# THE BOARD OF TRADE

Of the City of Toronto.

## PRESIDENT'S REPORT 1890.

Following the example set by former Presidents of this Board, it becomes my duty to make an address at the close of my year of office,—to which by your confidence and kindness I have been re-elected,—and in doing so it is with great satisfaction that I am able to congratulate its members upon the completion of our new building, and especially upon the handsome and commodious rooms which comprise the official home of the Board. The work has given us some anxiety during the past year, but every step in its progress has been closely watched, nothing has been left undone that ought to be done, and I am sure it is no vanity to say that as a consequence of the liberal enterprise of our Corporation, and the painstaking attention of its executive officers, we are now in possession of the best building of its class in Canada.

I am glad, also, to be able to say that the Board itself maintains its strength, and that a spirit of genuine good-fellowship continues to pervade its ranks. The reaper Death comes to us, as he comes to all, but while we lament the loss of a member so able, so useful, so successful and so distinguished as the late Hon. John Macdonald, we are profoundly thankful that not a few of the veteran business men who have been foremost in the commercial enterprises of our city are yet among us, to guide us by wise counsel and stimulate us by high example.

Men speak of the *esprit de corps* of the army, the bar, the press and the college. It is fitting also that there should be, as there is, an animating spirit in the commercial body, and therein lies, I believe, one of the most useful of the functions of our organization. The merchant guilds of England had their own peculiar *esprit de corps* four or five centuries ago, but it manifested itself in bull-baiting and heavy eating and drinking on feast days, and plundering every trader not a member of one's own guild all the rest of the year. The idea which regards trade as profitable to the two who make a bargain is more modern, and in our day the merchant feels that he has a community of interest with the man who supplies him with commodities on the one hand and the man who buys to consume them on the other. That idea has "broadened slowly down," if I may

apply a Tennysonian phrase to trade, and is generous and liberal as well as broad. And so it has been brought to pass that in Boards like ours there is a sentiment of brotherhood reaching out to all classes of men and to every occupation in life.

These things I say because it is honorable to magnify the occupations of trade and commerce at least once a year. But I turn to more practical considerations.

The business affairs of Toronto during the past year have not been so prosperous as we could have wished; but they might easily have been worse, and we ought not to complain. The situation at the close was in some respects more hopeful than at the beginning, and I am persuaded that on the whole the operations of the year have been marked by substantial improvement. This may be in part attributed to the greater carefulness which has characterized trade in reducing stocks and shortening the term of credit, and still more to the fairly good harvest reaped in Ontario and the active demand for all our farm products, which was maintained throughout the greater part of the year for home and foreign consumption.

In spite of financial disturbances in England and the United States, but notably in London and New York, there are no large failures to record for our city, and those which have taken place have, no doubt, served in some measure to place trade on a sounder and healthier basis. The stocks carried over are smaller than usual, and in many lines the imports are believed to have been less than in the previous year. This cautious policy on the part of merchants will go far to establish confidence, an assurance of which is afforded in the remarkably steady prices which have ruled throughout the year and the regularity with which payments have been made. The hoisting of the storm-drum elsewhere has been heeded here, and we hope to be able to weather the gale should it unfortunately come our way. But the danger is not yet past. New York and London are not absolutely secure, and besides we have to wait for the full effect upon trade of the two new tariffs,—the McKinley and the Foster.

It is to be observed, moreover, that modern business methods demand the employment of larger capital now than formerly. The development of the commercial traveller system has been attended by heavy expense. Our travellers would, as regards numbers, make a respectable standing army, and they are all high-priced men. All are officers, too, as salaries and expenses go; there is not a private in their ranks. Then the advertising system has grown to enormous proportions. No merchant can hope to build up or maintain a successful business who does not advertise liberally, and we can form some idea of what that means by a glance at the well-filled columns of our daily journals and trade papers. The duties upon imports are also an element in the cost of business operations; and so are the taxes levied for city purposes, which are accumulating year by year at a rate that few of us can pretend to justify or excuse.

As a general result of the new situation, we find that the amount of capital required to carry on trade is much larger now than it was even ten years ago, and naturally enough the tendency is to locate where the best banking facilities are afforded, railway transit and other conditions being equal. We are therefore not surprised at the expansion of Toronto's business during the last ten years, as shown by the figures of the Government trade tables. In the fiscal year 1878-9 the total value of imports entered for consumption at Ontario ports was \$34,260,205, of which Toronto's share was \$12,235,342, or 35 $\frac{3}{4}$  per cent. of the whole. For the fiscal year 1888-9 the value of goods entered at Ontario ports was \$42,292,819, and Toronto's share was \$19,137,244, or 45 $\frac{1}{4}$  per cent. of the whole. This is a proud exhibit, but if our city desires to maintain her commercial pre-eminence, and to overtake her great rival down by the St. Lawrence, it is of the first consequence that we should attend to the work of civic reform. The Council of the Board have not been unmindful of this matter during the past year, and I trust they will continue to give it such a share of their attention during the present year as its importance in relation to the trade and commerce of the city demands. As business men it is one of our first duties to keep a wary watch on the conduct of city government, for its influence is at all times direct and potent for good or evil to the large enterprises in which we are engaged. I cannot but regard it as an outrage that we should be obliged practically to increase our working capital by one-fourth in order to provide the taxes levied for the city revenue upon our stock in trade; and it is not less an outrage that the expenditure for all purposes in the city should exceed the amount required for managing the affairs of the whole Province of Ontario, with its population of over 2,000,000, and its manifold interests extending over an area of at least 100,000 square miles.

I have referred to the influence of the agricultural condition of the country upon the commercial situation. We all realize how intimate are the relations of the agricultural, the manufacturing and the commercial industries, but agriculture is confessedly the most important of the three. A failure of crops or a drop in prices of cereals, animals or animal products speedily reacts upon all other enterprises. But if the farmer is prosperous, men in every other occupation share in the measure of his gain. We, therefore, rejoice in the fact that during the past year the agricultural interest in Ontario was sensibly improved. It is true the crops did not realize the promise which they gave at one time, yet they reached an all-round good average, and the demand for them was active at fair prices. With the fear of the McKinley Bill before their eyes farmers hurried the bulk of their grain to market early in the season, instead of holding for a possible rise later on, as many often do. Such of their live stock as are usually sold to American buyers were disposed of in the same way, and it is now stated that there is an absolute scarcity of sheep in many parts of the Province. But the British demand for cattle, sheep and cheese was

also exceptionally good, and the exports to that market have reached large figures. As a consequence of this activity farmers have handled more money than usual during the autumn months of the year, store accounts have been more promptly paid, and the general business tone of the country has been amended. One of the best tests of the farmer's condition is the way in which he has been able to take up his notes for implements, and throughout Ontario and Quebec these notes have been paid up better than for years past.

We do not know, of course, how long the present prosperity will last. It is not unlikely that farmers sold out closer than in other years in anticipation of the new United States tariff, in which case they will have less to sell in the present year; but this can only apply to live stock. Neither can we pretend to say definitely what effect the new tariff will have upon our export trade of farm products to the United States. That it will make some changes necessary may be taken for granted; but changes are oftener in the end a boon than a loss in productive occupations. I have great confidence in the intelligence and the staying qualities of the Canadian people, and I know that nowhere else on the American continent is there better farm land or better farmers than in our Province of Ontario. Nay, I go farther and say that nowhere else is there as good on this continent. You know the glowing tribute paid a few years ago to our Province by that able and well-known American economist David A. Wells, and which has been so often quoted by one of our own political leaders. It is so good and so apt that I cannot refrain to quote it also—just premising that it first appeared some eighteen years ago in the pages of the North American Review:

“North of lakes Erie and Ontario and the river St. Lawrence, east of lake Huron, south of the forty-fifth parallel, and included mainly within the Dominion Province of Ontario, there is as fair a country as exists on the North American continent, nearly as large in area as New York, Pennsylvania and Ohio combined, and equal, if not superior, to those States as a whole in its agricultural capacity. It is the natural habitat on this continent of the combing-wool sheep, without a full, cheap and reliable supply of the wool of which species the great worsted manufacturing industries of the country cannot prosper, or, we should rather say, exist. It is the land where grows the finest barley, which the brewing interests of the United States must have if it ever expects to rival Great Britain in its present annual export of over eleven millions of dollars worth of malt products. It raises and grazes the finest of cattle, with qualities especially desirable to make good the deterioration of stock in other sections; and its climatic conditions, created by an almost encirclement of the great lakes, especially fit it to grow *men*. Such a country is one of the greatest gifts of Providence to the human race, better than bonanzas of silver, or rivers whose sands contain gold.”

Ontario, I am sure, has not fallen off either positively or relatively since those brilliant words were penned. We have the evidence, indeed,

that for the production of cereals she occupies the foremost place when compared with the leading States of the American Union, and her suitability for the production of live stock is amply attested by the sales of horses, cattle, sheep and swine of improved breeds which are constantly being made to the best American farmers. Let us look at the staple cereal crops, fall wheat, spring wheat, barley and oats, and see what the official statistics show. The following table gives the averages of annual yield per acre for the eight years 1882-9 for Ontario and 14 of the best grain-growing States:

	<i>Fall Wheat.</i>	<i>Spring Wheat.</i>	<i>Barley.</i>	<i>Oats.</i>
	bush.	bush.	bush.	bush.
Ontario.....	19.4	15.6	26.2	35.3
New York.....	14.7	...	22.3	28.0
Pennsylvania.....	12.3	...	19.8	27.4
Ohio.....	13.0	...	22.0	31.6
Michigan.....	15.6	..	21.6	32.6
Indiana.....	12.9	..	20.0	28.2
Illinois.....	13.3	..	22.3	34.6
Wisconsin.....	..	12.5	23.3	30.6
Minnesota.....	..	14.7	22.4	33.1
Iowa.....	..	11.3	21.8	32.6
Missouri.....	11.9	..	21.0	26.4
Kansas.....	14.9	..	21.5	30.4
Nebraska.....	..	11.8	22.2	30.7
California.....	12.1	..	19.7	26.9
Dakota.....	..	13.0	24.8	31.4

In this period of eight years the annual average yield per acre is higher in Ontario than in every one of the States for each kind of cereal, Michigan comes nearest to us in fall wheat, but our average exceeds hers by 3.8 bushels per acre, and it exceeds California's average by 7.3 bushels. Minnesota has the highest yield of spring wheat of the several States which grow that variety, but she is nearly one bushel per acre behind Ontario, while Iowa is behind by 4.3 bushels. In barley the States' averages range from 24.8 bushels per acre on the virgin prairie soil of Dakota to 19.7 in California, and in six States it is under 22 bushels. The Ontario average for the eight years is 26.2 per acre. Illinois has scored 34.6 bushels of oats per acre against our 35.3, but there are ten States in which the average is below 32, and four in which it is below 30 bushels per acre.

Now bearing in mind that in grain-growing, as in trade, the profits are all in the margin, it must be obvious that—assuming cost of production to be equal on both sides—the Ontario farmer makes a much larger profit than his American neighbor, and this being so he has no cause to fear his neighbor as a rival in the world's markets. It is a great advantage to possess the best climate, the best soil, and the best breed of men; and having these I am not apprehensive for the fate of the Ontario farmer in the long-run,—tariff walls to the south of us or no tariff walls.

But I would not have it understood that we have yet reached in Ontario a point beyond which there is no improvement—a stage at which we can say, "Rest and be thankful." Our soil is good, but it can be made better by drainage and tillage. It is rich, but a more general and systematic use of manures and fertilisers can make it richer and more productive still. They do these things better in Great Britain, and in the hope that our Ontario farmers may be led to emulate the practices of their British brothers I venture to make a comparison of products. For the six years 1885-90 the average yield of spring and fall wheat in Great Britain was 29.8 bushels per acre, against our 16.8 in the same period, of barley 33 bushels against our 25, and of oats 37.8 bushels against our 33. Now, see what the yield of those cereals would mean to Ontario if the British average was reached on the acreages of the last six years in crop. Instead of 23,000,000 bushels of wheat a year, our farmers would have produced 41,000,000; instead of 19,000,000 bushels of barley, they would have grown 25,000,000; and instead of 58,000,000 bushels of oats they would have had 66,000,000. In great Britain they are obliged to farm well because rent is high, and, as I have just said, the profits are in the margin. In Ontario rent is lower, but labor is dearer; and, while there has not been the same necessity here as there for the practice of intensive farming, we do not know how soon it may arise. In any case the chances are all on the side of the farmer who adopts and pursues the methods which give the highest average yield at the lowest average cost, and which maintain unimpaired the producing qualities of the soil.

Another of the great industries of Ontario, and next to agriculture, the most important as regards foreign trade, is that of timber and lumber. Fortunately, there are extensive forests in the northern regions of our Province, as shown a year ago by the Commissioner of Crown Lands; but I think I may be allowed to say that we ought not to deal with them as if the timber supply was inexhaustible. A crop of trees does not grow like a crop of wheat, or even like an apple-orchard. Our forests are centuries old, and it has occurred to me that we have already reached the stage in Ontario not only for conserving our timber lands but for the replanting of large tracts which have been either cut or burnt over. Re-forestation has been undertaken on a large scale in some European countries, and in the United States it is receiving, none too soon, some share of Governmental attention. I am sure that Commissioner Hardy, who is an energetic and progressive man, will not take it amiss if I venture to commend the matter to his attention also. A wisely laid scheme of afforestation adopted now may be depended on to give handsome returns fifty or one hundred years hence, and a hundred years are but a short time in the life of a nation. We have passed through a somewhat critical year in the lumber and timber trade, and I fear that the outcome has not been assuring in many cases. Shipments to England in particular have not been fortunate, and some exporters of heavy timber and deals are said to have lost heavily.

In Ontario, which supplies principally the United States markets, the export duty on timber threatened for a time serious consequences to the industry through the retaliatory measures which it provoked. The policy was a mistake, and its abandonment was a welcome relief to a business which can ill afford to be harassed by restrictive laws.

I now come to the subject of trade interchange, which is so important in our day because modern discoveries and inventions have done, and are doing, so much to annihilate the old facts of space and time that our fathers found so stubborn.

Our chief business must be with Britain and the United States, and we should on that and on every account be good friends with both. Because the States are nearer us, it might be assumed that they would be our best customers; but inasmuch as interchange is usually most profitable when it takes place between countries which differ largely as to their products and requirements, it seems to me that Britain's custom is likely to be even better. That would be the case if we had unrestricted reciprocity with both. It is much more likely to be the case when the one is doing all it can to dig trenches and build walls between itself and the rest of the world, and the other is doing all it can to build bridges between itself and the rest of the world. But the McKinley tariff brings us face to face, not with a theory on which there might be difference of opinion, but with a fact on which we can agree. The effect of that tariff, as long as its operation continues, must be to reduce the volume, and still more the value, of the trade between Canada and the States; and every one will admit that it is our present duty to consider what steps should be taken to develop trade in other quarters to make up for this certain reduction in the nearest quarter. The Government is considering the subject, and its Finance Minister is, I understand, proposing to the West India Colonies that they should make differential duties in our favor, in exchange for a reduced scale of duties on sugars, which are their chief product. We would all favor a Commercial Treaty on some such *quid pro quo* basis. Even Free Traders in Britain favored Cobden's Commercial Treaty between Britain and France, on the basis of "one thing for another," and the certainty of its enlarging the trade of the two countries. We believe that such a treaty would, in present circumstances, stimulate trade and commerce between Canada and the West Indies, and everyone who admits that must also admit that a Commercial Treaty between Canada and Britain would be a hundred times more beneficial to us. Why then should we not try for the dollar rather than for the cent, or for the dollar and the cent instead of the cent only? If there is no argument of principle against such a treaty in the one case, there can be none in the other. The existing treaties with Belgium and Germany forbid it, but these, I think, are subject to revision this year, and a movement is already on foot in Britain to have them revised accordingly. The foregoing being agreed to, the next question is, who should take the

initiative in bringing about a Commercial Treaty between Canada and Britain? Evidently Canada, not only because we admit that there are threatened gaps in our trade which must be made good, but because Commercial Treaties are more in accord with our trade policy than with that of the Mother Country. I think that both parties, Canada and Britain, are prepared to consider the question now, because both understand better than ever before the position of the other. Britain knows that we must raise a revenue, and that we can raise it only by taxing imports. She knows also that, herself excepted, every other country in the world, the Colonies included, is accepting the principle of the McKinley tariff, if not its details. Lord Salisbury admitted at the Mansion House the other day that the only reason for securing large slices of Africa was the anticipation that before long the only part of the world which Britain could hope to trade freely with would be the part covered by the flag, and from that part he will have to exclude the self governing colonies unless something is done to make the conditions of trade with them equal. On the other hand, Canada knows that Britain must freely admit the raw products which she manufactures, and that she must do nothing that would raise permanently the price of food, except in exchange for what her laborers and mechanics would acknowledge to be an equivalent. Both parties understanding thus each other's position, is Canada prepared to say to Britain, "We will, for differential duties in favor of certain of our products, admit your manufactures at a much lower tariff than at present, and also engage that any change we make as regards you will be in the direction of lowering still further." If we are prepared to make that offer, I believe that it will be fully considered and probably accepted by Britain. Our offer must of course contemplate much larger importations of British goods than we take now, and that is just what our manufacturers will not approve. But if we are going to sell more to Britain, we must buy more from her, which is the only possible basis for a profitable and enduring international trade; and it would be, I cannot doubt, to the advantage of ninety-nine out of one hundred Canadians that they should buy more from the Mother Country and sell more to her.

Two or three years ago a scheme was projected by the Prince of Wales and a number of other distinguished men in Great Britain, which had for its chief object the furtherance of closer trade relations with the colonies. A charter was procured for a corporation known as the Imperial Institute, which provided among other things for a Governing body composed of representatives chosen or appointed from Great Britain and the Colonies, and for an Imperial Museum in which would be maintained a permanent collection of raw materials and manufactures representative of the products and resources of all the Colonies. It also provided, I believe, for the maintenance of a commercial department as part of the scheme of the Institute, the aim of which would be to keep business men in all parts of the empire in touch with each other, and to promote trade by the

agency of reliable reports on produce, prices and the whole range of commercial affairs. I believe that the museum building, which is being erected on the South Kensington grounds, is already well advanced, and that in a few months, at longest, it will be handed over to the Institute for occupation. The enterprise, I understand, has been favorably received in the Colonies, and I am sure that if it is gone into with spirit it will greatly conduce to the well-being of the whole empire. It is a timely movement in view especially of the trade policy adopted by the United States, and if it should be directed by wise statesmanship I am persuaded that it will afford an easy and practical solution of the Imperial problem in the varied phases of its commercial and political relations.

My predecessor referred to the interest which a year ago centred around the renewal of the bank charters, expressing his conviction that the country would be best served by making as nearly perfect as possible the system of banking we use here rather than by experimenting with radical changes. The opinion had been held in some quarters that we could, with good results, take a lesson in banking matters from the United States. Our bankers thought otherwise, and after a series of interviews with the Finance Minister, in which the respective merits of the various banking systems of the world were exhaustively discussed, it was decided to make certain improvements, consistent with the principles underlying the system already existing, and looking to the greatest possible security and usefulness combined. The new Act requires each bank to arrange for the redemption of its notes in every Province of the Dominion; and, in order to avoid notes falling to a discount because of a bank failing, a guarantee fund is to be created by the banks unitedly, to be used in the event of the failed bank's assets being insufficient to redeem its notes practically at once. By those improvements the only exceptional good features of the United States national banking system have been incorporated into our system, without adopting any of the defects now so abundantly evident.

It should be a matter for congratulation that the Bankers' Section of the Board of Trade, doubtless because it was the only organised body of bankers in the Dominion, was able to exert an influence without which, perhaps, serious changes in our banking system would have been made. No one who has studied the causes of the collapse of the financial machinery of the United States during the recent panic, can doubt that our superior system of banking is a matter for as much material satisfaction as our superior judiciary. As against an absolute famine of currency necessitating a resort to such peculiar instruments as Clearing House certificates, rates of interest happily unknown in Canada, and mercantile failures in many cases entirely the result of inability to obtain ordinary banking accommodation, we have year after year an adequate supply of currency almost without the possibility of either inflation or insufficiency, a steadiness in the rates of interest greater than can be found elsewhere

in America, and a supply of money which rarely, if ever fails to keep pace with the legitimate wants of solvent firms. The irritation which some of our merchants feel at paying one per cent. more than ordinary rates at present is the most ample proof of the general steadiness of rates in Canada. What would merchants in high credit in Toronto think if ten per cent. were asked for loans, as it was lately in Milwaukee and other cities? And what would our struggling brothers in the North-West think of a national bank in Montana, which emphasises the good treatment it accords to its borrowers, by saying that the panics down east never affect its rates, which remain uniformly at twelve per cent.

It is to be hoped that our bankers will before long follow the example of their Montreal brethren, and create a Clearing House. Apart from the advantages to the bankers, the establishment of such a system for making exchanges of cheques and other items would be a distinct gain to the business of Toronto. The figures showing the daily clearings in a Clearing House, while they do not represent the total amount of business done in a particular city, are sufficiently accurate to be now accepted as the readiest means of showing the increase or decrease of a city's business as compared with former years; and also the relative importance of one city with another, as reflected in the clearings shown by each over a series of months or years.

One other topic and I close. We have had during the past year, as you all know, our attention very pointedly drawn to the mineral wealth of Ontario. This was done in several ways. First, by the publication of the report of the Royal Commission appointed by the Local Government to enquire into and report upon the mineral resources of the Province. Secondly, by accounts of new discoveries of great ranges of nickel and copper ores in the region north of Georgian Bay, and of the mining and smelting operations carried on in the vicinity of Sudbury. Thirdly, by the experiments which have demonstrated the great economic value of nickel when alloyed with iron or steel. Fourthly, by the excursions to the Sudbury mines of some of the principal iron masters and mining engineers of Great Britain and Germany. Fifthly, by a careful examination of the mines and mining locations made by experts of the United States Government, to ascertain the probable extent of the supply of nickel ore in the district. And lastly, by the visit paid to the Sudbury mines and works by the Council and other members of this Board of Trade in the early days of December. The invitation to us came from the manager of the Grand Trunk Railway, who generously placed two cars at our disposal. But I am bound also to express the obligations of the Board to the President of the Canadian Pacific Railway, who gave us conveyance over his line. Nor can I forget the whole-souled Mr. Ritchie, one of the Directors of the Canadian Copper Company, at whose instance the trip was organised.

We have heard and read much about the Sudbury mines, but I must confess for myself that my conceptions were far short of the wondrous

reality. The industry which had its beginning there four years ago, gives promise of growing to vast proportions at no distant day. The three companies whose mines and smelting furnaces we visited, are now giving employment to a thousand men, and it is not unlikely that before the close of the present year they will need the service of five times that number. There are now four furnaces in blast, smelting about 500 tons of ore daily, and it is probable that the number will be trebled before the end of the year. There is now a population of about 5,000 supported by the industry, and soon it may be 25,000. I confess, indeed, that I find it difficult to keep within bounds of moderation when I contemplate the possibilities of those northland nickel riches of ours, and since my return from Sudbury I have greater confidence than ever before in the great future for this Province and this city of Toronto, if we but use our opportunities wisely and strike while the nickel is hot.

You know what the United States Government experts have said in their report as to the supply of ore in the Sudbury mines, and in the ranges which they saw in the country twenty-five or thirty miles westward. Secretary Tracy, of the United States navy, who had been making very important experiments on armor-plates of nickel steel at the Annapolis navy yard a few months ago, seems to have been impressed with the fear that the Sudbury mines might be after all but such concerns as the little pocket mine at Lancaster Gap in his own country, for whose dear sake Congress had provided a protective duty of 15 cents per pound. So he sent up experts to see if there was enough nickel in Ontario, when alloyed with 95 per cent. of steel, to plate the few battle ships of the United States navy that is to be. They came, they made a careful survey, they took accurate measurements, they took nobody's word, they went back to Washington, and in their report to the Secretary of the Navy they say that there are 650,000,000 tons of ore in sight, or "above surface of ground, in deposits seen by us," as the experts themselves put it. How much there may be out of sight, or how much in undiscovered ranges, the wit of man cannot tell. But 650,000,000 tons ought to give assurance to the Secretaries of the Navies of all the nations of the earth.

For forty years iron mines have been worked in the States bordering on Lake Superior to supply ore for Ohio and Pennsylvania furnaces, and last year the quantity raised and shipped is reported to be 9,000,000 tons. This is a remarkable output, and our American friends justly boast of it as extraordinary. It was equal to two-thirds of all the iron mines of the United States in the previous year. Yet at the rate of 9,000,000 tons a year it would take seventy years to raise all the nickel and copper ore reported in sight in the Sudbury district.

As to the value of that vast body of mineral, one hardly dares to make an estimate. Dr. Peters, who was for some time manager of the Canadian Copper Company's works, states in the last volume of *Mineral Resources in the United States* that the nickel in the ore is seldom less

than 2½ per cent., and no better authority than Dr. Peters can be quoted. There are one or two mines which are said to yield 5 to 7 per cent. of nickel, and we were shown several tons of ore taken from a location in Denison township which, we were assured, contained 20 to 30 per cent. of nickel. But taking Dr. Peters' 2½ per cent. as an average, we have for the nickel contents of 650,000,000 tons of ore, the enormous quantity of 16,250,000 tons, or enough on a 5 per cent. basis to make 325,000,000 tons of nickel steel. The value of the nickel, computed at fifty cents per pound, which is less than the current rate, reaches the great sum of \$16,250,000,000, or as much as the value of all the agricultural products of this Province for a hundred years, on the present scale of production. The proportion of copper in the ore is usually higher than the nickel. By some it is placed at 5 or 6 per cent., but estimated at 4½ per cent. the 650,000,000 tons of ore would yield 29,000,000 tons of copper, worth at the current price \$8,700,000,000. Add the computed value of nickel and we have \$25,000,000,000 in round numbers, a sum large enough to pay the public debt of this Dominion a hundred times over.

Now, I am frank enough to say that my chief object in referring to this mineral wealth of Ontario is to awaken an interest in the industry in this city of Toronto, Refining works will be established somewhere, and nickel steel works will be established somewhere. Why not in the city of Toronto? We can bring the material here from the furnaces at Sudbury. We can bring iron ore of fine quality from Peterborough, Hastings and Haliburton. We can bring coke by water from ports on Lake Erie or by rail direct from Pennsylvania. And we have any quantity of waste land on the east shore of the bay, where furnaces and refining works could be erected with capacity to supply Europe and America with nickel and nickel steel. Experiments recently carried on at Pittsburgh and elsewhere have conclusively shown that the industry has an assured future. Some place will become the seat of it, and why not the chief city of the province which produces the raw material? It will employ capital and skilled labor possibly beyond any industry now established in Canada, and wherever it may be successfully set up it cannot fail to become the parent of other industries. And so I say to the gentlemen of the Board of Trade of the City of Toronto, with all the emphasis and earnestness I can command, Strike while the nickel is hot.

I conclude by thanking the members of the Board, the Vice-Presidents and members of the Council for their generous support in helping the advancement of the influence of the Board. To my predecessor, Mr. W. D. Matthews, I owe especial thanks for much assistance. Of the energy and unswerving support of the Secretary I cannot speak too highly—his enthusiasm contributes much to the success which the Board has attained.

## THE TREASURER'S REPORT.

*To the Members of the Board of Trade of the City of Toronto.*

GENTLEMEN,—It gives me pleasure to present my Seventh Annual Report as Treasurer, and congratulate you on the steady annual increase in membership and resources which has taken place since you honored me with your confidence.

The following table shows how we have steadily gained ground during the years 1884-1890 inclusive, and now that we have a handsome building in which to meet and transact business, I trust that we will make an effort to reach a membership of 1000 before the close of 1891.

Membership.	Income.	Expenditure.	Surplus.
1884—260.....	\$ 2,807 71.....	\$2,807 71.....	..
1885—669.....	5,353 35.....	4,790 26.....	\$ 563 09
1886—907.....	8,846 30.....	6,614 92.....	2,231 38
1887—915.....	10,274 35.....	5,973 04.....	4,301 31

ent.

We lost during the year several of our members by death, but their places were filled by others, and we have at this moment 916 contributing and one honorary member—in all 917.

The GRATUITY FUND was instituted on the 1st July, 1886, and at this date 837 of our members are entitled to participate in it. There are still, however, 80 of the original members of the Board who have not yet availed themselves of its benefits.

The total number of deaths in this branch since its establishment,—29th June, 1886,—has been 37,—thirteen of these having occurred during the year just closed.

The amount paid out to the widows and children of deceased members to this date has been \$37,038.21, which has proved a great blessing to many of them.

The fund now under the control of the Gratuity Board amounts to \$50,774.83, and is invested in Debentures, Mortgages, and on deposit in the Bank of Commerce.

The full details of Income and Expenditure are on the next page.

Respectfully submitted,

GEO. MACLEAN ROSE,

Toronto, 31st December, 1890.

# Board of Trade of the City of Toronto.

## GRATUITY FUND

### REPORT OF THE TRUSTEES.

TORONTO, July 4th, 1890.

To the Council of the Board of Trade, Toronto.

GENTLEMEN,

The Trustees of the Gratuity Fund present this their Fourth Annual Report and Financial Statements, duly audited, as provided by the By-Laws.

The total membership has increased from 826 to 834 during the year, but there are still 83 members of the Board of Trade who have failed to unite in the Gratuity Scheme.

Thirty-eight Certificates have changed hands since last Report, and three of the new comers are past the limit of age for participation in the benefit of the scheme. Contrary to the experience of other years, the average age of the new members (37 years) is greater than the average age of those who have retired (34 years).

In the Report for last year the following remark was made: "It is scarcely to be expected that future years will see so few inroads by death in our ranks, the percentage this year being abnormally small."

To the exceptionally great amount of sickness for the past year, which will be memorable for the devastations of "la grippe," we must attribute the large death rate now recorded, no less than sixteen members having been so taken from the scene of their activities here.

A considerable proportion of these were our younger men, the average age being 46, and in the list will be found the names of several, who, in their spheres of labor, did their share in the upbuilding of the Province and its industries.

It is instructive to glance at the following table:

	Deaths.	Average Age.	Per Centage.	Total Gratuities	Assessments and Interest.
1st Year....	6 ..	48.33 ..	.75 ..	5,094 86 ..	18,631 56
2nd " ....	9 ..	53.11 ..	1.00 ..	8,542 38 ..	22,961 00
3rd " .....	5 ..	44.60 ..	.62 ..	5,171 45 ..	14,819 83
4th " ....	16 ..	46 ..	1.85 ..	18,862 32 ..	35,204 14

EDGAR

from which it may be fairly deduced that even in a year acknowledged by all Life Insurance Companies to have been one of exceptionally heavy mortality, the principles upon which the Scheme is based, are unaffected, and the average death rate of the past four years is well within that predicted and provided for.

The other figures not alluded to, speak for themselves, and will well repay perusal by those interested, especially the handsome fund now accumulated, and the Trustees have only to direct attention to the large amount of assessments outstanding.

The scheme has come through the severe test of an extraordinarily bad year creditably to the foresight and liberal calculations of its promoters, and therefore with the strongest claims upon the continued confidence and support of every member of the Board.

The amount of arrears in any one case is quite inconsiderable and of recent creation, and the Trustees hope to see an early liquidation of this item.

The Trustees have held seventeen meetings during the year, and the business has received their prompt and earnest consideration.

At the fourth annual meeting in September next of which due notice will be given, Mr. Henry W. Darling, Trustee, retires by rotation ; but is eligible for re-election.

Respectfully submitted,

HENRY W. DARLING,

*Chairman.*
