Technical and Bibliographic Notes / Notes techniques et bibliographiques

The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming are checked below.

- Coloured covers /
Couverture de couleur
 - Covers damaged /
Couverture endommagée
 - Covers restored and/or laminated /
Couverture restaurée et/ou pelliculée
 - Cover title missing / Le titre de couverture manque
 - Coloured maps / Cartes géographiques en couleur
 - Coloured ink (i.e. other than blue or black) /
Encre de couleur (i.e. autre que bleue ou noire)
 - Coloured plates and/or illustrations /
Planches et/ou illustrations en couleur
 - Bound with other material /
Relié avec d'autres documents
 - Only edition available /
Seule édition disponible
 - Tight binding may cause shadows or distortion along
interior margin / La reliure serrée peut causer de
l'ombre ou de la distorsion le long de la marge
intérieure.
 - Blank leaves added during restorations may appear
within the text. Whenever possible, these have been
omitted from filming / Il se peut que certaines pages
blanches ajoutées lors d'une restauration
apparaissent dans le texte, mais, lorsque cela était
possible, ces pages n'ont pas été filmées.
 - Additional comments /
Commentaires supplémentaires:

L'Institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués ci-dessous.

- Coloured pages / Pages de couleur
 - Pages damaged / Pages endommagées
 - Pages restored and/or laminated /
Pages restaurées et/ou pelliculées
 - Pages discoloured, stained or foxed /
Pages décolorées, tachetées ou piquées
 - Pages detached / Pages détachées
 - Showthrough / Transparence
 - Quality of print varies /
Qualité inégale de l'impression
 - Includes supplementary material /
Comprend du matériel supplémentaire
 - Pages wholly or partially obscured by errata slips,
tissues, etc., have been refilmed to ensure the best
possible image / Les pages totalement ou
partiellement obscurcies par un feuillet d'errata, une
pelure, etc., ont été filmées à nouveau de façon à
obtenir la meilleure image possible.
 - Opposing pages with varying colouration or
discolourations are filmed twice to ensure the best
possible image / Les pages s'opposant ayant des
colorations variables ou des décolorations sont
filmées deux fois afin d'obtenir la meilleure image
possible.

This item is filmed at the reduction ratio checked below /
Ce document est filmé au taux de réduction indiqué ci-dessous.

A horizontal number line representing values from $10x$ to $32x$. The line is divided into segments by vertical tick marks at intervals of 2 units. The labels are placed above the line: $10x$, $12x$, $14x$, $16x$, $18x$, $20x$, $22x$, $24x$, $26x$, $28x$, and $30x$. There are 10 empty boxes below the line, corresponding to the segments between the labeled points.

The copy filmed here has been reproduced thanks to the generosity of:

National Library of Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shell contains the symbol → (meaning "CONTINUED"), or the symbol ▽ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Bibliothèque nationale du Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filming.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole → signifie "À SUIVRE", le symbole ▽ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

BLACK ANTIMONY.

LABORATORY
OF THE
INLAND REVENUE DEPARTMENT
OTTAWA, CANADA

BULLETIN No. 225

BLACK ANTIMONY.

OTTAWA, July 18, 1911.

W. J. GERALD, Esq.,
Deputy Minister of Inland Revenue.

SIR.—Some time ago representations were made to this Department to the effect that the drug known as Black Antimony was grossly adulterated. In consequence of this, a collection of 77 samples was made during March, April and May of this year and the following report gives the results of their examination; and it will be seen that the charges of gross adulteration are fully sustained. The following synopsis gives these results in brief:—

	Samples.
Adulterated, as containing no antimony.....	21
Very impure sulphide of antimony.....	9
Impure sulphide of antimony.....	8
Sulphide of antimony.....	39

77

Black Antimony is not defined by the British Pharmacopoeia; but the purified sulphide is defined as *Antimonium Nigrum Purificatum*. This is the crude sulphide separated from siliceous material and from arsenical compounds.

Neither is Black Antimony found in the United States Pharmacopoeia, since 1890. In the seventh decennial revision of the U.S.P. it is thus described:—

“Native Antimony Sulphide, purified by fusion, and as free from arsenic as possible.”

Under the designated tests it is required to dissolve in hydrochloric acid, without leaving more than one (1) per cent of residue. The United States National Dispensatory, 5th Edition, p. 223, describes it as dissolving in 10 parts of hydrochloric acid without leaving more than 1 per cent of residue.

Finlay Dun (Veterinary Medicines, 9th Edition, p. 246), says:—“The sulphide or stibnite, the most abundant ore of antimony, when purified by fusion, occurs in dark-grey, metallic, heavy brittle cakes, or as a heavy grey black, crystalline powder devoid of odour and taste, insoluble in water, and known as black, or crude antimony.

Black antimony is not now employed in human medicine, but as an alterative and anthelmintic for horses and cattle; and is a very largely used ingredient of very many condition powders.

From what I have said, it is apparent that no exact standard of purity exists for this article. It is, however, quite certain that it should be essentially the sulphide of antimony, known as stibnite; and I have no hesitation in describing the samples examined as adulterated when they contain no antimony whatever. This is the case with 21 samples, or 27 per cent of the entire collection. Where foreign matter to the extent of nearly 50 per cent is present, I have declared the samples to be *very impure*; and where more than 5 per cent of matters insoluble in hydrochloric acid is found, as *impure*.

It is quite evident that many of the adulterated samples, consisting as they do of metallic iron, silica and carbon (graphite) have had an origin such as to preclude the possibility of any honestly mistaken intent; and are entirely and knowingly frauds, not necessarily known as such to the immediate vendor, but certainly known to the original producer.

I beg to recommend publication of this report as Bulletin No. 255.

I have the honour to be, sir,

Your obedient servant,

A. MCGILL,
Chief Analyst.

, 1911.
