## Technical and Bibliographic Notes / Notes techniques et bibliographiques

The institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming are checked below.

- Coloured covers / Couverture de couleur
- Covers damaged / Couverture endommagée
- Covers restored and/or laminated / Couverture restaurée et/ou pelliculée
- Cover title missing / Le titre de couverture manque
- Coloured maps / Cartes géographiques en couleur
- Coloured ink (i.e. other than blue or black) / Encre de couleur (i.e. autre que bleue ou noire)
- Coloured plates and/or illustrations / Planches et/ou illustrations en couleur
- Bound with other material / Relié avec d'autres documents
- Only edition available / Seule édition disponible
- Tight binding may cause shadows or distortion along interior margin / La reliure serrée peut causer de l'ombre ou de la distorsion le long de la marge intérieure.
- Blank leaves added during restorations may appear within the text. Whenever possible, these have been omitted from filming / Il se peut que certaines pages blanches ajoutées lors d'une restauration apparaissent dans le texte, mais, lorsque cela était possible, ces pages n'ont pas été filmées.
- Additional comments / Commentaires supplémentaires:

L'institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de tournage sont indiqués ci-dessous.

- Coloured pages / Pages de couleur
- Pages damaged / Pages endommagées
- Pages restored and/or laminated / Pages restaurées et/ou pelliculées
- Pages discoloured, stained or foxed / Pages décolorées, tachetées ou piquées
- Pages detached / Pages détachées
- Showthrough / Transparence
- Quality of print varies / Qualité inégale de l'impression
- Includes supplementary material / Comprend du matériel supplémentaire
- Pages wholly or partially obscured by errata slips, tissues, etc., have been reshot to ensure the best possible image / Les pages totalement ou partiellement obscurcies par un feuillet d'errata, une peinture, etc., ont été tournées à nouveau de façon à obtenir la meilleure image possible.
- Opposing pages with varying colouration or discolourations are filmed twice to ensure the best possible image / Les pages s'opposant ayant des colorations variées ou des décolorations sont tournées deux fois afin d'obtenir la meilleure image possible.

This item is filmed at the reduction ratio checked below / Ce document est filmé au taux de réduction indiqué ci-dessous.

The copy filmed here has been reproduced thanks to the generosity of:

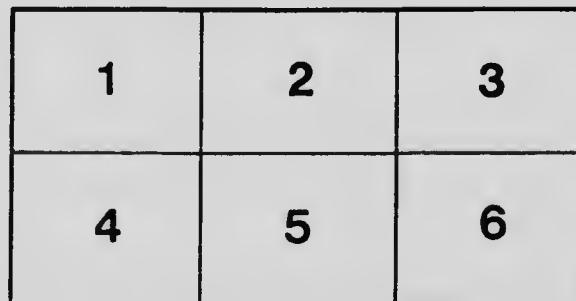

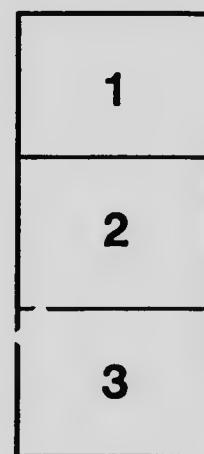

Library  
Agriculture Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol → (meaning "CONTINUED"), or the symbol ▽ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Bibliothèque  
Agriculture Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

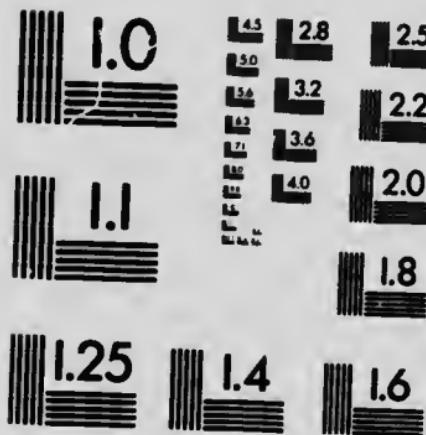

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plet et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plet, selon le cas. Tous les autres exemplaires origineux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole → signifie "À SUIVRE", le symbole ▽ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

<i>Conclusions.....</i>	61

To the Honourable  
The Minister of Agriculture.

SIR.—I herewith submit for your approval Bulletin No. 41 of the Experimental Farm series, which has been prepared by myself. There are presented in this publication the results of a large number of experiments, which have been conducted at all the experimental farms in your Department during the season of 1902, with oats, barley, spring wheat, pease, Indian corn, turnips, mangels, carrots, sugar beets and potatoes in plots of uniform size, and the crops grown under uniform conditions. The average results also are given of three to eight years' tests on such plots with varieties of oats, barley, spring wheat, pease, Indian corn, turnips and potatoes, three to seven years with plots of mangels and carrots, and four to six years' experience with sugar beets.

These trial plots are conducted with the object of gaining information as to the relative productiveness of the different sorts and their earliness in ripening. The returns show much variation in the weight of the crops grown and point to the importance of care in the choice of varieties of seed for sowing. It is hoped that these results giving the experience gained under some of the most important climatic variations found in the country, will prove useful to farmers in every part of Canada.

I have the honour to be,

Your obedient servant,

WM. SAUNDERS,

*Director of Experimental Farms*

OTTAWA, December 8, 1902.

*Director of Experimental Farms.*

---

During the past eight years experiments have been conducted on uniform trial plots at each of the Dominion Experimental Farms for the purpose of gaining information as to the most productive and earliest ripening varieties of grain, fodder corn, field roots and potatoes. In arranging for these plots the same varieties have been sown at each of the farms, the seed being supplied at the outset from a common stock. In each case the seed has been sown early, and, as a rule, all the different sorts of the same product have been sown on the same day or at least within two or three days so as to give to all an even start. The land chosen each year for these plots has been as nearly uniform in character as could be found and before sowing has been brought into a good condition of tilth. In this Bulletin which is the eighth of the series, the details are arranged after the same plan as in the previous issues, the different varieties being placed in the tables which follow in the order of their productivity at the Central Experimental Farm. The number of days required for each sort from sowing to ripening is also given and thus their relative earliness is shown.

In comparing the crops obtained from the several varieties in any one year with another, the relative positions occupied by the different sorts will often vary from lack of uniformity in the soil, and other causes. When, however, the average of such results can be given for a number of years the information becomes much more satisfactory and valuable.

In the experience recorded near the end of this bulletin the average crops obtained from the sowings of a number of successive years are shown, all those which have been three years under trial being placed in competition with those which have been tested for longer periods.

A break in the records of these tests has been necessary at Brandon this year owing to a very heavy rain storm or 'cloud burst' in June. This storm washed away many of the varieties of pease and barley, and others were so much injured by flooding that any comparisons of yield of varieties would be valueless. Under the circumstances the injured sorts have been omitted from this bulletin, but the particulars of their yields will be found in the annual report of the Experimental Farms for 1902.

By comparing the crops of the past year with the average of previous years it will be seen that the results of the harvest of 1902 have on the whole been very satisfactory.

#### TRIAL PLOTS OF OATS.

During the season of 1902, sixty-five varieties have been under trial. The size of the plots on which they were sown at the Experimental Farms in Ottawa, Ont., Napan, N.S., and Agassiz, B.C., was one-fortieth of an acre each, and at Brandon, Man., and Indian Head, N.W.T., they were one-twentieth of an acre each. The quantity of seed sown was in the proportion of two bushels per acre, and the dates of sowing were as follows :—At Ottawa, April 18, Napan, April 30, Brandon, May 27-28, Indian Head, May 12, and at Agassiz, April 21.

Particulars as to the character of the land in each case, and of the preparation and treatment it has had will be found in the annual report of the Experimental Farms for 1902.

In Canada the bushel of oats is 34 lbs.

6. Columbus.. . . . .	81 6	12. Early Golden Prolific.. . . . .	77 22

An average crop of 80 bushels 33 lbs. per acre.

EXPERIMENTAL FARM FOR THE MARITIME PROVINCES, NAPPAN, N.S.

	Per acre. Bush. Lbs.		Per acre. Bush. Lbs.
1. Golden Tartarian .. . . . .	111 26	7. New Zealand.. . . . .	103 18
2. Golden Giant.. . . . .	108 8	8. American Beauty .. . . . .	102 12
3. Salines.. . . . .	107 2	9. Siberian.. . . . .	102 12
4. Cromwell.. . . . .	105 30	10. Lincoln.. . . . .	102 12
5. White Schonen.. . . . .	105 30	11. Early Golden Prolific.. . . . .	102 12
6. White Giant.. . . . .	104 24	12. Mennonite.. . . . .	102 12

An average crop of 104 bushels 31 lbs. per acre.

EXPERIMENTAL FARM FOR MANITOBA, BRANDON, MAN.

	Per acre. Bush. Lbs.		Per acre. Bush. Lbs.
1. Early Golden Prolific.. . . . .	82 28	7. Wallis.. . . . .	74 24
2. Buckbee's Illinois.. . . . .	82 12	8. Early Maine.. . . . .	74 24
3. Siberian.. . . . .	82 2	9. Hazlett's Seizure .. . . . .	73 28
4. Holstein Prolific.. . . . .	81 6	10. Abundance.. . . . .	72 2
5. Mennonite.. . . . .	77 2	11. American Triumph.. . . . .	70 30
6. Joanette.. . . . .	74 24	12. Banner.. . . . .	70 30

An average crop of 76 bushels 22 lbs. per acre.

EXPERIMENTAL FARM FOR THE NORTH-WEST TERRITORIES, INDIAN HEAD, N.W.T.

	Per acre. Bush. Lbs.		Per acre. Bush. Lbs.
1. Danish Island.. . . . .	89 14	7. Holstein Prolific.. . . . .	82 2
2. Banner.. . . . .	88 8	8. Abundance .. . . . .	80 20
3. Tartar King.. . . . .	86 16	9. Columbus.. . . . .	80 20
4. Golden Tartarian.. . . . .	83 18	10. Wide Awake.. . . . .	80 20
5. Golden Giant.. . . . .	82 32	11. Thousand Dollar.. . . . .	78 24
6. Improved American.. . . . .	82 20	12. Oxford.. . . . .	78 8

An average crop of 82 bushels 28 lbs. per acre.

EXPERIMENTAL FARM FOR BRITISH COLUMBIA, AGASSIZ, B.C.

	Per acre. Bush. Lbs.		Per acre. Bush. Lbs.
1. Golden Giant.. . . . .	77 22	7. Black Beauty.. . . . .	72 22
2. Waverley.. . . . .	75 30	8. Master.. . . . .	72 12
3. Hazlett's Seizure.. . . . .	74 4	9. Holland.. . . . .	72 2
4. Golden Tartarian.. . . . .	73 18	10. Danish Island.. . . . .	71 16
5. Tartar King.. . . . .	72 32	11. Early Gothland.. . . . .	71 6
6. Columbus.. . . . .	72 32	12. Banner.. . . . .	70 30

An average crop of 73 bushels 4 lbs. per acre.

The twelve varieties of oats which have produced the largest crops in 1902, taking the average results obtained on all the Experimental Farms, are :

	Per acre.				Per acre.	
	Bush.	Lbs.			Bush.	Lbs.
1. Siberian.. . . . .	81	20	7. Golden Tartarian .. . . .		77	23
2. El'ner.. . . . .	80	17	8. Early Golden Prolific.. . . . .		77	23
3. Danish Island.. . . . .	80	6	9. New Zealand.. . . . .		76	22
4. Holstein Prolific.. . . . .	80	..	10. Buckbee's Illinois.. . . . .		76	20
5. Golden Giant.. . . . .	80	..	11. Mennonite.. . . . .		76	..
6. Columbus.. . . . .	79	24	12. Tartar King.. . . . .		75	12

An average crop of 78 bushels 17 lbs. per acre.

The average crop of all the varieties of oats tested at each of the Experimental Farms in 1902, was as follows :—At Ottawa, 65 bushels 19 lbs. per acre; Nappan, 90 bushels 18 lbs.; Brandon, 60 bushels 11 lbs.; Indian Head, 67 bushels 30 lbs., and at Agassiz, 63 bushels 10 lbs. The average return given by the whole of the varieties of oats tested at all the farms was 70 bushels 4 lbs. per acre.

#### TRIAL PLOTS OF BARLEY.

During the season of 1902, fifty-one varieties of barley have been under test, twenty-one of which were two-rowed sorts and thirty six-rowed. The barley plots were of the same size as those sown with oats, the seed was used in the proportion of two bushels per acre, and the dates of sowing were as follows :—At Ottawa, Ont., April 17; Nappan, N.S., May 16; Indian Head, N.W.T., May 17, and at Agassiz, B.C., April 19.

In Canada the bushel of barley is 48 lbs.

The six varieties of six-rowed barley which have given the largest crops during 1902, at the several Experimental Farms, are the following :—

CENTRAL EXPERIMENTAL FARM, OTTAWA, ONT.

	Per acre. Bush. Lbs.			Per acre. Bush. Lbs.	
1. Blue Long Head..	74	8	4. Stella..	65	40
2. Yale..	73	16	5. Odessa..	65	..
3. Trooper..	65	40	6. Mensury..	64	8

An average crop of 68 bushels 3 lbs. per acre.

EXPERIMENTAL FARM FOR THE MARITIME PROVINCES, NAPPAN, N.S.

	Per acre. Bush. Lbs.			Per acre. Bush. Lbs.	
1. Common..	63	16	4. Stella..	58	16
2. Royal..	59	8	5. Mansfield..	56	32
3. Garfield..	58	16	6. Empire..	55	..

An average crop of 58 bushels 23 lbs. per acre.

EXPERIMENTAL FARM FOR THE NORTH-WEST TERRITORIES, INDIAN HEAD, N.W.T.

	Per acre. Bush. Lbs.			Per acre. Bush. Lbs.	
1. Claude..	66	32	4. Blue Long-head..	62	24
2. Odessa..	65	..	5. Summit..	60	40
3. Empire..	62	44	6. Royal..	58	36

An average crop of 62 bushels 37 lbs. per acre.

EXPERIMENTAL FARM FOR BRITISH COLUMBIA, ACASSIZ, B.C.

	Per acre. Bush. Lbs.			Per acre. Bush. Lbs.	
1. Summit..	55	..	4. Surprise..	50	40
2. Rennie's Improved..	52	24	5. Yale..	40	10
3. Oderbruch..	50	40	6. Nugent..	40	..

An average crop of 48 bushels 11 lbs. per acre.

The six varieties of six-rowed barley which have produced the largest crops in 1902, taking the average results obtained on all the Experimental Farms, are :

	Per acre. Bush. Lbs.			Per acre. Bush. Lbs.	
1. Surprise..	55	15	4. Stella..	52	24
2. Odessa..	55	..	5. Blue Long Head..	52	19
3. Yale..	53	29	6. Brome..	52	1

An average crop of 53 bushels 23 lbs. per acre.

The average crop of all the varieties of six-rowed barley tested at each of the Experimental Farms in 1902, was as follows :—At Ottawa, 54 bushels 12 lbs. per acre; Nappan, 50 bushels 32 lbs.; Indian Head, 49 bushels 9 lbs., and at Agassiz, 39 bushels. The average return given by the whole of the varieties of six-rowed barley tested at all the farms was 48 bushels 17 lbs. per acre.

### TRIAL PLOTS OF SPRING WHEAT.

Seventy-one varieties of spring wheat were grown on the uniform trial plots during 1902. The size of the plots was one-fortieth of an acre each at Ottawa, Ont., Nappan, N.S., and Agassiz, B.C., and one-twentieth of an acre each at Brandon, Man., and Indian Head, N.W.T., and the quantity of seed sown was in the proportion of one and one-half bushels per acre. The dates of sowing were as follows :—At Ottawa, April 15, Nappan, April 26, Brandon, May 5 and 6, Indian Head, May 27, and at Agassiz, April 18.

The crops given by the different varieties have been very large at Ottawa, and extraordinary at Nappan and Agassiz. They have also been very good at the Indian Head and Brandon farms.

In Canada the bushel of wheat is 60 lbs.

5. Goose..	42	56	11. Minnesota No. 181..	40	47
6. Preston..	42	13	12. Herisson Bearded..	40	37

An average crop of 42 bushels 41 lbs. per acre.

The average crop of all the varieties of spring wheat tested at each of the Experimental Farms in 1902, was as follows :—At Ottawa, 36 bushels 26 lbs. per acre ; Nappan, 43 bushels 51 lbs. ; Brandon, 30 bushels 14 lbs. ; Indian Head, 35 bushels 29 lbs., and at Agassiz, 42 bushels 35 lbs. The average return given by the whole of the varieties of spring wheat at all the farms was 37 bushels 33 lbs. per acre.

## TRIAL PLOTS OF PEASE.

Fifty-seven varieties of pease were under trial in 1902. These were sown in plots of one-fortieth of an acre each at Ottawa, Ont., Nappan, N.S., and Agassiz, B.C., and one-twentieth of an acre each at Brandon, Man., and Indian Head, N.W.T. The quantity of seed used per acre has varied from two to three bushels, depending on the size of the pea. The dates of sowing were as follows :—At Ottawa, April 23, Nappan, May 7, Indian Head, May 27, and at Agassiz, April 22.

In Canada the bushel of pease is 60 lbs.

6. Mummy..	40	30	12. Harrison's Glory..	38	30

An average crop of 40 bushels 46 lbs. per acre.

The twelve varieties of pease which have given the largest crops in 1902, taking the average results obtained on all the Experimental Farms, are the following :—

	Per acre. Bush. Lbs.		Per acre. Bush. Lbs.
1. Prince..	41 ..	7. Cooper..	36 37
2. Alma..	39 30	8. Harrison's Glory..	36 27
3. White Wonder..	37 52	9. Agnes..	35 45
4. Mackay..	37 27	10. Prince Albert..	35 45
5. Arthur..	37 3	11. Pride..	35 33
6. Crown..	36 45	12. Early Britain..	35 33

An average crop of 37 bushels 6 lbs. per acre.

The average crop of all the varieties of pease tested at each of the Experimental Farms in 1902, was as follows :—At Ottawa, 36 bushels 15 lbs. per acre ; Nappan, 26 bushels 41 lbs. ; Indian Head, 32 bushels 56 lbs., and at Agassiz, 34 bushels. The average return given by the whole of the varieties at all the farms was 32 bushels 56 lbs. per acre.

#### TRIAL PLOTS OF INDIAN CORN.

The number of varieties of corn tested in 1902 was thirty-six. These were all planted in rows three feet apart and the plants thinned out to six or eight inches apart in the rows. The dates of planting were as follows :—At Ottawa, Ont., May 27. Nappan, N.S., May 30, Brandon, Man., May 31 and June 1, Indian Head, N.W.T., May 29, and at Agassiz, B.C., May 23.

The crop in each case was cut green and put into the silo for the winter feeding of stock. The dates of cutting were Ottawa, September 2, Nappan, October 30, Brandon, September 5, Indian Head, September 8, and at Agassiz, October 10. The yield per acre has been calculated in each case from the weight obtained from two rows each 66 feet long.

In Canada the ton is 2,000 lbs.

3. Mamm. Elght-rowed Flint.. . . . .	18 432	6. North Dakota White.. . . . .	16 1,264

An average crop of 17 tons 1,640 lbs. per acre.

## EXPERIMENTAL FARM FOR THE NORTH-WEST TERRITORIES, INDIAN HEAD, N.W.T.

	Per acre. Tons. Lbs.		Per acre. Tons. Lbs.
1. Salzer's All Gold.... . . . .	9 1,800	4. Pearce's Prolific.. . . . .	8 1,688
2. Selected Leaming.. . . . .	9 348	5. Early Butler.. . . . .	8 1,080
3. Kling Phillip.. . . . .	8 1,820	6. Thoro'bred White Flint.. . . . .	8 368

An average crop of 8 tons 1,847 lbs. per acre.

## EXPERIMENTAL FARM FOR BRITISH COLUMBIA, AGASSIZ, B.C.

	Per acre. Tons. Lbs.		Per acre. Tons. Lbs.
1. Thoro'bred White Flint.. . . . .	30 1,600	4. Giant Prolific Ensilage .. . . . .	22 1,760
2. Pride of the North.. . . . .	25 1,480	5. Salzer's All Gold.. . . . .	22 1,320
3. Extra Early Huron.. . . . .	24 1,500	6. Champion Wbrite Pearl .. . . . .	22 880

An average crop of 24 tons 1,757 lbs. per acre.

The six varieties of Indian corn which have given the heaviest crops in 1902, taking the average of the results obtained on all the Experimental Farms, are the following :—

	Per acre. Tons. Lbs.		Per acre. Tons. Lbs.
1. Salzer's All Gold.. . . . .	21 99	4. Eureka.. . . . .	18 1,884
2. Thoro'bred White Flint.. . . . .	20 1,751	5. Pride of the North.. . . . .	18 1,439
3. Early Butler.. . . . .	19 70	6. Giant Prolific Ensilage .. . . . .	18 872

An average crop of 19 tons 952 lbs. per acre.

The average crop of all the varieties, cut green, of Indian corn tested at each of the Experimental Farms in 1902, was as follows :—At Ottawa, 22 tons 155 lbs. per acre ; Nappan, 20 tons 162 lbs. ; Brandon, 13 tons 1,432 lbs. ; Indian Head, 6 tons

156 lbs., and at Agassiz, 19 tons 81 lbs. The average return given by the whole of the varieties at all the farms was 16 tons 140 lbs. per acre.

#### TRIAL PLOTS OF TURNIPS.

Thirty varieties of turnips were tested in 1902, sown on drills or on the flat  $2\frac{1}{2}$  feet apart. Two sowings were made at each farm, the second sowing about two weeks later than the first. The dates of sowing will be found in the accompanying table ; the dates on which the roots were pulled were as follows :—At Ottawa, Ont., October 14, Nappan, N.S., October 30, Brandon, Man., October 2, Indian Head, N.W.T., October 4, and at Agassiz, B.C., October 24. The yield per acre in each case has been calculated from the weight of roots gathered from two rows, each 66 feet long.

In Canada the ton is 2,000 lbs.

The crops of the two sowings of turnips at the Experimental Farms in 1902 have averaged per acre as follows :—

Central Experimental Farm, first sowing . . . . .	42	84
"            second sowing . . . . .	27	318
Experimental Farm, Nappan, first sowing . . . . .	42	667
"            Nappan, second sowing . . . . .	33	786
"            Brandon, first sowing . . . . .	16	604
"            Brandon, second sowing . . . . .	19	377
"            Indian Head, first sowing . . . . .	15	546
"            Indian Head, second sowing . . . . .	12	68
"            Agassiz, first sowing . . . . .	24	834
"            Agassiz, second sowing . . . . .	26	1,335

Average crop from all the plots at all the farms, first sowing 28 tons 196 lbs, second sowing 23 tons 1,494 lbs., showing an advantage in favour of the first sowing of 4 tons 702 lbs. per acre. It will be seen that the early sown plots have given the larger crops at all the experimental farms, excepting at Brandon and Agassiz, where the later sown crops have given the heavier yields.

The six varieties of turnips which have given the heaviest crops at the several experimental farms during the season of 1902, are the following :—

(Where not otherwise stated the quantities given are all from the early sown plots.)

#### CENTRAL EXPERIMENTAL FARM, OTTAWA, ONT.

	Per acre. Tons. Lbs.		Per acre. Tons. Lbs.
1. East Lothian . . . . .	53 1,910	4. Jumbo . . . . .	48 360

An average crop of 30 tons 888 lbs. per acre.

The six varieties of turnips which have produced the heaviest crops in 1902, taking the average of the results obtained on all the experimental farms, are the following :—

	Per acre. Tons. Lbs.	Per acre. Tons. Lbs.
1. Good Luck.. .. .. .. ..	31 1,577	4. Perfection Swede.. .. .. .. .. 30 77
2. Magnum Bonum.. .. .. .. ..	30 889	5. Champion Purple Top.. .. .. .. .. 29 1,492
3. Hall's Westbury.. .. .. .. ..	30 335	6. Giant King.. .. .. .. .. .. 29 1,794

An average crop of 30 tons 622 lbs. per acre.

## TRIAL PLOTS OF MANGELS.

Twenty-seven varieties of mangels have been under test during 1902, all were sown on drills or on the flat in rows 2½ feet apart. Two sowings were made at each farm, the second sowing about two weeks later than the first. The dates of sowing will be found in the accompanying table; the dates on which the roots were pulled were as follows :—At Ottawa, Ont., October 1, Napan, N.S., October 28, Brandon, Man., September 20, Indian Head, N.W.T., October 3, and at Agassiz, B.C., October 22. The yield per acre has been calculated in each case from the weight of roots gathered from two rows each 66 feet long.

In Canada the ton is 2,000 lbs.

An average crop of 32 tons 714 lbs per acre.

#### TRIAL PLOTS OF CARROTS.

Twenty different sorts of carrots were tested during 1902, all sown on drills or on the flat two feet apart. Two sowings were made in each case, the second sowing two weeks later than the first. The dates of sowing will be found in the accompanying table ; the dates on which the carrots were pulled were as follows :—At Ottawa, Ont., October 14, Nappan, N.S., October 24, Brandon, Man., October 2, Indian Head, N.W.T., October 5, and at Agassiz, B.C., October 28. The yield per acre in each case has been calculated from the weight of roots gathered from two rows, each 66 feet long.

In Canada the ton is 2,000 lbs.

3. Iverson's Champion.... . . . . .	23 1,723	6. Mamm. White Intermediate.. . . . .	22 1,650

Average crop of 23 tons 1,682 lbs. per acre.

### TRIAL PLOTS OF SUGAR BEETS.

Eight varieties of sugar beets have been tested during 1902, sown on drills or on the flat two feet apart. Two sowings were made at each farm, the second sowing about two weeks later than the first. The dates of sowing will be found in the accompanying table; the dates on which the roots were pulled, were as follows:—At Ottawa, Ont., October 14, Nappan, N.S., October 28, Brandon, Man., September 20, Indian Head, N.W.T., October 3, and at Agassiz, B.C., October 22. The yield per acre in each instance has been calculated from the weight of roots gathered from two rows, each 66 feet long.

In Canada the ton is 2,000 lbs.

2. Royal Giant.. . . . .	37 580	4. Red Top Sugar.. . . . . 27 1,935

An average crop of 33 tons 619 lbs. per acre.

The four varieties of sugar beets which have produced the heaviest crops in 1902, taking the average of the results obtained on all the experimental farms are :

	Per acre. Tons. Lbs.		Per acre. Tons. Lbs.
1. Royal Giant.. . . . .	26 1,105	3. Danish Red Top.. . . . .	23 903
2. Danish Improved.. . . . .	26 333	4. Red Top Sugar.. . . . .	23 549

An average crop of 24 tons 1,722 lbs. per acre.

### TRIAL PLOTS OF POTATOES.

Ninety varieties of potatoes have been under test during 1902. The potatoes planted were cut into pieces, with two or three eyes in each, and these were planted in rows 2½ feet apart, the sets being placed a foot apart in the rows. The following were the dates of planting and digging :—At Ottawa, Ont., planted May 27, dug October 2; Napan, N.S., planted May 29, dug October 3; Brandon, Man., planted May 20, dug September 30; Indian Head, N.W.T., planted May 7, dug October 2, and at Agassiz, B.C., planted May 14, dug September 22 to 30.

In Canada the bushel of potatoes is 60 lbs.

4. Beauty of Hebron.. . . . .	286 ..	10. Earliest of All.. . . . .	268 24
5. Brownell's Winner.. . . . .	281 36	11. Money Maker.. . . . .	266 12
6. New Variety No. 1.. . . . .	275 ..	12. American Giant.. . . . .	266 12

An average crop of 278 bushels 20 lbs. per acre.

## EXPERIMENTAL FARM FOR BRITISH COLUMBIA, AGASSIZ, B.C.

	Per acre		Per acre		
	Bush.	Lbs.	Bush.	Lbs.	
1. Maulie's Thoroughbred.. . . . .	386	36	7. Early Market.. . . . .	369	36
2. Irish Daisy.. . . . .	385	..	8. Columbus.. . . . .	369	..
3. Early Norther.. . . . .	383	18	9. Money Maker.. . . . .	369	..
4. American Giant.. . . . .	381	40	10. General Gordon.. . . . .	367	37
5. Prolific Rose.. . . . .	374	30	11. Sharpe's Seedling .. . . . .	367	4
6. Carman No. 1.. . . . .	372	54	12. Rose No. 9.. . . . .	366	51

An average crop of 374 bushels 25 lbs. per acre.

The twelve varieties of potatoes which have produced the largest crops in 1902, taking the average of the results obtained at all the experimental farms, are the following :—

	Per acre.		Per acre.		
	Bush.	Lbs.	Bush.	Lbs.	
1. Enormous.. . . . .	410	14	7. Troy Seedling.. . . . .	385	2
2. Irish Cobbler.. . . . .	406	59	8. Hale's Champion.. . . . .	384	25
3. Irish Daisy.. . . . .	402	54	9. Dakota Red.. . . . .	384	25
4. Money Maker.. . . . .	402	29	10. Flemish Beauty.. . . . .	381	33
5. Sharpe's Seedling.. . . . .	389	55	11. Rose No. 9.. . . . .	375	30
6. Burnahy Seedling.. . . . .	387	6	12. Great Divide.. . . . .	374	53

An average crop of 390 bushels 27 lbs. per acre.

The average crops of all the varieties of potatoes tested in 1902, at each of the experimental farms, were as follows :—At Ottawa, 434 bushels 38 lbs. per acre; Napan, 381 bushels 4 lbs.; Brandon, 333 bushels 5 lbs.; Indian Head, 223 bushels 14 lbs., and at Agassiz, 326 bushels 24 lbs. The average return given by the whole of the varieties at all the farms was 339 bushels 22 lbs. per acre.

## AVERAGE OF CROPS FOR THE PAST THREE TO EIGHT YEARS.

The results of experiments with different varieties of the more important agricultural crops to ascertain their relative productiveness become much more reliable and conclusive when the average experience of a series of years can be given. In this way variations arising from inequality of soil and variability of season are to a large extent equalized, and the conclusions reached become a much more valuable guide to the farmer in his selection of seed. The longer the experiments are continued the more accurate are the indications which can be given. The experience here recorded with most of the varieties under test covers a period of from six to eight years.

### THREE TO EIGHT YEARS' EXPERIENCE WITH VARIETIES OF OATS.

The twelve varieties of oats which have averaged the heaviest crops at the several experimental farms during the past three to eight years, are the following :—

(The length of time they have been under trial is stated in each case.)

In Canada the bushel of oats is 34 lbs.

#### CENTRAL EXPERIMENTAL FARM, OTTAWA, ONT.

6. New Zealand, 4 yrs.. . . . .	69	8	12. Early Gothland, 8 yrs.. . . . .	63	29

An average crop of 68 bushels 17 lbs. per acre.

The twelve varieties of oats which have produced the largest average crops for the past three to eight years on all the experimental farms, and hence may, perhaps, be regarded as worthy of being placed at the head of the list for general cultivation in Canada, are the following :—

	Per acre. Bush. Lbs		Per acre. Bush. Lbs		
1. Banner, 8 yrs.. . . . .	76	29	7. Improved American, 5 yrs .. . . . .	73	19
2. Danish Island, 5 yrs.. . . . .	76	9	8. Black Beauty, 4 yrs.. . . . .	72	32
3. Mennonite, 7 yrs.. . . . .	75	19	9. Buckbee's Illinois, 7 yrs .. . . . .	72	20
4. American Beauty, 7 yrs .. . . . .	75	6	10. Columbus, 8 yrs.. . . . .	72	15
5. New Zealand, 4 yrs.. . . . .	75	3	11. Thousand Dollar, 5 yrs.. . . . .	72	15
6. Holstein Prolific, 8 yrs.. . . . .	73	26	12. Golden Giant, 8 yrs.. . . . .	72	6

An average crop of 74 bushels 2 lbs. per acre.

## THREE TO EIGHT YEARS' EXPERIENCE WITH VARIETIES OF BARLEY.

### *Two-rowed Barley.*

The six varieties of two-rowed barley which have averaged the heaviest crops at the several experimental farms during the past three to eight years, are the following :—

(The length of time they have been under trial is stated in each case.)

In Canada the bushel of barley is 48 lbs.

### CENTRAL EXPERIMENTAL FARM, OTTAWA, ONT.

## CONCLUSIONS.

The experience of another year with comparative trial plots of many different varieties of grain, fodder corn, field roots and potatoes affords striking confirmation of the correctness of the results and conclusions which have been reached from season to season for the past eight years from the study of this interesting and important series of experiments.

The evidence produced shows that there are great differences in the relative productiveness of varieties, when grown side by side under similar conditions, hence the importance to farmers of choosing for seed those which give the heaviest crops, so that farming in Canada may thus be made more profitable.

In bulletin No. 40, published a year ago, in which was given the results of similar trial plots for 1901, no varieties of grain were admitted into the comparative list for a series of years unless they had been under trial for five or more years. Under this arrangement only 41 of the 64 sorts under test were considered. In this issue all those which have been three years or longer under trial are placed in competition, and the number of years they have been under test is stated in each case. As a result of this new arrangement some of the more promising of the more recently introduced sorts have found their way into the list of the 12 varieties which have given the largest crops throughout the Dominion. It is noteworthy, however, that in most instances the larger number in these lists consists of varieties which have been under trial for seven or eight years, and these are for the most part the same sorts as appeared among the best twelve in 1901 and previous years.

The general adoption of this plan throughout the bulletin has brought new names into most of the groups, but the preponderance maintained by the most productive sorts of past years shows the persistence of their productive character.

Having gained much experience during the past eight years with the many varieties under trial, it is proposed during the coming season to reduce the number of sorts being tested by discontinuing those which have failed to attain to a desirable standard and retaining only the very best in each series. By this means the names of those sorts which long experience has shown to be the most profitable to grow will be brought more prominently into notice, thus permitting a more ready selection of varieties of the highest excellence.
