

J. C. Weillbrenner

THE  
Montreal Almanack

FOR THE YEAR OF OUR LORD

1824:

Being Bissextile, or leap year.

Calculated for the Meridian of MONTREAL, in Latitude 45 degrees 30 minutes North, and Longitude 73 degrees 20 minutes West from the Royal Observatory at Greenwich.

‘He that obserbeth the wind shall not sow; and he that regardeth the clouds shall not reap.’—BUT—‘He that tilleth his land shall have plenty of bread.’—Ecclesiast.

Montreal:

PRINTED BY NAHUM MOWER,

And Sold by the different Booksellers in this city.

Price 9 dollars per Gross; 4s. 6d. per Dozen; 1/4 single.

Dr.  
Wm. W. Leigh Esq.

## NAMES AND CHARACTERS OF THE PLANETS.

☉ The Sun.	♿ Mercury.	♃ Jupiter.
☾ The Moon.	♀ Venus.	♄ Saturn.
♁ The Earth.	♂ Mars.	♁ Hershel or Georgian.

## NAMES AND CHARACTERS OF THE SIGNS OF THE ZODIAC.

1. ♈ Aries, the head.	7. ♎ Libra, the reins.
2. ♉ Taurus, the neck.	8. ♏ Scorpio, the secrets.
3. ♊ Gemini, the arms.	9. ♐ Sagittarius, the thighs.
4. ♋ Cancer, the breast.	10. ♑ Capricornus, the knees.
5. ♌ Leo, the heart.	11. ♒ Aquarius, the legs.
6. ♍ Virgo, the belly.	12. ♓ Pisces, the feet.

## NAMES AND CHARACTERS OF THE ASPECTS.

- ♊ Ascending Node. ♋ Descending Node.
- ☉ Conjunction, or situated in the same Longitude.
- ☐ Quartile, or when their Longitude differs 3 signs.
- ♁ Opposition, or differing 6 signs.

## CHRONOLOGICAL CYCLES FOR 1824.

Dominical Letters,	D. C.	Solar Cycle,	18.
Golden Number,	1.	Roman Indiction,	12.
Epact,	0.	Julian Period,	6537.

## MOVABLE FEASTS.

Septuagesima Sunday, - - - - -	February	15.
Quinquagesima, or Shrove Sunday,	February	29.
Ash Wednesday, or 1st day of Lent,	March	3.
Mid-Lent Sunday, - - - - -	March	28.
Palm Sunday, - - - - -	April	11.
Easter Day, - - - - -	April	18.
Low Sunday, - - - - -	April	25.
Rogation Sunday, - - - - -	May	23.
Ascension day, or Holy Thursday,	May	27.
Whit Sunday, - - - - -	June	6.
Trinity Sunday, - - - - -	June	13.
Advent Sunday, - - - - -	November	28.

## EMBER DAYS.

February 19, 21 and 22.	September 17, 19 and 20.
May 21, 23 and 24.	December 17, 19 and 20.

### SOLAR AND LUNAR ECLIPSES FOR 1824.

I. The first of the Sun, January 1st. invisible,  $\odot$  at 3h. 13m. morn.  $\delta$  latitude, 47 m. South.

II. The second is of the Moon, January 16th, visible, as follows:

Beginning, - - -	2h. 26m.	} Apparent Time, Morning.
Middle, - - -	3h. 52m.	
Ecliptic $\delta$ - - -	3h. 58m.	
End of Eclipse, - -	5h. 17m.	
Duration, - - -	2h. 51m.	

Digits eclipsed 9 degrees, 23 minutes, on the Moon's Northern Limb.

III. The third is of the Sun, June 26th, partly visible, as follows:

Beginning, - - -	7h. 8m.	} Evening.
Sun Sets, - - -	7h. 45m.	

About 2 digits eclipsed. The Sun will be centrally and totally Eclipsed on the meridian in Longitude 147 deg. 22 min. West from Greenwich, and 47 deg. 4 min. North.

IV. The fourth is of the Moon, July 10th, visible as follows:

Beginning, - - -	10h. 33m.	} Apparent Time Evening.
Middle, - - -	11h. 17m.	
Ecliptic, $\delta$ - - -	11h. 28m.	
End of Eclipse, - -	12h. 1m.	
Duration, - - -	1h. 29m.	

Digits eclipsed, 1 degree, 37 minutes, on the Moon's Southern Limb.

V. The fifth is of the Sun, December 20th, invisible,  $\odot$  at 5h. 50m. Morn.  $\delta$ 's lat.  $9\frac{1}{2}$  min. South.

### COMMENCEMENT OF THE FOUR SEASONS.

- SPRING begins March 20th, 10h. 40m. morning,
- SUMMER begins June 21st, 8h. 8m. morning,
- AUTUMN begins Sept. 22d. 10h. 5m. evening,
- WINTER begins Dec. 21st. 3h. 29m. evening,

#### *Explanation of Characters, &c. in the Calendar Pages.*

● Moon Apogee signify that the Moon is then farthest from the Earth.

♁ Opposition. A planet is said to be in opposition when it is on the side of the earth opposite to the Sun. When a planet is in opposition it rises about the time of the Sun's setting, sets about the time of his rising, and is on the meridian at midnight.

*Aphelion* is that point of a planet's orbit which is at the greatest distance from the Sun.

♊ ♋ *Nodes* are the two points where the orbit of a planet seems to intersect the ecliptic. That where the planet appears to ascend from the south to the north side of the ecliptic, is called the ascending Node; the opposite point, where the planet appears to descend from the north to the south, is called the descending Node.

*Longitude* of a planet is its distance from the beginning of Aries, reckoned on the ecliptic to the east.

*Latitude* of a planet is its distance from the ecliptic either north or south.

*Stationary*. A planet is said to be stationary when to an observer on the earth, it appears for some time at the same point in the heavens.

*Direct*. The motion of a planet is said to be direct, when it moves forward to the east, according to the order of the signs. *Retrograde*, is when a planet appears to move backwards, or contrary to the order of the signs.

*Occultation* is the obscuration or hiding from our sight of any star or planet, by the interposition of the body of the Moon or some other planet.

♊ ♋ *Conjunction*. Two heavenly bodies are said to be in conjunction when they are both on the same side of the earth. When two planets are in conjunction they rise, come to the meridian, and set at the same time.

*Greatest Elongation* of an inferior planet, is when the planet appears to be at its greatest distance either east or west from the Sun, that can be in that revolution.

A Louis d'Or coined before 1793	5 4	1	2	8	27	4
A Pistole do. do.	4 4	0	18	3	21	18
The 40 francs coined since 1792	8 6	1	16	2	43	8
The 20 francs.....	4 3	0	18	1	21	14

N. B.—Two pence farthing is allowed for every grain under or over weight on English, Portuguese and American Gold; and two pence one fifth of a penny on Spanish and French. Payments in Gold above £20, may be made in bulk; English, Portuguese and American at 89s. per oz.; French and Spanish at 87s. 8½d. deducting half a grain for each piece.

To turn Sterling into Currency, add one ninth part of the Sterling Sum to itself, and the amount will be Currency.

**MOON'S RISING AND SETTING.**

At four days old it sets at,	7 at near 1 in the morn-	17 - at ½ after 8.
and shines till, about	ing.	18 - about - 10.
10 at night.	15, at full, it rises about	19 - about - 11
5 - about - 11	6 in the evening.	20 - about - 12.
8 - about - 12	16 - at ¼ after - 7	

N. B.—This Table is sufficiently accurate for the purpose it is wanted—that of ascertaining moon-light evenings.

**OF THE CHANGES OF THE MOON.**

Many persons, understanding that the mean time between one new Moon and another is 29 days, 12 hours, 43 minutes and a fraction, imagine that to find the full or quarters of the Moon, they have only to add a half or fourth part of that time; and when they do not find the changes marked in the Calendar to correspond with this method, they impute it to mistake in the calculation of those changes. It is therefore, necessary to put them in mind, that the great inequality of the Moon's motions renders the above rule extremely inaccurate, so that nineteen times in twenty, it must fail in giving the true conjunction or change.

1824—FEBRUARY, 2d Month, 29 days.

In his ice-crusted Car with hailstones emboss'd,  
 Lo! WINTER has harness'd his silver-shod steeds,  
 The storm beaten Monarch, bespangled with frost,  
 By the slopes of the north triumphantly speeds :  
 His lances are flying all polish'd and bare,  
 Their wing o'er the ridges is eager and swift;  
 And oft as his arrows entangle the air,  
 The Archer is seen in the terrible drift !

# MARCH, 3d Month, hath 31 Days—1824.

Sweet Spring, thou lingerest! and it should be so:  
 Late let the fields and gardens blossom out!  
 Like man, when moist with smiles thy face is drest;  
 'Tis to deceive; and he who knows ye best,  
 When most ye promise, ever most, must doubt.

1824—APRIL, 4th Month, hath 30 days.

Spring, lovely spring, returns again,  
 To strew her beauties o'er the plain,  
 And ev'ry charm display;  
 To warm the breast with fond desire,  
 The warblers of the wood inspire,  
 To tune the sportive lay.

☽ First quarter, 6th day, 5h. 26m. evening.  
 ☾ Full Moon, 13th day, 20h. 55m. morning.  
 ☽ Last quarter, 21st day, 1h. 18m. morning.  
 ☽ New Moon, 28th day, 11h. 33m. evening.

1824.—JUNE, 6th Month, hath 30 days.

Joial now in social pride,  
 On yonder mountain's sunny side,  
 The bleating lambkins play;  
 The busy ploughman jogs along,  
 And joins the mock-bird's cheerful song,  
 Or robin's plaintive lay.

**JULY, 7th Month, hath 31 days.—1824.**

The herds, the flocks, the birds.  
 The hollow whispering breeze, the plaint of rills  
 The purling down amid the twisted roots  
 Which creep around, their dewy murmurs shake  
 On the sooth'd ear.

# NOVEMBER, 11th Month, hath 30 Days—1824.

The seed time is past, and the harvest is o'er;  
 The voice of the reaper is mute in the dale;  
 The horn of the huntsman awakens no more,  
 The silver-ton'd echo that sleeps in the vale;  
 The blushes of Spring have long faded away,  
 Her evergreen laurels hang frozen around:  
 The "last rose of Summer" has sunk to decay,  
 And autumn's gay foliage lies mixed with the ground.

- Full Moon, 6th day, 2h. 50m. evening.
- ☾ Last Quarter, 13th day, 7h. 26m. evening.
- ☽ New Moon, 20th day, 3h. 9m. evening.

1824—DECEMBER, 12th Month, hath 31 Days.

Behold, fond man!  
 See here thy pictured life; pass some few years.  
 Thy flowering spring, thy summer's ardent strength,  
 Thy sober autumn, fading into age,  
 And pale concluding winter, comes at last—And shuts the scene.

| Total number of Members,       | -     | -   | - | 50 |

\* Joseph Robitaille, J. Bte. Fortin, François Blanchet, Ls Bourdages, L. J. Papineau, D. B. Viger, François Huot, and Louis Gouveau, Esquires.

From 1808 to the present time, there have been six General Elections, instead of three, required by the Act of Parliament.

Of the five Assemblies since 1808, all have been dissolved before the expiration of the Constitutional period, excepting that of 1810. The Electors consist of all British subjects in the Province possessed of a freehold of the clear annual value of 40s. sterling, in the counties; and in the Towns possessed of a House of the clear annual value of £5 sterling, or resident in, and paying an annual rent for a dwelling house of not less than £10 sterling.

William Lindsay, Esquire, *Clerk.* P. E. Desbarats, Esquire, *Clerk As-*

*stant.* Robert  
 liam Green, Esq  
 B. Lindsay, *Clerk*  
*at Arms.* Ang  
 Jacques Langlois  
 Lafrance, *Deo*

- 49 The City of London founded by the Romans.
- 63 } Christianity is supposed to have been introduced into Britain by St. Paul or some of his disciples.
- 64 } Rome set on fire, and burned six days; upon which began the first persecutions against the Christians.
- 76 } Jerusalem taken by Titus the Roman General, and razed to the ground, and the plough made to pass over it.
- 79 } Herculaneum overwhelmed by an eruption of Mount Vesuvius.
- 135 } The second Jewish war ends, when the Jews are all banished from Judea.
- 152 } The Emperor Antonius Pius, stops the persecution against the Christians.
- 222 } The Roman empire begins to sink under its own weight and corruptions.
- 306 } Constantine the Great begins his reign.
- 308 } Cardinals first created.
- 313 } The tenth persecution against the Christians ends, by an edict of Constantine, who favours them, and gives full liberty to their Religion.
- 325 } The first General Council at Nice, where was composed the Nicene Creed.
- 328 } Constantine removes the seat of the Roman Empire from Rome to Constantinople.
- 381 } \_\_\_\_\_ orders all the Heathen Temples to be destroyed.
- 393 } Julian the Roman Emperor endeavours to re-build the Temple of Jerusalem, but is miraculously prevented.
- 394 } The Roman Empire is divided into the Eastern and Western Empires.
- 410 } Rome taken and plundered by Alaric, King of the Visi-Goths.
- 426 } The Romans reduced to extremities at home, withdraw their troops from Britain, and never return there.
- 447 } Attila with his Huns ravages the Roman Empire.
- 508 } Prince Arthur begins his reign over the Britons.
- 516 } The computing of time by the Christian Æra, introduced by Dionysius the monk.
- 551 } The manufactory of Silk introduced into Europe.
- 606 } The power of the Pope of Rome begins by the concession of Phocas, Emperor of the East.
- 602 } The Mahometan Æra of the Hegira, or flight of Mahomet, begins at this time.
- 634 } Glass introduced into England.
- 685 } The Britons are totally expelled by the Saxons, and driven into Wales and Cornwall.
- 713 } The Saracens, or followers of Mahomet, conquer Spain.
- 748 } The computing of years from the birth of Christ, began to be used in history.
- 800 } Charlemagne begins the Empire of Germany, and gives the present names to the days and months.
- 822 } Egbert, King of Wessex, unites the Heptarchy by the name of England.
- 890 } Alfred the Great, after subduing the Danish invaders, composes his body of Laws, divides England into Counties, &c.
- 915 } University of Oxford founded about this time.
- 915 } The University of Cambridge founded.

991 } The figures in Arithmetic are brought from Arabia into Europe.—  
       Letters of the Alphabet were heretofore used.  
 1000 } Paper made of Cotton rags was in use; the manufactory of it intro-  
       duced into England, 1558.  
 1066 } William the Norman conquers England.  
 1070 } Musical notes invented.  
 1172 } Henry II. of England, takes possession of Ireland—which has ever  
       since been governed by an English Viceroy, or Lord Lieuten-  
       ant.  
 1180 } Glass Windows began to be used in private houses in England.  
 1186 } The great conjunction of the sun, moon, and all the planets in Libra,  
       as seen from the earth, September 14.  
 1215 } Magna Charta signed by King John and Barons of England.  
 1293 } There is a regular succession of English Parliaments from this year.  
 1302 } The Mariner's Compass invented by Giocia of Naples.  
 1340 } Gunpowder and Guns first invented by Swartz, a monk of Cologne.  
 1344 } Gold first coined in England.  
 1411 } The University of St. Andrews in Scotland founded.  
 1430 } Printing invented about this time by Laurentius of Haarlem.  
 1454 } The University of Glasgow in Scotland founded.  
 1477 } The University of Aberdeen in Scotland founded.  
 1480 } Maps and Sea Charts first brought to England by Bartholomew Co-  
       lumbus.  
 1491 } William Grocyn publicly teaches the Greek language at Oxford.—  
       The Solar System discovered by Nicholas Copernicus, a Po-  
       lander.  
 1492 } America discovered by Columbus, a Genoese.  
 1494 } Algibra first known in Europe.  
 1517 } Martin Luther began the Reformation from Popery.  
 1529 } The name of Protestants takes its rise from the reformed protesting  
       against the Church of Rome.  
 1534 } The Reformation takes place in England under Henry VIII.

- 1812 } The United States declare war against Great Britain, June 18.  
Bonaparte invades Russia with an army of 400,000 men, June 28.  
Bonaparte commences his retreat from Russia, October 11.
- 1813 Prussia, Austria, Bavaria and Sweden at war with France.  
French army completely defeated at Leipzig, October 19.
- 1814 Bonaparte deposed and sent to the Island of Elba.  
Louis XVIII. called to the Throne of France.  
Peace with the United States ratified at Washington, Feb. 17.  
Bonaparte arrives in France, March 3d.
- 1815 } Bonaparte leaves Paris for his army, June 12.  
Battle of Waterloo, Bonaparte totally defeated, June 18.  
Bonaparte sent a prisoner to St. Helena, and arrived there, Oct. 15.
- 1820 King George III. died, January 29th.  
George IV. proclaimed King, January 30th.
- 1821 ——— Visited Ireland.
- 1822 Bonaparte Died.
- 1823 France declares War against, and invades Spain.

GREENWICH HOSPITAL.

(Lit. Gaz.)

HERE I COME AGAIN.

COMICAL stories them, Mr. Editor, about the lemmings and fotes; and perhaps many people would doubt the truth of the account, and the traveller to the North Cape be considered cousin-german to Baron Munchausen. In such matters I am little skilled; but the following plain statement of facts was given by old Ben Marlin to some young sprigs of fashion, who listened with wonder and astonishment:—"Why aye, young gentlemen, you may well say sailors see strange things. They are a sort of hum-fib-lus animals, that often stand in the imminent deadly breach, as Shakespur has it; for d'ye see the breech of a gun is its stern, as a body may say; and I've often elevated and depress'd my breech when the shots were flying about so thick, that you could'nt stick a marlin spike atwixt 'em. Well, I often wonder I didn't get knock'd down in the many blow-ups I've been in, but suppose I was bomb-proof. I remember when I was boatswain's mate of the Firefly frigate, Captain Tommyhawk, we were cruising off the coast of Norway to look for the flying Dutchman, 'cause, d'ye see, the Nabob of Arcot—him as lives at Pondicherry, in the north of Scotland—had sent an express to the Lords of the Admiralty in a fire-balloon, to inform 'em she was cruising about there, to the great annoyance of our merry-time subjects; so we were commissioned to send the ghost aloft in a shower of Congreve's rockets. Well, d'ye see, we'd got as far northward as sixty-six, when one afternoon, about three o'clock, it being then pitch-dark, we catch'd sight of her. Up comes Captain Tommyhawk; he was a rum subject, always full of spirits, and so was the first Lieutenant for matter o'that. Well, we made all sail in chase, and the officers swore it was she; for which ever way we put the ship's head, still she was on the starboard-bow, and none but a fan-tom could do that. The rockets were prepared, the matches were lighted; and just as we were going to fire, the officer of the watch discovered we had been chasing the anchor-stock that stuck up above the cat-head, and loom'd large in the dark; but that warn't the best of it, for it came on to blow great guns. The wind was at south-sou-north, and we lay a northeast and by west course. The night was as black as the Emperor of Morocco; however, we got her under close-reef'd pudding-bags, balanced the cook's apron for a try-sail, and stow'd the masts down in the hold. Away she went—sky-pole and bobbing-pole, scupper-hole and hawse hole, all under water. It took five men to hold the Captain's hat on, and we were obliged to shove our heads down the hatchways to draw breath. The first Lieutenant had all his hair blown off; and has worn a wig ever since. The Boatswain's call was jamm'd so fast in his jaws, that it took a dozen men to bowse it out with a watch-tackle. The Master was bellowing through his speaking-trumpet, when a squall took every tooth out of his head as clean as a whistle. His gums were as bare as the hour he was born, but that didn't matter; he lived on suction, grog, and bacca, though he's chew'd upon it ever since.—Oh what a sight to see the whales and dolphins jumping over us just like flying fish; and a shark swallowed the jolly-boat at one gulp! We drove all night, and about eleven o'clock next forenoon, just as day began to break, we heard a most tremendous roaring; it was like—but I can't tell you what it was like. The charts were examined, and every body pull'd long faces, for it was discovered to be the Moll-strum, that swallows every thing up. My eyes, there was a pretty predickment! When it was broad day light, we were close to it, and nothing could save us. You've seen soap-suds run round in a ring down a gully-hole? Well, what do you

think of a whin

oblivion; for d'ye se  
quid unax as

think of a whirlwind—a whirlpool I mean, whose horror-face was as wide as it is from here to Jerusalem? Ah, you may stare! but it was a complete earthquake. Up comes the Chaplain, and he soon began his dive-ocean, for a lump of sea lifted him up above the heads of the people, and overboard he went; but we saw him afterwards on the back of a grampus, making the best of his way to the North Pole. Well, we were suck'd in, and run round and round, just as people do when they run down from the top of the Monument; but still we kept on an even keel, though I'm certain we went at the rate of fifty miles a minute, and floated on the surface of the whirlpool. They said this was occasioned by gravitation. I know we were all grave enough upon the occasion, expecting to be buried alive. Well, we kept at this for some hours, and then the Captain swore we should come out on the opposite side of the globe; and he supposed the French man who found out that the variation of the compass proceeded from an internal motion, had gone that way before us. For my part I couldn't tell what to make of it. Well, we kept at this, as I told you before, for some hours, when it began to get plaguy hot, and the water steam'd again. 'Boiling springs!' says the Captain; 'we're under Lapland, and the witches are all at work under this huge cauldron!' We had only to dip our beef overboard, and it was cook'd in two minutes! Well, young gentlemen, we soon found out where we were; for though 'twas as dark—aye, as black as my hat one minute, yet in an instant, in an amagraphy, I may say, we burst from the water into the middle of a roaring fire, and was shot out of the top of Mount Hecla like a pellet from a pop-gun. How would you like that now? How high we went I can't say, but the sparks got hold of the rockets and set them off; and I understand the Astronomer Royal, at the house up there, was looking out that night, and took it for a whole fleet of comets. We had a fine bird's eye view of the world—saw Captain Parry jam'm'd up in the ice, Captain Franklin chasing the wolves, and Mr. Brookes killing the lemmings. Well, I can't say how high we went.— Says the Master, says he, 'A little higher, my lads, and we shall be able to catch hold of the tail of the Great Bear, pass a hawser round it, and make fast to repair damages; but mind your helm, boy, or you'll spur us on to Boates, knock Kiss-you-peeper out of her chair, or run away with the Northern Crown—though the Emperor of Russia takes pretty good care of that.' However, we didn't go quite so high, but come rattling down in a tremendous hurry, passed close to Riggle-us in Liso, and nearly poked the eye out of Medusa's head. Well, we fell at last upon a mountain of snow, keel downwards; it broke our fall, and happily we sustained but little injury—made a fine dock for ourselves—shored the frigate up—got all ataunt in a few days—and waited for the melting of the snow; when one morning the stocks fell, and we were left upon the wide ocean. The fact was, we had tumbled on to the back of a kraken that had been asleep for a century; the snow had gathered upon him in mountains; our thump woke him, though I suppose it took a fortnight to do it thoroughly; down he went, and we returned in safety to Old England! Here I am, you see, God bless His Majesty!—all dangers past—safe moored at last in Greenwich Hospital. I've nothing to complain of but one thing, and I think if I was to write to the Commander-in-Chief at the Parliament-House, he'd take it under his pious consideration; and that's this here:— We ought to get our bacca duty free, as we used to do in actual service. My old Captain, Sir Joseph, might jaw a bit about it, and come York over 'em; and Sir Isaac Coffin, however grave on other subjects, ought not to be mule in this, but commence undertaker in the cause, that we mayn't get pall'd at last, and have it shrouded in obscurity, or buried in oblivion; for d'ye see, right Virginia is a bacca-nation treat to such a dry, quid unux as

AN OLD SAILOR.

## ANECDOTES.

*A rare Patrimony.*—A young man of Nuremberg, (says the journal of that city) who had no fortune, requested a lawyer, a friend of his, to recommend him to a family, where he was a daily visitor, and where there was a handsome daughter, who was to have a large fortune. The lawyer agreed; but the father of the young lady, who loved money, immediately asked what property the young man had. The lawyer said he did not exactly know, but he would enquire.—The next time he saw his young friend, he asked him if he had any property at all. No, replied he. Well, said the lawyer, would you suffer any one to cut off your nose, if he should give you 20,000 dollars for it? (What an idea!) Not for all the world! 'Tis well, replied the lawyer, I had a reason for asking. The next time he saw the girl's father, he said, I have inquired about this young man's circumstances; he has indeed no ready money, but he has a jewel for which, to my knowledge, he has been offered, and he refused, 20,000 dollars. This induced the old father to consent to the marriage, which accordingly took place, though it is said that in the sequel he often shook his head when he thought of the jewel.

*What a simpleton knows, and what he don't know!*—A well known simpleton, who had for many years been employed in carrying the corn to mill for the poor house in the town in which he lives, was one day accosted by the miller in the following manner: "John, they say you are a fool—that you don't know any thing." "Hah, bah?" said John that can't be true, for I do know some things, though I may not know other things. But I can tell you what I do know, and what I don't know." "I am glad of it," replied the miller, "now let us hear John, what you do know." "I know," answered John, "that the miller's hog grow fat." "Very well, that's true, John; now please to inform me what you don't know." "I don't know," said John, scratching his head, "whose corn they are fed on."

### A WANT OF SPURS.

An Irishman getting on a high mettled horse, it ran away with him; upon which one of his companions called out to him to stop it. "Arrah, honey," cried he, "how can I do that when I have got no spurs!"

### A QUESTION TOO MUCH.

The veteran Counsellor Coldbeck, one day cross-examining a country fellow, as a witness, asked him in several ways, what he thought a particular person to be, from his own knowledge, hearsay, or belief; but could extract no other answer than that, 'he did not know, and could not tell.' 'Come fellow,' said the Counsellor, 'answer me on your oath: what would you take me to be, if you did not actually know my person, & should meet me in the street?' 'Why then,' says the fellow, 'since you ask me one, I will tell you

The learned Counsellor was silenced.

THE IRISH GENTLEMAN.

An Irish Gentleman in company, a few nights since, seeing that the lights were so dim as only to render the *darkness visible*, called lustily, “Here, waiter, let me have a couple of *daycent* candles, just that I may see how the others burn.

APOLOGY.

This was the apology of an Irishman, who, being upbraided with cowardice, said, ‘he had as bold a *heart* as any man in the army, but his cowardly *legs* always ran away with it.’

Receipts.

*Infallible remedy for stopping Bleeding at the nose.*

ONE ounce of sugar of lead, and half an ounce of green vitriol, to be triturated in a glass mortar; add to these half a pint of spirits of wine. Of this composition, young people, from ten to twelve years of age, are to take ten or twelve drops; patients under twenty years, fourteen or fifteen drops; and grown persons, twenty drops, four times each, in a spoonful of wine or brandy. Some very interesting trials, in the most obstinate cases, have been made with this mixture, with the greatest success.

*To cure the sting of a Wasp or Bee.*

To the part affected, apply oil of tartar, or solution of potash, and it will give instant ease; as also well bruised mallows.

*To prevent Sea Sickness.*

Drop a few drops of vitriolic æther upon loaf sugar, and let it dissolve in your mouth; or drink a few drops of æther, added to a solution of sugar in water, to prevent its immediate evaporation.

*A receipt for a Cough.*

Take a glass of spring water, and put into it a spoonful of the syrup of horehound, and mix with it nine or ten drops of the spirit of sulphur

*Remedy for Deafeness.*

Put a table-spoonful of bay salt into near half a pint of cold spring water, and after it has steeped therein twenty-four hours, (now and then shaking the phial,) cause a small tea-spoonful of the same to be poured into the ear most affected, every night when in bed, for seven or eight nights successively, observing to lay your head on the same side, by which the cure is generally completed.

**Cure for the Rheumatism.**—A remedy for rheumatism has been introduced in this country by Mr. Churchill, of Princess-street, Lieces-terfields. It is termed *Acupuncture*, and consists in cautiously inserting needles, to a proper depth, into those muscular parts which are the seat of the disease! It has long been held in repute by the Chinese and the French, who have adopted it, and speak of it with praise. Mr. Churchill relates several cases in his own practice in which it has been decidedly useful.—*Lon. paper.*

*L. P. Weilbrenner*
