

THE
PRINCE EDWARD ISLAND
CALENDAR,

For the Year of our Lord

1844.

Being Bissextile or Leap Year, and the latter part of
the SEVENTH, and the beginning of the EIGHTH,
year of the Reign of Her Majesty
QUEEN VICTORIA.

— ♦ —
CONTAINING,
EVERY THING NECESSARY FOR AN ALMANACK,
AND A GREAT VARIETY OF OTHER MATTERS.

CHARLOTTE-TOWN, P. E. I.

SOLD BY JAMES D. HASZARD,

PRINTER TO THE QUEEN'S MOST EXCELLENT MAJESTY.

EXPLANATION OF CHARACTERS AND ABBREVIATIONS USED IN THIS ALMANACK.

☉ Sun	♋ Conjunction	SIGNS OF THE ZODIAC. ♈ Aries governs the face & ♉ Taurus - neck. [head ♊ Gemini - - - arms ♋ Cancer - - - breast ♌ Leo - - - heart ♍ Virgo - - - bowels ♎ Libra - - - reins ♏ Scorpio - - - secrets ♐ Sagittarius - - thighs ♑ Capricornus - - knees ♒ Aquarius - - legs ♓ Pisces - - - feet
☾ Moon	♋ Opposition

MORNING AND EVENING PLANETS.

MERCURY, the least of the six old planets, is but seldom seen by the naked eye, and is not even under favourable circumstances visible more than two hours before the rising or after the setting of the sun, but when seen it appears at a little elevation like Antares, or Arcturus, red stars of the first magnitude. The following will be the most favourable opportunities for observing this planet during the year 1844.

April 24 to May 15 in the evening after sunset bearing W. N. W. Oct. 6. to Oct. 24 in the morning before sunrise bearing East.

For the conjunction of this and the other planets, see Calendar pages.

VENUS, will be visible in the evening, in the West, after sunset until July 23 the day of her inferior conjunction, and then in the morning in the East, before sunrise. In the months of June and the latter part of Augt. and first of Sept. her brilliancy will be so great that she may be seen at noon by the naked eye, without much difficulty, even amidst the strongest sunshine.

MARS, will be visible in the evening in the West after sunset until Augt. 4, the day of his conjunction, and then in the morning before sunrise.

The four small planets VESTA, JUNO, CERES, and PALLAS are seldom if ever seen by the naked eye even when nearest the earth. JUPITER will be in conjunction March 1, and in opposition Sept. 21. This planet is always easily distinguished by his beautiful white light, which though inferior to that of VENUS is by far more brilliant than that of any other planet or star.

SATURN, which shines with a pale red light will be about fifty degrees to the West of JUPITER the whole year, and therefore easily distinguished.

URANUS, will be in conjunction March 22 and in opposition Sept. 27, but cannot be seen without a telescope.

Beginning and length of Seasons.

ECLIPSES IN 1844.

Five Eclipses will happen this year of which three will be visible here.

I. May 31, a total Eclipse of the moon partially visible.

	H.	M.
Moon rises eclipsed -	7	40 afternoon
End of the Eclipse -	8	17

Magnitude of the eclipse when first seen will be about 8 digits.

II. June 15, a partial eclipse of the Sun, visible in the South Pacific and Great Southern Oceans.

III. Novr. 10, a very small partial eclipse of the Sun visible in a small portion of the Southern Ocean.

IV. Novr. 24, a total eclipse of the Moon visible.

	H.	M.
Beginning - - - -	5	35 afternoon.
Beginning of total Eclipse	6	44
Greatest obscuration -	7	30
End of total Eclipse -	8	17
End of the Eclipse -	9	25

V. Decr. 9, a partial eclipse of the sun visible in the North Pacific Ocean and the greater part of North America, slightly visible in Prince Edward Island,

	H.	M.	S.
Beginning - - - -	4	19	31
☉ upper limb sets (corr. for refr.)	4	20	28
Duration - - - -	0	0	57
Angle of first point of ☉ N. point of ☉ to W. 39° 14'			
contact from } Vertex to W. 80 16.			
Digits eclipsed 0° 5' on the northern limb.			

OCCULTATIONS.

The most important occultations probably visible in Prince Edward Island in 1844, are those of April 5, May 30, July 24, Octr. 29 and Decr. 23, but there will not be this year any visible occultation of a planet, or of a star of the first, or second magnitude.

EXPLANATION OF THE CALENDAR PAGES.

LEFT HAND PAGE.

- COLUMN, 1st and 2d, contain the days of the month and of the week.
- 3d and 4th. The rising and setting in mean time, of the highest point, or of the *upper limb* of the sun, corrected for refraction.
- 5th. Days length in hours and minutes.
- 6th. The Equation of Time (or quantity by which the Sun is *slow* or *fast* of the clock), at noon, *apparent* time (not mean) at Greenwich.
- 7th. The Sun's declination, for the same as the Equation, 6th column.
- 8th. The rising or setting of the Moon. The setting being given from the New Moon to Full, and her rising from Full to New Moon.
- 9th. The Place of the Moon in the Ecliptic.
- 10th. The time of the Moon's southing, or passing the meridian.
- 11th. Days increase or decrease in hours and minutes.

The top of the columns of each month shows the moon's phases, or the times of new and full moon, and of the first and last quarters, or two quadratures with the sun.

The FARMER'S CALENDAR is placed at the foot of the columns of each month.

RIGHT HAND PAGE.

1. Contains the days of the month.
2. Sundays, Phenomena, Anniversaries, &c.
3. Time of High Water at Halifax, Nova-Scotia.
4.Annapolis, N. S.
5.Charlotte Town, P. E. Island.
1.Windsor, N. S. and at St. John, N.B.

of that tide which immediately precedes the southing of the moon. These four columns being computed on the supposition, that the time of High Water on the days of New and Full moon, (*L'etablissement du port*) is at Halifax, 7h. 15m.—at Annapolis, 10h. 45m.—at Charlotte Town, 10h. 15m.—and at Windsor, and St. John, N. B. 11h. 45m. The tides of Jan'y. 5, April 17, May 17, June 15, July 15, October 26, November 24, and December 24, will be the highest of all this year, *uninfluenced by wind*, and in like manner the tides of January 5, April 17, May 17, June 15, July 15, October 26, November 24, and December 24, will be very low for spring tides.

*** It will be particularly noticed that all the calculations in this Almanack have been adapted to *mean* solar time; a mode of computation which has recently come into very general use, and which will probably soon entirely supersede the old mode of reckoning, as a clock regulated to *apparent* solar time, must, in consequence of the inequality of the solar days, be frequently adjusted. To those persons, however, who may prefer to use *apparent* time the calculations will be equally useful, as *mean* is easily converted into *apparent* time by subtracting the quantity in the *sixth* column of the left hand calendar pages, when the Sun is slow of clock, and adding it when fast of clock.—Thus, on 1st February the Sun rises in mean time at 7h. 20m. and sets at 5h. 8m. from which (if we subtract 14m. the quantity by which the Sun is that day too slow,) we obtain 7h. 6m. and 4h. 54m. the *apparent* time.

The grand measurer of our days presses on; still presses on in his unwearied career, and whirls our weeks, and months, and years away. Another annual period of our frail short lives is completed; another of our fleeting years is joined with those that have long since gone down to oblivion: the silent lapse of time is ever carrying somewhat from us, till at length the period comes, when *all* must be swept away. The prospect of this termination of our labours and pursuits, is sufficient to mark our state with vanity. Within a very little space all our enterprise are bounded. We crowd it with toils and cares; with contention and strife. We project great designs, entertain high hopes; then leave our plans unfinished and sink into oblivion.

1844.

JANUARY begins on MONDAY.

That Farmers at the present time have within their power the means for a more rapid advance in their profession than was enjoyed by those of fifty years since, is perfectly plain to all. The age in which we live is one of movement; and though farmers, as a class, are the last to be infected with the spirit of change and innovation, it would have been surprising indeed had this honourable employment of so large a portion of mankind been suffered to rest without availing itself of the benefits which science and experience have furnished.—The application of science to agriculture was one of the first benefits which the

business of the farmer received from a proper estimate of his employment—formerly the farmer was obliged to plod on in an unwearied routine, he being presumed to understand by nature or instinct all that was necessary for the cultivator of the soil to know. Agricultural societies have been found among the most efficient agents in promoting agriculture, and at the present day they are constantly increasing in number, activity and consequent usefulness. Agricultural Societies bring farmers into a beneficial acquaintance with each other—they stimulate inquiry, they invite discussion, they reward care and research, and at the meeting of these Societies, the bands of brotherhood, are materially strengthened. If the sledding is good, or the ground well frozen, all the transportation for the year that can be possibly be done, should be attended to.

Are your Apples good? If not, this month is the time to make preparations for improving them. There is a most surprising negligence among farmers on the subject of fruit, which is the more inexcusable, now when the value of fruit, apples particularly, is so much better understood than it formerly was. It should never be forgotten that a tree that will yield fifty bushels and upwards of large, fair, and beautiful apples, occupies no more space than a tree producing half the quantity of sour, bitter, inferior apples, that even hogs, unless threatened with the horrors of starvation, will not touch. Grafting is the remedy for such fruit, and there is no one who may not now sufficiently understand the process, to perform all that may be necessary to furnish

an assortment of the best apples the year round. Let the farmer then look about him during this month, and procure such apple grafts, as will give an ample supply of all the most desirable kinds. The Farmer himself should procure his own grafts, label them properly, and then, when put in, he will be certain of the fruit he wishes. We then again ask the reader, are your apples good? and if not, urge upon him the importance of attending to the matter without delay, as every year's delay in grafting, renders another year's use of worthless fruit necessary. Finish threshing your grain, and have it stored beyond the reach of rat, mouse, or weevil. If the roots have not been assorted when housed for the winter, the best should now be selected for seed and use, and the remainder fed out to the stock previous to the growth of green food in the spring. If you expect hens to lay during the winter, they must have a warm room, and plenty of suitable food, and in addition a supply of gravel and old mortar, or lime, and water.

1844.

But little can be done in the fields at this season of the year, but the good farmer will find March anything but an idle month, he will find it perhaps the most critical month in the year for his cattle and sheep, and that additional care will be required as the season advances, termed by farmers, between hay and grass—instead of lessening the quantity of feed his animals receive, he will increase it, and bring to his aid the roots he may have on hand. Where the straw and hay fed out are very dry, sprinkling brine over them will cause the animals to eat such food more freely—the weak animals should receive particular care, as should also cows and ewes. Cattle must be closely looked after,

and not allowed to wander in the roads or fields, dragging themselves through the mud, and poaching on meadows, without any benefit to themselves. Keep them sheltered and dry, and if they get well through this month, they will be safe enough on pasture thereafter. Do not believe those who tell you that green wood makes the hottest fire, and is cheaper to burn than dry—a man that preaches such doctrine usually has a smoking fire, and a scolding wife; two evils of no little magnitude to a man who loves to stay within doors on rainy days. March is a good month for putting agricultural implements in order, and this is a point of the utmost importance—it is idle to expect good farming without tools capable of giving such a result; and when obtained they must be of the best kinds and kept in order and preserved, or certain loss will ensue.

1844.

In the spring of the year much benefit may be derived from what is termed waste water, that is, the water that flows over the surface without being absorbed—all such waters contain more or less vegetable and animal matter, which if allowed to subside, forms one of the most fertilizing materials. The wash of roads in the spring is peculiarly rich, and every precaution should be taken to secure the advantage they afford. It is almost a criminal negligence in the farmer to allow the waste of the roads, yards, &c., to be lost to the farm. One of the most essential operations of the farm is ploughing, and on most farms the greater part of this is performed for spring crops, as they are called. If this business is not done well, or if the soil is not in a proper condition

for ploughing, poor crops may be expected. If the meadow grounds are not naturally free from stones, one of the first things that require attention, after the frost has left the ground, and it has become settled, is carefully to pick up all stones that appear, and which if left will be in the way of the scythe or rake. Dairy cows demand particular attention this month, to keep them from falling away. Sowing grass seeds on winter grain is generally performed this month, and is perhaps as well as if done earlier. Trees may be transplanted in this month, with every prospect of success, where reasonable attention is paid to them. The Garden should be particularly attended to—as much frequently may be raised on an acre of ground, for the support of the family in a garden, as from the best five acres of the farm. The fences should be staked up thoroughly on every part of the farm, so as to prevent waste of time, and crops from the inroads of unruly cattle.

1844.

Root Culture presents many advantages to the stock farmer. Roots are less exhausting to the soil than grain; they are admirably fitted to form a part of a course of crops; are very beneficial for pulverizing the soil; afford abundance of food for farm stock; may be substituted for grain; and serve to augment and improve the valuable product of the cattle yard. An acre of ground under good culture, will produce, on a fair average, 20 tons of Swedish turnips, mangel wurtzel, carrots, parsnips, or potatoes. Supposing a lean animal to consume one bushel a day,

and a fattening animal two bushels, the produce of an acre will then subsist three lean bullocks 110 days, nearly the period of our winter, and three fatting ones 55 days. The great obstacles to the more rapid extension of the culture here, is, the want of experience, proper implements, as drill barrows, cultivators, &c. and the labour of securing the crop in winter. The apparent magnitude of these obstacles is daily diminishing, and we shall ere long discover, that root crops may be cultivated, and secured for winter use, as easily as other farm crops. The whole force of the farmer will be required this month; his manure, if any remain, must be all carted out. The best manure for the meadow is a well mixed compost. All the new barn yard manure should be scattered over the ground before ploughing, and ploughed in.

Farms that will not produce good wheat, may be made to produce good Rye, yet to render it profitable, it should not be made to follow in consecutive years, as it often is, in the same field, sown with wheat, in the proportion of one to thirty of seed, rye is affirmed to be beneficial to the product of the wheat, affording shade and shelter, and protecting the latter from mildew, much improving the sample of the grain, and upon light soils, often giving an increase of two bushels per acre in the product. Rye will not thrive upon a wet soil—its general treatment nearly resembles that of wheat. The seed is generally sown early in September, sometimes in August, and sometimes as late as

November, and requires more covering than wheat. When sown early, it is often depastured in Autumn, by calves, sheep, and even cows, without prejudicing the crop, and even to its advantage. It is often sown as a soiling crop, to be cut in spring and fed to stock. It cannot be denied by any one, that those pests of good farming, noxious weeds, have increased, and are increasing, at a most frightful rate in nearly every part of the country—insignificant in their appearance or results at first, the farmer treats them with contempt, but before he is aware, they have obtained a hold on the soil, and sets him at defiance. The only safe course with weeds is to meet them early in the field, and allow them no rest until the extirpation is complete. This is the most active month of the whole year for vegetation—it becomes the farmer therefore, to be stirring early, and watch attentively the whole circle of his fields—nothing should be neglected.

1844.

JULY begins on MONDAY.

Diseases in the cattle, like those in man, are more easily prevented than cured. The best preventives are, a plenty of wholesome food, dry pastures in summer, dry and clean sheds, or stables, or well littered yards in winter, and an ounce of salt per diem to cattle and horses, and a quarter of an ounce to sheep. Salt augments the nourishment of the food eaten, improves the wool, and prevents disease. A great object is gained by bringing turnips forward as rapidly as possible after they have come up, as the principal danger of destruction or failure is before the rough leaf is put forth. In England bone dust is usually drilled

in with the seed, to hasten the early growth; here bone dust is rare, but a mixture of soot and ashes, or ashes alone, is found to be a very good application, particularly for the common turnip, and may be sown upon them broad cast, or scattered over the rows by hand—it will hasten their growth, prove a partial protection against insects. and improve the size and goodness of the roots. The soil for turnips should be such as will grow Indian Corn, it should be rich and dry, and with these qualifications, the more that sand preponderates the better, clay is the worst, and wet soils do not answer much better. Finish hoeing out corn, potatoes, and all other crops, and make early preparation for harvesting. See that your tools are all in order, and a full supply of each—get the best you can procure—in particular, rakes and pitchforks, which you know wont break by fair usage.

If a man would understand the value of agriculture; if he would learn to prize the art of all arts, the one that confers wealth and bread on the world; if he would see the true nobility of the country; if he would learn to look upon labor in its true light, honorable and useful to all; if he would have his heart gladdened at the successful results and rewards of honest industry, let him go among active, intelligent, practical farmers, men who in their practice enforce the same lessons they embrace in their theory. We know not of any other sight so well calculated to show at a single glance the great source of national prosperity, the manner

in which wealth is created, as a ramble in the fields, among the ripening or growing crops, or a few hours ride through a well cultivated district, when the farmer is filling his barns with the fragrant hay, and the reaper his arms with the golden sheaves; when the light wind comes scented with the odour of millions of flowers from the meadows and pastures, and gently bows the heavy heads of the maturing grain, when the rich silken tassels begin to wave amid the deep green of the luxuriant corn, and when, in short, on every hand, are to be seen unfailing indications of plenty, and for the toil and labours of the husbandman an abundant reward. Grass ought never to be exposed to the dew while spread. A few days of sun and dew while thus exposed, renders it almost worthless. Hay may also be carried into the mow sooner, by using salt freely at the rate of 4 quarts to a ton.

1844.

SEPTEMBER begins on SUNDAY.

If your hoed crops have been properly cultivated, they are now free from weeds; still, as it is a practice where thistles prevail, and one founded on correct principles, to plant and hoe such land, it may be well to look over the corn, potatoe, and other crops, and see that none of these weeds escape—a few hours work properly applied now, may save the labour of weeks hereafter. Where it is intended to sow wheat after corn, this crop should be cut up and removed from the ground as early as its maturity will admit—if the ground is well manured for the corn, as it always should be, and well cultivated, a crop of wheat may properly follow corn, and but little labour in ploughing is required

Sunday the 1st.

A most destruction fire this morning
at 3 o'clock - Stimpson's Store
consumed ^{Geo. Cooper's Shop} together with a Shop occupied
by Miss W. Lundy, and owned by D.
Merriman

to get in the seed. Cattle and swine intended for fattening, should now have increased attention paid to them, although the fact is generally known, that animals will take on fat much faster in moderate, or warm weather, than they will in cold, uncomfortable weather, it does not seem to have influenced the course of farmers as much as it should—the same quantity of food will give a far greater amount of pork in September and October, than in November and December,—begin to feed them as early as your means will admit, and you will probably find your account in this method. Dealers in pork may not like to have their operations commence too early; but when meat is making for home consumption, this objection does not apply—indeed so important is the difference, that it would be judicious for every man to reserve grain enough from his last year's stock, to feed his swine, cattle, &c. till his new crops are in readiness.

Some of the most important labours of the year are to be performed this month, and though they relate more to the preservation than to the production of crops, inattention to any of the essential things, will detract much from the comfort, as well as the profit of the farmer. Good potatoes may be spoiled by carelessness in digging and preserving—a few hours exposure to the sun, turns the surface more or less green, and gives the root a bitter, unpleasant flavour. Be not over anxious about a little dirt on your potatoes when housed, if they are dry, and no root should ever be put in the cellar, or in a pit when wet, for a

covering of earth is one of the best methods of keeping potatoes fresh, and in good order, when in the cellar. Winter apples are to be gathered this month, and on the manner of performing it, much of their durability is depending—to keep well, apples should be ripe, not bitten by frost, and perfectly dry and clean when gathered—the temperature of the air where they are kept, should be low and the air dry. Prepare all your supernumerary stock for market; cull out your choicest animals for breed and use, and sell and fat the remainder—be careful to avoid an overstock for winter—one half the animals well kept, will yield more profit than the whole half kept. Secure your winter squashes and pumpkins by placing them in a dry cool place, and you may have the luxury of good vegetable and pumpkin pies during the winter.

No great amount of out door work belongs to this month; what has not already been done, with few exceptions, must be left to another year; still there will be found many things to which the attention may be well directed, and deserving the notice of the husbandman. The cellar in particular, should be well looked to, and the most remote danger of freezing prevented, by suitable precaution. There are some men who never have any wood at their houses, except such as is drawn at a "drag" at a time from the wood lot, through the mud and dirt. Such men generally grind their axes on their neighbour's grindstone, and think him unreasonable if he does not furnish a mug of cider

and a boy to turn--this mode of getting fire wood, they deem saving; but reader, be ye not one of this class of saving men. Shelter for animals is a point too often neglected by farmers, their sheep and cattle are left to find the warm side of a stack or a fence, during our winter storms of snow or rain as they best can; and when the former die off by the dozen in March, or his cows are "on the lift" for a month or two in the Spring, the owner affects to wonder at the cause, or why his neighbour who has good sheds is not as unlucky as himself. Domestic animals must have a shelter; it is as necessary for them as it is for man, and one may as well talk of comfort without it as the other. Animals should be salted in the winter with the greatest attention and regularity--farmers are generally too careless about this in summer and generally neglect it altogether in winter. Before the ground is frozen look well to your fences.

There is still an important duty remaining, after all the implements, fields, buildings, and flocks and herds of the farmer have been cared for, and that belongs to making provision for the mind. There must be knowledge, there must be intelligence; or the farmer is but illy qualified for the responsible station he holds in society. He must see that books, papers, and such works as are calculated to interest, instruct, and give an elevated, healthy, moral tone to his own mind, or those of his children, are provided. There are long winter evenings coming, and if they are not well employed, the seeds of mischief will most assuredly

be sown. Knowledge is power; it is wealth; it is respectability; it is happiness; it endures with life. The mind may be likened to the soil, both are given to be improved; and the measure of our enjoyments, and the welfare of society, depend upon the good or bad culture we bestow upon them. Indolence may be compared to the coarse marsh plants, which feed upon the soil, and taint the air, without yielding anything comely or useful in return, for man or beast; intemperance, to broken down fences, which permit beasts to enter and consume the earnings of industry, and beggar the offspring of the owner; litigation, to the thorns and thistles, which rob the soil of its fertility, and mar the beauty of the landscape, while on the other hand, the fruitful application of knowledge to the useful purposes of life, may be likened to the draining and manuring, which give fertility to the soil.

The Royal Family of Great Britain.

THE QUEEN.

ALEXANDRINA VICTORIA, born May 24, 1819; married to Prince Albert Francis Augustus Charles Emanuel of Saxe Cobourg and Gotha, Feb. 10, 1840.

Victoria Adelaide Mary Louisa, born Nov. 21, 1840, *Princess Royal*.

Albert Edward, Prince of Wales, and Earl of Chester, Prince of the United Kingdom of Great Britain and Ireland, Duke of Saxony, Duke of Cornwall and Rothesay, Earl of Carrick, Baron of Renfrew, Lord of the Isles, and Great Steward of Scotland, born Nov. 9, 1841.

Princess Mary Maude Alice, born April 25, 1843.

The Queen Dowager.

Adelaide Amelia Louisa Teresa Caroline, widow of King William IV., sister of the reigning Duke of Saxe-Meiningen, born August 13, 1792.

Royal Princes and Princesses.

Ernest Augustus (King of Hanover), Duke of Cumberland, born June 5, 1771; married May 29, 1815, to Frederica Carolina Sophia, daughter of the Duke of Mecklenburg Strelitz, and widow of Fred. William, Prince of Solms Braunfels, born March 22, 1778. *Issue*, George Frederic Alexander Charles Ernest Augustus, born May 27, 1819.

Adolphus Frederick, Duke of Cambridge, born February 24, 1774; married June 1, 1818, to Augusta Wilhelmina Louisa, daughter of the Landgrave of Hesse Cassel; born July 25, 1797. *Issue*, George William Frederick Charles, born March 26, 1819; Augusta Caroline Elizabeth Sophia Louisa, July 29, 1822; Mary Adelaide, Nov. 27, 1833.

Mary, Duchess of Gloucester, born April 25, 1776.

Sophia, born November 3, 1777.

Cousin to the Royal Princes and Princesses.

Princess Sophia Matilda of Gloucester, born May 23, 1773.

Her Majesty's Mother.

Victoria Maria Louisa (Princess Dowager of Leiningen), Duchess of Kent, widow of Edward Duke of Kent, sister of the King of the Belgians, born August 17, 1786.

Henry VIII.	1509 April 22	Victoria	1837 June 20
Edward VI. ...	1547 Jan. 27		

* It has been generally assumed that the theory of "the king never dies" has been in practice since the Norman conquest; consequently William I.'s reign has been usually dated from the day of the battle of Hastings, October 14, 1066, and all subsequent reigns from the death or deposition of the previous king. But the reigns of the first eight kings after the Conquest did not commence till their coronation. The principle of hereditary right was first distinctly recognised on the accession of Edward I., whose reign, however, did not commence till the day on which he was proclaimed king, four days after his father's death. The reign of Edward IV. is dated from the day on which he deposed Henry VI.; but it did not become law and practice to date a reign from the death of the previous king until the accession of Edward VI., on the death of his father Henry VIII.,—a practice only since interrupted by the events following the death of Charles I. and the expulsion of James II.

† In some historical, and in all legal documents, the reign of Charles II. is reckoned from his father's death.

PRINCE EDWARD ISLAND.

HIS EXCELLENCY

SIR HENRY VERE HUNTLEY, KNIGHT, Lieutenant Governor and Commander in Chief in and over Her Majesty's Island of Prince Edward, and its Dependencies, Chancellor, Vice Admiral and Ordinary of the same, &c. &c. &c.

Explanation of Signals made at George's Battery, when Vessels are coming in Charlottetown Harbour.

One Ball, close, one vessel; One Ball half hoisted, 2 do.; Two Balls close, 3 do.; Two Balls, separated, 4 do.; a Pendant of any colour, 5 do.; a Pendant under a Ball, 6 do.; a Pendant over a Ball half hoisted, 7 do.; a Pendant under two Balls, close, 8 do.; a Pendant between two Balls separated, 9 do.; a Flag of any colour for 10 or more.

The above numerical Signals are hoisted at the East or West yard arm, according to the quarter the vessels first appear in, with the addition of a Ball at the centre of the yard, until the vessel can be seen.

The following Flags, hoisted with the Balls denote the quality or description of the Vessel, viz:

A Red Flag—a Flag Ship with a Squadron.

Do. with a red Pendant over it—do. without a Squadron.

Do. with a red Pendant under it—A line-of-battle Ship.

Do. with a white Pendant over it—a Frigate.

Do. with a white Pendant under it—a Sloop of war or small armed Vessel.

Do. with a blue Pendant over it—a Transport.

A blue Pendant for a Merchant Ship or Barque.

A Red Pendant for a Brig.

A White Pendant for a Schooner or Sloop.

A Red and White Flag (diagonal), for a Steamer.

Signals made on the Ensign Staff.

A Red Flag, with a white centre, for an English Mail.

A Blue Pendant, with a white cross in the centre, is a Vessel with Emigrants.

Justices appointed for directing Appropriation Monies for Roads and Bridges in Charlottetown and Royalty.

CHAMBERS'S PEOPLE'S EDITIONS.

Anxious to promote a taste for an improving kind of reading among the less opulent classes of the community, Messrs. Chambers have for several years been engaged in publishing, from time to time, a series of reprints of approved works in all departments of literature; and in such a form (royal octavo) as to combine extreme cheapness with good appearance, readableness, and durability. The books have been, and continue to be, selected with a regard to the amusement, instruction, and moral improvement of the people. The series also includes *Original Works* of an entertaining and instructive character, and *Translations* of the most approved productions of foreign writers.
