gross produce of the fisheries in the county of Gaspe, a part of which is exported, and the remainder consumed in the provinces. Codfish, 7,075 cwt. 5,046l.; Salmon, 2 barrels 6l.; Pickled fish, 10,596 barrels, 6,646l.; Fish oil, 5,760 gal. $512 l$.; total, 86,624l. Gross produce of the fisheries at the Magdalen Islands. [B. B. 1836.]

Horned cattle, aheep, swine, \&c. multiply with astonishing rapidity, and the European breeds seem improved on being transplanted to the American continent. The quantity of fish caught in the river and gulf of St. Lawrence, and in other streams is very great, and the consumption of this diet considerable in consequence of the tencts of the Roman Catholic faith. Fish oil is becoming an extensive article of export, as are also hides and horns. The peltry or fur trade (bee Hudson's Bay Territory chapter) has its outlet from the N. W. territories through Lower Canada. I hope to aee ere long, tobacco, hemp, wool, wax, rape and other oils among the staple products of this fine colony.

The Montreal district made in 1837 the following return for 1836 . [B. B. L. C. 1836.]

Crops.-Wheat, 20,000 acres; barley, 2,000 ditto; oats, 10,000 do.; peas, 5,000 do. ; rye, 50 do.; Indian corn, 200 do.; potatoes, 4,000 do. ; turnips, 50 do.; meadow, 20,000 do. ; pasture, 30,000 do. ; total in crop, $61,300 \mathrm{do}$. ; uncultivated, 15,000 do. Horses, 6,500 ; horned cattle, 16,000 ; sheep, 15,000 .

Protuce.-Wheat, 160,000 bushels; barley, 30,000 do.; oats, 150,000 do.; pease, 60,000 do. ; ryc, 600 do.; Indian corn, 2,000 do. ; potatoes, 400,000 do. ; turnips, 5,000do; hny, 28,000 tons; straw, 30,000 do.

The following prices of provisions and wages of labour in Lower Canada for 1836, were transmitted to the Colonial Office in 1837. Four months of the year are given on account of the varicty of the seasons. Horned cattle, 5l. 10s.; horses, 12l. 10s.; sheep, 10 s .; swine, $2 l$. 10 s ; milk, per gal. 8 d. ; buttcr (fresh), per lb, 1 s .; butter (salt), per $\mathbf{l b}$. 1s. 8 d. ; cheese, per lb. 6 cl. ; wheaten bread, per 6 lb . 9 d. ; beef, per $100 \mathrm{lbs} .16 .10 \mathrm{~s} . ;$ mutton per lb . $3 \mathrm{l} \mathrm{l}_{2}$.; pork, per 100 lbs . $16.15 s$.

Wages for Labour.-Predial, 18l. per annum, with board and lodging. Day labourcrs employed at farmwork in spring, summer and harvest, ohtain from $2 s$. tn $4 s$. per day, without food. Females from $1 s$, to 2s. per day.

Prices of Harvest Produce in Montreal District in 1836.-Wheat, per bush. $5 s$. to 8 s .4 d . ; barley, 3 s .4 d . to 4 s .8 d . ; oats, 2 s . to 3 s. ; pease, 4 s . 2 d . to 5 s .6 d .; rye, 4s. to 5 ss .6 d. ; Indian corn, 4s. to 5 s .6 d. ; potatocs, 1 s .6 d . to 2 s. ; turnips, 1 s . 3d. to 1 s . 6 d. ; hay, $2 l$. to $3 l$. per ton; straw, $15 s$. to $25 s$. per ton.

The following shews the land granted in Lower Canada in 1836 ; acres, 94,484 ,-of which 39,209 were gratuitous, and the remainder by purchase. The total number of acres in the Colony granted, is $3,129,544$-including two grants in Murray Bay of three leagues each, and two tracts in Chaleur Bay, contents unknown. Remaining to be granted as surveyed, $4,074,862$, independent of vast tracta not yet surveyed. [B. B. 1836.]
Nature and Value of Property annually created in Loucer Canada, and if not consumed turned into moveable property.-Wheat, $3,404,756$ bushels at 5s. per bushel, $851,689 l$; Oats, $3,432,274$ bushels at 28. , 314,227l.; Barley, 394,795 bushels at $4 s ., 78,958 l$.; Buck Wheat, 106,050 bushels, at $48 ., 21,020$.; Indian Corn, 339,633 bushels, at 4s., $67,866 l$.; Kye, 234,529 bushels at 3s., 35,179l.; Peas, 984,758 bushels at $4 s ., 196,951 \mathrm{l}$. ; Potatoes, 7,357,416 bushels at 1s. 6 d., 551,806l.; Animal Food, 600,000 mouths 30 lbs. each yearly, at $4 d$. per lb. 300,000 l. ; Fish, fresh and salt, 600,000 mouths, ditto, at $2 l$. per lh., 150,000 l. ; Butter, Cheese, Milk and Eggs, 600.000 mouths at 2 d . each daily, $50,000 \mathrm{l}$. ; Indispensable manufactures, \&c. Spirits, Soap, Candles, Linen, Woollens, Slooes, Clothing, \&c. $5 t$. for each person, 3,000,000l.; Luxuries, not before-mentioned, as food and drink, furniture, and apparel worn, \&c. \&c. $5 l$. each, $3,000,000 l$.; Income from trade, \&c., Surplus beyond immediate consumption for necessaries, $10 l$. each person averaging, $6,000,000 l$.; Timber and Ashes, consumed at home, and exported, at least, $1,000,000 l$.; Value of Commerce not before given, including the coasting and maritime trade, at least, 1,500,000l.; Wasted annually, by shipwreck, fire, bad scasons, improvidence, \&c., 250.000l.: total annually created, $17,417,6961$.

Nature and Value of Moveable Property.-Horses, 116,686 , at $10 l$. each, $1,116,860 l$.; Neat Cattle, 389,706, at $5 l$. each, $1,948,530 l$.; Sheep, 543,343 , at 1l. each, $543,343 l$.; Swine, 295,137, at $1 l$. each, 295, 137l.; Poultry, may be valued at least, 150.000 .; House furniture, 83,000 houses at an avcrage of $20 l$. a house, $1,860,000 l$.; Clothing and Equipage, 600,000 persons at an average of $10 l$. each, $6,000,0001$.; Ma chinery, and Farming Implements, 1,500,000l.; Bullion, or Gold and Silver Money; at least in money and plate, $1,000,000 l$.; Ships, Boats, Timber, and Mcrchandize; the Timber is almost incalculable; altogether at the very least, $20,000,000 l$. Total, $34,413,870 l$.

Nuture and Value of Immoveable Property.-Houses, 83,000 at $15 l$. each, $1,245,000 l$. ; Land improved in culture, $2,065,913$ acre8, at 51 . per acre, $10,329,665 l$.; Land occupied, not in culture, 3,981,793 acres at 1l., $0,981,793 l$. ; Lands not granted and waste, of $120,000,000$ acres at least, fit for cultivation, 30,000,000 at $5 s ., 7,500,000 /$.; Streets, Roads, Canals, Dykes, \&c., the extent of roads is great, public and privnte, a low estimate, $1,500,0001$.; Forts, Gaols, Churches, Public Buildings, a great deal of money has thus been expended by the French and Englisn, 1,500,000l.; Mnnufactorics, Stores, Iron Mines and Quarrics, $500,000 l$. Total, $26,556,385 l$. Grand total, Annually created, Moveable and Immovcahle, $78,387,921 l$.

## BOOK III.-POSSESSIONS IN NORTH AMERICA.

CHAPTER II.-UPPER CANADA.

Section I. The boundary line between Lower and Upper Canada, has been atated in the preceding chapter; the province of Upper Canada is bounded on the $\mathbf{S}$. W. by a line drawn through the centre of the great lakes, and separating it from the U. States, on the N. by the Hudson Bay tcrritory, on the E by the Ottawa and Lower Canada, and on the N. W. by the undefined boundaries, or, it may be said, by the Pacific Ocean, comprising in round numbers about 100,000 square miles.
11. The early accnunts of Canada, so far as is necessary to the general rcader, are einbraced in the preceding chapter: the French, as the allies of the Hurons and Algonquins, penetrated into Upper Canada, and the conquest of the lower province in 1759 made the British, by one campaign, masters of the whole of Upper Canada; the main features in whose history is, the contest with N . America in 1812 , and which it is not necessary to detail in this work. See "History of British Colonies, or Colonial Library," Vol. 1.-2nd Ed.

Lieutenant-Governors, Presidents, and Administrators of Upper Canada, from the dirision of the prosince 1791 to 1834.-Col John Graves Simcoe, Lieut.-Gov., July 8, 1792 ; the Hon. Peter Russel, Pres., July 21 , 1796 ; Llent. Gen. Peter Hunter, Lieut. Gov., August 17, 1799; the Hon. A. Grant, Pres., iSeptember 11, 1805 ; His Excellency Francis Gore, Lieut.-Gov., August 25, 1806 ; Major-Gen. Sir Isaac Brock, Pres., September 30, 1811 ; Major-Gen. Sir R. H. Sheaffe, Bart., Pres., October 20, 1812 ; Major-Gen. F. Baron de Rottenburgh, Pres., June 19, 1813 ; Licut.-Gen. Sir Gordon Drummond, K. C. B., Provincial Lieut.Gov.. December 13, 1813; Lieut.-Gen. Sir George Murray, Bart., Provincial Lieut.-Gov. April 25, 1815 ; Major-Gen. Sir F. P. Kohinson, K. C. B., Provincial Lieut.-Gov., July 1, 1815 ; His Excellency Francis Gore, Lieut.-Gov. September 25, 1815 ; the Hon. Samuel Smith, Adm., June 11, 1817 ; Major-Gen. Sir
P. Maitland, K. C. B., Lieut.-Gov., August 13, 1818 ; the Hon. Samucl Smith, Adm., March 8, 1820 ; Major Gen. Sir P. Maitland, K. C. B., Lieut.-Gov., June 30, 1820 ; Major-Gen. Sir John Colhorne, Lieut-Gov., November 5, 1828; Sir Francis Bond Head, 1835 ; Sir George Arthur, 1838.
III. The vast territory enibraced in the province of Upper Canada, as regards the inhabited parts, is in general a level champaign country; for, from the division line on lake St. Francis to Sandwich, a distance of nearly 600 miles westerly, nothing like a mountain occurs, although the greater part of the country is gently undulated into pleasing hills, fine slopes, and fertile vallies: but a ridge of rocky country runs north-east and south-westerly through the Newcastle and Midland districts, towards the Ottawa or Grand River, at the distance of from 50 to 100 miles from the north shore of Lake Ontario and the course of the River St. Lawrence. Passing this ridge to the north, the explorer descends into a wide and rich valley of great extent, which is agnin bounded on the north by a rocky and mountainous country, of still higher elevation.

Farther to the north, beyond the French river which falls into Lake Huron, are immense mountains, some of them of great but unknown elevation.

The country on the north and west side of Lake Ontario, and of Lake Erie which is still further west, continues fiat as far as Lake Huron, with only occasional moderate elevations of the surface of easy ascent. In the whole extent of this tract of country, there is hut a small portion of it under cultivation, the remainder bcing in its primitive atate of forests, lakes, and rivers; the latter for the most part falling into the great lakes, or into larger rivers, which again empty themselves into the great artery of the country, the St. Lawrence. The settlements are chiefly confined to the borders, or within a few miles of the borders of the great lake and rivers.

The lakes of Upper Canada are very numerous, a few of those best known are as follow :(For descriptions, see Colonial Library, 2nd Edition, Vol. I.)

[^6]Toronto, formerly called York, hut now restoreal in $\mid$ its native name, (Lat. 43.39 N. Long. 79.36 W.) is the infant capital of Upper Canada, delightfully aituate in the township of York, near the head of Lake Ontario, on the north side of an excellent harbour or an elllptical basin of an area of eight or nine miles, formed by a long, low sandy peninsula or island, stretching from the land east of the town to Gibraltar Point, abreast of a good fort. The town is laid out at right angles, with long and spacious atreets, (King Street, the great thorough fare is half a mile long), the side paths well flagged, and some of the streets macadamized. It contains the principal buildings and public offices of the province, viz. : the Parliament House and Government offices, Government House, the College of Upper Canada, the Hospital, Court House, Gaol, Protestant, Scotch and Roman places of worship, and aeveral Meeting Houses, the Upper Canada Bank, Law Society Hall, the Barracks, de.
Official return of the population of the city and Jibertic* of Toronto, taken by the assessors in May ald June, 1835.

To these nambers may be added strangers, emigrants, omissions, casual residents, tenants of the prison, and the soldiers in garrison, io ali over 1800 persons, giving an actual population of more than 11,000 souls within the city and liberties.

The population is now about 15,000 , compoaed of English, Irish, Scotch, native born Upper Canadians and a very few French Canadians. Little more than 30 years ago, the site whereon York now stands, and the whole country to the north and west of it was a perfect wilderness-the land is now fast clearingthickly settled by a robust and industrious European, and European descended population, blessed with health and competence, and on all sides indicating the rapid prog, ; of civilization. The other British town of imporiance on this shore is-

Kingaton, (distant from Toronto 184 and from Montreal 189 miles) in Lat. 44.8. Long. 76.40. W. is advantageously situate on the north bank of Lake Ontario at the head of the river St . Lawrence, and is separated by Points Frederick and Henry by a bay which extends a considerable distance to the N . W. beyond the town, where it receivea the waters of a river which flows from the interior. Point Frederick is a long narrow peninsula, cxtending about half a mile into the lake in a S. E. direction, distant from Kingston about three quarters of a mile on the opposite side of its bay. This peninsula forms the west side of a narrow and deep inlet called Navy Bay, from jta being the chief harbour of our navy on Lake Ontario. The extremity of the point has a strong battery, and there is a dock-yard with store-housea, \&c.

Point Henry, forming the east side of Navy Bay, is a high narrow rocky ridge, extending into the lake in
the same direction as Point Frederick. It is crowned by a fort built on the extremity of the ridge, and occupying the highest point of any grouud in this part of Canada. The dock-yard store-houses, slips for building shipa of war, naval barracks, wharfa, \&c., are on an extensive scale; during the war a first rate (the St. Lawrence) carrying 102 guns was built here, and in case of emergency, a formidable fleet could in a very brief period be equipped at Kingston in defence of British interests or honour.

Kingston, next to Quebec and Halifax, is the atrongest British post in America, and, next to Quebec and Montreal, the first in commercial importance, and has rapidly risen of late years, by becoming, through the means of the Ridean Canal, the main entrepot between the trade of the lower province and all the aettlements on the great lakes to the westward, and with the measures now in progresa to render the St. Lawrence navigable between Montreal and Lake Ontario, it may be expected to increase yet more rapidly; in 1828 , ita population amounted to 3,528 ; in 1834, to near 6,000 .

The Rideau Canal.-This far-famed undertaking, which is not properly speaking a canal, but rather a succession of raised waters by means of dams, with natural lakes interspersed, commences at Entrance Bay, a small bay in the Ottawa, 128 miles from Montreal, and 150 from Kingston, in latitude N. 45.30. longitude W. 76 50.-about a mile below the Falls of Chaudiere, and one and a half mile above the point where the Rideau River falls into the Ottawa. From Entrance Bay the canal is entered by eight locks; it then passes through a natural gully, crosses Dow's Swamp (which is flooded by means of a mound), crosses Peter's gully by means of an aqueduct, and joins the Ridcau River at the Hog's Back, ahout six miles from Entrance Bay. At the Hog's Back there is a dam 45 feet high and 400 long, which, by throwing back the river, converts about seven miles of rapids into still navigable water. The canal rises into the river by means of a lock. A series of locks and dams now commence with occasional embankments.

There is a dam and lock at the Black Rapids (138 miles from Montrcal) ; a dam, three locks, and two embankments at Long Island Rapids, which render the river navigable for 24 miles, to Barret's Rapids, 167 miles from Montreal; eight dams and 14 locks bring the canal to Olive's Ferry, 210 milea from Montreal, where the Rideau Lake contracta to 463 fect wide, and a ferry connects the road between Perth and Brockville. At the Upper Narrowa, 16 miles further, the Rideau Lake contracta again to about 80 fect across, ovel which a dam is thrown, with a lock of four feet lift, forming the Upper Rideau Lake into a summit pond of 291 feet above Entrance Bay, in the Ottawa; six miles further is the isthinus which sepa. rates the Upper Rideau Lake from Mud Lake, the source of the river Cataraqui. The canal is cut through this isthmus, which is one and a half mile wide; five miles advancing is the isthmus Clear Lake, 330 feet across, through which a cut is made to avoid the rapids of the natural channel.

To Cranberry Marsh, 17 miles from Isthmus Clear Lake (the last station adverted to), 255 miles from Montreal and 23 from Kingston, there are threc clans and six locks. The Marsh is about 78 feet aloove the level of Kingston Harbour, and about eight iniles long. Besides flowing into the Cataraqui River, the waters of this luarsh or lake burst out at White Fiah liall, and flow into the Gananoqui River, which is the waste weir for regulating the level of the water in the

Rideau Lake (the summit pond) ; thus the water in the whole line of canal, whether in times of flood or drought, is kept at a steady height. At Brewer's Upper and Lower Mills, 18 and 17 miles from Kingston, there are three dams and three locks; and at Kingston Mills, five miles from Kingston, one dam and four locks. The Canal, or Cataraqui River, falls into Kingston Bay at these mills, at a distance from Montreal of 273 miles.

The Rideau opens a water communication between Kingston and the Ottawa, a distance of 132 miles, by connecting together several pieces of water lying in that direction, viz. Kingston Mill-atream, Cranberry lake, Mud Lakc, Rideau Lake and River, the length of the cuts not exceeding 20 miles. The difference of level is 445 feet; about 20 miles are excavated, some through rocks. There are 47 locks, which are in length 142 feet, in breadth 33, and with a water depth of five feet, which admit vessela under 125 tons. There was either sad blundering in the estinate, or gross mismanagement in the expenditure on this canal, the original estimate for which was but 169,000 . the next estimate, before the plan of enlarging the locks was adopted, amounted to $486,000 l$., the addition of the locks raised the estimate to 762,673l.; but it may now be atated, that the total expenditure will not be short of one million sterling. The locks were originally planned upon a scale to correspond with those on the La Chine canal, i.e. 100 feet hy 20 ; these dimenaions were subaequently increased to 142 feet in length by 33 in width, with a depth of 5 feet water, hence a considerable augmentation of expense.

The Welland Canal connects Lake Erie with Lake Ontario. It was not undertaken by government, but by s company incorporated by the Legislature in 1825. The canal communicates with Lake Ontario by the Twelve-mile Creck, and is conducted over the range of hills forming the barrier of Lake Erie, at the Falls of Niagara, by means of locks until it meets the Chippawa at eight miles and a half from ita mouth; it ascends the Chippawa about 11 miles from thence, joining the Ouse upon Iake Eric at about one mile and a half from its mouth; the shifting bar at the entrance of the Ouse being remedied by extending piers into deep water beyond the bar. The length of the canal is 41 miles, its width 56 feet, and its depth $8 \frac{1}{2}$; the summit level is 330 feet, the ascending locks are 37 in number (made of wood), 22 feet wide, and 100 fect long. The cost of this canal has been, so far as we can yet estimate, upwards of $500,000 l$.; but there is little doubt that as the population on Lake Erie and Huron ahores increases, a fair return will be yielded for the capital expended.

The Grenville canal consists of three sections, one at the Long Sault on the Ottawa-another at the fall called the Chute à Blondeau, 60 miles from Montreal and 218 from Kingston, and a third at the Carillon Rapids, 56 miles from Montreal and 222 from Kingston, opening into the Lake of the Two Mountains, though which an uninterrupted navigation is practised by steam-boats to La Chine, nine miles above the city of Montreal. This canal renders the navigation of the Ottawa letween the Rideau and Montreal complete. All the locks on the Carillon, and on the Chinte à Blondeau are of the same size as on the Rideau, but on a part of the Grenville Canal, which was commenced hefore the large acale was adopted, some locks and a part of the cuttings will only adnit hoats 20 fect wide; the locks on La Chine are also calculated for boats only 20 fect wide ; the navigation for buats above 20 fect wide is interrupted at the

Grenville Canal, and if large boats be used on the Rideau, and on the higher part of the Ottawa, all goods must be unshipped on arriving st the Grenville Canal, and be either conveyed by portage or removed to smaller boats.

The distance from Kingston, on Lake Ontario, to Bytown, where the Rideau River joins the Ottaws, is about 150 miles; from Bytown to the Grenville canal, 64 miles; total, 214 miles; through the whole of whicl line the locks and cuttings are of a size to admit steam boats 134 feet long and 33 feet wide, and drawing five feet of water. A canal is proposed across the west extremity of the Island of Montreal, near the town of St. Anne'a, to surmount the rapida.

The Montreal communication with the Ottawa, by the canal between the former place and Lake St . Louis, at La Chine, ncar Montreal, is termed La Chine Canal; it is 28 feet wide at the bottom, 48 at the water line, has five feet depth of water, and a towing path; the whole fall is 42 feet, with the locka; the length is about seven miles. It is the property of a company; was begun in 1821 , completed in three years, at a cost of 137,000 l. which was defrayed by the company, slightly assiated by government, and for which the public service is exempt from toll.

By means of the great and useful works just mentioned, a large extent of country is opened up to the industry of the British aettlers; there is continuous steam-hoat communications in Upper Callada of about 460 miles, viz. from the Grenville canal, on the Ottawa, to Niagara.

The value of canals and steam navigation may be judged of from the fact, that, in 1812 , the news of the declaration of war against Great Britain by the United States, did not reach the post of Michilimackinac ( $\mathrm{t}, \mathrm{I} 07$ miles from Quebec) under two months; the same place is now within the distance of ten days' journey from the Atlantic.

JV. Our knowledge of the geological structure of the country bordering on the great lakes is more minute than the examinations yet made in Lower Canada [see Colonial Library, Vol. I.]

Beyond Lake Superior, or what La Hontan called the "fag end of the world," the country is exceedingly treary-miles of ponds and marshes, where the mud is knec deep, are succeeded by open, dry, sandy barrens, terminating in forests of hemlock and spruce, and then again a regular alternation of swamps, mud, bog, windfalla, and stagnant water, and in the course of many miles there is aeldom a dry spot to be found for a resting place; in winter strong whiskey is frozen to the consistence of honey, and in the height of summer (!) the thermometer is down to 36 . Farenheit at aun-rise.

A secondary sandstone (according to Mr. School. craft, an American gentlemen, who formed part of a government expelition from New York), forms the whole south coast of Lake Superior, through which the granite on which it rests occasionally appears ; chalcedony, cornelian, jaspar, opal, agate, sardony $x$, zeolith, and serpentine (all siliceous except the last two), with iron, lead, and copper are found imbedded in it. The sand hills west of the Grand Marais present to the lake, for nine miles, a stcep acclivity 300 feet high, composed of light yellow ailiceous sand, in three layers 150,80 , and 70 feet thick; the last mentioned uppermost and like the lowest pure, while the middle bed has many pebbles of granite, limestone, hornhleude, and quartz. By the subaidence of the waters of lakes Superior and Huron, occasioned, Mr. Lyell thinks, by the partial destruction of their
barriers at some unknown period, beds of sand, 150 feet thick, are exposed, below which are seen beds of clay, enclosing shells of the very species which now inhabit the lakes.

At Lake Superior, a red sandstone, for the most part horizontal, predominates on the south shore, resting In places on granite. Amygdaloid occupics a very large tract in the north atretching from Cape Verd to the grand Portage, profusely interiningled with argillaceous and other porphyries, sienite, trappose greenstone, sandstone, and conglomerates. Part of the north and east shore is the seat of older formations, viz. sienite, stratified greenstone, more or less chloritic, and alternating tive times with vast beds of granite, the general direction cast, with a north or perpendicular dip. Great quantities of the older shell limestone are found strewn in rolled masses on the beach from Point Marmoaze to Grand Portage.

Copper abounds in various parts of the country, in particular some large and brilliant specimens have been found in the angle between Lake Superior and Michigan. At the Coppermine River (Ontanagon, 300 miles from the Sault de St. Marie), the copper, which is in a pure and malleable state, lies in connexion with a body of serpentinc rock, the face of which it almost completely overlays, it is also disseminated in masses and grains throughout the substance of the rock.

The almost nniformly level shores of Jake Huron, present few objects of interest to the geologist: se. condary limestone filled with the usual reliquia, constitutes the great mass of the rock along the coast.
The chasm, at Niagara Falls, affords a clear indication of the geology of the country. The different strata,-first, limeorre; then fragile slate; and lastly, sandstone. The ippermost and lowest of these compose the great secondary formation of a part of Canada, and nearly the whole of the United States, occupying the whole basin of the Mississippi, and extending from it between the lakes and the Alleghany ridge of mountains, as far eastward as the Mohawk, between which the slate is often interposed, as at Niagara, and throughout the State of New York generally. At Niagara, the stratum of slate is nearly 40 feet thick, and nearly as fragile as shale, crumbling so much as to sink the superincumbent limestone, and thus verify, to some extent, the opinion that a retrocession of the falls has been going on for ages. The subsoil around Lake Ontario is limestone, resting on granite. The rocks about Kingston are usually a limestone of very compact structure, and light blueish grey colour, a fracture often approaching the conchoidal, a slight degree of translucency on a thin edge; and after percussion, the odour of flint rather than that of bitumen. The lowermost limestones are in general nore siliceous than those above them; and so much is it the case, that in some plnces, a conglomerated character is given to the rock by the intruaion of pieces of quartz or hornstone. It is remarkable, that both angular and rounded masses of felspar rock, which usually underlies limestone (or, if absent, is supplied by one in which hornblende predominates), are imbedded and isolated in the limestone, demonstrating the latter to have been at one time in a state of fluidity.
The limestone formation is stratified horizontally, its dip being greatest when nearest to the elder rock on which it reposes, and by which it would appear to have been upraised subsequently to the solidification of its strata; the thickness of which, like the depth of the soil, varies from a few feet to a few inches. Shale
occurs, as amongst most limestones; and, in some places so intimately blended with the latter, as to cause it to fall to pieces on exposure to the atmosphere. The minerals as yet noticed, in this formation, are chert or hornstone, basanite, chlorite, ealcareous spar, barytes, sulphate of strontian, sulphuret of iron, and sulphuret of zinc. Genuine granite, is seldom or never found.

The soils of Upper Canada are various; that which predominates is composed of brown clay and loam, with different projortions of marl intermixed; this compound soil prevails principally in the fertile country between the St. Lawrence and Ottawa; towards the north shore of Lake Ontario it is more clayey and extremely productive. The substratum throughout these districts is a bed of horizontal limestone, which in some places ises to the surface. The Neweastle district lying between the upper section of the Ottawa and the St. Lnwrence, is a rich black mould, which also prevails throughout the East Ricling of York, and on the banks of the Ouse or Grand River, and Thames.

At Toronto the soil is fertile, but stones are scarce for common use, which is also the case in scine town. ships hordering Lakes Erie, St. Clair, and the Detroit, thus demonstrating the alluvial nature of the territory. A light sandy soil predominates round the head of Lake Ontario.

The predominating soil of the country (east shore, Lake Iluron) traversed is a meagre, red, or yellow, ferruginous, sandy loam, varying in depth from feet to inches, often not exceeding three of the latter dimension, and not unfrequently absent altogether, leaving the rock bare but for its hoary covering of lichen clay, or clayey loams, were rarely seen, and when noticed, their usual position was either in some of the swampy valleys between the rocks or forming alluvial deposits on the banks of rivers, often deeply covered up by a siliccous sand.
V. In an extent of country embraced between $42^{0}$ and $50^{\circ}$ of north latitude, the climate is necessarily various; in the settled townships it is generally de. lightful, neither so cold in winter as Lower Canada, nor so hot in summer as New York ; in the Newcastle district between the $44^{\circ}$ and $45^{\circ}$ a man may work in the woods the whole winter in his shirt sleeves, as in England; and the summer heat is tempered by a cool breezc, which sets in from the S . W. about 10 a. m., and lasts generally to 3 or $4 \mathrm{p} . \mathrm{m}$. In summer the wind blows two-thirds of the season from the $S$. W., i. $e$, along the great lakes.

In spring and autumn this wind brings a good deal of moisture with it. The N. W. the most frequent in winter, is dry, cold and elastic; the S.E. soft, thawey and rainy; the wind seldom blows from west or south, more rarely from the northward. Of course changes of wind are accompanied by corresponding alternations of weather; the most sudden are to the N. W., followed by weather clear and cold for the season, almost every thunder shower clears up with this wind : the longest storms of rain, and the deepest falls of snow, are usually accompanied by easterly winds. The following table wi.t afford a comparative view of the climate of Upiper and Lower Canada throughout the year, as regards the highest, lowest, and mean temperature, for each month in Upper and Lower Canada; latitude 42 north in Upper Canada, latitude 45. north in Lower Canada.

VI. The peop most favoured security and ah healthful clima from burthens o traordinary incr tribution throu this section.

The winter of Upper Canada, although not at present severe, is becoming milder every year as cultivation extends. It is a great error to suppose that the great Lakes, Ontario, \&c. are frozen over at any time, they are always open in the centre, frequently exhibiting a beautiful and striking phenomenon during the inclement season, by reason of the water being warmer than the cireumamhient atmosphere, an evaporation resembling steain, may be ohserved ascending in every variety of shape, in clouds, columns and pyramids, with uneommon grandeur and magnificence from the vast surfaces of Ontario, Frie, Huron and Superior, as if from 80 many boiling cauldrons.
The chain of shallow lakes which run in an east and south-easterly direction from Lake Simece to-

wards the midland district, are seldom frozen more than inch thick until about Christmas, and they are again open before April.

The earth in Upper Canada is not generally frozen at a greater depth than from 12 to 18 inches, and the snow rarely lies at a greater depth than from 18 inches to two feet unless when drifted. It is very seldom that the roads are in a permanent condition for the use of the sleigh or carriole before the second week in January, and they are again broken up by the end of March : this shows the duration of sharp frosta and snow : in faet a labouring man may, if he chuses, work at all times out of doors : in Lower Canada, at the more northerly stations, it would he impossible so to do.

VI. The people of Upper Canada are among the most favoured on earth; they enjoy peace, liberty, seeurity and abundance on a fertile soil, and in a healthful climate, with an almost total exemption from burthens of any kind. To demonstrate the extraordinary increase of this population, and their distribution throughout the province, is the object of this section.

The earliest European settlers in Upper Canada were some Freneh limilies, who colonized about the hanks of the Detroit and on the St. Lawrence, previous to the British acquisition of the province, after which period the settlements of Europeans, or loyal inhabitants from the the United States, began to be encouraged.
In 1806, the number of months was estimated at

70,718; in 1811, at 77,000; but the war with the United States tended much to check the prosperity, and with it the increase of population in the province.
According to some returns before me, the number of males and females were in the following years thus-

| Years | Males | Fem. | Total. | Years | Males | Fem. | Total. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $1821 .$. | 65792 | 56795 | 122587 | $1831 .$. |  |  |  |
| $1823 .$. | 79238 | 70931 | 150169 | $1832 .$. | 130003 | 117039 | 247042 |

* Aasesament for district purposes, at the rate of one penny in the pound, in 1835, 1,888!.

It will be perceived from the foregoing, that the eastern division is formed into three counties, and these again subdivided into 12 townships. The dis. trict commences at the boundary line separating Upper and Lower Canada, and runs along the St. Lawrence, with part of Lake St. Francis (an expansion of the St. Lawrence), and the Long Sault rapid in front, until it reaches the adjoining district of Johnstown: inland, it is bounded by the Ottawa district. $\Lambda$ range of elevated land commences at Lochiel, and runs diagoually to the township of Matilda, whence it passes into the adjolning district.
N. B.-As every statistical information that can be 4,500 ; the Natches, 150; the Chickesaws, 750. The collected relative to the native population that once Cherokees, behind South Carolina, 2,500; the Catawoccupied the country now tenanted by Europenns and their descendants, must prove interesting, l give the following return, printed in the Annual Register, to wards the close of the last century: "The numes of the different Indian nations in North America, with the numbers of their fighting men, from the best authority I have been able to collect, are as follow; on the Mubile and Mississippi, the Choctaws or Flatheads,

The soil is rich, and well watered, cultivated and fertile. Some of it has been granted to discharged soldiers, and a good deal to the children of New England loyalista, and the Canada company possess some lots in it. There are nearly 15 acres of rateable land in the district to each individual, of which about $2 \frac{1}{2}$ acres are cultivated by each man. The male population does not so far outnumber the femsle as might be supposed in a new country. The inhabitants under 16 years of age, exceed those above that period of life. bas, between North ond South Carolina, 150; the liantias, a wandering tribe on both sides of the Mississippi, 800 ; the Kaspuuasquias, or lllinois in general, on the Ilinois river, and between the Ouabache and the Missiasippi, 600. On the Ouabache, the Piankishaws, 250 ; the Ouachtenons, 400 ; the Kikapous, 300. The Shawnese, on the Siotto, 500. The Drlawares, on the west of the Ohio, 300. The Mia-
mis，on the Misamis river，falling into Iake Erie and the Miniamis，350．The upper Crecks，back of Geor－ gis，the middle Creeks，behind West Florida，the lower Crecks，in East Florida，4，000．The Caouitas， on the east of the river Alibamous， 700 ；the Aliba－ mous，on the west of the Alibamous，600；the Akan－ saws，on the Akansaw river falling into the Missis－ sippi on the west side， 2,000 ；the Ajoues，north of the Missouri，1，000；the Paddoucas，west of the Mis－ sissippi，500．South of the Missouri，the white Panis， 2，000；the freckled or pricked Panis，2，000；the Canses，1，600；the Osages，600；the Grandes Eaix， 1,000 ．The Missouri，upon the river Missouri，3，000． Towards the heads of the Mississippi，the Sioux of the woods， 1,800 ；the Sioux of the meadows，2，500． The Blancs，Barbus，or White Indians with beards， 1，500．Far north near the lakes of the same name， the Assiniboils，1，500；the Christaneaux，3，005． The Ouiscansins，on a river of that name that fuils into the Mississippi on the cast side， 5.50 ．South of Puans Bay，the Mascoutens， 500 ；the Sakis， $4 C 0$ ； the Mechecouakis，250．Near Pucans Bay，Fille Avoine，or the Wildout Indians，350；the Puca $2 s$, 700．The Powtewatamis，near St．Joseph＇s River， and Detroit， 350 ；the Messesagues，or River Indir ns， being wandering tribes on the Lakes Huron and jn－ perior，2，000．Near the Lakes Superior and Michi－ gan，the Ottahwas， 900 ；the Chipwas， 5,000 ．I＇he Wiandots，near Lake Erie， 300 ；the Six Nations，or as the French call them，the Iroquois，on the fion－ tiers of New York，\＆c．，1，500；the Round－her ded

Indians，near the head of the Ottahwa River，2，500； the Algonquins，near the above， 300 ；the Nipissins， near the above also，400．St．Laurence Indians，on the back of Nova Scotia，\＆ce．，the Chalas，130；the Amelistes， 5.50 ；the Michmacks，700．The Abena－ quis，350．The Conawaghrunas，near the falls of St．Lewis， 200 ：total amount， 58,930 ．This being the whole number of men fit for bcaring arms，from hence we may be enabled to form some idea of the number of all the Indian inhabitants，men，women and children，on the continent of North America；which calculation，however，I ain ready to confess can be but rather a vague conjecture．

There being 58,930 warriors，it is computed that about one－third of the same number more are old men unfit for hearing arms，which makes the number of males come to maturity amount to about 88,570 ； and multiplied hy six will produce 531,420 ，which I consider as the whole number of souls，viz．men， women and children，of all the Indian nations that are come in any degree within our knowledge through－ out the continent of North Ameries．
It is a most melancholy consideration to reflect， that these few are all that remain of the many mil－ lions of natives，or aboriginal inhahitants with which this vast continent was peopled when first discovered by the whites ；and that even these will soon be ex－ tinct and totally annihilated，considering the ams－ zingly rapid depopulation they have hitherto expe－ rienced，since that（to them）fatal period or cra of the first arrival of the whites in $\Lambda$ meries．＂

The Ottawa district is situate in the rear of the its population，cultivation，stock，\＆e．，were as follows Fastern，bordering on the south shore of the river in 1835.
Ottawa from the Rideau river to the St．Lawrence；

The soil in Johns advantsgeously sitt of land rated to nearly three acres o number of people 1，150 those above $t$ dreh to adults is a tries ；it would app up a vacuun．To quently observed th exceeds those of m nut seem at present the necessity of suc proportion of males s，that there are as female products in e to increase and deer parent laws of matte perhapis，a sufficienc fuliy those laws；bit various countries，wi

The Ottawa district is thinly settled; the lands are proportion of males to females is very trifiling, and good, but low and marshy. Along the Rideau canal cultivation is heing extended; and as cultivation increases, those very lands which are now considered useless marshy soils, will become the most fertile sections of the country. There are nearly 18 acres of area rateable to each individual, of which somewhat more than two acres are cultivated by each. The dis.
the inhabitants under 16 years of age, are within 62 of the same amount as those above that period of life. The proportion of stock in the district is small, compared with other parts of the country.

Johnstown District, lics along the St. Lawrence river to the westward of the Ottawa and Eastern Districts. The Rideau canal passes through it.

The soil in Jolnstown is generally good, and it is sdvsitagcously situnted. There are about 14 neres of land rated to each individual, of which there are nearly three acres of cultivated to each mouth. The number of people under 16 years of age, exceed by 1,150 those above that age. This proportion of ehildren to adults is a striking feature in all new countries ; it would appear to be an effort of unture to lill up a vacuum. 'To accomplish this, It has been frequently olserved that the proportion of female birtis exceeds those of males; in Upper Canada this dues not seem at present to be the case, but the period for the necessity of such a liw may be past, and a due proportion of males to females requircl. Certain it is, that there are as fixed laws relative to male and female products in every class of creation in reiference to increase and decrease, as there are in the more apparent laws of matter and motion. We have not yet, perhnps, a sufficiency of facts generailized, to indicate fully those inws; but the statistics now collecting in various countries, will, it is hoped, enable us to solve
this interesting, and in many respeets important problem, in the history of civilization.

The townships on the Ottawa, N.W. of Bathurst district, are in much request: Jumberers now go 150 miles beyond Lake Chat; and, as the Ottawa has few rapids to the northward, towards its junction with Lake Nipissing, we may command a shorter commuvication between Montreal and Georgiana Bay, and Lake liurnn, than thint we now have through Lakes Ontario, Erie, and the Detroit, with the great additional advantage of its being beyond the threats of the American Government. A great part of this district is colonized by Ilighland antl Lowland Scotehmen, whose prudent, thrifty habits ndulrably fit them for emigrants. Here we find the proportion of females to males doubled, although the numbers nlove 16 and under 16 years of age are nently equal. There are upwards of 18 acres of rateable fand to each mouth, and more thinn 2 aeres cultivated; but the proportion of hands cultivnting 57,197 acres is very small, namely, 2,855 meu, i, e, 20 acres to each person.

The District on the north bounded by the river Ottawa, is called the Bathurst District. Census in 1835.

The next division as we proceed westward, is the long and extensive tract called the Milland District, whose base or southern extremity rests on the St. Lawrence and Lake Ontario, in the parallel of $44^{0} \mathrm{~S}$. latitude, while its northern boundary extends to 46.30 , and is terminated on the N.E. by the Ottawa river.
These flve districts may be considered as forming the eastern aection of the province, and present generaliy a moderately-clevated table land declining towards its numerous water courses. The timber of the forests is large and lofty, and of cvery variety. The aoil, though moist and marshy in many places, is extremely rich, consisting chiefly of a brown clay and yellow loam, admirably adapted to the growth of wheat and every species of grain : the rivers and lakes are extremely numerous; of the former may be mentioned as most conspicuous the Rideau, Petite Nation, Mississippi and Madawaska, which have their sources far in the interior, generally to the westward, and which fall into the Ottawa: the Gamnanoqui, Raisin, Cataraqui, Napanee, Salmon, Moira, and part of the Trent discharge themselves into the Bay of Quinté and the St. Lawrence. These streams, besides fertilizing the lands through which they meander,
afford, in general, convenient inland communications, and turn numerous grist, carding, fulling, and saw mills.

Besides numerous inferinr lakes there are the Rideau, Gannanoqui, White (Henderson'a), Mud, Devil, Indian, Clear, Irish, Loughborough, Mississippi, Olden, Clarendon, Barrie, Stoke, Marmora, Collins, Blunder, Angus, and Ossinicon. There are many roads throughout the section; the principal one is along the St. Lawrence, between Montreal and Kingston, traversing Cornwall and Lancaster, through which a line of stage coaches run daily (except Sundays) between the two provinces when ateam-boata cannot traverse. Klngston, the maritime capital of Upper Canada, has to the westward the fine Quinte tract in a prosperous state of cultivation.

Bytown, in Nepean, on the south bank of the Ottawa, is most picturesquely situate ; as is also Kinnel Lodgc, the romantic residence of the highland chleftain, M'Nab, on the broad, bold, and abrupt shore of the lake of Chats. Perth is a thriving village in the townahip of Drummond, on a branch of the Rideau, occupying a central position between the Ottawa and St. Lawrence.

The division and statistics of Neweastle are thus－

* These totals include 43 insane persons, and 61 persona deaf and dumb.

The soil throughout this large district is in general good, and though the population is large compared with other districts, there is yet abundance of room for more settlers. It is well watered by the Rice, Balsam, Trout, and other lakes, and by the Otanabce rivers, part of the Trent, \&c. Rice Lake, in the district of Newcastle, about 15 miles from Lake Ontario, and lying nearly $\mathbf{S}$. W. and N. E., is 2.5 miles long by 5 wide. Its name is derived from the wild rice growing on its margin and aurrounding marshes. The principal river on the North British shore of Ontario, is the Trent, which issuing out of Red Lake, after a very winding cri rse of 100 miles, falls into the Bay of Quinté, near the village of Sidney. The Otanabee, which falls into the north shore of Rice Lake, may be considered a continuation of the Trent River, of which the Rice Lake is merely an expansion, as is often the case in the American rivers. The Otanabee, like the Trent, is a broad and full river, and both are navigable for boats. From its source in Trout Lake, it communicates by a chain of lakes with Lake Simcoe, through which it is proposed to upen a cenal comnunication between I,akes Huron and Ontario. The extensive territory adjoining Newcastie, with its N. W. extremity resting on Gcorgiana Bay (an iniet of Lakc

Huron), is termed the Home District, it contaius the capital of Upper Canada, Toronto (late ealled York).
The central aection of Upper Cairada does not fall short in fertility of either the east or west portions of the province; it is well watered, the Nottawasaga, Holland, Musketlisebé, Beaver, Talloot, and Black Rivers fall into Lake Simeoe; the Credit, Etobicoke, Humber, and Don Rivers, How into Lake Ontario. There are excellent roads throughout the section; a canal is projected through the Home District, to connect Lakes Huron and Untario. Toronto, the capital, is rapidly improving; in 1833, its population wasmales above 16, 2,597 ; males under $16,1,404$; total males, 4,001 ; females above $16,2,155$; temalea under 16, 1,317; total females, 3,472 . In the suburbsMacauley Town, 558; from Osgoodelhall, where Macauley Town ends, to Farr's brewery, Lot-street, 40 n; from the eastward of King-street to the Don E-idze, taking in all about the windmill, 300 , making a grand total of 8,731. In 1836, the return gives males, 4,793; females, 4,861 ; totni, 9,654 . This 1 presume to be excluaive of the liberties of the city.

The physical aspect of the shores of Ontario exhibita great diversity, towards the N. E. they are low, with swampy marsics; to the N. and N, W., the
bsnks assume a to almost a plain but well relieved hills, that, after $f$ cstaract, stretche try borderiug th the rumerous of flourishing settle picturesque along high land over $\mathrm{Pr}_{\mathrm{r}}$

The next section of the province is termed the Western ; it embraces the Gore, Niagara, London and Western Districts, and circumseribed by the waters of the great lakes, Ontario, Erie and Huron, it may be considered a vast equilateral, triangular peninsula. with its base extending from Fort Erie to Cape Hurd, on Lake Huron, measuring 216 miles, and a perpendicular striking tbe Detroit river at Amheratburgh, of about 195 miles in length, and an almost uniformly level or olightly undulating surface, except a few aolitary eminences and a ridge of alightly elevated table land in the Gore and Niagara Districta, averaging 100 feet, and at some points approaching to 350 feet in height. The whole tract is alluvial in its formation, consisting chiefly of a stratum of b:ick and sometimes of yellow loam, about which is found (when in a state of nature) a rich and deep vegetable mould. The
substratum is a tenacious grey or blue clay, sometimes appearing at the surface intermixed with sand. Throughout the country there is an almost total abofsence stones or gravel within the greatest arable depth, but numerous and extensive quarries exist which furnish aburdant supplies for building, \&e. The forests are remarkable for the ateady growth and the rich foliage of their trees; in several places immense prairies or natural meadows exist, expanding for hundreds of miles, and with the vista delightfully relieved by occasional clumps of oak, white pine, and poplar, as if planted for ornament by man. With a delicious climate stretching from 42. to 44. N. latitude, it is not to be wondered that this acction is one of the finest in Upper Canada. The statistics of the first, pursuing our route as before from east to west, are-

There are in the Gore district upwarda of five acres of land rated as cultivated to each individual, and lit. tle more than 15 uncultivated.

The diatrict to the southward of Gore, and termed Niagara from being hounded to the cast by the river
and cataract of that name, is one of the finest and richest tracta in the world, and most elegibly situate in a bight as it were between the magnificent sheets of water, Jirie and Ontario. Its statistics are as of water,

Grand

It will he percei comparatively amal cultivation and am large in proportion other districts ; the tity of uncultivated

The scenery thro tremely picturesqu Newark, formerly from Toronto, roun 40 miles) is the sen district. It is sitn west bank of the ri angle formed by the our side the western The Niagara river e 43.15.30, longitude between its efllux an tance of $36 \frac{1}{2}$ miles.
The Niagara river, Lakes, commences former, and is the

NIAGARA DISTRICT, 1835.

It will be perceived from the foregoing that in this comparatively small district the quantity of land in cultivation and amount of rateable property is very large in proportion to what may be observed in the other districts ; there is still, however, a large quantity of uncultivated land in Niagara.

The scenery throughout this part of Carada is extremely picturesque. Fort George, or Niagara, or Newark, formerly the sent of goverument (distant from Toronto, round the head of Lake Ontario, about 40 miles) is the sea port (if it may be so called) of the district. It is situate upon a rising ground on the west bank of the river Niagara, within a mile of the angle formed by the river and the lake, protecting on our side the western boundary of the Niagara frontier. The Niagara river enters Lake Ontario in latitude $N$. 43.15.30, longitude 79.00.40; the difference of height between its efflux and affiux being 344 feet on a dis. tance of $36 \frac{1}{2}$ miles.
The Niagara river, which connects Eric and Ontario Lakes, commences at the N. F., extremity of the former, and is the outlet not only of the waters of

Eric, but also of those vast basins of Huron, Michigan, Superior, and their thousand tributaries. The river is $33 \frac{1}{2}$ miles long in its bends ( 28 direct), and traverses a country unrivalled for its richness and fertility, on the American as well as on the British side. When first assuming the character of a river at Fort Erie, it is one mile wide, but soon contracts its bed, at Black Rock, to half a mile, and becomes rapid; hut again expanding to its original dimensions, it flows on with more gentleness, its general course being from S. to N. A ferry at Black Rock, when the current is seven miles an hour, offers a sublime prospect of the mighty mass of waters rushing from the inland seas, to join their parent ocean. Beyond Black Rock, the river widens to embrace Grand Isle, twelve miles long, and two to seven miles broad, with Square Isie at its head, and Navy Isle at its foot. Below this, the river resembles a bay, more than two miles in breadth, and then narrow down the rapids to the far-famed Falls of Niagara, which are 20 miles from Lake Eric, the whole is navigable, except helow Chippewa, where the indraught of the cataract begins to be felt.

This inmense district has the advantage of a great extent of water frontier along the shores of Lakes Erie and Huron, besides a large portion of the Thames and the rivera Ouse on Lake Erie nend Aux Sables and Maitland on Lake Huron. London, though at present small, is in the heart of a fertile country on the banks of the beautiful river Thames, and will no doubt rapidly increase.
By recent information we learn that there is in progress a railroad making between Chathan, on the Thames, to London, thence to Hamilton, on the head waters of Lake Ontario, which will connect Lakes Huron, St. Clair, Erie, and Ontario; and from the work already performed, it will be quite equal to the Manehester rail-road. Ten years since not a white inhabitant was within 20 miles of this town. There is now upwards of 20,000 active and industrious inhabitants in this township, with four mills, six pair of French burr stones, two breweries, many saw-mills, \&c. Ten steam-boats, some of them upvards of 700 tons, plying between this and Lake Miehigan, Detroit, Goderich, Sandwich, Chippewa, and Buffalo, \&c. with one of the moat productive soils in the world, that will yield 18 to 20 barrels of the finest white wheat per acre, without any manure, from 10 to 15 years to
come. No rent, tithes, taxes, \&cc., to pisy, except $6 d$. per acre per year, the government tax cor making roads, bridges, \&c., after the land has bcen reclaimed seven years. In the townahip are two large Protestant churches, four Methodist meeting houses, two Presbyterian and two Quaker meeting-houses, a Roman Catholic chapel, three endowed achools, two newspapers (published three times a weck), a ladies' board-ing-school, an excellent commercial and classical academy, and an agricultural society has also been established here; all creeds live on very friendly terma, much united, and endeavouring to forward each other's views and interest by mutual good officea.
About the central part of the north coast of Lake Erie, the eccentric but just and philanthropic Colonel Talbot has founded a aettlement which reflects credit on his head and heart. Ever since the year 1802 this benevolent man has persevered in opening the fine country around him to the English emigrant. The Upper Canada Company have their land in thia district. The scenery around which, on the river Maitland, is more English-like than any other in America.
Extensive roads are now making in every direction, and the London district offers a most eligible spot for the consideration of the intending settler.

WESTERN DISTRICT.

* A return of the population was made for Warwick, but it was not conformable to law.

The population of each parish in Upper Canada will be found in the seetion on religion, when detailing the eeclesiastical establishment.

Statement of the vacant morveyed lanis lis the sevoral Districts of the Province, and their extent in spuare miles, in IA,33.

In connexion with the church of Scotland, government allowance $57 \%$. sterling each (City of 'Toronto chureh, $90 l$. sterling), by authority of despatch from Lord Aberdeen, 22nd February, 1835. United synod of Upper Canada government-allowance, $63 l .12 s .9 \mathrm{~d}$. sterling each. Authority, Lord Goderich's despateh of the 22 nd November, 1832.
The Methodist Episcopal Church, and the British Wesieyan Methodists in Upper Canada, in the year 1833, formed a union under the name of the "Wes leyan Methodist Church in Upper Canada." The English Church has authority annually to appoint one of their own body to preside over and conduct the affairs of the church in thls Province. The number of ministers in Canada is 90, who are itinerant, snd never reside in one particular mission above two years at a time. The number of church membera amounts to between 16 and 17,000 persons. The Primitive Methodists, in connexion with the English conference, have four travelling preachers and 30 local preachers. The members amount to between 3 and 400. There are in the Province four associations of Baptists, haviug 53 churches, 330 ordained minis.
ing the church belonging to the place in which such property was situated.

The area of the several townsbips is nearly the same, about 12 miles by 10 , and includes for the most part several stations where divine service is performed either in private, or school, houses.

The Roman Catholic Bishop remarks, that churches are required in many piaces licsides those mentioned in the return.
ters, and 17 licentiates. The number of Menonists, Turkers, Quakers, Independents, and other sects, cannot be ascertained.
It is calculated that the area of Upper Canada is $31,000,000$ acres, of which $26,000,000$ are capable of cultivation; one-seventh, or $3,700,000$ acres of this land is set apart for the maintenance of a Protestant Clergy-that is, 18,800 reserved lots of 200 acres each;-by some this is thought not an extravagant urovision, for judging from what takes place in the United States, each lot wiil not produce in a century, 20l. per annum, making a total of $376,000 l$, which, divided among 2,000 clergymen (a very small numher for a country as Inrge as England), gives only $188 l$. per amum to each minister. Such is the view of the subject taken by Arclidencon Strachan.

Clergy Fund Expenditure, 1836.-Lrection of parsunage houses, 3 fi7l.; Missionaries of Church of Eugland, 4,500 .; Archdeacon of York and Kingston, 600l. ; Sceretary to Clergy Corporation, 270l.; Office of ditto, $92 l$.; total, $5,830 l$. The Archdeacon of Yorh, 300l. per annum; Ditlo of Kingston, 300l.; Roman Citholle Bishop, 500l.; Ministers of Church
of England, 7,0651. ; Ditto of Scotlanu, 1,541l.; Ditto of Protestant Synod of Upper Canada, 6991.; Roman Catholic clergy, 1,000l.; contingent religious expenses, 639l.; total, 12,047.
VIII. There are no statistical returns showing the progress of education in Upper Canada similar to those given under Lower Canada; in each district there are boards of education, trustecs of public schools, and government schoolmasters.
Return of the number of Schools in Upper Canada.

Salary of tistrict school-mirs. 90 l.stg. The average munber of scholars in each school is from 45 to 60 . There are school fees, which may average 4l. or 5l. per ann. Each district furnishes n school-house, and keeps it in repair.

Upper Canada College and Roynal Grammar school, city of Toronto, in the Hone district-Principal, 6002 .; first class master, 3001 .; second ditto, 3001 .; third ditto, 3001.; mathematical mnster, 300l. ; Freneh ditto, 200l.; writing and aritlmetic, 2001.; nssistant ditto, 100 .; master of preparatory school, 175l.; drawing master, 100l. The above masters have houses in the college premises.
There are upwards of 100 scholars in the respective forms of the college. The terms at the Upper Canadn College are 30l. currency per annum for board and tuition, with some extra college dues. It the York National Central School, which gave instruction in the year ending April, 1833 , to 402 boys and 235 , girls, the terms for instruction to those who are able to pay is one dollar per quarter, and no family is required to pay for more than two elindern, no matter how many there be.
This return is contined to the district schools. The common schools are not regularly returned, hut they amount to several humdred, and instruct at least 20,000 children, trale and female. In addition to $90 \%$ sterling provided by the legisiature, for the salury of a classical master (which insure in each listrict a school in which the common hrunelhes of an neademicol education nre taught), $2.55 /$, sterling per namime is nllowed for the maintenance of common schools in each district. This lnst sum having beenf foumb totally Inadequate, the l.egislature have for some time past made an additional annual grant of 5,08851 , sterling, to be apportioned among the several districts, necording to their extcut and population. By additional instructions from his Mnjesty, dated 13th Feliruary, 1836, an linstrument was completed under the grent seal of the Province, ineorporating the I'pper Canulat Academy, nt Cobourg, in the Newcastle District, for the general education of youth in the virions branches of biterature and science, on christian principles, and appointing certain Wesleyan ministers and othera to be a hoard of trustees for mauaging the same.
The territorial appropriations, with a view to proville means of puhlic instruction, are truly munificent. The number of acres of iand originally reserved in

Upper Canada for purposes of education amounted to 467,675, of which 170,719 acres were alienated by grant to individ:als, and in lieu thereof 272,600 acres were appropriated to a similar purpose, giving a sur. plus over and above the quantity deficient of 101,881 . There were also alienated, as a per centage to surveyors, 19,28:2 acres. Since this reservation 225,944 acres have been re-invested in the crown in lieu of scattered rescrves granted as an endowment to the University of King's Collcge, and 66,000 acres have been set apart for the benefit of Upper Camada Col. lege; after which there yet remains 258,330 disposable acres for the benefit and extension of edncation. The legislature also grants from $4,000 \mathrm{l}$. to $8,000 \mathrm{l}$. per annum. In 1836, the anount voted was $8,055 l$.
The state of the gaols in the Province is thus returned in the Blue llooks-

If the foregoing return be correct, it exhibits s considerabic increase in the number of prisoners, even allowing for the auginented population siuce 1828. The principal increase is in the misdemennours; but the felon list is also much extended since 1828. Considuring, however, the population of the colony, the number of prisoners is very sunll.

The prisoners are allowed bread，beef，pork，pota－ toes and salt，average cost for each prisoner，3．s． $6 d$ ． per week．No clothing allowed，hut bedding where necessary．Average cost per annum， 15 s．to 20s．per head．Prisoners are allowed to work at their own trade for their own benefit．
X．The government of the colony has been admi－ nisterd since 1791 ，by a Licatenant－governor，an Executive Comeil（five menhers），in legislntive ditto （ 30 members），and a House of Assemhly or Repre－ sentatives（sixty－two members）．The Executive Council members are chosen by the Crown and the Lleutenant－governor．The presiding councillor is the Archdencon of the province．

The Legislative Council is not composed（as in many chartered governments）of the snme body that constitutes the Exccutive Council of the govermmen： it is，in fact，a deliberative nssembly distinct from the exccutive department，and composed of members from various districts of the province，who hold their office for life，whose duties are exclusively legislative， and in which all that is done is openly and publicly discussed，and proceeded in according to the same for－ malities as are observed in the representative branch of the legislature．
The House of Assembly has representatives for counties forty－six ；for towns four ；namely，Toronto， one；Niagarn，one；Kingston，one ；and Brockville， one ：lincoin county returns four members；the other twenty－six countles two ench；excepting IIaldimand one；Kent one；Simcoc one；Lennox and Adding－ ton one ench；Prescott and Russel one；Carlton one；and Lanark one．The proceedings of the House are in Englisli，and not as in Lower Cannda，In French； the journals regularly printed，and the dehates In form after the manner of the Britisli House of Commons． The elective franchise，\＆c．，is the same as in lower Canada，as are also the other points not mentioned in this section．

The law is alministered by a Court of Queen＇s Bench，with two puisne judges，and in each of the eleven districts there is a district judge；there are also quarter sessions，\＆c．，na in England．The ma－ gistrates amount in number to nearly 500 ，dispersed over each ilistrict，accurding to its population and extent．

Upper Canada is now in a very difficent position to defend itself from an incursion across the frontier by the Americans as compared with its cundition during the last war ；it has at present about sixty regiments of enrolled and embodied militia，with a colonel，lien－ tenant－colonel，and major，ahout nine captains，ten licutenants，and ten ensigns to each regiment，with upwards of 50,000 as gallant rauk and file as could be turned out in any part of the united kingdom．

Militia Return to Colonial Offire for 1836．－Offi－ cers， 1,757 ；non－commissinned oflicers， 1,600 ；rank and file， $19,131:$ total， 42,488 ．Included in the nhove，are is troops of cavalry and 5 companies of artillery；the lntter have three light field－pieces，and the former are armed，but not completely．

XI．The general revenue for the purpose of sup－ porting the government in Upper Chmadn，and admi－ nistoring the laws，is raised by a duty of 21 per cent． on all goods mud nurehandise imperted by sea，at the ports of Quehec or Montreal；wines，liquors，and certain articles of lixury，have a specific duty laid upon them．This duty is praid by the importer at the Custom－house Quehec，Upper Canailn receiving one third of the sum collected each year．This amount， with a duty upon shop and tavern licences for vend－ ing spinits，distillers，hawkers，pedlars，and nuction． eers，and a duty upon ectain imports from the Uni－ ted States，which are also paid by the importer，form the public resources of the provinee，and is at the disposal of the Provincial Legislature，for the payment of public officers，and for such general purposes as may be deemed essential to the welfare of the people and the interest of the provinee．

It will he ohserved that the largest part of the income of Upper Cannda arisea from the duties paid in lawer Canada，at the ports of Montreal and Que－ bec．The cosunl and territorial revenues of $13,032 l$ ．， includes for $1836,7,7951$ ．of daties on crown timber； $2,961 l$ ．proceeds of sales of lots in the military re－ serve，＇loronto ；2，645 $\boldsymbol{r}$ ．patent and surveying fees on grants of land and leases； $581!$ ．sales of crown lands； 864l．crown＇s proportion of scizures；383l．rents of mines，ferries，\＆c．，and the remainder of fines，\＆c． The internal revenue of the province，conslsts of du－ ties levied on spirits，hoth on the diatillation and sule；af the importation of salt（firl．per bushel）from

Amount of tax at 3 d . in the pound sterling, 2,445l. 17s.

The expenditure of the above, is devoted solely to the improvement, \&cc. of the city. During the year a common sewer has been completed through the centre of the main street, and communicating with the bay. Side-paths have been laid down, and the principal street in, and approaches to, the city macadamized and paved.

The letter poatage includes the British and sea postage, as well as the internal rates in the provinces.

The nett proceeda, after defraying the expenses of the establishment in the provinces, and the conveyance of the mails, \&sc., are remitted to the General Post Office, London

The sums received for the transmission of newspapers and pamphlets by post, have, ever since the establishment of the post-office in Britiah North America, been the emolument of the deputy postmaatergeneral, out of which he allows to his sub-deputies a commission for collecting, of from 10 to 20 per cent., which allowance is in addition to their galaries or commiasion as postmastera.

For 1827 and part of 1828, materials cannot be found for making up a perfect atatement of the sums received for the transmission of newspapers.

Gross amount of Newspaper Postage paid by each Proprietor of Newapopers in the Canadas, since 1827.

The foregoing return is collated from the Journals of the House ol Aasembly, and the lateat year printed is for 1834. There are aeveral journals mentioned in dificrent yeara; but they nppear to have ceased pub-
lishing, as their names are omitted from the lists. In the return for 1834, 48 journals are named, some of them for the first time in that year and others of a year or more duration : four are published at Quebec,
eight at Montreal，eight at Toronto，funr at Kingston， three at Hamilton；two at each of the towns of Niagara，St．Catherines，St．Thomas，Cobourg，and Perth ；and one journal at each of London，Sandwich，

Tho Post－ofice receipts for Upper and Lower Canada for five years，is thus shewn－the increase indicates augmented Trafic．

The taxation is small. The public salaries are at the minimum; no good ever accrued from paying scantily the servants of a private person-and in the case of the public servants, I have seen enough in the French, Dutch, and Portuguese colonies, to compel me to impress strongly on the minds of my countrymen, the necessity of paying the officers of the goverument salaries, not merely sulficient to keep them honest, hut such as will holl ost a temptation for the greatest virtue, and the highest talent to take office. The salaries in Upper Canada of the public function. aries, appear to me barely adequate to the end which ought ever to be kept in view-honesty and ability.
The following sums were paid by the province in 1836:-Civil Establishment, 14,820l.; Contingent Expenditure, 4,909l.; Judicial Establishment, $5146 l . ;$ Contingent Expenditure, 91l.; Ecclesiastical Establishment, 11,407l.; Contingent Expenditure, 639l.; miscellaneous expenditure, $176,503 l$. ; pensions, $2444 l$. Total, $215,962 l$. The expenditure from the revenue of Upper Canada by its Legislature, for the improvement of the navigation of the river St. Lawrence
(commenced in 1834), anounted, in 1836, to 207,000l. and the whole estimated expense is $315,000 l$. stg.

In the British parliamentary estimates for the year ending 31st March, 1839, the following sums were voted for the expense of the Indian Department of Upper and Lower Canada :-

Estimate of the probable expenditure of the Indian Department in Lower and Upper Canada, for its establishment and pensions, from 1st April, 1838 , to 31st of March, 1839, 19,155l. 12s.

Lower Canada.--Secretary, Quebec, 224l.; Interpreter, Three Rivers, $96 l$.; Missionary, Restigouche, 691. ; Missionary, Lorette, 461.; Schnolmaster, Lorette, $18 l$. ; Superintendent, Montreal, $216 l . ;$ one Interpreter, Montreal, $96 l$. ; two Missionaries, Montreal (46l. each), $92 l$.; one Missionary, Montreal, 41l. ; three Schoulmasters, Montreal (201 each), 62l.; total, 965 .

Upper Canada.-Chief Superintendent, Toronto, 3501. ; Assistant Superintendent, River St. Clair, 128l.; Interpreter Superintendent, River St. Clair, 96l.; Superintendent, Coldwater, 216 l . ; Interpreter,

Coldwater, $96 l$.; total, 887 l. Amount of effective eatablishment, $1,852 l$.
Retired Allowances, Pensions, and Gratuities.Lower Canada.-L. J. Duchesnay, late Superintendent at Quebec, $80 l$. ; G. Maccomber, late Interpreter, $361 . ;$ J. B. De Niverville, ditto, 551.; Madame de Montignv, widow of Capt. Montigny, 271. ; Madame 1) Eschambault, widow of Capt. D'Eschambault, 70l. ; Madame Vincent, widow of Louis Vincent, Schoolmaster, 10l.; one Chief of Indian Tribes, for wounds in action, 21l.; three Warriors of Indian Tribes, for wounds in action (15l. each), 45l.; total, 346 l . J. G. Chealey, late resident at St. Regis, a gratuity of 781 .
Upper Canada.-Col. Givens, late Chicf Superintendent, $371 l$.; J. B. Clench, late Superintendent at Colborne, 100l.; Alexander M'Donell, retired Asaistant Secretary, 85l.; David Price, retired Storekeeper, Clerk and Interpreter, 79l.; Benjamin Fairchild, retired Interpreter, $50 l$.; Sarah Elliott, widow of Col. M. Elliott, 74l.; Catherine Brant, widow of Capt. Brant, 851.; Hester Hill, widow of D. Hill, Mohawk Chief, $18 l$. ; Timothy Murphy, superannuated blacksmith, 391. ; two Warriors of Indian Tribes, for wounds in action (15l. each), 30l.; total, $933 l$. Gratuities: George Ironsides, late Superintendent, Amherstburg, 108l.; James Winniott, late Superintendent, Brentford, $54 l$; Jacob Marten, late Interpreter, Brentford, 20l.; total, $182 l$.
Amount for retired allowances, \&c., in lower and Upper Canada, $1,279 l$.; amount of gratuities, ditto, ditto, 2601 . ; ditto of effective establishment, $1,852 l$.; total, 3,392l. Expense of Indian Present, Stores, \&c. 15,762l. Grand total, 19,155l.
This estimate is less hy $344 l$. than that voted last year. The saving arises from a reduction in the number of officers employed in the department. In future years the saving will amount to 604l. there being placed on this estimate a charge of $260 l$. for gratuities to some of the officers whose situations have been abolished.

As considerable interest is felt respecting the debt which Upper Canada is incurring for public works, I subjoin the following detail, as printed in the proceedings of the House of Assembly in 1833. The total amount outstanding of debentures in provincial currency is $138,833 l$. at an interest of five and seven eightlis per cent. per annum ; $52,666 l$. in debentures, bearing six per cent. have been redeemed-namely, $25,000 l$. for the militia; $16,000 l$. for the puble service in $1824 ; 3,000 t$. of the Burlington Canal; and 8,6561 . of the Welland Canal : of the debentures outstanding the several amounts are, Burlington Canal, 5,000l.; Welland ditto, 16,334l.; Burlington ditto, 4,500l.; Welland ditto, $50,000 \mathrm{l}$.: Kettle Creek Harbour, $3,000 l$. ; Welland Canal, $25,000 l$.; Burlington, ditto, $5,000 \mathrm{l}$; Oakville Harbour (loan to Mr: Chisholm), $2,500 l$. ; roads and bridges, $20,000 l$.; Kettle Creek Harbour, 2,500l.; Port Hope Harbour, 2,000l.; and Cobourg Harbour Loan, $3,000 l$. Total, 191,500l. The interest is paid half yearly, as the debentures fall due, and their amount varies from 25 to $100 l$.
In 1833, the Provincial Legislature authorised the borrowing of money by debentures to the extent of 70,000l., to be applied to the improvement of the St. Lawrence, but only to bear five per cent. interest, and not the usual interest of six per cent.; the conse. quence was, that the money would not be lent in either of the Canadas, or in the United States; Mr. Dunn, the Receiver-General, was then sent to England, and subsequently authorized to negociate a loan with the house of Thomas Wilson and Co. (paying
interest five per cent. in London, or six per cent. in Canada), to the extent of 200,0001 . for the purpose of redeeming the debentures that have been issued from year to year for the Welland Canal, \&cc., as stated in the preceding page. The Upper Canada legislature have also sanctioned the borrowing of 356,000l. for making the St. Lawrence navigable for ships from Montreal into Lake Ontario; of $50,000 \mathrm{l}$. to pay the debts due by the Welland Canal, and to keep it in order; and of $45,000 l$. for making roads and bridges in the province ; these sums, together with the existing Upper Canada debt, 258,1381 . will make the whole debt, ineluding minor items, upwards of 800,000 .
The following is a report of the Finance Committee of the House of Assembly of Upper Canada. [From H. A. papers, January 19, 1837.]

To the Honourable House of Assembly :
The Finance Committee, to whom were referred the public accounts sent down to your honourable house in the present session, have taken into their consideration the public debt of the province, with the amount required for the payment of interest thercon, torether with the permanent and unavoidable charges upon the rublic revenues, as also the amount of the ordinary resources of the province, for the purpose of submitting the same, in as compendious and explicit a manner as possible, as their first report.
They find the public debt, on the 1st January last, to amount to $587,67 \mathrm{ll}$. of which $178,350 \mathrm{l}$. is due in this province, bearing an interest of six per cent. and 409,321 in England, payable there at an interest of five per cent. The amount of the loans contracted in England are, in curreney, 666,666l.; of which were drawn on the 1st Jan ury, 409,32tl.; leaving still to be drawn to meet the several appropriations of the legislature, $256,345 l$. ; which, with 10 per cent. premium, will make the sum of $283,079 l$. Of the public debt, the following sums have been appropriated for the purposes hereinafter respectively named:-St. Lawrence Navigation, 253,000l.; Welland Canal, 209,500l. ; Burlington Canal, 29,0911.; Inland waters, Newcastle District, 16,000l.; Tay Navigation, 1,000l.; Desjardin's Canal, 12,000; Kettle Creek Harbour, 6,500l. ; Port Hope Harbour, 2,000t.; Cobourg Harbour, 4,000l.; York Harbour, 2,000l.; River Trent Bridge, $4,625 l$. ; Brantford Bridge, 1,500 ; Dunnville Bridge, 1,250 ; Paris Bridge, 1,500l.; West Gwillimbury Bridges, 500 l . ; Roads in the vicinity of York, 45,0001 .; Bank of Upper Canada, 25,000l.; total, 594,4661 .
All or most of the ohjects for which the above out. lay has been made are such as, in the opinion of this committee, will eventually pay principal and interest, and be a productive source of revenue to the province; and cannot therefore be considered in the light of a debt contracted and chargeable on the funds of the province, for which no specific return is expected.
In a new country like Canada, with a limited revenue, great public works can only be constructed upon the credit of the province; and such credit should be freely extended, when it can be safely calculated that the proceeds of the works will ahortly pay the interest and eventually redeem the principal. Specitic ways and means should, however, be provided to meet the interest, when it cannot be borne from the ordinary revenues. The amount of intercst payable on the present debt is $10,086 \mathrm{l}$. in Upper Canada and 20,466l. in England, in all 30,552l. ; and when the balance of the loan effected in England shall be drawn, the whole amount of interest payable will be $43,420 l$ annually. According to the estimates and the information obtuined hy your conimissioners, tic probable amoult
required for th will be 299,22
Interest on appropriation f required for ci of the Legislat district sehool 900l. ; officers of light houses required), 1,00 Inspector-Gen pensioners, 120 97,000l.; Prov appropriated by appropriated b redemption of be drawn on th premium there revenue to be ditto from Upl -the sum req balance for the Legislature, 64, the revenue of upon the loans the Legislature, $86,000 \mathrm{l}$. "The gross le is given at 14,0 $17,680 l$. or 48,1 ? "The gross n
required for the public expenditure, in the year 1837, will be $299,220 l$. as follows, viz.

Interest on the public debt, $40,000 l$. ; permanent appropriation for the administration of justice, 7,223l.; required for civil expenditure, $9,892 l$.; contingencies of the Legislature, 11,000l.; conımon! schools, 3,150l.; district achool masters, 1,200l.; militia pensions, 900 l . ; officers of the Legislature, $890 l$. ; maintenance of light houses (by law), $600 l$. ; ditto (additional sum required), 1,000l.; Adjutant-General of Militia, 650l.; Inspector-General, 406l.; Receiver-General, 778l.; six pensioners, $120 l$. ; improvement of the St. Lawrence, 97,000l.; Provincial Penitentiary, 5,000l.; amount appropriated by acts of last session, $\mathbf{1 0 4 , 9 3 8} \ell$; amount appropriated by acts of present session, 9,473l.; redemption of debentures, $5,000 l$. The balance to he drawn on the loans in Finglard, with the probable premium thereon, is $283,079 l$.; probable amount of revenue to be received from Lower Canada, 53,000l.; ditto from Upper Canada, 28,000l.; total, 364,079l. -the sum required for the year 1837, 299,220l.; balance for the present year at the disposal of the Legislature, 64,859l. The permanent charges upon the revenue of the province, including the interest upon the loans, the contingencies for the support of the Legislature, light houses, \&e. are in round numbers, $86,000 l$. The ordinary resources to meet this expenditure will be, received from Lower Canada, $53,000 l$.; ditto from Upper Canada, 28,000l.; total, $81,000 l$. Leaving to be provided to pay interest in 1838, 5,000l.

Security for the discharge of duties in Upper Canada, 1836. Receiver-General, 80,000l.; Commis. siuner of Crown Lands, $10,000 l$.; Agent for sale of clergy reserve:; $10,000 l$.; Secretary to Colonial Corporation, 2,000l.; Sheriffs, 2,000l.; Inspectors of Licenses, 1,000l.; Collectors of Customs, 2,000l.

As the Post Office Department in the colonies requires considerable attention, an extract is given from a report made to the House of Assembly of Upper Canada by the Finance Committee, and printed in the journals for 1836. Appendix, Vol. I. No. 52.
"Your committee have not the means of ascertaining whether the statements laid before them as com puted by Mr. Stayner, the Deputy Post Master General at Quebec, are or are not correct. They have been obtained with great difficulty after the delay of a year had taken place from the date of the address of the House to the late Lieutenant Governor requesting information, they enter into many minute and impartant details, and as reported herein they contain the greatest fund of information on the subject of the financial affairs of the post office of the Canadas ever laid before the Legislature. From a perusal of their contents it will be seen, that in 1834 the number of post offices in the Canadas was 234, or three less than in 1833; the number of miles of post roads only 3,988 , or seven less than 1833 ; the wages to carriers, 10,371l.; the salaries, 3,4676 .; the contingencies, 1,005l.; the dead letters, 1,5296 .; the gross revenue, $30,632 l$., of which $12,092 l$. were remitted to London.
"The salaries in both pruvinces are stated in the returna, of which the above is an abstract, at $3,467 l$. Elsewhere the emoluments of the post masters in Upper Canada alone for the same year are made to be 4,732l. Hence it is evident that the above sum of 30,632l. is not the gross postage."
"The gross letter postage of Upper Canada in 1832 is given at $14,009 l$.-in $1833,16,510 t$. and in 1834 , $17,680 l$. or $48,199 l$. In these three years.
"The gross newspaper postnge for this province
for 1832, was $1,336 \%$.-for 1833, 1,433l. and for 1834 $1,231 l$, or in these thrce years, $4,000 l$.
" Nearly the whole of the newspaper postage, 4,000 l., went to Quebec and formed a perquisite of Mr. Stayner's office there. Of the gross letter postage reckoning in the proportion that the whole revenue derived from the Canadas bears to the whole revenue derived from Upper Canada, which is the greatest part, upwards of $20,000 l$. of specie have been taken out of the province and sent to London chiefly as profit or surplus revenue.
" Mr. Stayner states that he has remitted to London of aurplus postage collected in both Canadas, as follows :-In 1832, 12,519l.; 1833, 10,833l.; 1834, $12,092 l$. ; or in three years, $35,444 l$. a very small part of which was British postage. The inland postage of letters from Nova Scotia and New Brunswick, from both Canadas, in 1834, was only 562l. Mr. Stayner transmitted to Washington, as United States revenue, in and for 1834, 22,351 dollars.
"There were collected in the Canadas, in 1834, of Inland British American postage on letters forwarded to England by the Falmouth packets, via Halifax, 16l. 4s. 6 l.
" Am"ng the papers laid before the house are detailed statements of the expense of conveying the mails in both Canadas in each of the following years, viz. 1832, 8,644l. : $1833,9,896 l . ; 1834,11,203 l$. And Mr. Stayner atates the contingent expenditure of the department, which is chiefly in the Lower Province, for printing, advertising, mail locks and keys, seals and stamps, \&c. at, for $1834,1,874 l$.
"There is also a large and costly establishment of elerks, accountants, sorting clerks and other officers, the greater part of whom could be dispensed with in case the general post office of Upper Canada were placed at Toronto.
" Mr. Stayner gives his salary and emoluments as Deputy Post Master General, as follows:-In 1832, 3,123l.; 1833, 3,311; 1834, 3,122; to which we may add the allowance made hin for his expenses to London of $842 l .=10,398 \mathrm{l}$. $10,398 \mathrm{l}$. of ineome in three years to one office, residing nut of Upper Canada, deriving his chicf emoluments from the industry of her population, and yielding them a most unsatisfactory return. This is a state of things that is surely susecptible of improvement.
"The patronage of the department is enormous. The largest gross amount of letter postage in Upper Canada were collected, as follows: at (year 1834.) Toronto, 4,366l.; Kingston, 1,314l.; Hamilton, 582l.; Brockville, 506l.; Amherstburgh, 453l.; Bytown, 395l.; Belleville, 383l.; London, 337l.; Niagara, 330l.; Prescott, $314 l$.

"The emoluments of the post-masters of the following offices, in 1833 and in 1834, were as follows : \begin{tabular}{lll|lll}
Toronto \& $£ 738$ \& £713 \& Prescott \& £137 \& £138

 

Kingston \& 470 \& 503 \& Brockville \& 118 \& 118

 

Queenston \& 411 \& 438 \& Cobourg \& 102 \& 118 <br>
Hamilton \& 175 \& 184 \& Amheratburgh \& 110 \& 103
\end{tabular} Niagara

$152 \quad 146$
"The postage collected at Queenston in 1834, by the post master, who is also the high sheriff of the district, amounted to 721 . He receives and distributes the United States mail on that frontier. The whole of the emoluments of the post masters of Upper Canada, in 1833, was 4,428l.; and for 1834, 3,732l."
XII. The maritime trade of Upper Canada is carried on through the ports of Quebec and Montreal, and
thence conveyed to the upper province. There is therefore no mode of ascertaining the amount of the importa and exports. The province receives one third of the duties levied at Quebec and Montreal, which amounted in 1836, to 50,7191 . sterling.

A considerable trade is carried on along the American frontier, on the lakes and River St. Lawrence. Numerous steam vessels and schooners are constantly running during the navigable season, between the different ports belonging to the province and the United States, on lakes Ontario, Erie and Huron.
The imports consist of woollens, cottons, linens, hardware, castings, coal, leather, earthenware, groceries, wines, spirits, and almost every description of Britlsh manufacture.

The exports consist principally of wheat, flour,
lumber, pot and pearl ashes, pork, and tobacco from the western districts
XIII. Amount of paper currency in circulation in 1836. [B. B.]-There are three banks in the province, chartered by acts of the Legislature. "The Upper Canada Bank," capital, 200,000 l. "The commercial bank of the Midland District," capital, 200,000l., and the "Gore District bank," capital, 100,0001 . There are notes also in circulation, belonging to three private banks, viz. "The Agricultural Bank,"" "the Farmer's Bank," and the "Bank of the People." Notes of the bank of Lower Canada are also in partial circulation. The gross amount of Government Debentures, outstanding at the close of the year 1836, is as follows: In Upper Canada 176,850l. currency, or 159,165l. sterling. In England 241,600l. sterling.

Return by the St. Lawrence Inland Marine Assurance Company in 1836.

The amount of capital, stock subscribed is $100,000 \mathrm{l}$., of which ten per cent, or $10,000 \mathrm{l}$, have been paid in. The funds and property of the company consist of the following, viz. 332 Shares stock, in the bank of Upper Canada at $12 l$. each, amounting at per value to
138 Shares stock of the Midland District Commercial Bank, at 25l. each, amounting at per value to
79 Shares, stock in the city bank, Montresl, at 25l. each, amounting at per value to
400 Shares, stock in the Gore Bank at 12l. 10s. each, aunounting at per value to 5,0001 ., on which three instalments of ten per cent each have been paid, amounting to
Bills receivable, 617i. Cash on hand, 1661. Total

## Total

The property insured during the last year amounted to 337,1931 . 19s. currency; upon which the premium charged amounted to $2,3161.9 \mathrm{~s}$. The amount of losses paid by the company, $1,304 l$. currency. A small claim on the company, amount not yet ascertained, remains to be settled.
XIV. Some of the land in Upper Canada has been purchased by the British Government from the Indians, who receive their payments annually in clothing, ammunition, \&c., and such articles as they require. The purchases in 1818 were, October-Lake Huron, 1,592,000 scres, at 1,200l. per annum ; the Mississagua, 648,000 acres, at 522 l. per annum. In November, same year, the Rice Lake of $1,861,200$ acres, st 740l. per annum ; in April, 1819, the Long Wood of 552,190 acres, at 6000 . per annum ; in February, 1820, the Mohawk purchase of 27,000 acres, at 4501 . per annum ; being $4,680,390$ acres, at an annual charge of $3,512 l$,, which is defrayed by an appropria-
tion of part of the amount received for fees on the grants of land to emigrants.

No person, except United Englishmen, Loyalists (on the separation of the United States from Great Britain, those who preserved their allegiance to the British Crown and fled to Canada, were entitled to 200 acres of land each, by Act of Parlisment), or those entitled by existing regulations to the Government free grants, can obtain any of the waste Crown lands otherwise than by purchase. The sales take place under the direction of a Commissioner on the first and third Tuesday of every month in the different districta. The lands are put up at an upset price, of which notice is given at the time of advertising the sale, and the conditions are one-fourth of the pur-chase-money paid down; the remainder at three equal annual instalments, with interest at 6 per cent. payable on and with each instalment: when this ia completed, a patent for the lands is issued, free of charge. The clergy reserves when sold are, as to terms, 10 per cent. down, and the remainder in uine annual instalments of 2 per cent. each, with interest. There are occasional sales of town lots, \&c. The general size of a township is 69,000 acres-twelve miles by nine, say with nine lines of nire miles each (called concession lines), 400 rods apart, upon each of which a narrow line is reserved for a road. There are also two cross or check lines, each at right angles to the concession lines, and three miles apart, apon which the corners of the lots are marked, eighty rods apart; thus 400 rods deep, with eighty rods front, gives 200 acres to each lot, with a road in the front and rear of the farm.
It is difficult to ascertain the quantity of lands settled or ungranted in the province. In 1830, according to a document in the Surveyor-general's office, the surveyed township appeared thus-Granted prior to 1804, 4,500,000 acres; ditto since 1804, $3,800,000$ acres ; to be settled by Colonel Talbot, 302,420 acres ; Total granted, 8,602,426 acres. Remaining ungranted, 1,537,439 acres; Crown and clergy reserves two-sevenths, $4,142,750$ acres; Total, $5,680,189$ acres. Although a great part of the Crown reserves have been sold to the Upper Canada Company, and a very valuable part of them given to the

University (see Education), it is estimated that there are still upwards of $5,000,000$ acres of good land open for settlement, without going north of the back line, where $7,000,000$ or $8,000,000$ acres of excellent soil may yet be found.

Statement shewing the quantity of surveyed Lands remaining vacant and grantable, 31 st December, 1835. Quantity remaining unlocated 31st December, 1834, 1,527,164 acres; ditto unlocated in 1835, 121,346 acres; total, 1,405,818.

Tounships returned as surveyed in 1835.-Ross, 43,627 acres ; Pembroke, 5,663 ; Westmeath, 48,925 acres; Somerville, 20,270 ; total, 118,485 acres. Total quantity vacant and grantable, $1,624,303$ acres.

Exelusive of the lots remaining ungranted in the surveyed townships before mentioned, the rough estimate by Mr. Riehards, the Commissioner of Land, at present available, in round numbers, is - in townships not surveyed from Luther to Zero, 730,000 acres; in the Neweastle district, and joining the Home ditto, 550,000 acres; in the western ditto, west of the Upper Canada Company, 350,000 aeres; in the London ditto, north of ditto, 340,000 acres ; in ditto, not yet purchased from the Chippewa Indians, $2,500,000$ acres. Total, $4,470,000$ aeres.

The area of Lake Superior is about 35,000 square miles ; of Lake Huron, 20,000 ditto; of Lake Michigan, 21,000 ditto; of Lake Erie, 10,000 ditto; and, including Lake Ontario, the surface covered by these five lakes is upwards of 100,000 square miles, or $64,000,000$ acres !
XV. Copper and iron is abundant in various parts of the province; the latter particularly, at Charlotteville, about eight miles from Lake Erie. It is of that deseription whieh is denominated shot ore, a medium between what is called mountain and bog ore, and the metal made is of superior quality. At the Marmora Iron Works, about 32 miles north of the Bay of Quinté, on the River Trent (which are situate on an extensive white rocky flat, bare of stones, and apparently in former times the bottom of a river, exhibiting, like many other parts of Canada, different ridges and water-courses), the iron ore is rich to an excess, some speeimens yielding 92 per cent.; it is found on the surface, requiring only to be raised up. There is abundance of the requisite matcrials of limestone and pine.

The forest trees most prevalent are beech, maple, bireh, elm, bass, ash, oak, pine, hickory, butternut, halsam, hazel, hemlock, cherry, cedar, eypress, fir, poplar, sycamore (vulgo, button wood), white wood, willow, and spruce. Chesnut, walnut, and sassafras, though frequent at the head of Ontario, are seldom met with north of the Lake. The valuable sugar maple is common in every district. The butter nut is plentiful; the keruel is nutritious and agreeable to the taste, the young nut makes an excellent pickle, the bark dyes a durable brown colour, and an extract from it makes a mild and safe cathartic.

An immense quantity of oak and pine timber is annually sent down to Montreal and (quebec. Tobaceo and hemp are in process of general eultivation ; and the potatoe of Europe, conveyed to its original continent, thrives luxuriantly. Wheat is the staple of the province, and bears a higher price than any other in the Montreal and Quebec markets. All the English fruits, vegetables and grains fiourish luxuriantly, and yield in abundance their treasures with the smallest possible attention.

There are no means of ascertaining the number of sheep or goats.
Produce and Price of Produce.-Tobaceo is produced in the western district of an excellent quality. Every species of agricultural produce is cultivated; but there are no means of ascertaining the correct quantity of each. Wheat is brought to the market, and is a principal export of the province. The other description of produce is generally cultivated for home consumption.
The price of wheat per bushel varies in the several districts, from $3 s .9 d$, to $4 s .6 d$. currency, during the year, depending in a great measure on the facility of its transportation to market. The average price of oats during this year (1836) was 1 s .3 d . per bushel; ditto barley, 3s. to 3s. $6 d$. ditto; ditto hay, $2 l .10 s$. per ton; ditto potatoes, 1s. $3 d$. to 1s. $6 d$. per bushel; ditto fiour, $1 l .2 s .6 d$. to $1 l .5 s$. per barrel.

Prices in Upper Canada.-Horned cattle, from 131. to $18 l$. per yoke; horses, $10 l$. to $25 l$. each; sheep, 15s. each; swine, 16.53 . each; milk, $2 \frac{1}{2} d$. per quart; fresh butter, $7 \frac{1}{3} d$. to 1 s . per lh.; salt ditto, $6 d$, to $7 \frac{1}{3} d$.; chee:'e, $6 d$. to $9 d$. ; wheaten bread, $6 d$. to $8 d$. per loaf of four lbs.; beef, $3 d$. to $5 l$. per lb.; mutton, $4 \frac{1}{2} d$. to $7 d$. ; pork, $3 d$. to $5 d$. ; rice, $3 \frac{1}{2} d$. to $4 d$. ; coffee (green) $10 d$. to $1 s$. ; tca, $2 s .6 d$. to 5 s. ; sugar, $6 d$. to $8 \frac{1}{2} d$; salt, $1 \frac{1}{2}(l$. ; wine, $5 s$. to $15 s$. per gallon ; brandy, 5 s . to 8 s .; beer, 1 s . to 1 s .3 ll .; tobacco, 10 d . to $1 \mathrm{~s} .3 \dot{\mathrm{~d}}$. per lb.

Wages for Labour.-Domestic, 1l. 5s. to $2 l$. per month; prædial, $2 l$. to $3 l$., and $4 l$. to $5 l$.; the former with board, and the latter without board; trades, 6s. 3d. to 7s. 6d. per day.
The above are the average prices at the close of 1836. During the winter months, every article is in advance; but this return may be taken as the average prices throughout the year.

Manufactures.-It appears from the Assessment Rolls that there are in the province 551 grist mills, and 843 saw mills. The domestic manufacture of works is very common. Whiskey distilleries, breweries, tanneries, and pot and pearl-ash manufacturies are very numerous. In Johnstown District there is I steam-engine foundry, 1 brasa foundry, and 1 soap and candle factory; in Newcastle District, 16 fulling machines and 1 foundry for castings ; in Niagara District, 9 fulling mills, 14 carding machines, 5 spinning mills, and 1 salt manufactory ; in Midland District, 2 sir furnaces for small castings, 1 large furnace with
powerful la mschinery, chinery for and fulling, cloths.

A fresh w the shores have been se there are rep ing been obs lake.

In fine fis equalled; th and is capit been taken rather rare preferred to Montreal.

Section 1. Nova Scotia proper connected with the S. E. part of the continent of North America, by a narrow isthmus (eight miles wide), is situate between the parallels of 43. and 46. of north latitude, and the meridian 61. and 67. west longitude; it is bounded on the north by the Strait of Northumberland, which separates it from Prince Edward's Isle; on the N. E. by the Gut of Canseau, which divides it from the island of Cape Breton, on the S. and S. E. by the Atlantic Ocean, on the W. by the Bay of Fundy, and on the N. W. by New Brunswick. In length it is about 280 miles, stretching from S. W. to N. E., but of unequal breadth, varying from 50 miles at Black Rock Pier, to 104 miles at Bristol, and embracing a superficies of 15,617 square miles, or $9,994,880$ acres.
II. Although the territory, known under the title of Nova Scotia, was probably first visited by the Cabots in their voyage of discovery in 1497 (and the ancient authorities state such to be the case), the carliest authentic account we possess of its Europern colonization was by the Marquis de la Roche, who by the orders of Henry IV. sailed from France in 1598, with a number of convicts from the prisons, whom he landed on the small and barren 1sland of Sable, situate about 50 Ieagues to the $S$. E. of Cape Breton, and 35 of Canseau, about ten leagues in circumference, and interspersed with sand-hills, briarplots, and fresh-water ponds.

After cruising some time on the coast, the Marquis was compelled by stress of weather to return to France, leaving on Sable Isle forty unfortunate convicts who had been landed on this barren spot, where after seven years hardships twelve only were found alive, in a most wretched and emaciated state, on the French monarch having sent Chetodol, the pilot of the Marquis De la Roche, to look after and bring them back to France.

The next visitation of Nova Scotia (or, as the French called it Acadia, this name was given to Nova Scotia, New Brunswick, and part of the State of Maine; was by De Monts and his followers, and some Jesuits, in 1604, who esaayed for elght ycars to form settlements at Port Royal, St. Croix, \&c. but werc finally expelled from the country by the English governor and colonists of Virginia, who claimed the country by right of the discovery of Sebaatian Cabot, and considered the French colonists of De Monta as encroachers or intruders on the charter granted to the I'lymouth Company, in 1606, and which extended to the 45 . of north latitude; the right of occupancy being then considered invalid and the doctrine admitted-
" A tine it uas-to all be it known,
When all a man sailed by or saw, was his ou'n."
Eight years elapsed after the forcible expulsion of the French colonists from Port Royal and other parts of Acadin, before the Engliah legan to think of settling on the peninsula, but in 1621 Sir William Alexunder npplied for and ohtained from Jamea I., a grant of the whole country, which he proposed to colonize on an extensive scale; it was named in the patent

Nova Scotia, and comprised within the east side of a line drawn in a north direction from the River St. Croix to the Gulf of St. Lawrence.

The Nova Scotia baronets were created by Charles I.; they were to contribute their aid to the settlement, upon the consideration of each having allotted to him a liberal portion of land; their number was not to exceed 150; they were to be endowed with ample privileges, and pre-eminence to all knights called Equites Aurati, but none of them were to be baronets of Nova Scotia, or of Scotland, till they had fulfilled the conditions prescribed by His Majesty, and obtained a certificate of performance from the governor of the colony. The patents were ratified in parliament.

Within about a ycar after the sealing of his patent, Sir William Alexander despatched a number of emigrants to take possession of his grant, who, after wintering in Newfoundland, arrived in 1623 at Nova Scotia, where they found many French settlers, the descendants of those who had remained at Port Royal and other places, to whom were added adventurers from the St. Lawrence and France; under these circumstances the English emigrants thought it prudent not to attempt to take possession of the country, they returned to England, and war breaking out soon after, between England and France, efforts were made by Sir William Alexander and his friends to drive the French from Nova Scotia, but for several years all the efforts of De La Tour (to whom Sir Willlam Alexander had assigned or leased his grant) and others were ineffectual until Oliver Cromwell sent Major Sedgewick, with an armed force in 1654, and Nova Scotia for the third time fell into the possession of the English, nominally at least: Port Royal being taken by Scdgewick's troops, while French settlers were estahlished in different parts of the country; these were, however, finally subdued, and the protector Cromwell granted the claims of Charles La Tour as heir to his father, who received the colony from Sir William Alexander. Cromwell thought fit to associate with La Tour, Thomas (afterwards Sir Thomas) Temple, and William Crowne Temple purchased La Tour's share, re-established the different aettlements, and expended $16,000 l$. in repairing the fortifications, but while the colony was emerging from distress und obscurity, it was ceded to France by the treaty of Breda in 1667.

For 20 years succeeding the treaty of Breda, the colony enjoyed repose, and some progress was made in establlshing fisheriea and extending the fur trade, but upon the renewal of hostilitics in 1689 , it was still deficient in means of defence, and Port Royal was taken by Sir William Phipps, with a squadron from Massachusets; the Frencb, as usual still held themselves masters of the other parts of the peninsula; the English, however, retained a nominal posscssion, sometimes fighting for a district, at others ravaging the French settlements; but by the treaty of Ryswick, in 1696 , the colony was once more re. stored, or tather left unmolested in the possession of

France; bu in 1701, p Massachuse to the Brit part of the not be resto

France; but on the breaking out of the war again in 1701, preparations were made in England and Massachusets for the total subjugation of Nova Scotia to the British arms, with a distinct avowal on the part of the crown that if again conquered it should not be restored to France.

Sir William was born in 1650, at Pemaquid, in New England, he was the son of a blackamith, and commenced life as a shepherd : at the age of 18 he was apprenticed to a ship-carpenter, aubsequently built a small vessel for himself, and in the course of time was successful in raiaing̈ $300,000 l$. sterling from a Spanish wreck at the Bahamas. He was knighted by James II. and employed on several important expeditions by England, and by his Euturnita, the colonista.

The expedition for the capture of Nova Scotia sailed from Boston Bay on the 18th September, 1710, and after some fighting, Port Royal capitulated on the 29th; the other stations subsequently gave in their adhesion to the British government, and at the treaty between France and England, in 1713, Nova Scotia was finally ceded to the latter power, who changed the name of Port Royal to Annapolis Royni, in honour of Queen Anne-made it a scat of government, and named a council of the principal inhabitanta for the management of the civil affairs of the province.

By the 12th article of the treaty between France and England, of the 11th April, 1713, all Nova Scotia, with its ancient bourdaries, as also the city of Port Royal, and the inhabitants of the same, were ceded to Great Britain, " in such ample manner and form, that the subjects of the most Christian king shall be hereafter excluded from all kinds of fishing in the said seas, bays, and other places on the coast of Nova Scotia, that is to say, on those which be towards the east, within 30 leagues, beginning from the island commonly called Sable, inclusively, and thence atretch. ing along towards the S. W."

Little further remains to be stated respecting the acquisition of the colony that would be interesting to the general reader, or within the scope of this work: from 1713 to 1749, Nova Scotia was neglected by England. The French pretended to draw a distinction between Acadia and Nova Scotia; and as the country was ceded under the former appellation, they endeavoured to maintain that Acadia was the name of the peninsula which they had alone ceded to Britain, and that the rest of the country lying between New England and the Bay of Fundy, was a part of New France, which, together with Canada, still belonged to them, -but the trick was exposed by the inhabitants of Massachusets.

The designs of the French to acquire by fraud what they could not obtain by force, drew the attention of the British public to the importance of the colony, and encouragements were held out to retired officers, \&c., to whom offers of grants of land were made; 3,760 adventurers were embarked wlth their families for the colony. Parliament granted 40,0006. for their support, and they landed at Chebucto Harbour, when the town of Halifax was soon erected by the new emigrants under the command of their Governor the Hon. Edward Cornwallis. The French settlers (under the name of Neutrals) were atill very numerous in the colony, and with the aid of the Indians held the British in constant alarm, and murdered many of the settlers; after various contesta and much cruelty on either side, the 'Neutrals' to the number uf several thousand, were forcibly expelled from Nova

Scotia, and carried in British tranaports to Massachuaets, Pensylvania, \&c., leaving nothing behind them but smoking ruins and deaerted villagea. I agree with Mr. Haliburton, the hiatorian of his native country (who has written an admirable history of Nova Scotia, which was printed and got up in a most creditable manner, at Halifax, in 1829.) in deploring the cruel events that took place on this diatressing occasion, but the blame is to be attributed to the crafty policy of the French Court at Paris, who inatigated the Neutrals by every possible means to harass and annoy the English.

In 1758, a constitution was granted to Nova Scotia, cousisting of a House of Assembly for the Represent-atives-a Legislative Council and Governor representing the crown : in the same year the capture of Louisburgh, in Cape Breton Isle, gave additional sccurity to the colony, which now began to improve. In 1761, on the election of a new Parliament in Nova Scotia on the accession of George III. to the crown of Great Britain, the number of representatives returned were 24, namely, two for each of the counties of Halifax, Lunenburgh, Annapolis and King's; four for Halifax township, and two for each of the townahips of Lunenburgh, Annapolis, Horton, Cornwallis, Falmouth and Liverpool. By the treaty of Paris, 10th February, 1762, France resigned all further claima on any of her former possessions in North America. Nothing of any consequence has since occurred in Nova Scotia to require a detailed notice.

New Brunswick and Cape Breton were separated into two diatinct governments in 1784: the latter was re-annexed to Nova Scotia (of which it now forms a county) in 1819. The several Governors, since the British acquisition, were-

At Annapolis Royal.-1710, Col. Vetch, governor ; 1714, F. Nicholson, ditto; 1719, R. Phillips, ditto; 1722, J. Doucett, ditto; 1725, L. Armstrong, ditto; 1739, J. Adams, ditto ; 1740, Paul Mascarene, ditto.

At Halifax.-1749, E. Cornwallis, governor; 1752, T. Hopson, ditto; 1754, C. Lawrence, Lieut.-Gov.; 1756, C. Lawrence, Gov., and R. Monkton, Lieut.Gov. ; 1760, J. Belcher, ditto ; 1763, M. Wilmot, Gov.; 1766, M. Francklin, Lieut.-Gov.; 1766, Hon. Lord W. Campbell, Gov. ; 1772, M. Francklin, Lieut. Gov.; 1772, Lord W. Campbell, Gov. ; 1773, F. Legge, Gov., M. Franklin, Lieut.-Gov.; 1776, M. Arbuthnot, Lieut.-Gov.; 1778, R. Hughes, ditto ; 1781, Sir A. S. Hammond, ditto; 1782, John Parr, Gov., and Sir A. S. Hammond, Lieut.-Gov.; 1783, E. Fanning, ditto; 1792, J. Wentworth, ditto; 1808, Sir G. Prevost, ditto; 1811, A. Croke; 1811, Sir J. Sherbrooke, ditto; 1816, Lieut.-Gen. the Right Hon. George, Earl of Dalhousie, ditto ; 1820, Sir J. Kempt, ditto ; 1828, Sir P. Maitland; February, 1834, Lieut. Gov. Sir Colin Campbell.
III. The most remarkable natural feature on this peninsula of the North American continent is the numerous indentatlons along its coast.

A vast and unlnterrupted body of water impelled by the trade wind from the coast of Africa to the American continent, atrikes the Nova Scotia shore between 44. and 45 . N. latitude, with a force aimost adequate to its total annihilation-only a barrier of 15 niles in brcadth between the Atlantic Ocean and the Gulf of St. Lawrence seems to have escaped such a catastrophe: while a space of nearly 100 miles in length and upwards of 40 in breadth has been awallowed up in the vortex, which, rolling its tremendous tides of from 60 to 70 fect perpendicular height up the beds ol the adjoining rivers, has converted them
into inland seas, traversing the province from west to east for more than half its length.

The combined influence of the same powerful agent and of the Atlantic Ocean has produced (though in a less striking manner) the same effect upon the south shore. Owing to the operation of these causes, the harbours of Nova Scotia for number, capacity and safety are unparalleled in any other part of the world: between Halifax and Cape Canseau are 12 ports capable of receiving ships of the line, and there are 14 others of sufficient depth for merchantmen.

Respecting the interior of the colony, it may be observed that of 15,617 square miles, the superficial contents of Nova Scotia, one third is supposed to be occupied by lakes of various shapes and sizes, 80 spread out that there is no point in the province 30 miles from navigable water. The surface is undulating, there being scarcely more than half a mile at a time of level ground, but the elevation is inconsiderable, the highest land (Ardoise hill or Arthur's Seat) being only 810 feet above the level of the sea. There is a range of high lands on the west coast, between St. Mary's Bay and Argyle, and another more extended and lofty on North Coast, skirting the Bay of Fundy, between Annapolis and Windsor, or indeed to the head of Minas basin. The seenery throughout the province is beautifully picturesque, owing to the great variety of hill and dale, and the numerous rivers and lakes scattered throughout the country. [Sec Colonial Library, vol. vi.]

The harhour of Halifax has not perhaps a superior in any part of the world. It is situate in 44.40 N . latitude, 63.40 . W. longitude, nearly midway between the east and west extremity of the peninsula-and from its situation being directly open to the Atlantic and its navigation searcely ever interrupted by ice (as Quebec is annually), it is our chief naval station in North America, and affords safe anchorage for 1000 ships. Several islets exist at the entrance between Sambro Head and Devil's Island, rendering the navigation aprarently rather intricate, but even a stranger with proper precaution has nothing to fear. The channels east and west of M'Nabs island are guarded by York redoubt, Sherbrooke tower, East battery, and several others. The city of Halifax is built on the cast side of a small peninsula on the declivity of $n$ hill, which rises gradually from the water's edge; its length heing about two miles, and its breadth about half a mile, with wide strects crossing each other at right angles, and containing nearly 2000 houses, and a population not far short, including strangers, of 20,000 .
IV. Nova Scotia is divided into four geological divisions, extending from S. W. to N. E. nearly, and running in a longitudinal direction with the greatest diameter of the country. The south side of Nova Scotia, bordering on the Atlantic and forming a narrow strip from Cape Sable to Cape Canseau, is a primary district and composed principally of granite. gnejss and mica slate. The second division is three to four times the breadth of the first, and extends also the whole length from Cape St. Mary to Chedabucto Bay; it is comprosed of slate, greywacke, and greywacke slate. The third is a trap district, and forms a narrow slip from Briar island to Mina basin, including the whole of the North Mountains, and the islands, \&e. on the Nova Scotia shore of the Bay of Fundy, The fourth is a rad sandstone distriet, and extends from the Gut of Canseau, along the Northumberland strait. The fossil remains found in the mountain limestone, transition siate, \&e. are extremely
curious. The palm tree, the bamboo, i'se cactus may be dug from the rocks and coal seams. All indicat ing that Nova Scotia at one time enjoyed a tropical climate. [See Dr. Gesner'a valuable work on the Geology of Nova Scotia.]

## * By G. R. Young, Esq., of Nova Scotia.

Marble, alabaster, porphyry, \&c., abound. Beds of rich iron ore have been found in various directions; the sulphuret of learl has been found in narrow velins among the limestone at Guys' river; the copper ore is rich, and doubtless many other minerals will hereafter be discovered.

The soll of Nova Scotia is of various qualities; there are extensive alluvial traets, producing as rich crops as anty soll in Eingland would do; some of the uplands are sandy and pour, while, singular enough, the tops of the hilis are productive to $n$ high tegree.

On the sou ficult of cul excellent er the heads o fertile tract
V. The winter, and the case nt years being and mental ease and col the colony, other fevers regular, with on any inclit is a delicious weather unt

On the south coast the land is so rocky as to be difficult of cultivation, but when the stones are removed, excellent crops are yielded. The banks of rivers and the heads of bays on the north coast afford many fine fertile tracts.
V. The temperature of Nova Scotia is milder in winter, and the heat less intense in summer than is the case at Quebec; the air is highly salubrious, 80 years being a frequent age in the full use of bodily and mental faculties; many settlers pass 100 with ease and comfort. There are no diseases generated in the colony, which is also free from intermittent and other fevers. The summer heat is moderate and regular, with a soft S . W. wind, changing materially on any inclination N. or S. of that point. The autumn is a delicious season, and there is seldom any severe weather until the end of December. In order to
remove the prevailing idea in England that Nova Scotia is a region of snow and fog, I may atate, that the orchards of the province are equal to those of any part of America; plumbs, pears, quinces, and cherries are found in all gardena, and of the most excellent quality. Cider of superior quality forms an article of export, and peaches and grapes ripen in ordinary seasons without any artificial aid. Frost binds the earth from Christmas to April, with almost invariably an intervening thaw in January, as already described under Lower Cunada. The heaviest fall of snow is in February, during the predominance of the N.W. wind. Rain falls most frequently in spring and autumn, and a fog prevails on the S. shore near the mouth of the Bay of Fundy, but does not extend far inland. As the country becomes cleared, or owing to some unknown causes, the climate is becoming milder.

The following Meteorological Register is for Halifax.

| December. | 46 | 25 | 7 | Ditto and snow. | N.W. and N.E. |

The vegetable and animal kingdoms heing similar to those of Canada, require no separate deseription.
VI. When first discovered, Nova Scotia, as well as other parts of America, was inhabited by Indians of a reddish-brown colour, with high cheek-bones, large lips and mouths, long black coarse hair, and fine intelligent penetrating eyes; the males in height from five feet eight inches to six feet, with broad shoulders and strong limbs. The two principal tribes, the Micmacs and Richibuctoos, differing in teatures and in dialect, were equally savage in their mode of life and manners, hut to some extent civilized and made nominal Christians by the early French settlers, who trained the Indians to assist them in their wars against the English; and, in order to infuriate the semichristianized Indians against the English, the French inspired them with the horrible jdea that it was the English who crueified Christ!
The wars between the rival contestors for the possession of Nova Seotia, the Introduction of the small pox, and, ahove all (strange to say), the maddening use of spirituous liquors, have swept off nearly every Indian from the face of the country where he was onec master; and but few (not 1,000 ) of the Micmses still exist. Indolent, when not roused by the stimulus of hunger or revenge, the Indian dreams
away life in a silent monotonous existence; his only wants are food, raiment, and shelter of the humblest kinds; and within a few years more, the remnant of this extraordinary specimen of the human race will have entirely passed away.
1 have been unahle to find any very accurate early details of the progress of population in the colony. In 1749, about 140 years after the settlement of the colony, the Acadians amounted to 18,000 in number. After the removal of these people from Nova Scotia, in 1755 , the British settlers were computed at only 5,000 ; and in 1764 , the number of souls was reekoned at 13,000 , including 2,600 Acadians. In 1772, the reported numbers were 19,120 ; but in 1781, in consequence of a number of persons having quitted the colony, the number was reduced to 12,000 . Two years after, 20,000 loyalists arrived, so that the numbers were increased to 32,000 ; hut by the subsequent separation of New Brunswick, Prince Edward's Isle, and Cape Breton into distinct governments, Nova Seotia had of course a diminished population. In 1807, the number of mouths was estimnted at 65,000 , exelusive of Cape Breton Isle, then 2,515. Two eensuses have since heen made at intervals of 10 years each, the result of which was as follows.

| Counties. | Whites. |  | Free Blacks. |  | Total in$1817 .$ | Total in 1827. | Increase in Ten Years. |

The foregoing is exclusive of King's troops, which | males during the former period was 72,971, and of amounted in 1817 to 1,302 ; it is also exclusive of Cape Breton Isle, containing in 1817, 14,000, and in 1827, 30,000.

It will be observed that the census of 1827 is differently arranged from that of 1817. The number of servants, exclusive of masters, as follows :-

Population of Nova Scotia in 1827.

| County of Sydney . | 6255 | 5775 | 431 | 222 | 12760 | 508 | 126 | 89 |
| Total . | 57986 | 56509 | 5783 | 3913 | 123848 | 4563 | 945 | 1908 |

There has been no census since 1827. The totals in the two returns above for 1827 somewhat differ.

I do not know whether the term free blacks in the census of 1817 (and which I do not find in the census of 1927), applies to the aboriginal inhabitants of the colony, or to the residue of a large party of maroons, who were shipped from Jamaica to Nova Scotia, and who becoming dissatisfied, were for the greater part subsequently trans-shipped to Sierra Leone.

Nova Scotia has been so long and so unjustly considered in England a bleak, marshy, and almost uninhabitable country, that it may be necessary to enter into some detail as to ita inhabitants and localities;
for, as has been truly observed by a native of the colony, the extended and well-cultivated valley of the Annajolis-the diversified and picturesque country of Horton and Cornwallis-the richness and extent of views in the vicinity of Windsor - the unrivalied beauty of Mahone Bay, with ita numerous verdant islcts-the whole country bordering on the Shube-nacadie-the very many spots in the eastern parts of the province-and the extensive townships of Newport and Yarmouth, cannot fail to excite the wonder of strangers, and they exist in a territory which has always been represented as the most uninteresting part of the continent of North America.

The territorial distribution of the Nova Scotia ter). There are ten counties, some of which are again goverıment is-1, Eastern division ; 2, Middle; 3, subdivided into districts and townships, for the more Western: 4, Haifax ; 5, Cape Breton (see next chap. convenient administration of justice.

The only counties divided into districta are，Halifax $\mid$ in an English parish，and assesses themselves for the into three，viz．Halifax，Colchester，and Pictou；and Sydney into Lower and Upper．
The townships are not all of equal extent，nor of equal number in each county；viz．in Halifax Dis－ trict there are Halifax，Dartmouth，Preston，and Law－ rence Town ；in Colchester District，Truro，Onslow， and L．ondonderry；in Pictou District，Pictou，Eger－ ton，and Maxwelton；Lunenburg County，Chester， Lunenburg，and New Dublin；Queen＇s，Liverpool， and Guysborough；Shelburne，Shelburne，Yarmouth， Barrington，Argyle，and Pubnico ；Annapolis，Digby， Clements，Clare，Annapolis，Granville，and Wilmot ； King＇s，Aylesford，Horton，Cornwallis，and Parrsbo－ rough；Cumberland，Amherst，Wallace，Hants，Fal－ mouth，Windsor，Rawdon，Kempt，Douglas，and Newport；Sydney，Dorchester，St．Andrewa，Arisaig， Tracadie．In each township the inhabitants meet as
support of the poor．
The naval capital of British North America，Hali－ fax，has been beforc described，and Dartmouth re－ quires no separate account ：we may，therefore，pro－ ceed to the eastern division，containing the districts of Colchester，Pictou，and the counties of Sydney and Cumberland．The district of Colchester，is a part of the county of Halifax，and is bounded on the north－ west by the county of Cumberland，on the west by the Shubenaccadic River，on the south by the district of Halifax，and on the north and east by the district of Pictou．It contains three townships ；Truro，On－ slow，and Londonderry，besides the settlements of Economy，Stewiack，Tatamagouch，Salmon River，Shu－ benaccadie，Brookfield，\＆c．

The population of the district of Colchester，was in 1827.

Sydney County has been of late years divided into two districts-the upper and lower; the upper forms a triangle, its south side being 36 miles long, its western 25 , and its sea-coast, including the circuit of St. George's Bay, about 50 miles. It includes about one third of the whole county, comprehending the settlements of Antigonish, Gulf Shore, Cape George, Pomquet, Tracadie, and Harbour au Bushee. In an agricultural point of view, it is far auperior to the lower district, and notwithstanding the numerous and beautiful harbours, and valuable fishery, possessed by the latter, it is also much more populous.
The Lower District extends on its interior or northern boundary, from Cape Porcupine at the north end of the Gut of Canseau, to the eastern bounds of the district of Halifax, 40 miles ; on its western side from the southern boundary of Pictou
district, to the mouth of Ekemseegam Harbour, 30 miles; and on the sea-coast, including the shore of Cbedabucto Bay, 120 miles. No part of Nova Scotia, and perhaps few countries in the world, afford so many excellent harbours in the same extent of coast. Mary Joscph, Liscomb, Country Harbour, White-head Harbour, Canseau, and Crow Harbour, are all navigable for the largest ships, and are accommodated with safe and extensive anchorage ground. Ekemscegam, Little Liscomb, Little St. Lawrence, St. Mary's, Hollands, Beckerton, Fisherman's, Isaac's, Islands, Coddels, Torbay, Molasses, Raspberry, Big Dover, Little Dover, St. Andrew's Channel, Glasgow, Geurge's, Little Canseau, Philip's, Guysborough or Milford Haven, are all accessible and aafe for small vessels, and several of them for ships of 400 or 500 tons burthen.

CENSUS OF SYDNEY COUNTY.

Middle Division.-This division contains three coun. $\mid$ on the east by the Shubenaccadie River, and on the ties: Hant's county, Lunenburg county, and Queen's county The county of Hants is bounded on the weat by Horton, on the north by the Basin of Minas, south by parts of the counties of Halifax and Lunenburg. It contains six townships: Windsor, Newport, Rawdon, Kempt, Douglas, and Falmouth.
hants county census.

King's County is bounded on the south by the included in the number of acres of cultivated land. counties of Lunenburg and Hants, on the east by The sheriff of this county also states on his return, Cumberland, on the north by the Bay of Fundy, and on the west by the county of Annapolis. It contains four townships : Horton, Cornwallis, Parrsborough, and Ayleaford.
The common pasturage lands of the county are not
that the crop of wheat for 1827 was not more than one third of an average crop, with the exception of the Wellington Dykc, the produce of which was considered a fair crop.

VIII．The pro vate individuala， moting the blessi in 1811 ，any se raising s aum of after the manuer

The foregoing details will convey a more perfect idea of the actual state of the colony than any descriptions, however elaborate and minute. The great extent of land under cultivation-the produce (though the returns here stated are all under the mark, as a tax was dreaded) thereof-and the atock thereon, will all demonstrate that Nova Scotia is not the barren foggy land it has so unjustly been represented.
VII. The established Church is Episcopalian; the number of people of different religions at the last cengus were-Church of England, 28,659; do. Scotland, 37,227 ; do. of Rome, 20,401; of Methodists, 9,408 ; Baptists, 19,790; Lutherans, 2,968; Dissenters from the established Church, 4,417; do. of Scutland, 405. Quakers, 158 ; Jews, 3; Universaliata, 51 ; Sandima.
nians, 23 ; Swedenborgians, 3 ; Antinomians, 9 ; Unitarians, 4 ; Doubtful, 313. The foregoing does not include Cape Breton.

The established Church is under the management of a Biahop, Archdeacon, and 32 clergymen. Of the Church of Scotland there are 12 miniaters. Of the Roman Catholic Church, a Bishop and 14 Priesta. There are 19 Wesleyan and 36 Baptist Missionariea.

About 50,000 acres of land have been granted for the support of religion and schools ; the Ecclesiastical establishment as aupported by the Home Government, and expense thereof from April 1834 to March 1835 Bishop of Nova Scotia (salary 2,000l.) Archdeacon (300l.) President of King's College (50l.) Presbyterian Minister (75l.)

[^10]VIII. The provincial legialature, as also many private individuals, have made atrenuous efforts for promoting the blessings of education. By all act passed in 1811, any aettlement consiating of 30 families, raising a sum of not less than $50 l$. by asseasment, after the manner of poor ratea, are entitled to $25 \%$.
from the treasury of the province for the establishment of a school or schools; the returns for the last yenr will be sufficient to quote as an example of the extent of those schools: I also add the money aaseased by private individuals, and the aid granted in conformity to the Act.

|  |  |
| :---: | :---: |
|  | Population. |
|  | No, of Schools. |
|  | No. of Schotars. |
|  | No. tanght gratis. |
|  | Mane re- eclued by the People for six munths. |
|  | Moncy re. cetved from the provilice. |

Thus the average number of seholars to inhabitants is nine In 100. Independent of the loregoling there are 24 grammar schoots.

The expenses of each school including fuel and stationery, averagea abnut $30 l$. per annum.
IThere are besliles, in the several counties and districts of the province, as appears by the returns for the year 1836, 564 common achools, and 27 combined common granmar schools, at which $\mathbf{1 6 , 5 5 9}$ children received Instruction, of which number 1,244 poor children are taught gratuitously. These schouls are supported in part by the province, and partly by subscription. The nimount paid by the province in the last year on this account was 4,478l. 12s., and the amount raised by the people ahout treble that sum. There are also ahout 40 schools in ilifferent parts of the country, which are chlefly supported by the society for the propagation of the Gospel.

Dalhousic College, at Halifnx, is in constitution similar to the University of Erlinhurgh ; it is not yet in full ourration. 'lhere is a flue institution, called the King's College, at Windsor, with regularly educated prolessors, \&c., the state of which is very creditable to the colony, as is also the admirable institution of Pictou College.

There are eight nowspapers in the proviuce; but their names and relative position I am not cognizant of.

+ Destroyed hy fre in 1836.
X. Nova Scotia is governed somewhat after the same manner as Upper and Lower Canada, i.e. by a Governor (styled lieutenant-governor, as in Upper Canada), Council, and House of Assembly. The l're. sident of the Council is the Chief Justice of the province; the next in station is the bishop, nud there are 10 other members. The House of Assembly is large; 10 eounties return 2 members each, Halifax county 4 , and town Halifax 2. The following towns return each a member to the Provincial Parlinment:Truro, Onslow, Loudonderry, Annmpolis, Granville, Dighy, Lumenburg, Amherst, IIorton, Cornwallis,

Windsor, Finmouth, Barrington, Liverpool, Newport, Shelburne, and Yinmouth. This is independent of Caje Breton, which is connected with Novn Scotia as a county, and returns two members to the provincial llouse of Assembly.

The laws are administered by a Court of King's Bench and district courts, as in Canadn. The laws in furee are - 1, the common law of England; 2, the statute law of England; and 3, the statute law of Nova Scotin.

The number of enrolled militia in Nova Scotia and Crye Breton amounted at the last census to 21,899 .

The Colonial Office Blue Book for 1836 gives the / Cape Breton, officers, 234 ; non-commissioned ditto return fur Nova Scotia at-officers, 1,063 ; non-com- and rank and file, 5,888 ; total, officers, 1,297; nonmissioned ditto and rank and file, 22,488; and for
totnl, 29, 673 . According to counties-Halifax, officers, 164 ; rank and file, 3,093. Colehester, ollicers, 95; rank and file, 1,829 . Pictou, olficers, 70 ; rank and file, 2,456. Sydney, officers, 115 ; rank and file, 2,541 . Cumberland, ofleers, 63 ; rank and tile, 1,217 . Hants, offleers, 82; rank and file, 1,680 . King's, olficers, 87; rank abid file, 1583. Amapolis, ollicers, 137; rank and tile, 3,123 . Shetburne, oflieers, 1016 ; rank and file, 2,285. Qucen's, oflicers, 30 ; rank and tile, 6.22. Lunenberg, 104; rank und tile, 2,029.
The liw chacts that every male, from if to 60 , shall be enrolled as a militin-man, excepting the memhers of the lagislatme, lawyers, magistrates, surgeons, and ollicers of the civil und military departments. livery regiment, if enpatile, is divided into mettalions, which consist of not less than 300, nor more thun soo men. Fisery battalion is again divided into compmies, which consist of mot less than 30 , nor more than 80 men; and the whole are under the superintendence of military inspecting fied olficers, who review them on the days of regimental mecting.

The Kiag's troops consist of artillery and engineer iletachments, and three regiments of intinutry. Halifax is the chief naval station for the West Indies and North Ameriea, the communder-in-chief being a viceadmiral, with a suitnble tleet. The forts protecting Halifax town and harlour are strong.
XI. The income of the Nova Scotia Government is principally derivalle from duties levied on the importation of foreign goods at the different ports, as will be seen by the accompunying retarn for the year ending December, 1833, which, while it shews the extent of revenue, indicates also the amount of trade carried on at the different ports of the colony, and the quantity ol articles injourted.
The following is nn abstract of dutiable goods inported in the province or Nova Seotia, between the 31st of December, 1832, nal the 31st of December, 1833, for which the duties linve been prid or secured at the Excise Ollice (inchading the island of Capn Breton), under the Aets of the provincial Legislature.

CHAPTER IV.-CAPE BRETON AND SABLE ISLANDS.

Section I. This singular and valuable island, though forming a part of the government of Nova Scotia, necessarily requires a brief separate deseription. Cape Breton is sitoate between the parallels of 45.27. and 47.5 . N. lat. (including Madame, Scatari, Boulardie, St. Paul's, and other minor isles), and 59.38 . and 61.50. W. long.; bounded on the $S$. and E. by the Atlantic Ocean (distant from Cape Ray in Newfoundland on the E. 57 miles), on the N. and N.W. by the Gulf of St. Lawrence, and separated from the adjoining peninsula of Nova Scotia by St. George's Bay, and the strait or gut of Canseau, which is in iength about 20 miles, and in breadth one mile; the whole island being in its greatest length from N.E. to S.W. 100 miles, and the greatest breadth from S.E. to N.W. about 80 miles, comprising an area of about $2,000,000$ acres, exclusive of the surface covered by lakes and rivers.
II. The island was discovered ly Cabot, during the voyage mentioned in the first chapter; but whether named by him nfter Britain, or by its subsequent visitor Verazani (then in the service of France), after Brittany, is not known. While in possession of the French, it was called L'Isle Royale, In 1714, a few l'rench fishermen from Nova Scotia and Newloundland settled on its shores for the comvenience of the cod-fish trate, their residence being prineipally comfined to the summer months; while in winter it was visited by the fur-hunters or purchasers of skins from Nova Scotia and other places.

In 1715, I ouis XIV. in order to detach Queen Anne of England from her olliance with the united powers of Furope with whom he was contending, offered her Newfoundland, Hudson l3ay, and Nova Scotia, preserving to France, Canar'a, Prince Eilward's Island, and Cape Breton. The attention of the lirench Government was now actively hestowed on the latter as a means of extending the cod fishery, and still maintaining the command of the navigntion of the Guif of St. Lawrence; hence the eolonization of Cape Bretom, and the erection of the striong fortiliention of I,ouisburg (named nfter the French King) in 17:0, on the S.E: coast of the island.

The l'rench were not long on Cape Breton before
they commenced instigating the Indians to attack the English settlers at Cape Canseau and in Nova Scotia, and the war of 1744 , in Europe, was followed up with perseverance and ability by the garrison of Louis.. burg in its attacks on Nova Scotin. The Massachusets Government sent aid to Annapolis, then besieged by the French and their Indian allies. The Indians of Passamaquoddy, Penohscot, Pigwogat, and others, aided the New England colonists. A furious and savage war was carricd on between both parties, and the Government of Massachusets determined on attacking Louisburg, which the French had been 25 years fortifying, and though not then completed, at an expense of $30,000,000$ livres.

The capture of this place will he found at full length in my " Colonial Library," vol.
III. Cape Breton is of a shape nearly triangular, its shores indented with many fine dcep havens, broken with innumerable coves and islets, and almost separated into two islands by the great inlet of the sea, termed Bras d'Or, which ramifies in the most singular and romantic nanner throughout the isle. These natural divisions of Cape Breton are also in striking contrast, the one to the north being high, bold, and steep, that to the south low, intersected by water, diversified with moderate elevations, and grodually rising from the interior shore of the Bras d'Or until it presents abrupt clifts towards the ocean. In this latter division the highest land does not excced 800 feet, but the highlands in the north division are higher, bolder, and more continuous; Smoky Cape, exceeting 1,800 feet in altitude above the level of the sea. The Hrus d'Or would appear to have been an irruption of the ocean, caused by some carthquake or convulsion, admitting the water within the usual boundary of the coast. Its entrance is on the cast side of the island, theing Newfoundland, and divided into two passages by loulardie Island. The south passage, called Little Hras d'Or, is about $2: 3$ miles long, and from a quarter to three miles witle, but rendered unnavigable for large vessels by a bar nt its mouth. The north passage, Great Bras d'Or, is 25 miles long, two to three wide, with a free navigation, and above 60 fathoms soundings. The Bras d'Or itself is the union of these
two branches, which form the great lake in the centre of the island, with several fine bays, where the timber ahips for England usually lond, at a distance of 40 miles from the main ocean. The length of this noble sea-water lake is about 50 miles, its greatest width 20 , with a depth varying from 12 to 60 fathoms, every where securely navigable, and by reason of its numerous bays and inlets affording the benefit of inland ravigation to almost every faim in the country. Several fresh-water lakes exist in different places, the largest are Lake Marguerite, in the north division, which is about 40 miles in circumference; the Grand River and Mire lakes in the south, the latter, together with its river, intersecting the island on its S. E. coast for 30 miles, in the rear of the site of the ancient fortress of louisburg.

Sydney, the capital of Cape Breton, in latitude 46. 18., longitude 60. 3., is the only military post in the island, and is beautifully situated a few miles south of the entrance of Bras d'Or, upon a narrow but somewhat elevated tongue of land, abont one mile in length and half that space in breadth, its line of direction north and south, nearly 11 miles from the mouth of Spanish River. On the east side of the small promontory is a basin three miles in circumference, while the main channel runs on the west side, and then opens a fine harbour, affording a secure anchorage for large frigates. The operations of the mining company are improving Sydney, which it is asserted has suffered materially from the annexion of the island to Nova Scotia. From Sydney to Jouisburg the shore presents abrupt cliffs, low beaches, bays, rivers, and a few islands. [See "Colonial Liirary.:"]

The lighthouses on the shores of Cape Breton and Nova Scotia are thus stated in the 13.13. Culonial Office :-

Lighthonses on Sambo Island, mouth of Halifax harbour, 1 fixed light ; at M'Nutt's Island, mouth of Shelburne harbour, 2 lights, 1 ahove the other; at Briar Island, 1 fixed light; entrance of Annajolis Gut, ditto; Coffin's Island, mouth of Liverpool harbour, 1 revolring light; Island Gut of Causo, 2 lights, 1 above the other; Seal Island, 1 fixed light; Meagher's Beach, Halifax, 1 light ; entrance licton harbour, 1 fixed light for 8 months; Cross Island, near Lunenburgh; entrance Sydney harbour, 1 fixed light.

1V. The extensive coal and iron mines which peeuliarly mark the geological eharacter of Cape Breton, will be found detailed at considerable length in ny "Colonial Library," vol, vi. The islard can enume. rate, from sandstone downwarls, the whole of the rocks which constitute the trausition and primitive formations.
The coal fields of the island contain inamense deposits of gypsum, of a very superior quality for agriculturnl purposes, and now becoming an article of considerable traffic with the United States, who know how to appreciate its value. It constitutes a clift several miles in extent, and in some places 30 feet in height. The gypsum in the iower part of the cliff is sufficiently compact for architectural purposes, and that near the surface appenrs well adapted for potter's moulds, stucco, flooring, \&ic. It is very conveniently situated for export, as vessels of great burthen may approach close to the eliff. It also occurs abundantly in varlous other places.

The natural salt springs whieh also have iheir source in the new red sandstone, are well worth the attention of capitallsts. Situate so near to the veins
of coal, so necessary in the manufacture of salt, and in the very heart of the best fisheries of North Amerien, these promise fuir to become, at a future day, a productive source of wealth to the proprietors, and of incaleulable benefit to the fisheries.
V. Cape Breton in this respect resembles much its neighbouring peninsula, with perhaps more moisture from its insular position. The fog which is swept along the shores of Nova Scotia by the S.W. wind, and along the S. E. coast of Cape Breton as far as Scatari, is then blown off to sea : it never extends far inland, being dissipated by the reficeted heat. The climate is excecrlingly healthy, and the water excellent; two things of paramount value to the settler. The scasons may be thus indieated: in June the blossoms of the indigenous shrubs appear, apple trees are in full bloom in the beginning of July, when strawberries are in perfection; hay is made in July and August ; in the latter month raspberries and oats ripen, as do also currants and gooseberries, wheat in September, and apples and plums hang on the trees until the approach of winter in October and November.
VI. We have no accurate census of the island; the number of mouths are estimated at 30,000 , of whom the greater part are emigrants from the llighlands of Scotland and their descendants; these are chiefly employed in agriculture ; the next most numerous are the original European colonists, or French Acadians, an industrious people, employed in the tisheries and in building small vessels; the remaining colonists consist of English and Irish settlers, disbanded soldiers, and American loyalists, who were located here after the American war. The Mie Mac tribe, whose aneestors once tenanted the whole isle, are now reduced in number to about 300, who have embraced the Roman Catholic religion, and are becoming eivilized to some extent; they have lands assigned to them amounting to 10,000 neres. [See Nova Scotia for statistics.]

VIl. The imports in 1832 were in value 78,000l., consisting ehiefly of British manufactures; the exports were-timber to England, 9,500 loads; coal to the United States, \&c., 22,911 chaldrons; pickled fish, 21,000 barrels; dried fish, 44,000 quintals; oil, 2,500 barrels ; live stock, 820 head ; oats, 6,000 bushels; potatoes, 13,000 ditto ; total value, 80,0001 .

The following details of the trade of Cape Breton I have received from the London Custora House.

Sydney, port of Cape Breton.

Pictou Exports, ending 5th January.
The trade in coal is rapidly increasing at Cape Breton, as also at the port of Pictou: the quantity ciation, at the fixed rent of $3,000 l$. per annurn. The mind at Picton, in 1832 , was 12,020 chaldrons, and following description of a new source of employment at Cape Breton mine $30,8 \downarrow 0$ chaldrons.
 following description of a new source of employment
for British industry and capital will doubtless prove interesting.

The General Mining Association, as tenants of the Crown, and of his late Royal Highness the Duke of York, are lessees of all the mines and minerals of every description in the province of Nova Scotia Proper, and in the island and county of Cape Breton.
The operations of the association commenced there in the year 1827, and have hitherto been confined to the working of cual mines, and the discovery of iron ore.
The conl mines opened and at work are three in number-the Albion, tise Sydney, and the Bridgeport mines.

The Abion mines are situated on the banks of the East River, in the district of Pictou, or Poictou, and distant about eight miles and a half from the town of that name, a port of safe and casy access on the Gulf of St. Lawrence. A light-house has lately been erected on the coast, near l'ictou.

The liast River is only navigable for burthensome craft to withia six miles of the Albion mines; so that vessels arriving for coal receive their cargoes from burges, which load at the mines, and are towed down to the deep water by one of the steamers belonging to the Association. A rail-road, now in progress, will, when completed, obviate this inconvenience, as well as any breakage which the coal might sustnin by transhipment; and will at the same time materially reduce the cost of shipping it.

The strata are similar in their formation to those of the Staffordshire coal fields, and, like the latter, produce a coal whicls, good and serviceable as it is for household use, is, however, from its peeuliar pro-
perties, most remarkable for excellence for the purposes of steam and manufactures; and especially for the manufactures of iron, on account of the absence of sulphur in its composition.

In September 1833, the steam-boat "Royal Wil. liam," of 180 horse power, and 1,000 tons burthen, arrived in London, having performed the voyage from Quebec to Pictou, and from Pictou to London, by steam. The fuel used was, from Quebec to Pictou, English coal, from Pictou to Cowes, Albion coal, and from Cowes to London, again English coal, taken in at Cowes. The captain and the engineers gave a most decided preference to the Albion coal over the Eng. lish, and pronounced it to be the best fuel they had ever tried for generating steam. This is a very important fact, considered in connection with the immense and growing extent of steam navigation in the United States, which will find thus near at hand a supply commensurate with that extent of fuel, 80 valuable for its purposes, and to which it will be applied when further experience shall have satisfied the Americans of the superiority of such a coal for steam navigation over wood, and of the economy to be derived from the use of it.

The following return shows the quantities of coal shipped from the Albion mines, from the beginning of 1828 to 1836, distinguishing the number of chaldrons in each year:-In 1828, 4,467; 1829, 5,841; 1830, 6,426 ; $1831,8,34.7$; 1832, 12,020; 1833, 19,890; 1834, 14,927; 1835, 18,161; 1836, 36,322; 1837, 36,697 ; total number of chaldrons, 163,096 .

The coal is raised from four shafts by the aid of steam-pumping and wioding engines.

The establishment at the Albion mines consists of upwards of 400 persons employed in and about the mines, the foundery, the rail-road, steam-boat, and barges, the brick-kilns, \&c., and their several appurtenances. The number of dwelling-houses and of buildings required for these various works is little short of 100 ; and the small town of New Glasgow owes its birth and existence to the presence and operations of the General Mining Association in this part of the country.

The Sydney and Bridgeport mines are both in the island of Cape Breton, which is separated from Nova Scotia by the Gut of Canseau.
The Sydney mines are situated on the north. west entrance, of Spanish River, or Sydney harbour, a harhour equal, if not superior, to any in British America, and which is accessible in all winds. It is leere that the most extensive operations of the Association are carried on. The coal of this field is similar in quality to the Neweastle coal. It is well suited for all the purposes of good fuel, but most particularly for domestic use. It is highly bituminous, ignites readily, gives a strong lasting heat, and leaves but little ash. A rail-road, which cost $40,000 \ell$., and on which three locomotive engines are employed, is finished from the plts to a point of the harbour, where vessels of any burthen can load with ease, and well sheltered from
the prevailing winds. The establishment at the Sydney mines consists of about 300 persons and occupies 50 houses, including the buildings required for the works. The quantities of coal shipped from these mines from the year 1827, to 1837, are as follows: In 1827, 8,776 chaldrons; $1828,10,266 ; 1829,9,903$; 1830, 11,898; 1831, 13,882; 1832, 19,949; 1833, 15,302 ; $1834,11,693$; $1835,15,459$; 1836, 31,486 ; 1837, 35,154; the total in chaldrons being, 183,768.

The Bridgeport mines are situated on the southern shore of Indian Bay, one mile and three quarters from the harbour where vessels load, and which is perfectly secure for shipping in the most boisterous weather. The southern head of Indian Bay, which is called Cape Table, bears by compass from Flint Island northwest by west, distance eight miles and a half, and the northern head of the bay bears from the light-house on Flat Point at the entrance of Sydney harbour south-east, distance four miles. Vessels may run safely into four fathoms water between the northern and southern heads.

The coal from these mines is of excellent quality, of the same description as the Sydney, and not at all inferior to it. A rail-road has been laid from the pits to the shipping place, and along which the coal is carried and deposited at once in the holds of the vessels.

This establishment employs about 150 persons the houses and buildings exceed 20 in number, exclusive of wharfs, saw-pits, \&c. The following quantities of coal have been shipped from the Bridgeport mines from the year 1829, when they were first opened, to 1837 :-In 1829, 1,325 chaldrons ; 1830, 3,425; 1831, 6,851 ; $\{1832,10,890 ; 1833,9,805 ; 18.34,7,142$; 1835, 8,434 ; $1836,12,550$; 1837, 13,121; total in chaldrons being, 73,543.

The extent and power of the veins or seams of coal already discovered in Nova Scotia, render them as it were inexhaustible; and when the capabilities of the mines opened by the Association, are fully developed, they will be equal to supply any demand.
The capital of the General Mining Association is $400,000 l$. divided in 20,000 shares of $20 l$. each. Of this sum 340,000l., or $17 l$. per share, have already been subscribed, of which $240,000 l$., or $12 l$. per share, have been applied to the operations in Nova Scotia. On the other hand, the Association possseses in Nova Scotia considerable property in mines, machinery, implements, steam-boats, and other craft, wharfs, and houses, and about 14,000 acres of land.
VII. The staple products may be considered fish, coal, gypsum and timber. Of the former it may be observed, every river, creek, and bay teems with the finny tribe of every varicty. The extent of coal and gypsum has been already stated ; and as to timber, it exists in immense forests, equal in quality to any grown on the shores of the Baltic ; live cattle, butter, cheese, potatoes, oats, \&cc., are becoming increased articles of export to Newfoundland.

## SABLE ISLAND.

This scene of numerous and melancholy ship-wreeks,-forty vessels having been wrecked on it in the course of a few years, and in one year 200 people perished on its shores,-lying directly in the track of vessels bound to or from Furope, is ahout 85 miles distant from Cape Canseau; in length about 30 miles, by $1 \frac{1}{4}$ in width, shaped like a bow, and dimi-
nishing at either end to an accumulation of loose white sand, being little more than a congeries of hard banks of the same : its west end is in N. lat. 43.56.42. W, long. 60.71.15. East end N. lat. 43.59.5. W. long. 59.42. A sum of $800 l$. is devoted to keeping or the island a Superintendant from Novi Scotia, with a party of men provilled with provisions, \&c. for

the purpose of affording prompt aid to any shipwrecked mariners of whatsoever nation, who may be driven on its inhospitable shores. [See Colonial Library.]

The Magdalen Islands, in the Gulf of St. Lawrence, are 18 leagues N. W. of Cape Breton, the same northward of Prince Edward Isle; 36 leagues from the nearest point of Newfoundland; 75 ditto from the French settlements of Miguelon and St. Pierre, and 180 ditto eastward of Quebec. With four exceptions they form an almost continuous chain of land about 42 milea loug, and nearly N. E. and S. W. Amherst Island, the most southern of the chain, is nearly oval, having about $5 \frac{1}{2}$ and $3 \frac{1}{2}$ miles for its axis, with an elevation in one place of an isolated hill 260 feet above the level of the sea. Its harbour is the best in the chain, with a narrow, but straight entrance over a
soft ooze bar, for vessels drawing 11 to 12 feet water. Continuous spots of aand almost connect Amherst with Grindstone Island, whose diameter is about 5 miles. Cape Abright, the next in succession, is about 9 miles long and 3 broad. Then follows Entry and Coffin Islands. The population consists of nearly 200 families, the greater part of whom are French Acadians-fisherınen. Licutenant Baddely, who examined the islands, thinks them of igneous origin ; first, by reason of the form of the hills of which they are composed; sccondly, on account of their porphyritic, amygdaloidal, vesicular or lava-like structure; ti:irdly, the geological appearances of the sandstone, clays, \&c., shewn in their displacement, in their redness, and even in their friability. In some places the soil is a rich black mould as at St. Vincent's, and other volcanic islands in the West Indics.

## CHAPTER V.-NEW BRUNSWICK.

Section I. New Branswick, as an castern section of the continent of North America, is situate between the parallels of 45.5. and 48. 4. 30. north latitude, and the meridians of 63.47 .30 . and 67.53 . longitude west of Greenwich; bounded on the nurth by the Bay of Chaleurs, in tre Gulf of St. lawrence (separating it from the district of Gaspé), and by the River Ristigouche, which in its whole course, from its source to the estuary in the Bay of Chaleurs, divides the province from the county of Bonaventure, in Lower Canada; on the south it is bounded by the Bay of Fundy and Cinigneeto Inlet, which nenrly insulate Nova Scotia, the lntter being divided on land by a short boundary line (drawn from Fort Cumberland to Bay Verte, in Northumberland straits, an arm of the Gulf of St. Lawrence), which separates the county of Westmoreland, in New Brunswick, from that of Amherst in Nova Scotia; on the cast by the Gulf of St. Lawrence and Northumberland Strait, which separates it from Prince Edward's Island; and on the west by the United States territory, commeneing on the south coast at Passamaquoddy Bay in the Gulf of Fundy 'embracing the islands to the northward of 44.36., such as the Grand Monan, Deer, and Campo Bello), proceeding northward along the River Scodie or St. Croix ; the River Chiputnetikooh to a ebain of lakes, thence from a bountary line commencing at a monument on Mar's Hill, 100 miles west of Fredericton, in latitude 45. 57. N., longitude 66.46. W., and rumning northerly to about four or five miles west of the River St. John, to the source of the Ristigouehe River; the whole province containing 27,704 square miles, or $17,730,560$ acres.
II. The carly details of this colony are comprised in those of Nova Scotia, of which it formed a part, snd whieh the render will remember to have been finally ceded (after conquest) to Great Britnin, by the treaty of Utreeht in 1713, but until the final extirpation of the French power in North America, in 1758 and 1759, Great Britain could not be said to have peaceable possession of New Brunswiek, since which time it has remained in our possession. In 1785 the present limits of New Brunswick were fixed, and the territory was separated from the province of Nova

Scotia-crected into a separate government, under the administration of Col. Carleton, and a Legislative Assembly was summoned at St. John's.

The dreadful fire at Miramichi, on the E. coast, in 182.5, was one of the most terrible natural conflagrations of which we have any record in the history of the world. [See History of the British Colonies, vol. iii., or Colonial Library, vol. vi.]
111. New Brunswiek is generally composed of bold undulations, sometimes swelling into mountains, and again subdividing into vale and lowlands, covered with noble ferests, and intersected by numerous rivers and lakes, affording water communications in every direction to the pleasing settlements, scattered throughout the fertile alluvial spots, termed intervales. The greater part of the territory, namely about $14,000,000$ acres, is still in a state of nature adorned with abuntance of timber, and fine extended prairies : an idea of the country will, therefore, be better conveyed to the stranger by examining its appearance, by counties, which are in general distinetly divided by water courses, or other matural indications.

New Brunswiek is divided into ten countics-viz.: Gloucester, Northumberland, Kent, Westmoreland, St. John's, Charlotte, King's, Queen's, Sunbury, and York. Gloucester, Northumberland, and Kent were originally comprised under one county, named Northumberland, and extending over an area of 8,000 square miles, having a river frontier from the source of the Ristigouehe to Dalhousie Harbour, at the head of the Bay de Chaleur, and thence a seaboard along the south side of the bay and the gulf coast to Shediac Island.

The New Brunswiek shore, along the Gulf of St. Lawrence, is low and sandy, covered with trees of a stunted growth, and skirted with extensive marshes, large deep mosses and long sand beaches, formed by the contlicting currents of the gulf, and the different rivers that pierce the shore. The coast line of the magnificent Bay de Chnleur (which is 85 miles long, and from 16 to 30 broad,) commencing in 47.58. N. Lat. 64.30. W. Long, is similar to the gull shore, but in some places there are perpendicular cliffs of some height.

## 236 NEW BRUNSWICK.-GEOLOGY, MINERALOGY, AND SOIL; CLIMATE; POPULATICN

The city of St. John, in Lat. 45.20. N., Long. 66.3. ${ }^{\text {n }}$ numerous, and some sulphureous springs have lately W., by reason of the noble river on which it is built, is the emporium of the inland trade of a great part of the province: it is a handsome town on a rugged, rocky, and uneven peninsula projecting into the harbour, with numerous public buildings of stone, hrick, or wood. A court-house, church, and bank, of stone, are particularly remarkable for their excellent atructure. Being an incorporated city, St. John is governed by a mayor, aldermen, and commonalty, who have an annual revenue of $2,000 l$, at their disposal for the improvement of the city, whose population amounts to ahout 10,000 mouths. The harbour is easy of entrance, capacious and safe, with a lighthouse on a small Island (Patricge), about the centre of the entrance. The view from seaward is hold and rugged; but on opening the barbour, the wooded mountainous back ground, ard gencral picturesque scenery, forms a very beautiful picture. The finc river, St. John's, has a course of ncarly 600 iriles from its source near the Chaudiere in Lower Canada, to where it falls into the bay of Fundy.
York County contains the capital of the provinceFredericton, in 45.57 . N. Lat , 66.45. W. Long.; 85 miles distant from the sea coast at St. Johu's. Eightyfive miles from St. John's, 90 from St. Andrew's, ditto from Northumberland, 140 W . of Fort Cumberland in Westmoreland, and ditto from the Upper Settlement in Madawaska.
The site of Fredericton is upon a flat territory, on the right bank of the river St. John's, a body of water equally interesting from it's extent and purity, and which is here three quarters of a mile wide : the river, making an elbow, encluses the city on two sides ; whilst, on the land side, the plain is likewise enclosed by a chain of hills, and opposite to it the Nashwak rolls its broad, and sometimes rapid, stream into the St. John's, which to this point is navigable from the sea upwards for vessels of 50 tuns buithen.
Fredericton is laid out in blocks of a quarter of an acre square, of which there are 18; the streets are disposed rectangularly, some of them being a mile long, and, for the most part, continuously built on with wooden houscs. The public edifices consist of the Province Hall (where the Provincial Assembly and Courts of Justice assemble), the Court-house, Barracks, Government House, Library, Church, Chapels, and Kirk, with several other structures, the numher of which is rapidly increasing.
IV. The topography with descriptive and historical details, will he found in the "Colonial Library." Vol. vi.-Along the shores of the province, facing Chaleur Bay and the gulf of St. Lawrence, grey sand-stone and clay-slate predominate, with detached rock of granite, mica, quartz, and iron-stone ; on the S. coast limestone, greywacke, clay-slate with sandstone, interrupted occasionally by gneiss, trap and granite prevail. Specimens of amethyst, cornelian, jasper, \&cc. have been picked up in various places. Extensive veirs of coal lying a few feet above the level of the water, and running horizontally, are found on the shores of the Grand Lake in Queen's County : a company has been incorporated for 30 years, with a capital of 30,0000 . to work this mine. An excellent vein of coal has been recently opened on the hanks of the Salmon River, which is said to be superior to that of the Grand Lake. Iron ore is abundant. Copper, plumbago, and manganese have also been found, and gypsum and gi indstone are in inexhaustible quantities near Chignecto Basin; sait sjrings, strongly saturated, are
been found.
V. $N$ יw Brunswick is healthy; old age is frequent In persons possessed of the slighest degree of sobriety. Consumption and rheunatism are the most prevalent diseases; but agues and intermittent fevers are rare if not unknown. The following meteorological re. turn of the climate at Fredericton, the capital, was transmitted home to the army medical department:-

VI. By the census of New Brunswick in 1824, the aggregate number of the inhabitants was-Whites, Males, 38,764; Fcmales, 32,656; Total; 71,420. Free blacks, Males, 738; Females, 774 ; Grand Total, 72,932.

Divided by Counties, the population was in 1824-

In person the inhabitants of New Brunswick are generally tall, well-proportion and athletic; those born in the province exceeding in stature the Europeans from whom they are descended.

The following recent census of the State of Maine, which adjoins New Brunswick and with whom in particular the boundary question is in dispute, may be inserted as of interest at this moment:-

Census of Maine.-The population of this state, from the census taken in March last, amounts to 472,151 , exclusive of the Madawaska settlement and foreignera. In 1830, it was 399,402 , making a gain of 72,689 ; add to this amount 3,300 for the Madawaska settlement, and 10,000 for foreigners not included in the recent census, and the gain is 83,989 . Since 1830, York county has gained 2,071, Cumberland 7,506, Lincoln 2,890, Kennebec 9,886, Oxford 5,420, Waldo 7,027, Somerset 7,157, Penobscot 20,164, Hancock 3,632, Washington 6,918. The population of Somerset is now 42,963. Three counties only in the state have had a greater relative gain than Somerset ; they are Penobscot, Washington, and Watdo. Penobscot has gained 64 per cent, Washing. ton 32, Waldo 24, and Somerset 20.-From the Vindicator of July 21, 1837.
VII. Return of the Number of Churchea, Livings, \&e. of New Brunswlek, in 1836.

The established church is within the diocese of the Bishop of Nova Scotia, and under the government of an archdeacon with 26 clergymen (there are 26 churches), to whose support the Society for Propagating Christian Knowledge largely contribute; of the Established Church of Scotland there are five pastors; of the Romish Church, a hishopand twelve priests; of the Presbyterian Church of Nova Scotia, three ; of the Wesleyan Missionaries 15 ; and of the Baptists 16.

Church of England.-The form in which the return is required, does not admit of a complete return of the atate of the church. There are many congregations held in school-houses, and other unconsecrated buildings, at various, and sometimes great distances from the clergymen's residences, without which accommodation, in the present state of the province, hardly any country parish would be effectually served; of these congregations a complete atatement has not yet been obtained, but the returns made for this year to the archdeacon, specify 47 congregations, besides those which meet in churches and chapels, and comprize from 3,300 to 3,800 persons. In returning the value of the living, the fixed income from glebe is only given.

The income of the clergyman is in all cases derived from the Socicty for the Propagation of the Gospel in Foreign Parts, and was formerly 200l. sterling, to each rector, but this has heen lately subjected to a reduction of 25 per cent. The Society's allowance to the rector of Douglas, is $75 l$. ; to the rectors of Dumfries and Westmoreland, 100l. each. The curate at St. John's, 75l. ; the Curate at Fredericton, Kingston, St. Stephen and Chatham, 50l. each.

In addition to the income derived from the Society, some clergymen have received contributions from their parishioners, but no complete return for the year 1836, has been obtained. Probably they have not much exceeded the amounts reported for 1835. The present rector at Portland, who has no salary from the society, received $183 l .10$ s. from the people.

The curates noticed in the return, receive as follows from the pcople: first curate at St. John's, 180l.; St. Andrew, $90 l . ;$ Chatham, 40l. 10s.; St. Stephen, 45l.; Fredericton, $125 l$. currency.

Abstract.-No. of livings, 25 ; rectors, 24 ; curates, 6 ; parsonage-houses, 13 ; glebes, 27 ; churches, 42 ; chapels built or building, 9 ; the churches will accommodate 13,490 ; number of persons generally attending, from 5,760 to 6,000 ; to which may be added, for congregations that meet in unconsecrated places, 3,300 to 3,800 ; making a total of attendance as shewn by the returns received, from 9,060 to 9,800 .

Church of Scotland.-It may be observed generally, that this church is rapidly on the increase in the province; up to 1830, there were only two churches in connexion with the Established Church of Scotland. Now there are 13 churches supplied by 10 ordained elergymen, who all oceasionally preach to large congregations, assembling in school-houses and chapels. Besides there are several churches just now in the course of creation, and there are a few lately finished, which will be shortly filled up by ministers from Scotland. The gross number of Presbyterians in the province cannot be less than 20,000 . The average attendance in the churches at present regularly served, is at the lowest calculation 5,500 . By adding the congregations assembling occasionally in schoolhouses and chapels, this number would be greatly increased.
The income of the clergymen is chiefiy derived from pew-rents and collections. The Colonial Society of

Glasgow, has in two or three instances, where the case was urgent, made a grant of $50 l$. sterling for three years, The Scottish establishment receive no pecuniary aid from Her Majesty's Government, with the exception of $50 l$. from the casual revenue, to one of the ministers of St. John. A small grant of wilderness land only, has been recently made to each church by the home government.

Wesleyan Methodists.-The ministers of the Wesleyan Methodists connexion, are supported by voluntary contributions, and the Wesleyan Methodists Society in England. There are 14 missionaries in the province, 28 chapels, and 73 congregations, with an average attendance of 9,590 .

There are several other denominations of Christians; viz. Roman Catholies, Baptists, lndependents, \&c., but no returns have been received relative to them.
VIII. Grammar schools supported by legislative aid, are in active operation in several districts, and an excellent collcge has been established under the paternal auspices of Sir Howard Douglas; 6,000 acres of contiguous excellent land are appropriated for the use of this noble institution, which has the power of allowing the matriculation of students, without subscribing to the thirty-nine articles, except on taking degrees in divinity for the Church of England. Schools on the Madras system are established in each settle. ment, with a legislative allowance of $20 l$. each ; they are under the superintendance of the governor and board of trustees. Several excellent private seminaries exist in different parts of the province.

Degrees conferredin the year 1836 : five tlegrees of Bachelor in arts; oue degrec of minster fil arts.

By Acts of the Provincial Legislature, the grammar schools at St. John and St. Andrew's, are incorporated, and $135 l$. sterling is appropriated from the provincial revenue towards the support of the former school, and 906 . sterling towards the support of the latter, By another Act, $20 l$. sterling are appropriated for the support of a grammar school in each county in the province, on condition that the inhabitants subscribe $115 l$. for the like purpose. It is under these Acts that the enumerated sehools have been established.

By an Act of the Provincial Legislature, provision is made for the support of parish schools, to the num. ber of seven in a parish, provided that they do not average more than five to each parish in the several counties, by a grant of $20 l$. currency per annum, to each school; on condition that the inhabitants erect a schnol house, and subscribe $20 l$. more. In sddition to the schools thus established and endowed by the Legislature, there are a number of respectable private schonls in which all branches of education are taught, but as they receive no pecuniary encous. ragement from government, they have not been called upon to make any returns of their respective esta. blishments.

Gaols of New Brunswick and Prisoners confined therein in 1836. [B. B.]

The average cost of each Prisoner is about 4s. per weck.
X. The constitution of New Brunswick is assimilated to that of the other North American colonies, differing thus far from that of Upper or Lower Canada, that the Lieutenant-Governor's executive council of twelve have also a legislative capacity.
The House of Assembly contained 28 members, thus contributed-City of St. John, two ; county of ditto, four-Counties, Charlotte, four ; King's, two ; York, four; Westmoreland, four; Queen's and Sunbury, two each; Kent, one; Northumberland, two; and Gloucester, one. The numher of representatives has since been increased. The provincial parliament sits for about two months, during the winter, at Frederic. ton, and is regulated in its proceedings after the manner already described.
The laws are administered by a supreme court and minor tribunals. The former has a chiel justice and three puisne judges. There are also courts of chancery, vice admirnlty, and for granting prohates of wills, \&c. The number of barristers and attornies ntactising in the province are, 15 at Fredericton, 19 nt St. John's, and 37 at other stations. There are 50 public notaries.
The militia of the province of New Brunswiek is distributed in regiments, as follows: 1. York county, five battalions. 2. St, John City, two battalions. 3. St. Jolnn's county, two battalions. 4. Sunbury county, four battalions. 5. Westmoreland county, four battalions. 6. Nerthumberland county, two
hattalions. 7. Gloucester county, two battalinns. 8. Kent county, two battalions. 9. King's colibcy, three battalions (with cavalry attached). 10. Queen's county, two battalions. Making a total of 10 regiments and 29 battalions. Each hattalion has a lieutenant-colonel-major; 11 to 15 captains; 15 to 17 lieutenants; 10 to 16 ensigns, and the usual staff. The strength of the militia in 1836 was, Field officers, 51 ; captains, 300 ; subalterns, 580 ; staff, 90 ; sergeants, 471 ; drummers, 26 ; rank and filc, $19,260$.

Each regiment is trained three days in the year, one of which is the geberal training, or day of inspection, and the other two are company drills.

The province makes an allowance, for adjutants, not exceeding each $15 \%$. per annum ; and for sergeantmajors, a sum not exceeding 7l. 10s. per annum each for the care of arms, a sum not excceding $20 l$, to each battalion; and a bounty of 30 s . per man, per raonth, when embodied for netual service; but not to execed $3 l$. to each man on the whole. Provision for the services of the aljutant-general to the amount of 75l. Quarter-master-general, $50 l$. has been made for the year 1836. [13, 13.]
XI. The revenue of New Brunswick is principally derived from duties levied on the importation of goods at the several ports of the province.

In 1820, the gross revenite of the colony was about $30,000 l$. ; in 1825 , about $40,000 l$.; and since 1827, thus-

## CHAPCER VI.—PRINCE EDWARD ISI.AND.

Section I. Prince Edward Island (formerly called St. Joln's) is situated hit a kind of recess or hay of the Gulf of St. Lawrence, between the parnllels of 46. and 47.10. north Intitude, and of the meridians 62. and 65. west of Grecuwich, bounded on the west and south hy New Brunswick and Novn Scotin, from which it is separated by Northmmeriand Strait ; on the east by Cape Breton Isle, from which it is distunt 27 miles, and on the noith liy the Gulf of St. law, rence and Mngdalen Isiands. The brendth across the
strait hetween Truverse and Cape Tonrmenting is oniy nine miles. In length Prince lidwaril Isiand is nhont l. 10 iniles on a line through the centre of tha territory; in its geeatest lureadth 34 (in smme places not more than 15 miles, with na aren ol $1,860,000$ acres, or 2,13! square miles, most favomubly situnte for commerce, ngriculture or fisherics. Charlotte Jown, the cnpital of Prince Elward Ishoud, is distant from the Land's End in England 3,380 infles; from St. John's Nevfoundland, $\mathbf{6 3 0}$ : frona St. John's Ne'v

Brunswick, by sea 360 (across Nova Scotia), from Halifax, by the Gut of Canso, 240; (by Pictou 140 miles), from Pictou, 40 ; from Miramichi, 120 ; from Quebec, 580 ; and from Cape Ray, the nearest point of Newfoundland, 125 miles.
II. This island was discovered by Cahot, 24th June 1497, being the first land seen after his departure from Newfoundland ; it was named by this celebrated $\mathrm{Na}-$ vigator St. John, and not being formally claimed or settled by England, the French seized upon it as a part of the territory of New France or Canada, and in 1663 , leased or granted it together with the Magdalen, Bird and Biron Islands to the Sicur Doublett, a captain in the French navy, to be held as a feudal tenure of the company of Miscou.
The island remained as n fishing station to the Sieur and his associates (two fishing companies,) until after the treaty of Utrecht in 1715 , when it began to be colonized; and in 1758 there was said to have heen 10,000 settlers; but this is doubtful, as the French Supreme Government at Quebec discouraged colonization everywhere, except around the strong fortifications which they had erected in various parts of their North American dominions.

In 1758, on the capitulation of Louishourg, Prince Edward Island, which had formed the granary of that fortress, was traken possession of by the English.

At the conclusion of the peace in 1763, on the arrangement of the conquests made from France, this island, together with Cape Breton Isle, were annexed to the government of Nova Scotia. A great number of the Acadimn French on the island were still so hostile to the English that they were included in the order to remove those of Nova Scotia, a large number were in consequence shipped off to the neighbouring continent ; to the South colonies, and to France; in which latter place they were ill received and upbraided for their continual hostilities which had led to the total extinction of the French dominion in North America. Prince Edward Island was included in the general survey of the British empire in America in 1764, and which the coumencement of the first American war put a stop to on the continent. The survey of the island being completed in 1766 , varlous schemes for its cultivation and settlensent were proposed; amongst others, the Earl of Egmont, then first Lord of the Admiraliy, proposed settling it on a feudal plan (his lordship being lord paramount, with a certain number of baronies to be held of him ; each baron to crect a castle or stronghold, to maintain so many men at arms, and with their under-tenants to perform suit and scrvice according to the custom of the ancient feudal tenures of Europe. Upon the rejection of the Earl of Egmont's impracticable scheme, it was determined to grant the whole island to individuals on certain conditions prescribed by the then Bonrd of Trade and Plantations; but the number of applications being so great, it was thought proper that the different townships should be drawn by way of lottery, which was accordingly done with the exception of two townships, (these were Nos. 40 and 59 , then partly occupied by a fishing company with the consent of governmeut) some tickets being a prize of a whole township, others half, and others a third; many of the fortunate holders being officers of the army and navy, who had served during the preceding war. The conditions of settlement were26 townshijss (each township contains about 20,000 acres) to pay 6s. per annum for ench 100 acres; 29
ditto to pay $4 s$. for ditto; and 11 townships $2 s$. for ditto; and the grantees were to settle their lands in the proportion of one settler to each 200 acres, within ten years from the date of their grants, otherwise the same were to be void.

The mandamuses to the Governor of Nova Scotia, (to which the island was then annexed) issued for cach township, to the holders of the fortunate lottery tickets, under the King's sign manual, bear date for the greater part, August 1767; and thus, with exceptions scarcely worthy of note, the whole island containing $1,360,000$ acres, was given away in one day. [For an account of the effects resulting from this arrangement, see Colonial Library, vol. vii.]

1II. The general appcarance of Prince Edward Island, is extremely picturesque, though destitute of those bold, and in many instances, romantic features that characterise several parts of the ?djacent continent; in general the surface rises as in New Brunswick, into gentle undulations, without any absolutely flat country, hut no were reaching the clevation of mountains; the principal high lands being a chain of hills, traversing the island nearly north and south from l)e Sable to Grenville Bay; with this exception there are few inequalities to interfere with the ordinary agriculture, to the pursuit of which even a sailor is attracted, by the rich verdure which clothes the country to the water's edge.

The island is divided into three counties. [See Colonial Library, vol. vi.]
IV. Prince Edward Isle is a pastoral country,neither limestone, gypsum, coal nor iron have yet been discovered, but in many places the earth and rivulets are deeply impregnated with metallic oxides; the soil is in general a light reddish loam-in some places approaching to a tolerable strong clay-in most districts more or less sandy, but where the latter inclines to a dark colour, it is very fruitful. Red clay is a reddish sandstone, but occasionally, at intervals of several miles, a solitary block of granite is met with; in fact, the whole island seems to have been left dry in latter ages by the waters of the gulf of St. Lawrence, which are evidently continually on the decrease.
V. The climate is neither so cold in winter nor so hot in summer as that of Lower Canadn, while it is free from the fogs which rush along the shores of Cape Breton and Nova Scotia. Pcople 100 years of age, without ever knowing a day's sickness, are numerous in the island.

V1. We have no correct estimate of the progressive increase of the population; when taken from the French the island is supposed to have eontained 6,000 Acadians, a great number of whom were afterwards renoved, as stated under Nova Scotia. Scotchmen form more than one half of the whole population: those from the Hebrides are best su:ted to the island. The Acadian French are estimated at about 5,000 ; but of the Mic-mac, or native Indians, once so numerous, there are prohably not more than 30 families on the island. In 1802, the number of inhahitants was, males, 10,644 ; females, 10,007 ; total, 20,671 . In 1822, males, 12,140 ; females, 12,460 ; tutal, 24,600 . In 1825, males, 14,140 ; femules, 14,460 ; total, 28,600 . The two last censuses were as follows, viz.-Census of the Population taken under the ann thority of the Acts George 1V, cap. 7, A. D. 1827; and William IV. cap. 7, A. 1). I833.

PRINCE EDWARD ISLAND.-POPULATION in 1827 and 1833.

X. Prince Edward Island has its own Lieutenantgovernor, Council, and House of Assembly, constituted after the manner described in the preceding chapters; its military protection is under the control of the Nova Scotia Commander of the Forees. The Council consists generally of nine members appointed by the King's mandamus; and the House of Assembly of eighteen members, elected by the people as in the other colonies-four for cach county, and two for each of the towns of Charlotte, George and Prince towns. The form of procedure is that of the British P'arliament. The Exccutive and Legislative Council consists of nine members, including the Bishop of Nova Sentia, Surveyor-General, AttorneyGeneral, Colenial Treasurer, Town-major, Collector of Customs and lmposts \&ic. There is a Court of Chancery regulated after that of Westminster, over which
the Governor presides; and the jurisprudence of the colony is managed hy a Chief Justice. The laws are English. The militia consists of a troop of cavalry in euch county, two companies of artillery, and 11 regiments of foot; the whole comprizing 329 officers, and 4,545 non-commissioned officers and rank and file. The regular troops are derived from Nova Scotia, and consist of one Captain, one Subaltern, and rank and file, relieved every yenr from Halifax.
XI. The first revenue attempted to be levied for the support of the government, ins before stated, was the quit-rents; these failing in their extent, a Parliamentary grant was applied for and obtained.

The revenue of the island in 1821 , was $2,0.52 l$. ; in $1822,2,311 l$. ; in $1823,2,0191$; in $1821,2,0.52 l$.; in $1825,2,4791$. ; in $1826,4,935 l$. ; and since then the income has been thus :-

 public surGI., ditto of $0 l$. ; ditto of of treasurer, rlote TowWharf, $500 l$.; road compensation granted, 77l.; lunatics, 89l.; assayer of weights and measures, 15l.; salary of whartinger, $40 l$; Prince Town wharf, $9 l$; rent of government house, 150l.; advance for building Georgetown wharf, 30l.; refundel to J. Stewart, 33l.; Lieuteraant-governor Young, 300l.; repairinghouses, 401 .; contingencies, 201/.; total, 13,759l.; balance, $8,165 l$. ; grand total, $21,925 l$.

The expenditure of the pest year thus appears considerably to exceed that of any former year, the total amount being $13,759 l$. 6 s. $5 \frac{1}{2} \ell_{\text {. ; }}$ this great increase was contemplated by the House of Assembly at its last session, and an issue of treasury notes was made to meet the expenditure which was occasioned by the
appropriations for the erection of the New Government House, Academy, and other l'ublic Buildings, together with a larger amount than usual for the service of Roads and Bridges, and for additions to the wharfs at Charlotte Town and George Town, but in making such additional appropriations a Revenue to redeen that issue of Treasury Notes was anticipated, and will be derived under the Act levying an assessment on land. There is a very great deficiency in the amount of revenue derived from imposts, which can only be accounted for from a falling off in our exports, occasioned by the failure of our agricultural produce for the two last years, and from the advanced prices of foreign articles.

The fisheries of Prince Edward Island have not been sufficiently attended to；the herring fishery is of great importance ；it commences carly in the spring， when the bays and harbours，particularly on the north side of the island，are no sooner clear of ice than they are filled with immense shoals of those fish，which may be taken in any quantity：they are larger，though not so fat，gencrally，as those taken off the western coasts of Ireland and Scotland，and partake more of the character of the Swedish herring．Alewives or Gasperaus，although not so plentiful as the herring， appear in great quantities．Mackarcl are extremely numerous on the coast and in the harbours，from June to November．Cod are caught in great plenty in every part of the Gulf of St．Lawrence，more par－ ticularly on the coast of Prince Edward Island，the bay of Chaleur，and in the Straits of Belleisle．Trout is found every where extremely fine，and often very large；the halibut taken，sometimes weigh 300lbs． Sturgeons are common，in the summer months，in all the harbours，some measuring six to seven feet in length．Perch are found in all rivers and ponds that have a communication with the sea．

The lobsters are in great abundance，and very large and fine．In Europe this kind of shell－fish is only taken on the sea－coast amongst rocks ；at Prince Ed－ ward Island they are taken in the rivers and on shal－ lows，where they feed on a kind of sea－weed，called by the islanders cel grass，and a person wading into the water half－leg deep，might fill a bushel basket in half an hour．Many schooners are annually laden with oysters for Quebec and Newfoundland．

The plenty of fish，and the case with which it is procured，is of great assistance to the inhabitants，and in particular to new settlers，before they have time to raise food from the produce of the land．
The present mode of obtaining land in Prince Ed－ ward laland is，either by lease for a long term of years at $1 s$ ，to 18 ．fil．per aere per annumi－one or more years free，then $3 d$ ．per acre，and increasing yearly at that rate to full rent；or by purchase at from 10 s ．to 20 s ．and upward per acre．This is to be understood of woodland that it is wholly unimproved． Some proprietors have had farms fall into hand with more or less of cleared land on them；these of course are let or sold int an advanced sum，but commonly
for less than the cost of clearing．Emigrants who might not choose to sit down on a wood farm，would have many opportunities of purchasing the leaschold， or frechold，and improvements of partly cleared farms； and it would be wise in those possessing the nicansto do so．

The proprietors，with a view to escape the oppres－ sive effect of a quit rent or a land tax，now offer their estates on the following terms：－
1st．Proposed terms for conducting sales of lands in the Island of Prince Edward．
Each township heionging to the undersigned will be surveyed as the demand for lands arise，roads laid out in the most judicious direction，and the land be parcelled out in lots of 100 or 200 acres each，with a frontage on the road of 10 chains to each 100 acres．

An up－set price will be set on each lot，regard heing had to quality and location，varying from 6s．3d． Halifax currency to 20s．Halifax currency per acre； the great hody of lands to be offered at the lesser or intermediate pinces，and the ligher for those lots only of the first quality，as to soil and convenience of loca． tion．The government demand，for ungranted lands in the island，20s．Halifax currency per scre．The average price of land sold by the British North Ame－ rican Jand Company last yenr，was 9s．per ncre．The timher lands，sold in New Brunawick to Americans in large tracts，brought from 10s．to 15s．per nere．A tract，helonging to the heirs of Sir John Wentworth， situate in the district of Pictou，in the province of Nova Scotia，sold in 1835，from 15s．to 20s．per acre；and the undersigned have the best autherity for asserting their lands to he equal in soil，and more cligible for settlement，than any of the ahove referred to．By the British Packet，which arrived in Decem． ber，one of the undersigned has received $n$ proposal from a resident in the island，for the purchase of 500 acres of his estate，at the price of 20 s．currency per acre．
Sale to be offered on the following terms aud con－ ditions：－The purchaser，on paying 25 per cent．of the price，to be let into possession of the land，under an agreement to pay the interest annually，and to he entitled，on one half of the purchase money being paid，to have a deed in fee simple．The agreement
to be in writ going into po of attorney be made in moncy．To money，the land，with a cute a warra drawn in con

ot, regard being g from 6s. 3il. rency per acre; at the lesser or - those lots only enience of locaingranted lands per acre. The sh North Ame-- per atre. The to Americans in 4. per acre. A In Went worth, the province of s. to 20s. pet st autherity for soil, and more above referred ived in Decem. ived a proposal urchase of 500 s. currency par
terms and con. 25 per cent. of the land, under bally, nud to be e moncy being the agreement
to be in writing, and aigned by both parties. Before going into possession, the buyer to execute a warrant of attorney in ejectment, to be acted upon, if failure be made in the payment of interest or purchase money. To aecure the other half of the purchase money, the purchaser to give a mortgage over the land, with a power of sale contained in it, and to execute a warrant of attorney in ejectment, both to be drawn in conformity with the agreement.
As the purchaser is to receive the balance, if a sale should take place, over the money owing by him, it is his interest, as much as that of the proprietor, that suits and legal expenses should be avoided. The power of sale and warrant are insisted upon to save unnecessary expense.
The proprietor to be bound in the said agreement and mortgage, to receive the balance of the purchase money, with the interest due, whenever tendered.
The purchaser to pay the remaining moiety in five equal instalments, with interest, claarged at the rate of five per cent., due at the time of each instalment being paid; on failure of payment, the proprietor to have the right of selling the lot

If the proprictor, in default of payment by the purchaser, determine to sell, four months' notice, by advertisement in an island newspaper, must be previously given; and, upon a sale being made, the balance (if any) after deducting expenses, to he paid over by the proprietor to the owner. Alter the four months' notice, the proprietor to have the power of selling, at any future time, by public or private sale.
The purchaser, after he obtains his deed, to have the right to sell at any time to a third party; but the proprietor to have the option of accepting the new purchaser as his debtor for the balance of purchasemoney due, or of retaining for such balance the liability of the first purchaser.
The buyer to take the land subject to the payment of quit rent, and any tax now imposed, or that may hereafter lse imposed, upon the land.
and. Terms of settlement proposed to the present tenantry. The occupying tenants to have the option of purchasing their farms at 20 years' purchase in every case, supposing the rents to be 1 s . per acre; if more rent be paid, this sum and proportion to be adopted as the maximum ; and to be allowed the same liheral conditions for paying the purchase-money as already stated; or they may continue to hold on lease, as may be most agreeable to them.

It is impossible to fix a atandard to meet the circumstances of each individual case.
The proprietors bind themselves, absolntely, not to exceed the years of purchase ahove proposed with any tenant ; but they are ready to open a negociation with each of thein, and to take into favourable consideration the circumstances which the tenant is of opinion entitle hin to a deduction.
The proprictors have the clearest evidence to prove that many settlements have been effeeted in past years by the tenants upon these terms, and that they will be most acceptable at the present time to the great body of the tenantry.
3rd. Terms proposed to Emigrants and New Settlers for leases. To those who, in place of purchasing, prefer to remain as tenants, to emigrants, and to new settlera, the lands will be let in lots of 100 acres each, upon the following terms:-
Leases will be granted for 61 years certain, or the longeat of three lives, to be named when the lease ia executed, or for 99 yeara, upon the following rents :-

First aud second year No rent.

| Third year | 0s | 3d. per acre |  |
| :---: | :---: | :---: | :---: |
| Fourth year | 0 | 6 ditto |  |
| Fifth year | 0 | 9 ditto | S |
| Sixth year | 1 | 0 ditt |  |

And to continue for the remainder of the term, at the rent of $1 s$. per acre, or $5 l$. sterling for 100 acres. The tenant to pay the quit rents, and all taxes now existing, or to be hercafter imposed upon land.

The rents to be paid by the tenant, either in money, or in grrin, salted beef, pork, or butter, raised from the land, at the market price, to be delivered cither at Chariotte Town, or at some other ahipping port, as may be decided upon by the proprietor; and a written or printed notice to be given to the tenant or left at his usual place of abode, at least one month previous to the day of payment. The grain and other articles named, to be delivered in good marketable or ahipping condition.
The rent to be paid in labour, if the proprietor require it ; but the tenant to have the option of paying in money, or produce raised from the land.
The tenant, at any future time during the continuance of the lease, to have the right of purchasing upon the same terms as before detailed. This will appear as a condition in the lease.

The term day, for the pryinent of rents, to be the 20th of November in each year.

The underaigned herehy agree to be bound, absolutely, to the terms above stated, for the period of five years from the 1st of May next.

Average prices of various produ'e and merchandize in 1836.-Horned cattle, 7l. each; horses, 18l.; sheep, 10s.; swine, 1l. 10s.; milk, per quart, 4 d.; butter, fresh, per lb., $1 s$. ; butter, salt, 10l.; cheese, $9 d_{\text {. ; }}$ wheaten bread, $2 h d$. ; beef, $3 d$. ; mutton, $3 d$. ; pork, $3 d_{\text {. ; rice, }} 3 d$. ; coffee, $1 s .3 l_{\text {. ; tea, 3s. } 9 \text {. } . \text {; sugar, }}$ Gill.; salt, per bushel, 18.9 d. ; wine, per gailon, 12 s. ; brandy, 12 s . ; beer, 1 s .2 d . ; tobacco, per lb., 1 s .9 d .

## CHAPTER VII.-NEWFOUNDLAND AND THE LABRADOR COAST.

Section I. Newfoundland Isle, lying on the N. E aide of the Gulf of St. Lawrence, between the parallels of 46.40 . to 59.31 . N. latitude, and the meridians of 52.44 , to 59.31 . longitude W. of Greenwich, is bounded on the whole eastern shore by the Atlantic Ocean; on the N. E. and N. it is separated from the const of Labrador by the Strait of Belleisle (which is about 50 miles long, by 12 broad), on the N . W. by the Gulf of St. Lawrence, and on the ${ }^{-}$S. W. it approaches at Cape Ray towards Cape Breton Isle, ao as to form the main entrance from the Atlantic Ocean into the Gulf of St. Lawrence. Its extreme length, measured on a curve from Cape Race to Griguet Bay, is about 420 miles; its widest part, from Cape Ray to Cape Bonavista, is about 300 miles ; and, excluding ita broken and rugged shores, the circumference may be stated at 1,000 miles-the whole comprising an area of 36,000 square miles.

Newfoundland is the nearest part of America to Europe, the distance from St. John's, in Newfoundland, to Port Valentia, on the west eoast of Irelnnd, being 1656 miles, and which might be traversed every month throughout the summer, if steam packets were established, in from eight to ten days.
II. The history of this island begins, aecording to tradition, with its possession by Biorn, a sea king, or pirate of Iceland, who was driven thither, and is said to have taken shelter near Port Grace Harbour, about the year 1001. It is doubtful, however, whether his party ever colonized the island, if so perhaps they had become extinct before its accond discovery by John Cabot, the Venctian, who obtained a commission to make discoveries from Henry V11, and during his first voyage, 24th June, 1497, observed a headland, which, as a lucky omen, he named Bonavista, which name it retains to the present day. Cabot brought home with him three of the natives, who were clothed in skins, and speaking a language which no person underatood.

Robertson and Pinkerton were of opinion that Newfoundland was first colonized by the Norweglans, and the latter thought the red Indians degenerated savages from the Norwegian aettlers, whom Eric, Bishop of Greenland, went to Winiand, in 1221, to reform.
The Newfound Isiand having been nfterwards visited by Cotereal, a Portuguese, and Cartier, the French navigator, who reported most favourably on the abundance and excellency of lts cod fishery (owing to which it was called Bacalao, the Indian name for that fish), soon attracted fishermen from European nations to visit its coasts: still no permanent settlement was made, and the fate of the early attempta at this ohject were auch as, for a length of time, to deter future adventurers. Besides several others, Mr. Hoare, a merchant of Iondon, fitted out a ship, and attempted to pasa the winter there in 1536 , but the crew, to
avoid atarvation were obliged to resort to the most horrible expedients, and indeed would all have pe. rished had they not luckily found a French ship, in which the emaciated survivors returned to Fingland, giving deplorable accounts of their sufferings. Not deterred by this failure, however, and hia own first attempt in 1578, Sir Humphrey Gilhert, the enterprising half brother of the famous Sir Walter Raleigh, having obtained a patent from Queen Elizabeth for six yeara, granting him possession of 200 leagues round any point he chose to settle on, aold all his estates in England, and fitted out five amall vessels, in which he emharked with 200 people in 1583 . Sir Humphrey landed in the Bay of St. John's, and took quiet possession of the country, in the presence of a vast concourse of fishermen, being the crews of 36 vessels of different nations. This unfortunate adventurer was, however, not destined to realize his hopes; being anxious to take possession of as much country as possible, before the expiration of his patent, he proposed to prosecute his discoveries to the south; but his crews mutinied, and part of them returned home; of those who followed him above 100 were lost, in a gale, on board of one of the ships, off the Sable Island, or bank, and disheartened by their adverse circumstances, the others insisted on his steering homeward, which Sir Humphrey reluctantly consented to, remarking that he had but suspended his scheme until the next opring, 'when he would fit out an expedition royally.' His ship, however, foundered in a storm on the passage home, and thus ended this disastrous expedition.
In 1585, according to our next accounts, a vojage was made to Newfoundland, by Sir Bernard Drake, who claimed its sovercignty and fishery ir the nsme of Queen Elizabeth. Sir Bernard scized seversl Portuguese shijs laden with fish, and oil, and furs, and returned to England; but, owing to the war with Spain, and the alarm caused by the Spanish armada, several years elapsed before another voyage was made to the island.

A fresh attempt was made at a settlement in 1610, but this was also abnndoned, as well as several subsequent ones. The attempt in 1610 was made by virtue of a patent granted by James I. to the Lord Chancellor Bueon, l.ord Verulam, the Earl of Northampton, Lord Chief Baron Tanficid, Sir John Doddridge, and 40 nther persons, and under the designation of the "Treasurer and Company of Adventurers and Planters of the Cities of London and Bristol for the Colony of Newfoundland." The patent granted the lands be. tween Capes St. Mary and Bonnvista, with the sess and islands lying within ten lengues of the const, for the purpose of securing the trade of fishing to our subjects for ever. Mr. Guy, an intelligent and enterprising merchant of Briatol, who planned this expedition, settled in Conception Bay, remained there two
years, and th some of his $p$ at planting be

In 1614, Capt. Whitburn was sent out with a commission from the Admiralty to empannel juries, and investigate the abuses complained of by the fisherinen; he beld a Court of Admiralty on his arrival, and im. medistely received complaints from the masters of 170 vessels. In two years from this perind, Whitburn was sppointed chief over a little colony of Welshmen, formed by Dr. William Vaughan on the aouth part of the island, named by him Cambriol (now Little Britain), and which he purchased from the patentees before mentioned.

And what may be considered the first permanent colony, was eatabliahed in 1623 by Sir George Cal. vert, afterwards Lord Baltimore, in order that he might enjoy the exercise of his religion, which was Roman Catholic. The aettlers fixed their head-quarters st Ferry Low, spreading by degrees over all the bays in the south-eastern peninsula. Lord Baltimore made hia soln governor over the colony, which he called Avalon, and soon after proceeded thither himself, and it increased and flourished under his management: how his lordshlp contrived to set aside the former patentees is not known.

Avalon was the ancient name of Glastonbury, in Somersetshire, where it is aaid Christianity was first preached in Britain : Lord Baltimore transferred the name to his new colony under the idea that it was the first place in North America where Christianity was estsblished.

So important did the settlement of this colony now sppear to the anthorities at home, that we find the commissions directed to the Lord Treasurer, and others, 'to erect a common fishery, as a nursery for seamen;' and the first regulation for " governing of His Majesty's suhjects inhabiting in Newfoundland, or trafficking in bays," \&c. (a very interesting document) was issued by Charles I, and bears date 1633, about which time Lord Falkland sent a colony from Ireland to Newfoundland.

In I654, Sir David Kirk obtained a grant from Parliament of certain lands in Newfoundland, and proceeded thither with a few settlers; at thia time, notwithstanding the constant bickerings between our people snd the French, who had established a colony at Piacentia, there were settlements effected in fifteen different parts of the island, altogether smounting to 300 families : yet, strange to say, that for many years after this the Board of Trade and Plantations did every thing in their power to prevent any aettlers colonising on the island, and authorised the commlssion of various acts of cruelty on those who had settled!
Shortly after the accession of William III., on war breaking out with France, onse of the causes for which was set forth that, " of late the incroachments of the French upon Newfoundland, and His Majeaty's subjects' trade and fishery there, had heen more like the invations of an enemy than becoming friends, who enjoyed the advantages of that trade only by permission." The French settlement was attacked, in September, 1692 , by Commander Williams, but owing to the spirited conduct of the French governor, the expedition succeeded in doing no more than burning the works on Point Vesti. On the other hand, in 1696, the Chevalier Nesmond, with a strong squadron of French ships, aided by the force on the island, made a descent on the town and harbour of St. John, but having totally failed, he returned to France.

Before the close of that year the French were, however, more succeasful, for another squadron arriving under Brouillan, he, in concert with lbberville, attacked St. John's, which being now short of military stores, and in a very defenceless state, was compelled to surrender. The French however, did not retain it, hut having set fire to the fort and town, sent the garrison on parole to England.

The French admiral appears to have done nothing further, in consequence of a misunderstanding with Ibberville, who commanded the troops, and who followed up his auccess by destroying all the British settlements, except those of Bonavista and Carbonia Harbour, failing before which, he returned to Placentia.

To retrieve these losses, a British aquadron under Admiral Nevil, with 1,500 troops, commanded by Sir John Gihson, was dispatched, but the cowardice of one commander and the ignorance of the other dis. appointed the anticipated resulta; in the meantime the peace of Ryawick put an end to hostilities by replacing things in the position they were in prior to this war, and Sir John Norris was appointed governor to see that the atipulations were properly observed. The government of Newfoundland was at this time an object of ambition, and we find it always conferred on some diatinguished officer of the royal navy. Many Acts of Parliament were enacted to regulate the fish. eries, conferring privileges on fishing ships, and prohibiting the importation of fish taken by forelgners in foreign ships.

Shortly after the declaration of war against France, in May 1702, Sir John Leake was dispatched with a amall aquadron to take possession of the whole island, and arriving from England in August, he partially effected the object of his mission, by destroying the French aettlements at Trepassey, St. Mary's, Colinet, Great and Little St. Lawrence, and the Island of St. Peter's ; and, burning the fishing-boats, he returned to England at the end of the year with twentythree prizes.

In the following year Vice-admiral Graydon, being ordered with a squadron to protect the plantations, arrived off the coast of Newfoundland August 2 d .; but owing to a fog, which continued with great denaity for thirty days, his ships werc dispersed, and could not be brought together till the 3 d . of Septem. ber. He now called a council of war, as to the practicability of attacking the strong hold of the French at Placentia, and it was decided that it would not be prudent to do so with the force at his disposal, on which he returned to England, without effecting more than protecting the trade, by the presence of his fleet : the Admiral was severely and justly censured for his conduct.

The miscarriage of Graydon, encouraged the French to attempt the conquest of the whole island; and the garrison of Placentia having been atrongly reinforced from Canada, in the year 1705, five hundred men were dispatched under the command of Subercase, and made a resolute attack on Petty Harbour, a port within nine miles of St. John's, where they were repulsed; the French, however, devastated the different settlements, destroyed Fort Forillon, and sprend their ravages coastwise as far as Bonavista.

In the year 1706, Captain Underdown, with only ten ships, destroyed many of the French vesscls in the harbours along the coast, notwithstanding that the French had as many as ten armed vessels on that atation, and by his activity and succeas gave a severe blow to their trade. Although Parliament earnestly
entreated the Queen to ${ }^{\text {a }}$ use her royal endeavours to recover and preserve the ancient possessions, trade and fisherics of Newfoundland,' little attention was paid to this humble address, the whole disposable force being assigned to the Duke of Marlborough at that time, in the midst of his victorious career. The French, however, not withstanding their repeated disasters on the continent, still continued to persevere in their endeavours for the expulsion of the English from Newfoundland, and accordingly, St. Ovide, the King's Lieutenant at I'lacentia, having effected a landing without opposition, or without being discovered, within five leagues of St. John's, attacked and completely destroyed that town, on the 1st of January 1708.

Costabelle, the French commander-in-chief, next directed his force on Carbonia, the only aettlement of consequence remaining in the hands of the English, but, on this occasion he was not so fortunate, and was even ohliged to abandon the enterprise, after destroying all the buildings within their reach.

The news of this misfortune produced great excitement in England, as the possession of the fisheries had ever been considered a point of inmense importance, and an expedition was ordered, under Captain G. Martin and Colonel Francis Nicholson, to attempt the conquest of the island; but, owing to the strong force of the French, they could effect no more than the destruction of a few fishing stations. From this time until the treaty of Utrecht, the French remained in peaceable possession of Newfoundland: by this treaty, however, the island, as well as the adjacent ones, were declared to belong wholly to Great Britain. The French being allowed to catch and cure fish on certain conditions, and to occupy the isleta of St. Pierre and Miquelon, with a garrison of fifty men each.

The final conquest of all their American colonies in the seven years' war, made the French glad to receive back this privilege again at the peace of 1763. But as the French have now set up an exclusire (instead of a concurrent) right to a large extent of the coast fishery, and proceeded to drive away, by force, British veasels engaged in fishing on the very shores of their own island, I give here the following extracts from the treaties between England and France, from 1713 to 1814.

Negotiations respecting Newfoundland.-Treaty of Utrecht, 1715.-Art. 13. "The Island called Newfoundland, with the adjncent islands, shall from this time forward belong of right wholly to Great Britain; and to that end the town and fortress of Placentia, and whatever other places in the said island are in posscasion of the French, shall be yielded and given up, within seven months from the exchange of the ratifications of this treaty, or sooner, if possible, by the most Christian King, to those who have a comniasion from the Qucen of Great Britain for that purpose. Nor shall the most Christian King, his helrs and successors, or any of their subjects, at any time hercafter, lay claim to any right to the said island or lslands, and to any part of it, or them. Moreover, it shall not be lawful for the subjects of France to fortify any place in the said island of Newfoundland, or to ercct any buildings there, besides stages made of boards, and huts necessary and usual for drying of fish; or to resort to the said island beyond the time necessary for fishing, and drying of fish. But it shall be allowed to the subjects of France to catch fish, and to dry them on land, in that part only, and in no other besides that, of the said island
of Newfoundland, which stretches from the plsce called Cape Bonavista to the northern part of the said island, and from thence running down by the western side, reaches as far as the place called Point Riche. But the island called Cape Breton, as alao all others, both in the mouth of the river St. Lawrence, and in the gulph of the same name, shall hereafter belong of right to the French, and the most Christian King shall have all manner of liberty to fortify any place or places there."

Treaty of Paris, 1763.-Art. 5. "The subjects of France shall liave the liberty of fishing and drying on a part of the coasts of the island of Newfoundland, such as it is specified in the 13th article of the Treaty of Utrecht ; which article is rencwed and confirmed by the present treaty (except what relates to the island of Cape Breton, as well as to the other islands and coasts in the mouth and in the gulph of St. Lawrence) : and his Britannic Majeaty consents to leave to the subjects of the most Christian King the liberty of fishing in the gulph of St. Lawrence, on condition that the subjects of France do not exercise the said fishery but at the distance of three leagues from all the coasts belouging to Great Britain, as well as thuse of the continent, as those of the islands situated in the said gulph of St. Lawrence. And as to what relates to the fishery on the coasts of the island of Cape Breton out of the said gulph, the subjects of the most Christian King shall not be permitted to excrcise the said fishery but at the distance of fifteen leagues from the coasts of the island of Cape Breton, and the fishery on the coasts of Novs Scotia or Acadia, and everywhere else out of the said gulph, shall remain on the footing of former treaties."

Art. 6. "The King of Great Britain cedes the islands of St. Pierre and Miquelon, in full right, to his most Christian Majesty, to serve as a shelter to the French fishermen : and his said most Christiaa Majesty engages not to fortify the said islands; to erect no buildings upon them, but merely for the convenience of the fishery; and to keep upon them a guard of fifty men only for the police."

Treaty of Versailles, 1783.—Art. 4. "His Majesty the King of Great Britain is maintained in his right to the island of Newfoundland, and to the adjacent islands, as the whole were assured to him by the 13th article of the treaty of Utrecht; excepting the islands of St. Pierre and Miquelon, which are ceded in full right, by the present treaty, to bis most Christian Majesty.

Art. 5. "His Majesty the most Christian King, in order to prevent the quarrels which have hitherto arisen between the two nations of England and France, consents to renounce the right of fishing, which belongs to him in virtue of the aforesaid article of the Treaty of Utrecht, from Cape Bonavista to Cspe St. John, situated on the eastern coast of Newfoundland, in fifty degrees north latitude : and his Majesty the King of Great Britain consents, on his part, that the tishery assigned to the subjects of his most Chris. tian Majesty, beginning at. the said Cape St. John, passing to the north, and descending by the weatern coast of the island of Newfoundland, shall extend to the place called Cape Raye, situated in forty-seven degrees fifty minutes latitude. The Frcuch fishernen shall enjoy the tishery which is assigned to them by the present article, as they had the right to enjoy that which was assigned to them by the treaty of Utrecht.

Art. 6. "With regard to the fishery In the gulph of St. Lawrence, the French shall continue to exercine
it, conformabl Paris."

Declaration of his Britannic Majesty. - 1. "The King having entirely agreed with his most Christian Majesty upon the articles of the definitive treaty, will seek every means which shall not only ensure the execution thereof, with his aecustomed good faith and punctuality, but will beside give, on his part, all possible efficacy to the principles which shall prevent even the least foundation of dispute for the future.
"To this end, and in order that the fishermen of the two nations may not give cause for daily quarrels, his Britannic Majeaty will take the most positive measures for preventing his subjects from interrupting, in any manner, by their competition, the fishery of the French, during the temporary exercise of it which is granted to them upon the coasts of the island of Newfoundland; and he will for this purpose, cause the fixed settlements, which shall be formed there, to be removed. His Britannic Majesty will give orders that the French fishermen be not incommoded in cutting the wood necessary for the repair of their scaffolds, huts, and fishing vessels.
"The thirtcenth article of the treaty of Utrecht, and the method of carrying on the fishery, which has at all times been acknuwledged, shall be the plan upon which the fishery shall be carried on there: it shall not be deviated from by either party ; the French fisbermen building only their scaffolds, confining themselves to the repair of their fishing vessels, and not winteriug there; the subjects of his Britannic Majesty, on their part, not molesting in any manner the French fishermen during their fisling, nor injuring their scaffolds during their absence.
"The King of Great Britain, in ceding the islands of St. Pierre and Miquelon to France, regards them as ceded for the purpose of serving as a real shelter to the French fishermen, and in full confidence that these possessious will not become an object of jeulousy between the two nations; and that the fishery between the said islands and that of Newfuundland shall be limited to the middle of the channel.
"Manchester.
"Given at Versailles, the 3rd September, 1783."
Counter Decliration of his most Christian Majesty.
-"The principles which have guided the King in the whole course of the negociations which preceded the re-establighment of peace, must have convinced the King of Great Britain, that his Majesty has had no other design than to render it solid and lasting, by preventing as much as possible, in the four quarters of the world, every subject of discussion and quarrel.
"The King of Great Britain undoubtedly places too much confidence in the uprightness of his Majesty's intentions not to rely upon his constant attention to prevent the islands of St. Pierre and Miqueion from becoming an object of jealousy between the two nations.
" As to the fishery on the consts of Newfoundlant, which has been the object of the new arrangements settled by the two Sovercigns upon this matter, it is suffieiently ascertained by the fifth article of the treaty of peace signed this day, and by the decinration likewise delivered to-dny, by his Britannic Majesty's Ambassador Extrnordinary and Plenipotentiary ; and his Majesty declares that lie is fully satisfied on this liead.
" In regard to the fishery between the island of Newfoundland and those of St. Pierre and Miquelon, it is not to be carried on by either party, but to the Iniddie of the channel; and his Majesty will give the most positive orders that the French fishermen shnll
not go beyond this line. His Majesty is firmly persuaded that the King of Great Britain will give like orders to the English fishermen.
"Gnavier de Veroennes.
"Given at Versailles, the 3rd September, 1783."
Treaty of Paris, 1814. - Art. 8. "His Britannic Majesty, stipuluting for himself and his allies, engages to restore to his most Christian Majesty, within the term which shall be hereafter fixed, the colonies, fisheries, factorics, and establishments of every kind which were possessed by France on the 1st January, 1792, in the seas, and on the continents of America Africa, and Asia, with exception, however, of the islands of Tobago and St. Lucie, and the Isle of France and its dependencies, especially Rodrigues and Les Sechelles, which several colonies and possessions his most Christian Majesty cedes in full right and sovereignty to his Britannic Majesty, and also the portion of St. Domingo ceded to France by the treaty of Basle, and which his most Christian Majesty restores in full right and sovereignty to his Catholic Majesty.

Art. 13. "The French right of fishery upon the Great Bank of Newfoundland, upon the coasts of the islaud of that name, and of those adjacent islands in the St. Lawrence, shall be replaced upon the footing in which it stood in 1792."

Treaty of Paris, 1815.—Art. 11. "The treaty of Paris of the 30th of May, 1814, and the final Act of the Congress of Vienna of the 9 th of June, 1815, are confirmed, and shall be maintained in all such of their enactments which shall not have been modified by the articles of the present treaty."

In order to elucidate the meaning (if indeed such be required) of the treaties between Great Britain and France, on the subject of an exrlusive or concur rent right of fishing on the Newfoundland coasts, the following extracts from the treaties on the same suliject, between England and the United States are subjoined.

Treaty of 1783.-Art. 3. "It is agreed that the people of the United States shall continue to enjoy unmolested the right to take fish of every kind on the Grund Bank, and all other banks of Newfoundland, also in the gulf of St. Lawrence, and at all other places in the sea where the inhabitants of both countries used at any time heretof re to fish; and also that the inhabitants of the United ses shall have liberty to take fislı of any kind $c$, ' . part of the coast of Newfoundland as Britisls fist in.en shall use (but not to dry and cure the same un that island), and also in bays and creeks of all other of his Britannic Majesty's dominions in Aınerica; and that the American fishermen shall have liherty to dry and cure fish in any of the unsettled hays, harbours and creeks of Nova Scotia, Magdalen Islands, and Labrador, so long as the game shall remain unsettled; but so soon as the same or cither of them shall be settled, it shall not he lawful for the said fishermen to dry or cure fish at such settlements without a previous agreement for that purpose with the iuhabitants, proprictors or possessors of that ground."

In 1818 , the United States' Plenipotentiary knew ton well the value of the privileges of fislsing on the coasts of our territory not to make it an important branch of his negociations; thus-
"Whereas," says the convention, " differences have arisen respeeting the liberty clnimed by the Uuited States for the inhabitants there of, to take, dry, and cure fish on certain coasts, hays, harbours and creeks of his Britannic Mnjesty's dominions in America; it is agreed between the single contrncting parties, that
the inhabitants of the said United States shall have for ever, in connexion with the suhjects of his Britannic Majesty, the liberty to take fish of every kind on that pari of the southern coast of Newfoundland which extends from Cape Ray to the Rameau Islands, on the western and northern coast of Newfoundland, from the said Cape Ray to the Guiperon Islands, on the shores of Magdalen Islands, and also on the cossts, bays, harbours and creeks, from Mount Jolly, on the southern coast of Labrador, to and through the Straits of Belleisle, and thence northwardly, indefinitely along the coast, without prejudice, however. to any of the exclusive rights of the Hudson's Bay Company:"

The practical effect of the claims enforced by the French of exclusive rights on our coast, and which as justly may be claimed on the coast of Sussex, is the virtual cession of the larger and better half of Newfoundland to France, for from Cape Ray to the Quirpon islands, not ten British settlers are to be found, although the land is well adapted for cultivation and pasturaze.
III. Little is known of the interior of this vast island, which stands on an immense bank, in length about 600 miles, with a breadth of about 200 miles, and with soundings varying from 25 to 95 fathoms.
There are two banks, the outer one lies within the parallels of 44. 10. and 47.30. N. latitude, and the meridians 44. 15. and 45.25. W. longitude, with soundings from 100 to 160 fathoms. This bank appears to be a continuation of the Great Bank, and a succession may be observed the whole way to Nova Scotia.

Newfoundland is in shape nearly triangular, the apex thereof being to the northward, and the base extending east and west from Cape Ray to Cape Race. Like the Nova Scotia shores, and for a reason similar to the one given under that chapter, the coast is every where indented at intervals of two or three miles, by broad and deep bays, innumerable harbours, coves, creeks, and rivers. The island all round is rocky, (with pebbly beaches), generally covered with wood down to the water's edge, and with some lofty headlands on the $S$. W. side.

Beginning at the south-east part, Newfoundland is formed into a peninsula of 26 leagues in length, and five to 20 in breadth, by two large bays, the heads of which are separated by an isthmus not exceeding four milea in width. This peninsula has five large bays, and several smaller ones, and is that part of the island named hy Sir George Calvert, afterwards Lord Baltimore, Avalon.

To the north of Avalon, and on the eastern side of the island, lies Trinity Bay, between 47.55 . and 48 . 37. north latitude. This bay nearly divides the old province of Avalon from the rest of Newfoundland; separated from the Bay of Bonavista by a narrow neck of land; it has on the north side Trinity Harbour, Ireland's Eye, and Long Harbour ; to the south west, Bull's Bay and Islands, and Tickle Harbour ; to the south Chapel Bay; to the east and north-east Heart's Delight, Heart's Content, \&cc.; and from thence through the Harbours of New Pelican and Old Pelican, we pass Break-heart Point, leading to the Point of Cirates.
Round this point, about three miles from Conception Bay, lies the small island of Baccalao, an insulated rock, where an extraordinary number of birds congregate to batch their young-these are called Baccalao birds; and from their continual scream being heard a considerable distance at sea, and serving as a warning to mariners during the constant
fogs, the different governors (in former years) have issued proclamations imposing severe penalties on such as should molest them.

Conception Bay ranks as the first district in Newfoundland, not only from its numerous commodious harbours, coves, \&cc., but from the spirit and enterprise of its inhabitants. Harbour Grace is the principal town of this district; Carbonear, or Collier's Harbour is the next in importance, but its harbour, though spacious, is not considered at all seasons secure; hesides these there are several considerable settlements, as far up the bay as Holy Rood, formed by the deep inlets, separated by perpendicular rocks, which run out into the sea for two or three leagues, though they are not a mile in breadth. The scenery on this part of the coast is majestic, wild, and calcu. lated to strike the beholder with awe.

The Cape of St. Francis, the eastern boundary of Conception Bay, is distant seven miles from St. John's Harbour ; four leagues lower is Torbay, a fishing atation ; and three leagues further is St. John's. The harbour is one of the best in the island, being formed between two mountains, the eastern points of which leave an entrance, called the Narrows.

From the circumstances of the harbour being only accessible by one very large ship at a time, and from the numerous fortifications and batteries erected for its protection, St John'a is a place of considerable strength. The Narrows, which is the only assailable part, is so well guarded that any vessel attempting to force an entrance would be inevitably sunk. There is a signal post on the top of a lofty hill, on the right of the entrance of the Narrowa, which tele. graphs to the town the arrival of every vessel that passes, where from, and the length of passage.There are about 12 fathoms water in the middle of the channel, with tolerably good anchorage ground, The most lofty perpendicular precipices rise to a considerable height upon both sides, but the southem shore has rather the greuter altitude, only from 2 comparison with the opposite rocks. There is: light shewn every night at Fort Amherst on the left side of the entrance, where there is also a signal post, whence the ships that pass are hailed, and signals made to the hill before-mentioned, which repeats them to the Government House and the Town : other batteries of greater strength appear towering above the rocky eminences towards the north. At about two-thirds of the distance between the entrance, and, what may properly be turmed the harbour itself, there lies a dangerous shelf, cslled the Pancake, opposite the Chain Rock, so named from a chain which extends across the strait at that place, to prevent the admission of any hostile fleet. Mariners on entering the place ought to beware of approaching too near the rocks, on the larboard-hand inside the light-house point. Fort Townshend is situated immediately over the town, and was the usual residence of the governor. Fort William is more towards the north; and there is also a small battery perched on the top of a single pyramidical mount, called the Crow's Nest. The sonth-east limits of St. John's Bay is formed by Cape Spear, about four miles from the Narrows. Petty Harbour is a fishing station of some importance, as is also the Bay of Bulls about seven leagues from the mouth of the harhour. This last is difficult of access on account of some sunken rocks, but once in vessels are land locked and ride in safety. [For topography, \&c., see. "Colonial Lib. rary," vol. vi.]

less than of the
adjacent island of Newfoundland, to whose goverr ment it belongs. It may be sald to extend from uv to the 6 lst degree of north latitude, and from 56 (on the Atlantic) to 78 (on Hudson's Bsy) west longitude, the prevailing features being rocks, swamps, valleys, and mountains.
IV. The prevailing rock on the Labrador coast is gneis. On this at Lanse a Loup, a bed of old red sandatone ia super-ground, about 200 feet thick, and axtending above half a mile inlarid. Here also, as on every other part of the coast of labrador visited, the sppearance of the cliffs, and of the land near them, and the rolled masses inland, which have evidently been expoasd to the action of the sea, scem to prove that this has considerably receded. The sandstone is generally red and white, in alternate stripes, and presents a remarkable mural front to the sea. Near the surface it was atrongly marked with iron. The whole of the rock was composed of white quartz and yellow felspar ; and the grains were generally as fine as oatmeal, though occasionally coarser, even to the extent of half an inch in diameter. Both coarae and fine bear marks of being a mechanical deposit, being perfectly distinct, without the least appearance of amalgamation ; only a few exceptions occurring to this remark.
Over the red candatone was a thin atratum of red compact felspar, containing vegetable impressions, and also horizontal. Ahove this were varietiea of secondary limestone, nrranged in parallel strata several feet thick, and full of shells. Detached masses of primitive limestone wcre also found; and a few miles from the shore the secondary formations generally dis. sppeared, leaving gneis and mica slate on the surface.
The geology of the contiguous island of Newfoundland is of the same features as that on the labrador coast. The former abounds, it is said, with minerals of various sorts. The oldest inhabitants assert that Conception Bay contains mines of several sorts, at the head of Chapel Cove there is a coal mine, a lime kiln was erected in that neighbourhood some years back and worked with tolerable auccess. There is said to be an iron mine on the northern side of Belleisle, and another at Harbour Grace; and many of them affirm that there is a copper mine near St.

John's, which has actually been worked by Cornish miners brought out for that purpose. There is also a quantity of that mineral called marcasite, copperas stone, and horse gold (and which some of the earlier discoverers mistook for the genuine metal) found about Catalina Harbour. Coal has been found on the banks of the Humber, and there are excellent gypsum quarries near Cape Ray. Although a large part of the island consists of plains, studded with rocks, and termed " harrens," there is a considerable extent of alluvial soil capable of growing wheat and other grain. Springs of fresh water everywhere abound, and the island is well adapted for the paaturage of horned cattle on an extensive scale.
V. The climate of Newfoundland varies according to the locale of the island, whether north or south, and the weather, although severc, is less fierce than that of Lower Canada, while during a long winter the brilliancy of the Aurora Borealis and the splendid lustre of the moon and atars give peculiar beauty to the atmosphere.

The longevity of the inhabitants is the best proof of the salubrity of Newfoundland, in no country is old age attended with greater bodily vigour and mental animation. There are instances of fishermen 100 yeara of age being actively employed in the arduous duties of their calling.

On the coast of Labrador the winter is extremely aevere, the thermometer often falling $30^{\circ}$ below the freezing point, and although the houses of the Moravian Missionaries are heated by large cast iron stoves, the windows and walls are all the winter covered with ice, and the bed clothes freeze to the walls; rum is frozen in the air us rapidly as water, and rectified spirita $800 n$ become thick like oil. [For an account of the fogs, \&cc., see "Colonial Library," Vol. VI.]
VI. In consequence of the extensive fisheries carried on along its coasta, the population of Newfoundland necessarily fluctuates, and it is difficult to obtain an exact census. In 1806, the number of mouths were estimated at 26,505 . I have obtained two more recent censuses, the one for 1822 from the House of Commons Library, the other for 1827-8 from the Colonial Office.

Population of Newfoundland in 1822-3, and in 1827-8.

Allowing for passengers， 900 ，the total would be 55,719 ．
The marrlages within the year were 500 ，the births 1800 ，and the deathe 750. The number of French on our coast of Newlouodland，and from which Englishmen are excluded，is sald to amount to 12,000 ．

When Newfoundland was first visited after the general discovery of the continent of America，it was found to contain two distinct races of men－the one termed Red Indian，the other the Esquimaux；both are now almost extinct，the former perhaps en－ tirely so，as recriminating hostilities were waged between them and the early settlers，who shot and speared each other whenever an occasion presented itself．The destruction of the Red Indians was not owing solely to the European，but in fact，mainly to the exterminating war carried on against the former by the Mic－Mac Indians，who arrived in the island，in considerable numbers，from Nova Scotia and Cape Breton．
The［B．B．］at the Colonial Office for 1836，gives the following census of European population ：－

W II ITES．

| Total | 41467 | 32238 | 73705 |

The area in square miles has not been ascertained； the boundary of each district towards the interior，
having never been correctly defined．The populstion to the square mile cannot be ascertained or calcu－ lated，the interior of the island not being settled or inhabited．The pupulation is dispersed along the margin of the sea coast ；except about St．John＇s， very few buildings are to be found，beyond one mile from the sea．

Although the agriculture of this colony is progres． sively increasing，yet there are comparatively few per－ sons employed in it exclusively，the population being nearly all employed in the fisheries．Almost every family，however，have a small quantity of land in cul－ tivation．

The commerce carnot be ascertained accurately，as it is carried on mainly in vessels，which，as well as their crews，belong to other countries．Accurate re－ turns of the births，marriages，deaths，\＆c．，could not lie procured，as no register of burials is kept in the Roman Catholic Church．

The Esquimanx，who are thinly scattered on the Labrador coast，are similar to the Greenlanders，the language of the latter affurding a dialect for the former； in summer they live in tents prepared like those of the Greenianders，but in winter their habitations are constructed in a different manner ：chusing a large drift of snow，the Esquimaux digs a hole in it cor－ responding with the dimensiors of the intended house； pieces of snow，three fect long，two in breadth，snd one foot thick，are then cut and placed in the form of an arch over the hole；instead of a window an aper． ture is cut in the arch，and a slab of clear ice admits sufficient light ；the entrance to the dwelling is long， winding and very low，and another slab of thick ice forms the door．In the middle of the house is an cle－ vation of srow 20 inches high，covered with skins and used as the sleeping piace．Such is the extraordinary construction of an Esquimaux＇s dwelling for nine months of the year．

It is very p max on the

VII. Return of the number of Churches, Livings, \&c., of Newfoundland in 1836. [B. B.]

Besides two Dissenting places of worship at St. John's, one of which is Congregational and the other Wesleyan, there are 27 in the different scattered settlements of the Colony, all of them Wesleyan. The Protestant Episcopal Clergymen in this colony are all Missionaries appointed by the Society P.G.F., by whom they sre paid. The Archdeacon receives $300 l$. per annum from Government, in addition to his stipend from the Society.

There are, in fact, no parishes (as the term is gencrally understood) in this Colony. The respective Clergymen of the different religious persuasions, have each a district appropriated to hia spiritual charge, quite distinct (as to limits and extent) from each other. Nor can they be made to correspond, so as to admit of their being brought into the view required by this return.

There has usually existed a very commendable harmony of religious feeling between the different persuasions, the Wesleyana, Roman Catholice, Congregationists, and Dissenters generally heing more numerous than the Epiacopalian Church, over which there is an archdeacon; the Romish Church has a bishop.

Since the establishment of the Presentation School, the female scholars have been withdrawn, and a proportionste increase of boys has taken place. This school is conducted by five ladies of the nuns of that order, without any remuneration ; the superior superintending under the Catholic bishop for the time being. The school, it is ssid, has hitherto been supported by Dr. Fleming, the present hishop; but the Colonlal Legislature has, this year, voted the sum of 1001. per annum for its support, for the five years ending 6th May, 1841.

The Education Act passed in the last session of the Legislature having been only partially brought into operation, no returns of the schools established under it can yet be made.

The salaries of the mssters, mlstresses, and teachers of these schools (smounting to about 1,500 . per a:nnum) are paid out of the funds of the society. towards which the Legislature has voted the sum of 3001. for each of the five years ending the 6th May, 1841.

This is a valuable institution, and deserves to be extended throughout the coionics.
M M

X. The island affairs are administered by a House | of Rodney, Osborne, Byng, Hardy, Graves, \&c. Civil of Assembly, consisting of 15 members, chosen by the people. The qualification for an elector is universal household suffrage-that of a representative, being a householder of two yeurs' standing. A Legislative and Executive Council is added to the House of Assembly.

Newfoundland has had a resident governor ever since the year 1728, and amongst the distinguished officers who have held that office, we find the names
of Rodney, Osborne, Byng, Hardy, Graves, \&c. Civil
and justiciary courts were early established; and a superior court was added about 1750. In 1832, a representative government was given to Newfoundlaid, similar to that enjoyed at Nova Scotia.
The laws are in English, and administered by circuit courts. There is no militia in the island, and the police are jew in number.
XI. The revenue is derived from custom duties, licenses, \&c.

There is a considerable portion of shipping belong－gin，coffee，tea，sugar，oatmeal，salt，pease and beans， ing to Newfoundland，and registered in the island． 1 have only the following years ：－

Colonial shlpping tonnage，belonging to and regis－ tered at Newfoundland－In 1826， 20,548 tons ；1827， 22，105 tons；1828，25，385 tons；1829，27，319 tons； 1830，29，465 tons；1831，tons；1832，
tons；1833，tons；1834，tons；1835， tons；1836，tons．
The principal imports consist of bread，fiour，pork and beef，butter，rum，molasses，wine，brandy，and
lumber，\＆c．

We may now proceed to examine the extent of the fisheries，and first with regard to the quantity caught and exported at several intervals．In 1790，the ex－ port of fish from the island was，quintals 656，000；in 1800 ，quintals 382,000 ．The following is a consecu－ tive return laid before Parliament in 1828，and its value is enhanced by specifying the countries to which the fish were exported．

Fish caught and exported from Newfoundland．－Periods endiog 10th of October in each year．

The B. B. in the Colonial Office, for the following years shew the annexed results.
Quantity and Value of Pish in Newfonndland from 1828 to 1836.

In 1835, 9,931 quintals of Pickled Fish, value, 1,8781 .; in 1836 , value, 1,6651 .
In $1836,83,512$ gallons of Whale Oil, value, $4,443 l$.
The London Custom-house manuscript returns, which I have carefully examined, furnish the aggregate exportations of fish and other articles, as follows :-

Newfoundland Exports.-Years ending 5th January.-Custom-House.

Mr. Bliss, the intelligent agent for the North American Colonies, furnishes me with the following account of the trade of Newfoundland :-

| Years. | Exports. |  |  |  |  | Tonnage to |  |  | Total, Including all other Parts. |

XIII. Course of exchange varies according to fection; other sorts as well aa damsona, grow abuncircumstances, and to the demand for bills to make remittances to England in payment of spring supplies; it is generaily highest in the fall of the year. The demands for bills is governed in a great measure by the succeas or failure of the fisherics, particularly the seal fiahery; in the former event, remittances are made in Oil, in the latter, in Bills. The par of exchange is 15 one-third per cent. premium. In the course of 1836, it rose to 3 above, and fell to $25-6$ th below.

The Bank of British North America, have a branch at St. John's.
British money and Spanish dollars, the latter established by the governor's proclamation (1825) at 4s. 4d. sterling, but passing current at 5s. [B. B.]
XIV. Domeatic poultry succeeds very well; land and water wild fowl are found in great abundance, particularly bustarda, wild geese, and wild or eider ducks ; partridges, snipes, plovers, curlews and blnck-birds, are also in great abundance, as well as cagles, kites, hawks, ravena and jays.
The partridges are like ptarmigans, (of an excellent flavour) larger than those in Europe, and alwaya perfectly white in winter. The most remarkable of the sea birds which visit the coast of Newfoundland are, the lord and lady of the teal kind; the saddleback, gull, tinker, razor-bill, the loon, whabby, and ice bird.
Besides the great ataple of the island, fish, (see commerce) the numerous lakes and ponds which abound produce divers kinds of excellent trout and eels of a great size; the lobstera are ancummonly large and equally good, and the musiles better flavoured than in Europe. There are no oysters, but lance, herrings, mackarel and aalmon are in great abundance, besides these, place, sole, hallibut and thornback are found on the coast. The enpelin, which is perhaps the moat delicious fish in the world, arrives periodically in such ahoals as to change the colour of the sea, near the coves and beaches, and two persons may easily fill a conmmon aized boat in a couple of hours. This fish remains on the coast about six weeks, and is considered the best bait for cod. The herrings also arrive in the spring and autumn in prodigious ahoals.
Potatoes and cabbages are the most valuable productions of the island, growing in plots or gardens attached to the fisherman's houses. Turuips, carrots, parnsnips, peas, radishes and most garden roots yield abundantly. Red, black and white curranta, gooseberries and strawherries grow in great perfection; and a smaller kind of strawherry is lound wilh in the woods; raspberries grow everywhere, und that species of elierry called the Kentish comes to great perdantly in other sorts as well aa damsons, grow abundantly in favourable aeasons, hesides these apples and pears are aometimea raised in perfection.

The plains are almost covered with low stunted buahes which bear a great variety of whld berries. The snake root, capilaire and wisha capucoa, are indige. nous, when in blossom the latter plant is benutiful. It is made by the inhabitanta into a decoction and used after the manner of tea, and aaid to be extremely wholesome in apring. Another remarkable plant found in the woods is the Suracinia, a full description of which is given in Dr. Thornton's Temple of Flora. Sarsaparilla is also found in the island.

The swamps abound with a great variety of reeds and flowers, many of the latter extremely beautiful, such as wild roses, violets, \&e., but the season for enjoying them is short, for they all come together and last but a few weeks, which gives rise to the saying common in Newfoundland, " a short feast and a long famine." The timber grown on the Island, though generally of no great magnitude, is rendered very useful for the purposes of the fishery, and vessels of considerable size, varying from 60 to 200 tons esch, are built chiefly with native wood. The Juniper (or Hec-ma-tic), Witch Hazel, Black-birch, and Black. spruce, are the moat esteemed for these purposes; the cominon fir is not esteemed for building, but very well adapted for casks and other common uses in the fishery.
Kelp is extremely abundant all round the coast, and with other seaweeds is used for manure. The Zoophyta or animal flowers forming the link between the animal and vegetable kingdoma, may alao be frequently met with.
It will be observed from the foregoing returns, that the codfishery is the most important. [For a descrip. tion of the codfishery at Newioundland, see Colonial Librury, vol. vi.]

That the cod fisheries of Newfoundland are to Eng. land more precious than the mines of Peru and Mexico, and in truth, if we consider that the vsst quantities of fish annually drawn from the banks and adjacent coast, it will be found that as the mere representative value of gold, its worth far exceeds that of the precious metals, to aay nothing of the importance of the subject in a maritime, commercial and political point of view.
The total value of the trade of Newfoundland, may in fact be estimated at $2,000,000 l$. sterling per annum, independent of its great importance in a maritime point of view; while it should be remembered, thint it is upheld hy no bounties (as that of France), nor protected by any exclusive rights.
Another tishery of great importance to the island and to liugland, is that of seals for the sake of their
skins and oil, commencemen yeers to the fo

From a recent St. John's paper, I take the following statement of the outfit for the seal fishery at that port, of undermentioned years.

Return for t830-8 inciusive.

| Years. | Veasels. | Tons. | Men. |
| :---: | :---: | :---: | :---: |
| 1830 | 92 | 6198 | 1935 |
| 1831 | 118 | 8046 | 2578 |
| 1832 | 153 | 11462 | 3294 |
| 1833 | 106 | 8665 | 2564 |
| 1834 | 125 | 11029 | 2910 |
| 1835 | 126 | 11167 | 2912 |
| 1836 | 126 | 11425 | 2955 |
| 1837 | 121 | 10648 | 2940 |
| 1838 | 110 | 9300 | 28:6 |

In round numbers there were in 1831 , seals caught 744,000 ; 1832, 538,000; 1833, 438,000; 1834, 401,000 . In the spring of 1838 , there were 22 i vessels with 227,758 scals; value, $100,391 l$.

Manufactures, Fisheries, \&ec. in 1836. [B. B.] There are two corn nills at St. John's, and one at Brigus. The number of ships built in the colony are 24 , of 1,578 tons burthen; 107 registered according to law. A copper mine was discovered, and worked for a short time, some years ago (1776-7), near shoal bny, about 15 miles to the southward of St. John's. Some quarries of limestone have also been found, in one of which, at Canada Harbour (on what is called the French shore), the stone is of excellent quality.
The number of ahips employed in the fishery cannot be correctly ascertained. The number of boats are 6,159. Quantlty of fish in 1836, as follows:-Dried cod fish, 860,354 quintals, value 517,4571 .; pickled fish, 1,665l.; salmon, 1,847 tierces, 6,264l.; herrings, 1,534 barrels, 955 l.; mackerel, 79 casks, 991 .; caplin, suunds, and tongues, 2,037 casks, 749l.; seal and cod vil, 2,306,736 gallons, 241,502l.; whale oil, blubber and oil, dregs, 83,512 gallons, $4,445 l$.; seal skins 384,321 number, 34,930l.; total, 808,066l.

Produce, \&e. of Newfoundland in 28s6. [B. B.]

| Name of the District. |  | No. of Stock. |  |  | Quantity of Produce. |  |  |

Property annually created, turned into Moveable or Immoneable Property. - Animal food for 80,000 moutha, 200 lbs . each per annum, at $4 l l$. per lb ., $266,666 \ell$. ; fish for ditto, 150 lbs . each per annum, at 1 d . per lb., $50,000 \mathrm{l}$. ; bread and other vegetables for ditto, at $3 d$. per day for each, $365,000 l$. ; butter, milk, cheesc and eggs for ditto, at 1 l . per day for each, 120,166l.; Luxuries, viz.-wines, spirita, ale, tea, coffee, sugar, \&c., for ditto, at $3 d$. per day each, 365,000l.; food for horses, cows, \&c., 40,000, at 16 . each, 40,000l.; clothes and furniture worn out for 80,000 mouths, at $1 l$. each, $80,000 l$. ; domestic produce, value $500,000 l$.; income from business, or profits on professions, \&c., 100,000l.; waate by fire, loss, bad seasons, shlpwreck, \&c., 10,000l. Total, $1,896,832 l$.

Moveable Property: 1,000 horses, at 10l. each, $10,000 l$. ; 10,000 horned cattle, at $5 l$. each, $50,000 l$.; 10,000 aheep, at $1 l$. each, $10,000 l$.; 20,000 swine, at 14. each, 20,000l.; poultry, 2,000l.; huse furniture, \&c., for 15,000 houses, at $10 l$. cach, 150,0001 .; clothing and equipage for 80,000 mouths, at $5 l$. each, $400,0001$. ; machinery and farming implements, \&c., $20,000 l$.; bullion and coin, $60,000 l$.; ships, boats, timber, and other merchandize, $200,000 l$. Total, $922,000 l$.
Immoveable Property: 15,000 houses, at 101 . each, 150,000l. ; warehouses, mills, \&c., 100,000l.; 100,000 acres arable land, at $5 l$. pcr acre, $500,000 l$.; 200,000
acres land granted, but untilled, at Il. per acre 200,000l.; 1,000,000 acres land not granted, at 5 s. per acre, $250,000 \mathrm{l}$; roads, canals, dykes, bridges, wharfs, \&c., 50,0001 .; forts, gaola, churches, barracks, \&c., $300,000 l$; manufactories, mines, quarries, fishe. ries, \&c., $1,000,0001$. Total, $2,550,0001$. Total moveable and immoveable property, $5,368,832 l$. The statistics of the island are so vague, that the above imperfect estimate could only be made ; it is, how. ever, given for the purpose of promoting further inquiry.

## CHAPTER VIII.-HUDSON BAY TERRITORIES.

Sectsic. I. It is difficult to convey an idea of the territories included within this denomination; they may be said to ud between the meridians of 60 . and 140. W. ( ards of 4,000 miles) and from the 50th of N. $1 \mathrm{r}^{\prime \prime}$. .e to the Pole.
II. The geography of this large extent of country will be found detailed at considerable length in my "Colonial Library."
III. Hudson Bay was discovered, in 1610, by Henry Hudson, who commanded a vessel fitted out by the Engliah Russia Company for the purpose of exploring a N.W. passage round the continent of America. He was left by his mutinous crew with his son and seven other persons to perish in that inhospitable region. The same company subsequently fitted out several expeditions for exploring these seas, particularly by Button, Fox, James, and Gillam, who made voyagea between 1612 and 1668, when the latter, who had been aided by Charles 1I., at the suggestion of Prince Rupert, passed the winter of 1668 in a river which he named Rupert River, where he built Fort Charles, which be garrisoned, and in the following year returned to England. During his absence, the king had granted to Prince Rupert and the company associated with him their celebrated charter, dated May 2, 1669, which secures to them all the trade and commerce within the entrance of Hudson's Straits, together with all the countrica upon the coast, and confines of the said coast and straits, \&c. And under this grant the company have held possession up to the present day, ita legality having been established by the opinions of eminent lawyers, except during a short period (from 1697 to 1714), when the settlement was occupied by the French.
IV. The human race is scantily but widely diffused over this region. The natives who inhabit the country round Hudson's Bay may be divided into three distinct classes-the Southern Indians, the Northern Indians, and the Esquimaux; the first occupy the entire country to the north of Upper Canada, and their territory lies between that province and the south coast of Hudson's Bay, and that part of the west which lies between Churchill River and Lake Athabasca; these are composed of many tribes, some of whom bring the produce of their hunting to is company's factories, and others take it to trading houses, now cstablished nearer their own humes; they are of a middle size and copper colour, of strong and healthy conatitutions, and subject to few diseases: they seldom live to a great age, but generally enjoy all their facultica to the last. They excel in hunting, and are capable of enduring great fatigue, cold, and hunger. They are frequently eniployed by the factors to procure provisions, and though long used to firearms, they nre atill so expert with the bow and arrow
as to kill 50 or 60 geese in a day, gencrally shooting them on the wing.

The Northern Indians occupy the country from the 59th to the 68 th degree of north latitude ; their territy, of 500 miles in length, is bounded on the south by Churchill River, on the vest by the Athabasca Indians, on the east by Hudson's Bay, and on the north by the Dog-ribbed or Copper-coloured Indians, which latter, although speaking the same dialect, never visit the factories, but trade through the intervention of their neighbours, and are described by Hearne as a hospitable and harmless tribe.

The Northern Indians are well proportioned, and about the middle size; they have a peculiar cast of expression, different from any other tribes in the country; their foreheads are low, noses aquiline, chins long, eyes small, and cheek-bones high; their hair, like other tribes, is black, straight, and coarse: the men have little beard, and that they remove by plucking it out; they do not possess that activity of body and liveliness of disposition met with among the other tribes of Indians, who inhabit the west coast of Hudson's Bay.

The Esquimaux, who inhabit the northern coast of Hudson's Bay, seldom approach the fort at Churchill river, a small sloop being periodically dispatched to Knapp's Bay, Navy Bay, and Whale Cove, to trade with them. We have no data as to the numbers of these races: for minute descriptions see "Col. Lib."

The company's settlements around the whole of Hudson's Bay, which is 750 miles long and 600 broad, are only four-namely, at the mouth of Churchill liver, 59. N. latitude; on an island between two branches of Nelaon's River, in $57 \frac{1}{2}$ N. latitude; on the River Albany, in 52.18. N. latitude; and at the mouth of a small river on the south side of James's Bay. Theae are all fortitied positiona; the first named Prince of Wales's or Churchill Fort, the second York, the third Albany, and the fourth Moose Forts. The company have at present in their employ ahout 1,000 Europcans and their descendants by Indian wives. Under the protection of these are some smaller settlements auch as Severn House, in 56. 12. N. latitude, and East Main on Rupert River, in 53.24. N. latitude.

The Hudson's Bay complany have nearly 1,000 persons in their employment, and recently they have formed a location for their retired ofticers, \&c. on the Red River, where, according to a census taken during the year 1833, the population of the settlement was 3,070, of whom 1,750 were Catholics and 1,320 Protestants. Very little money is to be scen in the country, all trading being generally carried on by barter. The country is sufficiently fertile. A considerable trade in furs, \&c., is carried on by the company.

## BOOK IV.-POSSESSIONS IN ASIA.

CHAPTER I.-HINDOSTAN.

Section I. The total British territory under the immediate government of the East India Company is 514, 190 stuare miles (i. e. ten times the size of England!); and the extent in square miles of British territory in India, and of territories protected by Great Britain, is $1,128,800$ 3.-Purlinmentary Return, 1831.
II. The earliest authentic Furopean account of Hindostan is derived from Alexander's army, which the Macedonian chief pushed across the different rivers of the Punjaub, without however reaching the Gaages ; at this period a considerable portion of India was subject to the Persian monarchy. Subsequently the Hindoos became tributaries to the all-pervading sway of the disciples of Mahomet, and finally subjects of the victorious Moslems, who, headed by Timur or Tamerlanc, extended their conquests from the Irtish and Volga to the Persian Gulf, and from the Ganges to the Archipelago. A century after the death of Tamerlane, the Portuguese appeared on the coast of India, having effected a passage to the eastward by doubling the Cape of Goud Hope, and thus completely changed the European route of commerce with the eastern hemisphcre, which had previously been carried on by the Ked Sea and Egypt, or by the Black Sea and Constantinoplc. The example of the Portugucse was follewed by the Dutch, French, and English. Within less than a century after the death of Timur, or Tamerlane, the Portuguese, under Vasco de Gama, arrived in India, and found the west coast of Coromandel divided between two great sovereigns-the king of Cambay and the Zamorin; by aiding the petty princes who were dependent on the latter, the Portuguese soon acquired a paramount influence on the Malabar shore, and at the commencement of the sixteenth century secured themselves in, and fortified Goa, which they made the capital of their settlements and commerce in the eastern seas, extending over the east coast of Africa, the coasts of Arabia and Persia, the two peninsulas of India, Ceylon, the Moluccastheir trade even stretching to China and Japan. At this period they levied tribute on 150 native princes, and claimed and exercised a power to sweep from the Indian seas every European vessel that sailed without their permission. Of this mighty dominion scarcely a vestige now exists. The annexation of Portugal to the crown of Spain, and the war waged against the Hollanders, induced the Dutch, who had heretofore been content with the carrying trade between Lisbon and the north of Europe, to examine India; and at the commencement of the seventeenth century they became formidable rivals of the Portuguese, atripping them flrat of Malacca and Ceylon, then driving them from various aettlementa on the Malabar coast, and finally usurping their place on the shores of Coromandel. The enterprising spirit of the English was not long behind in establishing a trade in the eastern hemisphere, and they were followed by the French,
who became the most powerful rivals of the former after the dominion and trade of the Portuguese and Dutch had declined.

The first charter for the incorporation of the East India Company, was granted by Queen Elizabeth on the last day of the sixtcenth century, and was one of exclusive trade in the Indian seas for fifteen years with promise of renewal. [A full historical detail of the acquisition by the East India Company of the British territories will be found in my "History of the Colonies" and " Colonial Library."]

We now proceed to examine the details relative to the stipendiary princes-subsidiary and protected states -and feudatory and tributary chicftains of British India.

A large portion of the British dominions in the east is made up of the possessions of princes who either themselves, or their descendants, now enjoy stipends paid to them out of the public revenues. These princes first became connected with us by subsidiary alliances, and ceded territories in return for military protection; others lost their dominions by the chances of war; while some territories were taken under our control from the absolute incapacity of the rulers, or their tyranny, which in mercy to the unhappy sufferers we could no longer permit to exist. The princes of the first and last classes are formally installed on the Musnud, allowed to exercise sovereignty over the tenants on their household lands, they are cxempted from the juristiction of the British courts of law, have their own civil and military functionaries, with all the insignia of state, and a British envoy usually resident at their court, whose duties chicfly relate to their pecuniary affing, or the ceremonials of sovereignty. The following is an abstract $\mathrm{i}_{\mathrm{n}}$ round numbers of their atipends.

| When gratited | Titles of Princes. | Stipend. Kupees. |
| :---: | :---: | :---: |
| 1803 | Emperor of Delhi and Family...... | 15,00,000 |
| 1801 | Soubhadar of the Carontic | 11,65,400 |

| 1771 | Nawaub of Masullpatam .......... | 50,000 |
|  | Total Rupees. . | 1,08,91,449 |

Or at the rate of $\mathbf{2 8}$. per Rupee, in stelliug, 1,089,144i.

A very able document，drawn up by Mr．B．S． Jones of the Board of Control，makes the amount of stipends pald in 1827，28，as follows ：－
＂Nabob of Bengal，S．K．22，40，350．－Rajah of Be－ nares， $1,34,282$ ，Fmperor of Delhi，13，40，983，－ Benaeek Rao，5，79，866，－Nabob of Arcot，17，53，965， —Rajah of Tanjore， $\mathbf{1 0 , 4 7 , 3 8 9}$ ，－Nawaub of Masuli－ patain，52，671，－Familics of Hyder Ali and Tippoo Saib， $6,38,858$, －the late Peishwa，Bajee Rao and Chimuajee Appal，22，42，023，－Nabob of Surat， $1,62,675$ ．Total $1,01,92,557$ or at 2 s．the S．R． $1,019,255 l$ ，sterling．
Subsidiary Alliances．－Nearly one half of the Hin－ dostan territory is held by Governments in aubsi－ diary alliance with the Britiah government；the ge－ neral terms of the treaties with whom are，on the side of the Engliah，protection against external ene－ mies，and on the other，a aubmitting，in all political relations with foreign states，to the arbitration and
final adjudication of the British government ；a spe． cific force is furnished by the East India Company， and a territory equivalent to the maintenance of the troops ceded by the former ；the subsidizing state is also bound to keep on foot a specific contingent force to act in subordinate co－operation with the subsidiary． The protecting power is not to interfere with the in． ternal administration of the protected state，but in cases of exigency it reserves the right in general to assume the whole of the resourcea of the protected state．The aubsidiary force is liable to be called out to protect the legal succession to power，but not to be employed between the head of the government and its Zumendara or chiefs．
The following is given as a list of the princes，the military protection of whose territories is undertaken by the British government，together with the amount of subsidy paid by each，or the revenue on the terri－ torial assignment in lieu of subsidy．

British Feudatory Chiefs.-These chiefa so far differ from the former class, that, while the protected chiefs had treaties concluded with them as independent princea, the feudutory have had their allegiance tranaferred to Great Britain by their feudal superiors or by the events of war. In most cases, the lands which they held as a life tenure have been converted by our government into a perpetuity, and the ehiefs are permitted a sup. ome control on their own lands. Among the number of these chiefs may be mentioned the Putwurdhan family, of which there are nine chiefs; the Soubahdar of Jansi, Chief of Julaon and Calpee ; family of Angria (the Mahratta pirate); numeroua tributaries in Kattywar and in Gujerat ; the Rajahs of Shorapoor and Gudwal; the Seedee of Jinjeera, and other Abyssinian chiefs. The Parliamentary Return of the area of Protected and Allied States is as follows :-" Dominions of the Rajahs of Travancore and Cochin, 0,400 square miles; Nizam, 108,800; Rajah of Myaore, 29,750 ; King of Oude, 25,300 ; Dowlat Rao Scindiah, 42,400 ; the Rajah of Berar, including Nagpore, 64,270; Jeswunt Rao Holkar, 17,600; the Guicowar, including the detached Pergunnahs belonging to the British in Kattywar and Guzerat, 36,900; Rajah of Koorg, 2,230; Nabob of Kurnool, 3,500; Rajah of Sikhim, 4,400; Nabob of Bhopal, 7,360; Rajahs of Sattara, Colapore, Sewuntwarree, and the principal British Jaghiredars, 21,600; Rajah of Cutch, 6,100; Soubedar of Jhansi, Rajah of Duttea and others, commonly known as the Bundlecund chiefs, 19,000. Territories under British protection west of the River Jumna, comprehending Jhodpore, Bikanier, Jessulmeer, Khotah, the Seikh country, the hill districta of Sirmoor, and other amall states, 165,000. Of Aasam, Jynteea, Cachar, and Muneepore, the boundaries are so undefined that it is difficult to form cven an approximation to their auperficial contents, but it is estimated at 51,000 . Total, 614,610 square miles.
British Allies.-Independent of the foregoing states, the E. I. Company's government have general treaties with other surrounding nationa, viz. with Cochin China, Siam, Caubul, Nepaul and Ara, the intercourse of the Company ia principally of a commercial nature, but they have residents establighed at Nepaul and Ava.

With the Imaum of Muscat, and with other chiefs on the uestern shores of the l'ersiun Gulf, the Com. pany have treaties for commercial purposes, and with a view to the auppresaion of the slave trade, and of piracy in the Gulph. In order to aecure the fulfi. ment of the provisions of these treaties, the Company have established political agents on the shores of the Persian and Arabian Gulfs.

The arca of the kingdoms and prineipalities of India has been computed by Captain J. Sutherland after a novel manner; the boundaries of cach state having been marked off on a skeleton map, drawn on paper of equable texture, the whole were cut out with the greatest care, and ueighed individually aad collectively, as a check in the most delicate balance of the Calcutta Assay Office ; the weights were noted to a thousandth part of a grain, the balance being seusible to the tenth part of that minute quantity. Before setting to work on the states, an index, or unit of 100 square degrees, cut from the same paper, was first weighed, to serve as a divisor for the rest. The weighing proceas commenced in the driest part of the day, taking the whole of the papers together; thus the continent of India weighed 127,667 grains troy: the sum of the indieidual weights of the separate atates 127,773 grains troy: the addition was proved to proeecd from the hygrometric water absorbed towards the evening, and corrections were applied to endeavour to neutralise this source of error: the tollowing data must, however, only be considered as an approximation to truth in the absence of better information, owing to the imperfeet data of maps of India. By Captain Sutherland's weighing process, the area of the native states, in alliance with the British government, is 449,845 square miles. That of the territory under British rule, with the remain. ing small states and Jagerdars, 6 626,591 , giving the auperficial area of India, $1,076,591$ square miles, which nearly agrees with Hamilton's eatimate of 1,103,000.
Captain Sutherland classes the native states of India under the three following heads, viz.-

1st. Foreign; Persia, Kabool, Senna, the Arab tribea, Siam, and Acheen : 2d. External on the Frontier; Ava, Nepal, Lahore, and Sinde: 3d. I ulernal

(to which the following areas refer), which according to the nature of their relations, or treaties, with the British, he divides into six classes.

## Firat Claba.

By By
Weighment. Hamilton.

1. Oude, . square miles, 23,923 20,000
2. Mysore, ditto - - 27,999 27,000
3. Berar, or Nagpur, do. . $56,723 \mathbf{7 0 , 0 0 0}$
4. Travancore, do. . . 4,574 $\mathbf{6 , 0 0 0}$
5. Cochin, do. . . 1,988 2,000

Treaties offensive and defensive; right on theip psrt to claim protection external and internal from British Goverriment, and right of the latter to interfere in internal affairs.

Second Class.
6. Ilyderabad, square milea, $88,884 \quad 96,000$
7. Baroda, do. - 24,950 12,000

Treaties offensive and defensive, with the exception of the right of Britain to interfere in internal affairs, hut empovered to require the aid of British troops for the realization of the sovereign's just claims on his aubjecta.

Third Clabs.
8. Indore,
8. Indore,

Treaties offensive and derensive; states mostly trihutary; acknowledging the supremacy of and promising subordinate co-operation to, the British Government, but supreme rulers in their own dominions.

Fourth Class,
Amecr Khan :-
square miles.

16,602
32. Patiala, Keytn, Naba, and Jeend

Guarantee and protection, subordinate co-operation, but supremacy in their own territory.

Fifth Class.
33. Gwalior . square miles, 32,944

Amity and friendship.
Sixth Class.
34. Sattara
square milcs, 7,943
35. Kolapar

3,184
Protection, with the right of the British Government to control internal affairs.

Of the above states Captain Sutherland enumerates four as Mahomedan (i. e. with Mussulman rulers I presume), viz.: Hydrabad, Oude, Bhopal, and Tonk: of the Hindoo States eight are Mahratta, viz. : Sattara, Gwalior, Nagpar, Indore, Banda, Kolapar, Dlar, and Dewas : nineteen are Rajput, viz.: Oudipár, Jeyphir, Judpar, Bándi, Kotah, Cutch, Alwar, Bhikanir, Jesaluár, Kishenghur, Bánswára, Pertábgarrh, Dungerpar, Keroll, Scrowé, Rewah, Dhattea, Jhansé, and Terhi: six are of nther Hindoo tribes, viz. : Mysore, Bhurtpoerr, Travancore, Sawantwari, Cochin, and Dholpar. Wesides these allied states, there are the following lifferior Rajships and Jágérdars, viz.: Chets-Nagpär, Singajer, Sumbhalpár, Oudipoor, Mamiphr, Tanjore, the laroach family, Ferozpar, Merich, Tunsgaon, Nepani, Akulkote, and those of the Sagar and Nerbulda country, together with Sikhim, and the States of the Northern Hills.
An account of some of the lilly States lying North of the Tenasserim Provinces.-Of the numerous petty stntes north of the Tenasserim provinces, those only of Zimmay, Labong, and Lagon, on the cast bank of the Salween, and the slip of country on the west bank, inhabited by a wild, barbarous, but independent tribe of mountaineers, called Red Kayeons, have hitherto been visited by Europicans. Of the vast extent of country between the Salween and Cambodia Rivers, we know little or nothing, though it is hoped the expected opening of an overland trade between the frontiers of China and the Tennsserim provinces, will extend our knowledge of the intermediate countries. The country is extremely fertile in our territories, abounding in rivers; and with a population of but three to the square mile!
The town of Zimmay (or Changmai), is situated in Lat. 20. N. and Long. ahout 99. E.; that of Lahong, is distant from Zimmay only 10 miles S. E.; Lagon about $50 \mathbf{S} . E$. from the same. The several states are named after these towns, but their respective boundaries nre not well defined, and together with those of Moung-pny, and Moung-nam, appear to be the patrimony of one family.

About 50 ycars ago, when the whole of this country was under the dominion of Ava, aeven b. others succeded, with the assistance of Siam, in throwing off the Burmese yoke, ejected them from the abovenamed towns, and having been confirmed in the government of them by Siam, have continued tributary to that kingdom, and successfully resisted all the attempts of Ava to regain possession. The elder brother was invested with the title of "Chow-tchceWeet, or " Lord of Life," with the supreme authority over the others; and the title has descended to each hrother successively alive, till it reached the youngeat, whom Dr. Richardson, found on his first and second visits, but who died at the advanced age of 73 years, during his third visit. It is now in abeyance in the fanily, and a waits the decision of the court of Siam.From the Madras Herald, 31st Sept. 1837

Before closing the subject, it may be desirable to mention an independent chief of great talent, wealth and power, with whom the British government is on terms of friendly alliance. I allude to Runjeet, or Runajit Sing, whose country includes not only what is called the Punjab, and the whole of the beautiful and important valley of Cashmere, but also considerable tracts of territory beyond the Indus from Tatta on the south to Thibet on the north, and from Caubul on the west to beyonl the Sutlej on the cast. This formidable potentate possesses $n$ large army (see Military Section), an immense arsenal at Umritzar,
and a vast treasury (his annual revenues are estimated at $1,80,00,000$ rupees) at Govind Garrow.

The following are the names of the Governors-general of British India: Col. R. Clive, from June 1758 to Jan. 1760 ; J. L. Holwell, Jan. 1760 to July 1760 ; H. Vansittart, July 1760 to Nov. 1764 ; J. Spencer, Dec. 1764 to May 1765 ; Lord Clive, May 1765 to Jan. 1767 ; Harry Verelst, Jan. 1767 to Dec. 1769 ; J. Cartier, Dec. 1769 to April 1772 ; Warren Hastings, April 1772 to Feb. 1785; Sir J. Macpherson, Feb. 1785 to Sept. 1786 ; Marquess Cornwallis, Sept. 1786 to Oet. 1793 ; Sir J. Shore, Oct. 1793 to March 1798; Marquess Wellesley, May 1798 to July 1805 ; Marquess Cornwallis, July 180:5 to Oct. 1805; Sir G Barlow, Oct. 1805 to July 1807 ; Earl Minto, July 1807 to Uct. 1813; Marquess Hastings, Oct. 1813 to Jan. 1823 ; Lord Amherst, Aug. 1823 to April 1828; Lord W. Bentinck, June 1828 to 1834 ; Lord Auckland, 1835. The principal events which occurred under each of these rulers, will be found in my Colonial Library, vols. viii. and ix.
III. No langonge would do justice to the varied and magnificent scenery of Hindostan, partaking as it does of the richly luxuriant and wildly beautiful; here interninable plains, intersected with deep and mighty rivers: there inaccessible mountains, whose immeasurable summits are wreathed in eternal snow; on the one hand an almost boundless landsenpe, verdant with the softness of perpetual spring; on the other alpine steppes, ruggedly romantic, and fringed with vast and towering forests: mountainous ranges or ghauts on this shore, presenting $n$ stupendous bar. rier to the Indian oceun, while on thet, a low and sandy alluvium seems to invite the further encrcialiments of the deep nind stormy Bengal Bay. Indeed the features of British lodin are so varied that, to convey an exact idea of their peculiarities, would require volumes, and a survey of the country. The sea-coast line (extending from Cape Negrais to the frontiers of Sinde) is 3,622 English miles, with a territorial breadth (from Surat to Sinde) of 1,260 miles. The leading geographical features of Hindostan are the Himalaya Mountains, along the northern and eastern frontier; a range of ghauts, rising at the southern point of the peninsula, running north along the coast until receding at the parallels of 20 . to 22 , when they branch off in ridges of different elevations across the continent of India, until lost in the table land of Malwa and Allahabad; while on the eastward the mighty Ganges, and on the west. ward the nearly equal Indus, roll their impetuous and lengthened torrents from the Himalaya snows to the sultry coasts of Bengal and Cutch, giving off in their progrese an infinity of tributaries, which are ramified in every possible direction over the whole peninsula.
The sea coast of Bengnl province is, for many miles, scarcely elevated above the level of the sea, and where the sacred Ganges and mighty Burrampooter, with their hundred mouths, rush to join the parent fountain, a vast extent of country $(30,000$ square miles) called the Sunderbunils, extending for 180 miles along the bay of Bengal, is an interminable labyrinth of snlt water lakes, rivers, and creeks, interspersed with mangrove islets of shifting mounds of sand nad mud.

Calcutta, on the banks of the Hooghly, latitude 22. 23., longitude 88. 28., distant from the sea 100 miles, and from the Sanilheads about 130 miles, has a very intricate navigation through the bnuks of the sani and mud which occasionally shift their beds in the Hooghly river ns well $p$, ill the other branches in
the Ganges. It is, however, very favourably situated for internal navigation, as the Ganges and its sub. sidiary streams permit the transport of foreign produce to the north-west quarters of Hindostan over a distance of upwards of 1,000 miles, and the day may not be far distant when the Indus and the Ganges navigation will be united ly a canal. Diamond harbour, about 30 miles below Calcutta on the east bank of the Hooghly, has a draught of water sufficient for the largest Indiamen, but ships of 600 tous anchor quite close to the grand promenade (entitled the Strand road and Esplanade) of the 'City of Palaces.'

This metropolis and commercial emporium of the cast (now containing nearly a million of inhabitants), was so late as 1717, a small straggling village, with a few clusters of huts, to the number of ten or twelve, the inhabitants of which were hus. bandmen, endeavouring to reclaim the surrounding forests and swamps, which extended even to where Chandpal Ghaut now stands. The eity ia divided into streets at right angles with each other, with large and handsome squares throughout, particularly in the European part of the metropolis, each square having in its centre an extensive tank or reservoir of the Ganges water, with verdant sloping bnnks planted with evergreen shrubs. The residence of the Gover. nor-general, constructed by the Marquess Wellesley, is of equal magnitude to any palace in Europe.

The stupendous fortification of Fort Willinm was commenced by Lord Clive, after the battle of Plassy, and has cost the East Indin Company 2,000,000l. sterling. Situated on the margin of the river Hooghly (about one-fourth of $n$ mile below Calcutta), and on a level with the surrounding country, which is a per fect flat for many miles, it does not make an imposing appearance, indeed its strength is scarcely perceptible; nevertheless it is superior in strength and regularity to any fortress in India, and requires from 10,000 to 15,000 men to defend the works. The form is octagon, five sides being regular and three next the river according to circumstances. The river flows up to the glacis, the citadel towards which has a large salient angle, the faces of which entilade the whole sweep of the water ; indeed the guns of the faces benr upon the city, until crossed by the fire of the batterics parallel to the river. This salient angle is defended by several adjoining bastions and a counterscarp that covers them. The bastions on the five regular land sides have all many salient orillons, behind which are retired circular fianks extremely spacious, and an immense double flank at the height of the berme; the double flank would ennble the besieged to retard the pnssage of the ditch, ns from its form it cannot be enfiladed; the orillon is effective against ricochet shot, and is not to be scen from any parallel; the herme opposite the curtain serves as a roall, and contributes to the defence of the diteh like a faussebrave. The ditch is very wide and dry, with a cunette in the middle, which receives the water of the ditch by means of two sluices that are commanded by the fort. The countersenrp and covered way are excellent; every curtnin is covered by a large half moon without flanks, bonnet, or redoubt, but the faces each mount 13 pieces of heavy ordnance, thus giving a defence of 26 guns to these ravelins. The demi-bastions which terminate the tive regular fronts on cach side are covered hy a countergunrd, of which the faces, like the half moons, are pierced with 13 embrusures. These eounterguards are connected with two redonhts constructed in the place of arms of the ndjuecut $x$ -
entering angles, great attention advanced works and the nagles acute, project a other beyond th capable of takins period of the ap sble fortress is tr rounded by row well gravelled pr of balls, bombs barracks are spad

entering angles, the whole faced, and palisaded with great attention to neatness as well as strength. The advanced works are exccuted on an extensive scale, and the angles of the half moons being extremely acute, project a great way so as to be in view of each other beyond the flanked angle of the polygon, and capable of taking the trenches in the rear at an enrly period of the approach. The interior of this admirable fortress is truly beautiful,-large grass-plots surrounded by rows of shady trees, beneath which are well gravelled promenades, - with here and there piles of balls, bombshells, and parks of artillery. The barracks are spacious, and will contain 20,000 men.

The length of course of some of the principal rivers to the sea is in English miles-Indus, 1,700; Ganges, 1,500; Sutledj (to Indus 900), 1,400; Jhylum (ditto 750), 1,250; Jumna (to Ganges 780) 1,500; Gunduck (to Ganges 4!0), 980, In the Deccan and south of India-Godaveri, to the sea, 850 miles; Krishna, 700 ; Nerbudda, 700; Tuptee, 460; Cavery, 400. Taking the limit of the Ganges and Jumna to the west and south, and the Brahmaputra and Megna to the east, the country, completely intersected by navigable rivers, may be computed to cover an area of not less than forty square degrees.

The quantity of alluvial matter which these vast rivers carry down to the ocean is immense.
The Rev. Mr. Everest has furnished us with some interesting observations and experiments on the river Ganges, which he recently made at Ghazepore, in the province of Benares.
Velocity of the stream in feet in an hour.-July 3rd 6,810.7th, 11,520, 23rd, 21,000; August 8th, 4,200, 22nd 34,560 ; September 6th, $21,600,24$ th, 13,320 ; Octoher 8 th, 10,800 , or 20,200 average of the four months-equivalent to alsout four miles an hour.
Depth of the rirer.-Jure 22nd, 19 feet 6 inches; 30 th, 22 feet 6 inches; July 7th, 25 feet 6 inches; 14 th, 28 fect; 23 rd, 30 feet; August Ist, 35 feet 6 inches; 8 th, 44 feet; 13 th, 47 feet 6 inches; 22 nd, 42 feet ; 31 st, 36 feet; September 6th, 38 feet; 15 th, 37 feet 6 inches: 24 th, 28 feet 6 inches; October lst, 26 feet 6 inches, or an average of 33 feet for the four months.

Insoluble matter contai, ic in a given quantity of Ganges wuter.
ahove the level of the sea, forming an alpine belt 80 miles in extent, from Hindostan to Tibet. The principal clain of the Himalaya, running from north-west to south-enst, rises in a ridge, with an abrupt steep face against the plains of 6,000 feet in height ; there is then a slope from the crest of the ridge towards the north. The mountains on the side of the snowy range consist of a aeries of nearly parallel ridges, with intermediate vallies or hollows; spurs are thrown off in all directions into the hollows, forming aubordinate vallies. There is nothing like table land (perhaps in the whole of the mountains, with the exception of Nipal), and the valleys are broad wedge-shaped chasms, contracted at bottom to a mere water course; for this reason the quantity of level ground is inconsiderable. On the flank of the great chain there is a line of low hills (the Sewalik), which commence at Roopur, on the Sutlej, and run down a long way to the south, skirting the great chain. In some places they run up to and rise upon the Himalaya, in others they are aeparated by an intermediate valley. Between the Jumna and the Ganges they attnin their greatest height, viz. 2,000 feet above the plains at their feet, or 3,000 above the aea, rising at once from the level, with an abrupt mural front. To the east of the Ganges and west of the Jumna the Sewalik hills gradually fall off. They are serrated across their direction, forming a succession of scarcely parallel ridges, with a stcep face on one side, and a slope on the other; the slope being, like that of the great chain, towards the north, and the abutment towards the south. These hills may he considered an upheaved portion of the plains at the foot of the Himalaya, and formed of the debris of the mountains, washed down by rains and other natural causes. They nre covered with vast forests of saul, toom, and fir, and are uninhabited, and, as on the Himalaya, the dip or slope being towards the north, and the abutment towards the south, the great mass of vegetation has a northern exposure, and the south faces are generally naked. 20,000 feet have been barometrically measured and trigonometrically confirmed; at this height huge rocks, in inmense detached masses, lie scattered about or piled on each other as if realizing the Titanic fable of giants climbing to heaven. Beds of decajed sca shells are found, and lichens and mosses, the last link in vegetable life, struggle through a stunted existence beneath the verge of perpetual snow. At 16,800 feet north side, campanulas and ammonites have been found by enterprising Englishonen; at 13,000 feet the birch, juniper nnd pine appear, and at 12,000 feet the majestic oak rears its spacious head, towering amidat the desolation of nature. The cultivated limits of man have not passed 10,000 feet on the south slope, but on the north side villages are found in the valley of the Baspa river at 11,400 feet elevation, who frequently cut green crops, and ndvancing further the habitations of man are found as high as 13,000 feet, cultivation at 13,600 , tine birch trees at 14,000 , and furze bushes for fuel thrive at 17,000 feet above the level of the ucean!
[A misute account of the topography of each district, its scenery, rivers, nntural curiosities, \&cc. will be found in the Sccond Edition, vol. i., of my History of the British Colonies; in vuls, viii. nnd ix. of my Colomial Library, nud in vols. i., ii. und lii. of Eastern India, forming a contensed account of Dr: Buchanau'a Survey of Behar, \&c.]

## AREA, PARALLEL, MERIDIAN, AND PHYSICAL ASPECT OF EACH BRITISH POSSESSION.

| Districts. | Area in square Miles. | Parallel. |  | Gcography and Physical Aspect. |

| 0 - 0 |  |
| 26308013 | Segment of vast plain from bay of Bengal to the mountains, fertile, dry. |
| 26477853 | Flat, but intersected by ravines, naked soil, Chumbul river. |
| 27247927 | The Doab is in general flat and divested of lofty trees, dry and clayey soil. |
| 27507948 | Flat and interseeted by N. mountain streams, well cultivated. |
| 2730780 | Highly eultivated, many water courses, retentive brick clay. |
| 27567759 | Low dark jungle, loneliest part of the Doab, many watercourses. |
| $\begin{array}{lllll}28 & 0 & 79 & 0\end{array}$ | Highly cultivated, many watereourses. |
| $\begin{array}{lllllll}28 & 23 & 79 & 16\end{array}$ | Generally level, watered by the Ganges, Kosila, 8e. Kumaon ms. N. |
| 28427942 | Pleasantly situate on the Gurrnh, very fertile. |
| 285117842 | A varied moist soil, inundated along the Ganges, Gerwhal ms. Nd. |
| 27 1117753 | Table lani, Chumbul and Jumna, 60 feet high, light dry soil. |
| 28 4177 | Ditto, 800 feet above the ocean, thirsty saline soil, canals. |
| 29577732 | Quite flat to base of hills at N. and E., which rise abruptly, fertile. |
| 30 6 | Suceession of high mountainous ridges, elevating to 7000 leet. |
| $23 \quad 080$ | Deep ravines, fertile vallcys, and dense forests, Nerhudda delta. |
| 192185 | Low sea-coast, large fertile plains, hilly to W. |
| 174283124 | Mountainous lofty ridge, parallel with and frequently close to the sea. |
| 16598153 | Bounden by the Godavery, extensive delta, high hills, delta 500 sq. miles. |
| 16108114 | Mountainous, W. low sca-coast, lakes and streams, good harbour. |
| 16178032 | Ditto, ditto, ditto, watered by Krishna, to N. and Gondegama to the S . |
| $\begin{array}{llllll}15 & 5 & 76 & 59\end{array}$ | \{ Stupendous wall of mountains, rising abruptly from low lands, like |
| 143237854 | a terrace, a vast level, and fertile plains. |
| $\begin{array}{ccc}15 & 0 & 80 \\ 0\end{array}$ | Pieturesque even to the sea, groups of small hills, \&e. |
| 12147922 | Varied surface, mountainous to the North, elothed with verdure. |
| 124680 | Ineludes Madras, low, with large masses of granite in a sandy soil. |
| 11377813 | To N. 5,000 feet above the sea, three divisions of hills, the last table land. |
| $11 \quad 07720$ | Undulating talle land, 900 feet high; to the $\mathrm{N} .6,000$ feet, Neilgheries. |
| $\begin{array}{lll}11 & 0 & 78 \\ 10\end{array}$ | More elevated, waving valleys, and abrupt eminences. |
| $10 \begin{array}{lllllll}10 & 11 & 79 & 11\end{array}$ | Delta of Cauvery one llat sheet of rice cultivation to the linst. |
| 9117830 | Flat to S. and E., hilly and mountainous, N. \& W. forests, fertile vnlleys. |
| 81078 | Ridge of mountains W. open country to the sea, few hills, rivers. |
| 101276 | 200 miles sea-coast, low hills, separated by narrow valleys from W. Ghauts. |
| 1215750 | 180 milles ditto, rocky and mountainous, W. Ghauts. |
| 1620740 | 22.5 miles along sea, congeries of steep mountains, 2 to 4,000 feet Ghauts. |
| 1516.750 | Elevated to the W. isolated eminences, flat summits. |
| 1830742 | Irregular and intersected by many rivers, fertile valleys. |
| 202275 | Interspersed with low hills to S., and numerous streams. |
| 202173 | Hilly nind jungly to the E. and S., flat to N. and along the coast fertile. |
| 21227314 | Flat, well cultivated, and peopled along the Gulph. |
| 22237218 | Intersected by the Karee river, level, well watered, gnad soil. |
| 2230720 | Unequal hills, jungles, and reddish rocks, rude const. , |

The aspect and general features of the rivers, mountains \&c. of Hindostan, will be seen in my Colonial History.
IV. Primitive formations in which granitic rocks bear the prineipal proportions, oceupy, it is thought, not only the great Himalaya northern chain, but also three-fourths of the entire peninsula, from the valley of the Ganges below Patna to Cape Comorin ; although these rocks are frequently overlaid by a thin crust of laterite, a ferruginous clay considered as associated with the trap formation. The trassition formations have not as yet been clearly distinguished; the secondary formations described are-

1. The carboniferous group. Coal occurs extensively in the grits bounding the southern slope of the Himalaya, but it has been questioned whether this formation is the older coal or only lignite associated with nagelflue, as on the slope of the Alps; it has been particularly described, however, where the river Tista issues from this chain, $\left(88^{0} 35^{\prime}\right.$ east longitude, ) and there, undoubtedly, bears all the characters of the older formation ; its strata are highly inclined, whereas the tertiary beds and even most of the secondary in this part of Indin are horizontal. The coal district on the river Damída ( 100 miles north-west of Calcutta) extends on the banks of the river 60 miles, and nppears from its fossil lycopodia to be undoubtedly the older conl ; it reposes apparently on the surrounding primitive rocks, but it is not improbable that it extends across the delta of the Ganges to Sylhet, 306 miles, at the eastern extremity of Bengal. Tertiary rocks prevnil in Sylhet, and it is doubtful whether the sylhet coal be not really modern lignite. I believe no carboniferous limestone has been discovered.
2. Next to coal is a great sandstone formation, which, beginning nt the Ganges on the east, first shews itself supporting hasalt on the Rnj-Mahal hills; it again prevails throughout the interval between the confluence of the river Soane, and of the Jumma with the Gangea, and then stretches across the west-southwest through the Bundlecund district to the banks of
the Nerbídda, (which flows into the Gulf of Cambay as fnr as $79^{\mathbf{0}}$ east longitude,) where it is overlaid by the extremity of the grent basaltic district of northwestern India, near Sagarr, the red sandstone shews itself again emerging from beneath the north-west edge of this basaltic district, at Necmuch, near the west source of the Chumbul, and at Bang, in the valley of the Nerbudda.
In both places, as also along the central portion of the platforin before described, stretchilig through Mulwa, it is frequently covered with a thin crust of gray argillaceous limestone, supposed to represent English lias, but nearly destitute of organic remains, the general absence of which in the secondary rocks of India is remarkable. A primitive range extending from near Dellis to the head of the Gulf of Cambay separates the secondary rocks of Malwa from those of the great basin of the Indus; but on the west border of this ridge, through Ajmeer, the redstone again shows itself, containing rock-salt and gypsum. The dinmond nines of Panna, in Bundlecund, and of the Gulconda district, are sitnate in this formation, the matrix being a conglomerate bed with quartzose pehbles.
3. Tertiary rocks are fount at the foot of the first rise of the primitive rocks of the Himalaya, in the north-west of Bengal, where the Brahmaputra issues from them at the passes of the Garrow hills. Cerithia turritelli, remains of crocodiles, sharks, lobsters, \&e. are bere found, and further cast nummulite limestone prevails at Sylhet.

The great bnsnalic district of the nortl-west of India cxtends from Nagplir, in the very centre of India, to the west coasts, between Gou and Bombay, oceupylug the whole of that coast to its termination at the Gulf of Cambay, thence penetrating northward ns for as the 24 th parallel of north intitude.

The soils of Hindostnn vary of course with the geological chnrncters of the country; in the deltas of rivers, consisting of a rich alluvium; and In countries of $n$ trop formution : a stiff clayey and tenncluus surface, highly fertile when irrigated, prevails. In

Lower Bengal the fertility of the soil seems to be in－ exhaustible，owing perhaps to its saline qualitics； for aeveral centuries it has been in unceasing cultiva－ tion as the granary of India，rudely tilled，without the application of scientific principles to agriculture， and yet there seems to be no diminution in its fer－ tility；as we ascend the Ganges the quality of the earth of course varies．

The following is an analysis of three specimens of soil from sugar cane fields；the first was from a vil－ lage on the Sarju，ten miles north of the Ganges，at Buxar；the other two from the south of the Ganges near the same place．Numbers one and two require irrigation，three was sufficiently retentive of moisture to render it unnecessary；there is a substratum of Kankur throughout the whole of that part of the country，and to some mixture of this carthy lime－ stone with the surface of the soil the fertility of the latter is ascribed；the sugar cane grown yielded a rich juice．

$100 \quad 100 \quad 100$
The earths were not further examincd，but the two first consisted chiefly of sand；the third somewhat argillaceous．All were of a soft，fine ground allu－ vium，without pebbles，the analysis confirmed the quantities ascrited to each specimen．

The soils vary of the Hydrabad district，with the facility with which the rock of which they are formed decomposes；it is generally siliceous．The analysis of a garden soil at the cantonment of Secundarabad which had not received such manure，shewed specific gravity 1.70 ．Four hundred and eighty grains con－ tained water of absorption， 10 grains；stones con－ aisting of quartz and felspar， 255 grains；vegctable fibre， 2 ；siliceous sand， $154=431$ grains．Of mi－ nutely divided matter separated hy infiltration，viz． carbonate of lime，7；vegetable matter， 7 ；oxide of iron，2．5．；salt， 4 ；silica， 20 ；alumina， 8 ；loss， 10.5 ． Total，480．The richest soil in this district，and the most spontaneously productive is that arising from the decomposition of the clay slate．

The soil of Bengal is extremely shallow，and a compound of saltish mud and sand，the former derived from the inundations of the rivers washing down the richest particles of the surface in the up－ per provinces，and the sand probably being the reli－ quix $r^{f}$ the occean which is here retreating from the land．The Regur or cotton ground，which extends over the greatest part of central India，is supposed to be a disintegration of trap rocks；it requires nei－ ther manure nor rest，slowly absorbs moisture，and retains it long，and it has produced the most ex－ hausting crops in yearly succession for centuries． The saltpetre or nitrous soil is general in Bahar．The Rabur soil which is found in the Saugor and Ner－ budda country is of two kinds：the one of a black and the other of a brown yellow ：the first mentioned is cultivated for 30 years without a fallow，the latter，
after 20 or 25 years work，requires 12 years rest． A Rabur soil examined by Dr．Spry，was，when examined from the fallow，in hard lumps，imparting a soapy impression to the touch，with an earthy smell when breathed on，and a slightly adluesive quality applied to the tongue：specific gravity 1.908 ； colour dark brown． 200 parts yielded on examina－ tion，water of absorption， 21 ；carbonate of lime， 15 ； loss by burning， 3 ；oxide，or protoxide of iron （strongly attracted by the magnet）11；alumina， 8 ； siliccous sand， 131 ；loss， $11=200$ ．The Rabur land when first brought into cultivation from fallow，yields of wheat 10 ，and of gram 12 fold of spring crops．An analysis of the different soils shews very little heating or vegetable matter in them．Manure is seldom ap． plied，and its efficacy in the tropics has been doubted． The alluvial soils are of all others the most fertile， tilled with the least difficulty，and requiring no fallow if occasionally subjected to inundations of rivers containing much sediment．All the soils of India have in general a powerful absorbing quality；hence their fertile properties．［See Colonial Library，vol． viii．］

V．The temperature of so wide an extent of coun． try as British India，and of such different degrees of clevation is，of course，very varied．In Bengal Pro－ per，a vast quantity of rain，（amounting to 70 or 80 inches）falls in the rainy season，coming in with June and continuing to the middle or end of October．

Influence of the Moon in producing rain（Calcutta）in each year．

The uestern provinces under the Bengal Presidency， viz．Allahabad，Agra，Delhi，\＆e．are temperate，but hot winds blow during a part of the warm season，when the wealthier natives sometimes resort to underground habitations to escape their torrifying effects．

The climate of central India is mild，and approaehes much to that of the south parts of Europe，or to the table land of Spain；although the mercury may rise to 100 ，during the day，the nights are bland and invi． gorating．

The English dominions among the liills and nlong the Kumana province ure blessed with a delicions climate，the rigours of the winter solstice being mo－

Mr. Trail thus describes the climate of the Bhot mehals (districts) of the Kumaon territory:-" During full half the year, the surface is wholly covered with snow, beginning to fall about the end of September, and continuing to accumulate to the beginning of April. In open and level situations, where the bed of snow is in some years 12 feet deep, it is dissipated early in June; in the hollows not till the middle of July. During the five months of absence of snow, the thermometer ranges at sun rise from 40 to 55 degrees, and at mid-day from 65 to 75 degrees in the shade, and from 90 to 110 degrees in the sun. At Hauil Bagh in Kumaon, 3,887 feet above the sea, the range of the thermometer during the year was

\end{tabular}

" The heat of course diminishes as the height increases; and at Almora town, in $29^{\circ} 30^{\circ}(5,400$ feet high) the difference is two or three degrees less than the above average. During the cold season, on the contrary, from the greater evaporation, the thermometer before sunrise is always lowest in the vallies, and the frost more intense than on the hills of moderate height (that is, below 7,000 feet), while at noon the sun is more powerful. The extremes in 24 hours have been known 18 and 51 degrees. The snow does not fall equally every year; the natives fix on every third year as one of heavy snow, but in general it docs not lie long, except on the mountain tops and ridges. On the Ghagar range, between Almora and the plains, anow remains so late as the month of May. At Masuri, 6,000 to 7,000 feet high, the menn animal heat is only 57 degrees F.; indeed, at 4,000 feet elevation, the hot winds cease, and vegetation assumes a European character. The quantity of rain falling at Almora is from 40 to 50 inches per annum."

Southern India.-The climate is influenced by the N.E. and S.W. monsoons, and by the elevation of the country, the low lands being extremely hot, with dense cxhalations, and the upper dry, cool and healthy, as on the Mysore table land. The thermometer ranges in the Carnatic higher than in Bengnl (to 100 and 106 degrees F.) ; but the moisture or evaporation not being so great, the heat is less severely felt ; but, on the other hand, the cold season is of very short duration.

In Travancore, owing to the proximity of the ocean, and the waters on either side of the peninsular promontory, the climate is moist, but not oppressive, as the sea breeze blows from one quarter or another the whole year round.
The climate of the Neilgherry hills resembles in the higher parts that of the great intertropical plateaus of America, which have become the centres of civilization in the new hemisphere, with the additional advantage, that it is nut subject to an inconvenience attending the latter, namely, the sudden changes and cold piercing winds occasioned by the variety of lofty mountains. The mean temperature at Ootocamund is rather more than that of London ; but the annual range is very small, and the heat never sufficient to
bring the more delicate European fruita to perfection At Coimbatore the temperature during the cold season is - minimum 31 degrees $F$., maximum 59 degrees F .; in April 65, in May 64 degrees. There are no sultry nights, a blanket being ngreeable at all seasons of the year.
Bangalore (lat. 12.57 N., long. 77.38 E .) is one of the healthiest and gayest. stations in India, and remarkable for the wholesomeness of its atmosphere. The thermometer seldom rises above 82 or falls below 56 degrees $F$. The vine and eyprus grow luxuriantly; apple and peach trees yield delicious fruit, and strawberries are raised in the principal gardens. The monsoons, which sometimes deluge the Malabar and Coromandel consts, have their force broken by the lofty Ghauts; and the tableau of Mysore (on which Bangalore is situate) is constantly refreshed by genial showers, which preserve the temperature of the air, and the lovely verdure of the fields throughout the entire year.

The Malabar and Canara coasts are not unhealthy (tropically speaking), except in the marshes beneath the Ghauts, where the miasm, as in all similarly situated places, is very deleterious.
In the Mahratta country, the north-western parts towards the Ghaut mountains, which nttract the clouds from the Indian oceall, are visited with profuse rain, which semetimes continues three or four weeks without intermission, while to the S. and E., perhaps not 30 miles distant, not a drop of rain has fallen during the same period.

As we proceed to the N. and W, peninsula, the climate approaches to that described under the western provinces of the Bengal Presidency, except in the neighbourhood of the sen. In Guzerat the westerly winds are burning hot in May, June, and July. Candeish has a luxurious climate, like Malwah; and Poonah, a central station in Upper India, 2,500 feet above the level of the sea, 100 miles from Bombay, and 75 miles from the nearest sea coast, is delightfully situate within 30 miles of the Ghauts.

The following data shews the improving elimate of India, and which civilization will yet much further ameliorate.

His Majesty's Troops serving in Bombay Presidency.

On the whole, it may be said that the clinate of the British possessions on the continent of Asia is essentially of a tropical nature, though varying in intensity, and sometimes verging into thnt of the temperate zone, either by reasoll of the peculiarities of the soil, or its elevation above the level of the sea. The following table affiorda a comparative view of the monthly and yearly mean temperature of the air of Calcutta, Madras, Bombay, and the Neilgherry mountains ( 8,000 feet high), compared with the temperature of the city ol London, and the fall of rain in England.

Comparative View of the Montbly and Yearly Mean Temperature of the Air of Calcutta，Madras，Bombay，and the Neilgherry Mountains，\＆c．

V1．We have no census of British India previous to our occupation of the country，and little informa－ tion since that that can be relied on for minute cor－ rectness．I have searched the various public offices in India and England，and now procced to detail，as connectedly as possible，the result of my inquiries． The earliest document 1 have obtained relates to the Bengal Presidency，in 1789．I give it from the ma－ nuscript return，with its comments．

Estimate of the Population of the Provinces of Bengal and Bahar；the Company＇s Possessions in Orissa；and the Province of Benares，formed from Estimates trans． mitted by the Coilectors of the three former，and Resident in the latter，in answer to a refcrence made to them by desire of Lord Cornwallis，in July， 1749.

Remarks on the foregoing Estimate from the letters of the Resident at Benares，and several Collectors of Bengal，Bahar，and Orissa．
Benares．－The estimate of this province，formed by Mr．Duncan，is stated to have been made＂accord－ ing to the grain produce，allowing nine maunds on an average for the consumption of each person，children included ；＂excepting，however，the city of Benares and its vicinity，the population of which was estimated by Aly Ibraham Khan to be $1,000,000$ ，het the Re－ sident，deducting two－fifths，computes it to 0 ： $507,00 j$ only．

Bahar．－The computation in this district was made conjecturally by Mr．Law，who supposes the number of inhabitants＂to exceed rather than fall short of a million．＂Mr．Scton has endeavoured to obtain more accurate infurmation，but has not yet been able to procure it，or to distribute the number computed by Mr．Low among the mer，women，snd children．This distribe tion is，therefore，stated in equal proportions，which is nearly corresponding with the gencral average．

BeERDHOON，－－The estimate of this district，formed by Mr．Keating for Becrbhoom，and Mr．Hesilrige for Bishenpoor，is stated to have been founded on calcu－ lations made by some of the principal inhabitants． The children in this instance are stated to be delow ten years of age．

Bhagulpoor，－The estimate of this district， formed by Mr．Davis，is calculated on the number of villages，and houses，o：families，allowing four persons to cach family or house，and twenty houses to each village．He adds，that the hill people of the Jungle． terry were numbered in Mr．Cleveland＇s time，and found to be about 9,000 ．The children in this esti－ mate are said to be below fifteen．

BURDWAN．－The calculations in this district，made by Mr．Mercer，is also founded on the number of villages，and houses，or families，allowing four persons to each house；but he divides the villages into three classes，and computes the first class to contain 200， the second 50 ，and the third 5 houses．

Calcutta．－The different gentlemen who have held the office of collector of this town，and the 55 villages adjacent to it，having been unable to furnish any estimate of the population，the number specified has been assumed at nearly the average of different estimates furnished by intelligent natives to the com．

is district, formed Mr . Hesilrige for ounded on calcucipal inhabitants. ated to be below
of this district, on the number of ving four persons houses to each le of the Junglelund's time, and ren in this esti-
his district, made the number of ing four persons Ilages into three to contain 200,
emen who have wn, and the 55 nable to furnish number specified rage of different ives to the com-
piler of the foregoing general estimate, a few years
since, when he held the office of collector of Calcutta.
Ciutragono.-The estimate of thls district was furnished by Mr. Bird; but he does not explain on whst grounds it was formed.

Dacca.-The same remark is applicable to the estimste of this district, furnished by Mr. W. Douglas.

Dinagepore.-Also to the estimate of this district, furnished by Mr. Hatch.

Jessoae.-Ditto to the estimate of this district, furnished by Mr. IInckell, which is, however, detailed for each mehaul.
Midnarore.- Ditto to the estimate of this district, furnished by Mr. Burrowes, and also detailed.
Mooashedahan.-Ditto to this estimate, "urnished by Mr. J. E. Harrington, also detailed.
Mymensing.-The different collectors of this district having been unable to procure materials for any computation, the number specified is stated conjec. turally, on a general consideration of the relative assessment and extent of this district.

NuDDEA.-The estimate of this district, furnished by Mr . Redfearn, appears founded on a calculation of the number of houses or families, and an average allowance of seven or eight persons to each house; the proportions varying in different mehauls.

Pergunnaits (24).-Mr. Champain, who gave the estimate of this district, states it to be conjectural ; he also observes, that the children included are under 16 years of age.

Punea.-Mr. Heatley states the estimete of this district to have been formed " on the average of an actual investigation of three small villages, multiplied by 5,800 , the number of villages in the district," which, he adds, is a very low scale, and that " the general opinion swells the amount to $1,500,000$ inhabitants." He also observes, that the girls are considered adult at 11 or 12 ycars of age, and the boys at 20.

Ramghur.-Mr. Leslie states this estimate to have been the result of inquiries made by him; but does not explain the mode of inquiry.

Rangamatty. - This cstimate, which includes Bisny, Currubary, and Rangamatty only, was furnished by Mr. H. Jaillie, and is stated to be founded on the reports of the oldest inhabitants of each village.

Rajshany.-This estimate, which respects Zillnh Rajshahy as it stood in the year 1792, previous to the late new arrangement, is taken from a pergunnoh estimate furnished by the Zemindar, deducting a fourth for an apparent over-rate, on comparison with other districts.
Rungroae.-Mr. Macdowall, who furnished the estimate of this district, does not explain on what grounds it is founded; but it is detailed for each pergunnah.

Salt Districts.-The estimate of these districts is taken from detailed estimates furnished by Messrs. Hewett and Dent, but they do not explain the grounds of their calculations.
Shahanad.-Mr. W. A. Brooke, who furnished the estimate of this district, does not state the grounds of it.
Siakar Sarun.-Mr. Montgomerie states his estimate of this district to be conjectural.
Silhet.-The estimate of this district, furnished by Messrs. Willes and Smyth, is founded on a calcu. lation of the number of houses, and persons in each house, the proportion differing in different mehauls.

Tippranh. - This calculation, received from Mr. Macquire, ia stated by him to have been furnished ly the 'Zemindars of the different pergunnahs.

Tirhool.-This estimate is atated in detail by Ir. Bathurst, but without any specification of the growids on which it has been formed.
The credit due to the census of 1789 may be judged of from the foregoing comments; 1 rather think that the number of inhabitants is considerably understated. The next census embraces nearly the same division of districts. I obtained it in India from Inwarkanaut Tagore, a Hindoo of an enlarged mind, a most generous disposition, and a truly British spirit. Dwarkanaut Tagore was then at the head of the salt and opium department at Calcutta, and had perhaps the best means of judging as to ita correctness of any man in India; he considered it as a fair estimate for 1820 or 1822 . The calculations are founded on the number of villages and houses in each district; but we have no census of any purt of British India on which reliance can be placed: in aome places the population is estimated on the rudest data. It is essential to a knowledge of the condition of the people and for the purposes of good government that a complete census should be made of every district.
Provinees, Distriets, square Miles, Villages, Honses, and Population of the permatiently settled Provinces of Bengai, Behar, and Orissa, in 1822.

Statistics of Calcutta.-The following are the results of a census of Calcutta taken by Captain Birch, Superintendant of Police, down to January 1st, 1837. Males and Fcmales. English 3,133; Eurasians (these horn of European and native parents) 4,746; Portuguese 3,181; French 160; Chinamen 362; Ar. menians 636; Jews 307; W. Mahomedans 13,677; B. Mahomedans 45,067 ; W. Hindoos 17,333; B. Hindoos 120,318; Muguls 527; Parsees 40; Arabs 351 ; Mugs 683 ; Mudrasaes 55 ; N. Christians 49 ; Low Castes 19,084. Total Population, Males 144,911; Females 84,803; total 229,714.

Puckah Houses 14,623; Tiled Huts 20.304; Straw dittu 30,567. T'otal Houses 65,495; Police Force $1,3 \mathrm{is}$.

In the year 1800, according to the report of the Police Committee furnished to Lord Mornington, the population was 500,000 . In 1814, according to the calculation of Chief Justice Sir Hyde East, it amounted to $\mathbf{7 0 0 , 0 0 0}$.
Both of which calculations must have been erroneous, unless they include the suburbs of Cossipore and Garden Reach; which we believe they did.
In 1821, five assessors were appointed, by whose calculation the population of Calcutta amounted to as follows :-
Upper North Diviaion, Chriatians, 5 ; Mahomedans, 6,602; Hindoos, 64,582. Lower North ditto, Christians, 5,816 ; Mahomedans, 16,865; Hindoos, 25,570; Chinese, 244. Upper South ditto, Christians, 4,476; Mahomedans, 7,510 ; Hindoos, 18,153; Chinese, 170. Lower South ditto, Christians, 2,841; Mahomedans, 17,185; Hindoos, 9,898 . Total population, 179,917.
But the Magistrates in their report, calculated as follows:-
Upper-roomed Houses, 5,430 multiplied by $16=$ 86,880; J.ower ditto ditto 8,800 multiplied by $8=$ 70.400; Tiled Huts 15,792 divided by 4 and multiplied by $5 \frac{1}{2}=21,714$; Straw ditto 35,497 divided by 4 and multiplied by $5 \frac{1}{2}=51,558$. Total 230,552 .
But making ecrtain allowances, their definite calculation was:-
Resident Inhabitanta.
205,600
Influx daily
In 1831, Captain Steel made it
Captain Birch's calculation is
And the daily influx about
100,000
187,081 229,714
150,000
The above calculations do not include Kidderpore, Garden Reach, Sechporc, Howrah, Sulkca, Cossipore, or the other side of "the Ditch."

Duration of individual life, reckoning from the year 1827 to 1835 , inclusive. In 1827 the 15 deaths were at the agea of $28,60,41,1,2,17,45,1,1,37,60$, 60, $1,40,62$. In 1828, 15 , deaths at the agea of 21 , $34,76,1,19,64,1,1,5,37,50,1,25,15,35$. In 1829, 12 deatha at the ages of $24,30,10,48,16,36$, $30,22,1,30,75,1$. In 1830, 14 deatha at the nges of $50,40,70,1,2,20,15,9,42,40,35,1,67,7$. In 1831,17 deaths at the ages of $60,1,31,50,85,1,7$, $1,1,0 \frac{1}{2}, 32,55,0 \frac{1}{4}, 4,47,42,50$. In 1832, 17 deaths at th ages of $30,1,22,1,1,45,2,1,27,1,36,73$, 1,50,50,54,55. In 1833, 23 deaths at the ages of $7,1.1,60,40,53,55,87,45,30,85,14,38,25,40$, $30,20,40,20,56,0 \frac{1}{4}, 65,30$. In 1834,16 deaths at the ages of $35,75,0 \frac{1}{2}, 47,50,56,26,62,50,39,28$, 16, $6,58,01,74$. In 1835, 7 deaths at the ages of $23,87,20,61,62,41,16$.
Of the Armenian population there have been seve. ral accurate statementa which are interesting in a sta. tistical point of view. In 1814 the Armenians in Calcutta were:-Males, 269; Females, 195; total, 464. In 1815, M. 272; F. 208; total, 480. In 1836, an accurate ccrisus by Johannes Avdall Esq., (a much respected Armenian) gave M. 290; F. 215 ; totah, 505 . The Adults of all ages are 313. The No. of houses in which the 505 Armenians reside are 101, which exactly apportion 5 individuala to each.
The stationary condition of the population is owing, it is alleged, to the few marriages that take place. The duration of life is short.
The proportion of Musselmans to the Hindoos in Lower Bengal in the principal Mahomedan city and district is thus shewn :-

Population of the City and District * of Monrshedabad for 1829 .

* Proportion of sexes in the Clty. Mussulmans, Males, 28,442; Females, 27,648; Hindoos, Males, 4,438; Females, 45,648. Ditto in District. Mussulmanss, Males, 188,036; Females, 168,606; Hindons, Males, 241,710; Females, 223,514. Ratio of inhabitants per house 4,73 .

North Western Prorinces.-In the return of the population of India by districts, as laid before Parliament in 1831, there are no data for ascertaining the inhabitants of each district in the Upper or Western Provinces, under the Bengal Presidency: Mr. Exing, in his Police Report in 1826, gives a rough calculation of $32,206,806$ for the Benares and Barcilly Provinces, the area of which (excluding Delhi, which is not given,) is 66,510 square miles, (the reader will find the area of each province in the table at page but besides this area, there are 29,800 square miles of ceded districts on the Nerbudda, and $55,9(0)$ square miles of districts ceded by the lajah of Berar
in 1826, populatio Assam Ih tory, 400 part ; pop

| Grand Total . . | 66168 | 64504 | 130672 |

The grand total is $1,630,662$ in 28,006 houses ; less than five to a house.

Neither the palace or the auburbs of the city are included in the foregoing: their population is about 50,000 of both sexes.

The census of the Bombay Presidency is less to be depended on than that of Madras ; combining Colonel Sykes's information with the scanty intelligence laid before Parliament, I make up the following retum, as the nearest approximation to truth which is at present attainable.

A census of the city of Agra, taken in 1829, by Mr . Macsween, the magistrate of Agra, gives the following resulta : - Houses, 21,014 ; shops (some attached to the houses and some distinct), 5,513 ; temples and ustuls, 153 ; musjeeds, 107 ; churches, 2 ; other public buildings, 235 ; male inhabitants, 52,211. This census does not include the auddur bazar, the fort, and bullock eatablishment. A new census of the whole district is preparing. The Agra Ukbar of October 31, 1832, gives the following as the number of houses and inhabitants of Agra:-Houses, 29,788 , viz. pukha, 25,536 ; and kutcha, 4,252 : inha. bitanta, 96,597 , viz. Hindoos, 65,018 ; me11, 25,085; women, 29,933; Moosulmans, 31,579 ; men, 16,059 ; women, 15,520 .

Statistical view of the Districts of Bhagulpoor, Puraniya, and Ronggopoor.

It is difficult to say how near any of the foregoing returns, except those for Madras, approximate towards correctness ; the estimated population of 422,990 square miles here given is $89,577,206$, leaving 91,200 square miles of British territory, of the population of which no account can be traced; but if we allow the low rate of 90 mouths to the square mile, it will make the population of the British territories about $100,000,000$. Now to this vast number we are to add the inhabitants of the protected and allied states; the area of which is greater than that of the British territory by 100,000 square miles; and allowing an equal amount of population to the British territories, it will give a grand total of $200,000,000$ inhabitants, directly and indirectly under the sway of Great Britain, and subject to the government of the Honourable East India Company! The number of whites, or Europeans, does not, including all the military, amount to 100,000 .
The following estimate las been made of the population of the allied and independent states:-Hydrabad, $10,000,000$; Oudc, $6,000,000$; Nagpoorr, 3,000,000 ; Mysore, 3,000,000 ; Sattara, 1,500,000 Gaickwar, 2,000,000; Travancore and Cochin, 1,000,000; Rajpootana and variuus minor principalities, $16,500,000$; Scindia's territories, $4,000,000$;
the Seiks, 3,000,000; Nepaul, 2,000,000; Cashmere, \&c., $1,000,000$; Sinde, $1,000,500$; total, $51,000,000$. This, of course, is but a rough estimate by Hamilton.
VII. The government of British India possesses a feature which has rarely or never been found in any nation or in any age, I allude to its toleration of every mode or form of religion in which different sects may choose to adore the Creator ; to its protection again.t hostility, forcible opposition or oppression by on rival sect againat another, and to its auxiliary pecuniary aid when solicited by any congregation or com. munity. An account of the Hindoo, Mahomedan, and Parsce forms of religion, and of the different sect of Christians, will be found in my "Colonial Library" and " History of the Colonies."
We may now procced to observe how far the esta. blished church extends, premising that every aid has been afforded by the E. I. Company's Government which could promote the cause of true religion and its concomitants-charity, peace, and happincss. The following detail shews, first, the state of the Estah. lished Church in Bengal, according to the latest return in 1830, and the expenses incurred there, from the date of Calcutta being made a Bishop's See in 181t to 1831 .

The new charter authorized the Crown to erect the archdeaconries of Madras and Bombay into bishopricks (subordinate to the metropolitan of Bengal), with salaries ot 24,000 S. R. annunlly each, exclusive of 500l. each for outfits, passage money, \&c., and independent also of the expenses incurred in visitations. Pensions of 800l. a year are assigned atter 15 years office as bishol, and if he die within six months after his arrival in India, one years' salary shall be paid to his representatives.
The following extract from a public letter from Bombay, dated 20th January, 1830, to the Court of Directors, will shew what has been done in reference to the Roman Catholics, who, at the cession of Bombay, were to elijoy all the rights and immunities of their faith :-

Par. 27. Having called for information in regard to the Catholic churches, \&ce. within the limits of this Presidency, we beg to lay the result before your Honnurable Court.
The Bishop of Bombay states, that he has within the Island of Bombay under his jurisdiction five churches, including the new church at Colaba, built by the Hon. Company, nnd two chapels, that the number of priests are thirteen, exclusive of his vicar, General Fr. Luiz Maria, and Bishop Prendergast, who lives with him. That all these churches, except that at Colaba, bave sufficient funds to keep them in good order, and to support their priests; that those funds were left by pious benefactors; that at Surat he has two churches under his jurisdiction, and two priests, one of whom, as chaplain to the servants of the Hon. East India Company, receives 40 rupees per month, and the other nothing. That both the churelies have sufficient funds to keepp them in good order, and to support those priests. That at Broach and Baroda he has two chapels without any fund whatever, the chaplains there receiving from the Hon. Connpnny an allowance of 30 rupees each per month. That he has a chapel at Kaira without any fund, and that the chaplain receives from the Hon. Company an allowance of 40 rupees per month. That he has small chapels nt Mhow, Dhootia, Candeish, Malwan, and Rutnagherry, and the respective chaplains receive 30 rupees per month from the Hon. Company. That the chapels at Poona and Aurungabad ought to belong to him, but for the want of priests be has consented to the archbishop sending priests there: the bishop requests an allowance of 15 rupees per month on account of each of those small clapels, for keeping them in order, and an addition of 10 rupees per month to the allowance of the chaplains nttuched to them
The senior magistrates of the police atates that there are 12 Roman Catholic churches on the Island of Bombay, but in regard to the number of Pricsts, \&cc., he refers Government to the Bishop of Antipholi, and the Archbishop's Vicar General in Bombay, as he has no means himself of furnishing information thereon.
The Collector of Abmedabad reports that there are no Roman Catholic churehes within his collectorate, and that the whole number of persons of that religion residing within his jurisdiction doea not amount to above 40 souls.
The Collector of Broach reports that there is only one Roman Catholic church and one Priest In his Zillah: that the church was built by subscription, and the Priest receives a nonthly allowance of 30 rupees for his support. That the annual repairs of the church, and other monthly contingent expenses
thereof, such as clerks, pay, \&c. are borne by subscription lately made by some Roman Catholice residing there.
The Collector of Kaira reports that there are two Roman Catholic churches in his Zillah, to which but one Yriest is attached : that both churches are in the vicinity of Kaira, one close to the head cutchery in the suburbs of the town of Kaira, for performing the duty of which the Priest is allowed 40 rupecs per month from the Government : the other is situated in the camp, for performing the duty of which the Priest receives private voluntary contributions.
The Collector of Surat reports that there are two Roman Catholic Churches at Surat-the first was erected in 1624, a Sunnud was granted in the year 1729, by the Emperor of Delhi, and the Nawaub of Surat paid monthly a sum of rupees 12620 ins sup. port of it: this was continued until the date of its coming into the possession of the Hon. Company, when it ceased; it is now supported by the rent of three houses, yielding, when occupied, an aggregate monthly sum of 45 rupees. At present they have fallen much into decay, and two are without tenants, these belong to the church. The second church is supported by Government, the Priest receives a monthly sum of 40 rupeees, besides the subscrip. tions obtained occasionally from private individuals; it is said to be in a Hoorishing condition. The num. her of Roman Catholics who attend these two churches does not exceed 120 persons. There are few Roman Catholics, and no churches in any other part of his Zillah.
The Collector in the Southern Conean reports that there are six chorches in his Zillah, viz.:-one at Malwan, estimated annual expense 557 Rs . of which Government contributes 540 Rs .; one at Vingoorla, estimated annual expense, 58 Re.; one at Viziadroog: one at Rutnngherry, estimated annual expense, 540 rupees contributed by Government. This church was built in 1822 by the Portuguese inhabitants, with the assistance of 200 Rs. from Government; one at Hurnee ; one at Korli, to which Government contributes 237 Rs .
Mr. Reid states that the number of Roman Catho. lics is very Inconsiderahle, and consists principally of a floating population from Goa and Bombay. At Knrli, opposite the Fort of Reodunda, and at ViziaIroog and Hurnee, few old Portuguese residents are to be found. To Malwa, Vingoorla and Rutnagherry they hnve been attracted since the establishment of the British Government, and consist of Euglish writers and their families, farmers of the Government, Liquor Farms, and a few stone cotters nnd mechanicy; the total number does not exceed 1,000 souls.
The Collector of Ahmednuggur states that there are no churches nor uny established Priest in any town in his collectorate. That the Roman Catholics of Ahmedunggur, about 50 persons, met in a place of worship on Sundays and other days, and have been contemplating building a chureh, inviting a clergyman, and requesting ground from Government for the site of a church and burial place, and the Collector expresses a hope that when such npplication is made, we will afford them auitable asslstance.
The principal Collector of Dharwar reports that there are 11 churches in his collectorate, viz: one at each of the following places, Rhanapoor, Nundagurh, Shawpore, Belgaum, Kittoor, Beedee, Machgurh, Darwur, Azrah, (in the Kolapoor territory) Hallkur. nee, and Bellgoondee. That there are three Priests to those churches, one senior and two junior, all na-
tives of $\mathbf{C}$ are under other tem the next ff remaining ject to the principal s the eenior per annum each; they funcrals, \& senior Prie allowance d vernment, removal of members of auperintend ing men, w. of the other ing three do 2,600.

 to which but ches are in the ad cutchery in performing the 40 rupees per her is aituated $y$ of which the butions. : there are two -the first was ed in the year the Nawaub of 12620 ins sup. the date of its Hon. Company, by the rent of I, an aggregate esent they have vithout tenants, second church 'riest receives a s the subscriptate individuals; tion. The numese two churches are few Roman ther part of hisican reports that h, viz. :-one at ;57 Ra. of which ne at Vingoorla, ne at Viziadroog: ual expense, 540 t. This church inhabitants, with ernment; one at vernment contri-
of Roman Catho. sts principally of id Bombay. At $a$, and at Viziaese residents are and Rutnagherry establishment of if Engtish writers ernment, liquor mechanics; the ouls.
tntes that there d Priest in any Roman Catholics met in a place of s, and have been viting a clergyvernment for the d the Collector lication is made, e.
var reports that rate, viz: one at oor, Nundagurh, dee, Machgurh. ritory) Hallkurre three Priests o junior, sll na.
tives of Goa. That the four first mentioned churches are under charge of the senior Priest, to whom the other twe Fricsts are required to report proceedings ; the next four under one of the junior Priesta, and the remaining three under the other, the whole are aubject to the Archbishop of Goa. They derive their principat support from the Portuguese Government, the senior Priest is allowed a salary of 300 Goa rupees per annum, and the two junior Priests 250 rupees each; they also receive foes for baptisms, narriages, funerals, \&c. for little more than a year and a half the senior Priest, who officlates at Belgaum, received an allowance of 25 Rs . per month from the British Government, but this has been discontinued aince the removal of the 1 st Bombay European regiment. The members of the four churches under the immediate superintendence of the senior Priest, amount, including men, women, and children. to 1,300 souls; those of the other four churches to about 600 ; the remaining three churches to about 700; making together 2,600.
The whole of these are descendants of a body of Roman Catholics, who, about a century ago, removed from below the Ghauts and settled there. Their chief employment is distillation of apirits ; beaides the above there are at present at Belgaum, in her Majesty's 41 st regiment of foot, 279 men, 43 women, and 44 children, Roman Catholics, and 2,500 (sepoys, pienecrs, drummers, fiters, and camp followers) among the native troops, besides some of the same description, under the junior Priesta at Dhuuwar and Kelapoor.
The acting Collector of loona reports that there is one church and two Priests under his collectorate, and that the only Catholic inhabitants there, are a few servants and followers attached to the Camp at Poona. He docs not report the sources from which they derive theirsupport, but from the Accountant-general's statement it appears, that one of them receives an nllowance from Government of 50 Rs . per month, and the other 25 Rs.

The Collector of Khandesh reporta that there are two small churehes in his collectorate, one at Malligaum and the other at Dhoolia; there is only one Priest in Khandesh who resides at Dhoolia; he proceeds to Malligaum once in six or seven weeks to perform mass, he receives 30 Rs. per month from the Government, which is considered as a salary for performing mass on public days; in addition to this, he is generally paid by individuals one rupee for each baptiam, and one for each burial, and five ropees for each marriage; but these are not established fees, they are dispensed with, when the parties are in low circumstances; for all extra masses on account of individuals for their departed frienda, or other purposes, hall a ropee is paid; the amount of those fees may average about 12 ropees per mensem. The priest in Khandesh is not at all content with his allowances, as he could obtain more than touble the sum in Bombay, but, he understands, he hna been sent up to Khandesh much against his inclination. There are about 200 Roman Catholics in Khandesh, some ni whom are very respectable men, and who serve the Government as accountants, English writers, \&c.; others are personal scrvants and cooks of Europenn gentlemen. An addition of 10 Rs . per month has
lately been granted to him to defray the expense of his proceeding to Malligaum.

The Collector in the Northern Concan has handed up a atatement, ahewing the number of Roman Catholic churchea, the number of the Pricsta belonging to them, the sources whence they derive their support, and the number of the lnoman Catholic houses and subjests in his diatrict, to which we beg to draw your Honourable Court'a attention.

That the Roman Catholic faith is rapidly losing ground in his Zillah, there can be little doubt. Upwards of 1,200 familiea, Coolies, left the church doring the raging of the cholera, and returned to the worship of their forefathera; from what he has observed, however, the change was merely in name, the greater number calling themselves Christians are in fact idolaters; some, it is said, worship the Hindoo gods secretly in their houses, although they attend the church, and almoat all conceive the images of the saints as gods, and worahip them in that light.
Few, very few of the Christians, resident in his Zillah, are descended from the Portuguese families, they are generally converted Koombies, Bundarees, Coolies, and a few Brahmins; and the most extraordinary circumstance is, that most of them still adhere to the former prejudices of caste, and rarely intermarry, and in sonse parts will not eat together, notwithstanding which they are considered as brethren of the Church of Clorist.
The cause of this ignorance must originate in the extremely depresaed state of the clergy, and this is caused by the wretched pittance obtainable in each parish, no families of reapectability would think of educating any member for auch a station. The vicars of Salsette, in their petition to government, dated in December, 1836, stated that the churches ate almost " all in great decay, and going to ruin ; and there is nothing left for their repairs. The parishioners are so very poor and miserable that they can scarcely maintain themselves and families." Some of the churches are little better than a heap of roins.

Considering the deacription of the Priesta generally, the collector hardly knows whether the want of them in many places is a disadvantage or not, if men of education and character could by any menns be appointed, the advantage would be certain. The stateinent now forwarded shews 13 Priests officiating over 24 churches or parishes, in the Island of Sulsette, the Pricst at Tannah having the charge of four churches. The Priest of Agasce in the Mahim Talooka has charge of the churches of Tarapoor and Dabnoo, or rather murishes (for the church at the latter place is completely destroyed), a distance of 20 coss, but at present there are not many Christians in those two parishea.
Heretofore the Roman Catholics were in ecclesiastical matters subject to the rule of the Portuguese Bishop at Goa, and ministered to by an unedocated clergy. Now there are two Vicars Apostolic nt Bengal and Madras (one an Englishinan and the other an Irishman), subject to the Pope in religious matters. They have several European priests olliciating under them, and are recognized by Government. There are, it is said, a large number of Roman Catholics in the Madras territories; and one-half of the European soldiers are of that persuasion. Periapaliam, the extent of thelr respective congregations, and the mode in which they are supported.

Remarks.

Built in 1785 by public contributlons, the fund exclasively belonging to the church was originally acquired by the compensation of $\mathbf{t 3 , 0 0 0}$ pagodas, made by Governinent os account of the demolition of a chnrch in the fort which the Portuguese inhabitants buit, and the reat by legaclea, donations, Rc., fir the maintenance of the priests, charity achools, \&e.
This church was established at the part. cular instance of a large hody of Roman Catholics, who, aonoyed at the conduct of the Capuchin friars, petitioned Government and fonnded it in $18 t 5$ under the auspices of the see of St. Thome. A range of bazars belongs to the church, the rent of which goen towards the liquidation of a dicht con. tracted for its benefit, to the amount of 2,500 rupees.
Built by the headmen and other christisn pariahs of the place, and the asslstance of one Thomas D'Souze, Esfo, an opulent Por. tnguese merchant.
Built by the chriatian boatmen from fonds raised by their own contributions, ke. The original amount of these contributions was about 70,000 rupees, 30,000 of which weot towards the buiding of the church.

Built lately by the Capuchina.
Built by the Capuelides having their bury. ing ground there.

Built by Father Fetix, a Capuchin friar, from his nwn funds.
A small chapel, built by public contribu. tions from the Cathotics who have landed property at Madeveram. Foundation iaid for a laiger hullding.
Erected by the King of Portugal when the See of St. Thomé was estalitished. Fund about 20,000 pagodas, besides fuur houses and two gardens, partiy the endowment of the King of Portugal, and the rest from legaciea, kc . The sec is under the imme. diate patronage of that Monarch.

No Minister attached to it. Service is occasionally performed.

On Tuesdays this church is opened, and divine service performed, when charitable donations, in candies, oil, and other com. modities, are ohtalned to a considerabie amount, adequate to the auppori of the church, \&c.

No Minister is attached to it. Service is occasionally performed.
An allowance fa also granted by Govern. ment on account of the European troops in the cantonment.
Built hy puthic contributions. Service is occasionally performed.

The controul of the Capuchin Friars in and about Madras, is as follows: The church situated in Armenian St. called Qucen of Angels. The chapel situated at Royapooram, called Mother of Affliction. The chapel situated at Wallajapettah, ncar Triplicane, called Lady of Purification. The church situated at Vipery, called St. Andrew. The chapel situated near Monigar Chultry, called St. Roque and St. Lazar. The chapel situated at Big Parcherry, near the mint, called Lady of Aasumption, formerly under the controul of the Capuchins, is from 1824, under the controul of the acting Bishop of St. Thomé. The church situated at Royapooram called St. Peter, formerly under the controul of the Capuchins, is from 1826 under the controul of the said acting biahop. The chapel situated near the market, erected in 1815 , now called St. John'a church, by order of the then acting Bishop of St. Thome for the uae and benefit of the Rev. Father Eustaquio, a Capuchin Friar, stands under the controul of the present acting bishop. The funds which the Cspuchin Friare possess amount to about 180,000 rupecs, most of which is the acquirement of their predecessors, and the rest legacies by will of several testators, to which the superior for the time being of the said Capuchin church, situated in Armenian-strcet is the executor. The intereat of these funds are for the support and maintenance of the Capuchin Friars, charitable purposes, pious works, and decorum of the said church, situated in Armenian-street, under the superintendence of the said auperior. The chapel of the Mother of Affliction is supported by the Capuchins; the chapel of the Lady of Purification by the revenues thereof, and by alms of the public. The church of St. Andrew hy the revenues thereof, and from rent of the houses belonging to that church. The chapel of St. Roque and Lazar by the Capuchins. The chapel of the Lady of Assumption by the revenues thereof, and by alma of the public. The church of St. Peter by the funds thereof, which are under the controul of the Marine Board, acquired by boat people, and the church of St. John by the funds of the late Mr. John de Monte, who was a benefactor of the said church, and from revenues thereof.

As to the number of Furopeans or their descendan.s who attend these churches and chispels on Sunday and other festival days, I cannot exactly say ; but to the best of my knowledge and belief I think they may be in all, including the soldiers of the garrison of Fort St. George, to about 700, including countryborn, Malabar, Parialis, and boat people, who may be about 10,000 ; but since a division of Roman Catholics has taken place in 1815, among the country born, a part of thcse, to about 400 or 500 , frequent the church of St. John, and the rest to the Capuchin church to a greater number. The Pariahs of Parcherry and boat people to their own churches, where a small body of country born to about 200 , in Parcherry, frequent the Chapel of Assumption; and about 100 in the Church St. Peter. The Pariahs of Wallajapettah in their own chapel, where a small body of country born to about 50 , frequent there, and at Vipery about 200, anong country born, excluding Malabar Sepoya and Pariahs, who may be about 2,000 .

Statement of the Roman Catholic churches, their rirars, aml their respeclive funds.-Cuthedral of St. Thome, the Acting l3ishop Fr. Manuel da Ave Maria; ahout 20,000 pagodas, four houses to be rented, and two garilens. Church of Santa Rita at do. under do.; about 1,200 pagodas, and a house to be reuted.

Church of St. Domingos, do. no vicar ; two houses to be rented. Church of Madre de Deos, do. Rd. Manuel S. de Jesus; a garden and 500 nagolas. Church of Lazarus, do. do.; a cocoa-nut tree gardell. Church of Discanço, Rd. Antonio F. dor Arcanjos ; supported by the estate of the late Mr. J. de Monte. Church ot Luz, Rd. Fr. Francisco das Dores : about 500 pagodas, a house to be rented, and a garden. Church of Little Mount, no Vicar; a garden of paddy fielda. Church of St. Thomas's Mount, Rd. Antonio Rozario Cardozas; about 2,500 pagodas, and two houses to be rented. Church of Covelong, Rd. Luis Rubeiro; nhout 64,000 rupecs, but there is a seminary to be aupported also with the same fund. Church of Ponnmalay, Rd. Antonio Joze Pires; pagodas 2,500. Church of Pulicat, no vicar; no fund. Church of Vepery, Rd. Fr. Felix ; no fund; at present in charge of Rd. Muhille. Church of Periapauleum, no vicar ; no fund. Church of Madavcrum, no vicar ; no fund. Church of Wallajawpettah, no vicar; no fund. Church of Capuchins, of Madras, Rd. Fr. John Baptista ; about 30,000 pagodas, and two houses. Church of St. John at Madras, Rd. Domingos J. A. Pereira ; supported by the estate of Mr. J. De Monte. Church of Parchery at Madras, Rd. Jannario Saldanha; no fund, but is aupported by the Cathedral fund. Church of Royaporam, no vicar ; nbout 20,000 pagodas (boatmens' funds). Church another, at Madras, no vicar : supported by the Capuchins.

The Roman Catholic establishments which now enjoy the protection and support of the E.I. Company, include four apostolical vicars, with authority direct from the Pope; nominated by the Society De Propagandia Fide, and stationed at Pondicherry, Verapoly, Bombry, and Agra. There is also a prefect of the Romish mission at Nepaul. These apostolic vicars have under them in their aeveral dioceses a number of priesta ; most of whom are natives of India, and have been cducated in Indian seminaries by European ecclesiastics.

There are also two archbishops and tuo bishops, presented by the King of Portugal. The archbishops are of Gor, who is the Metropolitan and Primate of the Orient; and of Cranganore, in Malabar. The bishops are, of Cochin in Malabar, and St. Thomas at Madras. The latter includes Calcutta in his diocese; where he has a legate, who has under his superintendence 14 priests and 10 churches, viz. in Calcutta, one; in Serampore, one; in Cbinaurrah, one; in Bandel, one; in Cosimbazar, one; three at Chittagong; in Backergunge, one; and in Bowal, one.

The pricsts and churches under the presidencies of Madras and Bombay are very numerous, cxclusive of those which were formerly Syrian churches, and have been, as already mentioned, incorporated with that of Rome.

The Roman Catholic Bishop of Bombay, who, with his Vicar-general, resided on the island, has under his jurisdiction there five churches, inclusive of a new church on the island of Colabar, and two chapels There are connected with these cstablishments 13 pricsts, exclusive of the hishop and his vicar. All the churches, cxcept Colabar, have sufficient endowments for their support and that of their pricsts.

The principal church, which is dedicated to N. S. da Esperança, formerly stood on the Esplanade; but In the year 1804 it was removed at the company's expense, and n new one crected by Salliah Mahomed Fuzcel. This building cost about 4,000 . In 1831 it was discovered that the work had hicen bally executed, and the church was then ready to fall, in consequence
of which the company made a further grant of 14,000 rupees, nearly $2,000 l$., towards ita repair.

At Surat there are two churches under the jurisdiction of the Bishop of Bomhay. The oldest was erected in the year 1624 ; and it is a remarkable circumstance that for many years this church enjoyed a monthly income of 126 rupees, 2 anas paid by the Nahob of Surat, by virtue of a Sunnud from the Emperor at Delhl. This endowment ceased to be paid when Surat came entirely under the controul of the company ; but the chureh is still in possession of freehold property, yielding a monthly sum sufficient for its support. The second chureh is wholly supported by the company, who pay the priest his monthly stipend of 40 rupees. The stated worshippers in these two churches somewhat exceed 100.

The other Koman Catholic churches under the Presidency of Bombay are as follow: one in Broach, which was erected and is still supported by voluntary subscription, excepting a monthly stipend of 30 rupees to the priest, paid by the company; one at Baroda, supported in the same way; the church of N.S. los Remedios at Bassein, to the re-edification of which, in the year 1832, the company contrihuted liberally; a church at Poonah, with two priests, who enjoy stipends paid by the company ; one at Malwa; one at Vingorla; one at Viziadroog; ene at Rutnagherry, erected in 1822, with the aid of a grant from the company, and one at Ilurree.

The following statement exhibits the several missionary stations formed by the London, Baptist, and Wesleyan Societies, with the date ol the ycar when the mission was established at each station, and the number of missionaries resident at each.

London Society.-Calcutta, A. D. 1816, missionaries, 4 ; Chinsurah, 1813, 1; Berhampore, 1824, 2 ; Benares, 1820, 4 ; Madras, 1805, 4 ; Tripassore, 1826, superintended by the Madras missionaries; Vizagapatam, 1805, 2 ; Cuddapah, 1822, 1 ; Chittoor, 1827,1; Belgaum, 1820, 2 ; Bellary, 1810, 4 ; Bangalore, 1820, 2 ; Salem, 1827, 1 ; Combaconum, 1825, 1 ; Coimhatoor, 1830, 1; Nagercoil, 1806, 2; Neyoor, 1828, 2 ; Quilon, 1821, 1; Surat, 1815, 3; Darwar, 1829, superintended by the Belgaum missionaries.

Baptist Suciety.-Calcutta, 1801, missionaries, 7 ; Patna, 1832, 1 ; Digar, 1809, 1 ; Monghyr, 1816, 2 ; Sewry, 1807, 1 ; Cutwa, 1804, 1 ; Luckyantipnre, 1831, 1 ; Khane, 1831, 1; Bonstollah, 1829, 1. The above is exclusive of the mission family at Serampore, which is in the Danish territory.
Wesleyan Society.-Marlras, four Europeans, with native assistants; Bangalore, 4 ; Negapatam and Melnattam, 1.
VIII. It was stipulated at the last renewal but one of the E. I. Charter, that 10,000 l. should be annually devoted from the surplus territorial revenue of India, to the purpose of education; hy the following extract from a parliamentary return in 1832 , it will be seen that the company have doubled, and in some years trebled the amount laid down in the act, although there was no surplus revenue in India :-
In 1824, $21,884 l$.; 1825, 66,563l.; 1826, 27,412l.; 1827, 45,313l.; 1828, 35,841l.; 1829, 38,076l.; $1830,44,330 l$.
As an instance of the effurts making for the diffusion of intelligence throughout the British dominions, I may quote the testimony before Parliament of the Hon. Holt Mackenzie, who states that since the renewal of the last Charter, the Bengal Government have established a college at Calcutta for the Hindnos, and reforined very much the old Moslem College;
that colleges have been established at Delhi and Agra, for both Hindoos and Moslems; the Hindoo College at Benares has been reformed; at the several institutions it has been the object of Government to extend the study of the English language, and good hooks have heen supplied, \&c.; that seminaries have been estahlished in different parts of the country, and schools established by individuals who have heen aided by Government. The Calcutta School llook Society, from 1824-25 up to the 30th April, 1833, printed 13,000 copies of 24 Sanscrit works; 5,000 copies of seven Arabic works; 2,500 do, of five Per. sian authors; 2,000 do. of four Hindu do., and several other works were then in the press. The printing charges of the Society for the foregoing period was 105,425 rupees.
The late Colonel Mackenzie received from the Last India Company 10,000l. for his collections on the history of the Hindoos of the Southern Peninsula. The money paid by the East India Company for Dr. Morrison's Chinese Dictionary, was 12,0001 . sterling!

With respect to Bomhay, Major-General Sir Lionel Smith, a veteran and distinguished King's olficer, observes in his evidence before Parliament (fith Oct 1831). 'Elucation is in such extensive progress, that I hardly think it could be more extended-education is also going on in the Deckan; the encouragement given by Government consists in a very liberal estab. lishment, under the direction of an ofticer of very great attainments in the native langnages, Captain Jarvis.'

For the army, also, the Company have established schools, and libraries have been sent out to ladia for the use of the troops; and it is in frequent evidence hefore Parliament, that great pains are taken with the native regimental seminaries. I might quote similar testimony with respect to Madras, but perhaps the best proof that I could adduce is the state. ment made by that indefatigable friend of India, Sir Alcxander Johnson, in his late able Report laid before the Royal Asiatic Society, namely, that in Madras, 'the proportion of the inhabitunts who have been tauglit reading, writing, and the rudiments of arithmetic, in their own language, amount to one in five!'

Progress of Education in Bengral.-The Calcutta Madrissa, or Mahomedan College was founded in 1781, by Warren Hastings, who provided a building tor it at his own expense, amounting to 57,745 rujces, but which was afterwards charged to the Company. The Bengal Government also, at the recommendation of Mr. Hastings, assigned lands at the estimated value of 29,000 rupees per annum, for the support of the institution, to promote the study of the Arabic and Persian languages, and of the Mahomedan law, with a view, more especially, to the production of well qualified ollicers for the courts of justice.

In 1791, the government of the College was placed in the hands of a Cominittee of Superintendence, consisting of the acting president of the Board of Reve. nue, the Persian Translator to Guvermment, and the preparer of reports.

The students are divided into clnsses, and the fol. lowing aciences to be taught:-Natural Philosophy, Theology, Law, Astronomy, Geometry, Arithmetic, Logic, Rhetoric, Oratory, Grammar.

Not more than two months' vacation allowed to the students in one year. Every Friday to be set apart for purifications and religious worship. The salarics of the preceptors and officers to be-Head Preceptor, 400 rupees per month; first Assistant, 100 ; second ditto, 80 , third ditto, 60 ; fourth ditto, 30.

Each student in the five clasaes to receive an allowance of $15,10,8,7$, or 6 rupees per month, according to his class. The number of students to be regulated hy the committee, and all surplus funds to be employed in the purchase of books.
In a voluminous report in 1819, of a retrospective view of the resources and expenditure ol the institution, the latter amounted, from the year 1794 to the year 1818, a period of 25 years, to the sum of $4,94,197$ rupees. 30,000 rupees per annum, is now granted to the College out of the public treasury, instead of the institution depending upon the uncertain produce of the lands which were originally grauted to it as an endowment. The public examinations which take place every year, demonstrate the progress of the College.
In 1827, the study of Arabic, Mahomedan Law, and Mathematics was extended, and a Medical class instituted. The examinations were in Arabic, Logic, Rhetoric, Philosophy, Euclid, Arithmetic, Algebra and Nedicine. In 1808, an English Class was established; Skeletons and Anatomical Models and Surgical works provided. All applications for Law offices under Government were to be accompanied by certificates from the College, and a prefcrence given to those who had acquired the English language and produced testimonials of good conduct in the College. In 1830, No of Students 99 ; examined 85.
Benares Hindoo Sanscrit College, established by Jonathan Duncan, Esq., the resident at Benares in 1791, as a means of employing, beneficially for the country, some part of a aurplus which the public re.veuues yielded over their estimated amount. The expense for the first year was limited to $14,000 \mathrm{Rs}$. In the following year it was augmented to 20,000 Rs. ; at which amount it has been continued down to the present time. The object of this institution was the preservation and cultivation of the laws, literature and religion of the Hindoos, (and more particularly of their laws) in their sacred city; a measure which it was conceived would he equally advantageons to the natives, and honourable to the British Government among them.
The establishment originally consisted of a head pundit or rector ; eight professors; nine students who enjoyed salaries; with book-keepers, writers, peons, \&c. The Governor-General was constituted visitor, and the resident his deputy. Besides the acholars on the foundation, and a certain number of poor children who were to receive instruction gratis, the institution was open to all persons who were willing to pay for instruction: the teachers nnd students to hold their places during the pleasure of the visiter. All the pro. fessors, cxcept the professor of Medicine, to be Brahmins. The Brahmins to have preference in succession to the office of rector, or to professorships. Four examinations in the ycar to be held before the resident. Each professor to compose annually for the use of his students, a lecture on his respective science. Examinations into the most sacred branches of knowledge to be made by a committee of Brahmins. Courses of study to be prepared by the protessors. The internal discipline to be in all respects conformahe to the Dherma Shastra, in the chapter on education.

The prescribed course of studics in this college to comprehend,
Theology, Ritual, Medicine including Botany, \&c., Music, Mechanic Arta, Grammar, Prosody, nnd Saered Lexicography, Mathematics, Metaphysics, Iogic, Law, History, Ethics, Philosophy, and Poetry.

The Calcutta Hindoo Sanscrit College, dates its establishment from 1821. For the support of this institution, the annual sum of 30,000 rupees has been allowed by Government, and $1,20,000$ rupees has also been allotted for the erection of a college. The establishment consists of 14 Pundits, a Librarian and servants, 100 scholars on the foundation, and a Secretary.
The sum of 1,200 rupees is reserved for distribution in prizes at the public examination, and a achool for Hindoo children is connceted with the college.

In 1823, the Bengal Government formed a General Committee of Public Instruction at Calcutta, for the promoting of education and of the improvement of the morals of the natives of India.

The annual sum of one lac of rupees, which, by the 53 Geo. III., c. 155, was appropriated to the purposes of education, was placed at their disposal. The schools at Chinsurah, Rajpootana, and Bhaugulpore, were placed under the controul of this committee, and the separate grants which had been made to those schools, amounting together to 16,800 rupces per annum, were discontinued trom the 1st January, 1824.

The total amount placed at the disposal of the General Committee of Public Instruction in the years from 1821-22 to $1825-6$ was, S. R. 4,78,400.

Agra College.-In 1822, the Governor-General in Council sanctioned the institution of a college at Agra; the sum of 42,501 Rs. was for the erection of the college ; an expenditure of $\mathbf{1 5 , 4 2 0} \mathrm{Rs}$. authorised, and the number of students in the college was, in 1826, 117; 1827, 210 ; in 1830, 203; of whom 73 received atipendiary allowances.

Delhi College, similar to the forcgoing by its adaptation to useful instruction. In 1827, the number of students was 204; in 1828, 199 ; and in 1829, 152 ; the reduction being owing to a discouragement of pecuniary or stijendiary grants to pupils.

Vidtalaya or Anglo-Indian College.-"This highly interesting and promising institution," it is stated, " owes its origin to the intelligence and public spirit of some of the opulent native gentlemen of Calcutta, who associated together in 1816 , and subscribed a capital sum of Rs, $1,13,179$, to found a seminary for the instruction of the aons of Hindoos in the European and Asiatic languages and sciences." It was placed under the superintendence of the General Committce, as the condition of pecuniary aid, to the amount of 300 rupees per month, fur house-rent, afforded to it out of the Education Fund. This institution has a growing popularity and decided superiority, on its present footing, over any other affording tuition to the natives in the English language; a aelect library of books has been sent from England, and some additional philosophical apparatus. The number of scholars, all male, is stated at 200; and so long, the committee add, as such n number, all respectably connected, "can be trained, in useful know. lellge and the English language, a great improvement may be confidently anticipated in the intellectual character of the principal inhahitants of Calcutta." In order to secure the continued attendance of the more promising pupils, and to enable them to complete their course of study, a limited number of scholarships has been endowed by the Goverument. The number of pupils were in January, 1826, 196; in 1827, 372 ; July, is26, 280 ; 1828, 437 (of whom 100 received gratuitcus education). The number is still on the increase.

English College.-The Government sanctioned the cstablishment of a distinct Engrish College, fur the
admission of a certain number of the more advanced pupils from the Hindoo and Mahommedan colleges, for gratuitous instruction in literature and science, by means of the English language; for which purpose the Education fund could afford an income of Rs. 24,000 per annum.
The Bishop's College, near Calcutta.-A grant of land, of about 20 acres, was made by the Government in India for the purposes of the College, to which a farther grant has aince been made. It stands about three miles below Calcutta, in a fine situation, on the opposite bank of the river Hooghly, which is there much wider than the Thames at London. The spot is peculisrly favourable for privacy and retirement; and "t the scenery is such," Bishop Middleton observes, " as to gratify and soothe the mind."
The foundation stone of the college was laid, on the 15th of December, 1820, by Bishop Middleton. The Incorporated Society for the Propagation of the Gospel in Foreign Parts, transmitted to Dr. Middleton the sum of $5,000 \mathrm{l}$. to enable him to commence the work; $5,000 l$. were contributed by the Society for Promoting Christian Knowledge ; 5,000l. mure were voted by the Church Missionary Society; and the British and Foreign Bible Society had added 5,000l. This sum of $20,000 \mathrm{l}$. was augmented by collections in all the churehes in England and Wales, in consequence of a "King's Letter," which amounted to $45,000 \mathrm{l}$., with which the building has been completed.

The college consists of three piles of huildings, in the plain Gothic style. These buildings form three sides of a quadrangle; the fourth, or south side, being open to the river, which in that part flows nearly from E. to W. The pile which fronts the river consists of the chapel college to the $\mathbf{E}$, divided by a tower from the hall and library on the $W$. The buildings on the E. and $W$. sides of the quadrangle contain the apartments for a principal and two professors, with lecture rooms and rooms for the students. The whole is formed on the plan of combining comfort and convenience with an elegant simplicity.

Bishop's College is under the immediate direction of the Society for the Propagation of the Gospel ; but the statutes are so framed as to afford opportunity both to the Government in India and to the religious societies connected with the Church of England, of obtaining, under certain regulations, the benefits of the college for such students as they may place there.
For the regular supply of students, the Society for the Propagation of the Gospel has adopted the measure stated in the following extract from a late report : -"Ten theological scholarships and ten lay scholarships have been formed by the socicty for native or European youths educated in the principles of Christianity; and the sum of $1,000 \mathrm{l}$. per annum has been appropriated to this special purpose. The ordinary age of admission is 14 .
The Christian Knowledge Society assists in this plan of scholarship; having placed the sum of 6,0001 . at the disposal of the Gospel Propagation Society for the purpose of endowing five seholarships, to be called, in memory of the founder of the college, "Bishop Middleton's Scholarships." This grant is also intended to provide a salary for a Tamul teacher in the college, that being the language chiefly used in the society's missions.
The Church Missionary Society voted a grant of 1,000l. per annum for several years, on account of the importance of the institution, and of the co-operation it afforded to their department of labour in India.

In 1830, the Directors of Bishop's College had up. wards of 50,000 . in the 34 per cents., as a fund towards the support of that institution. There are upon that foundation a principal, two professom, eight missionaries, two catechists, and a printer.
The College Council consists of three professors, and attached to the college are four European mis. sionaries.

The foregoing abstract of the colleges in Bengal is sufficient to convey an idea of the good intentions of the Government in furthering education. There are various primary and elementary schools; viz. at Chin. surah, where there are 1,200 scholars; at Ajmeer, in which school there are 200 boys; Boglipoor school, 134 pupils; Cawnpore, 75 seholars; Allahabad, 59 ditto (it is proposed to establish an English college at Allahabad); Dacea, 25 schools and 1,414 pupils; Mynpoory College, Etawah, 40; Bareilly, 131 schools, 300 seminaries, with 3,000 pupils; and an established college, with 50 students. The following atatement respecting Bareilly is full of interest:-

In 1827, the local agents in Bareilly, Mesars. S. M. Boulderson, J. Davidson, and C. Bradford, were re. quired to report " what schools, collegea, or seminaries of any description whatever, existed in the towns or villages" of that district. In reply, they informed the Education Committee, that in the town of Bareilly there were 101 schools in which Persian was tought, and 20 in which the children of the Malinjims were taught accounts ; besides which there were 11 persons who taught Arabie, and two who taught the science of medicine ; that in the villages round about Bereilly there were nine Hiudu schools and 13 Persian; and in other parts of the district 108 Persian and 105 Hindu schools.
"In these schools," the local agents observe, "science of any sort is rarely studied. Works in the Persian language, such as the Bostan, Golistan, Zalicka, Mad. hooram Aboolfuzul, Sccundernameh, Tusha Kheelefia, Bahardanisli, are read with a view to facility in writing Persian ; besides this, the scholars are instructed in the simplest rules of arithmetic. In the colleges, the works read are in the Arabic language. The course of study includes Surf, Neho, Mautick, Laws of Compos:tion, Fikha Kikmut, under which are included medicine, mathematics, and natural philosophy, the Buddus, and the explanations of the Khoran ; besides these, there are schools in which the children of Ma . hajans and those intended for putwarries are taught accounts; those who study the Hindoo sciences read the Vedas, the Shastres, the Poorans, Beakam Jotuh Chelum Naryul, Ojoosh Bed, Memansa, Neari. We have not heard that there are any establishments for such scholars in the villages.
" In the schools in which Persian is taught, the boys read manuscript copies of the different books, and learn to write on boards.
" Hindoos and Mussulmans have no scruples about reading together. The teachers are almost always Syeds, Sheiks, Moguls, Patans or Kaits.
" The teachers are paid from three to seven rupees a month by the person at whose house they sit; they also get their meals twice a day ; and surance, that is, a kubba, razaee, toahak and bolaposh. Kubba and razee are regularly given every year, whether the oid one be worn out or not ; the tushak and bolaposh are sometimes given, sometimes not. Summer elothing is also sometimes given, but rarely. Those whodo not pay a teacher for attending at their own houses, send their children to the houses of those who entertain one, and pay the teacher from four anas to one rupee

The boys bcgin to study at six years of age sumetimes, but seldom till 20 ; in the colleges, from 14 to 25 , ometimes 30 , sometimes much less, it depending upon the talents and inclination of the students. Those who learn Persian, viz. boya till the age of 14 and 15 , never remain under the roof of the master ; on the contrary, he generally attends at the house of some persou or other, where he instructs the children of the master of the house, and those of others. Schools in which accounts are taught differ in no material respect from Persian ones. Those who teach Arabic have sometimes pupils who come from a distance residing under their roof; but those who live in the same town remain in their parents' housc. It is considered improper to take any thing from Arabic students, unless from necessity. The scloools in the towns are well attended in comparison with those of the villages. We have heard of no schools supported by public grants." In Delhi district there are about 300 elementary schools, ill several of which the preceptors receive no pay, but teach " gratis, in hope of Heaver."
There are a great variety of other colleges and schools in Kidderpore, Burdwan, Moorshedabad, Hooghly, Nuddea, Rajishaye, Calcutta Benevolent ỉchools (250 pupils of both gexes) ; infant schools in various districts, under the Committee of Management at Calcutta ; Sylhet, Chittagong, Beaspoor, \&c., independent of regular schools, and private or missionary seminsries. The missionary societies maintain schools at their respective stations. The following are manntained by them under this Presidency :-

By the London Society.-At Calcutta and out-stations, Bengallee schools, for boys, 11 ; for girls, 4 ;15. At Chinsurah, Bengallee, for boys, 2. At Berhanpore, Bengallee, for boys, 1 ; for girls, 1 ;-2. At Benares, Hindu, for boys, 4. By the Baptist Society: at Calcutla and out-stations, for boys, 2 ; for girls, 22 ;-24. At Cutu'a, for girls, 4. At seury, for boys, 4 ; for girls, $4 ;-8$.
The following is an abstract from a Rejort of the General Cominittec of Public Instruction of the l'resideney of Fort William, in Bengal, for the year 1836.

Agra College.-No. of pupils, 223 ; viz. 33 Christians, 31 Mahommedans, and 159 Hindus.

Ajmere.-No. of scholars, 218 ; viz. 206 Hindus, 9 Mussulmen, and 3 Christians.
Allahalind.-No. of scholars, 122 ; viz. 8.5 Hindus, 28 Mahommedans, and 9 Christinns.
Bareilly.-At present nothing taught but English. No. of scholars, 60 ; viz. 9 Mahonımedans, and 51 Hindus.
Benares Eaglish College.-No. of pupils, 142 ; viz. 131 Hindus, 10 Mahommedans, and 1 Christian. Total cost of building new college, 14,156 rupees, of which 10,000 were contributed by the General Committee, and the rest by subscription.
Benares Sanscrit College.-No. of acholars, 222.
Bhogulpoor Hill School.-No. of scholars, 79.
Calcutta. - Melical College. - Stipendiary students, 49.
Hindu College.-Total No. of pupils, $469 ; 392$ of whom are provided for by the parents, and the remainder by the college.

Muhammedan College. - In 1837, there were 42 paid, and 72 unpaid atudents.
Sanskrit College.--Preaent No. of scholars, 122; of whom 57 are pay acholars, receiving a monthly pay of 5 or 8 rupees ; and 65 out-students, getting no stipend from Government.

Dacca School.-There are in this seminary 149 pupils, of whom 134 are Hindus, 8 Mahommedans, and 7 Christinns.

Delhi Oriental College.-Arabic atudents, 45 ; Persian students, 64 ; Sanskrit department, 35.

Ferruckabad School.-No. of scholars, 30; of whom 28 are Hindus, and the other 2 Mahommedans.

Delhi English College.-No. of scholars 108; viz. 74 Hindus, 27 Mahommedans, and 7 Christians.

Gauahutti Schoot.-There are 136 pupils in this school, of whom 91 are Hindus, 43 Mahommedans, and 2 Christians.
Ghazeppoor School-There are 57 scholars in this institution, of whom 5 are Christians, 10 Mahommedans, and 42 Hindoos.

Goruckpoor.-There are 53 pupils, of whom 25 are Hindoos, 21 Mahommedans, and seven Christians.

Mohimmed Muhsin's College, Hoogy. - There are 1,013 students belonging to the English department of the College, of whom 31 are Mahommedans, 34 Christians, and the rest Hindoos. In the Arabic and Persian Classes, there are 197 atudents, of whom 138 are Mahommcdans, and 81 Hindoos.

Hoshungrabad.-There are 20 pupils, of whom four are Mahommedans, one a Christian, and the rest Hindoos.

Tubbulpore.-There are 17 pupils in the English department, and 64 in the Hindoo class.

Maulmein.-There are 107 pupils, of whom 42 are Christians, 40 Buddhists, seven Hindous, and one Mahommedan, and the religion of the remainder is not known.

Meerut.-There are at present in this school, 21 Christians, 33 Mahommedans, and 52 Hindoos.

Mitnupoor.-There are now 55 students in this school.

Murshedabal College.-There are 80 students in the English department, of whom 58 are Mahommedans, 21 Hindoos, and one Cliristian. In the oriental depurtment, there are 88 pupils, of whom 82 are Mahommedans, and the rest Hindoos. Monthly income of the College, 1,666 rupees.

Patno.-There are 102 pupils in this seminary, of whoin 15 are Christians, 16 Mahommedans, and 71 Hindoos.

Bujohahi.-There are at present 98 receiving instruction.

Saugor.-There are 205 Hindoos, and 11 Mahommedans in this school.

It is worthy of remark, that when the pupils of the different schools, have to pay for their own books, they are much more regular in their attendance, than if they had them gratis.

A medical college at Calcutta (the project and plan of which was laid by me before Lord W. Bentinck, in 1828, but rejected at the time by the Supreme Government, lest Hindoo prejudices should be offended) is now in full operation, and producing much good.

State of Education at Madras. The reports in detail from this Presidency are not numerous, but to compensate in some measure, we have a more complete return than from any other Presidencics relative to the males and females at each school, distinguishing the Hindoo from the Mussulman sclanlars as follows :

State of Educatlon under the Madras Presidency, distlogulshing the number of Colleges and Schools; the HIndoo from the Mussulman Scholars, and the Msle from the Female Pupils.
(From Government Returns ln 1836).

A summary of the report states, that the schools are for the most part supported by the people who send their children to them for instruction, the rate of pnyment for each scholar varying in dillerent dis tricts, and, aecording to the circumstances of the parents of the pupils, viz. from one ana (three-halfpence) to four rupees (eight shillings) a month, the ordinary rate of the poorer classes being genernlly four anas, and seldom exceeding eight anas. There are endowed schools, or teachers, in the following districts:-

Rajamundry.-69 teachers of the sciences, endowed with land, and 13 receiving allowances in money.

Nellore.-Several Brahnins and Mussulmans receiving 1,467 rupees per annum for teaching the Vedas, Arabic, and Persian.

Arcot.-28 colleges and six Persian schools.
Salem.-20 teachers of Theology, and one Mussulman school.

Tanjore.-77 colleges and 44 schools, supported by His Highness the Rajah.

Trichinopoly. - Seven schools.
Matalar.-One college.
Endowments for purposes of education in other districts have unfortunately been appropriated to other purposes.

The Missionary Societies maintain the following schools, under the Presidency :-

The London Socrety.-At Mudrus, and out stations, Tamil, for boys, 14 ; girls, 2 ; boys and girls, 2-18, Tripassoor-Tamil, boys and girls, 2 ; English, boys and girls, 2-4. Vizagapatan-'leloogoo, boys and girls, t1. Cuddepah-Teloogoo, boys and gints, 8 , Chittoor-Teloogoo and Tanil, for boys, 7; girls, 1-8. Belcaum, and out stations - Mahratta and Tramil, for boys, 7 ; for girls, 1-8. Beltury-Cana. rcse and Tamil, for boys, 12 ; for girls, 1-13. Bangalore, with out stations-Canarese, Mahratta, Teloogoo, and Tamil, for boys, with a few girls, 7. Sulem - Tamil, Teloogoo, and English, boys, 7. Comboco. num-Tamil, for boys, 12; for glris, 1-13. A committee of public instruction has been formed at Madras on the model of that of Bengal, ard much good has already been affected by the same.
State of Elucation at Bombay.-The Government of this Presidency has not been behind hand in promoting the blessing of education. In July, 1828, a circular letter was issued to the scveral collectors under the Bombay Government, calling upon them to report annually to the Foujdarry /obin the No. of schools in their collectorates, the n:sin... of boys attending each, and the mode in which education was conducted, also the mode in which printed tracts were sought after and disposed of. In October, 1829, these reports having been received, the Registrar of the Adawlut was instructed to forward to the Government a general report of the state of education in the provinces of the Bombay Presidency, framed from the information conveyed in the statements of the several collectors, and suggesting the means which, in the opinion of the Judges, were most likcly to promote and improve the education of the natives of India.

1st. By a gradual extension of schools on an improved principle, either by affording the patronage of Governinent to native schoolmasters, on condition of their improving their system, or by the establishment of new schools in populous places at the expense of Government; and

2nd. By the gratuitous distribution of useful books such as ' books of arithmetic, short histories, moral tales (distinct from their own false legends), natural history, and some short voyages and travels.'
Periodical examinations the jurges recommend to be held with caution, as likely to excite alarm, and when voluntarily aubmitted to by the schoolmnsters, to be accompanied by liberal rewards to the scholars for proficiency, 'as shewing the interest the Government takes in the procecdings, and as a mode of encouragement which would seem upon common principles likely to be attended with a good result.'

This report is accompanied by the following 'Statement of the Schools and Scholars in the different Collectorships.'
Native Education Society.-The committec of this noble institution (voluntarily formed in 1815, and composed in nearly equal proportions of Europcans and natives) at a mceting, l2th April, 1831, stated that its aggregate receipts and dishursements within the year amounted to between 70,000 and 80,000 rupees; that it has constantly on sale more than 40 publications in the native languages, many of them the produce of the Bombny lithographic and other presses, of which former mode of printing favourable specimens are appended to the reports : and that it has under its controul and manogement the severnl schools and establishments deseribed in the following paragrapha: -
"In the central achool 250 hoys have been through a course of atudy in the English Innguage: 50 have left it with a competent knowledge of the langunge, consisting of an acquaintance with geography, mathematics, and geometry. In Bombay, the boys in the Mahratta school have amounted to 954 , and In Guz. zerattee to 427. At present, there are altogether 50 of the society's achools, ench containiug about 60 loys, amounting in the whole to 3,000 boya under a course of education."

This report contains the following further parti. culars :-
"Your committee observe that the boys who have made the greatest progress in the English achools are the Hindoos; they are left longer in the achools by their parents than other boys, who, though equally intelligent and quick, are more irregular in their attendance. Few or no Mahomedan boys ever enter the schools."
In 1826, there were in the Socicty's school at Bombay 367 boys boarders, and 228 girls ditto; and therc were of day scholars, 268 Christians and 472 natives. In Surat school 3 Christians and 48 natives, and the regular schools 183 pupils.

There is a Hindoo college at Poona, at which premiums are awarded to the most deserving students. An admirable Engineer College has been formed ut Bombay, at which, according to the latest return, there were 86 students entertained and instructed.

* Master paid by government.

In May, 1830, the Education Society reported 25 schoolmasters ( 11 Mahrattas and 14 Guzzerattees), ready to commence their duties as teachers in the various schools in the Deecan, in Guzzerat, and in the two Concalls. They had acquired an accurate knowledge of their own languages, and were so far acquainted with the higher branches of the mathematics as to. entitle them to be considered teachers of the second order. Stations were proposed for them by the Society, to which they were sent by the Government.
In 1829, there were 44 students quitting the inatitution to entcr on professional employment, of whom there were-Europeans, 7 ; Mahratta, 32; Guzzerat. tee, 5. Mathematical instruments, \&c., are supplied by the E. I. Company.

The following very condensed abstract, relative to the number of the schools under the Bombay Preaidency (nccording to circular queries in 1825) and the mode in which the teacher is remunerated, will be perused with much interest.
[The realer desirous of further information on the siate of eduction in Indin, u'ill find many delails in rol. i., second cdition, of my "History of the Brilish Colonies," and in my "Colonial Library:" Some returns have been ordered to be prepared by Parliament, which will be found in the Appendix.]

Official Returns (Abstract) of the Schools under the Bombay Pr, 'dency.

Kandeish....

Uuder this Presidency the London Missionary So. ciety maintains the following schools : at Surat, Goojuratte, for boys, 4 ; girls, 1-5. At Dartean, Tamil, 2.
The following is an alstract of the proceedings of the Bombay Native Education Society in 1838 :English Central Schoul, containing 408 scholars; Murathee, 3 ditto, 331 ; Goojratee, three sehools, 312 ; Hindoostanee, New Cnzees-street school, 36.
Guvernment Schools in the Murathec Districts, at Poona, 7 schools, containing 484 scholars; Sholapoor, 5 ditto, 374; Ahmednuggur, 4 ditto, $316 ;$ Ahmedmuggur, 2 ditto, 151 ; Nassick, 2 ditto, 133; Dharwar, 4 ditto, 383 ditto; Candeish, 2 ditto, 107 ; Rutnagerry, 7 ditto, 626 ; Ditto, 4 ditto, 221 ; total, 37 schools, containing 2,795 scholars.
Government Schools in the District of Goojrat.-At Surnt, 2 schools, containing 147 scholars; Alimedabad, 2 ditto, 124 ; Broach, 2 ditto, 204; in the district, 21 ditto, 883 ; total, 27 schools, containing 1,358 scholars.
Abstruct.-On the Island of 13ombay, supported by the Society, 4 schools, containing 1,087 pupils; Murathee District Government Sehools 37, 2,795; Goojrat District ditto, 27, 1,358; total, 68 schools, containing 5,240 scholars.
The Calcutta Ellucution Press (now the Baptist Mission Press) has been productive of much gool; between July 1824 and February 1830, the number of native works produced at this press were,-Sanscrit, 15 finished, 3 in hand; Arahic, 2 finished, 5 in hand; Hindi, 3 finished; Persian 4 finished, 1 in hand.

The total value of the works was Rs. 58,890 .
The Calcutta School Book Society had published 38 volumes on important subjects, in the several Indian languages, as tollows:-In Snnscrit 3; Bengallee 9 ; Hindee 3; Arabic 2; Persian 5; Ilindostance 1; Anglo-Idengallee 3; Anglo-Hindee 1; Anglo-Persian 3 ; Anglo-Hindostance 2 ; English 6; total, 38.

OI' the foregoing elementary und standard volumes, there were 28,671 copies circulated in 1828 and in 1829, ns follows :-Of reports, 651 ; Sanserit llooks, 177 ; Bengaliee, 10,074 ; Hindee, 2,452 ; Ooriyn, 200 ; Arabic, 117; l'ersian, 1,907; Hindostanee, 1,173; English, 9,616 ; Anglo-Asiatic, 2,304; totnl, 28,671.
The Serampore Missionaries have 27 missionary stations, containing 47 missionaries, spread over an immense extent of country.

It is statel in the Nerampore account, that since 1825 , from 40,000 to 50,000 volumes or pamphlets (not copies of them) have been thrown into circulation by the native press I The English language is making rapid strides in every part of Jndia.
IX. Intimstely connected with the education and religion of a people is the state of crime in the country. The official returns on the subject nre few, not to the latest, nad consequently, most favournble

Allowances to Schoolmasters, and from what Source derived.

The schoolmaster's allowances are all derived from the
scholars, and supposed to average not more than 36 rupees
per annum for each school.
period, and relating principally to the Bengal Presi-dency-such as they are, however, they demonstrate the improved condition of the people and the beneficent nature of their government: for assuredly whatever elevates a bation in morality and temporal happiness, well deserves the appellation of bencficent. To begin with the highest class of offences for examination :-
Number of Persons Sentenced to Death, nnd to Trausportation or Imprisonment for Life, by the Court of Nizamut Adawlut of Bengal, from 1816 to 1827.

Deercase of death sentences on first period, 124 ; ditto of life transportation or impriconment, 878 ; total decrease on six yenrs, 1,002 .

The decrease which the foregoing tahle exhibits will delight every friend of humanity; on death sentences there was a decrease during the first period of 124, and comparing the two last with the two first years, alter an interval of ten years, the difference will be more strikingly observed:-in 1816 and 1817 , death sentences, 229 ; in 1826 and 1827 ditto, 122 ; decrease on two years, 107.
Number of Death-sentences in England and in India
for Five Years.

Sentences and Population.

| Years. | $\begin{aligned} & \text { England, } \\ & 12,000,000 \end{aligned}$ | $\begin{aligned} & \text { India. } \\ & 60,000,000 \end{aligned}$ |
| :---: | :---: | :---: |
| 1823 | 968 | 77 |
| 1824 | l0fig | 51 |
| 1825 | 1036 | 66 |
| 1826 | 1203 | 67 |
| 1827 | 1529 | 55 |
| $\left.\begin{array}{c}\text { Total in both } \\ \text { Countries }\end{array}\right\}$ | 5802 | 316 |

Thus, while those of India decreased 22 hetween the first and lnst year, those of England Increased 561. l.et it be remembered that sentences of death in

India are not merely sentences, they are in general fulfilled, unless when extraordinary circumstances intervene; the decrease shows, therefore, an actual decrease in crime, not, as would be the case in England, only a decrease of the nominal severity of the law, which in fact is actually taking place from year to year, not only by means of legislative enactments, but also by the unwillingness of jurors to find judgmenta involving deaths.

Sir R. Rice, in his evidence hefore the Lords in 1830, says that among n population of 150,000 peraons in Bombay, during three years, there was but one execution, and that was of an English serjeant.

The last table gave the returns of the Court of Nizamut Adawlut; the following are those of the Courts of Circuit, specifying the nature of the crimes :-
No. 1.-Sentences for Offences against the Person, passed by the Courts of Circuit in Bengal, at Two Periods.

| Offences. | No. of Persons Sentenced. |  |
| :---: | :---: | :---: |

Decrease of urime,
646

This is a very great decrease on two years, and in looking at the years preceding those given in the first table, the diminution is yet more gratifying to behold. For instance, adulteries were, from 1816 to 1818, in number 95 ; felony and misdemeanour, in the same years, 376; shewing a decrease on the former of 75 cases; and on the latter of 269 . In the second table there is also a marked improvement in the country.
Burglary.-In 1816 to 1818, 2,853; 1825 to 1827, 1,036; decrease, 1817.
Embezzlement.-In 1816 to 1818, 150; 1825 to 1827, 49; decrease, 101.

Cattle Sicaling.-In 1816 to 1818, 203; 1825 to 1827, 31 ; decrease, 172.
Lnrceny.-In 1815 to $318,1,516 ; 1825$ to 1827 , 223 ; decrease, 1,293.
But if the foregoing Circuit Conrt returns be most cheering and honourable to the 13 ritish Government, those of the Magistrates' Courts for the Lower and Western provinces of Bengal are much more so, for the decrease of crime is yet more extraordinary, whether as regards offences arising from revenge, from destitution, from blood-thirstiness, or from inmorality. The following shew the sentences of twn ycars; if we had them of a more recent date, I am convinced we should observe a still greater diminution.
Comparative Statement of Offences against Property snd against the Person, on which the Magistrates passed Sentence in the Lower and Western Provinces of Bengai,
duriog the Years 1826 and 1827 . durlog the Years 1826 and 1827.

certainly.- $Q$. Are there still robleries to any consicerable extent on the navigable rivers? $A$. Not at all to the extent they were formerly.- $Q$. Is there a river police? $A$. There is, I think, near Calcutta and near Dacca, and in other parts, but not very generally. The improvement in the police can he proved beyond all doulit, from the great dimunition in the number of crimes.- $Q$. Is that the case in the provinces where dacoity prevailed? $A$. Very greatly.Q. Can you state in what proportion the number of crimes has diminished? A. I think in the lower provinces the average of dacoities of late years is abont as one and a fraction to seven, as compared with the state of things 25 or 30 years ago." $\mathbf{~ M r}$ Mangles adds, "In the district of Kishnagur, formerly
from an average in former years of 250 or 300 , to 18 or 20 "

When commencing these tables, I have shewn the number of persons sentenced to death and transportation, or imprisoned for life, by the Nizamut Adawlut. Exile or incarceration sentences for seven years have thus decreased before this court : - In 1825, 334 ; in 1826, 137 ; and in 1827,65. A decrease, after one year's interval, of 269 sentences.

Another method exists for testing the efficacy of the police and of the laws, which is by looking at the returns of the higher classes of erime, whether murder or robbery with violence. I have, therefore, prepared this table to exbibit the result of the two periods of two years each. nost notorious for dacoities, that crime has decreased,

State of Crime in the Lower and Western Provinces of Bengal, at Two Periods of Two Years each.

| CRIMES. | Lower Provinces: <br> No. of Sentences. |  | Decrease <br> of Crime. | Western Provinces: No, of Senlences. |  | Decrease <br> of Crime. | Total Decrease in Lower and Western Provinces. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| Depledations with marder .. | 165 | 90 | 69 | 400 | 271 | 189 | 258 |
| Ditto will torture or wounding a $^{\text {a }}$. | 283 | 194 | 89 | 901 | 512 | 389 | 478 |
| Dith with opell vialence, but withont personal Injury | 330 | ${ }_{101}^{221}$ | 109 | 83 | 34 | 49 | 158 |
| Murder withmut depredation .. . . .- | 358 | 106 | 102 | 311 | $\underline{2.5}$ | 50 | 218 |
| Honicide not amonming to murder. . | 303 80 | 218 4 | 55 $3: 1$ | 311 | 185 118 | 1213 | 181 |
| Affitas with loss of tire .. .. .. .. | 80 | 47 | 3. | 150 | 118 | 02 | 101 |
| Total .. .. .. .. | 1525 | 1002 | 523 | 22.16 | 1375 | 871 | 1394 |

Under a mild and equitable system, murders with and without depredation decrensed 576 in two years ! The number of persons charged with shooting nt, stabbing, and poisoning with intent to kill, in England, have thus lamentably increased:-In 1826, 47 ; in 1827, 82 ; in 1828, 72 ; total, 201. In 1830, 80 ; in 1831, 104; in 1832, 132 ; totnl, 316.

Western Prorinces.-The number of murders withnut depredation were, in 1818 and 1820, 496; in 1827 and 1828, 255; decrease, 241. Alfrays with loss of life : in 1821 and 1823, 232; in 1827 and 1828, 118 ; decrease, 114. Homicides: in 1818 and 1820, 377; in 1827 and 1828, 185; decrease, 192. Depredations accompanied by torture and wounting: in 1818 and $1820,1,000$; in $18: 7$ and 1828,512 ; decrease, 488. In the Lower Provinces the same offences were, in

1818 and 1820,319 ; in 1827 and 1828, 194 ; decrease, 125. Depredations with open violence: in 1818 and 1820, 515; in 1827 and 1828,221 ; decrease, 324.

Mr. Robertson gives, in his pamplilet on the Civil Government of India, published in 1829, several tables to shew the decrease of crime:-Gang-robberies were, in 1807, 1,481 ; in 1824, 234 ; decrease, 1,247. Wilful murders: in 1807, 406; in 1824, 30 ; decrease, 376. Violent affrays: in 1807, 482; in 1824, 33 ; decrease, 449. Gang-rohberies in the district of Kishnagur were, in 1808,329 ; in 1824, 10 ; decrease, 319.

An analytical comparison of crime in England and in the Lower and Western Provinces of Bengal, is exlibited in the following parliamentary table:-

Gitme in England and Wales, Lower Hengal, and the Weslorn Provinees, Sentenced io Death, Transporlation, and Imprisonment for Life, in Six Years, ruding 1827 (he Popnlation ol' Engtand and Wales, $13,060,000$; of Lower Bengal, $40,000,000$; of the Westetll I'ruvinces, $\mathbf{2 0 , 0 1 0 , 0 0 0 \text { ). }}$

White the executions in England are, in proportion to the population, 1 in 200,000, those in the Lower Provinces of Bengal are not more than 1 in $1,500,000$; and while all aentenced to death in India experienced the punishment awarded thein, in England not the one.eighteenth of those sentenced to die suffered.

Yet has crime augmented in the latter, and diminished in the former country.

Comparison of crime in the Company's Bengal territories (the only place whence we have returns) with offences in England, in Irelaud, and in France, with reference to the yearly averages, and the proportion to the population:-

X. The Government of the British possessions on the continent of Asia is vested at home in two powers with co-ordinate authority-viz. the E. I. Company, and a Ministerial Board, termed His Majesty's Commissioners for the affairs of India, the latter being devised by Mr. Pitt as a check upon the political procecdings of the former.

The Court of Directors.- The more immediate governing power of British India, and consequently the patronage attached thereto, is vested in the Court of Directors, or executive body of the E. l. Company. The capital stock of this Company is $6,000,000 \%$. sterling, which is divided, according to a recent calculation, among 3,579 proprictors, of whom 53 hnve four votes ; 54 , three; 347 , twe ; 1,454 , one; and 221 hold only $500 \%$, stock, and are not qualified to vote, but mercly to delnte on any question ; 396 proprietors hold stock under $500 l$. and are not qualified to vote or spenk, and 220 have not held their stock a sufficient time to cuable them to vote. A proprietor of not less than 1,000l. has one vote; of $3,000 l$., two ; of $6,000 l$., threc ; and of $10,000 l$. and upwards, no more than four votes. The stock must be bond fide in the proprictor's possession for 12 months, to enable him or her to vote; a regulation adopted to prevent collusive transfers of stock for particular oceasions. The total number of roters is estimated at 2,000, and of the rotes about 3,500 are comprised within four miles of the General l'ost Ollice. Women as well as men, forcigners as well as Englishmen, if holding stock sufficient, are cnupowered to vote and debate. A late classification of the votes gave of gentry, bankers, merchants, traters, shipowners, shopkeepers, \&e. 1,836 ; of women (married, widows, and spinsters), 43; of oflicers in the King's and E. I. Company'a Army, 222; of the clergy, 86 ; of officers in the Royal Navy, 28; of medical men, 19 ; of the nobility, 90 . The following is said to be the atate of the votes of the Court of Proprictors in 1832 :-P'Pers, 20 ; Memhers of Parliament, 10 ; Directors, 50 ; elergymen, 86 ; medical men, 19 ; military otlicers, 222 ; naval ditto, 28 ; minor, 1 ; other gentlemen, 1,775 ; male votes, 2,211 ; female ditto, 372 ; total, 2,583. The Proprietors meet as a Court regularly every quarter, and specially when convened
to discuss particular business. The number of quar. terly and special Courts held from 1814 to $1830-31$, was 212. The powers vested in this Court are-the election of qualified proprictors as their delegates, or representatives, to form a Court of Directors; to frame bye-laws for the regulation of the Company, provided they do not interiere with Acts of Parlin. ment ; to controul salarics or pensions exceeding 200l. a year, or gratuitics above $600 l$. It may confer pecuniary rewards on any eastern statesman or warrior, above the latter named sum, subject, bowever, to the confirmation of the l3oard of Controul; it can demand copies of public documents to be laid before it for discussion and consideration, but it is prevented in. terfering with any order of the Court of Directors, after the same shall have received the approval of the Board of Controul. The Court of Proprictors did interfere, and uith effect, in the case of the maritime compensations, on the ground that their concurrenee had not heen obtained previously to the application of the Board. The Chairman of the Court of Di. rectors is ex-afficio Chairman of the Court of Proprietors. Dehates are regulated as in the House of Commons, and all questions and clections are decided by the ballot.
The Court of Dircetors or Representatives of the foregoing body of Proprietors, consist of 24 persons, qualified nccording to an Act of Parliament, which provides that each must be a matural horn or maturalized subject of Great Britain: possessed of 2,000 . stock, (no matter for what previons period) he must not be a Director of the Bank of England, or the South Sea Company; and, by a bye.law of the Company, he shall be liable to be removed it he should promote his own, or the elevation of any other Dirce. tor, by promises of reward, collusive transfer of stock, or payment of travelling expenses, receive nuy peenniary or other remuncration whatever, for any ap. pointment in his gift or patronage as a Director. Sis Directors retire annunlly by rotation, nad nre reeligible after 12 months absence, the Proprictors have a review of every Director in the course of four years, and can of course remove if they think fit such as they may deem not fit for the duty which they onght to fulfil. (Nineteen contested clections for lirectors took place from 1814 to 1831.) The Court of Directors elect from their own body $n$ Chnirman and De. puty Chairman annually, meet once a week, uot less than 13 form a Court, and all questions are decidd by ballot. The Court in genernl consists of men of various hahits, vews, and interests; by a recent unalysis there were ten retired eivil and law officers of the company ; four military ditto of ditto; four maritime ditto of ditto; three private Indian mer: chants; and nine London merchants and bankers;
of these 1 first electio to 30, and rectors enj at home an judicial, an proceeding to the supe in several $n$ Proprietors.

presentatives of the nsist of 24 persons, Parliament, which ral born or natura. ossessed of 2,0001 . ous period) he must of Jingland, or the yelaw of the Comhoved if he should of nny other Direc. ve transfer of stock, receive any peenitever, for any ap. as a Director. Six tion, and are rete Proprietors have furse of four years, ink fit such as they ch they ought to ons for Directors he Court of Ditec. Chairman and De-- a week, not less stions nre decided ousists of men of sts; by a recent and law officers to of ditto; four ate Ludian mernts and bankers;
of these 15 were under 10 years standing from the first election; 11 from 10 to 20 ditto; two from 20 to 30, and tivo from 30 upwards. The Court of Directors enjoy full initiatory authority over all matters at home and abroad relating to the political, financial, judicial, and military affairs of the company. But its proceedings are subject to certain Acts of Parliament; to the superintendence of the Board of Control, and in several matters to the approval of the Court of Proprictors.

For the despatch of business the Directors are divided into three Committees; Finance and Home, eight Dircetors; Political and Military, seven; Reveanc, Judicial, and Legislative, seven; the duty of each is partly defined by the title, t , ut there is a committee of secrecy, forming the cabinct council of the Company, and consisting of the Chairman, deputy ditto, and senior Director; its functions are defined by Parliament. In reference to the business done by the Court of Directors as compared with the Board of Control, the Select Committee of the House of Commons thus reports in 1832:
As to the proportions of general administration resting on the Board of Control, and the East India Company, its Courts and its Officers respectively, it has been asserted, that, of all the reflections, suggestions and instructions bearing upon the policy of the Indian Governments, contained in the public despatches, rine-tenths, if not a larger proportion originate with the India House, though whatever regards the more important transactions with other States, and whatever is done in England, may be said to be mainly done by the Board of Commissioners. Conidering the multifarious nature of the Company's relations and transactions, it is to be expected that the correspondence should be voluminous and complicated, comprehending, as it does, not only all that is originated in England, and transmitted to India, but the record of the proceedings and correspondence of all the Boards at the several Presidencies, with duplicates of the documents relating thereto in India, necessary to put the authorities at home in complete possession of all their acts. The correspondence comes home in despatches, and the explanatory matter in books or volumes. The total number of folio volumes received from 1793 to 1813,21 years, was 9,094 ; and from 1814 to 1829, a period of 16 years, 12,414.
From the establishment of the Board in 1784 to 1814, the number of letters received from the Court by the Board of Commissioners was, 1,791: the No. sent from them to the Court was, 1,195 . From 1814 to 1831, 1,967 letters have been written to, and 2,642 received from, the board. The number of drafts sent up to the hoard from 1793 to 1813 , were 3,958 ; from 1814 to $1833,7,962$, making an increase 4,004 ; in addition, there have been references, connected with servants, civil and military, and others, in this country, amounting between the years 1814 and 1830 , to 50,146 . Reports made to the Court by its Committees, apnrt from details and researches made in framing such Reports, 32,902 . From 1813 to the present time, nearly 800 Parliamentary Orders have been served on the Court, reguiring returns of vast extent.
By the new East India charter the Company have agred to place their Commercial rights in abeyance while they hold the political government and patronage of India, which is extended by charter to the 30th April, 1854, and in consideration of assigning over all their cominercial assets (upwards of $21,000,000 l$
sterling) for the benefit of the Indian territory, the present dividend of ten and a half per cent. ( $630,000 \mathrm{l}$.) on the Company's capital atock, is accured on the $\ln$ dian revenue for 40 years, at the expiration of whlch period the capital of $6,000,000 l$. will be paid off at the rate of $100 l$. for every $5 l .5 s$. of annuity. As a guarantee fund for the proprietors in case of the surplus Indian revenues being unable in any one year to pay the dividends, and in order to provide for the ultimate liquidation of the principal, the sum of $2,000,000 \mathrm{l}$. is to be set apart out of the commercial assets, to be invested in the three and a half per cents, there to accumulate as a security fund until it reaches the sum of $12,000,000$ l.

The business relating to the Indian Government is transacted in England, hetween the Board of Control and the Court of Directors, as follows:- (Evidence before Parliament in 1832.)

All communications, of whatever nature, and whether received from abroad or from parties in this country, come, in the first instance, to the Secretary's Office at the Last India House, and are laid by the Chairman before the first Court that meets after their receipt. Despatches of importance are generally read to the Court at length. The desjatelies, when read or laid before the Court, are considered under reference to the respective Committees, and the Officers whose duty it is to prepare answers, take the directions of the Chairs upon points connected with them; the draft is prepared upon an examination of all the documents to which the substance has reference, and submitted to the Chairs ; it is then brought before the Committec, to whose province the subject more particularly relates, to be approved or altered by them, and, on being passed, is laid before the Court of Directors. After it has passed the Court of Directors, the draft goes to the Boarl of Control, who are empowered to make any alterations, but reyuired to return it within a limited tine, and with reasons assigned for the alterations they have made. Previously, howevei, to the draft being laid before either Committee by the Chairs, experience has suggested the convenience of submitting it to the President of the Board, in the shape of what is called a previous communication. This is done in communication between the President and the Chairs, in which stage alterations, containing the original views of the President, are made. The draft being returned to the Chairman, is laid hy him, either with or without the alterations, as he may see fit, before the Cummittee. The draft, when approved of by the Committee, is submitted to the Court, and there altered or approved, as the Court may ace fit. It is then olficially sent to the Board, who make such alterations as they judge expedient, and return it to the Court, with their reasons at large for the same. Against these alterations the Court may make a representation to the Board, who have not unfrequently modified the alterations on such representation ; hut if the Board decline to do so, they state the aame to the Court and desire the draft may he framed into a lespatch, and sent out to lndia, agrecably to the terms of the Act of Parliament. In the event of a refusal, three Judges of the Court of Queen's Bench finally decided as to the legality of the Board's order.

13y the Act of 1784 and of 1833 , the Directora are charged with appointing a Secret Committee, whose province is to forward to India all despatches which, in the opinion of the Board of Control, should be secret, and the suhject.matter of which can only be divulged by perinission of the Board. The Coinmittee
consists of three Members of the Court of Directors, chosen by the Court generally, viz. the Chairman, Deputy Chair, and most frequently Senior Member, who take the oath of secresy, as prescrihed by the Act. Their officers are also sworn to secresy; and no one is employed in transcribing seciet despatches without the permission of the Board. 'Ihe Board are empowered by law to issuc, through the Secret Committee, orders and instructions on all matters relating to war, peace, or negociations of treaties with the States of India, and the Secret Committee are bound to transmit such order to India without delay. The Secret Committce have no legal power to remonstrate against such orders, provided they have relation t's the subjects above stated. The Committee have had communication, upon mattera stated in secret despatches, with the Board, and at their suggestions alterations have been made; but they have not the same power with regard to despatches sent down in the Secret Department that they have with regard to other despatches; they are not empowered to make representations thereon to the Board, whose orders are in fact conclusive on the Committee. The signatures of the Committee are necessary to ensure obedience to the orders conveyed by them to the Company's servants, with whom the Board of Commissioners have no direct correspondence.

It has heen stated that there is another class of subjects not provided for in the Act which establishes the Secret Committee, but which have been necesaarily treated through the Committee, and upon which its orders have been more punctually oheyed than in other cases, namely, negociations with European States having settlements in India, and generally all matters connected with war in Europe, which can in any way affect our Indian interests. (Provided for by the Act of 1833 , section xxxvi.)
When cither war against a Native State, or the carrying forward nn expedition against any of the Eastern Islands, has been in contemplation, and the finances of India at these periods exceedingly pressed, or re. quiring aid from this country, the Secret Committee, in communication with the Board of Commissioners, have taken upon themselves to provide the requisite funds, without intimating the same is the Court at the time. Thus despatches relating to subjects purely financial and commercial, such as the transmission of bullion, and the nature and amount of the Company's investments, have gone through the Secret Committee.

The Board of Control.-The E. I. Company's Hume Government, thus briefly described, has been controlled hy a ministerial authority since I784, which is termed the 'Board of Commissioners for the Affairs of India,' or more generally the Board of Control; it consists of such members of the Privy Council as his Majesty may be pleased to appoint, of whom the two principal Secretaries of Stnte and the Chancellor of the Exchequer shall always ex officio form three. The President is also nominated by the Crown, is usually a cabinet minister, and in all changes of Administration retires from office together with the salaried Commiasioners and secretary. The oath which the Commissioners take imposes on them the responsible duty of governing India to the best of their ability and judgment, as much and as completely as if there were no Executive Court or Administrative power. The controlling functions of the Board are exerciaed in revising all despatches prepared by the Court of Directora, and addressed to the Governmenta in Irdia; the originating, in requiring the Court to prepare
despatches on any named subject, and in nltering or revising such despatch as it may deem fit. The Board is divided into six departments, viz. Accounts, Reve. nue, Judicial, Military, Secret and Political, and Foreign and Public; the duties of which are thus defined. (Evidence before Parliament in 1832.)

1. The Accountant's Department. - To examine the accounts of the finances at home and abroad: control the correspondence between the Court of Directors and the Indian Governments, in the departments of Finance, and Mints, and Coinage: also, occasional correspondence in most of the other departments of the Company's affairs requiring calculation, or bearing a financial character.
2. The Revenue Department. - Principally revision of despatches proposed to be sent to the several Go. vernments of India, reviewing the detailed proccedings of those Governments, and of all the suhordinate revenue authorities, in connexion with the siljust. ment of the land assessments, the realization of the revenue so asscssed, and the general operation of the revenue regulations on the condition of the people, and the improvement of the country. Besides the land revenue, the detailed proceedings of the local authorities in the salt, opium, and custom depart. ments, come under periodical revision.
3. The Judicial Department. - Examination of all correspondence betcen the Court of Directors and the local Governments, on suhjects connected with the administration of civil and criminal justice and police in the interior of India, such as, the constitution of the various courts, the state of business in them, the conduct and proceedings of the judges, aad all proposals and suggestions which from time to time come under discussion, with the view of applying remedies to achnowledged defects.

The ling's Courts nt the three Presidencies, are not subject to the authority of the Conrt of Direc. tors, or of the Board of Control; but, any correspondence which takes place in relation to the appointment or retirement of the judges of those courts, or to their proceedings (including papers sent home for submission to the King in Council, recommendations of pardon, \&c.), passes through this depart. ment.
4. The Military Department. - Attention to any alterations which may be made in the allowances, organization, or numbers of the Indian army at the thrce Presidencies; to the rules nnd regulations affecting the different branches of the aervice; to the general staff, comprehending the adjutant and quartermnster general's department; the commissariat (both army and ordnance) ; the pay, building, surveying, and clothing departments; and, in fact, to every branch of Indian administration connected with the Company's army lt $e^{\cdot}$ so embraces so much of the proccedings, with respect to the King's troops, as relate to the charge of their maintenance in lndia, recruiting them from this country, and the periodical reliefs of regiments.
5. The Secret, Political, and Foreign DepartmentExamines all communications from or to the local Governments, respecting their relntions with the native chiefs or States ol India, or with foreign Eurvpeans, or Amcricans. It is divided into the following branches :-
i. The Secret department containing the correspondence between the Indian Governments and the Secret Committee of the Court of IVirectors. Under the provisions of the Act of I'arliament, sueh conf. dential communications as in the opintion of the loeal

governments require secresy, are addressed by them to the Secret Committee. Any directions, also, to the local governments, relating to war or negotiation, which, in the judgment of the Board of Control, require secresy, are signed by the Secret Committee ; and the local governments are bound to obey those directions in the same manner as if they were signed by the whole body of Directors.
ii. The Political department, comprising all correspondence not addressed to the Sccrct Committee, or sent through that Committee to the local Governments, respecting the native chiefs or states, with whom those governments are in alliance or communication, or whose affairs are under their political superintendence, or who are in the receipt of pecuniary stipends in lieu of territory
iii. 'fhe Foreign department, including all correspondence relating to commonications between the local governments and the several foreign Europeans who have settlements in India or the Eastern Islands; and embracing, in fact, all the procecdings of the local governments in relation to forcign Europeans or Americans, resorting to India.

The proceeding of the local government:, with respect to their residents and political agents, and to any other olficers and their respcctive establishments, through whom communications with native states and chiefs, or with foreigners, may be maintained, are also seported in the several departments in which those oflicers are respectively employed.
6. The Public Department.-The business of this department comprises the examination of all despatches to and from India upon Commercinl or Eccle siastical subjects, and of those which, being of a miscellaneuus character, are distinguished by the general appellation of Public." The commereia and ecclesiastical despatches, which are considered as forming two branches of correspondence distinct from the "Public," are united with the latter in the same department, only on account of the convenience of that arrangement, with reference to the distribution of business in the establishment of the Board of Control.
The Public correspondence comprises all those despatches which do not belong specifically to any of the branches of correspondence hitherto enumerated. They relate to the education of the natives and of the civil servants; to the appointment of writers and of the civil service genernlly, and to their allowances; to the several compassionate funds; to the grant of licenses to reside in India; to the press; to public buildings; to the Indian navy and the marine department ; to the affairs of Prince of Wales' lsland, Singapore, Malacca, and St. Helena; and to various miscellaneous subjects. Some of these being closely connected with the business of other departments, are reported upon in them, nlthough the whole pass through and are recorded in the public department.

The Erclesiastical despatches contain every thing relating to the appointment of chaplains, archdeacons, nad bishops; to their allowances; to their conduct; to the building and repair of churches, or other places used for public worship; and to all questions respecting the affairs of the churches of England and Scotland in India, or that of Rome, so far as public provision is made for its maintenance.
Any papers treating of ecclesiastical or miscellaneous topics, though they are not despatches to or from India, are likewise recorded and reported upon in this department.

The cost of the Board of Control is about $\mathbf{3 0 , 0 0 0}$. a year. The salary of the President of the Board is 3,500l. per annum; of ench of the paid Commissioners, $1,200 \%$. ; and of the Secretary I, 500 l ., to be raised to $1,800 l$. after three years' aervice. The Charter of 1833, authorizes two Secretaries for the Board.
The Domestic Government of India-is divided into three Presidencies, viz. Bengal, Madras, Bombay, and a Lieutenancy at Agra, or rather at Allahabad; the Chief at each Presidency is assisted and partly controlled by a Council of two of the Company's senior civil servants, and the Commander-in-Chief of the army. The government of Bengal is termed the Su. preme Government, and the head thereof is styled the Governor-General of India; he is necessarily pos. sessed of much local inclependence, exercising some of the most important rights of sovereignty, such as declaring war, making peace, framing treaties, to a certain extent forgiving criminals and enacting laws.
The Governor-General's Council consists of five Councillors, three to be servants of the Company of ten years standing, and to be appointed by the Directors; the fourth to be appointed by the Directors also, subject to the approbation of the King, but not from among the East India Company's servants, and with power to sit and vote in Council only at meetings for making laws and regulations. The Com-mander-in-Chief forms the fifth member, with precedence after the Governor-General.

On all questions of state policy, excepting in a judicial capacity, the Governor-General is independent of his Council; if the Council are dissentient, the Members record in their minutes the cause, which being submitted to the Governor-General, and he still remaining of his original opinion, the discussion is adjourned tor 48 hours, when the Governor-General may proceed to execution, tirst assigning his reasons for dissenting from the Council. The whole of the documents relative to the difference are then instantly transmitted to the Court of Directors and Board of Control; and the Court have the power, should they deem fit, of nppointing new Members of Council to succeed the dissentient ones, or of recalling the Governor-General

The Governor General, in virtue of his commission as Captain-Gencral, may head the military operations in any part of India. He has also the power of sus. pending the Governors of the other Presidencies, or of proceeding thither and taking the supreme authority in their Councils, in the execution of any of which acts he is subject to the vigilant supervision cf the home authorities. The Governors of Madras and Bombay are in a similar manner independent of local control, but for the sake of obtaining unity in foreign transactions, on matters of general and internal policy, or in expending money, they are subject to the authority of the Govcrnor-General, who, on procecding to either of the Presidencies, may assemble his Council there and sit as President.

Regulations for the good government of the British possessions in India, are passed by the Governor-Gen. in Council; they immediately become effective, but are transmitted home and subject to the revision of the Court of Directors and Board of Control ; heretofure ordinances for the good government of the Fresidency capitals were not valid until publicly exposed for 14 days, then registered by the Supreme (King's) Court; put in torce, but subject to a further ordeal at home: by the new Charter, these checks on the Governor-General are removed, and that authority in council can now make laws tor the regulation of even
her Majesty's supreme courts. Such is the legislative department of the Government, the executive is generally exercised by means of Boards, of which in Bengal there are five, (1. Revenue; 2. Customs, salt and opium; 3. Trade; 4. Military ; 5. Medical ;) at Madras three, (1. Revenue ; 2. Military ; 3. Medical ${ }_{\text {i }}$ ) and at Bombay one. Any of these Boards make suggestions or present drafts of regulations in their respective departments to Goverument; the Boards also receive from their subordinates suggestions, either for their own information or for transmission to the Governor-General in Council ; by this means the local knowledge of the inferior officers is brought under the knuwledge of the chief executive, and their talents and industry appreciated: indeed, a leading feature in the duties of the Indian Governments is that of noting down every transaction, whether as individual chiets of departments or as Boards: thus habits of business are generated, combined with a moral check of supervision, no matter what distance a servant may be from the Presidency, or what period of time may elapse, should an enquiry be necessary. All minutes of the Boards' proceedings are laid before the Government monthly, and then transmitted home. The objection alleged to this is that it creates delay; but, as correctly observed by the Court of Directors, in their Letter to the Board of Control, 27th August 1829, the Government of India may in one word be described as a Government of Checks. The Court thus judiciously remark :-' Now whatever may be the advantage of checks, it must always be purchased at the expense of delay, and the amount of delay will generally be in proportion to the number and efficiency of cheeks. The correspondence between the Court of Directors and the Governments of Indin, is conducted with a comprchensiveness and in a detail quite unexampled; every, the minutest proceedings of the local governments, ineluding the whole correspondence respecting it which passes between them and their subordinate functionaries, is placed on record, and complete copies of the Indian records are sent annually to England for the use of the home authorities. The despatehes from India are indexes to those records, or what a table of contents is to a book, not merely communicating on matters of high interest, or soliciting instructions on important measures in contemplation, but containing summary narratives of all the proceedings of the respective governments, with particular references to the correspondence and cons:liations thereon, whether in the political, revenue, judicial, military, financial, ecelesiastical or miscellan ous departments. In the ordinary course of Indian administration much must always be left to the discretion of local goverr. nints; and unless upon questions of general policy and personal cases, it rarely oceurs that instructions from hence can reach India before the time for acting upon them is gone by. This is a necessary consequence of the great distance hetween the two countries, the rapid succession of events in India, which are seldom long foreseen, even by those who are on the sput, and the importance of the ouling authorities there, acting with promptitude and decision, and adopting their measures, on their own responsibility, to the varying exigencies of the hour. These eirermstances unavoidably regulate, but do not exelude the controlling authority of the Court of Directors. Without defeating the intentions of Parliament, they point out the beat and indeed the only mode in which these intentions can be practically fulfilled. Although, with the exceptions above adverted to, a specific line of conduct cannot often be
prescribed to the Indian governments, yet it seems to indicate any other rather than a state of irresponsibility, that the proceedings of those governments are reported with fidelity, examined with care, and com. mented upon with frcedom by the home authorities; nor can the judgements passed by the Court be deemed uscless whilst, though they have immediate reference to past transactions, they serve ultimately as mules for the future guidance of their servants abroad. The knowledge, on the part of the local governments, that their proceedings will always undergo this revision, operates as a salutary check upon its conduct in India, and the practice of replying to letters from thence, paragraph by paragraph, is a security against habitual remissness or aecidental oversight on the part of the Court, or their servants at home. From a perusal of the Indian records, the Court also obtair an insight into the conduct and qualifications of their servants, which enables them to judge of their respective merits, and to make a proper selection of members of Council.'

The duties of the British funetionary in India may be gathered from the following detail of the chief stations and offices of the civil servants in Bengal. [Evidence before Parliament in 1832.] 'The duties of Territorial Secretary, in one branch, correspond in a great measure with those of the Chancellor of the Exchequer in this country; he manages the whole financial business of the Government, in concert with the Accountant-general ; but the Secretary is the chief officer of the Government in that department; moreover, he has the management of the territorial revenue, and the revenue derived from salt and opium, and he cunducts the correspondence of government with the three Boards of Revenue in the upper, lower, and central provinces respectively.
'In relation to the board of revenue, he is merely the ministerial officer of the Government ; he is nota responsible officer, and has no direct power over the Board of Revenue.
' If any increase of charge were proposed by any of the Boards of Revenue, or by any person acting under them, that proposal for inerease is submitted to the Territorial Seeretary before it is acpuiesced in and sanctioned by Government-he is the person alwars addressed. The Boards of Revenue have the power of writing directly to the Governer-General in Couneil ; but that is a mere matter of form, for such lettet goes equally through the office of the Territorial Secretnry, and is submitted by him to the Governor. General in Council.
' The Territorial Seeretary offers his opinion upon the admissibility of any new charge proposed. He his no right or power to do 30 , but he is generally called upon to do so. The Secretaries are in the habit of giving in papers called memoranda. As the Governor-General or Members of Council lay minutes before the Council Board, so the Secretaries, whenever they have any suggestion to make, submit what are called memoranda.
' One of the Members of the Council is nominally President of the Board of Revenuc, he performs no duties.
'The duties of the territorial and judicial departments as regard the judicial department are quite distinet departments. There are two Secretaries; the Judicial Secretary is quite independent of the Territorial; he cunducts the correspondence of the Government with the Sudder Dewanny and Nizamut Adawlut; they are the chief criminal and civil courts

judicial depart tment are quite wo Secretaries ependent of the pondence of the ony and Nizamut and civil courts at least all the
correspondence of Government on the subject of the police is conducted hy him. Like the Territorial Secretary, he is not a aubstantive officer, only a ministerial functionary of the government. He writes always in the name of the government; his letters always hegin with words to this etl'ect, 'I am directed by the Governor-General in Council to inform you? and this holds good with regard to all other Secretaries.
'The business of a Collector in the lower provinces is the receipt of revenue; the conduct of public sales, in the event of any defalcation on the part of any landed proprietor who is responsible for any portion of the revenue.
'There being a permanent settlement of the land revenue in those provinces, he has not much to do directly with the collection of the revenue; but he has a great number of other duties, as the management of wards' estates (minors' estates); for the Board of Revenue is also a Court of Wards.
- He excrcises judicial functions in what are called summary suits, arising from disputes between landlord and tenant, between zemindar and ryot. That is, in disputes connected with the administration of the revenuc.
' With reference to the extent in which he decides suits. The auits are summary suits; they are not conducted with the formality of regular suits; they are instituted originally in the courts of law, and are rcferred by the Judge to the Collector for decision ; they are of a particular description; they arc not conducted with the formality of regular law suits : there is a particular process laid down by the regulations for them.
'It is indirectly in the nature of a reference; it is a claim of the zemindar on the ryot for rent which the ryot disputes or denies ; and it is referred to the Collector, as a summary suit, under particular regulations.

All the instances in which he excrcises judicial power are referred to him hy the court, as far as regards the summary suits referred to; but there are also investigations which partake largely of judicial inquiries, which he conducts independently of the courts, as, for instance, where landholders in coparceny have petitioned to have their estates divided, and to become separately responsible to Government. Such divisions are called Butwarahs.

The revenue collected remains in the custody of a native Treasurer, who gives heavy security, and who is to a great degree independent of the Collector. Security is given to the Government throuch the Collector ; but the Board of Revenue see that it is sufficient, and the Collector is also responsible.'
Juticial.-We may now procced to examine briefly the mode in which the administration of justice is carried on. The civil law is administered according to the religious code of the party, whether Hindoo or Mahomedan. A commission is now being issued to examine into the variety of the civil laws existing in the various provinces, and to endeavour to codify them into a gencral system. The criminal law in India is the Mahomedan code, in which mutilations of the limbs and flagellations to death are not unfrequently ordained; these are commuted by us for imprisonment, \&c., and it will be seen in the section on gaols hew crime has been diminished in India. There are in the Company's Courts three grades of European Judges, the District, the Provincial, and the Judges of the Sudder Cnurt (there are also Magistrates, who exercise civil jurisdiction under special
appointments, and the Registrars try and decide causes referred to them by the Judge of the district.) The native Judges are divided into two classes. Ist, Moonsitfs, of whom there are several stationed in the interior of every district; and 2ndly, Sulder Aumeems, established at the saine station with the European Judge. Native Judges of any sect can try causes a3 far as 1,000 rupecs, and the amount may be increased at the rccommendation of the European Judge to 5,000 rupees ; this permission has been granted in very many cases, and the decisions have been extremely satisfactory. An appeal lies from the District Native Judges to the District European Judge, from the latter to the High Court of Sudder Adawlut at Calcutta, Madras, or Bombay, and from thence to the King in Council in England.
In the Bengal Presidency, for instance, there is first a high court ot Appeal, termed the "Sudder Dewanny and Nizanut Adawlut," or chief civil and criminal court. The functions of this court are cognizance of civil, criminal, and police matters; the remission or mitigation of punishment when the sentence of the law officers is unduly severe, co-revision previous to the execution of any sentence of death, transportation, or perpetual imprisonment, arbitration where the provincial judges differ from their law officers; revisions of the proceedings of any of the courts, with power to suspend provincial judges; it may direct suits for property exceeding $5,000 l$. in value, to be originally tricd before it; it may admit aecond or special appeals from the inferior courts, and its construction of the government regulations is final. The Chicf Jistice has 6,000l. n year, and the three Puisne Judges 5,0001 . each.
The second degree of Courts are the Provincial Courts of Appeal (of which there are six for Bengal), with a Chicf and Puisne Judge to each. They have no criminal jurisdiction ; try suits exceeding 5,000 rupees in value, if the plaintiff desire their decision (he may prefer it before the Zillah Judge, if the value do not excced 10,000 rupees), appeals lie from the Zillah Courts, and are final unles3 in cases of apecial appeal.

For the Bengal Presidency there are 20 Commissioners of Circuit, who combine revenue with judicial functions. They hold sessions of gaol delivery at least twice in each year at the different Zillah and City stations. The direction and controul of the Magistrates, Revenue Officers and Police are vested in them. The salary of cach Commissioner is 40001 . a year.

The Zillah Courts of Bengal amount to 49 ; some have a judge, magistrate, and registrar ; in others less extensive, the duties of judge and magistrate are conjoincd, or the duties of magistrate and registrar. The population and extent of a Zillah is various; in Bengal, the average population is about $2,000,000$. The total salaries of the European covecanted servants of a Zillah Court range from 30,000 to 44 ,, 00 S.R. a year.
These courts have cognizance of affrays, thefts, burglaries, \&c., when not of an gggravated character, and power to the extent of two years' imprisonment; commit persons charged with heirous offences for trial before the Commissioners of Circuit; try original suits to the value of 20,000 rupees ; decide appeals from registrars (i. e. causes not exceeding 500 rupecs in value), Sudder Auncems (native judges) and Monnsiffs; and by a regulation of 1832 (for the expedition of criminal justice), three Zillah judges may be invested with power by the Governor-General to hold sessions and goal delivery

These Courts have authority over the Police, and the judges are enjoined to visit the goals at least once a week.
Another and extensive set of Zillah and City Courts have been eatahlished last year with native judges of every class, caste, or persuasion, found qualificd for the duties enjoined them, to whom liberal salaries have been granted; and by a more recent regulation, native asaessora sit on the bench with the Europcan judges.

A plan of judicature similar to the foregoing is in force at Madras and Bombay, and in the N. W. provinces, modified by local usages; in some parts there are Punchayets (native juries) of arbitration and of civil and criminal procedure ; in others, uative asses. aors, in civil and criminal matters.
In the administration of civil justice the objects of the Company's Governmeut have been to render it pure in source, speedy in execution, and cheap in practice in the administration of criminal justice the aim haa been tirst to prevent crime, and secondly to promote the reformation of the offender. The judges are weil paid, in order to secure the purity of justice; the courts are numerous, in order that it may be speedily rend red, and the authorized fees are light (particularly in triffing cases) for the cheap attainment of right. In criminal matters, offences are quickly punished,-the death sentences (which are inflicted but for very few crimes) are almost sure to be carried into effect, and it is in evidence before Parliament (in 1832) that prisoners are brought to trial without delay, that the punishments awarded are mild and well proportioned to the offence; that abundant care is taken against unjust convictions, and that extraordinary care is paid to the health and comfort of the prisoners in the goals; the effect of the system is seen in the extraordinary diminution of crime. Measures have been taken for the promulgation of a knowledge of the old as well as new laws.
Laws and Regulations.-In pursuance of the direction, and by virtue of the powers given by the 47th section of the Act of the 3rd and 4th William IV. chap. 85, the Court of Directors of the East India Company, with the approbation of the Commissioners for the Affairs of India, ordain as follow :-

1. Copies of all lawa and regulations shall be communicated to the several Functionaries appointed to carry them into effect, and shall be preserved in all Courts of Justice, and there be open to the inspection of all persons.
2. All laws and regulations shall be translated into the several native languages most commonly spoken, and printed and sold at a low price.
3. The Governments of the several presidencies will make such a distribution of copies of the laws and regulations 80 to be sold as may bring them most conveniently within the reach of all persons, and will notify in a public manner where such copies may be procured.
4. The Governments will likewise, on the passing of any law and regulation, publish the title of it, and an abstract of its contents in the Gazettes and such other newspapers as are most generally circulated.

Authentification of Laus and Regulations.-1. The original copy of all laws and regulations shall be signed by the Members of the Legislative Council by whom they ahall be passed, and such copy shall be preserved in the archives of the Government of India.
2. Such copies only of the several laws and regulations hereafter passed as shall be printed at the Government Iress shall be admitted as evidence in

Courts of Justice. Such copies so printed shall bear in the title page fac-similes of the signatures of the Members of Council by whom the several lawa and regulations may have been respectively passed."

There is a Supreme or King's Court at each Presidency, with a Chief and twn Puisne Judges at Calcutta, and a Chief and one Puisne Judge at each of the other Presidencies. A Master in Equity, Registrar, an established number of Attor. nies and Barristers, at the discretion of the Judges, and at Calcutta there is a Hindoo and a Mahomedan law ofticer attached to the court. The jurisdiction of this Court extends over the local boundaries of the Presidency, with certain exceptions not well defined, and the Courts claim jurisdiction in certain cassis beyoud the Presidency; such claima have, lowever, been viewed with alarm, and the extension of the jurisdiction of the King's Court at the present perind deprecated. The salaries of the Supreme Court Juiges at the three Presidencies are, Bengul, Chief, 8,000l; Puisne, 6,000t. Madras, Chief, 60,000 rupees; Puisne, 50,000 rupces. Bombay, ditto ditto. Since 1807, there have been aix Chief Justices at Bengal, and siser 1805 seven Puisne. At Madras since 1815, four Chief, and since 1809, ten Puisne ; at Bombay, since 1823, three Chief and five Puisne Judges. The fixed clarges wre, in 1829, as follow : Bengal, S. R. 383,120; Mndras, 378,056 ; Bombay, 293,874; total, S. R. 955,050 , being an excess over 1823 of S. R. 205,826 . The salaries and contingent expenses of the Suprenie Court at Calcutta annually are 879,000 rupees, and the emoluments of Barristers and Attornies about 771,000 rupees. The same items at Madras and Bombay are-for the first, 650,000 rupees; and for the second, 950,000 rupees ; total of Supreme Courts, $3,250,000$ rupees. Trial by jury in criminal matters, not in civil; natives are eligible as petty and grand jurors ; proceedings are in English, with the aid of interpreters, and in general the civil laws of England are applied. There are at Calcutta and Bombay Courts of Requests, for the recovery of small debts, the Recorders of which are Europeans.

The Police in Bengal, for instance, are divided into stations with a native officer, native registrar, petty officer, and from 20 to 30 policemen well arned. In each district there are from 15 to 20 stations, making altogether in lower Bengal about 500, and in the uppler or western Provinces 400. Every village has also its own watchman, armed and paid by the village, and as there are 163,673 villages in lower Bengal, there is a further force of 160,000 men added to the Government establishment. In some Provinces of central India, each village has also a petty officer, whose duty it is to track thieves, and when he traces them to a village, to hand over the search to the trackers of that village.

The head officer at each station receives eriminal charges, holds inquests, forwards accused persons with their prosecutors and witnesses to the Zillah Magistrate, uses every exertion for the apprehension of criminals and the preservation of the peace in his district, and regularly reporta all proceedings to the European Magistrate from whom he receives orders. The village police, together with the village corporation officers (such as the barber, schoolnaster, accountant, waterman, measurer, \&c.), land agents, Zemindars, \&c. are all required to give immediate in. formation of crime committed within their limits, and to aid in the apprehension of offenders. There is a mounted police officered by natives, and a river police conducted also by natives.

The patronage of appointment rests only with the years standing ; ditto, exceeding 3,000l. by one of home authorities, that of promotion is thus managed. A writer on proving his qualifications in India, is allowed to fix on any branch of the service, (revenue, judicial, or political,) and the principle of succession to office is regulated partly by seniority, and partly by merit, blended so well together, as effectually to destroy favouritism, while a succession of offices is atill left open for the encouragement of talent and industry. An Act of Parliament, provides that all situations excecding in total value 5001 , per annuin, must be held by a civil servant of three years reaidence in India; ditto, excceding 1,500 , a year, by one of six
nine years, and of $4,000 l$. and upwards, by a servant of twelve years aojourn in the East. Thus, for vacancies under each classification, there are a certan mumber of candidates of the required local experience when the selection depends on the government, but every care is taken to make merit the sole ground for eligibility and success. The salaries of the whole Civil service are now undergoing reduction and madifications, which it is thonght will tend to stimulate the faculties of the functionaries employed.

The Company's civil servanta are educated at the East India College of Hailcylury, where each student

mast enter before he is 20 years of age, and pay $105 l$. per annum towards defraying the expensive and elaborate education which he receives in every essential branch of oriental and western literatore, philology and science, under the superintendance of a College Council, and the most learned professors in England. The test of examinations for a writership is severe. The nominations during the last five years from the College, consisted of sons of noblemen three; of baronets eight ; of clergymenfourteen; of East India Directors eight ; of Company's civil servants thirty ; oi ditto, military ditto, twenty-two ; of ditto, naval ditto, forty-two ; of His Majesty's military and naval otficers, twenty-seven ; and of merchants, bankers, and private gentlenen, one hundred and ten. The net expenditure of the Collcge of Haileybury, from 1805 to 1830 , was $3 f 3,427 l$., of which $96,3.99 l$. was for the building; 33,553l. for hooks, and philosophical instruments, \&c.; the salaries paid to professors, amount to $220,730 l$. and the number of students educated was 1,978 .
The following are the Rules and Regulations to be observed with respect to the Examination of Candidates for admission to the East India College at Haileybury.

India Board, 16 August 1837.
The Commissioners for the Affairs of India, by authority of an Act passed in the first year of Queen Victoris, intituled, " An Act to authorize the Commissioners for the Affairs of India, and the Court of Directors of the East India Company, to suspend the subsisting Enactments concerning the fourfold aystem of Nomination of Candidates for the East India Company's College at Haileybury, and for providing, during such suspension, for the Examination of Candidates for the said College," constitute and appoint the Rev. J. A. Giles, late fellow of Corpus Christi College, Oxford, the Rev. J. Isaacson, Fellow of St. Joha's College, Cambridge, and Thomas Hewitt Key, m. A., of Trinity College, Cambridge, to be Examiners for the purposes of the said Act; and the Examiners are hereby instructed to examine Candidates for admission to the East lndia Collcge at Haileybury, and to decide whether or not they are duly qualified for such admission.

Each candidate shall produce testimonials of good moral conduct, under the hand of the principal or superior authority of the college or public institution ia which he muy have been educated, or under the hand of the private instructor to whose care he may have been contided; and the said testimonials shalt have reference to his conduct during the two years iminediately preceding lis presentation for admission.
Each caudidate shall be examined in the Greek Testament, and shall not be deemed duly qualified for admission to Haileybury College, unless be be found to possess a competent knowledge thereof; nor unless he be able to render into English some portion of the works of one of the following Greek authors: Honer, Herodotus, Xenophon, Thucydides, Sophocles and Euripides; nor unless he can render iuto English some portion of the works of one of the folfowing Latin anthors: Livy, Terence, Cicero, Tacitus, Virgil and Horace; and this part of the examination will include questions in ancient history, geography and philosophy.
Fach randidate shall also be examined in modern histury and geograpliy, and in the elements of mathematical science, lncluding the common rules of arithmetic, vulgar and decimal fractions, and the first four books of Enclid. He shall also he examined in inoral
philosophy, and in the evidences of the Christian religion as set forth in the works of Paley.
It is however to be understood that superior attainments in one of the departments of literature or science, comprised in the foregoing plan of examination, shall, at the discretion of the examiners, be considered to compensate for comparative deficiency in other qualifications; and also that the examination shall be so conducted as to give to each candidate rcasonable time to prepare himsclf for the said examination.

The examincrs as above appointed are instructed to meet forthwith, and to divide the duties herein assigned to them amongst themselves in such ramner as to give to each examiner some ratment or branch of examination ; but althour,4 the examiners are to examine cach in his own department, separately, they arc to decide collectively, and after due consultation, on the claims of each candidate, and are to certify, under the hands of all and each of them, their decision for his admission to the College of Haileybury, or his rejection, as the case may he.
(signed) John Hobhouse.
The manner in which the patronage exercised in India is controlled by the Home Government of the East India Company, was ably explained by the secretary to the East India Company, in his lucid evidence before the Sclect Committees of Parliament in 1832, relative to Indian affairs:-
" The records, as now sent home from India, contain the most minute description of the services, the character, and conduct of every individual in the civil establishment. Perhaps I may exemplify it by stating, that when members of council for India are appointed by the Court of Directors, a list of civil servanta within a given period of the standing of those servants, from whence it is proposed to select members of council, is laid before the Court of Directors, which list contains a complete statement of the whole course of a servant's progress, from his arrival in Iudia as a writer, to the date at which it is proposed to appoint him to a seat in council. So it is with regard to every other civil servant in the establishment; and, if it would not be troubling the Committec too much, I will take the liberty of reating a letter, which has particular reference to the course now observed with regard to the patronage in India, and the scrutiny which is exercised by the autborities bere, or rather the knowledge which they possess of the course pursued hy the government abroad. It is an extract of a letter from the chairman and deputy of the Court of Directors to Lord Ellenborough, dated November 18:29: 'The Legislature has placed the local governments in suhordination to the government at home, it has exacted from them obedience to the orders issued by the constituted authorities in this country. The Legislature has provided, that all the Company's servants in Indin, civil and military, under the rank of GovernorGencral and Gqvernor, shall, in the first instance, receive their appointments from the Court of Directors; that the members of council shall, excepting in particular cases, be nominated by the Court, and that the Governor-General and Governors ahall likewise he appointed by the Court, with the approbation of the King. The Legislature has ampowered the Court of Dlrectors to recnll the Governor-General and other Governors, and to remove from office or diamiss from their service, any of their servants, civll or mllitary, and as a security against excesaive lenity or undue indulgence nil the part of the court, it has conferred
upon the crown the power, under His Majesty's sign me sual, countersigned by the President of the Board of Commissioners, of vacating appointments and commissions, and of recalling any of the Company's servants, civil or military, from the Governor-General downward. By these provisions, the fortune of every servant of the Complany in India is made dependant on the home authorities; and as long as the powers with which the latter are thus entrusted continue to be properly and seasonably exercised, there appears to us to be little ground for apprehension that the Indian functionaries will forget they are accountable agents, and still less that this forgetfulness will be generated by so adequate a cause as an occasional delay here, not in issuing necessary instructions, nor in replying to special references, but in reviewing their past proceedings.
"The Legislature having thus provided sufficient sureties against the independence and irresponsibility of the governments in India, has with a just appreciation of the distance and all the extraordinary circumstances attending the connexion between the two countries, not only left to the governments there the distribution and disposal of all the Company's establishments, civil and military, and the power of suspending from the service such individuals as may he guilty of misconduct, but has delegated to them powers of legislation, and to the Governor-general, individually nnd temporally, some of the most important rights of sovereignty, such as declaring war, making peace, and concluding treaties with foreign states; and while it has enacted, that the wilful disobeying, or the wilfully omitting, forbearing or neglecting to execute the orders of the Court of Directors by the local functionaries, shall be deemed a misdemennor at law, and made it punishable as such, the enactment is qualified with the exception of cases of necessity, the burthen of the proof of which necessity lies on the party so disobeying, \&ic.
"Nur do the powers thus conferred (large as they are) exceed the exigencies of the case. It would be superfluous in addressing your Lordships to enlarge on the magnitude of the trust reposed in the local governments, and the difficulties with which it is encompassed, difficulties so many and so great, as to be almost insuperable, if experience had not shewn that to a great extent at lcast they may be surmounted. The imposition of the various checks with which the system abounds presupposes the grant of a liberal confidence in those to whom power is delegated. The Individuals selected for members of the different councils of government are usually men of mature experience, who have distinguished themselves in the several gradations of the service. At the head of the two subordinate governments are generally placed persons who have recommended themseives to the home authorities by their eminent attainments, extensive local knowledge, tried habits of business, and useful services in India, or persons sent. from this country, who, without exactly the same recommendations, are on other grounds supposed to possess equal qualifications. The office of Governor-General has usually been filled by noblemen of elevated rank and character, who in some instances have held high offices of state in England, and who in going to India with the qualities of British atatesmen, have there the means of acquiring a personal knowledge of the country and the peopie whom they are sent to govern; and the allowances of the Governor-General, other governors and members, as well of the supreme as of the subordinate governments, are fixed on a more liberal
acale, suitable not to the character of mere executive agents, but to the greatness of discretionary trusts and the weight of their responsibility.
" It is by no means our intention, in submitting the foregoing considerations, to apologize for any want of promptitude or regularity on the part of the local governments in reporting their proceedings to the Court from the obligation of carefully revising those proceedings, and communicating their sentiments thereupor within a reasonable time, and above all of enforcing strict obedience to their orders where no sufficient reason is given for suspending or modifying them : all that we mean to infer is, that when the relative characters, position and powers of the constituted authorities at home and abroad are duly considered, a minute interference in the details of Indian administration was not contemplated by the Legisla. ture, and that as long as a general supervision is watchfully exercised, and no proceedings of importance are kept back from observation, overlooked, or neglected, its intentions are not necessarily defeated by an arrear of correspondence on matters of minor moment.
"It is doubtless indispensable that the home authorities shall exercise the utmost caution and circum. spection in the selection of their Indian governors, and in the chuice of fit persons for the councils of government; that they shall constantly and vigilantly inspect the proceedings of those governments, as they may affect the interests of the State as well as the characters and prospects of individuals : that com. mendation and censure be impartially distributed, and that in cases of manifest incompctence or gross mis. conduct, the extreme measure of removal from oftice be resorted to. It is incumbent on them to take care that, in our political relations with foreign powers, justice and moderation are uniformly observed, that the discipline and general efficiency of the army are maintained, and that ln the business of internal ad. ministration, the welfare of the native population is sedulously consulted. It is obligatory on them narrowly to scrutinize and control the public expenditure, to keep a watchful eye over all their servants, to see that distinguished merit is adequately encouraged and rewarded, that the undeserving are not promoted by favour, and that evil doers are not impro. perly shielded from the punishment due to delinquency. It is also within their provinces to convey to the lacal governments such instructions as may from time to time be deemed expredient with a view to these or other objects, and to enforce obedience to their orders when transgressed or imperfectly executed without valid reason."

Ecclesiastical,-The Episcopral clericai establishment in India is stated hefore Parliament, in 1832, (by Mr. Lushington) to be adequate to its purposes; the num. ber of European chaplains in 1817, were, 39 ; in 182 7 , 51 ; and in 1831, they were increased to 76, of whom 38 were at Bengal, 23 at Madras, and 15 at Bomhay. The clergy are under the charge of a Diocesan at Cal. cutta, with 5,000l. a year, and two Bishops (one st each Presidency) with 2,5006 . per annum cacin. The total charge of the establishment in 1827, was 66,9431 . steriing. The latest statistical returu (for 1827) gives the number of chaplalns, stations, and ecclesiastical charges, as follows:-

| Presidency. | Stations. | Chaplains. | Charge. |
| :---: | :---: | :---: | :---: |
| l3engal | 18 | - 27 | £ $40,62{ }^{\text {a }}$ |
| Madras | 18 | 22 | 20,199 |
| Boinbay | 2 | - 2 | 6,179 |

Since this lains has be charges also.

The total numher of European officers，it will be observed，is 4，487，of whom 752 are in the King＇s military service．The complement of officers to each regiment is，of Europeans， 1 colonel， 1 licut．－colonel， I major， 5 captains， 8 lieutennnta， 4 cornets or en－ signs；of native commissioned officers there are a subadar and jemadar with each troop or company． The command of stations is given to brigadiers，of whotn there are in Bengal 16，in Madras 12，and in Bomhay 7．The divisional commands，under general officers，are－Benga），King＇s， 2 ；E．I．Company， 5 ； Madras，King＇s， 2 ；E．I．Company， 3 ；Bombay， King＇s， 1 ；E．I．Company，2．Total，KIng＇s， 5 ； E．I．Company，10．On the Bengal establishment there are ninety－nine corps；namely， 3 of horse artil． lery， 7 of foot artillerv；a corps of engincers equal to 3 others in the strength of its officers； 10 of native cavalry； 2 of Eu，opean infuintry；and 74 of native infantry．In cach oif theae the European commissioned onticers consist of I coisnel，I ！leut．－colonel，I major， acaptains， 8 licutehants，and 4 seeond lieutenants， cornets，or eusigns．The total establisinment thus ia

1,980 ；or 99 colonela，the same of lieut．－colonels and of majors， 495 captains， 792 licutenants， 396 ensigns， and about 180 slıpernumeraries of the junior rank， awaiting the process of absorption．

The average number of European officers in Beugal， annually for the last 18 years，has been， 1,754 ；of easualties 80 per annum，or 1 in 22 ；of deaths 54 ，or 1 in 32 ；and of retirement，\＆c．， 26 ，or 1 in 67 ．In Madras，total number of officers， 1,346 ；of casualties 75 ，or 1 in 18 ；of deaths 52 ，or 1 in 26 ；and of re－ tirements，\＆c．23，or le in 58 ．In Bombay，total number of officers， 624 ；of casualtics 34，or 1 in 18 ； of deaths 26 ，or 1 in 24 ；of retirenients，\＆c． 8 ，or 1 in 78．（For tables of each department of the service， pay，allowances，\＆c．see Appendix．）
The total casualties of commissioned officers in the E．I．Company＇s army at the three Presidencies，from 1813 to 1833，has been yearly．169，154，159，143， $150,203,198,167,194,164,168,260,233,244,233$ ， $163,193,204,244,227,228$.

In 1835，the number of high－ranked officers of the E．I．Company＇s service attached to the ludian army establishment was ：－

| Rank． |  | 硅 | 凩 | － |
| :---: | :---: | :---: | :---: | :---: |
| Licutenant－Generala．． | 6 | 10 | 0 | 16 |
| Major－Generals ．．．． | 9 | 9 | 3 | 21 |
| Colunels | 84 | 51 | 34 | 169 |
|  | 99 | 70 | 37 | 206 |
| In Europe ．．．．．． | 55 | 50 | 29 | 134 |
| On service． | 44 | 20 | 8 | 72 |

The lieut．－colonels at the same period amounted to 206，majors 206，captains 1，030，and subalterns，2，472． In the Company＇s army there is no half－pay liat，no sinceures，and no pensioners under 25 years＇service； until that period is completed，European commis－ sioned officers are not eluabled to retire on the full pay of their rank，which is attained by seniority．A licut．－colonel，major，or captain，retires on the half－ pay of his rank，if his health requires his relinquish－ ing the aervice，and a lieutenant having served 13 ，or an ensign 9 years（including 3 years for a furlough）， may retire on ill－health certificates，on the half－pay of their rank．There are military funds to which liheral subserıptions are made by the Company＇s Govern－ ment；but the charges are principally borne hy the officers themselves．

The officers in the Company＇s service receive com－ missions from His Majesty corresponding with those which they receive from the E．I．Company；but， westward of the Cape of Good Hope，the Company＇s officers possess no rank when on service with the King＇s officers ；eastward of it，they take precedence according to date and rank of commission．It is but juatice to stnte，that in no part of the globe can there be found a braver or more gentlemanly community thun the olficers in the Comprany＇s service．

The officers for the Enst Indin army nre educated at Addiscombe College，und instructed in the oriental languages as woll as in militnry discipline．

Aldiscomber Plince，near Croydon，was purchased in 1809 of E．HI．D．Rudeliffe，Esq，for 16，6041，10s．It was previousiy the residence of the Earl of Liverpool， mad reputed one of the best red－lrick buildings in the
county．The land consista of 63 acres freehold and 24 rent hold．

Previous to ita conversion into a military aeminary the education of the Company＇s Cadets was conducted at Marlow，at Woolwich，or pricately．The number of cadets at Woolwich was limited to 46 ，and the average expense was $250 l$ ，each．The company al－ lowed 200 guincas to each cadet educated privately， and 45 guineas，or half the yearly expense，to eaeh cadet educated at Marlow．The estimated expeuse for two years of each cadet educated in their own seminary was $188 l$ ． $16 s$ ．The seminary was originally confined to the education of officers for the artillery or engineer corps，and the regulations for its estab－ lishment were framed in obedience to the 44 th clause of the Act of the 53rd George III，enj．55．The establishment and object of the institution were sanc－ tioned by a resolution of the General Court of the 7th April，1809．It was placed under the superin－ tendence of Dr．Andrew，who was pain at the rate of 80l．each per annum for 60 pupils．When the semi－ nary was first cstablished the cadets＇subscriptions were at the rate of 301 ．a year，and they also found certain articles of military elothing．

The successive augmentations which have taken place，are－lst．April 1821，from 30l．to $40 l$ ．n year， in addirion to the sum of 13 l .16 s .5 l. for clothing． 2nd．March 18， 1829 ，first year，65l．inclusive of military outfit ；second year，501．On the l6th Jan－ uary，1828，the seminary was opened for the educa－ tion of cadets for gemeral servire，exelusive of caralry． 3rd．On the 14th October，1835，the Court，ennsider－ ing the payment ot the eadets was disproportioned to the value of their education，fixed them at their present rate，which，all expenses included，may be taken at 61l．18s．per term，or about 240l．for the two years＇residence．

The building of the college cost $82,869 l$ ．，and the total expense，from 1810 to 1830 ，was $366,15.1 l$ ；of which $37,136 \%$ ．was for instructing the cadets in trigonometrical surveys，and the engineering，\＆c．； 18，752l．for books，stationery，and mathematical in－ struments．The rewards to cadets for industry and talent amounted in four years to $1,600 l$ ．
The annunl total expense of the seminary，upon an average of the six years ending Midsummer 1835，may be taken at about $20,000 l$ ，of which the company＇s proportion was between 11,000 ．nnd $12,000 l$ ．The number of cadets qualified during this period was－ engineers， 58 ；artillery， 80 ；infantry，242．

The plan of this noble institution originated with Mr．W．Abington，of the India House，and by a reso－ lution of the Court of Directors， 11 th April，1809，an honourshle tribute was made to his＂zeal，attention， and viyilance．＂The following resolution was passed by the Court of Dircctors，22nd November， 1837 ：－
＂That all the time during which cadets actunlly continue at the military seminary，nfter attaining the age of 16 and before they puss their public examina－ tion（provided they prass within the fixed period of four terms）shall count ns a portion of the period which may eventually entitle them to retire upon full $p a y$ under the regulations as now established．＂

The following analysis wns quoted in the House of Commons by the Right Ilonourable R．C．Fergusson， on Friday，the 26 th July，1833，on a motion that one fourth of the calletships be set apart for Sons of Compman＇s Officers．The Right Honourahle C．W．W． Wynn＇s motion was negatived without a division，a satisfactory proof that the Court of Directors had exercised their right of patronage in an unexception－
able manner．The rules and regulations establishied for the good government of the college are admirable．

II am indebted for the foregoing information to Mr ． T．R．Ctarke，of the College Office，E．I．House．］

> * No separate corps of horse artillery.

These troops are composed of Hindoos and Mussul－ mans，\＆c．mixed in every regiment，in a greater or less proportion ；and in discipline，cleanliness，sobri－ ety，and bravery，they are unsurpassed by any body of men．The native artillery make it a point of honour never to desert their guns，nnd wherever a British officer will lead，it has rarely or never been found that his se－ poys will not follow．The native cavalry are excellent and fearless riders，superior to Europeans，and good swordsmen；they are exceedingly fond of their horses， and take the best care of them ：of the whule army，it may be observed that no men are more alive to emu－ lation；a medal is as highly prized by a sepoy as by a British soldier，and hundreds of instances of heroism have been related of them which would do honour to Greek or Roman story．The Bengal army is considered to possess the highest caste men，being principally Raj－ poots；the Bombay sepoy is more a man of all－work find the Madrasites are，perhnps，the hardiest race， but all are extremely tenacious of their rights，and adhere punctiliously to the customs which their re－ ligion ordains；any violation of either，particularly of the latter，has ever been attended with serious con－ sequences．

The subsidiary Inclian forces and contingents, where they are specified in treaties with the East India Company, are as follows :-Sulsidiary. Oute not less 10,000 men; the Nizam, two regiments cavalry and cight battalions of infantry; the Gulcowar, two regiments of eavalry and 4,000 sepoys; Nagpore not stipulnted; Mulhar Rao Holkar, the strength judged adequate by the British Government; Travancore, three battalions of infantry ; Cochin, one battalion ditto, Mysore and Cutch not specified. Contingents of native chiefs; the Nizam, 10 cavalry and 12,000 infantry; Guicowar, 3,000 cavalry ; Nugpore, 1,000 ditto ; INokar, 3,000 ditto ; Mysore, 4,000 ditto (central India); Joudpore, 1,500 ditto; Ghuffoorkan, 600 ditto; Bhopaul, 600 cavalry ami 400 infantry: and Dowlah and Purtumbghur, 50 cavalry and 200 infantry; and Dewap 100 cavalry 100 infantry. The following ehiefs, not included in the preceding list, are pledged to bring forward troops to the extent of their neans when required by the Company's Government: Rajahs of Bhurtpore and Machery ; most of the Boondela chiefs; cliefs of Rajoootana and Malwa not enumerated above, and the Rajah of Sattarah. The military force of the Rajpoot States is 7,676 cavalry and 27,788 infantry, of which Kotah alone has 20,700 infantry and 4,200 cavalry. Simdia's army amounts to 10,000 cavalry and 20,000 infantry; Holkar's force, 3,456 cavuly and 2,00 infantry; the

Kajah of Sattaral has 300 cavalry and 5,000 infantry; Runjeet Sing's formidable force as given in the Meerut Observer, is as follows.
The Seick army of the Punjaub was, so late as the commencement of the present century, a mere military confederacy of predatory horse, and that gallant but unfortunate adventurer, George Thomas, coasi. dered them the most contemptible troops in Ilindos. tan. The talent of Runject Sing, has within the last twenty-five years established the military reputation of the Scicks, and this prince now possesses a regular army, accustomed to war, full of ardour, and jealous of renown ; the Scicks possess many qualities which admirahly fit them for a military life; they are indi. vidually brave and athetic, and are free from those prejudices of caste, which detracts from the military classes of the native soldiery of British India. A Seick will eat of any thing but beef; his religion never requires him to undress at his meals, nor does it prescribe fasts, or inculcate any thing to interfere with the duties of a soldier; like the soldier of Eu. rope, the Seicks are however not averse to the use of fermented liguors, and their Sirdars are notoriously addicted to the vice of drunkenness.
The foreigners or Hindoostanies of the Seick army are men from the provinces of British India, and receive a stipulated monthly pay ; many of the Seiek soldiers receive rations of grain, besides their pay.

General Abstract of the Setick Army.-Guns in dif. ferent forts, 108; Ditto Horse Artillery, 58, Ditto Foot Artillery, 142; total guns, 308. Mortars, 6 ; Jambourans on Camels, 305 ; Cavalry regular, 5,200; Ditto irregular, 43,300; total Cavalry, 48,500. In. fiuntry regular, 6,000; Ditto irregular; 17,000; total Infantry, 23,000. Golundaze, 1,500; grand total Army, 73,000. The horse artillery of Runject's army, consist of guns of small calibre, and their field equipment resemble that of our late foot batteries; and cunsequently such artillery would be utterly unable to cope with our horse artillery; still, as these guns are drawn by horses, their fire would be always available, which is not the case with bullock artillery.

In 1798, Tipjuou Sultan's fichl army was estimated at 47,470 fighting men: and his revenues at one Crore of Rupees; Runject Sing's army amounts to 73,000 men, and his revenues to one Crore and eighty lakhs of rupees.
The Hydrabad subsidiary force, stationed in His Highness the Nizam's dominions, is furuished from the Madras l'resideney, and consists of the following troops: one battalion foot artillery; two troops of horse artillery ; a plark of heavy guns ; two regiments native cavalry; one regiment of Europeans, and seven iegiments of native infantry.
'Ilie Nizam's regular and irregular troops under the command of British officers are under the immediate control of the supreme Government, and consist as follows: four independent companies of artillery, with large establishments of field pieces and heavy guns; one regiment of engineers; eight regiments of regular infantry; one garrison battalion; one invalid bat. tnlion; a body of invalits at Ellichapoor; and five regiments of irregular cavalry.

The payment of the Company's Hydrabad Subsidiary Force is provided for by trenty, and they are paid direct from the British treasuries through the military paymaster. As to the Nizam's troops, they are pail direct by the Nizam's Government, the total espense of which, it is said, amounts to about 42 or 43 iscs per annum.

The genernl servitude of the officers in the Combpany's army is thus shewn :-
nd 5,000 infantry;

HINDOSTAN.-EAST INDIA COMPANY'S MILITARY SERVICES.

Distribution of the Army in 1813 and in 1830.

Military force in India, European and Native, for 45 years.

Note.-This Return includes Provincial Corps; it omits Officers on Furlough to England. In the five years, 1801 until 1805, a portion of the Bombay army is returned as composing the Madras army, hecause it was employed in the Madras territory.

The Indian Marine, although at one time very con- | number of officers may be stated at 12 captains; 14 siderable, is of late much diminished; it is attaelied to commanders; 46 lieutenants; 71 junior ofticers, the Bombay Presideney, and consists of one frigate; and ahout 500 European seamen, (with a proportion four 18 gun ships; six 10 gun corvettes and brigs ; of four warrant-officers to each vessel) and a completwo armed steamers and some surveying vessels. The ment of from 600 to 700 native sea-men. The latest uv

## HINDOSTAN.-GOVERNMENT AND MILITARY.

Parliamentary returns of the annual cost of the Marine Establishment at Bombay is-Marine cruizers, \&c. S. R. 11,94,573; marine office establishment, \&c. $1,51,105$; water, luggage, and ferry-boats, 25,831 ; dry docks, mooring chains, \&c. 80,444 ; building vessels, purchase of timler, \&e., 4,24,741; total, S. 12 . 18,76,894; or in sterling 211,128l. Doring the European wars, the Indian navy on every occasion where an opportunity offered, have shewn themselves in nowise inferior in naval tacties and bravery to His Majesty's service, while the extensive and valuable surveys which the officers have made of the islands, rivers, gulphs and hays in the Indian and China seas display their seientific acpuirements in pre-eminent degree, and entitle them to the gratitude of every nation trading to the Enst. It is understood that measures are now in proress to convert the Bombay Marine iuto an armed steam flotilla.
It Calcutta there is a marine establishment which, though not of warlike mature, is nevertheless of the utmost importance. - I allude to the pilot service, which has no equal in any country in Europe. The service consists of 12 strong, well-fitted and quicksailing vessels, of 200 tons borthen, schooner-rigged, and admirably adapted for withstanding the tempestuous weather from April to Oetober, so frequent off the sand-heads at the mouths of the Ganges and Hooghly, where six or eight of the pilot vessels are constantly stationed, either at anchor or cruising about on the look-out for vessels coming up the liay
of Bengal; the moment a ship is seen, the pilot schooner makes towards her, puts a European pilot and a European lendsman on board, and then resumes her search for other ships approaching the port of Calcutta.

The service is one of seniority, from leadsman or volunteers (the lowest) to branch pilot (the highest). The number of Europeans in the pilot service is ahout 130 ; they are intelligent, skilful and gentlemanty men, well acquainted, from length of service, with the difficult and dangerous navigation of the llooghly, There are 12 hranch pilots, 24 masters, 24 tirst mates, 24 seeond mates, and between 70 and 80 volunteers or leadsmen. The salary of a hranch pilot is $70 l$. per month ; of a master $27 l$; of a first mate $15 l$. ; and of a second mate and volunteer (il. per month. Each ship going up or coming down from Calcutta (a distance of 150 miles) gives a gratuity of about a 100 rupees to the pilot and the leadsman who have charge of the ship. The yearly cost, according to the latest return betore Parlament, is in S. rupees -pilot schooners and buoy vessels, $3,68,585$; steam vessels 87,454 ; light-houses \&c. $1,08,505$; moorings 86,279 ; which, with various other items amount to S. I. $13,26,316=153,856 l$. sterting per annum. At Madras the marine is small, consisting of 20 Euro. prans and 265 natives.
The physieal or medical branch of the Anglo-Indian service, as regards the number employed in the army and marine is as follows :-

Number and Expense of the Medical Officers (European and Native Doctors) employed at each
Presidency, and at Penang and St. Helena, since 1813. N. B. The Civil Surgeons
in the E. 1. Company's Servire not ineludet.

In the medical schools, Hindoo, Mussulman, and Anglo Indian youths are taught Anatomy, Surgery, Practice of Physic, \&c., and when properly qualified, they receive appointments as Native Doctors in different regiments, and at the principal stations.
XI. The prosperity of a nation is muterially dependeat on a just system of finance, the leading principles of which are, that every individual shall contribute to the maintenance of a Govermment in proportion to the property he possesses, in order to protect him from domestic tyranny or foreign aggression, and that every individual contributing his quota shall have a voice in regulating its disbursement. As the comparative advantages of direct and indirect taxation are now deservedly engrossing a large share of public atteation, and the financial system of Great liritain and of our possessions in India is materially ditterent, it will be necessary to enter into some detail, in order that the Indian mode of finance may be more thoroughly understood and appreciated.
In India the ancient system of direct taxation has not been changed. The land in India has been from time immemorial the grand fund of supply to the Government, as will be seen by the proportions of the Indian revenue derived from different sources in $1831-2$, the latest year in which the returns have been laid before Parliament complete:-
Direct Toxation. - Land revenue, 10,750,2181, ; hotse tax, 40,0001.; tax on professions, $116, \mathrm{k} 30 \mathrm{l}$.; tolls on ferries, $96, \underline{2}+2 l$.; territories on Nerbudda, !39,347l.; Burmese cessions, 87,2666.; Mysore, Traraatore, and Cochin, 342,7761 . ; Nagpore subsidiary, ;7,743l.; Bhurt fore, 24,881l.; Nizam's and Rajpoot Tribute, $78,938 l$.; Cutch subsidiary, $13,332 l$.; miseellaneous, $17,996 \ell$. Total, 11,885,569l.
Indirect Taxation.-Sait sale \& licenses, 2,314,982l.; customs (sea \& land), $1,380,099 l$; opium, $1,442,570 l$.; post office, 103,501l.; tobacco, 63,048l.; mint reccipts, 60,5181 ; stamps, $328,300 l$; judicial fees and tines, $70,469 \%$; Sayer and Abkaree, $764,759 l$.; marine and pilotage, 45,974.; excise (in Calcutta), 19,106l. Total, 6,593,326l.
Land Reremue of Indiu. - The land-tax of British ladia is entitled to priority of consideration, no less on account of its tinancial importance as to amount, than of its influence over the righte nod interests of the native inhabitants of the country, and over the general prosperity of the empire. There are three different modes of assessing laud in India; and as reh has its advocates, and are essentially different in operation, the lairest plan which the Author can adoplt in laying a detail of them before the public, will be to give a very brief abstract of the evidence on the subjeet as laid before Parliament, during the recent dis. cussion on the renewal of the E. 1. Comprany's charter. Thus no favour to any system will be shewn, and the publie will be better enabled to form a compurative judgment on their respective merits. The source whence each praragraph is derived rerbutim is also given. I have only added coprulative conjunctions or artietes for the purpose of "dovetailing," as it were, the sentiments scattered through a vast mass of evidence. C. P. is Commons' Paper; Lords' is signified by L.; the tigure refers to the number of the paper or question.
Prin:iples of the Land Tax.-Three different modes of assessing the land tax prevail in British India; 1st, a perpetnal settlement with the proprietors of land; 2nd, a temporary settlement with the heads of vilinges or townships; and 3rd, a detinite settlement with each iadividual occupant or cultivator of the soil (1832, (', P. 2), but the acknowledged basis of every land
revenue aettlement in India is the right of a Governmert to a certain share of the gross produce of every inch of cultivated land; the share may be alienated entirely or partially, or it may be diminished by grants from Government : it may be commuted for a money payment under engagements more or less extended for a scries uf years, or even for perpetuity; but the groundworks of the land re enue in India is the right of Government to a share of the gross produce of all cultivation (1832, C. P. 29). Land is assessed with reterence to the payments of former years, and to the actual state of the cultivation, and of the season. If the cultivation have been increased, the revenue is increased; if land have been thrown $u p$, it is dimi. mished; if it he a bad season, allowances are made for it ( 1830, L. 2,285 ) ; and in case of complaint of over-assessment, it is rectitied ( 1830, L. 1,565 ), as it is well understood that nothing contributes so essentially to secure the public tranquillity as a low assessment (1831, C. 5,250).

The peeutiarity of lndia in deriving a large proportion of its revenue from the land, is in fact a very great advantage; nine-tenths probably of the revenue of the Government is derived from the rent of land never appropriated to individuals, and always considered to have been the property of Government. This is one of the most fortunate circumstances that can occur in any country; because, in conseguence of this, the wants of the state are supplied really and truly without taxation : the wants of Government are supplied without any drain, ether upon the produce of the man's labour, or the produce of any man's ceplital ( $1831, \mathrm{C} .3,134$ ). But the great difliculty in raising a revenue from the land in India is the difficulty of ascertaining correctly the value of land; approximation is all that can be obtained (1831, C. $3,162)$. The general proportion taken is extremely uncertain (1830, L. 2,537) ; because no portion of the gross produce of the land can ever be taken as the standard for assessment, for various proportions of the gross produce go as rent, according to all the various qualities of the soil, some lands yielding no rent, others a lourth, others a third, and other portions of the soil of a still more valuable quality, yiedling half or more than half of the gross produce as reut ( $1831, \mathrm{C}, 3,886$ ) ; that is, a surplus of the produce of the soil, after a full remmeration to the cultivator for his labour and stock (C. 3,884). The instruction for many years sent from home, and impressed upon the Governments of India is, that in no case can more be taken than the rent of the land, without both injustice and permanent injury to the country-not only injury to the individual cultivators, but injury to the Government itself; and in all doubtful cases, the instruction has heen to take special care to err on the side of tenity rather than on the side of severity; to take less than the rent rather than more (C. 3,162).

The consent of Govermment is not required for the cultivation of any new land; Govermment are haplyy that people should come and take up their abode; they make no enquiry, if there be no objection made by the neighhouring villagers; that is to say, that they do not oceupy the land that others are in the possession of; the right of possession remaining, unless disturbed by other claimants, which rarely or never occurs (1830, L. 542 and ${ }^{-13}$ ).

7he Zemindary or perprtual Settlement of Lord Cornwullis. - One of the most material points for consideration in respect to the hand-tax, is the different modes of leving the assessment now in lorce (1832, C. R. J. 2). 'lo begin with the Zemindary Scttle-
ment, the most obvious feature of advantage in which is the facility of collection, as it is a much more simple thing to obtain the revenue of a large diatrict from a certain moderate number of Zemindars or contributors, than it is to perform the collection in detail by the officers of Government themselves, and another advantage undoubtedly is, the greater degree of certainty in the result ( 1831, C. 3,$3 ; 9$ ). The main difference in the mode of collecting the land revenue in different parts of British India, consisting chiefly in the different degrees of summariness, or detail adopted in the collection of the revenue, from the great mass of cultivators who hold land generally in sn all portions, and who have a right to the perpetual hereditary occupancy of the soil, so long as they continue to pay the revenue demanded by Government.

When the E. I. Company came into possession of the revenues of the Dewanny of Bengal, Bahar, and Orissa, they found the land revenue collected in the most summary method by the intervention of officers under the Mahommedan Government, who had charge of districts sometimes of nore, sometimes of less extent, with varions titles, such as Zemindars and Talookdars, and who paid the revenue into the treasury in one sum, for which they were rewarded by the Government, gencrally with a per centage on their collections; in fact, Zemindars were found managing considerable districts whose obligations consisted in paying a certain annual amount to the Government. Many of them held their districts or estates under this condition hereditarily. ( 1831, C. $3,114,3,115$, 3,215).

On the East India Company becoming possessed of the Bengal territory, great abuses were found to prevail, and to be practised by the different sorts of prople employed in the collection of the revenue. The detail of the business was so great, that it frightened Lord Cornwallis and the Govermment. of the day, and they conceived that no better method for the protection of the Ryots or small cultivators, could be invented, than to create a species of landlords, from whom they expected much benefit to arise; the ground upon which they principally went was this, that those Zemindars, having a permanent interest in ihe lant assigned to them, would have an interest in the prosperity of the Ryots, in the same manner as a lardilord in England feels an interest in the prosperity of his tenants. This was expected to produce two good effects, to create a landed aristocracy in the country, and above all to atford protection to the Ryots or small cultivators, from the kind of paternal fecling that was expected to pervade the Zemindars (1831, C. 3,136), With a view to the protection of the whole mass of the agricultural population, and with the best of motives, the Zemindars in 1793, whether cultivators or officers in actual charge of districts, hereditarily or by special appointment, were created landholders of the country by which a property in the soil was vested in them, in nearly as full a sense as it is to the holder of a fee-simple in England; the sum which a Zemindar had been in the habit of paying was ascertained by the observation of a few prior years, the assessment or tax was fixed for ever, and an engngement was made that this anount of land revenue should never be raised on him; such is the nature of the settlement known by the name of 'the Zeminnany or Peamanent Settiement' (1831, C. 3,115, 3,116, 3,136, 3,215; 1832, R. C. P. 21). The countries settled on the permanent Zemindary tenure include under the Beagal Presidency, an extent of 149,782 square miles, emhracing the whole of Bengal, Bahar, Benares, and

Orissa (Cuttack alone excepted), with a population exclusive of the Benares province of $35,518,645$, as. sessed in 1829-j0, at a permanent Jumma or revenue of $32,470,858$ sicca rupees. Under the Madras Pre. sidency, the Zemindary settlement includes nearly the whole of the five northern Circars, lying imme. diately adjacent to the Bengal frontier; rather more than one third of the Salem, and about one-third of the Chingleput districts included under the head of Madura; and a small portion of the southern division of Arcot, consisting of some of the E. l. Company's ancient lands near Cuddalore; these countries include a territory of 49,607 square miles, with a population of $3,941,021$, assessed in 1829.30 , at $8,511,009$ sicca rupees. The permanent, or Zemin. dary Settlement has never extended to any portion of the provinces under the Bombay Presidency, which contain 59,438 square miles, with a populntion estimated at $6,251,546$; and 5,500 square miles in the nortliern Concan, of which the population is un. known ; far the greater part of the Madras territo. ries, to the extent of 92,316 square miles, with a population of $9,567,514$, has also been exempted from it ; as has also been the case in the province of Cuttack, under the Bengal Government, containing 9,040 square miles, and a population of $1,984,6: 0$; neither has the P'ermanent Settlement been extended to the Upper or Western Provinces under the Supreme Government, embracing 66,510 square miles, and a population of $32,206,806$; nor to the districts ceded on the Nerbudda, and by the Rajah of Berar in 1826, containing 85,700 square miles, of which the population is unknown; thus of the British territo. rial possessions on the continent of Asia, ineluding an area of 512,878 square miles, the Permanent or Zemindary Settlement extends over bet 199,389 square miles ( 1832, R. C. P. 21). We may now proceed to the consideration of the viliage system.

Villuge Land Revenue System.-The landed pro. perty in Upper India may be said to belong to the community of a village, each village having head men, leaders, or principals, called Mocudlims, of Potails, who either by descent, or sometimes by their personal influence, obtain a superiority in the ril. lage, and the management of its affairs; they are selected by the villagers, and removable at their pleasurc.

The lands are let out to men sometimes in the same village, sometimes in the neighbouring village, while certain portions, and certain rights are possessed by the different craftsmen or artizans of the village, such as the schoolmaster, the washerman, the barber, the carpenter, the blacksmith, the watehman, the village accountant, \&c. who have each a right to a certain share in the produce of the soil, of which there is also a certain portion set aside for certain recognised exjuenses of the village, and for defraying its hospitality towards strangers (1830, L. 398, 399, $405,406,529$ ). These village conmmunities are litle republics, having nearly everything that they want within themselves, and almost independent of any foreign relations. Dynasty after dynasty tumbles down; revolution succeeds to revolution; Hindoo, Patan, Megul, Mahratta, Seik, English, are all masters in turn, but the village comnuunitics remain the same. In times of trouble they arin and fortify themselves; an hostile army passes through the country; the village communities collect their cattle within their walls, and let the enemy pass unpruvaked. If plunder and devastation be directed again themselves, and the force employed be irresistible, they flee to friendly villages at a distance, but when the storm
has passed ov pations. If a scene of cont village canno pevertheless $r$ possession rey the succeedin take the place village, the sa lands will be who were dri lated, and it them out, fo through timea quire atrengtb sion with suc murities each itself, has con the preservati the revolution and is in a hig and to the enj dom and inde inittce, p. 29.)

The landed pro. to belong to the llage having head ed Mocuddims, or sometimes by theit riority in the ril. affairs ; they afe emovable at their
sometimes in the ighbouring village, rights are posr artizans of the he washerman, the $h$, the watchman, c each a right to a he soil, of which side for certain red for defrayiag its 30, L. 398, 399, munities are little g that they want lependent of any dynasty tumbles olution; Hindoo, ish, are all masinities remain the and fortify them. igh the country; eir cattle within unprovoked. If ngnin themselves, ible, they flee to when the storm
has passed over, they return and resume their occupations. If a country remain for a series of years the scene of continued pillage and massacre, so that the village cannot be inhabited, the scattered villagers nevertheless return whenever the power of peaccable possession revives : a generation may pass away, but the succeeding generation will return: the aons will take the place of their fathers, the aame site for the village, the aame position for the houses, the aame lands will be occupied by the descendants of those who were driven out when the village was depopulated, and it is not a trifling matter that will drive them out, for they will often maintain their post through times of disturbance and couvulsion, and acquire atrength sufficient to resist pillage and oppression with success. This union of the village commurities each one forming a separate little state in itself, has contributed more than any other cause to the preservation of the people of India, through all the revolutions and changes which they have suffered, and is in a high degree conducive to their happiness, and to the enjoyment of a great proportion ot freedum and independence. (1832, Commons' Rev. Committce, p. 29.)

It is lifficult to state the proportion of the produee of the village paid to Government ; the authorities know little of the precise property of any of the proprietors, it is not the interest or the wish of the village that the Government should scrutinize and know their possessions, therefore, if any one of the brotherhood fails to pay his proportion, that is a autter for the village at large to settle, they will often come forward to pay it for him, but those are all private arrangements kept to themselves; and the Moruddim has no power from the Government to enforce the assessment, what each man in the village has to pay is an internal arrangement, which it is desirable for the Government not to interfere in, the villagers settling among themselves what each has to pay, the total assessinent being calculated after enquiry into the state of prosperity in the village; what it has hitherto paid; what it is capable of paying ; the state of the village lands, and what assessments they ought to bear with reference to the produce; and if the villagers are dissatisfied with their Mocuddim, or head man, they turn him out ( $1830,1$. $401,402,404,528,583,584$.) Surveys of considerable expense have been made by Government; a minute accomnt taken of the state of the land in each village, the fields examined in the presence of a surveying officer, with all the assistance he can procure, not only from his own servants, but from the village communities, the pcople themselves interested, and also the ryots and people of the neighbouring villages, who are invited to attend. The exact limits of the village are put down, and even the detail of land within the village, the productions, houses, fruit bearing trees, and so on : the assessment is grounded upon these particulars (1831, C. 3,49:). The Upper or Western Provinces of Bengal, the greater part of the Bombay territories, the ceded territorics on the Nerbudda and the Province of Tanjore are all assessed by villages. ( 1831, C. $3119,3123,3129,3130$.) The Ryotwar System.-The peculiar principle of the third sort of assessment, termed Ryotwar, is to fix a maximum of assessment upon all the lands of the country in perpetuity; ( 1831, C. 4565 ) the money rent of each individual cultivator for the fiedds in his oceupation is defined with as much permanency as possible, the aggregate of such rents making the total assessment, which varies ench year with the increase or decrase of cultivation. Another main principle
of the Ryotwar system is to protect the rights of all ryots or cultivators, as they now exist in every village, from infringement; and to prevent all encroachment upon those rights (1831, C. 5156); thus, in the Ryotwar system, the details of the interest of the respective Ryots are known completely, and not at all in the Zcmindary system; and the former effectually does what the latter professes to do, but never has done, and never can do, that is, fix an assessment upon all the lands in the country. Under the Ryotwar ayatem, the assessment goes from detail to the aggregate; it respects property of every class, that of the largest landholder, and that of the smallest; it measures and assesses every portion of an estate, and thus facilitates the transfer of landed property, as the first question when taken into the market iswhat is the amount of public demand upon the land? (1831, C. 4565, 4567, 4568.) The Ryotwar system deals with the proprictor; if the Rajah be the complete proprietor, he is the person with whom the Government deals; it does not profess to interfere between him and his tenants, but in order to ascertain what the Rajah is to pay, his lands are first assessed in detail, and then in the aggregate (1831, C. 4570). The Ryotwar settlement is applicable, it is said, in every state of things; where there are proprietors it may be entered into with proprictors; where there are no proprictors it may be concluded with farmers or cultivators; it may be equally made for the largest or for the smallest quantity of land; for millions of acres, or for only a few. The owner of a single field may make his terms directly with the Government, and turn to his cultivation, knowing that he cannot be called on to pay more than a certain sum. The proprietor of the largest district may lo the same : for, although the cess under this 8ystem varies according to the value of land, difference of soil, population, situation, and other localities ; and although inferior land, paying the lower cess, becomes liahle when sutliciently improved to pay the higher cess; there is, nevertheless, a maximum for the best land, beyond which all produce is for the bencfit of the landholder: and there are remissions in cases of urgent distress (1832, C. R. P. No. 29.)

Another advantage which the Ryotwar system possesses over the Zemindary, is in the creation of a great body of independent proprictors, instead of a few who are proprictors only in name; and there is an advantage to the revenue, inasmuch as all the fruits of industry accumulate for the great mass of the people, but in the case of the Zemindary they accumulate for the bencfit of the few, while the Ryotwar system tends also in a considerable degree to the accumulation of capital ( $1831, C .4577,4578,4579$ ).

The following statement shews the amount of land revenue in the N . W. provinces, where the permanent or zemindary settlement does not exist.

Rerenue Western Districts. First D)ivision: (Jumma of $1: 243$.) Seharunpore, Rs. 9,25,991; Mozuffernugur, $6,11,404$; Meerut, $16,12,942$; Boolundshuhur, $8,76,522$; Allyghur, 17,04,590.

Second Division: Agra, 16,65,692; Muttra, 16,05,644; Furruckabad, 17,64,394; Mynporee, 18,34,714.

By Lord Cornwallis' permanent settlement in Lower Bengal moeb good was ettected, accompanied, how. ever, with no small pertion of evil; the fiximg for ever the assessment of the 'and was admirable in principle and highly benelicial to the proprietors, but the Govermment lost the advantage of inereased prosperity in the conntry in consequence ol the tax being fixed at a money instead of a corn rent: had the latter been adopted, the tenant could not complain, and the resources of the state would not have suffered: the next evil arose from considering the Zemindars as landed propristors instead of what they generally were, mere collectors or farmers of the revenue; the interests and rights of the leyots or cultivating tenants of the soil were thus entirely lost sight of, and no measure has since been devise which would restore them without the allegation being raised os our infringing the solemn compact of the germanent or Zemindary settlement.

A permanent land settlement might under proper surveys be made with rach village, as well as with a
zemindar; this plan inight also he catended to the
south of India, where the Ryotuer system is in foree; its advantages would be, that a stimulus would he given to cultivation and improvement without the Govermment, like the tithe owner in lingland, stepping forth to reap the reward of skill and industry; the assessment lining at a corn sent, the Government would not have a reventue fluctuating aecording to the rise or fall in the priecs of gold or silver,-and the rights of Luclividual cultivators as under the Madras Pesideney -or of village communities, as under the Bombay territories would be preserved; while the necessiey for annual scrutiny, and continual vexations interterene uf the Government with the famors would be hap. pily annulled. It is asserted that those periodieal famhes which desolate our provinces, oceur only in those districts where there is no pernanent land settlement. It would be well if the Hiddoos were chableal to purchase the lands and hold them in fee-simble, or to redem the Government tax on the soil by a lixed sum of money, to lon puid cither at once or by instalments spread over a . nifed number of years.

- The anclent and modern posesssions are nut stated separately after 1820-30.

Julicial revenue is raised on stamps requisite in $\mid$ two rupees. So also no summons is issued $f \sim n$ the causes of dillerent amount, in order to defray legal charges, and there are stamp duties at each Presidency as in England. In suits for sums not exceeding 16 rupees, the plaint or petition must be written on paper bearing a stanp of one rupee. If the suit exceed 16 rupees, and do not exceed 32 rupees, a stamp of two rupees is required. Above 32 rupecs, and not exceeding (64, the stamp) is 4 rupees. Shove 64 rupees, and not exceeding 150,8 rupees. Above 150 rupecs, and not excecding 300 , 16 rupees. Above 300 rupees, and not exceding 800, 32 rupees. Ahove 800 rujuees, and not exceeding $1,600,50$ rupees. Above 1,600 rupees, and not exceeding $3,000,100$ rupees. Above $3,000 \mathrm{rupec}$, and not exceeding 5,000, $t 50$ rupees, Ahove 5,000 rupees, mad nut exceeding $10,000,250$ rupees. Above 10,000 rupees, and not exceeding $15,000,350$ rupees. Above 15,000 rupees, and not excceding $25,000,500$ rupecs. Above 25,000 rupees, and not exceeding $50,000,750$ rupees. Above :0,000 rupees, and not exceeding $100,000,1,000$ rupees. Above 100,000 rupees, 2,000 rupees. The other stamp iluties to which the parties are subject, legides the institulion stamp, are-nll exhibits filed in court are required to be accompmied witlo mapplieation praying the ndmission of the sume, and that appulication must be writton on stamped puper ; it in the Gillenh Count, the stmmp is one rupe ; in the I'rovincial Court mad the Sulder IEwanty Adawlut,
attendance of any witnesses without an application in writing, praying the attendance of such persen, which application must be written on stamped paper, similar to that preseribed in the case of filing exhilits. Further answers, replications, rejoinders, supplemental pleadings, and all agreements of compromise and petitions, are required to be written on stamps of one rupee in the Zillah Court, and four rupees in the Provincial Court in the Sudder Dewnmy., Miscellaneous petitions and applications preferred to public authorities, either resenue or judicial, are required to be written on stamps of eight mas, if preferred to a Zillah judge or magistrate, or collector; of one rupee, if to a Court of Appeal or Circuit ; and of two rupees, if to the Sudder Dewanny or Nizamut Adawlut, or to the Buard of Revenue. The appointment of the vnkeels to act ln each case is made by an instrument bearing a similar stamp. Copies ol tecrees alsu are required to be stamped : in the /illala Court the stamp is one rupee; in the l'rovincial Court, two rupees; in the Sudder, four rupees; and all proceedings of the Sutder preprared for transmission to the King in Council must be transcribed on paper bearing a stamp of two rupees. Copies ol misedlancous papers are required to be written on $n$ stamp ot eipht nas, or hall-pupee. (l'or costs of a suit in the different Courts, sed (Mpentix.)

The judicial eharges are exceedingly henvy, viz. in

Bengal, the Supreme Court, S. R. 4,32,337; justices of the peace and diet of the prisuners at Calcutta, $2,51,693$; Court of Requests, 98,605 ; Sudder Dewanny and Nizamut Adawlut, $6,38,869$; Provincial Courts of Appeal and Zillah Adawluts, 62,69,040; provincial police, $17,89,377$; extra and contingent charges, $3,70,318$; pensions, 38,445 ; total, S. R. 9,89,91,694, or sterling 1,147,436i. In Multras, Supreme Court, S. R. 3,08,700 ; police charges in town of Madras, 1,33,040; Court of Sudder and Fouzdary Adawlut, 2,53,557; Provincial Courts, 25,97,490; pensions, \&e. 7, 342; total, S.R. 33,00, 129, or 377,158l. In Bombay, Supreme Court, S. R. 3,68,400; police charges at Bombay Presidency, 1,27,540; Court of Sudder and Fouzdary Adawlut, 2,62,891; provincial Courts, $19,39,774$; buildings, scc. 76,701 ; total, S. R. $27,75,306$, or $312,222 l$. The grand total for the three Presidencies being $1,836,816 l$. sterling.
Salt.-The next main item of revenue in Bengal is derived from the manulacture and sale of salt by Government, the average amual produce of which is about $1,800,000$. a year. It is in evidence before l'arliament that the people are abundantly supplied with salt, and the tax is less than four furthings, a month on each individual. Efforts have been made to authorize the Cheshire salt makers to furnish the Bengalese with salt; when the English Parliament remits or even lessens the duty levied on the Hindoos sugar being imported into Great Britain, then the Ilindoos may receive linglish salt. Upier Bengal is supplied with salt partly from the Lower lrovince, and partly from salt mines in Western Indin. Madras exports salt to liengal prepared by solar evaporation in exchange for rice and other provisions, and Bombay makes salt encurg for its own nee; the revenue in Bombay and Madras is tritling in amount compared with lengal, being in the latter about $300,0001 \%$ and in the former nut $20,000 \mathrm{l}$. a year. Mr. St. George Tucker, lately Chairman of the E. I. Company, thus details the salt 1 evenue for $1 \times 27$, which he states to be a fair year for judging of the average revenue:-

Population of Bengal, Behar, and Orissa, computed at $30,000,000$; 'plantity of salt consumed by this population, supplied from our sales, $4,500,000$ maunds; gross sale, at about 390 rupees per 100 maunds, $1,75,00,000$ S. rupees ; deduct eost and eharges, which constitute no part of the tax, $50,00,000 \mathrm{~S}$. ropees; net revenue or monopoly profit, $1,25,00,000$ rupees, at ${ }^{2}$ s. per sicca rupee, $1,250,000$ l. steriing. Merlium consumption of each individual, per amum, 6 seers $=1$ :2lls. ; ratc of contribution or poll-tax, yearly, $10, \mathrm{l}$. The population is now upwards of $40,000,000$, which would of course decrease the amount of the tax paid by each individual.
The charges on the salt revenue amounted in Bengal, in 1828 to S. R., $71,21,183$, or 826,0571 . viz. advances to manufacturers, $S$ R., $42,91,768$; conventiun with the lrench govermment to prevent any interference with the E. 1. Company's revenue. $4,00,010$; ditto with the Danish government, 15,000 ; salaries, commission to agents on manufacture, rent, establishments and contingencics, $22,61,527$; buildings, \&e., $1,52,8 \mathrm{NB}$. At Madras the charge on the salt revenue for the same year was $85,495 \%$, or S . R. $7,52,321$; of which the manufneturers' share was S. R. $2,50,5.42$; the advaners, $1,00,8.43$; the compensations, 25,542 ; and Moyen Zabital and other charges, 3,74,794.
The yenr 1 : $: 36-37$, in the following tuble, shews the proceeds derived from the sult sales in Bengal under the new system of selling at any time, nud not periodicelly by uuction.

Aecount of the Quantity of Salt sold, the Grnss Proceeds, Net Profit, and Average of the Net Profit, from 1803-4, in the Territaries under the Bengal Government subject to the Salt Monopoly.

Opium.-The revenue derived from opiun, which is only second in importance to salt, is ubtained in Bengal by Govermment receiving the propared fuice diretet from the cultivators, and oflering it for sale at public auction to the exporter (no opium is allowed to be grown in Bengal but by the cultivators, who are under engagements and advances with Government); and in Bombay a transit duty is charged on the shipment of the drug to China, the opium being grown and prepared in allied stntes, Malwa, for instance. Under the head of commerec, furiher particulars will be found ; it is here sullicient to say that the incidenee of this tax is diflieult of aseertaimaent: at first view it appears to fall on the consumers in China, or other foreigners in the E. Arehipetago ; but on a second view of the question it is evident that if the British Government did not levy the tax, the bengal producer of the opium would le at liberty to realize if possible the present price, and jochet him. self the diflerence which now goes into the ludian treasury. The charge in Bengal on the opium reve nue for $1827-28$, the latest year laid before Parlia. ment, was 658, 25.5l., or S. R. 66,7.4,605; of which the manufucturers receive in advance, S. R. $3 \times, 79,974$; and the salaries, ngency establishments and contin. gencies were $7,26,024$; and there was also a compensation to purchasers of interior Bahar opium in $18.5-25$ of S . R. 10,68,608. It may here be observed that a chest or bale of the E. I. Compray's opium is instantly; urchased by a Chinese customer without any other examination than that of the Company's mirk. The total mumber of chests of India opius. imported into (hina (vide Commerce section) was in $1833,23,492$ chests, the value of which was Sp, dol. $15,352,429$. An ollichal thecument laid beture the

Revenue Sub-committee of Parliament in June, 1822, |the return, it will be perceived, differs in the latter gives the following detail to 1827; the subsequent years, when the Malwa cultivation or purchase was fears I have filled up at the India House, the form of : abandoned for a transit duty.

Quantity of Behar and Benares Opium sold in India from 1797 to 1827, prime cost, \&c.

* These average prices, of which the maximum was rupees $2 s .2 d$., were reported to the Bengal Government, in the year 1822, as having been given to the cultivators of opium at the respective periods. In 1823 the Government fixed the maximum of recompense to the cultivator at 3 rupees per seer.
$\dagger$ Gross receipts. $\ddagger$ Net receipts. $\S$ This is the averaging price per chest.
[ror further details relative to the Opium Trade see section on Commerce.]
Customs, whether derived hy transit or other duties | their estublishment in Bengal in 1797, and in Calcutta of land, or from goods exported or imported by sea, city in 1828. The iustruments liable to the duty in form the next $\mathrm{item}_{\text {s }}$ and are yearly incrensing. The Bengnl are, contracts, deeds, conveyances, leases, collection of inland or turnpike like duties is in course powers of attorney, policics of insurance, promissory of final abolition (in Bombay totally abrogated) ; and notes, receipts, bail bonds, and legal proceeding genethe duties levied on sen goods are light in amount, wally 'ibills of exchange under 25 rupees, and receipts and unuccompanied by vexatious restrictione . Under 50 ribucerestre alone exempt). In Madras Stamps are an thereasing source oi screluc since stamptâ pana Goy introduced in 1808, chiefly
on legal proceedings；and in 1816 the dutics were extended to bonds，deeds，leases，mortgages，bills of exchange，and receipts．In Bombay the tax was first introduced in 1815．Delhi and some other territories are not yet subjected to this duty，from the operation of which the small dealer and poor farmer is exempt， while the large capitalist or inveterate litigist is made to pay a portion of the Goverument expenses，the most productive stamps in India being those on money－ dealing and miscellancous law－papers．The charge on stamps for 1827－8，was in Bengal，71，431l．，or S．R． $6,15,782$ ，viz．fees to native commissioners in Mofussil courts，S．R．2，27，370；purchase of paper，48，704； commission，salary，establishment，and contingency， $3,39,708$ ．For Madras the total charge was $9,437 l$ ．

The sayer and alkurve taxes include a variety of itens，in some places being irregular collections by provincial officers；in others licenses on professions or on manufactures，such as the distillation of spirits， which latter is colleeted by a still－heal duty，manu－ faetured after the English fashion，at the rate of six anas，or six sixteenths of a rupee per gallon，London proof．There is a tobacco monopoly in some places， and extra cesses in others；but these and other un－ statesman－like sources of revenue are all in course of abolition．

The Mint revemue is collected by a seignorage for coining of two per cent．on the produce，after allow－ ing for the difference of standard and dedueting the charges of refining when such are chargeable；that is， when the silver is below the dollar standard，which is five or six times worse than the present rupec．Copper coinage also yields to the Goverıment a large profit， the eopper money heing issued at the rate of 64 （weighing 6,400 grains）for the rupee，which is about 100 per cent．ahove the value of the copper．The charges on the Mint revenue of Bengal was，in 1827， 43,838 ．，or S．R． $3,77,867$ ，viz．salaries，establish－ ments and contingencies， $2,01,080$ ；loss of weight in melting the precious metals， $1,76,787$ ；for Madras， 20，406l．，and Bombay，3，637l．
The Post－office tax is light in amount，and increasing as fast as can be expected from a post conveyed by runners on foot．The charges under this head of revenue were for Bengal，salaries and establishments， S．R．1，25，594；Dawk establishment，6，42，293；total， S．R．7，67，887，or 89,0751 ．Madras，salarics and es－ tablishments，\＆．c．S．R．64，973；Tappal establishment 1，91，744．；total，S．R．2，56，717，or 29，339l．Bomiliay， 18，148l．

The charges for transmission of letters through the Government post－offices of British India are－

In Bengal，a letter is forwarded 1,000 miles for 12 anas，or is． $6 l_{l}$ ；in Bombny，ditto 1,000 ditto for 15 ditto，or 1 s ． $10 \frac{1}{2} \mathrm{l}$ ．；in Madras，ditto 1,000 ditto for 17 ditto，or $2 s$ ． $1 \frac{1}{2} l$ ．

The Marine revenue arises from port and anchorage dues，\＆c．，in order to keep up the useful establish－ ments at Calcutta，Madras and Bombay，in particular at the former port．
The forcgoing items are the principal，if not the sole，sources of the Government revenue of 18 to $20,000,000 l$ ，a－year．
The expenditure may，in the nggregate，the thus stated，under distinct heads．

XII. The Bank of Bengal (the only chartered bank in our Eastern possessions), established in 1809, by a charter from the Governor-General in Council, under Act of Parliament, is partly a private, partly a Government bank, recrulated as a hank of discount and deposit, on the principles of the Bank of England, and confined in its accounts and transactions to Calcutta. The shares were in value $1,000 l$. each, and in No. 500 ; the Government holding 100, with power to nominate three Directors, while the proprietors elected six; the President elected by the Directors, and the proprietors voting ly proxy. Natives may become Directors if chosen by the proprietors. Lately the No. of shares and their value has been increased. The premium on bank stock is about 50 per cent., and the average amount of dividend of late years nine to ten per cent. The accounts are public, and regularly laid before government twice a year, and of a puid. up capital of $5,000,000$ rupees, part is vested in government securities, and the remainder employed in the trade of banking. It issues notes which vary in amount froin 10 rupees to 20,000 rupees, there being no maximum or minimum limitation. The largest proportion is in notes of 100 rupees upwards; the average amount of its paper in circulation is $800,000 l$. which is all payable on demand at sight. The notes circulate among the natives as far as Behar, or wherever they are received in the Government Treasuries in receipt for revenue, \&c. There are two restrictions upon the issue of paper money, the first practical, namely a reservation of cash equivalent to a fourth of its engagements payable on demand, and the sccond, that the circulation of notes shall not exceed $2,000,000 \ell$, but there has scarcely ever been a demand for notes to half that extent. The Bank of Bengal has 110 monopoly, it is however the only chartered bank, i.e. it is a corporation, can sue and be sued under its common seal, and individual proprictors are not liable beyond the amount of their subscription; its other exclusive advantages consist in Govermment receiving its notes solely. The tollowing return shews the balance of the Bank of Bengal, 29th June, 1833 :-

Rates of business, on this date 6 per cent. for pri- $\mid$ its issues are $12,000,000$ rupees, a sum more than 50 vate bill discounts, and 4 pcr cent. for deposit loans;
per cent. in cxcess of the minimum of 1827, in which
year the whole amount of bank notes, including those of the three private banks then in existence, was not greater than the present joint circulation of the l3ank of Bengal and the Union Bank. The bank has lost considerably by bad tehts and by forgeries, at which latter the natives are extremely expert. There is an establishment termed the Union Bank at Calcutta, suggested and aided in its formation by the author of this work: it is supported by the prineipal merchants, and quite unconnected with government. Another establishment called the Bank ot India is now being tormed at Calcutta. Madras has no bank precisely similar to that of Bengal: a bank is now being formed at Bombay. There can now scarcely be said to he any gold coin in circulation in Bengal, and the highest silver denomination is rupees, viz. those of Calcutta and Furruckabad. The Furruckabad R. weighs 180.234 grs. troy; Calcutta rupee 191.916 grs, troy. For practical purposes the Calcutta rupee may be valued as weighing 192 grs. troy, with 176 of silver, and the Furruckabad 180 grs . with 165 of pure metal. The Madras rupee, as established in 1818 , consists of 180 grs . and contains 165 grs . of pure silver, and 15 grs . of alloy. The gold comage is of the same weight and fineness as the silver, but the ratio between gold and silver is liable to be varied from time to time hy Government pruclamation. Bengal, Madras, and Bomhay have each a mint, at which are coined rupees agreeing in standard and weight with the Furruckabad rupees, and the rupees of the three Presidencies are issued to the army at a nominal value, termed a Sonaut rupec. The gold coins that issue from the mint can scarcely be reckoned among the currencies, because the market value of gold having risen considerably above the mint value it has ceased to circulate at the preseribed or at any fixed rate. The gold mohur of lhengal weighs 204.710 grs , of which the fine gold is 187.651 grs.; the Madras gold rupee is of the same weight and standard with the silver, viz. 180 grs ; and at both Presidencies the relative value of gold to silver is fifteen to one, the Bengal mohur being reckoned equal to 16 rupees. A copper coin, wrighing 100 grs . is current through the lengal territories at the rate of 64 to 7 rupees, but it is a legnt tender only for the Iractional parts of the rupee; cowries or sea shells still circulate, and to a considerable extent in some provinces, but they are disappenring with the prosperity of the country,
A large mint has been established at 130 mbay for an uniform coinage, as there are a great number of different rupees current in the Deckhan, coined in different years, and having a marketable value, according to their value. The rates of exchatige vary nut only between Bombay and Poonah, but between district and district. Gold is not current in the Deckhan; there is no paper circulation; but native 'Hoondees,' or small bills of exchange, are numerous. The circulating medium is silver and copper, the relative value altering in favour of the latter; nll their gold has been exported to England years ago. It would be well 1 think to issue Government notes (payable on demand in specie, and receivable at the Revenue Collector's office for taxes \&c.) from each of the public treasuries, varying in amount from 60 to 500 rupees. This would be $n$ safe and uscful circulating medium. Ordinary interest ol money with the natives nine, and witl the liuropem mer cantile houses, five per cent. The bullion importa. tion viá Calcutta, from $1 \times 13-14$ to $1831.3 \%$, is vhlued at S.R.35,58.37,611; fiom which, deducting the exports of bullion tor the sume periul, S.R.6,53,96,544, leave bullion disposed of in the country, S.R,
$29,54,46,100$. The coinage of the several mints for the above term of 18 years was, Calcutta, S.R. 20,36,15,962 ; Benares, S.R. 8,82,36,359; Ferrucka. bad, S.R. 4,72,52,843; Sagur, S.R. $43,24,779$. Making a total of S.R. $34,35,24,940$, being an excess of one-fifth above the imports, or S. R. $5,30,76, \times 40$ The coinage of the native mints is estimated at one half of our own, which will give a total of S.R. $3,02,93,578$, or three crores per annum for the Bengal Presidency, being 150,000 per diem for 200 working days.

The total coinage of copper pice since 1801 , bears a value in silver of $50 \frac{1}{2}$ lakhs of S. R., which in tale is $32 \frac{1}{3}$ crores for 31 years, or one crore per ammum; thus udding 50,000 pieces to the daily work as above mentioned.
