Canadian Institute for Historical Microreproductions / Institut canadien de microreproductions historiques

© 1996

The copy filmed here has been reproduced thanks to the generosity of:

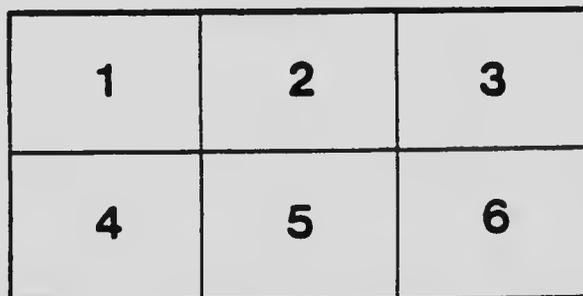

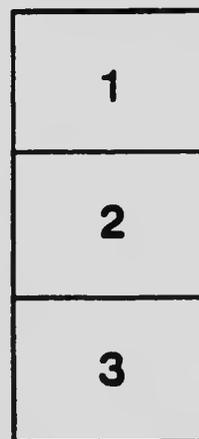

National Library of Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shell contains the symbol \rightarrow (meaning "CONTINUED"), or the symbol ∇ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Bibliothèque nationale du Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

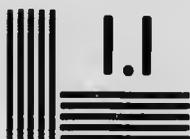

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole \rightarrow signifie "A SUIVRE", le symbole ∇ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

HEATON'S STANDARD PUBLICATIONS

THE CANADIAN PROVINCIAL BOOKLETS are revised every year, are published for the Canadian Provincial Governments, are absolutely reliable, contain no unnecessary words, have been designed to fit easily into a pocket or an envelope, can be mailed with ordinary correspondence and give precisely the information wanted by incoming settlers, travellers, investors, manufacturers and others who wish to extend their business. *Together they form the only uniform series of publications covering each Province in Canada.*

Opportunities in Quebec

General Information

AREA AND PHYSICAL FEATURES.—*Area*—Quebec is by far the largest Province in the Dominion. The older portion of the Province comprises 351,873 sq. miles, almost three times as much as the British Isles. It extends from longitude 57 to 79 west and from latitude 45 to 53 north, and is naturally divided from s.-w. to n.-e. by the St. Lawrence River. In 1912 the district of Ungava, lying immediately to the north, was incorporated with the Province by the Quebec Boundaries Extension Act. The territory thus added includes 351,780 sq. miles, making the total area of the Province 73,653 sq. miles—a greater area than Belgium, Holland, Germany, Denmark, Austria-Hungary and Bulgaria combined.

Lakes. The lakes in the Province cover a total area of 3,507,318 acres. The largest are Mistassini, 624,000 acres; Melville (part) 415,360; St. John, 224,000; Attikonak, 212,000; Ashuanipi, 204,000; Evans, 147,840; Mistassinis, 132,000 acres. There are 40 other lakes with areas of between 5,000 and 100,000 acres each, and innumerable small lakes.

Mountains. The principal mountain ranges stretch from s.-w. to n.-e., and are parallel to each other. South of the St. Lawrence River, following nearly its whole course, the Notre Dame or Green mountains, covered with forests, run from the latitude of Quebec to the Gulf of St. Lawrence, between Baie des Chaleurs and Gaspé point. North of the

One of the good roads of Quebec. A scene in the village of Napierville.

St. Lawrence River the Laurentian mountains form undulating ridges about 1,000 ft. in elevation; the Mealy mountains, about 1,500 ft. high, stretch from about latitude 75 w. to Sandwich Bay; the Wotchish mountains, a short range of crescent form, lie between the Gulf of St. Lawrence and Hudson Bay.

Rivers. The principal rivers, besides the St. Lawrence, which is navigable to Montreal, are the Ottawa, Gatineau, St. Maurice, Saguenay and Hamilton, in the Northern and Western parts of the Province, and the St. Francis, Chaudiere, Nicolet and Beauceour in the Eastern Townships.

CLIMATE.—The climate is healthy. Winters are cold, but bright and dry and the heavy snowfall protects grass and autumn-sown seed from damage by frost. In the spring, vegetation is very rapid, and the hot summer enables crops to be harvested early. In the district from Gaspé to Rimouski the proximity of the Atlantic Ocean makes the climate damp; the land in ordinary years can be worked only from 20th May to 15th October. From Rimouski to Three Rivers the season becomes gradually longer as we approach Three Rivers. The district from Three Rivers westward has the longest season of cultivation—from April 20th to November 20th.

New Quebec (Ungava). There are at most only 3 months of summer, and practically no spring or autumn. It is unlikely that this part of the Province will ever be fit for agriculture north of latitude 51.

Temperature and Rainfall. The following table shows the mean annual temperature and the average annual rainfall in inches, at various points in the Province, according to official returns published in Heaton's Annual, 1917 edition:

<i>Station.</i>	<i>Temp.</i>	<i>Rainfall.</i>
Abitibi	33.6	27
Anticosti, S.W. Point	35.2	29
Brome	39.9	34
Chicoutimi	35.4	30
Cape Chatte	36.7	..
Cape Magdalen	36.5	31
Cranbourne	36.0	45
Danville	43.8	37

<i>Station.</i>	<i>Temp.</i>	<i>Re. ril.</i>
Father Point	35.1	3'
Grindstone Island and Magdalen Islands.)	38.9	5
Huntingdon	40.6	12
Montreal	41.8	40
Quebec	39.0	41
Richmond	40.0	40
Shawinigan	36.4	
Sherbrooke	40.2	

COLONIZATION.—*Area for Settlement.* There are 75,000,000 acres of land available for settlement in the Province, of which about 7,000,000 acres are now surveyed and accessible by colonization roads. These are situate chiefly in districts known as Lake St. John and Saguenay, Ottawa, Temiscaming and Abitibi, St. Maurice, the Eastern Townships, the Chaudiere, Lower St. Lawrence and South Valley of the Matapedia and Gaspesia.

Crown Land Regulations. The Provincial Government sells lands from 20c. to 60c. an acre. The settler must build a habitable house, 16x20 feet, reside on land all the time until patent is granted, and clear 15 per cent. of his lot. Write Minister of Lands and Forests, Quebec.

Improved Farms. Farms of 100 acres can be purchased at from \$20 to \$30 per acre with improvements. Renting is generally on a system of equal sharing of the profits; the proprietors furnish tools with the farm.

List of Farms for Sale. For list of farms write to Department of Colonization, Mines and Fisheries, Quebec, or at 82 St. Antoine St., Montreal.

English Colonization Districts. The chief English Colonization Districts are the Eastern Townships, the Ottawa Valley and the Temiscaming or Upper Ottawa District. Besides these a few English settlers are found near Quebec, Montreal and the Chaudiere and Gaspé regions and along the Baie des Chaleurs. The Lake St. John region, the Matapedia Valley and the St. Maurice Valley offer advantageous fields for settlement. See under Agricultural Districts, page 26.

Cost of Making a Start. Partial clearing can be done by contract at from \$8 to \$15 an acre.

Cattle cost \$40 to \$100 each. Horses, \$100 to \$250; sheep, \$6 to \$15; swine, \$15; plows, \$13 to \$20; reapers and binders, \$110 to \$160; mowers, \$60 to \$80.

EDUCATION.—*Public Schools.* The dual system is in force in the Province of Quebec. In general, the Roman Catholic schools are French-speaking; the Protestant, English-speaking. There are three classes of Public Schools: Elementary, Model, *i.e.*, Intermediate Schools and Academies. In the model schools the elementary and model grades are taught, and in the academies the elementary, model and academy grades are taught. Hence a pupil may enter an academy at the alphabet stage and at the end of 11 years matriculate to the University. The Government grants to the public schools have greatly increased in the last ten years. In the year 1914-15 there were 7,040 elementary, model and academy schools in the Province with an attendance of 448,087 pupils. The courses of study in the Roman Catholic schools are authorized by the Roman Catholic Committee of the Council of Public Instruction, and the courses of study in the Protestant schools are authorized by the Protestant Committee. Each Committee has the power to make regulations, with the approval of the Lieutenant-Governor in Council, for the organization, administration and discipline of the schools under their control, for the division of the Province into inspection districts, for the government of normal schools, for the issuing of teachers' diplomas and for other important matters. There is therefore complete religious freedom in the Province in education.

Training Colleges for Teachers. There are 14 normal schools in the Province for the training of teachers; 13 Roman Catholic and 1 Protestant.

Universities. The chief universities are McGill (unsectarian) at Montreal, Laval (Roman Catholic), with colleges at Quebec and Montreal, and Bishop's (Anglican) at Lennoxville.

Agricultural. The Macdonald College, Ste. Anne de Bellevue, has a school of Agriculture with a four-years' course leading to the B.S.A. degree, a two-year course leading to a diploma, and various winter short courses and special courses. The college is affiliated with McGill University.

Skiing is becoming popular. The bright, dry, winter cold is Canada's greatest asset. It makes a vigorous people.

FISHERIES.—In 1915-16 the total value of Quebec sea and inland fisheries according to Dominion returns was \$2,076,851; the value of the equipment of both fisheries was \$1,464,373. The industry employed 13,797 persons. These figures do not fairly represent the value of the Quebec fisheries, for immense quantities of cod and halibut are caught in Quebec waters by vessels hailing from other Maritime Provinces, to which their catch is accredited.

Sea Fisheries. In 1915-16 the value of the marketed catch was estimated at \$1,901,623; including cod \$1,277,872, lobsters \$148,030, mackerel \$126,311, salmon \$92,453, herring \$85,552, besides haddock, halibut, smelts, clams, and 84 whales. The principal sea fishing centres are the Port of Chaleur, the Gaspé Coast and the Magdalen Islands. The equipment was valued at \$1,347,017. The industry employed 1,444 persons.

Inland Fisheries. The value of the marketed catch in 1915-16 was estimated at \$175,225, including eels \$58,375, perch \$16,548, pike \$10,156, pickerel \$8,468, sturgeon \$6,449, besides bass, whitefish, maskinonge, etc. The equipment was valued at \$122,056; the industry employed 1,644 persons.

New Quebec (Ungava). The numerous lakes and rivers of the Ungava Territory contain an inexhaustible supply of food fishes of large size and good quality, including lake and brook trout and-locked and sea-run salmon, whitefish, pickerel, suckers and ling or freshwater cod. On the northern, eastern and southern coasts salmon are taken in large quantities as far as Ungava Bay, and salmon as far as the west coast of Ungava Bay. Three large lakes in the interior contain considerable numbers of harbour seal, which are entirely land-locked. Little is known of the Hudson Bay fisheries.

FORESTS.—*Forest Area.* The forest area according to census of 1911, is 130,000,000 acres. This estimate includes forests held under land grants or owned by private individuals. The standing timber in the Quebec forests is estimated to cover 130 million acres. Of this total some 6 million acres are in private hands, 44½ million acres are under license to lumbermen, and the balance remains in the hands of the Government. This does

not include the forests of Ungava, which have not yet been explored.

Freehold Timber Lands. These consist largely of lands conceded under the seignorial tenure system, which prevailed up to 1854. The seignorial and patented lands are not subject to the dues and charges imposed upon licensed land, and are not affected by legislation prohibiting export of lumber cut on lands under license.

Forest Reserves. Laurentides National Park, 3,271-3 sq. miles; Gaspé Park, 2,500 sq. miles; Itinowski Reserves, 1,237 sq. miles; Saguenay and Massé Reserve, 110,000 sq. miles; Ottawa Reserve, 27,712 sq. miles; St. Maurice Reserve, 21,411 sq. miles; Chaudière Reserve, 318½ sq. miles; Peribonka Park, 3,500; Rivière du Loup, 500; Bonaventure and Gaspé, 1,733; Laurentian, 900 2-3; St. Francois, 150; Temiscouata, 227; Barachois, 113; Rivière Ouelle, 339; Bungay, Gulliver and Pohenegamooke Parks, 252; Beau-bien-Bourdares, 35; Bellehasse, 35; and Maskinonge Forest Reserve, 100 sq. miles. Total, 172,004½ sq. miles.

Forest Trees. The forest trees include spruce, white pine, hemlock, birch, ash, elm, poplar, beech, tamarack, jackpine, oak, butternut, cherry, hickory. The amount of spruce exceeds all others. Next come white pine, hemlock, and balsam fir.

Production. In 1915 the lumber production of the Province was estimated at 1,078,789 M ft. B.M.D. value \$17,784,415. This did not include lath and shingles.

Timber Licenses. Renewable licenses to cut timber are granted subject to annual ground rent of \$5.00 per 100 sq. mile, from 1st May to 30th April next. The dues are payable according to tariff in the regulations.

FUR FARMING.—Quebec is admirably situated for fur farming, as the best pelts are obtained in cold climates. In June, 1916, there were over a score of fox farms in the Province, one of which had been valued at \$200,000. The Cie Zootechnique Labelle operates a successful mink farm on an island in Lac Chaud. Skunk, muskrat, beaver and otter could all be raised profitably. Write E. T. D. Chambers, Special Officer, Fish

An ideal trout stream in the Laurentian Mountains. See Sport on page 14.

and Game Branch, Dept. of Colonization, Mines and Fisheries, Quebec, for report "Fur Farming in the Province of Quebec."

MANUFACTURES.—The value of manufactured products in Quebec, as shown by the Dominion Census returns, advanced from \$158,287,994 in 1901 to \$350,901,656 in 1911, an increase of 121.69 per cent. The following table shows the most important industries in the Province, with value of product, number of establishments and amount of capital employed:

<i>Product.</i>	<i>Value.</i>	<i>Factories.</i>	<i>Capital.</i>
Log products...	\$26,669,747	1,196	\$36,608,171
Boots and Shoes	22,662,178	96	15,755,985
Cottons	16,741,409	11	19,818,973
Butter & Cheese	16,156,986	2,142	4,442,280
Car repairs....	12,775,144	16	752,709
Men's Clothing, (factory)	12,698,624	104	5,092,316
Tobacco, Cigars & Cigarettes..	11,921,042	52	11,296,781
Car works	11,347,474	5	6,867,000
Flour & Grist Mill Products..	11,095,311	318	6,083,493
Paper	10,971,446	20	19,207,760
Lumber products	10,099,873	272	8,241,337

New Industries. In the 5 years 1905-1910, 3,413 new factories were started in Canada, of which 1,619 are in Quebec.

Pulp and Paper Mills. In 1915, 24 mills reporting to the Forestry Branch of the Dominion Government produced 560,793 tons of pulp, including 425,626 by mechanical process, 50,612 by sulphite process, 82,405 by sulphate process, and 3,150 by soda process. Spruce, balsam, fir and poplar were the chief woods used. In 1916 there were 57 mills in Quebec. In 1910 the exportation of pulpwood was prohibited, with the result that in 1915 the mills used 697,962 cords as against 319,315 cords in 1909—an increase of over 100 p.c.

POPULATION.—The total population of the Province of Quebec in 1911, according to the Dominion Census returns, was 2,003,232, rather more than half of which was rural. This shows an increase in population of 354,334, or 21.49 p.c. over the census figures of 1901.

Origins of the People. The chief nationalities represented in 1911 were as follows, according to the Dominion Census returns: French, 1,605,339; British, 316,103; Jewish, 30,648; Indians, 9,993; Italians, 9,576; Germans, 6,145; Poles, 3,228; Belgians, 2,103; Scandinavians, 1,756; Russians, 1,684; Chinese, 1,578; Dutch, 1,505; Austro-Hungarians, 1,289.

Religions of the People. Roman Catholics, 1,724,683; Anglicans, 102,684; Presbyterians, 64,125; Methodists, 42,444; Jews, 30,268; Baptists, 9,255; Protestants, 8,634; Congregationalists, 5,197; Lutherans, 2,618; Adventists, 2,435.

SPORT.—Quebec is a veritable sportsman's paradise. In 1916 there were nearly 300 Fish and Game Clubs in the Province. The total annual outlay of visiting sportsmen is estimated at 2 million dollars.

Fishing. The salmon fishing of Quebec is famous. Speckled trout, ouananiche, doré, bass and other fish afford unlimited sport to the angler. Some of the best fishing districts are Lake St. John, Rimouski, Temiscouata and Gaspé; Lake Edward; the northern parts of Joliette, Montcalm and Pontiac Counties, and from La Tuque westward along the line of the Transcontinental Railway.

Fisheries for Lease. The Fish and Game Branch controls the fishing in a number of unleased salmon rivers, flowing into the Gulf of St. Lawrence from the eastern part of the Canadian Labrador. The Minister of Colonization, Mines and Fisheries will consider offers for the lease of these for a short term of years. While unleased, permits to fish them may be had from the Department on payment of the usual license fee required from non-resident anglers.

Hunting.—*Big Game.* Moose and caribou have actually increased in number in some districts. Red deer abound. In the wilder parts bears and wolves are found. Otter, beaver and foxes are common.

Game Birds. The game birds include ptarmigan, partridge, snipe, plover, woodcock and wild duck.

WAGES.—*Farm Laborers.* There is a constant de-

mand for farm laborers at wages ranging from \$15 to \$30 per month, with board and lodging.

Domestic Servants. Employment is easily obtained either in the towns or in the country. Wages average between \$10 and \$25 per month.

Factory Hands. The wages of factory hands and skilled artisans are no higher than in the Old Country and the local supply of labor fully meets the demand. Such persons are not recommended to settle in Quebec.

WATER POWERS.—Hydro-electric power is supplied at reasonable rates at Montreal, Quebec, and most of the principal towns. There are many good opportunities for development in the St. Maurice River Valley, the St. Francis River Valley, the Lake St. John Region, and the Abitibi District.

St. Maurice River. On the St. Maurice River present developments exceed 250,000 h.p., which will probably be doubled in 10 years. One fall on this river supplies electric energy within a radius of 100 miles and there are many other important falls still in their natural state. The Provincial Government has given a contract for the construction of a storage reservoir at the head waters, which will insure a minimum flow throughout the year of 12,000 cubic feet per second.

St. Francis River. The St. Francis River also affords many water powers. Several are now utilized by the Pulp and Paper Mills of Windsor, Brompton and East Angus. A regulating reservoir is also being constructed at the head waters of this river.

The Unsettled Districts. A great many waterfalls await development on the numerous rivers flowing through the unsettled districts, and in the north-eastern and far northern parts of the Province. The watersheds are large. Most of the falls are from 20 to 50 feet, but they often reach a height of 100 feet. The rivers of Ungava, or new Quebec, flowing into Hudson Bay or North Atlantic, have enormous possibilities.

Leases from the Provincial Government. Rapids and falls with bordering tracts of land can be obtained under lease from the Provincial Government for periods of from 25 to 99 years, subject to working conditions and developments within a reasonable time. For full information write to the Department of Lands and Forests, Quebec.

Montmorency Falls.—There are many good opportunities for the development of water powers in the St. Maurice River Valley, the St. Francis River Valley, the Lake St. John District, and the Abitibi District. See page 15.

Agriculture

BEEKEEPING.—The industry has been greatly promoted by the introduction of the Italian Queen. Movable frame hives are taking the place of the old stationary hive. Better methods and increased production are largely due to the efforts of 6 Inspectors of the Department of Agriculture in their assigned districts.

CROP AREA.—The total land area of Quebec is 222,680,000 acres. Of this, according to the census of 1911, 14,444,175 acres were occupied, of which 7,430,941 acres, or 51 p.c., are improved.

DAIRYING.—The production of milk in 1900 was valued at \$21,000,000; in 1910, \$31,000,000; and in 1915, \$35,000,000—an increase of about \$1,000,000 per annum. In 1915 there were in the province 690 creameries, 940 cheese factories and 520 combined factories (making butter and cheese). The output of butter was 32,994,680 lbs., valued at \$9,904,400, and the total output of cheese was 52,590,222 lbs., valued at \$7,398,000, making a total value of \$17,302,400 for butter and cheese. The average price per pound of butter was 29.55 cents and of cheese, 13.86 cents. There are two condensed milk factories in the province. The available territory for the production of milk is not yet fully occupied in the Province of Quebec. New factories are being erected every year along the shores of the Lower St. Lawrence and in the newer settled districts in the northern part of the province. The total number of cows in the province was 639,805 in 1916. The increase in production in spite of the decreased number of cows shows a very marked improvement in the herds throughout the province. Some of the factories in the Eastern Townships find it more profitable to market cream in the U.S. than to manufacture butter or cheese. So important has this industry become that farms are leased on the basis of the number of cows they can maintain, the rental figure being about \$10 per cow.

Government Assistance. At St. Hyacinthe a dairy school has been established for training butter and cheese makers and give, in winter, a special course to farmers on the production and care of milk. The Provincial Government has established an effective system of grading and inspection of

cheese and butter, which has greatly stimulated the industry and improved the product.

Co-operation. The Quebec Cheesemakers Co-operative Society has greatly improved the quality of the cheese by establishing a strict system of grading.

Note. This Society has 1,800 members. It also grades and sells for its members maple sugar and syrup, honey, eggs, poultry and fatted calves. At the close of 1915 its business amounted to \$1,000,000.

FLAX.—Cultivated in small areas, chiefly for its fibre. It is retted, scutched, spun and made into fabrics for household purposes by the wives and daughters of French-Canadian farmers. The area devoted to flax has dropped from 1,361 acres in 1910 to 700 acres in 1914.

Flax Fibre and Linen Manufactures. As a result of the war and the destruction of Belgium there would appear to be an opportunity for the manufacture of linen. In five years Belgian flax has averaged \$405 per ton; Irish \$325, Russian \$202, Ontario flax, separated by antiquated methods, averaged \$201 per English ton in four years. It is claimed that the flax grown in Eastern Canada and handled by the new Feuillet process, could be sold for \$240 to \$300 per ton, and an average acre of flax would produce \$45 worth of fibre and \$13 worth of seed at points of export. The cost of establishing this system is estimated at \$60,000 to \$100,000 for 17,000 acres.

Flax Paper. It is estimated that ten tons of flax straw will make one ton of high-class "half stuff" for paper, worth in normal times \$140 to \$200 per ton. The following estimate of profit is made: Flax straw at \$3 per ton; cost of manufacturing, \$108 per ton; estimated investment, including working capital for mill producing ten tons daily, \$500,000. When selling the product at \$140 per ton, a capital of \$500,000 would pay annually 7 per cent., allow 5 per cent. depreciation and leave \$40,000. Large scale production of this "half stuff" has not yet been attempted. Write to Arthur D. Little, Ltd., 137 McGill Street, Montreal.

FODDER CROPS.—The deep snow, which in winter covers the pasture lands, and the natural irrigation afforded by rivers and brooks, and the regular rains, are the principal elements which

try to make the province eminently favorable for the production of fodder crops. Silos are being built in many parishes.

Hay and Clover. In 1915 hay and clover crops amounted to 3,862,000 tons, with a total value of \$58,507,000. The growing of clover for seed is rapidly extending.

Corn. The crop of forage corn in 1915 was 293,000 tons, value \$1,872,000. Indian corn is generally a successful crop except in colder districts, where the farmers use vegetables and roots for fodder.

Lucerne. The Lucerne crop was 8,500 tons, valued at \$81,000 in 1915.

FRUIT GROWING.—There are, in different parts of the province, over 30 experimental fruit stations. There are numbers of orchards in the Montreal District and in the Eastern Townships, where large quantities of apples, pears, cherries and other fruits are grown. In the District of Quebec, which is colder, there are also good orchards of apple, plum, and cherry trees.

Apples. Apples of the best dessert quality are grown in the Province of Quebec. The Fameuse, which has been grown there for over 200 years, is perhaps still the leading variety, though the McIntosh Red in handsome appearance and quality is equally good, while the tree is harder. The Duchess apple probably comes next in value, followed by Wealthy and Alexander. The Montreal Green, Yellow Transparent and St. Lawrence are well known varieties. Apples are grown chiefly in the Eastern Townships and Island of Montreal, although many parts of Quebec are well suited for apple growing. Probably the best orchard is that of the Trappist Fathers at Oka, in the Ottawa River Valley. Most of the apples are marketed in the province. The City of Montreal takes large quantities, much of it being sent to outlying districts in boats. The average profit per acre of a well cared for orchard averages from \$100 to \$150. This might be much greater as the McIntosh and Fameuse can be grown to perfection and bring top prices. According to the census of 1911 the total number of bearing apple trees in 1910 was 1,252,523 and of non-bearing or young trees 860,064 and the yield 1,481,239 bushels. The average is not given.

Montreal Melons. The Island of Montreal has long been noted for its big luscious musk melons. 8 to

French-Canadian cattle, first brought to Canada about 1620, bear strong similarity to Jerseys, Guernseys, Kings and some breeds of Normandy cattle. See page 22.

s. is the commonest size; some go as high as 22 lbs.; one is recorded 44 lbs. in weight. The shape varies from roundish to oblong. The growers have their own strains, which vary. The quality of the fruit is due partly to the climate and soil about Montreal, partly to the skill and trouble taken by the growers. A good crop will fetch \$2,000 or more per acre. There are no accurate statistics as to the quantity raised, but the output is considerable. The fruit now finds a ready market in many cities of the United States. Much of the melon land has been taken up by building lots.

Plums. European varieties succeed on the south shore of the Lower St. Lawrence River. In L'Islet and Yamouraska Counties, European and domestic plums are canned. There is a good opening for more canning houses.

Small Fruits. Manufacturers from the neighboring provinces come as far as the northern district of Quebec for supplies of small fruits which are renowned for succulence and flavor. There are good openings for canneries.

Experimental Fruit Stations. The Provincial Government has 30 experimental stations and 6 demonstration orchards which are doing good work. In 1915, 5 Horticultural Societies planted 7,000 fruit trees furnished by the Provincial Government on special conditions.

GRAIN CROPS.—In 1916, according to the October estimates made by the Dominion Government, the total yield and average yield per acre by bushels was as follows:

	Acres	Yield per acre	Total yield bushels
Spring Wheat	67,600	14.54	983,000
Oats	1,138,000	21.60	24,580,000
Barley	77,400	19.57	1,515,000
Rye	8,300	16.58	138,000
Peas	21,600	14.33	310,000
Beans	4,400	17.41	77,000
Buckwheat	101,000	21.45	2,166,000
Faba	500	9.00	4,500
Mixed Grains	91,000	22.90	2,084,000
Corn for husking	13,000	22.69	295,000

LIVE STOCK.—The Live Stock Breeders' Association of Quebec, organized in 1895, has held auction sales of pure-bred live stock since 1910,

Summary to Jerseys, Guernseys, and some breeds of Normandy cattle. See page 22.

and has done much to increase the number and quality of pure-bred animals in the province.

Cattle. French-Canadian cattle, first brought to Canada about 1620, bear strong similarity to Jerseys, Guernseys, Kings and some breeds of Normandy cattle. Are found generally through the province, practically the sole breed along the St. Lawrence south of Quebec and in Lake St. John District. As compared with Ayrshires, Guernseys and Shorthorns, the French-Canadian cow stands first in the cost of producing butter and second in milk. They are hardy, easy to keep, good foragers, tractable and sure breeders, but not good for beef. The prevailing color is black with fawn ring around the muzzle; horns with black points. In the Eastern Townships and in many other sections there are fine herds of Ayrshire, Hereford, Durham, Jersey, Guernsey, Angus, Friesian and Canadian cattle. In 1916 there were in the province 639,805 milch cows and 535,603 other cattle.

Horses. French-Canadian horses are descended from animals sent out from France in early days of the colony, first shipment being from stables of Louis XIV in 1665. About 1870 the native strain was nearly spoilt by introduction of foreign stallions. The breed has since been revived. It is an excellent general purpose horse, docile and ambitious, hardy; about 15 hands high, with abundant hair on mane, tail and legs; would make useful cavalry remounts and mounted infantry horses. The best artillery horses in the South African war came from the Valley of the Ottawa and sections of Quebec. In 1916 there were 332,628 horses in the province. The Department of Agriculture has encouraged the breeding of Belgian draught horses by the importation of stallions.

Sheep. There were 497,771 sheep in the province in 1916, half of which are Leicesters, the remainder Shropshires, Cotswolds, Lincolns, Oxfords and Southdowns. With the growth of the dairy and hog industries, sheep raising has been neglected. There is much rough land suitable for sheep. The local demand for mutton far exceeds the supply, and the U.S. cities offer a market at all times. At present there is no export trade done. The wool is now quoted in several centres.

Swine. The bacon industry is as yet in its infancy,

though for years farmers have been fattening hogs for Montreal and local markets. In 1916 there were 531,303 swine in the province.

MAPLE SUGAR AND SYRUP.—The average annual sugar output of Canada was about 28,803,385 lbs., during the decade 1901-11; of this Quebec contributed 19,270,514 lbs. The annual output of the province is estimated at \$1,680,393. The average selling price has been about 10 cents per lb. The trees are generally tapped in the latter part of March and April. Moderately warm days followed by freezing nights are ideal conditions to promote flow. Seasons vary, but the cost of fitting up a modern sugar camp is a paying investment even at low market prices.

Co-operative Society. A co-operative society has been formed at Waterloo.

Sugar-making Schools. The Department of Agriculture has established 4 sugar-making schools at Beauceville, Beauce Co., Ste. Louise, L'Islet Co., St. Basimir, Portneuf Co., and La Minerva, La-Belle Co.

Dominion Legislation. The Federal Government has passed a stringent act to prevent adulterated imitations.

By-products. As by-products there can be obtained a good vinegar, matic acid and bimalate of lime, the best known constituent for baking powder.

POULTRY.—During the last ten years the production of poultry and eggs in the Province of Quebec has more than trebled. The cold and sanitary poultry house, with or without cotton front, but always well ventilated, is rapidly growing in favor. The American breeds of hens and the Pekin duck are generally preferred. American or utility breeds are most popular on account of the high market price for eggs and properly fattened and milk-fed poultry.

Government Assistance. Demonstration houses have been established in several sections by the Experimental Union, and by the Macdonald College, and about 40 breeding and fattening stations have been opened in different sections. The Government aims to have one of these establishments in every rural county. The making of capons has lately been introduced. About 50 local demonstrators, supplied with caponizing tools, are teaching the farmers how to operate.

An Infant Industry.—Now is Canada's opportunity to supply the market at home and take the place of Danish bacon which is being absorbed in the G. demand. See "Swine," page 22.

Education of School Children. Settings of eggs have been distributed to school children by the District Agents of the Department of Agriculture, and teachers to train them in the care of poultry and poultry judging. Local exhibitions will be held in the fall.

Boys' and Girls' Poultry Clubs. The poultry department of Macdonald College, Ste. Anne de Bellevue, has organized poultry clubs at Lennoxville, Cookshire and Shawville, to instruct boys and girls in poultry keeping.

Co-operation. Co-operative Societies are being organized for the sale of eggs. The "Quebec Cheesemakers' Co-operative Agricultural Society," 27 William Street, Montreal, handles the eggs, which are bought solely from Egg Circles, or Poultry Co-operative Associations.

POTATOES.—Potato growing is an important branch of agriculture. The District of Quebec produces excellent Swedish turnips for the table; they are in great demand on the Montreal market and elsewhere. Rutabaga or Swedish turnips, mangolds and sugar beets are cultivated by many farmers for feeding their dairy cows in winter.

TOBACCO.—From an industrial point of view the growing of tobacco in the Province of Quebec is limited to the countries around Montreal, and chiefly on the north shore of the St. Lawrence. Owing to the short summers and early frosts the early varieties are chiefly grown, known as "Canadian" such as the Petit Ronge, Parfum d'Italie and Cannelle (known also as Cinnamon scented). These are black smoking tobaccos, contain a large proportion of nicotine, and are very strong. Other varieties are: Great and Small Havana, Comstock Spanish, Zimmer-Spanish and Connecticut Seed Leaf, grown in counties of Rouville, Joliette and Montcalm. These produce pipe tobaccos, or ordinary fillers for domestic or combination cigars. The Burley variety is gradually going out owing to the competition from Ontario. The total annual production in Quebec is about 4,000,000 lbs.

Co-operative Society. The planters of the Yamaska Valley have formed a co-operative society and established at Cesaire a large warehouse for the curing and sale of Comstock Spanish tobacco as fillers and binders of cigars.

Agricultural Districts

This chapter contains descriptions of the principal districts to which British Immigration is directed. A few English settlers are found near Quebec, Montreal, and the Chaudière and Gaspé regions, and along the Baie des Chaleurs. The Matapédia Valley and the St. Maurice Valley also offer advantageous fields for settlement.

ABITIBI DISTRICT.—In the extreme n.-w. of the Province. Area about 30,000,000 acres, of which nearly one-half is suitable for agriculture. Watered by Lake Abitibi and the Harricana, Bell and Nottaway Rivers. The portion traversed by the National Transcontinental Railway has been surveyed and divided into farm lots. Principal town is Amos, on G.T.P., 430 miles from Quebec. Colonization has been promoted by the Government since 1912, and by the 1st July, 1915, over 2,000 lots have been granted to settlers. Mining prospects are very good in many sections. Large forests at the head of the rivers will supply the lumber industry for years. Write the Minister Lands and Forests, Quebec.

EASTERN TOWNSHIPS.—Bounded on the east by River Chaudière, on the west by Seignories on River Richelieu, on the south by boundaries of Maine, New Hampshire and Vermont, on the north by the counties of Lotbinière, Nicolet and Yamaska and the River St. Lawrence, is well settled, chiefly by English. Soil generally fertile and easily cleared. Cereals and vegetables do well. Stock-raising and dairy-farming conducted on a large scale. District is well watered, railways has ample accommodations and contains the following towns: Sherbrooke, Coaticook, Stanstead, Lennoxville, Waterbury, Waterloo, Granby.

LAKE ST. JOHN DISTRICT.—Situated 176 miles north-west of Quebec City. Upwards of 27,000 new settlers have gone to this district. A number of flourishing villages have been established with ample railway, steamship and telephone facilities. The Saguenay River drains Lake St. John into the St. Lawrence, while the Quebec and Lake St. John Railway connects the district with Quebec City. There are big pulp and paper mills at Jonquières and Chicoutimi.

OTTAWA VALLEY.—Comprises 40,000 sq. miles, one-third being well suited for settlement; lower portion is settled; middle of the valleys of the Catineau, the Lievre and Rouge rivers remain for settlement. Railways, colonization and lumbering roads afford ample transportation. The lands are well timbered. Quarrying for phosphates provides occupation.

TEMISCAMING OR UPPER OTTAWA DISTRICT.—An immense territory, 70 to 80 miles in width, between the height of land and Laurentian mountains, comprising the valleys of Lake Temiscaming and River des Quinze; land composed chiefly of grey, yellow and black loam with clay subsoil; produces abundantly wheat, peas, oats, barley, vegetables, etc.; also clover and fodder plants, rendering cattle raising easy. The district contains large forests, silver, lead, copper, iron and mica; game and fish abound. Write the Agent of Lands, Ville Marie, Temiscaming Co.

Mining

MINERAL PRODUCTION.—The annual Mineral production of the Province of Quebec for the past 75 years, as published by the Bureau of Mines, Quebec, is as follows:

1866.....	5,019,932	1911.....	8,679,786
1867.....	5,391,368	1912.....	11,187,110
1868.....	5,458,998	1913.....	13,475,534
1899.....	5,552,062	1914.....	11,738,256
1910.....	7,323,281	1915.....	11,465,873

ALUMINUM.—Can be used for purposes which ordinarily consume large quantities of copper. Bauxite the commercial ore of Aluminum, has not been found in Canada, but aluminum is manufactured from imported ores by the Northern Aluminum Company, at Shawinigan Falls, Que.

ASBESTOS.—Operations at Theford, Black Lake, West Broughton and Danville. The Asbestos Corporation of Canada has the control of several mines at Black Lake and Theford. Other large producers of asbestos are Asbestos, and Asbestic Co., Black Lake Asbestos and Chrome Co., Bell's Asbestos Mines, Johnston's Mines, Jacob's Asbes-

tos Mining Co., Martin-Bennett Asbestos Co. Asbestos boards are manufactured at Nashua, N.H., Ambler, Pa., and at Lachine, near Montreal. Except part of the Bell Mine, at Thetford, all workings are open cast. The total production in 1915 was 113,115 tons, worth \$3,544,362. This represents 80 per cent. of the world's production. Since the outbreak of war, the trade with Germany, previously important, has been cut off, but large shipments have been made to the U.S., apparently to supply the South American trade of manufactured asbestos products previously controlled by Germany; also to England and France.

BUILDING STONE.—*Granite* is quarried in the Counties of Beauce, Stanstead, Iberville, Portneuf and Argenteuil.

Limestone is quarried near Montreal, east and west of Quebec, and near Hull, Valleyfield and Chandler.

Marble. Marble is obtained at Philipsburg and South Stukeley, some of which was used in the Chateau Laurier Hotel at Ottawa, and several large buildings in Montreal. A large quarry is operated at Portage du Fort.

Sandstone is quarried in Beauharnois and Two Mountains Counties.

Slate. Roofing slates have been quarried at Danville, Corris, Brompton, Melbourne, Rockland, and at Botsford in Temisconata County.

Syncline intrusive in limestone is obtained near Montreal.

CEMENT MATERIALS.—Two plants near Montreal and one near Hull use limestone and clay and are now controlled by the Canada Cement Co. Production in the Province of Quebec in 1917 was 2,484,362 barrels; value, \$2,805,374.

CHROMITE.—Irregular deposits are found in Brome, Megantic, Richmond and Wolfe Counties. The production has been greatly stimulated by the war. The output jumped from 135 tons, value \$1,210 in 1914, to 14,397 tons, value \$245,297, in 1915.

CLAY PRODUCTS.—In 1915 the output was 91,932 M. bricks, valued at \$665,017; tile pottery, etc., \$195,680. See also under Kaolin.

COPPER.—Copper and sulphur ore are mined by the Eustis Mining Co., at Eustis, and by the Weedon Mining Co., at Weedon. The production in 1915 was 142,797 tons, valued at \$1,021,777. Sub-

stantial shipments were made in 1914 from a promising prospect at Stratford, near Weedon, and from the Ives Mine at Eastman. There are satisfactory indications near Sherbrooke and at other points in the Eastern Townships. Some indications found in Pontiac County, Chibougamau District, on the north shore and in the Metapedia region.

FELDSPAR.—A remarkably pure white feldspar, suitable for the manufacture of artificial teeth, is mined in Ottawa County. In 1915 the production was 22 tons, valued at \$640.

GALVNA.—Chief occurrences at Lake Temiscaming, Calumet Island, Portneuf County, and on north shore of Gaspé Bay. The Calumet Island and Portneuf County deposits are being developed. In 1915 the output of lead-zinc was 634 tons, value \$36,000.

GOLD.—The best known occurrences of gold in the Province of Quebec are in the alluvial deposits of the Eastern Townships, the most important ones known being in the valley of the Chaudière River, where extensive work by hydraulic methods has been carried on at various times. These have been idle for the last two years. Gold is also extracted from the sulphur-copper ores of the Eastern Townships. Deposits of lode gold occur at Chibougamau and in Abitibi. Production in 1915 was 1,158 ounces, valued at \$23,082.

GRAPHITE.—Only one company is operating at present. Several others have mined and milled graphite until recently, and will probably resume work. The principal deposits are in Ottawa County, near the town of Buckingham, and in Argenteuil and Labelle Counties. The output of graphite and magnesite in 1915 was 135,200 lbs., value \$2,461.

IRON.—Hematite ore occurs in Dunham Township, County Missisquoi. Analysis shows metallic iron, 69.49 p.c.; silica, 1.32 p.c.; sulphur, 0.10 p.c.; phosphorus, 0.8 p.c. Occurrences also reported in Chester Township. Magnetic ore occurs in Seigneurie of Rigaud-Vaudreuil, Beauce County; also in Leeds County, Bristol, and in Lake Chibougamau District. Magnetic sand occurs on north shore of St. Lawrence. Experiments show

sands can be concentrated into product yielding from 67 to 70 p.c. of metallic iron, 1 p.c. titanium, and practically no sulphur or phosphorus. Treatment has been successful by the Grondal process. Bog ore in previous years has been made into pig iron at Radnor and Drummondville. In the St. Lawrence Valley there are many deposits of bog ore, remarkably free of sulphur and phosphorus.

KAOLIN (CHINA CLAY)—China clay has been found near St. Remi de Amherst, Argenteuil Co. The Canadian China Clay Co. has been organized to develop the deposits. Laboratory tests have demonstrated that the clay possesses the requisites for the manufacture of high-grade paper and certain paint pigments. In 1915 the output was 1,300 tons, value \$13,000.

IRON PYRITES.—In the Sherbrooke District mining has been carried on for over 30 years. There are two mines, with a total output in 1915 of about 142,797 ton, containing about 42 p.c. sulphur. One-half is used for the manufacture of sulphuric acid in Canada, the rest is shipped to the United States.

MAGNESITE.—Carbonate of magnesia, also called Glöbertite, is found in Grenville Township, Argenteuil County. The N. American Magnesite Co., of Montreal, have been shipping regularly, and have given the following analysis of the product shipped: Carbonic acid, 49.85 p.c.; magnesia, 44.20 p.c.; lime, 5.15 p.c. This magnesia can be used as a source of carbonic acid and magnesia, and for furnace lining. Mining operations have also been commenced by the Scottish Canadian Magnesite Co. The rock is a fine white marble, fairly hard, easily worked, and can be successfully used for ornamental purposes. Production in 1915 was 16,285 tons, value \$137,353.

MICA.—The Blackburn Bros., of Ottawa; H. T. Flynn, of Hull; Wallingford Bros., of Perkins Mills, and T. F. Nelles, of Ottawa, are some of the chief producers. They prepare all their mica and buy a little from small producers. The Laurentides Mica Co. prepare split mica in their workshops at Ottawa, Aylmer, Hull and Buckingham. Total output in 1915 amounted to 735,602 lbs., valued at \$55,897.

MINERAL PIGMENTS.—The Canada Paint Co., The Champlain Oxide Co., and S. W. Argall, mine and calcine ochre at St. Malo, near Three Rivers. Yellow ochre and deep red oxide of iron is found in Ottawa County and the Eastern Townships. At many points in the Laurentides the inhabitants use the earth raw, or roughly burned, for rough painting. In 1915 the output was 6,261 tons, valued at \$12,285.

MOLYBDENUM.—Occurrences in small quartz veins running through a mass of granite at Lake Keewagama, on a small island in Lake Askikwaj and in township of Guerin, also in Egan and Onslow Township. The deposits on Lake Keewagama and in Onslow Township are being developed.

NATURAL GAS.—Surface gas is found in the St. Lawrence valley, generally at from 225 to 300 ft. depth. The Canadian Gas and Oil Co., at Three Rivers, have sunk a number of wells and piped gas to St. Barnabe, Yamachiche, Louiseville, and Three Rivers. They are not in operation now. An important discovery of natural gas is reported to have been made near St. Hyacinthe, at a depth of 1,800 ft.; a rock pressure of 275 lbs. has been noted.

PHOSPHATE.—Total value of the production in 1915 was 635 tons, valued at \$5,057. Chiefly got out with mica in the Ottawa region. Part of this was used by the Capelton Chemical and Fertilizer Co., which manufactures superphosphate, and part was manufactured into phosphorus and phosphated chemical products by the Electric Reduction Co. at Buckingham.

PLATINUM.—Platinum has been found in the Riviere du Loup and near the Gilbert River.

SILVER.—In 1915 the total output of silver was 57,426 ounces, valued at \$31,809. Mainly extracted from the pyritous ores of the Eastern Townships.

TALC.—In Brome County and the Eastern Townships, steatite and talc deposits are known.

ZINC.—Zinc ores are found in Calumet Island. These deposits are being developed (see Galena).

Boards of Trade Register

**When Writing to a Local Reference, Mention
Should be Made of Heaton's Annual.**

This Register is revised every year and includes certified official returns from local Boards of Trade and the municipal authorities of towns where no Board of Trade is established. Information is given generally as received. The Editors reserve the right to use information obtained from other reliable sources and edit the returns made, but they cannot, for obvious reasons, from their own knowledge, vouch for the absolute accuracy of every detail in each case. As a general rule, entries in this Register are confined to towns of over 1,200 population. Exceptions are made in special cases. Where possible a reliable local reference is given, who will supply further information upon request. Hotels, as far as possible, are given in the order of merit.

NOTE.—The Quebec Government assumes no responsibility in connection with this Register.

ABBREVIATIONS.—*Tel.*, Telegraph; *Ex.*, Express; *m.*, miles; *Pop.*, * population according to Returns of Census, 1911; *Pop. estimate of Mayor or local Board of Trade.*

POPULATION STATISTICS.—As a rule, the figures are taken from local estimates, based on Assessment Returns or a Special Civic Census.

County Towns marked ¶.

AMOS.—Centre of new colonization district of Abitibi, on Harricana River and National Transcontinental Ry., 140 miles e. of Cochrane, Ont., 430 miles w. of Quebec. Boat service on Upper Harricana for 60 miles. Hotels, Commercial, Forest, \$1.50 and \$2. 1 R.C. church, 1 school, municipal water system. 1 bank, 2 saw and planing mills (output 5,000,000 ft. per annum), sash and door factory. Pop. 500. With surrounding township 1,000. Neighborhood supplies gold, molybdenite and asbestos. Outfitting point for prospectors and hunters. Moose are abundant.

Note. The Spirit Lake detention camp for alien enemies is 5 miles distant.

Special Opportunities. Industries requiring lumber, real estate investments, mining. Write Manager Banque d'Hochelaga.

¶**AMQUI.**—(Rimouski Co.), on Can. Govt. Rys. At junction of Amqui River with Metapedia River. Can. Ex., Dom. Ex. Hotels, Coulombe, St. Louis, La Plé, Pauliot, \$1.50. R.C. church, 18 schools, bank. Industries, lumber, 5 shingle mills, 2 butter factories, flour mill, 25 stores. Reg. light and power. Pop. 3,775. Write Manager La Banque Nationale.

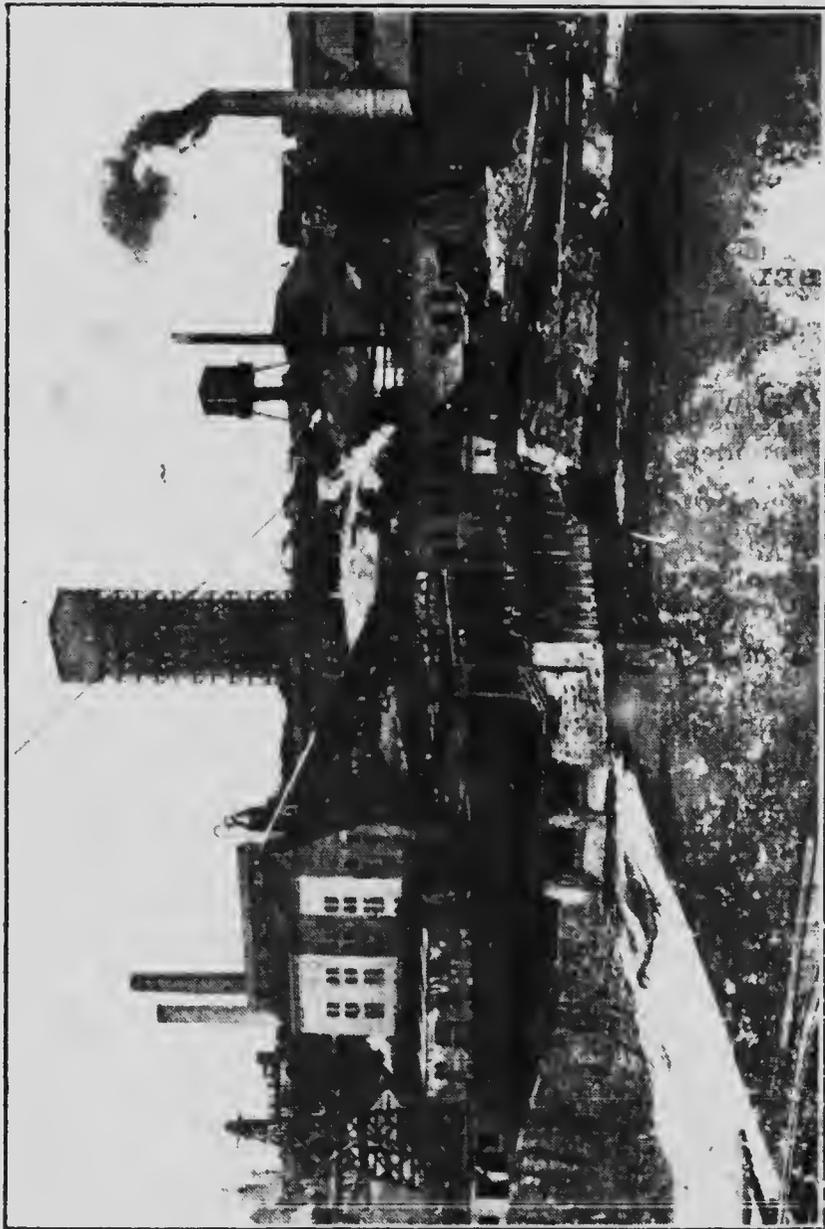

¶**ARTHABASKA.**—(Arthabaska Co.), on Nicolet River, 2½ miles from G.T.R. station at Victoriaville, 60 m. s.-w. of Quebec. Can. Ex. Tel. G.N.W. Bell telephone, R.C. church, 2 colleges, convent, monastery and hospital, courthouse, jail, 2 hotels, bank. Industries, 1 tannery, 1 butter and cheese factory, 1 flour mill, 1 cheese box factory, 3 saw mills, 1 carding mill, furniture factory. Pop. 1,400. Write Manager Molsons Bank.

¶**AYLMER.**—(Wright Co.), on Lake Deschenes, an expansion of Ottawa River, on C.P.R. Dom. Ex. Tel. C.P.R. Electric car to Ottawa, 8 miles, and Hull. Summer service 10 min., winter 20 min. Hotels, British, Holt, Windsor, \$1 to \$3. Bank. Industries, 3 saw mills, planing mill, greenhouses, wool, wood company, 4 churches, R. C. academy, convent, public school, waterworks, sewers, electric light and power, \$25 per h.p. per annum, town hall. Queen's Park offers popular attractions. Moderate rents, modern conveniences, good schools and cheap transportation, with fine situation on water front, make this a favorite summer resort. Pop. *3,206.

Special Opportunities. Manufacturers can obtain electric power from Deschenes at \$15 per h.p. Write Sec.-Treas. Town of Aylmer.

¶**BAIE ST. PAUL.**—(Charlevoix Co.). Tel. G.N.W. Phone to Charlevoix and Saguenay. Bell Tel. On Rivers Moulin and Gouffre. Hotels, Windsor, \$1.50; Simers, \$1.50. Bank. Industries, woollen mills, saw mill, foundry, carding mill, tannery, 2 grist mills, bricks. 3 saw mills, 2 spool wood factories, pulpwood. Large beds of iron ore. Fine summer resort, good fishing and hunting. Laurentides National Park is nearby. Pop. *1,857.

¶**BEAUHARNOIS.**—(Beauharnois Co.), on St. Lawrence River and G.T.R., St. Lawrence and Adirondack Ry., Montreal 22 miles. Can. Ex., Am. Ex. Hotels, Russell, Lake View, du Peuple. 3 churches, academy, convent. 2 banks. Industries include furniture, grist mill, furnace and hot water boiler

The Laurentide Pulp and Paper Mill at Grand Mere. See page 57 in 1916
there were 57 mills in the Province. See page 1

foundry, lumber co., paper mills, electric light co., fishing, hunting. Pop. *2,005.

Special Opportunities. Bonus and tax exemptions for new industries.

BEAUPORT.—(Quebec Co.), on Quebec Ry., Light and Power Co., 2 miles from Quebec. Can. Ex. cl. G.N.W. R.C. church, college, convent, 1 bank. Industries, cement, lime, saw mill, grist mills, washing machines, band saws, quarries. Pop. of parish, 5,000. Write Town Clerk.

BEDFORD.—(Missisquoi Co.), on Pike River and C.P.R. 60 miles from Montreal, 18 miles from St. John's. Dom. Ex. Tel. C.P.R. Hotel, Bedford, \$2. Churches, 2 banks, 2 schools. Industries, Bedford Mfg. Co. (farming tools), Bedford Stove Co., Corey Needle Co., 2 saw mills, paint factory, sashes and doors, brooms and whisks, beekeepers' supplies, electric light, waterworks system. Pop. *1,500.

Special Opportunities. Town offers special inducements to manufacturers employing over 20 hands. Trains G.T.R. and C.V.R. within 2 miles make this a convenient point. Write Sec. Board of Trade.

BIC.—(Kimouski Co.), on St. Lawrence River and Can. Govt. Rys., 170 miles from Quebec. Can. Ex., Dom. Ex. Tel. G.N.W. Hotels, Canada, Laval. R.C. church, 9 schools, 2 banks, telephones, waterworks, elec. light. Industries, 2 flour mills, 2 saw mills, 4 cheese factories, sash and door factory, engine boiler works, pulp. Pop. 2,150. Write Manager Bank of Commerce.

BLACK LAKE.—(Megantic Co.), on Quebec Central Ry. Am. Ex. Tel. G.N.W. Hotels, Commercial, Grand Central. 2 churches (Ang., R.C.), 2 banks. Industries, asbestos mining, chrome mining, saw mill, elec. light co., sashes and doors, furniture, washboards, asbestos products. Pop. 4,000.

Special Opportunities. Electric power available. Ice dealer, lawyer, dentist. Write the Mayor.

BOLDUC.—(Beauce Co.), on Chaudière River, 11 miles from Quebec Central Ry. at St. Evariste. Ex. and Tel. Hotel, St. Martin, 1 R.C. church, convent, schools. Industries, 1 flour mill, 3 saw mills, feed mills. Pop. of parish, 2,000.

Note. Electric light will be installed in 1917. Write Sec. Board of Trade.

BONAVENTURE RIVER.—(Bonaventure Co.), on Baie des Chaleurs and on Quebec and Oriental Ry., 10 miles from New Carlisle. S.S. connection

The Laurentide Pulp and Paper Mill at Grand Mere. See page 1 there were 57 mills in the Province. See page 1

with Quebec, Montreal and Campbellton. Dom. Ex. Tel. G.N.W. Hotel, Chateau Le Blanc, 2. Church, 12 schools, convent, Boys' Academy Bank, 3 saw mills, butter factory, 10 retail stores. Salmon fishing. Pop. 2,800.
