© 1986

The copy filmed here has been reproduced thanks to the generosity of:

Metropolitan Toronto Library
Canadian History Department

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol \rightarrow (meaning "CONTINUED"), or the symbol ∇ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Metropolitan Toronto Library
Canadian History Department

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole \rightarrow signifie "A SUIVRE", le symbole ∇ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

ADVERTISEMENT.

IT is hoped this work will be found more complete, comprehensive, and accurate, than any thing of the kind hitherto attempted in this Province. It is, however, scarcely possible to avoid some errors, from the very nature of the undertaking, but we hope they are few. Great attention has been paid to the astronomical calculations. The prognostications of weather can never be quite certain although there may be just grounds for the expectation of a particular kind of weather, at a certain period to come, by reason of planetary influence. These calculations are at least amusing, and are therefore inserted according to ancient usage.

The MILITIA APPOINTMENTS being taken from the Adjutant General's Office are of course accurate. Indeed, every thing depending upon the statements obtained from the Public Offices in York, must be correct, since the heads of the various Departments have, with much kindness, given every facility towards the satisfactory completion of this undertaking:—for which they have the Proprietor's warmest acknowledgements.

A general, though necessarily a brief, account of CANADA,—together with a few useful instructions to Emigrants, and a great number of valuable Tables, are added, with a view of rendering this work a useful Companion to every class of Persons in this Country. *

Since the two first editions, several important additions have been made, amongst which the STATISTICAL TABLES, formed from the ASSESSMENT ROLLS and the POPULATION RETURNS, are perhaps the most valuable, as they will shew at one view, when the whole are collected, what are the resources of the country, in a manner that must be perfectly clear and indisputable; and, a comparison of years, will prove the amount of increase, or decrease.

A very comprehensive CHRONOLOGY has been likewise added, to mark some interesting epochs in the History of the World.

CHARLES FOTHERGILL,

YORK, U. C. }
November 1st, 1824. }

Printer to the King's }
Most Excellent Majesty. }

* It will, indeed, be found particularly useful to occasional visitors, and travellers through the country, being a matter-of-fact book compiled from the most authentic sources.

CHRONOLOGICAL CYCLES.

Dominical Letter	B.	Solar Cycle	74
Lunar Cycle, or Golden Number }	2	Roman Indiction	13
Epact	11	Julian Period	6629

MOVEABLE FEASTS.

Septuagesima	Jan. 30	Low Sunday	April 10
Quinquagesima, or Shrove Sunday	Feb. 13	Rogation Sunday	May 8
Ash Wednesday, or 1st day of Lent	Feb. 16	Ascension Day, or Holy Thursday	12
Mid Lent Sunday	March 13	Whit Sunday	May 22
Palm Sunday	March 27	Trinity Sunday	29
Easter Day	April 8	Advent Sunday	Nov. 27

COMMENCEMENT OF THE SEASONS.

- Spring—Sun enters ♈, March 20.
 Summer—Sun enters ♋, June 21.
 Autumn—Sun enters ♎, September 23.
 Winter—Sun enters ♏, December 21.

SOLAR AND LUNAR ECLIPSES. IN THE YEAR 1825.

- May 31st.—The Moon will be Eclipsed, but in a very slight manner, being no more than about 1-5th of a degree, which will happen at 46 minutes past 6 o'clock in the afternoon, and here invisible.
- June 16th.—The Sun will be Eclipsed at 13 minutes past 7 o'clock in the morning;—here invisible.
- Nov. 25th.—The Moon will be Eclipsed at 11 o'clock in the forenoon; here invisible.
- Dec. 9th.—The Sun will be Eclipsed, partly VISIBLE, and calculated as follows:—
 Beginning at 3h. 33 minutes *afternoon*.—☉ sets about 7 Digits, Eclipsed at 4h. 26 minutes.—On the ☉'s Southern limb, and more we cannot say, as the Sun will then be sinking below the horizon of Canada.

THUNDER AND LIGHTNING.

To determine the distance of Lightning, count the number of *Seconds* between the *flash* and the *clap of Thunder*, and allow rather less than a *quarter of a mile* for each second.

The middle of the room is the safest situation in a Thunder Storm, and lower rooms are more safe than upper chambers.

The Planet *Venus* will be the Evening Star until the 19th of May; then the Morning Star to the end of the year.

♌	Leo,	♒	Aquarius,
♍	Virgo,	♓	Pisces,

MOON'S RISING AND SETTING.

At four days old it sets at,	15,—at full, it rises about 6 in
and shines till, about 10 at night.	the evening,
5—about 11,	16—at 1-4 after 7,
6—about 12,	17—at 1-2 after 8,
7—at near 1 in the	18—at about 10,
morning	19—at about 11,
	20—at about 12,

N. B. This table is sufficiently accurate for the purpose it is wanted for, that of ascertaining moonlight evenings.

OF THE CHANGES OF THE MOON.

Many persons, understanding that the mean time between one new Moon and another is 29 days, 12 hours, 44 minutes and a fraction, imagine that, to find the full or quarters of the Moon, they have only to add a half or fourth part of that time; and when they do not find the changes marked in the Calendar to correspond with this method; they impute it to mistake in the calculation of those changes. It is therefore, necessary to put them in mind, that the great inequality of the Moon's motions renders the above rule extremely inaccurate, so that nineteen times in twenty it must fail in giving the true conjunction or change.

EXPLANATION OF THE CALENDAR.

The First Column contains the Days of the Month; the Second the days of the Week; the Third Aspects, Holidays, Anniversaries, &c; the Fourth, Prognostications of Weather, the Fifth, the Places of the Moon; the Sixth and Seventh, the Rising and Setting of the Sun; and the Last the Rising and Setting of the Moon.

*THE whirling tempest raves along the plain;
 And on the cottage thatch'd, or lordly roof,
 Keen fastening shakes them to the solid base—
 Huge uproar lords it wide The clouds commix'd.
 With stars, swift gliding sweep along the sky,
 The cattle from the uninclosed fields return,
 And ask, with meaning low, their wonted stalls,
 Or ruminat in the contiguous shade.*

NOW Sh pher ls. to your helpless charge be kind,
 Baffle the raging year, and fill their pens
 With food at will; lodge them below the storm,
 And watch them strict; for from the bellowing east,
 In this dire season, oft the whirlwinds wing
 Sweeps up the burden of whole wint'ry plains,
 At one wild waft, and whelms the hapless flock.

*As yet the trembling year is unconfir'd,
 And Winter oft at eve resumes the breeze,
 Chills the pale morn, and bids its driving sleets
 Deform the day de lightless; so that scarce
 The bittern knows his time, with bill ingulph'd
 To shake the sounding marsh; or from the shores
 The plovers when to scatter o'er the heath,
 And sing their wild notes to the listening waste!*

FROM the moist meadow to the wither'd hill,
 Led by the breeze, the vivid verdure runs,
 And swells, and deepens, to the cherish'd eye.
 The hawthorn whitens, and the juicy groves
 Put forth their buds, unfolding by degrees—
 Till the whole leafy forest stands display'd,
 In full luxuriance, to the sighing gales.

*FROM brightening fields of ether fair disclos'd,
 Child of the SUN, resplendent SUMMER comes.
 In pride of youth, and felt through NATURE'S depths;
 He comes attended by the sultry hours,
 And ever fanning breezes, on his way;
 While, from his ardent look, the turning SPRING
 Averts her bashful face; and earth and skies,
 All smiling, to his hot dominion leave.*

*ECHO no more returns the cheerful sound
 Of sharpening scythe: the mower, sinking, heaps
 O'er him the humid hay, with flowers perfum'd,
 And scarce a chirping grass-hopper is heard
 Through the dumb mead. Distressful NATURE pants.
 The very streams look languid from afar;
 Or, through th' unshelter'd glade, impatient seem
 To hurl into the covert of the grove,*

*THE SUN has lost his rage; his downward orb
 Shoots nothing now but animating warmth,
 And vital lustre; that, with various ray,
 Lights up the clouds, those beautiful robes of Heaven:
 Incessant roll'd into romantic shapes,
 The dream of waking fancy! Broad below,
 Cover'd with ripening fruits, and swelling fast.
 Into the perfect year, the pregnant earth.
 And all her tribes rejoice.*

*CROWN'D with the sickle and the wheat'n sheaf,
White AUTUMN, nodding o'er the yellow plain,
Comes jovial on; the Doric reed once more,
Well pleas'd. I tune—what'er the Windy frost
Nitrous prepar'd; the various blossom'd Spring
Put in white promise forth; and Summer suns
Concocted strong rush bundl's: now to view;
Full, perfect all, and swell my glorious theme!*

*HENCE from the busy joy resounding fields,
 In cheerful error, let us tread the maze
 Of Autumn unconfin'd; and taste, reviv'd,
 The breath of orchard big with bending fruit—
 Obedient to the breeze and beating ray,
 From the deep loaded bough a mellow shower
 Incessant melts away. The juicy pear
 Lies, in a soft profusion, scatter'd round.*

PERPETUAL WEATHER TABLE.

By DOCTOR HERSCHELL.

The following Table, constructed by the celebrated Doctor Herschell, upon a philosophical consideration of the attraction of the sun and moon, in their several positions, as to the earth, and confirmed by the experience of many years actual observation, may without doubt, suggest to the observer what kind of weather will probably follow the moon's entrance into any one of her quarters, and that so near the truth, that it will be very seldom found to fail.

	SUMMER.	WINTER.
If it be a new or full moon, or the moon enters into the first or last quarter, at the hour of 12 at noon.	Very rainy	Snow or rain
Or between the hours of 2 and 4	Changeable	Fair and mild
4 to 6	Fair, if wind N.	Fair
6 to 8	W.—Rainy if S. or S. W.	Fair and frosty if N or N E.
8 to 10	Ditto	Rain or Snow if S. or S. W.
10 to midnight	Fair	Ditto
Midnight to 2	Fair	Fair and Frosty
2 to 4	Cold, with frequent showers	Hard frost, unless wind S. or S. W
4 to 6	Rain	Snow and Stormy
6 to 8	Wind and Rain	Ditto
8 to 10	Changeable	Stormy
10 to 12	Frequ. Showers.	cold rain, if W. snow if E. cold high wind.

From the above Table it will be seen, that the nearer to midnight either of the moon's periodical changes, (i. e. within two hours either before or after it) the more fair the weather is in summer, while the nearer to noon that the changes take place, the reverse may be expected. Fair weather may also follow when either of the periodical changes occur during the afternoon six hours, viz from four to ten; but this is mostly dependent on the wind.—The moon's entrance during all the hours after midnight, except the two first, is unfavourable to fair weather. The like may nearly be observed in winter. Every farmer ought to preserve a copy of this table, and carefully to regulate his pursuits by its indications. Such a line of conduct might materially promote his comforts and his interests, while in no case could it disturb his prospects or destroy his hopes.

ORIGIN OF THE NAMES OF THE DAYS OF THE WEEK.

As it may be a subject of Curiosity to know the origin of the names of the days of the week, we present our readers with an account extracted from a Treatise on the Idols of the Saxons, from whom the days were called and distinguished.

SUNDAY.

THE Idol of the Sun, from which Sunday is derived, among the Latins *DIES SOLIS* was placed in a temple and adored and sacrificed to: for they believed that the sun did co operate with this Idol. He was represented like a man half naked, with his face like the sun, holding a burning wheel with both hands on his breast, signifying his course round the world; and by its fiery gleams, the light and heat wherewith he warms and nourisheth all things.

MONDAY.

The Idol of the Moon, from which cometh our Monday, *DIES LUNE* anciently Moonday: This Idol appears strangely singular, being habited in a short coat like a man; Her holding a bloom, expresses what she is. *

TUESDAY.

Torso, the most ancient and peculiar God of the Germans, represented in his garment of a skin, according to their ancient manner of cloathing; next to the sun and moon, they paid their adoration to this Idol, and dedicated the next day to him; from which our Tuesday is derived, anciently Tuisday; called in Latin *DIES MARTIS*.

WEDNESDAY.

WODEN, † was a valiant prince among the Saxons; his image was prayed to for victory over their enemies, which if they obtained, they usually sacrificed the prisoners taken in battle to him. Our Wednesday is derived from him, anciently Woden's day.

* What *DIODORUS SICULUS* says of the ancient inhabitants of Egypt, may perhaps be said with equal truth of all other idolatrous nations. "When they took a view of the universe, and contemplated the nature of things, they imagined that the Sun and Moon were the two first and greatest Gods." Ed.

† *ODIN*, as he is termed by the moderns.—It is a mistake to call him a "prince of the Saxons" though most of the Saxon princes pretended to be descended from him.—*Odin* is believed to have been the name of the one true God amongst the first colonies who came from the east, and peopled Germany and Scandinavia, and among their posterity for several ages. He was peculiarly the God of their battles, and had in their estimation the attributes of omnipotence.—For an interesting account of this deity, and also of *THOR* and *FREA* see *Mallet's Northern Antiquities*. Ed.

THURSDAY.

THOR, * was placed in a large hall, sitting on a bed, canopy'd over, with a crown of gold on his head, and 12 stars over it, holding a scepter in the right hand; to him was attributed the power over both heaven and earth, and that as he was pleas'd or displeas'd he could send thunder, tempests, plagues, &c or fair reasonable weather, and cause fertility. From him our Thursday derives its name, anciently Thor-day; among the Romans, *DIES JOVIS*, as this Idol may be substituted for Jupiter.

FRIDAY.

FRIDA, † this Idol represented both sexes, holding a drawn sword in the right hand and a bow in the left, denoting that women as well as men should fight in time of need: She was generally taken for a Goddess, and was reputed the giver of peace and plenty, and cause of love and amity: Her day of worship was called by the Saxons *Fridadeag*, now Friday, *DIES VENERIS*,

SATURDAY.

SEATER OR CRODO stood on the prickly back of a perch. He was thin visaged, and long haired, with a long beard, bare headed and bare-footed, carrying a pail of water in his right hand, wherein are fruit and flowers; and holding up a wheel in his left, and his coat tied with a long girdle: His standing on the sharp fins of this fish, signified to the Saxons, that by worshipping him they should pass through all dangers unhurt; by his girdle flying both ways, was shewn the Saxons freedom, and by the pail with fruit and flowers, was denoted that he would nourish the earth. From him, or from the Roman deity Saturn, ‡ comes Saturday.

TWELFTH DAY.

The origin of the practice of drawing for King and Queen over the twelfth cake on this day is involved in obscurity, like that of many

* **THOR** was the eldest and bravest of the sons of Odin and Frey—and next to them the greatest of the Scandinavian Gods—It was anciently believed that **THOR** reigned over all the heavens; that in his Palace were 640 Halls; that he launched the thunder, pointed the lightning, and gave direction to the meteors, winds, and storms. He it was who wielded a hammer or a club dreaded alike by Gods and Men. Ed.

† More properly **FREY**, the Goddess of Love, Beauty, and Pleasure amongst the Scandinavians.—She was the wife of Odin, and was the deity most revered—although the mother of all the Gods she was the same with **Herthus**, or the Earth—and to her votaries she bestowed every variety of delight—particularly happy marriages and easy births. Ed.

‡ The **Seator** or **Scator** of the Scandinavians and Celtic nations was the same with the Saturn of the Romans.—He was worshipped by all the Celtic nations in the west of Europe. Ed.

other customs of apparently of greater moment. Some trace it to a play of the Roman Children, who drew beans at the end of the Saturnalia for the same purpose; and this classical origin is countenanced by the amusement having prevailed in our universities, where the decision was made by beans found in the cake.

Others imagine in it a faint resemblance of the offerings made to the new-born Saviour by the Magi, or Wise Men of the East, of Gold, Frankincense, and Myrrh; and this opinion seems probable, as at the ceremony performed in this country, annually on this day, the Monarch either personally, or by his Chamberlain, makes a similar offering.

The old Calendars notice that on the vigil of this day King's were elected by beans, and the day was called the festival of King's.

In the time of King Alfred the twelve days after the nativity of our Saviour were declared to be festivals.

The festivities of Twelfth day are still kept up at Rome, in France, and in Spain. The day is called the Feast of King's.

New Monthly Magazine.

HISTORICAL EXPLANATION OF SOME REMARKABLE DAYS IN MARCH AND APRIL.

1st. SAINT DAVID—The Welsh regard St David as their tutelar saint, and, annually, hold festive meetings on this day. In 640 the Britons, under King Cadwallader, obtained a complete victory over the Saxons; and St. David is considered not only to have contributed to this victory by his prayers, but by the judicious regulations which he adopted for rendering the Britons known to each other. He directed the Welsh to wear leeks in their caps, drawn from a garden near the field of action; while the Saxons, from a want of some distinguishing mark, frequently mistook each other, almost indiscriminately slaying friends and foes.—Hence the custom of the Welsh wearing leeks in their hats on St. David's Day. St. David was descended from the Royal Family of the Britons, being uncle of King Arthur, and son of Xantus, Prince of Cereticu, now Cardiganshire. Being ordained Priest, he retired into the Isle of Wight, and embraced an ascetic life. He founded twelve monasteries one of which was in the vale of Ross, near Menevia, now called St David's. Soon afterwards, the Archbishop of Caerleon resigned his see to St. David, whose opposition was only overcome by the absolute commands of the synod. He had, however, the liberty to transfer his see from Caerleon, then a populous city, to Menevia. He continued in this see many years and died, towards the end of the 6th century, at a very advanced age.

17th SAINT PATRICK.—He was a native of Scotland, whose original name was Succothus, but was changed by Pope Celestine into Patrick. In 432, he was sent by that Pontiff as a missionary into Ireland. He converted a great many of the Irish to Christianity, and founded, in 472, the Archbishoprick of Armagh. He has been justly called the Apostle of the Irish, and the Father of the Hibernian Church; and he is also esteemed the tutelar Saint of the country.—

The works of St. Patrick were published in London in 1666. Among the miracles of St. Patrick, it is recorded that he delivered Ireland from venomous reptiles, restored sight to the blind, health to the sick, and raised nine dead persons to life. He was buried at Downpatrick, where his body was found in 1185, in a church bearing his name. The custom of wearing shamrock, or *trefoil*, on this day, arose, according to some, from St. Patrick's using a leaf of it, when expounding the doctrine of the Trinity, to represent the divisibility of the Divinity into three distinct parts, and its union in one stein.

FIFTH SUNDAY IN LENT.—Rites peculiar to Good Friday were formerly used, in the Roman Catholic Church, on this day, which was called *Passion Sunday*, because they began to advert to the passion of Christ. In the north of England there are yet some remains of these observances. Among other of the old ceremonies, soft beans were distributed as a kind of dole to denote this season of grief; but these are now used in their repasts of this day, which is known by the name of *care* or *careing Sunday*, signifying a day of especial care or devotional attention.—At Newark upon Trent, one of the fairs is denominated "Careing Fair," and is held the Friday before "Careing Sunday," which is the Sunday fortnight before Easter.

GOOD FRIDAY—This day is held as a solemn fast in remembrance of the CRUCIFIXION OF OUR SAVIOUR. Its appellation of *Good*, seems peculiar to the Church in England. The Saxons called it *Long-Friday*, from the length of the ceremonies on that day; but its ancient title was *Holy Friday*, and the week in which it happens, was, and is now denominated *Holy* or *Passion Week*.

According to St. Mark, the Crucifixion commenced at the 3d, and ended at the 6th hour—but St. John states it to have begun at the 6th hour. It has, however, been decided, that the *third hour* is the correct account: In the Church of Rome officers called *Tenebræ*, (i. e. darkness) are sung on holy Friday, and the day preceding and succeeding it. The lights are extinguished, and nearly at the conclusion of the service, a solemn silence is observed—when suddenly a tremendous noise ensues, in token of the rending of the veil of the Temple. In London, *Cross Buns*—(so called from the cross impressed upon them)—form the general breakfast on *Good Friday*. In some counties, a stock of cakes is preserved as a cure for the faithful throughout the year—a remnant of the sacramental water or *housell* of the Church of Rome, as practised by the priests nearly eight centuries ago.

EASTER DAY.—Is the day on which our Saviour rose from the dead; the third day after Good Friday. The word Easter signifies "to rise."—This grand festival was so anciently observed by the Church, that no one in former times doubted that it was established by apostolical authority. As all Christians on the preceding *Friday*, stood as it were, mournfully by the cross of their Saviour, and the next day were overwhelmed with grief for his departure; the Church on this day, upon the first notice of his resurrection from the grave, calls upon us, with a becoming and holy transport, to turn our heaviness into joy, to put off our sackcloth, and gird ourselves with gladness.

Among the primitive Christians, this queen of feasts, as they called it, was so highly esteemed, that it was solemnized fifty days successively; but as devotion abated, this feast was shortened; the whole week however, was for a long time observed as holidays, for the expression of their joy for our Lord's resurrection.

From the New Monthly Magazine for August 1816.

FIRST OF APRIL: OR, APRIL FOOLS'-DAY.

"THE FIRST OF APRIL was anciently observed in Britain as a high and general festival, in which an unbounded hilarity reigned through every order of its inhabitants; for the sun at that period of the year, entering into the sign *Aries*, the *new year*, and with it the season of rural sports and vernal delight was then supposed to have commenced. The proof of the great antiquity of the observance of this annual festivity, as well as the probability of its original establishment in an *asiatic* region arises from the evidences of facts afforded us by a chronology, which shall presently be adduced. Although the reformation of the year by the *Julian* and *Gregorian* calendars, and the adoption of its commencement to a different and for a nobler system of theology, have occasioned the festival-sports, anciently celebrated in the country on the *first of April* to have long since ceased; and although the changes, occasioned during a long lapse of years by the shifting of the equinoctial points, have in Asia itself been productive of important astronomical alterations as to the exact era of the commencement of the year; yet on both Continents, some very remarkable traits of the jocundity which then reigned, remain even to these distant times. Of those preserved in Britain, none of the least remarkable or ludicrous is that of making *April Fools*, as it is called, on the *first day* of that month; but this Colonel Pearce has proved to have been an immemorial custom among the Hindoos (in the second volume of *Asiatic Researches*) at a celebrated festival, holden about the same time in India, which is called the *Huli festival*. I shall insert the Colonel's own words:

"During the *Huli*, when mirth and festivity reign among Hindoos of every class, one subject of diversion is to send people on errands and expeditions that are to end in disappointment, and raise a laugh at the expense of the person sent. The *Huli* is always in March and the *last day* is the general holiday. I have never yet heard any account of the origin of this English custom, but it is unquestionably very ancient, and is still kept up even in great towns, though less in them than in the country. With us it is chiefly confined to the lower class of people, but in India high and low join in it; and the late Suraja Doulah, I am told, was very fond of making *Huli* fools, though he was a Mussulman of the highest rank. They carry the joke here so far as to send letters, making appointments, in the names of persons who it is known must be absent from their home at the time fixed upon, and the laugh is always in proportion to the trouble given."—*Maurice's India Antiquities*.

CHRISTMAS DAY,

From the Calvis Calendaria.

"This Grand Festival is universally observed on the 25th December, in memory of the NATIVITY of JESUS CHRIST; whence the term

CHRIST'S Mass from the appellation. **CHRIST**, having been added to the name of **JESUS**, to express that he was the *Messiah*. The *Mass* of **CHRIST**, as originally used by the Church, implied solely the festival celebrated.

From the various alterations in the Roman Calendar, arose the inaccuracy that certainly prevails, in keeping the day of our **LORD'S** nativity, which did *not* take place on the 25th December, but at the time the Jews kept their Feast of Tabernacles.

The **FIRST CHRISTIANS** kept the **NATIVITY** on the 1st of January, conforming in this computation to the *Roman year*. On the **FEAST** of **TABERNACLES**, they decorated their Churches with green boughs, as a memorial that **CHRIST** was actually born *at that time*.

The custom of ornamenting churches and houses with evergreens at Christmas, is still pretty generally observed.

The now almost obsolete custom of making presents at this season, under the title of Christmas Boxes, arose from the custom of a box devoted to every ship which sailed on a voyage being deposited with a priest, into which money might be dropt to give efficacy to the prayers of the Church, and these Boxes being opened at Christmas in each year, thence acquired the name of **CHRISTMAS BOXES**. This in process of time, became the familiar name of presents themselves, and the poorer classes were encouraged to beg of their richer neighbours **BOX MONEY**, or in other words, money to supply the Priest's box.

The ancient salutation of **A MERRY CHRISTMAS**, like that of a **HAPPY NEW YEAR**, adverted to the hospitality of the rich whose spacious Halls, crowded with tenants and neighbours, were scenes of boundless hospitality. "*Round about our Coal fire*" they were regaled with the most substantial fare the season could afford. The first dish was generally a **BOAR'S HEAD**, and sometimes a Gammon of Bacon. The Boar's head is yet served upon Christmas Day at Queen's College, Oxford—where it is solemnly usher'd into the Hall with a *Monkish Carol*. Both these dishes were meant to express an abhorrence of Judaism.

PLUM PUDDINGS were emblematical, from their ingredients, of the offerings to the wise men; and **MIXED PIGS** with pieces of paste over them in the form of a *cratch* or *hay rack*, commemorated the manger in which our **Saviour** was first laid. A composition of *Als, Sugar, Nutmeg, &c.* called **LAMB'S WOOL**, passed joyfully from hand to hand in the **Wassail Bowl** the name given to the vessel out of which the Saxon colonists in Britain took such copious draughts, as even to call for legislative interference. **WASSAIL** is a corruption of the words **WAE HEAL, Be of health**.

When Hengist and Horsa first visited Britain at the solicitation of Vortigern prince of the Silures, the British chief became enamoured of Rowena, the niece of HENGIST, at a Banquet prepared by the stranger in honour of Vortigern, the Princess, instructed by her Uncle, presented to the aged Prince a Cup of spiced wine, and with a smile welcomed him in the words **WAE HEAL HALFORD CYNING** or *Be of health Lord King*, to which, through his Interpreter he answered "**DRINK HEAL**" or *I drink your health*. The event is narrated by Robert of Gloucester, but as the vocabulary of this ancient Rhymer

may not be intelligible generally to our readers, we shall prefer the more modern paraphrase in the Antiquarian Repertory:

“ Health, my Lord King, the sweet Rowena said;
 Health, cried the Chieftain to the Saxon Maid;
 Then gaily rose, and ‘mid the concourse wide
 Kissed her hale lips, and placed her by his side.
 At the soft scene such genile thoughts abound,
 That healths and kisses ‘mongst the guest went round;
 From this the social custom took its rise,
 We still retain, and still must keep the prize.

WASSAIL OR WASSAIL from that period, because the name of the Drinking Cups of the Anglo Saxons; and the custom of drinking healths, derived from their Saxon Ancestors, still remains amongst the English and those descending from them; hence drinking parties were called WASSAILS, and the Jolly Bacchanals WASSAILERS.

Christmas, considered as a religious festival, is one of the first consequence; and although, from the change which modern luxury has introduced in the manners of the age, many of the solemnities with which it was formerly observed are now discontinued, it still is marked as a period when a more social intercourse takes place between the different classes of society, and one at which the poor are considered as having, amidst the general festivity which prevails, a stronger claim upon the benevolence and charity of their richer neighbours. The reader will find an interesting account of Christmas, as it was observed in the early part of the last century, in one of the first numbers of the Sketch Book.

BRIEF ANNALS
OF
PUBLIC EVENTS,
FROM THE
DISCOVERY OF AMERICA,
TO THE
DIVISION OF THE PROVINCE OF QUEBEC INTO
UPPER AND LOWER CANADA.

IT has been judiciously remarked by the author of the American Annals, that the remarkable discovery of a New World, (which has been receiving inhabitants from the old for more than three hundred years,) and those events, and actions, which are connected with it, can now be accurately ascertained, without having recourse to such legends as have darkened and disfigured the early annals of most nations.

It is the purpose of the Compiler of these Annals to confine himself, (after noticing the Discovery of Columbus,) to such events as relate to Canada only.

C. F.

BRIEF ANNALS,

Æt. Æt.

ANNO DOMINI 1492.—On the 3rd day of August, CHRISTOPHER COLUMBUS set sail from *Palos in Spain*, with three vessels and ninety men; and on the 11th of October following, discovered land on one of the Bahama Islands. This was the first certain knowledge possessed by modern Europeans of any part of the New World *

1497.—Henry VII. of England gave permission to John Cabot to take six ships, with all things necessary for a voyage of discovery in North America. Early in June, in the same year, having his son, Sebastian, with him, he discovered part of Newfoundland; he next saw and named the Island of St. John; and, continuing a westerly course, he afterwards arrived at the Continent, along the coast of which he sailed, northerly as far as 67 and a half north latitude.

It is remarkable that no further attempts towards discovery were made by the English for upwards of sixty years afterwards, if we except the proposed expedition of Elliot and Ashurst.

1502.—Hugh Elliot and Thomas Ashurst, merchants of Bristol, with two other gentlemen, obtained a patent from Henry VII. for the establishment of Colonies in the countries then lately discovered by Cabot; but it is not known whether they availed themselves of this permission, or made any voyage to the New World.

1506.—Jean Denys, a Frenchman, sailed with his pilot, Camart, a native of Rouen, from Harfleur to Newfoundland, and drew a map of the Gulf of St. Lawrence and the adjacent coast.

1508.—Thomas Aubert, who made a voyage in this year from Dieppe to Newfoundland, was the first who sailed up the great River St. Lawrence to the country of Canada. This man carried off some of the natives, and exhibited them in Paris.

1517.—The cod fishery on the banks of Newfoundland had, by this time, attracted the attention of several European nations, for there were fifty Spanish, French, and Portuguese ships employed in it this year.

1522.—Newfoundland, settled by different nations before any part of Canada, is said to have contained, at this period, about fifty houses.

1527.—The scheme of discovering a passage to the East Indies by the North West being resumed in England, a voyage was made, by the advice of Robert Thorne, of Bristol, with two ships, furnished out by Henry VIII; but it proved unsuccessful, and even disastrous, for one of the ships was lost. Hakluyt says, this *Master Thorne* was "a notable member and ornament of his country," and that he exhorted the King with "very weightie and substantiall reasons, to set forth a discoverie even to the North Pole."

* We say *modern*, because we are believers in the success of the famous expedition of *MADOC*, from Wales, in the 12th century. *Ed.*

1535.—Cartier discovering now the river of Canada, which gradually obtained the name of St. Lawrence, sailed up this noble stream more than three hundred leagues to a great and swift fall or rapid; formed alliances with the natives; took possession of the territory, built a fort; and wintered in the country, which he called *New France*. He, at this time, visited Huchelaga, which he called *Mount Royal*, (afterwards Montreal,) a large Indian settlement. This was the first attempt made by the French to form a settlement in America.

Charlevoix says, the name of the St. Lawrence was first given to the bay, next to the Gulf, and then to the River of Canada.

On this expedition of Cartier's, he carried off Donnacona, a Chief of the natives, and Hakluyt says, "the poore king of the country, with two or three of his chiefe companions, coming aboarde the French shippes, being required thither to a banquet, was traiterously carried away into France, where he lived four yeares, and then dyed a Christian there."

1536.—A voyage was made from England to Newfoundland, by 120 persons, 30 of whom were gentlemen of education, and character, at the head of whom, according to Hakluyt, was "one Master Hore of London, a man of goodly stature and of great courage, and given to the studie of Cosmographie, &c." Cape Breton was discovered during this voyage, but the expedition was eventually so disastrous, through famine, that the survivors were constrained to support life by feeding on the bodies of their dead companions.

1540.—Francois de la Roque, Lord of Roberval, a nobleman of Picardy, and the King of France's Lieutenant General and Viceroy in Canada, sent out Cartier, with five ships, to Canada, this year, intending to follow him with two other ships, fitted out at his own expense, for the purpose of colonizing some part of the banks of the St. Lawrence.

1542.—The Lord Roberval, himself, arrived in Canada this year, and built a fort, and wintered about four leagues above the Island of Orleans (which was at first called the Isle of Bacchus.) Purchas says, this fort was "faire and strong."

1548.—The first Act of the English Parliament relating to any part of America was made this year; this was to protect and encourage the English fishery on the banks of Newfoundland.

1549.—In this year, Lord Roberval, accompanied by his brother and a numerous train of adventurers, again embarked for the river St. Lawrence; but they were never heard of afterwards;—a disaster which discouraged the government and people of France, that for more than fifty years no further measures were taken for supplying the few settlers that remained in Canada.

1576.—Martin Frobisher was sent out by Queen Elizabeth, with three small ships, and discovered Elizabeth's Foreland, and the straits, which still bear his own name. He entered a bay in N. L. 53 degrees, and carried off one of the natives, whom, Hakluyt says, "for very choler and disdain, bit his tongue in twaine within his mouth."

1577.—The discovery of supposed gold ore by Frobisher, in his voyage of last year, encouraged the society of adventurers to send him out, with three other ships, to explore the coast of Labrador and Greenland, with an ultimate view of discovering a passage to India; but he

again returned without success, though he brought away nearly 200 tons of this supposed gold; and with it a man, woman, and child, of the natives—but Stow says in his Chronicle that “neither the man, woman, nor child lived long: nor did his gold prove ore but dross.”

1578.—Frobisher sailed again for this northern Continent, with no fewer than fifteen ships, in search of gold, and was foolish enough to carry home immense quantities of the same glittering stones (most probably *micaceous mica*, or *talc*) to the utter ruin of many adventurers.

1681.—The French trade to Canada was renewed, after an interruption of nearly 50 years.—The cause of which interruption was the carrying off the Indian king or chief in 1635, by Cartier, an outrage that could not be forgiven by the natives, who would have no dealings, or intercourse with the French for so many years afterwards.

1683.—Sir Humphrey Gilbert, by virtue of a commission which he carried from Queen Elizabeth this year, took possession of St. John's in Newfoundland and two hundred leagues every way around it, for the Crown of England, and published laws for the government of the territory. This formal possession, in consequence of the discovery by the Cabots, is considered the foundation of the right and title of the Crown of England to the territory of Newfoundland, and the fishery on its banks.

The renewal of the French trade with Canada was so suspicious, that three ships, one of them of 480 tons, were employed this year in that trade.

1686.—Sir Walter Raleigh introduced the fashion of smoking Tobacco in England. It had been carried thither for the first time in 1675 by Sir John Hawkins, but was then considered as a mere drug, and Stow says in his Chronicle that “all men wondered what it meant.” But Raleigh, and a Mr. Law, had learned the practice of smoking, through pipes made of clay, from the Indians of Virginia. This singular plant appears to have been used in all parts of North America. In the account of Cartier's voyage in 1635, it appears that it was used in Canada, and a particular account is given of the manner of preserving it. “There groweth a certain kind of herbe, whereof in summer they make a great provision for all the year, making great account of it, and only men use of it, and first they cause it to be dried in the sunne, then weave it about their neckes wrapped in a little beastes skinne made like a little bagge, with a hollow piece of stone or wood like a pipe; then when they please they make powder of it and then put it in one of the ends of the said cornet or pipe, and laying a cole of fire upon it, at the other ende, sucke so long that they fill their bodies full of smoke, till that it cometh out of their mouth and nostriles, even as out of the tonnell of a chimney.”—Hakluyt, iii 224.

1591.—The *Walrus* or *Morse* must have been common in and about the Gulf of St. Lawrence; for this year, we find that a fleet of ships was fitted out from the port of St. Malo, in France for Canada, and to hunt for *Morses* about the bay of St. Lawrence, whose teeth were sold at a much dearer rate than Ivory. They also obtained oil in vast quantities from the bodies of those animals. An English Voyager in Hakluyt says, there were 15,000 of these creatures killed, this year, by one small bark at Ramea, an island lying within the straits of St. Peter, back of Newfoundland, in N. Lat. 47.

1598.—George Drake, an Englishman, made a voyage up the Gulf of St. Lawrence, to the Isle of Ramea, and carried home intelligence of the profitable trade of the French and others in these parts of America.

1598.—The Marquis de la Roche received a commission from Henry IV. to conquer Canada; but returned without doing any thing of consequence, and shortly afterwards died of vexation.

1600.—On the death of La Roche, his patent was renewed in favor of M. de Charvin, who made a voyage up the St. Lawrence as far as Tadousac, where he left some of his people; and returned with a freight of Furs. The following year he sailed again and proceeded as far as *Trois Rivieres*.

1603.—Pierre du Gast, Sieur de Monts, a gentleman of the bed chamber to Henry IV. of France, received a patent of the American territory from the 40th to the 46th deg N. Lat. constituting him Lieutenant General of the country, with power to Colonise it and subdue and convert the natives to Christianity.

Samuel Champlain of Brouage in France, anchored at Tadousac this year, and made discoveries in the neighbouring territory.

1608.—Champlain, being sent out at the head of a colony with three ships for the purpose of making a permanent settlement this year laid the foundation of Quebec, the future capital of Canada, after having examined all the most eligible situations in Acadia and along the river St. Lawrence. Subsequent experience has proved the wisdom of his choice. Champlain says that Quebec was the Indian name of the place. "Trouvant un lieu le plus estroit de riviere, que les habitants du pays appellent Quebec, j'y bastir et edifier une habitation; et desfricher des terres, et faire quelques jardinages."

1612.—The English Colony in Conception Bay, Newfoundland, this year consisted of 54 men, 6 women, and 2 children.

1621.—This year Acadia first received the name of *Nova Scotia*, its whole territory being granted by that name to Sir Wm. Alexander, of Minstry, by King James I.

1627.—The Colony of Quebec, by direction of Cardinal Richelieu, then the sole Minister of France, was taken out of the hands of the French Protestants, and together with its trade, placed under the management of one hundred persons called "*The Company of One Hundred Associates*," at the head of which was the Cardinal himself, with the Marshal Desai, and other persons of eminence. Charlevoix thinks nothing could have been better planned; and that France would have been the most powerful colony in America, had the execution been answerable to the design.

1630.—A commission having been given by Charles I. to David Kerk, and his valiant kinsmen, to conquer the American Dominions of France, Kerk had attacked Canada in July, 1628, and still carried on his military operations with vigour.—Louis and Thomas Kerk, appearing again at this time off point Levi, sent an officer on shore to Quebec, to summon the city to surrender; Champlain, then in chief command, knowing his means to be inadequate to a defence, surrendered the city by capitulation. The terms of this capitulation were very favourable to the French Colony, and they were so punctually and honourably fulfilled by the English, that the greater part

of the French chose to remain with their captors, rather than go, as had been stipulated to France—"Thus was the capital of *New France* subdued by the arms of England, just one hundred and thirty years before its final conquest by the celebrated Wolf."

1632—Charles I. by the treaty of St. Germain, resigned the right which he had claimed to *New France*, *Acadia* and *Canada*, as the property of England, to Louis XII King of France. Chalmers says, the signal event of the capture of Quebec was unknown when peace was re-established in April, 1629; and assigns this as the reason why King Charles, at that treaty, absolutely restored to France those territories generally and without limits; and particularly *Port Royal*, *Quebec* and *Cape Breton*. From the restitution of these territories to France, may be dated the commencement of a long train of evils to the British Colonies, and to England, to this transaction, in the judgment of the able historian, last quoted, may be fairly traced back the colonial disputes of latter times, and the American revolution.

1635—Rene Rohault, having become a Jesuit, resumed a project, which had been interrupted by the English conquest of Quebec, of founding a college in that city: a seminary that had been planned ten years before. This institution succeeded; and, it is said, was of essential service to the colony—Many Frenchmen were now encouraged to embark with their families for Canada.

M. Champlain died at Quebec this year—he was justly regretted by the whole colony of New France, of which he might be said to be the parent. He had penetration, courage, constancy, probity, and patriotism—Charlevoix says of him, that he was "un historien fidele et sincere, un voyageur, qui observe tout avec attention, un ecrivain judicieux, un bon geometre, et un habile homme de mer."

1639—A Nunnery of French Ursulines was founded at Quebec, *Madame de la Peltrie*, a pious Catholic lady, devoting both her time and fortune to this design, went to Quebec with three Ursulines, attended by Le Jeune, Superior of the Jesuit mission into Canada. Entering the city under a general discharge of cannon, they proceeded with much triumph, amidst the acclamations of the people, to the church, where *Te Deum* was sung, with great solemnity, for their arrival.—Charlevoix says that this *Madame de la Peltrie* had such zeal for the conversion and comfort of the native Canadians, that she actually cultivated the earth with her own hands, to increase her power of doing good. The Hospital, called *l'Hotel Dieu*, was founded the preceding year at Sileri, by *Madame la Duchesse d'Alguillon*.

1642—MAISONNEUVE, a gentleman of Champaign, who the preceding year, brought over several families to Montreal, now entered with them into possession of their new habitation, and Chapel, on this island, with many religious ceremonies.—In 1640 the French King had vested the property of the island in 35 associates, of whom *Maisonneuve* was one; and on the 15th of October 1641, he was declared Governor of the Island.—*Charlevoix Nouvelle France*.

1647—The French in Canada, in their trade with the neighbouring Indians, had, for several years, been obstructed by the *Mohawks*—Unable to subdue that formidable tribe without assistance, about this time, they sent M. Marie as an agent to solicit aid from the *Massachusetts*, with offers of liberal compensation, but the government of

that colony rejected the alluring proposal. It is said this Marie was a *Jesuit*, and offered a large sum for assistance; but the English gave the very wise answer that the *Mohawks* had never injured them, and they would have nothing to do with the business.

1648.—The Colonists of New England sent to the Governor and Council of Canada a proposal of perpetual peace between the Colonies, though the mother countries might be at war; although the French were much pleased with the proposal, and anxious to conclude an agreement of this kind, the business terminated without success, because the English were firm in their determination not to assist the French against the *Iroquois*.

1649.—In the month of March, one thousand *Iroquois* suddenly attacked the Huron village of St. Ignatius, containing 400 persons, all of whom, three only excepted, were massacred.

1654.—About this period the *Eries*; a numerous tribe of Indians which inhabited the borders of Lake Erie, were so effectually exterminated by the *Iroquois*, that were it not for the name of the Lake, we should have no memorial of their former existence. Charlevoix calls them "la nation des Eriez, ou de *Chal*."

1655.—The *Onondagas* sent deputies to Quebec to solicit missionaries of the French, a number of whom were accordingly sent to that tribe, and many of the heads of it became converts to the Christian Religion.

1660.—Francois de Laval Abbot of Montigny, being appointed Bishop of Canada, came over and brought, for the first time, some Monks of other orders besides the *Jesuits*.

1664.—The Rev. John Eliot completed his translation of the Bible into the Indian language, which was printed at Cambridge, and entitled "Manusse *Wunnectupanatanwoc* UP BIRIUM GOD *Naneewoc* NUXKONE TESTAMENT *Kah Wonk Wuseku* TESTAMENT."

1665.—M. de Courcelles being appointed Governor of New France, transported the regiment of Carignan Salieres to Canada this year.—It consisted of 1000 foot, a great number of families, numerous mechanics, hired servants, horses (the first ever seen in Canada) cattle, and sheep were brought to this country at the same time. The 100 associates in whom the property of the Colony was vested, had grown weary of the expense of maintaining their colony; and from the year 1644 abandoned the Fur Trade to the inhabitants, reserving to themselves, as their right of lordship, an annual payment of 1000 Beavers.—Reduced at length to the number of 45 associates, they made a total resignation of all their rights, 1662, to the French King; who soon afterwards, included New France in the grant which he made of the French Colonies in America, in favour of the West India Company formed by the great Colbert.

1666.—The *Mohawks*, having greatly annoyed the French, were attacked this year by a French army of 28 companies of foot and the whole militia of the Colony. This formidable body of troops marched upwards of 700 miles, in the depth of winter, from Quebec into the country of the *Mohawks*, with a view of utterly destroying them; but the Indians retired, with their women and children, into the depth of the woods, leaving only a few ancient *SACHEMS* in the villages, who chose rather to die than desert their habitations. These

were murdered by the French, and their villages burnt; yet, nothing of political importance was gained by this expedition, which was commanded by M. de Tracy, in person, who was then upwards of 70 years old.

1667.—Peace was at length established between the French and the Five Nations, which continued for several years, and they cultivated a mutual trade. The Sieur Perot, a French Missionary, travelled more than 1200 miles to the westward of Quebec, making proselytes amongst the Indians as he went along.

1670.—A terrible disease broke out amongst the Indians in the northern parts of Canada, it swept off whole tribes, particularly the tribe of *Atlikamegues*, which has never since been heard of—*Tadousac*, the chief mart of the Indian fur trade with the French, was deserted, as also *Trois Rivières*, where the small pox carried off 1500 Indians at once.

1671.—A grand Congress of the French, and of many Canadian Indians, was held this year at the Falls of St. Mary; where the Indians professed submission to the King of France, in a formal manner.

1672.—M. de Courcelles, Governor of Canada, built a fort on the north side of the outlet of Lake Ontario, (*near the modern Kingston*.) as a barrier against the Iroquois, pretending, however, that he merely intended it as a place of trade, and for their mutual accommodation.

1673.—The Count Frontenac completed the fort on Lake Ontario, begun last year by Courcelles, and called it after his own name. The French likewise built a fort at Michilimackinac.—Father Marquette, in company with one Joliet, a citizen of Quebec, employed by M. Talon, for the discovery of the Mississippi, entered that noble river on the 17th of June, and descended it to a point within three days journey of the Gulf of Mexico, when they returned to Canada. The French had received information of this river from the Indians. Ferdinand de Soto had discovered the country on the Mississippi 130 years before, but the Spaniards did not see fit to settle it.

1674.—Quebec was made a Bishopric.

1678.—M. de Sale re-built the Fort Frontenac with stone. He also launched a Bark of ten tons on Lake Ontario, and in the year following another vessel of 60 tons on Lake Erie. About this time he likewise inclosed a little spot of ground at Niagara with stockades, intended for a Fort.

1680.—The Father Hennepin, with M. Dacan, sent out on discovery by M. de la Sale, ascended the Mississippi, from Canada, as far as the falls of St. Anthony.

1682.—M. de la Sale descended the Mississippi to the sea, and took possession of all the country watered by that mighty stream, in the name of Louis XIV; calling it in honour of the King, *Louisiana*.

1683.—The French erected a Fort between the Lakes Erie and Huron.

1684.—M. de la Barre, with a large army from Canada, made an unsuccessful expedition into the country of the Five Nations. De la Barre found it necessary to conclude his campaign with a treaty. He was met, at the place appointed, by the *Oncidas*, *Onondagas*, and *Coy-*

ugas; the *Mohawks* and *Senecas* refusing to attend. Seated in a chair of state, surrounded by his own Indians (principally the *Hurons* of *Lorette*) and the French officers, he addressed himself to Garangula, an *Onondaga* Chief, in a very haughty speech, which he concluded with a menace to burn the castles of the Five Nations, and destroy the Indians, unless the satisfaction, which he demanded, was given.

Garangula who sat at some little distance before his men, with his pipe in his mouth, and the *Great Calumet of Peace* before him, did nothing but look at the end of his pipe during this harangue;—when it was finished, after walking five or six times round the circle, in silence, he stood perfectly upright, and thus answered the French General:—

"Oonuntio, I honor you, and all the warriors who are with me honor you,—Your interpreter has finished your speech. I now begin mine. My words make haste to reach your ears; harken to them.—Oonuntio, in setting out from Quebec you must have imagined that the scorching beams of the sun had burnt down the forests, which render our country inaccessible to the French; or, that the inundations of the Lakes had shut us up in our castles; but now you are undeceived; for I and my warriors have come to assure you that the *Senecas*, *Cayugas*, *Onondagas*, *Oneidas*, and *Mohawks*, are yet alive." After ascribing the pacific overtures of the General to the impotence of the French, and repelling the charges brought against his countrymen, he added: "We are born free; we have no dependence, either on the Oonuntio, or the Corlar." This speech, which affords an interesting specimen of the spirit and eloquence of the aboriginals, has this fine conclusion—"My voice is the voice of all the Five Nations—Hear what they say; open your ears to what they speak—The *Senecas*, *Cayugas*, *Onondagas*, *Oneidas*, and *Mohawks*, say, that when they buried the hatchet at *Catercauy*, in the presence of your predecessor, in the very centre of the Fort, and planted the tree of peace in the same place, it was then agreed that the Fort should be used as a place of rendezvous for merchants, and not as a refuge for soldiers.—Hear, Oonuntio, you ought to take care, that so great a number of soldiers, as appear now, do not choke the tree of peace, planted in so small a tort, and hinder it from shading both your country and ours with its branches. I do assure you, that our warriors shall dance to the Calumet of Peace under its leaves, and that we will never dig up the ax to cut it down, until the Oonuntio or the Corlar shall either jointly or separately endeavour to invade the country, which the Great Spirit has given to our ancestors. This belt confirms my words; and this other, the authority, which the Five Nations have given me."

Enraged at this bold reply, De la Barre retired to his tent, and prudently suspended his menaces. Two days after, at the conclusion of the peace, the Indian chief and his retinue returned to their country, and the French army embarked in their canoes for Montreal.

1695—The inhabitants of Canada amounted to 17 000; three thousand of whom were supposed to be capable of bearing arms. Chalmers says, these numbers were taken from an accurate account made by order of the government.

* Titles given by the Indians to the Governors of Canada and of New York.

1687.—In this year the French Cabinet took measures to destroy, as was intended, at one blow the whole British interest in North America. M Denonville, who had succeeded De la Barre, took the field at the head of 1500 French, and 500 Indians. The Senekas, who had refused to meet De la Barre at the late treaty, were known to be most firmly attached to the English, it was therefore determined either to extirpate that tribe, or so to humble them, as to render them examples of French resentment to all the other Indians.

Denonville commenced his march from Cataracuy on the 23d of June. In this campaign, the scouts of the French army had advanced as far as the corn of the villages without seeing a single Indian; though they passed within pistol shot of 500 Senekas, who laid on their bellies, and suffered them to pass and repass, without disturbing them. But, on a sudden, when the invading army had approached within a quarter of a league from the chief village of the Senekas, the war shout arose, in terrific effect, intermingled with a discharge of fire arms from all sides. This surprize threw the French into confusion, and the Senekas fell upon them with great fury; but the French Indians being rallied, in the end repulsed them. In this action there fell about 100 of the French, 10 French Indians, and 80 Senekas. The next day Denonville continued his march with the intention of burning the village; but he found it already in ashes. The Senekas had burnt it and fled. Two old men only were found in the castle, who were cut into pieces and boiled, to make soup for the French allies. (see Colden p. 78.) The valour of the French army was next employed in destroying the corn of the Indian plantations, which they effectually accomplished; and thus ended the *extirpating* campaign of Denonville!

Before Denonville returned into Canada he built a Fort, with four bastions, at Niagara, in which he left a garrison of 100 men with provisions; but it was soon afterwards abandoned.

1689.—On the 27th of June, the Senekas, Cayugas, Onondagas, and Oneidas, renewed their covenant with the English. Colden says this renewal was previous to the arrival of Count Frontenac, who came over on the 2d of October, this year as Governor of Canada, at the advanced age of 68 years, in the room of Denonville, who was recalled.

A body of 1200 Indians of the Five Nations invaded the island of Montreal on the 26th of July, burnt all the plantations, and made a horrible massacre of men, women, and children, throwing the whole French Colony into the utmost consternation; inasmuch, that Valrenes, the commandant at Cataracuy was ordered by Denonville to abandon that place—SMITH (in his N York, p. 56) says, that 1000 French were slain in this invasion, and 26 carried off and burnt alive. Charlevoix's account is horrible—" *Ils ouvriront le sein des femmes enceintes, pour en arracher le fruit, qu'elles portoient, ils mirent des enfans tout rivan a la broche, et contraignirent les meres de les tourner pour les faire rotir.*"

In a conference held this year between the English Colonies and the Five Nations, the latter promised to preserve "the chain (which united them) inviolable", and said "we wish that the sun may always shine in peace over all our heads, that are comprehended in this chain."

1690.—An unsuccessful attack on Quebec was made this year by the English forces, from the Colonies, under the command of Sir W. Phipps. The fleet did not arrive before that fortress until the 5th of October. The largest ships carried 44 guns. A simultaneous attack on Montreal, by the way of Lake Champlain, at the same time, was designed, but the army was compelled to retreat by sickness (as it is said :) and the fleet, after many disasters, arrived at Boston on the 19th of November.

1693.—Count Frontenac invaded the country of the *Mohawks* from Canada, but his army, after encountering the greatest hardships, and losing 80 men killed, and 30 wounded, found it necessary to return without accomplishing any thing material. A great quantity of Fur had been accumulated by the French at Michilimackinac; but the Five Nations had so effectually blocked up the passage between that place and Canada, that they had remained useless for several years. At length, however, a fleet of 200 canoes, laden with furs, arrived at Montreal, and Colden says, this arrival "gave as universal a joy to Canada, as the arrival of the *Galleons* gave in Spain."

At this period Canada contained, by computation, 180,000 souls. There were six churches in Quebec.

1694.—*Decanesora*, who had for many years the greatest reputation among the Five Nations, as a speaker, arrived in Canada, with many other deputies, to hold a treaty with the French. "This *Decanesora* was grown old," says Colden, "when I saw him, and heard him speak; he had great fluency, and a graceful elocution that would have pleased in any part of the world. His person was tall and well made; and his features, to my thinking, resembled much the *bustos* of Cicero."

It is not clear how this treaty terminated, or whether there was any made; for, we find this same *Decanesora* very soon afterwards assuring an English conference, at Albany, of a fact that could not be very satisfactory to the French. Addressing Gov. Fletcher of New York, the orator gave the following passage, as part of his speech to the Governor of Canada—"Omnitio, we will not permit any settlement at *Cataracui*; you have had your fire there thrice extinguished. We will not consent to your rebuilding that fort, but the passage, through the river shall be free and clear. We make the sun clear and drive away all clouds and darkness, that we may see the light without interruption."

1695.—The Five Nations having now positively refused to accede to the terms proposed by the French, Count Frontenac determined to compel them to submission. Having previously sent out 300 men, in the hope of surprising them on their hunting ground, between Lake Erie and Cataracui Lake (now Ontario.) and at the same time to

* Here is an apparent inconsistency—A. D. 1685—It is said there were only 17 000 inhabitants by a census accurately taken. Now, in 1693, only eight years afterwards, 'tis said there were 180 000 by computation. The only way for accounting for this extraordinary difference is to suppose that the first census comprehended the *white* population only, and that in the latter statement, all the Indian tribes were included.—Ed.

view the old French Fort there; he, in the summer of this year, sent out a considerable body of French and Indians, to repair the fortifications at Cataracuy, in which work they were completely successful, and restored its former name, *Fort Frontenac*.

1696.—The Count Frontenac having secured his Fort at Cataracuy resolved to make the Five Nations feel his resentment.—Having assembled all the regular troops and the militia of Canada, at Montreal, together with the *Oucnagungas*, the *Qualoghies* of Loretto, the *Adirondacks*, *Sokokics*, *Nepiciriniens*, the *Praying Indians* of the Five Nations, and a few Utawawas, he marched with this formidable army from that Island on the 4th of July. After twelve days march the French army arrived at Cataracuy. On approaching Onondago, the Indians hearing of the formidable power of the French, by a *Seneca* deserter, thought it prudent to retire, after setting fire to their poor fort and bark cottages. All the French did here was to destroy a very extensive field of corn. The Chevalier de Vaudreuil was dispatched with 6 or 700 men to destroy another field of corn, belonging to the *Oneidas*, at no great distance, which was accomplished; and these feats, with the capture of 35 *Oneidas*, who staid to welcome the French, in one of their little Forts, were all the achievements of this grand enterprize. The fact was, the French experienced the insurmountable difficulty of supporting so large an army in a wilderness, and they were obliged to return to Montreal on the 10th of August, without doing any thing more.

1698.—Count Frontenac died, aged 78 years. Charlevoix speaks thus highly of him. "He retained all the firmness, and all the vivacity of his best years; and died, as he had lived, beloved by most, esteemed by all, and with the glory of having, without scarcely any succours from France, sustained and augmented a colony, open and attacked on all sides, and which he had found on the point of ruin.

1699.—M de Calliers, succeeding the Count Frontenac, as Governor of Canada, terminated the disputes between the French and the Five Nations, by agreeing to have an exchange of prisoners at Onondago. Colden says this peace was esteemed by the Canadians as the greatest blessing heaven could grant them, "*for nothing could be more terrible than this last war with the Five Nations.*" When the French Commissioners came to Onondago, *Dequesora* met them without the gate, and complimented them with three strings of wampum. "*By the first he wiped away their tears for the French, who had been slain in the war; by the second he opened their mouths, that they might speak freely; by the third he cleaned the nut, on which they were to sit, from the blood that had been spill on both sides.*"

1715.—A recent misfortune of the Canadians, in the loss of a large and richly laden ship, proved eventually a signal benefit; for it compelled the colonists to raise hemp, and flax which, by permission of the French Court, they many actured into linens and stuffs, to the great advantage of the colony. This ship was called the *Sphinx* and was captured by the English. She was bound to Quebec, and had on board the Bishop of that City, a great number of ecclesiastics and women of large fortunes, with a general cargo of the estimated value of 1,000,000 *livres*.

At th

1709.—A plan was formed by Lord **FUNDERLAND**, Secretary of State, for the subversion of the French power in Canada, Acadia, and Newfoundland by joint forces from England, and her Colonies in America, but it was not carried into effect.

1710.—Col. Schuyler, impressed with a deep sense of the necessity for vigorous measures against the French, made a voyage from N York to England, on purpose to convince the Ministry of the absolute necessity of reducing Canada to the Crown of Great Britain. He was accompanied by Five Indian Chiefs, who gave their assurance of fidelity to Queen ANNE, and solicited her assistance against their common enemy, the French. The appearance of these *Sachems* in England excited much interest.

1712.—The Merchants of Quebec raised 50,000 crowns for the purpose of completing the fortifications of that City.

1714.—At this period, Canada could not raise more than 4,484 men able to bear arms, from the age of 14 to 60; but she had, besides, 23 companies of marines, who were paid by the King of France, and these contained 627 soldiers—(Charlevoix.)

1715.—*Ginseng* was discovered in Canada this year, by Father **LASITAN**, a Jesuit.

1727.—John Thomas, a praying Indian of the *Mohawks* who had been amongst the first converts to Christianity, and always a steady friend to the English, died this year at the advanced age of 110 years.

1749.—Acadia, being ceded to Great Britain by the treaty of *Aix la Chapelle*, changed its name to Nova Scotia. Parliament aware of its importance, resolved to colonize it forthwith, and voted £40,000 in aid of that purpose. Advantageous terms being offered, 3760 adventurers accepted them, and settled at the bay of Chebucto. Every soldier and seaman was allowed 50 acres; an Esquire 200; a Lieutenant, 300; a Captain 460; and every officer of higher rank, 600 acres; together with 30 for every servant. They were furnished with instruments for fishing and agriculture, had their passage free, and provisions found them for the first year after their arrival.—(Hewitt.)

At this time the Militia of Canada amounted to 12,000 men, the regular troops to 100; and the companies of marines to 626—(Univ. Hist. XL. 190.)

1755.—This year was remarkable for a terrible Earthquake that was felt throughout a great part of America. Its motion was undulatory, and it occasioned a great deal of mischief in towns and villages. Its course was from the N. West to the S. East. Its extent upwards of 1000 miles, until it passed into the ocean in the direction of the West India Islands from the Chesapeak Bay.

1756.—M. de **MONTCALM** succeeded the Baron Dieskau in the chief command of the French Forces in Canada.

1757.—It was in this year, at the Capture of Fort William Henry, that the horrible massacre of many hundred unarmed British officers and soldiers, by the Indians in the French service, was permitted by **MONTCALM** and his officers; to their eternal disgrace, and in direct violation of a solemn compact—(For a shocking account of this butchery see *Carter's Travels*.)

At this period the whole Colony of Louisiana is said to have con-

tained no more than 10,000 souls, whites and negroes, *Montreal* contained about 5,000 inhabitants.

1758.—By the acquisition of Fort William Henry, the French had now full possession of the Lakes Champlain, and George; and by the destruction of Oswego they had acquired the dominion of those other Lakes which connect the St. Lawrence with the waters of the Mississippi. The first afforded the easiest admission from the northern colonies into Canada, or from Canada into those Colonies; the last united Canada to Louisiana. But the strong arm of Britain had not yet been put forth with all the energy of its power, guided by the wisdom and foresight of the immortal CHATHAM, who had been recently placed at the head of a new administration, and it was not long before the aspect of affairs was changed in this part of the world.

Adm. BOSCAWEN arrived with a formidable fleet at Halifax, and Gen. ABERCROMBIE was shortly at the head of 50,000 men, the most powerful army, till then, ever seen in America.

Louisburgh, and the whole of Cape Breton; Isle Royal; St. John's, and their dependencies, were speedily conquered and taken possession of by Boscawen and Gen. Amhurst. Fort Frontenac, on Lake Ontario, which then possessed 60 pieces of cannon, 16 mortars, a large number of small arms, and a vast quantity of provisions, military stores, and merchandize, surrendered at discretion to a force under Col. Badsstreet, who had been dispatched on this service by Gen. Abercrombie, from before *Ticonderoga*. Nine armed vessels likewise fell into the hands of Col. Badsstreet, who destroyed both the Fort and the vessels, and such stores as he could not carry away. *Fort du Queene*, was captured by Gen. FORBES, who named it *Pittsburgh*, in compliment to the popular minister.

1759.—This was a memorable year for Canada: in which the vast and during project which had been so often formed, and abandoned, was at length carried into effect; that of making an immediate and entire CONQUEST of the COUNTRY by GREAT BRITAIN; which was accomplished by the immortal WOLFE and his brave ASSOCIATES, in the TAKING OF QUEBEC. We cannot pretend to go into any detail of this famous achievement in a work like this.

Whilst the operations were carried on against Quebec, SIR WILLIAM JOHNSON secured the conquest of Uper Canada, by the capture of Niagara, and the defeat of the entire French force in that quarter.

Quebec contained, at the time of its capitulation about 10,000 souls. (*Precis sur l'Amerique*) Gen. Wolfe, who expired in the arms of victory, was only 33 years of age.—He possessed those military talents, which, with the advantage of years and opportunity of actions, “to moderate his ardour, expand his faculties, and give to his intuitive perfection and scientific knowledge, the correctness of judgment perfected by experience, would have placed him on a level with the most celebrated generals of any age or nation.” After he had received his mortal wound, it was with reluctance that he suffered himself to be conveyed into the rear.—Leaning on the shoulder of a Lieutenant, who knelt down to support him, he was seized with the agonies of death; but hearing the words ‘they run,’ he exclaimed, ‘Whorun?’ ‘The French,’ replied his supporter, ‘Then I die happy,’ said the General,

and expired — A death more glorious, says Belsham, is no where to be found in the annals of history. MONROCALM was every way worthy to be a competitor of WOLFE. He had the truest military genius of any officer whom the French had ever employed in America. After he had received his mortal wound, he was carried into the city; and when informed that it was mortal, his reply was, 'I am glad of it.' On being told, that he could survive, but a few hours, 'So much the better,' he replied, 'I shall not then live to see the surrender of Quebec.'

1760.—The fall of Quebec did not produce the immediate submission of Canada. After the battle on the Heights of Abraham, the French army retired to Montreal. This army, the command of which devolved on M. de Lévi, still consisted of ten battalions of regulars, and it was reinforced, after the action, by 6,000 Canadian Militia, and a body of Indians. With these forces an attempt was made for the recovery of Quebec; but it was unsuccessful. On the 8th of September, Montreal, Detroit, Michilimackinac, and all other places within the government of Canada, were surrendered to his Britannic Majesty; and, the destruction of an armament, ordered out from France in aid of Canada, completed the annihilation of the French power on the continent of North America.

1763.—By the second article of the *Treaty of Fontainebleau*, France renounces, and guarantees to Great Britain, all Nova Scotia and Acadia, and likewise CANADA, the Isle of Cape Breton, and all other Islands in the Gulf and River of St. Lawrence.—By the same article it was stipulated that the French in Canada may freely profess the Roman Catholic Religion, as far as the laws of Great Britain permit; that they may enjoy their civil rights, retire when they please, and may dispose of their Estates to British Subjects.

A Proclamation was issued by his Majesty the King of Great Britain, in the month of October, declaring the Government of Quebec to be bounded on the Labrador Coast by the River St. John, and from thence by a line drawn from the head of that river through the Lake St. John to the south end of Lake Nipissing;—from whence the said line, crossing the River St. Lawrence and the Lake Champlain in 45 degrees N. Latitude, passing along the Highlands which divide the rivers that empty themselves into the said River St. Lawrence from those which fall into the sea; and also the north coast of the Bay of Chaleurs, and the coast of the Gulf of St. Lawrence to Cape Rosiers, and from thence crossing the mouth of the River St. Lawrence by the west end of the island of Anticosti, terminates at the aforesaid river St. John.

In testimony of the 'Royal sense and approbation of the conduct and bravery of the officers and soldiers of the army and to reward the same,'—The Governors were empowered to grant lands, without fee or reward, to such reduced Officers, as had served in America during the late war, and to such private soldiers, as had been, or should be, disbanded in America, and were actually residing there, &c. &c.—

a Private,	50

At this time Canada contained upwards of 65,000 Inhabitants — (Stokes)

The exports from Great Britain to Canada, amounted this year to £8,623 15s 11d.

1765 — It may be remarked that Canada and Halifax submitted to the famous *Stamp Act* which occasioned so much turmoil in the Provinces now constituting the United States.

1773 — The *Shawanise* Indians, including men, women, and children were reduced to 600. — (*Am. Annals*.)

1774 — A committee of the American Insurgents was appointed to seduce the Canadians from their loyalty to the Crown of Great Britain, and *Ministers of the Gospel* were employed, as agents, for this abominable purpose. The form of the *circulars* used on this occasion is preserved in the *American Annals*.

1775 — The revolted Colonies, by a Public Address, called on the people of Canada to unite with them. Gen Schuyler afterwards tells them, that he has received positive orders from Congress "to cherish every CANADIAN!"

The famous discomfiture of MONTGOMERY and ARNOLD in their attack on Quebec, in which the former lost his life, occurred late (November) this year.

1776 — Early in the summer, Canada was entirely freed from the presence of the Insurgent Army of the Americans, under General Arnold, who had continued the blockade of Quebec, for some time.

1780 — The 19th of May was distinguished by the phenomenon of a remarkable darkness in the northern parts of America; and is still called '*the dark day*.' In most parts of the country where it prevailed, the darkness was so great that persons were unable to read common print, determine the time of day, dine, or manage their domestic business, without additional light. It commenced between 10 & 11 A. M. It appeared to grow by a succession of clouds from the northward, and was most pitchy about 2 o'clock P. M. The Mem. of Acad. says, Candles were lighted up in the houses; the birds, having sung their evening songs, disappeared and became silent; the fowls retired to roost; the cocks were crowing all round as at day break; objects could not be distinguished but at a very little distance; and every thing bore the appearance and gloom of night.

1783 — The Province of Quebec contained by enumeration, 113,000 Inhabitants. English and French; exclusive of 10,000 Loyalists, who had recently settled in the upper parts of the Province. [*Coll. Hist. Soc. VI. 49*]

1786 — Lord DORCHESTER (Sir Guy Carleton) arrived at Quebec with the Commission of Captain General and Governor of Quebec, Nova Scotia, New Brunswick, and their dependences, and the Island of Newfoundland.

1791 — By an Act of Parliament, the Province of Quebec was divided into two separate Provinces, to be called, '*the Provinces of Upper and Lower Canada*.' On this occasion a very interesting debate took place in the House of Commons. —

Mr. PITT said it appeared to His Majesty's Ministers, first, that the only way of consulting the interest of the internal situation of the

Province of Quebec, and of rendering it profitable to Great Britain, was to give it a Legislature, as near as circumstances would admit, according to the principles of the British Constitution. In the next place, it appeared to them that *there was no probability of reconciling the jarring interests and opposite views of the inhabitants, but by giving them two Legislatures.* It was conceived this form of Government was best adapted to put an end to all the difficulties of a legal sort, and to render the regulations more useful to the subjects of that country. *He believed there was such a rooted opposition of interests of one description and the other, that if there was a Constitution consisting of a House of Assembly, in which the parties might be nearly balanced, the consequence, at least, for a long series of years, would be a great degree of animosity, and a great degree of confusion.* It seemed to His Majesty's servants the most desirable thing, if they could not give satisfaction to all descriptions of men, to divide the Province, and to contrive that one division should consist, as much as possible of those who were well inclined towards the English Laws, and that the other part should consist of a decided preponderancy of the ancient Inhabitants, who were attached to the French Laws. It was in Upper Canada particularly, that they were to expect a great addition of English Inhabitants. The consequence was, that if it was not divided from the rest, the Canadians, forming a majority of five to one, the grievance would be every year increasing, in proportion as the population increased. It was intended to give a FREE CONSTITUTION to Canada, according to *British ideas of Freedom.* This could not be done without a division of the Provinces, to prevent the clashing of opposite interests, which must otherwise necessarily ensue.

Many of the difficulties and serious inconveniences, even at that time foreseen by Mr. Fox, as likely to arise from this division of interests in the Canadas, having been actually experienced. (to such a degree as to render necessary an appeal to the Imperial Parliament, on the part of Upper Canada) It is now proposed, (1822,) to re-unite the Provinces under one Legislature; and, it is expected that this important question will be finally determined in the next Session of the British Parliament.

A
SKETCH
OF THE PRESENT STATE
OF
CANADA.

DRAWN UP EXPRESSLY FOR THIS WORK,

BY

CHARLES FOTHERGILL.

1824

The geographical position of this vast country may be thus generally stated.—It is bounded on the East by the Gulf of St. Lawrence, and Labrador*;—on the North, by the Territories of Hudson's Bay; on the West, by the Pacific Ocean; on the South by unexplored Indian Countries; and part of the United States of America viz. *Missouri, Illinois, Indiana, Michigan, Ohio, Pennsylvania, New-York, Vermont, New-Hampshire, the District of Main,* and by the British Province of New Brunswick.

These boundaries describe a large and magnificent portion of the globe we inhabit, large enough for the foundation of an Empire which may become hereafter the arbitress of the destinies of the new world, embracing with her mighty arms the whole width of the great continent of America.—Secured in her rear by the frozen regions of the north, and with such a front as she possesses towards the south, it is

* *Labrador* has been strangely annexed (in 1809) to the Government of *Newfoundland*, though the Sea will continue to roll through the straits of *Belleisle* in despite of artificial arrangements, and unnatural connexions.

impossible but, with the adoption of wise and decisive measures, she must be able hereafter to hold a far more imperious sway, in regard to the countries of the south, than was ever held by the Tartars (in their best days,) over Asia; or by the northern hordes of Europe, over the Empire of Rome, at the period of the overthrow of the then mistress of the world. The *foundation stone* of this Empire has been laid by the Queen of the Ocean, and it depends on the prudence and wisdom of her councils, and on the loyalty, ambition, temper, skill, industry, bravery, high qualities, and perseverance of Canadians, no matter of what origin, how far the fairy vision which is kindled up in fancy, may be realized. But this is not a time, nor a place, for the indulgence of reverie, however splendid or enticing, and we must be content with present realities.—To the contemplation of these realities, forming altogether so promising an embryo, let us proceed.

We have only to cast our eyes transiently over a map of North America to be immediately assured of the singularly advantageous situation of the settled parts of Upper Canada—Sented like a gem in the bosom of a country that is neither scorched by the sultry summers of the south, nor blasted by the tardy, bitter-hitting, winters of the north; surrounded by the most magnificent Lakes, and possessing the most extensive internal navigation in the known world, it would be difficult perhaps impossible, to find, in any other region of the globe, a tract of country of the same magnitude with so many natural advantages, as that part of Upper Canada which lies between the Lakes Ontario, Erie, and Huron, and the Ottawa, or Grand River, nine tenths of the whole extent of which are calculated for the exercise of almost every description of agricultural labour, and with such a prospect of success as, perhaps, no other part of this continent could realize. A part of this tract of country, commencing in the neighbourhood of Kingston, and running westward nearly 500 miles to the Sandwich frontier, by a depth, northward, of from 40 to 100 miles, is, *alone*, capable of supplying all Europe with grain; besides being rich in cattle; and producing silver, lead, copper, iron, lime, marble, gypsum, marble, free stone, coal, salt, wool, hemp, and flax (of the best quality,) tobacco, and timber of every description; besides furs, game, fish, and many other valuable productions.*

Much has been said, at a distance, against the climate of this fine country. Those, however, who have removed to it from Great Britain are agreeably disappointed in finding it more; pleasant, (because not so moist and unwholesome) than that which they have left. It might be said, with no great impropriety, that the present inhabitants of Canada have but two seasons,—Summer and Winter—for Winter has so soon disappeared, which generally happens by the middle of April, than the whole animal and vegetable creation starts into renewed life with a rapidity and vigor that leaves the season of spring

* It must be understood that we are always speaking of the settled parts of Upper Canada, unless especially mentioned to the contrary.

† We say *present*, because we have no doubt of a further amelioration of climate, as the woods are cleared away and the waters diminish.

with such doubtful limits as to be scarcely perceptible, or deserving a specific character; again, in the fall of the year, the months of September and October are generally so fine and summer like, and these being succeeded by what is so aptly termed the *Indian Summer*, in November, (that month which is so gloomy in England, and said to be so fatal to Englishmen) that we should have great difficulty, were it not for an artificial Calendar, in saying when it was autumn.*

To convey a more just and certain idea of the severity of an Upper Canadian Winter, it may be well to mention that the chain of shallow Lakes which run in an easterly, and south easterly direction from Lake Simcoe, towards the Midland District, are seldom or never frozen so hard as to bear a man with any heavy burthen, with much safety, until about Christmas; and they are again open before the middle of April. Owing to the want of a proper explanation by travellers, and others, attempting to describe this country, an erroneous idea has been formed in England that our Great Lakes are frozen over in winter; whereas they are always open, frequently exhibiting a beautiful and striking phenomenon during the inclement season, by reason of the water being warmer than the atmospherical air; in consequence of which, an evaporation resembling steam, and in every variety of shape, in clouds, columns, and pyramids, may be frequently observed ascending with uncommon grandeur and magnificence from the vast surfaces of Ontario, Erie, Huron, and Superior, as from so many immense boiling caldrons. We recollect an eminent landscape-painter and designer in England, who, when about to design a landscape, was accustomed to seat himself in an armed chair, in the centre of a large room, and, by means of tobacco and a pipe, send forth column after column of tobacco smoke, in rapid succession, with a view of assisting his imagination in the combination of forms by the new, singular, and grotesque shapes into which the smoke would embody itself.—Those artists who may require aids of this description, would do well to secure some eminence overlooking one of the great Lakes just enumerated, whereon to build an observatory: for, nothing can be more grand than the spectacle to which we have alluded.

It is the small, and nearly stagnant, bays, and for a few yards only from the shores, where the water is shallow, that any part of the Great Lakes is frozen in winter. The earth too, is seldom frozen at a greater depth than from 12 to 18 inches, and the snow rarely lies in a greater depth than from 18 inches to two feet, unless where it is drifted. It is very seldom the roads are in any permanent condition for the use of the *Sleigh* or *Carriole* before the second week in *January*, and they are again broken up towards the end of *March*, a fact which sufficiently indicates the duration of snow and of sharp frosts. It is proper, however, to remark, that the winters of Lower Canada, (being in a higher latitude) are both more severe and of longer duration. There is a difference of at least one month in the length of the inclement season

* In the Western District, the culture of both Cotton and Indigo has been attempted, on a small scale, with success; and Vineyards and Orchards may be laid out advantageously in almost any part of the Upper Province.

at Quebec, and on the shores of Lake Ontario; and, farther westward, in the Sandwich Frontier, this favourable difference is still greater. In Upper Canada a labouring man, if he chooses, can at all times work out of doors; but in the Lower Province there are days of particular severity, in the winter season, in which it would be impossible for him to pursue out doors work.

There are natural phenomena in the climate of CANADA which remain unaccounted for, and are sufficiently puzzling even to the most philosophical geologist. Of these, the *Indian Summer*, which almost uniformly commences and terminates in the month of November; and the *tertian intervals* of fine weather, throughout the winter, after two or three nights of intense frost, deserve to be particularly mentioned.

The *Indian Summer* as it is termed, consists of many days, (the Indians say there *must be fifteen smoky days* to constitute one of these summers,) of delightfully mild, serene weather, with a misty, hazy atmosphere, though the haze is dry and soft, appearing to rest chiefly on the horizon.—In the evening of these days, the sun generally goes down with a crimson flush on the western heavens. The general temperature of the atmosphere, during this season, is singularly grateful to animal sensation; and, those of the feathered tribes who are directed by an infallible guide to seek other regions, more to the southward, on the approach of hoary-headed winter, avail themselves of this charming season for the prosecution of their interesting journey; and it is at this time the rivers and lakes of Canada are covered by innumerable flocks of wild fowl, of every species known to this quarter of the world, gathering with their families for winter quarters.

By what is termed *tertian intervals* of fine weather, through the winter season, is meant a very extraordinary and certain phenomenon that may be relied upon with the same surety as the diurnal motion of the planets. The greatest intensity of frost is *always remittant* at the end of the *third day*; that is, the inhabitants of Upper Canada never suffer the extreme severity of their climate for more than two or three days at any one time; being perfectly assured, on feeling any extreme degree of cold, that it will mitigate within three days, and that several days of mild weather will succeed.—It may require several years of attentive observation to ascertain the number and duration of the intervals of mild and severe weather that usually occur in a Canadian winter between the 43d and 49th degrees of North Latitude; but it would prove a subject of very interesting and instructive inquiry to any gentleman of sufficient leisure to pursue it in the country.

So many persons have been deterred from emigrating to CANADA through a false notion of its climate being frightfully severe, that it seems to be a duty incumbent on those who speak or write for the instruction of others at a distance, to endeavour to remove the erroneous impression. Those who arrive from Europe, and settle in Upper Canada, uniformly express their satisfaction at the change, in this particular, at least. There is generally a clearness, dryness, and brilliancy in the atmosphere, so captivating, after the catarrhal moisture which saturates the air of northern Europe, that it is impossible for the newly inducted emigrant not to rejoice in the change.—whilst the starry hosts of heaven appear with a splendor far more dazzling

than any thing he has before seen, and the mode of travelling in winter in carriages or sleighs, the easiest and most delightful in the world, gives him ready access to distant markets, whether of business or pleasure.

It may be readily supposed that in such a vast extent of country every description of soil, and every variety of surface, as to mountains, hills, vallies, and plains, must occur. Speaking of the inhabited parts of Canada, the Lower Province is the most mountainous, and the Upper Province the most level and Champaign; indeed, from the division line on Lake St. Francis to Sandwich, a distance of nearly six hundred miles, nothing like a mountain occurs, although the greater part of the country which is passed through, between those places, is gently undulated into pleasing hills, fine slopes, and fertile vallies. There is, however, a ridge of rocky and generally barren country, running north-easterly, and south-westerly, through the Newcastle and Midland Districts, towards the Ottawa, or Grand River, at the distance of from 50 to 100 miles from the northern shore of Lake Ontario, and the course of the River St. Lawrence; a ridge which divides and directs the course of innumerable streams, those on one side running to the northward, whilst those on the other run to the southward, and empty themselves into Lake Ontario or the River St. Lawrence.—The base of this ridge has an elevation of not less than 200 feet above the level of Ontario, and is rich in *Silver, Lead, Copper, and Iron.**

Farther to the north, beyond the French River, which falls into Lake Huron, are immense mountains, some of them of vast and unknown degrees of elevation. Many of the mountains which describe the great vally of the St. Lawrence, are from 3000 to 4000 feet, above the level of the river; and that part of the chain which approaches the city of Quebec, on the northern side of the river, is worthy the attention of the geologist and mineralogist, in a particular manner, from the hope there is every reason to entertain that these mountains yield several rare, and valuable, kinds of earth for pigments, which may hereafter become articles of commerce. When in Quebec, in the year 1816, the writer of this *Sketch* was shewn several fine specimens, in the Seminary of that City, which had been procured in these mountains at no great distance from Quebec; amongst which may be mentioned a rich brown resembling the *vandyke brown* of artists; a yellow, equal to that of *Naples*; and an extraordinary fine blue, of a tint between that of *Indigo* and the costly *Ultramarine*. The subject is mentioned in this place with a view of exciting further inquiry, and experiment; because, at present, the artists and colourmen of London are principally supplied with their most valuable pigments from Italy.—A scientific gentleman who has lately explored the coast of *Labrador*, and the *Gulf of St. Lawrence*, was very successful in his mineralogical pursuits, particularly in the neighbourhood of Gaspe from whence he obtained some new, and many valuable and beau-

* Passing this ridge, towards the north, the explorer descends into a wide and rich vally of great extent; which is again bounded on the north by a rocky and mountainous country of still higher elevation.

tiful specimens of the *Quartz*, family—including a great variety of *Cornelians*, *Agates*, *Opals*, and *Jaspers*;—several of which have been cut into useful or ornamental articles by Mr SMELLIE, *Lapidary*, of Quebec. From *Labrador* the same gentleman brought several large and beautiful specimens of the spar so peculiar to that coast, and which is commonly known by the name of *Labrador-spar*, of a brilliant *sky-blue*, or *ultra marine* colour—with others of a *green yellow*, *red*; and, one or two of a singularly fine *pearl grey* colour.—They are all hard and capable of receiving the highest polish.—These specimens were found at *Mingan* imbedded in a rock of granite.

The whole northern shore of the *St. Lawrence*. from *Quebec* to its mouth, and round the coast of *Labrador*, offers to the mineralogist and geologist such a field for research as we believe no other country can afford.—It has never been explored by scientific men.—Much of the coast bordering on the *Gulf* is primitive, or of the earlier formations of rock.

The *Saguenay* is a very remarkable river, and richly deserves the notice of a scientific traveller:—as far up as *Chicoutiny* which is 25 leagues from its mouth, the foot of the high, and sometimes bald or scantily wooded, mountains of granite, are washed on both sides by its waters.—The *Point aux Bouleaux*, and for some distance on the western side of its mouth, is an alluvial deposit containing, probably, the richest soil in the world, being composed of a species of soapy, grey, marl from 30 to 40 feet in depth.—But, as the object of this little sketch is to give the stranger a general idea of the nature of that part of the country in which we are writing, we must go back to the soil of *Upper Canada*, and speak of its quality; which, in its wild or uncultivated state, may be known by the species and fine growth of the timber with which it is covered.

The best lands are those which produce the *hardest* timber, such as *Oak*, *Maple*, *Beech*, and *Elm*. *Black Walnut*, &c. though *Bass-Wood*, when of luxuriant growth, is also an indication of good land; and so is *Pine*, where it is large, clean, tall and thrifty.—Many of the *Cedar swamps*, where the Cedars are not stunted, and are intermingled with *Ash* of large growth, contain soil of the richest quality, and are calculated for the finest *Hemp grounds* in the world.*

It may give a just idea of the general richness of the soil to state, that we have frequently heard of instances where 50 bushels of *Wheat* per acre have been produced on a farm, even where the stumps (which would probably occupy one eighth of the surface of a field) have not been eradicated, we know, indeed, of some instances where 60 bushels, and one in the *Town of York*, where *One Hundred Bushels* of *Wheat*, have been obtained from a single acre; and, in the *District of Newcastle*, many examples may be found wherein *Wheat* has been raised on the same ground, for 16 or 18 years successively,

* As the SOCIETY for the ENCOURAGEMENT OF ARTS MANUFACTURES and COMMERCE in London still hold out their premiums of a *Gold Medal* and *GUANO* for the cultivation of *Hemp* in the *British Provinces* of *N America* there is still hope that this important article will become a staple of the country.

without the application of manure!—The general average of the returns of Wheat crops, however, throughout Upper Canada, probably, is not more than 25 bushels per acre, owing to the space occupied by stumps, and the indifferent skill of the ordinary farmers.* The winter wheats are found to be most productive, and they weigh the heaviest.

Of *Indian Corn* or *Maize*, from 60 to 80 bushels per acre, is not an uncommon return; and of *Pumpkins*, of the largest kinds, we have instances of more than a ton weight being produced from a single seed.

But there cannot be a more certain indication of the depth and richness of the soil than the fine growth of the timber which it produces; and, we have not unfrequently measured particular trees of that species of *white oak* which grows in low moist places, and which is usually called *swamp oak*, that gave circumferences of 16 to 17, and 18 feet, and an altitude of from 30 to 40 feet to the first bough. And we have more than once, on the rich lands to the northward of *Rice Lake*, found *White Pine* trees that gave a diameter of *five feet*, and an altitude of *two hundred!* These are facts that determine at once the depth, richness, and vegetative power of the soil, since those giants of the forest are not nourished by the heavens which they pierce, but by the earth from whence they spring.

Vegetation is so rapid in this country that *Barley* sown the last week in *July*, has been reaped in the second week of *September*, for several years successively, and on land that was deemed poor and exhausted, and a more abundant crop has been seldom witnessed.

From every observation and experiment that has been made, no doubt can be entertained of the great fertility of the soil of this fine country, not only every vegetable production which thrives in similar latitudes in Europe prosper here; but others, which require either greater heat, or greater care, are found to succeed in CANADA, without any particular attention. The finest *Melons* and *Cucumbers*, are brought to perfection in the open fields, and *tobacco* is cultivated with the greatest success. Even the *wild Grapes* become ripe by the first or second week in September; so that there is every reason to believe, if vineyards were cultivated, the inhabitants of this country might add a variety of choice wines to their list of articles of home consumption, and of foreign trade. We have drank of a wine very nearly resembling, and but little inferior to, that of *Oporto*, which was made from the common wild grape of the country.

It is remarkable, throughout this country, that the soil and growth of timber upon the immediate banks of the rivers and lakes is inferior to that of the country farther back; and it appears that all the larger rivers and lakes have a second bank at some distance behind that which at present bounds the waters. This is even the case with the *St Lawrence* and the *Great Lakes*. On another occasion, when our limits are not so circumscribed as they necessarily are at present, we may venture upon an explanation of these phenomena.

* A premium of the *Gold Medal*, or *Fifty Guineas*, is held out by the SOCIETY already named, for the best method of extirpating the Stumps and Roots of Trees from newly cleared land—which it is hoped will produce the much desired result.

In all newly discovered countries, that are thickly wooded, the navigable waters are the great thoroughfares along which the inhabitants must conduct their business. The first settlements are therefore formed along the banks of the principal rivers and lakes; extending backwards, only by slow degrees, as the lands in front are occupied. In Canada, a remarkable exemplification of this kind of progress has been seen. A long straggling settlement from a hundred and fifty miles below Quebec, to Sandwich, being a distance of more than a thousand miles, was formed before the people ever thought of penetrating into the interior for any other purpose than that of hunting, or for barter with the Indians. Even at this day the most remote settled Townships, from the frontier waters, with the exception of the road from York to Penetanguishene, is not more than from 40 to 60 miles. It is not, therefore, in this country, as it is in the back parts of the United States, where an emigrant, purchasing land, has frequently the painful necessity of commencing his establishment at a vast distance from any neighbours. In Canada there is abundance of the most fertile land in every variety of situation, in the midst of, or closely adjoining to, active settlements, that may be had from Government on the payment of the undermentioned fees.

* A material alteration, and one very favourable to the Emigrant, has now (1824) taken place, as will be seen by the subjoined Order in Council of the date of 31st January, 1824;—by which the gratuitous Grants of 50 Acres are no longer made; but, in lieu thereof, the Fees on 200 Acres, and consequently on 100 Acres, are reduced to the rate at which they stood previous to the year 1819.—(for which see P. 57.)

Executive Council Chamber, }
York, 31st January, 1824. }

PRESENT,

HIS EXCELLENCY THE LIEUTENANT GOVERNOR, IN COUNCIL,

His Majesty's Government having recently extended their assistance to the class of Emigrants, which it was intended to relieve by gratuitous Grants of Fifty Acres of Land, in conveying them to their respective locations:

It is ORDERED, that from the first day of May next, no gratuitous Grant be made of any quantity of Land to other than privileged per-

The Provincial Government have it not in their power to grant more than 1,200 Acres to any single individual without a special order from the Imperial Government of Great Britain. The above fees are payable in three equal instalments; the *first*, on locating the land; the *second*, on the completion of the settlement duty; (for the performance of which a period of two years is allowed,) and the *third* when the Deed is executed, until which time a Location Ticket, given by the Surveyor General, is held by the occupant.*

The settlement duty required is to clear and fence five acres on every hundred acres granted; to build a house not less than 16 feet by 20; and, to clear one half of the road in front of each lot: an allowance for road: independent of the full quota granted being left by the Surveyor in every instance; so that no lot is without a public highway.—On the 21st of February, 1820, His Excellency, the present exemplary LIEUTENANT GOVERNOR was pleased to direct that the clearing of half the road, and cutting down without clearing, *one chain* in depth from the road, along the front of each lot, should be considered and admitted, as part of the five acres per hundred, so that, now, there is about 3 1-2 acres of what is called *slashing* and only 1 1-2 acres of perfect clearance upon each lot required. The present expense of mere settlement duty, if hired, and paid for in money, is about \$25 for every hundred acres.

There is a line of very fine Townships, beautifully watered, running through the Newcastle and Midland Districts, now under survey, that are to be granted on the *old fees*, as ordered in Council on the 5th of January 1819.—These townships are named:

Eldon,
Fenelon,
* Verulam,
Harvey,
* Douro,
Dummer,
* Belmont,
Burleigh,

Lake,
Tudor,
Grimsthorpe,
Anglesea,
Barrie,
Clarendon,
Palmerston, and
Methuen.

sons—And that as the Fee on Two Hundred Acres was raised, in order to defray the gratuitous Grants of Fifty Acres the consideration failing, the future Fee on Two Hundred Acres is reduced to Eight Pounds Four Shillings and One Penny Sterling; the existing Fee before 1819, and the Fee on all other Grants, in Townships Surveyed since that time, to be the same as established by the Order in Council, of 5th January, 1819.

N. B. Possessors of gratuitous Grants for Fifty Acres, may, by paying the Fee on One Hundred Acres, receive a Grant of the adjoining Fifty Acres if vacant.

JOHN SMALL,
Clk. Ex'v. Council.

* It must be continually borne in mind that we are to be supposed as *always* speaking of the Upper Province.

Some of these Townships are on the same level with, and others of them are even to the southward of, lands granted long ago; so that the advantages secured by those who may be inclined to settle in these New Townships, (on account of the low fees and the excellent water communication which they possess,) are important. Those of the above Townships which are situated upon the larger Lakes, and upon the river Otouabee, which falls into the Rice Lake, are the most attractive to settlers whose pursuits are those of Agriculture.

Every facility is given to the Settler, who can take the number of vacant lots, in any particular Township, and go and judge for himself as to the situation and quality of the land, before he makes his location; so that, if he makes an improper choice, he has no one to blame but himself. To save trouble and expense to the poor emigrants, who arrive in this country for the purpose of settlement, County Land Boards are established in every District where there are any vacant lands belonging to the Crown, for location; and these Land Boards are empowered to grant Tickets for 50, 100, and 200 acres; but not for a larger quantity.—If more than 200 acres is required, the applicant must petition the Land Council at York. The applicant must satisfy the Board that he is not an Alien, and he is required to take the Oath of Allegiance.

The New Townships are formed out of recent purchases by Government from the Indians, who receive their payments annually, in clothing, ammunition, and such articles as they require. It must be interesting to many readers to see a statement of some of these purchases; the following are the most recent:—

1818, October,	The LAKE HURON purchase, of 1,692,000 Acres.	per Annum. £ 1,200 0
	The MISSISSAUGA purchase, of 648,000 Acres.	522 10
November,	The RICE LAKE purchase, of 1,861,200 Acres.	740 0.
1819, April,	The LONG WOOD purchase, of 552,190 Acres.	600 0
1820, February,	The MOHAWK purchase, (Midland District,) of 27,000 Acres.	450 0

Being 4 680 390 Acres, at the annual charge of £3 512 10s. which is defrayed by an appropriation of part of the amount received for fees on the Grants of Land to Emigrants. This system prevents any complaints, or even a murmur of any kind: from the *Aborigines* of the country, who live on the best terms with their white neighbours.

Whilst engaged in this part of the subject, it may not be amiss to give a word or two of advice to Emigrants of all classes, from one who has seen a good deal of the country.

It must always be taken for granted that whoever leaves England, no matter where he goes, must experience some change for the worse; for if he is in no otherwise affected than in his feelings, he must suffer a temporary laceration that may jaundice every first view of the new country to which he goes; and it is not pretended that even CANADA is so heavenly a land as to do away at once with all such views and feelings, although the writer of this account has but little hesitation in stating that it speedily takes fast hold of the affections of the new comer; and that, if a fair comparison is made between the advantages and disadvantages possessed by the various Colonies of Great Britain, in different parts of the world, and that those things are coolly and candidly weighed, the decision *must* be in favour of CANADA; which is undoubtedly, one of the most fertile and magnificent regions of the Globe; peopled by the subjects of Great Britain; in the full possession of British Laws, and immunities; and, with a Constitution nearly on a model with that of England; but without the vexatious operation of a *tylthe system*, with scarcely any taxes, and with many other privileges it would be tedious to name on this occasion. Were it not for the difference of scenery and climate, a man emigrating from England to this country would scarcely feel sensible of any immediate change, since he finds the same laws, manners, customs, language, and very often the same faces, which he had formerly known.

With all these superior advantages and enjoyments, which are such as can be had in no other colony, some individuals may be found to undervalue them, and be discontented, but these instances serve as lessons to others.—Let one of them be here named.—A man who arrived in this Province from the north of England with a few pounds in his pocket settled on a farm between York and Lake Simcoe; the industry and economy of five or six years, in this new situation, made him comparatively independent.—He had a sufficient quantity of land cleared, and a saw mill, to bring him in a handsome income; and he lived at his ease, and with plenty.—But it is the nature of man to be restless and dissatisfied; so it was in this instance.—Although he had never enjoyed so much affluence at any former period of his life, this man grew uneasy; he thought of England, of his former abodes, his home, his ancient friends, and his recollections became insupportable; he sold his farm, his mill, his stock, and once more set his face towards England:—the voyage was passed, a few hours brought him into the midst of the scenes of his youth; he again took a farm, stocked it, again tried the fluctuations of markets and fairs, and was again bankrupt, *fatally* bankrupt, for now there was *nothing* left, and this foolish man ended his days in a work house! Frightful exchange for the ease and independence of a CANADIAN YEOMAN!

Those who are labouring under the bitter feelings of expatriation should consider that the same sun, and the same moon, and stars which shine on the scenes they have left behind, gladden creation here; and that the *Great Father of all*, who is the same *yesterday, to day, and for ever*, is alike present every where. Let the beautiful reply of the immortal HOWARD, which he gave to an expostulating friend on the eve of his departure for the southern parts of Russia, where he died, be always in our recollection. "*The road to Heaven is quite as short from Cairo, as it is from London.*"!! And let them consider themselves as the workmen employed by Omnipotence to lay the foundation of what is to become hereafter a mighty Empire, in which their children's children are to have an inheritance and a name; and that what are now the beautiful fields and gardens of England, once looked as a wilderness in the eyes of our forefathers.— O what value is that religion, or philosophy, which for ever chains its possessor down to present, and to painful, realities? Let us be wise, and learn how to appreciate those advantages and blessings that may be actually enjoyed in this our adopted country, and sorrow, regret, and despondency, will be far ever banished from our dwellings!

But the instances of men taking the gloomy side of the question, in this fine country, are rare; particularly amongst the lower class of society, to whom the advantages are much greater than any other country affords. His land (which is a Freehold) costs him little or nothing; a few months labour for others, should he have no money at all, (at the high rate of wages, in this country) enables him to stock his farm, on which he may keep a yoke of Oxen, or a pair of Horses, constantly employed, besides leaving timber sufficient for fire wood for many years. He should, however, be careful not to destroy his timber in a heedless manner, by burning it in large log heaps, after he has a few acres cleared. Some of the finest timber in the world is often considered so great an eye sore, that the sooner it can be utterly destroyed the better; but if, in making the clearance, the top and under brush only, were burnt in the field, and the heavy timber was cut into cord wood, or split into rails, instead of being consumed in one universal conflagration, it would be much better for the small Freeholder; and afterwards, when the whole projected clearance was made, and it became necessary to attack the reserved trees, only to thin them out, in the same manner that is practised in the wood lands of England, taking those trees only which have arrived at maturity, and leaving the young thrifty wood to improve,—several generations must appear and disappear before any serious inconvenience could arise from the want of fuel. Of course there is not the same necessity for such economy on the larger grants. After all, there is the comfortable assurance of abundance of coal in various parts of the country; and from the many navigable waters intersecting it in almost every direction, that useful article can never be very expensive.

For a great number of years to come there will be an ample range for a large stock of cattle and pigs in the woods, and on the plains; so that the small occupier will be freed from the necessity of having any part of his land in pasture, unless it should be his choice to have it

otherwise. Swedish Turnips are found to answer extremely well, and to stand the utmost severity of the climate; with a couple of acres under a crop of this invaluable root, and the straw of his *Maize*, *Wheat*, *Barley*, or *Oats*; he may maintain, comparatively, a large stock of horned cattle through the winter; and in the summer the only expense attending them will be an occasional visit, to see that all are going on well. Pigs grow very fat whilst running at large in the woods, especially towards the fall of the year. All the taxes, or assessments, put together, which a man of this description has to pay, would not amount to more than a few shillings; and, as to raiment, it is customary to grow wool and flax sufficient for the cloathing of his family. Sugar he manufactures himself, so that he has only a little tea to purchase. should he require through custom, the use of that luxury. Many people in country situations use the young shoots of the *Hemlock Tree*; and other herbs of the forest of agreeable flavour; in lieu of tea, without any bad consequences, or disrelish. If he is a *Tobacco-smoker* or *chewer*, he may raise as much as he pleases in his own garden.

Wages, compared with what they are in Great Britain, are still very high in this country; and hitherto, in the Upper Province, it has not been difficult to procure work. In many parts indeed, there is yet a scarcity of labourers. It is true that money is not now plentiful; but there is scarcely any thing that the older residents have to spare in payment of wages that is not useful, nay absolutely necessary to one going on to a new farm; and two years being allowed by Government for the performance of settlement duty, (which in favourable weather may very often be done in one month) the poor emigrant has plenty of time to earn a yoke of oxen, and a cow or two, a few pigs, seed corn, and potatoes, &c. &c. besides the necessary provisions in pork and flour, until his own crops are ready; and should he not prove an expert axeman, even to hire men to do his settlement duty for him, which is often the case. Several instances have occurred where English rustics, by *thrashing alone*, (where every ninth or tenth bushel was allowed for the labour) have earned wherewithal for the cropping and stocking their new farm.

In consequence of these advantages, there are many individuals, particularly in the new settlements in the District of Newcastle, who have abundance and to spare, upon the smallest Grants, after being no more than three years in the Province. All the poor emigrant, who arrives at Quebec or Montreal, has to do, is to push forward as speedily as possible for the Upper Province; he must not suffer himself to be deterred by its apparent distance, and he must stop his ears against all the insinuations and seductions that will be used in his passage up the country, especially by Americans, along the whole course of the St. Lawrence, who will try every art to seduce him into the United States. Let him ever bear in mind what he may have been frequently told—and with much truth, that Upper Canada is the best “poor man’s country in the world;” and let him determine on making actual experiment for himself; and, if he has only industry, perseverance and integrity, we will not only answer for his success, but that neither himself nor his children will ever have occasion to repent the choice which he has made. time realize every object of a reasonable ambition, and become one of the most free and independent men on earth.

In many places, particularly at *Port Hope*, and at *Cobourg*, in the District of Newcastle, preparations have been made for the reception of poor Emigrants by the erection of suitable buildings, and having every facility in readiness for securing an early location in a desirable situation amongst the new townships to the northward of Rice Lake, to which there is an excellent road from Port Hope. This fine part of the country is principally settled by persons from Scotland and Ireland, and from the English counties of Yorkshire and Cumberland.

The Court House, where the Judge and Board for the District sits regularly once in every fortnight, is between the two villages of *Cobourg* and *Port Hope*, in both of which there is a handsome church of the established religion, besides a School house; and fairs are held twice a year at each place. There are two excellent grist mills, one at each village; and at Port Hope there are, besides a Saw mill, an Oil mill, a Fulling mill, three Breweries and Distilleries, two Tanneries, a Hat manufactory; Millwrights; several excellent Stores, in which every description of useful merchandize may be had on moderate terms; two blacksmith's shops, Pot and Pearl Asheries, Cabinet makers, Carpenters, Masons, Coopers, Shoemakers, Tailors, and several other useful mechanics. Cobourg and Port Hope are only seven miles distant from each other, by a good road; and between the two, another village named Amhurst, in which the Court House is situated, has been laid out by Major BURSHAM, in which are already two taverns, several mechanics, and some neat houses.

Port Hope, at which a wharf and commodious harbour on Lake Ontario is now projected, is the most convenient depot for the Townships in the rear of Hope and Hamilton, and for the Upper Ferry on Rice Lake, and is the place where the greatest trade is carried on.— Amhurst is the most convenient for the Middle Ferry on the Rice Lake, and for those who may have to ascend the river Ottonabee; Cobourg, in which there is also excellent accommodation, and several good stores, is the most convenient for the Lower Ferry on the Rice Lake, and to those who may have business in the lower parts of the Townships of Ottonabee and Asphodel, with the new Townships in their rear, and down the River Trent.

It will be seen by a reference to a Map of this country, that the villages just mentioned are most advantageously situated nearly in the centre of the northern coast of Lake Ontario; and it is impossible they can fail to become, with the gradual improvement of the country, places of great utility consequence hereafter. It should not be forgotten, likewise to mention, that these villages, with their respective neighbourhoods and the Rice Lake, already possess an extensive circle of good, and even polished, society.

We have been the more particular in these remarks, because we are quite satisfied that the District of Newcastle offers the finest field for enterprise, and merits more attention from emigrants, than any other part of Canada.

Should this light and hasty sketch fall into the hands of any of the poor class of Emigrants, before they can have made a settlement, it may be well to give them some idea of the expense they

must be at, before they can be said to be at all comfortable in their new abode.—At the present time it will cost the emigrant pretty nearly as follows:—

For building a Log-House, with a shade for his Oxen, and a Pig Sty.	£ 7 10 0
—For this sum his house may have two apartments, a stone chimney and hearth,* and two glazed sash windows.	
Clearing, Fencing, and Sowing Five Acres of Land, if he has to pay cash for it.	15 0 0
Seed for the first crop, with the price of two axes, two hoes, two brush hooks, two forks, one spade and one shovel. †	4 0 0
Yoke of Oxen and chain, from £10 to	15 0 0
An Ox Sleigh,	1 10 0
A Cow £3, Sow with Pigs, £1, 5.	4 5 0
Two Ewes with Lamb, 2\$ each,	1 0 0
‡ Some necessary articles of Household Furniture.	10 0 0
Putting up a Log Barn,	5 0 0
Two Kettles for making Sugar,	3 0 0
Prov. Cur'y.	£ 66 5 0

Any able bodied man may earn the above amount within the two years allowed him for the performance of settlement duty, and if he should choose to work himself with his oxen, in clearing, sowing, fencing, or in erecting the buildings, a considerable part of the above mentioned sum may be saved. But it is now supposed that the man is a stranger to the sort of labour required, and that he has no money but what he earns in this country. The two first crops with the increase of his stock, ought to go far towards paying the whole of the above amount.

A friend of the Author's has published a plan in London, by which he conceives that a number of those people now subsisting on parochial relief in England, may be removed to, and employed in, this

* This expense of a stone chimney, &c. has been questioned by several persons unacquainted with the work required, and from parts of the country where the proper materials are scarce—but we know, from experience, that where workmen accustomed to the laying of mis-shapen stones, and where the materials are at hand, the labour can be done for the price here stated.

† A Plough should not be required for several years, because the best management of newly cleared lands is to sow down with good grass seed, either with the second or third crop, and to keep it in grass until the stumps begin to rot, when the plough may be put in with full effect.

‡ We would say to the emigrant who is about to embark, bring no furniture, the carriage of which will cost more than it is worth in this country, but be provided with plenty of good substantial wearing apparel, which is here generally flimsy and very expensive.

has from its

country with great advantage, both to the public and themselves."— The money required in aid of this scheme, is not to be paid to the people, but is to be laid out within two years, in provisions and supplies of implements and stock, under the direction of certain managers. The cleared lands to constitute a *mortgage* to secure the payment of what is then the *debt* of the colonist.† "During the laying out of the money and the clearing of the lands, some slight restrictions on the employment and alienation of the property will be imposed on the owners of it; but, after the repayment of the capital employed, each individual in the settlement will be free from all interference. The time of such repayment, within ten years, will depend on the exertions of the settlers, who may receive their deeds on redeeming their lands."

The projector assumes a family, of the description to which he alludes, to consist of five persons, and that the sum of £200, managed with ordinary prudence, will enable such a family to acquire a prosperous settlement in Canada in two years, without any exposure to privations, and within ten years the money might be repaid, without inconvenience, by the family to which it was loaned: The author gives a detailed account of the expenses, with the manner in which he conceives the important business should be conducted; and sums up the total expenditure for 100 such families, thus:—

For the journey to the coast for 100 families, at £20	}	£2000
each family, 1st February, 1822,		
For the voyage to Montreal, March 1822,	}	3000
For the expenses to be incurred between May and June, 1822,		
Item, between June and October, 1822,	}	4500
Item, between October, 1822, and January, 1823,		
Item, between January and May, 1823,	}	1500
Item, between May and July, 1823,		
Item, in July, 1824,	}	900
		<hr/>
		£20 000

The quantity of land required for 100 families, on this plan, is half

* This plan differs from those lately suggested for diminishing the public burthens of England, as it relies for success on the personal exertions of the colonist, uncontrolled by the *perpetual* presence of superintendants; and as a boon or charity is not intended to be given them.

† Since last year, and writing this article. *The Great Canadian Land Company*, of London, has been formed; and the hint may have been taken from the pamphlet to which we allude. But not having seen the plan of operations intended to be pursued by this Company who have purchased, (as it is said,) *all the Crown, and half the Clergy Reserves*, we cannot pretend to state its objects; although it is quite certain the most beneficial results must accrue to the Canada from its operation.

a township, or 31,500 acres; which will be divided in the following proportions:—

	<i>Acres.</i>
For the Settlers	10,000
For the Managers,	5,000
For the Clergy and Schools,	4,000
For the Crown and Civil Government,	4,000
For the Town Plot, to belong to the Parish and Managers,	} 2,000
For the Surveyors,	1,500
For the Parish advancing the Capital,	5,000
	<hr/>
	31,500

The Managers should be competent to give the settlers proper directions for the sale of so much of their household goods as cannot usefully be carried with them; and, for the purpose of the present sketch, the whole party will be assumed to be safely landed at Montreal, in May,

Under favourable circumstances, the people will be placed on their lands early in June, prepared to clear away for a spring crop. With common industry, three such persons as we ought to presume our able settlers to be, will not find it difficult to get five acres sown in proper time in 1822; from which they may expect to raise about 50 bushels of wheat, 80 bushels of Indian Corn, with the usual quantity of Pumpkins, musk and water melons, 100 bushels of potatoes, and a quantity of corn stalks and straw, with garden productions; during the summer, before the crops are harvested, the people will be employed in preparing five acres more for an autumn season, and this cleared ground, with the former five acres, will be ready for wheat in the first autumn. After having sent a proportion of this first crop to market, a certain quantity turned into flour, salted their pigs, and put up a warm hovel for their cattle, they will in the winter of 1822—23 again be occupied in clearing more land for the ensuing spring. The quantity which may be then prepared will be about 10 acres which will be sown with oats, Indian corn, barley, pumpkins, and turnips, and planted with potatoes. Besides this work, they will sow the first ten acres, with seed for a meadow; during the second summer, five acres more will be prepared for the second autumn; and the several seasons will bring their own work on the lands previously cleared.

Having thus, in the second autumn, 10 acres of wheat land, and 10 acres of meadow, with additional occupations for the winter of 1823—24, on this increase, they will be able to clear for the third spring only 5 acres more; so that in the third harvest of 1824, such a family as we have assumed will possess 30 acres of cleared land, and 70 uncles; 10 acres of the 30 will be sown with wheat, 10 with spring crops, and 10 will be in meadow.

Their produce at the close of the third autumn, may be stated thus, at a low estimate:

From 10 acres of wheat, about	250 bushels
2 ditto of oats	70 ditto
2 ditto of Indian corn	100 ditto
2 ditto of barley	70 ditto

Pumpkins, in number about 5000, which are planted to the Indian corn hills.

Not more than ten tons of hay can be expected from the meadow, incumbered as it will be with stumps of trees, for several years. To this must be added the natural increase of the stock, together with the abundance of water and musk melons in the corn fields, and of garden productions, and an ox and several hogs in salt.

After this third autumn of 1824, the repayment of the capital advanced will begin; it will arise out of the production of the harvest of 1825, and the rate at which it will be made, may be judged of by the foregoing statement.

"It appears to me impossible," continues this ingenious writer, "that upon equal capital any set of men of the class here contemplated can be placed so advantageously; both to themselves and to the country, in any other part of the world as in UPPER CANADA."

The author illustrates his argument by an example, after the following manner:—

"In 1795, the parish of Barkham, in Berkshire, contained 200 inhabitants, of whom about 40, besides the sick, received relief to the amount of £75 a year. The average expense of supporting the families of labourers in Barkham was then about £25 each; making the rate of £75 to be divisible amongst a number of people equivalent to three ordinary families, which may be said to be the number in excess in the want of employment.—If the parish could be disburdened of these three families, and employment should not vary, those left behind would receive wages equal to their full support, until paupers again super-abound.

"The means for settling three families in Upper Canada is assumed to be a loan of £600, to be repaid in ten years, as before stated, and this sum will be raised easily by a mortgage of the rates under the sanction of an Act of Parliament.—Thus the rates will be lowered forthwith to the interest of that loan; viz: to £30 a year from £75; and they will decrease continually in proportion as the loan shall be repaid, and as the town plot and other land apportioned to the parish shall become marketable. This will be variable in point of time; and the amount of the proceeds will depend on the general prosperity of the whole settlement; it can hardly fail of making a very considerable return within seven years of the colonists quitting England. According to the Expenditure of Barkham, the rates for a surplus population of one hundred families is £2500 a year. Upon this income it would be easy to borrow £20,000 under the authority of an Act of Parliament. The interest on which being taken at £1000 a year, the parish from which the colonists could proceed, would make a present annual saving of £1500.

"Since the publication of the foregoing sketch, several individuals in England, in Canada, and in Nova Scotia, otherwise well disposed towards the views of the writer, have objected, that "under the present depressed state of agriculture, the settler will not be able to repay the capital advanced." This should not, certainly, be a subject of mere conjecture. In fact, it may be reduced to calculation. The

"York Market prices for the preceding week" are given in the Upper Canada Gazette of the 23d of May, 1822. now before the writer; from which it can easily be shewn. in the article of wheat only, that their will not be any difficulty for an industrious man to raise the required instalments.

Suppose a farmer and his two able sons, such as the writer has known many in the country, and who left England four years ago, nearly destitute, about to clear and to fence off, for a crop, ten acres of good, heavily timbered land, in order to raise a small sum of money. The question will be, can they "in the depressed state of Agriculture," produce, not a surplus of corn, but a surplus of money?

In what follows, the farmer and his sons are presumed to buy every article at the market price, and to dispose of the produce at the same; any practical man will at once notice that, if the party were established on their farm, and living upon their own produce, as in Canada the farmers universally do, the money expenditure would not be one third of what it is here estimated at; for instance. instead of giving five pence for a gallon of flour, the farmer would send wheat to the miller, and receive in return his proportion of flour, toll being detained for working it. The same in regard to his whiskey; and with respect to his beef and pork, he would never have occasion to go to the butcher, as he has here been supposed to do, and so forth.

The first expense will be for axes, about	£2 10 0
Brush hooks,	0 10 0
Provision, &c for seven weeks for three men, (the time required for the job in question.) and for one man during one week, which will be necessary in order to 'drag' the wheat in,	3 10 0
Seed wheat,	2 5 0
Provision, &c during the time they are reaping the wheat,	0 16 0
Provision for carrying the wheat, threshing,	0 5 0
	1 0 0
Keep for the oxen when lodging and getting in the seasons, independent of 'browe' a most capital feed well known to the 'af- ternoon' Canadian farmer, as well as to the early settler,	1 0 0
Taxes of all descriptions for 10 acres of land, and a yoke of oxen.	0 1 6
Wear of clothes, &c. and trifling incidental expenses	2 0 0
<hr/>	
Total expense, according to the York market,	13 17 6
Wheat off 10 acres, 250 bushels, at 2s. 6d. per bushel, or £5 a load,	31 5 0
<hr/>	
Clear surplus for the settler,	£17 7 6
<hr/>	

In the next year the expenses will be diminished.

	9	2	6
Wheat off ten acres, 250 bushels, at 2s. 6d.	31	5	0
Clear surplus for the settler,	£22	2	6

If these simple calculations be not correct, they may easily be contradicted and exposed. If it should be thought a high estimate, let half this surplus be taken, as nearer the probable result; and it cannot then be doubted that in the course of ten years the great majority of the settlers will be free from any incumbrance. The only objection to this calculation seems to be, that "the York market prices," may be reduced by the access of so many new growers of corn*. But it is conceived that a very great falling off may be admitted without risk of destroying the prospects of these colonists who have ten years allowed for the repayment of their debt.

"To a settlement of this description, the managers should devote their whole attention; and a leader of intelligence would be amply remunerated by the share of wild lands to be apportioned to him in respect of a colony of from 500 to 2000 families." The necessity of a personal residence amongst the people during the time of distributing the lands, needs little illustration, after the excellent example shewn by Capt. Williamson, in the settlement of a part of Sir W. Pulteney's estate in the Genesee country, in the State of New York, a short notice of which deserves a place here.

Mr. Morris had bought the land at five pence per acre, and, in 1791 sold one million of acres to Sir Wm. Pulteney at one shilling per acre,

* It is a very favourable evidence in support of the author's plan, for us to state, that the prices quoted from the York Market in the spring of 1822, were very unusually low, and such as may be scarcely expected to recur. The average price of wheat for the last seven years in Upper Canada cannot be taken at less than four shillings currency per bushel.

or for £50,000. With other purchases, Captain Williamson, the manager, had possession of 1,500,000 acres of land, bounded on the north by Lake Ontario. After building 10 mills, with a great number of houses, and making several hundred miles of road 800,000 acres were re sold at the price of from one to three dollars per acre before the summer of 1795. The produce not only refunded the purchase money and the whole amount of the other expense incurred, but also yielded a net profit of £50,000 sterling.

The *Plan* here alluded to is not altogether original on the part of our friend B—, since that famous *Patriot Mr. Gourlay*, projected a scheme nearly similar in the year 1817; and it has always been a subject of regret to the writer of this *sketch*, that one so well qualified to promote the agricultural interests, and encourage fresh accessions to our population, from other parts of the British Dominions, should have intermeddled with politics; since, on many questions of political economy, and especially on the subject of the *Poor laws* of England, that eccentric being was a perfect adept, whilst in *Politics* he became not merely bewildered, but actually insane. However, as to the introduction of British Paupers into the forests of Canada, no one anxious to witness the prosperity of this country can have any objection, at least on this side the water if they come as well provided as our friend B—proposes, viz: with £200 sterling for each family of 5 persons; but we think the expenses are over rated, and have no doubt that such a family, (particularly where this species of emigration was carried on extensively) could be removed and settled down comfortably, with all that was necessary to preserve it from becoming any kind of burthen whatever to others, for £100 sterling*—We are quite certain there are many persons, on whom the most perfect reliance could be placed, who would be very glad to undertake the removal and settlement, in this country, of 200 such families for the sum of £20,000 sterling.

Whilst on this subject, it ought to be mentioned that there is now a man in the District of Newcastle, who came out a little more than two years ago, without a single shilling in his pocket, his health and the use of his hands were all his dependence. A short time since, this same man disposed of a yoke of capital Oxen and a fine Cow which he had earned over and above what he required upon his little farm, on which he had besides, two excellent Cows and a large stock of Pigs, left for store pigs and for breeding, after having packed fourteen barrels of pork. He had also purchased a Reserve Lot from a neighbour, on which he had sown several acres of Fall Wheat; and in the following year (his third) he proposes building a good framed house, together with a large barn. The means for accomplishing all these results, so vast for one in his original mean circumstances, have been earned in an honest and fair way by farming on shares, as it is here termed; that is, he has a certain share, as may be previously agreed upon, of the produce of a farm (whose owner cannot conve-

* In the second edition of "Sketches of Plans for settling in Upper Canada, &c." the author admits that he had over rated the expense for the passage and settlement of each family upon his arrival in this country.

niently work it himself,) for his labour and expense in cultivating it, a practice that is common in many parts of Canada.

Here, then, is an instance of a man who, without friends, without capital, without credit, realizes what is, comparatively a comfortable independence in three years! Many more instances of a similar kind might be adduced, were it necessary, to shew with what rapidity and ease, an industrious, honest man, though poor, may elevate himself above the reach of want in this highly favoured country; and if a single, unaided, individual can prosper, surely, half the sum mentioned by our friend B—already alluded to, expended with prudence and economy, would establish a family of five persons in Canada, so as to be no longer burthensome to the parish which sent them out, or, to this country which received them into her bosom. Enough, it is conceived, has now been said to shew the advantages held forth in Canada to the poorer classes of society, on an occasion where the limits for discussion are so much narrowed by the necessity of regarding other subjects.

The field which is here presented to men of an higher order, and to capitalists, is so extensive, and requires so much detail, as well as argument and illustration, to demonstrate, that we cannot pretend to enter upon it with any fullness on this occasion; nor would it, indeed, be altogether a fit subject for discussion in a mere *sketch* like this; However, as it is not improbable this little work may fall into the hands of persons anxious for some information on this head, a few brief remarks shall be added, reserving a fuller statement for another, and a more enlarged opportunity.

Of the liberal professions, Clergymen are most required, and Lawyers the least needed. Such a provision has been made by the Imperial Government for the established Church, without any demand or tythe from the people, as must eventually make the Canadian Clergy (should things remain constituted as they now are) the most powerful, wealthy, and influential body to be found in any country, ancient or modern, no less than *one seventh of the whole soil* being set apart for its use and support. It is true the income at present derived from this vast appropriation, is scarcely worth naming; but it is every day increasing, and it is impossible to say to what extent it may hereafter arrive. There are a great many situations in various parts of the Province, where Clergymen, who *would be* active in the performance of their important duties, are much wanted.

An act of the provincial parliament prevents English or Scottish Attorneys from practising here until they have served a Clerkship of the same duration as is required from Law Students in this country, viz:—*Five years actual service*, under articles, to a Practising Attorney of this Province. Regular Barristers, however, or any person who has been called to practice at the Bar of any of His Majesty's superior Courts, not having merely local jurisdiction in England, Scotland, or Ireland; or in any of His Majesty's Provinces in North America, on producing testimonials of good character and conduct, to the satisfaction of the Law Society of this Province, may be called by the said Law Society to the degree of a Barrister upon his entering himself of the said Society, and conforming to all the rules and regulations thereof.

There are several openings in country situations, in different parts of the Province, where skillful *Medical Men* are much wanted, and in which they could scarcely fail to realize handsome properties; but the labour in such situations is severe. A *Medical Board* is established at York to examine all Candidates who have not graduated in the regular manner at some eminent British, or Foreign University; and no pretender to knowledge in this important profession is allowed to practise here without having previously satisfied the *Board* of his ability, and obtaining a licence for that purpose.

Of all professional men, or those of the middle ranks of Society who are not possessed of much wealth, there are none to whom so many advantages are offered in this country, as to the *Half Pay Officers* of the British Army and Navy. They become immediately independent. Entitled by the regulations of Government to receive from 500 to 1200 acres of land, according to their rank, from an Ensign to a Colonel, if in the Army; and, from a Midshipman to a Captain, if in the Navy; on payment of a Fee scarcely worth the naming (£2 7s. 8d.) they are immediately placed on a footing with the Country Gentlemen, as to real estate, whilst their half pay, drawn at stated intervals, gives them an advantage possessed by very few in this country.— Their Bills almost always bear a premium of from 5 to 10 per cent. this, with the difference of Currency, and the certainty that *One Hundred Pounds*, will go farther in the purchase of all the little luxuries for the table, and for the conveniences of life, than *Two Hundred Pounds* will obtain in England; besides the almost total freedom from Taxes, Assessments, and many other expenses that must be incurred by Gentlemen of this class in Great Britain, altogether give them extraordinary advantages; and we have often thought that in no other part of the Globe could they settle down so advantageously as in this Province. Besides, by their attainments, and rank in life, they are immediately eligible for many honourable stations and employments, which add to their influence and consequence, if not to their wealth; and such Gentlemen will have the additional satisfaction of finding much of that kind of society to which they have been accustomed, in almost every part of the Province, for there are now but few of the settled Townships in which there are not some half-pay officers, either of the Army or Navy.

We purposely neglect saying any thing of Merchants and Tradersmen, because if any such persons embark *speculatively* in this country without being previously well acquainted with it, and the mode of transacting business, it will undoubtedly be to their severe cost and loss.—Mechanics of almost every description are certain to do well, if honest, sober, and industrious. Spirituous liquors are unfortunately so extremely cheap, that temptations to drunkenness daily and hourly occur to him who is addicted to that most fatal of all vices.

To the small capitalist of from £5000 to £20,000, and upwards, the field that is opened in Upper Canada is *alluring, splendid, and dazzling!!* But it is such a subject that it is difficult to know where to begin, and still more so, where to stop! neither do we feel very willing to open the stores of our budget, in this particular, to the whole world, further than by touching generally on a few of those subjects to which such a capitalist should direct his attention, and by earnest-

ly requesting him "*to come and see,*" when we promise he shall know more. Capital alone is wanting to place Canada in the rank which her natural wealth and position entitle her to maintain in the scale of nations, and, as the right arm of Great Britain; and we would venture to insure a certain number of capitalists, to the amount above named, a *quadruple* return for the sum expended, within the term of ten or a dozen years! It cannot be expected we should state the mode of procedure on this occasion.

There is a great deal in knowing the signs of the times, and in being able to take advantage of those signs—He who has a spare capital, and wishes to increase it, should be "a discerner of the times."—General WASHINGTON is said to have excelled in this particular, and to have secured many advantages from the adroitness with which he managed his own interests in the fluctuations of the land market which at a certain period engrossed the attention of all classes in the United States of America.

The buying and selling, the parcelling out and settling, and locating land, may be called the staple business of all new countries, and that in which both individuals and the State are most deeply concerned. Much therefore, nay, almost every thing, depends upon the way in which it is managed—It is an idle and absurd opinion that land jobbing is injurious. When carried on extensively it is very advantageous to any new country; it imparts life, spirit, and enterprise, and converts what would otherwise become a stagnant, putrid marsh, into a living fountain of all that gives strength and power to Empire. The whole history of the United States, and especially the account of the settlement of the Genesee Lands in the State of New York, to which we have already alluded, afford striking illustrations of this argument. The present times are very favourable for making extensive purchases of land in Upper Canada—the price, owing to that general depression in the value of all kinds of property which succeeded the late war, being nearly as low now as it was at the first settlement of many parts of the country. The Province is now just emerging, like a new creation, into that general notice which it deserves, and the value of lands *must speedily rise in an extraordinary ratio*. The growth of Canada has never been forced; and, though it may have been considered tardy in comparison with that of the United States, (many parts of which are *hot-beds of human population*) its advancement has been natural, wholesome, and regularly progressive.

The usual mode of setting apart the Crown and Clergy Reserves in Upper Canada, is certainly very much against those Capitalists who may wish to embark in undertakings of this kind, and even against others who may desire to settle down together, and form a little community of their own. But it is probable the Provincial Government might be induced to vary from the common practice of allotting Reserves, on being convinced that it would be productive of public and private advantage, to any material extent, in any particular vicinity. Since the above remarks were penned, and most fortunately for Canada, the IMPERIAL GOVERNMENT has been induced to dispose of the greater part, if not the whole, of these Reserves to a LAND COMPANY, lately (1824) formed in London, and possessed of an immense capital:—We have not yet (Dec. 1824) had an opportu-

city of ascertaining all the views of this important co-partnership, whose agents are daily expected from England; but, the following are among the objects announced in a pamphlet lately published in London.—It proceeds, in the first place, to state the causes which have operated most in retarding the improvement and settlement of UPPER CANADA, viz:—

1st. The effects, immediately attending the late war; 2d the stagnation in the demand and depreciation of price in agricultural produce, which ensued after peace; 3d, the great delay which has taken place in obtaining a compensation from the Mother Country for the damages sustained during the late war—about £200,000 have, however, been allowed, and arrangements made to pay them; 4th, the existence of the Crown and Clergy Reserves; 5th, the mode in which fresh settlers have been introduced into the Colony.

The advantages which are to follow, are then mentioned in the words subjoined:—

‘The proposed company will make a wonderful alteration in a country so gifted and so circumstanced.

‘1st. It will throw into the country that stimulus which alone is wanting—*capital*.

‘2d. It will direct the tide of emigration into an incomparably more beneficial and useful channel.

‘3d. The certainty of finding immediate employment, and that in cultivated districts, without having to go into the wilds for it, will attract a greater number of emigrants into the Colony.

‘4th. The settling of these upon lands partly cleared and built on, will much sooner call their energies into action, and will enable them to make a much quicker progress towards independence and wealth.

‘5th. The extra demand for agricultural produce will encourage the old settlers to increased exertions and the employment that will be given to them in clearing the lands, will enable them to become purchasers themselves of many of the lots.

‘6th. The attention of small capitalists in this country will be attracted to the colony. There are at present in Great Britain a number of persons of small fortune, who, since the fall in the value of money, and the difficulty of employing it to advantage, are at a loss to support themselves and families, and have, therefore, been looking out for countries to emigrate to. As matters have hitherto been conducted, however, no one of that description would ever entertain an idea of going to Canada to place himself and family in a wilderness, at a distance from all habitations, with no neighbours but the wild beasts of the forests, out of reach of a church, and equally so of a market, either for the disposal of his surplus produce or the purchase of the necessaries he may require; but inform such a man that he may purchase, at a very moderate rate, a lot of rich and fertile land, free of tithes and poor rates, with little or no taxes, situated in a cultivated district with neighbours on each hand, and where a very little labour will open a communication with both church and market, and he will immediately think of going to such a quarter.

We sh count y with the of this c

‘Que Rumineo Canada.

7th. The capital of the company, and its power of acting, will enable it to do more in ten years, than could be effected by the dividends in half a century.

If such be the results that will flow from the operations of this company, its gains will be in proportion. The value of the lands will rise very considerably, in a short time it will be doubled, tripled, quadrupled. Before the war, it was calculated that the price of land doubled every five years. Since the peace, it has, for the reasons given, been almost stationary; but it will now rise rapidly.

It would be doing great injustice, however, to the highly respectable gentlemen who have already come forward in support of this measure, or to those who may be expected to do so; to suppose that they would confine their views of the benefits to be derived from it to pecuniary ones, without taking at all into consideration the political, which it is conceived will be still greater and more brilliant.

1st. By filling up the blanks in the old settlements the population will be concentrated, and the physical strength of the colony greatly augmented.

2d. By the stimulus given to cultivation of all kinds, the productions of the colony will be proportionally increased, and consequently its riches, so that it will soon be able to relieve the mother country from a part, and in future from the whole expenses of the administration of both Provinces.

3d. The increased population along the line of the river St. Lawrence and the lakes, where the old settlements principally lie, will multiply the natural means of defence, and, by augmenting the militia, will do away with the necessity of keeping a large military force in the country, and so save in that expense also.

4th. The increase in population and wealth will create an increased demand for the manufactures of the mother country.

5th. The same causes will increase the exports from the Province, and it is calculated that it may soon be able to supply Great Britain with all the lumber, flax, hemp, &c. she may require, and thus prevent her from being under the necessity of applying for those articles to the countries of the Baltic, the governments of which are taking such pains to exclude her manufactures and produce from their ports.

6th. A more certain, easy, and beneficial channel will be opened to relieve that redundance of population, under which this country has been labouring for some years past, than any that has yet been offered, and a considerable annual expense will, in a great measure, be saved to Government, while, at the same time, the emigrants will be much better provided for.

It has been thought necessary to submit these faint sketches, because very little is known respecting Upper Canada.

We shall probably further the interests of all concerned, and of the country generally, if, to these extracts, we add the following queries with their answers, from the same source, explanatory of the designs of this Great Company.

“Queries answered by the Hon. and Rev. Dr. STRACHAN, and by P. RUMFORD, Esq. Members of the Council of the Province of Upper Canada.

"Has the improvement of Canada, particularly of the Upper Province, with respect to the value of property, and the increase of population been in any degree considerable within the last seven years?"

"The population has increased prodigiously during the last seven years, but the emigrants have been chiefly persons of little or no property, with the exception of half-pay officers, who are entitled to gratuitous grants. Lands in Canada, being in some degree a circulating medium, are estimated in the market high or low, in proportion to the value of their produce, the lowness of which for several years back, has caused much distress to many who were not provident when it was high; consequently persons forced to sell have seldom got the value of their property, sometimes not half the value, but those who are not in distress will not dispose of their property at an under price.

"To what extent may emigration have been carried during the last seven years?"

"The average number of emigrants who have landed at Quebec during this period, may be taken at upwards of 10,000 annually. In one year more than three thousand orders for land were granted by the present Excellent Lieutenant Governor.

"Suppose a Company were formed in England to promote the agricultural improvement and population of Canada, from what sources would they derive any return for their capital?"

"Were such a Company in possession of the Crown Reserves in any District, a new impetus would be given to the Province. By good roads and building mills on the blocks or tracts, the lands would immediately become valuable. Offices for the sale of the lands might be opened in London, Edinburgh, and Dublin, furnished with correct maps and description. The character of the Company would guarantee the safety of the purchaser in respect to his title—and to shew fairness, the Company might direct their lands to be shown, free of all expense, to the agents of any private association or small capitalists, who might be disposed to purchase. In many of the populous Townships, the Reserves would be purchased by the native inhabitants, in order to settle their children near themselves; for example, in many of the Townships, there are already 200 families, most of which possess one lot of 200 acres; but we shall suppose, that the 200 families possess, among them only, 150 such lots. Now the grantable lots in a Township are about 240, and 90 Reserved lots, that is, 45 for the Crown, and 45 for the Clergy. The population from emigration and natural increase doubles in about 12 years, so that in that time the 200 families would be 400 families, and require at least 150 more lots of land. This supposition is placing the matter in the most disadvantageous point of view, because many of the unoccupied lots belong either to the inhabitants of the same Township or other individuals, who, knowing the value of lands in the midst of a populous settlement, hold them high, so that the Company would, in all probability sell the Reserves, much sooner than is here anticipated, being satisfied with a moderate profit. In fine, were a little capital thrown into the Province and the public attention drawn towards it, lands would rise four-fold, and yet be cheap to the actual settler, as the produce would rise in proportion, from the rapid advancement of commerce, of enterprise, and increase of circulating medium.

"What is the cause of that difference which all travellers have remarked between the United States and Canada, where the soil and climate are so similar; in the former every thing is represented as alive, active, and prosperous; in the latter all dull and languid?"

"This question admits of a most satisfactory answer. Upper Canada was first settled by refugees from the United States after the peace of 1788, all of whom were destitute and wholly without capital; every accession of inhabitants has been nearly of the same description. Whatever wealth is to be found in the Province, has been made entirely from the soil; never yet had one single capitalist come into the country: purchased a large tract of land, built mills, made roads, and, as the American say prepared it for settlement. The consequence has been apparent languor, compared with the neighbouring States, many persons becoming comfortable, but never acquiring great capitals. But in the American States, many purchased large tracts, spent many hundred thousand dollars in their preparation for location, sold at high prices, and after a few years, recovered the capital laid out seven fold. The same may be done in Canada at this moment, and with the certainty of speedier returns than the speculators on the other side, as the population of Canada is much greater than the parts of the country were, where they commenced their operations."

"Quizes answered by the Right Reverend Father McDONELL, Bishop of Rhosina.

"What do you conceive would be the most effectual mode of encouraging emigrants possessed of a little Capital to settle in Canada, independent of the cheapness of the land?"

"Were twenty or thirty acres cleared in lots of 200, it would be a great inducement to that class of emigrants to sit down at once in Canada; but certainly the most efficacious way of inducing emigrants to go to Canada and remain in the country, would be to help them with the means of clearing the lands and settling themselves."

"Suppose a company were formed in England for this purpose what would be the source of income, or the return for the capital so invested?"

"The company should have lands on easy terms from government; it should agree with settlers to take their lands at a certain regulated price, and assist the settlers to clear them in the American way, taking an obligation from the settler to repay the money advanced, and the price of the land, within a certain period of years. Thus the difference of the price paid by the company to Government, and the price which the company would receive from the settlers, would in my opinion constitute a certain source of return to the Company."

"What is the cause of that difference which all travellers have remarked between the United States and Canada, where the soil and climate are so similar, in the former every thing is represented as alive, active, and prosperous; in the latter all dull and languid in comparison?"

"In the United States the lands are all bought in large tracts by speculators, men of capital. The first thing these gentlemen do, is to open roads in different directions, through the tracts which they purchase, and to build mills in favourable situations, thus attracting settlers to their lands; and by disposing of lots along the roads and in

advantageous situations, giving encouragement to build villages — These speculators help the new settlers with loans, &c. and do not give them titles to the land till such time as they have fulfilled the conditions, and have repaid the capital with interest of the money advanced to them. When it happens as it sometimes does, that the settlers fall in their engagements, the lands revert to the speculators with all the improvements made on them, and then are in a condition to bring a much better price from the next that desire to purchase them. As the tracts are thus improved, the lots which were at first considered of little value by settlers, are gradually made more valuable, in so much that those which remain longest in the hands of the speculators, generally bring the greatest prices. Now, on the other hand, with regard to Canada the Crown and Clergy Reserves, and the Concessions granted to military claimants, keep more than three-fourths of the whole Province in a state of nature, and deprive the settler of the assistance of his neighbours in making bridges and roads, to bring his produce to market, and from the towns such things as his family requires; prevent mills and other accommodations from being erected; thus cramping the exertions of the settlers.

“But you have said there are no speculators of capital in Canada, similar to the Americans; of what avail then will it be, that these waste lands are brought to sale, when the energy is wanting that is required to animate the country?”

“If those obstructions of which I have spoken, were removed, and the lands free to be sold, capitalists would soon rise to render them profitable subjects of speculation. I do even conceive that men of capital would come from England and Europe, and deal in the American manner with those lands; besides the natural progress of the agricultural population of the Province would create a market; for it may be justly said, that the youth of Canada all aspire to become possessors of land, and there are no spots so desirable as these very Reserves which are a dead weight on the prosperity of the Province.”

“Do you know any thing of the Pulteney lands on the American side of the St Lawrence?”

“Yes; I had an opportunity many years ago of reading the correspondence of the agent of Sir W. Pulteney, respecting these settlements. From that correspondence it appears that the progress of their operations were, as I have described the progress of the American speculators. It also appeared that Sir W. Pulteney and his associates had laid out large sums of money, perhaps as much as sixty or eighty thousand pounds in building inns, and mills, and making roads and bridges, before they got much return. But now the lands which were not worth half a dollar an acre when they began their operations, are worth on an average, from thirty to forty dollars an acre.”

“How long had these operations been going on before the lands came to make so great a return?”

“There was very little return made for the first eight or ten years. The return for the succeeding five was considerable, and the profit has since continued to increase in a prodigious ratio, quite incalculable.”

“Do you conceive, if similar undertakings were instituted in Canada, that similar results would follow from them?”

“I think that the result would be quite equal; for the natural feci-

"What are those superior natural facilities?"

"The great channel of internal navigation—the St. Lawrence from Montreal to Amherstburgh, a distance of nearly 800 miles, might be rendered navigable for vessels coming across the Atlantic, and steam boats, by cutting a canal, first from the Cascades to Coteau du-Lac, a distance of thirteen miles, and from Cornwall to the head of the rapid Plat, a distance of forty miles, and from Burlington Bay, at the head of Lake Ontario, to the mouth of the Grand River that flows into Lake Erie, a distance of about thirty miles. Government is excavating a canal to avoid the great rapids of the Ottawa; and besides these, the whole country is intersected by stream and lakes in a manner quite peculiar to itself, affording the means of inland navigation in every direction."

"*Queries answered by WILLIAM GILKISON, Esq. long resident in Upper Canada.*

"What is the average cost per acre of clearing land in Upper Canada in favourable situations, and what may be called unfavourable situations?"

"Lands are cleared of their standing timber and brushwood (not of roots,) including fencing, for the average price of about seventy-five shillings per acre. It is immaterial to the labourer where the lands may be situated, but the quality of its timber fixes the rate. Lands covered with oak, ash, elm, hickory or maple, and the like, are the most easily cleared, and may be called favourable: those with white pine, cedar &c. unfavourable.

"What is the average value of land, generally per acre, after it has been cleared?"

"There are but few lots (lots consisting of 200 acres) cleared of more than half its timber; and when sales or valuations are made, this is done by average of the whole quantity in the lot: their price varies according to situation and state of buildings.—Average may be £350.

"What would be the difference in comparative value of a lot of 200 acres in a state of nature, and the same lot where fifty acres shall have been cleared?"

"I have about 2000 acres in a state of nature, some of them exceedingly well situated, which I would not sell under fifteen shillings an acre; but tracts of land have been sold for three shillings an acre. Last winter I sold 200 acres in the Township of Cornwall, with a house and barn on it, for £420. This farm had been several years in the market; it had sixty acres of cleared land, but no fence.

"What would be the value of a lot of 200 acres cleared, with a house, &c. thereon?"

"A 200 acres lot is in no case ever cleared of more than half its timber. The value, taking it with the first houses barns, &c. may be estimated from £250 to £300. The answer to this query applies to land settled within eight years, during which the first buildings are seldom changed.

"In what districts do you consider the most desirable Reserved lands to be situated, bearing in mind that the inquiry is made with reference to operations on a large scale?"

"It is impossible to give a satisfactory answer to this query. A reference to the Surveyor General's maps, &c. and to the field notes of his deputies, can alone be relied on. I have always heard the Districts of Niagara, Gore, and Midland District, named as containing the most valuable of the Crown and Clergy Reserves."

We should not satisfactorily acquit ourselves of the task we have thus voluntarily assumed, were we to neglect adding the remarks of a writer apparently well acquainted with this country, and with the views of the Company, whose project we have just noticed; especially as our means of estimating the merits of the ultimate design are, as yet, imperfect. The remarks alluded to were published, a few months ago, in the "*London Press*," after having described the manner of allotting the reserves, and their present situation and value—the writer assures us,—“The Canadian Company propose gradually to purchase these reserves from Government, at a valuation to be estimated by Commissioners appointed by both parties, to sell them to farmers, taking a certain *per centage* of the price in hand, reserving for the remainder of the sum due, *Six per cent per annum*, the legal interest of the colony, and retaining as security in their own hands the *title deeds of the lot*; so that they become possessors with all the improvements that have been made, in case the purchaser fails to fulfil his engagement. From a thorough investigation of the plans of this Company, and an intimate knowledge of the country, so which these are to be put in practice, we are of opinion that for a person who will be satisfied with a fair and steady return for the capital he invests, the Canadian Company's is a desirable stock. For those who expect to double their principal in a short time, we cannot recommend it. But we think that sober people had better invest their money in such a concern, where there is every prospect of an adequate return from solid security, than to cast their bread upon the waters of a foreign loan, to raise a bubble, which, as is naturally to be expected, generally terminates in a squeak.”

In our opinion the success of this Company entirely depends upon the skilful management of their affairs, and on the employment of judicious, *practical*, men as their agents.—There must be no *stinecurists*, no *adlers*, no *theoretical lookers-on*.—The example of Sir Wm. PULTLER's agent (Captain Williamson) in the settlement of the *Genessee* country, must be followed;—and the most splendid success is certain!

Before we take our leave of this subject we cannot forbear transcribing the following sensible commentary, from a late *Montreal Gazette*, which contains some very wholesome advice—and such as the Company would do well to adopt. Alluding to the *Queries*, and their answers, already presented to the readers of this Sketch, the writer observes—

“In his answer to the first query, notwithstanding the Bishop's ample opportunities of judging of this subject, we would, with all deference to his opinion, beg to say the plan he recommends, is not the most suitable for existing circumstances. To ‘help Emigrants with the means of clearing the lands and settling themselves’ has been found not to answer; nor will it induce them ‘to remain in the country,’ but have a contrary effect. When what are called the military settle-

other dis

ments were first established, those who took lands in them were allowed rations for one year, and furnished with tools and other necessaries. The greater majority of these settlers fled away their time, without exertion, while thus receiving rations—and as soon as they were withdrawn, many left their lands, without making any improvements upon them. Some who remained, until the expiration of the time allowed for obtaining their deeds, having barely cleared what was required by the conditions of their location tickets—sold their lots, and left the settlement. To give help to settlers to clear lands necessarily implies, that they are totally destitute, and to such settlers, the assistance they receive is in almost every case thrown away; whereas, those possessed of capital (which is the description of settlers for whom the information is sought in the query,) require no help for clearing—and it would be much better bestowed by enabling them to raise and cultivate different crops or to make improvements on their farms, after they are cleared, by the erection of buildings, the promotion of laudable schemes, such as building mills, draining, fencing, and other plans that would enhance the value of a cleared farm or be serviceable to those in its vicinity. It will never answer to advance help to the settler who has no capital of his own to enable him to clear his lands. The Bishop in his answer to the second query recommends assistance to be given to settlers to enable them to clear lands in 'the American way,' from which it may be inferred that such a practice as that of advancing means to clear lands to the settler is common in the United States. This we have every reason to think is not the case.—Americans, or those so called, possess an uncommon turn for clearing wood lands with facility. They will clear the same extent at one half the expense and in one half the time a settler from the old country could—and there are few of them so destitute of capital as to require any help for this purpose. Besides, the sentiments of these and of British Emigrants are generally, so diametrically opposite, as regards the possession of lands, that what might be of service to the one would be injurious to the other. When a native of Great Britain once becomes a proprietor of the soil he considers it as his stock in trade, he goes on to improve it, not only to raise from it his present necessities and comforts, but to leave it as a portion and provision for his family. He has no intention of selling, and nothing but its being unsuitable for his purpose, or his being pressed by necessity, will induce him to do so. What improvements he makes are not done to enhance the price of his property when brought to market, but to add to his own comforts and increase the means of providing for his children. The American on the contrary looks upon a farm as a piece of merchandise, or the clearing land in the same light that a mechanic views any piece of workmanship, he is engaged in. The sooner it is done the quicker he can bring it to market, and he never calculates on receiving any profitable return from it but by its sale. To advance help to the latter to clear their farms, is the same as lending money to a merchant to enable him to make a favourable speculation, and which may be returned next day when he effects a sale. But to give an advance to a British settler to clear lands is hanging the weight of an obligation upon him which he cannot for years repay—and in addition to his other difficulties, in clearing wood lands, he has the melancholy reflex-

tion to think that he is in debt, and while he is so, he views the possession of his farm not as a proprietor, but as a sort of lessee. It is not by this land jobbing system of retaking the lots after being given out, for the value of the improvements, that will ever attract British farmers to Canada; although such a plan would perhaps induce some of the Americans who speculate in clearing and selling lands. It is the desire of becoming *bona fide* the proprietor of the soil, and the hope of exemption from taxation, which forms the magnet of attraction to British Emigrants in Canada; none of them ever clear a farm with the hope of increasing their capital by the sale of it; but in the expectation of its descending to posterity as an heir loom, and a fortune to secure their families from want.

Should the Canadian Land Company be so illadvised as to follow the plan here recommended, they will soon discover the ill consequences of it. they will inundate the country with Emigrants of no capital. Numbers of these poor persons will come out in the hopes of getting help from the Company, and their ignorance of the proper mode of applying that help, will involve themselves in ruin, and waste the property of the Company, without making improvements on their lands adequate to the advances made to them.*

Sometimes an entire Township is offered for sale, as is the case at present, in the District of Newcastle, in that of *Seymour*, through which the River Trent, one of the finest streams in the Province, and abounding with Mill Seats, runs in its course from the Rice Lake to the Bay of Quinte, on Lake Ontario. This Township is admirably calculated for the formation of a beautiful and rich settlement; it is in the immediate neighbourhood of the *Marmora Iron Works*, and surrounded on all sides by thriving settlements; this tract of land, a great part of which is of the first quality, may now be purchased at a price, and on terms that would insure a noble fortune to a Capitalist of sufficient means to carry the proper plan of settlement, and resale, into full effect.

In this Township there are about 47,000 acres, exclusive of Reserves. There are also the following additional tracts, now advertised for sale, on very liberal terms, viz:—

<i>Blandford</i> , about	- - -	20,000 Acres.
<i>Houghton</i> , ———	- - -	19,000
<i>Middleton</i> , ———	- - -	14,000
<i>Southwold</i> , ———	- - -	17,000
<i>Yarmouth</i> , ———	- - -	11,903
<i>Westminster</i> , ———	- - -	9,237
<i>Sheffield</i> , ———	- - -	66,688

The whole of which, together with *Seymour*, are appropriated for the endowment of a College in this province.

But there is scarcely any part of this Province where a man of judgement, and with the necessary funds, might not lay out his mo-

* Since writing the preceding paragraph a very gentlemanly and enterprising individual from the West Indies of the name of *Beattie*, and a relative of the celebrated author of the "*Minstrel*," and other poems, has made a purchase, and has settled in this Township,

ney with a certainty of enormous advantage. As we have before hinted, it would not be quite proper to go into detail on an occasion like this; but we should be rejoiced to hail the arrival of men of capital in this Province, not merely for their own sake, but for the general good of the country, which would naturally grow in wealth and power, in the same ratio with the success of private individuals —

To those who might wish to embark in a commerce of raw material, or in the extensive manufacture of staple articles of home consumption, there is here also a fine field for enterprise; since there are none of those restrictions which gave so much umbrage in the United States before their separation from the British Crown, and which were so much dwelt upon by the famous Dr. PRIDE, in his work on *Civil Liberty*, as being a just cause of discontent and remonstrance. Of the precious and valuable metals Government reserves *Gold and Silver*, only. Grantees are put into the full, free, and uncontrolled possession of all the *Copper, Lead, Iron, Tin*, or other *Metallic*, or *Mineral* substances which may be found on their lands, together with *Coal*, and all other substances whatever; and the more this country is explored, by men properly qualified, the richer it will be found in valuable mineral productions.

The history of the Establishment of the *Marmora Iron Works*, now the property of the enterprising and patriotic CHARLES HAYES, Esq., is alone sufficient to show the liberality of Government, and the hopes that any other capitalist may reasonably entertain of success in laying the foundation of future wealth, so far at least as the patronage, and encouragement of the Government, in this country, is concerned or desired.

There are several manufactories of a domestic nature, in which large capitals are required, the want of which is at present seriously felt by all classes of people in this Province. Of these, *Salt*, (which may be obtained by going to a sufficient depth in almost every part of the country) stands the first in the list of necessity, since the Upper Canadians are not only supplied with great irregularity, but they pay at least double what they ought to pay for this indispensable article, and are under the control, in this respect, to a serious and alarming extent, of a people who are always rivals, and sometimes enemies. At one period, during the last war, *SALT* was sold in this country at from \$10 to \$15 per bushel, and even now it is frequently 6, 6, & 7\$ per barrel, in situations, where it ought not to exceed \$2 per barrel. The culture of *Tobacco, Hemp, Flax, and Wool*, and *Rape* for the manufacture of *Oil* for exportation, also, the establishment of *Paper Mills*, (which are very much wanted;) of *Nail*, and *Screw Factories; Glass-Houses; Potteries;* and a *Manufactory of Course Paint*. All promise abundant returns for the outlay of capital; and, to be of the most beneficial consequences to the country.

A great deal of enterprise and public spirit has been lately shown in the *Western District*, where *Tobacco crops* have increased so considerably as to allow the exportation of many hundred hogsheads, during the last season:—We have heard of a single cultivator having 40 acres under this valuable crop.—As the markets of the Lower Pro-

vince are much too limited for the disposal of a tenth part of what will shortly be raised in the West, an application was made to the Imperial Government at home, by our Legislature, in favour of the Canadian grower: which has had the most satisfactory result,—the Lords of the Committee of Privy Council for Trade, having consented that Tobacco, the produce of Canada, shall be admitted into Great Britain on payment of a duty of *three pence per lb. less than is payable on Tobacco the produce of any other country.*

Amongst the Domestic Manufactories, that of coarse woollen cloth is one of the most considerable. In the narrow District of Gore, alone, from 2 to 3000 pieces are annually made; and throughout the country, it is a trade, together with the weaving of linen, rapidly increasing.—The following letter, addressed to the writer of this Sketch, may be here introduced with propriety, as a strong proof of what may be done, even by very humble individuals; and, of the rapid improvement which is generally making in this country:—

SIR,

A few days past I visited Brayn's Woollen Factory lately established in Southwold, six miles from Port Talbot, the same distance from St Thomas, and near the confluence of Kettle Creek with Lake Erie, of which I beg leave to submit to you a short account.

About three years ago, Mr. Richard Brayn, and his son John, (late of Lancashire, England,) went into the woods and put in operation a Saw Mill, on a beautiful branch of Kettle Creek, preparatory to the erecting of this Woollen Factory. The year following they set going a Carding Machine, and now they have completed the cloth Manufactory, taking wool in the fleece, and returning it ready for the Tailor. They have in operation a Picking Machine, a double Carding Machine, which cards about 100lbs. of wool per diem; a Billy or roping machine, with 30 spindles, drawing 5 threads of 6 feet length per minute, and capable of working 60lbs. of wool per day; a Jauny for spinning yarn, with 60 spindles, drawing 4 threads of 7 feet length per minute; and making about 25lbs. of yarn per diem; Two looms in operation, which can turn off about 60 yds. cloth per day, and a fulling and dressing apparatus sufficient to finish the proceeds of the Factory, together with what customers work they may receive.

They informed me that they had received this season about 9000lbs. of wool for manufacture; had carded about 6,500lbs. for customers, and taken in 100 pieces of cloth for fulling and dressing.

They made the whole of the machinery on the spot, except the spindles, which came from England. The Brayn's themselves were the artists, except for the heavy blacksmith's work, which however was performed under their immediate inspection. They are ingenious enterprising mechanics, and deserve much praise, as well as the generous support of the public, for their industry and perseverance in erecting such valuable works in this new settlement, which as far as my information extends, are the first that have been altogether made in the Province. Since the projection of the above mentioned and other works to assist in the manufacture of wool, sheep have increas-

sed in this settlement nearly, if not more than, four-fold; and in consequence the Brayn's intend doubling the extent of their works in the course of two years.

The works are situated in one of the most delightful portions of the Talbot Settlement, both as respects the quality of the Land, the excellence and quantity of its fine Oak timber, its proximity to the Lake, its beautiful chrysolite rivulets, and the pleasing variety of scenery it now presents, but which will admit of infinite improvement. Some of the finest views in the District of London are to be found along the banks of Kettle Creek.

I am,
Sir,
Port Talbot,
18th Nov 1824.

Yours most respectfully,
A. H. BURWELL.

Nature has designed this country to become rich not *merely* by reason of her agricultural resources, which promise to be inexhaustible; but through the commercial advantages of her natural position, which cannot be surpassed; for no country in the world is possessed of so many public highways, by water communication, as Upper Canada. The rivers of a country may be compared to the arteries and veins of the human body, as being alike the channels, for communicating health, vigour, and life, into every part.

The River St. LAWRENCE, which we shall here consider as arising from the Great and Magnificent Basin of LAKE SUPERIOR, which is (more than 1500 miles in circumference,) has a course to the sea of nearly 3000 miles, varying from 1 to 90 miles in width, of which distance, including the Lakes ONTARIO, ERIE, and HURON, it is navigable for ships of the largest class, very nearly 2000 miles, and the remainder of the distance is navigable for barges, batteaux, and vessels drawing little water, of from 10 to 15, and even 50 Tons burthen. Into this great artery, as it were, of the finest part of the country, fall many other rivers of such extent as would be esteemed waters of considerable magnitude, and of the highest importance, in any other country.

Some of these Rivers are the outlets of regions of vast extent that are watered by a countless number of Lakes, and minor streams. Of these the *Saguenay*, which falls into the St. Lawrence below Quebec; and the *Ottawa*, or *Grand River*, whose embouchure is divided into two branches by the Island of Montreal; and the *Trent*, or *River Otonabee*, which is the outlet of a long chain of Lakes, in the north-west country towards Lake Huron, and which falls into Lake Ontario near Kingston, are the most considerable.* Steam Boats of the first class, and with the most elegant accommodations, are now found on all the large waters, as far to the westward as the river St. Clair; and Canals are cutting in various quarters to facilitate commercial intercourse.

But it would be impossible in a sketch like this to mention or describe

* The Bay of Quinte is, in fact, rather the mouth of the River Trent, or Otonabee, than a Bay of Lake Ontario: as there is not only a perceptible current down its centre—but it has no side communication with the lake for many miles, until it arrives at what is termed the *upper gap*.

a fifth part of the Lakes and Rivers which open and fertilize the extensive region of Upper Canada. No one who looks at any existing map of the Province can form any idea either of their number or magnitude. Such a detail must be reserved for another occasion, and for a larger work. Amongst the improvements lately suggested, in that spirit of enterprize which at present seems to be so general, is one of vast moment to the commercial interests of both Provinces; and, indeed, of all British America. Several public spirited individuals have formed themselves into a company which is called the "St. Lawrence Association." Their objects extend to an inquiry into the most feasible methods of improving the navigation of the *St. Lawrence*, throughout its entire course, by means of steam-machinery, rail-ways, canals, deepening channels, or any other method that may be suggested in the course of research. The improvement of the navigation of the *Ottawa*, as well as of all the other smaller streams which empty themselves into the *St. Lawrence*, will also claim the attention of this "Association" whose scope will, in fact, extend to whatever may increase, or develop, the resources of this country, in a commercial point of view.

The views of the Association will not be confined merely to an improved method of ascending the Rapids between *LaChine* and *Johnstown*, although that is certainly an object of primary importance, and one that demands immediate attention. To facilitate the conveyance of produce from one Province to the other will prevent its taking a direction through foreign channels, and must necessarily promote that profitable intercourse which should ever subsist between Provinces whose interests are so intimately blended.

It appears upon inquiry that produce, should the contemplated improvements be carried into effect, might be brought with facility from *Niagara* to *Quebec*, a distance of about 570 miles, in the short space of 60 hours. With a favourable wind a vessel may traverse the length of *Lake Ontario* in 24 hours; a boat can descend the *St. Lawrence* from *Kingston* to *Montreal* in 20 hours; and the passage of a steam-boat from the latter city to *Quebec* would occupy 16 hours; making in all 60 hours!

JAMES GENOIX, Esq. a very enterprising and patriotic citizen of *Quebec*, to whom we have been frequently indebted for valuable commercial information, thus concludes one of his able communications on this subject. "These contemplated improvements may be carried into effect by the 1st of July next, and it only remains for the discerning inhabitants of the two Provinces, who are more immediately interested, to give their most zealous support to a measure of such unprecedented advantage to the whole country; for it must be evident, that in the article of flour alone, having the protecting duty in our favour, no country in the world can enter into a competition with us in supplying the West India Islands, and our sister Provinces of *Nova Scotia*, *New Brunswick*, &c. &c."

To show the wonderful and unequalled advantages which the *CANADA* possess, in respect of internal navigation; and, to render this part of our work more complete and interesting to those at a distance, it may be proper to mention that, beside the Steam-boats which at present navigate the upper part of the *St. Lawrence* and *Lake Onta-*

rio, there is one of large dimensions and excellent accommodations, named the *Superior*, on LAKE ERIE, which plies from *Buffalo* to *Detroit* a distance of more than 230 miles, and this vessel commences her regular trips at a point upwards of *One Thousand Miles* from the *Gulf of St. Lawrence!* The navigation from *Quebec* to *Buffalo*, with all the present interruptions may be performed in a week, and from thence to the *River St. Clair*, (either to *Detroit* or *Sandwich*) in *three days*. From thence into the *Lakes HURON, MICHIGAN, and SUPERIOR*, the impediments are few and trifling. From the *Island of Anticosti* at the mouth of the *St. Lawrence* to the head of *Lake Superior*, we have a navigation of an extent little less than *Three Thousand Miles*; the greater part of which is ship-navigation; and may be run over, with all the present obstacles, during the summer months, at the rate of about 80 miles per day; and, that through the greatest extent of fertile country to be found, in continuity, in any part of the world—with a climate highly favourable to agricultural labour!!

The principal new settlements that have been formed, are the *Perth*, on the waters of the *Rideau*, in the *District of Bathurst*; the *Rice Lake Settlement* in the *District of New Castle*; and the *Talbot Settlement*, in the *London District*. But, during the administration of the present excellent Lieutenant Governor nearly fifty new Townships, averaging upwards of sixty thousand acres each, have been surveyed within the space of five years, and there are very few of these without inhabitants. The population of Canada is increasing with great rapidity. Including the Military, and also the Aborigines of the country, both Provinces cannot contain much less than *One Million of Souls*.*

But it is very difficult to get at the truth, in this respect, notwithstanding an Act of the Provincial Parliament of Upper Canada compels the inhabitants of each Township, through their Town Clerk, to make an annual return. The census is usually taken in so careless and slovenly a manner, in the country, that it is seldom or never accurate, and the error is always in under rating. In the Lower Province, the census is generally made by the resident Clergy. †

It is probable the settled parts of Upper Canada contain about 200,000 souls. The largest towns are *York* and *Kingston*, of which *Kingston* is the most populous, containing 2 800 inhabitants. Many

* A return has been lately made for Lower Canada, which if true, will oblige us to be more moderate in calculating the round numbers for both Provinces; but, believing our present estimate to be near the truth, we shall wait for a more perfect return before we alter the amount which is here estimated.

† An Act to make more effectual provision for obtaining an accurate census of the population of the Upper Province, having passed during the last session of the Provincial Parliament—we may shortly expect much more correctness in the annual returns than has been hitherto found;—indeed that section of our work for the present year, which treats of this subject, is much more correct than that of last year.

other towns are growing into note, of which the following are the principal:—

Cornwall,	Coburg,	Niagara,
Prescott,	Port Hope,	St. Davids,
Brockville,	Big Bay, (<i>township</i>	Queenston,
Perth,	<i>of Whitby,</i>	Stamford,
Richmond,	New Market,	Chippeway,
Gannanoque,	Penetanguishene,	Waterloo,
Fitzroy Harbour,	Dundas,	Victoria,
(<i>on the Ottawa,</i>)	Ancaster,	Port Talbot,
Bath,	Hamilton,	Brantford, (<i>Grand</i>
Belville,	(<i>District of Gore</i>)	<i>River,</i>)
Marmora,	Grimsby,	Ambertsburgh,
Hollowell,	St. Catherines,	Sandwich.

The Militia of Upper Canada have become formidable, not merely by their number, but for their quality and metal; and there cannot be more loyal, nor better disposed men towards the British Government in any part of the Empire; no, not in the heart of England; and the last war with the United States having given them immortal renown, their spirit is of so high and confident a character, that it will be extremely difficult if not impossible, for any foreign enemy to subdue it.—It is no longer a problem whether the Canadas will prove an easy conquest to the United States of America. One Hundred and Fifty Thousand Canadian Militia, (which both Provinces have now at command,) so well disposed as they certainly now are, with the Troops of Provincial Cavalry and Riflemen which have been voluntarily raised, under the orders of an able General, from the nature of the country they have to defend, may bid defiance to any number that may be brought against them.—And here we purposely omit saying any thing of His Majesty's Regular Troops, and the aid to be derived from the Indians.

The ABBE DU PRADT was never more mistaken than in his assertion, at p. 479, of his famous work on the Colonies, where he says, in his usual pompous and conceited phraseology.—“Acadia and Canada will have ceased to belong to England on the day that the United States will be able to establish an army of 50,000 men.” That experiment has been tried; even whilst the Canadian Hercules was as an infant in his swaddling clothes. We hope it will be long before it may be necessary to evince a greater maturity of strength, either defensively or offensively!

Nothing is more tempting, and nothing is more dangerous, and fallacious, to minds of a certain grasp, than analogous reasoning.—It requires a penetrating and comprehensive genius, especially in politics, to apply it with any hope of drawing safe and just conclusions. DU PRADT adds to the assertion just quoted. “The English will find themselves in a position, with respect to the Americans, equivalent to that which they formerly found themselves in France. They will be in the same circumstances in Canada as they were in France during the time that they held possession of Guienne and Normandy, as the Swedes were in Finland since a Petersburg existed, but with this difference that Guienne and Finland are situated only at the distance of a few leagues from England and Sweden, whereas the United

States are by the side of Canada, and England is distant a thousand leagues from it."

This amusing and interesting Frenchman forgets a very important fact; that a given extent of country, (especially one like Canada possessing so much wilderness, with strong natural boundaries or barriers,) even as a fortress of certain magnitude, requires no more than a certain number of men to garrison it; and that a greater number than what is required is generally an incumbrance, (when straightened in a siege,) rather than a benefit, as they only serve to consume the means of a protracted defence. We think it was the famous GUSTAVUS ADOLPHUS of Sweden, who said that he would not desire a larger defensive army than 40,000 men fit for actual service, to accomplish any military object; as such a force would always enable him to choose his positions. It is indeed worthy of remark how few men, comparatively, were actually engaged in all the most memorable battles, both of ancient and modern times. But to return, M du PONT never reflected that, unlike Guineu or Normandy or Finland, the Canadas were destined to become in a few years a match, single handed, against any neighbouring foe; and of this fact there cannot now be much doubt, whilst nothing could be more preposterous than to suppose the two French Provinces, which have been named, were a match for all France; or, that Finland was capable of defending itself against the enormous power of the Russian Autocrat. Enough, however, has been said on the subject here.

The exports of Canada are already considerable; and, from the encouragement held forth by the "Trade Act" passed during the last Session of the Imperial Parliament, in favour of this country, it is but reasonable to expect they will be greatly increased in a short time. Since the last war with the United States the exports from the two Provinces have averaged (including Furs and Peltry*) about £1,500,000, and from 600 to 700 ships are now employed every year in the foreign and coasting trade. The tonnage employed during the present year (1824) by the Custom House returns at Quebec, is no less than 148,477!

The prices of Provisions in the Upper Province are at present (1824) moderate.

THE YORK MARKET PRICES, (DECEMBER 10th,) ARE AS FOLLOWS:

	s.	d.	s.	d.	s.	d.	s.	d.			
Beef per lb. in the Butchers Stalls	0	3	a	0	3h	Mutton, do.	0	0	a	0	4

Price of Bread for this week (December 10th.) 6lbs. Brown, 8d. 4 1/2s White, 7d.

Many of what, in some countries, may be called luxuries can be had here in their proper season, at a very moderate price, such as Oysters, Cod fish, Venison, and Game in abundance.

The domestic animals of Canada admit of great improvement, and it is strongly recommended, from the success of some experiments which have been already made, to attend to this improvement rather by judicious selection and crossing, than by importing fine breeds from the too highly refined stock of England; excepting only a few Stallions of the large improved Coach, or Cart Horses of England, which are much wanted to give weight and power to the spindle-shanked, flimsy, horses imported into the Upper Province from the

United States; and, to give size to the light, compact, hardy, invincible, little horses of the Lower Province.

It has often been asserted that the pony of Wales, and the Galloway of Scotland, are superior, for their size to any other horses in the world. But the writer of this article has no doubt that horses can be found in Montreal and Quebec of 14 hands high, and under, that for drawing, or carrying, heavy weights, and for bottom, and sheer hardihood would far surpass the horses of any other country, not excepting even any part of Great Britain, which is so justly renowned for the excellence of its Ponies as well as for the watchless character of its Hunters and Race Horses;—since the little horses of Lower Canada are every day performing what would be deemed great exploits were they recorded in the Sportsman's Magazine. But excellent as these horses are, their inferior size renders them unfit for many purposes of draught.

The horned cattle of this country, merely want good wintering, and more attention, than is now generally paid, to a judicious cross in breeding, to be every thing that a farmer could desire.

Sheep are for the greater part imported from the United States, and have more or less of the 'Merino' in their breed; too much so, in our opinion, to be so profitable in this climate, and with the careless management they receive, as they may be. It is thought that the improved 'Cheviot,' whose fleece is weighty, and possesses a long staple, might be introduced into Canada with great success, and it is well worth while to make the experiment.—It is to be lamented that the different breeds of sheep are not more generally cultivated than they are in Canada, as the climate is very favourable to the growth of wool, which might hereafter become a valuable article of export; and, what is very remarkable, although little or no attention is paid to these useful animals, they are not here subject to the same disorders which are so frequent in Great Britain, such as the *scab*, the *rot*, the *foot rot*, &c. &c.

There are many who wish for an importation of the largest breed of English Hogs, to give weight to those of this country, as well as to render them of a more 'kindly nature,' as a breeder would term it. But, there is not the smallest doubt that a skillful and attentive farmer, who is a good manager, may have a breed of Hogs, without leaving Canada, equal to every thing that he may desire. Hogs which arrive at the weight of 300 lbs are surely heavy enough for ordinary consumption, and we have frequently known instances of their arriving at such a weight in Canada, without any particular attention being paid to them.

So much has now been said on subjects that may be deemed, in general, foreign to a publication of this nature, that the writer is afraid of enlarging his sketch until he knows how far it may prove acceptable to the public. Should he have the happiness to find his plan approved, he will undertake to work up by degrees, what is now little more than a rough outline, very hastily sketched, into a more finished picture, for the succeeding volumes of this work, which he is desirous of rendering as useful a companion as he can make it to all ranks of people who may visit, or who may intend to visit, as well as to those who reside, in this Province.

To go no further therefore into this subject on the present occasion, as the wealth of Upper Canada is at this time chiefly agricultural; we shall conclude our sketch in the eloquent language of the author from whom we have just quoted.

"Every thing depends upon, and arises from, the cultivation of land. It forms the internal strength of states; and draws riches into them from without. Every power which comes from any other source except the land, is artificial and precarious, either in natural or moral philosophy. Industry and commerce, which do not act immediately upon the agriculture of a country, are in the power of foreign nations, who may either dispute these advantages through emulation, or deprive the country of them through envy. This may be done either by establishing the same branch of industry among themselves, or by suppressing the exportation of their own unwrought materials, or the importation of those materials in manufacture.— But a state well manured, and well cultivated, produces men by the fruits of the earth, and riches by those men. This is not the teeth which the dragon sows to bring forth soldiers to destroy each other; it is the milk of Juno, which peoples the heavens with an innumerable multitude of stars."

A BRIEF VIEW
OF THE GOVERNMENT OF BRITAIN
DURING THE PERIOD IN WHICH IT WAS RANKED AS A PROVINCE OF
THE ROMAN EMPIRE.
FROM THE INVASION OF JULIUS CÆSAR,
FIFTY FIVE YEARS BEFORE CHRIST,
TO THE
ARRIVAL OF THE SAXONS, A. D. 449.

SKETCHED EXPRESSLY FOR THIS WORK, BY
CHARLES FOTHERGILL.

WE agree with the learned BURLASE, who has adduced unquestionable evidence of the fact, that the large and beautiful Island of Great Britain; the most renowned in the world, was known to, and partially settled by, the *Phoenicians* at a very early period, even when the greatest part of Europe remained an unexplored wilderness, rude and wild as the remotest fastness of America.—It was inhabited for many ages; and, as DR HENRY observes, was the scene of many wars, revolutions, and other important events, before it was invaded by the Romans under JULIUS CÆSAR in the year before CHRIST, 55.

But it is not our purpose to plunge into the gloom and doubt of so remote an antiquity.—We have no desire, especially in this place, to peer and pry into the darkness of unwritten History, or to gaze on the creations of fancy, when unimpeachable records, and substantial forms, are near

From the retreat of JULIUS CÆSAR, to the invasion of CLAUDIUS, a period of *ninety seven years*, but little is known of the Monarchs, Princes or Chiefs of the Island.—Neither AUGUSTUS, TIBERIUS, nor CALIGULA, (although the latter Emperor had collected an army of no less than 200,000 men on the opposite coast of *Gaul*) attempted the invasion.

At the period of the invasion of CLAUDIUS, we hear much of CARACTACUS, a native Prince, who seems to have been worthy of the fame which has been bestowed upon him by every historian of that age; and, after him, the renowned BOADICIA, Queen of the *Iceni** who was at one time, and in one engagement, at the head of 230,000 men.—From the defeat of this immense army to A. D. 207, the Southern parts of Britain were chiefly under the rule of Governors sent thither from Rome; amongst whom, AGRICOLA was the best, and the most famous.—he not only defeated the *Caledonians* in many battles, but was the first who circumnavigated the island, and determined its entire coast.

* The *Iceni* inhabited the Counties of Suffolk, Norfolk, Cambridge, and Huntingdon.

It was in the year 207 that the emperor SEVERUS arrived in England, where he remained for four years, and built the stupendous wall, from sea to sea across the island towards the north, which bears his name:—it was for the purpose of checking, if not to prevent, the inroads of the Scots: and vestiges of the vast undertaking may be still traced—Severus died in the city of York, on the 4th Feb 211, and three immense Tumuli, called Severus's Hills, which were raised by his army, remain as an imperishable monument, within a mile and a half of the city walls, unto this day.*

After the departure, from Britain, of the two new Emperors, CARACALLA and GETA to the accession of DIOCLESIAN in 284, the Government remained in the hands of a regular succession of Roman Viceregents, though but little is known of that long and dark period of our history.

It was about this time that the Franks and Saxons began to figure on the stage of politics, and of war, acting chiefly as pirates. We hear of considerable numbers of these people distinguishing themselves under *Alecis*, in his opposition to CONSTANTINE, when London was fortunately preserved from utter destruction, in the year 296.

CONSTANTINE the Great, began his reign and splendid career at York, A. D 306. His mother *Helena*, is said to have been a daughter of COIL, one of the native Kings of Britain—Many have affirmed that this Emperor was born in the island, † and his warmest panegyrist exclaims, with much energy, "O fortunate Britain! more happy than all other lands, for thou hast first beheld Constantine Caesar!"

After the death of this great Prince, the government of Britain fell to his eldest son, who was likewise named *Constantine*, and who was slain in the year 340.

Gratianus Funarius, the father of *Valentinian*, appears as the Roman Governor of Britain, under the Emperor Constantine in 354.

From the year 367 to 375 the excellent and brave Theodosius was Governor. From that period to 381, when he assumed the Purple, the Emperor Maximus, who had married the daughter of a British Prince, held the Government. Both Theodosius, and Maximus were very much beloved by the people.

From the date of 393 to 412 we hear of Chrysantus, and Victorinus, as the military representatives of Imperial Rome; and, from 418 to 421 we find Gallio, a general of great ability, acting as Governor—Afterwards, to the arrival of the Saxons in 449, began the most disastrous and melancholy period in the whole history of our country, harassed by incessant attacks from the marauding Scots, and the yet more barbarous Picts, she became the prey of horde after horde of lawless savages from the north, till she had little left for the famished vagabonds to plunder.

* There is a tradition amongst the country people of that part of Yorkshire, which the writer of this sketch has often heard, still remaining, which affirms that these hills were raised by earth carried from a hollow, (in which a villa, called *Hole gate* now stands) in the helmets of the whole Roman Army!—Two of these Hills or Tumuli, are not less than 100 feet high, with proportional bases!!

§ The A
recorded

During this unhappy period, the *Britons* appear to have been without either order, law, government, or any chiefs worthy of the name; all was confusion, famine, pestilence, rapine, and plunder. The *ROMAN* had turned pale, and his empire, and name, and greatness, were tottering before the threats, and actually falling before the power, of the terrible *ATTILA*!

OFFICERS OF THE BRITISH GOVERNMENT,

WHILST UNDER THE DOMINION OF ROMAN EMPERORS.

THAT the reader may form some distinct idea of the state of the country and its government, in the early part of its history, we here subjoin some lists of Officers, and notes from the *Notitia Imperii*, a work of great antiquity and rarity.

Under the government of the Honorable the Vicegerent of Britain, are:

Consular governments of those parts of Britain, called,
*Maxima Cæsariensis,**
Valentia;

Presidial Governors of these parts of Britain, called,
Britannia Prima,
Britannia Secunda,

This honourable Vicegerent hath his Court composed in this manner;

† A principal Officer of the Agents, chosen out of the *Ducenarii*, or under Officers.

A Principal Clerk, or Secretary,
 Two Chief Accountants, or Auditors,

‡ A Master of the Prisons,
 A Notary,

A Secretary for despatches,

An Assistant or Surrogate,

Under Assistants,

§ Clerks for Appeals,

Serjeants, and other inferior Officers,

There were also *Nine Military* stations, with the necessary officers, under the command of the Count of the Saxon Shore.

* The two most northerly provinces were governed by consulars, as being most exposed to danger.

† Under the lower empire there were many incorporated bodies of men of different professions; and these incorporated bodies were called *Scholæ*.

‡ The master of the Prisons was called *Commentariensis*, from his keeping an exact calendar of all the prisoners in all the prisons under his inspection.

§ The *Exceptores* were a particular order of Clerks or Notaries, who recorded the proceedings and sentences of the Judges upon appeals.

The Count of Britain had also a court composed after the manner we have mentioned, with the addition of a *Registrar*.

Under the Government of the honourable the Duke of Britain were

the *Præfets*, viz:—

Præfect of the Sixth Legion,		Præfect of the Scouts,	
— — —	Dalmatian Horse	— — —	Directores
— — —	Crispian Horse	— — —	Defensores
— — —	Cu rassiæ	— — —	Solenses
— — —	Borarii Tigresiensis	— — —	Pacenses
— — —	Nervii Dictenses	— — —	Longovicarii
— — —	Watchmen	— — —	Derventionenses

Also along the line of the *Wall*,

The Tribune of the 4th Cohort

a Cohort of Carnovii

1-1 Cohort of Frisagi

1-1 Cohort of Batavi, and Tungri, and of the

4th Cohort of Gauls, and the 2d of *Dalmatians, Daciens, Moors, Spaniards, and many others*

He had also a body of men in armour; and in his court was a principal officer from the courts of the Generals of the Soldiers in ordinary attendance, who was changed yearly.

OF THE SAXON HEPTARCHY.

Upon the establishment of the *Saxons and Angles* in South Britain, after the year 450, the whole of that part of the Island was divided into the seven following Kingdoms; viz:—

- I—**KENT**, founded by *Hengist* in 455 —It terminated in 823.
- II—**SUSSEX**, or the *South Saxons*, was founded by *Ella* in 491, and ended about the year 600.
- III—**EAST ANGLES**, founded by *Iffa*, in 751, and ended in 792
- IV—**WESSEX**, or the *West Saxons*, founded by *Cerdic* in 619, and ended about 1012.
- V—**NORTHUMBERLAND**, established by *Ida* in 547 and ended in 827.
- VI—**ESSEX**, or the *East Saxons*, founded by *Ercenwin* in 527, and ended in 810
- VII—**MERCIA**, founded by *Crida*, in 584, and ended in 824.

TABLE I.

ENGLISH MONARCHS BEFORE THE CONQUEST.*

EBERT. Began to Reign, A. D	801	Reigned 37 years.
Ethelwolf,	836	20
Ethelbald,	858	2

* Ancient Geographers aver that previous to the invasion of the Island by the Romans, that part which was afterwards named England was peopled by seventeen different tribes each of which was governed by a Prince of its own — These tribes were independent of each other, except when a common danger threatened them, when they united under the authority of a single Chief, a man of the greatest renown amongst them.—*Porponius Mela*, Lib. dispense with such parts as seem in some cases to oppress the subject, and to judge according to equity, conscience and reason. Wherefore he is said to have two powers—the one absolute, the other ordinary; the meaning of which is, he must observe the form of proceeding in other Courts; yet, in his absolute power, he is not limited by the written law, but in conscience and equity. He may issue Writs of Habeas Corpus at all times. He has power to collate to all Ecclesiastical benefices in the King's gift rated under £20 per annum in the King's books; his oath is to do justice to all persons, poor and rich; the King truly to counsel, and to keep the King's counsel, and not to suffer the rights of the Crown to be in any way diminished. The Lord Chancellor and Lord Keeper are the same in power and precedence. Both are appointed by the King's delivery of the Great Seal; they differ only in this—the Lord Chancellor hath also letters patent, the Lord Keeper none.

EARL OF HARROWBY, — Lord President of the Council.

The Lord President of the Council holds his post by Letters Patent *durante bene placito*. By the Stat. 21 Henry 8th, he is to attend the King's Person; to manage the debates in Council; to propose matters from the King at the Council, and to report to the King the resolutions thereupon.

EARL OF LIVERPOOL, K. G. — First Lord Commissioner of the Treasury.

The Lord Treasurer, whose office is now executed by five Lords Commissioners, hath the appointment of all Officers employed in Collecting the Revenues of the Crown; he hath the nomination of all escheators, and the disposal of all places and ways relating to the Revenue, and of the Kingdom; and power to Let Leases of the Crown Lands. The office of Chancellor of the Exchequer is always held by one of the Lords Commissioners of the Treasury, (except upon some very particular occasions when the Lord Chief Justice of the King's Bench is appointed to act as such). He is styled Chancellor and under Treasurer of the Exchequer; he has custody of the Exchequer Seal; he has also the controulment of the Rolls of the Lords of the Treasury; and he sits in the Court of Exchequer above the Barons of Exchequer. He has many lucrative offices in the Court of Exchequer in his gift.

EARL OF WESTMORELAND, K. G. — Lord Privy Seal.

This great Officer is so called from his having the Privy Seal in his custody, which he must not put to any grant without warrant under the King's Signet. This Seal is used to all Charters, Grants, and Pardons, Signed by the King before they come to the Great Seal.

Right Honourable ROBERT PEEL, — Secretary of State for the Home Department.

Until the Reign of Henry VIII there was only one Secretary of State; and until the Reign of Elizabeth, the Secretaries were never of the Privy Council. From that time to the present there have been two Secretaries of State, and sometimes three; and thus a

Council has seldom been held without the presence of at least one of them. From the death of Queen Anne to the Rebellion of 1745, there was a third Secretary for Scotland; and from 1768, to the loss of America in 1782, there was one for the Colonies. In 1795 there was another appointed under the denomination of the War Department. The Department of the two Secretaries, were, previous to 1782, divided into Northern and Southern; but are now divided into one Foreign, and the other Domestic; with the Home Secretary, all grants, pardons, and regulations in civil matters of any kind are made and executed. To the Foreign Secretary belong all dispatches to and from other Courts, and all business appertaining to the same. They have the custody of the Privy Signet, because the King's private letters are sealed with it. There are four Clerks of the Signet, who are to make out grants, patents &c. which have the sign manual, to which the Signet being added, it is a warrant to the Privy Seal; as the Privy Seal is a warrant to the Great Seal. The Paper Office belongs to the Secretary of State, where all letters, papers, memorials, and negotiations, are deposited and preserved.

Right Hon. GEORGE CANNING — *Secretary of State for the Foreign Department.*

EARL BATHURST, K. G. — *Secretary of State for the War Department and the Colonies.*

DUKE OF WELLINGTON, K. G. G. C. B. &c. — *Master General of the Ordnance.*

Right Hon. F. J. ROBINSON. — *Chancellor of the Exchequer.*

VISCOUNT MELVILLE — *First Lord Commissioner of the Admiralty.*

THE power of Lord High Admiral hath, since the Reign of Queen Anne, been executed by Commissioners. The Statute of Charles II. ascertains his authority in these words:—"That the Lord High Admiral for the time being, shall have full power and authority to grant Commissions to inferior Vice Admirals or Commanders in Chief of any squadron of ships; to call and assemble Courts Martial, consisting of Commanders and Captains; and no Court Martial where pain of death shall be inflicted, shall consist of less than five Captains at least, the Admiral's Lieutenant to be, as to this purpose, esteemed as a Captain, and in no case wherein sentence of death shall pass (by the articles for regulating the Government of His Majesty's Ships of War, or any of them, except mutiny) there shall be execution of such sentence without leave of the Lord High Admiral, if the offence be committed in narrow seas; but, in case any of the offences aforesaid be committed in any voyage beyond the narrow seas, then execution shall be done by order of the Commander in Chief. He appoints Coroners to view dead bodies found on the coasts, and Judges in the High Court of Admiralty. To him belong all fines and forfeitures of all transgressions at sea, and at the sea shore; and in ports from the first bridge on rivers to the sea, goods of Pirates, waifs, wrecks, &c. Since the revolution, the maritime laws have undergone alterations and revisions, and the office of Lord High Admiral has been considerably abridged of its perquisites. Of late years this high office has always been in commission, and still remains an office of great honour, power, and emolument. The first Commissioner of the Admiralty

has a salary of £3,000 per annum, and the six Commissioners £1,000 a year each, and all of them (the youngest Commissioner excepted) has a house in the Admiralty.

Right Hon. CHAS. WATKIN WILLIAMS WYNN.—*President of the Board of Control.*

Right Hon. C. B. BATHURST.—*Treasurer of the Navy.*

Right Hon. LORD BEXLEY.—*Chancellor of the Duchy of Lancaster.*

ACCOUNT OF SOME OF THE PRINCIPAL OFFICERS OF HIS MAJESTY'S HOUSEHOLD.

Lord Chamberlain.—**DUKE OF MONTROSE**

The Office of Lord Chamberlain is to take care of all the officers and servants (excepting those belonging to the King's bed-chamber, who are under the Groom of the Stole.) belonging to the King's chamber, who are sworn into their places by him. He hath the oversight of the officers of the Wardrobe at all His Majesty's houses; and the removing of wardrobes or beds; of tents, revels, music, comedians, huntsmen, messengers, of all handicrafts and artizans; and what is not common to other nations, although a layman, he hath the oversight of the King's Chaplains, and of all the Heralds, Physicians, Apothecaries, &c.—It is his place to inspect the charges of coronations, marriages, public entries, cavalcades, and funerals; and all furniture for, and in, the Parliament Houses, and rooms of addresses to the King.

Lord Steward.—**MARQUESS OF CONYNGHAM.**

The Estate of the King's Household is entirely committed to the Lord Steward, to be ruled and governed by his discretion; and all his commands in Court are to be obeyed; his authority reaches over all officers and servants of the King's Household, except those of the King's Chamber, Stable, and Chapel. Under the Lord Steward, in the country house, are the Treasurer of the Household, Comptroller, Cofferer, Master of the Household, Clerks of the Green Cloth, &c. It is called the Counting-House, because all the accounts and expenses of the King's Household are daily taken and kept in it. The Board of Green Cloth was kept in it.

Master of the Horse.—DUKE OF DORSET.

The Master of the Horse hath the charge and government of all the King's stables and horses. He hath also power over equeries and pages, footmen, grooms, farriers, smiths, saddlers, and all other trades in any way relating to the stables. He has the privilege of applying to his own use, one coachman, four footmen, and six grooms, in the King's pay.—In any solemn cavalcade he rides next behind the King.

In order to find the distance from any place, in the foregoing Tables and Lists, to another, deduct the smaller from the larger number of miles, and the product gives the distance:—thus, do you want to know how far it is from York to Coteau du Lac, by the main road; deduct 931 from 1253, and there remains 322 miles, the true distance; or, if it be a Cross Road, and you want to know how far it is from York to another place named,—say to Raleigh; see how far York is from Halifax (by the list that is given) and how far Raleigh is from Halifax,—deduct 1253 from 1427 and the result is 174 miles, the true distance from York to Raleigh.

As these Tables and Lists are taken from those used in the Post Office, it must be presumed they are as correct as the present state of the country will admit of.

Return for Fitzroy, Pakenham, Tarbolton; Darling, and Levant not correctly given in the preceding list.	600

Total actually Returned, 150,769

From the manner in which these returns are made, it is certain the numbers are, in nine instances out of ten, under rated; on an average, perhaps, of one third on the grand total.—This arises from the slovenly way, to save the trouble of going from house to house, but too frequently adopted by the Assessors, or other persons, employed for the purpose of obtaining the Census. However, a considerable improvement has been noticed since last year, in this particular, and we will hope for still greater accuracy hereafter. In the

A SET
OF
STATISTICAL TABLES
FORMED FROM THE
ASSESSMENT ROLLS
OF THE
PROVINCE.

NOTE.—Could it have been foreseen that documents of so much importance. (as the **ASSESSMENT ROLLS** of the **PROVINCE** undoubtedly are) were generally formed in a very slovenly manner; notwithstanding the provisions of the **STATUTE** in such case made and directed; we should certainly have used more caution in pronouncing *accurate* **STATISTICAL TABLES** for the whole **Province**, in this work. But, it was impossible to conceive that what so materially concerned every *Township* and *District* in the country, could, in many instances, have been so carelessly and imperfectly attended to. Yet so it is, and it will require at least several years before this important and interesting section of our work can be brought to any thing like a state of perfection. In the mean time, however, many valuable deductions may be made from what is here given; which is authentic as far as it goes.

REMARKS.

The total valuation of the property enumerated in the foregoing Tables, appears to be £1,969,074 13s 1d.—(errors excepted)—on which the rate of one penny in the pound is collected for the local uses of the several Districts.

A comparison of years with this statement, (which is as perfect as the accuracy of the documents from which we have had to compile, would admit.) as succeeding editions of this work make their appearance, will shew the gradual increase and improvement of the resources of the country.

But, it is our duty to declare that, from long observations we are obliged to conclude, in general returns of this nature, either through dishonest motives, and a desire to pay as little tax as possible, on the part of the assessed, or, through the carelessness of those employed to make the returns, the reports are below the true numbers, by about one third; with the exception, of the number of Houses

Assuming this as a fact, (of which we, ourselves, have no manner of doubt) for the amusement of our readers, as well as for the information of strangers, we shall here place in round numbers the real amount of several items in a general aggregate; and, a most interesting statement it is!

UPPER CANADA, from the best evidence that can be at present obtained, has now,

* 989,249 Acres of Land under cultivation.

304 Grist Mills,
386 Saw Mills,

(All these Mills are wrought by water)

396 Merchant's Shops exclusive of Store Houses.

* 30,774 Horses of three years old and upwards.

* 27,614 Oxen of four years old and upward.

* 67,644 Milch Cows; and, at least,

* 3,000 Young Cattle from two to four years old.

469 Carriages for Pleasure.

The items marked with an asterisk (*) have the one third alluded to, added.—The return of Grist and Saw Mills, being more free from suspicion, from the nature of the property, remains, in this view, as sent by the Assessors.

In the preceding quantities we have considered it wholly useless to mention the number of acres of wild or uncultivated land; because the returns are ridiculously below the real amounts, of which we will here give the most satisfactory proof

There are at least 260 Townships of land actually surveyed in UPPER CANADA;—these, according to instructions from the Surveyor General's Office, average about 66,000 acres each; so that we have unquestionable evidence to shew that 17,160,000 acres have been actually surveyed in this Province. To say the least of it, three fourths of that quantity have been located, and, yet, what is the number of acres of wild land returned in the assessment rolls?—Why about 2 millions?

The stranger ought to be informed that, as the common log-houses of the country pay no tax, they are not mentioned in any of the re-

turns.—We in

turns.—We intended to have given an abstract from the Act of Parliament, containing the scale by which the various kinds of property is valued; (far below the true value;) but, as there is a column in the returns from the *Western District* sufficiently accurate for our present purpose, we decline occupying more space with that detail

Amongst the curious and interesting reflections occasioned by a review of the foregoing tables, there is one well worthy of attention, from the extreme singularity of the fact which gives rise to it—Notwithstanding the wise provisions of the Statute 27. HENRY VIII. ch. 6; and 32, HENRY VII. ch. 13; in the succeeding Reign, when England was threatened with invasion by the Spanish Armada, in 1588, after a general survey, ordered for the express purpose, ELIZABETH could find no more than 50,000 serviceable horses throughout her entire kingdom!

Here, in a country almost covered with wood, and apparently but ill adapted, in its present state, for the breeding of horses; and settled (with the exception of a few Frenchmen on the western frontier,) but little more than thirty years, we have nearly as many horses as were to be found in all England at a most flourishing period of its history;—and, in both Canadas together, there is now, beyond a doubt, at least three times the number of horses that were returned to the patriotic Queen ELIZABETH, on the momentous occasion alluded to.

As a much better idea of the number of *Merchant's Shops* in U. C. can be had from the returns of the Licences made to the INSPECTOR GENERAL, than from the tables of assessments already given, we shall subjoin a list of them, together with the number of *Tavern Licences*, and *Distilleries*, and then close this section of the work, which it is hoped will be brought nearer to perfection in another edition, when more accurate returns shall have been made from the several Townships and Districts of the Province, under the operation of some recent and more effective enactments of the Legislature

The number of SHOP LICENCES issued between the 5th day of January, 1823, and the 5th day of October 1824, so far as the District Inspectors have reported the same,

Is, 191, amounting to	£1 146 0 0
Deduct allowance to Inspectors,	114 12 0

24 Hours	1 Day	12 Months	1 Year

MISCELLANEOUS.

- A Barrel of Anchovies about 18lb
- A Barrel of Gunpowder is 112 lb
- A Barrel of Herring, No. 500
- A Keg of ditto 60—two of which count a hundred
- A Last of Hides, 12 dozen,
- A Truss of Straw, 36 lb.
- A Truss of Hay, new, 60 lb.
- Ditto ditto old, 56 lb.
- A Load of Hay, 36 trusses.
- A Load of Bricks, No. 500
- A Load of Tiles, No. 1000.
- A Load of Timber 50 feet solid.
- A Tun of Sweet Oil, 236 Gallons
- A Father of Lead, 19 c. 2'qrs.
- A Firkin of Butter, 56 lb
- A Stone of Iron. Shot, or Horseman's weight, 14 lb.—Butcher's weight, 8 lb.

VALUE OF GOLD AND SILVER COINS.

A Grain of Gold, about 2d.
 A Penny weight, about 4s
 A Grain of Silver, about half a farthing.
 A Penny weight 3d.
 An Ounce, about 5s.
 According to the weight of English Coins, the Mint value of a lb. of Gold is 44 guineas and a half, or £46 14s. 6d.—a lb. of Silver, £3 2s— the oz. of Gold £3 17s. 10 1/2d and the ounce of Silver, 5s 2d, so that the value of the Standard Gold is 15 times that of Silver, and 1 1/4th more.
 * The value of a lb. of Gold as Bullion, in Oct. 1809, was £56 16s

N. B. All the Woods were very good of the sort, except the Elm, and all very dry; the measure is English, and the weight Avordupois.

It is probable that the woods of Canada are lighter, (except those grown on plains and exposed situations) than similar species produced in England.

GOLDEN RULES.

TO RENDER YOUNG TRADESMEN REPECTABLE, PROSPEROUS,
AND WEALTHY.

1.—Choose a good and commanding situation, even at a higher rent or premium; for no money is so well laid out as for situation, provided good use is made of it.

No. 6.

2.—Take your shop door from off the hinge at seven in the morning, that no obstruction may be opposed to your customers.

3.—Clean and set out your windows at eight o'clock, and do this with your own hands, that you may expose for sale the articles which are most saleable, and which you most want to sell.

4.—Sweep before your house; and, if required, open a foot-way from the opposite side of the street, that passengers may think of you while crossing, and that all the neighbours may be sensible of your diligence.

5.—Wear an apron, if such be the custom of your business, and consider it a badge of distinction, which will procure you respect and credit.

6.—Apply your first returns of ready money to pay debts before they are due, and give such transactions due emphasis by claiming discount.

7.—Always be found at home and in some way employed; and remember that your meditating neighbours have their eyes upon you, and are continually gauging you by appearance.

8.—Re-weigh and re-measure all your stock, rather than let it be supposed that you have nothing to do.

9.—Keep some article not usually kept, or sell some current article cheap, that you may draw customers and enlarge your intercourse.

26	6 2 $\frac{7}{8}$	44	3 10 $\frac{1}{2}$
27	5 15 $\frac{1}{8}$	45	3 9 $\frac{1}{2}$

10.—Keep up the exact quality or flavour of all articles which you find are approved of by your customers, and by this means you will enjoy their preference.

11.—Buy for ready money as often as you have any to spare; and when you take credit, pay to a day, and unasked.

12.—No advantage will ever arise to you from any ostentatious display of expenditure.

13.—Beware of the odds and ends of stock, of remnants, of spoiled goods, and of waste, for it is in such things that your profits lie.

14.—In serving your customers, be firm and obliging, and never lose your temper, for nothing is got by it

15.—Always be seen at Church or Chapel on Sunday ; never at a Gaming Table ; and seldom at the Theatres or places of amusement.

16.—Prefer a prudent and discreet, to a rich and showy wife.

17.—Spend your evenings by your own fire side, and shun a public house or a sottish club as you would a bad debt

18.—Subscribe with your neighbours to a book club, and improve your mind, that you may be qualified to use your future affluence with credit to yourself, and advantage to the public.

No. 10.

A TABLE to show how many Plants, or Trees, may be planted on an Acre of Land, at different distances.

IN A SQUARE ACRE ARE,

- 4 roods, each rood 40 rods, poles or perches.
- 160 rods, 16 feet and a half each,
- 4 840 square yards, 9 feet each,
- 43 550 square feet, 144 inches each,
- 174,240 squares of six inches each, or 36 inches,
- 6,272,640 inches, or squares of 1 inch each.

AN ACRE WILL CONTAIN

Trees or Plants,	Number of Feet asunder.			Square feet to each.
108 and 360 feet over,	at 20 feet asunder, or 400

19.—Take stock every year, estimate your profits, and do not spend above their fourth

20.—Avoid the common folly of expending your precious capital upon a costly architectural front; such things operate on the world like paint on a woman's cheeks—repelling beholders, instead of attracting them

21.—Every pound wasted by a young tradesman, is two pounds lost at the end of three years, and sixteen pounds at the end of twenty-four years

22.—To avoid being robbed and ruined by apprentices and assistants, never allow them to go from home in the evening, and the restrictions will prove equally useful to servant and master

23.—Remember that prudent purchasers avoid the shop of an extravagant and ostentatious trader; for they justly consider that, if they must deal with him, they must contribute to his follies.

All the different denominations of the above Coins pass current—
Two pence farthing is allowed for every grain under or over weight,
 on English, Portuguese, and American Gold;—and *Two pence* and
one fifth on Spanish and French.—Payments in Gold above £20, may
 be made in bulk; *English, Portuguese, & American*, at 80s per oz;—
French and Spanish, at 87s 8 1-2, deducting *half a grain* for each
 piece.

No. 18.

To turn any given Currency into any Currency required.

RULE 1.—Let the value of the Spanish Dollar be expressed in Shillings
 or Pence, in each of the Currencies, writing them in the form of
 a Fraction.

and making the $\left\{ \begin{array}{l} \text{required} \\ \text{given} \end{array} \right\}$ Currency the

Numerator (of the Fraction—
 Denominator)

Reduce this Fraction to its *least terms*, and it will serve as a
 constant Multiplier, by which any such of the *given* Currency be-
 ing Multiplied, it will be converted into the Currency required.
 N. B. When the Fraction is not an Improper one the Multiplier will
 become a Divisor.

EXAMPLES—To form a rule for changing Sterling at 4s. 6d. per Dollar
 into New York at 8s per Dollar.

Here Sterling is given and York required: The Dollar

in $\left\{ \begin{array}{l} \text{York } 8 \text{ s or } 96 \text{ Pence Numerator,} \\ \text{Sterling } 4 \text{ s } 6 \text{ d. or } 54 \text{ Pence Denominator.} \end{array} \right.$

Therefore $\frac{8}{9}$ is the Multiplier sought, which reduced
 to its least terms becomes $\frac{2}{3}$ or $\frac{1}{1.5}$, therefore if Sterling

be Multi
 York, th
 1 less 1/2
 which is
 1/2 = 2x

be Multiplied be 16 and divided by 9 the result will be York, thus, $\frac{1}{9}$ is the same as 2 into $\frac{2}{9}$, but $\frac{2}{9}$ is the same as 1 less $\frac{1}{9}$, therefore 2 into $\frac{2}{9}$ is equal to 2 into 1 less $\frac{1}{9}$; which is that Rule, expressed shorter thus—
 $\frac{1}{9} = 2 \times \frac{2}{9} = 2 \times 1 \frac{1}{9}$.

No. 23.

To Extinguish Fire.

For preserving buildings from fire, Mr. Hartley's celebrated method of plates which is cheaper and more effectual than other modes that have been tried, is of the utmost importance in all buildings to be applied as a partial security in the spots most liable to be set on fire. To put out a fire an experiment has been tried which deserves further enquiry — A modern traveller gives this account at Augstburgh; — "We saw an experiment for extinguishing fire; they had made a fabrick of boards set round with faggots, dry cloven wood and other combustibles, when all was thoroughly on fire, they threw in a little barrel, it made a small explosion, and the fire immediately abated; but continuing still to burn at one end, they threw in another barrel and it was all extinguished. The same I am told, has since been performed in England."* If I mistake not, the Society of Arts offered a premium for something of the sort, and in consequence, some experiments were made long after this author wrote, which was in 1722, and Mr Godfrey, the chemist, produced a ball or barrel, which exploding had the same effect, and was very satisfactory; but the composition was a secret which died with the great Mr. Boyle. It is to be regretted that other, and greater premiums are not given to re-discover so valuable an art. — A. Young.

To render White Wash durable.

White Wash of Lime is rendered fixed and durable without cracks if made with water, in which common salt is dissolved — [L'avauteur Annales des Arts et Man.]

No. 25.

Method of preparing a cheap substitute for Oil Paint, by M. LUDICKE

It often happens that people do not choose, or cannot employ Oil Painting in the country, either because it does not dry soon enough and has an insupportable smell, or because it is too dear. M. Ludicke employed with the greatest success the following method, for painting ceilings, gates, doors, and even furniture.

THE PROCESS.

Take fresh curds and bruise the lumps on a grinding stone, or in an earthen pan or mortar, with a spatula; after this operation put them into a pot with an equal quantity of lime well quenched, and become thick enough to be kneaded; stir this mixture well, without adding water, and you will soon obtain a white coloured fluid, which may be applied with as much facility as varnish, and which dries very

* Wright's Travels, Vol. II. p. 500.

speedily; but too thick the which hold which you addition of contain very

Tak best) courru

speedily; but it must be employed the same day, as it will become too thick the day following. Ocre, Armenian Sole, and all colours which hold with lime, may be mixed with it according to the colour which you wish to give to the wood; but care must be taken that the addition of colour made to the first mixture of curds and lime may contain very little water, else the painting will be less durable.

When two coats of this paint have been laid on, it may be polished with a piece of woollen cloth or other proper substance and it will become as bright as varnish. It is certain that no kind of painting can be so cheap and besides other advantages, in the same day two coats may be laid on and polished as it dries speedily and has no smell. If it be required to give it more durability in places exposed to moisture, go over the painting after it has been polished with the white of an egg, this process will render it as durable as the best oil painting.

No. 26.

Weather Boarding—To PAINT.

Three parts air slacked lime, two of wood ashes, and one of fine sand or sea coal ashes, sift through a fine sieve, add as much linsed oil as will bring it to a consistence for working, with a painter's brush; great care must be taken to mix it perfectly, it is impenetrable to water, and the sun hardens it — [Patterson Society Trans Vol. XII p. 265]

No. 27.

To Paint Boards, &c.

Melt twelve ounces of rosin in an iron pot; add three gallons of train oil; and three or four rolls of brimstone; when melted then, add as much Spanish brown ochre, first ground fine, with as much of the oil as will give your colour; lay it on with a brush as hot and thin as possible, and some days after the first coat is dry lay on another. It will preserve the plank for ages — [Bath Papers, vol. II. p. 144.]

Dr. Parry recommends this improvement; —

Take twelve ounces of rosin, and eight ounces of roll brimstone; each coarsely powdered, and three gallons of train oil. Melt them slowly, gradually adding four ounces of bees wax cut in bits. Frequently stir the liquor, which, as soon as the solid ingredients are dissolved, will be fit for use. What remains unused will become solid on cooling, and may be remelted on subsequent occasion — [Bath Soc papers, Vol. XI. p. 240.]

No. 28.

Cracks in Iron Vessels.

Six parts of yellow potter's clay, one of filings of iron, and linsed oil sufficient to form the whole into a paste of the consistence of putty. — [Katelyn]

No. 29.

A useful recipe for making Family Wine.

Take black currents, red currents, ripe cherries, (black hearts are best) raspberries, each an equal quantity, or nearly so: if the black currents are most abundant, so much the better. — To four pounds of

mixed fruit well bruised, put one gallon of clear soft water; steep them three days and nights in open vessels, frequently stirring up the mass; then strain through a hair sieve. The remaining pulp press to dryness. Put both liquors together, and to each gallon of the whole, put three pounds of good, rich, moist sugar of a bright yellowish appearance; let the whole stand again three days and nights, frequently stirring up as before, after skimming the top. then turn it into casks and let it remain, full, and purging, at the bung-hole about two weeks. Lastly, to every nine gallons put one quart of good brandy, and bung down. If it does not soon drop fine, a steeping of isinglass may be introduced, and stirred into the liquor, in the proportion of about half an ounce to nine gallons.

N B. Gooseberries especially the largest, rich flavoured, may be used in the mixture to great advantage; but it has been found the best way to prepare them separately, by more powerful bruising or pounding, so as to form the proper consistence in pulp, and by putting six quarts of fruit to one gallon of water, pouring on the water twice, the smaller quantity at night, the larger the next morning.

This process, finished as aforesaid, will make excellent wine, un-mixed; but this fluid added to the former mixture, will sometimes improve the compound.—[Bath Soc. papers, Vol. XI. p. 224.]

TARIFF.

By which the Trade between Upper Canada and the United States of America is regulated.

BY THE PROV. STAT. OF 2d. GEO. IV.

The following articles may be imported from the United States on payment of the duties respectively affixed to each:—

Apples one shilling per bushel
 Beer in bottles six shillings per dozen
 Beer in casks one shilling per gallon
 Beet fifteen shillings per barrel
 Beef ten shillings per hundred pounds
 Boots fifteen shillings per pair
 Boards of Pine twenty shillings per 1000 feet
 Boards of Oak twenty shillings per 1000 feet
 Barley two shillings per bushel,
 Butter sixpence per pound,
 Cable and tarred Rope three pence per pound
 Cordage untarred three pence per pound
 Cider one shilling per gallon
 Call Skins and Skins dressed as Upper Leather two shillings and six pence each
 Cattle (young) from two to four years old, thirty five shillings per head
 Cows twenty five shillings per head
 Cheese six pence per pound
 Chord Wood or Wood intended for fuel five shillings per chord
 Distilled Spirits two shillings and six pence per gallon
 Flour ten shillings per barrel of one hundred and ninety six pounds
 Flour six shillings per hundred weight
 Flax seed Oil, one shilling per gallon
 Harness Leather four pence per pound
 Hogs (alive) twenty shillings per head
 Hog's Lard six pence per pound
 Hams and Bacon six pence per pound
 Indian Corn two shillings per bushel
 Lumber of Pine, twenty shillings per 1000 feet
 Lumber of Oak, twenty shillings per 1000 feet
 All other Lumber hewed or sawed, thirty shillings per 1000 feet.

 Salt six pence per bushel
 Sole Leather three pence per pound
 Shoes five shillings per pair
 Shingles five shillings per 1000
 Sheep one shilling per head
 Tobacco manufactured three pence per pound
 Wheat two shillings and six pence per bushel

The second clause of the same Act affixes a Duty of 10 per cent *ad valorem* on all other articles except Iron Castings, and Tinware, which are subject to a duty of 20 per cent.

The third clause of the same Act exempts the following articles from any duty, viz:—Unmanufactured Tobacco, Cotton Wool, Tallow, Raw Hides, Printing Paper, the personal Baggage, travelling Horse or Horses, travelling Carriage or Carriages, of any person or persons, Subjects or Foreigners, who may lawfully come into or reside in this Province

The fourth clause of the same Act admits the following articles, *Duty Free*, for exportation only, Flour, Pork, and other Provisions, Pot and Pearl Ashes, Salt, Lumber, Wheat, Meal and Grains, Fur and Skins undressed.

BY STAT. OF 3d. GEO. IV.

COMMONLY CALLED THE CANADA TRADE BILL.

[Passed in the British Parliament, the 6th August, 1822]

The following articles may be imported into Canada from the U. States.

Asies	Dings of all sorts
Barley	Diamonds and precious stones
Biscuit	Flax
Beans	Fruit and Vegetables
Bread	Fustick and all sorts of Wood for Dyer's use
Beaver and all sorts of Fur	Flour
Bowspits	Grain of any sort
Calumnaes	Garden Seeds
Cocoa	Hemp
Cattle	Hending Boards
Cochineal	Horses
Corn and Ballion	Hogs
Cotton Wool	

Hides	Pitch
Hay	Rye
Hoops	Rice
Hardwood or Mill Timber	Staves
Indigo	Skins
Live Stock of any sort	Shingles
Lumber	Sheep
Logwood	Tar
Mahogany and other wood for Cabinet wares	Tallow
Masts	Tobacco
Mules	Turpentine
Neat Cattle	Timber
Oats	Tortoise Shell
Peas	Wool
Potatoes	Wheat
Poultry	Yards

By the same Act the articles enumerated below may be also imported subject to the duties annexed to each. But where any of the articles specified are liable to a *Colonial Duty*, equal to the one imposed by *this Act*, such articles shall not be charged with those duties in addition. But, if the duty payable under the Colonial Law shall be less in amount than the duty payable by *this Act*, then, and in such case, the difference only between the amount of the duty payable by *this Act*, and the duty payable under the authority of the Colonial Law, shall be deemed payable by *this Act*.

	<hr/>		<hr/>
	£1,212,217		£926,489

The imports in 1824 exceed those of 1823 in value £186,000 of which are the article of Rum from the advance in price obtained, the quantity exceeding that of the former year only 17000 Gallons.

The other articles making up the increase are Sugar, Coffee, Tea, and Goods paying 2½ per cent, and no part of the Harlequin's cargo has appeared in the imports.*

As to the exports the most prominent article is Ashes. In 1823, the quantity exceeded that in 1824 only 46 pounds weight, but in value £76000.

Lumber is much greater in quantity, but only £17,000, more in value, rating it at the shipping prices Flour is 14,000l. less Pork and Provisions 20,000l. more. The whole amount of exports exceeds the previous year in the small sum of 3625l.

The most encouraging view of the exports is the value of new ships, or the money circulated through so many thousand hands from the disbursements to pay the labour in building—even the chips afforded warmth and comfort to the poor. The increase under this last head exceeds £80,000.

THE Account of a TERRIBLE EARTHQUAKE, which convulsed and ravaged a great part of Canada, in the year 1663. Written and preserved by the JESUITS in their College, at Quebec; now republished in this place, for the purpose of endeavouring to procure further confirmation of so extraordinary a catastrophe, either by geological evidence, or traditionary lore from the Indians.

IT was on the 5th February, 1663, about half past five o'clock in the evening, that a great rushing noise was heard throughout the whole extent of Canada — This noise caused the people to run out of their houses into the streets, as if their habitations had been on fire; but instead of flames and smoke, they were surprized to see the walls reeling backwards and forwards, and the stones moving, as if they were detached from each other. The bells sounded by the repeated shocks — The roofs of the buildings bent down, first on one side and then on the other. The timbers, rafters, and planks, cracked. The earth trembled violently, and caused the stakes of the palisades and pailings to dance, in a manner that would have been incredible had we not actually seen it in many places. It was at this moment that every one ran out of doors. Then were to be seen animals flying in all directions, children crying and screaming in the streets; men and women seized with affright, stood horror struck with the dreadful scene before them, unable to move, and ignorant where to fly for refuge from the tottering walls and trembling earth, which threatened every instant to crush them to death, or sink them into a profound and immeasurable abyss.

Some threw themselves on their knees in the streets, crossing their breasts and calling upon their saints to relieve them from the dangers with which they were surrounded. Others passed the rest of this dreadful night in prayer; for the earthquake ceased not, but continued at short intervals, with a certain undulating impulse, resembling the waves of the ocean; and the same qualmish sensation, or sickness at the stomach, was felt during the shocks, as is experienced in a vessel at sea.

The violence of the earthquake was greatest in the forests, where it appeared as if there was a battle raging between the trees; for not only their branches were destroyed, but even their trunks are said to have been detached from their places, and dashed against each other with inconceivable violence and confusion—so much so, that the Indians, in their figurative manner of speaking, declared that all the forests were drunk.

The war also seemed to be carried on between the mountains, some of which were torn from their beds and thrown upon others, leaving immense chasms in the places from whence they had issued, and the very trees with which they were covered sunk down, leaving only their tops above the surface of the earth; others were completely overturned, their branches buried in the earth and the roots only remained above ground.

During this general wreck of nature, the ice, upwards of six feet thick, was rent and thrown up in large pieces, and from the openings, in many parts, there issued thick clouds of smoke, or fountains of dirt and sand, which spouted up to a very considerable height. The springs were either choked up, or impregnated with sulphur.—Many rivers were totally lost; others were diverted from their course, and their waters entirely corrupted. Some of them became yellow, others red, and the great river of St. Lawrence appeared entirely white, as far down as Tadoussac. This extraordinary phenomenon must astonish those who know the size of the river, and the immense body of water in various parts, which must have required such an abundance of matter to whiten it.

They write from Montreal that during the earthquake, they plainly saw the stakes of the picketing, or palisades, jump up, as if they had been dancing; that of two doors in the same room, one opened and the other shut, of their own accord; that the chimneys and tops of the houses beat like the branches of trees agitated by the wind; that when they went to walk, they felt the earth following them, and rising at every step they took, sometimes sticking against the sole of the foot, and other things, in a very forcible and surprising manner.

From Three Rivers they write, that the first shock was the most violent, and commenced with a noise resembling

thunder.

thunder. The houses were agitated in the same manner as the tops of trees during a tempest, with a noise as if fire was crackling in the garrets.

The first shock lasted half an hour, or rather better, though its greatest force was properly not more than a quarter of an hour; and we believe there was not a single shock which did not cause the earth to open more or less. As for the rest, we have remarked, that though this earthquake continued almost without intermission, yet it was not always of an equal violence. Sometimes it was like the pitching of a large vessel, which dragged heavily at her anchors; and it was this motion which occasioned many to have a giddiness in their heads, and qualmishness at their stomachs. At other times, the motion was hurried and irregular, creating sudden jerks, some of which were extremely violent; but the most common was a slight tremulous motion, which occurred frequently with little noise.

Many of the French inhabitants and Indians, who were eye witnesses to the scene, state, that a great way up the river of Trois Rivieres, about eighteen miles below Quebec, the hills which bordered the rivers on either side, and which were of a prodigious height, were torn from their foundations, and plunged into the river, causing it to change its course, and spread itself over a large tract of land recently cleared: the broken earth mixed with the waters, and for several months, changed the colour of the great River St. Lawrence, into which that of Trois Rivieres disembogues itself.

In the course of this violent convulsion of nature, lakes appeared where none ever existed before; mountains were overthrown, swallowed up by the gaping earth, or precipitated into adjacent rivers, leaving in their place frightful chasms or level plains.—Falls and rapids were changed into gentle streams, and gentle streams into falls and rapids. Rivers in many parts of the country sought other beds, or totally disappeared. The earth and the mountains were violently split and rent in innumerable places, creating chasms and precipices whose depths have never yet been ascertained. Such devastation was also occasioned in the woods, that more than a thousand acres in our neighbourhood were completely overturned; and

where, but a short time before, nothing met the eye but one immense forest of trees, now were to be seen extensive cleared lands, apparently just turned up by the plough.

At Tadoussac, (about 150 miles below Quebec, on the north shore,) the effect of the earthquake was not less violent than in other places; and such a heavy shower of volcanic ashes fell in that neighbourhood, particularly in the River St. Lawrence, that the waters were as violently agitated as during a tempest.

Near St Paul's Bay (about 50 miles below Quebec on the north shore,) a mountain, about a quarter of a league in circumference, situated on the shore of the St. Lawrence, was precipitated into the river; but as if it had only made a plunge, it rose from the bottom, and became a small island, forming, with the shore, a convenient harbour, well sheltered from all winds.

Lower down the river, towards Point Allouettes, an entire forest of considerable extent was loosened from the main bank, and slid into the River St. Lawrence, where the trees took fresh root in the water.

There are three circumstances, however, which have rendered this extraordinary earthquake particularly remarkable — The first is its duration, it having continued from February to August, that is to say, more than six months, almost without intermission! It is true, the shocks were not always equally violent. In several places, as towards the mountains behind Quebec, the thundering noise and trembling motion continued successively for a considerable time. In others, as towards Tadoussac, the shock continued generally for two or three days at a time with much violence.

The second circumstance relates to the extent of this earthquake, which, we believe, was universally throughout the whole of New France, for we learn that it was felt from *Placé Priceé* and *Gaspé*, which are situated at the mouth of the St. Lawrence, to beyond Montreal, * as also in New England, Acadia, and other places more remote.

* It appears from this, that the Jesuits at Quebec had not then received any account of the devastation which the earthquake had committed in Upper Canada, and of course were unacquainted with its real extent.

mentions

As far as it has come to our knowledge, this earthquake extended more than 600 miles in length, and about 300 in breadth. Hence 180,000 square miles of land were convulsed on the same day, and at the same moment.

The third circumstance, which appears the most remarkable of all, regards the extraordinary protection of Divine Providence which has been extended to us, and our habitations; for we have seen near us the large openings and chasms which the earthquake occasioned, and the prodigious extent of country which has been either totally lost or hideously convulsed, without our losing either man, woman, or child, or even having a hair of their heads touched.

*A sketch of the Length, Breadth and circumference of the following Lakes in Upper Canada by Estimation.**

NAMES	LENGTH	BREADTH	CIRCUMFERENCE
	MILES	MILES	MILES.
Superior	450	Nearly 200	1525
Huron	250	190	1100
Michigan	260	90	1000
Erie	275	50	700
Ontario	180	80	500
		<i>(from Port Hope to Genesee Riv)</i>	
Simcoe	40	30	120
St. Clair	35	30	100
		<i>(bet. Lk's Superior and Huron.)</i>	
George	25		58
Rice Lake	24	2 1/2 to 5	58

* The Lakes of Upper Canada are innumerable, and we cannot pretend to notice an hundredth part of them in this place.—We can only give an estimate of those best known, and of which the banks are already partially settled.—In our next, we hope to add the dimensions of other Lakes.

- 1761 The English Take Pondicherry and Bellisle.—
A Process against the Jesuits in France —Deaths
of Doctor Sherlock, Bishop Hoadley, Doctors S.
Haies and Leeland, and of Samuel Richardson.
- 1765 The Regency Bill Passed in England —Deaths of
the Duke of Cumberland and of the Chevalier De
St. George; and also of the Poets Doctor Young
and David Mallet, and of the Mathematician, Doc-
tor Simpson
- 1766 The American Stamp Act Repealed.
- 1767 The Jesuits Expelled from Spain, Genoa, and Ve-
nice.—The Discoveries of Carteret in the South
Seas.—Severe Frost.—Riots on account of the high
price of Bread, at Seven pence Farthing.
- 1768 Act making the Irish Parliament Oriental, Passed.
—Mr. Wilkes returned for Middlesex, but his Elec-
tion declared Void.—Riot in St. George's Fields —
Captain Cook returned from his First Voyage.—
The Royal Academy Established.
- 1769 Mr. Wilkes' Second and Third Elections declared
Void.—The Shakespeare Jubilee at Stratford.—
Transit of Mercury.—Spittlefields Weavers Hang-
ed for a Riot.
- 1770 Poland, which had been for some years a prey to
anarchy, was this year afflicted with another dread-
ful scourge, the Plague, which made great havoc.
The neighbouring Powers, who had long had their
eyes upon this country, found this a convenient op-
portunity to draw forces round her, on pretence of
defending themselves against the Introduction of
that dreadful disorder into their dominions; but in
reality, to be ready to act when an opportunity
offered.
- The Emperor Joseph, of Germany, wishing to ac-
quire popularity, set apart one day in the week at
Vienna, to receive Petitions, or Complaints from
his subjects of all ranks without distinction.

1770 This year the Marriage between Louis, Dauphin of France, afterwards Louis XVI. and the Arch-Duchess Maria Antoinette, took place, and which formed a close connection between the Courts of Austria and France; by no means agreeable to the people of the latter country.

Settlement of the Falkland Islands by the British. — Election of Mr. Wilkes, for the Third Time, by a majority of nearly 1000.

Bingly, the Printer, who had been committed for refusing to answer Interrogatories, was Discharged, after two years Imprisonment; on a motion of the Attorney General.

At the Grand Fire Works at Paris, played off on the Marriage of the Dauphin, an alarm taking place; the crowd pressed so much to get away, that nearly 3000 persons were killed, drowned, crippled, or wounded. The deaths alone were 712. This accident was said to be ominous, which it really proved to be.

The Court of Chancery, in the Case of Miller *versus* Taylor, for Selling Thomson's Seasons, determined that Taylor should account to Miller for the Profits on the Books he had sold; by which means, the question respecting Literary Property was finally determined.

1771 The King of Poland Carried Off from the midst of his Capital by a small party of desperate Poles.

This Session the Great Question respecting the Printing the Debates came on. Some of the Printers of Newspapers were called up to the House for disobeying the standing orders of the House, in Printing their Debates. The Printers did not attend. The Speaker, by order of the House, issued a Warrant to take them into custody; and a messenger was sent into the City to arrest them. The

1771 Messenger who arrested Miller was carried before the Lord Mayor (Crosby,) and Aldermen Oliver and Wilkes, who discharged the Printer, and held the Messenger to bail. The House of Commons, in a rage, committed their two Members, Crosby and Oliver, to the Tower, where they remained during the sitting of Parliament. The Printers have ever since continued to print the Debates, and the House of Commons have not thought proper to expose themselves to the like opposition again.

The Royal Academy Met for the First Time in the New Apartments, given them by the King, at Somerset House.

Lady Elizabeth Sutherland, (since Marchioness of Strafford,) then only Six Years Old, was, by the House of Lords, admitted as Countess of Sutherland.

The Lord Mayor and Alderman Oliver Visited in the Tower by many of the Nobility and Gentry; and the Common Council determine to keep a Table for them during their confinement.

The Lord Mayor carried, by Habeas Corpus, before the Chief Justice of the Common Pleas, but the Chief Justice declared he could give no relief.

A Solemn Hearing before the Court of Common Pleas respecting the Lord Mayor. The Court determined they could not give any relief.

Captain Cook, in the Endeavour, returned to Spithead, from his Voyage Round the World.

A Court of Escheats was held before the Lord Mayor, to recover the property of a Bastard, who died intestate, for the King. Such Court had not been held before in the City for 150 years.

An Oak Tree fell in Kent, which sold for £106.

A Tea Tree, in the garden of the Duke of Northumberland, in full flower; being the first which had flowered in England.

1772 This year disclosed one of the most infamous Treaties that ever disgraced the States of the Continent. The Balance of Power has employed the attention of the Politicians of Europe for nearly a century, but in this transaction it appears to have been totally lost sight of.—The House of Commons, from their conduct in the Middlesex Election, had lost much of their credit with the Public; and the Printers set them at defiance for this year; and ever since, they have Published the Debates, in defiance of their standing orders.

The Body of Thomas Beaufort, Duke of Exeter, who died in 1427, was found in the Ruins of the Abbey of St. Edmonsbury, wrapt in lead.

By an Account made up to this period, it appears, that from March 25th, 1741, to Dec. 1771, there have been received into the Foundling Hospital 16,694 Children!

Lord Mansfield and the King's Bench determined, that Money standing in the Books of the Bank, in the name of the Husband and Wife, the Husband alone has a right to Transfer.

A Woman was Executed at Lisbon for the Murder of Thirty-three Infants committed to her care.

They write from the Archipelego, that no less than 700 Houses, and 5000 Inhabitants, have been Destroyed, since Christmas, by Earthquakes.

in Fourteen Years of Peace, and Eight Years of
War, were from 1750 to 1764.

* Amongst the Instances of Longevity given in this Chronology,
all those below 112 years, which are very numerous, are purpose-
ly omitted, to avoid swelling this article too much.

Peace,	21,348
War, 1765 to 1772,	7,783
	Total—29,131

1774 Independence of the Crimea Acknowledged — Russia, by the great plan of Peter the Great, in founding the City called after him, had secured a port at the Baltic; and now, by the last treaty with Turkey, has obtained a free passage for her fleet into the Mediterranean.

Louis XVI. Ascends the Throne at the age of 20.— Turgot was made Minister of Finance. — Louis, unfortunately for himself and Europe, displays too much inclination for despotic power.

The Bostonians, in America, throw a large quantity of Tea, sent to their town by the East India Company, into the sea.

The Congress of America issues a spirited Declaration of Rights.

Judges first sent to the East Indies.

A Fine of £2000. laid by the Quarter Sessions on the County of Nottingham, for not raising their Militia last year.

A Letter to the Speaker of the House of Commons, in the Public Advertiser, voted by the House of Commons a Breach of Privilege. The Printer ordered to attend next day.

He attended, and gave up the Rev. Mr Horne as the writer. Mr H. was ordered to attend, who, on the 17th, did so, and demanded to have Evidence brought against him; and there not being any, except the Printer, who was in custody, he was discharged. Mr. Horne is since known by the name of Horne Tooke.

This day the great cause respecting Literary Property was finally determined, when the House of Lords resolved, that the Statute of Queen Anne alone secured literary property; by that Statute, the Common Law Property being done away.

1774 The First Unitarian Church was opened by the Rev Mr. Lindsey, who, from conscientious motives, had quitted the Church of England and a good living.

The Society of Antiquaries obtained leave to open the Tomb of Edward I. in Westminster Abbey. — They found the body in perfect preservation, and most richly dressed.

The English Evacuated Falkland's Island, leaving an Inscription to support their claim to the same.

INSTANCES OF LONGEVITY. *Aged.*

Mr. William Beaby, near Dungarven, in the County of Londonderry. He was an English at the Battles of the Boyne and Aghrim,	130
Allen Duncan, at Nize, Scotland,	112
Mr Tice, of Hogley, in Worcestershire,	125
Shelah M'Allister, of Londonderry,	118
Hugh Cuming, of Ratharland, in Ireland,	114

By a Return made to the Congress of America this year, it appears, that the number of persons in the Revolted Colonies was 3,026,678; the Colony of Georgia was not included in the estimate.

The number of Newspapers published this year appears, by the books of the Stamp office, to be 12,300,000.

1775 Never did a new Parliament meet in this country, from which the People looked for more important measures. The fate of North America, and the power of legislation for that great country, were now to be determined. The Earl of Chatham, although almost worn out by the gout, attended, and proposed a plan of Reconciliation, which he supported with all his powers of oratory, but which was rejected by a great majority. He made a second motion, but that met the same fate. — Petitions from the West India Islands, from the Merchants,

Great Britain.

1775 and from the American Congress, were all disregarded; and there now appeared a firm resolution in the Ministry to enforce obedience by arms.

In this debate, Mr. Fox exerted himself with his accustomed abilities, and he soon after became the leader of the opposition.

Nine Women Burned in Poland as Witches.

A Farmer, near Bingley, digging in his field, discovered a Copper Chest, containing 100 weight of Roman Silver Coin, some as old as Julius Cæsar.

Captain Cook, in the Endeavour, returned from his Second Voyage of Discovery.

The Baronets of Nova Scotia appeared in the Badges of their Order at Court, which had been laid aside many years.

The Americans Defeated in an Attack on Quebec.

INSTANCES OF LONGEVITY. *Aged.*

A Pleasure Boat of Fifteen Tons, built of Iron, Lunched in the River Foss, in Yorkshire, several persons embarked in her.

1778 Ministers announce to the House that the French had acknowledged the Independence of the United States. On the Duke of Richmond's arguing in the House of Lords, a few days afterwards, that England should do the same, the great Earl of Chatham rose, with apparent heat, to answer the Duke, declaring his objection to what he called the Dismemberment of the Empire, when he fell into convulsions, and died in a few hours.

Pondicherry Taken by the English, which may be said to have extinguished the French Power in the East.

A Woman, who proved afterwards to be a lunatic, laid hold of the King as he was getting out of his chair at St. James's.

Nootka Sound Discovered by Captain Cook.

The Sandwich Islands Discovered.

The Courts of Session at Edinburgh unanimously gave their opinion in favour of the Unlimited Freedom of Negroes in this country, which went much farther than the Courts of England had done.

Messrs. Franklin, Dean, and Lee, publickly received at the Court of France, as Ambassadors from the United States of America.

The Count d'Artois and the Duke de Bourbon had a Duel at Paris. The Count having grossly insulted the Duchess of Bourbon, the King banished him to Choisi.

A party from on board an American Privateer, commanded by Paul Jones, landed and Burned one of the Ships in the harbour of Whitehaven. He had just before landed near Kirkcudbright, in Scotland, and pillaged the house of Lord Selkirk. They carried off his Lordship's Plate.

The King of Prussia opened the Campaign, at the head of an Army of 200,000 men.

A Verdict of £300. given against Three Officers of the Customs, for seizing goods which were not Contraband.

1780 Lord George Gordon, at the head of 20,000 men, carries up his famous Petition to the House of Commons; the rejection of which occasions very serious riots.

An Account was received of the melancholy Death of Captain Cooke, the celebrated Circumnavigator, at the Island of Owy-hee, in the South Seas.

From the Province of Tucuman, in America, they write, that they have now a Negro-woman living there, who, from authentic testimony, must be 176 years-old.

During the night, an extraordinary phenomenon appeared in the sky: the light resembled a great fire, and the elements seemed in a flame, and flashes of sparkling fire seemed to shoot from the horizon. The same appeared in France and Germany.

The Court of King's Bench, in the cause of the City of London against the Inhabitants of Richmond, determined, that the Owners of Lands have no property in the soil of a navigable river.

The Earl of Surrey, afterwards Duke of Norfolk, Recanted the Errors of the Church of Rome before the Archbishop of Canterbury.

A Man under sentence of death, having been released from Newgate by the Rioters, prudently surrendered himself to Mr. Akerman, the keeper, and was granted a Free Pardon.

A Cluster of Syrian Grapes, grown in England, was presented to the Duke of Portland, which weighed 11 lb. 10 oz.

Newgate Burned by the Mob.

Doctor Hutton proved by Experiment, that a Hill has the greatest power of Attraction at one fourth its height.

1781 Mr. Burke moved to bring in his Bill of Reform, in which Mr. William Pitt, then just of age, made

1781 His Maiden Speech, and a motion was made by Mr. Fox, respecting the American States.

The Clarendon Printing Office at Oxford was Founded.

It was determined in the Exchequer, that Milk, Calves, Potatoes, Peaches Melons, Pines, Exotic Trees and Shrubs, were Titheable

The Exclusive Right of the King's Printer to print the Forms of Prayer, was fully established in the Exchequer.

One Townsend, a Lieutenant of a Privateer, executed for Murder on the High Seas, by ordering a gun to be fired into a Neutral Ship, which killed the Captain.

1782 A Dreadful Fire broke out at Constantinople, wherein 40,000 Houses were Burned; and the Plague raging both in the Capital and the Province, would have excited pity; but the savage heart of Catharine only induced her to take advantage of these misfortunes. She not only drew her troops to the Turkish confines, but the Emperor of Germany did the same; and the latter refused to renew the treaty with Turkey, which was nearly expiring,

The Marquis of Rockingham's Administration, which was so justly popular, was formed this year.—An Act, disqualifying Officers of Customs, Exercise, &c. even from voting for Members of Parliament, was passed, as did Mr. Burke's Bill of Reform in the Household.—Mr. Pitt, about the same time, made a motion for a Reform of Parliament, which was lost by a majority of 20 only.

The City of London paid £27,000. for damages done in the City by the Rioters of 1780.

Rodney Defeated the French Fleet.

The Royal George man of war, 100 guns, overset at Spithead, and 800 persons perished.

1782 land, His Majesty ordered £25,000. to be paid to settle them there.

A Monument was erected in Guildhall, to the memory of the Earl of Chatham.

Died at Preston, near Hull, Valentine Catesby, aged 116.

1783 Several Cities, Towns, and Villages, and upwards of 40,000 Persons, of Naples and Sicily, were destroyed this year by earthquakes.—Of the town of Castel Nova, the following account is given:—That an inhabitant of that place, being on a hill at no great distance, looking back, saw no remains of the town, but only a black smoke—4,000 people perished in that town.

The Parliament of England, in fact, ceded the right of Taxing Colonies; and France had introduced into the minds of her people, both civil and military, those notions, which in the end, brought about the Revolution.

After eight years' struggle, the United States of America were acknowledged to be Independent.

His Majesty created a new Order of Knighthood for Ireland, to be called Knights of the Illustrious Order of St. Patrick.

It was determined in the Court of King's Bench, when two parties, not in partnership, drew a bill to their order, both must endorse it, to make it negotiable.

It appeared by official returns, that 43,633 men, exclusive of officers, were killed or died in the military service in America.

At the Interment of the Archbishop of Canterbury, at Lambeth, a coffin of a Bishop of Ely was found; the date on the plate 1570; the body and clothes were perfectly sound.

A woman at Koningsburgh brought to bed of five children.

1783 It was determined in the Court of King's Bench, that an inn-keeper is bound to keep his guests in security; and therefore, a verdict was given to a gentleman who had been robbed in an Inn.

A member expelled the House of Commons, who had been proved guilty of perjury.

INSTANCES OF LONGEVITY. *Aged.*

1787 Two Bishops consecrated for the British Colonies in America.

A Forged Gazette Extraordinary was circulated, with a view to affect the Funds. The principal in this business has never been discovered.

A Shark was taken in the Thames, near Poplar; in his belly was found a watch, with the name of Wats'n engraved on it. The watch had belonged to a young gentleman who had been drowned near Falmouth.

The Root of Scarcity introduced into England by Doctor Lettsom,

The Colony of Botany Bay Settled.

1787 The Agricultural Society Formed.

Died at Horton, near Leek, in Staffordshire, Mary Brook, aged 148.

1788 The Quakers at Philadelphia emancipated their Slaves, and opened schools of instruction for them.

A Bog in Ireland, in the county of Tipperary, was observed to swell, which soon burst, overflowed a vast tract of fertile land adjoining, and tore up several trees by the roots.

By a verdict in the Court of King's Bench, it was determined, that Interest may be charged on a Debt, after the usual term of Credit is expired.

Lady St. John recovered an Estate of £12,000 a year from her husband, which she had assigned under the influence of terror.

A Society was formed for Exploring the interior parts of Africa.

The Chancellor Refused a Bankrupt's Certificate, because he had lost £5, at one time in gaming.

Upwards of 5000 head of Horned Cattle perished for want of sustenance, owing to the dryness of the season.

The real Cinnamon Tree of Ceylon successfully cultivated in Jamaica and Dominica.

The first Bishop of Nova Scotia consecrated.

Iron pipes, to the length of forty miles, cast by Mr. Wilkinson, to supply the City of Paris, with water.

At St. Lucia, 900 persons were destroyed by an Earthquake.

The King became Deranged in Mind.

A Leather Cannon was proved in the King's Park, at Edinburgh, which was found to answer; it was fired three times.

M. de Lesseps arrived in France from Kamptchatka, from Mons. de Perouse, who, with his two ships, the Boufsole and Astrolabe, were never more heard of.

INSTANCES OF LONGEVITY. *Aged.*

1788 At Galway, Patrick Conolly, Esq. 114
 At Selkirk, Mr. Riddell, 116

1789 The National Assembly one morning finding the
 — hall they met in shut, with a view to prepare a
France throne for the King, took offence, and hastened to a
 Tennis-court to deliberate, and there took an oath
 not to separate until they had formed a Constitu-
 tion.

Italy. The Pope, in addition to the Mortification he had
 already suffered, now saw his power in, and profit
 from, France at an end. He heard with dismay the
 decree of the National Assembly, that Tithes were
 Abolished, and the Possessions of the Clergy de-
 clared National Property.

The quackery of Animal Magnetism brought from
 France into England.

A most Severe Frost, which began on the 25th of
 November, and continued unremitted for Seven
 Weeks; the Thames was frozen in a remarkable
 manner, and the ice this day, (Jan. 14th,) for the
 first time, broke up, at the time that a fair was held
 thereon.

The King pronounced by the physicians perfectly
 recovered.

The King and Royal Family went in Procession
 to St. Paul's, attended by the Peers and the House
 of Commons, to return Thanks.

Three Magistrates were sentenced to a Fine of one
 hundred pounds each, for discharging Messrs. Ban-
 nister and Palmer, who had been committed as va-
 grants for Acting Plays without a Licence.

The King of Prussia ordered a Newspaper to be
 printed, and distributed throughout his dominions.

A Vessel was Launched at Depford, built of Cop-
 per.

The Bastile at Paris taken and destroyed.

- 1789 Many of the Princes and Nobles of France emigrate.
The Liberty of the Press in France decreed.
The weekly consumption of Coals at the Carroon Manufactory, is stated to be 11,000 Tons.
- 1790 Ismael captured by Suwarrow, the place was taken by storm, and the most horrible excesses committed; 15,000 of the besieged fell, and all the inhabitants were massacred.
A Dispute takes place between the English and Spaniards, respecting Nootka-Sound.
Letters received from the philanthropic Mr. Howard, which say, that from the bad state of the Russian Hospitals at Riga, Cronstadt, &c. nearly 70,000 men have perished within the last year.
Nuns and Friars turned out of the Convents of France.
The Court of King's Bench determined, that a Vender of Goods has a right to stop them in Transitu.
Advice was received of a meeting on board the Bounty, armed ship, which had been sent from Otaheite, with the Bread Fruit. The mutineers put the Captain and seventeen men into one of the boats, in which they ran nearly 4,000 miles, and were miraculously preserved.
In digging for a new dock at Blackwall, after passing several strata of sand, clay, &c. were found a number of large Trees, and a Hazel nut Hedge.
A Verdict was given in the Court of King's Bench in favour of a Slave, who sued his master for Wages.
The grand Anniversary Festival, in honour of the Destruction of the Bastile, when all present took an Oath to observe the Constitution. 600,000 citizens are thought to have been present.
Mr. Powell, the Pedestrian, performed his second journey from London to York, and back again, in Five Days and 18 Hours.—400 miles.

1790 It was determined that a Livery stable-keeper cannot detain a Horse for his Keep, although an Inn keeper may.

Spirits of Turpentine applied with success to the rot in sheep; one-third spirit diluted with two-thirds water.

Galvani, of Italy, discovered the Crural Nerve of a Frog to be convulsed when touch'd with a wet knife; hence Galvanism.

1791 A most important Debate took place respecting Mr. Hastings' Trial: The question was—Whether an Impeachment abated on a dissolution of Parliament? and it was determined that it did not.

The Canadian Division Bill agitated; on which an irreconcilable quarrel occurred between Mr. Fox and Mr. Burke.

The Riots at Birmingham, when many disputing-meeting-houses, and several private dwellings, were destroyed.

The Fog was so dense at Amsterdam, that above 230 persons fell into the canals, and were drowned.

Females debarred from succeeding to the Crown of France.

The Court of King's Bench determined, that the half-pay of an Officer of the Army was not Assignable.

The House, Library, and valuable Philosophical Apparatus, belonging to the celebrated Dr. Priestly, destroyed by the Rioters at Birmingham.—The houses of Messrs. Ryland, Russell, Hutton, and others, were likewise demolished.

A Jury at Sudbury, not being able to agree, oppressed by hunger, broke open the door, and went home.

In the course of this year, above 32,000 houses were destroyed by fire at Constantinople.

1792 France declared a Republic, and the Trial of Louis XVI, which lasted to the end of the year.
