Select Boarding & Day School
FOR YOUNG LADIES,
CONDUCTED BY MISS THOMSON,
Assisted by her Father, Elder Thomson, A. M.
St. John, N. B.

THE course of Tuition pursued embraces the
entire routine of a thorough English Educa-
tion—the Continental Languages and, if re-
quired, the Greek and Latin.—Drawing, Painting,
Music, and Singing; together with Natural and
Moral Philosophy, and the general range of Polite
Literature.
The limited number received secures to the
Pupils all the domestic comforts and supervision of
home; and no efforts are spared to render the
duties of the pupil spontaneous rather than com-
pulsory. The Domestic Department is under the
superintendence of Mrs. Thomson.
Two Classes of DAY PUPILS, consisting of 12
only.
N. B.—ELDER THOMPSON, A. M., devotes the
whole of his time during Class hours to his Daugh-
ters' Pupils. August 19.

Sons of Saint Andrew,
GIE TEST!

THE Annual Gathering of the "ST. ANDREW'S
SOCIETY," and Guests, will be held at BRAT-
TAIN'S POINT, on the River Saint John, on
THURSDAY the 25th instants.

The favorite Steamer "Forest Queen" has been
engaged for the occasion, and will leave Indian
Town at 9 o'clock, A. M., precisely.
Tickets, 7s. 6d. each, for a Gentleman and two
Ladies, and 2s. 6d. for each additional Lady, may
be obtained from either of the Committee.
☞ No money will be received at the boat.
Fraud like this is a fearful trait!
Foregather at the table, we'll hoist no hat!
To meet the love, and hand up and hand down.

JOHN M. WALKER, Secretary,
ALEX. JARVIE,
W. THOMSON,
T. M. REED,
ROBERT THOMPSON,
ADAM JACK,
ROBT. ROBERTSON, R. CRUKSHANK, Secretary.

SAINT JOHN SEMINARY,
Princess Street.

THIS Seminary will be opened on Monday
the 1st of August, in Princess street, (South
side a few doors East from Ferguson street.)
MALCOLMSON & HUGHESON, who design
it not only for Boys, but also to supply a want long felt
and expressed by many intelligent and respectable par-
ents to obtain for their daughters, a moderate expense
the usual requisites of a sound and liberal Education.

For Young Ladies who may find it inconvenient to at-
tend in the forenoon, or may wish to mix with the juve-
nile or scholars, private Classes will be formed, in the School
Room, between the hours of 4 and 6 P. M. Mr. H. is a
young gentleman of considerable literary acquirements,
and experience in teaching, and that he has during the
last year been employed as Teacher in two Academies
of the highest grade in Scotland.

The whole arrangements of the Institution are adapted
to the improved Modern System of both Male and Female
Education.—The following Branches form the standard
course of Instruction—Greek, Latin, French and Eng-
lish; Algebra, Geometry, Trigonometry, Mensuration,
and Arithmetic, Theoretical, Mental and Practical; Book-
keeping, by Double and by Single entry; Natural Philo-
sophy, Astronomy, Political and Practical Geography,
Natural and Civil History, English Grammar, English
Composition, and the Composition, Origin, and Primary
signification of Words; Spelling, Reading, and Writing;
together with all the usual subordinate and subsidiary
branches.

Mr. H. will be in attendance at the School Room,
on after Monday the 27th instants, from half-past 10 to
6 o'clock. To answer inquiries and enrol pupils for the dif-
ferent classes to be formed.

Marble Chimney Pieces.

THE Subscriber invites the attention of the
public to the above beautiful article. They are
manufactured of Stone, by the Penrhyn Marble
Company, in imitation of the most rare and desir-
able kinds of Marble.
In style and finish they are unequalled, are very
highly polished, retain their beauty much longer
than common Marble and are not injured by coal
gas, smoke or acids.

They have been extensively introduced into
public and private buildings in the United States,
giving perfect satisfaction to those who have tried
them. While superior in appearance they are sold
cheaper than anything of the kind in the market.
In fact, the confidence with which they have been
put so far used gives the fairest evidence that the
Penrhyn Marble, by its many advantages, will in

Poetry.

ADMIRABLE THINGS.

The hand outstretched to meet a brother's... The hand that reaches out to meet a brother's...

A Survey of the Physical Sciences.

Man was early led to the study and contemplation of Nature. The day and night heavens, the varied surface of the earth, the deep forests and the beautiful and somewhat mysterious succession of the seasons...

The Physical Sciences embrace all the facts of nature, classified on the principle of resemblances. These facts have been accumulating through ages, and now form distinct branches of knowledge, such as Mechanics, Astronomy, Optics, Electricity, Magnetism, and Chemistry...

The birth of these sciences is undoubtedly found in the Cosmogony of the Orient. Traditions of the Creation are seen in all languages, and lie at the basis of all inquiries into the wonderful spectacle of Nature...

The religious element soon became predominant. The wonderment of Nature excited awe. Mystery veiled on her inexplicable and infinite diversity, and nursed into gigantic vigor the mystic superstition of the East...

This element was doomed to divide its power, and in some degree become the servant of a degrading selfishness. The love of power and gain, assisted by a subtle policy, invested the observations of Nature with imaginary awe. Superstition became a pampered thing, and the deformed outcroppings of the physical sciences appeared in astrology and the arts of divination...

From this oppressive thralldom, thought, after the lapse of ages, began to awaken. Minds here and there, stirred by the love of knowledge, brooded over the known facts of Nature, and warmed them into order and life. Travelling merchants brought new facts to view; caravans were induced to carry freights of knowledge as well as wares...

The banks of the Indus, favored by Nature and Providence, became not only the nursery of the race, but also of the first civilization. W. Von Humboldt is justified in tracing up all the streams of philosophy that irrigate the world to that fountain...

Chaldees, we are certain, was the seat of early astronomical observations. As early as 720 B. C., eclipses of the moon were noticed and chronicled. Egypt, we have good reason to believe, made observations on the eclipses of the sun and moon about the time of the Exodus, 1491 B. C. The Chaldeans divided the day into twelve hours. The sun-dial of Ahaz is brought to view in the Old Testament...

Mechanics were brought into notice at an early period in the history of the world. The forces of Nature were turned into the service of man. The ruins of Southern India and the pyramids of Egypt are indications of gigantic labor. Their construction must have required machineries of no ordinary power. The labor of Archimedes in this department of physical science is familiar. The ancients ascribe to him the invention of forty mechanical contrivances; the moderns regard him as the founder of Mechanics. The protracted defence of Syracuse against the Romans, sustained chiefly by his machines, is a wonderful fact in history...

Mechanics, in some form, must have been an existence almost commensurate with the creation of man. Power and motion belong to life. Their application was needed even in the preparation of food and clothing. Implements were required in the erection of the first hut and the formation of the first battle-club...

The growth of mechanics must have been rapid. The love of power is deeply seated in the heart; and every instrument that could multiply its force would be eagerly sought. Mechanical contrivances were the earliest indications of inventive skill. What they were in ancient times, history only indicates—Tyre, and Asia Minor...

Archimedes must be regarded as the founder of this branch of physical science. He was born in Syracuse, 287 B. C. He laid down the principles of statics and hydrostatics, and invented many machines. STEVINUS, an engineer of the Lower Countries, is the first person in modern who advanced beyond the ancients. He lived in the sixteenth century. GALILEO promoted this branch of knowledge. He was born at Pisa, 1564. To him we are indebted for the first great steps in modern mechanics. Heavens contributed sound-

thing. He explained the doctrine of the pendulum. Newton completed the superstructure of the principles of mechanics.

Since his day, the application of these principles has been incessant and varied. England and America have attained an eminence among the nations, on account of their machines. In the latter country, the geometrical lathe of Durand and the press of Hoe cannot be passed over. The former adorns our notes with the most beautiful machine-work, and by rendering counterfeiting impossible, gives security to our currency. The latter, by its astonishing capacity, throws off 20,000 impressions in an hour.

The advantages arising from applied mechanics are of the greatest importance. To these advantages, as much as to any thing else, England and America owe their greatness. Two structures may be named here—the tubular bridge over the Menai Straits, and the Crystal Palace. They are good instances of the perfection of applied mechanics, and the estimation in which the subject is held by the people.

Harvesting Grain.

It would seem to be almost superfluous at this late day, to urge upon our farmers the importance of cutting grain before it becomes fully ripe; yet notwithstanding the numerous articles which have been written and published on this subject, and the very judicious millers and grain dealers in favor of early harvesting—especially where the grain is intended for bread making or routing—there are many who still adhere to the old practice, and will by no means allow their crops to be harvested till the grain is fully ripe. Prejudice is a tyrannical master, and no class of the community appear to be more fully under its control than our own agricultural class. In New York, and, indeed, in all the great wheat-growing States, the practice of cutting grain before it is dead ripe prevails universally. The exact time when it should be harvested, is now, with the grain producing part of the community, no longer a matter of doubt or speculation; all being fully convinced that the right period is indicated by that change which the grain experiences when passing from its milky state to that of complete hardness, and when the kernels, without being "sticky," are yet not sufficiently hard to resist the pressure of the thumb and finger. The farina of the grain being perfected, all that is necessary to render it fit for flouring is the hardening of the mass, and this, it is abundantly established, may be accomplished after the straw has been cut, as before. Beside, grain that is allowed to stand till it is fully or dead ripe, makes darker flour, and is not so heavy; it scatters in harvesting, and does not command, in our markets, so ready a sale, or so high a price. The straw of grain, when it is cut before the period of perfect maturity, is also much more valuable; it possesses a degree of succulence and saccharine sweetness which renders it a good food for stock; a use to which the straw that has stood in the fields till it has become dead or perfectly matured, can never be applied.

I have cut oats when the straw was just turning from its green to its golden hue, and have found the grain as plump and full, and far brighter in color, than that which had stood in the field till ripe. The straw of oats, when harvested early, and properly cured, is nearly as valuable for cattle feeding as the best clover hay; and when chaffed and mixed with chopped roots or meal, it makes a feed eagerly partaken of by stock of every description.—Germantown Telegraph.

Soiling Cows. The superiority of soiling over the common method of turning cattle to pasture, or in other words allowing them a free range, is strongly contended for by many at this day. The practice, so far as it is at present prevalent in this country, has been introduced from Europe, where it has obtained for a long time, and where certain peculiarities of soil, climate and population, render it far more necessary than it now is, or very soon can be, with us. Yet if it really possesses the high merits claimed for it by its advocates—many of whom are among the most intelligent and discriminating farmers and dairymen our country can boast of, it is certainly by no means to be neglected. We have now before us as we write, the statements of many men of this class, and among the number a gentleman of Waltham, Middlesex County, Mass., who had "four cows, and not a rod of ground which could be appropriated to pasturage. These animals, therefore, were never out of the barn or the barn yard, and were fed with grass mowed for them, with green corn fodder, which had been sown broad cast for them, and with about three pints of meal each, per day. The amount of their produce was kept for thirteen weeks. Two of these animals were heifers of two years old, which had calved in the spring. The whole milk of one of them was taken by her calf during six out of the thirteen weeks. Some of the milk of the other was taken for family use, but the quantity was not determined. Under these circumstances three heifers could not be rated as more than one cow of full age and milk. From this stock, however, this circumstance and fed, three hundred and eighty-nine pounds of butter were made in the thirteen weeks!

An additional pound would have given an average of thirteen pounds a week, for the whole time, to a stock which must, in fairness, be set down as three cows only!

Where the soiling system is adopted, as it is on many farming establishments—among which we may mention that of the Shakers of New Lebanon, N. J., the superior quantity and quality of the manure is said to be sufficient to defray all the extra expense of cutting the fodder and feeding. It is all saved, the liquid as well as the solid excrement, and being preserved under cover, is of great strength and energy.

In our own practice we have been obliged to resort to this mode of feeding in order to keep stock enough to produce anything like the amount of manure we desire to use.

By keeping the cows in the barn until about the 10th of June, our eight acres of old worn out pasture (though as good eight acres of land as any farmer need desire), afforded eight cows a plenty good bite until a crop of "cow corn," put into a warm and rich piece of land as early as it is fit for the seed, gets high and stout enough to cut. After this there is no difficulty, as a succession of crops of this highly nutritious fodder may then be obtained until October.—N. E. Farmer.

One hour in the bath, Napoleon used to say, refreshes me more than four hours of sleep.

DOMESTIC RECEIPTS.

To PICKLE CUCUMBERS.—Wipe and put them in salt water, strong enough to bear an egg, in which let them remain six or seven days; then scald in vinegar to green them after which put them in cold spiced vinegar. Beans are done the same.—[Home Cookery]

REF STEWED WITH ONIONS.—Cut some tender beef in small pieces, and season it with pepper and salt, slice some onions and add it, with water enough in the stew pan to make a gravy; let it stew slowly till the beef is done, then add some pieces of butter rolled in flour to make rich gravy. Cold beef may be done in the same way, only the onions must be stewed first and meat added. If the water should stew away too much, put in a little more.—[National Cook Book]

To MAKE VINEGAR FROM BEETS.—Grate the washed beets, express the juice in a cheese press, and put the liquor in an empty barrel cover the bung-hole with gauze, and place it in the sun. In a few weeks the vinegar will be good. It is said one bushel of sugar beet will make five or six gallons of vinegar, which is probably nearly correct, as nine-tenths of a bushel of roots contains equal to six gallons in measure, containing the interstices.

To COVER PRESERVES.—The covering for preserves used by the trade, instead of a bladder, is made by brushing over sheets of wax, with linseed oil which has been previously boiled. The sheets should be hung in a string, and thoroughly dry before using. The material is also used for tulip shades, and as a substitute for glass in workshops. It is perfectly water proof.

PASTE FOR CLEANING GLOVES.—Liquor of ammonia half an ounce, chloride of potassium ounces, cured soap one pound, water; dissolve the soap in water, with a gentle heat, then as the mixture cools stir in the other ingredients. Use it by rolling it over the gloves until the dirt is off.

To MAKE ROSE-WATER.—Take two pounds of rose-leaves, place them on a napkin tied round the edges of a basin filled with hot water, and put a dish of cold water upon the leaves; keep the bottom water hot, and change the water at top as soon as it begins to grow warm. By this kind of distillation, you will extract a great quantity of the essential oil of the roses by a process which cannot be expensive, and will prove very beneficial.

What do you think.—A young buck of the soap-lover, who wore an unsavory face, because, as he said, it looked foreign, lately accented a Yankee as follows:—I say, follow, some individuals think I am a Frenchman, and some take me for an Italian—now, what do you think I am? "I think you are a damned fool!" replied Jonathan.

A Pathosous Epistle.—An Irishman, on arriving in America, took a fancy to the Yankee girls, and wrote to his wife: "Dear Nora—these melancholy lines are to inform you that I died yesterday, and hope that you are enjoying the same blessing. I recommend you to marry Johnny O'Rourke, and take good care of the children. From your affectionate husband till death."

Adams' Hardware Store, Dock Street Corner, Market Square. The Subscriber has received, per Ships Imperial, Miramichi, &c., 4 CASES SHIP, 10 rolls LEAD PIPE 2 1/2 inch SHEET LEAD, 1 to 180 kegs Brandram's No. 1 WHITE LEAD, 4 to 1 cwt.; 50 kegs Green, Black, Yellow and Red PAINT; 200 casks best fine WHITING; 1 cask Lardine HORN; 1 cask REJUNG HOOKS and SICKLES; 34 dozen Griffin's SCYTHES; 1 case Cross-cut SAWS; 2 cases Planes, Chisel Handles, &c.; 1 cask Hair Cloth; 5 casks containing Blacksmith, Mill and other FILES; Pocket and Table CUTLERY; John Wilson's Slices, Butcher, Farrier, Leather and Putty Knives, Razors, &c.; 5 casks containing Sheep Shears, Brushes and Bits, Plane Irons, Socket and Firm Chisels and Gouges, Turkey Oil Stones, Saw Pads, Mortice Gouges, Caulking Irons, Watchmaker's Files, Coffin Furniture, Cow Bells, Brass and Iron SPOKE BILLS, Slip Hammers and Planes, Chest, Trunk and Pad Locks, Carpenter's Patent Rim Locks, Copper BELL WIRE and HOUSE BELLS, Bell Metal Preserving Kettles, Tinned Iron Tea and Table Spoons, Carpenter's Rules, Trout Hooks, &c.; 15 dozen Hay Forks; 10 Steel Shovels and Spades. The Road to Health.

Holloway's PILLS.

CURE OF A DISORDERED LIVER AND BAD DIGESTION. Copy of a Letter from Mr. R. W. Kirrus, Chemist, 7 Prescott Street, Liverpool, dated 6th June, 1851. To Professor HOLLOWAY. Sir—Your Pills and Ointment have stood the highest on our sale list of Proprietary Medicines for some years. A customer to whom I can refer for any enquiries desires me to let you know the particulars of her case. She had been troubled for years with a disordered liver, and bad digestion. Of the last occasion, however, the violence of the attack was so alarming, and the inflammation set in so near her under it, that she was unable to eat or to bear up under it; fortunately she first not being able to swallow food, she had the most judiciously recommended to bear up under it; fortunately she first not being able to succeed in her case, she had the most judiciously recommended to bear up under it; fortunately she first not being able to succeed in her case, she had the most judiciously recommended to bear up under it...

AN EXTRAORDINARY CURE OF RHEUMATIC FEVER, IN VAN DIEMEN'S LAND.

Copy of a Letter inserted in the Hobart Town Courier, of the 1st March, 1851, by Major J. Welch. Margaret M. Conigan, thirteen years of age, residing at New Town, had been suffering from a violent rheumatic fever for upwards of two months, which had entirely deprived her of the use of her limbs; during this period she was under the care of the most eminent medical men in Hobart Town, and by them her case was considered hopeless. A friend prevailed upon her to try Holloway's Pills, which she consented to do, and in an incredible short space of time they effected perfect cure.

CURE OF A PAIN AND TIGHTNESS IN THE CHEST AND STOMACH OF A PERSON 84 YEARS OF AGE.

From Messrs. Thos & Son, Proprietors of the Em Advertiser, who can touch for the following statement.—August 2nd, 1851. To Professor HOLLOWAY. Sir—I desire to bear testimony to the good effects of Holloway's Pills. For some years I suffered severely from a pain and tightness in the stomach which was also accompanied by a shortness of breath, that prevented me from walking about. I am 84 years of age, and notwithstanding my advanced state of life, these Pills have so relieved me, that I am desirous that others should be made acquainted with their virtues. I am now recovered, by their means, comparatively active, and can take exercise without inconvenience or pain, which I could not do before.

AN EXTRAORDINARY CURE OF THE GRAVEL, AND A MOST DANGEROUS FEVER COMPLAINT.

Copy of a Letter addressed to J. K. Heyden, Esq., 8yd New South Wales, dated Feb. 23rd, 1851. Sir—A Mr. Thomas Clark, a Settler at Long George, was for a considerable time seriously afflicted with a Complaint of the Liver, together with the Gravel. His medical attendants, after trying all their skill, eventually told him that his case was hopeless, and any further efforts useless in this situation, and when expecting every day would terminate his existence, a friend recommended him to try Holloway's Pills, and as a fortune here he did so, the first good result was obtained, he therefore persevered in taking them according to the directions, and in a few weeks he had got so well, that he felt great pleasure in confirming this statement, or even make an affidavit to the same effect, should it be required. (Signed) WILLIAM JONES, Proprietor of the WONDERFUL EFFICACY OF HOLLOWAY'S PILLS, IN CASES OF DROPSY. Persons suffering from Dropsy, either about the turn of life, or at other times, should immediately have recourse to these Pills, as hundreds of persons are annually cured, by their use, of this dreadful complaint in its different stages, when all other means had failed.

These celebrated Pills are wonderfully efficacious in the following complaints.

Ague, Asthma, Bilious Complaints, Blisters on the Skin, Bowel Complaints, Colic, Constipation of the Bowels, Consumption, Debility, Dropsy, Dysentery, Erysipelas, Female Irregularities, Fevers of all kinds, Fistula, Gout, Head-ache, Indigestion, Inflammation, Jaundice, Liver Complaints, Lumbago, Piles, Rheumatism, Retention of Urine, Scrofula or King's Evil, Sore Throat, Stomach and Gravel, Secondary Symptoms, Tic Douloureux, Tumours, Ulcers, Venereal Affections, Worms of all kinds, Weakness from whatever cause, &c. &c. Sold by the Proprietor, 244, Strand, (near Temple Bar), London; and by S. L. TILLEY, Provincial Agent, No. 15, King Street, St. John, N. B.; A. Coy & Son, Fredericton; W. T. Baird, Woodstock; Alexander Lockhart, Quebec; James Beck, Bend of Pettaquamscutt; O. L. Sayre, Deerchester; John Bell, Shediac; J. O. Lewis, Hillsborough; John Curry, Canning; and James G. White, Belleisle.—In Pots and Boxes, at 5d., 10d., and 25c. each. There is a very considerable saving in taking the larger sizes. N. B.—Directions for the guidance of patients are affixed to each box. N. B.—Directions for the guidance of patients are affixed to each box.

Vulcan Foundry Manufacturers.

A LARGE assortment of the manufactures of the Vulcan Foundry, consisting of Bay State and Patent Union COOKING STOVES, FRANKLINS, Register GRATES, Close Stoves, &c., &c., all of the most approved patterns and descriptions. For sale at the Warehouse of the subscriber. The above Goods can be recommended to the attention of the public. Orders for Castings or Work required at the Foundry will have attention, if left at the Counting Room of JOHN V. THURGAR, North Market Wharf April 26.
