TWELFTH YEAR.

GLOOM AT SANDRINGHAM.

ALBERT VICTOR OF WALES NIGRO UNDO DEATH.

Information regarding the Duke of Clarence's Week Long Illness—His Mother and Alliance Constantly by His Side—With Prince George Yet Feels from His Sufferings—The Duke of York's Sorrow.

LONDON, Jan. 13.—It has been very serious to-night for the Duke of Clarence and Avondale.

As a general rule serious illness in the royal family is admitted only when it cannot be checked or denied. A prince is hardly allowed to be ill until he is in danger of his life.

The Duke of Clarence is in the condition of the Duke of Clarence in the severity of the inflammation of the lungs. His lungs are almost gone, and a convulsion nearly carried him off one day.

The influenza in itself is not very alarming, except as it seizes the weakest point in the victim's constitution.

It has settled with apparently deadly effect on Clarence's weak lungs. He has never been a robust lad and is in a question whether he has vitality enough to stand even a moderate attack of illness.

If the Duke of Clarence's illness should prove fatal, Prince George will be heir to the throne, and the Prince of Wales, though all immediate danger from his recent attack of typhoid fever is over, Prince George is still very strong, and if influenza should fasten its clutches on him the Duke of York's baby would be brought close to the British throne.

With all these points in view it is easy to understand the intense public anxiety about the Duke of Clarence's illness. Both the Princes of Wales and his fiancée, the Princess Mary, remain near the Duke's bedside.

All plans for the wedding are off. Every plan is anxiously waiting to see whether the inevitable fate will throw on the table.

Watching the Bulletin.

LONDON, Jan. 13.—Great apprehension was felt to-day in all classes of society regarding the illness of the Duke of Clarence and Avondale.

The attack of congestion of the lungs from which the Duke of Clarence is suffering is a very serious case, and the opinion was freely and openly expressed that the Duke would not recover.

A bulletin issued from Sandringham Hall at 9.30 stated that grave symptoms had supervened in the case of the Duke of Clarence, and that the physicians in attendance upon the Duke have naturally sought to His Royal Highness in any danger, and the bulletins hitherto issued have been somewhat optimistic.

The condition of the Duke is the sole topic of conversation in the clubs, hotels, railway stations and every place where people move. The Duke's illness is the subject of conversation in the homes of the aristocracy, and the Duke's illness is the subject of conversation in the homes of the aristocracy.

and two other princesses of the Khedivial family are down with the influenza.

LONDON, Jan. 13.—Among the persons prominent in English society who have been attacked by influenza are Lord and Lady Bessborough, who are both prostrated at Warwick Castle, their residence in Warwick.

In Tiverton, Devonshire, with a population of 7500, there have been 30 deaths during the last fortnight.

One hundred and forty of the professors, students and attendants at the Catholic College at Teignmouth, Devonshire, have been stricken.

Advices from Paris show that influenza continues to increase there where it has been the number of deaths resulting from the disease is very large.

In the lunatic colony at Ghent the disease continues to spread in spite of every effort to check it, and many of the residents of the colony have already died.

abney is placed at 2,000,000. The property of the town depended in a measure upon the abney.

SEVERAL OF THE CELEBRATED ABNEY. Peeping is a town of over 10,000 inhabitants, and its name is derived from Ficus Campa, field of the fig tree, from the alleged fact that this was the case here.

The town of Peeping is situated on the bank of the river, in which Joseph of Arimathea had placed the Precious Stone, the stone which was used between England and France.

The monastery of Peeping is also interesting as the only one of the famous monasteries of Normandy that stood to the northeast of the Seine. It was founded by Richard the Fearless, Duke of Normandy, about 960.

The Abbey Church, a most interesting one, contained an interior of great beauty and grandeur, and was a masterpiece of architecture. The interior tower was stately though simple, and on the south side there was a fine portal of the fourteenth century.

WINDSWEPT, Jan. 13.—The election in South Winnipeg to-day resulted in return of J. G. Greenway (Greenway supporter) over D. E. Sprague (Oppositionist) by a majority of 98.

THE WORLD PUTS A VIBE TO THE INSTITUTION. A Harrowing Scene—Fifteen Nights of the Little Sufferers—Only One Man Recovered—The Good Work Which the Hospital Has Done.

It is now some slight weeks since the Diphtheria Hospital was opened, and everything considered, it has done good work. Dr. G. Tweed has done good work—so much good work for his health; the nurses could not be exceeded in care and gentleness, but their numbers could be increased with much advantage.

It was a case of Dr. Burgess' 887 Queen-street, that first called attention to this necessary institution. As this case illustrates some points that must be of interest to many ratepayers of the city The World gives some particulars below.

Mr. John Hamilton, 1305 Queen-street, has recently suffered from diphtheria in his family. His wife, a bright and active girl of 12, was suddenly stricken with diphtheria in the most malignant type. He was removed to the hospital—the ambulance was sent for, but the child was so weak that it was in a few hours after its removal to the hospital that it expired.

Dr. Burgess was in attendance upon the child at the hospital, and described the case as a harrowing. There were 15 little children in the ward and cure, who had been taken to look after four more in an adjacent ward. For Dr. Burgess was Dr. Burgess, and his father had to assist at the bedside, the child was so weak that it was in a few hours after its removal to the hospital that it expired.
