LIST OF MAPS AND PLANS.

Map of the United States showing its territorial development,	To follow page 3286
Maps of the United States in 1783, in 1790, in 1803, in 1840, and in 1860, . . .	To follow page 3326
Map of the principal theatre of war in Virginia, 1861-65,	To follow page 3434
Map of the Vicksburg Campaign,	On page 3490
Map of the Battle-field of Gettysburg,	On page 3501
Map of the Battle-field of Chattanooga,	On page 3511
Map of the Atlanta Campaign,	On page 3531

SUPPLEMENT.

"Abelard" to "Wheatstone,"	Pages 3669 to 3811
Chronology of important and indicative events,	Pages 3812 to 3856
Lineage of European Sovereigns and great historical families,	Pages 3857 to 3883
Selected Bibliography,	Pages 3885 to 3909
List of works from which passages have been quoted in "History for Ready Reference and Topical Reading,"	Pages 3910 to 3935

TUNNAGE AND POUNDAGE.—A tax or custom of two shillings on the tun of wine and sixpence on the pound of merchandise, which became, in England, from the fourteenth century, one of the regular parliamentary grants to the crown, for a long period. It grew out of an agreement with the merchants in the time of Edward II., to take the place of the former right of prisage; the right, that is, to take two tuns of wine from every ship importing twenty tuns or more,—one before and one behind the mast.—W. Stubbs, *Const. Hist. of Eng.*, ch. 17, sect. 276-277 (v. 2).—See, also, ENGLAND: A. D. 1639.

TURAN.—"The old Persians, who spoke an Aryan tongue, called their own land Iran, and the barbarous land to the north of it they called Turan. In their eyes, Iran was the land of light, and Turan was the land of darkness. From this Turan, the land of Central Asia, came the many Turkish settlements which made their way, first into Western Asia and then into Europe."—E. A. Freeman, *The Ottoman Power in Europe*, ch. 2.

TURANIAN RACES AND LANGUAGES.—The name Turanian has been given to a large group of peoples, mostly Asiatic, whose languages are all in the agglutinative stage and bear evident marks of a family relationship. "This race, one of the largest, both numerically and with regard to the extent of territory which it occupies, is divided into two great branches, the Ugro-Finnish and the Dravidian. The first must be again subdivided into the Turkish, including the populations of Turkestan and of the Steppes of Central Asia, as well as the Hungarians who have been for a long time settled in Europe; and the Uralo-Finnish group, comprising the Finns, the Estonians, the Tchoudecs, and, in general, nearly all the tribes of the north of Europe and Asia. The country of the Dravidian branch is, on the contrary, to the south. This branch is in fact composed of the indigenous people of the Peninsula of Hindustan; Tamuls, Telingas, Carnates, who were subjugated by the Arian race, and who appear to have originally driven before them the negroes of the Australian group, the original inhabitants of the soil, who are now represented by the almost savage tribe of the Khonds. The Turanian race is one of the oldest in the world. . . . The skulls discovered in France, England and Belgium, in caves of the close of the quaternary epoch, appear from their characteristics to belong to a Turanian race, to the Uralo-Finnish group, and particularly resemble those of the Esthoniens. Wherever the Japhetic or pure Indo-European race extended, it seems to have encountered a Turanian population which it conquered and finally amalgamated with itself."—F. Lenormant, *Manual of Ancient Hist. of the East*, bk. 1, ch. 4.—"From the 'Shah-nameli,' the great Persian epic, we learn that the Aryan Persians called their nearest non-Aryan neighbours—the Turkic or Turcoman tribes to the north of them—by the name Turan, a word from which we derive the familiar ethnologic term 'Turanian.'"—I. Taylor, *Etruscan Researches*, ch. 2.

TURCOMANS, Russian subjugation of the. See RUSSIA: A. D. 1869-1881.

TURDETANI, The.—"There is a tradition that the Turdetani (round Seville) possessed laws from very ancient times, a metrical book of laws, of 6,000 verses, and even historical records. At any rate, this tribe is described as the most civilized of all the Spanish tribes, and at the same time the least warlike."—T. Mommsen, *Hist. of Rome*, bk. 3, ch. 7.—"The most mixed portion of the Peninsular population . . . is that of the water-system of the Guadalquivir and the parts immediately south and east of it, . . . the country of the Turdetani and Bastitani, if we look to the ancient populations—Bætica, if we adopt the general name of the Romans, Andalusia in modern geography; . . . it was the Iberians of these parts who were the first to receive foreign intermixture, and the last to lose it."—R. G. Latham, *Ethnology of Europe*, ch. 2.

TURDETANIA.—The ancient name of modern Andalusia, in Spain; known still more anciently as Tartessus.

TURIN PAPYRUS, The.—An Egyptian papyrus preserved in the Turin Museum, for which it was purchased from M. Drovetti, consul-general of France. "If this papyrus were entire, the science of Egyptian antiquities could not possess a more valuable document. It contains a list of all the mythical or historical personages who were believed to have reigned in Egypt, from fabulous times down to a period we

cannot ascertain, because the end of the papyrus is wanting. Compiled under Rameses II. (19th dynasty), that is, in the most flourishing epoch of the history of Egypt, this list has all the characteristics of an official document, and gives us the more valuable assistance, as the name of each king is followed by the duration of his reign, and each dynasty by the total number of years during which it governed Egypt. Unfortunately this inestimable treasure exists only in very small pieces (164 in number), which it is often impossible to join correctly."—F. Lenormant, *Manual of Ancient Hist. of the East*, bk. 3, ch. 1, sect. 2.

TURKESTAN.—"Few even of the leading authorities are of accord as to the exact meaning of such common expressions as Turkestan or Central Asia. The Russians themselves often designate as Central Asia the second great administrative division of their Asiatic possessions, which is mainly comprised within the Aralo-Caspian depression. But this expression is misleading in a geographical sense. To the portion of this division directly administered by the Governor-General, whose headquarters are at Tashkent, they give the still more questionable name of Eastern Turkestan—the true Eastern Turkestan, if there be any, lying beyond his jurisdiction in the Chinese province of Kashgaria. . . . Russian Turkestan is bordered on the west by the Caspian, the Ural river and mountains, on the east by the Pamir plateau, the Tian-Shan and Ala-tau ranges separating it

from the Chinese Empire, northwards by the low ridge crossing the Kirghis steppes about the 51st parallel, and forming the water-parting between the Aralo-Caspian and Ob basins."—*Stanford's Compendium of Geog. and Travel: Asia*, pp. 391-392.—Of the region sometimes called Chinese Turkestan, the name "Kashgaria," lately current in Europe, has no raison d'être since the collapse of the independent state founded by Yakub of Kashgar. In the same way the expression 'Kingdom of Khotan' fell into disuse after the city of Khotan had ceased to be the capital. The term 'Little Bokhara,' still in use some thirty years ago, pointed at the former religious ascendancy of Bokhara, but is now all the less appropriate that Bokhara itself has yielded the supremacy to Tashkent. Lastly, the expressions Eastern Turkestan and Chinese Turkestan are still applicable, because the inhabitants are of Turki speech, while the Chinese have again brought the country under subjection."—É. Reclus, *The Earth and its Inhabitants: Asia*, v. 2, ch. 3.—See, also, YAKOON BEA.

TURKS.

6th Century.—Beginning of their career.—"At the equal distance of 2,000 miles from the Caspian, the Icy, the Chinese, and the Bengal seas, a ridge of mountains is conspicuous, the centre, and perhaps the summit, of Asia, which, in the language of different nations has been styled Imaus, and Caf, and Altai, and the Golden Mountains, and the Girdle of the Earth. The sides of the hills were productive of minerals; and the iron-forges, for the purpose of war, were exercised by the Turks, the most despised portion of the slaves of the great khan of the Geougen. But their servitude could only last till a leader, bold and eloquent, should arise to persuade his countrymen that the same arms which they forged for their masters might become in their own hands the instruments of freedom and victory. They sallied from the mountain; a sceptre was the reward of his advice. . . . The decisive battle which almost extirpated the nation of the Geougen established in Tartary the new and more powerful empire of the Turks. . . . The royal encampment seldom lost sight of Mount Altai, from whence the river Irtysh descends to water the rich pastures of the Calmucks, which nourish the largest sheep and oxen in the world. . . . As the subject nations marched under the standard of the Turks, their cavalry, both men and horses, were proudly computed by millions; one of their effective armies consisted of 400,000 soldiers, and in less than fifty years they were conducted in peace and war with the Romans, the Persians, and the Chinese. . . . Among their southern conquests the most splendid was that

of the Nephthalites, or White Huns, a polite and warlike people, who possessed the commercial cities of Bochara and Samarcand, who had vanquished the Persian monarch, and carried their victorious arms along the banks and perhaps to the mouth of the Indus. On the side of the west the Turkish cavalry advanced to the lake Meotis [Sea of Azov]. They passed that lake on the ice. The khan, who dwelt at the foot of Mount Altai, issued his commands for the siege of Bosphorus, a city the voluntary subject of Rome and whose princes had formerly been the friends of Athens."—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 42.—"The name Turks is the collective appellation of a vast number of tribes extending from the neighbourhood of the Lake Balkal, 110° E. longitude, to the eastern boundaries of the Greek and Slavonic countries of Europe. . . . Although the name of the Turks first became known to the western nations in the sixth century, the people had appeared in the west a century earlier, for there is every reason to believe that the Huns belonged to the Turkish stock. The Turks of Mount Altai are called Thü-klü by the Chinese writers and are regarded as the same people as the Hiong-nü of earlier times. . . . The Chinese name . . . appears to be a corruption of the Turkish word 'terk' . . . a 'helmet.' The Thü-klü became very powerful under their leader Gumere, who conquered the Jenjen (the Geougen of Gibbon), united under his sway all the Turkish tribes . . . and assumed the title of Chagan or Khan, A. D. 546."—W. Smilh, *Note to above*.

A. D. 999-1183.—The Gaznevide empire.—The decline of the Caliphate at Bagdad in the 9th century was signalized by the rise to practically independent power of several dynasties in its Persian and Central Asian dominions. Among these was the dynasty of the Samanides who ruled, for a hundred and twenty-five years, an extensive dominion in northern Persia and modern Afghanistan and in the Turkoman regions to the Oxus and beyond. In this dominion of the Samanides was included the Turkish tribes which had submitted to Ishma and which were presently to become the master champions of the faith. Their first attainment of a real empire in the Moslem world was accomplished by the overthrow of the Samanide princes, and the chief instruments of that revolution were two Turks of humble origin—Sebectagl, or Sebektelkin, and his son Mahmud. Sebectagl had been a slave (in the service of a high official under the Samanides) who gained the favor of his masters and acquired command of the city and province of Gazna; whence his famous son Mahmud was called the Gaznevide, and the wide conquests which the latter made are sometimes distinguished as the Gaznevide empire. "For him the title of Sultan was first invented [see SELTAN]; and his kingdom was enlarged from Transoxiana to the neighbourhood of Ispahan, from the shores of the Caspian to the mouth of the Indus. But the principal source of his fame and riches was the holy war which he waged against the Gentoos of Hindostan. . . . The Sultan of Gazna surpassed the limits of the conquests of Alexander; after a march of three months, over the hills of Cashmir and Thibet, he reached the famous city of Klnoge, on the Upper Ganges, and, in a naval combat on one of the branches of the Indus, he fought and vanquished 4,000 boats of the natives. Delhi, Lahor, and Multan were compelled to open their gates; the fertile kingdom of Guzarat attracted his ambition and tempted his stay." The throne of Mahmud scarcely outlasted himself. In the reign of his son Massoud, it was nearly overturned by another Turkish horde—later comers into the region of Bokhara from the steppes beyond. In a great battle fought at Zendeen, in Khorassan, A. D. 1038, Massoud was defeated and driven from Persia to a narrowed kingdom in Cabul and the Punjab, which survived for more than a century longer and then disappeared.—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 57.

(Seljuk), A. D. 1004-1063.—Conquests of Seldjuk and Togrul Beg.—"The history of the origin of the Seldjukides is obscured by numerous myths, but it appears from it that Seldjuk, or more correctly Seldjik, the son of Tokmak, and Subash, commander of the army of a prince

named Pigu or Bogu, were expelled from their native steppes for some crime, and forced to seek their fortunes in strange countries. Seldjuk, with 100 horsemen, 1,000 camels, and 50,000 sheep, migrated to a place on the southern confines of the desert, in the neighbourhood of Djend [described as distant twenty fersakhs from Bokhara]. He settled there and, with all his followers, embraced Islamism." Under Seldjuk and his two grandsons, Togrul and Tchakar, the Seldjukides grew formidable in numbers and power, on the border of the empire of Mahmud the Ghaznevide, then rising on the ruins of the principality of the Samanides. Thinking to control these turbulent kinsmen of his race, Mahmud unwisely proposed to them to quit the country they occupied, between the Oxus and the Jaxartes, and to settle themselves in Khorasan. "In the year . . . (1030), that is, within a year of the death of Sultan Mahmud, we find the Seldjukides west of Merv, on the ground now occupied by the Tekke-Turkomans, in the neighbourhood of the southern city of Nisa and Abiverd, from which point they molested the rich province of Khorasan by constant raids, as grievously as is done by the Turkomans to this very day." When it was too late, the Ghaznevide Sultan attempted to expel the marauders. His armies were routed, and the grandsons of Seldjuk were soon (A. D. 1039) in undisputed possession of the whole of Khorasan, with the rich and flourishing cities of Merv, Balkh, and Nishapur. A few years later they had pushed forward "over the ruins of the former power of the Buyyides [or Boudes, of Persia] to Azerbaïdjan, and, in the year 446 (1054) the skirmishers of the Turkish army, led by Togrul Beg, penetrated into the interior of the eastern Roman Empire [that is, into Asia Minor]; and although the bold inhabitants of the desert in their raid on the land of the Cæsars were bent rather on plunder than on actual conquest, yet even their temporary success against the great name of Rome—so long one of awe to the ancient Asiatic—increased enormously the prestige and reputation of the Seldjukides. Togrul Beg was said to meditate a pilgrimage to Mecca, with the object at the same time of clearing the road thither, which the state of anarchy in Bagdad had long rendered unsafe."—A. Vámbéry, *Hist. of Bokhara*, ch. 6.—"Togru Beg, under pretence of a pilgrimage to Mekka had entered Irak at the head of a strong army, and sought to obtain admission into Bagdad. The khalif, in opposition to the advice of his vizier and the officers of the Turkish militia, consented; on the 22nd Ramadan, 447 (December, 1050), the name of Togrul was inserted in the public prayer; and three days after he made his entry into the city. He had taken an oath, before entering, to be the faithful and obedient servant of the khalif; but it is needless to add that he broke this immediately afterwards, and occupied the city in force. A dispute broke out between the Seljuk soldiers and some shop-keepers. The Baghdad Turks took the side of the citizens, the foreigners were driven out, and several of them killed and wounded. This riot was followed by a general attack upon the ill-fated city by the army of Togrul Beg. It was useless for the khalif and his vizier to protest their innocence. The Turkish chief denounced them as the murderers of his soldiers, and summoned the vizier to his camp to

explain his conduct. On his arrival there he was arrested and flung into prison. With this occurrence the rule of the Bouleis in Baghdad may be said to have terminated, and that of the Seljuks commenced. Togrul Beg remained for a year inactive in Baghdad, neither visiting the Khalif nor heeding his entreaties to put an end to the ravages and outrages perpetrated by his fierce and lawless soldiery on the wretched towns-people." The Khalif was forced, nevertheless, to crown Sultan Togrul with two crowns, one to represent the sovereignty of Persia and the other the sovereignty of Arabia, and to confer on him the title of "The Sultan of the Court, the Right Hand of the Chief of Believers, the King of the East and of the West." The Seljuk sultan was now master of the Asiatic Mahometan empire. But civil war was still protracted for a period, by struggles of the partisans of the Bouleis, assisted by the Fatimite Khalif of Egypt, and the unfortunate city of Baghdad suffered terribly at the hands of each party in turn. Togrul Beg, in the end, destroyed the opposition to his rule, and was at the point of marrying one of the Khalif's daughters, when a sudden illness ended his life, A. D. 1063. He was succeeded by his nephew, Alp Arslan, who extended the empire of the Seljuks in Asia Minor and Armenia.—R. D. Osborn, *Islam under the Khalifs of Baghdad*, pt. 3, ch. 2.

A. D. 1063-1073. — Conquests of Alp Arslan.—"Alp Arslan, the nephew and successor of Togrul Beg, carried on the havoc and devastation which had marked the career through life of his uncle. Togrul Beg had on two or three occasions invaded the Asiatic territories of the Byzantine Emperor; Alp Arslan carried these partial conquests to completion. He invaded in person the northern parts of Armenia and Iberia. He laid waste the country in the cruellest manner, for it was the notion of these barbarians that a country was not really conquered unless it was also depopulated. Iberia had been long celebrated for the industry of its inhabitants, the wealth of its numerous towns, and the valour of its people. There is no doubt they could have flung back the invaders had the Byzantine Empire come to their aid. But avarice was the dominant passion of the Emperor, Constantine X., and rather than disburse his loved hoards, he preferred to look idly on, while his fairest provinces were laid waste and overrun. The country was, in consequence, compelled to submit to the Seljuk Turks, and the invaders settling upon it, like a swarm of locusts, swiftly converted the happiest and most flourishing portion of Asia into a scene of poverty and desolation. From Iberia, Alp Arslan passed into Armenia. Ani, the capital, was stormed and taken, after a gallant defence, on the 6th June, 1064. . . . So great was the carnage that the streets were literally choked up with dead bodies; and the waters of the river were reddened from the quantity of bloody corpses."—R. D. Osborn, *Islam under the Khalifs of Baghdad*, pt. 3, ch. 2.—"So far as one can judge from the evidence of modern and mediæval travellers and of Byzantine historians, Asia Minor, at the time of the Seljuk invasion of Alparslan, was thickly occupied by races who were industrious, intelligent, and civilised—races with a certain mixture of Greek blood and mostly Greek as to language. The numerous provincial cities were the centres

of civilisation. Their walls and amphitheatres, their works of art, aqueducts, and other public buildings, give evidence of a long-continued sense of security, of peaceful and progressive peoples, and of a healthy municipal life. Wealth was widely diffused. . . . It was against this prosperous portion of the Empire, which had contributed largely to the wealth of the capital, that Alparslan turned his attention when the border states were no longer able to resist his progress. . . . The Strong Lion of the Seljuks devoured many cities and devastated the fairest provinces. Cappadoeia was laid waste; the inhabitants of its capital, Caesarea, were massacred. . . . Mesopotamia, Mitylene, Syria, and Cilicia were plundered."—E. Pears, *The Fall of Constantinople*, ch. 2.—The career of Alp Arslan in Asia Minor was opposed by a courageous and vigorous emperor, Romanus Diogenes, or Romanus IV.; but Romanus exposed himself and his army rashly to the chances of a battle at Manzikert, A. D. 1071, on which all was staked. He lost; his army was routed, and he, himself, was taken prisoner. He was released on signing a treaty of peace and agreeing to pay a heavy ransom; but a revolution at Constantinople meantime had robbed him of the throne, deprived him of the means of fulfilling his engagements, and brought upon him, soon afterwards, a cruel end. Alp Arslan, provoked by the repudiation of the treaty, revenged himself on the ill-fated country which lay at his mercy. "Every calamity of this unfortunate period sinks into insignificance when compared with the destruction of the greater part of the Greek race, by the ravages of the Seljuk Turks in Asia Minor."—G. Finlay, *Hist. of the Byzantine and Greek Empires*, bk. 3, ch. 1, sect. 2.

A. D. 1073-1092. — The empire of Malek Shah and its subordinate Sultans.—Alp Arslan, assassinated in 1073, "was succeeded by his son, Malek Shah, in whose reign the power of the Seljukian Turks attained its greatest height. . . . Turkestan, the home of his race, including Bokhara and Samarcand, was annexed by Malek, and the rule of the shepherd Sultan was admitted at Casbgar. In addition to Persia and the countries just mentioned, his territory included at one time nearly the whole of what is now Turkey in Asia. . . . The Seljukian empire, however, broke up on the death of Malek, which took place in 1092, and, after a period of civil war, was divided into four parts. . . . The only one of the divisions . . . with which I am concerned is that which was carved out of the dominions of the Roman empire, and of which the capital was, for the most part, at Iconium, a city which to-day, under the name of Koniah, retains somewhat of a sacred character among the Turks, because of its connection with the first Sultans who obtained the right to be Caliphs. Sultan Malek, eighteen years before his death, had prevented a quarrel with Sullman, his cousin, by consenting to allow him to be Sultan of the Seljuks in the lands of the Christian empire. With Sullman there begins the famous line of robber chiefs who are known as Seljukian Sultans of Rome or Roum, or as Sultans of Iconium."—E. Pears, *The Fall of Constantinople*, ch. 2.—"The dominion of Suleiman over the greater part of Asia Minor was recognised by a treaty with the Byzantine empire in 1074, when Michael VII. purchased the assistance of a Turkish aux-

illary force against the rebellion of Oursel and his own uncle John Dukas. Nicephorus III. ratified the treaty concluded with Michael VII., augmented the power of the Turks, and abandoned additional numbers of Christians to their domination, to gain their aid in dethroning his lawful prince; and Nicephorus Melissenos, when he rebelled against Nicephorus III., repented a similar treason against the traitor, and, in hopes of gaining possession of Constantinople, yielded up the possession of Nicaea to Suleiman, which that chief immediately made the capital of his dominions. . . . When Alexius ascended the throne [Alexius I. A. D. 1081], the Seljouk conquests in Asia Minor were still considered as a portion of the dominions of the Grand Sultan Malekshah, the son of Alp Arslan, and Suleiman, the sultan of Nicaea, was only his lieutenant, though as a member of the house of Seljouk, and as cousin of Malekshah, he was honoured with the title of Sultan. The prominent position which his posterity occupied in the wars of the Crusaders, their long relations with the Byzantine empire, and the independent position they held as sultans of Iconium, have secured to them a far more lasting place in history than has been obtained by the superior but less durable dynasty of the grand sultans. . . . Toutoush, the brother of Malekshah, who acted as his governor at Damascus at the same time, became the founder of the Syrian dynasty of Seljouk sultans. — G. Finlay, *Hist. of the Byzantine and Greek Empires, from 718 to 1453*, bk. 3, ch. 2, sect. 1. — The empire of Malek Shah "was as vast as that of the Sassanian kings in the height of their glory. He encouraged the cultivation of science and literature, and his reign is famous for the reformation of the Calendar [in which work Omar el-Khayyam, the poet, was one of the astronomers employed]. An assembly of all the astronomers of Persia adopted a system of computing time which Gibbon says 'surpasses the Julian and approaches the accuracy of the Gregorian era.' It was called the Jalaheen era, from Jala'u'd-Din, 'Glory of the Faith,' one of the titles of Malik-Shah, and commenced on March 15, 1079." — C. R. Markham, *Hist. of Persia*, ch. 6.

A. D. 1092-1160.— **Dissolution of the empire of Malek Shah.**—"Melikshah's reign was certainly the culminating point of the glory of the Seldjukides. . . . Mindful of the oriental adage, 'Perfection and decay go hand in hand,' he determined as far as possible to provide, during his own lifetime, against discord breaking out amongst those who should come after him, by dividing the empire between his different relations. Antolia was given to Suleiman Shah, whose family had hitherto governed Gazan; Syria fell to his brother Tutush, the adversary of the Crusaders; Nushtekin Gartcha, who had raised himself from slavery to the rank of generalissimo, and who became later the founder of the dynasty of the Khahrezmides, was invested with Khahrezm; Aksonghar got Aleppo; Tehekermish Mosul, Kobulmish Damascus, Khomar-tekln Fars, and his son Sandjar was entrusted with the administration of Khorasan and Transoxania. These precautions proved, however, ineffectual to preserve the dynasty of the Seldjukides from the common fate of oriental sovereign races, for after the death of Melikshah, which took place in 485 (1092), his son Berkyaruk

(the Very Brilliant One) had scarcely ascended the throne before the flames of discord were kindled amongst the numerous members of the family, and they speedily fell a prey to the generals and the other relations of the deceased prince." Sandjar, who died in 1160, "was almost the only one of all his race who took to heart the decay of their power in their old hereditary dominions, or made any earnest endeavour to arrest it."—A. Vámbéry, *Hist. of Bokhara*, ch. 6.

(Ottoman); A. D. 1240-1326.— **Origin and rise of the modern Turkish power.**—On the final defeat and death, in Kurdistan, of the last Khwarezmian or Carizmanian prince, who was pursued relentlessly by the Mongols of Jengis Khan and his successors, there was dissolved an army which included various Turkish hordes. The fragments of this Khwarezmian force were scattered and played several important parts in the history of the troubled time. "The bolder and more powerful chiefs invaded Syria, and violated the holy sepulchre of Jerusalem; the more humble engaged in the service of Ahaln, Sultan of Iconium, and among these were the obscure fathers of the Ottoman line. They had formerly pitched their tents near the southern bank of the Oxus, in the plains of Mahan and Nesa; and it is somewhat remarkable that the same spot should have produced the first authors of the Partlian and Turkish empires. At the head or in rear of a Carizmanian army, Soliman Shah was drowned in the passage of the Euphrates. His son Orthogru became the soldier and subject of Ahaln, and established at Surgut, on the banks of the Sangar, a camp of four hundred families or tents, whom he governed fifty-two years both in peace and war. He was the father of Tiaman, or Athman, whose Turkish name has been melted into the appellation of the Caliph Othman; and if we describe that pastoral chief as a shepherd and a robber, we must separate from those characters all idea of ignominy and baseness. Othman possessed, and perhaps surpassed, the ordinary virtues of a soldier, and the circumstances of time and place were propitious to his independence and success. The Seljukian dynasty was no more, and the distance and decline of the Mogul Khans soon enfranchised him from the control of a superior. He was situate on the verge of the Greek empire. The Koran sanctified his 'gazi,' or holy war, against the infidels; and their political errors unlocked the passes of Mount Olympus, and invited him to descend into the plains of Bithynia. . . . It was on the 27th of July, in the year 1299 of the Christian era, that Othman first invaded the territory of Nicomedia; and the singular accuracy of the date seems to disclose some foresight of the rapid and destructive growth of the monster. The annals of the twenty-seven years of his reign would exhibit a repetition of the same incursions; and his hereditary troops were multiplied in each campaign by the accession of captives and volunteers. Instead of retreating to the hills, he maintained the

most useful and defensible posts, fortified the towns and castles which he had first pillaged; and renounced the pastoral life for the baths and palaces of his infant capitals. But it was not till Othman was oppressed by age and infirmities that he received the welcome news of the conquest of Prusa, which had been surrendered by famine or treachery to the arms of his son Orchan. . . . From the conquest of Prusa we may date the true era of the Ottoman empire. The lives and possessions of the Christian subjects were redeemed by a tribute or ransom of thirty thousand crowns of gold; and the city, by the labors of Orchan, assumed the aspect of a Mahometan capital."—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 64.—"Osman is the real Turkish name, which has been corrupted into Othman. The descendants of his subjects style themselves Osmanlis, which has in like manner been corrupted into Ottoman."—Dr. W. Smith, *Note to Gibbon, as above*.

A. D. 1326-1359.—Progress of conquests in Asia Minor.—The Janissaries.—"Orchan [the son and successor of Othman] had captured the city of Nicomedia in the first year of his reign (1326); and with the new resources for warfare which the administrative genius of his brother [Alaeddin] placed at his command, he speedily signalled his reign by conquests still more important. The great city of Nice [Nicaea] (second to Constantinople only in the Greek Empire) surrendered to him in 1330. . . . Numerous other advantages were gained over the Greeks; and the Turkish prince of Karasi (the ancient Mysia), who had taken up arms against the Ottomans, was defeated; and his capital city, Berghama (the ancient Pergamus), and his territory, annexed to Orchan's dominions. On the conquest of Karasi, in the year 1336 of our era, nearly the whole of the north-west of Asia Minor was included in the Ottoman Empire; and the four great cities of Brusa, Nicomedia, Nice, and Pergamus had become strongholds of its power. A period of twenty years, without further conquests, and without war, followed the acquisition of Karasi. During this time the Ottoman sovereign was actively occupied in perfecting the civil and military institutions which his brother had introduced; in securing internal order, in founding and endowing mosques and schools, and in the construction of vast public edifices. . . . Orchan died in the year 1359 of our era, at the age of seventy-five, after a reign of thirty-three years, during which the most important civil and military institutions of his nation were founded, and the Crescent was not only advanced over many of the fittest provinces of Asia, but was also planted on the European continent."—Sir E. S. Creasy, *Hist. of the Ottoman Turks*, ch. 2.—"It is with Othman's son Orchan that the Ottoman Empire really begins. He threw off his nominal allegiance to the Sultan [of Iconium], though he still bore only the title of Emir. And in his time the Ottomans first made good their footing in Europe. But while his dominion was still only Asiatic, Orchan began one institution which did more than anything else firmly to establish the Ottoman power. This was the institution of the tribute children. By the law of Mahomet . . . the unbeliever is allowed to purchase life, property, and the exercise of his religion, by the payment of tribute. Earlier Mahometan rulers had been

satisfied with tribute in the ordinary sense. Orchan first demanded a tribute of children. The deepest of wrongs, that which other tyrants did as an occasional outrage, thus became under the Ottomans a settled law. A fixed proportion of the strongest and most promising boys among the conquered Christian nations were carried off for the service of the Ottoman princes. They were brought up in the Mahometan faith, and were employed in civil or military functions, according to their capacity. Out of them was formed the famous force of the Janissaries, the new soldiers who, for three centuries, as long as they were levied in this way, formed the strength of the Ottoman armies. These children, torn from their homes and cut off from every domestic and national tie, knew only the religion and the service into which they were forced, and formed a body of troops such as no other power, Christian or Mahometan, could command. . . . While the force founded by Orchan lasted in its first shape, the Ottoman armies were irresistible. But all this shews how far the Ottomans were from being a national power. Their victories were won by soldiers who were really of the blood of the Greeks, Slaves, and other conquered nations. In the same way, while the Ottoman power was strongest, the chief posts of the Empire, civil and military, were constantly held, not by native Turks, but by Christian renegades of all nations. The Ottoman power in short was the power, not of a nation, but simply of an army."—E. A. Freeman, *The Ottoman Power in Europe*, ch. 4.—"The name of Yeni Tscheri, which means 'new troops,' and which European writers have turned into Janissaries, was given to Orchan's young corps by the Dervish Hadji Beytarch."—Sir E. S. Creasy, *Hist. of the Ottoman Turks*, ch. 2.

A. D. 1360-1389.—The conquests in Europe of Amurath I.—"The dissensions of the elder and younger Andronicus [Emperors at Constantinople, the younger—a grandson—in revolt and the elder finally deposed, A. D. 1320-1328], and the mistaken policy of Cantacuzene [Great Domestic of the empire, regent, after the death of Andronicus the younger, A. D. 1341, and then usurper of the throne from 1341 until 1355], first led to the introduction of the Turks into Europe; and the subsequent marriage of Orchan with a Grecian princess was acceded to by the Byzantine court as a faint bond of peace between a dreaded conqueror and a crouching state. The expectation of tranquillity was, however, fatally blasted; and, in the last quarrel of Cantacuzene with his pupil [John Paleologus, the youthful son of Andronicus the younger, who was deprived of his crown for fourteen years by Cantacuzene], the disastrous ambition of the former opened the path of Solyman, the son of Orchan, across the Hellespont [A. D. 1356], and laid the northern provinces of the kingdom open to the temporary ravages of the barbarians, thus inflicting a lasting and irremediable injury on the liberties of Christendom. The exploits of Solyman, however, led to no other permanent results than the example which they left to the ambition of Amurath I., who, amongst his earliest achievements, led his victorious army across the Hellespont [A. D. 1360], ravaged the extended district from Mount Hæmus to the Straits, and, taking possession of Adrianople [A. D. 1361], made it the first seat of his royalty, and the first

shrine of Mahomedanism in Europe. His conquests had now drawn a circle round the encircled dominions of the Emperor; and the submission of John Palæologus, together with his political views in more distant quarters, alone prevented Amurath from contracting the circumference to the centre, and annihilating the empire of the East, by seating himself on the throne of Byzantium. For the present, he turned his back upon the city, and pursued his course towards the wilds of Bulgaria and Servia."—Sir J. E. Tennent, *Hist. of Modern Greece*, v. 1, ch. 4.—"Hitherto the Turkish victories in Europe had been won over the feeble Greeks; but the Ottomans now came in contact with the far more warlike Slavonic tribes, which had founded kingdoms and principalities in Servia and Bosnia. Amurath also menaced the frontiers of Wallachia and Hungary. The Roman See, once so energetic in exciting the early crusades, had disregarded the progress of the new Mahometan power, so long as the heretical Greeks were the only sufferers beneath its arms. But Hungary, a country that professed spiritual obedience to the Pope, a branch of Latin Christendom, was now in peril; and Pope Urban V. preached up a crusade against the infidel Turks. The King of Hungary, the princes of Servia, of Bosnia and Wallachia, leagued together to drive the Ottomans out of Europe; and their forces marched towards Adrianople until they crossed the river Marizza at a point not more than two days' journey from that city." A single battle, fought on the Marizza, in 1363, broke this first Slavonic league against the Turks, and Amurath proceeded in his acquisition of towns and territory from the Servians and Bulgarians until 1376, when both people purchased a short peace, the former by paying a heavy annual tribute of money and soldiers, the latter by giving their king's daughter to the Turk. The peace thus secured only gave an opportunity to the Slavic nations to organize one more great attempt to cast out their aggressive and dangerous neighbor. Servia led the movement, and was joined in it by the Bulgarians, the Bosnians, and the Skipetars of Albania, with aid likewise promised and rendered from Hungary, Wallachia, and Poland. But nothing prospered in the undertaking; it served the ambition of the Turks and quickened their conquest of southeastern Europe. Amurath fell upon Bulgaria first (A. D. 1389), broke down all resistance, dethroned the king and annexed his state to the Ottoman dominions. A few weeks later in the same year, on the 27th of August, 1389, the great and famous battle of Kossova was fought, which laid the heavy yoke of Turkish tyranny upon the necks of the Servian people, and the memory of which has been embalmed in their literature. Amurath was assassinated in the hour of victory by a despairing Servian nobleman, but lived long enough to command the execution of the captive Servian king.—Sir E. S. Creasy, *Hist. of the Ottoman Turks*, ch. 3.

A. D. 1389-1403.—The conquests of Bajazet.—The Emir becomes Sultan.—His overthrow and capture by Timour.—"The character of Bajazet, the son and successor of Amurath,

is strongly expressed in his surname of Ilderim, or the Lightning; and he might glory in an epithet which was drawn from the fiery energy of his soul and the rapidity of his destructive march. In the fourteen years of his reign he incessantly moved at the head of his armies, from Boursa to Adrianople, from the Danube to the Euphrates. . . . No sooner had he imposed a regular form of servitude on the Servians and Bulgarians than he passed the Danube to seek new enemies and new subjects in the heart of Moldavia. Whatever yet adhered to the Greek empire in Thrace, Macedonia, and Thessaly, acknowledged a Turkish master. . . . The humble title of emir was no longer suitable to the Ottoman greatness; and Bajazet condescended to accept a patent of sultan from the caliphs who served in Egypt under the yoke of the Mamelukes—a last and frivolous homage that was yielded by force to opinion, by the Turkish conquerors to the House of Abbas and the successors of the Arabian prophet. The ambition of the sultan was inflamed by the obligation of deserving this august title; and he turned his arms against the kingdom of Hungary, the perpetual theatre of the Turkish victories and defeats. Sigismund, the Hungarian king, was the son and brother of the emperors of the West; his cause was that of Europe and the Church; and on the report of his danger, the bravest knights of France and Germany were eager to march under his standard and that of the cross. In the battle of Nicopolis [September 28, A. D. 1396], Bajazet defeated a confederate army of 100,000 Christians, who had proudly boasted that if the sky should fall they could uphold it on their lances. The far greater part were slain or driven into the Danube; and Sigismund, escaping to Constantinople by the river and the Black Sea, returned, after a long circuit, to his exhausted kingdom. In the pride of victory, Bajazet threatened that he would besiege Buda; that he would subdue the adjacent countries of Germany and Italy; and that he would feel his horse with a bushel of oats on the altar of St. Peter at Rome. His progress was checked, not by the miraculous interposition of the apostle, not by a crusade of the Christian powers, but by a long and painful fit of the gout. . . . At length the ambition of the victorious sultan pointed to the conquest of Constantinople; but he listened to the advice of his vizir, who represented that such an enterprise might unite the powers of Christendom in a second and more formidable crusade. His epistle to the emperor was conceived in these words: 'By the divine clemency, our invincible scimitar has reduced to our obedience almost all Asia, with many and large countries in Europe, excepting only the city of Constantinople; for beyond the walls thou hast nothing left. Resign that city; stipulate thy reward; or tremble for thyself and thy unhappy people at the consequences of a rash refusal.' But his ambassadors were instructed to soften their tone, and to propose a treaty, which was subscribed with submission and gratitude. A truce of ten years was purchased by an annual tribute of thirty thousand crowns of gold." The truce was soon broken by Bajazet, who found a pretext for again demanding the surrender of Constantinople. He had established his blockade of the city and would surely have won it by famine or assault if Timour's invasion of Asia Minor (A. D.

1402) had not summarily interrupted his plans and ended his career. Defeated at the battle of Angora and taken prisoner by the Tartar conqueror, he died a few months later — whether caged like a beast or held in more honorable captivity is a question in some dispute. — E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 64-65. — See, also, TIMOUR.

A. D. 1393.—Wallachian capitulation. See BALKAN AND DANUBIAN STATES: 14-18TH CENTURIES (ROMANIA, ETC.).

A. D. 1402-1451.—Prostration and recovery. — Conquests of Mahomet and Amurath II. — It is one of the marvels of history that the Ottoman empire, broken and dismembered by Timour, recovered its vigor and re-entered upon a long career. After the fall of Bajazet, three fragments of his dominions were held by three of his surviving sons, while other portions were transferred by Timour to princes of the old Seljuk house. Civil war broke out between the brothers of the Ottoman race; it resulted in the triumph of Mahomet, the youngest (A. D. 1413), who reunited a large part of the dominions of his father. He reigned but eight years, which were years of peace for the Greeks, with whom Mahomet maintained a friendly intercourse. His son, Amurath II., was provoked to renew the state of war, and a formidable attack upon Constantinople was made in August, 1422. The first assault failed, and disturbances at home recalled Amurath before he could repeat it. The Roman capital was relieved for thirty years; but its trembling emperor paid tribute to the sultan and yielded most of the few cities that remained to him outside of his capital. The Ottoman power had become threatening again in Europe, and Servians, Bosnians, Albanians, Wallachians, Hungarians, and Poles now struck hands together in a combination, once more, to oppose it. "A severe struggle followed, which after threatening the utter expulsion of the house of Othman from Europe, confirmed for centuries its dominion in that continent, and wrought the heavier subjugation of those who were then seeking to release themselves from its superiority. In 1442 Amurath was repulsed from Belgrade; and his generals, who were besieging Hermannstadt, in Transylvania, met with a still more disastrous reverse. It was at Hermannstadt that the renowned Hunyades first appeared in the wars between the Hungarians and the Turks. He was the illegitimate son of Sigismund, King of Hungary, and the fair Elizabeth Morsiney. In his early youth he gained distinction in the wars of Italy; and Comines, in his memoirs, celebrates him under the name of the White Knight of Wallachia. After some campaigns in Western Christendom, Hunyades returned to protect his native country against the Ottomans." At Hermannstadt, and again at Vasag, Hunyades defeated the Turks with great slaughter and rivaled them in the ferocity with which his prisoners were treated. His fame now gave a great impulse to the Crusade against the Turks which Pope Eugenius had preached, and drew volunteers to his standard from all the nations of the West. In 1443, Hunyades led a splendid and powerful army across the Danube near Semendra, drove the Turks beyond the Balkans, forced the passage of the mountains with a boldness and a skill that is compared with the exploits of Hannibal and Napoleon, and ex-

torted from the Sultan a treaty (of Szegeddin, July 12, 1444) which rescued a large Christian territory from the Moslem yoke. "The Sultan resigned all claims upon Servia and recognised George Brankovich as its independent sovereign. Wallachia was given up to Hungary." But the peace which this treaty secured was brief; Christian perfidy destroyed it, and the penalty was paid by whole centuries of suffering and shame for the Christians of the Danubian states. "Within a month from the signature of the treaty of Szegeddin the Pope and the Greek Emperor had persuaded the King of Hungary and his councillors to take an oath to break the oath which had been pledged to the Sultan. They represented that the confessed weakness of the Ottomans, and the retirement of Amurath [who had placed his son Mahomet on the throne and withdrawn from the cares of sovereignty] to Asia, gave an opportunity for eradicating the Turks from Europe which ought to be fully employed. The Cardinal Julian [legate of the Pope] pacified the conscientious misgivings which young King Ladislaus expressed, by his spiritual authority in giving dispensation and absolution in the Pope's name. . . . On the 1st of Sept., the King, the legate, and Hunyades, marched against the surprised and unprepared Turks with an army of 10,000 Poles and Hungarians. The temerity which made them expect to destroy the Turkish power in Europe with so slight a force was equal to the dishonesty of their enterprise." They advanced through Bulgaria to the Black Sea, and southward along its coast as far as Varna, which they took. There they were called to account. Amurath had resumed the sceptre, put himself at the head of 40,000 of the best warriors of Islam and on the 10th November he dashed them upon the Christian forces at Varna, with the broken treaty borne like a banner at their head. His victory was overwhelming. Cardinal Julian and the King of Hungary were both among the slain. Hunyades fled with a little remnant of followers and escaped to try fortune in other fields. "This overthrow did not bring immediate ruin upon Hungary, but it was fatal to the Schavonic neighbours of the Ottomans, who had joined the Hungarian King against them. Servia and Bosnia were thoroughly reconquered by the Mahometans; and the ruin of these Christian nations, which adhered to the Greek Church, was accelerated by the religious intolerance with which they were treated by their fellow Christians of Hungary and Poland, who obeyed the Pope and hated the Greek Church as heretical. . . . The bigotry of the Church of Rome in preaching up a crusade against the sect of the Patarenes, which was extensively spread in that country [Bosnia], caused the speedy and complete annexation of an important frontier province to the Ottoman Empire. Seventy Bosnia fortresses are said to have opened their gates to the Turks within eight days. The royal house of Bosnia was annihilated, and many of her chief nobles embraced Mahometanism to avoid a similar doom." After once more attempting to escape from the throne, and being recalled by domestic disturbances, Amurath reigned yet six years, extending his dominions in the Peloponnesus, defeating once more his old antagonists, Hunyades, who invaded Servia (1448), but being successfully defied in Albania by the heroic Scanderbeg. He died in

1451.—Sir E. S. Creasy, *Hist. of the Ottoman Turks*, ch. 4.

A. D. 1451-1481.—Conquest of Constantinople.—The Empire organized and perfected by Mahomet II.—Mahomet II., son of Amurath II., “finished the work of his predecessors; he made the Ottoman power in Europe what it has been ever since. He gave a systematic form to the customs of his house and to the dominion which he had won. His first act was the murder of his infant brother, and he made the murder of brothers a standing law of his Empire. He overthrew the last remnants of independent Roman rule, of independent Greek nationality, and he fixed the relations which the Greek part of his subjects were to bear both towards their Turkish masters and towards their Christian fellow-subjects. He made the northern and western frontiers of his Empire nearly what they still remain. The Ottoman Empire, in short, as our age has to deal with it, is, before all things, the work of Mahomet the Conqueror. The prince whose throne was fixed in the New Rome held altogether another place from even the mightiest of his predecessors. Mahomet had reigned two years, he had lived twenty-three, on the memorable day, May 20th 1453, when the Turks entered the city of the Cæsars and when the last Emperor, Constantine, died in the breach [see CONSTANTINOPLE: A. D. 1453]. . . . And now that the Imperial city was at last taken, Mahomet seemed to make it his policy both to gather in whatever remained unconquered, and to bring most of the states which had hitherto been tributary under his direct rule. Greece itself, though it had been often ravaged by the Turks, had not been added to their dominions. The Emperors had, in the very last days of the Empire before the fall of Constantinople, recovered all Peloponnesos, except some points which were held by Venice. Frank Dukes also reigned at Athens, and another small duchy lingered on in the islands of Lenkas and Kephallenia and on the coasts of Akarnania. The Turkish conquest of the mainland, again saving the Venetian points, was completed by the year 1460, but the two western Islands were not taken until 1479. Eubœa was conquered in 1471. . . . The Empire of Trebizond was conquered in 1461, and the island of Lesbos or Mitylene in 1462. There was now no independent Greek state left. Crete, Corfu, and some smaller islands and points of coast, were held by Venice, and some of the islands of the Ægean were still ruled by Frank princes and by the Knights of Saint John. But, after the fall of Trebizond, there was no longer any independent Greek state anywhere, and the part of the Greek nation which was under Christian rulers of any kind was now far smaller than the part which was under the Turk. While the Greeks were thus wholly subdued, the Slaves fared no better. In 1459 Servia was reduced from a tributary principality to an Ottoman province, and six years later Bosnia was annexed also. . . . One little fragment of the great Slavonic power in those lands alone remained. The little district of Zeta, a part of the Servian kingdom, was never fully conquered by the Turks. One part of it, the mountain district called Tsermagora or Montenegro, has kept its

independence to our times. Standing as an outpost of freedom and Christendom amid surrounding bondage, the Black Mountain has been often attacked, it has been several times overrun, but it has never been conquered. . . . To the south of them, the Christian Albanians held out for a long time under their famous chief George Castriot or Scanderbeg. After his death in 1459, they also came under the yoke. These conquests of Mahomet gave the Ottoman dominion in Europe nearly the same extent which it has now. His victories had been great, but they were balanced by some defeats. The conquest of Servia and Bosnia opened the way to endless inroads into Hungary, South-eastern Germany and North-eastern Italy. But as yet these lands were merely ravaged, and the Turkish power met with some reverses. In 1456 Belgrade was saved by the last victory of Huniades [see HUNGARY: A. D. 1442-1456], and this time Mahomet the Conqueror had to dec. In another part of Europe, if in those days it is to be counted for Europe, Mahomet won the Genoese possessions in the peninsula of Crimea [A. D. 1475], and the Tartar Khans who ruled in that peninsula and the neighbouring lands became vassals of the Sultan. . . . The best years of Mahomet's reign were marked by a great failure and a great success. He failed to take Rhodes [A. D. 1480], which belonged to the Knights of Saint John; but his troops suddenly seized on Otranto in Southern Italy. Had this post been kept, Italy might have fallen as well as Greece; but the Conqueror died the next year, and Otranto was won back.”—E. A. Freeman, *The Ottoman Power in Europe*, ch. 4.

A. D. 1481-1520.—The sad story of Prince Jem and the Christians.—Massacre of the Shiites.—Selim's conquests in Persia, Syria and Egypt.—The Sultan becomes the successor of the Khalifs, the chief of Islam.—“The long reign of Bayezid [or Bajazet] II. (1481-1512) which surpassed that of his father and grandfather, so that the three together nearly completed a century, was marked by a general lethargy and incapacity on the part of the Turkish Government. . . . Family dissensions were indeed the leading incidents of Bayezid's reign, and for many years he was kept in a state of anxious uncertainty by the ingenious intrigues of the Christian Powers concerning the custody of his brother, the unfortunate Prince Jem. The adventures of Prince Jem (the name is short for Jemshid, but in Europe it has been written Zizim) cast a very unpleasant light upon the honour of the Christians of his time, and especially upon the Knights of Rhodes. Of the two sons of Mohammed II. Jem was undoubtedly the one who was by nature fitted to be his successor. . . . Jem however, was not the first to hear of his father's death, and a year's warfare against his brother ended in his own defeat. The younger prince then sought refuge with the Knights of

Rhodes, who promised to receive him hospitably, and to find him a way to Europe, where he intended to renew his opposition to his brother's authority. D'Aubusson, the Grand Master of Rhodes, was too astute a diplomatist to sacrifice the solid gains that he perceived would accrue to his Order for the sake of a few paltry twinges of conscience; and he had no sooner made sure of Prince Jem's person, and induced him to sign a treaty, by which, in the event of his coming to the throne, the Order was to reap many sterling advantages, than he ingeniously opened negotiations with Sultan Bayezid, with a view to ascertain how much gold that sovereign was willing to pay for the safe custody of his refractory brother. It is only fair to say that Bayezid, who had no particle of cruelty in his nature, did all he could to come to terms with Jem. . . . All negotiation and compromise having proved ineffectual, he listened to the proposals of the crafty Grand Master, and finally agreed to pay him 45,000 ducats a year, so long as he kept Jem under his surveillance. The Knights of St. John possessed many commanderies, and the one they now selected for Jem's entertainment was at Nice, in the south of France. In 1482 he arrived there, wholly unconscious of the plots that were being woven about him. . . . On one pretext or another the knights contrived to keep their prisoner at Nice for several months, and then transferred him to Ronsillon, thence to Puy, and next to Sassenage, where the monotonies of captivity were relieved by the delights of love, which he shared with the daughter of the commandant, the beautiful Philippine Hélène, his lawful spouse being fortunately away in Egypt. . . . Meanwhile Grand Master D'Aubusson was driving a handsome trade in his capacity of jailor. All the potentates of Europe were anxious to obtain possession of the claimant to the Ottoman throne, and were ready to pay large sums in hard cash to enjoy the privilege of using this specially dangerous instrument against the Sultan's peace. D'Aubusson was not averse to taking the money, but he did not wish to give up his captive; and his knightly honour felt no smirch in taking 20,000 ducats from Jem's desolate wife (who probably had not heard of the fair Hélène) as the price of her husband's release, while he held him all the tighter. Of such chivalrous stuff were made the famous knights of Rhodes; and of such men as D'Aubusson the Church made cardinals! A new influence now appeared upon the scene of Jem's captivity. Charles VIII. of France considered that the Grand Master had made enough profit out of the unlucky prince, and the king resolved to work the oracle himself. His plan was to restore Jem to a nominal suzerainty by the aid of Matthias Corvinus, Ferdinand of Naples, and the Pope. He took Jem out of the hands of the knights, and transferred him to the custody of Innocent VIII., who kindly consented to take care of the prince for the sum of 40,000 ducats a year, to be paid by his grateful brother at Constantinople." Innocent's successor, the terrible Borgia, Alexander VI., unsatisfied with this liberal allowance, opened negotiations with Constantinople looking to the payment of some heavy lump sum for summary riddance of poor Jem. But the sinister bargain was interrupted by Charles VIII. of France, who invaded Italy at this juncture, passed through Rome, and took the captive

prince in his train when he went on to Naples. Jem died on the way, and few have doubted that Pope Alexander poisoned him, as he had poisoned many before. "The curious conclusion one draws from the whole melancholy tale is, that there was not apparently a single honest prince in Christendom to take compassion upon the captive." In 1512 Bayezid was deposed by his son Selim, and did not long survive the humiliation. To avoid troubles of the Prince Jem character, Selim slew all his brothers and nephews, eleven in number, making a family solitude around the throne. Then he prepared himself for foreign conquest by exterminating the sometimes troublesome sect of the Shi'as, or Shiites, in his dominions. "A carefully organized system of detectives, whom Selim distributed throughout his Asiatic provinces, revealed the fact that the number of the heretical sect reached the alarming total of 70,000. Selim . . . secretly massed his troops at spots where the heretics chiefly congregated, and at a given signal 40,000 of them were massacred or imprisoned. . . . Having got rid of the enemy within his gates, Selim now proceeded to attack the head of the Shi'as, the great Shah Ismail himself [the founder of the Sunn line of Persian sovereigns, who had lately established his authority over the provinces of Persia]. . . . Selim set forth with an army estimated at over 140,000 men, 80,000 of which were cavalry. . . . After weary and painful marching, the Ottomans forced Ismail to give battle at Chaldiran [or Tabreez—see PERSIA: A. D. 1499-1887]," and defeated him. "The victory of Chaldiran (1514) might have been followed by the conquest of Persia, but the privations which the soldiery had undergone had rendered them unmanageable, and Selim was forced to content himself with the annexation of the important provinces of Kurdistan and Dyarbekr, which are still part of the Turkish Empire; and then turned homewards, to prosecute other schemes of conquest. No peace, however, was concluded between him and the Shah, and a frontier war continued to be waged for many years. During the campaign against Persia, the Turks had been kept in anxiety by the presence on their flanks of the forces of the Mamluk Sultans of Egypt and Syria, whose frontiers now marched with the territory of the Ottomans." Turning his arms against the Mamluks, "Selim set out in 1516 for Syria, and meeting the Mamluk army on the field of Marj Dabik near Aleppo, administered a terrible defeat, in which the aged Sultan El-Ghuri was trampled to death. He found a brave successor in Tuman Bey, but in the interval the Turks had mastered Syria and were advancing to Gaza. Here the Mamluks made another stand, but the generalship of Sinan Pasha was not to be resisted any more than the preponderance of his forces. The final battle was fought at Reydaniya in the neighbourhood of Cairo, in January, 1517. . . . Twenty-five thousand Mamluks lay stark upon the field, and the enemy occupied Cairo. There a succession of street-fights took place." The perfidious Turkish Sultan finally cheated the Mamluks into submission by offering amnesty, and then put them to the sword, giving the city up to massacre. "Tuman Bey, after some further resistance, was captured and executed, and Egypt became a Turkish province. . . . Sultan Selim returned to Constantinople in 1518, a much more dignified personage than he had set out. By the

conquest of the Mamluk kingdom he had also succeeded to their authority over the sacred cities of Arabia, Mekka and Medina, and in recognition of this position, as well as of his undoubted supremacy among Mohammedan monarchs, he received from the last Abbaside Khalif, who kept a shadowy court at Cairo, the inheritance of the great pontiffs of Baghdad. The 'faidéant' Khalif was induced to make over to the real sovereign the spiritual authority which he still affected to exercise, and with it the symbols of his office, the standard and cloak of the Prophet Mohammed. Selim now became not only the visible chief of the Mohammedan State throughout the wide dominions subdued to his sway, but also the revered head of the religion of Islam, wheresoever it was practised in its orthodox form. The heretical Shias of Persia might reject his claim, but in India, in all parts of Asia and Africa, where the traditional Khalifate was recognized, the Ottoman Sultan henceforth was the supreme head of the church, the successor to the spiritual prestige of the long line of the Khalifs. How far this new title commands the homage of the orthodox Moslem world is a matter of dispute; but there can be no doubt that it has always added, and still adds, a real and important authority to the nets and proclamations of the Ottoman Sultan." Selim died in 1520, and was succeeded by his son Suleyman, or Solyman, who acquired the name of "the Magnificent."—S. Lane-Poole, *Story of Turkey*, ch. 8-9.

A. D. 1498-1502.—War with the Venetians.—"During the first 17 years of Bajazet's reign, the peace between the Venetians and the Porte, though occasionally menaced, remained on the whole undisturbed. The Venetians complained of the Turkish incursions, and the definitive occupation of Montenegro, while the Porte, on its side, was jealous because the Republic had reduced the Duke of Naxos to dependence, and obtained possession of Cyprus (1489). At last, in 1498, the Turks, after making great naval preparations, suddenly arrested all the Venetian residents at Constantinople, and in the following year seized Lepanto, which surrendered without striking a blow (August 1499). Soon after, a body of 10,000 Turks crossed the Isonzo, carrying fire and desolation almost to the lagoons of Venice. In August 1500, Modon was taken by assault. . . . Navrino and Koron surrendered soon after, but towards the close of the year the Venetians were more successful. They captured Ægina, devastated and partly occupied Mytilene, Tenedos, and Samothrace, and with the help of a Spanish squadron, and 7,000 troops, under Gonsalvo de Cordova, reduced the island of Cephalonia. For this service the grateful Venetians rewarded Gonsalvo with a present of 500 tons of Cretan wine, 60,000 pounds of cheese, 266 pounds of wrought silver, and the honorary freedom of their Republic. In 1501 the Venetian fleet was joined by a French, a Papal, and a Spanish squadron, but, through a want of cordiality among the commanders, little was effected. The Turks, however, had not made a better figure; and the Porte, whose attention was at that time distracted by the affairs of Persia, was evidently inclined for peace. The disordered state of the Venetian finances, and the

decay of their commerce through the maritime discoveries of the Portuguese, also disposed them to negotiation; although the sale of indulgences, granted to them by the Pope for this war, is said to have brought more than 700 pounds of gold into their exchequer. The war nevertheless continued through 1502, and the Venetians were tolerably successful, having captured many Turkish ships, and, with the assistance of the French, taken the island of Sta. Maura. But at length a treaty was signed, Dec. 14th, by which Venice was allowed to hold Cephalonia, but restored Sta. Maura, and permitted the Porte to retain its conquests, including the three important fortresses of Modon, Koron, and Navarino."—T. H. Dyer, *Hist. of Modern Europe*, bk. 1, ch. 6 (p. 1).

A. D. 1566-1571.—Reign of Selim II.—War with the Holy League of Spain, Venice and the Pope.—Conquest of Cyprus.—Great defeat at Lepanto.—"In 1566, Solyman the Magnificent closed his long and prosperous reign. His son and successor, Selim II., possessed few of the qualities of his great father. Bred in the Seraglio, he showed the fruits of his education in his indolent way of life, and in the free indulgence of the most licentious appetites. With these effeminate tastes, he inherited the passion for conquest which belonged, not only to his father, but to the whole of his warlike dynasty. . . . The scheme which most occupied the thoughts of Selim was the conquest of Cyprus. . . . Selim, resolved on the acquisition of Cyprus, was not slow in devising a pretext for claiming it from Venice as a part of the Ottoman empire. The republic, though willing to make almost any concession rather than come to a rupture with the colossal power under whose shadow she lay, was not prepared to surrender without a struggle the richest gem in her colonial diadem. War was accordingly declared against her by the Porte, and vast preparations were made for fit-

ting out an armament against Cyprus. Venice, in her turn, showed her usual alacrity in providing for the encounter. She strained her resources to the utmost. In a very short time she equipped a powerful fleet, and took measures to place the fortifications of Cyprus in a proper state of defence. But Venice no longer boasted a navy such as in earlier days had enabled her to humble the pride of Genoa, and to ride the unquestioned mistress of the Mediterranean. The defences of her colonies, moreover, during her long repose had gradually fallen into decay. In her extremity, she turned to the Christian powers of Europe, and besought them to make common cause with her against the enemy of Christendom." The only responses to her appeal came, first, from Pope Pius V., and finally, through his urgency, from Philip II. of Spain. After much deliberation, Philip agreed, in the spring of 1570, to enter into an alliance with Venice and the Pope against the Ottoman Porte. "The ensuing summer, the royal admiral, the famous John Andrew Doria, who was lying with a strong squadron off Sicily, put to sea, by the king's orders. He was soon after reinforced by a few galleys which were furnished by his holiness, and placed under the command of Mark Antonio Colonna. . . . On the last of August, 1570, the combined fleet effected its junction with the Venetians at Candia, and a plan of operations was immediately arranged. It was not long before the startling intelligence arrived that Nicosia, the capital of Cyprus, had been taken and sacked by the Turks, with all the circumstances of cruelty which distinguish wars in which the feeling of national hostility is embittered by religious hatred. The plan was now to be changed. A dispute arose among the commanders as to the course to be pursued. No one had authority enough to enforce compliance with his own opinion. The dispute ended in a rupture. The expedition was abandoned. . . . Still the stout-hearted portiff was not discouraged; nor did the king of Spain draw back. "Venice, on the other hand, soon showed that the Catholic king had good reason for distrusting her fidelity. Appalled by the loss of Nicosia, with her usual inconstancy, she despatched a secret agent to Constantinople, to see if some terms might not yet be made with the sultan." Her overtures, however, were coldly received by the sultan, and she was won back to the alliance. "Towards the close of 1570, the deputies from the three powers met in Rome to arrange the terms of the league." With much difficulty, a treaty was concluded, and ratified in May, 1571, to the effect that the operations of the league "should be directed against the Moors of Tunis, Tripoli, and Algiers, as well as against the Turks; that the contracting parties should furnish 200 galleys, 100 transports and smaller vessels, 50,000 foot and 4,500 horse, with the requisite artillery and munitions; that by April, at farthest, of every succeeding year, a similar force should be held in readiness by the allies for expeditions to the Levant; and that any year in which there was no expedition in common, and either Spain or the republic should desire to engage in one on her own account against the infidel, the other confederates should furnish 50 galleys towards it; that if the enemy should invade the dominions of any of the three powers, the others should be bound to come to the aid of their ally;

that three-sixths of the expenses of the war should be borne by the Catholic king, two-sixths by the republic, the remaining sixth by the Holy See; . . . that each power should appoint a captain-general; that the united voices of the three commanders should regulate the plan of operations; that the execution of this plan should be intrusted to the captain-general of the league, and that this high office should be given to Don John of Austria [natural son of Charles V. and half-brother of Philip II.]. . . . Such were the principal provisions of the famous treaty of the Holy League." The sultan was not dismayed. "He soon got together a powerful fleet, partly drawn from his own dominions, and in part from those of the Moslem powers on the Mediterranean, who acknowledged allegiance to the Porte. The armada was placed under the command of Selim's brother-in-law, the Pacla Piali. . . . Early in the season [of 1571] the combined fleets sailed for the Adriatic, and Piali, after landing and laying waste the territory belonging to the republic, detached Uluch [dey of Algiers] with his squadron to penetrate higher up the gulf. The Algerine, in executing these orders, advanced so near to Venice as to throw the inhabitants of that capital into . . . consternation. . . . Meanwhile the Venetians were pushing forward their own preparations with their wonted alacrity,—indeed with more alacrity than thoroughness. . . . The fleet was placed under the command of Sebastian Veniero, and sailed before midsummer, "or as much of it as was then ready, for the port of Messina, appointed as the place of rendezvous for the allies. Here he was soon joined by Colonna, the papal commander, with the little squadron furnished by his holiness; and the two fleets lay at anchor . . . waiting the arrival of the rest of the confederates and of Don John of Austria." The latter reached Messina on the 25th of August. "The whole number of vessels in the armada, great and small, amounted to something more than 300. Of these full two thirds were 'royal galleys.' Venice alone contributed 106, besides six 'galazzas.' These were ships of enormous bulk. . . . The number of persons on board of the fleet, soldiers and seamen, was estimated at 80,000. . . . The soldiers did not exceed 29,000. . . . On the 16th of September the magnificent armament . . . stood out to sea." Before encountering the Turkish fleet, the allies received tidings "that Famagosta, the second city of Cyprus, had fallen into the hands of the enemy, and this under circumstances of unparalleled perfidy and cruelty. . . . The fall of Famagosta secured the fall of Cyprus, which thus became permanently incorporated in the Ottoman empire." On Sunday, October 7th, the armada of the Turks was found and attacked in the gulf of Lepanto. The terrific fight which ensued lasted only four hours, but those were hours of indescribable destruction and carnage. "It was indeed a sanguinary battle, surpassing in this particular any sea-fight of modern times. The loss fell much the most heavily on the Turks. There is the usual discrepancy about numbers; but it may be safe to estimate their loss at nearly 25,000 slain and 5,000 prisoners. What brought most pleasure to the hearts of the conquerors was the liberation of 12,000 Christian captives, who had been chained to the oar on board the Moslem galleys, and who now came forth, with tears of joy streaming down their

haggard cheeks, to bless their deliverers. The loss of the allies was comparatively small,—less than 8,000." As to the armada of the Turks, "it may almost be said to have been annihilated. Not more than 40 galleys escaped out of near 250 which entered into the action. . . . The news of the victory of Lepanto caused a profound sensation throughout Christendom. . . . In Venice, which might be said to have gained a new lease of existence from the result of the battle, . . . the 7th of October was set apart to be observed for ever as a national anniversary. . . . It is a great error to speak of the victory of Lepanto as a barren victory, which yielded no fruits to those who gained it. True, it did not strip the Turks of an inch of territory. . . . But the loss of reputation—that tower of strength to the conqueror—was not to be estimated."—W. H. Prescott, *Hist. of Philip II.*, bk. 5, ch. 9-11.

A. D. 1572-1573.—Withdrawal of Venice from the Holy League.—Conquest of Tunis by Don John of Austria and its recovery, with Goletta.—"Ulucciali, whom Selim . . . made commander-in-chief of all his naval forces, exerted himself with extraordinary vigour and activity in fitting out a new fleet, to supply the place of that which had been ruined in the battle of Lepanto; and such at this time were the resources of the Turkish empire, that he was ready by the month of April [1572] to leave Constantinople, with more than 200 galleys, besides a great number of other ships. With this fleet he coasted along Negropont, the Morea, and Eplrus; put the maritime towns into a posture of defence; chastised with great severity many of those Christians who had been concerned in the invitation given to Don John [who had just been offered the sovereignty of Albania and Macedonia by the Christians of those countries]; and afterwards took his station at Modon in the Morea, with an intention to watch there the motions of the enemy. He had full leisure to finish all the preparations which he judged to be necessary. The allies disputed long with one another concerning the plan of their future operations," and were also held inactive by the Spanish king's fear of an attack from France. "It was the last day of August before the allies could effectuate a junction of their forces; and it was the middle of September before they came in sight of the enemy. . . . Ulucciali drew out his fleet, as if he intended to offer battle; but no sooner had he made a single discharge of his artillery . . . than he retired under the fortifications of Modon." The allies thought first of besieging Modon, but gave up the project. They then sent Alexander Farnese, prince of Parma—afterwards so famous in the Netherlands—to reduce Navarin; but he had no success and abandoned the siege. The expedition then returned to Messina. The Venetians, dissatisfied with the conduct of the war, now faithlessly negotiated a separate peace with the Turks; but Philip II. of Spain maintained his alliance with the Pope (now Gregory XIII.), and ordered his brother, Don John, to proceed the

next spring to Africa and undertake the reduction of Tunis. Don John obeyed the order, "carrying with him for this purpose a fleet of 2,000 sail, having 20,000 foot on board, besides 400 light horse, 700 pionsers, and a numerous train of heavy artillery. Tunis was at this time in the hands of the Turks, commanded by Heder Basha, whom Selim had lately sent to govern the town and kingdom. Heder, seized with consternation at the approach of the Spanish fleet, left Tunis with his troops and a great number of the inhabitants, and Don John took possession of the place without meeting with the smallest opposition. Philip had instructed his brother, when he sent him on this expedition, to destroy Tunis, and to strengthen the fortifications of the isle and fortress of Goletta. But instead of complying with these instructions, Don John resolved to fortify the town more strongly than ever; and having laid the foundations of a new fort, or citadel, he treated all the inhabitants who remained with lenity and indulgence; and engaged many of those who had fled to return and submit to the Spanish government; after which he carried back his fleet to Sicily." It is believed that Don John had conceived ambitious hopes of a kingdom on the African border of the Mediterranean. "In the summer following [1573], Selim sent Ulucciali against Tunis, with a fleet consisting of 300 ships, having about 40,000 troops on board, under the command of his son-in-law, Sinan Basha. The new fort which Don John had begun to build was not yet complete. Nor was the garrison which he had left strong enough to hold out long against so great a force." Before Don John could reassemble a fleet with which to make his way to the protection of his African conquest, both Tunis and Goletta were carried by assault, and passed again into the possession of the Turks and their Moorish vassals. —R. Watson, *Hist. of Philip II.*, bk. 9.

A. D. 1572-1623.—Beginning of the decline of the Ottoman power.—"The conquest of Cyprus was the last great exploit which ever added materially to the dominions of the Porte; the battle of Lepanto was the final blow which destroyed its naval superiority. The days of greatness had gone by. The kingdoms of the West were developing their strength, and had learnt the policy of union and of peace among themselves. Their armies had acquired the discipline and had learnt the lessons in which the Ottomans had shown so formidable an example; and their navy rode triumphant on the seas. The Empire, no longer in the hands of Charles V., with foreign interests to absorb its power, could bestow an undivided strength upon its own affairs; and the Emperor Ferdinand was looking forward with some hope to an incorporation of Hungary, which should end the weakness, and ensure the safety, of his eastern frontier. As the pre-eminence of the Porte, however, and the dread of it declined, a wider intercourse for her with Europe began. . . . Slowly the Sultans were beginning to take part in the schemes and combinations of the Christian Powers, from which they had hitherto so contemptuously stood aloof. Five reigns succeeded to that of Selim [the Son, son of Solyman the Magnificent], during which the progress of decline continued marked. The indolence of Amurath III. [1574-

1595], the incapacity of Mahomet III. [1595-1603], the inexperience of Achemet I. [1603-1617], the imprudence of Othman II. [1618-1622], and the imbecility of Mustapha [1617-1618, and 1622-1623], contributed to bring the Ottoman Empire into a condition of anarchy and weakness. During the reign of Amurath hostilities with Austria were renewed, and successive losses testified to the feeble state of the Ottoman arms."—C. F. Johnstone, *Historical Abstracts*, ch. 3.

A. D. 1623-1640.—War with Persia.—Siege and capture of Bagdad.—Horrible massacre of the inhabitants.—During the first twelve years of the reign of Amurath IV. [1623-1635], the Ottoman Empire had been occupied with active hostilities in different parts of Europe, and especially with Poland, Germany, and the maritime powers of the Mediterranean. . . . In the east, however, great losses had been sustained. Shah Abbas, a sovereign well entitled to the epithet "Great," had repossessed himself of Diarbekr, Bagdad [1623], the district of the Euphrates, with Kourdistan; and, on the north, he had regained Armenia, and a considerable part of Anatolia. The Sultan therefore resolved to undertake an expedition to recover the territories thus taken from him, and to this he was encouraged by the death of his formidable foe the Persian monarch. Amurath marched from his capital early in 1625, to superintend the operations of the campaign. . . . In passing through Asia, he took care personally to examine into the conduct of his various Pashas, and wherever it was requisite he subjected them to a severe punishment. One of them, the Pasha of Erzeroum, was put to death. Having at that city reviewed his army, he found them to amount to 200,000 men, and as his first object was the seizure of Armenia, the key of the Persian provinces, he besieged Erivan, and notwithstanding a vigorous defence, the fortress in a few days surrendered. Tauris and the surrounding provinces speedily fell into his hands, and Amurath returned in the winter to Constantinople, entering the city in great triumph. The affairs of Europe were in such a state of confusion, that it was several years ere he again appeared in the east, the scene of so many of his victories. The Khan of Tartary threw off his allegiance, the Polish serfs appeared suddenly on the Caspian shores, and, joining a body of Russians, attacked and carried the fortress of Azof. . . . The European war, which at this time occurred, rendered it unnecessary for the Sultan to entertain any serious apprehension from his enemies in the west, who were sufficiently occupied with their own affairs. He therefore directed his attention to Persia, resolved to subjugate that country, and to seize upon Bagdad. To this end his preparations were proportionally great. An immense army was collected on the Asiatic side of the Bosphorus. This mighty host numbered more than 300,000 armed men, and was accompanied by a numerous array of miners, as well as artillery. And after having consulted an astrologer, Amu-

raht embarked amid all the display which Asiatic pomp could furnish, and directed his progress toward Persia. After a successful march, this immense army arrived at Bagdad. The city was strongly fortified, and defended by a resolute army of 80,000 men. The Shah, however, was absent in the northern part of his dominions, which had been threatened by an invasion from India, under Shah Jehan, father of the celebrated Aurungzebe. Bagdad, therefore, was left to its own resources. The operations of the siege began in October 1638. . . . The besieged made repeated sallies, with a force of five or six thousand men at a time, who, on retiring, were succeeded by a similar number, and thus the losses of the Ottoman army were sometimes very great. The 200 great guns, however, which played upon the ramparts, at length made a wide opening in the walls, and after five days' fighting in the breach thus made, where 'the slain lay in immense multitudes, and the blood was stagnated like a pool to wade through,' the city was taken. Quarter was given to 24,000 of the defenders, who remained alive, on condition that they would lay down their arms. But as soon as they had done so, the Sultan perfidiously issued orders to the Janizaries, and the work of butchery commenced, and was carried on by torch-light during the night on which the city was taken, and an indiscriminate slaughter took place, neither youth, nor age, nor sex being spared by the ruthless conqueror and his merciless soldiers. . . . In the morning of the 23d of December the Sultan marched into the city, passing with his army over the innumerable bodies of the unfortunate Persians, whose gallant defence merited a better fate. Some 15,000 women, children and old men were all that remained of the inhabitants, who, but a day or two before, filled every part of the magnificent capital. . . . The capture of Bagdad closed the military career of the Sultan."—R. W. Fraser, *Turkey, Ancient and Modern*, ch. 17.—"A peace with Persia, on the basis of that which Solymen the Great had granted in 1555, was the speedy result of Amurath's victories (15th September, 1639). Erivan was restored by the Porte; but the possession of Bagdad and the adjacent territory by the Ottomans was solemnly sanctioned and confirmed. Eighty years passed away before Turkey was again obliged to struggle against her old and obstinate enemy on the line of the Euphrates. . . . Amurath died at the age of 28, on the 9th of February, 1640."—Sir E. S. Creasy, *Hist. of the Ottoman Turks*, ch. 13.

A. D. 1625-1626.—War in Hungary. See HUNGARY: A. D. 1600-1600.

A. D. 1640.—Accession of Ibrahim.

A. D. 1645-1669.—The war of Candia.—Conquest of Crete.—"The Turks attacked the island [of Crete] in 1645, and the war went on till 1669, when Crete was lost. This is called the war of Candia, from the long siege of the town of Candia, which was most gallantly defended by the Venetians, with the help of many volunteers from Western Europe. It must be remembered that, though the island has sometimes got to be called Candia, from the town of Candia and its memorable siege, yet the island itself has never changed its name, but has always been called Crete both by Greeks and Turks."—E. A. Freeman, *The Ottoman Power in Europe*, p. 145.

—“The war which cost the republic of Venice the island of Crete owed its origin to the incessant irritation caused by the Western corsairs in the Archipelago. Some strong measures adopted by the Venetians to suppress the piracies committed by Turkish and Barbary corsairs in the Adriatic, created much dissatisfaction on the part of the Othoman government, which looked chiefly to the Mohammedan corsairs as a protection against the Christian corsairs in the Levant, and considered it the duty of the Venetians to suppress the piracies of these Christians. The Porte at last resolved to seek a profitable revenge, and a pretext soon presented itself. In 1644 some Maltese galleys made a prize which offended the personal feelings of the reigning sultan, Ibrahim. . . . As he feared to attack Malta, he resolved to make the Venetians responsible for the shelter which Crete had afforded to the corsairs. The Porte affected to consider Venice as a tributary State, which was bound to keep the Archipelago free from Christian corsairs, in return for the great commercial privileges it enjoyed in the Othoman empire. Immediate preparations were made for attacking Crete, but the project was concealed from the Venetian senate, under the pretence of directing the expedition against Malta. . . . In the month of June 1645, the Othoman army landed before Canea, which capitulated on the 17th of August. This treacherous commencement of the war authorised the Christian powers to dispense with all the formalities of international law in lending assistance to the Venetians during the celebrated War of Candia, which lasted nearly 25 years. During this long struggle the Venetians generally maintained the superiority at sea, but they were unable to prevent the Othoman navy, whenever it exerted its full force, from throwing in supplies of fresh troops and ample stores, by which the Othoman army was enabled to command the whole island, and kept Candia, and the other fortresses in the hands of the republic, either blockaded or besieged. The Greeks generally favoured the Turks, who encouraged them to cultivate their lands by purchasing the produce at a liberal price, for the use of the army. . . . The squadrons of the republic often ravaged the coasts of the Othoman empire, and on one occasion they carried off about 5,000 slaves from the coast of the Morea, between Patras and Coron. In the year 1656, after Mocenigo's great victory at the Dardanelles, they took possession of the islands of Tenedos and Lemnos, but they were driven from these conquests by the Othoman fleet in the following year. At the end of the year 1666, the grand vizier, Achmet Kueprily, one of the greatest ministers of the Othoman empire, took the command of the siege of Candia. The whole naval force of Venice, and numerous bands of French and Italian volunteers, attempted to force the grand vizier to raise the siege; but the skill of the Italian engineers, the valour of the French nobles, and the determined perseverance of Morosini, were vain against the strict discipline and steady valour of the Othoman troops. The works of the besiegers were pushed forward by the labours of a numerous body of Greek pioneers, and the fire of the powerful batteries at last rendered the place untenable. At this crisis Morosini proved himself a daring statesman and a sincere patriot. When he found that he must surrender the city, he re-

solved to make his capitulation the means of purchasing peace for the republic. . . . On the 27th September 1669, Achmet Kueprily received the keys of Candia, and the republic of Venice resigned all right to the island of Crete, but retained possession of the three insular fortresses of Karubusa, Sudra, and Spinalonga, with their valuable ports. No fortress is said to have cost so much blood and treasure, both to the besiegers and the defenders, as Candia; yet the Greeks, in whose territory it was situated, and who could have furnished an army from the inhabitants of Crete sufficiently numerous to have decided the issue of the contest, were the people on the shores of the Mediterranean who took least part in this memorable war. So utterly destitute of all national feeling was the Hellenic race at this period.”—G. Finlay, *Hist. of Greece under Othoman and Venetian Domination*, ch. 2.

A. D. 1684-1696.—War with the Holy League.—Expulsion from Hungary.—Venetian conquests in Greece.—Revolution at Constantinople.—Accession of Solyman II.—Czar Peter's capture of Azov.—The first Russian acquisition on the Black Sea.—In 1684, “a league against the Turks, under the protection of the Pope, and thence called the Holy League, was formed by the Emperor, the King of Poland, and the Republic of Venice; and it was resolved to procure, if possible, the accession to it of the Czar of Muscovy. The Venetians were induced to join the league by the hope of recovering their former possessions, and declared war against the Sultan, Mahomet IV., July 15th. The war which ensued, now called the Holy War, lasted till the Peace of Carlowitz in 1699. Venice in this war put forth a strength that was little expected from that declining state. Many thousand Germans were enrolled in her army, commanded by Morosini, and by Count Königsmark, a Swede. The Austrians pursued the campaign in Hungary with success [steadily expelling the Turks—see HUNGARY: A. D. 1683-1699]. . . . While the war in Hungary had been conducted by the Emperor with such eminent success, the King of Poland had made only some fruitless attempts upon Moldavia. The Czar of Muscovy, Ivan Alexiowitsch, who, after settling some disputes about boundaries with the King of Poland, had joined the Holy League in 1686, did not fare much better. All the attempts of the Russians to penetrate into the Crimen were

frustrated by the Tartars. The Venetians, on the other hand, had made some splendid conquests. St Maura, Koron, the mountain tract of Maina, Navarino, Modon, Argos, Napoli di Romania, fell successively into their hands. The year 1687 especially was almost as fatal to the Turks in their war with Venice as in that with Hungary. In this year the Venetians took Patras, the castles at the entrance of the bay of Lepanto, Lepanto itself, all the northern coast of the Morea, Corinth, and Athens. Athens had been abandoned with the exception of the acropolis or citadel; and it was in this siege that one of the Venetian bombs fell into the Parthenon, which had been converted by the Turks into a powder magazine, and destroyed the greater part of those magnificent remains of classical antiquity. The acropolis surrendered September 29th. The fall of Athens, added to the disastrous news from Hungary, excited the greatest consternation and discontent at Constantinople, and brought about a revolution which deposed the sultan, raising his brother Solyman to the throne (1687) in his place. "By the capture of Malvasia in 1690, the Venetians completed the conquest of the Morea. The Isle of Chios, taken in 1694, was again lost the following year; but in Dalmatia and Albania the Venetian Republic made many permanent conquests, from the mountains of Montenegro to the borders of Croatia and the banks of the Unna. The operations of the Poles in the Turkish war were insignificant; but in July 1696, the Russians, under the Czar Peter, after many long and fruitless attempts, at length succeeded in taking Azov, at the mouth of the Don; a most important conquest as securing for them the entry into the Black Sea. It was the fall of this place, combined with the defeat at Zenta [in Hungary], that chiefly induced the Porte to enter into negotiation for a peace."—T. H. Dyer, *Hist. of Modern Europe*, bk. 5, ch. 4 (v. 3).

A. D. 1714-1718.—War with Venice and Austria.—Recovery of the Morea and disasters in Hungary.—The Peace of Passarowitz.—"By the treaty of the Pruth the Russian conquest of Azof had been recovered. This success encouraged the hope of repairing the other losses that had been incurred in the former war. There were two states which had aggrandised themselves at Turkish expense, Austria and Venice. Of these the republic was far the less formidable and was naturally chosen as the first object of attack. A pretext was found in the protection which Venice had given to some Montenegrin fugitives, and in December, 1714, the Porte declared war. Venice was entirely unprepared, and moreover had failed to acquire popularity amongst her Greek subjects. In 1715, the grand vizier, Ali Cumurgil, landed in the Morea, and by the end of the year was master of the whole peninsula. Sailing thence he captured Suda and Spinalonga, the two last fortresses that Venice had been allowed to retain in Crete. The republic naturally appealed to

her old ally, Austria, which had guaranteed her possessions by the treaty of Carlowitz. . . . As the Turk refused to give any satisfaction, war was inevitable. The intervention of Austria saved Venice from ruin. The grand vizier and the main body of the Turkish army had to be employed in Hungary. Still a considerable army and fleet was sent to attack Corfu. The Venetian troops were commanded by count Schulerburg, who had won a great reputation in the northern war, and whose services had been procured for the republic by Eugene. A heroic defence ended successfully, and in August, 1716, the Turks were compelled to raise the siege. 'It was the last glorious military exploit in the annals of the republic, and it was achieved by a German mercenary soldier.' Meanwhile the vizier, with an army of 150,000 men, had laid siege to Peterwardein, the most important of the Austrian border-fortresses in Hungary," and suffered death there, in a great defeat which prince Eugene inflicted upon his army, August 5, 1716. The same year, Eugene took Temesvar, and in August, 1717, he annihilated the Turkish army before Belgrad, capturing the town (see HUNGARY: A. D. 1699-1718). The result was the Treaty of Passarowitz, signed in July, 1718. "Austria retained all its conquests, thus completing its possession of Hungary by acquiring the Banat of Temesvar, and adding to it Belgrad and a strip of Servia. The Turks, on their side, kept the Morea, while Venice was confirmed in its possession of Corfu and Santa Maura, together with the conquests which it had made in 1717 in Albania and Dalmatia."—H. Lodge, *Hist. of Modern Europe*, ch. 16.

A. D. 1768-1774.—War with Russia on behalf of Poland.—Concession of independence to the Crim Tartars.—The Poles, in their struggle with Catherine II. of Russia found a strange champion in the Turk (see POLAND: A. D. 1763-1773). "The Sultan, Mustafa III., was opposed to intervention in Poland; but his hand was forced by a rising in Constantinople, and he declared war against Russia in October, 1768. Hostilities were not commenced till the next year, and they never assumed considerable proportions. The Turkish army was in the last stage of inefficiency, and the Russians, who were wholly unprepared for war, were little better. Galitzin, an incompetent commander, defeated the grand vizier, and took Khoczim after his first attack had been repulsed. His successor, Romanzow, the Russian Turenne, acted with greater energy. He drove the Turks from Moldavia, and in 1770 he occupied Wallachia, won a great victory over vastly superior numbers at Kagul [August 1, 1770], and advanced into the Crimea. At the same time a Russian fleet appeared in the Mediterranean with the avowed intention of restoring Greece to independence. But the admiral, Alexis Orloff, mismanaged the expedition. After encouraging the Greeks to rebel, he left them to the horrors of a Turkish revenge, and sailed towards Constantinople. A victory over the Turkish fleet gave

him possession of Chios and other islands of the Archipelago, but he refused, in spite of his English officers, to attempt the passage of the Dardanelles." In May, 1772, a truce was arranged and a congress assembled to settle the terms of peace. "But the Russian demands were too excessive for the Porte to accept, and the Turks resumed hostilities in 1773. They attempted to recover Moldavia and Wallachia, and for a time they succeeded in forcing the Russians to retreat. Mustafa III. died in December, and was succeeded by his brother Abdul Hamid. In the next year Romanzow won a complete victory, and compelled the grand vizier to accept the terms dictated to him at Kutschuk Kalnairji [July 16, 1774]. The Russians restored the conquered provinces except Azof and Kinburn, only stipulating for toleration for the Christian population. The Tartars of the Crimea and Kuban were declared independent of the Porte, and authorised to elect their own Khan. Russian ships were allowed free passage through the Dardanelles, and the right of sailing in the Turkish seas and on the Danube. Poland, for which the Turks had undertaken the war, was not even mentioned in the treaty."—R. Lodge, *Hist. of Modern Europe*, ch. 20, sect. 11-12.

A. D. 1774.—Accession of Abdul Hamid.

A. D. 1776-1792.—Acquisition of the Crimea by the Russians.—War with Russia and Austria.—The Treaties of Sistova and Jassy.—Territorial concessions.—"A peace of some years followed the treaty of Kalnairji, if, indeed, that can be called peace where the most solemn engagements are perpetually evaded. On that treaty Catherine put what interpretation she pleased. . . . She offered her protection to the voivods of Wallachia and Moldavia, who, in consequence, were her vassals rather than those of the Porte. The Christians on the opposite bank of the Danube were in correspondence with Russia; they were encouraged to revolt, to claim her protection, to oppose the Turkish government in every way. . . . Though the Crimea had been declared independent, she proved that the word had reference merely to the authority of the sultan, and not to hers. . . . More than once . . . the Russian troops appeared in that peninsula. In 1776 they deposed the reigning khan, and elected in his stead another, who was easily induced to solicit the protection of the empress. Turkey threatened to resume the war. . . . At length . . . a new treaty, or rather a modification of the former, was signed at Constantinople in 1779. In it Russia promised to desist from some of her obnoxious pretensions in regard both to the two principalities and the Crimea; but promises cost little. . . . Almost every year brought new complaints and evasions. The foundation of the city of Cherson, about ten leagues from Oztakof, gave peculiar umbrage to the Porte. This place had now a population of 40,000; and the number of warlike vessels constructed in its arsenal were evidently intended to overawe Constantinople. In 1783 another insulting message was sent to the Turkish ministers,—that, let the conduct of the empress in regard to the Crimea be whatever it might, they should not interfere. At the same time she prevailed on the khan whom she had supported,

Sahim Gherei, to make the most outrageous demands from the Porte. The khan's envoy was beheaded. Under the pretext of punishing the Turks for this insult to their 'good ally,' the Russians requested permission to march through his territory. It was immediately granted; but no sooner were they in the peninsula than, instead of proceeding against the Turkish fortifications on the island of Taman, they seized the towns, forced the Mahometan authorities, in the khan's presence, to take the oath of allegiance to the empress, and seized on the revenues of the country. . . . The khan was now forced to resign his authority, and transfer it to Catherine; in return, he received some estates in Russia. A manifesto declared that the Crimea, Kuban, and Taman, were for ever incorporated with the empire. In a document of some length, and of great force, the Turkish ministry exposed to the world the unprincipled encroachments of their neighbours." But Russia responded to it by marshalling three great armies on the frontiers, with an exhibition of formidable fleets in the Euxine and the Baltic. "The Porte, terrified at this menacing display, listened to the advice of France and Austria; and, by another treaty (signed at Constantinople early in 1784) recognised the sovereignty of the empress over the Crimea, Taman, and a great part of Kuban. To the first and last of these places she restored their ancient classical names, Taurida and Caucasus." The treaty of Constantinople did not put an end to Russian aggressions, and in August, 1787, the Sultan declared war. "The campaign was opened with ardour. Knowing that Oztakof would be the earliest object of hostility, the Sultan sent a considerable force to cover it. Another army marched to the Danube, and the vizier in person took the field. . . . On the other hand, Potemkin, the commander-in-chief, having under his orders some of the best generals in the service, hastened to the frontiers, which were soon covered by Russian troops. At the same time the emperor Joseph [according to a prior agreement with Catherine] sent 80,000 Austrians into Moldavia; while a powerful fleet in the Euxine prepared to co-operate with the allies, and another in the Baltic was ready to sail for the Mediterranean. It seemed, indeed, as if Catherine's favourite dream, the elevation of her grandson Constantine to the throne of the Greek empire, was about to be realised. Yet these mighty preparations had no commensurate effect. An attack on Kinburn by 5,000 Turks from the garrison of Oztakof was repulsed [by Suwarof] with heavy loss. But this advantage was counterbalanced by the dispersion of the Euxine fleet in a storm, with the loss of some vessels. These were the chief events of the first campaign. The second, of 1788, was more decisive. Oztakof was taken by assault, and the garrison [with nearly all the inhabitants] put to the sword. At the same time Joseph took Sobuch; and his generals captured Soubitza [Dubitza?]. On the deep, too, fortune was equally adverse to the Turks. Their fleet was defeated in the Euxine. . . . In the following campaigns the superiority of the Russians was maintained. It would have been still more signal but for the jealousy of Potemkin, who could not tolerate success in any of his generals. . . . The death of Abdul Hamet, and the accession of Selim III., made no difference in the character of the war; it was still

adverse to the Turks. Fortress after fortress [including Belgrade, taken by General Loudon for the Austrians] was reduced by the enemy; and, though no general engagement was risked, the loss of men was not the less felt. Suwarof saved the Austrians [in Moldavia, defeating the Turks, who had nearly overwhelmed them, at Fockshant, July 30, and again at Rinnik, September 16, 1789]; Repnin forced the Seraskier, Hussein Pasha, to seek refuge in Ismail; Komenski reduced Galatza; Ackerman fell into the power of the Christians; Bender was forced to capitulate. In the following campaign, the important fortress of Ismail was assailed; the siege was conducted by Suwarof, the most dreaded of all the Russian generals. . . . It was taken . . . though the loss was most severe; and, in revenge, the garrison, with the greater part of the population [nearly 40,000 in all], was put to the sword. Other successes followed, both on the banks of the Caspian, and on those of the Danube. Bohuda was stormed; at Kozlin 100,000 Turks were defeated by Repnin; Varna was menaced; and the road to Adrianople lay open. The grand vizier now sued for peace, which Catherine was ready to grant, on conditions much less onerous than might have been expected." Austria had already made peace with the sultan and withdrawn from the war. By the treaty of Sistova, which the new emperor, Leopold, signed on the 4th of August, 1791, the Austrians relinquished all their conquests except the town of Old Orsova and a small district in Croatia along the left bank of the river Unna. With these slight variations the same boundary between Austria and Turkey was reconstituted in 1791 that had been defined by the treaty of Belgrade in 1739. The treaty of the Turks with Russia was signed at Jassy on the 9th of January 1792. "By that treaty, Catherine retained the whole country between the Bog and the Dniester, but restored all the other conquests which she had made since 1787. This was the last of the hostilities between Russia and the Porte during the reign of this empress; and the peace of Jassy enabled her to carry into effect her designs on Poland."—R. Bell, *Hist. of Russia*, v. 2, ch. 11.

A. D. 1789-1812.—Attempted reforms of Sultan Selim III.—Their fate and his.—Palace revolutions.—Reign of Mahmud II.—War with Russia.—"Abd-ul-Ilamid died on the 7th April, 1789, and was succeeded by his nephew, Selim III (1789-1807). Although Selim had been confined in the Seraglio by his uncle, he had been in other respects well treated. His love of information and his natural talents had induced him to carry on an active correspondence with several servants of his father and his uncle. Their information had, however, in no way satisfied him, and he had commenced a correspondence with Choiseul, the French envoy at Constantinople in 1786, and had also sent his intimate friend Isaac Bey to France, to enquire into the state measures and administrative organization of that country. Selim had also entered into correspondence with Louis XVI, and this lasted till 1789, when the French Revolution broke out simultaneously with Selim's ascension of the throne. All this throws a clear light upon

Selim's eventual exertions to cause reforms, which at last cost him both his throne and his life. His thirst for knowledge leads us to presume that he was not deficient in natural and sound talent. . . . But it was a mistake, that in his pursuit of knowledge, and desire to improve the institutions of Turkey—and the habits and character of its inhabitants—Selim should have applied to France, and to Frenchmen. That country was then on the eve of her great revolution. Theories of all kinds were afloat. . . . Selim would certainly have acted more wisely had he sought help from his own sensible mind; he would have easily perceived the palpable fact, that things which were suited for Christian nations were utterly inapplicable to the rude, uncivilized Turks. . . . Unfortunately he set about the task with very different ideas, and listened to the suggestions of the sciolists who surrounded him. The first thing to which they drew his attention was the formation of a council of state, which not only restricted the power of the Grand Vizier, but that of the Sultan, very materially. The Reis Effendi, Raschid, was the soul of the council, and the boldest of these sciolists; and he had perfect liberty to carry on the work of reform. He set the printing presses again in activity which had been introduced in a preceding reign, sent for French officers, who founded an engineer academy, built arsenals and foundries, and openly stated that he took science under his protection. But his chief care was to form an army after the European fashion, in order by their assistance to gain the mastery over the Janissaries, in whom old customs and traditions found their most zealous guardians. He took several steps, therefore, to call into life the new military organization, called the Nizam Djedid; and as money was required for the purpose, he laid a tax on articles of consumption. This was quite sufficient to cause the popular discontent to burst into a flame. The Ulama declared themselves hostile to the Nizam Djedid, and Pashwan Oglu, Paicha of Widdin, who placed himself at the head of the Janissaries, openly rebelled against the Porte, which could not effect anything to check him, but acquiesced in all that was demanded. The extraordinary conquests of Napoleon diverted attention from Turkey, and instead of seeking to divide the dominions of a weak neighbour, the Great Powers of the Continent were trembling for their own safety. Egypt became the battle field between England and France [see FRANCE: A. D. 1798-1799 (AUGUST-AUGUST), and 1801-1802], and its invasion by Napoleon obliged the Turks to unite with the Allied Powers against France. When the French were expelled from Egypt, that province was restored to Turkey, and peace concluded between the two Powers. Selim, under the influence of General Sebastiani who was then French ambassador at Constantinople, signed [seized?] what was considered by him a favourable opportunity for renewing the war with Russia [see below], in which, however, the Turks were defeated both by land and sea. These misfortunes the Janissaries attributed to the new troops or Seymens. . . . At the end of May, 1807, the chiefs of the Janissaries and the Ulama had already formed their plans for the overthrow of the Sultan, when Selim accelerated the outbreak by going to the mosque on Friday, accompanied by

a body of Seymens and the French ambassador, Sebastiani. The Janissaries, aroused by this, broke out in open revolt, which soon grew of such a menacing nature by the co-operation of the Mufti, that Selim was compelled to promise the abolition of the Nizam, and the heads of those of his advisers who had promoted the measure. But the insurgents were not satisfied with this; they demanded the abdication of the Sultan, whom the Mufti declared unworthy to be a successor of Muhammad, through his partiality for foreigners, and marched to the Seraglio, to carry their designs into effect. But when the Mufti and the Ulama entered it, they found a new Sultan. Selim, under the conviction that he could not resist the storm his attempts at reform had created, had retired to the Harem, where his nephew, Mustapha, was confined, and led him to the throne; he had then attempted to destroy his own life by a cup of poisoned sherbet, but had been prevented by Mustapha, and was led into the apartments of the Royal Princess, with a promise that he should ever be treated as a friend and an uncle. On the same afternoon, Sultan Mustapha III [IV] (who reigned from 31st May, 1807, to 28th July, 1808) rode in solemn procession for the first time to the great mosque, was invested in the traditional manner with the sabre of Muhammad, then immediately did away with the Nizam Djedid, and restored the old customs. But among the Pashas in the provinces, there were several devoted partisans of reform. The most influential of these was Mustapha Bairaktar, Pacha of Rostchuk, who set out in July 1808, at the head of 18,000 men, to restore Selim to the throne. He succeeded in taking possession of the capital, and keeping the Sultan so long in ignorance of his designs, until he sent him orders to resign the throne in favour of Selim. As the Sultan had only one hour allowed him for consideration, he was so helpless that he followed the advice of the Mufti and had Selim cruelly murdered. As the gates of the Seraglio were not opened at the appointed time, and Bairaktar hurried up to enforce his authority, Selim's lifeless body was thrown over the wall. Upon this the Pacha ordered the Seraglio to be stormed, seized the Sultan, destroyed all those who had advised the abolition of the plans of reform, and placed Mustapha's younger brother on the throne. Mahmud II, the second son of Abd-ul-Hamid, was born on the 2nd July, 1785, and was consequently twenty-three years of age when he ascended the throne. . . . Mahmud appointed Mustapha Bairaktar his Grand Vizier, and, regardless of the fate of his predecessor, restored all the measures of reform which Selim had undertaken. Within three months the Janissaries were again in open rebellion, and on the night of the 14th November, 1808, attacked the Seymens, destroyed a great number of them, and, after storming the new barracks, forced their way into the Grand Vizier's palace. He fled and appealed to the people for help, but the greater portion abused him as a renegade and joined the rebels. Bairaktar recognised his impending fate, but still ordered the execution of Mustapha, for fear he might reascend the throne. After this he retired with a body of Seymens into a stone tower, where he had before collected a quantity of gunpowder. He defended himself here for some time, but, at last, when the Janissaries rushed up in larger masses to the attack,

he blew up the tower. The Janissaries then attacked the Seraglio, and, but for the fact that Mahmud was the last legitimate descendant of the race of Osman, they would have taken his life. But even this, probably, would not have saved him, had he not sent a deputation to the insurgents and given an unconditional assent to their demands. . . . As an additional guarantee for his own safety on the throne, emancipated with the blood of his uncle and his brother, Mahmud ordered his brother's son, a child of three months old, to be strangled, and four of the Sultanas to be thrown into the Bosphorus. The reign of Mahmud is one of the longest and most important in the whole of Turkish history. It commenced with war. The Emperor Alexander menaced him on the Danube; the Hospodar of Servia, Czerny George, had rebelled against him. The campaign of the Turks in 1809, was, consequently, not a prosperous one. The contest lasted till 1812, when it was ended by the treaty of Bucharest, which surrendered the whole of Bessarabia, as far as the Pruthi, to Russia. At the same time the Russian protectorate of the Greek Christian subjects of the Porte, which had been stipulated in the treaty of Kutchuk Kainarjli, was again confirmed."—Sir J. Porter, *Turkey*, v. 1, pp. 194-204.

A. D. 1798.—In the Coalition against France.—**War declared.** See FRANCE: A. D. 1798-1799 (AUGUST — APRIL).

A. D. 1806-1807.—Alliance with Napoleon, and hostilities with Russia and England.—**British fleet before Constantinople.**—Its humiliating retreat.—The English again in Egypt.—Disastrous failure of their expedition.—"Before the end of 1806, Russia had driven Selim into the arms of France; and war was declared at the Porte just after Napoleon's victories in Prussia had filled Alexander with alarm. His troops had overrun some Turkish territory before war was declared; but just at this juncture he wanted all his forces for the defence of his own frontier. He dreaded the effects of withdrawing them from the Turkish provinces, which would immediately light for France; but he must do it. He besought the British to undertake another of those 'diversions' which began to sound so disagreeably to the ears of Englishmen. . . . The Grenville Cabinet . . . gave orders to Sir John Duckworth, then cruising off Ferrol, to join Admiral Louis at the mouth of the Dardanelles. . . . Neither the efforts of the British [French representative at Constantinople] . . . nor any other warning that the English were coming, had roused the Turks to make the slightest preparation. The ships sailed proud up the strait [February, 1807], undelayed by the fire of the forts at the narrowest part of the channel, and belching out flames and cannon-balls as they went. They took and burned some Turkish ships, and appeared before Constantinople, to the horror of the whole population, who were absolutely without means of defence. The Divan would have yielded at once; but Sebastiani prevented it, and instigated a negotiation which proved a fatal snare to Sir John Duckworth, notwithstanding express warnings and instructions, strong and clear, from Lord Collingwood. He was unwilling to destroy the city, and shoot down the defenceless inhabitants;

and he allowed himself to be drawn on, from day to day, exchanging notes and receiving promises. . . . Meantime, not a moment was lost by Sebastiani and the Turks, whom he was instructing in Napoleon's methods of warfare. Women and children, Christians and Mohammedans, worked day and night at the defences; and in a few days the whole coast was bristling with artillery, and the chance was over. . . . There was nothing to be done but to get away as safely as they yet might. . . . For thirty miles (reckoning the windings of the channel) the ships ran the gauntlet of an incessant fire—and such a fire as was never seen before. Stone balls, weighing 700 or 800 lbs., broke down the masts, crushed in the decks, snapped the rigging, and amazed the hearts of the sailors. The hills smoked from end to end, and the roar of the artillery rolled from side to side. In another week, Sir J. Duckworth declared in his dispatch, any return would have been impossible. The news of this singular affair spread fast over Europe. Every body thought the expedition gallantly conceived, and miserably weak in its failure. . . . So ended the second of the 'diversions' proposed under the Grenville Ministry. The third legacy of this kind that they left was a diversion on the side of Egypt. For some time, a notion had been gaining ground, in the minds of English politicians, that the Sultan would, some day soon, be giving Egypt to Napoleon, in return for the aid afforded to Constantinople, on the Danube, and elsewhere. Egypt was in an unhappy state. Mohammed Alee, the Viceroy, was at feud with the Memlooks; and the Arab inhabitants were made a prey of by both. The Grenville Ministry thought that a diversion in that direction would be of great service to Russia, and great injury to Napoleon; and they confidently reckoned on being enthusiastically received by the Arab inhabitants, and probably by the Memlooks also. In laying their plans, however, they strangely underrated the forces and the ability of Mohammed Alee; and they sent only between 4,000 and 5,000 men to the mouth of the Nile, instead of an army large enough to cope with the able and warlike Pasha of Egypt, and his Albanian troops. The small British force was drafted from the troops in Sicily. It landed without opposition on the 17th of March, supposing that Sir John Duckworth must by this time have conquered the Sultan, and that his province of Egypt would come very easily into our hands. No opposition was made to the landing of the troops, and Alexandria capitulated immediately. Only seven lives were lost on the British side. Within the city, however, no prisons were found." A detachment of 1,200 men sent to Rosetta for supplies were trapped in the city by Mohammed Alee's Albanians, and 400 of them, with their general, were shot down in the streets. Then Rosetta was besieged, with results of disastrous failure and the loss of 1,000 or 1,200 more men. General Fraser, the Commander, "was discouraged from home, and hourly harassed by the enemy. . . . More and more of the enemy came up as his little force dwindled away; and at last, on the appearance of a column which he was unable to encounter, he sent out a flag of truce, with an offer to evacuate Egypt on the restoration of the prisoners taken since the invasion. This was in August, 1807; and in September the last English soldier left the mouth of the Nile.

By this time, the Sultan had declared war against England, and had caused a seizure of all the British property in his dominions."—H. Martineau, *Hist. of Eng.*, 1800-1815, bk. 2, ch. 1.

A. D. 1826.—Reforms of Mahmud II.—Insurrection of the Janissaries.—Their subjugation and destruction.—"While the struggle in Greece was proceeding, Mahmud had been busily engaged with his internal reforms, many of which were of a nature to offend the prejudices of his subjects. His great object was to give a European character to the institutions and the manners of his country. He introduced the western style of dress into Turkey; abandoned the use of the turban, which Mohammedans generally regard with much veneration; and gave musical and theatrical entertainments within the sacred enclosure of the Seraglio. He resolved also to recommence the military reforms of his uncle Selim, and again to establish the Nizam Jedid, or body of troops organized after European models. This last design roused once more the savage fanaticism of the Janissaries. On the 15th of June, 1826, when the Sultan and the Grand Vizier were in the country, the dissatisfied troops rose in insurrection, and committed great excesses. The Grand Vizier, hastily recalled to the metropolis, took measures for vindicating his master's authority, and at once found himself supported, not only by the new troops, but by the Ulemas and Students. Mahmud arrived shortly afterwards at the Seraglio, and by his orders the Mufti unfolded the standard of the Prophet, and summoned all faithful Mohammedans to rally round that holy symbol. The city was soon divided into two hostile factions. The Janissaries concentrated their forces in one of the great squares, and threw up entrenchments. The supporters of the Sultan gathered in their front, and an attack was made by ordinance, before which the Janissaries retired into their fortified barracks, where they continued to fight with the resolution of despair. . . . The building was presently on fire from one end to the other. The frightful struggle was continued in the midst of the flames; all who endeavoured to escape were at once shot down; and before the day was over 6,000 Janissaries had perished at the hands of their fellow-troops. Fifteen thousand who had not taken part in the movement were exiled to different places in Asia Minor, and on the following day a Hatt-i-Sherif pronounced the abolition of a corps which had contributed so much to the military predominance of Turkey, but which had at length become a source of internal danger too great to be suffered."—E. Olliver, *Cassell's Ill. Hist. of the Russo-Turkish War*, v. 1, ch. 23.

A. D. 1826-1829.—Convention of Ackerman.—War with Russia.—Surrender of Varna and Silistria.—Disastrous battle of Koulevscha.—Treaty of Hadrianople.—Cessions of territory.

—“It was not to be expected that an event so remarkable as the destruction of the Janizaries would fail to be taken advantage of by the court of St. Petersburg. The Emperor Nicholas had brought with him to the Russian throne a thorough determination to carry out that aggressive policy of the Empress Catherine, of which the terms of the celebrated treaty of Kutschoune-Kahnardji [see above: A. D. 1768-1774] afforded so striking an illustration, and the annihilation of the Ottoman army, as well as the distressed condition of many of the provinces of that empire, afforded an opportunity too tempting to be neglected. The Czar, therefore, demanded that the Sultan should conclude with him a treaty, the provisions of which were made the subject of discussion at Ackerman, a town in Bessarabia; and Mahmoud, pressed by the necessity of his condition, . . . had found it requisite to conclude the arrangement, and the celebrated convention of Ackerman was ratified 11 October 1826. This treaty proved of great importance to Russia. In addition to other provisions, it recognised the whole stipulations of the two treaties of Bucharest and Kaimurdji, by which Russia claimed the right to interpose in behalf of the members of the Greek church in the Ottoman dominions. . . . During the year which succeeded the ratification of the convention of Ackerman, Russia was occupied with the Persian war, which was prosecuted with great vigour by General Paskewitch, by whom very considerable advantages were obtained; and in November 1827 the treaty of Tourkmaanchai was concluded between Russia and Persia. . . . It left the Emperor . . . at leisure to carry out those hostile intentions which his ready interference in the affairs of Greece, and a variety of other considerations, clearly proved him to entertain. The approaching war was indicated by the mutual recriminations of the hostile powers. Russia accused the Porte of an endeavour to cause a revolution in the Caucasus, and of a violation of treaties by closing the Bosphorus against Russian ships, and by its conduct towards its Christian subjects. There was no inconsiderable foundation for such a complaint, and especially for the latter part of it. . . . Both sides immediately prepared for the struggle, which a variety of circumstances have proved that the Czar had long contemplated, and only waited for a suitable opportunity of entering upon. . . . In the month of May [1828] the [Russian] force began to assemble on the banks of the Pruth, and crossed that river at three different points. Being unopposed by the Ottomans, the Russian forces almost immediately entered Jassy and Bucharest, took possession of Galatz, and in a few weeks had occupied the whole of the left bank of the Danube. To accomplish as rapidly as possible the objects of the campaign, as well as to avoid having their very widely extended line exposed to the enemy, it was resolved by the leaders of the Russian forces to cross the Danube at Brahilow, and thence to advance with rapidity upon Silistria, Varna, and Schumla. This resolution they immediately proceeded to carry into effect. . . . About the middle of July, the Russian force under General Rudjiger on the right, and Generals Wolnoff and Diebitch on the left wing, accompanied by the Emperor Nicholas, moved toward Schumia; and the Ottoman army, whose instructions were to avoid general actions, and to

throw their whole energy upon the defence of their fortifications, having engaged in battle with the enemy, retired within the entrenched camp surrounding that fortress, which now contained a force of 40,000 men. . . . The Emperor . . . resolved . . . to leave a corps of observation of 30,000 men before Schumla, under General Wittgenstein, and to direct the principal efforts of his army, in the first instance, to the reduction of Varna. . . . On the 5th of September, after having been absent at Odessa for about a month, during which he was engaged making arrangements for obtaining levies from Russia, and in negotiating loans in Holland, the Emperor Nicholas arrived at Varna, to inspect the progress and encourage the operations of the besiegers. . . . The besieging force, towards the end of August, amounted to 40,000 men, which, on the arrival of the Emperor, were reinforced by more than 20,000, with a great addition to the artillery already possessed by the invading army. This large force was further supported by the Russian fleet. . . . The details of the siege exhibit a series of assaults repulsed with the utmost valour and spirit by the besieged, and entailing an immense loss upon the Russians, both in men and superior officers; but the circumstance that the reinforcement sent to relieve the garrison could not approach, so closely was the place invested, and the destruction of a part of the walls by the cannon of the Russians, led to a surrender, and Jussouf Pasha delivered up the fortress to the Emperor on the 10th of October, after a siege of more than two months. The utmost efforts were made to reduce Silistria, after Varna had been surrendered, but the advance of the season, and the difficulties of the attempt, as well as the disastrous circumstances of the Russian army before Schumla, soon proved that nothing more could be attempted till the following spring. The campaign, therefore, was brought to a conclusion, and orders were issued for the Russians to retire beyond the Danube, and take up their winter quarters in Wallachia. The fall of Brahilow and Varna were the only important events of the campaign of 1828 in Europe, and even these successes had been attained at a vast expense of human life. Out of nearly 160,000 men who had crossed the Danube at the beginning of the campaign, only about one-half remained. . . . In Asia operations were carried on by the Russians with equal vigour and much more success, in consequence, in a great measure, of the military genius and experience of General Paskewitch, who commanded the troops on the east of the Black Sea. . . . The first attack of the Russians in Asia was made upon the fortress of Anapa. . . . After a siege of about a month, the place was taken, with 85 guns and 3,000 prisoners, and the fleet sailed immediately to Varna. . . . After some other successes, General Paskewitch resolved upon attacking the town and fortress of Akhalzikh, a very important place in the pashalik of that name, and which was not only strongly fortified by nature and art, but had for its chief strength a resolute garrison of 10,000 Ottomans, besides the armed inhabitants of the place. The Sultan's troops defended this important fortress with the most undaunted resolution. . . . The surrender of Akhalzikh was followed by that of other important places of strength, which closed the campaign of 1828 in Asia. . . . The campaign of 1828 had rendered the most active

preparations requisite on the part of both belligerents for the commencement of hostilities in the following spring. The Ottoman soldiers, according to their usual custom, hastened from the garrisons to pass the winter in their homes, but the utmost efforts were made by the Porte to gather an adequate force to meet the exigencies of the struggle so soon to be renewed. Although only 10,000 men were left in Schumla during the winter, 40,000 assembled in that fortress early in spring. They were, however, for the most part new levies. . . . The Russians, on the other hand, were no less energetic in their arrangements. . . . It was impossible, however, before the month of May, from the condition of the Danube, to commence the campaign with the whole force, but by the tenth of that month the passage of the river was completed at Hirchova and Kalavatsch, below Sillistria, the siege of which was immediately begun, while General Kouprianoff was stationed with a force at Pravadi, a fortress on the east of Schumla, and which, lying in the line of communication between Sillistria and Varna, was important to the Russians as the means of keeping open a communication between the army of General Roth near Varna and the troops destined to act upon Sillistria. Redschid Pasha, who on being recalled from Greece had been appointed Grand Vizier, had arrived at Schumla on the 21st of March, and on perceiving the position of the invading army, formed the well-conceived design of attacking Pravadi and the force under General Roth. . . . This movement of the Vizier became immediately known to General Roth, who by means of a courier conveyed information of it to Count Diebitch. That General was too acute not to perceive the purpose of his adversary, and too enterprising not to endeavour immediately to take advantage of it. The Count therefore adopted a movement of the highest importance, and which, indeed, had the effect of deciding the campaign. Instead of marching to attack Redschid Pasha at Pravadi, he resolved to intercept his communication with the fortress he had quitted, and thus compel the Ottoman general either to come to a general engagement, which could hardly fail to result to the advantage of the Russians, or to fight his way towards Schumla through the Russian army, or leave the fortress of Schumla to its fate, which, feebly garrisoned as it was, could not be long delayed. This skilful manœuvre was no sooner resolved upon than it was carried into execution. . . . While the Russian force were rapidly advancing towards Koulevscha, a village between Pravadi and Schumla, and scarcely three miles from the latter, the Grand Vizier remained wholly ignorant of the fact that Diebitch had quitted Sillistria, and persisted in the belief that the only opponents of his retreat to Schumla were Generals Roth and Rudiger. . . . The mistake was fatal. The Ottoman cavalry attacked the infantry of the Russians, who were overwhelmed by their charge; and Diebitch, having waited in expectation that the Vizier would descend from the eminence on which he was posted to complete his supposed victory, and finding that he did not make this movement, broke from his concealment among the hills, and suddenly attacked the Ottoman troops with his whole force. The effect was instantaneous. A universal panic seized the Vizier's forces, his cavalry and infantry fled in

confusion, every attempt to bring them to a stand proved abortive, and he himself escaped with difficulty. The artillery and baggage all fell into the hands of the enemy. . . . The muster at Schumla on the return of the Vizier and his remaining troops exhibited the magnitude of their loss. Out of a fine army of 40,000 men, who a few days before had marched from the fortress full of confidence, only 12,000 foot and about 6,000 cavalry remained. After the fatal battle of Koulevscha, the siege of Sillistria was carried on with redoubled vigour, and on the 30th of June the fortress surrendered, when the whole garrison were made prisoners of war, and to the number of 8,000, and the Russians found on the ramparts 238 cannon, in addition to those on board the vessels in the harbour. The fall of Sillistria now determined the Russian commander-in-chief to push across the Balkans. . . . After defeating with great facility such troops as opposed their advance, the Russian army pressed on with the utmost activity towards Hadrianople, and entered the city not only unopposed, but amidst the rejoicings of a multitude of the Greek population. . . . The terror which this extraordinary event inspired at Constantinople may easily be imagined to have been extreme. The very heart of the empire had been assailed by the victorious invaders in Europe, while the tidings from the Asiatic provinces of the defeats sustained by the Sultan's forces opposed to General Paskowitch, greatly contributed to the public alarm. . . . In the midst of this tumult of public feeling, the ambassadors of England and Austria exerted themselves to the utmost to bring about a pacification; and . . . the Sultan reluctantly agreed to the conclusion of a treaty of peace. . . . The celebrated treaty of Hadrianople, which concluded the war of 1828-29, . . . contained sixteen distinct articles, by which, among other matters, the following conditions were agreed upon:— The principalities of Wallachia and Moldavia, and all the conquered places in Bulgaria and Roumelia, were restored to the Porte, with the exception of the islands at the mouth of the Danube, which were to remain the possession of Russia. In Asia all the recent conquests were to revert to the Porte, with the exception of Anapa, on the north-eastern shore of the Black Sea, several important fortresses, together with an extensive district situated to the north and east of a line of demarcation supposed to be drawn from the then existing boundary of the province of Gouriel, and thence by that of Imeritia direct to the point where the frontiers of Kars unite with those of Georgia. The conditions of the treaties of Kainardji, Bucharest, and Ackerman were confirmed; . . . the passage of the Dardanelles was declared open to all Russian merchant ships, as well as the undisputed navigation of the Black Sea; an indemnity for losses by Russian subjects was fixed at £750,000, to be paid in eighteen months; and the expenses of the war were to be paid to the Russian Government, amounting to 10,000,000 ducats, about £5,000,000. . . . To this treaty two separate acts were annexed, the provisions of which are of scarcely less importance than the treaty itself. By these acts it was arranged that the Hospodars of Moldavia and Wallachia should be elected for life instead of for seven years, and that no interference in the affairs of these provinces by any of the officers of the Porte should take

place; that no fortified towns, nor any establishment of Muslims, should be retained by the Porte on the left bank of the Danube; that the Turkish towns on that bank of the river should belong to Wallachia; and that the Mussulmans who possessed property in such places should be required to sell it in the space of eighteen months. . . . The conclusion of these treaties, on the 14th September 1829, terminated the war between Russia and the Ottoman Empire."—R. W. Fraser, *Turkey, Ancient and Modern*, ch. 50-51.

A. D. 1830.—Recognition of the autonomy of Servia. See BALEAN AND DANUBIAN STATES: 14-19TH CENTURIES (SERVIA).

A. D. 1831-1840.—Rebellion of Mehemed Ali, Pasha of Egypt.—Intervention of Russia and the Western Powers.—Egypt made an hereditary pashalik.—"The peace of Adrianople (1829) had greatly discredited the authority of the Porte; insurrections multiplied, and Turkish armies had to enter Bosnia and Albania. In these and all other matters by which the embarrassment of the Porte was increased, the ambitious Mehemed Ali, Pasha of Egypt, had a hand. As payment for his services against the Greeks, he had demanded the pashalik of Damascus. Sultan Mahmoud II. had refused the demand, and only given him the promised Candia. Hence, while the Western powers were occupied with the consequences of the July revolution [in France], and all Europe appeared to be on the verge of a new upheaval, he undertook to seize his booty for himself. In consequence of a quarrel with Abdallah, Pasha of Acre, Ibrahim Pasha [son of Mehemed Ali], notorious for his barbarous conduct of the war in Peloponnesus, crossed the Egyptian frontier, October 20th, 1831, with an army organized on the European system, took Gaza, Jaffa and Jerusalem without resistance, and besieged Acre, which was resolutely defended by Abdallah. Mehemed Ali now demanded both pashaliks—Damascus and Acre. The sultan commanded him to evacuate Syria. The demand was naturally refused; so Mehemed and his son Ibrahim were outlawed. But the latter proceeded with his operations, took Acre by storm May 25th, 1832, and entered Damascus. In the mean time, a Turkish army, under Hussein Pasha, had advanced into Syria. Mehemed Pasha, Hussein's lieutenant, was defeated at Homs, July 9th. Hussein himself, attempting to retrieve this loss, was defeated at Beylan July 27th, and his army scattered. The sultan sent a new army against Ibrahim, under Reshid Pasha, the Grand Vizier, who had displayed great efficiency in the reduction of the Albanians and Bosnians. Reshid . . . was utterly defeated at Konieh December 20th, and was himself taken prisoner. The sultan was in a critical situation. He could not at the moment bring together another considerable army, while Ibrahim had 100,000 well-trained troops, and the road to Constantinople lay open before him." Russia, having no wish to see the energetic Pasha of Egypt in possession of that coveted capital, offered her help to the sultan and he was driven to accept it. "A Russian fleet appeared in the Bosphorus, and landed troops at Scutari, while a Russian army was on the march from the Danube to cover Constantinople. . . . At length England and France perceived how dangerous it was

to forget the East in their study of the Dutch-Belgian question. Their ambassadors had enough to do, by a hasty peace, to make Russia's help unnecessary. As their threats made no impression on the victorious Mehemed Ali, they filled the sultan with distrust of Russia, and by representing a cession of territory to his vassal as the lesser of the two evils, persuaded him into the peace of Kutayah (May 6th, 1833), by which Mehemed Ali received the whole of Syria and the territory of Adana, in south-eastern Asia Minor. Russia had to retire with her object unattained, but had no sooner been thrown out at the front door than she came in at the back. She called the sultan's attention to the favor shown to the insatiable pasha by England and France in the peace of Kutayah, and concluded with him, July 8th, 1833, the treaty of Unklar-Skelessi, by which he entered into a defensive alliance with Russia for eight years, and pledged himself to permit no foreign vessel of war to pass through the Dardanelles. The Western powers took this outwitting very ill, and from that time on kept a sharp eye on Constantinople." Mehemed Ali was meantime giving another direction to his ambition. "The west coast of Arabia, as far as the English post at Aden, had been in his possession since 1829. He now sought to extend his sway over the eastern coast, and subdue the sultan of Muscat. . . . If this were to continue, the two most important roads to the East Indies, by Suez and by the Persian Gulf, would be in the hands of Mehemed Ali. . . . With Egypt, Syria, and Arabia in his hands, England's position in the East would receive a blow that must be felt. So it was a foregone conclusion which side England would take. In 1838 she concluded with the Porte a commercial treaty by which the abolition of all monopolies, as well as free exportation from all parts of the Turkish empire, including Egypt and Syria, was secured to her. Mehemed Ali hesitated about accepting this treaty; and Mahmoud, full of hate against a vassal who threatened ultimately to devour him, declared him a traitor, deprived him of all his dignities, and caused an army to advance into Syria under Hasiz Pasha. But again fortune was not favorable to the Turks. In their camp, as military adviser of the commander-in-chief, was a Prussian captain, Hellmuth von Moltke. For two years he had been assisting the sultan in planning and putting into execution military reforms. Recognizing the weakness and unreliable character of the Turkish army, he advised Hasiz Pasha to fall back on the strong camp at Birdshik, bring up the re-enforcements which were under way, and then risk a battle. But the Pasha would not listen to Moltke's advice, pronouncing retreat a disgrace. He was completely routed at Nisib, on the Euphrates, June 24th, 1839, and his army scattered. For the second time the road to Constantinople lay open to Ibrahim. Misfortunes fell thick and fast upon the Turks. Sultan Mahmoud died June 30th, and the empire fell to a sixteen-year old youth, his son Abdul Medshid. Five days later, Capudan Pasha, with the Turkish fleet, sailed out of the Dardanelles under orders to attack the Egyptians. Instead of this he went over to Mehemed Ali with his whole fleet—in consequence of French bribery, it was said. . . . In order to prevent Turkey from casting herself a second time into Russia's arms, four great

powers—England, France, Austria, and Prussia—declared, July 27th, 1839, that they would themselves take the Eastern question in hand. To save herself from being wholly left out, Russia had to give her consent, and become a party to the treaty. But there were very different views as to the way in which the question was to be settled. France, which was striving after the control of the Mediterranean, and which, since Napoleon's campaign, had turned its eyes toward Egypt, wished to leave its friend Mehemed Ali in full possession. England saw her interests endangered by the pasha, thought France's occupation of Algiers quite enough, and was afraid that if Turkey were too weak she might become the defenceless prey of Russia. The latter wished at no price to allow the energetic pasha to enter upon the inheritance of Turkey, or even of a part of it, and was pleased at seeing the cordial understanding between France and England destroyed. Austria and Prussia supported England and Russia, and so France was left alone. The Anglo-Russian view found expression in the quadruple alliance which the great powers, with the exception of France, concluded in London, July 15th, 1840. By this the hereditary possession of the pashalik of Egypt, and the possession for life of a part of Syria, were secured to Mehemed Ali, in case he submitted to the conclusions of the conference within ten days. . . . The allied powers began hostilities against Mehemed Ali, who, relying on French assistance, refused to submit. The Anglo-Austrian fleet sailed to the Syrian coast, and took Beirut and Acre; and Alexandria was bombarded by Commodore Napier. This and the fall of the Thiers ministry brought Mehemed Ali to a full realization of his mistake. He might consider himself lucky in being allowed to hold Egypt as hereditary pashalik upon evacuating Syria, Arabia, and Candia, and restoring the Turkish fleet. For this favor he had to thank England, which sought by this means to secure his friendship and the Suez road to India. The catastrophe of the 'sick man' [the Turk] was again put off for a few years."—W. Müller, *Political Hist. of Recent Times*, sect. 11.

A. D. 1861-1876.—The reign of Abd-ül-Aziz, and accession of Abd-ül-Hamid.—"Troubles broke out in the Lebanon in 1860, a French army was dispatched to restore order, and in the adjustment of rival claims an opportunity was afforded to Lord Dufferin for displaying those diplomatic talents for which he is renowned. In 1861 the Sultan Abd-ül-Mejid died, and with him passed away the hope of regenerating Turkey. His brother and successor Abd-ül-Aziz was an ignorant bigot, whose extravagance brought his country to avowed insolvency (1875), and thus deprived her of that sympathy which is seldom given to the impecunious. The only remarkable thing he did was to travel. No Ottoman Sultan had ever before left his own dominions, except on the war path, but Abd-ül-Aziz ventured even as far as London, without, however, awakening any enthusiasm on the part of his Allies. In 1876 he

was deposed, and—found dead. How he came by his death is a matter of doubt, but his end is said to have turned the brain of his successor, Murad V., a son of Abd-ül-Mejid, who after three months was removed as an imbecile, and succeeded by his brother, . . . Abd-ül-Hamid."—S. Lane-Poole, *The Story of Turkey*, ch. 17.

A. D. 1861-1877.—Union of Wallachia and Moldavia.—Revolt in Bosnia and Herzegovina.—Reforms demanded by the Great Powers.—War with Servia.—Conference at Constantinople.—Russian preparations for war.—"Before four years were over [after the termination of the Crimean War by the Treaty of Paris], one of the chief stipulations of the treaty was set aside. Wallachia and Moldavia, which it had been the policy of the Powers to separate, displayed a constant desire to join. Two of the great Continental Powers—France and Russia—favoured the junction. England, Austria, and Turkey, thinking that the union would ultimately lead to their independence, opposed their fusion under one prince. At last, after discussions, which at one moment seemed likely to rekindle the flames of war, an administrative union was arranged, which resulted, in due course, in the formal union of the two provinces in 1861. [In 1858, the two provinces chose the same prince, or hospodar, in the person of Prince John Couza, who took the title of Prince of Roumania. The Porte protested, but was induced, in 1861, to recognize this union of the coronets. Prince Couza aspired to absolutism, and was forced to abdicate in 1866. Then a German, Prince Charles of Hohenzollern, was chosen by the two provinces to be his successor.] Thus, five years after the Peace of Paris, one of the stipulations on which England had insisted was surrendered. In 1870 the Franco-German War led to the obliteration of another of them. In November, when the armies of France were either beaten or besieged, Russia repudiated the clause of the Treaty of Paris which had limited the forces of Russia and Turkey in the Black Sea. The declaration of the Russian Government came as a painful shock to the British people. The determination of a great European state to tear up the clause of a treaty excited indignation. It was recollected, moreover, that it was for the sake of this clause that the Crimean War had been prolonged after the Vienna negotiations; and that all the blood which had been shed, and all the money which had been spent, after the spring of 1855, were wasted in its abandonment. . . . All that diplomacy was able to do was to lessen the shock by persuading the Russian Government to submit its proposal for the abrogation of the clause to a conference. . . . The conference met. . . . It had practically nothing to do but to record its assent to the Russian proposal. . . . For five years more the Eastern Question remained undisturbed. In the spring of 1875 an insurrection broke out in Bosnia and Herzegovina, two of the northern provinces of European Turkey. The Porte failed to quench the disturbance; and, its efforts to do so increasing its pecuniary embarrassments, was forced in the autumn to repudiate the claims of its many creditors. . . . In the meanwhile the insurrection continued to spread, and attracted the attention of the great European Powers. At the instigation of Austria a note was drawn up [by Count Andrássy, and

known, therefore, as the Andrassy Note], which was at once signed by all the European Powers except England, and which was ultimately accepted by England also, declaring that 'the promises of reform made by the Porte had not been carried into effect, and that some combined action by the Powers of Europe was necessary to insist on the fulfilment of the many engagements which Turkey had made and broken.' As the note failed to effect its object, the representatives of the Northern Powers—Germany, Austria, and Russia—met at Berlin, proposed a suspension of arms for two months, and intimated that if Turkey in the two months failed to fulfil her broken promises, 'force would be used to compel her' to do so. The British Government, unwilling to join in a threat, refused to sign this new note. The insurrection went on; Servia, sympathising with the insurgents, declared war against Turkey; Russian officers and Russian troops fought in the Servian battalions; and Russia herself, setting her legions in motion, evidently prepared for hostilities. When these events occurred, large numbers of the English people were prepared to support the Turk. Though they had been partially estranged from the cause of Turkey by the repudiation of the Ottoman debt in the previous autumn, they recoiled at the sacrifices of the Crimean War; they were irritated with the manner in which one part of the Treaty of Paris had been torn up in 1870; and they were consequently prepared to resist any further movement on the part of Russia. The Porte, however, dreading the extension of revolt, allowed its officers to anticipate disorder by massacre. The atrocious cruelty with which this policy was executed [especially in Bulgaria—see BALKAN and DANUBIAN STATES: A. D. 1875-1878] excited a general outburst of indignation in this country [England]; and the British Ministry, whose leader had hitherto displayed much sympathy with the Turks, found himself forced to observe a strict neutrality. In the short war which ensued in the autumn of 1876, the Servian troops proved no match for the Turkish battalions. At the request or command of Russia the Porte was forced to grant an armistice to the belligerents; and, on the suggestion of the British Ministry, a Conference of the Great Powers was held at Constantinople to provide for the better government of the Turkish provinces. The Constantinople Conference, held at the beginning of 1877, formed in many respects an exact parallel to the Vienna Conference held in the summer of 1855. . . . The Porte rejected all the proposals on which the other Powers were agreed. . . . In each case the failure of the Conference was followed by war. But the parallel ends at this point. . . . In the Russo-Turkish war of 1877-8, Turkey was left to fight her own battle alone."—S. Walpole, *Foreign Relations*, ch. 3.

A. D. 1877-1878.—War with Russia.—Heroic defense of Plevna.—Defeat and surrender.—"Russia had already massed large numbers of troops on her frontier, and Turkey was also engaged in the work of mobilization. On the 24th April the Emperor of Russia issued a manifesto to his subjects, in which he recited

the interest of the empire in the Christian population of the Balkan peninsula, and the general desire that their condition should be ameliorated. He declared that all efforts at peace had been exhausted. . . . He had given the orders for the army to cross the frontier, and the advance upon Turkey was begun without delay. . . . The Turks had not been idle, though their preparations were by no means as complete as those of Russia. They had massed heavy bodies of troops along the Danube, and were prepared to resist the movements of the Russians south of that stream. . . . The first crossing [of the Russians] was made at Galatz, on the 22d June, by General Zimmermann, who went over with two regiments in pontoons and drove out the Turks who were posted on the heights on the opposite shore. Having obtained a footing in the Dobrudja, as the peninsula between the Danube and Black Sea is called, the Russians were able to throw bridges over the great stream, by which the whole left wing of the army moved across. Meantime the right wing, on the 26th June, sent a pontoon force over the Danube from Simnizza, under command of General Skobelev, who drove out the small force of Turks posted there, though not without hard fighting. More pontoons followed, and then a bridge was thrown across on which the army could march. . . . By the first week of July the whole Russian army was safely encamped on the southern bank of the Danube, and getting in readiness to assume the offensive. . . . The advance did not begin in force until after the middle of the month. But before that time General Gourko . . . had pushed forward on the road to the Balkans, heading first for Tirnova. . . . On the 5th July the cavalry occupied Biela, . . . and on the 7th Gourko was in possession of Tirnova. . . . The Emperor joined the army at Biela on the 8th or 9th. Gourko was soon reported past the Balkans. . . . The first check of the Russians was at Plevna. They had previously captured Nicopolis with its garrison of 7,000 men, having themselves lost about 1,300 officers and men killed and wounded. Orders had been given to occupy Plevna as soon as possible, and Baron Krudener sent forward General Schilder-Schuldner to carry out the orders. . . . Schilder-Schuldner had 6,500 men and 46 guns in the division with which he went to capture Plevna; he was attacked by a vastly superior force of Turks before he had reached his objective point, and the first battle of Plevna was disastrous to the Russians. . . . Nearly 3,000 men and 74 officers were killed or wounded. . . . The Russians retired to Nicopolis, and the Turks set to work to strengthen Plevna. . . . From the 20th to the 30th of July the Russians were engaged in bringing up reinforcements and getting ready for another attack. An order came for the assault of the Turkish position; Baron Krudener did not believe the assault advisable, but the command of the Grand Duke Nicholas left him no discretion." The assault was made on the 31st of July, and was repulsed, with a loss to the Russians of 170 officers and 7,136 men. "There was nothing for the Russians to do but send for reinforcements, and wait until they arrived. The advance into Turkey had received a severe check, from which recovery was not easy. From the offensive the Russians were thrown upon the defensive, and all as the result of a single battle of six or eight

hours' duration. Happily for Russia, the Turkish army had no competent leader, or the army of the Czar might have been captured or drowned in the Danube. The Turks had three armies in the field. . . . Mehemet Ali was at Shumia with 65,000 men; Osman Pasha at Plevna, with 50,000; and Suleiman Pasha at Yeni Zagra, with 40,000. . . . The order of the Czar for reinforcements was quickly issued, and resulted in the despatch of 120,000 regulars and 180,000 militia for the front. With these reinforcements went 460 pieces of artillery. . . . General Gourko took up his position in the Shipka Pass whence Suleiman Pasha sought in vain to dislodge him. . . . Towards the end of August the Russian reinforcements were assembled in such numbers that an advance could again be ventured. . . . The total Russian and Roumanian force for the attack of Plevna amounted to 80,000 men and 440 guns, while the Turks were estimated to have about 56,000 men—and Osman Pasha. . . . The attack began with a bombardment on the 6th September," which was kept up until the 11th, when the Russians again endeavored to carry the Turkish works by assault. Skobelev, conspicuous, as he always was, in daring and in success, took one of the redoubts and held it until the next day, waiting vainly for reinforcements which were not sent. Elsewhere the assault failed. "The Russian killed and wounded were estimated at 18,000 to 20,000, and the Turkish about 5,000 less than the Russian. The capture by assault having been given up, the Russians sat down to invoke the aid of that engine, more powerful than all their batteries, the engine of starvation. . . . One by one the roads leading into Plevna were occupied, but it was nearly two months from the terrible battle of the 11th September before the routes for supplies and reinforcements destined for Osman Pasha could be secured. The investment was completed on the 3d November; 120,000 Russians and Roumanians were around Plevna." On the morning of December 10 the beleaguere'd Turks made a desperate sortie, attempting to break the line of investment, having failed in which their stout-hearted commander surrendered unconditionally. "With the fall of Plevna and the surrender of its garrison of 40,000 men, the Turkish opposition practically ceased. Within a month from that event General Gourko had captured Sophia, and General Radetsky took the village of Shipka, in the Shipka Pass, and compelled the surrender of a Turkish army of 23,000 men. . . . Gourko and Skobelev advanced upon Philippopolis by different routes and narrowly missed capturing Suleiman Pasha with his entire force. Skobelev advanced upon Adrianople, which the Turks abandoned, and Shivno and Yeni-Zagra were occupied, all inside of thirty days. Plevna had made the Russians the masters of the situation, and they advanced upon Constantinople, the Turks retiring before them, and occasionally making a feeble resistance. Turkey asked the mediation of England, and finally, despairing of her aid, signed an armistice that became the basis of the treaty of San Stefano."—T. W. Knox, *Decisive Battles since Waterloo*, ch. 21.—The campaign of the Russians in Bulgaria was accompanied by another in Asiatic Turkey, where they, likewise, met with a temporary check, after pushing their first advance too confidently, and with an insufficient force. They invested Kars

and advanced against Erzeroum, in May, 1877; but were defeated at Sevin and withdrew from both undertakings. Having received reinforcements, they resumed the offensive in October, attacking the main Turkish army, under Mukhtar Pasha, in its strong position at Aladsha, or on the Little Yahnli and Great Yahnli hills. Their first attack, on the 2d, was repulsed; they repeated it on the 15th with success, driving one wing of the enemy into Kars and forcing the other to surrender. Kars was then besieged and taken by assault November 17. The Turks suffered another defeat at Deve-Boyum, near Erzeroum, November 4, and they evacuated Erzeroum itself in February, 1878.—E. Ollier, *Cassell's Illustrated Hist. of the Russo-Turkish War*.

A. D. 1878.—Excitement in England over the Russian advance.—The British fleet sent through the Dardanelles.—Arrangement of the Berlin Congress.—"At the opening of 1878 the Turks were completely prostrate. The road to Constantinople was clear. Before the English public had time to recover their breath and to observe what was taking place, the victorious armies of Russia were almost within sight of the minarets of Stamboul. Meanwhile the English Government were taking momentous action. . . . Parliament was called together at least a fortnight before the time usual during recent years. The Speech from the Throne announced that her Majesty could not conceal from herself that, should the hostilities between Russia and Turkey unfortunately be prolonged, 'some unexpected occurrence may render it incumbent on me to adopt measures of precaution.' This looked ominous to those who wished for peace, and it raised the spirits of the war party. There was a very large and a very noisy war party already in existence. It was particularly strong in London. It embraced some Liberals as well as nearly all Tories. It was popular in the music-halls and the public-houses of London. . . . The men of action got a nickname. They were dubbed the Jingo Party. . . . Some Tyrtaeus of the tap-tub, some Körner of the music-halls, had composed a ballad which was sung at one of these caves of harmony every night amidst the tumultuous applause of excited patriots. The refrain of this war-song contained the spirit-stirring words: 'We don't want to fight, but, by Jingo, if we do, we've got the ships, we've got the men, we've got the money too.' Some one whose pulses this lyrical outburst of national pride failed to stir called the party of its enthusiasts the Jingoos. . . . The name was caught up at once, and the party were universally known as the Jingoos. . . . The Government ordered the Mediterranean fleet to pass the Dardanelles and go up to Constantinople. The Chancellor of the Exchequer announced that he would ask for a supplementary estimate of six millions for naval and military purposes. Thereupon Lord Carnarvon, the Colonial Secretary, at once resigned. . . . Lord Derby was also anxious to resign, and indeed tendered his resignation, but he was prevailed upon to withdraw it. The fleet meanwhile was ordered back from the Dardanelles to Besika Bay. It had got as far as the opening of the Straits when it was recalled. The Liberal

Opposition in the House of Commons kept on protesting against the various war measures of the Government, but with little effect. . . . While all this agitation in and out of Parliament was going on . . . the news came that the Turks, utterly broken down, had been compelled to sign an armistice, and an agreement containing a basis of peace, at Adrianople. Then, following quickly on the heels of this announcement, came a report that the Russians, notwithstanding the armistice, were pushing on towards Constantinople with the intention of occupying the Turkish capital. A cry of alarm and indignation broke out in London. One memorable night a sudden report reached the House of Commons that the Russians were actually in the suburbs of Constantinople. The House for a time almost entirely lost its head. The lobbies, the corridors, St. Stephen's Hall, the great Westminster Hall itself, and Palace Yard beyond it, became filled with wildly excited and tumultuous crowds. If the clamour of the streets at that moment had been the voice of England, nothing could have prevented a declaration of war against Russia. Happily, however, it was proved that the rumour of Russian advance was unfounded. The fleet was now sent in good earnest through the Dardanelles, and anchored a few miles below Constantinople. Russia at first protested that if the English fleet passed the Straits Russian troops ought to occupy the city. Lord Derby was firm, and terms of arrangement were found—English troops were not to be disembarked, and the Russians were not to advance. Russia was still open to negotiation. Probably Russia had no idea of taking on herself the tremendous responsibility of an occupation of Constantinople. She had entered into a treaty with Turkey, the famous Treaty of San Stefano, by which she secured for the populations of the Christian provinces almost complete independence of Turkey, and was to create a great new Bulgarian State with a seaport on the Egean Sea. The English Government refused to recognise this Treaty. Lord Derby contended that it involved an entire readjustment of the Treaty of Paris, and that that could only be done with the sanction of the Great Powers assembled in Congress. Lord Beaconsfield openly declared that the Treaty of San Stefano would put the whole south-east of Europe directly under Russian influence. Russia offered to submit the Treaty to the perusal, if we may use the expression, of a Congress; but argued that the stipulations which merely concerned Turkey and herself were for Turkey and herself to settle between them. This was obviously an untenable position. . . . Turkey meanwhile kept feebly moaning that she had been coerced into signing the Treaty. The Government determined to call out the Reserves, to summon a contingent of Indian troops to Europe, to occupy Cyprus, and to make an armed landing on the coast of Syria. . . . The last hope of the Peace Party seemed to have vanished when Lord Derby left his office [which he did on the 28th of March]. Lord Salisbury was made Foreign Minister. . . . Lord Salisbury's first act in the office of Foreign Secretary was to issue a circular in which he declared that it would be impossible for England to enter a Congress which was not free to consider the whole of the provisions of the Treaty of San Stefano. . . . Prince Bismarck had often during these events

shown an inclination to exhibit himself in the new attitude of a peaceful mediator. He now interposed again and issued invitations for a congress to be held in Berlin to discuss the whole contents of the Treaty of San Stefano. After some delay, discussion, and altercation, Russia agreed to accept the invitation on the conditions proposed, and it was finally resolved that a Congress should assemble in Berlin on the approaching June 13. To this Congress it was supposed by most persons that Lord Salisbury would be sent to represent England. Much to the surprise of the public, Lord Beaconsfield announced that he himself would attend, accompanied by Lord Salisbury, and conduct the negotiations in Berlin. "The event was, we believe, without precedent. . . . The Congress was held in the Radzivil Palace, a building with a plain unpretending exterior in one of the principal streets of Berlin, and then in the occupation of Prince Bismarck. The Prince himself presided. . . . The Congress discussed the whole or nearly the whole of the questions opened up by the recent war. . . . The great object of most of the statesmen who were concerned in the preparation of the Treaty which came of the Congress, was to open for the Christian populations of the south-east of Europe a way into gradual self-development and independence. But on the other hand it must be owned that the object of some of the Powers, and especially, we are afraid, of the English Government, was rather to maintain the Ottoman Government than to care for the future of the Christian races. These two influences, acting and counteracting on each other, produced the Treaty of Berlin."—J. McCarthy, *Hist. of Our Own Time*, ch. 65 (v. 4).

A. D. 1878.—The Treaties of San Stefano and Berlin.—"The First Article of the Treaty of San Stefano had reference to the new boundaries to be assigned to Montenegro. The accession of territory, which was not very large, was taken from the provinces of Bosnia and Albania, and lay to the north, east, and south of the original State. . . . It gave to the mountaineers their much-coveted admission to the sea. It was next provided that a European Commission, on which the Sublime Porte and the Government of Montenegro were to be represented, should be charged with fixing the definite limits of the Principality. . . . By Article II., the Sublime Porte recognized definitely the independence of the Principality of Montenegro. . . . Article III. dealt with Servia, which was recognized as independent. The new frontier of this Principality was to follow the course of the Drina, the Dezevo, the Raska, the Ibar, the Morava, and some other streams, and was drawn so as to give Little Zwoznik, Zakar, Leskovatz, Ak Palanka, and Nisch, to the Servians. . . . In Article V., the Sublime Porte undertook to recognize the independence of Roumania, which would thus acquire a right to an indemnity, to be hereafter discussed between the two countries. The most important sections of the Treaty were of course those which had relation to Bulgaria. They commenced with Article VI., which set forth that Bulgaria was constituted an autonomous, tributary Principality, with a Christian Govern-

ment and a national militia. The definitive frontiers of the new Principality were to be traced by a special Russo-Turkish Commission before the evacuation of Roumelia by the Russian army. . . . The new Bulgaria was of very considerable dimensions. It extended from the Danube in the north to the *Ægean* in the south; and from the borders of Albania in the west to the Black Sea in the east. All that was left to Turkey in this part of her Empire was an irregular and somewhat narrow territory, running westward from Constantinople along the shores of the Sea of Marmora and the *Ægean* until it touched the limits of the new Principality, and extending no farther north than was sufficient to include Adrianople and its immediate neighbourhood. By this arrangement, the territory so left to the Sultan was completely separated from Thessaly and Albania. . . . According to Article VII., the Prince of Bulgaria was to be freely elected by the people, and confirmed by the Sublime Porte with the assent of the Powers. No member of the reigning dynasties of the Great European Powers should be capable of being elected Prince of Bulgaria. . . . The introduction of the new system into Bulgaria, and the superintendence of its working, would be entrusted for two years to an Imperial Russian Commissioner. . . . By Article VIII., the Ottoman army would no longer remain in Bulgaria, and all the ancient fortresses would be razed at the expense of the local Government. . . . Until the complete formation of a native militia, the country would be occupied by Russian troops. . . . Article IX. declared that the amount of the annual tribute which Bulgaria was to pay the Suzerain Court would be determined by an agreement between Russia, the Ottoman Government, and the other Cabinets. . . . By Article X., the Sublime Porte was to have the right to make use of Bulgaria for the transport, by fixed routes, of its troops, munitions, and provisions, to the provinces beyond the Principality, and vice versa. . . . Article XII. provided that all the Danubian fortresses should be razed, and that in future there should be no strongholds on the banks of the Danube, nor any men-of-war in the waters of Roumania, Servia, or Bulgaria. . . . Article XIV. imposed on Bosnia the obligation to introduce reforms into Bosnia and the Herzegovina." Articles XV. and XVI. stipulated reforms in government of Crete, Epirus, Thessaly, Armenia, and other parts of the Ottoman Empire. "The question of the war-indemnities was arranged in Article XIX., which set forth that the Emperor of Russia claimed, in all, 1,410,000,000 roubles for losses imposed on Russia during the contest. . . . The Emperor, however, did not desire to receive the whole of this indemnity in the form of money-payments, but, taking into consideration the financial embarrassments of Turkey, and acting in accordance with the wishes of the Sultan, was willing to substitute for the greater part of the sums enumerated certain territorial cessions, consisting of the Sandjak of Tultcha, on the Danube (including the Delta Islands and the Isle of Serpents), and, in Asia, Ardahan, Kars, Batoum, Bayazid, and the territory extending as far as the Soghanli Dagli. With respect to the Sandjak of Tultcha and the Delta Islands, Russia, not wishing to annex that territory, reserved to herself the right of exchanging it for the part of Bessarabia detached from her by the Treaty of

1856. . . . The ceded territories in Europe and Asia were to be taken as an equivalent for the sum of 1,100,000,000 roubles." The remaining Articles of the Treaty of San Stefano related to details of minor importance. "The Treaty of Berlin, signed by the Plenipotentiaries on the 13th of July, 1878, and of which the ratifications were exchanged on the 3rd of August, was the Treaty of San Stefano, with additions, subtractions, and amendments. . . . Speaking generally, it may be said that the objects of the Treaty of Berlin, as distinguished from its predecessor, were to place the Turkish Empire in a position of independence, and to protect the jeopardised rights of Europe. These ends it accomplished, or partially accomplished, by several important provisions. It divided the so-called Bulgaria into two provinces, of which the one to the north of the Balkans was formed into a tributary Principality, while the one to the south, which was to be designated Eastern Roumelia, was to remain under the direct authority of the Sultan, with administrative autonomy and a Christian Governor-General. It left to the Sultan the passes of the mountains, and the right of sending troops into the interior of Eastern Roumelia whenever there might be occasion. It reduced the stay of the Russian army in European Turkey. . . . It secured to Roumania, as compensation for the loss of that portion of Bessarabia which had been annexed to Moldavia by the Treaty of Paris (1856), a larger amount of territory, south of the Danube, than had been granted at San Stefano. It restored to Turkey the whole of the northern shores of the *Ægean*, a wide extent of country in Europe, and, in Asia, the valley of Alashgerid and the town of Bayazid. . . . It gave far ampler guarantees for religious liberty than had entered into the projects of the Czar."—E. Ollier, *Cassell's Illustrated Hist. of the Russo-Turkish War*, v. 2, ch. 9 and 21.—"In her private agreement with Russia, England had consented to the cession of Batoum, but she now sought to diminish the value of that post by stipulating that the fortifications should be demolished and the port declared free. The dispute, which at one time assumed a serious character, was finally settled by a declaration on the part of the Czar that Batoum should be a free port. Kars, Ardahan, and Batoum were ceded to Russia, the district of Khotur to Persia, and the Sultan pledged himself to carry out the requisite reforms in Armenia without loss of time, and to protect the inhabitants against the Kurds and Circassians. At the same time a secret treaty was made known which had been contracted between England and Turkey on the 4th of June. By this treaty the Porte pledged itself to carry out reforms in Asia Minor, and England, on her part, guaranteed the integrity of the Sultan's Asiatic possessions. To put England in a position to fulfil her part of the treaty, and as a pledge for the execution of the promised reforms, the Porte surrendered Cyprus to England as a naval and military station, the latter agreeing to regard the island as an integral part of the Turkish empire, and to make over the surplus revenue to the Sultan. This treaty, which had received the consent of Germany and Russia at the time of its execution, aroused great indignation in France and Italy. . . . To pacify the former state, Beaconsfield and Salisbury entered into a secret arrangement with Wadding-

ton, in accordance with which England was to put no obstacles in the way of a French occupation of Tunis—an arrangement of which the French government finally took advantage in the year 1881. The English representatives had also entered into an arrangement with Austria in reference to Bosnia and Herzegovina. In the sitting of June 29th Andrássy read a memorandum in which he set forth that Austria had been disturbed for a whole year by the insurrection in those provinces, and had been compelled to receive and provide for over 150,000 Bosnian fugitives, who positively refused again to submit to the hardships of Turkish misrule; that Turkey was not in a position to restore order in the disturbed districts. . . . Thereupon the Marquis of Salisbury moved that Austria be charged with the occupation and administration of Bosnia and Herzegovina, and . . . the congress . . . decided to hand over those two provinces to Austro-Hungary. . . . The independence of Serbia and Montenegro was recognized on condition that full freedom and political equality were accorded to the members of all religions. Serbia received an addition to her population of 280,000 souls, her most important acquisition being the city and fortress of Nish. She also assumed a part of the Turkish debt. The recognition of Roumanian independence was conditioned on the cession of Bessarabia to Russia, and the admission to political equality of the members of all religions—a condition which had special refer-

ence to the Jews. In compensation for Bessarabia Roumania was to receive the Dobruddia and the islands at the mouth of the Danube. . . . Austria took possession of her share of the booty at once, but not without the most obstinate resistance."—W. Müller, *Political Hist. of Recent Times*, sect. 30.

A. D. 1894.—Reported Atrocities in Armenia.—A disturbance of some nature—the causes and extent of which have not yet been ascertained—occurring in Turkish Armenia during the late weeks of summer or early part of autumn, gave occasion for what is claimed to have been more horrible atrocities on the part of the Turkish soldiery than were committed in Bulgaria during the year 1877. The scene of alleged massacres is in the mountainous district of Sussoun, near the western end of Lake Van, where 6,000 men, women and children are said to have been slain. The Christian world having been roused, though not very promptly, by the reports of this fresh outbreak of barbarism, the Porte has been forced by pressure from the Powers to consent to the formation of a commission to investigate the affair. England, France and Russia are to be represented on the commission.

TUSCANY: A. D. 685-1115.—The founding of the duchy.—The reign of Countess Matilda.—The rise of the free cities.—"The first Lombard duke of whom any sure record remains is a certain 'Alovisino' who flourished about the year 685; and the last, though of more doubtful existence, is 'Tachlputo,' in the 8th century, when Lucca was the principal seat of government, with the privilege of coining, although her Counts were not always Dukes and Marquises of Tuscany. About the year 800, the title of Duke seems to have changed to that of Count, and although both are afterwards used the latter is most common: Muratori says, that this dignity was in 813 enjoyed by a certain Boniface whom Sismondi believes to be the ancestor of Countess Matilda; but her father, the son of Tedaldo, belonged to another race: he was the grandson to Atone, Azzo, or Adelberto, Count of Cannosa. . . . The line of Boniface I. finished in 1001 by the death of Hugo the Great. . . . After him, on account of the civil wars between Ardoino and Henry, there was no permanent Duke until 1014, when the latter appointed Ranieri, whom Conrad the Salique deposed in 1027, making room for Boniface the father of Countess Matilda. This heroine died in 1115 after a reign of active exertion for herself and the Church against the Emperors [in the 'War of Investitures,' see PAPACY: A. D. 1056-1122], which generated the infant and as yet nameless factions

of Guelph and Ghibeline. . . . The fearless assertion of her own independence by successful struggles with the Emperor was an example not overlooked by the young Italian communities under Matilda's rule. . . . These seeds of liberty began first to germinate amongst the Lombard plains, but quickly spreading over the Apennines were welcomed throughout Tuscany [see ITALY: A. D. 1056-1152]. . . . It seems probable that in Tuscany, towards the commencement of the 12th century, the Count's authority had passed entirely into the principal communities, leaving that of the Marquis as yet untouched; but there are reasons for believing that the Countess Matilda in some of her difficulties was induced to sell or cede a portion of her power, and probably all that of the Count's. . . . Altogether, there appears little reason to doubt the internal freedom of most Tuscan cities very early in the 11th century."—H. E. Napier, *Florentine History*, bk. 1, ch. 4 (r. 1).

TUSCARORAS, The. See AMERICAN ABORIGINES: IROQUOIS CONFEDERACY, and IROQUOIS TRIBES OF THE SOUTH.

TUSCULAN VILLAS.—"In Cicero's time the number of country-houses which a wealthy Roman considered it necessary to possess had evidently become considerable, and the amount spent upon them very great. The orator himself had villas at Tusculum, Antium, Formie, Baie, and Pompell, besides his town-houses on the Palatine, and his family seat at Arpinum. . . . The Tusculanum of Cicero had formerly been in the possession of Sylla. . . . Close to the Villa of Cicero, and so near that he could go across to fetch books from the library, was the Villa of Lucullus. . . . Many other Roman villas lay on the Tusculan hills."—R. Burn, *Rome and the Campagna*, ch. 14, pt. 3.

TUSCULUM.—"In the times of the Latin League, from the fall of Alba to the battle of Lake Regillus, Tusculum was the most prominent town in Latium. It suffered, like the other towns in Latium, a complete eclipse during the later Republic and the Imperial times; but in the ninth, tenth, eleventh and twelfth centuries, under the Counts of Tusculum, it became again a place of great importance and power, no less than seven popes of the house of Tusculum having sat in the chair of St. Peter." The ruins of Tusculum, about fifteen miles from Rome, on the Alban hills, have been considerably explored.—R. Burn, *Rome and the Campagna*, ch. 14, pt. 3.—See, also, ALBA.

TWO SICILIES, The Kingdom of the.—The kingdom founded in Southern Italy and Sicily by the Norman conquest in the 11th century (see ITALY: A. D. 1000-1090, and 1081-

1194) maintained its existence until recent times, sometimes as a unit, and sometimes divided into the two dominions, insular and peninsular, of Sicily and Apulia, or Naples. The division occurred first after the rising against the French and the massacre known as "the Sicilian Vespers" (see ITALY: A. D. 1282-1300). The crown of Sicily was then acquired by Peter, king of Aragon, succeeded by his son Frederick. Charles of Anjou and his successors were left in possession of the kingdom of Naples, alone, although still claiming Sicily in union with it. "As the king who reigned at Naples would not give up his right to Sicily, . . . his kingdom is often called Sicily as well as the Island Kingdom; and so when at last the two kingdoms became one [again—see ITALY: A. D. 1412-1447], the strange name of the Kingdom of the Two Sicilies arose."—W. Hunt, *Hist. of Italy*, p. 93.—See, also, NAPLES, and SICILY.

TYCHE.—One of the variously named parts of the ancient city of Syracuse, Sicily. Its position was northwest of Achrallia.

TYNWALD, Court of. See MANX KINGDOM; and, also, THING.

TYRANTS, Greek.—"A 'tyranny,' in the Greek sense of the word, was the irresponsible dominion of a single person, not founded on hereditary right, like the monarchies of the heroic ages and of many barbarian nations, nor on a free election, like that of a dictator or æsymnet, but on force. It did not change its character when transmitted through several generations, nor was any other name invented to describe it when power, which had been acquired by violence, was used for the public good; though Aristotle makes it an element in the definition of tyranny, that it is exercised for selfish ends. But, according to the ordinary Greek notions, and the usage of the Greek historians, a mild and beneficent tyranny is an expression which involves no contradiction."—C. Thirlwall, *Hist. of Greece*, ch. 10.—"In spite of the worst which has been said against them, the tyrants hold a legitimate place in the progress of Greek constitutional history. They were the means of breaking down the oligarchies in the interests of the people. . . . It was at Sicily that the first tyrannies arose. . . . About the year 670 B. C. a certain Orthogoras, who is said to have been a cook, succeeded in establishing himself as tyrant in Sicily. Of his reign no incident is recorded.

He was succeeded by his son Myron."—E. Abbott, *Hist. of Greece*, pt. 1, ch. 12.

TYRAS, The.—The ancient name of the river Dniester.

TYRCONNEL'S DOMINATION IN IRELAND. See IRELAND: A. D. 1685-1688.

TYRE.—"Justin represents Tyre as having been founded a year before the Capture of Troy, thus apparently reducing by about 1,500 years the date assigned to it by the priests of the temple of Hercules. . . . Josephus places the settlement of Tyre 240 years before the building of Solomon's Temple. He refers no doubt to the same event as Justin, the occupation of the island by the Sidonians, as he cannot have been ignorant of the mention of Tyre in the Old Testament more than 240 years before Solomon. The date of the building of Solomon's Temple is itself disputed, estimates varying from 1012 B. C. to 969 B. C. . . . Tyre consisted of two parts, an island about three-quarters of a mile in length, separated from the mainland by a strait four stadia, about half a mile, in width at its northern end, and a town on the shore. The latter was distinguished as Pake-Tyros, or Ancient Tyre, and was the chief seat of the population, till the wars of the Assyrian monarchs against Phœnicia. It extended along the shore from the river Leontes in the north to the fountain of Ras-el-Ain in the south, a distance of seven miles, great part of which would be suburb rather than city. Pliny, who wrote when its boundaries could still be traced, computes the circuit of Pake-Tyros and the island together at nineteen Roman miles, that of the island town being 22 stadia. . . . Though called Old Tyre, because it lay in ruins, when the younger city on the island was in the height of its prosperity, it was from the first connected with it; and the name of Tyre (Tsour), 'a rock,' would hardly be appropriate, except to the island. . . . It is probable that, from the first, the island, from the excellence of its natural harbour, was a naval station to the city on the mainland, and, as a place of security, the seat of the worship of the national deities, Astarte, Belus, Heracles. . . . The situation of Pake-Tyros was one of the most fertile spots on the coast of Phœnicia. The plain is here about five miles wide, the soil is dark, and the variety of its productions excited the wonder of the Crusaders. Near the southern extremity of the city was a fountain, which, communicating with some natural receptacle in the mountains above, poured forth copious and perennial streams of pure and cool water. An aqueduct distributed them through the town. . . . Whatever may have been the relative importance of Pake-Tyros and the island, previous to the great migration from Sidon, occasioned by the victory of the Ascalonites, there can be no doubt that from this time the population of the island greatly increased. The colonization of Gades took place about a century later. But we have no connected history of Tyre till near the age of Solomon."—J. Kenrick, *Phœnicia: Hist.*, ch. 1.—See, also, PHœNICIANS.

The founding of the colony of Carthage. See CARTHAGE: THE FOUNDING OF.

B. C. 598-585.—Siege by Nebuchadnezzar. See PHœNICIANS: B. C. 850-538.

B. C. 332.—Siege and capture by Alexander the Great.—After defeating the Persians at Issus (see MACEDONIA; B. C. 334-330), Alexander turned his attention to the tributary Phœnician cities, whose fleets gave to the Great King a naval power more formidable than the hosts of the nations which marched at his command. Sidon, Hydrus, and other towns submitted promptly to the conqueror. Tyre offered a qualified surrender, which did not satisfy the haughty Macedonian, and he instantly laid siege to the city. Having no adequate fleet with which to reach the island-town, he resolved to carry a causeway across the channel which separated the island from Old Tyre, on the mainland, and he demolished the buildings of the latter to provide materials for the work. It was an undertaking of immense magnitude and difficulty, and the ingenious Tyrians found many modes of interfering with it. They succeeded in destroying the mole when half of it had been built; but Alexander, with obstinate perseverance, began his work anew, on a larger scale than before. He also collected a strong fleet of war-galleys, from Cyprus and from the Phœnicians who had submitted to him, with which the opposition of the enemy was checked and his own operations advanced. After seven months of prodigious labor and incessant battle, the strong walls of Tyre were beaten down and the city taken. "It soon became a scene of unresisted carnage and plunder. The Macedonians, exasperated by the length and labours of the siege, which had lasted seven months, and by the execution of their comrades [Greek prisoners, whom the Tyrians had put to death on the walls, before the eyes of the besiegers, and cast into the sea], spared none that fell into their hands. The king—whom the Greeks call Azelmicus—with the principal inhabitants, and some Carthaginian envoys who had been sent with the usual offerings to Melkart, took refuge in his sanctuary; and these alone, according to Arrian, were exempted from the common lot of death or slavery. It was an act of clemency, by which the conqueror at the same time displayed his piety to the god. Of the rest, 8,000 perished in the first slaughter, and 30,000, including a number of foreign residents, were sold as slaves. But if we may believe Curtius, 15,000 were rescued by the Sidonians [of Alexander's navy], who first hid them in their galleys, and afterwards transported them to Sidon—not, it must be presumed, without Alexander's connivance or consent. It sounds incredible, that he should have ordered 2,000 of the prisoners to be crucified. . . . Tyre was still occupied as a fortress, and soon recovered some measure of her ancient prosperity."—C. Thirlwall, *Hist. of Greece*, ch. 50.

ALSO IN: Arrian, *Anabasis of Alexander*, bk. 2, ch. 15-24.

B. C. 332-A. D. 638.—Under Greek and Roman domination.—"The Carians, with whom Alexander re-peopled the city [of Tyre] fell into the habits of the former population, and both Tyre and Sidon recovered much of their commercial greatness. After a long struggle between the kingdoms of Egypt and Syria, Phœnicia was finally secured to the latter by Antiochus the Great (B. C. 198). But the commercial rivalry of Egypt proved more serious even than political subjection; and the foundation of Ber-nice on the Red Sea diverted to

Alexander much of the oriental commerce that had previously flowed through Tyre and Sidon. But still they did not succumb to their younger rival. Under the Romans, to whom Phœnicia was subjected with Syria [by Pompeius the Great, B. C. 64], Tyre was still the first commercial city of the world."—P. Smith, *Hist. of the World*; *Ancient*, ch. 24.

A. D. 638.—Capture by the Moslems.—After the taking of Jerusalem by the Caliph Omar, the Moslems made themselves masters of the remainder of Palestine very quickly. Tripoli was first won by treachery, and then the same traitor who had delivered it, making his way to Tyre, succeeded in bringing about the betrayal of that place. Many of the inhabitants were put to the sword; but many others are said to have saved their lives by accepting the religion of the victors. The fall of Tyre was followed by the flight from Cæsarea of Constantine, son of the Emperor Heraclius, who commanded in Syria, and the entire abandonment of that rich province to the Moslems.—S. Ockley, *Hist. of the Saracens*, pp. 251-253 (*Bohn ed.*).

A. D. 1124.—Siege and Conquest by the Venetians and Crusaders.—"The Venetians took little or no part in the First Crusade, being largely engaged in commerce with the Saracens. But in 1124—a full quarter of a century after the taking of Jerusalem—they found it wise to obtain an interest in the Christian conquests that were spreading along the Levantine coasts. They accordingly sent their doge, with a formidable fleet, to offer aid to the Latin king of Jerusalem—then Baldwin II.—for the reduction of either Ascalon or Tyre, both of which cities were still held by the Moslems. Finding it difficult to make choice between the two places, a solemn drawing of lots took place, at the altar of the Holy Sepulchre, as a means of ascertaining the will of God. The lot decided that Tyre should be attacked, and operations were accordingly begun. But "the Venetians, more devoted to the interests of their commerce and of their nation than to those of a Christian kingdom, demanded, before beginning the siege of Tyre, that they should enjoy a church, a street, a common oven, and a national tribunal in every city in Palestine. They further demanded other privileges and the possession of a third of the conquered city." The demands of the Venetians were complied with, and Tyre, after a siege of over five months, beleaguered by land and sea, was taken. The capitulation was an honorable one and honorably respected. The Moslem inhabitants were permitted to leave the city; the Christians entered it triumphally, and the day on which the news reached Jerusalem was made a festival.—J. F. Michaud, *Hist. of the Crusades*, bk. 5.

TYROL: Origin of the county and its name.—"Tyrol freed herself from the suzerainty of Bavaria in very early times. She was divided among a number of princes, lay and ecclesiastical. The principal of these were the counts of the Adige or of the Tyrol, and the counts of Andechs, who obtained the title of duke from Frederick I. [1153-1190], and called themselves dukes of Meran. Their race came to an end in 1248, and their domains were united to those of the counts of Tyrol who thus became possessed of the larger part of the lands

between the Inn and the Adige. Tyrol takes its name from the castle of Tirol, which was built on the site of the Roman station Terlois, not far from Meran, on the upper waters of the Adige." — L. Jager, *Hist. of Austro-Hungary*, p. 144, footnote.—"After the dissolution of the classic Roman Empire, the Province of Rætia split up into parcels. . . . It is impossible, in a sketch like this, to follow the various dynasty and other changes, most of them extremely perplexed and obscure, which ensued between the 5th and 10th centuries. At the end of this period, the main constituents of the old province had assumed something like the shape which they now bear. That is to say, Rætia Secunda was separated from Rætia Prima, which had also lost what formerly belonged to it south of the Alpine ridge. . . . Tirol again had been detached from Rætia Prima, and had begun to form a separate entity. Meanwhile a power of first rate importance in the future history of Graubünden [the Grisons] had arisen; namely the Bishöpic of Chur. . . . The Bishops of Chur took rank as feudal lords of the first class. . . . Originally an insignificant house, exercising . . . the functions of Bishops to the See of Chur, the Counts of Tirol acquired influence and territory under the shadow of distant ecclesiastical superiors."

J. A. Symonds, *Hist. of Graubünden (In Strickland's 'The Engadine')*, pp. 23-27.

UGANDA.—"It was in 1858 that the travellers Burton and Speke, starting from Zanzibar, first made Europe acquainted with the existence of that vast inland sea, the Victoria Lake, of which Rebmann and Erhardt had already heard native reports. Four years later Speke and Grant, passing round the western shore, reached Uganda; and they found here, if I may employ the paradox, a singular, barbaric civilisation. Combined with the most barbarous usages and the grossest superstition were many of those advances in the scale of humanity which we are wont to accept as indications of civilisation. There was an appeal to law, and cases were decided after a formal hearing. The administration was vested in the king,—an absolute despot,—and from him downwards there existed a regular chain of delegated power and control. Well-made roads, kept constantly in repair, intersected the country in all directions. Rough bridges were constructed across river swamps. An army was maintained, and also a fleet of canoes on the waters of the lake. The arts of

building, smith-work, &c., were very far in advance of anything to be found between Uganda and the coast. The ideas of decency, the use of clothing, and the planting of trees, were indications of long years of development, of which the intricate customs and etiquettes surrounding the Court were an additional proof. Speke traces the earliest developments of this civilisation to Unyoro and its shepherd kings, descendants of a nomadic, pastoral race—the Wuhuma—whom he supposes to be an offshoot from the Abyssinians or Gallas. Uganda and the countries lying along the lake shore, being the richest province of this Wuhuma empire—called Kitara—had to bring large quantities of produce to Unyoro for the king's use, and their inhabitants were looked on as slaves. The legend relates that a hunter named Uganda headed a revolt, and was proclaimed king under the name of Kimera. Mtesa was the seventh of the dynasty, according to Speke, which shows it to be of some little antiquity. Speke was enthusiastic about the fertility of Uganda, and the development of its people as compared with the savage tribes of Africa. The next European to visit the country was Colonel Challié Long, who was sent by Gordon in the summer of 1874. Stanley followed in 1875, and simultaneously Linant arrived in the country. In 1876 Gordon sent Emin with a party of soldiers to Mtesa's capital. They were for some time quartered there, and Gordon had views of annexing Uganda to the Egyptian Sudan. . . . Stanley was even louder in his praises of Uganda than Speke had been, and described it as the 'Pearl of Africa.' In consequence of his appeal on behalf of the people, a fund was started, and missionaries were despatched to Uganda. These arrived in June 1877. . . . Some two years later—February 1879—the French (R. Catholic) Algerian Mission despatched a party of 'White Fathers' to

begin mission-work in Uganda. The religious differences between these two conflicting creeds, which marked the very inauguration of the R. Catholic mission, much puzzled and confused Mtesa, since both alike called themselves 'Christians.' The Arabs from the coast had already settled in Uganda, and brought with them the religion of Islam. . . . Mtesa showed great toleration to all creeds, though at one time he had leaned to Mohammedanism, and had ordered all Uganda to embrace that creed. Shortly after, however, as the followers of Islam refused to eat the king's meat because it was not killed in the orthodox way according to the Koran, he ordered the massacre of all Mohammedans. . . . Mtesa died in the autumn of 1884, and Mwanga, then about eighteen years old, succeeded him — being selected from among Mtesa's sons on account of his personal likeness to the late king, since in Uganda paternity is often difficult to prove. At this time the three religions had made great progress, and their disintegrating influences on the old customs began to be more and more apparent. This was especially the case with regard to the Christians, who no longer regarded the king as divine, nor his acts, however gross and cruel, as having a divine sanction. They owned a Higher allegiance, though they remained obedient subjects, and distinguished themselves by bravery in war. Such an attitude was, of course, intolerable to a cruel despot like Mwanga. . . . There was still a further reason for suspicion and fear of the white men. . . . The Egyptian flag had been hoisted at Mruli and Fauvera in Unyoro, only just beyond the borders of Uganda, and Gordon's envoys — Colonel Long and Emin — and his troops had penetrated to Mtesa's capital. The Arabs also told of the doings of the Belgians on the Congo. At a later period reports reached Mwanga of German annexations in Usugara on the East Coast. Last, and most disturbing of all, was the news of Mr. Thomson's arrival near Usoga in the East — the route from the coast by which native tradition said that the conquerors of Uganda would come. Mwanga had succeeded his father in November 1884. Early in 1885 he determined to stamp out those dangerous religions, Mohammedan and Christian alike, which were disintegrating his country. The missionaries Mackay and Ashe, were seized, and their followers persecuted. But the religion spread the more. A plot to depose Mwanga was discovered and crushed. With varying fortunes — sometimes treated leniently, sometimes the victims of violent persecution — the missionaries held their own till the autumn of 1885. Then came news of Bishop Hannington's approach." Unhappily the Bishop came by the forbidden Usoga route, and Mwanga ordered that he be killed, with all his men, which was done in October, 1885. "After this the position of the Europeans was very precarious, but not till the following May (1886) did the storm burst. Mwanga then threw aside all restraint, and butchered the Christian converts wholesale. . . . But in spite of the martyrdom by torture and burning, the religion grew. . . . The heroism inspired by religion in the early history of our own Church was repeated here in the heart of Africa." At length, in 1888, there was a revolt, in which Christians and Mohammedans seem to have combined, and Mwanga fled to an island at the south of the Lake. His brother Kiwewa was made

king, and for a time, the Christians were in control of affairs. But the Mohammedans grew jealous, and by a sudden rising drove the Christians out. Kiwewa refusing to accept the creed of Islam, was deposed, and another brother, Karema, was raised to the throne. The exiled Christians now made overtures to Mwanga, and an alliance was concluded, which resulted in the overthrow of the Mohammedan or Arab party, and the restoration of Mwanga to the throne, in October, 1889. The two Christian factions, Catholic and Protestant, or French and English, divided the country and all the offices of government between them, but were bitterly jealous of each other and perpetually quarreled, while the defeated Mohammedans were still strong and unsubdued. Affairs were in this state when Dr. Peters, the explorer in command of the German "Emin Relief Expedition," came to Uganda, having learned of the rescue of Emin Pasha by Stanley. Dr. Peters, with the aid of the French party, succeeded in arranging some kind of treaty with Mwanga, and this alarmed the Imperial British East Africa Company (see AFRICA: A. D. 1884-1891) when news of it had been received. That alarm was soon increased by intelligence that Emin Pasha had entered the German service and was about to conduct a strong expedition to the south of Lake Victoria Nyanza. These and other circumstances led to the despatching of Capt. Lugard with a small force to Uganda to represent the British East Africa Company and establish its influence there. Capt. Lugard arrived at Mengo, the capital of Uganda, on the 18th of December, 1890. Meantime Great Britain and Germany, by the Anglo-German Agreement of July 1, 1890 (see AFRICA: A. D. 1884-1891) had settled all questions between them as to their respective "spheres of influence," and Uganda had been definitely placed within the British "sphere." This enabled Captain Lugard to secure the signing of a treaty which recognized the suzerainty of the Company, established its protectorate over Uganda, and conceded to it many important commercial and political powers. He remained in the country until June, 1892, during which time he was driven to take part in a furious war that broke out between the Catholic and Protestant parties. The war ended in a partition of territory between the factions, and three small provinces were, at the same time, assigned to the Mohammedans. After maintaining Captain Lugard and his force in the country for eighteen months, the Company found the cost so heavy and the prospect of returns so distant, that it came to a resolution to withdraw; but was induced by a subscription of £16,000 from the Church Missionary Society to remain for another year in the exercise of the control which it had acquired. At the end of 1892 the Company renewed its resolution to evacuate the region west of Lake Victoria, and the British Government was urgently pressed to take upon itself the administration of the country. It was only persuaded, however, to assume the cost of a further occupation of Uganda for three months by the Company's officers, in order to give more time for ensuring the safety of missionaries and other Europeans. It consented, moreover, to despatch a Commissioner to investigate the situation and report upon it. The official selected for that duty was Sir Gerald Porter, Consul-General at

Zanzibar. Sir Gerald returned to England with his report in December, 1893, and died of typhoid fever in the month following. His report urged the maintenance of an effective control over the government of Uganda, to be exercised directly by the British Government, in the form of a Protectorate, keeping the king on his throne, with a Commissioner at his side to direct his action in all important particulars. After much discussion, the decision of the Government was announced at the beginning of June, 1894. It determined to establish the proposed Protectorate in Uganda, not extending to Unyoro, and to place a Sub-Commissioner on duty between Lake Victoria and the sea, for the purpose of watching over communications, and apparently without political powers. The Government declined to undertake the building of the railway from Mombassa on the coast to the Lake, for which the Imperial British East Africa Company had made surveys.—Capt. F. D. Lugard, *The Rise of our East African Empire*.

ULTRAMONTANE.—ULTRAMONTANISM.—The term ultramontane (beyond the

mountain) has been used for so long a time in France and Germany to indicate the extreme doctrines of Papal supremacy maintained beyond the Alps—that is, in Italy, and especially at Rome—that it has come to have no other meaning. The ultramontanists in each country are those who make themselves partisans of these doctrines, in opposition to the more independent division of the Roman Catholic Church.

UMBRIANS, The.—“The Umbrians at one time possessed dominion over great part of central Italy. Descriptions in their language also remain, and manifestly show that they spoke a tongue not alien to the Latin. The irruption of the Sabellian and of the Etruscan nations was probably the cause which broke the power of the Umbrians, and drove them back to a scanty territory between the Æsis, the Rubicon, and the Tiber.”—H. G. Liddell, *Hist. of Rome, introd., sect. 2*.—See, also, ITALY: ANCIENT.

UNIFORMITY, Acts of.—Two Acts of Uniformity were passed by the English Parliament in the reign of Edward VI. (1548 and 1552), both of which were repealed under Mary. In 1559, the second year of Elizabeth, a more thoroughgoing law of the same nature was enacted, by the provisions of which, “(1) the revised Book of Common Prayer as established by Edward VI. in 1552, was, with a few alterations and additions, revised and confirmed. (2) Any parson, vicar, or other minister, whether benefited or not, wilfully using any but the established liturgy, was to suffer, for the first offence, six months' imprisonment, and, if benefited, forfeit the profits of his benefice for a year; for the second offence, a year's imprisonment; for the third, imprisonment for life. (3) All persons absenting themselves, without lawful or reasonable excuse, from the service at their parish church on Sundays and holidays, were to be punished by ecclesiastical censures and a fine of one shilling for the use of the poor.”—T. P. Taswell-Langmead, *English Const. Hist., ch. 12*.—See, also, ENGLAND: A. D. 1559.—In 1662 soon after the Restoration, another Act of Uniformity was passed, the immediate effect of which was to eject about 2,000 ministers from the established Church. See ENGLAND: A. D. 1662-1665.

UNITARIANISM.—"In its restricted sense Unitarianism means belief in the personal unity of God instead of in a community of divine persons. . . . Among the articles of Unitarian faith so understood, besides the doctrine of one supreme divine person, may be enumerated belief in human nature, in moral freedom, in human reason, in character as of more worth than ritual or creed, in the equal justice not to say mercy of God, in the unreality of a devil, not to say of evil, and in the ultimate salvation, or evolution into something better, of all souls. . . . Without being in any sense the first article of the faith, either in the historical order as having been the starting-point, or in the logical order as underlying the whole system, or in the order of importance as being with us the doctrine of doctrines, it has happened in spite of a thousand protests that belief in God's personal unity has given its name to the entire confession. The movement first called Socinian, then Arminian, and finally Unitarian, began as a protest of the 'natural man' against two particularly hateful doctrines of Calvinism, that of total depravity and that of predestination."—S. C. Beach, *Unitarianism and the Reformation (Unitarianism: its Origin and History)*.—"The establishment of distinct Unitarian churches in England dates back to 1774, when Theophilus Lindsey left the Church of England and went up to London to start the first avowedly Unitarian place of worship in the country. But that was not the beginning of Unitarianism. Centuries before this, Unitarianism began in England as an individual opinion, led first its martyr-age, then a period when it was a great ferment of controversy, and finally the distinct development of it which stands today in our English Unitarian body. The names of some of the Unitarian martyrs on the continent of Europe are comparatively well known,—Servetus, burned by Calvin; Valentine Gentilis the Italian; and other isolated students here and there, who had been stirred up by the Reformation spirit to read the Bible for themselves, and who could not stop where Luther and Calvin stopped. . . . What is called the 'era of toleration' began immediately after the overthrow of the Stuarts in 1688. The sects were now at liberty to go quietly on in their own way. On the one hand there was the great established Episcopal Church,—at a pretty low ebb in religious life, for its most earnest life had gone out of it on that 'black Bartholomew's Day, 1662,' when the two thousand Puritan clergy were ejected [see ENGLAND: A. D. 1662-1665]. On the other hand were these Puritans,—'Dissenters' they began now to be called,—divided into three great sects, Baptists, Independents, and English Presbyterians. Now,

these were all free. They could build churches, and they did. From 1693 to 1720 was the great 'chapel'-building time. . . . But now, in this great development of chapel-building by these three denominations, a curious thing took place, which unexpectedly affected their after history. That curious thing was, that while the Baptists and Independents (or Congregationalists) tied down all these new chapels to perpetual orthodox uses by rigid doctrinal trust-deeds, . . . the English Presbyterians left theirs free. It seems strange that they should do so; for the Presbyterians had begun by being the narrowest sect of the Puritans, and the Scotch Presbyterians always remained so. But the English Presbyterians had very little to do with the Scotch ones, and through all the changes and sufferings they had had to go through they had become broadened; and so it came to pass that now, when they were building their churches or chapels up and down the country, they left them free. . . . The English Presbyterians, thus left free, began to grow more liberal. . . . A general reverence for Christ took the place of the old distinct belief in his deity. . . . They opened the communion to all; they no longer insisted on the old professions of 'church-membership,' but counted all who worshipped with them 'the church.' Thus things were going on all through the middle of the last century. Of course it was not the same everywhere; some still held the old views. . . . One man among them, . . . Dr. Joseph Priestley, . . . was one of the leading scientists of his time,—a restless investigator, and at the same time an earnest religious thinker and student, just as eager to make out the truth about religion as to investigate the properties of oxygen or electricity. So he investigated Christianity, studied the creeds of the churches, came to the conclusion that they were a long way from the Christianity of Christ, and gradually came to be a thoroughgoing Unitarian. When he came to this conclusion he did not hide it; he proclaimed it and preached it. . . . The upshot of it was, that at length he aroused a large part of the body to the consciousness that they were really Unitarians. They still did not take the name; they disliked sect-names altogether. . . . And so, though they mostly continued to call themselves English Presbyterians, or simply Presbyterians, all the world began to call them Unitarians; and more and more the Baptists and Independents, or Congregationalists, who had formerly fellowshiped and worked with them, drew apart, and left them, as they are to-day, in the reluctant isolation of a separate Unitarian body. Two other movements of thought of a somewhat similar kind increased and strengthened this development of a separate Unitarian body,—one among the General Baptists, the other in the great Episcopal Church itself."—B. Herford, *Unitarianism in England (Unitarianism: its Origin and History)*.—"It is hard to trace the early history of Unitarianism in New England. The name was seldom used, yet not omitted with any view to concealment; for we have abundant proof that the ministers to whom it belonged preached what they believed clearly and fully. . . . But a marvellous change had taken place in the last century, at the beginning of which the denial of the Trinity would have seemed no better than blasphemy; while at its close nearly all the clergy of Boston

and its vicinity and many others in Massachusetts were known to dissent from the ancestral creed, to have ceased to use Trinitarian doxologies, and to preach what was then known as Arianism, regarding Jesus Christ as the greatest and oldest of created beings, but in no proper sense as God. At the same time, so little stress was laid on the Trinity by its professed believers that, with two or three exceptions, these Arians remained in full church fellowship with those of the orthodox faith. In the territory now within the limits of Boston there were, a century ago, but two professedly Trinitarian ministers, one of them being Dr. Thacher, of the liberal Brattle Square Church, while Dr. Eckley, of the Old South Church, was known to entertain doubts as to the deity of Christ."—A. A. D. 1607-1752.—First settlement and organization of the thirteen original English colonies.—The earliest attempts at European settlement (as distinct from exploration) within the present limits of the United States were made by French Huguenots, under the patronage of Admiral Coligny; first at Port Royal, on Beaufort River, Florida, where Jean Ribaut, in 1562, placed a few colonists who soon abandoned the spot, and, two years later, at Fort Caroline, on St. John's River, in the same peninsula. The second colony, commanded by René de Laudonnière, was considerable in numbers but unpromising in character, and not likely to gain a footing in the country, even if it had been left in peace. It was treacherously extinguished, however, by the Spaniards in September, 1565. The Spaniards had then established themselves in a fortified settlement at St. Augustine. It was surprised and destroyed in 1567 by an avenging Huguenot, but was promptly restored, and has survived to the present day,—the oldest city in the United States. (See **FLORIDA**.)—The first undertakings at colonization from England were inspired and led by Sir Walter Raleigh. After unsuccessful attempts, in conjunction with his elder half-brother, Sir Humphrey Gilbert, to establish settlements in Newfoundland, Raleigh obtained a grant from Queen Elizabeth, in 1584, under which he planted a colony of 108 settlers, commanded by Ralph Lane, on Roanoke Island, within the boundaries of the present State of North Carolina. In honor of the virgin queen of England, the name Virginia was given to the region at large. Lane's colonists had expected to find gold, silver and pearls, and lost interest in the country when none could be discovered. In June, 1586, they persuaded Sir Francis Drake, who had touched at Roanoke with his fleet, to carry them home. Soon afterwards, several ships, sent out by Raleigh with reinforcements and supplies, arrived at the island, to find it deserted. They left fifteen men to hold the ground; but a year passed before another expedition reached the place. The fort was then found in ruins; the fifteen men had disappeared, and nothing of their fate could be learned. The new

colony perished in the same way—its fate an impenetrable secret of the savage land. This was Raleigh's last venture in colonization. His means were exhausted; England was absorbed in watching and preparing for the Spanish Armada; the time had not come to "plant an English nation in America." Sir Walter assigned his rights and interests in Virginia to a company of merchant adventurers, which accomplished nothing permanently. Twenty years passed before another vigorous effort of English colonization was made. In 1606 King James issued a royal charter to a company singularly formed in two branches or divisions, one having its headquarters at London, and known as the London Company, the other established at Plymouth and known as the Plymouth Company. Between them they were given authority to occupy territory in America from the 34th to the 45th degree of latitude; but the two grants overlapped in the middle, with the intention of giving the greater domain to the company which secured it by the earliest actual occupation. The London Company, holding the southward grant, despatched to Virginia a company of 105 emigrants, who established at Jamestown, on the northerly bank of James River (May 13, 1607), the first permanent English settlement in America, and founded there the colony and the subsequent State of Virginia. The colony survived many hardships and trials, owing its existence largely to the energy and courage of the famous Captain John Smith, who was one of its chief men from the beginning. Its prosperity was secured after a few years by the systematic cultivation of tobacco, for which the demand in England grew fast. In 1619, negro slavery was introduced; and by that time the white inhabitants of Virginia had increased to nearly 4,000 in number, divided between eleven settlements. (See **VIRGINIA**.)—Meantime, the Plymouth Company had done nothing effectively in the northward region assigned to it. Bartholomew Gosnold, in 1602, had examined the coast from Maine to Cape Cod, and built a lonely house on the island of Cuttyhunk; Martin Pring, in 1603, had loaded two ships with sassafras in Massachusetts Bay; a colony named in honor of the chief justice of England, Sir John Popham, had slivered through

the winter of 1607-8 near the mouth of Kennebec River and then gone home; Captain John Smith, in 1614, had made a voyage to the country, in the interest of London merchants, and had named it New England; but no lasting English settlement had been made anywhere within the bounds of King James' grant to the Plymouth Company, at the waning of the year 1620, when Virginia was well grown. It was then by chance, rather than by design, that the small ship *Mayflower* landed a little company of religious exiles on the Massachusetts coast, at Plymouth (December 21, 1620), instead of bearing them farther south. Driven from England into Holland by persecutions, twelve years before, this congregation of Independents, or Separatists, now sought liberty of conscience in the New World. They came with a patent from the London, or South Virginia Company, and expected to plant their settlement within that company's territorial bounds. But circumstances which seemed adverse at the time bent their course to the New England shore, and they accepted it for a home, not doubting that the proprietors of the land, who desired colonists, would permit them to stay. The next year they received a patent from the Council for New England, which had succeeded to the rights of the Plymouth Company. Of the hardships which these Pilgrim Fathers endured in the first years of their Plymouth Plantation, who does not know the story! Of the courage, the constancy and the prudence with which they overcame their difficulties, who has not admired the spectacle! For eight years they remained the only successful colony in New England. Then came the memorable movement of Puritans out of Old England into New England, beginning with the little settlement at Salem, under John Endicott; expanding next year into the "Governor and Company of Massachusetts Bay"; founding Dorchester, Roxbury, Charlestown, Watertown, and Boston, in 1630, and rapidly possessing and putting the stamp of the stern, strong Puritan character on the whole section of America which it planted with towns. In the Puritan colony of Massachusetts Bay a cleavage soon occurred, on lines between democratic and aristocratic or theocratic opinion, and democratic seceders pushed southwestwards into the Connecticut Valley, where Dutch and English were disputing possession of the country. There they settled the question decisively, in 1635 and 1636, by founding the towns of Hartford, Windsor, Wethersfield and Springfield. Three years later the three towns first named confederated themselves in a little republic, with a frame of government which is the first known written constitution, and so gave birth to the future State of Connecticut. In 1638 New Haven was founded by a company of wealthy nonconformists from England, under the lead of their minister, John Davenport, and was a distinct colony until 1662, when it was annexed to Connecticut by a royal charter. Another State, the smallest of the New England commonwealths, was taking form at this same time, in a little wedge of territory on Narragansett Bay, between Connecticut and Massachusetts. Roger Williams, the great apostle of a tolerant Christianity, driven from Salem by the intolerant Puritanism of the Bay, went forth with a few followers into the wilderness, bought land from the Narragansett Indians, and laid the foundations (1636) of the town of Providence. In that

same year another small company of people, banished from Boston for receiving the teachings of Mrs. Anne Hutchinson, bought the island of Aquidneck or Aquetnet from the Indians and settled at its northern end. This community was soon divided, and part of it removed to the southern end of the island, beginning a settlement which grew to be the town of Newport. The island as a whole received the name of the Isle of Rhodes, or Rhode Island; and in 1644 its two settlements were united with Providence, under a charter procured in England by Roger Williams, forming the colony of Providence Plantations. In 1643 the colonies of Massachusetts, Plymouth, Connecticut and New Haven, entered into a confederation, from which Rhode Island was excluded, calling themselves "The United Colonies of New England." The object of the confederation was common action in defence against the Indians and the Dutch on the Hudson. It was the beginning of the cementing of New England. Before this time, small settlements had been planted here and there in northern New England, within territory covered by grants made to Sir Ferdinando Gorges and Captain John Mason. The province claimed by Gorges was subsequently called Maine, and that of Mason, New Hampshire; but Maine never rose to an independent colonial existence. After years of dispute and litigation, between 1651, and 1677, the jurisdiction of Massachusetts was extended over the province, and it remained the "District of Maine" until 1820, when Massachusetts yielded the separation which made it a sovereign state in the American Union. The New Hampshire settlements were also annexed to Massachusetts, in 1641, after Captain Mason's death; were separated in 1679, to be organized as a royal province; were temporarily reclaimed without royal authority in 1685; but finally parted from Massachusetts in 1692, from which time until the Revolution they remained a distinct colony. (See NEW ENGLAND; also MASSACHUSETTS, CONNECTICUT, RHODE ISLAND, NEW HAMPSHIRE, and MAINE.)—While the English were thus colonizing New England at the north and Virginia at the south, the Dutch, not recognizing their claims to the country between, had taken possession of the important valley of the Hudson River and the region around its mouth, and had named the country "New Netherland." The river had been discovered in 1609 by Henry Hudson, an English sailor, but exploring in the service of the Dutch. Trading with the Indians for furs was begun the next year; the coast and the rivers of the region were actively explored; a New Netherland Company was chartered; a trading-house, called Fort Nassau, was built on the Hudson as far to the north, or nearly so, as Albany; but no real colonization was undertaken until 1623. The New Netherland Company had then been superseded by the Dutch West India Company, with rights and powers extending to Africa as well as the West Indies and the North American coasts. It bought Manhattan Island and large tracts of land from the Indians, but had little success for several years in settling them. In 1629 it introduced a strange experiment, creating a kind of feudal system in the New World, by conveying great estates to individuals, called Patroons, or Patrons, who would undertake to colonize them, and who received with their territorial grant much of the

powers and many of the characteristics of a feudal lord. Several Patroon colonies were established on a baronial seign; but, generally, the system did not produce satisfactory results, and in 1640 the Company tried the better experiment of making the trade of New Netherland free to all comers, offering small independent grants of land to settlers, and limiting the Patroons in their appropriation of territory. The Company government, however, as administered by the directors or governors whom it sent out, was too arbitrary to permit a colonial growth at all comparable with that of New England. Collisions with the English in Connecticut arose, over questions of boundary, but the latter held their ground. Southward, on the Delaware, the Swedes made a settlement where the city of Wilmington now stands, and refused to be warned off by the Dutch, who claimed the region. This Swedish colony prospered and enlarged itself during sixteen years, but was overcome by Director Stuyvesant of New Netherland in 1654. A little later than the appearance of the Swedes on the Delaware, certain colonists from New Haven bought lands from the Indians on both banks of the Delaware and made attempts at settlement, in what is now New Jersey and on the site of the future city of Philadelphia. The Dutch and Swedes combined against them and they failed. In 1664 the whole situation in this middle region was changed by the English conquest of New Netherland. The territory so acquired—or regained, if the original English claim had been good—passed then, by royal grant, to the Duke of York (afterwards King James II.), and became the proprietary province of New York. (See NEW YORK).—The Duke of York, in turn, the same year, transferred to Lord John Berkeley and Sir George Carteret the part of his domain which lay between the Hudson and the Delaware, and it received the name of New Casarea, or New Jersey. Under encouragement from Berkeley and Carteret the New Haven colonization was resumed. Ten years later Berkeley sold his rights to a party of Quakers who were seeking a refuge for their persecuted sect in the New World. A division of the province was made and the Quaker proprietors received West Jersey, while East Jersey remained to Carteret. (See NEW JERSEY).—Before this time, William Penn had become the principal owner of the West Jersey interest. Not long afterwards (1681), by surrendering a claim which his father held against the British government, Penn procured from King Charles II. a much greater proprietary domain, on the western side of the Delaware, being no less than the vast tract, 40,000 square miles in extent, which received the name of Pennsylvania. To his title from the king he added a deed of purchase from the Indians. Penn's scheme of colonization was very liberally framed, and it was conducted with marked success. Philadelphia, first laid out in 1683, had 2,000 inhabitants in 1685, and Pennsylvania at that time had 8,000. Penn himself did not find peace or quietness in his position as a princely proprietor, but he founded a great and prosperous commonwealth on noble lines. (See PENNSYLVANIA).—In order to possess one bank of the Delaware River and Bay to the sea, William Penn, after securing his grant from the king, bought additionally from the Duke of York the

claims of the latter to that strip of territory which the Swedes had settled on and struggled for with the Dutch, and which took an independent political form in later days as the State of Delaware. The Delaware "territories," as they were called, never accepted their dependent relationship to Pennsylvania, and as early as 1703 it was found necessary to concede them a separate legislature, though they continued under Penn's proprietary government. (See DELAWARE).—Adjoining Penn's province on the south was the domain of another great proprietor, Lord Baltimore, whose title deed, from the same royal source as that of Penn, but prior in time by half a century, gave rise to conflicts which troubled the whole life of the peaceful Friend. The first Lord Baltimore (George Calvert) received from James I. in 1633 a patent which gave him territory on the northerly side of the Potomac River, stretching to the Delaware Bay and River and to the 40th parallel of north latitude. By its terms it did undoubtedly take in Delaware and part of Pennsylvania; but the intervening occupation by the Swedes and Dutch, the English conquest, and the royal grant to the Duke of York, confused the title. The controversy was not settled until 1701-7, when "Mason and Dixon's line" was run as the accepted boundary between Maryland and Pennsylvania. The lords proprietary of Maryland had been in conflict long before Penn's time with their neighbors at the south, in Virginia, and had many difficulties to encounter and many troubles in their undertaking to found a state. The powers they had received with their grant from the king were the largest that royalty could concede to a subject, and gave to their province the character of a palatine principality. But they exercised their substantial sovereignty with an admirable moderation. They were Catholics, and the early settlers in Maryland were largely though not wholly of that faith. But they introduced a policy of tolerance which was strange at the time to every other part of the New World except Rhode Island, and made their province free to all religions. Numerous Puritans entered it, especially from Virginia, where they were unwelcome; and these, it can hardly be denied, made ill returns for the tolerant hospitality they received. During the time of the Civil War, the Commonwealth and the Protectorate in England, the Maryland Puritans were hostile, not only to the proprietary government, but to its tolerant principles, and used the ascendancy which they frequently gained in a spirit that does not compare favorably with that of their adversaries. Subsequently the ascendancy of the Puritans gave way to that of the Anglican Church, without restoring the toleration which Catholicism in power had established—a rare instance in history—and which Protestantism in power had suppressed. (See MARYLAND).—Beyond the Virginia plantations, in the South, the coasts to which Raleigh had sent his first colonists, and to which the virgin queen had intended to give her name, waited long for settlement. The first durable colony within that territory which took its name in time from a less worthy sovereign was planted in 1653, at Albemarle, on the Chowan River, by a small company of dissenters from Virginia. In 1665 a considerable party of emigrants from the Barbadoes, headed by a wealthy planter of that island,

Sir John Yeamans, established themselves on Cape Fear River, near its mouth, in the district which was afterwards called Clarendon. Two years before this time, in 1663, King Charles II. had discharged some part of his heavy obligations to his loyal supporters by granting that whole section of the American continent which lies between the 31st and 36th parallels of latitude to a company of courtiers, including Clarendon, Monk, Shaftesbury, and others, and the province was named Carolina. It was divided into two great counties, Albemarle and Clarendon, and these corresponded somewhat nearly to the North Carolina and South Carolina of the present day. In 1670 the lords proprietors sent out a colony under William Sayle, which settled first at Port Royal; but Sayle died soon after landing, and the colonists were induced to migrate northwards to the Ashley River, where Sir John Yeamans met them with a considerable part of his Clarendon colony, and became the head of the united settlements. There they founded "Old Charleston," and, after a few years, shifting the site to the confluence of the Ashley and the Cooper, they began the building of the present city of Charleston. This became the nucleus of the subsequently distinct colony of South Carolina, as Albemarle did of that of North Carolina. The division was made in 1729, when the rights of the Proprietors were bought by the Crown, and the Carolinas became crown colonies. Until that time, the southern colony had made far greater progress than its northern twin. It had received a considerable immigration of Huguenots from France and of Scotch-Irish from the north of Ireland, as well as of English, and Charleston was becoming an important port, especially frequented by buccaners. But after the displacement of the proprietary government, North Carolina began quickly to receive more than its share of the Scotch-Irish immigration and no small number of Highland Scotch. The colony was developed almost wholly in the agricultural direction, with few and small towns. Slavery was introduced at an early day, and rooted itself in the industrial system, as it did in that of all the southern settlements. (See NORTH CAROLINA and SOUTH CAROLINA.)—The last of the "Thirteen Colonies" to come into existence was the colony of Georgia, founded so late as 1733 by General James Oglethorpe. It occupied territory too close in neighborhood to the Spaniards of Florida to be attractive to settlers in the 17th century. Its colonization was undertaken by General Oglethorpe primarily as a philanthropic enterprise for the benefit of unfortunate English debtors, who were released from prison and permitted to emigrate under his care; but secondarily to strengthen the defence of the English colonies against the Spaniards. He obtained his grant from George II. "in trust for the poor," and the colony was governed by trustees until 1753, when it was surrendered to the crown. The first emigrants left England in the fall of 1732, and early in the next year Savannah was laid out by Oglethorpe in person. His scheme of colonization proved highly attractive, not only in England but on the continent, and numbers of Protestant Germans came over to become part of the original population of Georgia. At the outset, slavery was strictly prohibited; but the settlers thought themselves

grievously oppressed by the denial of slaves, and their discontent became so great that in 1749 the trustees rescinded the prohibition. (See GEORGIA.)

A. D. 1620-1776.—Constitutional relations of the colonies to the English Crown and Parliament.—The working of the leaven of independence in New England Puritanism.—The history of the development of the question between England and her colonies, as to their constitutional relations to one another, "falls naturally into two periods: first, from the beginning of English colonization in America to the Revolution of 1688; second, from 1688 to the Declaration of Independence. . . . Passing now to the history of the first period, it is to be observed that the leading institution in the English government at that time was the King in Council. . . . But in the 17th century, owing to a combination of very strong political and religious forces, the struggle between the King in Parliament and the King in Council was . . . opened and pushed with vigor. It continued with alternations of success, but on the whole with results favorable to Parliament, till 1688. Then the King in Parliament finally gained the ascendancy, and this result was so secured by statute as never afterwards to be seriously called in question. The supremacy of Parliament was established by a series of royal concessions. The parliamentary party viewed these as compromises between Parliament and king. This gave color to the theory of social contract, which was now given new impulse and form by the parliamentary writers of the 16th and 17th centuries. . . . It naturally follows from what has been said that the administration of colonial affairs previous to 1688 was in the hands of the King in Council. Such was the fact. The enterprises of discovery were fitted out under the patronage of the crown; the territories discovered or visited were taken possession of in its name; and grants of land, of rights of government and trade, were made to actual settlers by the kings. Every colonial charter is a proof of this. As the king was by the theory of English law feudal proprietor of England, so he became proprietor of colonial territory, though that territory was granted out in seage, one of the freest forms of English tenure. Certain superficial distinctions were introduced in the form of colonial governments, as royal, proprietary, and charter; but they all emanated from the crown. Its supremacy extended around and beneath them all. The fact that they were established by grant is proof of this, even though there had been no subsequent acts to enforce the control. They were colonies of the English crown; their inhabitants were its subjects. The true doctrine of sovereignty and allegiance necessitates this conclusion. . . . Parliament passed few statutes affecting the colonies. Yet, not to mention others, there were five such of very great importance which fall within this period: the Act of Supremacy (1 Eliz. cap. 1), and the four Navigation acts. In all these the colonies were expressly mentioned. But the relative position of crown and Parliament is illustrated by the fact that when in 1624 the Council was proceeding to annul the third Virginia charter, the House tried to interfere but was warned off—because the business concerned only the king and his advisers. Moreover there was no lack of precedents

for the extension not only of common law but of royal ordinances and statute law outside of the original realm of England. . . . Such in outline was the status of English colonial law previous to 1688. It was in the process of formation and adaptation to the new empire. There were ample precedents for the exercise of the rights of British sovereignty in America, but those rights had not yet been called into the fullest operation. Their legitimacy however was in general fully acknowledged by the colonists. They had been allowed great liberty in establishing their governments, erecting courts, levying taxes, organizing and calling out their militia for defence against the Indians. Colonial society had been allowed to develop freely in all lines and the product was far different from anything which existed in the mother country. It was democratic rather than aristocratic; it was also extremely particularistic, and too remote from England to feel much interest in the general concerns of the empire. In this divergence of social organization and interests, as between the colonies and the mother country, lay the germ which might develop into resistance on the part of the plantations, if at any time England should attempt to enforce her rightful supremacy over them. But as yet there was too little of the spirit of union among the colonists to make possible any combined action. Also those dynasties whose government had been most arbitrary in England, the Tudors and Stuarts, had, till the reign of James II, treated the colonies with great leniency. But the statements just made do not cover the whole ground. They describe the attitude of the colonies in general toward the mother country, but they do not describe the special conditions which prevailed in New England. If we wish to know how the theory of colonial independence originated, we must look in that direction. The American revolution cannot be explained without reference to the political character and tendencies of Puritanism. . . . Puritanism then was a political as well as a religious movement. On the one hand its doctrines contained a strong democratic leaven; on the other they contained principles which might lead to the separation of church and state. How the former tendency worked itself out in New England is familiar; how the latter failed of accomplishment there is equally well known. The Puritans of Massachusetts were not opposed to the union of church and state or to the employment of the secular power to enforce religious conformity. . . . What they were opposed to was every other form of state church except their own. . . . In order to maintain her peculiar system, Massachusetts had to be on her guard against all interference from outside. . . . The Massachusetts charter was brought over to this country. A few years later the Plymouth company was dissolved, and representation of the colony in England, except by such agents as she might send, ceased. The terms of the charter were very liberal; but like all the others it was a royal grant, and expressly stated that the inhabitants of the colony were to be subjects of England and were to enjoy all the liberties and immunities of such, as if they were in the realm of England. The oaths of supremacy and allegiance were to be administered to all who should go to the colony. The company was made a 'body corporate and politic' and was

given ample powers of government; but its laws, statutes, and ordinances were not to be contrary to the laws of England. The admission of freemen was left in the hands of the corporation. How did the Puritan oligarchy make use of this charter for serving the purposes of their government? In a word, they interpreted the expression 'body corporate and politic' to mean an independent state, and virtually abandoned all legal connection with England except an empty acknowledgment of allegiance. The oath of allegiance was not administered, but instead an oath of fidelity to the government of Massachusetts. An ecclesiastical system wholly different from that of England was established. Only those were admitted to political rights, made freemen, who were members of a Congregational church. . . . The colony also exercised full legislative and judicial powers, and denied the right of appeal both practically and theoretically. The proof of this is most direct and convincing. To illustrate: in 1646 the General Court refused to permit the appeal of Dr. Child and others who, as Presbyterians, desired to lay before Parliament the wrongs they suffered in Massachusetts. Not only was the right denied, but the petitioners were prevented by force from carrying their case to England. The same course was pursued in reference to appeals in ordinary judicial cases. During the discussion of the affair just mentioned it was boldly affirmed in the General Court that subjects were bound by English laws only so long as they lived in England; that neither statutes nor royal ordinances were in force beyond the seas. A little later than this both the magistrates and the elders were called upon to give their views on the legal relations between the colony and England. Both agreed that by their charter they 'had absolute power of government'; that their government was perfect and sufficient in all its parts, not needing the help of any superior to make it complete. They acknowledged that they had received the charter from England, and 'depended upon that state for protection and immunities as freeborn Englishmen'; but the duties which were correlative to those immunities, and which are necessary to a true conception of allegiance, were not mentioned. This position was consistently maintained by the Puritans of Massachusetts as long as they remained in power. In their correspondence with the home government and its officials between 1664 and 1684 the right of appeal was always denied. Its exercise was never allowed. If we add to this the further statements that Massachusetts coined money; strove to enlarge the bounds of her patent, not only without consulting the king, but in defiance of his absolute prohibition; taxed English imports; and, without the consent of the home government, entered the New England confederation, some notion can be formed of the degree of independence claimed and exercised by that colony. The exercise of this independence however did not make it legal. It only illustrates the fact that the roots of the American revolution extend back into the times of which we are speaking. . . . It was to be expected that England would interfere to bring Massachusetts within the bounds of constitutional dependence. Complaints against the colony, on the part of Gorges and of those who had been banished by the Puritans, began very early. These led to

'quo warranto' proceedings for the recall of the charter in 1635. But civil strife at home compelled the government of Charles I to abandon the project. Then came the period of the Commonwealth, when the views of the English government were so fully in harmony with those of the New England leaders that the practical independence of the colony was ignored. . . . From the restoration dates the beginning of a more comprehensive colonial policy." With the fall of the Massachusetts charter, in 1684, "closes the first stage in the development of the idea of colonial independence. The struggle between the Puritans of Massachusetts and the crown is the most significant fact in American history previous to 1700. The Puritans were defeated; the authority of England was reasserted. . . . But for our purpose the important result is that the Puritans left behind them an armory full of precedents and arguments in favor of colonial independence. They had constructed the American theory on that subject. That was the chief permanent result of their experiment. They had from first to last adhered to the theory which expediency taught them to adopt. They taught the colonists how to resist the exercise of the ecclesiastical and judicial supremacy of the crown. If now at any time in the future the Americans should consider themselves aggrieved by the acts of the English government, the Puritan spirit and theory would be likely to appear. Such was the aspect of affairs at the close of the first period of colonial history. After the revolution of 1688, Parliament assumes more and more the control of American concerns. Statutes on those subjects multiply. The administration of the colonies becomes a branch of the ministerial government of Great Britain. The development of an imperial as distinguished from an insular policy is begun. The interference of England in colonial affairs became more frequent and the control asserted more extensive than heretofore. . . . The attitude of the colonists during this period was one of passive rather than active resistance. Parliamentary restrictions were so far evaded as not to be burdensome. . . . The records show that the burden of opinion in the colonies was jealousy of all government, so far as it operated as a restraint. The interference of government, whether colonial or imperial, was welcomed by the colonists, when it could be used for the advancement of their private or local interests; when larger objects were aimed at, it was if possible ignored or resisted. . . . The political condition of the colonies was for the first time clearly revealed during the French and India war. The history of Germany can furnish no more vivid spectacle of the evils of particularism than does that struggle. . . . The condition of anarchy and helplessness revealed by the war was such as to convince all the servants of the crown in America that active parliamentary interference was necessary, if the colonies were to be defended and retained as an integral part of the British empire. The fact that the British government, within a reasonable time after the close of the war, proceeded to put this suggestion into execution, implies nothing arbitrary or unreasonable. It had the undoubted constitutional right to do so; and so far as could be seen at the time, expediency prompted in the same direction. But during the century since the Puritan oligarchy of Massachusetts yielded

to the supremacy of the crown, the theory of social contract had been fully developed. It had formulated the needs of the opposition in all the European countries to the system of absolutism. It was the theory of government very generally held by the Puritans in both England and America. . . . This theory, as soon as it was understood, would naturally find general acceptance in the colonies. . . . The American revolution, as truly as the French, was the outgrowth of the doctrine of natural rights and social contract. By this I mean simply that the doctrine in question formed the theoretical basis of both movements. So far as the American revolution is concerned the proof of this statement is contained in the writings of the patriot leaders at the time, the various state papers that were issued, and the doctrine that was held respecting the right of imperial taxation. No man contributed so much to bringing about the revolution as Samuel Adams; and his mind was saturated with the theory of social contract. He made it the basis of all his reasonings. . . . The reason why New England became the leader of the movement clearly appears. The process of development through which the colonies passed was a natural, and therefore a necessary one. It was slow and obscure, and therefore could not be clearly recognized at the time. But that it was nevertheless revolutionary becomes evident when we compare the views and aims of the colonists with the constitution of the British empire. When the two systems came into collision the colonists adopted a theory which was 'in the air' at the time, but one under which no government can be successfully carried on. When they came to erect a government of their own, they had to abandon it. It is not claimed that the doctrine of natural rights ever found such general acceptance in America as in France. The character of the people and the absence of a despotic government prevented that. But that the American revolution cannot be explained without assigning it a prominent place is evident. It is not intended to convey the impression that the colonists had no grievances. There were causes for complaint, but they were doubtless greatly exaggerated. A mind filled with the democratic theories of the times, and with the loose notions concerning sovereignty and allegiance which then prevailed, could easily imagine that Parliament, unless resisted, would establish a despotic government in America."—Professor H. L. Osgood, *England and the Colonies* (*Pol. Sci. Quarterly*, Sept., 1887).

A. D. 1651-1672.—The Navigation Acts and the colonies.—Spirit and objects of the English restrictive commercial system.—To the Act of Navigation, passed in 1651 (see NAVIGATION LAWS) is due a change in the relations of the colonies to the mother-country. "Henceforth they were regarded mainly as feeders to its carrying-trade, as consumers of its manufactures, as factories for the distribution of its capital, and, in a word, as mere commercial appendages of what was now the great commercial power. Dominion became subordinate to trade. . . . Beginning . . . with the re-enactment of the Navigation Act after the Restoration, we find that the new system which is to regulate colonial trade and define the relations of the colonies to the parent, is contained in three Acts of Parliament. First, in the re-enactment itself of the Act of Naviga-

tion in 1663; secondly, in an act, passed in 1663, entitled 'an Act for the encouragement of trade'; and, thirdly, in an act, passed in 1672, and entitled 'an Act for the encouragement of the Greenland and Eastland fisheries, and for the better securing the plantation trade.' . . . The three acts which created the system, were all passed in the reign of Charles II.; the others followed rapidly, and in great numbers, for a century, until the failure of the attempt to transform this system of trade into one of trade and revenue, by means of what is known as the Stamp Act. St. John's Navigation Act was re-enacted in 1690, under Charles II., as the first-fruits of the Restoration. This act forbade importation into or exportation out of the colonies, save what came and went in English ships, and its object was, to shut the doors of the colonies against foreign trade. In 1663 another step was taken, and an act was passed with the object, openly avowed in its fifth section, of keeping the colonies in 'a firmer dependence' upon England, and of making that kingdom the staple, or place of distribution, not only of colonial produce, 'but also of the commodities of other countries and places, for the supplying of them.' To effect this, the Act of 1663 went beyond that of 1660, and exacted, that no European products or manufactures should be imported into any colony, except what had been actually laden and shipped in an English port, and carried 'directly thence' to the importing colony. This act forced the colonists to get such supplies as they could not themselves furnish in England only, and thus not only could none but merchants of whom three fourths were English transport merchandise to and from the colonies, but the colonists themselves were not suffered to go anywhere but to England for that which they could not get at home. . . . This position of factor between the colonies and foreign markets was a lucrative one. But the spirit of trade is such, that it regards much as only a stepping-stone to more, and the next enactment concerning colonial trade, or that of 1672, betrays this characteristic. The existing factorage was maintained only between the colonial and foreign trade; it had no place in intercolonial traffic. . . . As this intercolonial trade developed, it attracted the observation of the English merchants, who at last demanded the control of it. In compliance with this demand, an act was passed in 1673, subjecting any enumerated commodity to a duty specified in the statute—and thus was destroyed the freedom, and, to a great extent, the incentive of intercolonial traffic. This act was well entitled 'an Act for the encouragement of the Greenland and Eastland fisheries, and for the better securing of the plantation trade.' History is silent respecting the fisheries, but it has been very outspoken concerning its effect on the plantations. The effect was this: if Rhode Island wished to be supplied by Massachusetts with one of the enumerated commodities, and Massachusetts desired to furnish Rhode Island with that commodity, the delivery of the goods could not be made by the producer to the consumer, but the article would have to be sent to England first, and landed there, and then be sent back from England to Rhode Island before the consumer could touch it. A line drawn from Boston, in Massachusetts, to Bristol, in England, and thence back to Newport, in Rhode Island,

will show the course which such article must take, if sold by Massachusetts to Rhode Island, before the demands of English commerce were satisfied; it will in all probability likewise show the least angle with the longest sides ever subtended on the chart of trade. Should, however, the parties to the transaction desire to avoid the risk and delay incident to this phenomenal voyage, they could do so by paying the certain rates and duties prescribed by this statute."—E. G. Scott, *The Development of Const. Liberty in the English Colonies of Am.*, ch. 8 (with corrections by the author).—"Unfortunately there does not exist any history of the commerce of the American colonies, from the Commonwealth to 1774, as affected by navigation laws, acts of trade, and revenue measures. No one who has read the 29 acts which comprise this legislation will recommend their perusal to another; for, apart from their volume, the construction of these acts is difficult,—difficult even to trained lawyers like John Adams, whose business it was to advise clients in respect to them. Nor have special students, like Bancroft, stated their effect with exact precision."—M. Chamberlain, *The Revolution Impending: Critical Essay (Narrative and Critical Hist. of Am.*, v. 6), p. 64.

A. D. 1690.—The First American Congress. —King William's War.—"After the accession [in England, A. D. 1689] of William and Mary, hostilities were declared between France and England, which extended to America; and thus began the first inter-colonial war [commonly known in American history as King William's War]. The French soon planned an invasion of Boston and New York. . . . On the 8th of February, 1690, a war-party, who had come stealthily from Canada, entered the open gates of the town of Schenectady, when it was snowing, and broke the stillness of midnight with the terrible yell and whoop of the savages. Men, women, and children, for two hours, were mercilessly butchered. Their dwellings were burned. The whole town was sacked. . . . The intelligence flew through the colonies. . . . Schenectady was the Fort Sumter of that day. The event had a political effect. It shamed the factions in New York at least into a truce. It roused a spirit of patriotism. The governor of Massachusetts urged, in letters to other colonies, the necessity for immediate action to provide for the common defence. . . . The General Court [of Massachusetts], in view of organizing a joint effort of the colonies, proposed to hold a congress. The call for a meeting is dated the 19th of March, 1690. It relates, that their majesties' subjects had been invaded by the French and Indians; that many of the colonists had been barbarously murdered, and were in danger of greater mischiefs; and it proposed, as a measure of prevention, that the neighboring colonies, and Virginia, Maryland, and the parts adjacent, should be invited to meet at New York, and conclude on suitable methods for assisting each other for the safety of the whole land. The governor of New York was desired to transmit this invitation to the southern colonies. Such was the first call for a general

congress in America. It is free from narrowness. It is liberal in its spirit, simple in its terms, and comprehensive in its object. . . . The call elicited from several colonies interesting replies. Governor Hinckley, of Plymouth, entered with zeal into the measure, and, though the General Court was not in session, appointed a commissioner. The Quaker-governor of Rhode Island, Henry Bull, replied in an excellent spirit. . . . Though the time was too short to convene the assembly for the appointment of commissioners, he promised the aid of that colony to the utmost of its ability to resist the French and Indians. The head of the convention of Maryland wrote, that it was the design of the assembly to send arms and men to aid in the general defence. . . . President Bacon, of Virginia, replied, that the proposition would require the action of the assembly, and that nothing would be done until the arrival of the daily expected governor. The replies to the invitation were cordial. The commissioners of four colonies [Massachusetts, Plymouth, Connecticut, and New York] met at New York. . . . The deliberations led to a unanimous result. On the 1st of May, an agreement was signed by the delegates, in behalf of the five colonies [including Maryland under its promise], to raise a force of 855 men for the strengthening of Albany, and, 'by the help of Almighty God, subduing the French and Indian enemies.' It was agreed, that the lieutenant-governor of New York should name the commander of this force; that it should not be employed on any other service without the consent of the five colonies; and that the officers should be required to preserve among their men good order, punish vice, keep the Sabbath, and maintain the worship of God. No proposition appears to have been entertained for a permanent organization. . . . Efforts were made to obtain additional aid from New Jersey, Pennsylvania, and Rhode Island. . . . I need only state, as the result of this congress, that it was resolved to attempt the reduction of Canada by two lines of attack,—one to conquer Acadia, and then to move on Quebec; and the other, by the route of Lake Champlain, to assault Montreal. The New England forces under Sir William Phips, assigned to the first route, captured Acadia and Port Royal, and sailed for Quebec, in the expectation of being aided by the other forces who marched by the Champlain route. But they, under Fitz-John Winthrop, with the title of major, were not successful. Leisler (see New York: A. D. 1689-1691), with characteristic rashness, accused the commander of treachery; while the officers charged the commissary, Jacob Milborne, of New York, with inefficiency in procuring supplies. The failure of Winthrop occasioned the retreat of Phips."—R. Frothingham, *The Rise of the Republic of the U. S.*, ch. 3.

A. D. 1696-1697.—The Board of Trade for the Supervision of the Colonies.—Plans of Colonial Union by Penn and others.—"The king attempted a more efficient method of administering the colonies; and, in May 1696, a Board of Commissioners for Trade and Plantations, consisting of the chancellor, the president of the privy council, the keeper of the privy seal,

the two secretaries of state, and eight special commissioners, was called into being. To William Blathwayte, who had drafted the new charter of Massachusetts, John Locke, and the rest of the commission, instructions were given by the crown 'to inquire into the means of making the colonies most useful and beneficial to England; into the staples and manufactures which may be encouraged there, and the means of diverting them from trades which may prove prejudicial to England; to examine into and weigh the acts of the assemblies; to set down the usefulness or mischief of them to the crown, the kingdom, or the plantations themselves; to require an account of all the moneys given for public uses by the assemblies of the plantations, and how the same are employed.' The administration of the several provinces had their unity in the person of the king, whose duties with regard to them were transacted through one of the secretaries of state; but the Board of Trade was the organ of inquiries and the centre of colonial information. Every law of a provincial legislature, except in some of the charter governments, if it escaped the veto of the royal governor, might be arrested by the unfavorable opinion of the law officer of the crown, or by the adverse report of the Board of Trade. Its rejection could come only from the king in council. . . . The Board of Trade was hardly constituted before it was summoned to plan unity in the military efforts of the provinces; and Locke with his associates despaired, on beholding them 'crumbled into little governments, disunited in interests, in an ill posture and much worse disposition to afford assistance to each other for the future.' The Board, in 1697, 'after considering with their utmost care,' could only recommend the appointment of 'a captain-general of all the forces and all the militia of all the provinces on the continent of North America, with power to levy and command them for their defence, under such limitations and instructions as to his majesty should seem best.' . . . With excellent sagacity—for true humanity perfects the judgment—William Penn matured a plan of a permanent union, by a national representation of the American States. On the 8th day of February 1697, he delivered his project for an annual 'congress,' as he termed it, of two delegates from each province. . . . But the ministry adopted neither the military dictatorship of Locke and his associates, nor the peaceful congress of William Penn."—G. Bancroft, *Hist. of the U. S. (Author's last revision)*, pt. 3, ch. 4 (v. 2).—The following is the Plan of Union drafted by Penn: "A Briefe and Plainne Schem how the English Colonists in the North parts of America, viz.: Boston, Connecticut, Road Island, New York, New Jerseys, Pennsylvania, Maryland, Virginia, and Carolina may be made more usefull to the Crowne, and one another's peace and safty with an universall concurrence. 1st. That the severall Colonies before mentioned do meet once a year, and oftener if need be, during the war, and at least once in two years in times of peace by their stated and appointed Deputies, to debate and resolve of such measures as are most advisable for their better understanding, and the public tranquillity and safty. 2d. That in order to it two persons well qualified for sence, sobriety and substance be appointed by each Province, as their Representatives or Deputies, which in the

whole make the Congress to consist of twenty persons. 3d. That the King's Commissioner for that purpose specially appointed shall have the chair and preside in the said Congress. 4th. That they shall meet as near as conveniently may be to the most central Colony for use of the Deputies. 5th. Since that may in all probability, be New York both because it is near the Center of the Colonies and for that it is a Frontier and in the King's nomination, the Govr. of that Colony may therefore also be the King's High Commissioner during the Session after the manner of Scotland. 6th. That their business shall be to hear and adjust all matters of Complaint or difference between Province and Province. As, 1st, where persons quit their own Province and goe to another, that they may avoid their just debts, tho they be able to pay them, 2nd, where offenders fly Justice, or Justice cannot well be had upon such offenders in the Provinces that entertain them, 3dly, to prevent or cure Injuries in point of Commerce, 4th, to consider of ways and means to support the union and safety of these Provinces against the public enemies. In which Congresses the Quotas of men and charges will be much easier, and more equally sett, then it is possible for any establishment made here to do; for the Provinces, knowing their own condition and one another's, can debate that matter with more freedom and satisfaction and better adjust and balance their affairs in all respects for their common safety. 7y. That in times of war the King's High Commissioner shall be general or chief Commander of the severall Quotas upon service against a common enemy as he shall be advised, for the good and benefit of the whole."—H. W. Preston, *Documents illustrative of Am. Hist.*, p. 146.

A. D. 1696-1749.—Growing despotism of the English mercantile policy.—Systematic suppression of colonial manufactures.—“By the erection, in 1696, of a new Standing Council, or Board of Trade, under the denomination of ‘The Lords Commissioners for Trade and Plantations,’ the interests of British commerce and the affairs of Colonial trade and government were confided to that body, which thenceforward became the repository of all official intelligence upon those subjects, and the medium of communication with the several governors and assemblies of the Colonies. Yearly reports of the state of the Provinces were required from the governors, in answer to queries addressed to them by the Board. An Act of Parliament of the same year still further restricted commercial intercourse, by limiting trade between England and her Colonies to English, Irish and Colonial built vessels, and by prohibiting Colonial produce from going to the ports of Ireland or Scotland. . . . The feeble attempts of the Colonists to make a portion of their own clothing from their abundant materials had not been unnoticed in England. Three years after—the Board of Trade having received complaints from English merchants and manufacturers, that the wool and woolen manufactures of Ireland and the North American plantations began to be exported to foreign markets formerly supplied by England—an Act passed the British Parliament, . . . dictated by that sleepless vigilance which guarded the staple manufacture of England. It prohibited the exportation of any wool or woolen manufacture from Ireland, except to certain ports in

England; but, by way of compensation, virtually surrendered to Ireland the linen manufacture, then little regarded in comparison with the woolen interests. In reference to the Colonies, it was enacted that ‘After the first day of December, 1699, no wool, woofels, yarn, cloth, or woolen manufactures of the English plantations in America shall be shipped in any of the said English plantations, or otherwise laden, in order to be transported thence to any place whatsoever, under the penalty of forfeiting ship and cargo, and £500 for each offence.’ . . . A letter from New England to the Board of Trade [in 1715] . . . reiterates the necessity of employing the New England people in producing naval stores, to turn them from manufactures. . . . The discouragement of American manufactures, from this time, became the settled and avowed policy of the government, and, three years later, the Bill prohibiting the erection of forges and iron mills was introduced, and declared that the erecting of Manufactories in the Colonies ‘tends to lessen their dependence upon Great Britain.’ . . . The company of Feltnakers, in London, petitioned Parliament, in Feb., 1731, to prohibit the exportation of hats from the American Colonies, representing that foreign markets were almost altogether supplied from thence, and not a few sent to Great Britain. The petition was referred to a special committee, who reported that, in New York and New England, beaver hats were manufactured to the number, it was estimated, of 10,000 yearly. . . . The exports were to the Southern plantations, the West Indies, and Ireland. In consequence of this evidence, and that furnished by the Board of Trade in the same session, an act was passed (5 George II. c. 22) that ‘no hats or felts, dyed or undyed, finished or unfinished, shall be put on board any vessel in any place within any of the British plantations; nor be laden upon any horse or other carriage to the intent to be exported from thence to any other plantation, or to any other place whatever, upon forfeiture thereof, and the offender shall likewise pay £500 for every such offence.’ . . . This severe and stringent law continued in force in the Colonies until the Revolution. It aimed at the prostration of one of the oldest and, on account of the abundance and cheapness of beavers and other furs, one of the most profitable branches of industry.”—J. L. Bishop, *Hist. of Am. Manufactures*, v. 1, ch. 14.—In 1749 an act of Parliament was passed “to encourage the Importation of pig and bar iron from his majesty's colonies in America, and to prevent the erection of any mill or other engine for sifting or rolling of iron, or any plating forge to work with a tilt hammer, or any furnace for making steel in any of the said colonies.” “Pig iron was allowed to be imported free to all parts of the kingdom, so as to secure cheap bar iron. But bar iron could not be imported at any port but London, and carried no further than ten miles from that city. This clause was intended to aid the owners of woods. In order to protect the nail trade, all sifting-mills in the colonies were ordered to be destroyed.”—J. B. Pearce, *Concise Hist. of the Iron Manufacture of the Am. Colonies*, p. 121.

A. D. 1748-1754.—First collisions with the French in the Ohio Valley.—“As the year 1750 approached, there came upon the colonies two changes, destined to lead to a new political life. In the first place, the colonies at last began to overrun the mountain barrier which had hemmed them in on the west, and thus to invite another and more desperate struggle with the French. The first settlement made west of the mountains was on a branch of the Kanawha (1748); in the same season several adventurous Virginians hunted and made land-claims in Kentucky and Tennessee. Before the close of the following year (1749) there had been formed the Ohio Company, composed of wealthy Virginians, among whom were two brothers of Washington. King George granted them 500,000 acres, on which they were to plant 100 families and build and maintain a fort. The first attempt to explore the region of the Ohio brought the English and the French traders into conflict; and troops were not long in following, on both sides [see OHIO VALLEY: A. D. 1748-1754]. At the same time the home government was awaking to the fact that the colonies were not under strict control. In 1750 the Administration began to consider means of stopping unlawful trade.”—R. G. Thwaites, *The Colonies, 1492-1750* (*Epoche of Am. Hist.*), ch. 14, sect. 130.

A. D. 1750-1753.—The eve of the great French war.—Attitude of the colonies.—“The quarrel in which the French and English now engaged was exclusively a colonial one. The possession and defence of the Americans had already cost, over and over again, a larger sum than the whole produce of their trade would have produced. The English had the mortification of observing that the colonists claimed all the security of Englishmen against attack, and repudiated their obligation to take a share of the burdens which their defence occasioned. Were they attacked by the French,—they were Englishmen, and had a right to the legis which that name throws over all subjects of the crown; were they called upon for a subscription in aid of the war,—they were men who would not submit to be taxed without their own consent; were they taken at their word, and requested through their own assemblies to tax themselves,—they sometimes refused, and sometimes doled out a minute supply, taking care to mix up with their money bill some infringement on the royal prerogative, which rendered it impossible, except under severe exigency of the public service, for the governor to accept the terms offered. . . . The action of the colonies at this crisis was in accordance with their invariable policy. As soon as they perceived that the French meditated a war of aggression in America, a chorus of complaint and apprehension came at once from the colonists. Shirley, Governor of Massachusetts, and Clinton, Governor of New York, had convened an assembly at Albany during the last year of the last war, to concert measures for uniting all the colonies for common defence;

Massachusetts and the other New England States were, of course, anxious that the union should be carried out. They were the barrier between the Canadas and the southern colonies, and if any attack was made they must bear the brunt of it. . . . The Congress of Albany, and especially the Legislature of Massachusetts, advocated the erection of a line of detached forts which might be so arranged as to overawe the French frontier, and defend the New England colonies from attack. . . . It was all in vain; every colony, with the exception of Massachusetts, Connecticut, and South Carolina, refused to contribute one farthing towards the expense. . . . Even in 1753, when the French were actually on the Ohio, and Washington had brought back certain intelligence of their intentions and views, the Virginians refused supplies to Dinwiddie because they declared themselves ‘easy on account of the French.’ When at last the French had actually established themselves in fortified posts at Niagara, at Le I uf, and at Venango, when Contrecoeur had driven a colonial officer out of a post which he held on the forks of the Monongahela, when Fort du Quesne had arisen on the ruins of an English stockade, they could no longer close their eyes to the danger which was actually within the boundaries of their State. They granted £10,000 of their currency; but Dinwiddie wrote home that the bill was so clogged with encroachments on the prerogative, that he would not have given his assent had not the public service rendered the supply imperatively necessary.”—Viscount Bury, *Exodus of the Western Nations*, v. 2, ch. 7.—“The attitude of these various colonies towards each other is hardly conceivable to an American of the present time. They had no political tie except a common allegiance to the British Crown. Communication between them was difficult and slow, by rough roads traced often through primeval forests. Between some of them there was less of sympathy than of jealousy kindled by conflicting interests or perpetual disputes concerning boundaries. The patriotism of the colonist was bounded by the lines of his government, except in the compact and kindred colonies of New England, which were socially united, though politically distinct. The country of the New Yorker was New York, and the country of the Virginian was Virginia. The New England colonies had once confederated; but, kindred as they were, they had long ago dropped apart. . . . Nor was it this segregation only that unfitted them for war. They were all subject to popular legislatures, through whom alone money and men could be raised; and these elective bodies were sometimes factious and selfish, and not always either far-sighted or reasonable. Moreover, they were in a state of ceaseless friction with their governors, who represented the king, or, what was worse, the feudal proprietary. These disputes, though varying in intensity, were found everywhere except in the two small colonies which chose their own governors; and they were premonitions of the movement towards independence which ended in the war of Revolution. The occasion of difference mattered little. Active or latent, the quarrel was always present. . . . Divided in government; divided in origin, feelings, and principles; jealous of each other, jealous of the Crown; the people at war with the executive, and, by the fermentation of

internal politics, blinded to an outward danger that seemed remote and vague,—such were the conditions under which the British colonies drifted into a war that was to decide the fate of the continent.”—F. Parkman, *Montcalm and Wolfe*, ch. 1 (p. 1).

A. D. 1754.—The Congress at Albany and its Plans of Union.—Franklin's account.—“In 1754, war with France being again apprehended, a congress of commissioners from the different colonies was, by an order of the Lords of Trade, to be assembled at Albany, there to confer with the chiefs of the Six Nations concerning the means of defending both their country and ours. Governor Hamilton [of Pennsylvania], having received this order, acquainted the House with it, requesting they would furnish proper presents for the Indians, to be given on this occasion; and naming the speaker (Mr. Norris) and myself to join Mr. Thomas Penn and Mr. Secretary Peters as commissioners to act for Pennsylvania. (The House approv'd the nomination, and provided the goods for the present, and tho' they did not much like treating out of the provinces;) and we met the other commissioners at Albany about the middle of June. In our way thither, I projected and drew a plan for the union of all the colonies under one government, so far as might be necessary for defense, and other important general purposes. As we pass'd thro' New York, I had there shown my project to Mr. James Alexander and Mr. Kennedy, two gentlemen of great knowledge in public affairs, and, being fortified by their approbation, I ventur'd to lay it before the Congress. It then appear'd that several of the commissioners had form'd plans of the same kind. A previous question was first taken, whether a union should be established, which pass'd in the affirmative unanimously. A committee was then appointed, one member from each colony, to consider the several plans and report. Mine happen'd to be prefer'd, and, with a few amendments, was accordingly reported. . . . The debates upon it in Congress went on daily, hand in hand with the Indian business. Many objections and difficulties were started, but at length they were all overcome, and the plan was unanimously agreed to, and copies order'd to be transmitted to the Board of Trade and to the assemblies of the several provinces. Its fate was singular: the assemblies did not adopt it, as they all thought there was too much 'prerogative' in it, and in England it was judg'd to have too much of the 'democratic.' The Board of Trade therefore did not approve of it, nor recommend it for the approbation of his majesty; but another scheme was form'd, supposed to answer the same purpose better, whereby the governors of the provinces, with some members of their respective councils, were to meet and order the raising of troops, building of forts, etc., and to draw on the treasury of Great Britain for the expense, which was afterwards to be refunded by an act of Parliament laying a tax on America. . . . The different and contrary reasons of dislike to my plan makes me suspect that it was really the true medium; and I am still of opinion it would have been happy for both sides the water if it had been adopted. The colonies, so united, would have been sufficiently strong to have defended themselves; there would then have been no need of

troops from England; of course, the subsequent pretence for taxing America, and the bloody contest it occasioned, would have been avoided.”—B. Franklin, *Autobiography* (ed. by John Bigelow), c. 1, pp. 808-810.—“When the members assembled at the Court House in Albany on the 19th of June, it was found that Pennsylvania was not alone in appointing a distinguished citizen to represent her. On the roll of the congress were the names of Lieutenant-governor De Lancey, of New York, who presided; and from the same province William Smith, the historian, and the future Sir William Johnson, not yet made a baronet. From the proprietary provinces of Pennsylvania and Maryland were the well known officials, John Penn, grandson of the founder; Richard Peters; and Benjamin Tasker. From the province of New Hampshire were her future governor, Meshech Weare, and Theodore Atkinson; and from the province of Massachusetts Bay, the late Lieutenant-governor, Thomas Hutchinson, Colonel John Chandler, of Worcester, and Oliver Partridge, a man of commanding influence in western Massachusetts. Lastly, the two colonies which had so tenaciously preserved their charter governments through the vicissitudes of more than a century.—Connecticut and Rhode Island,—had acceded to the repeated solicitations of the home government, and with unfeigned reluctance, we may be sure, had sent as representatives men of such wide experience in their colonial concerns as Roger Wolcott, Jr., and Stephen Hopkins. 'America,' says Mr. Banecroft, 'had never seen an assembly so venerable for the states that were represented, or for the great and able men who composed it.' They were detained in this hospitable old Dutch town for more than three weeks. . . . Franklin's plan . . . was not approved by a single one of the colonial assemblies before which it was brought; and . . . no action was ever taken on it in England. Yet there is no contribution to constructive statesmanship preceding the year 1776, which had a profounder effect on the subsequent growth and development of the idea of American nationality. Even in the amended form in which it was 'approved' by the congress, it was, says a recent writer, 'in advance of the Articles [of Confederation] in its national spirit, and served as the prototype of the constitution itself.'”—W. E. Foster, *Stephen Hopkins: a Rhode Island Statesman*, ch. 6 (pt. 1).

The Plan of Union, as adopted by the Congress at Albany, was accompanied by a "Representation of the Present State of the Colonies." The following is the full text of the Representation, followed by that of the Plan of Union: "That His Majesty's Title to the Northern Continent of America, appears to be founded on the Discovery thereof first made, and the Possession thereof first taken in 1497, under a Commission from Henry the VIIIth, of England, to Sebastian Cabot. That the French have possessed themselves of several Parts of this Continent, which by Treaties, have been ceded and confirmed to them: That the Rights of the English to the whole Sea Coast, from Georgia, on the South, to the River St. Lawrence, on the North, excepting the Island of Cape-Breton, in the Bay of St. Lawrence, remains plain and indisputable. That all the Lands or Countries Westward from the Atlantic Ocean to the South Sea, between 48 and 84 Degrees of North Latitude, were expressly

Included in the Grant of King James the First, to divers of his Subjects, so long since, as the Year 1606, and afterwards confirmed in 1620; and under this Grant, the Colony of Virginia claims an Extent as far West as to the South Sea; and the antient Colonies of the Massachusetts-Bay and Connecticut, were by their respective Charters, made to extend to the said South Sea; so that not only the Right to the Sea Coast, but to all the Inland Countries, from Sea to Sea, have at all Times been asserted by the Crown of England. That the Province of Nova Scotia or Acadia, hath known and determinate Bounds, by the original Grant from King James the First; and that there is abundant Evidence of the same, [and of the Knowledge] which the French had of these Bounds, while they were in Possession of it; and that these Bounds being thus known, the said Province by the Treaty of Utrecht, according to its antient Limits, was ceded to Great-Britain, and remained in Possession thereof, until the Treaty of Aix la Chapelle, by which it was confirmed; but by said Treaty 'tis stipulated, That the Bounds of the said Province shall be determined by Commissioners, &c. That by the Treaty of Utrecht, the Country of the Five Cantons of the Iroquoise, is expressly acknowledged to be under the Dominion of the Crown of Great-Britain. That the Lake Champlain, formerly called Lake Iroquoise, and the Country Southward of it, as far as the Dutch or English Settlements, the Lake Ontario, Erie, and all the Countries adjacent, have by all antient Authors, French and English, been allowed to belong to the Five Cantons or Nations; and the whole of those Countries, long before the said Treaty of Utrecht, were by the said Nations, put under the Protection of the Crown of Great-Britain. That by the Treaty of Utrecht, there is a Reserve to the French, a Liberty of frequenting the Countries of the Five Nations, and other Indians in Friendship with Great-Britain, for the Sake of Commerce; as there is also to the English, a Liberty of frequenting the Countries of those in Friendship with France, for the same Purpose. That after the Treaty of Utrecht, the French built several Fortresses in the Country of the Five Nations, and a very strong one at a Place called Crown-Point, to the South of the Lake Champlain. That the French Court have evidently, since the Treaty of Aix la Chapelle, made this Northern Continent more than ever, the Object of its Attention. That the French have most unjustly taken Possession of a Part of the Province of Nova-Scotia; and in the River St. John's, and other Parts of said Province, they have built strong Fortresses; and from this River they will have, during the Winter and Spring Season, a much easier Communication between France and Canada, than they have heretofore had, and will be furnished with a Harbour more commodiously situated for the Annoying the British Colonies by Privateers and Men of War, than Louisbourg itself. That they have taken Possession of, and begun a Settlement at the Head of the River Kennebeck, within the Bounds of the Province of Main, the most convenient Situation for affording Support, and a safe Retreat, to the Eastern Indians, in any of their Attempts upon the Governments of New-England. That it appears by the Information of the Natives, the French have been making Preparations for another Settlement, at a

Place called Cohass, on Connecticut River, near the Head thereof, where 'tis but about ten Miles distant from a Branch of Merrimack River; and from whence, there is a very neat and easy Communication with the Abnecals Indians, who are settled on the River St. Francois, about forty Miles from the River St. Lawrence; and it is certain, the Inhabitants of New-Hampshire, in which Province this Cohass is supposed to lie, have been interrupted and impeded by the French Indians, from making any Settlement there. That since the Treaty of Aix la Chapelle, the French have increased the Number of the Forts in the Country of the great Lakes, and on the Rivers which run into the Mississipp, and are securing a Communication between the two Colonies of Louisiana and Canada, and at the same Time, putting themselves into a Capacity of annoying the Southern British Colonies, and preventing any further Settlements of His Majesty's Dominions. That they have been gradually increasing their Troops in America, transporting them in their Ships of War, which return to France with a bare Complement of Men, leaving the rest in their Colonies; and by this Means, they are less observed by the Powers of Europe, than they would be, if Transports as usual heretofore, were provided for this Purpose. That they have taken Prisoners diverse of His Majesty's Subjects trading in the Country of the Iroquoise, and other inland Parts, and plundered such Prisoners of several Thousand Pounds Sterling; and they are continually exciting the Indians to destroy or make Prisoners the Inhabitants of the Frontiers of the British Colonies; which Prisoners are carried to Canada, and a Price equal to what Slaves are sold in the Plantations, is demanded for their Redemption and Release. That they are continually drawing off the Indians from the British Interest, and have lately persuaded one Half of the Onondago Tribe, with many from the other Nations along with them, to remove to a Place called Oswegachie, on the River Cadaracqui, where they have built them a Church and Fort; and many of the Senecas, the most numerous Nation, appear to be wavering, and rather inclined to the French. And it is a melancholy Consideration, that not more than 150 Men of all the several Nations, have attended this Treaty, altho' they had Notice, that all the Governments would be here by the Commissioners, and that a large Present would be given. That it is the evident Design of the French to surround the British Colonies, to fortify themselves on the Back thereof, to take and keep Possession of the Heads of all the important Rivers, to draw over the Indians to their Interest, and with the Help of such Indians, added to such Forces as are already arrived, and may be hereafter sent from Europe, to be in a Capacity of making a general Attack upon the several Governments; and if at the same Time, a strong Naval Force be sent from France, there is the utmost Danger, that the whole Continent will be subjected to that Crown: And that the Danger of such a Naval Force is not merely imaginary, may be argued from past Experience. For had it not been by the most extraordinary Interposition of Heaven, every Sea Port Town on the Continent, in the Year 1746, might have been ravaged and destroyed, by the Squadron under the Command of the Duke D'Anville, notwithstanding the then declining State of the

French, and the very flourishing State of the British Navy, and the further Advantage accruing to the English, from the Possession of Cape-Breton. That the French find by Experience, they are able to make greater and more secure Advantages upon their Neighbours, in Peace than in War. What they unjustly possessed themselves of, after the Peace of Utrecht, they now pretend they have a Right to hold, by Virtue of the Treaty of Aix la Chapelle, until the true Boundary between the English and French be settled by Commissioners; but their Conquests made during War, they have been obliged to restore. That the French Affairs relative to this Continent, are under one Direction, and constantly regarded by the Crown and Ministry, who are not insensible how great a Stride they would make towards an Universal Monarchy, if the British Colonies were added to their Dominions, and consequently the whole Trade of North-America engrossed by them. That the said Colonies being in a divided, disunited State, there has never been any joint Exertion of their Force, or Council, to repel or defeat the Measures of the French; and particular Colonies are unable and unwilling to maintain the Cause of the whole. That there has been a very great Neglect of the Affairs of the Iroquoise, as they are commonly called, the Indians of the Six Nations, and their Friendship and Alliance has been improved to private Purposes, for the Sake of the Trade with them, and the Purchase or Acquisition of their Lands, more than the Public Services. That they are supplied with Rum by the Traders, in vast and almost incredible Quantities; the Laws of the Colonies now in Force, being insufficient to restrain the Supply. And the Indians of every Nation, are frequently drunk, and abused in their Trade, and their Affections thereby alienated from the English; they often wound and murder one another in their Liquor, and to avoid Revenge, fly to the French; and perhaps more have been lost by these Means than by the French Artifice. That Purchases of Land from the Indians by private Persons, for small trifling Considerations, have been the Cause of great Uneasiness and Discontents; and if the Indians are not in fact imposed on and injured, yet they are apt to think they have been; and indeed, they appear not fit to be entrusted at Large, with the Sale of their own Lands: And the Laws of some of the Colonies, which make such Sales void, unless the Allowance of the Government be first obtained, seem to be well founded. That the Granting or Patenting vast Tracts of Land to private Persons or Companies, without Conditions of speedy Settlements, has tended to prevent the Strengthening the Frontiers of the particular Colony where such Tracts lie, and been Prejudicial to the rest. That it seems absolutely necessary, that speedy and effectual Measures be taken, to secure the Colonies from the Slavery they are threatened with: that any farther Advantages of the French should be prevented; and the Encroachments already made, removed. That the Indians in Alliance or Friendship with the English, be constantly regarded under some wise Direction or Superintendency. That Endeavours be used for the Recovery of those Indians who are lately gone over to the French, and for securing those that remain. That some discreet Person or Persons be appointed to reside

constantly among each Nation of Indians; such Person to have no Concern in Trade, and duly to communicate all Advices to the Superintendants. That the Trade with the said Indians be well regulated, and made subservient to the Public Interest, more than to private Gain. That there be Forts built for the Security of each Nation, and the better carrying on the Trade with them. That warlike Vessels be provided, sufficient to maintain His Majesty's Right to a free Navigation on the several Lakes. That all future Purchases of Lands from the Indians be void, unless made by the Government where such Lands lie, and from the Indians in a Body, in their public Councils. That the Patentees or Possessors of large unsettled Territories, be enjoined to cause them to be settled in a reasonable Time, on Pain of Forfeiture. That the Complaints of the Indians, relative to any Grants or Possessions of their Lands, fraudulently obtained, be inquired into, and all Injuries redressed. That the Bounds of those Colonies which extend to the South Seas, be contracted and limited by the Alleghenny or Apalachian Mountains; and that Measures be taken, for settling from time to time, Colonies of His Majesty's Protestant Subjects, Westward of said Mountains, in convenient Cantons, to be assigned for that Purpose. And finally, that there be an Union of His Majesty's several Governments on the Continent, that so their Councils, Treasure, and Strength, may be employed in due Proportion, against their common Enemy."

The Plan of Union, adopted on the 10th of July, was as follows: "Plan of a proposed Union of the several Colonies of Massachusetts-Bay, New-Hampshire, Connecticut, Rhode-Island, New-York, New-Jersey, Pennsylvania, Maryland, Virginia, North-Carolina, and South Carolina, for their mutual Defence and Security, and for the Extending the British Settlements in North-America. That humble Application be made for an Act of the Parliament of Great-Britain, by Virtue of which One General Government may be formed in America, including all the said Colonies; within and under which Government, each Colony may retain its present Constitution, except in the Particulars wherein a Change may be directed by the said Act, as hereafter follows. That the said General Government be administered by a President General, to be appointed and supported by the Crown; and a Grand Council, to be chosen by the Representatives of the People of the several Colonies, met in their respective Assemblies. That within Months after the Passing of such Act, the House of Representatives in the several Assemblies, that happen to be sitting within that Time, or that shall be especially for that Purpose convened, may and shall chuse Members for the Grand Council, in the following Proportions; that is to say: Massachusetts-Bay, 7; New-Hampshire, 2; Connecticut, 5; Rhode-Island, 2; New-York, 4; New-Jersey, 3; Pennsylvania, 6; Maryland, 4; Virginia, 7; North-Carolina, 4; South Carolina, 4; = 48. Who shall meet for the first Time at the City of Philadelphia in Pennsylvania, being called by the President General, as soon as conveniently may be, after his Appointment. That there shall be a new Election of Members for the Grand Council every three Years; and on the Death or Resignation of any Member, his Place shall be supplied by a new Choice, at the next

Sitting of the Assembly of the Colony be represented. That after the first three Years, when the Proportion of Money arising out of each Colony to the General Treasury, can be known, the Number of Members to be chosen for each Colony, shall from time to time, in all ensuing Elections, be regulated by that Proportion (yet so as that the Number to be chosen by any one Province, be not more than seven, nor less than two). That the Grand Council shall meet once in every Year, and oftener if Occasion require at such Time and Place as they shall adjourn to at the last preceding Meeting, or as they shall be called to meet at by the President General on any Emergency; he having first obtained in writing, the Consent of seven of the Members to such Call, and sent due and timely Notice to the whole. That the Grand Council have Power to chuse their Speaker, and shall neither be dissolved, prorogued, nor continue sitting longer than six Weeks at one Time, without their own Consent, or the special Command of the Crown. That the Members of the Grand Council shall be allowed for their Service, Ten Shillings Sterling per Diem, during their Session and Journey to and from the Place of Meeting, twenty Miles to be reckoned a Day's Journey. That the Assent of the President General be requisite to all Acts of the Grand Council; and that it be his Office and Duty to cause them to be carried into Execution. That the President General, with the Advice of the Grand Council, hold or direct all Indian Treaties, in which the general Interest or Welfare of the Colonies may be concerned; and to make Peace or declare War with Indian Nations. That they make such Laws as they judge necessary for regulating all Indian Trade. That they make all Purchases from Indians for the Crown, of the Lands now not within the Bounds of particular Colonies, or that shall not be within their Bounds, when some of them are reduced to more convenient Dimensions. That they make new Settlements on such Purchases, by granting Lands in the King's Name, reserving a Quit-Rent to the Crown for the Use of the General Treasury. That they make Laws for regulating and governing such new Settlements, 'till the Crown shall think fit to form them into particular Governments. That they may raise and pay Soldiers, and build Forts for the Defence of any of the Colonies, and equip Vessels of Force to guard the Coast, and protect the Trade on the Ocean, Lakes, or great Rivers; but they shall not impress Men in any Colony, without the Consent of its Legislature. That for those Purposes, they have Power to make Laws, and lay and levy such general Duties, Imposts, or Taxes, as to themselves appear most equal and just, considering the Ability and other Circumstances of the Inhabitants in the several Colonies, and such as may be collected with the least Inconvenience to the People; rather discouraging Luxury, than loading Industry with unnecessary Burthens. That they may appoint a general Treasurer and a particular Treasurer in each Government, when necessary; and from time to time, may order the Sums in the Treasuries of each Government, into the General Treasury, or draw on them for special Payments, as they find most convenient; yet no Money to issue, but by joint Orders of the President General and Grand Council, except where Sums have been appro-

printed to particular Purposes, and the President General is previously impowered by an Act, to draw for such Sums. That the general Accounts shall be yearly settled, and reported to the several Assemblies. That a Quorum of the Grand Council, impowered to act with the President General, do consist of Twenty-five Members; among whom there shall be one or more from a Majority of the Colonies. That the Laws made by them for the Purposes aforesaid, shall not be repugnant, but as near as may be agreeable, to the Laws of England, and shall be transmitted to the King in Council, for Approbation, as soon as may be, after their passing; and if not disapproved within three Years after Presentation, to remain in Force. That in Case of the Death of the President General, the Speaker of the Grand Council for the Time being, shall succeed, and be vested with the same Power and Authorities, and continue 'till the King's Pleasure be known. That all Military Commission Officers, whether for Land or Sea Service, to act under this General Constitution, be nominated by the President General, but the Approbation of the Grand Council is to be obtained, before they receive their Commissions. And all Civil Officers are to be nominated by the Grand Council, and to receive the President General's Approbation, before they officiate. But in Case of Vacancy, by Death or Removal of any Officer, Civil or Military, under this Constitution, the Governor of the Provinces in which such Vacancy happens, may appoint, 'till the Pleasure of the President General and Grand Council can be known. That the particular Military as well as Civil Establishments in each Colony, remain in their present State, this General Constitution notwithstanding; and that on sudden Emergencies, any Colony may defend itself, and lay the Accounts of Expence thence arisen, before the President General and Grand Council, who may allow and order Payment of the same, as far as they judge such Accounts just and reasonable."

A. D. 1755.—Demand of the royal governors in America for taxation of the colonies by act of Parliament.—At the congress of American governors which General Braddock convened at Alexandria, in April, 1755, on his first arrival in America as commander-in-chief of the British forces, "Braddock directed their attention, first of all, to the subject of a colonial revenue, on which his instructions commanded him to insist, and his anger kindled 'that no such fund was already established.' The governors present, recapitulating their strifes with their assemblies, made answer: 'Such a fund can never be established in the colonies without the aid of parliament. Having found it impracticable to obtain in their respective governments the proportion expected by his majesty toward defraying the expence of his service in North America, they are unanimously of opinion that

it should be proposed to his majesty's ministers to find out some method of compelling them to do it, and of assessing the several governments in proportion to their respective abilities.' This imposing document Braddock sent forthwith to the ministry, himself urging the necessity of laying some tax throughout his majesty's dominions in North America. . . . I have had in my hands vast masses of correspondence, including letters from servants of the crown in every royal colony in America; from civilians, as well as from Braddock and Dunbar and Gage; from Delancey and Sharpe, as well as from Dinwiddie and Shirley; and all were of the same tenor. The British ministry heard one general clamor from men in office for taxation by act of parliament. . . . In England, the government was more and more inclined to enforce the permanent authority of Great Britain.—G. Bancroft, *Hist. of the U. S. (Author's last revision)*, v. 2, pp. 416-417.

A. D. 1755-1760.—The French and Indian War, known in Europe as the Seven Years War: The English conquest of Canada.—See CANADA: A. D. 1750-1753, to 1760; NOVA SCOTIA: A. D. 1749-1755; 1755; OHIO (VALLEY): A. D. 1748-1754, to 1755; CAPE BRETON ISLAND: A. D. 1758-1760; also, for an account of the accompanying Cherokee War, SOUTH CAROLINA: A. D. 1759-1761.

A. D. 1760-1775.—Crown, Parliament and Colonies.—The English theory and the American theory of their relations.—"The people of every colony were subject to two jurisdictions, one local and one general, that must be adjusted to each other. To effect such adjustment caused no little friction; and the Colonies and the Mother Country got on peaceably as long as they did, only because neither one pushed its theory of colonial relations to an extreme, each yielding something to the other and thus effecting a compromise. The Colonies held that the dominion which the Cabots discovered in America belonged to the King, rather than to the Kingdom, of England. Englishmen adventuring into this dominion to plant colonies were entitled to all the privileges of free-born Englishmen at home; trial by jury, habeas corpus, and exemption from taxes that their own representatives had not voted. The British Empire was not one dominion, but several dominions. Every one of these dominions had, or should have, its own legislature to enact laws for its government. The Colonies were not one dominion, but 13 dominions; and in every one the legislature was as supreme as Parliament was in England. Parliament, therefore, had nothing more to do with Massachusetts or Virginia than the legislatures of those colonies had to do with England. The King, who alone had a voice in the matter, had, in their charters, guaranteed to the Colonies the common law so far as this was applicable to their condition, and he was now powerless to withdraw what he had thus conceded. Such, in outline, was the American theory of colonial relations. Still, no one pretended that this theory had ever been fully carried out in practice. It must also be said that it did not appear fully formed at once, but grew up gradually. The British theory was that Englishmen continued Englishmen when they emigrated to the American dominions of the King; that the power of Parliament, to which they were subject

in the old home, followed them to the new one; and that Parliament could yield them more or fewer powers of self-government for a time, and then withdraw them. It was also claimed that the Colonies were already represented in the House of Commons; since the several members of that body did not represent particular districts or constituencies, but the whole British Empire. Besides, it was asserted that the Colonies themselves had repeatedly acknowledged the authority of Parliament by submitting to its legislation. Still no one pretended that this theory had ever been fully carried out."—B. A. Hinsdale, *The American Gov't*, sect. 92-93.

A. D. 1761.—Enforcement of revenue laws in Massachusetts.—The Writs of Assistance and Otis's speech.—"Immediately after the conquest of Canada was completed, rumors were widely circulated . . . that the charters would be taken away, and the colonies reduced to royal governments. The officers of the customs began at once to enforce with strictness all the acts of parliament regulating the trade of the colonies, several of which had been suspended, or become obsolete, and thus had never been executed at all. The good will of the colonists or their legislatures, was no longer wanted in the prosecution of the war; and the commissioners of the customs were permitted and directed to enforce the obnoxious acts. Governor Bernard [of Massachusetts], who was always a supporter of the royal prerogative, entered fully into these views, and shewed by his opinion, his appointments and his confidential advisers, that his object would be, to extend the power of the government to any limits, which the ministry might authorize. The first demonstration of the new course intended to be pursued, was the arrival of an order in Council to carry into effect the Acts of trade, and to apply to the supreme judicature of the Province [Massachusetts], for Writs of Assistance, to be granted to the officers of the customs. In a case of this importance there can be no doubt, that Mr. Paxton, who was at the head of the customs in Boston, consulted with the Government and all the crown officers, as to the best course to be taken. The result was, that he directed his deputy at Salem, Mr. Cottle, in November, 1760, to petition the Superior Court, then sitting in that town, for 'writs of assistance.' Stephen Sewall who was the Chief Justice, expressed great doubt of the legality of such a writ, and of the authority of the Court to grant it. None of the other judges said a word in favour of it; but as the application was on the part of the Crown, it could not be dismissed without a hearing, which after consultation was fixed for the next term of the Court, to be held in February, 1761, at Boston, when the question was ordered to be argued. In the interval, Chief Justice Sewall died, and Lieutenant Governor Hutchinson was made his successor, thereby uniting in his person, the office of Lieutenant Governor with the emoluments of the commander of the castle, a member of the Council, Judge of Probate and Chief Justice of the Supreme Court! . . . The mercantile part of the community was in a state of great anxiety as to the result of this question. The officers of the Customs called upon Otis for his official assistance, as Advocate General, to argue

their cause. But, as he believed these writs to be illegal and tyrannical, he refused. He would not prostitute his office to the support of an oppressive act; and with true delicacy and dignity, being unwilling to retain a station, in which he might be expected or called upon to argue in support of such odious measures, he resigned it though the situation was very lucrative, and if filled by an incumbent with a compliant spirit, led to the highest favours of government. The merchants of Salem and Boston, applied to Mr. Pratt to undertake their cause, who was also solicited to engage on the other side; but he declined taking any part, being about to leave Boston for New York, of which province he had been appointed Chief Justice. They also applied to Otis and Thacher, who engaged to make their defence, and probably both of them without fees, though very great ones were offered. The language of Otis was, 'in such a cause, I despise all fees.' . . . The trial took place in the Council Chamber of the Old Town House, in Boston. . . . The Judges were five in number, including Lieutenant Governor Hutchinson, who presided as Chief Justice. The room was filled with all the officers of government, and the principal citizens, to hear the arguments in a cause that inspired the deepest solicitude. The case was opened by Mr. Gridley, who argued it with much learning, ingenuity, and dignity, urging every point and authority, that could be found after the most diligent search, in favour of the Custom house petition; making all his reasoning depend on this consideration — 'if the parliament of Great Britain is the sovereign legislator of the British Empire.' He was followed by Mr. Thacher on the opposite side, whose reasoning was ingenious and able, delivered in a tone of great mildness and moderation. 'But,' in the language of President Adams, 'Otis was a flame of fire; with a promptitude of classical allusions, a depth of research, a rapid summary of historical events and dates, a profusion of legal authorities, a prophetic glance of his eyes into futurity, and a rapid torrent of impetuous eloquence, he hurried away all before him. American Independence was then and there born. The seeds of patriots and heroes, to defend the 'Non sine Diis animosus infans'; to defend the vigorous youth, were then and there sown. Every man of an immense crowded audience appeared to me to go away as I did, ready to take arms against Writs of Assistance. Then and there, was the first scene of the first act of opposition, to the arbitrary claims of Great Britain. Then and there, the child Independence was born. In fifteen years, i. e. in 1776, he grew up to manhood and declared himself free.' 'There were no stenographers in those days,' to give a complete report of this momentous harangue. How gladly would be exchanged for it, a few hundred verbose speeches on some of the miserable, transient topics of the day, that are circulated in worthless profusion. Yet on this occasion, 'the seeds were sown,' and though some of them doubtless fell by the wayside or on stony places, others fell on good ground, and sprang up and increased and brought forth in due season, thirty, sixty and an hundred fold. . . . After the close of his argument, the Court adjourned for consideration, and at the close of the term, Chief Justice Hutchinson pronounced the opinion: 'The Court has considered the subject of

writs of assistance, and can see no foundation for such a writ; but as the practice in England is not known, it has been thought best to continue the question to the next term, that in the meantime opportunity may be given to know the result.' No cause in the annals of colonial jurisprudence had hitherto excited more public interest; and none had given rise to such powerful argument. . . . An epoch in public affairs may be dated from this trial. Political parties became more distinctly formed, and their several adherents were more marked and decided. The nature of ultra-marine jurisdiction began to be closely examined; the question respecting raising a revenue fully discussed. The right of the British parliament to impose taxes was openly denied. 'Taxation without representation is tyranny,' was the maxim, that was the guide and watch word of all the friends of liberty. The crown officers and their followers adopted openly the pretensions of the British ministry and parliament, and considering their power to be irresistible, appealed to the selfishness of those who might be expectants of patronage, and to the fears of a! quiet and timid minds, to adopt a blind submission, as the only safe or reasonable alternative. Otis took the side of his country, and as has been shewn, under circumstances that made his decision irrevocable. He was transferred at once from the ranks of private life, not merely to take the side, but to be the guide and leader of his country, in opposition to the designs of the British ministry. 'Although' says President Adams, 'Mr. Otis had never before interfered in public affairs, his exertions on this single occasion secured him a commanding popularity with the friends of their country, and the terror and vengeance of her enemies; neither of which ever deserted him.' His popularity was instantaneous, and universal; and the public were impatient for the approaching election, when they could make him a representative of Boston.'—W. Tudor, *Life of James Otis*, ch. 5-7. —See, also, MASSACHUSETTS: A. D. 1761.

A. D. 1763.—General effects, economically and politically, of the English trade regulations.—'Economically the general results of the trade regulations were important. Robert Giffen has repeatedly pointed out how difficult it is, even with modern comparatively accurate methods, to obtain reliable results from the use of export and import statistics. This difficulty is immeasurably enhanced when we have to rely on the meagre figures of a century and a half ago. For we neither know how these statistics were taken, nor at all how accurate they are; while their inadequacy becomes clearly evident when we consider the large amount of smuggling carried on both in England and the colonies. One general proposition, however, can be formulated from the examination of these statistics, and that is the balance of trade between England and the colonies was unfavorable to the latter. And this was an inherent consequence of the mercantile system, by which England regu-

lated these commercial relations. The colonies were unable to pay England for her manufactures entirely in raw materials, and the residue was paid in coin obtained from the favorable trade with Spain, Portugal, and the West Indies. All metal had to be sent to England; it was, as De Foe says, 'snatched up for returns to England in specie.' An important consequence followed from this continuous drain of specie. The colonies could with difficulty retain coin, and hence were forced either to fall back on barter, or to issue paper money. . . . While, on the one hand, the acts of trade and navigation are partially responsible for many sad passages in the fiscal history of the colonies, on the other hand they conduced to the development of a most important colonial industry. This industry was ship-building, for which the colonies were especially adapted on account of the cheapness of lumber. In developing this natural fitness, the protection afforded to English and colonial shipping by the Navigation Acts was an important factor. As a rule England did not discriminate against colonial and in favor of English ships, although the colonies frequently attempted by legislation to secure advantages for their own shipping. As a result of this policy ship building and the carrying trade increased rapidly, especially in the New England colonies. . . . So important did this industry become that in 1724 the ship carpenters of the Thames complained to the King, 'that their trade was hurt and their workmen emigrated since so many vessels were built in New England.' Massachusetts built ships not only for England, but also for European countries, and for the West Indies. . . . Politically the commercial regulations were not so important. Up to 1763 only slight political importance attaches to the system, for only in a negative way did it affect the political ideas of the colonists. The colonies were peopled by men of varied race and religion, who had little common consciousness of rights and wrongs and few common political ideals. The centrifugal forces among them were strong. Among centripetal forces, such as a common sovereign and a common system of private law, must be reckoned the fact that their commerce was regulated by a system which, as a rule, was uniform for all the colonies. When the acts of trade worked to their advantage, the colonists reaped common benefits; when they inflicted hardships, the colonists made common complaint. Moreover, the fact that England was unable to enforce certain of her acts, especially the Molasses Act, caused contempt for parliamentary authority. The continued and, by the very nature of things, the necessary violation of this law lead to a questioning of its sanction, while the open favoritism shown in it towards the West India colonies naturally aroused disaffection in those of the continent. The colonial system, as it was administered before 1763, contributed but slightly in bringing about the revolution of 1776. As Mr. Ramsay has said, 'if no other grievances had been superadded to what existed in 1763, they would have been soon forgotten, for their pressure was neither great, nor universal. It was only when the fundamental basis of the acts was changed from one of commercial monopoly to one of revenue, that the acts became of vital political importance.'—G. L. Beer, *The Commercial Policy of England toward the Am. Colo-*

nies (Columbia College Studies in History, etc., v. 3, no. 2), ch. 7, sect. 2.

A. D. 1763-1764.—Pontiac's War. See PONTIAC'S WAR.

A. D. 1763-1764.—Determination in England to tax the colonies.—The Sugar (or Molasses) Act.—'It did not take four years after the peace of 1763 to show how rapidly the new situation of affairs was bearing fruit in America. . . . The overthrow of their ancient enemy [the French in Canada], while further increasing [the self-confidence of the Americans, at the same time removed the principal check which had hitherto kept their differences with the British government from coming to an open rupture. Formerly the dread of French attack had tended to make the Americans complaisant toward the king's ministers, while at the same time it made the king's ministers unwilling to lose the good will of the Americans. Now that the check was removed, the continuance or revival of the old disputes at once foreboded trouble; and the old occasions for dispute were far from having ceased. On the contrary the war itself had given them fresh vitality. If money had been needed before, it was still more needed now. The war had entailed a heavy burden of expense upon the British government as well as upon the colonies. The national debt of Great Britain was much increased, and there were many who thought that, since the Americans shared in the benefits of the war, they ought also to share in the burden which it left behind it. People in England who used this argument did not realize that the Americans had really contributed as much as could reasonably be expected to the support of the war, and that it had left behind it debts to be paid in America as well as in England. But there was another argument which made it seem reasonable to many Englishmen that the colonists should be taxed. It seemed right that a small military force should be kept up in America, for defence of the frontiers against the Indians, even if there were no other enemies to be dreaded. The events of Pontiac's war now showed that there was clearly need of such a force; and the experience of the royal governors for half a century had shown that it was very difficult to get the colonial legislatures to vote money for any such purpose. Hence there grew up in England a feeling that taxes ought to be raised in America as a contribution to the war debt and to the military defence of the colonies; and in order that such taxes should be fairly distributed and promptly collected, it was felt that the whole business ought to be placed under the direct supervision and control of parliament. . . . It was in 1763 that George Grenville became prime minister, a man of whom Macaulay says that he knew of 'no national interests except those which are expressed by pounds, shillings, and pence.' Grenville proceeded to introduce into Parliament two measures which had consequences of which he little dreamed. The first of these measures was the Molasses Act [often called the Sugar Act], the second was the Stamp Act. Properly speaking, the Molasses Act was an old law which Grenville now made up his mind to revive and enforce. The commercial wealth of the New England colonies depended largely upon their trade with the fish which their fishermen caught along the coast and as far out as the banks of Newfoundland. The finest fish could be sold in

Europe, but the poorer sort found their chief market in the French West Indies. The French government, in order to ensure a market for the molasses raised in these islands, would not allow the planters to give anything else in exchange for fish. Great quantities of molasses were therefore carried to New England, and what was not needed there for domestic use was distilled into rum, part of which was consumed at home, and the rest carried chiefly to Africa wherewith to buy slaves to be sold to the southern colonies. All this trade required many ships, and thus kept up a lively demand for New England lumber, besides finding employment for thousands of sailors and shipwrights. Now in 1733 the British government took it into its head to 'protect' its sugar planters in the English West Indies by compelling the New England merchants to buy all their molasses from them; and with this end in view it forthwith laid upon all sugar and molasses imported into North America from the French islands a duty so heavy that, if it had been enforced, it would have stopped all such importation. . . . It proved to be impossible to enforce the act without causing more disturbance than the government felt prepared to encounter. Now in 1764 Grenville announced that the act was to be enforced, and of course the machinery of writs of assistance was to be employed for that purpose. Henceforth all molasses from the French islands must either pay the prohibitory duty or be seized without ceremony. Loud and fierce was the indignation of New England over this revival of the Molasses Act. Even without the Stamp Act, it might very likely have led that part of the country to make armed resistance, but in such case it is not so sure that the southern and middle colonies would have come to the aid of New England. But in the Stamp Act, Grenville provided the colonies with an issue which concerned one as much as another."—J. Fiske, *The War of Independence*, ch. 4.

A. D. 1764.—The climax of the mercantile colonial policy of England, and its consequences.—"Historians, in treating of the American rebellion, have confined their arguments too exclusively to the question of internal taxation, and the right or policy of exercising this prerogative. The true source of the rebellion lay deeper, in our traditional colonial policy. Just as the Spaniards had been excited to the discovery of America by the hope of obtaining gold and silver, the English merchants utilized the discovery by the same fallacious method, and with the same fallacious aspirations. . . . A hundred years ago the commercial classes believed that the prime object of their pursuits was to get as much gold and silver into England as they could. They sought, therefore, to make their country, as nearly as they might, a solitary centre of the exportation of non-metallic commodities, that so she might be also the great reservoir into which the precious metals would flow in a return stream. On this base their colonial policy was erected. . . . So long as the colonies remained in their infancy the mercantile policy was less prejudicial to their interests. The monopoly of their commerce, the limitation of their markets, the discouragement of their

manufactures, in some cases amounting to absolute prohibition, were all less fatal in a country where labour was dear, than they would be in a state where population was more fully developed and land had become scarcer. . . . A contraband trade sprung up between them and the colonies of Spain. Our settlers imported goods from England, and re-exported them to the Spanish colonies, in return for bullion and other commodities. The result of this was that the Spanish colonists had access to useful commodities from which they would otherwise have been debarred, that the American colonists could without distress remit the specie which was required by the nature of their dealings with England, and that a large market was opened for English products. This widely beneficial trade was incontinently suppressed in 1764, by one of those efforts of short-sighted rigour which might be expected from any government where George Grenville's influence was prominent. All smuggling was to be put down, and as this trade was contraband, it must be put down like the rest. The Government probably acted as they did in answer to the prayers of the mercantile classes, who could not see that they were cutting off the streams that fed their own prosperity. They only saw that a colonial trade had sprung up, and their jealousy blinded them to the benefits that accrued to themselves as a consequence of it. Their folly found them out. The suppression of the colonial trade was entrusted to the commanders of men-of-war. . . . We may be sure that the original grievance of the colonists was not softened by the manners of the officers who had to put the law into execution. The result of the whole transaction was the birth of a very strong sense in the minds of the colonists that the mother country looked upon them as a sponge to be squeezed. This conviction took more than a passing hold upon them. It was speedily inflamed into inextinguishable heat, first by the news that they were to be taxed without their own consent, and next by the tyrannical and atrocious measures by which it was proposed to crush their resistance. The rebellion may be characterised as having first originated in the blind greediness of the English merchants, and as having then been precipitated by the arbitrary ideas of the patriots, in the first instance, and afterwards of the King and the least educated of the common people. If the severe pressure of the mercantile policy, unflinchingly carried out, had not first filled the colonists with resentment and robbed them of their prosperity, the imperial claim to impose taxes would probably have been submitted to without much ado. And if the suppression of their trade in 1764 had not been instantly followed by Grenville's plan for extorting revenue from them, they would probably in time have been reconciled to the blow which had been dealt to their commerce. It was the conjunction of two highly oppressive pieces of policy which taught them that they would certainly lose more by tame compliance than they could possibly lose by an active resistance."—J. Morley, *Edmund Burke*, ch. 4.

ALSO IN: W. Massey, *Hist. of England, Reign of George III.*, v. 1, ch. 5.

A. D. 1764-1767.—Patriotic self-denials.—"Upon the news of the intention to lay [the Stamp Tax] . . . on the colonies, many people,

the last year, had associated, and engaged to forbear the importation, or consumption, of English goods; and particularly to break off from the custom of wearing black clothes, or other mourning [it being generally of British manufacture—Foot-note], upon the death of relations. This agreement was then signed by some of the council, and representatives, and by great numbers of people in the town of Boston, and the disuse of mourning soon became general. This was intended to alarm the manufacturers in England. And now [in 1765], an agreement was made, and signed by a great proportion of the inhabitants of Boston, to eat no lamb during the year. This was in order to increase the growth, and, of course, the manufacture of wool in the province. Neither of these measures much served the purpose for which they were professedly intended, but they served to unite the people in an unfavourable opinion of parliament."—T. Hutchinson, *Hist. of the Province of Mass. Bay, 1749-1774*, pp. 116-117.—The movement thus started in Boston before the passage of the Stamp Act spread rapidly through the other provinces after the Act had been passed, and continued to be for several years a very serious expression of colonial patriotism and opposition to the oppressive policy of the mother country. See below: A. D. 1765.

A. D. 1765.—The Stamp Act.—"The scheme of the imposition by Parliament of a tax on the American colonists to be collected by stamps was not a new one. Nearly forty years before this time, 'Sir William Keith, the late Governor of Pennsylvania, presented an elaborate disquisition to the King . . . proposing the extension of the stamp duties to the Colonies by Act of Parliament.' It had been one of the projects of the factious Dunbar, during his short career of turbulence and intrigue in New Hampshire. Governor Sharpe of Maryland and Governor Dinwiddie of Virginia had recommended a resort to it at the time of the abortive movement for a union of the Colonies. Its renewal at this time has been said to have been especially due to Charles Jenkinson, then only private secretary to Lord Bute, but who rose afterwards to be Earl of Liverpool. The project, as now resolved upon, was pursued with inconsiderate obstinacy, though it encountered a spirited debate when it was brought into the House of Commons [February, 1765]. . . . The bill was pending in the House between three and four weeks, at the end of which time it was passed, the largest number of votes which had been given against it in any stage of its progress not having amounted to fifty. It was concurred in by the House of Lords, where it appears to have met no resistance, and in due course [March 22] received the royal assent. No apprehension of consequences counselled a pause. The Stamp Act—as it has ever since been called by eminence—provided . . . for the payment, by British subjects in America to the English Exchequer, of specified sums, greater or less, in consideration of obtaining validity for each of the common transactions of business."—J. G. Palfrey, *Hist. of New England*, bk. 6, ch. 3 (p. 5).

The following is the text of the Stamp Act:

Whereas, by an act made in the last session of parliament, several duties were granted, continued, and appropriated, towards defraying the expenses of defending, protecting, and se-

curing the British colonies and plantations in America: and whereas, it is first necessary, that provision be made for raising a further revenue within your majesty's dominions in America, towards defraying the said expenses; we, your majesty's most dutiful and loyal subjects, the commons of Great Britain, in parliament assembled, have therefore resolved, to give and grant unto your majesty the several rites and duties hereafter mentioned; and do most humbly beseech your majesty that it may be enacted, And be it enacted, by the king's most excellent majesty, by and with the advice and consent of the lords spiritual and temporal, and commons in this present parliament assembled, and by the authority of the same, That from and after the first day of November, one thousand seven hundred and sixty five, there shall be raised, levied, collected and paid, unto his majesty, his heirs and successors, throughout the colonies and plantations in America, which now are, or hereafter may be, under the dominion of his majesty, his heirs and successors,

1. For every skin of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any declaration, plea, replication, rejoinder, demurrer, or other pleading, or any copy thereof, in any court of law within the British colonies and plantations in America, a stamp duty of three pence.

2. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any special bail, and appearance upon such bail in any such court, a stamp duty of two shillings.

3. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which may be engrossed, written or printed, any petition, bill, or answer, claim, plea, replication, rejoinder, demurrer, or other pleading, in any court of chancery or equity, within the said colonies and plantations, a stamp duty of one shilling and six pence.

4. For every skin or piece of vellum, or parchment, or sheet or piece of paper, on which shall be engrossed, written, or printed, any copy of any petition, bill, answer, claim, plea, replication, rejoinder, demurrer, or other pleading, in any such court, a stamp duty of three pence.

5. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written, or printed, any monition, libel, answer, allegation, inventory, or renunciation, in ecclesiastical matters, in any court of probate, court of the ordinary, or other court exercising ecclesiastical jurisdiction within the said colonies and plantations, a stamp duty of one shilling.

6. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any copy of any will, (other than the probate thereof,) monition, libel, answer, allegation, inventory, or renunciation, in ecclesiastical matters, in any such court, a stamp duty of six pence.

7. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any donation, presentation, collation or institution, of or to any benefice, or any writ or instrument for the like purpose, or any register, entry, testimonial or certificate of any degree taken in any university, academy, college, or seminary of learning,

within the said colonies and plantations, a stamp duty of two pounds.

8. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any monition, libel, claim, answer, allegation, information, letter of request, execution, renunciation, inventory, or other pleading, in any admiralty court within the said colonies and plantations, a stamp duty of one shilling.

9. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which any copy of any such monition, libel, claim, answer, allegation, information, letter of request, execution, renunciation, inventory or other pleading, shall be engrossed, written or printed, a stamp duty of six pence.

10. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any appeal, writ of error, writ of dower, 'ad quod damnari,' certiorari, statute merchant, statute staple, attestation, or certificate, by any officer, or exemplification of any record or proceeding, in any court whatsoever within the said colonies and plantations, (except appeals, writs of error, certiorari, attestations, certificates, and exemplifications, for, or relating to the removal of any proceedings from before a single justice of the peace,) a stamp duty of ten shillings.

11. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any writ of covenant for levying fines, writ of entry for suffering a common recovery, or attachment issuing out of, or returnable into any court within the said colonies and plantations, a stamp duty of five shillings.

12. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any judgment, decree, or sentence, or dismissal, or any record of nisi prius or postea, in any court within the said colonies or plantations, a stamp duty of four shillings.

13. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any affidavit, common ball, or appearance, interrogatory, deposition, rule, order or warrant of any court, or any 'dedimus potestatem,' capias, subpoena, summons, compulsory citation, commission, recognisance, or any other writ, process, or mandate, issuing out of, or returnable into, any court, or any office belonging thereto, or any other proceeding therein whatsoever, or any copy thereof, or of any record not herein before charged, within the said colonies and plantations, (except warrants relating to criminal matters, and proceedings thereon, or relation thereto,) a stamp duty of one shilling.

14. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any note or bill of lading, which shall be signed for any kind of goods, wares, or merchandize, to be exported from, or any docket or clearance granted within the said colonies and plantations, a stamp duty of four pence.

15. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, letters of mart or commission for private ships of war, within

the said colonies and plantations, a stamp duty of twenty shillings.

16. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any grant, appointment, or admission of or to any public beneficial office or employment, for the space of one year, or any lesser time, of or above twenty pounds per annum, sterling money, in salary, fees, and perquisites, within the said colonies and plantations, (except commissions and appointments of officers of the army, navy, ordnance, or militia, of judges, and of justices of the peace,) a stamp duty of ten shillings.

17. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which any grant of any liberty, privilege, or franchise, under the seal or sign manual, of any governor, proprietor, or public officer, alone, or in conjunction with any other person or persons, or with any council, or any council and assembly, or any exemplification of the same, shall be engrossed, written, or printed, within the said colonies and plantations, a stamp duty of six pounds.

18. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any license for retailing of spirituous liquors, to be granted to any person who shall take out the same, within the said colonies and plantations, a stamp duty of twenty shillings.

19. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any license for retailing of wine, to be granted to any person who shall not take out a license for retailing of spirituous liquors, within the said colonies and plantations, a stamp duty of four pounds.

20. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any license for retailing of wine, to be granted to any person who shall take out a license for retailing of spirituous liquors, within the said colonies and plantations, a stamp duty of three pounds.

21. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any probate of wills, letters of administration, or of guardianship for any estate above the value of twenty pounds sterling money, within the British colonies [and] plantations upon the continent of America, the islands belonging thereto, and the Bermuda and Bahama Islands, a stamp duty of five shillings.

22. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any such probate, letters of administration or of guardianship, within all other parts of the British dominion in America, a stamp duty of ten shillings.

23. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written, or printed, any bond for securing the payment of any sum of money, not exceeding the sum of ten pounds sterling money, within the British colonies and plantations upon the continent of America, the islands belonging thereto, and the Bermuda and Bahama Islands, a stamp duty of six pence.

24. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall

be engrossed, written or printed, any bond for securing the payment of any sum of money above ten pounds, and not exceeding twenty pounds sterling money, within such colonies, plantations and islands, a stamp duty of one shilling.

25. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any bond for securing the payment of any sum of money above twenty pounds, and not exceeding forty pounds sterling money, within such colonies, plantations and islands, a stamp duty of one shilling and six pence.

26. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any order or warrant for surveying or settling out any quantity of land, not exceeding one hundred acres, issued by any governor, proprietor, or any public officer, alone, or in conjunction with any other person or persons, or with any council, or any council and assembly, within the British colonies and plantations in America, a stamp duty of six pence.

27. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any such order or warrant for surveying or settling out any quantity of land above one hundred and not exceeding two hundred acres, within the said colonies and plantations, a stamp duty of one shilling.

28. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any such order or warrant for surveying or settling out any quantity of land above two hundred and not exceeding three hundred and twenty acres, and in proportion for every such order or warrant for surveying or settling out every other three hundred and twenty acres, within the said colonies and plantations, a stamp duty of one shilling and six pence.

29. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any original grant or deed, mesne conveyance, or other instrument whatever, by which any quantity of land, not exceeding one hundred acres, shall be granted, conveyed, or assigned, within the British colonies and plantations upon the continent of America, the islands belonging thereto, and the Bermuda and Bahama islands (except leases for any term not exceeding the term of twenty-one years) a stamp duty of one shilling and six pence.

30. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any such original grant, or any such deed, mesne conveyance, or other instrument whatsoever, by which any quantity of land, above one hundred and not exceeding two hundred acres, shall be granted, conveyed, or assigned, within such colonies, plantations and islands, a stamp duty of two shillings.

31. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any such original grant, or any such deed, mesne conveyance, or other instrument whatsoever, by which any quantity of land, above two hundred, and not exceeding three hundred and twenty acres, shall

be granted, conveyed, or assigned, and in proportion for every such grant, deed, mesne conveyance, or other instrument, granting, conveying or assigning every other three hundred and twenty acres, within such colonies, plantations and islands, a stamp duty of two shillings and six pence.

32. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any such original grant, or any such deed, mesne conveyance, or other instrument whatsoever, by which any quantity of land, not exceeding one hundred acres, shall be granted, conveyed, or assigned, within all other parts of the British dominions in America, a stamp duty of three shillings.

33. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any such original grant, or any such deed, mesne conveyance, or other instrument whatsoever, by which any quantity of land, above one hundred and not exceeding two hundred acres, shall be granted, conveyed, or assigned, within the same parts of the said dominions, a stamp duty of four shillings.

34. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written, or printed, any such original grant, or any such deed, mesne conveyance, or other instrument whatsoever, by which any quantity of land, above two hundred and not exceeding three hundred and twenty acres, shall be granted, conveyed, or assigned, and in proportion for every such grant, deed, mesne conveyance, or other instrument, granting, conveying, or assigning every other three hundred and twenty acres, within the same parts of the said dominions, a stamp duty of five shillings.

35. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written, or printed, any grant, appointment, or admission, of or to any beneficial office or employment, not hereinbefore charged, above the value of twenty pounds per annum sterling money, in salary, fees, or perquisites, or any exemption of the same, within the British colonies and plantations upon the continent of America, the islands belonging thereto, and the Bermuda and Bahama islands, (except commissions of officers of the army, navy, ordnance, or militia, and of justices of the peace,) a stamp duty of four pence.

36. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written, or printed, any such grant, appointment, or admission, of or to any such public beneficial office or employment, or any exemption of the same, within all other parts of the British dominions in America, a stamp duty of six pence.

37. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written, or printed, any indenture, lease, conveyance, contract, stipulation, bill of sale, charter party, protest, articles of apprenticeship or covenant, (except for the hire of servants not apprentices, and also except such other matters as hereinbefore charged,) within the British colonies and plantations in America, a stamp duty of two shillings and six pence.

38. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which any

warrant or order for auditing any public accounts, beneficial warrant, order, grant, or certificate, under any public seal, or under the seal or sign manual of any governor, proprietor, or public officer, alone, or in conjunction with any other person or persons, or with any council, or any council and assembly, not herein before charged, or any passport or let-pass, surrender of office, or policy of assurance, shall be engrossed, written, or printed, within the said colonies and plantations, (except warrants or orders for the service of the army, navy, ordnance, or militia, and grants of offices under twenty pounds per annum, in salary, fees, and perquisite,) a stamp duty of five shillings.

39. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written, or printed, any notarial act, bond, deed, letter of attorney, procuration, mortgage, release, or other obligatory instrument, not herein before charged, within the said colonies and plantations, a stamp duty of two shillings and three pence.

40. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written, or printed, any register, entry, or enrolment of any grant, deed, or other instrument whatsoever, herein before charged, within the said colonies and plantations, a stamp duty of three pence.

41. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written, or printed, any register, entry, or enrolment of any grant, deed, or other instrument whatsoever not herein before charged, within the said colonies and plantations, a stamp duty of two shillings.

42. And for and upon every pack of playing cards, and all dice, which shall be sold or used within the said colonies and plantations, the several stamp duties following: (that is to say,)

43. For every pack of such cards, one shilling.

44. And for every pair of such dice, ten shillings.

45. And for and upon every paper called a pamphlet, and upon every newspaper, containing public news, or occurrences, which shall be printed, dispersed, and made public, within any of the said colonies and plantations, and for and upon such advertisements as are hereinafter mentioned, the respective duties following: (that is to say,)

46. For every such pamphlet and paper, contained in a half sheet, or any lesser piece of paper, which shall be so printed, a stamp duty of one half penny for every printed copy thereof.

47. For every such pamphlet and paper, (being larger than half a sheet, and not exceeding one whole sheet,) which shall be so printed, a stamp duty of one penny for every printed copy thereof.

48. For every pamphlet and paper, being larger than one whole sheet, and not exceeding six sheets in octavo, or in a lesser page, or not exceeding twelve sheets in quarto, or twenty sheets in folio, which shall be so printed, a duty after the rate of one shilling for every sheet of any kind of paper which shall be contained in one printed copy thereof.

49. For every advertisement to be contained in any gazette, newspaper, or other paper, or any pamphlet which shall be so printed, a duty of two shillings.

50. For every almanac or calendar, for any one particular year, or for any time less than a year, which shall be written or printed on one side only of any one sheet, skin, or piece of paper, parchment, or vellum, within the said colonies and plantations, a stamp duty of two pence.

51. For every other almanac, or calendar, for any one particular year, which shall be written or printed within the said colonies and plantations, a stamp duty of four pence.

52. And for every almanac or calendar, written or printed in the said colonies and plantations, to serve for several years, duties to the same amount respectively shall be paid for every such year.

53. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which any instrument, proceeding, or other matter or thing aforesaid, shall be engrossed, written, or printed, within the said colonies and plantations, in any other than the English language, a stamp duty of double the amount of the respective duties before charged thereon.

54. And there shall be also paid, in the said colonies and plantations, a duty of six pence for every twenty shillings, in any sum not exceeding fifty pounds sterling money, which shall be given, paid, contracted, or agreed for, with or in relation to any clerk or apprentice, which shall be put or placed to or with any master or mistress, to learn any profession, trade, or employment. 2. And also a duty of one shilling for every twenty shillings, in any sum exceeding fifty pounds, which shall be given, paid, contracted, or agreed for, with, or in relation to, any such clerk or apprentice.

55. Finally, the produce of all the aforementioned duties shall be paid into his majesty's treasury; and there held in reserve, to be used, from time to time, by the parliament, for the purpose of defraying the expenses necessary for the defense, protection, and security of the said colonies and plantations.

A. D. 1765.—News of the Stamp Act in the Colonies.—Colonel Barré's speech and the Sons of Liberty.—Patrick Henry's speech in the Virginia Assembly.—Formal protests and informal mob-doings in Philadelphia, New York and Boston.—In the course of the debate in the British House of Commons, on the Stamp Act, February 6, 1765, Charles Townshend, after discussing the advantages which the American colonies had derived from the late war, asked the question: "And now will these American children, planted by our care, nourished up to strength and opulence by our indulgence, and protected by our arms, grudge to contribute their mite to relieve us from the heavy burden under which we lie?" This called to his feet Colonel Isaac Barré who had served in America with Wolfe, and who had a knowledge of the country and people which most members of Parliament lacked. "They planted by your care!" exclaimed Barré. "No: your oppressions planted them in America. They fled from your tyranny to a then uncultivated, un hospitable country, where they exposed themselves to almost all the hardships to which human nature is liable; and, among others, to the cruelties of a savage foe, the most subtle, and, I will take upon me to say, the most formidable of any people upon the face of God's earth; and yet, actuated by principles

of true English liberty, they met all hardships with pleasure, compared with those they suffered in their own country from the hands of those who should have been their friends. They nourished up by your indulgence. They grew by your neglect of them. As soon as you began to care about them, that care was exercised in sending persons to rule them in one department and another, who were, perhaps, the deputies of deputies to some members of this house, sent to spy out their liberties, to misrepresent their actions, and to prey upon them; men whose behavior on many occasions has caused the blood of those sons of Liberty to recoil within them; men promoted to the highest seats of justice, some who, to my knowledge, were glad, by going to a foreign country, to escape being brought to the bar of a court of Justice in their own. They protected by your arms! They have nobly taken up arms in your defence; have exerted a valor amidst their constant and laborious industry, for the defence of a country whose frontier was drenched in blood, while its interior parts yielded all its little savings to your emolument. And believe me—remember I this day told you so—the same spirit of freedom which actuated that people at first will accompany them still. But prudence forbids me to explain myself further. God knows I do not at this time speak from motives of party heat; what I deliver are the genuine sentiments of my heart. However superior to me in general knowledge and experience the respectable body of this house may be, yet I claim to know more of America than most of you, having seen and been conversant in that country. The people, I believe, are as truly loyal as any subjects the king has; but a people jealous of their liberties, and who will vindicate them, if ever they should be violated. But the subject is too delicate; I will say no more." Notes of Colonel Barré's speech were taken by a Mr. Ingersoll, one of the agents for Connecticut, who sat in the gallery. He sent home a report of it, which was published in the newspapers at New London, and soon the name of the "Sons of Liberty," which the eloquent defender of the resisting colonists had given to them, was on every lip.—G. Bancroft, *Hist. of the U. S. (Author's last rev.)*, v. 3, ch. 8.—"Meantime [in 1765], 'The Sons of Liberty'—a term that grew into use soon after the publication of Barré's speech—were entering into associations to resist, by all lawful means, the execution of the Stamp Act. They were long kept secret, which occasioned loyalists to say that there was a private union among a certain sect of republican principles from one end of the continent to the other. As they increased in numbers, they grew in boldness and publicity, announcing in the newspapers their committees of correspondence, and interchanging solemn pledges of support."—R. Frothingham, *The Rise of the Republic of the U. S.*, p. 183.—"The Stamp Act was passed March 23, 1765. A copy of it was printed in the 'Pennsylvania Gazette' on April 18th, but this must necessarily have been in advance of news of its passage. The people of Philadelphia began at once to show their determination to make it [the Stamp Act] a nullity so far as revenue was concerned. An enforced frugality was the first step. . . . In the 'Pennsylvania Gazette' of April 18th there was an article against expensive and ostentatious fu-

nerals, the writer saying that often £70 or £100 were squandered on such occasions. August 15th, when Alderman William Plumsted was buried at St. Peter's Church, the funeral, by his own wish, was conducted in the plainest way, no pall, no mourning worn by relatives. In March, the Hibernia Fire Company resolved, 'from motives of economy, and to reduce the present high price of mutton and encourage the breweries of Pennsylvania, not to purchase any lamb this season, nor to drink any foreign beer.' Other fire companies and many citizens copied this example. . . . On October 25th the merchants and traders of Philadelphia subscribed to a non-importation agreement, such as were then being signed all over the country. In this article the subscribers agreed that, in consequence of the late acts of Parliament and the injurious regulations accompanying them, and of the Stamp Act, etc., in justice to themselves and in hopes of benefit from their example (1) to countermand all orders for English goods until the Stamp Act should be repealed; (2) a few necessary articles, or shipped under peculiar circumstances, are excepted; (3) no goods received for sale on commission to be disposed of until the Stamp Act should be repealed; and this agreement to be binding on each and all, as a pledge of word of honor."—J. T. Scharf and T. Westcott, *Hist. of Philadelphia*, ch. 16 (p. 1).—The first stern note of defiance came from Virginia. Patrick Henry had lately been elected to the colonial assembly. Having waited in vain for the older leaders of the house to move in the matter of expressing the feeling of the colony on the subject, on the 29th of May, when the session was within three days of its expected close, "Mr. Henry introduced his celebrated resolutions on the stamp act. I will not withhold from the reader a note of this transaction from the pen of Mr. Henry himself. It is a curiosity, and highly worthy of preservation. After his death, there was found among his papers one sealed, and thus endorsed: 'Enclosed are the resolutions of the Virginia assembly in 1765, concerning the stamp act. Let my executors open this paper.' Within was found the following copy of the resolutions, in Mr. Henry's handwriting:—'Resolved, That the first adventurers and settlers of this, his majesty's colony and dominion, brought with them, and transmitted to their posterity, and all other his majesty's subjects, since inhabiting in this, his majesty's said colony, all the privileges, franchises, and immunities, that have at any time been held, enjoyed, and possessed by the people of Great Britain. Resolved, That by two royal charters, granted by King James I., the colonists, aforesaid, are declared entitled to all the privileges, liberties, and immunities of denizens and natural-born subjects, to all intents and purposes, as if they had been abiding and born within the realm of England. Resolved, That the taxation of the people by themselves, or by persons chosen by themselves to represent them, who can only know what taxes the people are able to bear, and the easiest mode of raising them, and are equally affected by such taxes themselves, is the distinguishing characteristic of British freedom, and without which the ancient constitution cannot subsist. Resolved, That his majesty's liege people of this most ancient colony, have uninterruptedly enjoyed the right of being thus governed by their own assembly, in the

article of their taxes and internal police, and that the same hath never been forfeited, or any other way given up, but hath been constantly recognised by the king and people of Great Britain. Resolved, therefore, That the general assembly of this colony have the sole right and power to lay taxes and impositions upon the inhabitants of this colony; and that every attempt to vest such power in any person or persons whatsoever, other than the general assembly aforesaid, has a manifest tendency to destroy British as well as American freedom.' On the back of the paper containing these resolutions, is the following endorsement, which is also in the handwriting of Mr. Henry himself:—'The within resolutions passed the house of burgesses in May, 1765. They formed the first opposition to the stamp act, and the scheme of taxing America by the British parliament. All the colonies, either through fear, or want of opportunity to form an opposition, or from influence of some kind or other, had remained silent. I had been for the first time elected a Burgess, a few days before, was young, inexperienced, unacquainted with the forms of the house, and the members that composed it. Finding the men of weight averse to opposition, and the commencement of the tax at hand, and that no person was likely to step forth, I determined to venture, and alone, unaided, and unassisted, on a blank leaf of an old law-book wrote the within. Upon offering them to the house, violent debates ensued. Many threats were uttered, and much abuse cast on me, by the party for submission. After a long and warm contest, the resolutions passed by a very small majority, perhaps of one or two only. The alarm spread throughout America with astonishing quickness, and the ministerial party were overwhelmed. The great point of resistance to British taxation was universally established in the colonies. This brought on the war, which finally separated the two countries, and gave independence to ours. Whether this will prove a blessing or a curse will depend upon the use our people make of the blessings which a gracious God hath bestowed on us. If they are wise, they will be great and happy. If they are of a contrary character, they will be miserable. Righteousness alone can exalt them as a nation. Render! whoever thou art, remember this; and in thy sphere, practise virtue thyself, and encourage it in others.—P. Henry.' Such is the short, plain, and modest account which Mr. Henry has left of this transaction. . . . It is not wonderful that even the friends of colonial rights who knew the feeble and defenceless situation of this country should be startled at a step so bold and daring. That effect was produced; and the resolutions were resisted, not only by the aristocracy of the house, but by many of those who were afterward distinguished among the brightest champions of American liberty. The following is Mr. Jefferson's account of this transaction: 'Mr. Henry moved and Mr. Johnston seconded these resolutions successively. They were opposed by Messrs. Randolph, Bland, Pendleton, Wythe, and all the old members, whose influence in the house had, till then, been unbroken. They did it, not from any question of our rights, but on the ground that the same sentiments had been, at their preceding session, expressed in a more conciliatory form, to which the answers

were not yet received. But torrents of sublime eloquence from Henry, backed by the solid reasoning of Johnston, prevailed. The last, however, and strongest resolution was carried but by a single vote. The debate on it was most bloody. I was then but a student, and stood at the door of communication between the house and the lobby (for as yet there was no gallery) during the whole debate and vote; and I well remember that, after the numbers on the division were told and declared from the chair, Peyton Randolph (the attorney-general) came out at the door where I was standing, and said, as he entered the lobby: "By God, I would have given 500 guineas for a single vote": for one would have divided the house, and Robinson was in the chair, who he knew would have negatived the resolution. Mr. Henry left town that evening; and the next morning, before the meeting of the house, Col. Peter Randolph, then of the council, came to the hall of burgesses, and sat at the clerk's table till the house-bell rung, thumbing over the volumes of journals, to find a precedent for expunging a vote of the house. . . . Some of the third members, who had voted for the strongest resolution, had become alarmed; and as soon as the house met, a motion was made and carried to expunge it from the journals. . . . The manuscript journal of the day is not to be found; whether it was suppressed, or casually lost, must remain a matter of uncertainty; it disappeared, however, shortly after the session. . . . In the interesting fact of the erasure of the fifth resolution, Mr. Jefferson is supported by the distinct recollection of Mr. Paul Carrington, late a judge of the court of appeals of Virginia, and the only surviving member, it is believed, of the house of burgesses of 1765. The statement is also confirmed, if indeed further confirmation were necessary, by the circumstance that instead of the five resolutions, so solemnly recorded by Mr. Henry, as having passed the house, the journal of the day exhibits only . . . four. . . . 'By these resolutions,' says Mr. Jefferson, 'and his manner of supporting them, Mr. Henry took the lead out of the hands of those who had, theretofore, guided the proceedings of the house; that is to say, of Pendleton, Wythe, Bland, Randolph.' It was, indeed, the measure which raised him to the zenith of his glory. He had never before had a subject which entirely matched his genius, and was capable of drawing out all the powers of his mind. . . . It was in the midst of this magnificent debate, while he was descanting on the tyranny of the obnoxious act, that he exclaimed in a voice of thunder, and with the look of a god: 'Cesar had his Brutus—Charles the First, his Cromwell—and George the Third—('Treason!' cried the speaker—'Treason, treason!' echoed from every part of the house. It was one of those trying moments which is decisive of character. Henry faltered not for an instant; but rising to a loftier attitude, and fixing on the speaker an eye of the most determined fire, he finished his sentence with the firmest emphasis)—may profit by their example. If this be treason, make the most of it.' This was the only expression of defiance which escaped him during the debate. He was, throughout life, one of the most perfectly and uniformly decorous speakers that ever took the floor of the house. . . . From the period of which we have been speaking, Mr. Henry became the idol of the

people of Virginia; nor was his name confined to his native state. His light and heat were seen and felt throughout the continent; and he was every where regarded as the great champion of colonial liberty."—W. Wirt, *Sketches of the Life and Character of Patrick Henry*, sect. 2.—"The publication of Mr. Henry's resolutions against the Stamp Act created a widespread and intense excitement. They were hailed as the action of the oldest, and hitherto the most loyal of the colonies; and as raising a standard of resistance to the detested Act. Mr. Otis pronounced them treasonable, and this was the verdict of the Government party. But, treasonable or not, they struck a chord which vibrated throughout America. Hutchinson declared that, 'nothing extravagant appeared in the papers till an account was received of the Virginia resolves.' Soon the bold exclamation of Mr. Henry in moving them was published, and he was hailed as the leader raised up by Providence for the occasion. The 'Boston Gazette' declared: 'The people of Virginia have spoken very sensibly, and the frozen politicians of a more northern government say they have spoken treason.' But the people were no longer to be held down by 'the frozen politicians,' north or south. They commenced to form secret societies pledged to the resistance of the Act by all lawful means, which we called 'The Sons of Liberty.'"—W. W. Henry, *Patrick Henry: Life, Correspondence and Speeches*, v. 1, pp. 93-94.—At New York, "In May articles began to appear in the papers congratulating the public on the patriotic and frugal spirit that was beginning to reign in the Province of New York. The principal gentlemen of the city clad themselves in country manufactures or 'turned clothes.' Woyman printed in large type in his paper, the N. Y. Gazette, the patriotic motto 'It is better to wear a homespun coat than lose our liberty.' Spinning was dully in vogue; materials being more wanting than industrial hands; a need the farmers were endeavoring to remedy by sewing more flax seed and keeping more sheep, and finally we notice the odd statement 'that little lamb came to market as no true lovers of their country or whose sympathetic breasts feel for its distresses will buy it, and that sassafras, balm and sage were greatly in use instead of tea and allowed to be more wholesome.' Funerals and mourning, which were then expensive luxuries, were modified and their extravagance curtailed. The Society for promoting Arts and Manufactures resolved to establish a bleaching field and to erect a flax spinning school where the poor children of the city should be taught the art. They also ordered large numbers of spinning wheels to be made and loaned to all who would use them. In September we find it announced that women's shoes were made, cheaper and better than the renowned Hoses,' by Welis, Lasher, Bolton, and Davis, and that there was a good assortment on hand; that boots and men's shoes were made, in every quarter of the city, better than the English made for foreign sale; wove thread stockings in sundry places; the making of linen, woolen, and cotton stuffs was fast increasing; gloves, hats, carriages, harness and cabinet work were plenty. The people were now self dependent; cards now appeared recommending that no true friend of his country should buy or import English goods, and the

dry goods men were warned that their importations would lie on hand to their cost and ruin. There being now a sufficiency of home made goods it was proposed on the 19th October to establish a market for all kinds of Home Manufactures; and a market was opened under the Exchange in Broad Street on the 23d. From the shortness of the notice the design was not sufficiently known in the country and there was neither plenty nor variety; but numbers of buyers appeared and everything went off readily at good prices. The gentlemen merchants of the city, as they were styled, were not behind any class in patriotism or sacrifice. A meeting was called for Monday 28th October at Jones' house in the Fields, 'The Freemasons Arms,' but the attendance, owing to the short notice, not being sufficient to enter upon business, they were again summoned on the 30th October to meet the next day at four o'clock at Mr. Burns' long room at the City Arms to fall upon such methods as they shall then think most advisable for their reciprocal interest. On the 31st there was a general meeting of the principal merchants at this tavern, which was known under the various names of the City Arms, the Province Arms, the New York Arms, and stood on the upper corner of Broadway and Stone, now Thames street, on the site later occupied by the City Hotel. Resolutions were adopted and subscribed by upwards of two hundred of the principal merchants; 1st, to accompany all orders to Great Britain for goods or merchandize of any nature kind or quality whatever with instructions that they be not shipped unless the Stamp Act be repealed; 2nd, to countermand all outstanding orders unless on the conditions mentioned in the foregoing resolution; 3rd, not to vend any goods sent on commission, shipped after the 1st January succeeding, unless upon the same condition. In consequence of these resolutions the retailers of goods subscribed a paper obliging themselves not to buy any goods, wares or merchandize after the 1st January unless the Stamp Act were repealed. This was the first of the famous Non Importation Agreement, the great commercial measure of offense and defense against Great Britain. It punished friends and foes alike and plunged a large portion of the English people into the deepest distress; at the same time it taught the Colonies the value and extent of their own resources."—J. A. Stevens, *The Stamp Act in New York (Magazine of Am. Hist., June, 1877)*.—"The Stamp Act was reprinted in New York "with a death's-head upon it in place of the royal arms, and it was hawked about the streets under the title of 'The Folly of England and the Ruin of America.' In Boston, the church-bells were tolled, and the flags on the shipping put at half-mast. But formal defiance came first from Virginia." Patrick Henry had just been elected to the colonial assembly. "In a committee of the whole house, he drew up a series of resolutions, declaring that the colonists were entitled to all the liberties and privileges of natural-born subjects, and that 'the taxation of the people by themselves, or by persons chosen by themselves to represent them, . . . is the distinguishing characteristic of British freedom, without which the ancient constitution cannot exist.' It was further declared that any attempt to vest the power of taxation in any other body than the colonial assembly was a

menace to British no less than to American freedom; that the people of Virginia were not bound to obey any law enacted in disregard of these fundamental principles; and that any one who should maintain the contrary should be regarded as a public enemy. It was in the lively debate which ensued upon these resolutions, that Henry uttered those memorable words commending the example of Tarquin and Cæsar and Charles I. to the attention of George III. Before the vote had been taken upon all the resolutions, Governor Fauquier dissolved the assembly; but the resolutions were printed in the newspapers, and hailed with approval all over the country. Meanwhile, the Massachusetts legislature, at the suggestion of Otis, had issued a circular letter to all the colonies, calling for a general congress, in order to concert measures of resistance to the Stamp Act. The first cordial response came from South Carolina, at the instance of Christopher Gadsden, a wealthy merchant of Charleston and a scholar learned in Oriental languages, a man of rare sagacity and most liberal spirit. . . . The first announcement of the Stamp Act had called into existence a group of secret societies of workmen known as 'Sons of Liberty,' in allusion to a famous phrase in one of Colonel Barré's speeches. These societies were solemnly pledged to resist the execution of the obnoxious law. On the 14th of August, the quiet town of Boston witnessed some extraordinary proceedings [see LIBERTY TREE]. . . . Twelve days after, a mob sacked the splendid house of Chief Justice Hutchinson, threw his plate into the street, and destroyed the valuable library which he had been thirty years in collecting, and which contained many manuscripts, the loss of which was quite irreparable. As usual with mobs, the vengeance fell in the wrong place, for Hutchinson had done his best to prevent the passage of the Stamp Act. In most of the colonies, the stamp officers were compelled to resign their posts. Boxes of stamps arriving by ship were burned or thrown into the sea. . . . In New York, the presence of the troops for a moment encouraged the lieutenant-governor, Colden, to take a bold stand in behalf of the law. He talked of firing upon the people, but was warned that if he did so he would be speedily hanged on a lamp-post, like Captain Porteous of Edinburgh. A torchlight procession, carrying images of Colden and of the devil, broke into the governor's coach-house, and, seizing his best chariot, paraded it about town with the images upon it, and finally burned up chariot and images on the Bowling Green, in full sight of Colden and the garrison, who looked on from the Battery, speechless with rage, but afraid to interfere. Gage did not dare to have the troops used, for fear of bringing on a civil war; and the next day the discomfited Colden was obliged to surrender all the stamps to the common council of New York, by whom they were at once locked up in the City Hall. Nothing more was needed to prove the impossibility of carrying the Stamp Act into effect."—J. Fiske, *The American Revolution*, v. 1, ch. 1.—In Connecticut the stamp agent, Mr. Ingersoll, was compelled by a body of armed citizens to resign—see CONNECTICUT: A. D. 1765.

A. D. 1765.—The Stamp Act Congress.—The delegates chosen, on the invitation of Massachusetts, to attend a congress for consultation on the circumstances of the colonies, met, October 7, 1765, in the City Hall at New York. "In no place were the Sons of Liberty more determined, or were their opponents more influential. It was the headquarters of the British force in America, the commander of which, General Gage, wielded the powers of a viceroy. A fort within the city was heavily mounted with cannon. Ships of war were moored near the wharves. The executive, Lieutenant-governor Colden, was resolved to execute the law. When the Massachusetts delegates called on him, he remarked that the proposed congress would be unconstitutional, and unprecedented, and he should give it no countenance. The congress consisted of twenty-eight delegates from nine of the colonies; four, though sympathizing with the movement, not choosing representatives. Here several of the patriots, who had discussed the American question in their localities, met for the first time. James Otis stood in this body the foremost speaker. His pen, with the pens of the brothers Robert and Phillip Livingston, of New York, were summoned to service in a wider field. John Dickinson, of Pennsylvania, was soon to be known through the colonies by 'The Farmer's Letters.' Thomas McKean and Cæsar Rodney were pillars of the cause in Delaware. Edward Tilghman was an honored name in Maryland. South Carolina, in addition to the intrepid Gadsden, had, in Thomas Lynch and John Rutledge, two patriots who appear prominently in the subsequent career of that colony. Thus this body was graced by large ability, genius, learning, and common sense. It was calm in its deliberations, seeming unmoved by the whirl of the political waters. The congress organized by the choice, by one vote, of Timothy Ruggles, a Tory,—as the chairman,—and John Cotton, clerk. The second day of its session, it took into consideration the rights, privileges, and grievances of 'the British American colonists.' After seven days' debate, it agreed—each colony having one vote—upon a declaration of rights and grievances and ordered it to be inserted in the journal. [The following is the 'Declaration': 'The members of this congress, sincerely devoted, with the warmest sentiments of affection and duty, to his majesty's person and government, inviolably attached to the present happy establishment of the protestant succession, and with minds deeply impressed by a sense of the present and impending misfortunes of the British colonies on this continent; having considered, as maturely as time will permit, the circumstances of the said colonies, esteem it our indispensable duty to make the following declarations of our humble opinion, respecting the most essential rights and liberties of the colonists, and of the grievances under which they labor by reason of several late acts of parliament. 1. That his majesty's subjects in these colonies owe the same allegiance to the crown of Great Britain that is owing from his subjects born within the realm, and all due

subordination to that august body the parliament of Great Britain. 2. That his majesty's liege subjects in these colonies are entitled to all the inherent rights and liberties of his natural born subjects within the kingdom of Great Britain. 3. That it is inseparably essential to the freedom of a people, and the undoubted right of Englishmen, that no taxes be imposed on them, but with their own consent, given personally, or by their representatives. 4. That the people of these colonies are not, and from their local circumstances cannot be, represented in the house of commons of Great Britain. 5. That the only representatives of these colonies are persons chosen therein by themselves, and that no taxes ever have been or can be constitutionally imposed upon them, but by their respective legislatures. 6. That all supplies to the crown being free gifts from the people, it is unreasonable and inconsistent with the principles and spirit of the British constitution for the people of Great Britain to grant to his majesty the property of the colonists. 7. That trial by jury is the inherent and invaluable right of every British subject in these colonies. 8. That the late act of parliament entitled 'an act for granting and applying certain stamp duties, and other duties, in the British colonies and plantations in America,' &c., by imposing taxes on the inhabitants of these colonies; and the said act, and several other acts, by extending the jurisdiction of the court of admiralty beyond its ancient limits, have a manifest tendency to subvert the rights and liberties of the colonists. 9. That the duties imposed by several late acts of parliament, from the peculiar circumstances of these colonies, will be extremely burdensome and grievous; and from the scarcity of specie, the payment of them absolutely impracticable. 10. That as the profits of the trade of these colonies ultimately center in Great Britain, to pay for the manufactures which they are obliged to take from thence, they eventually contribute very largely to all supplies granted to the crown. 11. That the restrictions imposed by several late acts of parliament on the trade of these colonies, will render them unable to purchase the manufactures of Great Britain. 12. That the increase, prosperity, and happiness of these colonies depend on the full and free enjoyment of their rights and liberties, and an intercourse with Great Britain mutually affectionate and advantageous. 13. That it is the right of the British subjects in these colonies to petition the king, or either house of parliament. 14. That it is the indispensable duty of these colonies, to the best of sovereigns, to the mother country and to themselves to endeavor, by a loyal and dutiful address to his majesty, and humble application to both houses of parliament, to procure the repeal of the act for granting and applying certain stamp duties, of all clauses of any other acts of parliament whereby the jurisdiction of the admiralty is extended as aforesaid, and of the other late acts for the restriction of American commerce.] . . . The delegates present from only six of the colonies—except Ruggles and Ogden—signed the petition; those from New York, Connecticut, and South Carolina not being authorized to sign. On the 25th of October, the congress adjourned. Special measures were taken to transmit the proceedings to the unrepresented colonies. The several assemblies, on meeting, heartily approved

of the course of their delegates who concurred in the action of congress; but Ruggles, of Massachusetts, was reprimanded by the speaker, in the name of the House, and Ogden, of New Jersey, was hung in effigy by the people. The action of the assemblies was announced in the press. Meanwhile the Sons of Liberty, through their committees of correspondence, urged a continental Union; pledged a mutual support in case of danger; in some instances stated the numbers of armed men that might be relied on; and thus evinced a common determination to resist the execution of the Stamp Act."—R. Frothingham, *Rise of the Republic of the U. S.*, ch. 5.

A. D. 1765-1768.—Treaties with the Indians at German Flats and Fort Stanwix.—Cession of Iroquois claims to western Pennsylvania, West Virginia and Kentucky.—The drawing of the Indian boundary line.—"After the success of Bradstreet and Bouquet [see PONTIAC'S WAR], there was no difficulty in concluding a treaty with all the Western Indians; and late in April, 1765, Sir William Johnson, at the German Flats, held a conference with the various nations, and settled a definite peace. At this meeting two propositions were made; the one to fix some boundary line, west of which the Europeans should not go; and the savages named, as this line, the Ohio or Alleghany and Susquehanna; but no definite agreement was made, Johnson not being empowered to act. The other proposal was, that the Indians should grant to the traders, who had suffered in 1763, a tract of land in compensation for the injuries then done them, and to this the red men agreed. . . . During the very year that succeeded the treaty of German Flats, settlers crossed the mountains and took possession of lands in western Virginia and along the Monongahela. The Indians, having received no pay for these lands, murmured, and once more a border war was feared. . . . And not only were frontier men thus passing the line tacitly agreed on, but Sir William himself was even then meditating a step which would have produced, had it been taken, a general Indian war again. This was the purchase and settlement of an immense tract south of the Ohio River, where an independent colony was to be formed. How early this plan was conceived we do not learn, but, from Franklin's letters, we find that it was in contemplation in the spring of 1766. At that time Franklin was in London, and was written to by his son, Governor Franklin of New Jersey, with regard to the proposed colony. The plan seems to have been to buy of the Six Nations the lands south of the Ohio, a purchase which it was not doubted Sir William might make, and then to procure from the King a grant of as much territory as the Company which it was intended to form would require. Governor Franklin, accordingly, forwarded to his father an application for a grant, together with a letter from Sir William, recommending the plan to the ministry; all of which was duly communicated to the proper department. But at that time there were various interests bearing upon this plan of Franklin. The old Ohio Company [see OHIO VALLEY: A. D. 1748-1754] was still suing, through its agent, Colonel George Mercer, for a perfectior of the original grant. . . . General

Lyman, from Connecticut we believe, was soliciting a new grant similar to that now asked by Franklin; and the ministers themselves were divided as to the policy and propriety of establishing any settlements so far in the interior,—Shelburne being in favor of the new colony, Hillsborough opposed to it. The Company was organized, however, and the nominally leading man therein being Mr. Thomas Walpole, a London banker of eminence, it was known as the Walpole Company. . . . Before any conclusion was come to, it was necessary to arrange definitely that boundary line which had been vaguely talked of in 1765, and with respect to which Sir William Johnson had written to the ministry, who had mislaid his letters and given him no instructions. The necessity of arranging this boundary was also kept in mind by the continued and growing irritation of the Indians, who found themselves invaded from every side. . . . Franklin, the father, all this time, was urging the same necessity upon the ministers in England; and about Christmas of 1767, Sir William's letters on the subject having been found, orders were sent him to complete the proposed purchase from the Six Nations, and settle all differences. But the project for a colony was for the time dropped, a new administration coming in which was not that way disposed. Sir William Johnson having received, early in the spring, the orders from England relative to a new treaty with the Indians, at once took steps to secure a full attendance. Notice was given to the various colonial governments, to the Six Nations, the Delawares, and the Shawanese, and a Congress was appointed to meet at Fort Stanwix during the following October. It met upon the 24th of that month, and was attended by representatives from New Jersey, Virginia, and Pennsylvania; by Sir William and his deputies; by the agents of those traders who had suffered in the war of 1763; and by deputies from all of the Six Nations, the Delawares, and the Shawanese. The first point to be settled was the boundary line which was to determine the Indian lands of the West from that time forward; and this line the Indians, upon the 1st of November, stated should begin on the Ohio at the mouth of the Cherokee (or Tennessee) river; thence go up the Ohio and Alleghany to Kittaning; thence across to the Susquehanna, &c.; whereby the whole country south of the Ohio and Alleghany, to which the Six Nations had any claim, was transferred to the British. One deed, for a part of this land, was made on the 3d of November to William Trent, attorney for twenty-two traders, whose goods had been destroyed by the Indians in 1763. The tract conveyed by this was between the Kenhawa and Monongahela, and was by the traders named 'Indianna.' Two days afterward, a deed for the remaining western lands was made to the King, and the price agreed on paid down. These deeds were made upon the express agreement, that no claim should ever be based upon previous treaties, those of Lancaster, Logstown, &c.; and they were signed by the chiefs of the Six Nations, for themselves, their allies and dependents, the Shawanese, Delawares, Mingoes of Ohio, and others; but the Shawanese and Delaware deputies present did not sign them. Such was the treaty of Stanwix, whereon rests the title by purchase to Kentucky, western Virginia, and Pennsylvania. It was a better foundation,

perhaps, than that given by previous treaties, but was essentially worthless; for the lands conveyed were not occupied or hunted on by those conveying them. In truth, we cannot doubt that this immense grant was obtained by the influence of Sir William Johnson, in order that the new colony, of which he was to be governor, might be founded there. . . . The white man could now quiet his conscience when driving the native from his forest home, and feel sure that an army would back his pretensions. . . . Meantime more than one bold man had ventured for a little while into the beautiful valleys of Kentucky, and, on the 1st of May, 1769, there was one going forth from his 'peaceable habitation on the Yankin river in North Carolina,' whose name has since gone far and wide over this little planet of ours, he having become the type of his class. This was Daniel Boone. He crossed the mountains, and spent that summer and the next winter in the West. But, while he was rejoicing in the abundance of buffalo, deer, and turkeys among the cane-brakes, longer heads were meditating still that new colony, the plan of which had been lying in silence for two years and more. The Board of Trade was again called on to report upon the application, and Lord Hillsborough, the President, reported against it. This called out Franklin's celebrated 'Ohio Settlement,' a paper written with so much ability, that the King's Council put by the official report, and granted the petition, a step which mortified the noble lord so much that he resigned his official station. The petition now needed only the royal sanction, which was not given until August 14th, 1773; but in 1770, the Ohio Company was merged in Walpole's, and, the claims of the soldiers of 1756 being acknowledged both by the new Company and the government, all claims were quieted. Nothing was ever done, however, under the grant to Walpole, the Revolution soon coming upon America. After the Revolution, Mr. Walpole and his associates petitioned Congress respecting their lands, called by them 'Vandalia,' but could get no help from that body. What was finally done by Virginia with the claims of this and other companies, we do not find written, but presume their lands were all looked on as forfeited."—J. H. Perkins, *English Discoveries in the Ohio Valley* (North Am. Rev., July, 1839).

A. D. 1766.—Examination of Dr. Franklin before Parliament.—On the 28th of January, 1766, while the bill for the repeal of the Stamp Act was pending in Parliament, Dr. Franklin was examined before the House of Commons, in Committee. The questions and answers of this very interesting examination, as reported in the Parliamentary History, were as follows:

Q. What is your name, and place of abode?
—A. Franklin, of Philadelphia.

Do the Americans pay any considerable taxes among themselves?—Certainly many, and very heavy taxes.

What are the present taxes in Pennsylvania, laid by the laws of the colony?—There are taxes on all estates real and personal, a poll-tax, a tax on all offices, professions, trades, and businesses, according to their profits; an excise on all wine, rum, and other spirit; and a duty of ten

pounds per head on all negroes imported, with some other duties.

For what purposes are those taxes laid?—For the support of the civil and military establishments of the country, and to discharge the heavy debt contracted in the last war.

How long are those taxes to continue?—Those for discharging the debt are to continue till 1772, and longer, if the debt should not be then all discharged. The others must always continue.

Was it not expected that the debt would have been sooner discharged?—It was, when the peace was made with France and Spain; but a fresh war breaking out with the Indians, a fresh load of debt was incurred, and the taxes, of course, continued longer by a new law.

Are not all the people very able to pay those taxes?—No. The frontier counties, all along the continent, having been frequently ravaged by the enemy, and greatly impoverished, are able to pay very little tax. And therefore, in consideration of their distresses, our late tax laws do expressly favour those counties, excusing the sufferers; and I suppose the same is done in other governments.

Are not you concerned in the management of the post office in America?—Yes; I am deputy post-master general of North America.

Don't you think the distribution of stamps, by post, to all the inhabitants, very practicable, if there was no opposition?—The posts only go along the sea coasts; they do not, except in a few instances, go back into the country; and if they did, sending for stamps by post would occasion an expence of postage, amounting, in many cases, to much more than that of the stamps themselves.

Are you acquainted with Newfoundland?—I never was there.

Do you know whether there are any post-roads on that island?—I have heard that there are no roads at all; but that the communication between one settlement and another is by sea only.

Can you disperse the stamps by post in Canada?—There is only a post between Montreal and Quebec. The inhabitants live so scattered and remote from each other, in that vast country, that posts cannot be supported among them, and therefore they cannot get stamps per post. The English colonies too, along the frontiers, are very thinly settled.

From the thinness of the back settlements, would not the Stamp Act be extremely inconvenient to the inhabitants, if executed?—To be sure it would; as many of the inhabitants could not get stamps when they had occasion for them, without taking long journeys, and spending, perhaps, three or four pounds, that the crown might get sixpence.

Are not the colonies, from their circumstances, very able to pay the stamp duty?—In my opinion, there is not gold and silver enough in the colonies to pay the stamp duty for one year.

Don't you know that the money arising from the stamps was all to be laid out in America?—I know it is appropriated by the act to the American service; but it will be spent in the conquered colonies, where the soldiers are, not in the colonies that pay it.

Is there not a balance of trade due from the colonies where the troops are posted, that will bring back the money to the old colonies?—I think not. I believe very little would come

back. I know of no trade likely to bring it back. I think it would come from the colonies where it was spent directly to England; for I have always observed, that in every colony the more plenty of means of remittance to England, the more goods are sent for, and the more trade with England carried on.

What number of white inhabitants do you think there are in Pennsylvania?—I suppose there may be about 160,000.

What number of them are Quakers?—Perhaps a third.

What number of Germans?—Perhaps another third; but I cannot speak with certainty.

Have any number of the Germans seen service, as soldiers, in Europe?—Yes, many of them, both in Europe and America.

Are they as much dissatisfied with the stamp duty as the English?—Yes, and more; and with reason, as their stamps are, in many cases, to be double.

How many white men do you suppose there are in North America?—About 300,000, from 16 to 60 years of age.

What may be the amount of one year's imports into Pennsylvania from Britain?—I have been informed that our merchants compute the imports from Britain to be above 500,000*l*.

What may be the amount of the produce of your province exported to Britain?—It must be small, as we produce little that is wanted in Britain. I suppose it cannot exceed 40,000*l*.

How then do you pay the balance?—The balance is paid by our produce carried to the West Indies, and sold in our own islands, or to the French, Spaniards, Danes, and Dutch; by the same carried to other colonies in North America, as to New England, Nova Scotia, Newfoundland, Carolina, and Georgia; by the same carried to different parts of Europe, as Spain, Portugal and Italy. In all which places we receive either money, bills of exchange, or commodities that suit for remittance to Britain; which, together with all the profits on the industry of our merchants and mariners, arising in those circuitous voyages, and the freights made by their ships, centre finally in Britain to discharge the balance, and pay for British manufactures continually used in the province, or sold to foreigners by our traders.

Have you heard of any difficulties lately laid on the Spanish trade?—Yes, I have heard that it has been greatly obstructed by some new regulations, and by the English men of war and cutters stationed all along the coast in America.

Do you think it right, that America should be protected by this country, and pay no part of the expence?—That is not the case. The colonies raised, clothed and paid, during the last war, nearly 25,000 men, and spent many millions.

Were you not reimbursed by parliament?—We were only reimbursed what, in your opinion, we had advanced beyond our proportion, or beyond what might reasonably be expected from us; and it was a very small part of what we spent. Pennsylvania, in particular, disbursed about 500,000*l*, and the reimbursements, in the whole, did not exceed 60,000*l*.

You have said that you pay heavy taxes in Pennsylvania; what do they amount to in the pound?—The tax on all estates, real and personal, is eighteen pence in the pound, fully rated; and the tax on the profits of trades and

professions, with other taxes, do, I suppose, make full half a crown in the pound.

Do you know any thing of the rate of exchange in Pennsylvania, and whether it has fallen lately?—It is commonly from 170 to 175. I have heard that it has fallen lately from 175 to 162 and a half, owing, I suppose, to their lessening their orders for goods; and when their debts to this country are paid, I think the exchange will probably be at par.

Do not you think the people of America would submit to pay the stamp duty, if it was moderated?—No, never, unless compelled by force of arms.

Are not the taxes in Pennsylvania laid on unequally, in order to burden the English trade, particularly the tax on professions and business?—It is not more burdensome in proportion than the tax on lands. It is intended, and supposed to take an equal proportion of profits.

How is the assembly composed? Of what kinds of people are the members, landholders or traders?—It is composed of landholders, merchants, and artificers.

Are not the majority landholders?—I believe they are.

Do not they, as much as possible, shift the tax off from the land, to ease that, and lay the burthen heavier on trade?—I have never understood it so. I never heard such a thing suggested. And indeed an attempt of that kind could answer no purpose. The merchant or trader is always skilled in figures, and ready with his pen and ink. If unequal burdens are laid on his trade, he puts an additional price on his goods; and the consumers, who are chiefly landholders, finally pay the greatest part, if not the whole.

What was the temper of America towards Great Britain before the year 1763?—The best in the world. They submitted willingly to the government of the crown, and paid, in all their courts, obedience to acts of parliament. Numerous as the people are in the several old provinces, they cost you nothing in forts, citadels, garrisons or armies, to keep them in subjection. They were governed by this country at the expense only of a little pen, ink, and paper. They were led by a thread. They had not only a respect, but an affection for Great Britain, for its laws, its customs and manners, and even a fondness for its fashions, that greatly increased the commerce. Natives of Britain were always treated with particular regard; to be an Old-England man was, of itself, a character of some respect, and gave a kind of rank among us.

And what is their temper now?—O, very much altered.

Did you ever hear the authority of parliament to make laws for America questioned till lately?—The authority of parliament was allowed to be valid in all laws, except such as should lay internal taxes. It was never disputed in laying duties to regulate commerce.

In what proportion hath population increased in America?—I think the inhabitants of all the provinces together, taken at a medium, double in about 25 years. But their demand for British manufactures increases much faster, as the consumption is not merely in proportion to their numbers, but grows with the growing abilities of the same numbers to pay for them. In 1723, the whole importation from Britain to Pennsylvania, was but about 15,000*l.* sterling; it is now near half a million.

In what light did the people of America use to consider the parliament of Great Britain?—They considered the parliament as the great bulwark and security of their liberties and privileges, and always spoke of it with the utmost respect and veneration. Arbitrary ministers, they thought, might possibly, at times, attempt to oppress them; but they relied on it, that the parliament, on application, would always give redress. They remembered, with gratitude, a strong instance of this, when a bill was brought into parliament, with a clause to make royal instructions laws in the colonies, which the House of Commons would not pass, and it was thrown out.

And have they not still the same respect for parliament?—No; it is greatly lessened.

To what causes is that owing?—To a concurrence of causes; the restraints lately laid on their trade, by which the bringing of foreign gold and silver into the colonies was prevented; the prohibition of making paper money among themselves; and then demand a new and heavy tax by stamps; taking away at the same time, trials by juries, and refusing to receive and hear their humble petitions.

Don't you think they would submit to the Stamp Act, if it was modified, the obnoxious parts taken out, and the duty reduced to some particulars, of small moment?—No; they will never submit to it.

What do you think is the reason that the people of America increase faster than in England?—Because they marry younger, and more generally.

Why so?—Because any young couple that are industrious, may easily obtain fair ¹ of their own, on which they can raise a family.

Are not the lower rank of people more at their ease in America than in England?—They may be so, if they are sober and diligent, as they are better paid for their labour.

What is your opinion of a future tax, imposed on the same principle with that of the Stamp Act, how would the Americans receive it?—Just as they do this. They would not pay it.

Have not you heard of the resolution of this House, and of the House of Lords, asserting the power of parliament relating to America, including power to tax the people there?—Yes, I have heard of such resolutions.

What will be the opinion of the Americans on those resolutions?—They will think them unconstitutional and unjust.

Was it an opinion in America before 1763, that the parliament had no right to lay taxes and duties there?—I never heard any objection to the right of laying duties to regulate commerce; but a right to lay internal taxes was never supposed to be in parliament, as we are not represented there.

On what do you found your opinion, that the people in America made any such distinction?—I know that whenever the subject has occurred in conversation where I have been present, it has appeared to be the opinion of every one, that we could not be taxed in a parliament where we were not represented. But the payment of duties laid by act of parliament, as regulations of commerce, was never disputed.

But can you name any act of assembly, or public act of any of your governments, that made such distinction?—I do not know that

there was any; I think there was never an occasion to make any such act, till now that you have attempted to tax us; that has occasioned resolutions of assembly, declaring the distinction, in which I think every assembly on the continent, and every member in every assembly, have been unanimous.

What then could occasion conversations on that subject before that time?—There was, in 1754, a proposition made (I think it came from hence) that in case of a war, which was then apprehended, the governors of the colonies should meet, and order the levying of troops, building of forts, and taking every other necessary measure for the general defence; and should draw on the treasury here, for the sums expended, which were afterwards to be raised in the colonies by a general tax, to be laid on them by act of parliament. This occasioned a good deal of conversation on the subject, and the general opinion was, that the parliament neither would, nor could lay any tax on us, till we were duly represented in parliament, because it was not just, nor agreeable to the nature of an English constitution.

Don't you know there was a time in New York, when it was under consideration to make an application to parliament, to lay taxes on that colony, upon a deficiency arising from the assembly's refusing or neglecting to raise the necessary supplies for the support of the civil government?—I never heard of it.

There was such an application under consideration in New York; and do you apprehend they could suppose the right of parliament to lay a tax in America was only local, and confined to the case of a deficiency in a particular colony, by a refusal of its assembly to raise the necessary supplies?—They could not suppose such a case, as that the assembly would not raise the necessary supplies to support its own government. An assembly that would refuse it, must want common sense, which cannot be supposed. I think there was never any such case at New York, and that it must be a misrepresentation, or the fact must be misunderstood. I know there have been some attempts, by ministerial instructions from hence, to oblige the assemblies to settle permanent salaries on governors, which they wisely refused to do; but I believe no assembly of New York, or any other colony, ever refused duly to support government, by proper allowances, from time to time, to public officers.

But in case a governor, acting by instruction, should call on an assembly to raise the necessary supplies, and the assembly should refuse to do it, do you not think it would then be for the good of the people of the colony, as well as necessary to government, that the parliament should tax them?—I do not think it would be necessary. If an assembly could possibly be so absurd as to refuse raising the supplies requisite for the maintenance of government among them, they could not long remain in such a situation; the disorders and confusion occasioned by it, must soon bring them to reason.

If it should not, ought not the right to be in Great Britain of applying a remedy?—A right only to be used in such a case, I should have no objection to, supposing it to be used merely for the good of the people of the colony.

But who is to judge of that, Britain or the colony?—Those that feel can best judge.

You say the colonies have always submitted to external taxes, and object to the right of parliament only in laying internal taxes; now can you shew that there is any kind of difference between the two taxes to the colony on which they may be laid?—I think the difference is very great. An external tax is a duty laid on commodities imported; that duty is added to the first cost, and other charges on the commodity, and when it is offered to sale, makes a part of the price. If the people do not like it at that price, they refuse it; they are not obliged to pay it. But an internal tax is forced from the people without their consent, if not laid by their own representatives. The Stamp Act says, we shall have no commerce, make no exchange of property with any other, neither purchase nor grant, nor recover debts; we shall neither marry nor make our wills, unless we pay such sums, and thus it is intended to extort our money from us, or ruin us by the consequences of refusing to pay it.

But supposing the internal tax or duty to be laid on the necessaries of life imported into your colony, will not that be the same thing in its effects as an internal tax?—I do not know a single article imported into the northern colonies, but what they can either do without or make themselves.

Don't you think cloth from England absolutely necessary to them?—No, by no means absolutely necessary; with industry and good management, they may very well supply themselves with all they want.

Will it not take a long time to establish that manufacture among them; and must they not in the mean while suffer greatly?—I think not. They have made a surprising progress already. And I am of opinion, that before their old clothes are worn out, they will have new ones of their own making.

Can they possibly find wool enough in North America?—They have taken steps to increase the wool. They entered into general combination to eat no more lamb, and very few lambs were killed last year. This course persisted in, will soon make a prodigious difference in the quantity of wool. And the establishing of great manufactories, like those in the clothing towns here, is not necessary, as it is where the business is to be carried on for the purposes of trade. The people will all spin and work for themselves, in their own houses.

Can there be wool and manufacture enough in one or two years?—In three years, I think, there may.

Does not the severity of the winter, in the northern colonies, occasion the wool to be of bad quality?—No, the wool is very fine and good.

In the more southern colonies, as in Virginia, don't you know that the wool is coarse, and only a kind of hair?—I don't know it. I never heard it. Yet I have been sometimes in Virginia. I cannot say I ever took particular notice of the wool there, but I believe it is good, though I cannot speak positively of it; but Virginia, and the colonies south of it, have less occasion for wool; their winters are short, and not very severe, and they can very well clothe themselves with linen and cotton of their own raising for the rest of the year.

Are not the people in the more northern colonies obliged to fodder their sheep all the winter?

— In some of the most northern colonies they may be obliged to do it some part of the winter.

Considering the resolutions of parliament as to the right, do you think, if the Stamp Act is repealed, that the North Americans will be satisfied?— I believe they will.

Why do you think so?— I think the resolutions of right will give them very little concern, if they are never attempted to be carried into practice. The colonies will probably consider themselves in the same situation, in that respect, with Ireland; they know you claim the same right with regard to Ireland, but you never exercise it. And they may believe you never will exercise it in the colonies, any more than in Ireland, unless on some very extraordinary occasion.

But who are to be the judges of that extraordinary occasion? Is not the parliament?— Though the parliament may judge of the occasion, the people will think it can never exercise such right, till representatives from the colonies are admitted into parliament, and that whenever the occasion arises, representatives will be ordered.

Did you never hear that Maryland, during the last war, had refused to furnish a quota towards the common defence?— Maryland has been much misrepresented in that matter. Maryland, to my knowledge, never refused to contribute, or grant aids to the crown. The assemblies every year, during the war, voted considerable sums, and formed bills to raise them. The bills were, according to the constitution of that province, sent up to the council, or upper house, for concurrence, that they might be presented to the governor, in order to be enacted into laws. Unhappy disputes between the two houses, arising from the defects of that constitution principally, rendered all the bills but one or two abortive. The proprietary's council rejected them. It is true, Maryland did not contribute its proportion, but it was, in my opinion, the fault of the government, not of the people.

Was it not talked of in the other provinces as a proper measure to apply to parliament to compel them?— I have heard such discourse: but as it was well known that the people were not to blame, no such application was ever made, or any step taken towards it.

Was it not proposed at a public meeting?— Not that I know of.

Do you remember the abolishing of the paper currency in New England, by act of assembly?— I do remember its being abolished in the Massachusetts's Bay.

Was not lieutenant governor Hutchinson principally concerned in that transaction?— I have heard so.

Was it not at that time a very unpopular law?— I believe it might, though I can say little about it, as I lived at a distance from that province.

Was not the scarcity of gold and silver an argument used against abolishing the paper?— I suppose it was.

What is the present opinion there of that law? Is it as unpopular as it was at first?— I think it is not.

Have not instructions from hence been sometimes sent over to governors, highly oppressive and unpolitical?— Yes.

Have not some governors dispensed with them for that reason?— Yes, I have heard so.

Did the Americans ever dispute the controuling power of parliament to regulate the commerce?— No.

Can any thing less than a military force carry the Stamp Act into execution?— I do not see how a military force can be applied to that purpose.

Why may it not?— Suppose a military force sent into America, they will find nobody in arms; what are they then to do? They cannot force a man to take stamps who chuses to do without them. They will not find a rebellion; they may indeed make one.

If the act is not repealed, what do you think will be the consequences?— A total loss of the respect and affection the people of America bear to this country, and of all the commerce that depends on that respect and affection.

How can the commerce be affected?— You will find, that if the act is not repealed, they will take very little of your manufactures in a short time.

Is it in their power to do without them?— I think they may very well do without them.

Is it their interest not to take them?— The goods they take from Britain are either necessaries, mere conveniences, or superfluities. The first, as cloth, &c. with a little industry they can make at home: the second they can do without, till they are able to provide them among themselves; and the last, which are much the greatest part, they will strike off immediately. They are mere articles of fashion, purchased and consumed, because the fashion in a respected country, but will now be detested and rejected. The people have already struck off, by general agreement, the use of all goods fashionable in mournings, and many thousand pounds worth are sent back as unsaleable.

Is it their interest to make cloth at home?— I think they may at present get it cheaper from Britain, I mean of the same fineness and neatness of workmanship; but when one considers other circumstances, the restraints on their trade, and the difficulty of making remittances, it is their interest to make every thing.

Suppose an act of internal regulations connected with the tax, how would they receive it?— I think it would be objected to.

Then no regulation with a tax would be submitted to?— Their opinion is, that when aids to the crown are wanted, they are to be asked of the several assemblies according to the old established usage, who will, as they have always done, grant them freely. And that their money ought not to be given away, without their consent, by persons at a distance, unacquainted with their circumstances and abilities. The granting aids to the crown, is the only means they have of recommending themselves to their sovereign, and they think it extremely hard and unjust, that a body of men, in which they have no representatives, should make a merit to itself of giving and granting what is not its own, but theirs, and deprives them of a right they esteem of the utmost value and importance, as it is the security of all their other rights.

But is not the post office, which they have long received, a tax as well as a regulation?— No; the money paid for the postage of a letter is not of the nature of a tax; it is merely a quantum meruit for a service done; no person is compellable to pay the money, if he does not chuse

to receive the service. A man may still, as before the act, send his letter by a servant, a special messenger, or a friend, if he thinks it cheaper and safer.

But do they not consider the regulations of the post-office, by the act of last year, as a tax?—By the regulations of last year the rate of postage was generally abated near thirty per cent. through all America; they certainly cannot consider such abatement as a tax.

If an excise was laid by parliament, which they might likewise avoid paying, by not consuming the articles excised, would they then not object to it?—They would certainly object to it, as an excise is unconnected with any service done, and is merely an aid which they think ought to be asked of them, and granted by them if they are to pay it, and can be granted for them, by no others whatsoever, whom they have not empowered for that purpose.

You say they do not object to the right of parliament, in laying duties on goods to be paid on their importation; now, is there any kind of difference between a duty on the importation of goods and an excise on their consumption?—Yes; a very material one; an excise, for the reasons I have just mentioned, they think you can have no right to lay within their country. But the sea is yours; you maintain, by your fleets, the safety of navigation in it, and keep it clear of pirates; you may have therefore a natural and equitable right to some toll or duty on merchandizes carried through that part of your dominions, towards defraying the expence you are at in ships to maintain the safety of that carriage.

Does this reasoning hold in the case of a duty laid on the produce of their lands exported? And would they not then object to such a duty?—If it tended to make the produce so much dearer abroad as to lessen the demand for it, to be sure they would object to such a duty; not to your right of laying it, but they would complain of it as a burden, and petition you to lighten it.

Is not the duty paid on the tobacco exported a duty of that kind?—That, I think, is only on tobacco carried coastwise from one colony to another, and appropriated as a fund for supporting the college at Williamsburgh, in Virginia.

Have not the assemblies in the West Indies the same natural rights with those in North America?—Undoubtedly.

And is there not a tax laid there on their sugars exported?—I am not much acquainted with the West Indies, but the duty of four and a half per cent., on sugars exported, was, I believe, granted by their own assemblies.

How much is the poll tax in your province laid on unmarried men?—It is, I think, fifteen shillings, to be paid by every single freeman, upwards of twenty one years old.

What is the annual amount of all the taxes in Pennsylvania?—I suppose about 20,000*l.* sterling.

Supposing the Stamp Act continued, and enforced, do you imagine that ill humour will induce the Americans to give as much for worse manufactures of their own and use them, preferably to better of ours?—Yes, I think so. People will pay as freely to gratify one passion as another, their resentment as their pride.

Would the people at Boston discontinue their trade?—The merchants are a very small num-

ber compared with the body of the people, and must discontinue their trade, if nobody will buy their goods.

What are the body of the people in the colonies?—They are farmers, husbandmen or planters.

Would they suffer the produce of their lands to rot?—No; but they would not raise so much. They would manufacture more, and plough less.

Would they live without the administration of justice in civil matters, and suffer all the inconveniences of such a situation for any considerable time, rather than take the stamps, supposing the stamps were protected by a sufficient force, where every one might have them?—I think the supposition impracticable, that the stamps should be so protected as that every one might have them. The Act requires sub-distributors to be appointed in every county town, district, and village, and they would be necessary. But the principal distributors, who were to have had a considerable profit on the whole, have not thought it worth while to continue in the office, and I think it impossible to find sub-distributors fit to be trusted, who, for the trifling profit that must come to their share, would incur the odium, and run the hazard that would attend it; and if they could be found, I think it impracticable to protect the stamps in so many distant and remote places.

But in places where they could be protected, would not the people use them rather than remain in such a situation, unable to obtain any right, or recover, by law, any debt?—It is hard to say what they would do. I can only judge what other people will think, and how they will act, by what I feel within myself. I have a great many debts due to me in America, and I had rather they should remain unrecoverable by any law than submit to the Stamp Act. They will be debts of honour. It is my opinion the people will either continue in that situation, or find some way to extricate themselves, perhaps by generally agreeing to proceed in the courts without stamps.

What do you think a sufficient military force to protect the distribution of the stamps in every part of America?—A very great force; I cannot say what, if the disposition of America is for a general resistance.

What is the number of men in America able to bear arms, or of disciplined militia?—There are, I suppose, at least — [Question objected to. He withdrew. Called in again.]

Is the American Stamp Act an equal tax on that country?—I think not.

Why so?—The greatest part of the money must arise from lawsuits for the recovery of debts, and be paid by the lower sort of people, who were too poor easily to pay their debts. It is therefore a heavy tax on the poor, and a tax upon them for being poor.

But will not this increase of expence be a means of lessening the number of lawsuits?—I think not; for as the costs all fall upon the debtor, and are to be paid by him, they would be no discouragement to the creditor to bring his action.

Would it not have the effect of excessive usury?—Yes, as an oppression of the debtor.

How many ships are there laden annually in North America with flax seed for Ireland?—I cannot speak to the number of ships, but I know

that in 1752, 10,000 hogsheds of flax seed, each containing seven bushels, were exported from Philadelphia to Ireland. I suppose the quantity is greatly increased since that time; and it is understood that the exportation from New York is equal to that from Philadelphia.

What becomes of the flax that grows with that flax seed?—They manufacture some into coarse, and some into a middling kind of linen.

Are there any slitting mills in America?—I think there are three, but I believe only one at present employed. I suppose they will all be set to work, if the interruption of the trade continues.

Are there any fulling mills there?—A great many.

Did you never hear that a great quantity of stockings were contracted for, for the army, during the war, and manufactured in Philadelphia?—I have heard so.

If the Stamp Act should be repealed, would not the Americans think they could oblige the parliament to repeal every external tax law now in force?—It is hard to answer questions what people at such a distance will think.

But what do you imagine they will think were the motives of repealing the Act?—I suppose they will think that it was repealed from a conviction of its inexpediency; and they will rely upon it, that while the same inexpediency subsists, you will never attempt to make such another.

What do you mean by its inexpediency?—I mean its inexpediency on several accounts; the poverty and inability of those who were to pay the tax; the general discontent it has occasioned; and the impracticability of enforcing it.

If the Act should be repealed, and the legislature should shew its resentment to the opposers of the Stamp Act, would the colonies acquiesce in the authority of the legislature? What is your opinion they would do?—I don't doubt at all, that if the legislature repeal the Stamp Act, the colonies will acquiesce in the authority.

But if the legislature should think fit to ascertain its right to lay taxes, by any act laying a small tax, contrary to their opinion, would they submit to pay the tax?—The proceedings of the people in America have been considered too much together. The proceedings of the assemblies have been very different from those of the mobs, and should be distinguished, as having no connection with each other. The assemblies have only peaceably resolved what they take to be their rights; they have not built a fort, raised a man, or provided a grain of ammunition, in order to such opposition. The ringleaders of riot they think ought to be punished; they would punish them themselves, if they could. Every sober, sensible man would wish to see rioters punished, as otherwise peaceable people have no security of person or estate. But as to an internal tax, how small soever, laid by the legislature here on the people there, while they have no representatives in this legislature, I think it will never be submitted to.—They will oppose it to the last.—They do not consider it as at all necessary for you to raise money on them by your taxes, because they are, and always have been, ready to raise money by taxes among themselves, and to grant large sums, equal to their abilities, upon requisition from the crown.—They have not only granted equal to their abilities, but, during

all the last war, they granted far beyond their abilities, and beyond their proportion with this country, you yourselves being judges, to the amount of many hundred thousand pounds, and this they did freely and readily, only on a sort of promise from the secretary of state, that it should be recommended to parliament to make them compensation. It was accordingly recommended to parliament, in the most honourable manner, for them. America has been greatly misrepresented and abused here, in papers, and pamphlets, and speeches, as ungrateful, and unreasonable, and unjust, in having put this nation to immense expence for their defence, and refusing to bear any part of that expence. The colonies raised, paid, and clothed, near 25,000 men during the last war, a number equal to those sent from Britain, and far beyond their proportion; they went deeply into debt in doing this, and all their taxes and estates are mortgaged, for many years to come, for discharging that debt. Government here was at that time very sensible of this. The colonies were recommended to parliament. Every year the King sent down to the House a written message to this purpose, That his Majesty, being highly sensible of the zeal and vigour with which his faithful subjects in North America had exerted themselves, in defence of his Majesty's just rights and possessions, recommended it to the House to take the same into consideration, and enable him to give them a proper compensation. You will find those messages on your own journals every year of the war to the very last, and you did accordingly give 200,000*l.* annually to the crown, to be distributed in such compensation to the colonies. This is the strongest of all proofs that the colonies, far from being unwilling to bear a share of the burden, did exceed their proportion; for if they had done less, or had only equalled their proportion, there would have been no room or reason for compensation. Indeed the sums reimbursed them, were by no means adequate to the expence they incurred beyond their proportion; but they never murmured at that; they esteemed their sovereign's approbation of their zeal and fidelity, and the approbation of this House, far beyond any other kind of compensation; therefore there was no occasion for this act, to force money from a willing people; they had not refused giving money for the purposes of the act; no requisition had been made: they were always willing and ready to do what could reasonably be expected from them, and in this light they wish to be considered.

But suppose Great Britain should be engaged in a war in Europe, would North America contribute to the support of it?—I do think they would, as far as their circumstances would permit. They consider themselves as a part of the British empire, and as having one common interest with it; they may be looked on here as foreigners, but they do not consider themselves as such. They are zealous for the honour and prosperity of this nation, and while they are well used, will always be ready to support it, as far as their little power goes. In 1739 they were called upon to assist in the expedition against Carthage, and they sent 3,000 men to join your army. It is true Carthage is in America, but as remote from the northern colonies as if it had been in Europe. They make no distinction of wars, as to their duty of assisting in them.

I know the last war is commonly spoke of here as entered into for the defence, or for the sake of the people of America. I think it is quite misunderstood. It began about the limits between Canada and Nova Scotia, about territories to which the crown indeed laid claim, but were not claimed by any British colony; none of the lands had been granted to any colonist; we had therefore no particular concern or interest in that dispute. As to the Ohio, the contest there began about your right of trading in the Indian country, a right you had by the treaty of Utrecht, which the French infringed; they seized the traders and their goods, which were your manufactures; they took a fort which a company of your merchants, and their factors and correspondents, had erected there to secure that trade. Braddock was sent with an army to re-take that fort (which was looked on here as another incroachment on the King's territory) and to protect your trade. It was not till after his defeat that the colonies were attacked. They were before in perfect peace with both French and Indians; the troops were not therefore sent for their defence. The trade with the Indians, though carried on in America, is not an American interest. The people of America are chiefly farmers and planters; scarce any thing that they raise or produce is an article of commerce with the Indians. The Indian trade is a British interest; it is carried on with British manufactures, for the profit of British merchants and manufacturers; therefore the war, as it commenced for the defence of territories of the crown, the property of no American, and for the defence of a trade purely British, was really a British war—and yet the people of America made no scruple of contributing their utmost towards carrying it on, and bringing it to a happy conclusion.

Do you think then that the taking possession of the King's territorial rights, and strengthening the frontiers, is not an American interest?—Not particularly, but conjointly a British and an American interest.

You will not deny that the preceding war, the war with Spain, was entered into for the sake of America; was it not occasioned by captures made in the American seas?—Yes; captures of ships carrying on the British trade there, with British manufactures.

Was not the late war with the Indians, since the peace with France, a war for America only?—Yes: it was more particularly for America than the former, but it was rather a consequence or remains of the former war, the Indians not having been thoroughly pacified, and the Americans bore by much the greatest share of the expence. It was put an end to by the army under general Bouquet; there were not above 300 regulars in that army, and above 1,000 Pennsylvanians.

Is it not necessary to send troops to America, to defend the Americans against the Indians?—No, by no means; it never was necessary. They defended themselves when they were but a handful, and the Indians much more numerous. They continually gained ground, and have driven the Indians over the mountains, without any troops sent to their assistance from this country. And can it be thought necessary now to send troops for their defence from those diminished Indian tribes, when the colonies are become so

populous, and so strong? There is not the least occasion for it; they are very able to defend themselves.

Do you say there were no more than 300 regular troops employed in the late Indian war?—Not on the Ohio, or the frontiers of Pennsylvania, which was the chief part of the war that affected the colonies. There were garrisons at Niagara, Fort Detroit, and those remote posts kept for the sake of your trade; I did not reckon them, but I believe that on the whole the number of Americans, or provincial troops, employed in the war, was greater than that of the regulars. I am not certain, but I think so.

Do you think the assemblies have a right to levy money on the subject there, to grant to the crown?—I certainly think so; they have always done it.

Are they acquainted with the Declaration of Rights; and do they know that by that statute, money is not to be raised on the subject but by consent of parliament?—They are very well acquainted with it.

How then can they think they have a right to levy money for the crown, or for any other than local purposes?—They understand that clause to relate to subjects only within the realm; that no money can be levied on them for the crown, but by consent of parliament. The colonies are not supposed to be within the realm; they have assemblies of their own, which are their parliaments, and they are, in that respect, in the same situation with Ireland. When money is to be raised for the crown upon the subject in Ireland, or in the colonies, the consent is given in the parliament of Ireland, or in the assemblies of the colonies. They think the parliament of Great Britain cannot properly give that consent till it has representatives from America; for the Petition of Right expressly says, it is to be by common consent in parliament, and the people of America have no representatives in parliament, to make a part of that common consent.

If the Stamp Act should be repealed, and an act should pass, ordering the assemblies of the colonies to indemnify the sufferers by the riots, would they obey it?—That is a question I cannot answer.

Suppose the King should require the colonies to grant a revenue, and the parliament should be against their doing it, do they think they can grant a revenue to the King, without the consent of the parliament of Great Britain?—That is a deep question. As to my own opinion I should think myself at liberty to do it, and should do it, if I liked the occasion.

When money has been raised in the colonies, upon requisitions, has it not been granted to the King?—Yes, always; but the requisitions have generally been for some service expressed, as to raise, clothe, and pay troops, and not for money only.

If the act should pass, requiring the American Assemblies to make compensation to the sufferers, and they should disobey it, and then the parliament should, by another act, lay an internal tax, would they then obey it?—The people will pay no internal tax: and I think an act to oblige the assemblies to make compensation is unnecessary, for I am of opinion, that as soon as the present heats are abated, they will take the matter into consideration, and if it is right to be done, they will do it of themselves.

Do not letters often come into the post offices in America, directed into some inland town where no post goes?—Yes.

Can any private person take up those letters, and carry them as directed?—Yes; any friend of the person may do it, paying the postage that has accrued.

But must not he pay an additional postage for the distance to such an inland town?—No.

Can the post-master answer delivering the letter, without being paid such additional postage?—Certainly he can demand nothing, where he does no service.

Suppose a person, being far from home, finds a letter in a post office directed to him, and he lives in a place to which the post generally goes, and the letter is directed to that place, will the post-master deliver him the letter, without his paying the postage received at the place to which the letter is directed?—Yes; the office cannot demand postage for a letter that it does not carry, or farther than it does carry it.

Are not ferrymen in America obliged, by act of parliament, to carry over the posts without pay?—Yes.

Is not this a tax on the ferrymen?—They do not consider it as such, as they have an advantage from persons travelling with the post.

If the Stamp Act should be repealed, and the crown should make a requisition to the colonies for a sum of money, would they grant it?—I believe they would.

Why do you think so?—I can speak for the colony I live in; I had it in instruction from the assembly to assure the ministry, that as they always had done, so they should always think it their duty to grant such aids to the crown as were suitable to their circumstances and abilities, whenever called upon for the purpose, in the usual constitutional manner; and I had the honour of communicating this instruction to that hon. gentleman then minister.

Would they do this for a British concern; as suppose a war in some part of Europe, that did not affect them?—Yes, for any thing that concerned the general interest. They consider themselves as a part of the whole.

What is the usual constitutional manner of calling on the colonies for aids?—A letter from the secretary of state.

Is this all you mean, a letter from the secretary of state?—I mean the usual way of requisition, in a circular letter from the secretary of state, by his Majesty's command, reciting the occasion, and recommending it to the colonies to grant such aids as became their loyalty, and were suitable to their abilities.

Did the secretary of state ever write for money for the crown?—The requisitions have been to raise, clothe, and pay men, which cannot be done without money.

Would they grant money alone, if called on?—In my opinion they would, money as well as men, when they have money, or can procure it.

If the parliament should repeal the Stamp Act, will the assembly of Pennsylvania rescind their resolutions?—I think not.

Before there was any thought of the Stamp Act, did they wish for a representation in parliament?—No.

Don't you know that there is, in the Pennsylvania charter, an express reservation of the right of parliament to lay taxes there?—I know

there is a clause in the charter, by which the King grants that he will levy no taxes on the inhabitants, unless it be with the consent of the assembly, or by an act of parliament.

How then could the assembly of Pennsylvania assert, that laying a tax on them by the Stamp Act was an infringement of their rights?—They understand it thus: by the same charter, and otherwise, they are entitled to all the privileges and liberties of Englishmen; they find in the Great Charters, and the Petition and Declaration of Rights, that one of the privileges of English subjects is, that they are not to be taxed but by their common consent; they have therefore relied upon it, from the first settlement of the province, that the parliament never would, nor could, by colour of that clause in the charter, assume a right of taxing them, till it had qualified itself to exercise such right, by admitting representatives from the people to be taxed, who ought to make a part of that common consent.

Are there any words in the charter that justify that construction?—The common rights of Englishmen, as declared by Magna Charta, and the Petition of Right, all justify it.

Does the distinction between internal and external taxes exist in the words of the charter?—No, I believe not.

Then may they not, by the same interpretation, object to the parliament's right of external taxation?—They never have hitherto. Many arguments have been lately used here to shew them that there is no difference, and that if you have no right to tax them internally, you have none to tax them externally, or make any other law to bind them. At present they do not reason so, but in time they may possibly be convinced by these arguments.

Do not the resolutions of the Pennsylvania assemblies say, all taxes?—If they do, they mean only internal taxes; the same words have not always the same meaning here and in the colonies. By taxes they mean internal taxes; by duties they mean customs; these are the ideas of the language.

Have you not seen the resolutions of the Massachusetts Bay assembly?—I have.

Do they not say, that neither external nor internal taxes can be laid on them by parliament?—I don't know that they do; I believe not.

If the same tax should say neither tax nor imposition could be laid, does not that province hold the power of parliament can lay neither?—I suppose that by the word imposition, they do not intend to express duties to be laid on goods imported, as regulations of commerce.

What can the colonies mean then by imposition as distinct from taxes?—They may mean many things, as impressing of men, or of carriages, quartering troops on private houses, and the like; there may be great impositions that are not properly taxes.

Is not the post-office rate an internal tax laid by act of parliament?—I have answered that.

Are all parts of the colonies equally able to pay taxes?—No, certainly; the frontier parts, which have been ravaged by the enemy, are greatly disabled by that means, and therefore, in such cases, are usually favoured in our tax laws.

Can we, at this distance, be competent judges of what favours are necessary?—The parlia-

ment have supposed it, by claiming a right to make tax laws for America; I think it impossible.

Would the repeal of the Stamp Act be any discouragement of your manufactures? Will the people that have begun to manufacture decline it?—Yes, I think they will; especially if, at the same time, the trade is opened again, so that remittances can be easily made. I have known several instances that make it probable. In the war before last, tobacco being low, and making little remittance, the people of Virginia went generally into family manufactures. Afterwards, when tobacco bore a better price, they returned to the use of British manufactures. So fulling mills were very much disused in the last war in Pennsylvania, because bills were then plenty, and remittances could easily be made to Britain for English cloth and other goods.

If the Stamp Act should be repealed, would it induce the assemblies of America to acknowledge the right of parliament to tax them, and would they erase their resolutions?—No, never.

Is there no means of obliging them to erase those resolutions?—None, that I know of; they will never do it, unless compelled by force of arms.

Is there a power on earth that can force them to erase them?—No power, how great soever, can force men to change their opinions.

Do they consider the post office as a tax, or as a regulation?—Not as a tax, but as a regulation and conveyance; every assembly encouraged it, and supported it in its infancy, by grants of money, which they would not otherwise have done; and the people have always paid the postage.

When did you receive the instructions you mentioned?—I brought them with me, when I came to England, about 15 months since.

When did you communicate that instruction to the minister?—Soon after my arrival, while the stamping of America was under consideration, and before the Bill was brought in.

Would it be most for the interest of Great Britain, to employ the hands of Virginia in tobacco, or in manufactures?—In tobacco, to be sure.

What used to be the pride of the Americans?—To indulge in the fashions and manufactures of Great Britain.

What is now their pride?—To wear their old clothes over again, till they can make new ones.

—Withdrew.—*Parliamentary History of England*, v. 16, pp. 138–160.—“Mr. Sparks very justly says that there was no event in Franklin's life more creditable to his talents and character, or which gave him so much celebrity, as this examination before the House of Commons. His further statement, however, that Franklin's answers were given without premeditation and without knowing beforehand the nature or form of the question that was to be put, is a little too sweeping. In a memorandum which Franklin gave to a friend who wished to know by whom the several questions were put, he admitted that many were put by friends to draw out in answer the substance of what he had before said upon the subject.”—J. Bigelow, *Life of Benjamin Franklin*, v. 1, p. 507, *foot-note*.

A. D. 1766.—The repeal of the Stamp Act and passage of the Declaratory Act.—Speech of Pitt.—“The Grenville Ministry had fallen in July [1765], and had been succeeded by that of

Rockingham; and Conway, who had been one of the few opponents of the Stamp Act, was now Secretary of State for the Colonies. . . . The Stamp Act had contributed nothing to the downfall of Grenville; it attracted so little attention that it was only in the last days of 1765 or the first days of 1766 that the new ministers learnt the views of Pitt upon the subject; it was probably a complete surprise to them to learn that it had brought the colonies to the verge of rebellion, and in the first months of their power they appear to have been quite uncertain what policy they would pursue. . . . Parliament met on December 17, 1765, and the attitude of the different parties was speedily disclosed. A powerful Opposition, led by Grenville and Bedford, strenuously urged that no relaxation or indulgence should be granted to the colonists. . . . Pitt, on the other hand, rose from his sick-bed, and in speeches of extraordinary eloquence, and which produced an amazing effect on both sides of the Atlantic, he justified the resistance of the colonists.”—W. E. H. Lecky, *Hist. of England in the 18th Century*, ch. 12 (v. 3).—“The following is the main part of the speech delivered by Pitt (not yet made Lord Chatham) on the 14th of January, 1766, as imperfectly reported: “It is my opinion, that this kingdom has no right to lay a tax upon the colonies. At the same time, I assert the authority of this kingdom over the colonies to be sovereign and supreme, in every circumstance of government and legislation whatsoever. They are the subjects of this kingdom; equally entitled with yourselves to all the natural rights of mankind and the peculiar privileges of Englishmen; equally bound by its laws, and equally participating in the constitution of this free country. The Americans are the sons, not the bastards of England! Taxation is no part of the governing or legislative power. The taxes are a voluntary gift and grant of the Commons alone. In legislation the three estates of the realm are alike concerned; but the concurrence of the peers and the Crown to a tax is only necessary to clothe it with the form of a law. The gift and grant is of the Commons alone. . . . When . . . in this House, we give and grant, we give and grant what is our own. But in an American tax, what do we do? ‘We, your Majesty's Commons for Great Britain, give and grant to your Majesty’—what? Our own property! No! ‘We give and grant to your Majesty’ the property of your Majesty's Commons of America! It is an absurdity in terms. . . . There is an idea in some that the colonies are virtually represented in the House. I would fain know by whom an American is represented here. Is he represented by any knight of the shire, in any county in this kingdom? Would to God that respectable representation was augmented to a greater number! Or will you tell him that he is represented by any representative of a borough? a borough which, perhaps, its own representatives never saw! This is what is called the rotten part of the Constitution. It cannot continue a century. If it does not drop, it must be amputated. The idea of a virtual representation of America in this House is the most contemptible idea that ever entered into the head of a man. It does not deserve a serious refutation. The Commons of America represented in their several assemblies, have ever been in the possession of this, their

constitutional right, of giving and granting their own money. They would have been slaves if they had not enjoyed it! At the same time, this kingdom, as the supreme governing and legislative power, has always bound the colonies by her laws, by her regulations, and restrictions in trade, in navigation, in manufactures, in every thing, except that of taking their money out of their pockets without their consent. Here I would draw the line. . . . Gentlemen, sir, have been charged with giving birth to sedition in America. They have spoken their sentiments with freedom against this unhappy act, and that freedom has become their crime. Sorry I am to hear the liberty of speech in this House imputed as a crime. But the imputation shall not discourage me. It is a liberty I mean to exercise. No gentleman ought to be afraid to exercise it. It is a liberty by which the gentleman who calumniates it might have profited. He ought to have desisted from his project. The gentleman tells us America is obstinate; America almost in open rebellion. I rejoice that America has resisted. Three millions of people, so dead to all the feelings of liberty as voluntarily to submit to be slaves, would have been fit instruments to make slaves of the rest. . . . Since the accession of King William, many ministers, some of great, others of more moderate abilities, have taken the lead of government. . . . None of these thought or even dreamed, of robbing the colonies of their constitutional rights. That was reserved to mark the era of the late administration. Not that there were wanting some, when I had the honor to serve his Majesty, to propose to me to burn my fingers with an American stamp act. With the enemy at their back, with our bayonets at their breasts, in the day of their distress, perhaps the Americans would have submitted to the imposition; but it would have been taking an ungenerous, an unjust advantage. The gentleman boasts of his bounties to America! Are not these bounties intended finally for the benefit of this kingdom? If they are not, he has misapplied the national treasures! I am no courtier of America. I stand up for this kingdom. I maintain that the Parliament has a right to bind, to restrain America. Our legislative power over the colonies is sovereign and supreme. I would advise every gentleman to sell his lands, if he can, and embark for that country. When two countries are connected together like England and her colonies, without being incorporated, the one must necessarily govern. The greater must rule the less. But she must so rule it as not to contradict the fundamental principles that are common to both. . . . The gentleman asks, When were the colonies emancipated? I desire to know, when were they made slaves? But I dwell not upon words. When I had the honor of serving his Majesty, I availed myself of the means of information which I derived from my office. I speak, therefore, from knowledge. My materials were good. I was at pains to collect, to digest, to consider them; and I will be bold to affirm, that the profits to Great Britain from the trade of the colonies through all its branches, is two millions a year. This is the fund that carried you triumphantly through the last war. The estates that were rented at two thousand pounds a year, three-score years ago, are at three thousand at present. Those estates sold then from fifteen to eighteen

years purchase; the same may now be sold for thirty. You owe this to America. This is the price America pays you for her protection. And shall a miserable financier come with a bonnet, that he can bring 'a pepper-corn' into the exchequer by the loss of millions to the nation? I dare not say how much higher these profits may be argued, . . . I am convinced on other grounds that the commercial system of America may be altered to advantage. You have prohibited where you ought to have encouraged. You have encouraged where you ought to have prohibited. Improper restraints have been laid on the continent in favor of the islands. You have but two nations to trade with in America. Would you had twenty! Let acts of Parliament in consequence of treaties remain; but let not an English minister become a custom-house officer for Spain, or for any foreign power. Much is wrong! Much may be amended for the general good of the whole! . . . A great deal has been said without doors of the power, of the strength of America. It is a topic that ought to be cautiously meddled with. In a good cause, on a sound bottom, the force of this country can crush America to atoms. I know the valor of your troops. I know the skill of your officers. There is not a company of foot that has served in America, out of which you may not pick a man of sufficient knowledge and experience to make a governor of a colony there. But on this ground, on the Stamp Act, which so many here will think a crying injustice, I am one who will lift up my hands against it. In such a cause your success would be hazardous. America, if she felt, would fall like the strong man; she would embrace the pillars of the State, and pull down the Constitution along with her. Is this your boasted peace—not to sheathe the sword in its scabbard, but to sheathe it in the bowels of your countrymen? . . . The Americans have not acted in all things with prudence and temper: they have been wronged; they have been driven to madness by injustice. Will you punish them for the madness you have occasioned? Rather let prudence and temper come first from this side. I will undertake for America that she will follow the example. . . . Upon the whole I will beg leave to tell the House what is my opinion. It is that the Stamp Act be repealed absolutely, totally and immediately. That the reason for the repeal be assigned, viz., because it was founded on an erroneous principle. At the same time, let the sovereign authority of this country over the colonies be asserted in as strong terms as can be devised, and be made to extend to every point of legislation whatsoever; that we may bind their trade, confine their manufactures, and exercise every power whatsoever except that of taking their money out of their pockets without their consent."—*Representative British Orations*, pp. 98-119.—The views of Pitt were defended in the strongest terms by Lord Camden, who pledged his great legal reputation to the doctrine that taxation is not included under the general right of legislation, and that taxation and representation are morally inseparable. . . . The task of the ministers in dealing with this question was extremely difficult. The great majority of them desired ardently the repeal of the Stamp Act; but the wishes of the King, the abstention of Pitt, and the divided condition of parties had compelled Rockingham to include in his Government Charles Townshend, Barrington,

and Northington, who were all strong advocates of the taxation of America. . . . In addition to all these difficulties the ministers had to deal with the exasperation which was produced in Parliament by the continual outrages and insults to which all who represented the English Government in America were exposed. Their policy consisted of two parts. They asserted in the strongest and most unrestricted form the sovereignty of the British Legislature, first of all by resolutions and then by a Declaratory Act affirming the right of Parliament to make laws binding the British colonies 'in all cases whatsoever,' and condemning as unlawful the votes of the colonial Assemblies which had denied to Parliament the right of taxing them. Side by side with this measure they brought in a bill repealing the Stamp Act. . . . The great and manifest desire of the commercial classes throughout England had much weight; the repeal was carried [March, 1766] through the House of Commons, brought up by no less than 200 members to the Lords, and finally carried amid the strongest expressions of public joy. Burke described it as 'an event that caused more universal joy throughout the British dominions than perhaps any other that can be remembered.'—W. E. H. Lecky, *Hist. of Eng. in the 18th Century*, ch. 12 (v. 3).

A. D. 1766-1767.—The Townshend measures.—The liberal Rockingham administration, after a few months of power, disappeared [July, 1766], having signalized itself as regarded America by the repeal of the Stamp Act, and by the Declaratory Act. Of the new ministry the leading spirit was Charles Townshend, a brilliant statesman, but unscrupulous and unwise. His inclinations were arbitrary; he regretted the repeal of the Stamp Act, as did also the king and Parliament in general, who felt themselves to have been humiliated. Pitt, indeed, now Earl of Chatham, was a member of the government; but, oppressed by illness, he could exercise no restraint upon his colleague, and the other members were either in sympathy with Townshend's views, or unable to oppose him. Townshend's three measures affecting America, introduced on the 13th of May, 1767, were: a suspension of the functions of the legislature of New York for contumacy in the treatment of the royal troops; the establishment of commissioners of the customs, appointed with large powers to superintend laws relating to trade; and lastly an impost duty upon glass, red and white lead, painters' colors, paper, and tea [see ENGLAND: A. D. 1765-1768]. This was an 'external' duty to which the colonists had heretofore expressed a willingness to submit; but the grounds of the dispute were shifting. Townshend had declared that he held in contempt the distinction sought to be drawn between external and internal taxes, but that he would so far honor the colonists in their quibble as to make his tax of that kind of which the right was admitted. A revenue of £10,000 a year was expected from the tax, which was to be applied to the support of a 'civil list,' namely, the paying the salaries of the new commissioners of customs, and of the judges and governors, who were to be relieved wholly or in part from their dependence upon

the annual grants of the Assemblies; then, if a surplus remained, it was to go to the payment of troops for protecting the colonies. To make more efficient, moreover, the enforcement of the revenue laws, the writs of assistance, the denunciation of which by James Oth had formed so memorable a crisis, were formally legalized. The popular discontent, appeased by the repeal of the Stamp Act, was at once awake again, and henceforth in the denial of the right of Parliament to tax, we hear no more of acquiescence in commercial restrictions and in the general legislative authority of Parliament. . . . The plan for resistance adopted by the cooler heads was that of Samuel Adams, namely, the non-importation and the non-consumption of British products. From Boston out, through an impulse proceeding from him, town-meetings were everywhere held to encourage the manufactures of the Province and reduce the use of superfluities, long lists of which were enumerated. Committees were appointed everywhere to procure subscriptions to agreements looking to the furtherance of home industries and the disuse of foreign products. . . . Before the full effects of the new legislation could be seen, Townshend suddenly died; but in the new ministry that was presently formed Lord North came to the front, and adopted the policy of his predecessor, receiving in this course the firm support of the king, whose activity and interest were so great in public affairs that he 'became his own minister.'—J. K. Hosmer, *Samuel Adams*, ch. 7.

A. D. 1767-1768.—The Farmer's Letters of John Dickinson.—The Circular Letter of Massachusetts, and the "Unrescinding Ninety-two."—The English ministry was probably misled by the strong emphasis which had been laid here during the controversies concerning the Stamp Act upon the alleged distinction between external and internal taxation. We had refused to submit to the latter, but admitted that the former might be binding upon the whole empire as a commercial regulation. In form the duties levied on paints, glass, tea, etc., were undoubtedly such a regulation, but it was at once contended here that, in point of fact and of principle, this was as much an exercise of the alleged right of Parliamentary taxation for the purpose of raising a revenue for imperial purposes as the Stamp Act itself. Although it was passed by the opponents of the Stamp Act, and by the Rockingham ministry, who professed to be our friends, the net met at once with opposition here. Late in October, 1767, it was denounced by a public meeting in Boston, which suggested a non-importation agreement as the best means of rendering its operations ineffective. These agreements were favorite expedients for manifesting political discontent in those days, but, as they were voluntary, their obligation sat somewhat loosely upon those who signed them. The truth is, that those who were most decided in opposition to the course of the ministry were somewhat puzzled as to the plan they should adopt to exhibit the earnestness of their discontent. . . . While the leaders of the opposition throughout the country were doubtful and hesitating, there appeared in the Pennsylvania Chronicle for the 2d of December, 1767, the first of a series of letters on the political situation,

afterwards known as the 'Farmer's Letters.' . . . The letters, fourteen in number, followed one another in quick succession, and they were read by men of all classes and opinions throughout the continent as no other work of a political kind had been hitherto read in America. It was, of course, soon known that John Dickinson was their author, and people remembered that he was the person who had formulated what was a genuine Bill of Rights in the Stamp Act Congress. The more these letters were read, the more convinced people became that in the comprehensive survey they took of our political relations with the mother-country, especially as these were affected by the last obnoxious act of Parliament, and in the plans which were proposed to remedy the evil, Mr. Dickinson had struck the true key-note of the opposition to the ministerial measures. He appeared at this crisis, as he did in the Stamp Act Congress, as the leader and guide in the controversy. From this time until the Declaration of Independence the Pennsylvania idea, which was embodied by Mr. Dickinson in these Farmer's Letters, 'controlled the destinies of the country;' and Mr. Bancroft only does justice to Mr. Dickinson's position when he recognizes fully his commanding influence during that period. We may say with pardonable pride (and it is one of those truths which many of our historians have managed in various ways to relegate to obscurity), that, as the leading spirit in the Stamp Act Congress, Dickinson gave form and color to the agitation in this country which brought about the repeal of that act, and that the arguments by which the claim of the ministry to tax us for revenue by such an act of Parliament as that levying duties on glass, paints, etc. was answered in the 'Farmer's Letters' first convinced the whole body of our countrymen, groping blindly for a cure for their grievances, that there was a legal remedy, and then forced the ministry to consent in a measure to the demand for a repeal of some of its most obnoxious provisions. It is worth remarking that when the ministry yielded at all it yielded to argument, and not to the boastful threats which were so common. The 'Farmer's Letters' gave courage and force to those who in February denounced the law in Pennsylvania; they formed the mainspring of the movement which resulted in the circular letter sent by the legislature of Massachusetts on the 17th of that month to the Assemblies of the other Colonies; in short, they had the rare good fortune not only of convincing those who suffered that the remedy was in their own hands, but also of persuading those who had the power to abandon, or at least to modify their arbitrary measures. . . . Mr. Dickinson begins these grave essays with an air of simplicity as charming as it is calculated to attract the attention of the reader. 'I am a farmer,' he says, 'settled, after a variety of fortunes, near the banks of the river Delaware, in the Province of Pennsylvania. I received a liberal education, and have been engaged in the busy scenes of life, but am now convinced that a man may be as happy without bustle as with it. Being generally master of my time, I spend a good deal of it in my library, which I think the most valuable part of my small estate. I have acquired, I believe, a greater knowledge of history and of the laws and constitution of my country than is generally attained by men of my class,'

etc. He then explains the nature of the controversy with the mother-country, making it so clear that the points in dispute are comprehensible by a child. . . . As to our method of asserting our rights, he says, with an elevation of sentiment which reminds one of Edmund Burke more than of any other political writer, 'The cause of liberty is a cause of too much dignity to be sullied by turbulence and tumult. It ought to be maintained in a manner suitable to her nature. Those who engage in it should breathe a sedate yet fervent spirit, animating them to actions of prudence, justice, modesty, bravery, humanity, and magnanimity.' He shrinks, evidently with terror, from speaking of what may be the consequences of the persistent refusal of England to change her oppressive measures. . . . After showing in the most striking manner the nature of our wrongs, the letters turn gladly to the remedy that lies open to us. That remedy is based upon a cultivation of the spirit of conciliation on both sides, and Mr. Dickinson urges again and again upon his English readers the folly of their policy, by showing them the value of the American Colonies to them, and especially how the trade and wealth of the English merchants are bound up in the adoption of a liberal policy towards us. This is one of the most interesting and important topics discussed in these letters, and the subject is treated with elaborate skill, leading to convincing conclusions drawn from our history. It must not be forgotten that prior to the Revolution an impression widely prevailed among the most thoughtful of our own people, as well as among our friends in England, that if the English people could be made to understand the frightful losses they would suffer in case of a war in which we should be fighting for our independence, or even during a short interruption of the trade between the two countries, they would force the government to yield rather than run the risk of the consequences. . . . Even Dr. Franklin in London, who had had so many proofs of the indifference and contempt with which the representations of the Colonies in England were regarded . . . thought the appeal of the Farmer to Englishmen so irresistible that, although no friend of Dickinson's, he arranged that these letters should be reprinted in London."—C. J. Stillé, *The Life and Times of John Dickinson*, ch. 4.—In February, 1768, "the Legislature of Massachusetts sent a Circular Letter [ascribed to Samuel Adams] to the Assemblies of the other colonies, in which was set forth the necessity of all acting together harmoniously, and of freely communicating the mind of each to the others. The course Massachusetts had pursued was described, with the contents of the petition and letters which had been written, and with the hope expressed that she would have their cordial co-operation in resistance to the ministerial measures. The notion that political independence was aimed at was strenuously denied, and the trust was entertained that what had been done would meet the approval of their 'common head and father,' and that the liberties of the colonies would be confirmed. This letter elicited response from some, others returned none officially, but all who answered replied favorably. It gave, however, the greatest offence to the ministry, and particularly to Lord Hillsborough, the Secretary of State for the Colonies. It seems that he read it entirely

by the light which a letter from Governor Bernard to Lord Barrington had shed upon it. This epistle declared the real motive of the colonies to be a determination to be independent. Hillsborough, filled with this idea, communicated it to the other members of the cabinet, and thus the Circular Letter was laid before them, prejudged. It was determined that it merited consideration, but that the only notice to be given it should be one of censure, and, on the spur of the moment, they resolved upon two things: to require the Massachusetts Assembly to rescind the Letter, and to require the other legislatures before whom it had been laid to reject it. This was done, and the consequences were, that the General Court, or Legislature, of Massachusetts voted, by ninety-two to seventeen, that they would do nothing of the kind, and that the other legislatures gave the outcast a hearty welcome. As for the people, they showed their approval of their representatives by toasting, from one end of the country to the other, 'The unrescinding Ninety-two, with whom was coupled the number Forty-five, or that of the famous 'North Briton'; while the Bostonians added fuel to the flame by a riot on the score of the sloop Liberty, in which they attacked the houses of the Commissioners of the Customs, and made a bonfire of the Collector's boat. Shortly afterward, (but not by reason of the riot), four ships of war anchored in Boston harbor, and two regiments of soldiers were quartered on the town."—E. G. Scott, *The Development of Const. Liberty*, ch. 10 (with corrections by the author).

A. D. 1769.—Massachusetts threatened, and Virginia roused to her support.—"The proceedings in Massachusetts attracted in England the greatest attention, elicited the severest comment, and, because a military force had been ordered to Boston to support the stand of the administration, created the greatest solicitude. . . . The king, on opening parliament, characterized the action of Boston as a subversion of the Constitution and evincing a disposition to throw off dependence on Great Britain. The indictment against the colonies was presented in sixty papers laid before parliament. Both Houses declared that the proceedings of the Massachusetts Assembly, in opposition to the revenue acts were unconstitutional, and derogatory to the rights of the crown and the parliament; that the Circular Letter tended to create unlawful combinations; that the call of a convention by the selectmen of Boston was proof of a design of setting up an independent authority; and both Houses proposed to transport the originators of the obnoxious proceedings to England for trial and condign punishment, under the cover of an obsolete act of Henry VIII. . . . The administration determined to make an example of Massachusetts, as the ring-leading province in political mischief, by transporting its popular leaders to England to be tried for their lives in the king's bench. Such was the purport of an elaborate despatch which Lord Hillsborough sent to Governor Bernard, directing an inquiry to be instituted into the conduct

of any persons who had committed any overt act of resistance to the laws. . . . Thus a great issue was created that affected all the colonies. . . . There was no adequate step taken to meet the threatened aggression until the House of Burgesses of Virginia convened in May."—R. Frothingham, *The Rise of the Republic of the U. S.*, ch. 6.—"On the day of the prorogation of parliament [May 9, 1769] the legislature of Virginia assembled at Williamsburg. Great men were there; some who were among the greatest—Washington, Patrick Henry, and, for the first time, Jefferson. Botetourt [the governor], who opened the session in state, was in perfect harmony with the council, received from the house of burgesses a most dutiful address, and entertained fifty-two guests at his table on the first day, and as many more on the second. . . . But the assembly did not forget its duty, and devised a remonstrance which became the example for the continent. It claimed the sole right of imposing taxes on the inhabitants of Virginia. With equal unanimity, it asserted the lawfulness and expediency of a concert of the colonies in defence of the violated rights of America. It laid bare the flagrant tyranny of applying to America the obsolete statute of Henry VIII.; and it warned the king of 'the dangers that would ensue' if any person in any part of America should be seized and carried beyond sea for trial. It consummated its work by communicating its resolutions to every legislature in America, and asking their concurrence. The resolves were concise, simple, and effective; so calm in manner and so perfect in substance that time finds no omission to regret, no improvement to suggest. The menace of arresting patriots lost its terrors; and Virginia's declaration and action consolidated union. . . . The next morning, the assembly had just time to present an address to the king, when the governor summoned them, and said: 'I have heard of your resolves, and augur ill of their effects; you have made it my duty to dissolve you, and you are dissolved accordingly.' Upon this, the burgesses met together as patriots and friends, with their speaker as moderator. They adopted the resolves which Washington had brought with him from Mount Vernon, and which formed a well-digested, stringent, and practicable scheme of non-importation, until all the 'unconstitutional' revenue acts should be repealed. . . . The voice of the Old Dominion roused the merchant of Pennsylvania to approve what had been done. The assembly of Delaware adopted the Virginia resolves word for word; and every colony south of Virginia followed the example."—G. Bancroft, *Hist. of the U. S.* (Author's last revision), pp. 347-353.

A. D. 1770.—Repeal of the Townshend duties except on Tea.—On the 5th of March, 1770—the same day on which the tragical encounter of the king's troops with citizens of Boston occurred—Lord North introduced a motion in Parliament for the partial repeal of Townshend's revenue act; "not on the petitions of America, because they were marked by a denial of the right, but on one from merchants and traders of London. 'The subject,' said he, 'is of the highest importance. The combinations and associations of the Americans for the tem-

porary interruption of trade have already been called unwarrantable in an address of this house; I will call them insolent and illegal. The duties upon paper, glass, and painters' colors bear upon the manufacturers of this country, and ought to be taken off. It was my intention to have extended the proposal to the removal of the other duties; but the Americans have not deserved indulgence. The preamble to the act and the duty on tea must be retained, as a mark of the supremacy of parliament and the efficient declaration of its right to govern the colonies.' . . . Thomas Pownall moved the repeal of the duty on tea. The house of commons, like Lord North in his heart, was disposed to do the work of conciliation thoroughly. . . . Had the king's friends remained neutral, the duty on tea would have been repealed; with all their exertions, in a full house, the majority for retaining it was but 63. Lord North seemed hardly satisfied with his success; and reserved to himself liberty to accede to the repeal, on some agreement with the East India Company. The decision came from the king."—G. Bancroft, *Hist. of the U. S. (Author's last revision)*, v. 3, pp. 381-382.

A. D. 1772.—The burning of the Gaspé.—“One of the first overt acts of resistance that took place in this celebrated struggle [in the war of independence] occurred in 1772, in the waters of Rhode Island. A vessel of war had been stationed on the coast to enforce the laws, and a small schooner, with a light armament and twenty-seven men, called the Gaspé, was employed as a tender, to run into the shallow waters of that coast. On the 17th of June, 1772, a Providence packet, that plied between New York and Rhode Island, named the Hannah, and commanded by a Captain Linzee, hove in sight of the man-of-war, on her passage up the bay. The Hannah was ordered to heave-to, in order to be examined; but her master refused to comply; and being favoured by a fresh southerly breeze, that was fast sweeping him out of gunshot, the Gaspé was signalled to follow. The chase continued for five-and-twenty miles, under a press of sail, when the Hannah coming up with a bar, with which her master was familiar, and drawing less water than the schooner, Captain Linzee led the latter on a shoal, where she struck. The tide falling, the Gaspé . . . was not in a condition to be removed for several hours. The news of the chase was circulated on the arrival of the Hannah at Providence. A strong feeling was excited among the population, and towards evening the town drummer appeared in the streets, assembling the people in the ordinary manner. As soon as a crowd was collected, the drummer led his followers in front of a shed that stood near one of the stores, when a man disguised as an Indian suddenly appeared on the roof, and proclaimed a secret expedition for that night, inviting all of 'stout hearts' to assemble on the wharf, precisely at nine, disguised like himself. At the appointed hour, most of the men in the place collected at the

spot designated, when sixty-four were selected for the bold undertaking that was in view. This party embarked in eight of the launches of the different vessels lying at the wharves, and taking with them a quantity of paving stones, they pulled down the river in a body. . . . On nearing the Gaspé, about two in the morning, the boats were hailed by a sentinel on deck. This man was driven below by a volley of stones. The commander of the Gaspé now appeared, and ordering the boats off, he fired a pistol at them. This discharge was returned from a musket, and the officer was shot through the thigh. By this time, the crew of the Gaspé had assembled, and the party from Providence boarded. The conflict was short, the schooner's people being soon knocked down and secured. All on board were put into the boats, and the Gaspé was set on fire. Towards morning she blew up.”—J. F. Cooper, *Naval Hist. of the U. S.*, v. 1, ch. 3.

ALSO IN: S. G. Arnold, *Hist. of Rhode Island*, ch. 19 (v. 2).

A. D. 1772-1773.—The instituting of the Committees of Correspondence.—The Tea Ships and “the Boston Tea-Party.”—“The surest way to renew and cement the union [of the colonies] was to show that the ministry had not relaxed in its determination to enforce the principal of the Townshend acts. This was made clear in August, 1772, when it was ordered that in Massachusetts the judges should henceforth be paid by the crown. Popular excitement rose to fever heat, and the judges were threatened with impeachment should they dare accept a penny from the royal treasury. The turmoil was increased next year by the discovery in London of the package of letters which were made to support the unjust charge against Hutchinson and some of his friends that they had instigated and aided the most extreme measures of the ministry. In the autumn of 1772 Hutchinson refused to call an extra session of the assembly to consider what should be done about the judges. Samuel Adams then devised a scheme by which the towns of Massachusetts could consult with each other and agree upon some common course of action in case of emergencies. For this purpose each town was to appoint a standing committee, and as a great part of their work was necessarily done by letter they were called ‘committees of correspondence.’ This was the step that fairly organized the Revolution.”—J. Fiske, *The War of Independence*, ch. 5.—“The town records of Boston [November 2, 1772] say:—‘It was then moved by Mr. Samuel Adams that a Committee of Correspondence be appointed, to consist of twenty-one persons, to state the rights of the colonists and of this Province in particular to men and Christians and as subjects; and to communicate and publish the same to the several towns and to the world as the sense of this town, with the infringements and violations thereof that have been or from time to time may be made.’ The motion occasioned some debate and seems to have been carried late at night; the vote in its favor, at last, was nearly unanimous. The colleagues of Adams, who had left him almost alone thus far, now declined to become members of the committee, regarding the scheme as useless or trifling. The committee was at last constituted without them; it was made up of men of little prominence but of

thorough respectability. James Otis, in another interval of sanity, was made chairman, a position purely honorary, the town in this way showing its respect for the leader whose misfortunes they so sincerely mourned. The Committee of Correspondence held its first meeting in the representatives' chamber at the town-house, November 3, 1772, where at the outset each member pledged himself to observe secrecy as to their transactions, except those which, as a committee, they should think it proper to divulge. According to the motion by which the committee was constituted, three duties were to be performed: 1st, the preparation of a statement of the rights of the colonists, as men, as Christians, and as subjects; 2d, a declaration of the infringement and violation of those rights; 3d, a letter to be sent to the several towns of the Province and to the world, giving the sense of the town. The drafting of the first was assigned to Samuel Adams, of the second to Joseph Warren, of the third to Benjamin Church. In a few days tidings came from the important towns of Marblehead, Roxbury, Cambridge, and Plymouth, indicating that the example of Boston was making impression and was likely to be followed. On November 20, at a town-meeting in Faneuil Hall, the different papers were presented: Otis sat as moderator, appearing for the last time in a sphere where his career had been so magnificent. The report was in three divisions, according to the motion. . . . In the last days of 1772, the document, having been printed, was transmitted to those for whom it had been intended, producing at once an immense effect. The towns almost unanimously appointed similar committees; from every quarter came replies in which the sentiments of Samuel Adams were echoed. In the library of Bancroft is a volume of manuscripts, worn and stained by time, which have an interest scarcely inferior to that possessed by the Declaration of Independence itself, as the fading page hangs against its pillar in the library of the State Department at Washington. They are the original replies sent by the Massachusetts towns to Samuel Adams's committee sitting in Faneuil Hall, during those first months of 1773. One may well read them with bated breath, for it is the touch of the elbow as the stout little democracies dress up into line, just before they plunge into actual fight at Concord and Bunker Hill. There is sometimes a noble scorn of the restraints of orthography, as of the despotism of Great Britain, in the work of the old town clerks, for they generally were secretaries of the committees; and once in a while a touch of Dogberry's quaintness, as the punctilious officials, though not always 'putting God first,' yet take pains that there shall be no mistake as to their piety by making every letter in the name of the Deity a rounded capital. Yet the documents ought to inspire the deepest reverence. They constitute the highest mark the town-meeting has ever touched. Never before and never since have Anglo-Saxon men, in lawful folk-mote assembled, given utterance to thoughts and feelings so fine in themselves and so pregnant with great events. To each letter stand affixed the names of the committee in autograph. This awkward scrawl was made by the rough fist of a Cape Ann fisherman, on shore for the day to do at town-meeting the duty his fellows had laid upon him; the hand that wrote

this other was cramped from the scythe-handle, as its possessor mowed an interval on the Connecticut; this blotted signature, where smutted flangers have left a black stain, was written by a blacksmith of Middlesex, turning aside a moment from forging a barrel that was to go duty at Lexington. They were men of the plainest; but as the documents containing statements of the most generous principles and the most courageous determination, were read in the town-houses, the committees who produced them, and the constituents for whom the committees stood, were lifted above the ordinary level. Their horizon expanded to the broadest; they had in view not simply themselves, but the welfare of the continent; not solely their own generation, but remote posterity. It was Samuel Adams's own plan, the consequences of which no one foresaw, neither friend nor foe. Even Hutchinson, who was scarcely less keen than Samuel Adams himself, was completely at fault. 'Such a foolish scheme,' he called it, 'that the faction must necessarily make themselves ridiculous.' But in January the eyes of men were opening. One of the ablest of the Tories, Daniel Leonard, wrote:—'This is the foulest, subtlest, and most venomous serpent ever issued from the egg of sedition. I saw the small seed when it was implanted; it was a grain of mustard. I have watched the plant until it has become a great tree.' It was the transformation into a strong cord of what had been a rope of sand."—J. K. Hosmer, *Samuel Adams*, ch. 13.—'In the spring of 1773, Virginia carried this work of organization a long step further, when Dabney Carr suggested and carried a motion calling for committees of correspondence between the several colonies. From this point it was a comparatively short step to a permanent Continental Congress. It happened that these preparations were made just in time to meet the final act of aggression which brought on the Revolutionary War. The Americans had thus far successfully resisted the Townshend acts and secured the repeal of all the duties except on tea. As for tea they had plenty, but not from England; they smuggled it from Holland in spite of custom-houses and search-warrants. Clearly unless the Americans could be made to buy tea from England and pay the duty on it, the king must own himself defeated. Since it appeared that they could not be 'forced into doing this, it remained to be seen if they could be tricked into doing it. A truly ingenious scheme was devised. Tea sent by the East India Company to America had formerly paid a duty in some British port on the way. This duty was now taken off, so that the price of the tea for America might be lowered. The company's tea thus became so cheap that the American merchant could buy a pound of it and pay the threepence duty beside for less than it cost him to smuggle a pound of tea from Holland. It was supposed that the Americans would of course buy the tea which they could get most cheaply, and would thus be beguiled into submission to that principle of taxation which they had hitherto resisted. Ships laden with tea were accordingly sent in the autumn of 1773 to Boston, New York, Philadelphia, and Charleston; and consignees were appointed to receive the tea in each of these towns. Under the guise of a commercial operation, this was purely a political trick. It was an insulting

challenge to the American people, and merited the reception which they gave it. They would have shown themselves unworthy of their rich political heritage had they given it any other. In New York, Philadelphia, and Charleston mass-meetings of the people voted that the consignees should be ordered to resign their offices, and they did so. At Philadelphia the tea-ship was met and sent back to England before it had come within the jurisdiction of the custom-house. At Charleston the tea was landed, and as there was no one to receive it or pay the duty, it was thrown into a damp cellar and left there to spoil. In Boston things took a different turn."—J. Fiske, *The War of Independence*, ch. 5.

"Acting upon the precedent of the time of the Stamp Act, when Oliver, the stamp commissioner, had resigned his commission under the Liberty Tree, a placard was posted everywhere on the 3d of November, inviting the people of Boston and the neighboring towns to be present at Liberty Tree that day at noon, to witness the resignation of the consignees of the tea, and hear them swear to re-ship to London what teas should arrive. The placard closed,—'Show me the man that dares take this town.' At the time appointed, representatives Adams, Hancock, and Phillips, the selectmen and town clerk, with about five hundred more, were present at the Liberty Tree. But no consignees arrived, whereupon Mollenue and Warren headed a party who waited upon them. The consignees, Clarke, a rich merchant, and his sons, Benjamin Faucell, Winslow, and the two sons of Hutchinson, Thomas and Ellsha, sat together in the counting-house of Clarke in King Street. Admittance was refused the committee, and a conversation took place through a window, during which the tone of the consignees was defiant. There was some talk of violence, and when an attempt was made to exclude the committee and the crowd attending them from the building, into the first story of which they had penetrated, the doors were taken off their hinges and threats uttered. Mollenue, generally impetuous enough, but now influenced probably by cooler heads, dissuaded the others from violence. . . . A town-meeting on November 5, in which an effort of the Tories to make head against the popular feeling came to naught, showed how overwhelming was the determination to oppose the introduction of the tea. . . . When news arrived on the 17th that three tea-ships were on the way to Boston, for a second time a town-meeting demanded through a committee, of which Samuel Adams was a member, the resignation of the consignees. They evaded the demand; the town-meeting voted their answer not satisfactory, and at once adjourned without debate or comment. The silence was as follows; what was impending none could tell. . . . On the 28th, the first of the tea-ships, the Dartmouth, Captain Hall, sailed into the harbor. Sunday though it was, the Committee of Correspondence met, obtained from Benjamin Rotch, the Quaker owner of the Dartmouth, a promise not to enter the vessel until Tuesday, and made preparations for a mass-meeting at Faneuil Hall for Monday forenoon, to which Samuel Adams was authorized to invite the surrounding towns. A stirring placard the next morning brought the townsmen and their neighbors to the place. After the organization, Samuel Adams, arising among the thousands,

moved that: 'As the town have determined at a late meeting legally assembled that they will to the utmost of their power prevent the landing of the tea, the question be now put,—whether this body are absolutely determined that the tea now arrived in Captain Hall shall be returned to the place from whence it came.' There was not a dissenting voice. . . . In the afternoon, the meeting having resolved that the tea should go back in the same ship in which it had come, Rotch, the owner of the Dartmouth, protested, but was sternly forbidden, at his peril, to enter the tea. Captain Hall also was forbidden to enter any portion of it. 'Adams was never in greater glory,' says Hutchinson. The next morning, November 30, the people again assembling, the consignees made it known that it was out of their power to send the tea back; but they promised that they would store it until word should come from their 'constituents' as to its disposal. . . . The Dartmouth each night was watched by a strong guard; armed patrols, too, were established, and six couriers held themselves ready, if there should be need to alarm the country. . . . During the first week in December arrived the Eleanor and the Weaver, also tea-ships, which were moored near the Dartmouth, and subjected to the same oversight. The 'True Sons of Liberty' posted about the town the most spirited placards. . . . The days flew by. At length came the end of the time of probation. If the cargo of the Dartmouth had not been 'entered' within that period, the ship according to the revenue laws, must be confiscated. Rotch, the Quaker owner, had signified his willingness to send the ship back to England with the cargo on board, if he could procure a clearance. The customs officials stood on technicalities; under the circumstances a clearance could not be granted. The grim British admiral ordered the Active and the Kingfisher from his fleet to train their broadsides on the channels, and sink whatever craft should try to go to sea without the proper papers. The governor alone had power to override these obstacles. It was competent for him to grant a permit which the revenue men and the admiral must respect. If he refused to do this, then on the next day the legal course was for the revenue officers to seize the Dartmouth and land the tea under the guns of the fleet. It was the 16th of December. A crowd of seven thousand filled the Old South and the streets adjoining. Nothing like it had ever been known. Town-meeting had followed town-meeting until the excitement was at fever heat. The indefatigable Committee of Correspondence had, as it were, scattered fire throughout the whole country. . . . Poor Quaker Rotch . . . felt himself, probably, the most persecuted of men, when the monster meeting forced him in the December weather to make his way out to Milton Hill to seek the permit from Hutchinson. . . . Meantime darkness had fallen upon the short winter day. The crowd still waited in the gloom of the church, dimly lighted here and there by candles. Rotch reappeared just after six, and informed the meeting that the governor refused to grant the permit until the vessels were properly qualified. As soon as the report had been made, Samuel Adams arose, for it was he who had been moderator, and exclaimed: 'This meeting can do nothing more to save the country.' It was evidently a concerted

signal, for instantly . . . the famous war-whoop was heard, and the two or three score of 'Mohawks' rushed by the docks, and with the crowd behind them hurried in 'the brightening moonlight to Griffin's wharf, where lay the ships. The tea could not go back to England; it must not be huddled. The cold waters of the harbor were all that remained for it. Three hundred and forty-two chests were cast overboard. Nothing else was harmed, neither person nor property. All was so quiet that those at a distance even could hear in the calm air the ripping open of the thin chests as the tea was emptied. The 'Mohawks' found helpers, so that in all perhaps one hundred and fifty were actively concerned. Not far off in the harbor lay the ships of the fleet, and the Castle with the 'Sam Adams Regiments.' But no one interfered."—J. K. Hosmer, *Samuel Adams*, ch. 16.

A. D. 1774 (March—April).—The Boston Port Bill.—The Massachusetts Act and the Quebec Act.—"The spoken defiance of the other colonies had been quite as efficient as the combination of threats and force to which Boston was compelled to resort, but Lord North hunched the first retaliatory and punitive measure against that city. . . . The first of Lord North's bills was the Boston Port Act, which closed the harbor until indemnity for the tea there destroyed should be paid and the king be satisfied that thereafter the city would obey the laws. The demand for indemnity was fair but the indefinite claim of obedience was not only infamous in itself but, as Burke said, punished the innocent with the guilty. . . . North's second bill was a virtual abrogation of the Massachusetts charter. The council of twenty-eight had been hitherto elected every year in joint session of the assembly. The king might now appoint the whole body to any number, from twelve to thirty-six, and remove them at pleasure. The men so appointed were designated mandamus councillors. Thereafter town-meetings could be held only by permission of the governor and for the sole purpose of electing officers [General Gage was made governor under this act, and four regiments were placed in Boston for his support]. Sheriffs were to return all juries, and were to be named by the governor and hold office during his pleasure. The third bill was really a device of the king's, and it is said that the ministry was confused and shamefaced in presenting it. It ordained that magistrates, revenue officers, or other officials indicted in Massachusetts for capital offences were to be tried either in Nova Scotia or Great Britain. Another measure made legal the billeting of troops, against which Boston had hitherto striven with success, and a fifth, known as the Quebec Act, though depriving that province of the right of habeas corpus, restored the French customary law ('coutume de Paris'), established Roman Catholicism as the state religion, and by extending its boundaries to the Ohio and Mississippi, shut off the Northern English Colonies from westward extension. This was intended as an arbitrary settlement of a vexed question. The Pur-

tans, however, . . . exclaimed that the next step would be the establishment among them of English episcopacy."—W. M. Sloane, *The French War and the Revolution*, ch. 14.

A. D. 1774 (May—June).—Effects of the Boston Port Bill.—The call for a Continental Congress.—"The Boston Port Bill was received in America with honors not accorded even to the Stamp Act. It was cried through the streets as 'A barbarous, cruel, bloody, and inhuman murder,' and was burnt by the common hangman on a scaffold forty-five feet high. The people of Boston gathered together in town-meeting at Faneuil Hall, and expresses were sent off with an appeal to all Americans throughout America. The responses from the neighborhood came like snow-flakes. Marblehead offered the use of its wharves to the Boston merchants; Salem averred that it would be lost to all feelings of humanity were it to raise its fortunes on the ruins of its neighbor. Newburyport voted to break off trade with Great Britain, and to lay up its ships. Connecticut, as her wont is, when moved by any vital occurrence, betook herself to prayer and humiliation, first, however, ordering an inventory to be taken of her cannon and military stores. Virginia, likewise, resolved to invoke the divine interposition, but, before another resolution which called for a Congress could be introduced, her House was precipitately dissolved; whereupon the resolution was brought up and passed at a meeting called in 'the Apollo,' where it was further declared that an attack on one colony was an attack upon all. Two days later the Massachusetts letter itself was received, upon which the Virginians called a convention. From all parts contributions in money poured into Boston, and resolutions were everywhere passed, declaring that no obedience was due the late acts of Parliament; that the right of imperial taxation did not exist; that those who had accepted office under pay of the king had violated their public duty; that the Quebec act establishing Roman Catholicism in Canada was hostile to the Protestant religion, and that the inhabitants of the colonies should use their utmost diligence to acquaint themselves with the art of war, and for that purpose should turn out under arms at least once a week. In the fulness of time, a cordon of ships was drawn around Boston, and six regiments and a train of artillery were encamped on the Common—the only spot in the thirteen colonies where the government could enforce an order. The conflict between constitutional liberty and absolutism had now reached that dangerous point where physical force became one of its elements. . . . The situation was at once recognized throughout the colonies, and the knowledge that in union there is strength, manifested itself in one general impulse toward a Colonial Congress. Committees of Correspondence were organized in every county, and throngs attended the public meetings. 'One great, wise, and

noble spirit; one masterly soul animating one vigorous body,' was the way John Adams described this impulse. The Canadas alone remained inanimate. . . . But not so those to whom constitutional liberty was as the breath of life. On the 17th of June (1774) the Massachusetts Assembly, which had been removed by a royal order to Salem, answered Virginia by responding on a call for a Continental Congress at Philadelphia. The governor, hearing of what was going on, sent the secretary of the colony to dissolve the Assembly, but, finding the doors shut upon him, he had to content himself with reading the message to the crowd outside. The House went on with its work, while, at the same time, a great meeting, with John Adams in the chair, was being held at Boston in Faneuil Hall. Twelve colonies agreed to send delegates to a Continental Congress to be held at Philadelphia in September.—E. G. Scott, *The Development of Const. Liberty in the Eng. Colonies of Am. ch. 11 (with corrections by the author).*

A. D. 1774 (May—July).—Governor Hutchinson's departure for England.—His conversation with King George.—In May, 1774, Governor Hutchinson, of Massachusetts, who had applied some months before for leave of absence to visit England, was relieved by General Gage and took his departure. General Gage was temporarily commissioned to be "Captain General and Governor-in-Chief" of the Province of Massachusetts, and "Vice-Admiral of the same," combining the civil and military powers in himself. It was then supposed that Hutchinson's absence would be brief; but, to his endless grief, he never saw the country again. Soon after his arrival in England he had an interview with the king, which is reported at length in his Diary. The conversation is one of great historical interest, exhibiting King George's knowledge and ideas of American affairs, and representing the opinions of a high-minded American loyalist. It is reprinted here exactly as given in Governor Hutchinson's Diary, published by his great-grandson in 1883:

"July 1st.—Received a card from Lord Dartmouth desiring to see me at his house before one o'clock. I went soon after 12, and after near an hour's conversation, his Lordship proposed introducing me immediately to the King. I was not dressed as expecting to go to Court, but his Lordship observing that the King would not be at St. James's again until Wednesday [this was Friday], I thought it best to go; but waited so long for his Lordship to dress, that the Levée was over; but his Lordship going in to the King, I was admitted, contrary, as L^d Pomfret observed to me, to custom, to kiss His Majesty's hand in his closet: after which, as near as I can recollect, the following conversation passed.

K.—How do you do M^r H. after y^r voyage?

H.—Much reduced Sir by sea-sickness; and unfit upon that account, as well as my New England dress, to appear before your Majesty.

Lord D. observed—M^r H. apologised to me for his dress, but I thought it very well, as he is just come ashore; to which the K. assented.

K.—How did you leave your Government, and how did the people receive the news of the late measures in Parliament?

H.—When I left Boston we had no news of any Act of Parliament, except the one for shutting up the port, which was extremely alarming to the people.

(Lord D. said, Mr. H. came from Boston the day that Act was to take place, the first of June. I hear the people of Virginia have refused to comply with the request to shut up their ports, from the people of Boston, and M^r H. seems to be of opinion that no colony will comply with that request.)

K.—Do you believe, M^r H., that the account from Virginia is true?

H.—I have no other reason to doubt it, except that the authority for it seems to be only a newspaper; and it is very common for articles to be inserted in newspapers without any foundation. I have no doubt that when the people of Rhode Island received the like request, they gave this answer—that if Boston would stop all the vessels they then had in port, which they were hurrying away before the Act commenced, the people of R. Island would then consider of the proposal.

The King smiled.

Lord D.—M^r H., may it please y^r Majesty, has shewn me a newspaper with an address from a great number of Merchants, another from the Episcopal Clergy, another from the Lawyers, all expressing their sense of his conduct in the most favourable terms. Lord Dartmouth thereupon took the paper out of his pocket and shewed it.

K.—I do not see how it could be otherwise. I am sure his conduct has been universally approved of here by people of all parties.

H.—I am very happy in your Majesty's favourable opinion of my administration.

K.—I am intirely satisfied with it. I am well acquainted with the difficulties you have encountered, and with the abuse & injury offered you. Nothing could be more cruel than the treatment you met with in betraying your private letters.

The K., turning to Lord D.—My Lord, I remember nothing in them to which the least exception could be taken.

Lord D.—That appears, Sir, from the report of the Committee of Council, and from your Majesty's orders thereon.

H.—The correspondence, Sir, was not of my seeking. It was a meer matter of friendly amusement, chiefly a narrative of occurrences, in relating of which I avoided personalities as much as I could, and endeavoured to treat persons, when they could not be avoided, with tenderness, as much as if my letters were intended to be exposed; whereas I had no reason to suppose they ever would be exposed.

K.—Could you ever find M^r H. how those letters came to New England?

H.—Doctor F. may it please your Majesty, has made a publick declaration that he sent them, and the Speaker has acknowledged to me that he rec^d them: I do not remember that he said directly from Doctor F., but it was understood between us that they came from him. I had heard before that they came either direct from him, or that he had sent them through another channel, and that they were to be communicated to six persons only, and then to be returned without suffering any copies to be taken. I sent for the Speaker and let him know

what I had heard, which came from one of the six to a friend, and so to me. The Speaker said they were sent to him, and that he was at first restrained from shewing them to any more than six persons.

K.—Did he tell you who were the persons?

H.—Yes, sir. There was M^r Bowdoin, M^r Pitts, Doctor Winthrop, D^r Chauncy, D^r Cooper, and himself. They are not all the same which had been mentioned before. The two Mr. Adams had been named to me in the room of M^r Pitts and D^r Winthrop.

K.—M^r B. I have heard of.

Lord F. I think he is father-in-law to M^r T. [Temple].

K.—Who is M^r Pitts?

H.—He is one of the Council—married M^r B.'s sister.

K.—I have heard of D^r Ch. and D^r Cooper, but who is Doctor Winthrop?

H.—He is not a Doctor of Divinity, Sir, but of Law; a Professor of Mathematics and Natural Philosophy at the College, and last year was chose of the Council.

K.—I have heard of one M^r Adams, but who is the other?

H.—He is a Lawyer, Sir.

K.—Brother to the other?

H.—No, Sir, a relation. He has been of the House, but is not now. He was elected by the two Houses to be of the Council, but negatived. The speaker further acquainted me that, after the first letter, he received another, allowing him to shew the Letters to the Committee of Correspondence; and afterwards a third, which allowed him to shew them to such persons as he could confide in, but always enjoined to send them back without taking copies. I asked him how he could be guilty of such a breach of trust as to suffer them to be made publick? He excused it by saying that he was against their being brought before the House, but was overruled; and when they had been read there, the people abroad compelled their publication, or would not be satisfied without it. Much more passed with which I will not trouble your Majesty; but after the use had been made of the Letters, which is so well known, they were all returned.

K., turning to L^d D.—This is strange:—where is Doctor F., my Lord?

Lord D.—I believe, Sir, he is in Town. He was going to America, but I fancy he is not gone.

K.—I heard he was going to Switzerland, or to some part of the Continent.

L^d D.—I think, Sir, there has been such a report.

K.—In such abuse, M^r H., as you met with, I suppose there must have been personal malvolence as well as party rage?

H.—It has been my good fortune, Sir, to escape any charge against me in my private character. The attacks have been upon my publick conduct, and for such things as my duty to your Majesty required me to do, and which you have been pleased to approve of. I don't know that any of my enemies have complained of a personal injury.

K.—I see they threatened to pitch and feather you.

H.—Tarr & feather, may it please your Majesty; but I don't remember that ever I was threatened with it.

Lord D.—Oh! yes, when Malcolm was tarred and feathered [Almanac for 1770, May, MS. Note], the committee for tarring and feathering blamed the people for doing it, that being a punishment res^d for a higher person, and we suppose you was intended.

H.—I remember something of that sort, which was only to make diversion, there being no such committee, or none known by that name.

K.—What guard had you, M^r H.?

H.—I depended, Sir, on the protection of Heaven. I had no other guard. I was not conscious of having done anything of which they could justly complain, or make a pretence for offering violence to my person. I was not sure, but I hoped they only meant to intimidate. By discovering that I was afraid, I should encourage them to go on. By taking measures for my security I should expose myself to calumny, and being censured as designing to render them odious for what they never intended to do. I was, therefore, obliged to appear to disregard all the menaces in the newspapers, and also private intimations from my friends who frequently advised me to take care of myself.

K.—I think you generally live in the country, M^r H.; what distance are you from town?

H.—I have lived in the country, Sir, in the summer for 20 years; but, except the winter after my house was pulled down, I have never lived in the country in winter until the last. My house is 7 or 8 miles from the Town, a pleasant situation, and most gentlemen from abroad say it has the finest prospect from it they ever saw, except where great improvements have been made by art, to help the natural view. The longest way the road is generally equal to the turnpike roads here; the other way rather rough.

K.—Pray, what does Hancock do now? How will the late affair affect him?

H.—I don't know to what particular affair your Majesty refers.

K.—Oh, a late affair in the city, his bills being refused. (Turning to Lord D.) Who is that in the city, my Lord?

Lord D. not recollecting—

H.—I have heard, Sir, that M^r Haley, a merchant in the city, is M^r Hancock's principal correspondent.

K.—Ay, that's the name.

H.—I heard, may it please your Majesty, before I came from N. England, that some small sums were returned, but none of consequence.

K.—Oh, no, I mean within this month, large sums.

Lord D.—I have heard such rumours, but don't know the certainty.

H.—M^r Hancock, Sir, had a very large fortune left him by his uncle, and I believe his political engagements have taken off his attention from his private affairs. He was sensible not long ago of the damage it was to him, and told me he was determined to quit all publick business, but soon altered his mind.

K.—Then there's M^r Cushing: I remember his name a long time: is not he a great man of the party?

H.—He has been many years Speaker, but a Speaker, Sir, is not always the person of the greatest influence. A M^r Adams is rather considered as the opposer of Government, and a sort of Wilkes in New England.

K.—What gave him his importance?

H.—A great pretended zeal for liberty, and a most inflexible natural temper. He was the first that publicly asserted the Independency of the colonies upon the Kingdom, or the supreme Authority of It.

K.—I have heard, M^r H., that your ministers preach that, for the sake of promoting liberty or the publick good, any immorality or less evil may be tolerated?

H.—I don't know, Sir, that such doctrine has ever been preached from the pulpit; but I have no doubt that it has been publicly asserted by some of the heads of the party who call themselves sober men, that the good of the publick is above all other considerations, and that truth may be dispensed with, and immorality is excusable, when this great good can be obtained by such means.

K.—That's a strange doctrine, indeed. Pray, M^r H., what is your opinion of the effect from the new regulation of the Council? Will it be agreeable to the people, and will the new appointed Councillors take the trust upon them?

H.—I have not, may it please y^r Majesty, been able to inform myself who they are. I came to Town late last evening, and have seen nobody. I think much will depend upon the choice that has been made.

K.—Enquiry was made and pains taken that the most suitable persons should be appointed.

H.—The body of the people are Dissenters from the Church of England; what are called Congregationalists. If the Council shall have been generally selected from the Episcopalians, it will make the change more disagreeable.

K.—Why are they not Presbyterians?

H.—There are very few Churches which call themselves Presbyterians, and form themselves voluntarily into a Presbytery without any aid from the civil government, which the Presbyterian Church of Scotland enjoys.

Lord D.—The Dissenters in England at this day are scarce any of them Presbyterians, but like those in New England, Congregationalists, or rather Independents.

K.—Pray, what were your Ancestors, M^r H.?

H.—In general, Sir, Dissenters.

K.—Where do you attend?

H.—With both, Sir. Sometimes at your Majesty's chapel, but more generally at a Congregational church, which has a very worthy minister, a friend to Government, who constantly prays for your Majesty, and all in authority under you.

K.—What is his name?

H.—Doctor Pemberton.

K.—I have heard of Doctor Pemberton that he is a very good man. Who is minister at the chapel?

H.—The Rector is Dr. Camer, a very worthy man also, who frequently inculcates upon his hearers due subjection to Government, and condemns the riotous violent opposition to it; and besides the prayers in the Liturgy, generally in a short prayer before sermon, expressly prays for your Majesty, and for the chief Ruler in the Province.

K.—Why do not the Episcopal ministers in general do the same?

H.—In general, Sir, they use no other prayer before sermon than a short collect out of the Liturgy.

K.—No—(turning to Lord D.) It is not so here, my Lord?

Lord D.—I believe it is, Sir. In your Majesty's Chapel they always use such a prayer. It is a form adapted.

K.—I think you must be mistaken.

Lord D.—No, Sir. This prayer used to be printed formerly, but of late it has not been printed with the service. In general the ministers use a collect, as M^r Hutchinson says; sometimes the collect in the Communion service—'Prevent us, O Lord,' &c., but I think oftener the collect for the second Sunday in Advent.

H.—My education, Sir, was with the Dissenters. I conceive there is no material difference between reading a prayer out of a book, and saying it 'memoriter,' without book.

Lord D.—I think, Sir, it is not very material. The prayers of the Dissenters are in substance very much the same with those in the service of the church.

K.—I see no material difference, if the prayers be equally good, but will not that depend upon the minister? But, pray, M^r H., why do your ministers generally join with the people in their opposition to Government?

H.—They are, Sir, dependent upon the people. They are elected by the people, and when they are dissatisfied with them, they seldom leave till they get rid of them.

K.—That must be very dangerous. If the people oblige them to concur with them in their erroneous principles on Government, they may do it in religion also, and this must have a most fatal tendency.

H.—There is one check, Sir, upon the people. Unless a minister be dismissed by a council of Churches, the Province law makes provision for the recovery of the salary; but we have no instance where a minister, for any length of time, has brought suits for the recovery of his salary, after the people refuse to hear him. They generally weary him, and sooner or later they get clear of him.

Lord D.—That's a considerable tye, however.

K.—Pray, M^r H., does population greatly increase in your Province?

H.—Very rapidly, Sir. I used to think that Doctor F., who has taken such pains in his calculations, carried it too far when he supposed the inhabitants of America, from their natural increase, doubled their number in 25 years; but I rather think now that he did not; and I believe it will appear from the last return I made to the Secretary of State, that the Massachusetts has increased in that proportion. And the increase is supposed, including the importation of foreigners, to be, upon the whole, greater in most of the Southern Colonies than in the Massachusetts. We import no settlers from Europe, so as to make any sensible increase.

K.—Why do not foreigners come to y^r Province as well as to the Southern Governments?

H.—I take it, Sir, that our long cold winters discourage them. Before they can bring the land to such a state as to be able in summer to provide for their support in winter, what little substance they can bring with them is expended, and many of them have greatly suffered. The Southern colonies are more temperate.

K.—What is the reason you raise no wheat in your Province?

H.—In most places, especially near the sea, it blasts.

K.—To what cause is that owing?

H.—It has been observed that when the grain is so forward as to be out of the milk the beginning of July, it seldom blasts; and that about the 8th or 10th of that month the weather becomes exceeding hot, and what are called the honey dews of the night are fixed upon the grains by the scalding sun in a hot morning, and if the grain be then in the milk it shrivels up, and the straw becomes rusty and black. This is a pretty general opinion of the cause.

K.—To what produce is your climate best adapted?

H.—To grazing, Sir; your Majesty has not a finer Colony for grass in all your dominions: and nothing is more profitable in America than pasture, because labour is very dear.

K.—Then you import all your bread corn from the other Colonies?

H.—No, Sir, scarce any, except for the use of the maritime towns. In the country towns the people raise grain enough for their own expending, and sometimes for exportation. They live upon coarse bread made of rye and corn mixed, and by long use they learn to prefer this to flour or wheat bread.

K.—What corn?

H.—Indian corn, or, as it is called in Authors, Maize.

K.—Ay, I know it. Does that make good bread?

H.—Not by itself, Sir; the bread will soon be dry and husky; but the Rye keeps it moist, and some of our country people prefer a bushel of Rye to a bushel of Wheat, if the price should be the same.

K.—That's very strange.

Lord D.—In many parts of Scotland, Sir, Rye is much esteemed as making good and wholesome bread.

The King enquired very particularly into many other parts of the produce of the country, and the natural history of it, to which I gave the best answers I was capable of.

K.—New York, I think, comes the next to Boston in their opposition to Government?

H.—Does your Majesty think nearer than Pennsylvania?

K.—Why, I can't say that they do of late. K.—Rhode Island, Mr H., is a strange form of Government.

H.—They approach, Sir, the nearest to a Democracy of any of your Colonies. Once a year all power returns to the people, and all their Officers are new elected. By this means the Governor has no judgment of his own, and must comply with every popular prejudice.

K.—Who is their Governor now?

H.—His name, Sir, is Wantou, a Gentleman who I have reason to think wishes to see Government maintained as much as any they could find in the Colonies.

K.—How is it with Connecticut? are they much better?

H.—The constitutions, Sir, are much the same; but Connecticut are a more cautious people; strive to make us little noise as may be, and have in general retained a good share of that virtue which is peculiarly necessary in such a form of Government.

More was said upon the state of these and some of the other Colonies. There being something of a pause about this time, I turned to Lord Dartmouth and asked—Does your Lordship remember when you had the first account of the Lieutenant Governor's death, and whether it was before the Letters which I wrote by Governor Tryon?

Lord D.—Oh, yes, I had a letter from you several weeks before that, giving an account of it.

H.—There was a vessel sailed for Lisbon the day after he died, and I gave a letter to the master in charge, to put it on board the first Vessel for London, but was doubtful of the conveyance.

K.—We never could find out which way that letter came. Is the present L. Governor a relation to the late Mr Oliver?

H.—No, Sir, not of the same family. I have no connection with him, nor did I ever let him know that I had mentioned him as one of the persons I thought might be proper for a Lieutenant Governor.

K.—The Chief Justice, I think, is brother to the late Mr Governor?

H.—Yes, Sir.

K.—We had thought of him, but as he was not one of those you had named, the present Gentleman, upon enquiry, appeared under all circumstances the most proper.

H.—I had some particular inducement not to mention the Chief Justice. He is related to me, and his appointment would have increased the envy against both of us.

K.—How is he related to you?

H.—One of his sons, Sir, married one of my daughters. I was, besides, uncertain whether the salary would be continued; and if it should be, his salary as Chief Justice exceeded it, except in case of my absence, and then the expense of living, and the additional trouble from his post, I considered as more than an equivalent. I considered further, that the controversy in which he had been engaged as Chief Justice would render the administration peculiarly difficult just at that time; and I supposed it would immediately devolve upon him by my absence, having then no expectation of being superseded. I never took more pains to divest myself of all personal views than in mentioning proper persons for this place. I should have been more anxious, if I had not thought it not improbable that some person might be appointed, and sent from England.

K.—What number of Indians had you in your Government?

H.—They are almost extinct. Perhaps there are 50 or 60 families at most upon the Eastern Frontier, where there is a small fort maintained; tho' I conceive the inhabitants would not be in the least danger. It is, Sir, as if in a few years the Indians would be extinct in all parts of the Continent.

K.—To what is that owing?

H.—I have thought Sir, in part to their being dispirited at their low despicable condition among the Europeans, who have taken possession of their country, and treat them as an inferior race of beings; but more to the immoderate use of spirituous liquors. There are near 100 families, perhaps more, of Indians who are domiciliated, and live, some in other towns, but most of them

at a place called Mashpee, where they have a church, and a Missionary to preach to them, and also an Indian Minister who has been ordained, and preaches sometimes in his own language.

K.—What, an Episcopal Minister?

H.—No, Sir, of the Congregational persuasion or form of worship.

The King was particular in many other enquiries relative to my Administration, to the state of the Province, and the other Colonies. I have intimated what remained the clearest upon my mind, and as near the order in which they passed as I am able. He asked also what part of my family I brought with me, and what I left behind, and at length advised me to keep house a few days for the recovery of my health. I then withdrew. I was near two hours in the K. close. Lord D. feared I was tired so long standing. I observed that so gracious a reception made me insensible of it."—*Diary and Letters of Thos. Hutchinson*, ch. 5.

A. D. 1774 (September).—The meeting of the First Continental Congress.—"On the 5th day of September most of the delegates elected to the congress were in Philadelphia. They were invited by the speaker of the Pennsylvania assembly to hold their sessions in the State House, but decided to meet in the hall owned by the carpenters,—a fine brick building, having commodious rooms for the use of the committees, and an excellent library in the chambers. It is still in good preservation. At ten o'clock in the morning the delegates met at the City Tavern, walked to Carpenters' Hall, and began the sessions of the Continental Congress. This assembly, when all the members had taken their seats, consisted of 55 delegates, chosen by 12 colonies. They represented a population of 2,300,000, paying a revenue of £80,000 sterling. Georgia, which did not elect delegates, gave a promise to concur with her 'sister colonies' in the effort to maintain their right to the British Constitution. . . . In general, the delegates elect were men of uncommon ability, who had taken a prominent part in the political action of their several localities. . . . New England presented, in John Sullivan, vigor; in Roger Sherman, sterling sense and integrity; in Thomas Cushing, commercial knowledge; in John Adams, large capacity for public affairs; in Samuel Adams, a great character, with influence and power to organize. The Middle colonies presented, in Philip Livingston, the merchant prince of enterprise and liberality; in John Jay, rare public virtue, juridical learning, and classic taste; in William Livingston, progressive ideas tempered by conservatism; in John Dickinson, 'The Immortal Farmer,' erudition and literary ability; in Cesar Rodney and Thomas McKean, working power; in James Duane, mild Whiggism, halting, but keeping true to the cause; in Joseph Galloway, downright Toryism, seeking control, and at length going to the enemy. The Southern colonies presented, in Thomas Johnson, the grasp of a statesman; in Samuel Chase, activity and boldness; in the Rutledges, wealth and accomplishment; in Christopher Gadsden, the genuine American; and in the Virginia delegation, an illustrious group,—in Richard Bland, wisdom; in Edmund Pendleton, practical talent; in Peyton Randolph, experience in legislation; in Richard Henry Lee statesmanship in union with high culture; in Patrick Henry, genius and elo-

quence; in Washington, justice and patriotism. 'If,' said Patrick Henry, 'you speak of solid information and sound judgment, Washington unquestionably is the greatest man of them all.' . . . The congress was organized by the choice of Peyton Randolph of Virginia for President, and Charles Thomson of Philadelphia, not a member, for Secretary. . . . A discussion . . . arose on the rules to be observed in determining questions, . . . which was renewed the next day, when it was agreed that each colony should have one vote."—R. Frothingham, *The Rise of the Republic of the U. S.*, ch. 9.

A. D. 1774 (September—October).—The action of the Congress.—"The Congress first resolved 'to state the rights of the colonies in general, the several instances in which those rights were violated or infringed, and the means most proper for a restoration of them.' Next, 'to examine and report the several statutes which affect the trade and manufactures of the colonies,' not earlier than the last nine years. While these subjects were under consideration, resolutions of Boston and its neighbors [Middlesex and Suffolk counties] were laid before them, stating their wrongs and merely defensive measures to which they would adhere, 'as long as such conduct may be vindicated by reason and the principles of self-preservation, but no longer.' . . . Congress unanimously approved and recommended 'a perseverance in this firm and temperate conduct, trusting a change in the councils of the British nation. The merchants were urged not to order goods, and to suspend those ordered; and it was resolved, that after the first of next December there should be no importation of British goods, and no consumption of, or traffic in them. A loyal petition to the king was ordered, assuring him that by abolishing the system of laws and regulations of which the colonies complained, enumerating them, the jealousies they had caused would be removed, and harmony restored. 'We ask but for peace, liberty and safety. We wish not a diminution of the prerogative, nor do we solicit the grant of any new right in our favor. Your royal authority over us, and our connection with Great Britain, we shall always carefully and zealously endeavor to support and maintain.' General Gage was entreated to discontinue the erection of the fortifications on Boston Neck, and to prevent all injuries on the part of the troops; and Massachusetts was asked 'temporarily to submit to a suspension of the administration of justice where it could not be procured in a legal and peaceable manner.' Persons accepting office under the recent act, changing the form of her government, were denounced, 'as the wicked tools of that despotism which is preparing to destroy those rights which God, nature, and compact have given to America.' A memorial was next ordered to the inhabitants of the British colonies there represented, exposing their common wrongs and urging a united 'commercial opposition,' warning them to extend their views 'to mournful events,' to be 'in all respects prepared for every contingency, and to implore the favor of Almighty God.' An appeal was made to the

enlightened sympathies of the British people. . . . Finally, an address was made to the inhabitants of the Province of Quebec, inviting their co-operation. In the meantime, the form of a non-exportation, non-consumption association was adopted, and signed by each of the delegates. . . . A declaration of the rights and injuries of the colonies was made, in which the most difficult question was disposed of. The right to participate in the legislative council of their common country, was declared to be the foundation of English liberty and of all free government. . . . Of all these proceedings the language was that of peace, except where other language was demanded. For they approved the opposition of the inhabitants of Massachusetts Bay to the execution of the late acts of Parliament, and declared, 'If these acts shall be attempted to be carried into execution by force, in such case all America ought to support them in their opposition,' and 'that seizing or attempting to seize any person in America, in order to transport such person beyond the sea for trial of offences committed within the body of a county in America, being against law, will justify, and ought to meet with, resistance and reprisal.' These were the essential resolutions. They bound the colonies to a common resistance to acts of force against all, or any one of them. They also declared their opinion of the necessity that another Congress should be held in the ensuing month of May, unless the redress of grievances which they had desired was obtained before that time, and that all the colonies in North America choose deputies, as soon as possible, to attend such Congress. On the twenty-sixth of October, after a secret session of fifty-one days, this body adjourned. The recommendations of this Congress were received with marked respect among the patriots of the colonies."—J. C. Hamilton, *Hist. of the U. S. as traced in the writings of Alex. Hamilton, ch. 3 (c. 1)*.—"Trained in all the theories of the mercantile system, America had been taught to believe (1) that two countries could continue to trade; though one of necessity did so at a loss; (2) that in the trade between England and the colonies, the former both through natural advantages and through law was the party to which the profit accrued; (3) that England was a shop-keeping nation, whose very existence depended on her trade and manufactures. A suspension of trade between England and America therefore would mean misery, if not ruin, to the mother country, while the colonies would 'both save and gain.' With measures of non-importation, non-exportation and non-consumption, accordingly, did this otherwise powerless body hope to coerce the English people and government. Though founded on an economic fallacy, this method of action was certain to have a great effect in England. Twice already had it been employed on a limited scale—against the Stamp Act and against the revenue acts,—and each time with sufficient success to warrant the belief that its wider application would result in victory. Now the agents of the colonies in London were writing home: 'If you have virtue enough to resolve to stop, and to execute the resolution of stopping, your exports and imports for one year, this country must do you justice.' . . . In both England and America the temporary destruction of British trade was viewed not merely as an effective weapon, but as the only

peaceful one which the colonies possessed. A failure to unite in a non-importation agreement against England would, according to a prominent English politician, leave nothing for the colonies 'but to decide between ruin and submission.' The question for the Congress was not, therefore, a choice of remedies, but merely whether, and to how great an extent, the delegates could be brought to agree to the only one within their reach. For even while accepting the system as effective against Great Britain, the delegates and their constituents had so far progressed as to realize that it bore with uneven force on the different colonies. The southern colonies were really no more diversified in their industries than the West India islands. South Carolina grew rice and indigo; North Carolina depended largely on tar, pitch and turpentine; Virginia raised tobacco. Unless these products could be exported to Europe, those colonies might suffer for the necessities of life. . . . The first consideration of the subject in the Congress revealed serious difficulties. The Virginia delegation, 'to avoid the heavy injury that would arise,' were prevented by their instructions from agreeing to an immediate cessation of trade relations. Imports would cease on November 1, 1774, but exports must continue till August 10, 1775. It was in vain they were told 'that a non-exportation at a future day cannot avail,' and that at the Virginia date non-exportation would not operate before the fall of 1776. The Virginians had determined to cure and sell their tobacco crop of 1774 before 'consideration of interest and of equality of sacrifice should be laid aside.' So vital, however, did most of the delegates consider the immediate enforcement, that it was proposed to act without Virginia; for Boston and New England, it was said, would need active support before that date. This proposition was defeated by the refusal of the delegates of North Carolina and Maryland to join unless Virginia should also make the sacrifice. With sorry grace the Congress had to accept the dictation of Virginia. But the trouble did not end here. Virginia's selfish interest having been triumphant, the South Carolina delegation sought for an equal advantage, and demanded that the two great products of that colony should be especially reserved from the non-exportation clause. . . . Rather than yield, the Congress preferred a cessation of business for several days, in order 'to give our [South Carolina] deputies time to recollect themselves.' But when the Association was ready for signing, the South Carolina delegates, with but one exception, seceded from the Congress, and their assent was only secured eventually through a compromise, by virtue of which rice alone was excluded from the agreement, while indigo was brought under its terms. Such were the secret deliberations of the Congress, in endeavoring to unite the colonies in the use of their only weapon. The first public results appeared in the form of a unanimous resolution, passed and published on September 22, requesting 'the merchants and others in the several colonies not to send to Great Britain any orders for goods,' and to delay or suspend orders already sent. Five days later it was unanimously resolved that after December 1, 1774, 'there should be no importation into British America from Great Britain or Ireland, or from any other place,' of any goods, wares or

merchandise exported from Great Britain or Ireland. Three days later, with no assertion of unanimity, a resolution was announced to the effect 'that from and after the 10th day of September, 1775, the exportation of all merchandise and every commodity whatsoever to Great Britain, Ireland and the West Indies ought to cease, unless the grievances of America are redressed before that time,' and a committee was appointed to draft a plan for carrying into effect these resolves. On October 12 this committee brought in a report, which, after consideration and amendment, was on the 18th of October agreed to and ordered signed. On October 20 it was signed and ordered to be printed. Possessed of no real power, the Congress relied on the people to enforce this agreement. It was recommended that in every county, city and town a committee be chosen 'whose business it shall be attentively to observe the conduct of all persons touching this Association.' With hardly an exception, this recommendation was adopted. . . . As America had refused to trade with Great Britain and her colonies, the government replied by acts prohibiting any such trade. The policy of 'exhausting its opponent by injuring itself' was at last to have a fair trial, but through British, not American action. The colonies were by law interdicted from all commerce, trade and fishing. But before the legislation went into effect blood had been shed at Lexington. The contest could no longer be fought with acts of Parliament and resolves of Congress; 'blows must decide.' The Association was distinctively a peace weapon. Had the Congress really expected war, no action could have been more foolish. A garrison soon to be beleaguered virtually shut its ports to supplies. No better proof is needed of how little the delegates wished or worked for separation." —P. L. Ford, *The Association of the First Congress* (*Pub. Sci. Quarterly*, Dec., 1891.)—"It is only after a careful study of the proceedings of this Congress, and the subsequent history of some of its members, that we come at its real character. It was a Peace Congress. Some of the colonies had been compromised by their attitude in respect to the East India Company's teas; and the extreme measures of the British government in closing the port of Boston, and altering the charter of the contumacious people of Massachusetts, excited the apprehension of other colonies as to the ulterior purposes of the ministry. While it was the patriotic desire of the Congress to express their sympathies and to stand by the people of Boston in the hour of their sufferings, it was hoped and expected that some conciliatory course would be followed which would allow the ministry and the Massachusetts people to extricate themselves from their difficulties without recourse to war. John Adams had no faith in the efficacy of the petition to the king, nor in the addresses to the people of Great Britain and the Canadas. Matters had gone so far in New England that they would be satisfied with no terms short of the withdrawal of the royal troops, the re-opening of the port of Boston, and the total repeal of all measures designed to reduce them to obedience. At the same time, not only the British ministry, but the British people also, were demanding the complete submission of the Bostonians, or the infliction of condign punishment. So far as Massachusetts was concerned, the war was inevitable. John Adams saw it to be so, and

prepared himself for it. He endeavored to prepare the Congress for it, and not without valuable results. The great work effected by this Congress was the bringing the colonies on to common ground by a declaration of their rights. Opinions were divided. A compromise ensued, and the famous fourth article was the result. It was drawn by John Adams, and carried mainly by his influence, and reads as follows:—"That the foundation of English liberty, and of all free government, is a right in the people to participate in their legislative council; and as the English colonists are not represented, and from their local and other circumstances cannot be properly represented in the British Parliament, they are entitled to a free and exclusive power of legislation in their several provincial legislatures, where their rights of representation can alone be preserved, in all cases of taxation and internal polity, subject only to the negative of their sovereign, in such manner as has been heretofore used and accustomed. But from the necessity of the case, and a regard to the mutual interest of both countries, we cheerfully consent to the operation of such acts of the British Parliament as are bona fide restrained to the regulation of our external commerce, for the purpose of securing the commercial advantages of the whole empire to the mother country; and the commercial benefits of its respective members; excluding every idea of taxation, internal or external, for raising a revenue on the subjects in America, without their consent.' This was not precisely what John Adams wanted, but it was much. When this declaration went forth, the cause of Massachusetts, in whatever it might eventuate, was the cause of the colonies. It was nationalized. This was John Adams's greatest feat of statesmanship. On it the success of the impending war, and the Declaration of Independence rested."—M. Chamberlain, *John Adams, the Statesman of the Am. Rev.*, pp. 78-80.—"How far the authority of this first congress extended, according to the instructions of the delegates, it is impossible to determine with certainty at this distance of time. But it is probable that the original intention was that it should consult as to the ways and means best calculated to remove the grievances and to guaranty the rights and liberties of the colonies, and should propose to the latter a series of resolutions, furthering these objects. But the force of circumstances at the time compelled it to act and order immediately, and the people, by a consistent following of its orders, approved this transcending of their written instructions. The congress was therefore not only a revolutionary body from its origin, but its acts assumed a thoroughly revolutionary character. The people, also, by recognizing its authority, placed themselves on a revolutionary footing, and did so not as belonging to the several colonies, but as a moral person; for to the extent that congress assumed power to itself and made bold to adopt measures national in their nature, to that extent the colonists declared themselves henceforth to constitute one people, inasmuch as the measures taken by congress could be translated from words into deeds only with the consent of the people. This state of affairs essentially continued up to March 1, 1781. Until that time, that is, until the adoption of the articles of confederation by all the states, congress continued a revolutionary

body, which was recognized by all the colonies as 'de jure' and 'de facto' the national government, and which as such came in contact with foreign powers and entered into engagements, the binding force of which on the whole people has never been called in question. The individual colonies, on the other hand, considered themselves, up to the time of the Declaration of Independence, as legally dependent upon England and did not take a single step which could have placed them before the mother country or the world in the light of 'de facto' sovereign states. They remained colonies until the 'representatives of the United States' in the name of the good people of these colonies' solemnly declared 'these united colonies' to be 'free and independent states.' The transformation of the colonies into 'states' was, therefore, not the result of the independent action of the individual colonies. It was accomplished through the 'representatives of the United States'; that is, through the revolutionary congress, in the name of the whole people. Each individual colony became a state only in so far as it belonged to the United States and in so far as its population constituted a part of the people."—H. von Holst, *Const. and Pol. Hist. of the U. S.*, v. 1, ch. 1.

ALSO IN: W. V. Wells, *Life of Samuel Adams*, v. 2, pp. 213-247.—J. Adams, *Diary (Works, v. 2)* pp. 358-401.—*Journal of the Congress which met at Phila. Sept. 5, 1774* (London: J. Almon).

A. D. 1774-1775.—Provincial Congress of Massachusetts and Committee of Safety.—Military preparations.—"Governor Gage issued writs, dated September 1, convening the General Court at Salem on the 5th of October, but dissolved it by a proclamation dated September 28, 1774. The members elected to it, pursuant to the course agreed upon, resolved themselves into a Provincial Congress. This body, on the 26th of October, adopted a plan for organizing the militia, maintaining it, and calling it out when circumstances should render it necessary. It provided that one quarter of the number enrolled should be held in readiness to muster at the shortest notice, who were called by the popular name of minute-men. An executive authority—the Committee of Safety—was created, clothed with large discretionary powers; and another called the Committee of Supplies. On the 27th Jedediah Preble, (who did not accept), Artemas Ward, and Seth Pomeroy, were chosen general officers; and on the 28th, Henry Gardner was chosen treasurer of the colony, under the title of Receiver-General. Among the energetic acts of this memorial Congress, was one authorizing the collection of military stores. It dissolved December 10. The committee of safety, as early as November, authorized the purchase of materials for an army, and ordered them to be deposited at Concord and Worcester. These proceedings were denounced by General Gage, in a proclamation dated November 10, as treasonable, and a compliance with them was forbidden. In a short time the king's speech and the action of Parliament were received, which manifested a firm determination to produce submission to the late acts, and to maintain 'the supreme authority' of Great Britain over the colonies. General Gage regarded this intelligence as having 'cast a damp upon the faction,' and as having produced a happy effect upon the royalist cause. However, a second Provincial Congress (February 1 to 16, 1775) re-

newed the measures of its predecessor; and gave definiteness to the duties of the committee of safety, by 'empowering and directing' them (on the 9th of February) to assemble the militia whenever it was required to resist the execution of the two acts, for altering the government and the administration of justice. At the same time it appointed two additional generals, John Thomas, and William Heath, and made it the duty of the five general officers to take charge of the militia when called out by the committee of safety, and to 'effectually oppose and resist such attempt or attempts as shall be made for carrying into execution by force' the two acts. . . . The conviction was fast becoming general that force only could decide the contest. Stimulated and sustained by such a public opinion, the committees of safety and supplies were diligent, through the gloomy months of winter, in collecting and storing at Concord and Worcester materials for the maintenance of an army."—R. Frothingham, Jr., *History of the Siege of Boston*, ch. 1.—The following citizens composed the Committee of Public Safety, viz., "John Hancock, Joseph Warren, Benjamin Church, Richard Devens, Benjamin White, Joseph Palmer, Abraham Watson, Azor Orne, John Pigeon, William Heath, and Thomas Gardner. The following 'Committee of Supplies' was announced, viz., Elbridge Gerry, David Cheever, Benjamin Lincoln, Moses Gill, and Benjamin Hall. . . . By the first day of January, 1775, the garrison of Boston had been increased to thirty-five hundred men, and mounted three hundred and seventy men as a daily guard-detail, besides a field officers' guard of one hundred and fifty men on Boston Neck. Three brigades were organized and were officered, respectively by Generals Lord Percy, Pigott and Jones. In November of 1774, General Gage had advised the British government, that he, 'was confident, that to begin with an army twenty thousand strong, would in the end save Great Britain blood and treasure.' Meanwhile, the militia drilled openly, rapidly completed company organizations, and made many sacrifices to procure arms, powder and other materials of war. The Home government, in view of the serious aspect of affairs, ordered Generals Howe, Clinton, and Burgoyne to join General Gage, and announced that 'ample reinforcements would be sent out, and the most speedy and effectual measures would be taken to put down the rebellion,' then pronounced to already exist. On the eighth of April, the Provincial Congress resolved to take effectual measures to raise an army, and requested the co-operation of Rhode Island, New Hampshire and Connecticut. On the thirteenth, it voted to raise six companies of artillery, to pay them and keep them at drill. On the fourteenth it advised citizens to leave Boston and to remove to the country. On the fifteenth, it solemnly appointed a day for 'Public Fasting and Prayer,' and adjourned to the tenth day of May. The Committee of Public Safety at once undertook the task of securing powder, cannon and small arms. A practical embargo was laid upon all trade with Boston. The garrison could obtain supplies only with great difficulty, and, as stated by Gordon, 'nothing was wanting but a spark, to set the whole continent in a flame.'"—H. B. Carrington, *Battles of the American Revolution*, ch. 2.

A. D. 1775 (January—March).—Vain efforts toward pacific statesmanship in the British Parliament, by Chatham, Burke, and others.—A newly elected British Parliament "met on November 30, 1774; but no serious measure relating to America was taken till January 1775, when the House reassembled after the Christmas vacation. The Ministers had a large majority, and even apart from party interest the genuine feeling of both Houses ran strongly against the Americans. Yet at no previous period were they more powerfully defended. I have already noticed that Chatham, having returned to active politics after his long illness in 1774, had completely identified himself with the American cause, and had advocated with all his eloquence measures of conciliation. He . . . moved an address to the King praying that he would as soon as possible, 'in order to open the way towards a happy settlement of the dangerous troubles in America,' withdraw the British troops stationed in Boston. In the course of his speech he represented the question of American taxation as the root-cause of the whole division, and maintained that the only real basis of conciliation was to be found in a distinct recognition of the principle that 'taxation is theirs, and commercial regulation ours;' that England has a supreme right of regulating the commerce and navigation of America, and that the Americans have an inalienable right to their own property. He fully justified their resistance, predicted that all attempts to coerce them would fail, and engulphed the Congress at Philadelphia as worthy of the greatest periods of antiquity. Only eighteen peers voted for the address, while sixty-eight opposed it. On February 1 he reappeared with an elaborate Bill for settling the troubles in America. It asserted in strong terms the right of Parliament to bind the colonies in all matters of imperial concern, and especially in all matters of commerce and navigation. It pronounced the new colonial doctrine that the Crown had no right to send British soldiers to the colonies without the assent of the Provincial Assemblies, dangerous and unconstitutional in the highest degree, but at the same time it recognised the sole right of the colonists to tax themselves, guaranteed the inviolability of their charters, and made the tenure of their judges the same as in England. It proposed to make the Congress which had met at Philadelphia an official and permanent body, and asked it to make a free grant for imperial purposes. England, in return, was to reduce the Admiralty Courts to their ancient limits, and to suspend for the present the different Acts complained of by the colonists. The Bill was not even admitted to a second reading. Several other propositions tending towards conciliation were made in this session. On March 22, 1775, Burke, in one of his greatest speeches, moved a series of resolutions recommending a repeal of the recent Acts complained of in America, reforming the Admiralty Court and the position of the judges, and leaving American taxation to the American Assemblies, without touching upon any question of abstract right. A few days later, Hartley moved a resolution calling upon the Government to make requisitions to the colonial Assemblies to provide of their own authority for their own defence; and Lord Camden in the House of Lords and Sir G. Savile in the House of Commons endeavoured to

obtain a repeal of the Quebec Act. All these attempts, however, were defeated by enormous majorities. The petition of Congress to the King was referred to Parliament, which refused to receive it, and Franklin, after vain efforts to effect a reconciliation, returned from England to America."—W. E. H. Lecky, *Hist. of Eng. in the 18th Century*, ch. 12 (v. 3).

The following are the more important passages of the speech of Burke, on moving the resolutions which he introduced in the House of Commons, March 22, 1775:

"The proposition is peace. Not peace through the medium of war; not peace to be hunted through the labyrinth of intricate and endless negotiations; not peace to arise out of universal discord, fomented from principle, in all parts of the empire; not peace to depend on the juridical determination of perplexing questions, or the precise marking the shadowy boundaries of a complex government. It is simple peace, sought in its natural course and in its ordinary haunts. It is peace sought in the spirit of peace, and laid in principles purely pacific. I propose, by removing the ground of the difference, and by restoring the former unsuspecting confidence of the colonies in the mother country, to give permanent satisfaction to your people,—and (far from a scheme of ruling by discord) to reconcile them to each other in the same act and by the bond of the very same interest which reconciles them to British government. My idea is nothing more. Refined policy ever has been the parent of confusion,—and ever will be so, as long as the world endures. Plain good intention, which is as easily discovered at the first view as fraud is surely detected at last, is, let me say, of no mean force in the government of mankind. Genuine simplicity of heart is an healing and cementing principle. . . . The capital leading questions on which you must this day decide are these two: First, whether you ought to concede; and secondly, what your concession ought to be. On the first of these questions we have gained . . . some ground. But I am sensible that a good deal more is still to be done. Indeed, Sir, to enable us to determine both on the one and the other of these great questions with a firm and precise judgment, I think it may be necessary to consider distinctly the true nature and the peculiar circumstances of the object which we have before us: because, after all our struggle, whether we will or not, we must govern America according to that nature and to those circumstances, and not according to our own imaginations, not according to abstract ideas of right, by no means according to mere general theories of government, the resort to which appears to me, in our present situation, no better than arrant trifling. . . . The first thing that we have to consider with regard to the nature of the object is the number of people in the colonies. I have taken for some years a good deal of pains on that point. I can by no calculation justify myself in placing the number *below* two millions of inhabitants of our own European blood and color,—besides at least 500,000 others, who form no inconsiderable part of the strength and opulence of the whole. This, Sir, is, I believe, about the true number. There is no occasion to exaggerate, where plain truth is of so much weight and importance. But whether I put the present numbers too high or too low is a matter of little

moment. Such is the strength with which population shoots in that part of the world, that, state the numbers as high as we will, whilst the dispute continues, the exaggeration ends. Whilst we are discussing any given magnitude, they are grown to it. Whilst we spend our time in deliberating on the mode of governing two millions, we shall find we have millions more to manage. Your children do not grow faster from infancy to manhood than they spread from families to communities, and from villages to nations. . . . But the population of this country, the great and growing population, though a very important consideration, will lose much of its weight, if not combined with other circumstances. The commerce of your colonies is out of all proportion beyond the numbers of the people. . . . The trade with America alone is now within less than £500,000 of being equal to what this great commercial nation, England, carried on at the beginning of this century with the whole world! . . . But, it will be said, is not this American trade an unnatural protuberance, that has drawn the juices from the rest of the body? The reverse. It is the very food that has nourished every other part into its present magnitude. Our general trade has been greatly augmented, and augmented more or less in almost every part to which it ever extended, but with this material difference: that of the six millions which in the beginning of the century constituted the whole mass of our export commerce the colony trade was but one twelfth part; it is now (as a part of sixteen millions) considerably more than a third of the whole. . . . I choose, Sir, to enter into these minute and particular details; because generalities, which in all other cases are apt to heighten and raise the subject, have here a tendency to sink it. When we speak of the commerce of our colonies, fiction lags after truth, invention is unfruitful, and imagination cold and barren. . . . I pass . . . to the colonies in another point of view,—their agriculture. This they have prosecuted with such a spirit, that, besides feeding plentifully their own growing multitude, their annual export of grain, comprehending rice, has some years ago exceeded a million in value. Of their last harvest, I am persuaded, they will export much more. At the beginning of the century some of these colonies imported corn from the mother country. For some time past the Old World has been fed from the New. The scarcity which you have felt would have been a desolating famine, if this child of your old age, with a true filial piety, with a Roman charity, had not put the full breast of its youthful exuberance to the mouth of its exhausted parent. As to the wealth which the colonies have drawn from the sea by their fisheries, you had all that matter fully opened at your bar. You surely thought those acquisitions of value, for they seemed even to excite your envy; and yet the spirit by which that enterprising employment has been exercised ought rather, in my opinion, to have raised your esteem and admiration. And pray, Sir, what in the world is equal to it? Pass by the other parts, and look at the manner in which the people of New England have of late carried on the whale-fishery. Whilst we follow them among the tumbling mountains of ice, and behold them penetrating into the deepest frozen recesses of Hudson's Bay and Davis's Straits,

whilst we are looking for them beneath the arctic circle, we hear that they have pierced into the opposite region of polar cold, that they are at the antipodes, and engaged under the frozen serpent of the South. Falkland Island, which seemed too remote and romantic an object for the grasp of national ambition, is but a stage and resting-place in the progress of their victorious industry. Nor is the equinoctial heat more discouraging to them than the accumulated winter of both the poles. . . . I am sensible, Sir, that all which I have asserted in my detail is admitted in the gross, but that quite a different conclusion is drawn from it. America, gentlemen say, is a noble object,—it is an object well worth fighting for. Certainly it is, if fighting a people be the best way of gaining them. Gentlemen in this respect will be led to their choice of means by their complexions and their habits. Those who understand the military art will of course have some predilection for it. Those who wield the thunder of the state may have more confidence in the efficacy of arms. But I confess, possibly for want of this knowledge, my opinion is much more in favor of prudent management than of force,—considering force not as an odious, but a feeble instrument, for preserving a people so numerous, so active, so growing, so spirited as this, in a profitable and subordinate connection with us. First, Sir, permit me to observe, that the use of force alone is but temporary. It may subdue for a moment; but it does not remove the necessity of subduing again; and a nation is not governed which is perpetually to be conquered. My next objection is its uncertainty. Terror is not always the effect of force, and an armament is not a victory. If you do not succeed, you are without resource; for, conciliation failing, force remains; but, force failing, no further hope of reconciliation is left. Power and authority are sometimes bought by kindness; but they can never be begged as alms by an impoverished and defeated violence. A further objection to force is, that you impair the object by your very endeavors to preserve it. The thing you fought for is not the thing which you recover, but depreciated, sunk, wasted, and consumed in the contest. Nothing less will content me than whole America. I do not choose to consume its strength along with our own; because in all parts it is the British strength that I consume. I do not choose to be caught by a foreign enemy at the end of this exhausting conflict, and still less in the midst of it. I may escape, but I can make no insurance against such an event. Let me add, that I do not choose wholly to break the American spirit; because it is the spirit that has made the country. Lastly, we have no sort of experience in favor of force as an instrument in the rule of our colonies. Their growth and their utility has been owing to methods altogether different. Our ancient indulgence has been said to be pursued to a fault. It may be so; but we know, if feeling is evidence, that our fault was more tolerable than our attempt to mend it, and our sin far more salutary than our penitence. These, Sir, are my reasons for not entertaining that high opinion of nutried force by which many gentlemen, for whose sentiments in other particulars I have great respect, seem to be so greatly captivated. But there is still behind a third consideration concerning this object, which serves to determine

my opinion on the sort of policy which ought to be pursued in the management of America, even more than its population and its commerce: I mean its temper and character. In this character of the Americans a love of freedom is the predominating feature which marks and distinguishes the whole. . . . This fierce spirit of liberty is stronger in the English colonies, probably, than in any other people of the earth, and this from a great variety of powerful causes; which, to understand the true temper of their minds, and the direction which this spirit takes, it will not be amiss to lay open somewhat more largely. First, the people of the colonies are descendants of Englishmen. England, Sir, is a nation which still, I hope, respects, and formerly adored, her freedom. The colonists emigrated from you when this part of your character was most predominant; and they took this bias and direction the moment they parted from your hands. They are therefore not only devoted to liberty, but to liberty according to English ideas and on English principles. . . . Your mode of governing them, whether through lenity or indolence, through wisdom or mistake, confirmed them in the imagination, that they, as well as you, had an interest in these common principles. They were further confirmed in this pleasing error by the form of their provincial legislative assemblies. Their governments are popular in an high degree: some are merely popular; in all, the popular representative is the most weighty; and this share of the people in their ordinary government never fails to inspire them with lofty sentiments, and with a strong aversion from whatever tends to deprive them of their chief importance. If anything were wanting to this necessary operation of the form of government, religion would have given it a complete effect. Religion, always a principle of energy, in this new people is no way worn out or impaired; and their mode of professing it is also one main cause of this free spirit. The people are Protestants, and of that kind which is the most adverse to all implicit submission of mind and opinion. . . . All Protestantism, even the most cold and passive, is a sort of dissent. But the religion most prevalent in our northern colonies is a refinement on the principle of resistance: it is the dissent of dissent, and the protestantism of the Protestant religion. . . . Permit me, Sir, to add another circumstance in our colonies, which contributes no mean part towards the growth and effect of this untractable spirit: I mean their education. In no country, perhaps, in the world is the law so general a study. The profession itself is numerous and powerful, and in most provinces it takes the lead. The greater number of the deputies sent to the Congress were lawyers. But all who read, and most do read, endeavour to obtain some smattering in that science. I have been told by an eminent bookseller, that in no branch of his business, after tracts of popular devotion, were so many books as those on the law exported to the plantations. The colonists have now fallen into the way of printing them for their own use. I hear that they have sold nearly as many of Blackstone's 'Commentaries' in America as in England. General Gage marks out this disposition very particularly in a letter on your table. He states, that all the people in his government are lawyers, or smatterers in law,—and that in Bos-

ton they have been enabled, by successful chicane, wholly to evade many parts of one of your capital penal constitutions. . . . The last cause of this disobedient spirit in the colonies is hardly less powerful than the rest, as it is not merely moral, but laid deep in the natural constitution of things. Three thousand miles of ocean lie between you and them. No contrivance can prevent the effect of this distance in weakening government. Seas roll, and months pass, between the order and the execution; and the want of a speedy explanation of a single point is enough to defeat an whole system. . . . Then, Sir, from these six capital sources, of descent, of form of government, of religion in the northern provinces, of manners in the southern, of education, of the remoteness of situation from the first mover of government,—from all these causes a fierce spirit of liberty has grown up. It has grown with the growth of the people in your colonies, and increased with the increase of their wealth: a spirit, that, unhappily meeting with an exercise of power in England, which, however lawful, is not reconcilable to any ideas of liberty, much less with theirs, has kindled this flame that is ready to consume us. . . . The question is not, whether their spirit deserves praise or blame,—what, in the name of God, shall we do with it? You have before you the object, such as it is,—with all its glories, with all its imperfections on its head. You see the magnitude, the importance, the temper, the habits, the disorders. By all these considerations we are strongly urged to determine something concerning it. We are called upon to fix some rule and line for our future conduct, which may give a little stability to our politics, and prevent the return of such unhappy deliberations as the present. . . . It should seem, to my way of conceiving such matters, that there is a very wide difference, in reason and policy, between the mode of proceeding on the irregular conduct of scattered individuals, or even of bands of men, who disturb order within the state, and the civil dissensions which may, from time to time, on great questions, agitate the several communities which compose a great empire. It looks to me to be narrow and pedantic to apply the ordinary ideas of criminal justice to this great public contest. I do not know the method of drawing up an indictment against an whole people. . . . I am not ripe to pass sentence on the gravest public bodies, intrusted with magistracies of great authority and dignity, and charged with the safety of their fellow-citizens, upon the very same title that I am. I really think that for wise men this is not judicious, for sober men not decent, for minds flattered with humanity not mild and merciful."

In the closing part of his speech, Mr. Burke introduced successively and commented upon the following propositions, or resolutions, which formed in their entirety his plan of conciliation. At the end of his speaking they were rejected by a vote of 270 against 78:

"That the colonies and plantations of Great Britain in North America, consisting of 14 separate governments, and containing two millions and upwards of free inhabitants, have not had the liberty and privilege of electing and sending any knights and burgesses, or others, to represent them in the high court of Parliament.

That the said colonies and plantations have been made liable to, and bounden by, several subsidies, payments, rates, and taxes, given and granted by Parliament, though the said colonies and plantations have not their knights and burgesses in the said high court of Parliament, of their own election, to represent the condition of their country; by lack whereof they have been oftentimes touched and grieved by subsidies, given, granted, and assented to, in the said court, in a manner prejudicial to the common wealth, quietness, rest, and peace of the subjects inhabiting within the same.

That, from the distance of the said colonies, and from other circumstances, no method hath hitherto been devised for procuring a representation in Parliament for the said colonies.

That each of the said colonies hath within itself a body, chosen, in part or in the whole, by the freemen, freeholders, or other free inhabitants thereof, commonly called the General Assembly, or General Court, with powers legally to raise, levy, and assess, according to the several usages of such colonies, duties and taxes towards defraying all sorts of public services.

That the said general assemblies, general courts, or other bodies legally qualified as aforesaid, have at sundry times freely granted several large subsidies and public aids for his Majesty's service, according to their abilities, when required thereto by letter from one of his Majesty's principal Secretaries of State; and that their right to grant the same, and their cheerfulness and sullenness in the said grants, have been at sundry times acknowledged by Parliament.

That it hath been found by experience, that the manner of granting the said supplies and aids by the said general assemblies hath been more agreeable to the inhabitants of said colonies, and more beneficial and conducive to the public service, than the mode of giving and granting aids and subsidies in Parliament, to be raised and paid in the said colonies.

That it may be proper to repeal an act, made in the 7th year of the reign of his present Majesty, intituled, 'An act for granting certain duties in the British colonies and plantations in America; for allowing a drawback of the duties of customs, upon the exportation from this kingdom, of coffee and coccon-nuts, of the produce of the said colonies or plantations; for discontinuing the drawbacks payable on China earthen ware exported to America; and for more effectually preventing the clandestine running of goods in the said colonies and plantations.'

That it may be proper to repeal an act, made in the 14th year of the reign of his present Majesty, intituled, 'An act to discontinue, in such manner and for such time as are therein mentioned, the landing and discharging, lading or shipping, of goods, wares, and merchandise, at the town and within the harbor of Boston, in the province of Massachusetts Bay, in North America.'

That it may be proper to repeal an act, made in the 14th year of the reign of his present Majesty, intituled, 'An act for the impartial administration of justice, in the cases of persons questioned for any acts done by them, in the execution of the law, or for the suppression of riots and tumults, in the province of the Massachusetts Bay, in New England.'

That it may be proper to repeal an act, made in the 14th year of the reign of his present Maj-

esty, intituled, 'An act for the better regulating the government of the province of the Massachusetts Bay, in New England.'

That it may be proper to explain and amend an act, made in the 35th year of the reign of King Henry VIII., intituled, 'An act for the trial of treasons committed out of the king's dominions.'

That from 'ie time when the general assembly, or court, of any colony or plantation in North America, shall have appointed, by act of assembly duly confirmed, a settled salary to the offices of the chief justice and other judges of the superior courts, it may be proper that the said chief justice and other judges of the superior courts of such colony shall hold his and their office and offices during their good behaviour, and shall not be removed therefrom, but when the said removal shall be adjudged by his Majesty in council, upon a hearing on complaint from the general assembly, or on a complaint from the governor, or the council, or the house of representatives, severally, of the colony in which the said chief justice and other judges have exercised the said offices.

That it may be proper to regulate the courts of admiralty or vice-admiralty, authorized by the 15th chapter of the 4th George III., in such a manner as to make the same more commodious to those who sue or are sued in the said courts; and to provide for the more decent maintenance of the judges of the same.—Edmund Burke, *Works*, v. 2.

A. D. 1775 (January—April).—Aims at independence disclaimed.—'The denial that independence was the final object, was constant and general. To obtain concessions and to preserve the connection with England was affirmed everywhere; and John Adams, after the peace, went farther than this, for he said:—'There was not a moment during the Revolution, when I would not have given everything I possessed for a restoration to the state of things before the contest began, provided we could have had a sufficient security for its continuance.' If Mr. Adams be regarded as expressing the sentiments of the Whigs, they were willing to remain Colonists, provided they could have had their rights secured to them; while the Tories were contented thus to continue, without such security. Such, as it appears to me, was the only difference between the two parties prior to hostilities. . . . Franklin's testimony, a few days before the affair at Lexington, was, that he had 'more than once travelled almost from one end of the continent to the other, and kept a variety of company, eating, drinking, and conversing with them freely, [and] never had heard from any person, drunk or sober, the least expression of a wish for a separation, or a hint that such a thing would be advantageous to America.' Mr. Jay is quite as explicit. 'During the course of my life,' said he, 'and until the second petition of Congress in 1775, I never did hear an American of any class, or of any description, express a wish for the independence of the Colonies.' 'It has always been, and still is, my opinion and belief, that our country was prompted and impelled to independence by necessity, and not by choice.' Mr. Jefferson affirmed, 'What, east-

ward of New York, might have been the dispositions towards England before the commencement of hostilities. I know not; but before that I never heard a whisper of a disposition to separate from Great Britain; and after that its possibility was contemplated with affliction by all. Washington, in 1774, fully sustains these declarations, and, in the 'Fairfax County Resolves,' it was complained that 'malevolent falsehoods' were propagated by the ministry to prejudice the mind of the King: 'particularly that there is an intention in the American Colonies to set up for Independent States.' Mr. Madison was not in public life until May, 1776, but he says, 'It has always been my impression, that a re-establishment of the Colonial relations to the parent country, as they were previous to the controversy, was the real object of every class of the people, till the despair of obtaining it,' &c. . . . The only way to dispose of testimony like this, is to impeach the persons who have given it."—L. Sabine, *Biographical Sketches of Loyalists of the Am. Rev.*, v. 1, pp. 64-66.

A. D. 1775 (January—September).—Revolution in South Carolina. See SOUTH CAROLINA: A. D. 1775.

A. D. 1775 (April).—The Beginning of the War of the American Revolution.—Lexington.—Concord.—"On April 19, 1775, the committees of safety could only count up twelve field-pieces in Massachusetts; and there had been collected in that colony 21,549 fire-arms, 17,441 pounds of powder, 22,191 pounds of ball, 144,699 flints, 10,108 bayonets, 11,579 pouches, 15,000 canteens. There were also 17,000 pounds of salt fish, 35,000 pounds of rice, with large quantities of beef and pork. Viewed as an evidence of the forethought of the colonists, these statistics are remarkable; but there was something heroic and indeed almost pathetic in the project of going to war with the British government on the strength of twelve field-pieces and seventeen thousand pounds of salt fish. Yet when, on the night of the 18th of April, 1775, Paul Revere rode beneath the bright moonlight through Lexington to Concord, with Dawes and Prescott for comrades, he was carrying the signal for the independence of a nation. He had seen across the Charles River the two lights from the church-steeple in Boston which were to show that a British force was going out to seize the patriotic supplies at Concord; he had warned Hancock and Adams at Rev. Jonas Clark's parsonage in Lexington, and had rejected Sergeant Mouroe's caution against unnecessary noise, with the rejoinder, 'You'll have noise enough here before long—the regulars are coming out.' As he galloped on his way the regulars were advancing with steady step behind him, soon warned of their own danger by alarm-bells and signal-guns. When Revere was captured by some British officers who happened to be near Concord, Colonel Smith, the commander of the expedition, had already halted, ordered Pitcairn forward, and sent back prudently for reinforcements. It was a night of terror to all the neighboring Middlesex towns, for no one knew what excesses the angry British troops might commit on their return march. The best picture we have of this alarm is in the narrative of a Cambridge woman, Mrs. Hannah Winthrop, describing 'the horrors of that midnight cry,' as she calls it. The women of that town were roused

by the beat of drums and ringing of bells; they hastily gathered their children together and fled to the outlying farm-houses; seventy or eighty of them were at Fresh Pond, within hearing of the guns at Menotomy, now Arlington. The next day their husbands bade them flee to Andover, whither the college property had been sent, and thither they went, alternately walking and riding, over fields where the bodies of the slain lay unburied. Before 5 A. M. on April 19, 1775, the British troops had reached Lexington Green, where thirty-eight men, under Captain Parker, stood up before six hundred or eight hundred to be shot at, their captain saying, 'Don't fire unless you are fired on; but if they want a war let it begin here.' It began there; they were fired upon; they fired rather ineffectually in return, while seven were killed and nine wounded. The rest, after retreating, reformed and pursued the British towards Concord, capturing seven stragglers—the first prisoners taken in the war. Then followed the fight at Concord, where four hundred and fifty Americans, instead of thirty-eight, were rallied to meet the British. The fighting took place between two detachments at the North Bridge, where 'once the embattled farmers stood, and fired the shot heard round the world.' There the American captain, Isaac Davis, was killed at the first shot—he who had said, when his company was placed at the head of the little column, 'I haven't a man that is afraid to go.' He fell and Major Buttrick gave the order, 'Fire! for God's sake fire!' in return. The British detachment retreated in disorder, but their main body was too strong to be attacked, so they disabled a few cannon, destroyed some barrels of flour, cut down the liberty-pole, set fire to the court-house and then began their return march. It ended in a flight; they were exposed to a constant guerilla fire; minute-men flocked behind every tree and house; and only the foresight of Colonel Smith in sending for reinforcements had averted a surrender. At 2 P. M., near Lexington, Percy with his troops met the returning fugitives, and formed a hollow square, into which they ran and threw themselves on the ground exhausted. Then Percy in turn fell back. Militia still came pouring in from Dorchester, Milton, Dedham, as well as the nearer towns. A company from Danvers marched sixteen miles in four hours. The Americans lost ninety-three in killed, wounded and missing that day; the British, two hundred and seventy-three. But the important result was that every American colony now recognized that war had begun."—T. W. Higginson, *History of the United States of America*, ch. 10.

A. D. 1775 (April).—The first Provincial Convention in New York. See NEW YORK: A. D. 1775 (APRIL).

A. D. 1775 (April—May).—The siege of Boston begun.—"Reinforcements of foreign troops and supplies were constantly arriving in Boston. Howe, Clinton, and Burgoyne came, as generals, on the 25th of May. Bitterness, ridicule, and boasting, with all the irritating taunts of a mer-

enary soldiery,' 'ern freely paired on the patriots and on t o .ixed multitude' which composed the germ of their army yet to be. The British forces had cooped themselves up in Boston, and the provincials determined that they should remain there, with no mode of exit save by the sea. The pear-shaped peninsula, hung to the mainland only by the stem called the 'Neck,' over which the tide-waters sometimes washed, was equally an inconvenient position for crowding regiments in war-like array, and a convenient one for the extemporized army which was about to beleaguer them there. . . . The town of Charlestown, which lay under the enemy's guns, had contained a population of between two and three thousand. The interruption of all the employments of peace, and the proximity of danger, had brought poverty and suffering upon the people. They had been steadily leaving the town, with such of their effects as they could carry with them. It proved to be well for them that they had acted upon the warning. It would seem that there were less than 200 of its inhabitants remaining in it at the time of the battle, when the flames kindled by the enemy and bombs from a battery on Copp's Hill laid it in ashes. On the third day after the affair at Concord, the Provincial Congress again assembled, voted to raise at once 13,000 men, to rally at Cambridge and the neighborhood, and asked aid from the other provinces to which Connecticut, Rhode Island, and New Hampshire responded. The forts, magazines, and arsenals, such as they then were, were secured for the country. . . . Of the 15,000 men then gathered, by the cry of war, at Cambridge and Roxbury, all virtually, but not by formal investm^{en}t, under the command of General Ward, nearly 10,000 belonged to Massachusetts, and the remainder to New Hampshire, Rhode Island, and Connecticut. They have been designated since, at various times and by different writers, under the extreme contrast of terms, as an 'organized army,' and a 'mob.' Either of these terms would be equally inappropriate. . . . Our troops were 'mainten^{en}' extemporized into fragmentary companies and skeleton regiments. The officers, chosen on the village-green or in its public-house, paying for the honor by a treat, or perhaps because they kept the premises where the treat could be most conveniently furnished, were not commissioned or ranked as the leaders of an army for campaign service. The yeomen of town and village had not come together at the summons of a commander-in-chief through adjutant, herald, or advertisement. They came unbidden, at an alarm from the bell on their meeting-house, or from a post-rider, or from the telegrams transmitted by tongue and ear. . . . And for the most part they were as free to go away as they had been to come. They were enlisted after a fashion, some prime conditions of which were their own convenience or pleasure. . . . Such of them as came from the seaboard might briag with them old sails for tents, while the midsummer days made it scarcely a hardship to many to have only the heavens for a roof. Generally their towns were expected to keep them supplied with food. . . . The forces then mustered at Cambridge as a central camp, and, stretching from the left at Chelsea almost round to Dorchester on the right, for nearly three quarters of a circle, were indeed not organized, nor yet had they any characteristic of

a mere mob. They combined in fact four independent armies, united in resistance to a foreign enemy. . . . Each of the Provinces had raised, commissioned, and assumed the supply of its respective forces, holding them subject to their several orders. After the battle in Charlestown, the Committee of War in Connecticut ordered their generals, Spencer and Putnam, while they were on the territory of this Province, to regard General Ward as the commander-in-chief, and suggested to Rhode Island and New Hampshire to issue the same instructions to their soldiers. . . . General Artemas Ward was a conscientious and judicious patriot. In the French war he had earned some military experience and fame. . . . On October 27, 1774, the Provincial Congress, in which he was a delegate, appointed him a general officer, and on May 19 following, Commander-in-chief. As such he served at Cambridge till the arrival of Washington. On the very day of the battle in Charlestown, when the great chieftain was selected for his high service, Ward was chosen by the Continental Congress as its first major-general. Though he was only in his 48th year when he was burdened with the responsibility of the opening warfare, his body was infirm from disease and exposure. Lieutenant-General Thomas, two years the senior of Ward, was second in command. . . . General Israel Putnam preceded his Connecticut troops in hurrying to the scene of war on the news of the affair at Lexington and Concord. His men soon followed him, with like enthusiasm. The New Hampshire troops, on their arrival at Medford, made choice of Colonel John Stark as their leader. Colonel Nathaniel Greene commanded a regiment from Rhode Island. . . . A few days after the affair at Lexington, when virtually the siege began, General Gage, the British commander, at the solicitation of some of the leading citizens assembled in Faneuil Hall, had, by a mutual understanding, entered into an agreement that such of the inhabitants as wished to depart from the town should be at liberty to do so, if they would leave their arms behind them and covenant not to engage in any hostility against his army. The agreement was availed of by many of the suffering and frightened people. . . . But the original freedom and fullness of this understanding, on the part of General Gage, were soon reduced by a very strict examination of those who sought to go out of the town, and by a rigid search of the effects which they wished to take with them. . . . Several of the inhabitants remained in it from different motives: some as devoted loyalists; some as timid neutrals; some as spies, to watch each hostile movement and to communicate it to their friends outside. . . . After hostilities commenced, General Gage, of course, regarded the citizens as alike prisoners, either in the same sense in which he was himself under restraint, or as abettors of those who were his enemies. . . . The population of the town, independent of the military, was then about 18,000. To all those who were not in sympathy with them the British behaved in an insulting and exasperating manner. . . . To show, as members of the English Church establishment, their contempt of congregational places of worship, they removed the pews and pulpit from the Old South meeting-house, and, covering the floor with earth, they converted it into a riding-school for Burgoyne's squadron of

cavalry. The two eastern galleries were allowed to remain, one for spectators, the other for a liquor-shop, while the fire in the stove was occasionally kindled by books and pamphlets from the library of a former pastor, Dr. Prince, which were in a room in the tower. . . . At the time of the skirmishes at Lexington and Concord there were about 4,000 British troops in Boston and at the Castle. The number was increased to more than 10,000 before the action in Charlestown."—G. E. Ellis, *Hist. of the Battle of Bunker's Hill*, pp. 4-26.

A. D. 1775 (April—June).—The spreading of revolt.—All the colonies in line with New England.—“On the 23d of April, the day after the dissolution of the provincial Congress of New York, the news from Lexington burst upon the city. Though it was Sunday, the inhabitants speedily unloaded two sloops which lay at the wharfs, laden with flour and supplies for the British at Boston, of the value of £80,000. . . . The royal government lay hopelessly prostrate. Isaac Sears concerted with John Lamb to stop all vessels going to Quebec, Newfoundland, Georgia, or Boston, where British authority was still supreme. The people shut up the custom-house, and the merchants whose vessels were cleared out dared not let them sail. In the following days the military stores of the city of New York were secured, and volunteer companies paraded in the streets. . . . On the 1st of May the people, at the usual places of election, chose for the city and county a new general committee of one hundred, who ‘resolved in the most explicit manner to stand or fall with the liberty of the continent.’ All parts of the colony were summoned to send delegates to a provincial convention, to which the city and county of New York deputed one-and-twenty as their representatives. . . . On the 2d of May the New Jersey committee of correspondence called a provincial congress for the 23d at Trenton. To anticipate its influence, the governor convened the regular assembly eight days earlier at Burlington, and laid before them the project of Lord North [adopted by the British parliament in February, offering to each colony freedom from taxation on its making satisfactory provision for the general defense and for support of government]. The assembly could see in the proposition no avenue to reconciliation, and declared their intention to ‘abide by the united voice of the continental congress.’ Such, too, was the spirit of Pennsylvania. ‘Let us not have it said of Philadelphia that she passed noble resolutions and neglected them,’ were the words of Mifflin, youngest of the orators who on the 25th of April addressed the town-meeting called in that city on receiving the news from Lexington. Thousands were present, and agreed ‘to associate for the purpose of defending with arms their lives, their property, and liberty.’ Thomas Paine from that day ‘rejected the sullen Pharaoh of the British throne forever.’ . . . In Philadelphia, thirty companies, with 50 to 100 in each, daily practiced the manual exercise of the musket. One of them was raised from the Quakers. . . . The Pennsylvania assembly, which met on

the first day of May, rejecting the overtures of the governor, ‘could form no prospect of lasting advantages for Pennsylvania but from a communication of rights and property with the other colonies.’ . . . On the 5th Franklin arrived, after a voyage over the smoothest seas, and the next morning was unanimously elected a deputy to the congress. . . . In Maryland, at the request of the colonels of militia, Eden, at Annapolis, gave up the arms and ammunition of the province to the freemen of the county. Pleased with his concession, the provincial convention distinguished itself by its moderation; and its delegates to congress determined to labor for a reconciliation. In Virginia [where, in the night of April 20th, Governor Dunmore had carried off the gunpowder stored in the colony’s magazine at Williamsburg, and where, as a consequence, the excited people were already in arms, though no further action had yet been taken], on the 2d of May, at the cry from Lexington, the independent company of Hanover and its county committee were called together by Patrick Henry. The soldiers, most of them young men, elected him their chief, and marched for Williamsburg, on the way greatly increasing in numbers. Alarmed by the ‘insurrections,’ Dunmore convened the council, and in a proclamation of the 3d pretended that he had removed the ammunition, lest it should be seized by slaves. Message after message could not arrest the march or change the purpose of Henry. . . . At sunrise on the 4th the governor’s messenger met Henry at New Kent, and, as a compensation for the gunpowder taken out of the magazine, paid him £300, for which he was to account to the convention of Virginia. The sum was found to be more than the value of the powder, and the next Virginia convention directed the excess to be paid back. . . . In twelve or thirteen days the message from Lexington was borne to Newbern, in North Carolina, where it ‘wrought a great change.’ The governor, in his panic, ordered the cannon in the town to be dismantled; and, after a remonstrance made in the name of the inhabitants by Abner Nash, ‘the oracle of their committee and a principal promoter of sedition,’ he shipped his wife to New York and fled to Fort Johnston, where a sloop-of-war had his station. In South Carolina, Charles Pinckney, on learning the inflexibility of parliament, using power intrusted to him by the provincial congress, appointed a committee of five to place the colony in a state of defence; on the 21st of April, the very night after their organization, men of Charleston, without disguise, under their direction, seized all the powder in the public magazines, and removed 800 stand of arms and other military stores from the royal arsenal. The tidings from Lexington induced the general committee to hasten the meeting of the provincial congress, whose members, on the 2d of June, Henry Laurens being their president, associated themselves for defence against every foe; ‘ready to sacrifice their lives and fortunes to secure her freedom and safety.’ They resolved to raise two regiments of infantry and a regiment of rangers. . . . ‘The people of Charleston are as mad as they are here in Boston,’ was the testimony of Gage. The skirmish at Lexington became known in Savannah on the 10th of May, and added Georgia to the union. At that time she had about 17,000 white inhabitants and 15,000 Africans. Her militia was not

less than 3,000. Her frontier, which extended from Augusta to St. Mary's, was threatened by the Creeks, with 4,000 warriors; the Chickasas, with 450; the Cherokees, with 3,000; the Catactas, with 2,500. But danger could not make her people hesitate. On the night of the 11th, Noble Wimberley Jones, Joseph Habersham, Edward Telfair, and others, broke open the king's magazine in the eastern part of the city, and took from it over 500 pounds of powder. To the Boston wanderers they sent 63 barrels of rice and £122 in specie; and they kept the king's birthday by raising a liberty-pole."—G. Bancroft, *Hist. of the U. S. (Author's last revision), v. 4, ch. 11.*

A. D. 1775 (May).—The surprising of Ticonderoga and Crown Point.—“Early in the year 1775, as soon as it was made manifest by the attitude assumed on the part of the British government against the colonies, and by the conduct of General Gage in Boston, that open hostilities must inevitably commence in a short time, it began to be secretly whispered among the principal politicians in New England that the capture of Ticonderoga was an object demanding the first attention. In the month of March, Samuel Adams and Dr. Joseph Warren, as members of the Committee of Correspondence in Boston, sent an agent privately into Canada, on a political mission, with instructions to ascertain the feelings of the people there in regard to the approaching contest, and to make such reports as his observations should warrant. . . . This agent sent back intelligence from Montreal, and among other things advised, that by all means the garrison of Ticonderoga should be seized as quickly as possible after the breaking out of hostilities, adding that the people of the New Hampshire Grants had already agreed to undertake the task, and that they were the most proper persons to be employed in it. This hint was given three weeks anterior to the battle of Lexington, and how far it influenced future designs may not be known; but it is certain that, eight days after that event, several gentlemen at that time attending the Assembly in Hartford, Connecticut, concerted a plan for surprising Ticonderoga and seizing the cannon in that fortress, for the use of the army then marching from all quarters to the environs of Boston.”—J. Sparks, *Life of Ethan Allen (Library of Am. Biog., v. 1), p. 270.*—The gentlemen above mentioned “borrowed of the Connecticut Treasury some 1,800 dollars, and enlisted Mott and Phelps of Hartford, and Blagden of Salisbury, to beat up recruits. With these they went northward, and at Pittsfield got the co-operation of Captains Easton and Brown. No time was to be lost, and they pushed on with some forty men to find that Vermont giant, Ethan Allen, at Bennington. Allen at once agreed to go; he sought out Seth Warner, and roused the ‘Green Mountain Boys,’ who were mostly Connecticut and Massachusetts men; so that, in a few days, there gathered at Castleton (7th of May, 1775) two hundred and seventy strong men. Allen was their first leader, Easton second, and Warner

third. Their larger body was to cross the Lake in boats from Shoreham, and surprise ‘Ty.’ Captain Herrick, with thirty men, was to seize the pass of Skenesborough (now Whitehall) at the head of the Lake, and Captain Douglass was to search for and seize all boats and batteaux. While these things were in progress, the ambitious, active, and daring Benedict Arnold heard of this expedition, and at once got leave from the Committee of Safety at Cambridge, to lead it. He rode post-haste through Massachusetts to raise men, and, with a single follower, reached Castleton, and claimed the command. These rough cubs of the forest could not well understand why he should lead them, for had they not Allen, and Warner, and Easton, and Phelps, and Biggelow, and others? But they consented that he should join Allen as an equal; and so forward they went. On the 8th of May Captain Noah Phelps, disguised with rough farmer clothes, and a long beard, blundered into the fort at Ticonderoga, pretending he wanted to be shaved. He found the gates open, and discipline loose; for no telegraph had carried the Lexington news to them, nor had the winds wafted the smell of blood, or the sounds of muskets there. When the darkness was deepest on the night of the 9th, Allen and Arnold, with 83 men, pulled across the Lake, landed near the fort, and then sent back the boats for Warner and his men. They had a boy, Nathan Beman, for a guide, and were full of courage. Allen formed his men, made them a little speech, and all was ready, when the question arose as to who should have the honor of entering the fort first. The dispute was warm between Arnold and Allen, but was finally quieted; and, side by side, at daylight, they rushed through the gate of the fort, defended only by sleeping men. The sentinel snapped his musket, and ran, giving the alarm; the garrison hastily turned out, to find themselves in the face of superior numbers. Allen sought and found the Commander's bed-room, and when Captain Delaplace waked, he saw any thing but an Angel of Mercy with white wings. Delaplace opened the door, with trowsers in hand, and there the great gaunt Ethan stood, with a drawn sword in his hand. ‘Surrender!’ said Ethan. ‘To you?’ asked Delaplace. ‘Yes, to me, Ethan Allen.’ ‘By whose authority?’ asked Laplace. Ethan was growing impatient, and raising his voice, and waving his sword, he said: ‘In the name of the Great Jehovah, and of the Continental Congress, by God!’ Delaplace little comprehended the words, but surrendered at once. Thus, on the morning of 10th of May, the strong fortress of Ticonderoga was taken by the border-men, and with it 44 prisoners, 120 iron cannon, with swivels, muskets, balls, and some powder, without the loss of a single man. The surprise was planned and paid for by Connecticut, and was led by Allen, a Connecticut-born man, but was carried out by the ‘Green Mountain Boys.’ Skenesborough (Whitehall) was surprised and seized, while Major Skene was out shooting. Arnold at once manned a schooner, taken at Skenesborough, and led an attack against an armed sloop at St. John's; he took her and the place, and returned in triumph to meet Allen, who, in batteaux, was coming to sustain him. Warner led a party against Crown Point, and took it, with its hundred cannon, and small garrison of 12 men.

News of these things was carried to the Continental Congress, reassembled at Philadelphia, which caused almost as much surprise there, as Allen's demand did to Captain Delaplace, and more exultation. They requested the Committee of Safety of New York and Albany, to have an inventory made of the stores, so that they might be returned 'when the restoration of harmony between Great Britain and the Colonies' should render it safe."—C. A. D. 1775 (May—August).—The Second Continental Congress and its work.—Its powers, theoretical and actual.—Its opportunity.—Its influence.—The New England Army adopted as the "Continental Army," and Washington made Commander-in-chief.—"The second General Congress assembled at Philadelphia on the 10th of May. Peyton Randolph was again elected as president; but being obliged to return, and occupy his place as speaker of the Virginia Assembly, John Hancock, of Massachusetts, was elevated to the chair. . . . Many of those most active in vindicating colonial rights, and Washington among the number, still indulged the hope of an eventual reconciliation, while few entertained, or, at least, avowed the idea of complete independence. A second 'humble and dutiful' petition to the king was moved, but met with strong opposition. John Adams condemned it as an imbecile measure, calculated to embarrass the proceedings of Congress. He was for prompt and vigorous action. Other members concurred with him. Indeed, the measure itself seemed but a mere form, intended to reconcile the half-scrupulous; for subsequently, when it was carried, Congress, in face of it, went on to assume and exercise the powers of a sovereign authority. A federal union was formed, leaving to each colony the right of regulating its internal affairs according to its own individual constitution, but vesting in Congress the power of making peace or war; of entering into treaties and alliances; of regulating general commerce; in a word, of legislating on all such matters as regarded the security and welfare of the whole community. The executive power was to be vested in a council of twelve, chosen by Congress from among its own members, and to hold office for a limited time. Such colonies as had not sent delegates to Congress might yet become members of the confederacy by agreeing to its conditions. Georgia, which had hitherto hesitated, soon joined the league, which thus extended from Nova Scotia to Florida. Congress lost no time in exercising their federated powers. In virtue of them, they ordered the enlistment of troops, the construction of forts in various parts of the colonies, the provision of armies, ammunition, and military stores; while, to defray the expense of these, and other measures, avowedly of self-defence, they authorized the emission of notes to the amount of \$3,000,000, bearing the inscription of 'The United Colonies'; the faith of the confederacy being pledged for their redemption. A retaliating decree was passed, prohibiting all supplies of

provisions to the British fisheries; and another, declaring the province of Massachusetts Bay absolved from its compact with the crown, by the violation of its charter; and recommending it to form an internal government for itself. . . . The situation of the New England army, actually besieging Boston, became an early and absorbing consideration. It was without munitions of war, without arms, clothing, or pay; in fact, without legislative countenance or encouragement. Unless sanctioned and assisted by Congress, there was danger of its dissolution. . . . The disposition to uphold the army was general; but the difficult question was, who should be commander-in-chief? . . . The opinion evidently inclined in favor of Washington; yet it was promoted by no clique of partisans or admirers. More than one of the Virginia delegates, says Adams, were cool on the subject of this appointment. . . . Adams, in his diary, claims the credit of bringing the members of Congress to a decision. . . . On the 15th of June, the army was regularly adopted by Congress, and the pay of the commander-in-chief fixed at \$500 a month. Many still clung to the idea, that in all these proceedings they were merely opposing the measures of the ministry, and not the authority of the crown, and thus the army before Boston was designated as the Continental Army, in contradistinction to that under General Gage, which was called the Ministerial Army. In this stage of the business, Mr. Johnson, of Maryland, rose, and nominated Washington for the station of commander-in-chief. The election was by ballot, and was unanimous. It was formally announced to him by the president, on the following day, when he had taken his seat in Congress. Rising in his place, he briefly expressed his high and grateful sense of the honor conferred on him, and his sincere devotion to the cause. 'But,' added he, 'lest some unlucky event should happen unfavorable to my reputation, I beg it may be remembered by every gentleman in the room, that I this day declare, with the utmost sincerity, I do not think myself equal to the command I am honored with. As to pay, I beg leave to assure the Congress that, as no pecuniary consideration could have tempted me to accept this arduous employment, at the expense of my domestic ease and happiness, I do not wish to make any profit on it. I will keep an exact account of my expenses. Those, I doubt not, they will discharge, and that is all I desire.'" Four major-generals,—Artemas Ward, Charles Lee, Philip Schuyler and Israel Putnam,—and eight brigadier-generals—Seth Pomeroy, Richard Montgomery, David Wooster, William Heath, Joseph Spencer, John Thomas, John Sullivan, and Nathaniel Greene—were appointed. "At Washington's express request, his old friend, Major Horatio Gates, then absent at his estate in Virginia, was appointed adjutant-general, with the rank of brigadier."—W. Irving, *Life of Washington*, v. 1, ch. 33.—"The Congress of 1775 was not content with mere expression of opinions. It took a large view of its powers. It realized that its efficiency depended wholly upon the acceptance of its acts by the principals of the different delegations; but, following its judgment as to what the patriotism of the colonies would approve and sustain, it initiated action of various kinds, which, from the beginning, assumed the certainty of adoption by the colo-

bles, and derived all its energy from the probability of such ratification. The Congress doubtless exceeded the letter of the instructions received by a portion of its members; but this was not from any misconception of those instructions. . . . In pointing out to the colonies the direction which their preparations for resistance ought to take, the Congress no more acted upon an imagined authority to command the colonies than does the lookout at the bow of the ship, when he reports the direction of danger to the officer of the deck. The Congress unquestio...ly enjoyed a prestige at this juncture which it subsequently lost. The people, and even the provincial conventions, occasionally addressed it in a tone which indicated that they unconsciously attributed to it power which it plainly did not possess."—A. W. Small, *The Beginnings of Am. Nationality* (Johns Hopkins Univ. Studies, 8th series, 1-2) p. 73.—“With the energy and recklessness of a French revolutionary body it might have blotted out the distinctions between colonies, and established a centralized government, to be modified in time by circumstances. In fact, it took no such direction. It began its course by recommendations to the new colonial governments; it relied on them for executive acts; and, as soon as the new colonies were fairly under way, they seized on the power of naming and recalling the delegates to the Congress. From that time the decadence of the Congress was rapid; the national idea became dimmer; and the assertions of complete sovereignty by the political units became more pronounced.”—A. Johnston, *The United States: its History and Constitution*, sect. 63-66 (ch. 3).

A. D. 1775 (June).—The Battle of Bunker Hill.—“British reinforcements, under three generals, Howe, Clinton, and Burgoyne, arrived at Boston soon after the fight at Lexington. Gage had now about 10,000 men. These occupied the town of Boston, which lay on a peninsula covering the middle of the harbor. Around them, on the hills of the mainland, there were about twice their number of undisciplined and poorly-armed Americans, without cannon and almost without food. Just north of Boston, another peninsula ran out into the harbor. On it there were several hills, and the Americans determined to seize and fortify one of them, called Bunker Hill. About 1,000 men, under Colonel Prescott, were sent into the peninsula for this on a suitable night. For some reason, they passed beyond Bunker Hill, and seized Breed's Hill, much closer to Boston. Breed's Hill is now usually called Bunker Hill, and the Bunker Hill monument is erected upon it. The American fortification was continued silently and swiftly through the night. In the morning of June 17, 1775, the British in Boston woke to see a long line of intrenchments running across the hill above them, and an American working-party busily strengthening it. For a time, the British frigates in the harbor kept up a slow and distant fire, to which

the working-party paid no attention; but at noon the work was stopped, for the British troops were coming across the harbor in boats. Three thousand well armed, uniformed, and drilled soldiers, who had never known defeat in equal fight, landed near Charlestown, under General Howe. Here they formed at the water-side, and in a long, steady line began to move upward to scatter the 1,500 farmers who were watching them from the top of the hill. From the roofs of the houses in Boston, the rest of the British army and the townspeople were watching, anxious to see 'whether the Yankees would fight.' Most of the watchers expected to see the untrained soldiers in the fort fire a few hasty shots at a safe distance, and run. The fort held a threatening silence until the attacking column was within 150 feet. Then, at the word, came a sheet of fire from the marksmen within; and, when the sun ke lifted, part of the British line was lying dead or wounded, and the rest were retreating hastily down the hill. The British were not cowards: the officers re-formed the line at the bottom of the hill, and, after setting fire to Charlestown, again advanced to the attack. Again there was a steady silence in the fort, a close and deadly fire, and the British line was driven down the hill again. The British then moved up the hill for the third time. The powder in the fort was now gone, and the garrison fought for a few minutes with gunstocks and stones against the British bayonets. But such a struggle was hopeless, and the British gained the fort. They were too tired to pursue the garrison, who escaped to the mainland.”—A. Johnston, *Hist. of the U. S. for schools*, s. v. 105-107.—“As soon as Prescott saw the defence was hopeless, he ordered a retreat, and friend and foe mingled together as they surged out of the sally-port amid the clouds of dust which the trampling raised, for a scorching sun had baked the new-turned soil. It was now, while the confused mass of beings rocked along down the rear slope of the hill, that Warren [who had joined the defending force that morning as a volunteer] fell, shot through the head. No one among the Americans knew certainly that he was dead, as they left him. . . . Prescott did not conceal his indignation at not having been better supported, when he made his report at Ward's headquarters. He knew he had fought well; but neither he nor his contemporaries understood at the time how a physical defeat might be a moral victory. Not knowing this, there was little else than mortification over the result,—indeed, on both sides. . . . The general opinion seems to be that the Americans had about 1,500 men engaged at one time, and that from 3,000 to 4,000 at different times took some part in it. The British had probably about the same numbers in all, but were in excess of the Americans at all times while engaged. The conflict with small arms lasted about ninety minutes.”—J. Winsor, *The Conflict Precipitated* (*Narrative and Critical Hist. of Am.*, v. 6, ch. 2).—“How can we exaggerate the relative importance of this day's action? Did it not, in fact, not only open, but make the contest, dividing into two parties not only those determined for the ministry or for enfranchisement, but also all timid, hesitating, reluctant neutrals? It was impossible after this to avoid taking a side. It rendered all reconciliation impossible, till it

should offer itself in the shape of independence. It echoed the gathering cry that brought together our people from their farms and workshops, to learn the terrible art which grows more merciful only as it is more ferociously, that is, skilfully, pursued. The day needs no rhetoric to magnify it in our revolutionary annals. When its sun went down, the provincials had parted with all fear, hesitation, and reluctance. They found that it was easy to fight. . . . General Gage's account of the battle, acknowledging the loss of 226 killed and 828 wounded, was received in London, July 25th. While the ministry received with dismay this official intelligence, and kept it back from publication, many private letters accompanying it in its transit anticipated with exaggerations its humiliating details."—G. E. Ellis, *Hist. of the Battle of Bunker's Hill*, pp. 102-105.

A. D. 1775 (August—December).—Unsuccessful expedition to Canada.—"The exploits of Allen and Arnold at Ticonderoga . . . had invited further conquests; but the Continental Congress hesitated to take any steps which might seem to carry war across the line till the Canadians had the opportunity of casting in their lot with their neighbors. On the 1st of June, 1775, Congress had distinctly avowed this purpose of restraint; and they well needed to be cautious, for the Canadian French had not forgotten the bitter aspersions on their religion which Congress had, with little compunction, launched upon its professors, under the irritation of the Quebec Act. Still their rulers were aliens, and the traditional hatred of centuries between races is not easily kept in abeyance. Ethan Allen was more eager to avail himself of this than Congress was to have him; and the march of events converted the legislators, and the opportunity which Allen grieved to see lost was not so easily regained when Congress at last authorized the northern invasion. Arnold and Allen had each aimed to secure the command of such an expedition, the one by appealing to the Continental Congress, the other by representations to that of New York. Allen had also gone in person to Philadelphia, and he and his Green Mountain Boys were not without influence upon Congress, in their quaint and somewhat rough ways, as their exuberant patriotism later made the New York authorities forget their riotous opposition to the policy which that province had been endeavoring to enforce in the New Hampshire Grants. Connecticut had already sent forward troops to Ticonderoga to hold that post till Congress should decide upon some definite action; and at the end of June, 1775, orders reached Schuyler which he might readily interpret as authorizing him, if the Canadians did not object, to advance upon Canada. He soon started to assume command, but speedily found matters unpromising. The Johnsons were arming the Indians up the Mohawk and beyond in a way that boded no

good, and they had entered into compacts with the British commanders in Canada. Arnold had been at Ticonderoga, and had quarrelled with Hinman, the commander of the Connecticut troops. Schuyler heard much of the Green Mountain Boys, but he only knew them as the lawless people of the Grants, and soon learned that Allen and Warner had themselves set to quarrelling. . . . In August the news from Canada began to be alarming. Richard Montgomery, an Irish officer who had some years before left the army to settle on the Hudson and marry, was now one of the new brigadiers. He urged Schuyler to advance and anticipate the movement now said to be intended by Carleton, the English general commanding in Canada. At this juncture Schuyler got word from Washington that a co-operating expedition would be dispatched by way of the Kennebec, which, if everything went well, might unite with Schuyler's before Quebec."—J. Winsor, *The Conflict Precipitated* (*Narr. and Crit. Hist. of Am.*, v. 6).—The two movements were made, from Ticonderoga and from the Kennebec, with results which will be found related under CANADA: A. D. 1775-1776. "No expedition during the American Revolution had less elements of permanent value than those which were undertaken against Canada during the year 1775. Great results were anticipated, but none were realized. The obstacles were too substantial, and failure was inevitable. Wonderful endurance and great physical courage were manifested, and these were accompanied by a prodigious amount of faith, but there was neither ability nor opportunity for works commensurate with the faith. Certain Acts of Parliament, known as the Canadian Acts, were as offensive to Canadians as other legislation was to Americans; but the former were not pressed to the extremity of armed resistance. The people themselves having no harmony of religious or political views, were equally divided in language and race. Neither did the Canadians invite the aid of the colonies. The hypothesis that Canada would blend her destiny with that of New England, and would unite in resistance to the crown, certainly involved some identity of interest as well as of action. But the characters of the two people were too unlike to be unified by simple opposition to English legislation, and Canadians had no antecedents such as would prompt a hearty sympathy with New England and its controlling moral sentiment. Neither was there such a neighborly relation as admitted of prompt and adequate aid from one to the other, in emergencies calling for a combined effort. As a base of operations for a British army moving upon the colonies, Canada had the single advantage of being less distant from England than an Atlantic base, and many supplies could be procured without the expense and delay of their transportation across the Atlantic; but between Canada and the American colonies there was an actual wilderness. Hence a British offensive movement from Canada involved constant waste of men and materials, a deep line through an uninhabited or hostile region, and such a constant backing, as was both inconsistent with the resources of the base, and with a corresponding support of armies resting upon the sea coast. The British government was not ready for operations so extensive and so exhaustive of men and treasure; neither

did it realize the necessity for that expenditure. There were two alternatives, one illustrated by General Carleton's plan, viz., to hold the forts of Lake Champlain, as advanced, defensive positions; and the other, that of Burgoyne, to strike through the country and depend upon support from the opposite base. The true defense of the colonies from such expeditions depended upon the prompt seizure and occupation of the frontier posts. An American advance upon Canada was not only through a country strategically bad, but the diversion of forces for that purpose endangered the general issue, and entrusted its interests to the guardianship of an army already insufficient to meet the pressing demands of the crisis. The occupation of New York in 1775, by an adequate British force, would have infinitely outweighed all possible benefit from the complete conquest of Canada. At the very time when Washington could hardly hold the British garrison of Boston in check,—when he had an average of but nine rounds of ammunition per man, he was required to spare companies, ammunition, and supplies for a venture, profitless at best,—with the certainty that reinforcements could not be supplied as fast as the enemy could draw veteran regiments from Great Britain and Ireland, to defend or recover Canadian soil. In giving a rapid outline of this first attempt of the colonies to enlarge the theatre of active operations, it should be noticed that the initiative had been taken before General Washington had been elected commander-in-chief, and that Congress itself precipitated the final movement.—H. B. Carrington, *Battles of the Am. Rev.*, ch. 19.

A. D. 1775 (September).—Flight of Governor Tryon from New York. See NEW YORK: A. D. 1775 (APRIL—SEPTEMBER).

A. D. 1775-1776.—Washington in command at Cambridge.—The British forced out of Boston.—Washington "arrived in Cambridge, Massachusetts, on the 2d of July [1775], and on the following day presented himself at the head of the army. His head-quarters remained at Cambridge, till the evacuation of Boston by the royal forces on the 17th of March, 1776. The position of affairs was one of vast responsibility and peril. The country at large was highly excited, and expected that a bold stroke would be struck and decisive successes obtained. But the army was without organization and discipline; the troops unused to obey, the officers for the most part unaccustomed, some of them incompetent, to command. A few of them only had had a limited experience in the Seven Years' War. Most of the men had rushed to the field on the first alarm of hostilities, without any enlistment; and when they were enlisted, it was only till the end of the year. There was no military chest; scarce anything that could be called a commissariat. The artillery consisted of a few old field-pieces of various sizes, served with a very few exceptions by persons wholly untrained in gunnery. There was no siege train, and an almost total want of every description of ordnance

stores. Barrels of sand, represented as powder, were from time to time brought into the camp, to prevent the American army itself from being aware of its deficiency in that respect. In the autumn of 1775, an alarm of small-pox was brought from Boston, and the troops were subjected to inoculation. There was no efficient power, either in the Provincial Assembly or the Congress at Philadelphia, by which these wants could be supplied and these evils remedied. Such were the circumstances under which General Washington took the field, at the head of a force greatly superior in numbers to the royal army, but in all other respects a very unequal match. Meantime the British were undisputed masters of the approaches to Boston by water. Washington's letters disclose extreme impatience under the inaction to which he was condemned; but the gravest difficulties attended the expulsion of the royal forces from Boston. It could only be effected by the bombardment and assault of that place; an attempt which must in any event have been destructive to the large non-combatant population, that had been unable to remove into the country, and which would have been of doubtful success, for the want of a siege train, and with troops wholly unused to such an undertaking. Having in the course of the year received some captured ordnance from Canada [from Fort Ticonderoga], and a supply of ammunition taken by privateers at sea, Washington was strongly disposed to assault the town, as soon as the freezing of the bay on the western side of the peninsula would allow the troops to pass on the ice. The winter, however, remained open longer than usual, and a council of war dissuaded this attempt. He then determined to occupy Nook's Hill (an eminence at the extremity of Dorchester 'Neck,' as it was called, separated from Boston by a narrow arm of the harbor), and Dorchester Heights, which commanded Nook's Hill and the town itself. In this way the royal forces would be compelled to take the risk of a general action, for the purpose of dislodging the Americans, or else to evacuate the town. The requisite preparations having been made with secrecy, energy, and despatch, the heights were covered with breastworks on the night of the 4th of March, 1776, as 'by enchantment.' A partial movement, undertaken by the royal army to dislodge the Americans, was frustrated by stress of weather; and on the 17th of March, in virtue of an agreement to that effect with the municipal government, the town and harbor of Boston were evacuated by the British army and navy without firing a gun. Thus, without a battle and without the destruction of a building in Boston, the first year of the war was brought to a successful and an auspicious close."—E. Everett, *Life of Washington*, ch. 5.

A. D. 1775-1776.—The beginning of the American Navy, and the early fitting out of Privateers.—"Before the end of 1775 the Continental Congress ordered that five ships of 32 guns should be built, five of 28, and three of 24. This order was carried out, and these vessels are the proper beginning of the navy of the United States. Almost every one of them, before the war was over, had been captured, or burnt, to avoid capture. But the names of the little fleet

will always be of interest to Americans, and some of those names have always been preserved on the calendar of the navy. They are the 'Washington,' 'Raleigh,' 'Hancock,' 'Randolph,' 'Warren,' 'Virginia,' 'Trumbull,' 'Esfingham,' 'Congress,' 'Providence,' 'Boston,' 'Delaware,' 'Montgomery.' The State of Rhode Island, at the very outbreak of hostilities, commissioned Abraham Whipple, who went with his little vessel as far as Bermuda, and, from his experience in naval warfare earned in the French War, he was recognized as commodore of the little fleet of American cruisers. . . . Meanwhile, every maritime State issued commissions to privateers, and established admiralty or prize courts, with power to condemn prizes when brought in. Legitimate commerce had been largely checked, and . . . the seamen of the country, who had formerly been employed in the fisheries, or in our large foreign trade with the West India Islands and with Europe, gladly volunteered in the private service. Till the end of the war the seamen preferred the privateer service to that of the government. . . . The larger maritime States had in commission one or more vessels from the beginning, but they found the same difficulty which the Congress found in enlisting seamen, when any bold privateer captain came into rivalry with them. . . . As early as the 22d of December, in 1775, Congress had appointed Esek Hopkins, of Rhode Island, commander-in-chief of its navy, and had named four captains besides, with several lieutenants, the first of whom was John Paul Jones. . . . On the 10th of October [1776] a resolution of Congress fixed the rank of captains in the navy, . . . Paul Jones eighteenth on a list of twenty-four. Jones was not pleased that his rank was not higher, but eventually his achievements were such that his reputation probably now stands higher as a successful officer than that of any of the number."—E. E. Hale, *Naval Hist. of the Am. Rev. (Narrative and Critical Hist. of Am. v. 6, ch. 7).*

A. D. 1776 (January—June).—King George's war measures and Paine's "Common Sense."—The setting of the tide of opinion toward national independence.—"Disastrous news arrived from England before the close of the winter of 1775-6. The King had opened Parliament with a speech in which he had denounced the Colonists as rebels, seeking, with deceitful pretences, to establish an independent empire; and his Majesty recommended decisive, coercive measures against them. . . . The answer to the Royal Address (adopted by a vote of seventy-six to thirty-three in the Lords, and two hundred and seventy-eight to one hundred and eight in the Commons) gave assurances of the firm support of Parliament to the proposed measures. The very moderately conciliatory propositions made by the Duke of Richmond, Mr. Burke, and the Duke of Grafton, were summarily voted down, and not far from the middle of December the atrocious 'Prohibitory Act,' as it was generally designated, passed. It was, in effect, a declaration of war, and a war unrestrained by the customs, and unmitigated by the decencies

of civilization. It authorized the confiscation of American vessels and cargoes, and those of all nations found trading in American ports. It authorized British commanders to impress American crews into the British Navy, and to place them on the same footing with voluntarily enlisted seamen; that is, to give them a choice between paricide and being hung at a yard-arm! Finally, it referred all future negotiations to two Commissioners, to be sent out along with a conquering armament, who were allowed to grant pardons to individuals and Colonies, on submission, thus leaving no future alternative opposed to the latter but the sword, and indicating that henceforth all appeals to King or Parliament were cut off. . . . Concurrently with these legislative steps, the practical ones for carrying on the war, with a large army, were entered upon. Finding it difficult or impossible to obtain the necessary recruits at home, and that the existing English and Irish regiments embarked with such reluctance that it was necessary to keep a guard upon the transports 'to keep them from deserting by wholesale,' the Ministry successively applied to Russia, the States-General, and finally, several of the German States for mercenaries. . . . The infamy of filling up the British armament was reserved for the Princes of three or four petty German States. . . . As the news of these events successively reached the American Congress and people, in the winter and spring of 1775-6, the contest took a new coloring. Not only the bold, but the moderate began now to see the real alternative before them. And at a critical moment the remedy, and the path to it, were pointed out by a master hand. 'Common Sense' was published by Thomas Paine, and a more effective popular appeal never went to the bosoms of a nation. Its tone, its manner, its biblical allusions, its avoidance of all openly impassioned appeals to feeling, and its unanswerable common sense were exquisitely adapted to the great audience to which it was addressed; and calm investigation will satisfy the historical student that its effect in preparing the popular mind for the Declaration of Independence, exceeded that of any other paper, speech, or document made to favor it, and it would scarcely be exaggeration to add, than all other such means put together. John Adams, with a childish petulance, and with a rancor so vehement that it appears 'ridiculous, spares no occasion to underrate Paine's services, and to assault his opinions and character. . . . His transparent motive seems to be to decry the author of a paper which had too much the credit of preparing the public mind for the Declaration of Independence, a credit which Mr. Adams was more than anxious to monopolize. Let us be just. Paine's services in paving the way to the Declaration are not to be mentioned on the same page with John Adams's. Moreover, Independence would have been declared, and, perhaps, nearly as early, had Paine never written. But he did, at a propitious moment, and with consummate adaptation, write a paper which went like the arrow which pierces the centre of the target. Its effect was instantaneous and tremendous. . . . The work ran through innumerable editions in America and France. The world rung with it. . . . It admits of no doubt that pretty early in 1776, all the true Whigs in Congress, moderates as well as ultras, became satis-

fied of the necessity and expediency of separation, and that henceforth it was only a question of time with them. Enactments placing the struggle on the footing of open war, instead of mere insurrection—issuing letters of marque and reprisal against the enemies of our commerce—advising the local authorities to disarm the disaffected—opening the ports of the country to all nations but Great Britain—directing negotiations for foreign alliances to be undertaken—were successively made. Finally, on the 10th of May, a resolution, prepared by John Adams and R. H. Lee, passed the House, advising all the Colonies to form governments for themselves; and in this, unlike preceding instances of giving advice on the same subject, no limitation of the duration of the governments to be formed 'to the continuance of the present dispute' was inserted. This, with a befitting preamble, written by John Adams, was adopted on the 15th, . . . and was, obviously, a long and bold stride in the direction of independence, and must have been understood by all as its signal and precursor. . . . Congress cheered on those whom peculiar circumstances had rendered more backward, and it tarried for them a little by the way; on the other hand, it prudently waited for the prompting of the more forward. Thus it avoided the appearance of dominating over public opinion—the thus it 'kept front and rear together.' Early in April (12th), North Carolina 'empowered' her delegates 'to concur with the delegates of other Colonies in declaring independency.' At its 'May session' (the day of the month not appearing in the record under our eye), the General Assembly of Rhode Island abolished its act of allegiance, and directed all commissions and legal processes henceforth to issue in the name and under the authority of the 'Governor and Company.' The Connecticut General Assembly, which met on the 9th of May, before its adjournment (date not before us), repealed its act against high treason, and made the same order with Rhode Island in regard to legal processes. On the 15th of May, Virginia took a still more decisive step, by instructing its delegates in Congress to move for a Declaration of Independence. . . . The Virginia delegates in Congress made choice of Richard H. Lee to move the resolutions contained in their instructions of May 15th; and he did so on Friday, the 7th day of June, John Adams seconding them. Their consideration was postponed until the next day, when they were referred to a committee of the whole, and debated throughout Saturday and the succeeding Monday. On the latter day (10th) Congress resolved: 'That the consideration of the first resolution be postponed to Monday, the first day of July next; and in the meanwhile, that no time be lost, in case the Congress agree thereto, that a committee be appointed to prepare a declaration to the effect of the said first resolution, which is in these words: That these Colonies are, and of right ought to be, free and independent States; that they are absolved from all allegiance to the British Crown; and that all political connection between them and the State of Great Britain is, and ought to be, totally dissolved.'—H. S. Randall, *Life of Jefferson*, v. 1, ch. 4.

A. D. 1776 (January-June).—Engagement of hiring Hessians to reinforce the British arms.—"The [British] Cabinet had entertained some hopes of Russian auxiliaries [application for 20,000 of whom had been made to the Empress Catherine, who refused them with hardly concealed scorn], but the negotiation for that object could not be matured. Early in the year treaties were signed with the Landgrave of Hesse for taking into British pay 12,000 of his men; with the Duke of Brunswick and other petty potentates of Germany for 5,000 more. These little princes, seeing the need of England, which did not choose to lean, as she might and should have done, on her own right arm, insisted on obtaining, and did obtain, most usurious terms. Under the name of levy-money, there was to be paid to them the price of 30 crowns for every foot-soldier. Under the name of subsidy, each of their Serene Highnesses was moreover to be indulged with a yearly sum, irrespective of the pay and subsistence of the troops; and on the plea that in this case no certain number of years was stipulated as the term of service, the Landgrave of Hesse claimed and was promised a double subsidy, namely 450,000 crowns a year. The men were to enter into pay before they began to march! The subsidies were to be continued for one full year at least after the war was over and the troops had returned to their respective homes. Never yet, in short, was the blood of brave men sold on harder terms. The disgrace of this transaction to the German Princes who engaged in it requires little comment. . . . The ablest by far of the German Princes at that time, Frederick of Prussia, was not in general a man of compassionate feelings. He had no especial love or care for the North American cause. . . . Yet even Frederick expressed in strong terms his contempt for the scandalous man-traffic of his neighbours. It is said that whenever any of the newly hired Brunswickers or Hessians had to pass through any portion of his territory he claimed to levy on them the usual toll as for so many head of cattle, since he said they had been sold as such! Nor can the British ministry in this transaction be considered free from blame. . . . Certain it is that among the various causes which at this period wrought upon our trans-Atlantic brethren to renounce their connection with us, there was none more cogent in their minds than the news that German mercenaries had been hired and were coming to fight against them."—Lord Mahon (Earl Stanhope), *Hist. of Eng.*, 1713-1783, ch. 53 (v. 6).—"The first German troops to start for America were the Brunswickers. These marched from Brunswick on February 22d, 1776, 2,283 strong, and were embarked at Stade, near the mouth of the Elbe. The second division of Brunswickers embarked at the end of May—about 2,000 men. The first Hessians set out from Cassel early in March, and were shipped at Bremerlehe, near the mouth of the Weser. The second division was embarked in June. Together they numbered between 12,000 and 13,000 men. They were for the most part excellent troops and

well equipped, for the Landgrave's little army was one of the best in Germany. . . . The Prince of Waldeck sent his regiment through Carse) without trouble. The Prince of Hesse-Hanau, the Margrave of Anspach-Bayreuth, and the Prince of Anhalt-Zerbst had a longer road."—E. J. Lowell, *The Hessians in the Revolutionary War*, ch. 5.

A. D. 1776 (June).—The British repulsed at Charleston.—Early in 1776 the task was assigned to Clinton, who had in January departed from Boston, . . . to force and hold the Southern colonies to their allegiance [see NORTH CAROLINA: A. D. 1775-1776; and Cornwallis, with troops, was sent over under convoy of Sir Peter Parker's fleet, to give Clinton the army he needed. The fleet did not reach North Carolina till May. In March, [Charles] Lee, while in New York, had wished to be ordered to the command in Canada, as 'he was the only general officer on the continent who could speak and think in French.' He was disappointed, and ordered farther south. By May he was in Virginia, ridding the country of Tories, and trying to find out where Parker intended to land. It was expected that Clinton would return north to New York in season to operate with Howe, when he opened the campaign there in the early summer, as that general expected to do, and the interval for a diversion farther south was not long. Lee had now gone as far as Charleston (S. C.), and taken command in that neighborhood, while in charge of the little fort at the entrance of the harbor was William Moultrie, upon whom Lee was inculcating the necessity of a slow and sure fire, in case it should prove that Parker's destination, as it might well be, was to get a foothold in the Southern provinces, and break up the commerce which fed the rebellion through that harbor. The people of Charleston had been for some time engaged on their defences, and 'seem to wish a trial of their mettle,' wrote a looker-on. The fort in question was built of palmetto logs, and was unfinished on the land side. Its defenders had four days' warning, and the neighboring militia were summoned. On the 4th of June the hostile fleet appeared, and having landed troops on an adjacent island, it was not till the

27th that their dispositions were made for an attack. Their ships threw shot at the fort all day, which did very little damage, while the return fire was rendered with a precision surprising in untried artillerymen, and seriously damaged the fleet, of which one ship was grounded and abandoned. The expected land attack from Clinton's troops, already ashore on Long Island, was not made. A strong wind had raised the waters of the channel between that island and Sullivan's Island so high that it could not be forded, and suitable boats for the passage were not at hand. A few days later the shattered vessels and the troops left the neighborhood, and Colonel Moultrie had leisure to count the cost of his victory, which was twelve killed and twice as many wounded. The courage of Sergeant Jasper, in replacing on the bastion a flag which had been shot away, became at once a household anecdote.—J. Winsor, *The Conflict Precipitated (Narrative and Critical Hist. of Am. v. 6, ch. 2).*

ALSO IN: H. Flanders, *Life of John Rutledge*, ch. 16 (*Lives of the Chief Justices*, v. 1).—C. B. Hartley, *Life of Gen. William Moultrie (Heroes and Patriots of the South)*, ch. 2.

A. D. 1776 (June).—Resolutions for Independence.—Making ready for the Declaration.—"Things were now verging on every side to the same point. North Carolina had conferred the necessary powers to vote for independence and foreign alliances as early as the 12th of April. And now came the news from Richard Lee, to Mr. Adams, that on the very day of the passage of the significant preamble in congress, the 15th of May, the convention of Virginia had gone a step further, and had instructed their delegates to propose independence. Authority to assent to its natural consequences, a confederation and foreign alliances, followed as a matter of course. On the other hand, the convention of Massachusetts had referred the subject back to the people, to be considered and acted upon at their primary town meetings, and the responses had been for some time coming in unequivocally enough. So decided was the feeling that Joseph Hawley, impatient of the delay, was stimulating the nowwise reluctant Gerry to greater exertions. Perceiving these encouraging indications in opposite quarters, the friends of independence now consulted together, and made up their minds that the moment had come for a final demonstration. Resolutions, embracing the three great points, were carefully matured, which it was arranged that Richard Henry Lee, on behalf of the delegates of Virginia, should present, and John Adams should second, for Massachusetts. The movement took place, accordingly, on the 7th of June. It appears on the journal, recorded with the customary caution, as follows: 'Certain resolutions respecting independency being moved and seconded,—Resolved, that the consideration of them be referred till to-morrow morning; and that the members be enjoined to attend punctually at ten o'clock, in order to take the same into their consideration.' It was well that a measure of so momentous a character should be accompanied with as much of the forms of notice and special assignment as the body could properly give it. The record of what passed at the appointed time has come down to us very barren of details. We only know that the resolutions were referred to the committee of the whole, where they were de-

bated with great spirit during that day, Saturday, and again on Monday, the 10th, by which time it had become quite clear that a majority of the colonies were prepared to adopt the first and leading resolution. This majority was composed of the four New England, and three out of the four southern colonies. But it being deemed inadvisable to place this great act upon so narrow a basis, and a prospect being held out of securing a more general concurrence by delaying the decision, a postponement until the 1st of July was effected by a change of the votes of two colonies. In the mean while, however, as it was thought suitable to accompany the act with an elaborate exposition of the causes which were held to justify it, a committee was ordered to have in charge the preparation of such a paper in season for the adjourned debate. . . . At the same time that Thomas Jefferson, John Adams, Benjamin Franklin, Roger Sherman, and Robert R. Livingston, all but the last named being of the movement, were appointed the committee to prepare a declaration, as mentioned, the congress formally voted a second committee, with powers to prepare and digest a form of confederation to be entered into between the colonies; and yet a third, to mature a plan of treaties to be proposed to foreign powers. In this compass were included all the elements of national sovereignty abroad and at home. . . . The bulk of opposition now centred in the five middle colonies, and the pillar upon which it leaned was John Dickinson. But under the combined assaults conducted by the leading colonies of Virginia and Massachusetts, it was plain that victory was become a mere question of time. Jonathan D. Sergeant, who had left congress to hasten a change in the counsels of New Jersey, had been so successful in spiriting up the assembly as to be able to write, on the 15th of June, to Mr. Adams, that the delegates about to be elected would be on the spot by the 1st of July, the day to which the question had been assigned, and that they would 'vote plump.' Equally favorable news soon came from Maryland. . . . Thus were two States secured. But Pennsylvania, Delaware, and New York yet remained to move. In the first of these, recourse was had once more to the so-called committees of conference. . . . And here, on the 23d of June, Dr. Benjamin Rush, then a young man, but acting entirely in sympathy and co-operation with the leaders in congress, moved and carried the appointment of a committee to declare the sense of the conference with respect to an independence of the province on the crown of Great Britain. He and James Smith were then joined with Thomas McKean, the chairman of the conference, in a committee, which was ready the next day with a report affirming the willingness of the deputies of the conference to concur in a vote declaring the United Colonies free and independent States. The report was adopted unanimously, was presented to congress on the 25th, and, doubtless, had its effect in determining those delegates of the colony to absent themselves on the final vote, upon whose resistance its adverse decision depended. As the hesitation of Delaware was chiefly owing to the feeling that pervaded the county of Sussex, Mr. Rodney had repaired thither for the purpose of bringing about a favorable change, in which errand the news came that he was laboring with success. The dele-

gates from New York, no longer interposing any active opposition, yet unwilling to assume a responsibility which their constituents had not authorized, preferred to withdraw from participation in the decision. Such was the state of affairs on the 1st of July, to which day the discussion had been adjourned. There was then little doubt of an affirmative vote on the part of all but four colonies."—J. Q. Adams and C. F. Adams, *Life of John Adams*, v. 1, pp. 808-818.

A. D. 1776 (June).—End of proprietary and royal government in Maryland. See MARYLAND: A. D. 1776.

A. D. 1776 (July).—Authorship, adoption and signing of the Declaration of Independence.—"For the last hundred years one of the first facts taught to any child of American birth is, that Jefferson wrote the Declaration of Independence. The original draft in his handwriting was afterward deposited in the State Department. It shows two or three trifling alterations, interlined in the handwritings of Franklin and Adams. Otherwise it came before Congress precisely as Jefferson wrote it. Many years afterward John Adams gave an account of the way in which Jefferson came to be the composer of this momentous document, differing slightly from the story told by Jefferson. But the variance is immaterial. . . . Jefferson's statement seems the better entitled to credit, and what little corroboration is to be obtained for either narrator is wholly in his favor. He says simply that when the Committee came together he was pressed by his colleagues unanimously to undertake the draft; that he did so; that, when he had prepared it, he submitted it to Dr. Franklin and Mr. Adams, separately, requesting their corrections, 'which were two or three only and merely verbal,' 'interlined in their own handwritings'; that the report in this shape was adopted by the committee, and a 'fair copy,' written out by Mr. Jefferson, was then laid before Congress. A somewhat more interesting discussion concerns the question, how Jefferson came to be named first on the committee, to the entire exclusion of Lee, to whom, as mover of the resolution [see, above, (JANUARY—JUNE)], parliamentary etiquette would have assigned the chairmanship. Many explanations have been given, of which some at least appear the outgrowth of personal likings and dislikes. It is certain that Jefferson was not only pre-eminently fitted for the very difficult task of this peculiar composition, but also that he was a man without an enemy. His abstinence from any active share in debate had saved him from giving irritation; and it is a truth not to be concealed, that there were cabals, bickerings, heart-burnings, perhaps actual enmities among the members or that famous body, which, grandly as it looms up, and rightly too, in the mind's eye, was after all composed of jarring human ingredients. It was well believed that there was a faction opposed to Washington, and it was generally suspected that irascible, vain, and jealous John Adams, then just rising from the ranks of the people, made in this matter common cause with the aristocratic Virginian Lees against their fellow-countrymen. . . . So it is likely enough that a timely illness of Lee's wife was a fortunate excuse for passing him by, and that partly by reason of admitted aptitude, partly because no risk could be run of any interference of personal

feelings in so weighty a matter, Jefferson was placed first on the committee, with the natural result of doing the bulk of its labor. On July 1, pursuant to assignment, Congress, in committee of the whole, resumed consideration of Mr. Lee's resolution, and carried it by the votes of nine colonies. South Carolina and Pennsylvania voted against it. The two delegates from Delaware were divided. Those from New York said that personally they were in favor of it and believed their constituents to be so, but they were hampered by instructions drawn a twelvemonth since and strictly forbidding any action obstructive of reconciliation, which was then still desired. The committee reported, and then Edward Rutledge moved an adjournment to the next day, when his colleagues, though disapproving the resolution, would probably join in it for the sake of unanimity. This motion was carried, and on the day following the South Carolinians were found to be converted; also a third member 'had come post from the Delaware counties' and caused the vote of that colony to be given with the rest; Pennsylvania changed her vote; and a few days later the Convention of New York approved the resolution, 'thus supplying the void occasioned by the withdrawing of her delegates from the vote.' On the same day, July 2, the House took up Mr. Jefferson's draft of the Declaration, and debated it during that and the following day and until a late hour on July 4. Many verbal changes were made, most of which were conducive to closer accuracy of statement, and were improvements. Two or three substantial amendments were made by the omission of passages; notably there was stricken out a passage in which George III. was denounced for encouraging the slave-trade. . . . No interpolation of any consequence was made. Jefferson had ample cause to congratulate himself upon this event of the discussion. . . . He himself spoke not a word in the debate. . . . The burden of argument, from which Jefferson wisely shrank, was gallantly borne by John Adams, whom Jefferson gratefully called 'the colossus of that debate.' Jefferson used afterward to take pleasure in tingeing the real solemnity of the occasion with a coloring of the ludicrous. The debate, he said, seemed as though it might run on interminably, and probably would have done so at a different season of the year. 'But the weather was oppressively warm, and the room occupied by the deputies was hard by a stable, whence the hungry flies swarmed thick and fierce, alighting on the legs of the delegates and biting hard through their thin silk stockings. Treason was preferable to discomfort, and the members voted for the Declaration and hastened to the table to sign it and escape from the horse-fly. John Hancock, making his great familiar signatore, jestingly said that John Bull could read that without spectacles; then, becoming more serious, began to impress on his comrades the necessity of their 'all hanging together in this matter.' 'Yes, indeed,' interrupted Franklin, 'we must all hang together, or assuredly we shall all hang separately.' . . . Amid such trifling, concealing grave thoughts, Jefferson saw his momentous document signed at the close of that summer afternoon."—J. T. Morse, Jr., *Thomas Jefferson*, ch. 3.—"The statements relative to signing the Declaration are conflicting. Jefferson states

that it was signed generally on the 4th (Memoira 1, 94), and he in other places reiterates this statement, but this manuscript is not known to be extant. . . . According to the journals, Congress, on the 19th of July, resolved that the 'declaration, passed on the 4th, be fairly engrossed on parchment, with the title and style of "The unanimous Declaration of the Thirteen United States of America," and that the same, when engrossed, be signed by every member of Congress.' On the 2d day of August, the journals say, 'The Declaration being engrossed, and compared at the table, was signed by the members.' . . . This manuscript is preserved in the office of the Secretary of State.—It. Frothingham. *The Rise of the Republic*, p. 545 and foot-note.—"Because statesmen like Dickinson and communities like Maryland were slow in believing that the right moment for a declaration of independence had come, the preposterous theory has been suggested that the American Revolution was the work of an unscrupulous and desperate minority, which, through intrigue mingled with violence, succeeded in forcing the reluctant majority to sanction its measures. Such a misconception has its root in an utter failure to comprehend the peculiar character of American political life, like the kindred misconception which ascribes the rebellion of the colonies to a sordid unwillingness to bear their due share of the expenses of the British Empire. It is like the misunderstanding which saw an angry mob in every town-meeting of the people of Boston, and characterized as a 'riot' every deliberate expression of public opinion. No one who is familiar with the essential features of American political life can for a moment suppose that the Declaration of Independence was brought about by any less weighty force than the settled conviction of the people that the priceless treasure of self-government could be preserved by no other means. It was but slowly that this unwelcome conviction grew upon the people; and owing to local differences of circumstances it grew more slowly in some places than in others. Prescient leaders, too, like the Adamses and Franklin and Lee, made up their minds sooner than other people. Even those conservatives who resisted to the last, even such men as John Dickinson and Robert Morris, were fully agreed with their opponents as to the principle at issue between Great Britain and America, and nothing would have satisfied them short of the total abandonment by Great Britain of her pretensions to impose taxes and revoke charters. Upon this fundamental point there was very little difference of opinion in America. As to the related question of independence, the decision, when once reached, was everywhere alike the reasonable result of free and open discussion; and the best possible illustration of this is the fact that not even in the darkest days of the war already begun did any state deliberately propose to reconsider its action in the matter. The hand once put to the plough, there was no turning back."—J. Fiske, *The Am. Revolution*, ch. 4 (v. 1).

A. D. 1776 (July).—Text of the Declaration of Independence.—The following is the text of the great manifesto:

"When in the Course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume among the Powers of the earth, the separate and equal station to which the Laws of Nature and of Nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation. We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable Rights, that among these are Life, Liberty and the pursuit of Happiness. That to secure these rights, Governments are instituted among Men, deriving their just powers from the consent of the governed, That whenever any Form of Government becomes destructive of these ends, it is the Right of the People to alter or to abolish it, and to institute new Government, laying its foundation on such principles and organizing its powers in such form, as to them shall seem most likely to effect their Safety and Happiness. Prudence, indeed, will dictate that Governments long established should not be changed for light and transient causes; and accordingly all experience hath shown, that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But when a long train of abuses and usurpations, pursuing invariably the same Object evinces a design to reduce them under absolute Despotism, it is their right, it is their duty, to throw off such Government, and to provide new Guards for their future security.—Such has been the patient sufferance of these Colonies; and such is now the necessity which constrains them to alter their former Systems of Government. The history of the present King of Great Britain is a history of repeated injuries and usurpations, all having in direct object the establishment of an absolute Tyranny over these States. To prove this, let Facts be submitted to a candid world. He has refused his Assent to Laws, the most wholesome and necessary for the public good. He has forbidden his Governors to pass Laws of immediate and pressing importance, unless suspended in their operation till his Assent should be obtained; and when so suspended, he has utterly neglected to attend to them. He has refused to pass other Laws for the accommodation of large districts of people, unless those people would relinquish the right of Representation in the Legislature, a right inestimable to them and formidable to tyrants only. He has called together legislative bodies at places unusual, uncomfortable, and distant from the depository of their Public Records, for the sole purpose of fatiguing them into compliance with his measures. He has dissolved Representative Houses repeatedly, for opposing with manly firmness his invasions on the rights of the people. He has refused for a long time, after such dissolutions, to cause others to be elected; whereby the Legislative Powers, incapable of Annihilation, have returned to the People at large for their exercise; the State remaining in the mean time exposed to all the dangers of invasion from without, and convulsions within. He has endeavoured to prevent the population

of these States; for that purpose obstructing the Laws for Naturalization of Foreigners; refusing to pass others to encourage their migration hither, and raising the conditions of new Appropriations of Lands. He has obstructed the Administration of Justice, by refusing his Assent to Laws for establishing Judiciary Powers. He has made Judges dependent on his Will alone, for the tenure of their offices, and the amount and payment of their salaries. He has erected a multitude of New Offices, and sent hither swarms of Officers to harrass our People, and eat out their substance. He has kept among us, in times of peace, Standing Armies without the Consent of our legislature. He has affected to render the Military independent of and superior to the Civil Power. He has combined with others to subject us to a jurisdiction foreign to our constitution, and unacknowledged by our laws; giving his Assent to their Acts of pretended Legislation: For quartering large bodies of armed troops among us: For protecting them, by a mock Trial, from Punishment for any Murders which they should commit on the Inhabitants of these States: For cutting off our Trade with all parts of the world: For imposing taxes on us without our Consent: For depriving us in many cases, of the benefits of Trial by Jury: For transporting us beyond Seas to be tried for pretended offences: For abolishing the free System of English Laws in a neighbouring Province, establishing therein an Arbitrary government, and enlarging its Boundaries so as to render it at once an example and fit instrument for introducing the same absolute rule into these Colonies: For taking away our Charters, abolishing our most valuable Laws, and altering fundamentally the Forms of our Governments: For suspending our own Legislatures, and declaring themselves invested with Power to legislate for us in all cases whatsoever. He has abdicated Government here, by declaring us out of his Protection and waging War against us. He has plundered our seas, ravaged our Coasts, burnt our towns, and destroyed the lives of our people. He is at this time transporting large armies of foreign mercenaries to complete the works of death, desolation and tyranny, already begun with circumstances of Cruelty & perfidy scarcely paralleled in the most barbarous ages, and totally unworthy the Head of a civilized nation. He has constrained our fellow Citizens taken Captive on the high Seas to bear Arms against their Country, to become the executioners of their friends and Brethren, or to fall themselves by their Hands. He has excited domestic insurrections amongst us, and has endeavoured to bring on the Inhabitants of our frontiers, the merciless Indian Savages, whose known rule of warfare, is an undistinguished destruction of all ages, sexes, and conditions. In every stage of these Oppressions We have Petitioned for Redress in the most humble terms: Our repeated Petitions have been answered only by repeated injury. A Prince, whose character is thus marked by every act which may define a Tyrant, is unfit to be the ruler of a free People. Nor have We been wanting in attention to our British brethren. We have warned them from time to time of attempts by their legislature to extend an unwarrantable Jurisdiction over us. We have reminded them of the circumstances of our emigration and settlement here. We have

appealed to their native justice and magnanimity, and we have conjured them by the ties of our common kindred to disavow these usurpations, which would inevitably interrupt our connections and correspondence. They too have been deaf to the voice of justice and of concanguinity. We must, therefore, acquiesce in the necessity, which denounces our separation, and hold them, as we hold the rest of mankind, Enemies in War, in Peace Friends. We, therefore, the Representatives of the united States of America, in General Congress, Assembled, appealing to the Supreme Judge of the world for the rectitude of our intentions, do, in the Name, and by Authority of the good People of these Colonies, solemnly publish and declare, That these United Colonies are, and of Right ought to be Free and Independent States; that they are Absolved from all Allegiance to the British Crown, and that all political connection between them and the State of Great Britain, is and ought to be totally dissolved; and that as Free and Independent States, they have full Power to levy War, conclude Peace, contract Alliances, establish Commerce, and to do all other Acts and Things which Independent States may of right do. And for the support of this Declaration, with a firm reliance on the Protection of Divine Providence, we mutually pledge to each other our Lives, our Fortunes and our sacred Honor.—John Hancock. **New Hampshire**—Josiah Bartlett, Wm. A. D. 1776 (July).—Constitutional effect of the Declaration of Independence.—"The Declaration of Independence did not create thirteen sovereign states, but the representatives of the people declared that the former English colonies, under the name which they had assumed of the United States of America, became, from the 4th day of July, 1776, a sovereign state and a member of the family of nations, recognized by the law of nations; and further, that the people would support their representatives with their blood and treasure, in their endeavor to make this declaration a universally recognized fact. Neither congress nor the people rolled in this upon any positive right belonging either to the individual colonies or to the colonies as a whole. Rather did the Declaration of Independence and the war destroy all existing

political jural relations, and seek their moral justification in the right of revolution inherent in every people in extreme emergencies. . . . Political theories had nothing to do with this development of things. It was the natural result of given circumstances and was an accomplished fact before anyone thought of the legal consequences which might subsequently be deduced from it."—H. von Holst, *Const. and Pol. Hist. of the U. S.*, v. 1, ch. 1.

A. D. 1776 (July).—Independence declared in New Jersey and Governor Franklin arrested. See *New Jersey*: A. D. 1774-1776.

A. D. 1776 (August).—The struggle for New York and the Hudson.—Battle of Long Island.—"Washington had been informed, early in January, that General Sir Henry Clinton had sailed from Boston, with a considerable body of troops, on a secret expedition. Apprehending that the city of New York was his destination, he immediately dispatched General Charles Lee to Connecticut to raise troops, and to proceed to that city to watch and oppose Clinton wherever he might attempt to land. Six weeks before the evacuation of Boston [March 17, 1776], Lee had encamped near New York with twelve hundred militia. Already the Sons of Liberty had been busy, and overt acts of rebellion had been committed by them. They had seized the cannons at Fort George, and driven Tryon, the royal governor, on board the *Asia*, a British armed vessel in the harbor. In March, Clinton arrived at Sandy Hook, just outside New York harbor, and on the same day, the watchful Lee providentially entered the city. The movement, although without a knowledge of Clinton's position, was timely, for it kept him at bay. Filled in his attempt upon New York, that commander sailed southward. . . . The destination of Howe, when he left Boston, was also unknown to Washington. Supposing he, too, would proceed to New York, he put the main body of his army in motion toward that city, as soon as he had placed Boston in a state of security. He arrived in New York about the middle of April [April 14], and proceeded at once to fortify the town and vicinity, and also the passes of the Hudson Highlands, fifty miles above. In the mean while, General Lee, who had been appointed to command the American forces in the South, had left his troops in the charge of General Lord Stirling [March 7], and was hastening toward the Carolinas to watch the movements of Clinton, arouse the Whigs, and gather an army there. . . . Pursuant to instructions, General Howe proceeded toward New York, to meet General Clinton and Parker's fleet. He left Halifax on the 11th of June, [1776], and arrived at Sandy Hook on the 29th. On the 2d of July he took possession of Staten Island, where he was joined by Sir Henry Clinton [July 11], from the South, and his brother, Admiral Lord Howe [July 12], with a fleet and a large land force, from England. Before the first of August, other vessels arrived with a part of the Hessian troops, and on that day, almost 30,000 soldiers, many of them tried veterans, stood ready to fall upon the republican army of 17,000 men, mostly militia, which lay intrenched in New York and vicinity, less than a dozen miles distant. The grand object in view was the seizure of New York and the country along the Hudson, so as to keep open a communication with Canada, separate the

patriots of New England from those of the other states, and to overrun the most populous portion of the revolted colonies. This was the military plan, arranged by ministers. They had also prepared instructions to their commanding generals, to be pacific, if the Americans appeared disposed to submit. Lord Howe and his brother, the general, were commissioned to 'grant pardon to all who deserved mercy,' and to treat for peace, but only on terms of absolute submission on the part of the colonies, to the will of the King and parliament. After making a foolish display of arrogance and weakness, in addressing General Washington as a private gentleman, and being assured that the Americans had been guilty of no offense requiring a 'pardon' at their hands, they prepared to strike an immediate and effective blow. The British army was accordingly put in motion on the morning of the 22d of August [1776], and during that day, 10,000 effective men, and forty pieces of cannon, were landed on the western end of Long Island, between the present Fort Hamilton and Gravesend village. Already detachments of Americans under General Sullivan, occupied a fortified camp at Brooklyn, opposite New York, and guarded seven passes on a range of hills which extend from the Narrows to the village of Jamaica. When intelligence of the landing of the invading army reached Washington, he sent General Putnam, with large reinforcements, to take the chief command on Long Island; and to prepare to meet the enemy. The American troops on the island now [August 26], numbered about 5,000. The British moved in three divisions. The left, under General Grant, marched along the shore toward Gowanus; the right, under Clinton and Cornwallis, toward the interior of the island; and the center, composed chiefly of Hessians, under De Heister, marched up the Flatbush road, south of the hills. Clinton moved under cover of night, and before dawn on the morning of the 27th, he had gained possession of the Jamaica pass, near the present East New York. At the same time, Grant was pressing forward along the shore of New York Bay, and at day-break, he encountered Lord Stirling, where the monuments of Greenwood cemetery now dot the hills. De Heister advanced from Flatbush at the same hour, and attacked Sullivan, who, having no suspicions of the movements of Clinton, was watching the Flatbush Pass. A bloody conflict ensued, and while it was progressing, Clinton descended from the wooded hills, by the way of Bedford, to gain Sullivan's rear. As soon as the latter perceived his peril, he ordered a retreat to the American lines at Brooklyn. It was too late; Clinton drove him back upon the Hessian bayonets, and after fighting desperately, hand to hand, with the foe in front and rear, and losing a greater portion of his men, Sullivan was compelled to surrender. As usual, misfortunes did not come single. While these disasters were occurring on the left, Cornwallis descended the port-road to Gowanus, and attacked Stirling. They fought desperately, until Stirling was made prisoner. Many of his troops were drowned while endeavoring to escape across the Gowanus Creek, as the tide was rising; and a large number were captured. At noon the victory for the British was complete. About 500 Americans were killed or wounded, and 1,100 were made prisoners. These were soon suffering dreadful

horrors in prisons and prison-ships, at New York. The British loss in killed, wounded, and prisoners, was 307. It was with the deepest anguish that Washington had viewed, from New York, the destruction of his troops, yet he dared not weaken his power in the city, by sending reinforcements to aid them. He crossed over on the following morning [August 28], with Mifflin, who had come down from the upper end of York Island with a thousand troops, and was gratified to find the enemy encamped in front of Putnam's lines, and delaying an attack, until the British fleet should co-operate with him. This delay allowed Washington time to form and execute a plan for the salvation of the remainder of the army, now too weak to resist an assault with any hope of success. Under cover of a heavy fog, which fell upon the hostile camps at midnight of the 29th, and continued until the morning of the 30th, he silently withdrew them from the camp, and, unperceived by the British, they all crossed over to New York in safety, carrying everything with them but their heavy cannons. . . . Howe, who felt sure of his prey, was greatly mortified, and prepared to make an immediate attack upon New York, before the Americans should become reinforced, or should escape from it."—B. J. Lossing, *Family Hist. of the U. S.*, period 5, ch. 3.

A. D. 1776 (September).—Quiet death of proprietary government in Pennsylvania and adoption of a State Constitution. See PENNSYLVANIA: A. D. 1776.

A. D. 1776 (September—November).—The struggle for New York and the Hudson.—Successes of the British.—Washington's retreat into New Jersey.—"At daybreak the British awoke, but it was too late. They had fought a successful battle, they had had the American army in their grasp, and now all was over. The victory had melted away, and as a grand result, they had a few hundred prisoners, a stray boat with three camp-followers, and the deserted works in which they stood. To make such a retreat as this was a feat of arms as great as most victories, and in it we see, perhaps as plainly as anywhere, the nerve and quickness of the man who conducted it. It is true it was the only chance of salvation, but the great man is he who is entirely master of his opportunity, even if he have but one. The outlook, nevertheless, was, as Washington wrote, 'truly distressing.' The troops were dispirited, and the militia began to disappear, as they always did after a defeat. Congress would not permit the destruction of the city, different interests pulled in different directions, conflicting opinions distracted the councils of war, and, with utter inability to predict the enemy's movements, everything led to halfway measures and to intense anxiety, while Lord Howe tried to negotiate with Congress, and the Americans waited for events, Washington, looking beyond the confusion of the moment, saw that he had gained much by delay, and had his own plan well defined. . . . Every one else, however, saw only past defeat and present peril.

The British ships gradually made their way up the river, until it became apparent that they intended to surround and cut off the American army. Washington made preparations to withdraw, but uncertainty of information came near rendering his precautions futile. September 15th the men-of-war opened fire, and troops were landed near Kip's Bay. The militia in the breastworks at that point had been at Brooklyn and gave way at once, communicating their panic to two Connecticut regiments. Washington, galloping down to the scene of battle, came upon the disordered and flying troops. He dashed in among them, conjuring them to stop, but even while he was trying to rally them they broke again on the appearance of some sixty or seventy of the enemy, and ran in all directions. In a tempest of anger Washington drew his pistols, struck the fugitives with his sword, and was only forced from the field by one of his officers seizing the bridle of his horse and dragging him away from the British, now within a hundred yards of the spot. . . . The rout and panic over, Washington quickly turned to deal with the pressing danger. With coolness and quickness he issued his orders, and succeeded in getting his army off, Putnam's division escaping most narrowly. He then took post at King's Bridge, and began to strengthen and fortify his lines. While thus engaged, the enemy advanced, and on the 16th a sharp skirmish was fought, in which the British were repulsed, and great bravery was shown by the Connecticut and Virginia troops, the two commanding officers being killed. This affair, which was the first gleam of success, encouraged the troops, and was turned to the best account by the general. Still a successful skirmish did not touch the essential difficulties of the situation, which then as always came from within, rather than without. To face and check 25,000 well equipped and highly disciplined soldiers, Washington had now some 12,000 men, lacking in everything which goes to make an army, except mere individual courage and a high average of intelligence. Even this meagre force was an inconsistent and diminishing quantity, shifting, uncertain, and always threatening dissolution. The task of facing and fighting the enemy was enough for the ablest of men; but Washington was obliged also to combat and overcome the inertness and dulness born of ignorance, and to teach Congress how to govern a nation at war. . . . Meanwhile the days slipped along, and Washington waited on the Harlem Plains, planning descents on Long Island, and determining to make a desperate stand where he was, unless the situation decidedly changed. Then the situation did change, as neither he nor any one else apparently had anticipated. The British warships came up the Hudson past the forts, brushing aside our boasted obstructions, destroying our little fleet, and getting command of the river. Then General Howe landed at Frog's Point, where he was checked for the moment by the good disposition of Heath, under Washington's direction. These two events made it evident that the situation of the American army was full of peril, and that retreat was again necessary. Such certainly was the conclusion of the council of war, on the 16th, acting this time in agreement with their chief. Six days Howe lingered on Frog's Point, bringing up stores or artillery

or something, . . . and gave six days to Washington. They were of little value to Howe, but they were of inestimable worth to Washington, who employed them in getting everything in readiness, in holding his council of war, and then on the 17th in moving deliberately off to very strong ground at White Plains. . . . On the 28th, Howe came up to Washington's position, and found the Americans quite equal in numbers, strongly entrenched, and awaiting his attack with confidence. He hesitated, doubted, and finally feeling that he must do something, sent 4,000 men to storm Chatterton Hill, an outlying post, where some 1,400 Americans were stationed. There was a short, sharp action, and then the Americans retreated in good order to the main army, having lost less than half as many men as their opponents. With caution now much enlarged, Howe sent for reinforcements, and waited two days. The third day it rained, and on the fourth Howe found that Washington had withdrawn to a higher and quite impregnable line of hills, where he held all the passes in the rear and awaited a second attack. Howe contemplated the situation for two or three days longer, and then broke camp and withdrew to Dobbs Ferry. Such were the great results of the victory of Long Island, two wasted months, and the American army still untouched. Howe was resolved, however, that his campaign should not be utterly fruitless, and therefore directed his attention to the defences of the Hudson, Fort Lee, and Fort Washington, and here he met with better success. Congress, in its military wisdom, had insisted that these forts must and could be held. . . . An attempt was made to hold both forts, and both were lost, as he [Washington] had foreseen. From Fort Lee the garrison withdrew in safety. Fort Washington was carried by storm, after a severe struggle. Twenty-six hundred men and all the munitions of war fell into the hands of the enemy. It was a serious and most depressing loss, and was felt throughout the continent. Meantime Washington had crossed into the Jerseys, and, after the loss of Fort Lee, began to retreat before the British, who, flushed with victory, now advanced rapidly under Lord Cornwallis. — II. C. Lodge, *George Washington*, v. 1, ch. 6.

A. D. 1776 (October). — Connecticut assumes independence and sovereignty. See CONNECTICUT; A. D. 1776.

A. D. 1776-1777. — Washington's retreat through New Jersey and his mas- sively return movement. — The victories at Trenton and Princeton retrieving the situation. — "On the 17th [of November] Washington ordered Lee [who had lately returned from the south, and who had command of 7,000 men at Northcastle] to come over and join him; but Lee disobeyed, and in spite of repeated orders from Washington he stayed at Northcastle till the 2d of December. General Ward had some time since resigned, so that Lee now ranked next to Washington. A good many people were finding fault with the latter for losing the 3,000 men at Fort Washington, although, as we have seen, that was not his fault but the fault of Congress. Lee now felt that if Washington were ruined, he

would surely become his successor in the command of the army, and so, instead of obeying his orders, he spent his time in writing letters calculated to injure him. Lee's disobedience thus broke the army in two, and did more for the British than they had been able to do for themselves since they started from Staten Island. It was the cause of Washington's flight through New Jersey, ending on the 8th of December, when he put himself behind the Delaware river, with scarcely 3,000 men. Here was another difficulty. The American soldiers were enlisted for short terms, and when they were discouraged, as at present, they were apt to insist upon going home as soon as their time had expired. It was generally believed that Washington's army would thus fall to pieces within a few days. Howe did not think it worth while to be at the trouble of collecting boats wherewith to follow him across the Delaware. Congress fled to Baltimore. People in New Jersey began taking the oath of allegiance to the crown. Howe received the news that he had been knighted for his victory on Long Island, and he returned to New York to celebrate the occasion. While the case looked so desperate for Washington, events at the north had taken a less unfavourable turn. Carleton [who began preparations to invade the province of New York as soon as Arnold retreated from Canada] had embarked on Lake Champlain early in the autumn with his fine army and fleet. Arnold had fitted up a small fleet to oppose his advance, and on the 11th of October there had been a fierce naval battle between the two near Valcour Island, in which Arnold was defeated, while Carleton suffered serious damage. The British general then advanced upon Ticonderoga, but suddenly made up his mind that the season was too late for operations in that latitude. The resistance he had encountered seems to have made him despair of achieving any speedy success in that quarter, and on the 3d of November he started back for Canada. This retreat relieved General Schuyler at Albany of immediate cause for anxiety, and presently he detached seven regiments to go southward to Washington's assistance. On the 2d of December Lee crossed the Hudson with 4,000 men, and preceded slowly to Morristown. Just what he designed to do was never known, but clearly he had no intention of going beyond the Delaware to assist Washington, whom he believed to be ruined. Perhaps he thought Morristown a desirable position to hold, as it certainly was. Whatever his plans may have been, they were nipped in the bud. For some unknown reason he passed the night of the 12th at an unguarded tavern, about four miles from his army; and there he was captured next morning by a party of British dragoons, who carried him off to their camp at Princeton. The dragoons were very gleeful over this unexpected exploit, but really they could not have done the Americans a greater service than to rid them of such a worthless creature. The capture of Lee came in the nick of time, for it set free his men to go to the aid of Washington. Even after this force and that sent by Schuyler had reached the commander-in-chief, he found he had only 6,000 men fit for duty. With this little force Washington instantly took the offensive. It was the turning-point in his career and in the history of the Revolutionary War. On Christmas, 1776,

and the following nine days, all Washington's most brilliant powers were displayed. The British centre, 10,000 strong, lay at Princeton. The principal generals, thinking the serious business of the war ended, had gone to New York. An advanced party of Hessians, 1,000 strong, was posted on the bank of the Delaware at Trenton, and another one lower down, at Burlington. Washington decided to attack both these outposts, and arranged his troops accordingly, but when Christmas night arrived, the river was filled with great blocks of floating ice, and the only division which succeeded in crossing was the one that Washington led in person. It was less than 2,500 in number, but the moment had come when the boldest course was the safest. By daybreak Washington had surprised the Hessians at Trenton and captured them all. The outpost at Burlington, on hearing the news, retreated to Princeton. By the 31st Washington had got all his available force across to Trenton. Some of them were raw recruits just come in to replace others who had just gone home. At this critical moment the army was nearly helpless for want of money, and on New Year's morning Robert Morris was knocking at door after door in Philadelphia, waking up his friends to borrow the \$50,000, which he sent off to Trenton before noon. The next day Cornwallis arrived at Princeton, and taking with him all the army, except a rear-guard of 2,000 men left to protect his communications, came on toward Trenton. When he reached that town, late in the afternoon, he found Washington entrenched behind a small creek just south of the town, with his back toward the Delaware river. 'Oho!' said Cornwallis, 'at last we have run down the old fox, and we will bag him in the morning.' He sent back to Princeton, and ordered the rear-guard to come up. He expected next morning to cross the creek above Washington's right, and then press him back against the broad and deep river, and compel him to surrender. Cornwallis was by no means a careless general, but he seems to have gone to bed on that memorable night and slept the sleep of the just. Washington meanwhile was wide awake. He kept his front line noisily at work digging and entrenching, and made a fine show with his camp-fires. Then he marched his army to the right and across the creek, and got around Cornwallis's left wing and into his rear, and so went on gayly toward Princeton. At daybreak he encountered the British rear-guard, fought a sharp battle with it and sent it flying, with the loss of one-fourth of its number. The booming guns aroused Cornwallis too late. To preserve his communications with New York, he was obliged to retreat with all haste upon New Brunswick, while Washington's victorious army pushed on and occupied the strong position at Morristown. There was small hope of dislodging such a general from such a position. But to leave Washington in possession of Morristown was to resign to him the laurels of this half-year's work. For that position guarded the Highlands of the Hudson on the one hand, and the roads to Philadelphia on the other. Except that the British had taken the city of New York—which from the start was almost a foregone conclusion—they were no better off than in July when Lord Howe had landed on Staten Island. In nine days the tables had been completely turned. The attack upon

an outpost had developed into a campaign which quite retrieved the situation. The ill-fated interference of Congress, which had begun the series of disasters, was remedied; the treachery of Lee was checkmated; and the cause of American Independence, which on Christmas Eve had seemed hopeless, was now fairly set on its feet. Earlier successes had been local; this was continental. Seldom has so much been done with such slender means."—J. Fiske, *The War of Independence*, ch. 6.—"The effect of these two unexpected strokes at Trenton and Princeton was to baffle Howe, and utterly disconcert his plans. Expecting to march upon Philadelphia at his leisure, he suddenly finds Washington turning about and literally cutting his way through the British posts, back to a point where he threatened Howe's flank and rear. The enemy were at once compelled to retire from all their positions below Brunswick, give up the thought of wintering in Philadelphia, and fall back to the vicinity of New York. When Horace Walpole heard of these movements, he wrote to Sir L. Orance Mann: 'Washington has shown himself both a Fabius and a Camillus. His march through our lines is allowed to have been a prodigy of generalship. In one word, I look upon a great part of America as lost to this country.' Here the campaign closed. Washington could not be dislodged from his strong mountain position, and Howe was satisfied to rest his troops and postpone further operations until the next season. Meantime the country took heart, Congress voted troops and supplies, and the army was recruited and organized on a better basis. 'The business of war is the result of Experience,' wrote Wolcott from Congress, with faith unshaken during the darkest hours of the campaign; and experience was now put to good profit. The crisis was passed. Events proved decisive. Hardship and anxiety were yet to come during succeeding years of the war; but it was the result of this year's struggle that cleared away misgivings and confirmed the popular faith in final success. England could do no more than she had done to conquer America; while America was now more ready than ever to meet the issue. Independence was established in the present campaign—in the year of its declaration; and more than to any others we owe this political privilege to the men who fought from Long Island to Princeton."—H. P. Johnston, *Campaign of 1776 (Memoirs of the Long Island Hist. Soc., v. 3), pt. 1, ch. 8.*

A. D. 1776-1777.—Prisoners and exchanges. —British treatment of captives.—The Jersey Prison-ship and the Sugar-house prison.—In New York, during the British occupation of the city, "wretched indeed was the condition of the poor refugee, of the sick soldier, and, above all, the patriot prisoner. The newspapers are filled with calls for charitable contributions for women and children perishing with cold and hunger, for disabled soldiers and families without a shelter. . . . But if the favored Tories suffered, what must have been the condition of the patriot prisoners, confined by thousands in bleak barracks, churches, and prison-ships? Let us pass up Broadway, amidst the uncleared ruins,

and, turning down Liberty Street, pause before a huge brick building near the Middle Dutch Church. It is five stories high, with broken windows, through which the fierce winds of winter rush unrestrained. Through its imperfect roof and various openings, snow, ice, and water penetrate to every part of the building. Sentries pace round its walls prepared to fire upon any of its maddened inmates who attempt in desperation to escape. Wounded men crawl to the windows begging aid; but the impassive sentinel turns back the gifts of the charitable. No communication with the prisoners can be allowed. The walls within are bare and cheerless, nor do any of the common conveniences of life soften the horrors of those dreary chambers. Yet the old Sugar-House is the most crowded building in New York, and hundreds of prisoners, some chained, others at large, fill its comfortless interior. In the old Sugar-House were confined the prisoners of Long Island, the captives of sudden forays, the patriot citizen, and the heroes of the rebel army. Clothed in rags and scarcely covered from the winter air, crowded in narrow apartments and broken by hunger and disease, the prisoners died by thousands. The sick lay down on beds of snow to perish; the feeble wounded quivered in the February blast. Food of the coarsest kind was served out to them in scanty measure, and devoured with the eagerness of famine. Every night ten or twenty died; every day their corpses were thrown into pits without a single rite of burial. When led out to be exchanged, the glad hope of freedom gave them no joy—they died on the way to their friends, or lingered out a few weeks of miserable decline in the hospitals of the Jerseys. So wretched was their condition that Washington refused to consider them fit subjects for exchange. 'You give us only the dead or dying,' he wrote to Howe, 'for our well-fed and healthy prisoners.' Howe, as if in mockery, replied that they had been kept in 'airy, roomy buildings,' on the same fare as his own soldiers. Washington pointed to the condition in which they reached him—diseased, famished, emaciated, and dying, as they were conducted to his quarters. Across the river, in Wallabout Bay, lay the prison-ship 'Jersey.' She was the hulk of a 64 gun ship, long unseaworthy, her masts and rigging gone, her figure-head broken off, and her whole appearance singularly repulsive. Yet on board of the Jersey were confined 1,200 captured seamen. She was never cleansed, and lay in that condition seven years. No fires warmed her occupants in winter, no screen sheltered them from the August sun; no physician visited the sick, no clergyman consoled the dying there. Poor and scanty food, the want of clothing, cleanliness, and exercise, and raging diseases that never ceased their ravages, made the Jersey a scene of human suffering to which the Black Hole of Calcutta might favorably compare. Benevolent Tories would sometimes convey by stealth food or clothing to his unhappy inmates; but this was little. Toward the close of the war the British, from shame or pity, made some improvement in her condition; but she remained throughout the coarsest a centre of sickness and death, always decimated by disease and always replenished with new victims. The bones of her dead, estimated at 11,000, lie buried on the

Brooklyn shore. The crowded city itself was never free from contagion. In winter the small-pox made fearful ravages."—E. Lawrence, *New York in the Revolution* (*Harper's Magazine*, July, 1808).

A. D. 1776-1778.—Attitude and feeling of France.—Her disposition to aid the colonies and the reasons for it.—The American embassy to the French court.—Silas Deane and Beaumarchais.—Franklin at Passy.—"On March 17, 1776, Vergennes presented to his associates in the cabinet—Maurepas, Turgot (controller-general), Sartine (secretary of the navy), and St. Germain (secretary of war)—a paper entitled 'Considerations,' which, after for many years evading the search of historians, . . . was brought to light by De Witt and republished by Doniol. In this important paper Vergennes, after some general reflections on the advantages which the two crowns of France and Spain derived from the continuance of the civil war in America, and, on the other hand, on the inconveniences which might arise from the independence of the Colonies, and the probability that, in case of failure in North America, England would, to recover its credit, turn its arms against the French and Spanish possessions in America, proceeds to consider the course at once to be pursued. He bitterly attacks the English for their habitual breach of good faith, violation of treaties, and disregard of that observance of the sacred laws of morality which distinguish the French, and infers that they will take the first opportunity to declare war against France or invade Mexico. No doubt, if the kings of France and Spain had martial tendencies: if they obeyed the dictates of their own interests, and perhaps the justice of their cause, which was that of humanity, so often outraged by England; if their military resources were in a sufficiently good condition, they would feel that Providence had evidently chosen that very hour for humiliating England and revenging on her the wrongs she had inflicted on those who had the misfortune to be her neighbors and rivals, by rendering the resistance of the Americans as desperate as possible. The exhaustion produced by this intestine war would prostrate both England and her Colonies, and would afford an opportunity to reduce England to the condition of a second-rate power; to tear from her the empire she aimed at establishing in the four quarters of the world with so much pride and injustice, and relieve the universe of a tyranny which desires to swallow up both all the power and all the wealth of the world. But the two crowns not being able to act in this way, they must have recourse to a circumspect policy," Vergennes "draws the following inferences: (1) That they should continue dexterously to keep the English ministry in a state of false security with respect to the intentions of France and Spain. (2) That it would be politic to give the insurgents secret assistance in military stores and money; that the admitted utility would justify this little sacrifice, and no loss of dignity or breach of equity would be involved in it. (3) That it would not be consistent with the king's dignity or interest to make an open contract

with the insurgents until their independence was achieved. (4) That in case France and Spain should furnish assistance, they should look for no other return than the success of the political object they had at that moment in view, leaving themselves at liberty to be guided by circumstances as to any future arrangements. (5) That perhaps a too-marked inactivity at the present crisis might be attributed by the English to fear, and might expose France to insults to which it might not be disposed to submit. The English, he adds, respect only those who can make themselves feared. (6) That the result to which all these considerations led was that the two crowns should actively prepare means to resist or punish England, more especially as, of all possible issues, the maintenance of peace with that power was the least probable. . . . It would be a mistake, however, to attribute the French support of America exclusively to a feeling of revenge for the humiliations of the prior war. Other motives came in and exercised a decisive influence. There was a conviction, and a right one, in France that for Britain to hold under control the whole of North America as well as of India would give her a maritime supremacy, as well as a superiority in wealth, which would constitute a standing menace to the rest of the civilized world. There was, again, an enthusiasm among the young nobility and among officers in the army for America, which, even aside from the bitterness towards Britain with which it was mingled, had great effect on people as well as on court; and to this was added the sympathy of doctrinaire political philosophers who then and for some time afterwards had great power in forming French public opinion. By the enthusiasm of the young nobility the queen—brilliant, bold, weary of the traditions of the old court, inconsiderate as to ultimate political results—was affected, and through her her husband was reached. But above this was the sense of right which was uppermost in the breast of the unfortunate sovereign who then, with little political experience but high notions of duty as well as of prerogative, occupied the throne."—F. Wharton, ed., *Revolutionary Diplomatic Corr. of the U. S.*, *Introd.*, ch. 4 (v. 1).—"From the earliest moment France had been hopefully regarded by the colonists as probably their friend and possibly their ally. To France, therefore, the first American envoy was dispatched with promptitude [receiving his instructions in March and reaching Paris in the following June, 1776] even before there was a declaration of independence or an assumption of nationality. Silas Deane was the man selected. He was the true Yankee Jack-at-all-trades; he had been graduated at Yale College, then taught school, then practiced law, then engaged in trade, had been all the while advancing in prosperity and reputation, had been a member of the first and second congresses, had failed of reflection to the third, and was now without employment. Mr. Parton describes him as 'of somewhat striking manners and good appearance, accustomed to live and entertain in liberal style, and fond of showy equipage and appointment.' Perhaps his simple-minded fellow-countrymen of the provinces fancied that such a man would make an imposing figure at a European court. He developed no other peculiar fitness for his position; he could not even speak French; and it

proved an ill hour for himself in which he received this trying and difficult honor. . . . Deane arrived in France in June, 1776. He had with him a little ready money for his immediate personal expenses, and some letters of introduction from Franklin. It was intended to keep him supplied with money by sending cargoes of tobacco, rice, and indigo consigned to him, the proceeds of which would be at his disposal for the public service. He was instructed to seek an interview with de Vergennes, the French minister for foreign affairs, and to endeavor with all possible prudence and delicacy to find out what signs of promise the disposition of the French government really held for the insurgents. He was also to ask for equipment for 25,000 troops, ammunition, and 200 pieces of field artillery, all to be paid for—when Congress should be able! In France he was to keep his mission cloaked in secure secrecy, appearing simply as a merchant conducting his own affairs.

. . . Before the arrival of Deane the interests of the colonies had been already taken in hand and substantially advanced in France by one of the most extraordinary characters in history. Caron de Beaumarchais was a man whom no race save the French could produce, and whose traits, career, and success lie hopelessly beyond the comprehension of the Anglo-Saxon. Bred a watchmaker, he had the skill, when a mere youth, to invent a clever escapement balance for regulating watches; had he been able to insert it into his own brain he might have held more securely his elusive good fortunes. From being an ingenious inventor he became an adventurer general, watchmaker to the king, the king's mistresses, and the king's daughters, the lover, or rather the beloved, of the wife of the controller of the king's kitchen, then himself the controller, thence a courtier, and a favorite of the royal princesses. Through a clever use of his opportunities he was able to do a great favor to a rich banker, who in return gave him chances to amass a fortune, and lent him money to buy a patent of nobility. This connection ended in litigation, which was near ruining him; but he discovered corruption on the part of the judge, and thereupon wrote his Memorials, of which the wit, keenness, and vivacity made him famous. He then rendered a private, personal, and important service to Louis XV., and soon afterwards another to the young Louis XVI. . . . He became frenzied in the American cause. In long and ardent letters he opened upon King Louis and his ministers a rattling fire of arguments sound and unsound, statements true and untrue, inducements reasonable and unreasonable, forecastings probable and improbable, politics wise and unwise, all designed to show that it was the bounden duty of France to adopt the colonial cause.—J. T. Morse, Jr., *Benjamin Franklin*, ch. 9.—Soon after the arrival of Deane in Paris, the American Congress, having determined to declare the independence of the states represented in it, appointed a committee "to prepare the plan of a treaty to be proposed to foreign powers, which, after a long discussion, was at length agreed to, and ministers were appointed to negotiate the treaties proposed. Mr. Franklin, Mr. Deane, and Mr. Jefferson, were elected, but, the last mentioned gentleman having declined accepting the appointment offered him, Mr. Arthur Lee, then in London, was chosen in his place. These

transactions were placed on the secret journals, and no member was permitted to give any specific information concerning them, or to state more than, 'that congress had taken such steps as they judged necessary for obtaining foreign alliances.' The secret committee were directed to make an effectual lodgment in France of £10,000 sterling, subject to the order of these commissioners. They assembled in Paris early in the winter, and had an immediate interview with the count De Vergennes. It was perceived that the success of the American cruisers, whose captures had been so considerable as to raise the price of insurance higher than it had been at any time during the war with both France and Spain, had excited a very favourable opinion of the capacities and energies of the nation. They were assured that the ports of France would remain open to their ships, and that the American merchants might freely vend in them every article of commerce, and purchase whatever might be useful for their country. But it was apparent that the minister wished to avoid a rupture with England, and was, therefore, unwilling to receive them openly as the ministers of the United States, or to enter into any formal negotiation with them.—J. Marshall, *Life of Washington*, v. 3, ch. 7.—"It is . . . a settled rule of diplomacy that a minister should not be pressed upon a foreign court by which it is understood that he will not be received. To this may be added the rule that applications for loans should, unless as part of a treaty alliance, be made through business channels. In disregard of these rules the majority of Congress, under the influence of Richard H. Lee and Samuel Adams, instituted a series of missions to European courts for the bare purpose of borrowing money, when the courts so addressed not only gave no intimation that they would receive these envoys, but when, from the nature of things, as well as from unofficial intimation, it should have been known that such reception would be refused. With France there was no difficulty, as France had intimated unofficially that such envoys would be received, at least in a private capacity, France being then ready to take the consequence of war with Britain. And this reception was accorded . . . first to Silas Deane, then to Franklin, and then to Arthur Lee. Here Franklin thought Congress should stop, saying that ministers should not be sent to sovereigns without first having some sort of assurance of recognition of the United States as an independent sovereignty, and that a 'virgin' republic, as he called it, should wait till there was some such recognition before thrusting embassies on foreign courts with demands for money. Congress thought differently. Arthur Lee was instructed to go to Madrid with an alternate commission to Berlin; William Lee was sent to Vienna, Dana to St. Petersburg, Adams to The Hague, Izard to Florence, and the instructions in each case were to demand not only recognition, but subsidy. . . . The policy of sending ministers to European courts where such ministers were not received worked injuriously to the United States from the mere fact of their non-reception. Another difficulty arose from the circumstance that several of these ministers took up their residence in Paris, and, without specific authority, considered it their duty to take part in the counsels of the American legation. Thus Ralph Izard,

commissioned to Tuscany, never went there, but remained in Paris, claiming a right to be informed of all the details of the negotiations with France, and occupying no small share of the time and care of Franklin with discussions of this claim, which Franklin could not accede to, but on which Izard continued to insist. When the triple legation of Franklin, Deane, and Arthur Lee (and afterwards Franklin, Arthur Lee, and Adams), was commissioned, it was understood that its members were to divide, so that one (Franklin) should remain in Paris, while the others should take charge of the missions to other capitals. But Arthur Lee, when he found that he could not be received in Madrid, or in Vienna, or in Berlin, made but brief excursions to Spain, to Austria, and to Berlin, reporting himself after each short trip promptly at Paris, there to differ from Franklin not only as to important business details, but as to the whole policy of the mission. When Adams was in Paris, during their joint mission, he concurred with Arthur Lee in what turned out to be the disastrous measure of removing Williams as commercial agent and putting in his place William Lee, with a nephew of William and Arthur Lee as clerk; while on the whole question of sending legations to foreign courts which had not consented to receive them, and in the still more important question of the attitude to be assumed by the commissioners to the French court, Adams agreed with Lee. . . . It is due to Adams to say that he saw the inherent difficulties of permanent missions conducted by three joint commissioners; that he recommended that there should be but one permanent minister to France; and that he recognized Franklin's great influence with the French ministry as a strong reason for his retention though without colleagues. But there can be no doubt that down to the period when Franklin became sole minister, the American cause in Europe was much embarrassed by the fact that he had colleagues associated with him."—F. Wharton, *Introduct. to The Revolutionary Diplomatic Correspondence of The U. S.*, ch. 1, sect. 16-17, and ch. 9, sect. 106 (v. 1).—Before Franklin or Lee reached France, Silas Deane had already entered into negotiations with Beaumarchais and opened a train of dealings which proved unfortunate for both. Leaving aside "all the long controversy about the rights and wrongs of Beaumarchais, which have never been completely and satisfactorily solved, . . . it appears that a large part of the misunderstanding between him and Deane and Arthur Lee is attributable to a change of plan between April and July, 1776. Beaumarchais's scheme of operation, when he saw Lee in London, was to expend money which should, at least in pretence and form, be obtained from the voluntary contributions of wealthy Frenchmen in aid of the American cause; but in July, when he saw Deane, that scheme had been dropped, and the project was that he should appear as a merchant. . . . In May, there was a plan on the part of the French government to employ a real merchant; now the plan was to employ a comedy merchant. This was exactly the rôle which Beaumarchais was qualified to fill, and he proceeded to establish and open a large house, with all the accessories of a house of business, as the same are understood and represented on the stage. At that time it was believed that

the colonists had plenty of exportable products which they could and would contribute for the purpose [purchase?] of arms and ammunition. It was thought that their main difficulty would be to find any market in which they could purchase contraband of war. The chief assistance, therefore, which they would need from France would be secret permission to make this exchange in France. Beaumarchais's commercial operations would be real commercial operations, and at worst could only issue in some expenses and losses, on the balance of account, which the French government might have to make good. Beaumarchais approached Deane with all the forms and reality of a commercial proposition, and Deane assured him that he should have some returns in six months, and full pay for everything which he supplied in a year. Two days later they made a contract by which Congress was to pay the current price of the goods in America when they should arrive, or take them at the cost price, with insurance, charges, and commission 'proportioned to the trouble and care, which cannot now be fixed.' . . . August 18, Beaumarchais writes to the Committee of Secret Correspondence that, led by esteem for a people struggling for liberty, he has established an extensive commercial house, solely for the purpose of supplying them with all things useful, even gold for the payment of troops; and that without waiting for their consent he has already procured 200 cannons, 200,000 pounds of powder, 20,000 guns, with balls, lead, clothing, etc. He wants the cargoes consigned to him in return, and promises that he has great power to use any consignments whatsoever; but he wants especially tobacco. He signs this letter Roderique Hortales & Co. . . . A million livres were advanced by Spain to Beaumarchais, August 11, 1776, and the Farmers-general of France advanced a million livres, but took advantage of the distress of the Americans to stipulate that it should be paid for in tobacco at half its then current price. Beaumarchais also advanced money to Deane for his personal expenses; and it has never been doubted that he exerted himself with the utmost energy, if not always with the greatest prudence, to expedite the shipment of the goods. Of the three ships which he despatched at the end of the year, two were captured by the English; but the one which arrived was of the greatest possible value to the cause. . . . When Arthur Lee received his appointment as Commissioner to France and entered upon the discharge of his duties, he found that the promises made to him by Beaumarchais . . . had not been kept. He reported to the Committee of Secret Correspondence that a change in the mode of sending had been settled between Deane and Hortales. . . . Arthur Lee always held the attitude of suspicion that Deane and Beaumarchais were in a conspiracy to levy contributions for themselves on the free gifts of France to the United States. Franklin always affected to ignore the dealings with Beaumarchais, and to treat them as exclusively in the hands of Deane; while Congress always showed themselves very careful not to pay for anything which possibly was intended as a gift. Therefore Deane and Beaumarchais were left for years to claim and protest that there had been genuine mercantile contracts which had not been fulfilled, and they could scarcely obtain atten-

tion. . . . September 8, 1777, Congress voted that Deane had no authority to make contracts with persons to come to America. November 21, they voted to recall him. Undoubtedly the vexation which Deane had caused them by sending over a great number of persons to serve in the army, under contracts which enabled them to demand large pay and high rank, was the chief cause of irritation against him; but Arthur Lee had also been poisoning the mind of his brother, and through him, of the whole Lee-Adams faction in Congress, with suspicions of Deane's honesty. Deane had found himself transferred, within a period of two or three years, from an utterly obscure existence at Wethersfield, Connecticut, to the position of a quasi-ambassador at the court of France. He adopted a large and expensive style of living, and kept open house for the Americans at Paris. It is very reasonable to suppose that this large expenditure on his part was one of the chief grounds of belief that he was making great gain out of his position. . . . The affair of Silas Deane has importance far beyond the merits or the fate of that individual. The quarrel over him and his rights and wrongs, as will presently be seen, entered into the hottest party contests in Congress during the next two or three years, and it comes up again often subsequently. It has even been asserted that the intimacy into which John Adams was thrown with the Lees, in this connection, was what made him President of the United States, by winning him votes from Virginia in 1796. January 1, 1778, Beaumarchais, having heard that money had been given to the Americans through Grand, the banker, writes to Vergennes: 'So I have lost the fruit of the most noble and incredible labour by those very exertions which conduct others to glory.' . . . He is in terror of bankruptcy. Inasmuch as a treaty of alliance between France and the United States was now made, matters had entered upon a new stage. Beaumarchais, with his fictitious firm of Hortales, was no longer necessary or useful. The French government dealt directly with the American envoys in granting supplies and subsidies. April 7, Congress made a contract with Hortales that they should pay, for all the cargoes already shipped and those to be shipped, the first cost, charges, and freight, in France. The contract between Beaumarchais and Deane is recognized. Hortales is to pay bills drawn every two months at double usance for twenty-four million livres annually. This article, however, is subject to ratification by the house in Paris and the American Commissioners at Paris. American produce is to be exported and consigned to this house. Interest is to be paid on all sums due, with a commission of two and a half per cent. From this time Beaumarchais falls out of sight as an agent of aid and supplies to the American cause, and becomes a claimant, who considers that he has been treated with injustice and ingratitude by the United States.—W. G. Sumner, *The Financier and the Finances of the Am. Revolution*, ch. 8 (v. 1).—“The episode of Beaumarchais . . . was a survival of the secret diplomacy of Louis XV, for a short time exercising an extraordinary influence in the first period of the reign of Louis XVI. Louis XVI, on reaching the throne, found the machinery of secret diplomacy so ingeniously constructed by his predecessor in full

operation; and, . . . for one or two delicate inquiries at the outset of the new reign, Beaumarchais, who of all the diplomatists of this peculiar breed was the most adroit and fertile in expedients, was well fitted. Hence came his employment, and from his employment came his suggestions, full of brilliant wit and effective reasoning, as to America. But the antagonism between him and Vergennes was too marked to permit sustained political relationship; and when Franklin entered into diplomatic life in Paris Beaumarchais ceased to take a prominent political position. And even during the period of Beaumarchais' greatest activity it must be remembered that he was not technically Vergennes' subordinate. It was one of the peculiarities of the secret diplomacy of Louis XIV and Louis XV, as depicted by Broglie in his admirable treatise on that topic, that even the existence of the secret agent was not to be supposed to be known to the king's ostensible ministers. This was not the case with Beaumarchais; but at the same time Beaumarchais' political influence ceased . . . when, on the arrival of Franklin, Vergennes, with Franklin's aid, took control of Anglo-American diplomacy.”—F. Wharton, *Introd. to The Revolutionary Diplomatic Correspondence of the U. S.*, ch. 4, sect. 55 (v. 1).

A. D. 1776-1779.—The Thirteen Colonies become States.—The framing and adoption of State Constitutions.—“The recommendations to form governments proceeded from the general congress; the work was done by the several states, in the full enjoyment of self-direction. Each of them claimed to be of right a free, sovereign, and independent state; each bound its officers to bear to it true allegiance, and to maintain its freedom and independence. Massachusetts, which was the first state to frame a government independent of the king, deviated as little as possible from the letter of its charter; and, assuming that the place of governor was vacant from the 19th of July 1775, it recognised the council as the legal successor to executive power. On the 1st day of May 1776, in all commissions and legal processes, it substituted the name of its ‘government and people’ for that of the king. In June 1777, its legislature assumed power to prepare a constitution; but, on a reference to the people, the act was disavowed. In September 1779, a convention, which the people themselves had specially authorized, framed a constitution. It was in a good measure the compilation of John Adams, who was guided by the English constitution, by the bill of rights of Virginia, and by the experience of Massachusetts herself; and this constitution, having been approved by the people, went into effect in 1780. On the 5th of January 1776, New Hampshire shaped its government with the fewest possible changes from its colonial forms, like Massachusetts merging the executive power in the council. Not till June 1783 did its convention agree upon a more perfect instrument, which was

approved by the people, and established on the 31st of the following October. The provisional constitution of South Carolina dates from the 26th of March 1776. In March 1778, a permanent constitution was introduced by an act of the legislature. Rhode Island enjoyed under its charter a form of government so thoroughly republican that the rejection of monarchy, in May 1776, required no change beyond a renunciation of the king's name in the style of its public acts. A disfranchisement of Catholics had stolen into its book of laws; but, so soon as it was noticed, the clause was expunged. In like manner, Connecticut had only to substitute the people of the colony for the name of the king; this was done provisionally on the 14th of June 1776, and made perpetual on the 10th of the following October. Before the end of June of the same year Virginia, sixth in the series, first in the completeness of her work, by a legislative convention without any further consultation of the people, framed and adopted a bill of rights, a declaration of independence, and a constitution. On the second of July 1776, New Jersey perfected its new, self-created charter. Delaware next proclaimed its bill of rights, and, on the 20th of September 1776, the representatives in convention having been chosen by the freemen of the state for that very purpose, finished its constitution. The Pennsylvania convention adopted its constitution on the 28th of September 1776; but the opposition of the Quakers whom it indirectly disfranchised, and of a large body of patriots, delayed its thorough organization for more than five months. The delegates of Maryland, meeting on the 14th of August 1776, framed its constitution with great deliberation; it was established on the 9th of the following November. On the 18th of December 1776, the constitution of North Carolina was ratified in the congress which framed it. On the 5th of February 1777, Georgia perfected its organic law by the unanimous agreement of its convention. Last of the thirteen came New York, whose empowered convention, on the 20th of April 1777, established a constitution that, in humane liberality, excelled them all. The privilege of the suffrage had been far more widely extended in the colonies than in England; by general consent, the extension of the elective franchise was postponed. The age of twenty-one was a qualification universally required. So, too, was residence, except that in Virginia and South Carolina it was enough to own in the district or town a certain freehold or 'lot.' South Carolina required the electors to 'acknowledge the being of a God, and to believe in a future state of rewards and punishments.' White men alone could claim the franchise in Virginia, in South Carolina, and in Georgia; but in South Carolina a benign interpretation of the law classed the free octoroon as a white, even though descended through an unbroken line of mothers from an imported African slave; the other ten states raised no question of color. In Pennsylvania, in New Hampshire, and partially in North Carolina, the right to vote belonged to every resident taxpayer; Georgia extended it to any white inhabitant 'of any mechanic trade'; with this exception, Georgia and all the other colonies required the possession of a freehold, or of property variously valued, in Massachusetts at about \$200, in Georgia at £10. Similar condi-

tions had always existed, with the concurrence or by the act of the colonists themselves. Maryland prescribed as its rule that votes should be given by word of mouth; Virginia and New Jersey made no change in their usage; in Rhode Island each freeman was in theory summoned to be present in the general court; he therefore gave his proxy to his representative by writing his own name on the back of his vote; all others adopted the ballot, New York at the end of the war, the other eight without delay."—G. Bancroft, *Hist. of the U. S. (Author's last revision)*, v. 5, ch. 9.

A. D. 1777 (January—December).—The campaign on the Delaware.—Lord Howe in possession of Philadelphia.—Battles on the Brandywine and at Germantown.—The winter of Washington's army at Red Bank.—"Washington remained at Mifflintown from the 7th of January until the 28th of May, during which time no military movement of importance took place. His men left for their homes as soon as their terms of service expired, and as few militia entered the camp to take their places, at times it seemed as if the army would be so reduced as to be unworthy of the name. It was not until late in the spring that the new levies reached headquarters. On the 28th of May the Americans marched to Middlebrook and took position behind the Raritan. On the 13th of June Howe marched from Brunswick and . . . endeavored to bring on a general engagement, . . . but Washington refused to leave the strong position he occupied, and Howe retired to Amboy. Early in April Howe had settled upon a campaign having for its object the capture of Philadelphia. He determined to embark his troops and transport them to the banks of the Delaware or Chesapeake, and march directly on the city. . . . On the 23d of July, after Howe's troops had been three weeks on the vessels, the fleet sailed, shaping its course southwesterly. . . . Signal fires were lighted along the Jersey coast as it was seen from time to time by those who were watching for it, and messengers carried inland the news of its progress. At last, on the 30th, it was spoken of by the capes of Delaware, but Lord Howe deemed it too hazardous to sail up that river, and after consulting with his brother, the general, continued on his course southward. On the 15th of August he entered Chesapeake Bay, and on the 25th the troops were landed at Elk Ferry." Meantime, Washington had been in great uncertainty as to the destination and intentions of his antagonist, but had drawn his army near to Philadelphia. It had just been joined by several distinguished foreign officers, Lafayette, De Kalb and Pulaski in the number. At Philadelphia there was consternation on the approach of the enemy, but "the pacific influence which the presence of a large Quaker population exercised seemed to bear down all military efforts. . . . To impress the lukewarm with the strength of his forces, and to inspire hopes in the breasts of the patriotic,

on the 24th of August Washington marched his army through the streets of Philadelphia. The men were poorly armed and clothed, and to give them some uniformity they wore sprigs of green in their hats." The advance of Howe from Elk Ferry was slow, and it was not until the 11th of September that the Americans encountered him, at Chad's Ford, on the Brandywine, where they had taken position. In the battle which occurred that day the British gained a clear victory, by means of a successful flank movement which Cornwallis executed, crossing the river some miles above, while General Knyphausen made feigned attempts at Chad's Ford. "The American loss was about 1,000, killed, wounded, and prisoners; that of the British, 579. . . . The day after the battle Washington marched from Chester to Philadelphia. He rested his army two days at Germantown, and then recrossed the Schuylkill; public opinion demanding that another battle should be risked before the city should be given up. On the 16th the two armies met on the high ground south of Chester Valley and prepared for action. The skirmishing had actually begun, when a violent storm stopped the engagement by ruining the ammunition of both armies. Washington withdrew to the hills north of the valley, and, finding it impossible to repair the damage done by the storm, retreated again over the Schuylkill, leaving Wayne behind him to watch the enemy and attack their rear should they attempt to follow." But Wayne was surprised at Paoli, and Washington was deceived by a feigned movement, so that Howe succeeded in entering Philadelphia without another battle, on the 26th, having occupied Germantown the day before. "The main portion of Howe's army remained at Germantown, a village of a single street, two miles in length, and five from the city." Here, on the morning of October 4th, Washington attacked him, and, for a time, with great success; but confusion and misunderstandings on the part of the attacking columns arose, which turned the half-won victory into a defeat. "The Americans lost nearly 1,100 killed, wounded, and prisoners; the British 521. . . . While the Americans were defeated in their object, the moral results of the battle were in their favor. It inspired them with confidence, and showed the world that, though driven from the field of Brandywine, they were still aggressive." The next few weeks were employed by Howe in reducing the forts which commanded the Delaware. Fort Mifflin was taken after a severe siege, and this compelled the abandonment of Fort Mercer, from which the British had been repulsed with heavy loss. Early in December Howe moved upon Washington's lines, at White-mars, intending an attack; but found them so strong that he dared not venture the attempt, and returned to Philadelphia. "As the season was advancing, and the Americans were in no condition to keep the field, it was decided to go into winter-quarters at Valley Forge, on the west side of the Schuylkill, where the Valley Creek empties into the river. The surrounding hills were covered with woods and presented an inhospitable appearance. The choice was severely criticised, and De Kalb described it as a wilderness. But the position was central and easily defended. The army arrived there about the middle of December, and the erection of huts

began. They were built of logs, and were 14 by 15 feet each. The windows were covered with oiled paper, and the openings between the logs were closed with clay. The huts were arranged in streets, giving the place the appearance of a city. It was the first of the year, however, before they were occupied, and previous to that the suffering of the army had become great. Although the weather was intensely cold the men were obliged to work at the buildings, with nothing to support life but flour mixed with water, which they baked into cakes at the open fires. . . . The horses died of starvation by hundreds, and the men were obliged to haul their own provisions and firewood. As straw could not be found to protect the men from the cold ground, sickness spread through their quarters with fearful rapidity. 'The unfortunate soldiers,' wrote Lafayette in after-years, 'were in want of everything; they had neither coats, hats, shirts, nor shoes; their feet and their legs froze till they became black, and it was often necessary to amputate them. . . . The army frequently remained whole days without provisions, and the patient endurance of both soldiers and officers was a miracle which each moment served to renew.' . . . While the country around Valley Forge was so impoverished by the military operations of the previous summer as to make it impossible for it to support the army, the sufferings of the latter were chiefly owing to the inefficiency of Congress. That body met at Lancaster after leaving Philadelphia, and at once adjourned to York, where its sessions were continued. But it in no way equalled the congresses which had preceded it. 'The Continental Congress and the currency,' wrote Gouverneur Morris in 1778, 'have greatly depreciated.'"—F. D. Stone, *The Struggle for the Delaware* (*Narrative and Critical Hist. of Am.*, v. 6, ch. 5).—The sufferings of the army at Valley Forge, and the shameful neglect which it experienced, were indignantly described by Washington, in a letter addressed to the President of Congress, December 23, 1777: "Since the month of July," he wrote, "we have had no assistance from the quartermaster-general, and to want of assistance from this department the commissary-general charges great part of his deficiency. To this I am to add, that, notwithstanding it is a standing order, and often repeated, that the troops shall always have two days' provisions by them, that they might be ready at any sudden call; yet an opportunity has scarcely ever offered, of taking an advantage of the enemy, that has not been either totally obstructed, or greatly impeded on this account. And this, the great and crying evil, is not all. The soap, vinegar, and other articles allowed by Congress, we see none of, nor have we seen them, I believe, since the battle of Brandywine. The first, indeed, we have now little occasion for; few men having more than one shirt, many only the society of one, and some none at all. In addition to which, as a proof of the little benefit received from a clothier-general, and as a further proof of the inability of an army, under the circumstances of this, to perform the common duties of soldiers, (besides a number of men confined to hospitals for want of shoes, and others in farmers' houses on the same account,) we have, by a field-return this day made, no less than two thousand eight hundred and ninety-eight

men now in camp unfit for duty, because they are barefoot and otherwise naked. By the same return it appears, that our whole strength in Continental troops, including the eastern brigades, which have joined us since the surrender of General Burgoyne, exclusive of the Maryland troops sent to Wilmington, amounts to more than eight thousand two hundred in camp fit for duty; notwithstanding which; and that since the 4th instant, our numbers fit for duty, from the hardships and exposures they have undergone, particularly on account of blankets (numbers having been obliged, and still are, to sit up all night by fires, instead of taking comfortable rest in a natural and common way), have decreased near two thousand men. We find gentlemen, without knowing whether the army was really going into winter-quarters or not (for I am sure no resolution of mine would warrant the Remonstrance), reprobating the measures as much as if they thought the soldiers were made of stocks or stones, and equally insensible of frost and snow; and moreover, as if they conceived it easily practicable for an inferior army, under the disadvantages I have described ours to be, which are by no means exaggerated, to confine a superior one, in all respects well-appointed and provided for a winter's campaign, within the city of Philadelphia, and to cover from depredation and waste the States of Pennsylvania and Jersey. But what makes this matter still more extraordinary in my eye is, that these very gentlemen,—who were well apprized of the nakedness of the troops from ocular demonstration, who thought their own soldiers worse clad than others, and who advised me near a month ago to postpone the execution of a plan I was about to adopt, in consequence of a resolve of Congress for seizing clothes, under strong assurances that an ample supply would be collected in ten days agreeably to a decree of the State (not one article of which, by the by, is yet come to hand),—should think a winter's campaign, and the covering of these States from the invasion of an enemy, so easy and practicable a business. I can assure those gentlemen, that it is a much easier and less distressing thing to draw remonstrances in a comfortable room by a good fireside, than to occupy a cold, bleak hill, and sleep under frost and snow, without clothes or blankets. However, although they seem to have little feeling for the naked and distressed soldiers, I feel superabundantly for them, and, from my soul, I pity those miseries, which it is neither in my power to relieve or prevent. It is for these reasons, therefore, that I have dwelt upon the subject; and it adds not a little to my other difficulties and distress to find, that much more is expected of me than is possible to be performed, and that upon the ground of safety and policy I am obliged to conceal the true state of the army from public view, and thereby expose myself to detraction and calumny.”—George Washington, *Writings, ed. by W. C. Ford, v. 6, pp. 259-262.*—It was during this trying winter, while the army suffered at Valley Forge, that it was joined by Baron Steuben, an accomplished Prussian officer, trained in the school of Frederick the Great, with a record of distinguished service in the Seven Years War. He came as a volunteer, and was welcomed by Washington, who found in him the organizer, the disciplinarian, the instructor, which the rudely formed

American army so greatly needed. The services rendered by Baron Steuben during that first winter of his stay in America were especially valuable, beyond measure. In his own account of the state of things which he found he says: “My determination must have been very firm that I did not abandon my design when I saw the troops. Matters had to be remedied, but where to commence was the great difficulty. In the first place, I informed myself relative to the military administration. I found that the different branches were divided into departments. There were those of the quarter-master general, war commissary, provisions commissary, commissary of the treasury, or paymaster of forage, etc., etc. But they were all bad copies of a bad original. That is to say, they had imitated the English administration, which is certainly the most imperfect in Europe. The general asked me to give him some statements concerning the arrangements of the departments, and their various branches in the European armies. I gave them to him, and, detaching therein the duties of each department and of its different branches, dilated upon the functions of the quarter-masters (*maréchaux généraux de logis*) in particular, in which branch I had served myself for a long time in the Seven Years' War. But the English system, bad as it is, had already taken root. Each company and quarter-master had a commission of so much per cent. on all the money he expended. It was natural, therefore, that expense was not spared—that wants were discovered where there were none; and it was also natural that the dearest articles were those that suited the commissioners best. Hence the depreciation of our currency—hence the expense of so many millions. I pointed out to General Washington and several members of Congress the advantages of the contract system. I even drew up a memorandum on the subject, which Colonel Laurens translated into English, showing the way in which things were contracted for in the Prussian and French armies. But whether it was that they thought such a system impracticable in this country, or whether they were unable to check the torrent of expense, things remained as they were. I directed my attention to the condition of the troops, and I found an ample field, where disorder and confusion were supreme. . . . The number of men in a regiment was fixed by Congress, as well as in a company—so many infantry, cavalry, and artillery. But the eternal ebb and flow of men engaged for three, six, and nine months, who went and came every day, rendered it impossible to have either a regiment or a company complete; and the words company, regiment, brigade, and division, were so vague that they did not convey any idea upon which to form a calculation, either of a particular corps or of the army in general. They were so unequal in their number, that it would have been impossible to execute any maneuvers. Sometimes a regiment was stronger than a brigade. I have seen a regiment consisting of thirty men, and a company of one corporal! . . . The soldiers were scattered about in every direction. The army was looked upon as a nursery for servants, and every one deemed it his right to have a valet; several thousand soldiers were employed in this way. We had more commissaries and quarter-masters at that time than all the armies of Europe

together; the most modest had only one servant, but others had two and even three. If the captains and colonels could give no account of their men, they could give still less an account of their arms, accoutrements, clothing, ammunition, camp equipage, etc. Nobody kept an account but the commissaries, who furnished all the articles. A company, which consisted, in May, of fifty men, was armed, clothed and equipped in June. It then consisted of thirty men; in July it received thirty recruits, who were to be clothed, armed and equipped; and not only the clothes, but the arms were carried off by those who had completed their time of service. General Knox assured me that, previous to the establishment of my department, there never was a campaign in which the military magazines did not furnish from 5,000 to 8,000 muskets to replace those which were lost in the way I have described above. The loss of bayonets was still greater. The American soldier, never having used this arm, had no faith in it, and never used it but to roast his beefsteak, and indeed often left it at home. This is not astonishing when it is considered that the majority of the States engaged their soldiers for from six to nine months. Each man who went away took his musket with him, and his successor received another from the public store. No captain kept a book. Accounts were never furnished nor required. As our army is, thank God, little subject to desertion, I venture to say that during an entire campaign there have not been twenty muskets lost since my system came into force. . . . The men were literally naked, some of them in the fullest extent of the word. The officers who had coats had them of every color and make. I saw officers, at a grand parade at Valley Forge, mounting guard in a sort of dressing-gown, made of an old blanket or woolen bed-cover. With regard to their military discipline, I may safely say no such thing existed. . . . I commenced operations by drafting 120 men from the line, whom I formed into a guard for the general-in-chief. I made this guard my military school. I drilled them myself twice a day; and to remove that English prejudice which some officers entertained, namely, that to drill a recruit was a sergeant's duty and beneath the station of an officer, I often took the musket myself to show the men the manual exercise which I wished to introduce. All my inspectors were present at each drill. We marched together, wheeled, etc., etc., and in a fortnight my company knew perfectly how to bear arms, had a military air, knew how to march, to form in column, deploy, and execute some little maneuvers with excellent precision. . . . I paraded them in presence of all the officers of the army, and gave them an opportunity of exhibiting all they knew. They formed in column; deployed; attacked with the bayonet; changed front, etc., etc. It afforded a new and agreeable sight for the young officers and soldiers. Having gained my point, I dispersed my apostles, the inspectors, and my new doctrine was eagerly embraced. I lost no time in extending my operations on a large scale. I applied my system to battalions, afterward to brigades, and in less than three weeks I executed maneuvers with an entire division in presence of the commander-in-chief. . . . The most interesting narrative of the energy employed by Steuben, and the success of

his system, is given by his favorite aid-de-camp and intimate friend, William North, who was with him from the beginning. He says in his biographical sketch: 'Certainly it was a brave attempt! Without understanding a word of the English language, to think of bringing men, born free, and joined together to preserve their freedom, into strict subjection; to obey without a word, a look, the mandates of a master! that master once their equal, or possibly beneath them, in whatever might become a man! It was a brave attempt, which nothing but virtue, or high-raised hopes of glory, could have supported. At the first parade, the troops neither understanding the command, nor how to follow in a changeament to which they had not been accustomed, even with the instructor at their head, were getting fast into confusion. At this moment, Captain B. Walker, then of the second New York regiment, advanced from his platoon, and offered his assistance to translate the orders and interpret to the troops. "If," said the baron, "I had seen an angel from heaven, I should not have more rejoiced." . . . Walker became from that moment his aid-de-camp, and remained to the end of the baron's life his dear and most worthy friend. From the commencement of instruction, no time, no pains, no fatigue were thought too great, in pursuit of this great object. Through the whole of each campaign, when troops were to maneuver, and that was almost every day, the baron rose at three o'clock; while his servant dressed his hair he smoked a single pipe and drank one cup of coffee, was on horseback at sunrise, and, with or without his suite, galloped to the parade. There was no waiting for a tardy aid-de-camp, and those who followed wished they had not slept. Nor was there need of chiding; when duty was neglected, or military etiquette infringed, the baron's look was quite sufficient.' . . . Steuben enjoyed the confidence of both officers and men, and every thing he proposed was executed with as much precision as if it were an order from the commander-in-chief. Although he was only a volunteer, without any specific rank in the army, he had greater power and authority than any general could boast of."—F. Kapp, *Life of Frederick William von Steuben*, ch. 6.

A. D. 1777 (July).—The coming of Lafayette.—'La Fayette, barely nineteen years old, was in garrison at Metz, when he was invited to a dinner that his commander, the Count de Broglie, gave to the brother of the king of England, the Duke of Gloucester, then on his way through the city. News had just been received of the proclamation of the independence of the United States, and, the conversation having naturally fallen on this subject, La Fayette piled the duke with questions to acquaint himself with the events, entirely new to him, which were happening in America. Before the end of the dinner he had made his decision, and, from that moment, he no longer thought of anything else

except setting out for the new world. He went to Paris and confided his project to his friends, the Count de Ségur and the Viscount de Noailles, who were to accompany him. The Count de Broglie, whom he also informed, tried to turn him from his design. 'I saw your uncle die in Italy,' he said to him, 'and your father at Minden, and I do not wish to contribute to the ruin of your family by allowing you to go.' Nevertheless, he put La Fayette in communication with the former agent of Choiseul in Canada, the Baron de Kalb, who became his friend. De Kalb presented him to Silas Deane, who, considering him too young, wished to dissuade him from his project. But the news of the disasters experienced by the Americans before New York, at White Plains and in New Jersey, confirmed La Fayette in his resolution. He bought and fitted out a vessel at his own expense, and disguised his preparations by making a journey to London. Nevertheless his design was disclosed at Court. His family became angry with him. He was forbidden to go to America, and, to render this order effective, a lettre de cachet was issued against him. Nevertheless he left Paris with an officer named Mauroy, disguised himself as a courier, went on board his ship at Passage in Spain, and set sail April the 26th, 1777. He had several officers on board. La Fayette successfully avoided the English cruisers and the French vessels sent in pursuit of him. Finally, after a hazardous passage of seven weeks, he reached Georgetown, and, furnished with letters of recommendation from Deane, he reported to Congress.—T. Balch, *The French in America during the War of Independence*, ch. 7.—In consideration of the great personal sacrifice he had made in quitting France, and his offer to serve the American cause at his own expense and without pay, Congress, with hesitation, conferred on the young marquis the rank of Major General, but without command. He succeeded, too, in procuring a like commission for Baron de Kalb, who had accompanied him. While La Fayette was still busy with these arrangements, Washington came to Philadelphia, and they met at a dinner party. They seem to have been drawn to one another at the first exchange of words, and a friendship began which lasted through their lives. La Fayette was soon invited to become a member of the military family of the commander-in-chief.—B. Tuckerman, *Life of General Lafayette*, ch. 2.

A. D. 1777 (July–October).—**The struggle for the Hudson.**—Burgoyne's expedition from Canada.—His surrender at Saratoga.—Early in the summer of 1777 a formidable expedition under General Burgoyne was set in motion from Canada toward Lake Champlain. "It was a part of Burgoyne's plan, not merely to take Ticonderoga, but to advance thence upon Albany, and, with the co-operation of the troops at New York, to get possession also of the posts in the Highlands. The British would then command the Hudson through its whole extent, and New England, the head of the rebellion, would be completely cut off from the middle and southern colonies. Burgoyne started on this expedition with a brilliant army of 8,000 men, partly British and partly Germans, besides a large number of Canadian boatmen, laborers and skirmishers.

On the western shore of Lake Champlain, near Crown Point, he met the Six Nations in council, and after a feast and a speech, some 400 of their warriors joined this army. His next step was to issue a proclamation . . . threatening with all the extremities of war all who should presume to resist his arms. Two days after the issue of this proclamation, Burgoyne appeared [July 1] before Ticonderoga." The commander of that important fort, General St. Clair, found defense impracticable and evacuated the place. He was vigorously pursued in his retreat and only escaped with the loss of most of his baggage and stores, besides several hundred men, in killed, wounded, and prisoners. "After a seven days' march, he joined Schuyler at Fort Edward, on the Hudson. Here was assembled the whole force of the northern army, amounting to about 5,000 men; but a considerable part were militia hastily called in; many were without arms; there was a great deficiency of ammunition and provisions; and the whole force was quite disorganized. The region between Skenesborough [now Whitehall, where Burgoyne had halted] and the Hudson was an almost unbroken wilderness. Wood Creek was navigable as far as Fort Anne [which the Americans had fired and abandoned]; from Fort Anne to the Hudson, over an exceedingly rough country, . . . extended a single military road. While Burgoyne halted a few days at Skenesborough to put his forces in order, and to bring up the necessary supplies, Schuyler hastened to destroy the navigation of Wood Creek," and to make the road from Fort Anne as nearly impassable as a wilderness road can be made. "All the stock in the neighborhood was driven off, and the militia of New England was summoned to the rescue. . . . The advance from Skenesborough cost the British infinite labor and fatigue; but . . . [the] impediments were at length overcome; and Burgoyne, with his troops, artillery, and baggage, presently appeared [July 29] on the banks of the Hudson. . . . Fort Edward was untenable. As the British approached, the Americans crossed the river, and retired, first to Saratoga, and then to Stillwater, a short distance above the mouth of the Mohawk. Hardly had Schuyler taken up this position, when news arrived of another disaster and a new danger. While moving up Lake Champlain, Burgoyne had detached Colonel St. Leger, with 200 regulars, Sir John Johnson's Royal Greens, some Canadian Rangers, and a body of Indians under Brant, to harass the New York frontier from the west. St. Leger laid siege to Fort Schuyler, late Fort Stanwix, near the head of the Mohawk, then the extreme western post of the State of New York. General Herkimer raised the militia of Tryon county, and advanced to the relief of this important post, which was held by Gansevoort and Willett, with two New York regiments. About six miles from the fort [near Oriskany, August 6], owing to want of proper precaution, Herkimer fell into an ambush. Mortally wounded, he supported himself against a stump, and encouraged his men to the fight. By the aid of a successful sally by Willett, they succeeded at last in repulsing the assailants, but not without a loss of 400, including many of the leading patriots of that region, who met with no mercy at the hands of the Indians and refugees. Tryon county, which included the whole district

west of Albany, abounded with Tories. It was absolutely necessary to relieve Fort Schuyler." General Arnold was accordingly despatched thither, with three regiments, and on his approach St. Leger, deserted by most of his Indian allies, retreated precipitately, leaving most of his stores and baggage behind. Meantime, Burgoyne was beginning to find his situation serious. To feed and otherwise supply his army was the chief difficulty. He could bring enough of stores to the head of Lake George, by the water carriage which he commanded, from Canada; but to transport them thence to the Hudson, though the distance was only eighteen miles, proved nearly impracticable. "The roads were so bad, and the supply of draft cattle so small, that, after a fortnight's hard labor, the British army had only four days' provision in advance." To improve his supplies, and partly, moreover, in the hope of finding discontent among the settlers of the New Hampshire Grants, Burgoyne sent 800 men, under Colonel Baum, into Vermont. They were defeated [August 16] at Bennington by the New Hampshire and Vermont militia under Colonel John Stark, and again defeated a second time the same day, after reinforcements had been sent to them. "Besides the killed, about 200 in number, the Americans took near 600 prisoners, 1,000 stand of arms, as many swords, and four pieces of artillery. . . . The American loss was only 14 killed and 42 wounded. . . . The victory of Stark had a magical effect in reviving the spirits of the people and the courage of the soldiers."—R. Hildreth, *Hist. of the U. S.*, ch. 36 (p. 3).—"Burgoyne's position was by this time very dangerous. His Indians were leaving him; many of his best men had been killed or captured; and he was getting short of provisions. The army opposed to him was increasing: Congress was hurrying men up the Hudson; and the country militia were coming rapidly. Burgoyne, therefore, desperately attempted to force his way through the American army. He crossed the Hudson, and moved slowly down its west bank toward the Mohawk. About the same time, Gates, who had been sent by Congress to take Schuyler's place, felt strong enough to move up the west bank of the Hudson, away from the Mohawk. The two armies met [September 19] at Bemis Heights, between Saratoga Lake and the Hudson. The battle which followed [called by some writers the battle of Freeman's Farm] was not decisive: the British held the ground; but the Americans had shown that Burgoyne could not break through."—A. Johnston, *Hist. of the U. S. for Schools*, sect. 222-223.—"Burgoyne now halted again, and strengthened his position by field-works and redoubts; and the Americans also improved their defences. The two armies remained nearly within cannon-shot of each other for a considerable time, during which Burgoyne was anxiously looking for intelligence of the promised expedition from New York which, according to the original plan, ought by this time to have been approaching Albany from the south. At last, a messenger from Clinton made his way, with great difficulty, to Burgoyne's camp, and brought the information that Clinton was on his way up the Hudson to attack the American forts which barred the passage up that river to Albany. Burgoyne, in reply, on the 30th of September, urged Clinton

to attack the forts as speedily as possible, stating that the effect of such an attack, or even the semblance of it, would be to move the American army from its position before his own troops. By another messenger, who reached Clinton on the 5th of October, Burgoyne informed his brother general that he had lost his communications with Canada, but had provisions which would last him till the 20th. Burgoyne described himself as strongly posted, and stated that though the Americans in front of him [at Stillwater] were strongly posted also, he made no doubt of being able to force them, and making his way to Albany; but that he doubted whether he could subsist there, as the country was drained of provisions. He wished Clinton to meet him there, and to keep open a communication with New York. Burgoyne had over-estimated his resources, and in the very beginning of October found difficulty and distress pressing him hard. The Indians and Canadians began to desert him; while, on the other hand, Gates's army was continually reinforced by fresh bodies of the militia. . . . Finding the number and spirit of the enemy to increase daily, and his own stores of provisions to diminish, Burgoyne determined on attacking the Americans in front of him, and by dislodging them from their position, to gain the means of moving upon Albany, or at least of relieving his troops from the straitened position in which they were cooped up. Burgoyne's force was now reduced to less than 6,000 men. The right of his camp was on some high ground a little to the west of the river; thence his entrenchments extended along the lower ground to the bank of the Hudson, the line of their front being nearly at a right angle with the course of the stream. The lines were fortified with redoubts and field-works. . . . The numerical force of the Americans was now greater than the British, even in regular troops, and the numbers of the militia and volunteers which had joined Gates and Arnold were greater still. General Lincoln, with 2,000 New England troops, had reached the American camp on the 29th of September. Gates gave him the command of the right wing, and took in person the command of the left wing, which was composed of two brigades under Generals Poor and Leonard, of Colonel Morgan's rifle corps, and part of the fresh New England Militia. The whole of the American lines had been ably fortified under the direction of the celebrated Polish General, Kosciusko, who was now serving as a volunteer in Gates's army. The right of the American position, that is to say, the part of it nearest to the river, was too strong to be assailed with any prospect of success; and Burgoyne therefore determined to endeavour to force their left. For this purpose he formed a column of 1,500 regular troops, with two twelve-pounders, two howitzers, and six six-pounders. He headed this in person, having Generals Phillips, Riedesel, and Fraser under him. The enemy's force immediately in front of his lines was so strong that he dared not weaken the troops who guarded them, by detaching any more to strengthen his column of attack. It was on the 7th of October that Burgoyne led his column forward; and on the preceding day, the 6th, Clinton had successfully executed a brilliant enterprise against the two American forts which barred his progress up the Hudson. He had captured them both,

with severe loss to the American forces opposed to him; he had destroyed the fleet which the Americans had been forming on the Hudson, under the protection of their forts; and the upward river was laid open to his squadron. He had also, with admirable skill and industry, collected in small vessels, such as could float within a few miles of Albany, provisions sufficient to supply Burgoyne's army for six months. He was now only 150 miles distant from Burgoyne; and a detachment of 1,700 men actually advanced within 40 miles of Albany. Unfortunately Burgoyne and Clinton were each ignorant of the other's movements; but if Burgoyne had won his battle on the 7th, he must on advancing have soon learned the tidings of Clinton's success, and Clinton would have heard of his. A junction would soon have been made of the two victorious armies, and the great objects of the campaign might yet have been accomplished. All depended on the fortune of the column with which Burgoyne, on the eventful 7th of October, 1777, advanced against the American position. It failed in the attempt to break the American line. Arnold, who had been deprived of his command by Gates, rushed into the fight at its fiercest stage and assumed a lead, without authority, which contributed greatly to the result. General Fraser, on the British side, was wounded mortally by a sharp-shooter under Morgan's command. Burgoyne's whole force was driven back, with heavy losses in killed and wounded, leaving six cannon behind them, and the Americans, pursuing, carried part of their entrenchments by storm. By this success, the latter "acquired the means of completely turning the right flank of the British, and gaining their rear. To prevent this calamity, Burgoyne effected during the night an entire change of position. With great skill he removed his whole army to some heights near the river, a little northward of the former camp, and he there drew up his men, expecting to be attacked on the following day. But Gates was resolved not to risk the certain triumph which his success had already secured for him. He harassed the English with skirmishes, but attempted no regular attack. Meanwhile he detached bodies of troops on both sides of the Hudson to prevent the British from recrossing that river, and to bar their retreat. When night fell, it became absolutely necessary for Burgoyne to retire again, and, accordingly, the troops were marched through a stormy and rainy night towards Saratoga, abandoning their sick and wounded, and the greater part of their baggage, to the enemy. . . . Burgoyne now took up his last position on the heights near Saratoga; and hemmed in by the enemy, who refused any encounter, and baffled in all his attempts at finding a path of escape, he there lingered until famine compelled him to capitulate. The fortitude of the British army during this melancholy period has been justly eulogised by many native historians, but I prefer quoting the testimony of a foreign writer, as free from all possibility of partiality. Botta says: 'It exceeds the power of words to describe the pitiable condition to which the British army was now reduced. The troops were worn down by a series of toil, privation, sickness, and desperate fighting. They were abandoned by the Indians and Canadians; and the effective force of the whole army was now diminished by repeated and heavy losses,

which had principally fallen on the best soldiers and the most distinguished officers, from 10,000 combatants to less than one-half that number. Of this remnant, little more than 3,000 were English. In these circumstances, and thus weakened, they were invested by an army of four times their own number, whose position extended three parts of a circle round them; who refused to fight them, as knowing their weakness, and who, from the nature of the ground, could not be attacked in any part. In this helpless condition, obliged to be constantly under arms, while the enemy's cannon played on every part of their camp, and even the American rifle-balls whistled in many parts of the lines, the troops of Burgoyne retained their customary firmness, and while slaking under a hard necessity, they showed themselves worthy of a better fate. They could not be reproached with an action or a word, which betrayed a want of temper or of fortitude.' At length the 13th of October arrived, and as no prospect of assistance appeared, and the provisions were nearly exhausted, Burgoyne, by the unanimous advice of a council of war, sent a messenger to the American camp to treat of a convention. General Gates in the first instance demanded that the royal army should surrender prisoners of war. He also proposed that the British should ground their arms. Burgoyne replied, 'This article is inadmissible in every extremity; sooner than this army will consent to ground their arms in their encampment, they will rush on the enemy, determined to take no quarter.' After various messages, a convention for the surrender of the army was settled, which provided that 'The troops under General Burgoyne were to march out of their camp with the honours of war, and the artillery of the intrenchments, to the verge of the river, where the arms and artillery were to be left. The arms to be piled by word of command from their own officers. A free passage was to be granted to the army under Lieutenant-General Burgoyne to Great Britain, upon condition of not serving again in North America during the present contest.' The articles of capitulation were settled on the 15th of October; and on that very evening a messenger arrived from Clinton with an account of his successes, and with the tidings that part of his force had penetrated as far as Esopus, within 50 miles of Burgoyne's camp. But it was too late. The public faith was pledged; and the army was, indeed, too debilitated by fatigue and hunger to resist an attack if made; and Gates certainly would have made it, if the convention had been broken off. Accordingly, on the 17th, the convention of Saratoga was carried into effect. By this convention 5,790 men surrendered themselves as prisoners. The sick and wounded left in the camp when the British retreated to Saratoga, together with the numbers of the British, German, and Canadian troops, who were killed, wounded, or taken, and who had deserted in the preceding part of the expedition, were reckoned to be 4,689. The British sick and wounded who had fallen into the hands of the Americans after the battle of the 7th, were treated with exemplary humanity; and when the convention was executed, General Gates showed a noble delicacy of feeling, which deserves the highest degree of honour. Every circumstance was avoided which could give the appearance of triumph. The

American troops remained within their lines until the British had piled their arms; and when this was done, the vanquished officers and soldiers were received with friendly kindness by their victors, and their immediate wants were promptly and liberally supplied. Discussions and disputes afterwards arose as to some of the terms of the convention; and the American Congress refused for a long time to carry into effect the article which provided for the return of Burgoyne's men to Europe; but no blame was imputable to General Gates or his army, who showed themselves to be generous as they had proved themselves to be brave."—Sir E. Creasy, *Fifteen Decisive Battles of the World*, ch. 13.

A. D. 1777-1778.—The British in Philadelphia.—Their gay winter. See PHILADELPHIA: A. D. 1777-1778.

A. D. 1777-1778.—The Conway Cabal.—The capitulation of Burgoyne at Saratoga "was an all-important event in its influence on the progress of the war; but its immediate effect was unpropitious to the reputation of the Commander-in-chief, who was compelled, at the close of the year, to place his army in a state of almost total destitution in winter-quarters at Valley Forge. The brilliant success of General Gates at Saratoga, in contrast with the reverses which had befallen the American Army under the immediate command of Washington, encouraged the operations of a cabal against him, which had been formed by certain disaffected officers of the army, and was countenanced by a party in Congress. The design was, by a succession of measures implying a want of confidence, to drive Washington to retire from the service in disgust; and, when this object was effected, to give the command of the army to General Gates, who lent a willing ear to these discreditable intrigues. A foreign officer in the American Army, of the name of Conway, was the most active promoter of the project, which was discovered by the accidental disclosure of a part of his correspondence with Gates. Washington bore himself on this occasion with his usual dignity, and allowed the parties concerned, in the army and in Congress, to take refuge in explanations, disclaimers, and apologies, by which those who made them gained no credit, and those who accepted them were not deceived. A part of the machinery of this wretched cabal was the publication, in London, and the republication in New York of [a] collection of forged letters . . . bearing the name of Washington, and intended to prove his insincerity in the cause of the Revolution. Nothing perhaps more plainly illustrates his conscious strength of character, than the disdainful silence with which he allowed this miserable fabrication to remain for twenty years without exposure. It was only in the year 1796, and when about to retire from the Presidency, that he filed, in the department of State, a denial of its authenticity."—E. Everett,

Life of Washington, ch. 6.—In a letter written May 30, 1778, addressed to Landon Carter, from the camp at Valley Forge, Washington alluded to the subject of the cabal as follows: "With great truth I think I can assure you, that the information you received from a gentleman at Sabine Hall, respecting a disposition in the northern officers to see me superseded in my command by General G—— is without the least foundation. I have very sufficient reasons to think, that no officers in the army are more attached to me, than those from the northward, and of those, none more so than the gentlemen, who were under the immediate command of G—— a last campaign. That there was a scheme of this sort on foot, last fall, admits of no doubt; but it originated in another quarter; with three men who wanted to aggrandize themselves; but finding no support, on the contrary, that their conduct and views, when seen into, were likely to undergo severe reprehension, they slunk back, disavowed the measure, and professed themselves my warmest admirers. Thus stands the matter at present. Whether any members of Congress were privy to this scheme, and inclined to aid and abet it, I shall not take upon me to say; but am well informed, that no whisper of the kind was ever heard in Congress."—George Washington, *Writings*, ed. by W. C. Ford, v. 7, p. 89.

ALSO IN: W. Irving, *Life of Washington*, v. 3, ch. 28-30.—J. C. Hamilton, *Hist. of the U. S.*, in the *Writings of Alex. Hamilton*, v. 1, ch. 13-14.—J. Sparks, *Life of Gouverneur Morris*, v. 1, ch. 10.—W. V. Wells, *Life of Samuel Adams*, ch. 46 (a. 2).

A. D. 1777-1781.—Adoption and ratification of the Articles of Confederation.—"On the 11th of June, 1776, the same day on which the committee for preparing the declaration of independence was appointed, congress resolved, that 'a committee be appointed to prepare and digest the form of a confederation to be entered into between these colonies'; and on the next day a committee was accordingly appointed, consisting of a member from each colony. Nearly a year before this period (viz. on the 21st of July, 1775), Dr. Franklin had submitted to congress a sketch of articles of confederation, which does not, however, appear to have been acted on. . . . On the 12th of July, 1776, the committee appointed to prepare articles of confederation presented a draft, which was in the hand-writing of Mr. Luckenson, one of the committee, and a delegate from Pennsylvania. The draft, so reported, was debated from the 22d to the 31st of July, and on several days between the 5th and 20th of August, 1776. On this last day, congress, in committee of the whole, reported a new draft, which was ordered to be printed for the use of the members. The subject seems not again to have been touched until the 8th of April, 1777, and the articles were debated at several times between that time and the 15th of November of the same year. On this last day the articles were reported with sundry amendments, and finally adopted by congress. A committee was then appointed to draft, and they accordingly drafted, a circular letter, requesting the states respectively to authorize their delegates in congress to subscribe the same in behalf of the state. . . . It carried, however, very slowly conviction to the minds of the local legislatures. Many objections were

stated, and many amendments were proposed. All of them, however, were rejected by congress, not probably because they were all deemed inexpedient or improper in themselves; but from the danger of sending the instrument back again to all the states, for reconsideration. Accordingly, on the 20th of June, 1778, a copy, engrossed for ratification, was prepared, and the ratification begun on the 9th day of July following. It was ratified by all the states, except Delaware and Maryland, in 1778; by Delaware in 1779, and by Maryland on the 1st of March, 1781, from which last date its final ratification took effect, and was joyfully announced by congress. In reviewing the objections taken by the various states to the adoption of the confederation in the form in which it was presented to them, . . . that which seemed to be of paramount importance, and which, indeed, protracted the ratification of the confederation to so late a period, was the alarming controversy in respect to the boundaries of some of the states, and the public lands, held by the crown, within these reputed boundaries."—J. Story, *Commentaries on the Const. of the U. S.*, bk. 2, ch. 2 (p. 1).

The following is the text of the Articles of Confederation:

Article I.—The style of this Confederacy shall be, 'The United States of America.' **Art. II.**—Each State retains its sovereignty, freedom, and independence, and every power, jurisdiction, and right, which is not by this Confederation expressly delegated to the United States in Congress assembled. **Art. III.**—The said States hereby severally enter into a firm league of friendship with each other, for their common defense, the security of their liberties, and their mutual and general welfare, binding themselves to assist each other against all force offered to, or attacks made upon them, or any of them, on account of religion, sovereignty, trade, or any other pretense whatever. **Art. IV.**—The better to secure and perpetuate mutual friendship and intercourse among the people of the different States in this Union, the free inhabitants of each of these States, paupers, vagabonds, and fugitives from justice excepted, shall be entitled to all privileges and immunities of free citizens in the several States; and the people of each State shall have free ingress and egress to and from any other State, and shall enjoy therein all the privileges of trade and commerce subject to the same duties, impositions, and restrictions as the inhabitants thereof respectively; provided that such restrictions shall not extend so far as to prevent the removal of property imported into any State to any other State of which the owner is an inhabitant; provided also, that no imposition, duties, or restriction shall be laid by any State on the property of the United States or either of them. If any person guilty of, or charged with, treason, felony, or other high misdemeanor in any State shall flee from justice and be found in any of the United States, he shall, upon demand of the governor or executive power of the State from which he fled, be delivered up and removed to the State having jurisdiction of his offense. Full faith and credit shall be given in each of these States to the records, acts, and judicial proceedings of the courts and magistrates of every other State. **Art. V.**—For the more convenient management of the general interests of the United States, delegates shall be

annually appointed in such manner as the Legislature of each State shall direct, to meet in Congress on the first Monday in November, in every year, with a power reserved to each State to recall its delegates, or any of them, at any time within the year, and to send others in their stead for the remainder of the year. No State shall be represented in Congress by less than two, nor by more than seven members; and no person shall be capable of being a delegate for more than three years in any term of six years; nor shall any person, being a delegate, be capable of holding any office under the United States for which he, or another for his benefit, receives any salary, fees, or emolument of any kind. Each State shall maintain its own delegates in any meeting of the States and while they act as members of the Committee of the States. In determining questions in the United States in Congress assembled, each State shall have one vote. Freedom of speech and debate in Congress shall not be impeached or questioned in any court or place out of Congress; and the members of Congress shall be protected in their persons from arrests and imprisonment during the time of their going to and from, and attendance on, Congress, except for treason, felony, or breach of the peace. **Art. VI.**—No State, without the consent of the United States, in Congress assembled, shall send any embassy to, or receive any embassy from, or enter into any conference, agreement, alliance, or treaty with any king, prince, or state; nor shall any person holding any office of profit or trust under the United States, or any of them, accept of any present, emolument, office, or title of any kind whatever from any king, prince, or foreign state; nor shall the United States, in Congress assembled, or any of them, grant any title of nobility. No two or more States shall enter into any treaty, confederation, or alliance whatever between them, without the consent of the United States, in Congress assembled, specifying accurately the purposes for which the same is to be entered into, and how long it shall continue. No State shall lay any imposts or duties which may interfere with any stipulations in treaties entered into by the United States, in Congress assembled, with any king, prince, or state, in pursuance of any treaties already proposed by Congress to the courts of France and Spain. No vessel of war shall be kept up in time of peace by any State, except such number only as shall be deemed necessary by the United States, in Congress assembled, for the defense of such State or its trade, nor shall any body of forces be kept up by any State in time of peace, except such number only as, in the judgment of the United States, in Congress assembled, shall be deemed requisite to garrison the forts necessary for the defense of such State; but every State shall always keep up a well-regulated and disciplined militia, sufficiently armed and accoutred, and shall provide and constantly have ready for use in public stores a due number of field-pieces and tents, and a proper quantity of arms, ammunition, and camp equipage. No State shall engage in any war without the consent of the United States, in Congress assembled, unless such State be actually invaded by enemies, or shall have received certain advice of a resolution being formed by some nation of Indians to invade such State, and the danger is so imminent as not to admit of a delay

till the United States, in Congress assembled, can be consulted; nor shall any State grant commissions to any ships or vessels of war, nor letters of marque or reprisal, except it be after a declaration of war by the United States, in Congress assembled, and then only against the kingdom or state, and the subjects thereof, against which war has been so declared, and under such regulations as shall be established by the United States, in Congress assembled, unless such State be infested by pirates, in which case vessels of war may be fitted out for that occasion, and kept so long as the danger shall continue, or until the United States, in Congress assembled, shall determine otherwise. **Art. VII.**—When land forces are raised by any State for the common defense, all officers of or under the rank of Colonel shall be appointed by the Legislature of each State respectively by whom such forces shall be raised, or in such manner as such State shall direct, and all vacancies shall be filled up by the State which first made the appointment. **Art. VIII.**—All charges of war, and all other expenses that shall be incurred for the common defense, or general welfare, and allowed by the United States, in Congress assembled, shall be defrayed out of a common treasury, which shall be supplied by the several States in proportion to the value of all land within each State, granted to, or surveyed for, any person, as such land and the buildings and improvements thereon shall be estimated, according to such mode as the United States, in Congress assembled, shall, from time to time, direct and appoint. The taxes for paying that proportion shall be laid and levied by the authority and direction of the Legislatures of the several States, within the time agreed upon by the United States, in Congress assembled. **Art. IX.**—The United States, in Congress assembled, shall have the sole and exclusive right and power of determining on peace and war, except in the cases mentioned in the sixth Article; of sending and receiving ambassadors; entering into treaties and alliances, provided that no treaty of commerce shall be made, whereby the legislative power of the respective States shall be restrained from imposing such imposts and duties on foreigners as their own people are subjected to, or from prohibiting the exportation or importation of any species of goods or commodities whatever; of establishing rules for deciding, in all cases, what captures on land and water shall be legal, and in what manner prizes taken by land or naval forces in the service of the United States shall be divided or appropriated; of granting letters of marque and reprisal in times of peace; appointing courts for the trial of pirates and felons committed on the high seas; and establishing courts for receiving and determining finally appeals in all cases of captures; provided that no member of Congress shall be appointed a judge of any of the said courts. The United States, in Congress assembled, shall also be the last resort on appeal in all disputes and differences now subsisting, or that hereafter may arise between two or more States concerning boundary, jurisdiction, or any other cause whatever; which authority shall always be exercised in the manner following: Whenever the legislative or executive authority, or lawful agent of any State in controversy with another, shall present a petition to Congress, stating the matter in question, and praying for a hearing, notice

thereof shall be given by order of Congress to the legislative or executive authority of the other State in controversy, and a day assigned for the appearance of the parties by their lawful agents, who shall then be directed to appoint, by joint consent, commissioners or judges to constitute a court for hearing and determining the matter in question; but if they cannot agree, Congress shall name three persons out of each of the United States, and from the list of such persons each party shall alternately strike out one, the petitioners beginning, until the number shall be reduced to thirteen; and from that number not less than seven nor more than nine names, as Congress shall direct, shall, in the presence of Congress, be drawn out by lot; and the persons whose names shall be so drawn, or any five of them, shall be commissioners or judges, to hear and finally determine the controversy, so always as a major part of the judges who shall hear the cause shall agree in the determination; and if either party shall neglect to attend at the day appointed, without showing reasons which Congress shall judge sufficient, or being present, shall refuse to strike, the Congress shall proceed to nominate three persons out of each State, and the secretary of Congress shall strike in behalf of such party absent or refusing; and the judgment and sentence of the court, to be appointed in the manner before prescribed, shall be final and conclusive; and if any of the parties shall refuse to submit to the authority of such court, or to appear or defend their claim or cause, the court shall nevertheless proceed to pronounce sentence or judgment, which shall in like manner be final and decisive; the judgment or sentence and other proceedings being in either case transmitted to Congress, and lodged among the acts of Congress for the security of the parties concerned; provided, that every commissioner, before he sits in judgment, shall take an oath, to be administered by one of the judges of the supreme or superior court of the State where the cause shall be tried, 'well and truly to hear and determine the matter in question, according to the best of his judgment, without favor, affection, or hope of reward.' Provided, also, that no State shall be deprived of territory for the benefit of the United States. All controversies concerning the private right of soil claimed under different grants of two or more States, whose jurisdictions, as they may respect such lands, and the States which passed such grants are adjusted, the said grants or either of them being at the same time claimed to have originated antecedent to such settlement of jurisdiction, shall, on the petition of either party to the Congress of the United States, be finally determined, as near as may be, in the same manner as is before prescribed for deciding disputes respecting territorial jurisdiction between different States. The United States, in Congress assembled, shall also have the sole and exclusive right and power of regulating the alloy and value of coin struck by their own authority, or by that of the respective States; fixing the standard of weights and measures throughout the United States; regulating the trade and managing all affairs with the Indians, not members of any of the States; provided that the legislative right of any State, within its own limits, be not infringed or violated; establishing and regulating post-offices from one State to another, throughout all the

United States, and exacting such postage on the papers passing through the same as may be requisite to defray the expenses of the said office; appointing all officers of the land forces in the service of the United States, excepting regimental officers; appointing all the officers of the naval forces, and commissioning all officers whatever in the service of the United States; making rules for the government and regulation of the said land and naval forces, and directing their operations. The United States, in Congress assembled, shall have authority to appoint a committee, to sit in the recess of Congress, to be denominated 'A Committee of the States,' and to consist of one delegate from each State, and to appoint such other committees and civil officers as may be necessary for managing the general affairs of the United States under their direction; to appoint one of their number to preside; provided that no person be allowed to serve in the office of president more than one year in any term of three years; to ascertain the necessary sums of money to be raised for the service of the United States, and to appropriate and apply the same for defraying the public expenses; to borrow money or emit bills on the credit of the United States, transmitting every half year to the respective States an account of the sums of money so borrowed or emitted; to build and equip a navy; to agree upon the number of land forces, and to make requisitions from each State for its quota, in proportion to the number of white inhabitants in such State, which requisition shall be binding; and thereupon the Legislature of each State shall appoint the regimental officers, raise the men, and clothe, arm, and equip them in a soldier-like manner, at the expense of the United States; and the officers and men so clothed, armed, and equipped shall march to the place appointed, and within the time agreed on by the United States, in Congress assembled; but if the United States, in Congress assembled, shall, on consideration of circumstances, judge proper that any State should not raise men, or should raise a smaller number than its quota, and that any other State should raise a greater number of men than the quota thereof, such extra number shall be raised, officered, clothed, armed, and equipped in the same manner as the quota of such State, unless the Legislature of such State shall judge that such extra number can not be safely spared out of the same, in which case they shall raise, officer, clothe, arm, and equip as many of such extra number as they judge can be safely spared, and the officers and men so clothed, armed, and equipped shall march to the place appointed, and within the time agreed on by the United States, in Congress assembled. The United States, in Congress assembled, shall never engage in a war, nor grant letters of marque and reprisal in time of peace, nor enter into any treaties or alliances, nor coin money, nor regulate the value thereof, nor ascertain the sums and expenses necessary for the defense and welfare of the United States, or any of them, nor emit bills, nor borrow money on the credit of the United States, nor appropriate money, nor agree upon the number of vessels of war to be built or purchased, or the number of land or sea forces to be raised, nor appoint a commander-in-chief of the army or navy, unless nine States assent to the same, nor shall a question on any other

point, except for adjourning from day to day, be determined, unless by the votes of a majority of the United States, in Congress assembled. The Congress of the United States shall have power to adjourn to any time within the year, and to any place within the United States, so that no period of adjournment be for a longer duration than the space of six months, and shall publish the journal of their proceedings monthly, except such parts thereof relating to treaties, alliances, or military operations as in their judgment require secrecy; and the yeas and nays of the delegates of each State, on any question, shall be entered on the journal when it is desired by any delegate; and the delegates of a State, or any of them, at his or their request, shall be furnished with a transcript of the said journal except such parts as are above excepted, to lay before the Legislatures of the several States. **Art. X.**—The Committee of the States, or any nine of them, shall be authorized to execute, in the recess of Congress, such of the powers of Congress as the United States, in Congress assembled, by the consent of nine States, shall, from time to time, think expedient to vest them with; provided that no power be delegated to the said Committee, for the exercise of which, by the Articles of Confederation, the voice of nine States in the Congress of the United States assembled is requisite. **Art. XI.**—Canada, according to this Confederation, and joining in the measures of the United States, shall be admitted into, and entitled to all the advantages of this Union; but no other colony shall be admitted into the same, unless such admission be agreed to by nine States. **Art. XII.**—All bills of credit emitted, moneys borrowed, and debts contracted by or under the authority of Congress, before the assembling of the United States, in pursuance of the present Confederation, shall be deemed and considered as a charge against the United States, for payment and satisfaction whereof the said United States and the public faith are hereby solemnly pledged. **Art. XIII.**—Every State shall abide by the determinations of the United States, in Congress assembled, on all questions which by this Confederation are submitted to them. And the Articles of this Confederation shall be inviolably observed by every State, and the Union shall be perpetual; nor shall any alteration at any time hereafter be made in any of them, unless such alteration be agreed to in a Congress of the United States, and be afterwards confirmed by the Legislatures of every State. **AND WHEREAS** it hath pleased the great Governor of the world to incline the hearts of the Legislatures we respectively represent in Congress to approve of, and to authorize us to ratify, the said Articles of Confederation and perpetual Union, know ye, that we, the undersigned delegates, by virtue of the power and authority to us given for that purpose, do, by these presents, in the name and in behalf of our respective constituents, fully and entirely ratify and confirm each and every of the said Articles of Confederation and perpetual Union, and all and singular the matters and things therein contained. And we do further solemnly plight and engage the faith of our respective constituents, that they shall abide by the determinations of the United States, in Congress assembled, on all questions which by the said Confederation are submitted to them;

and that the Articles thereof shall be inviolably observed by the States we respectively represent, and that the Union shall be perpetual. In witness whereof we have hereunto set our hands in Congress. Done at Philadelphia in the State of Pennsylvania the ninth day of July in the year of our Lord one thousand seven hundred and seventy-eight, and in the third year of the independence of America."

"Under these Articles of Confederation the treaty of peace with England was concluded and the American nation was governed until the final adoption of the Constitution of the United States. The main defect of the Articles of Confederation was, that although powers sufficiently adequate to create a government were ceded, there was no power to raise revenue, to levy taxes, or to enforce the law, except with the consent of nine States; and although the government had power to contract debts, there were no means by which to discharge them. The government had power to raise armies and navies, but no means wherewith to pay them, unless the means were voted by the States themselves; they could make treaties with foreign powers, but had no means to coerce a State to obey such treaty. In short, it was a government which had the power to make laws, but no power to punish infractions thereof. Washington himself said: 'The Confederation appears to me to be little more than the shadow without the substance, and Congress a nugatory body.' Chief Justice Story, in summing up the leading defects of the Articles of Confederation, says: 'There was an utter want of all coercive authority to carry into effect its own constitutional measures; this of itself was sufficient to destroy its whole efficiency as a superintending government, if that may be called a government which possessed no one solid attribute of power. In truth, Congress possessed only the power of recommendation. Congress had no power to exact obedience or punish disobedience of its ordinances; they could neither impose fines nor direct imprisonments, nor divest privileges, nor declare forfeitures, nor suspend refractory officers. There was no power to exercise force.'"—S. Sterne, *Constitutional Hist. of the U. S.*, ch. 1.—"The individual states had attributed to themselves, in the Articles of Confederation, no powers which could place them in relation to foreign nations in the light of sovereign states. They felt that all such claims would be considered ridiculous, because back of these claims there was no real corresponding power. Congress therefore remained, as heretofore, the sole outward representative of sovereignty. But the power to exercise the prerogatives was taken from it, and this without placing it in any other hands. The changes effected by the Articles of Confederation were rather of a negative than of a positive nature. They did not give the State which was just coming into being a definite form, but they began the work of its dissolution. . . . The practical result . . . was that the United States tended more and more to split up into thirteen independent republics, and . . . virtually ceased to be a member of the family of nations bound together by the 'jus gentium.'"—H. von Holst, *Const. and Pol. Hist. of the U. S.*, v. 1, ch. 1.

A. D. 1778 (February).—**The Treaty with France.**—"The account of Burgoyne's surrender, which was brought to France by a swift-sailing ship from Boston, threw Turgot and all Paris into transports of joy. None doubted the ability of the states to maintain their independence. On the 12th of December their commissioners had an interview with Vergennes. 'Nothing,' said he, 'has struck me so much as General Washington's attacking and giving battle to General Howe's army. To bring troops raised within the year to this, promises everything. The court of France, in the treaty which is to be entered into, intend to take no advantage of your present situation. Once made, it should be durable; and therefore it should contain no condition of which the Americans may afterward repent, but such only as will last as long as human institutions shall endure, so that mutual amity may subsist forever. Entering into a treaty will be an avowal of your independence. Spain must be consulted, and Spain will not be satisfied with an undetermined boundary on the west. Some of the states are supposed to run to the South Sea, which might interfere with her claim to California.' It was answered that the last treaty of peace adopted the Mississippi as a boundary. 'And what share do you intend to give us in the fisheries?' asked Vergennes; for in the original draft of a treaty the United States had proposed to take to themselves Cape Breton and the whole of the island of Newfoundland. Explanations were made by the American commissioners that their later instructions removed all chances of disagreement on that subject. . . . The question of a French alliance . . . was discussed by Vergennes with the Marquis d'Ossun, the late French ambassador in Madrid, as the best adviser with regard to Spain, and the plan of action was formed. Then these two met the king at the apartment of Maurepas, where the plan, after debate, was finally settled. Maurepas, at heart opposed to the war, loved ease and popularity too well to escape the sway of external opinion; and Louis XVI. sacrificed his own inclination and his own feeling of justice to policy of state and the opinion of his advisers. So, on the 6th of February, a treaty of amity and commerce and an eventual defensive treaty of alliance were concluded between the king of France and the United States, on principles of equality and reciprocity, and for the most part in conformity to the proposals of congress. In commerce each party was to be placed on the footing of the most favored nation. The king of France promised his good offices with the princes and powers of Barbary. As to the fisheries, each party reserved to itself the exclusive possession of its own. Accepting the French interpretation of the treaties of Utrecht and of Paris, the United States acknowledged the right of French subjects to fish on the banks of Newfoundland, and their exclusive right to half the coast of that island for drying-places. On the question of

ownership in the event of the conquest of Newfoundland the treaty was silent. The American proposal, that free ships give freedom to goods and to persons, except to soldiers in actual service of an enemy, was adopted. Careful lists were made out of contraband merchandises. The absolute and unlimited independence of the United States was described as the essential end of the defensive alliance; and the two parties mutually engaged not to lay down their arms until it should be assured by the treaties terminating the war. Moreover, the United States guaranteed to France the possessions then held by France in America, as well as those which it might acquire by a future treaty of peace; and, in like manner, the king of France guaranteed to the United States their present possessions and acquisitions during the war from the dominions of Great Britain in North America. A separate and secret act reserved to the king of Spain the power of acceding to the treaties. Within forty-two hours of the signature of these treaties of commerce and alliance the British ministry received the news by special messenger from their spy in Paris, but it was not divulged." It was officially communicated to the British government on the 13th of March, when ambassadors were withdrawn on both sides and war soon followed.—G. Bancroft, *Hist. of the U. S. (Author's last rev.)*, v. 5, ch. 17.

A. D. 1778 (June).—Peace-proposals from England.—British evacuation of Philadelphia and march to New York.—Battle of Monmouth.—"On May 11th, Sir Henry Clinton relieved Sir William Howe at Philadelphia, and the latter took his departure in a blaze of mock glory. . . . The new commander was more active than his predecessor, but no cleverer, and no better fitted to cope with Washington. . . . Expecting a movement by the enemy, Washington sent Lafayette forward to watch Philadelphia. Clinton, fresh in office, determined to cut him off, and by a rapid movement nearly succeeded in so doing. Timely information, presence of mind, and quickness, alone enabled the young Frenchman to escape, narrowly but completely. Meantime, a cause for delay, that curse of the British throughout the war, supervened. A peace commission, consisting of the Earl of Carlisle, William Eden, and Governor Johnstone, arrived. They were excellent men, but they came too late. Their propositions three years before would have been well enough, but as it was they were worse than nothing. Coolly received, they held a fruitless interview with a committee of Congress, tried to bribe and intrigue, found that their own army had been already ordered to evacuate Philadelphia [in apprehension of the arrival of the expected French fleet] without their knowledge, and finally gave up their task in angry despair, and returned to England to join in the chorus of fault-finding which was beginning to sound very loud in ministerial ears. Meanwhile, Washington waited and watched, puzzled by the delay, and hoping only to harass Sir Henry with militia on the march to New York. But, as the days slipped by, the Americans grew stronger, while Sir Henry weakened himself by sending 5,000 men to the West Indies,

and 3,000 to Florida. When he finally started [evacuating Philadelphia June 17], he had with him less than 10,000 men, while the Americans had 13,000, nearly all continental troops. Under these circumstances, Washington determined to bring on a battle. He was thwarted at the outset by his officers, as was wont to be the case. Lee had returned more whimsical than ever, and at the moment was strongly averse to an attack. . . . Washington was harassed of course by all this, but he did not stay his purpose, and as soon as he knew that Clinton actually had marched, he broke camp at Valley Forge and started in pursuit. There were more councils of an old-womanish character, but finally Washington took the matter into his own hands, and ordered forth a strong detachment to attack the British rear-guard. They set out on the 25th, and as Lee, to whom the command belonged, did not care to go, Lafayette [see above: A. D. 1777 (JULY)] was put in charge. As soon as Lafayette had departed, however, Lee changed his mind, and insisted that all the detachments in front, amounting to 6,000 men, formed a division so large that it was unjust not to give him the command. Washington, therefore, sent him forward next day with two additional brigades, and then Lee by seniority took command on the 27th of the entire advance. In the evening of that day, Washington came up, reconnoitred the enemy, and saw that, although their position was a strong one, another day's unmolested march would make it still stronger. He therefore resolved to attack the next morning, and gave Lee then and there explicit orders to that effect. In the early dawn he despatched similar orders, but Lee apparently did nothing except move feebly forward, saying to Lafayette, 'You don't know the British soldiers; we cannot stand against them.' He made a weak attempt to cut off a covering party, marched and counter-marched, ordered and countermanded, until Lafayette and Wayne, eager to fight, knew not what to do, and sent hot messages to Washington to come to them. Thus hesitating and confused, Lee permitted Clinton to get his baggage and train to the front, and to mass all his best troops in the rear under Cornwallis, who then advanced against the American lines. Now there were no orders at all, and the troops did not know what to do, or where to go. They stood still, then began to fall back, and then to retreat. A very little more and there would have been a rout. As it was, Washington alone prevented disaster. . . . As the ill tidings grew thicker, Washington spurred sharper and rode faster through the deep sand and under the blazing mid-summer sun. At last he met Lee and the main body all in full retreat. He rode straight at Lee, savage with anger, not pleasant to look at, one may guess, and asked fiercely and with a deep oath, tradition says, what it all meant. . . . Lee gathered himself and tried to excuse and palliate what had happened, but although the brief words that followed are variously reported to us across the century, we know that Washington rebuked him in such a way, and with such passion, that all was over between them. Lee . . . went to the rear, thence to a court-martial, thence to dismissal and to a solitary life. . . . Having put Lee aside, Washington rallied the broken troops, brought them into position, turned them back, and held the enemy in check. It was not

an easy feat, but it was done, and when Lee's division again fell back in good order the main army was in position, and the action became general. The British were repulsed, and then Washington, taking the offensive, drove them back until he occupied the battlefield of the morning. Night came upon him still advancing. He halted his army, lay down under a tree, his soldiers lying on their arms about him, and planned a fresh attack, to be made at daylight. But when the dawn came it was seen that the British had crept off, and were far on their road. The heat prevented a rapid pursuit, and Clinton got into New York. Between there and Philadelphia he had lost 2,000 men, Washington said, and modern authorities put it at about 1,500, of whom nearly 500 fell at Monmouth. . . . Monmouth has never been one of the famous battles of the Revolution, and yet there is no other which can compare with it as an illustration of Washington's ability as a soldier. . . . Its importance lies in the evidence which it gives of the way in which Washington, after a series of defeats, during a winter of terrible suffering and privation, had yet developed his ragged volunteers into a well-disciplined and effective army. The battle was a victory, but the existence and the quality of the army that won it were a far greater triumph. The dreary winter at Valley Forge had indeed borne fruit."—H. C. Lodge, *George Washington*, v. 1, ch. 7.

A. D. 1778 (June—November).—The war on the border.—Activity of Tories and Indians.—The Massacre at Cherry Valley.—"The Six Nations were stirred to hostility by Sir John Johnson and the Mohawk chief Joseph Brant, with Walter Butler, of infamous name. Their Tory partisans were more cruel than the red men. At Cobleskill, Schoharie county, June 1, 1778, Brant won a savage triumph with a mixed force, and burned and plundered the settlement. Springfield was also destroyed, and the assailants retired. A month later the Indians were again at Cobleskill, and, burning where they went, beat off a force that attempted to check them. The valley of the Schohariekill was in the succeeding year subjected to invasions from the Senecas, and suffered severely. About Fort Stanwix the Tories and red men were continually hovering, and more than once persons were pounced upon and scalped in sight of the works. In 1778, in the early autumn, German Flats was visited by Brant and his followers, and was entirely destroyed, although all the inhabitants but two were warned in season to escape with their lives. An expedition was sent after the Indians, but failed to bring the warriors to battle, and was rewarded only by laying waste the Indian villages of Unadilla and Oquaga, and capturing a large supply of cattle and provisions. At Cherry Valley a fort had been built, and the village was occupied by a band of colonial troops under Colonel Ichabod Alden. He rested in security, and the settlers were scattered in their habitations, regardless of warnings of approaching foes. Under cover of a severe storm of snow and rain, November 11, Brant and Butler, with 800 Indians and Tories, swooped upon the homes, and 43 persons, including women and children,

were butchered, 40 taken prisoners, all the buildings were burned, and the domestic animals seized. So brutal was the massacre that Brant charged Butler and the Tories with acting against his protests. Brant himself was content, July 19, 1779, with destroying the church, mills, houses, and barns at Minniskink, Orange county, without sacrificing lives, but turned upon a party sent in pursuit, and, after capturing a detachment, butchered the wounded, and slew 45 who tried to escape. Such deeds produced a terror in the colony. No one knew where the red men and Tories would strike next. To check and counteract them, excursions were made against the tribes in their homes. One of these was led by Colonels Van Schaick and Willett from Fort Stanwix in April, 1779. Proceeding by Wood Creek and Oneida Lake, they penetrated the villages of the Onondagas, which they destroyed, and seized the provisions and even the weapons of the red men, who fled into the wilderness."—E. H. Roberts, *New York*, ch. 24 (v. 2).—The following account of the attack on Cherry Valley is from a pen friendly to Butler and from sources favorable to the Tory side: "After an exhausting march next day through a blinding snow-storm and over ground covered with deep wet snow and mud, Butler halted his men at dark in a pine wood which afforded them some shelter, six miles from Cherry Valley. He assembled the chiefs and proposed that as soon as the moon rose, they should resume their march and surround the house occupied by the officers, while he made a rush upon the fort with the rangers. They readily assented, but before the time appointed arrived it began to rain violently, and they obstinately refused to move until daybreak. It was then arranged that Capt. McDonnell with 50 picked rangers and some Indians should storm the house, while Butler with the remainder assailed the fort. Without tents, blankets or fires, they spent a sleepless night covering beneath the pines, and were glad to move as soon as day appeared. They had approached unperceived within a mile of the fort by passing through a dense swamp, when the Indians in front fired at two men cutting wood. One fell dead; the other, though bleeding, ran for his life and the entire body of Indians set up a whoop and followed at full speed. Unhappily the rangers had just been halted to fix flints and load their rifles, and the Indians obtained a long start. The Continental officers attempted to escape to the fort but only two or three reached it. The colonel, five other officers and twenty soldiers, were killed on the way and the lieutenant-colonel, three subalterns, and ten privates were taken. The colors of the regiment were abandoned in the house and burnt in it. The garrison of the fort was fully alarmed, and opened a fierce fire of artillery and small arms. The rangers seized and burnt a detached block-house, and fired briskly at the loop-holes in the palisades for ten minutes, when Butler saw with horror and consternation that the Indians had set their officers at defiance, and dispersed in every direction to kill and plunder. Their wretched misconduct forced him to collect all the rangers into a compact body on an eminence near the principal entrance to the fort, to oppose a sally by the garrison, which then undoubtedly outnumbered them considerably. There he was obliged to remain inactive all day under a cease-

less, chilling rain, while blazing houses and shrieks of agony told their pitiful tale in the settlement below. At nightfall he marched a mile down the valley and encamped. He then struggled with indifferent success to rescue the prisoners. Those surrendered were placed next the camp fires and protected by his whole force. Next morning most of the Indians and the feeblest men among the rangers were sent away with a huge drove of captured cattle for the supply of the garrison at Niagara, and McDonnell and Brant, with 60 rangers and 50 Indians, swept the valley from end to end, ruthlessly burning every building and stack in sight, while Butler, with the remainder, again stood guard at the gate of the fort. He hoped that this appalling spectacle would provoke the garrison to sally out and fight, but the lesson of Wyoming had not been lost on them, and they continued to look on from the walls in silent fury. Another great herd of cattle was collected, and Butler leisurely began his retreat, having had only two rangers and three Indians wounded during the expedition. He did not disguise the dark side of the story in his letter to Col. Bolton of the 17th November. "I have much to lament," he said, "that notwithstanding my utmost precautions to save the women and children, I could not prevent some of them falling victims to the fury of the savages. They have carried off many of the inhabitants and killed more, among them Colin Cloyd, a very violent rebel. I could not prevail on the Indians to leave the women and children behind, though the second morning Captain Johnson (to whose knowledge of the Indians and address in managing them I am much indebted) and I got them to permit twelve, who were loyalists, and whom I concealed, with the humane assistance of Mr. Joseph Brant and Captain Jacobs of Ochquaga, to return. The death of the women and children on this occasion may, I believe, be truly ascribed to the rebels having falsely accused the Indians of cruelty at Wyoming. This has much exasperated them, and they are still more incensed at finding that the colonel and those who had then laid down their arms, soon after marching into their country intending to destroy their villages, and they declared that they would be no more accused falsely of fighting the enemy twice, meaning they would in future give no quarter."—E. C. Utkishank, *The Story of Butler's Rangers*, pp. 55-56.

A. D. 1778 (July).—The war on the border.—Bloody work of the Tories and their Indian allies.—The Massacre at Wyoming.—"In 1778, according to the plan of campaign as given by Guy Johnson in his correspondence, the English forces on the western borders of New York were divided into two bodies: one, consisting of Indians under Brant, to operate in New York, while Deputy Superintendent Butler with the other should penetrate the settled district on the Susquehanna. Brant [Joseph Brant, the Mohawk chief], who, according to Colonel Claus, 'had shown himself to be the most faithful and zealous subject his majesty could have in America,' did his work unsparringly, and ruin marked his track. In the valley of the upper Mo-

hawk and the Schoharie nothing but the garrison-houses escaped, and labor was only possible in the field when muskets were within easy reach. Occasionally blows were struck at the larger settlements. . . . In July, 1778, the threatened attack on Wyoming took place. This region was at that time formally incorporated as the county of Westmoreland of the colony of Connecticut. . . . In the fall of 1776, two companies, on the Continental establishment, had been raised in the valley, in pursuance of a resolution of Congress, and were shortly thereafter ordered to join General Washington. Several stockaded forts had been built during the summer at different points. The withdrawal of so large a proportion of the able-bodied men as had been enlisted in the Continental service threw upon the old men who were left behind the duty of guarding the forts. . . . In March, 1778, another military company was organized, by authority of Congress, to be employed for home defence. In May, attacks were made upon the scouting parties by Indians, who were the forerunners of an invading army. The exposed situation of the settlement, the prosperity of the inhabitants, and the loyalty with which they had responded to the call for troops, demanded consideration from Connecticut, to whose quota the companies had been credited, and from Congress, in whose armies they had been incorporated; but no help came. On June 30th, an armed labor party of eight men, which went out from the upper fort, was attacked by Major Butler, who, with a force estimated by the American commander in his report at 800 men, Tories and Indians in equal numbers, had arrived in the valley. This estimate was not far from correct; but if we may judge from other raiding forces during the war, the proportion of whites is too large, for only a few local Tories had joined Butler. The little forts at the upper end of the valley offered no resistance to the invaders. On July 3d, there were collected at 'Forty Fort,' on the banks of the river, about three miles above Wilkesbarré, 230 Americans, organized in six companies (one of them being the company authorized by Congress for home defence), and commanded by Colonel Zebulon Butler, a resident in the valley and an officer in the Continental army. It was determined, after deliberation, to give battle. In the afternoon of that day, this body of volunteers, their number being swelled to nearly 300 by the addition of old men and boys, marched up the valley. The invaders had set fire to the forts of which they were in possession. This perplexed the Americans, as was intended, and they pressed on towards the spot selected by the English officer for giving battle. This was reached about four in the afternoon, and the attack was at once made by the Americans, who fired rapidly in platoons. The British line wavered, but a flanking fire from a body of Indians concealed in the woods settled the fate of the day against the Americans. They were thrown into confusion. No efforts of their officers could rally them while exposed to a fire which in a short time brought down every captain in the band. The Indians now cut off the retreat of the panic-stricken men, and pressed them towards the river. All who could saved their lives by flight. Of the 300 who went out that morning from Forty Fort, the names are recorded of 163 officers and killed

in the action or in the massacre which followed. Major Butler, the British officer in command, reported the taking of 'two hundred and twenty-seven scalps' and only five prisoners.' Such was the exasperation of the Indians, according to him, that it was with difficulty he saved these few. He gives the English loss at two whites killed and eight Indians wounded. During the night the worst passions of the Indians seem to have been aroused in revenge for Oriskany. Incredible tales are told of the inhumanity of the Tories. These measures of vengeance fell exclusively upon those who participated in the battle, for all women and children were spared. As soon as the extent of the disaster was made known, the inhabitants of the lower part of the valley deserted their homes, and fled in the direction of the nearest settlements. Few stayed behind who had strength and opportunity to escape. In their flight many of the fugitives neglected to provide themselves with provisions, and much suffering and some loss of life ensued. The fugitives from the field of battle took refuge in the forts lower down the valley. The next day, Colonel Zebulon Butler, with the remnants of the company for home defence, consisting of only fourteen men, escaped from the valley. Colonel Denison, in charge of Fort Fort, negotiated with Major Butler the terms of capitulation which were ultimately signed. In these it was agreed that the inhabitants should occupy their farms peaceably, and their lives should be preserved 'intire and unhurt.' With the exception that Butler executed a British deserter whom he found among the prisoners, no lives were taken at that time. Shortly thereafter, the Indians began to plunder, and the English commander, to his chagrin, found himself unable to check them. Miner even goes so far as to say that he promised to pay for the property thus lost. Finding his commands disregarded, Butler mustered his forces and withdrew, without visiting the lower part of the valley. The greater part of the Indians went with him, but enough remained to continue the devastation, while a few murders committed by straggling parties of Indians ended the tragedy. The whole valley was left a scene of desolation."—A. McF. Davis, *The Indians and the Border Warfare of the Rev. (Narrative and Critical Hist. of Am., v. 6, ch. 8)*.—"Rarely, indeed, does it happen that history is more at fault in regard to facts than in the case of Wyoming. The remark may be applied to nearly every writer who has attempted to narrate the events connected with the invasion of Colonel John Butler. Ramsay, and Gordon, and Marshall—nay, the British historians themselves—have written gross exaggerations. Marshall, however, in his revised edition, has made corrections. . . . Other writers, of greater or less note, have gravely recorded the same fictions, adding, it is to be feared, enormities not even conveyed to them by tradition. The grossest of these exaggerations are contained in Thatcher's Military Journal and Drake's Book of the Indians. The account of the marching out of a large body of Americans from one of the forts, to hold a parley, by agreement, and then being drawn into an ambuscade and all put to death, is false; the account of 70 Continental soldiers being butchered, after having surrendered, is also totally untrue. No regular troops surrendered, and all escaped who survived the battle

of the 3d. . . . There is still another important correction to be made. . . . This correction regards the name and the just fame of Joseph Brant, whose character has been blackened with all the infamy, both real and imaginary, connected with this bloody expedition. Whether Captain Brant was at any time in company with this expedition is doubtful; but it is certain, in the face of every historical authority, British and American, that, so far from being engaged in the battle, he was many miles distant at the time of its occurrence. . . . It will, moreover, be seen, toward the close of the present work, that after the publication of Campbell's 'Gertrude of Wyoming,' in which poem the Mohawk chieftain was denounced as 'the Monster Brant,' his son repaired to England, and, in a correspondence with the poet, successfully vindicated his father's memory."—W. L. Stone, *Life of Joseph Brant, v. 1, p. 339, foot-note, 338 and foot-note*.—"No lives were taken by the Indians after the surrender; but numbers of women and children perished in the dismal swamp on the Pokono range of mountains, in the flight. . . . The whole number of people killed and missing was about 300. . . . The greatest barbarities of this celebrated massacre were committed by the Tories."—The same, *Poetry and Hist. of Wyoming, ch. 6*.

A. D. 1778 (July—November).—**The French fleet and army and their undertakings.**—Ill fortune and ill-feeling between the new allies. —**The failure at Newport.**—"The first minister of France to the United States, M. Genard, came accompanied by a fleet and army, under D'Estaing, (July.) 'Unforeseen and unfavorable circumstances,' as Washington wrote, 'lessened the importance of the French services in a great degree.' In the first place, the arrival was just late enough to miss the opportunity of surprising the British fleet in the Delaware, not to mention the British army on its retreat to New York. In the next place, the French vessels proved to be of too great draught to penetrate the channel and cooperate in an attack upon New York. Thus disappointing and disappointed, D'Estaing engaged in an enterprise against Newport, still in British hands. It proved another failure. But not through the French alone; the American troops that were to enter the island at the north being greatly behindhand. The same day that they took their place, under Sullivan, Greene, and Lafayette, the French left theirs at the lower end of the island, in order to meet the British fleet arriving from New York, (August 10.) A severe storm prevented more than a partial engagement; but D'Estaing returned to Newport only to plead the injuries received in the gale as compelling his retirement to Boston for repairs. The orders of the French government had been peremptory, that in case of any damage to the fleet it should put into port at once. So far was D'Estaing from avoiding action on personal grounds, that when Lafayette hurried to Boston to persuade his countrymen to return, the commander offered to serve as a volunteer until the fleet should be refitted. The Americans, however, talked of desertion and of inefficiency,—so freely, indeed, as to affront their faithful Lafayette. At the

same time, large numbers of them imitated the very course which they censured, by deserting their own army. The remaining forces retreated from their lines to the northern end of the island, and, after an engagement, withdrew to the mainland, (August 30.) It required all the good offices of Lafayette, of Washington, and of Congress, to keep the peace between the Americans and their allies. D'Estaing, soothed by the language of those whom he most respected, was provoked, on the other hand, by the hostility of the masses, both in the army and amongst the people. Collisions between his men and the Bostonians kept up his disgust; and, when his fleet was repaired, he sailed for the West Indies, (November.) . . . On the part of the British, there was nothing attempted that would not have been far better unattempted. Marauding parties from Newport went against New Bedford and Fairhaven. Others from New York went against Little Egg Harbor, Tories and Indians — a collection of banditti, as they were rightly styled by Washington, descended from the northern country to wreak massacre at Wyoming and at Cherry Valley. The war seemed to be assuming a new character: it was one of ravages unworthy of any cause, and most unworthy of such a cause as the British professed to be. Affairs were at a low state amongst the Americans."—S. Eliot, *Hist. of the U. S.*, pt. 3, ch. 5.

A. D. 1778 (December).—Anxieties of Washington.—His opinion of Congress.—The serious defects and errors of that body.—"Much of the winter was passed by Washington in Philadelphia, occupied in devising and discussing plans for the campaign of 1779. It was an anxious moment with him. Circumstances which inspired others with confidence, filled him with solicitude. The alliance with France had produced a baneful feeling of security, which, it appeared to him, was paralyzing the energies of the country. England, it was thought, would now be too much occupied in securing her position in Europe, to increase her force or extend her operations in America. Many, therefore, considered the war as virtually at an end; and were unwilling to make the sacrifices, or supply the means necessary for important military undertakings. Dissensions, too, and party feuds were breaking out in Congress, owing to that relaxation of that external pressure of a common and imminent danger, which had heretofore produced a unity of sentiment and action. That august body had, in fact, greatly deteriorated since the commencement of the war. Many of those whose names had been as watchwords at the Declaration of Independence had withdrawn from the national councils; occupied either by their individual affairs, or by the affairs of their individual States. Washington, whose comprehensive patriotism embraced the whole Union, deprecated and deplored the downward of this sectional spirit."—W. B. Peabody, *Life of Washington*, v. 3, ch. 38.—The following, from a letter written by Washington in December, 1778, to Benjamin Harrison, Speaker of the Virginia House of Delegates, intimates the grave anxieties which filled his mind, and the opinion of Congress with which he had returned from a visit

to Philadelphia: "It appears as clear to me as ever the Sun did in its meridian brightness, that America never stood in more eminent need of the wise, patriotic, and spirited exertions of her Sons than at this period; and if it is not a sufficient cause for general lamentation, my misconception of the matter impresses it too strongly upon me, that the States, separately, are too much engaged in their local concerns, and have too many of their ablest men withdrawn from the general council, for the good of the common weal. . . . As there can be no harm in a pious wish for the good of one's Country, I shall offer it as mine, that each State wd. not only choose, but absolutely compel their ablest men to attend Congress; and that they would instruct them to go into a thorough investigation of the causes, that have produced so many disagreeable effects in the army and Country; in a word, that public abuses should be corrected & an entire reformation worked. Without these, it does not in my Judgment require the spirit of divination to foretell the consequences of the present administration; nor to how little purpose the States individually are framing constitutions, providing laws, and filling offices with the abilities of their ablest men. These, if the great whole is mismanaged, must sink in the general wreck, and will carry with it the remorse of thinking, that we are lost by our own folly and negligence, or the desire perhaps of living in ease and tranquillity during the expected accomplishment of so great a revolution, in the effecting of which the greatest abilities, and the honestest men our (i. e. the American) world affords, ought to be employed. It is much to be feared, my dear Sir, that the States, in their separate capacities, have very inadequate ideas of the present danger. Removed (some of them) far distant from the scene of action, and seeing and hearing such publications only, as flatter their wishes, they conceive that the contest is at an end, and that to regulate the government and police of their own State is all that remains to be done; but it is devoutly to be wished, that a sad reverse of this may not fall upon them like a thunder-clap, that is little expected. I do not mean to designate particular States. I wish to cast no reflections upon any one. The Public believe (and, if they do believe it, the fact might almost as well be so), that the States at this time are badly represented, and that the great and important concerns of the nation are horribly conducted, for want either of abilities or application in the members, or through the discord & party views of some individuals. . . . P. S. Phila: 30th. This letter was to have gone by Post from Middlebrook but missed that conveyance, since which I have come to this place at the request of Congress whence I shall soon return. I have seen nothing since I came here (on the 23d Inst.) to change my opinion of Men or Measrs., but abundant reason to be convinced that our affairs are in a more distressed, ruinous and deplorable condition than they have been in since the commencement of the War.—By a faithful laborer then in the cause—By a man who is daily injuring his private Estate without even the smallest earthly advantage not common to all in case of a favorable Issue to the dispute.—By one who wishes the prosperity of America most devoutly and sees or thinks he sees it, on the brink of ruin, you are beseeched most earnestly, my dear Colo.

Harrison, to exert yourself in endeavoring to rescue your Country by (let me add) sending your ablest and best Men to Congress—these characters must not slumber nor sleep at home in such times of pressing danger—they must not content themselves in the enjoyment of places of honor or profit in their own Country while the common interests of America are mouldering and sinking into irretrievable (if a remedy is not soon applied) ruin in which theirs also must ultimately be involved. If I was to be called upon to draw a picture of the times and of Men, from what I have seen, and heard, and in part know, I should in one word say that idleness, dissipation & extravagance seems to have laid fast hold of most of them.—That speculation—peculation—and an insatiable thirst for riches seems to have got the better of every other consideration and almost of every order of Men.—That party disputes and personal quarrels are the great business of the day whilst the momentous concerns of an empire—a great and accumulated debt—ruined finances—depreciated money—and want of credit (which in their consequences is the want of everything) are but secondary considerations and postponed from day to day—from week to week as if our affairs wear the most promising aspect—after drawing this picture, which from my Soul I believe to be a true one, I need not repeat to you that I am alarmed and wish to see my Countrymen roused.—I have no resentments, nor do I mean to point at any particular characters,—this I can declare upon my honor for I have every attention paid me by Congress that I can possibly expect and have reason to think that I stand well in their estimation, but in the present situation of things I cannot help asking—Where is Mason—Wythe—Jefferson—Nicholas—Pendleton—Nelson—and another I could name—and why, if you are sufficiently impressed with your danger do you not (as New Yk. has done in the case of Mr. Jay) send an extra member or two for at least a certain limited time till the great business of the Nation is put upon a more respectable and happy establishment.—Your Money is now sinking 5 pr. ct. a day in this city; and I shall not be surprized if in the course of a few months a total stop is put to the currency of it.—And yet an Assembly—a concert—a Dinner—or supper (that will cost three or four hundred pounds) will not only take Men off from acting in but even from thinking of this business while a great part of the Officers of ye Army from absolute necessity are quitting the service and ye more virtuous few rather than do this are sinking by sure degrees into beggary and want.—I again repent to you that this is not an exaggerated act; that it is an alarming one I do not deny, and confess to you that I feel more real distress on acct. of the prest. appearances of things than I have done at any one time since the commencement of the dispute—but it is time to bid you once more adieu.—Providence has heretofore taken me up when all other means and hope seemed to be departing from me in this.—George Washington, *Writings, ed. by W. C. Ford, v. 7, pp. 297-303.*—“The first Continental Congress enjoyed and deserved in a remarkable degree the respect and confidence of the country. The second Congress was composed of eminent men, and succeeded, for a time, to the honors and reputation of the first. But when it attempted to pass from dis-

ussion to organization, and to direct as well as to frame the machinery of administration, its delays and disputes and errors and contradictions and hesitations excited a well-founded distrust of its executive skill. Conscious of this distrust, it became jealous of its authority; and instead of endeavoring to regain, by correcting its errors, the ground which it had lost by committing them, it grew suspicious and exacting in proportion to the decay of its strength. And while this critical change in its relations to the country was taking place, important changes took place also in the materials of which it was composed,—some of its wisest members being removed by death, or imperative calls to other fields of duty, or by falling of re-election at the regular expiration of their terms of office. Among the first elements with which it was brought into collision were the newly organized governments of the States. The question of State rights, that unsolved problem of our history, begins almost with the beginning of the war. How abundant and active the materials of disunion were, and how difficult it was even for leading men to rise above them might be proved by numerous passages in the letters of Washington and Greene, if it were not still more evident from the conduct of the local legislatures. How far this spirit might have been counteracted or controlled if the policy of the Congress had been that policy of prompt decision and energetic action which, commanding respect at all times, commands in times of general danger general and implicit obedience, it is impossible to say. . . . Another element with which it was brought into immediate and constant relations was the army; and, unfortunately for both, these relations, from their very nature, brought into immediate and constant contrast the elements of opposition which they both contained, rather than the elements of harmonious action, which they also contained in an almost equal degree. If the Congress was composed of the representatives of the people, the army was composed in a large proportion of the constituents of the Congress. More than once also, during the course of the war, men who had done good work for their country as soldiers, withdrawing from their original field of action, did equally good service for her as statesmen. And more than once, too, men who had proved themselves wise and eloquent in counsel were found at the head of a regiment, or even in more subordinate positions in the army. . . . The real interest and the real object of the citizen in arms and of the citizen in the toga were still the same. But their point of view was different. The ever-present object of Congress was discussion as a means of organization. The ever-present object of the leaders of the army was decision as a means of action. Congress counted obstacles, weighed difficulties, balanced opposing advantages, eating and sleeping meanwhile and refreshing mind and body as nature bade. But while Congress was deliberating upon the best way of procuring meat, the army was often brought to the verge of starvation for the want of it. While Congress was discussing by a warm fire the most eligible method of providing the army with tents and blankets, half the army was sleeping on the snow without either blanket or tent. While Congress was framing elaborate resolutions, and drawing out and equipping regiments upon paper, officers

in the field were standing disheartened before their thinned and disheartened ranks. . . . Errors of statesmanship, like errors of generalship, would easily have been forgiven and forgotten; for both statesmen and generals had still much to learn. Unfortunately, while the best generals strove earnestly to correct their errors by their experience, Congress, in too many things, clung obstinately to its errors, in spite of the most decisive experience. Those errors were twofold,—errors of policy and errors of principle,—the one tending to undermine the respect which, in the beginning, was felt for their wisdom; the other, to awaken a general distrust of their justice. The first year of the war demonstrated the danger of short enlistments and temporary levies. But more than half the second year was allowed to pass before it was decided to raise an army for the whole duration of the war. The first campaign demonstrated the necessity of providing by regularly organized departments for the food, clothing, and transportation of the army; but it was not till late in the second year that a board of war was organized; and not till later still that the Quartermaster-General and Commissary-General were allowed to devote themselves to their duty in camp, instead of waiting idly for orders at the door of Congress. All experience and the simplest reasoning showed the importance of strengthening the hands of their General by passing promptly all the acts needed for the conduct of an army in the field, or the support and instruction of an army in quarters; but, in spite of all experience and the plainest reason, Congress persisted in its unseasonable delays. . . . The policy of the Congress, in the organization and support of the army, was a policy of tergiversation and delay. No wonder that the army, leaders and all, should early lose their confidence in its wisdom! But the dissatisfaction did not end here. One of the earliest felt of the numerous wants of the army was the want of good officers. . . . To select them in the beginning from the mass of unproved candidates was impossible; but in the course of two campaigns, the characters and pretensions of men were well tried, the chaff thoroughly sifted, and what remained might be confidently accepted as sound. . . . It was evidently the policy of Congress to secure by all proper and reasonable inducements the services of such officers for the war. It was the duty of Congress, in its dealings with them, to remember that in becoming soldiers, and exposing themselves to the dangers and privations of a soldier's life, they adopted, with the ideas of subordination that lie at the basis of military discipline, the ideas of rank and grade which define and circumscribe that subordination. But Congress remembered nothing of this. It required of them the service of officers, but gave them a pay hardly sufficient to enable them to live like private soldiers. It demanded the present sacrifice of cold, hunger, hard service, and exposure to sickness, wounds, and death; and refused the prospective reward of half-pay or pension when sickness or wounds should have incapacitated them for further exertion, or death should have made their wives unprotected widows, and their children helpless orphans. Forgetting that pride is an essential element of the military character, and that self-respect is essential to a healthy and sustaining pride, it trifled with their claims to rank by the

accepted rules of service, and claimed and exercised the power of dealing with commissions according to its own good pleasure."—G. W. Greene, *Life of Nathaniel Greene*, bk. 2, ch. 18 (p. 1).

A. D. 1778-1779.—Clark's conquest of the Northwest for Virginia, and its annexation to the district of Kentucky.—"Virginia . . . had more western enterprise than any other colony. In 1774 Dunmore's war gave her the 'backlands,' into which her frontiersmen had been for some time pressing. Boone was a Carolinian, but Kentucky was a distinctively Virginia colony. In 1776 the Virginia legislature erected the County of Kentucky, and the next year a Virginia judge dispensed justice at Harrodsburg. Soon the colony was represented in the legislature of the parent state. While thus extending her jurisdiction over the region southwest of the Ohio, the Old Dominion did not forget the language of [her charter] of 1609, 'up into the land throughout from sea to sea, west and northwest.' George Rogers Clark, a Virginian who had made Kentucky his home, was endowed with something of the general's and statesman's grasp. While floating down the Ohio in 1776, being then 24 years of age, he conceived the conquest of the country beyond the river. . . . Clark says he had since the beginning of the war taken pains to make himself acquainted with the true situation of the Northwestern posts; and in 1777 he sent two young hunters to spy out the country more thoroughly, and especially to ascertain the sentiments of the 'habitants.' On the return of these hunters with an encouraging report, he went to Williamsburg, then the capital of Virginia, where he enlisted Governor Patrick Henry and other leading minds in a secret expedition to the Illinois. Acting under a vaguely worded law, authorizing him to aid 'any expedition against their Western enemies,' Governor Henry gave Clark some vague public instructions, directing him to enlist, in any county of the commonwealth, seven companies of men who should act under his command as a militia, and also private instructions that were much more full and definite. . . . Both the public and private instructions are dated January 2, 1778. The governor also gave the young captain a small supply of money. Clark immediately re-crossed the mountains and began to recruit his command. . . . Overcoming as best he could the difficulties that environed him, he collected his feeble command at the Falls of the Ohio. On June 26, 1778, he began the descent of the river. Leaving the Ohio at Fort Massac, forty miles above its mouth, he began the march to Kaskuskia. This fell into his hands, July 5th, and Cahokia soon after, both without the loss of a single life. Clark found few Englishmen in these villages, and the French, who were weary of British rule, he had little difficulty in attaching to the American interest. Vincennes, soon after, surrendered to a mere proclamation, when there was not an American soldier within one hundred miles of the place. . . . Clark prevailed upon 100 men to re-enlist for eight months; he then filled up his companies with recruits from the villages, and sent an urgent call to Virginia for re-enforcements. The salutary influence of the invasion upon the Indians was felt at once; it 'began to spread among the nations even to the border of

the lakes; and in five weeks Clark settled a peace with ten or twelve different tribes. . . . And now Clark began really to feel the difficulties of his situation. Destitute of money, poorly supplied, commanding a small and widely scattered force, he had to meet and circumvent an active enemy who was determined to regain what he had lost. Governor Hamilton [the British governor at Detroit] projected a grand campaign against the French towns that had been captured and the small force that held them. The feeble issue was the capture, in December, 1778, of Vincennes, which was occupied by but two Americans. Clark, who was in the Illinois at the time of this disaster, at once put his little force in motion for the Wabash, knowing, he says, that if he did not take Hamilton, Hamilton would take him; and, February 23, 1779, at the end of a march of 250 miles, that ranks in peril and hardship with Arnold's winter march to Canada, he again captured the town, the fort, the governor, and his whole command. Hamilton was sent to Virginia a prisoner of war, where he was found guilty of treating American prisoners with cruelty, and of offering the Indians premiums for scalps, but none for prisoners." Clark was ambitious to extend his march to Detroit, but could not compass the necessary means. "Detroit lost for a few hundred men," was his pathetic lament as he surrendered an enterprise that lay near his heart. Had he been able to achieve it, he would have won and held the whole Northwest. As it was he won and held the Illinois and the Wabash in the name of Virginia and of the United States. The bearing of this conquest on the question of western boundaries will be considered in another place, but here it is pertinent to remark that the American Commissioners, in 1782, at Paris, could plead 'uti possidetis' in reference to much of the country beyond the Ohio, for the flag of the Republic, raised over it by George Rogers Clark, had never been lowered. It would not be easy to find in our history a case of an officer accomplishing results that were so great and far-reaching with so small a force. Clark's later life is little to his credit, but it should not be forgotten that he rendered the American cause and civilization a very great service. All this time the British were not idle. War-party after war-party was sent against the American border. In 1780 a grand expedition was organized at Detroit and sent to Kentucky under the command of Captain Bird. But it accomplished nothing commensurate with its magnitude and cost. . . . The Northwest had been won by a Virginia army, commanded by a Virginia officer, put in the field at Virginia's expense. Governor Henry had promptly announced the conquest to the Virginia delegates in Congress. . . . But before Patrick Henry wrote this letter, Virginia had welded the last link in her chain of title to the country beyond the Ohio. In October, 1778, her Legislature declared: 'All the citizens of the commonwealth of Virginia, who are actually settlers there, or who shall hereafter be settled, on the west side of the Ohio, shall be included in the district of Kentucky which shall be called Illinois County.' Nor was this all. Soon after, Governor Henry appointed a lieutenant-commandant for the new county, with full instructions for carrying on the government. The French settlements remained under Vir-

ginia jurisdiction until March, 1784."—B. A. Hinsdale, *The Old Northwest*, ch. 9.

A. D. 1778-1779.—The French Alliance.—Peril of France.—Doubtful feeling in America.—Spanish mediation with England.—"From the third volume of Doniol's comprehensive work on the 'Participation de la France a l'établissement des États Unis,' published in 1888, we are able to learn for the first time the extreme peril of France in 1778-'79. When Vergennes advised the recognition of the independence of the United States, it was on the same grounds that Canning advised the recognition of the independence of the Spanish South American States many years afterwards. The fair distribution of power in the civilized world, which was threatened in the latter period by the Holy Alliance, was threatened in the former period by the assumption of maritime supremacy by Britain. In each the object was to call up a new sovereignty in America, so as to check an undue concentration of sovereignty in Europe. Undoubtedly Vergennes was aided, as Canning was aided, by the enthusiasm felt by men of liberal views for a revolution that was expected to extend the domain of liberalism; but with Vergennes, as with Canning, the object was the establishing of a power abroad which could resist a dangerous aggression at home. When in February, 1778, France acknowledged the independence of the United States, Vergennes had good reason to hold either that Britain would not resent the insult by war, or that she would find that in such a war the odds were against her. A British army had just capitulated at Saratoga, America, so it was reported to Vergennes and so he believed, was unanimous in determining to defend her liberties to the last. In Holland there was a strong party which was expected to force the States-General into a recognition of their sister republic. Spain had already secretly advanced a million of francs to the American commissioners. From Frederick the Great, delighted to see his British relatives, who had not always supported him in his troubles, annoyed by a revolt in their own domain, came words very encouraging to the American envoys. Catharine II listened with apparent satisfaction to a scheme which would relieve her infant shipping from British oppression. It looked as if, should Britain declare war against France, she would have against her the armies and navies of all continental Europe, aided by the people of her American Colonies in a compact mass. But in a few months there came a great change. The British army under Howe was so largely reinforced as for the immediate present to give it a great superiority over any army Congress could bring against it in open field. . . . It is true that the news in April of the French treaty revived the energies of the revolutionists; but this treaty had its drawbacks, as the old dislike of France, in part inherited from England, in part the product of the Seven-years war, intensified the yearning for the mother country which in many hearts still remained. French officers complained that on their first arrival in New England they were received with sullen aversion

by the people, though welcomed by the revolutionary leaders. The French army and navy, for the first year in which they were engaged in America, did no good to the American cause; and so great was the popular irritation at their inactivity, so strong, it was said, continued to be the old race attachment to England, that Intelligent French observers in America advised Vergennes that he must move warily, for at any moment America might make a separate peace with Britain and then join the British forces against France. No doubt these reports, so far as they pronounced this to be the drift of a large minority in Congress, were unfounded in fact. They were nevertheless communicated under high sanction to Vergennes, and produced in his mind the liveliest anxiety. . . . English influence had for a time regained its ascendancy in Holland. Prussia and Russia, having tasted the delights of neutral commerce, let it be plainly understood that they would not abandon a neutrality so profitable for the risks of belligerency. And Spain had taken alarm and was backing out not merely from the family compact, but from her recent promise to aid the insurgents. Aiding the insurgents, her minister declared, was cutting her own throat, and no aid to the insurgents should be given except on a very heavy equivalent. If France was to meet the shock of the British navy alone she might be swept from the seas, and, aside from this danger, her finances were in such a ruinous condition that her bankruptcy was imminent. One of two courses must be adopted, not only to save France but to save the independence of the United States and the consequent equilibrium of power for which France has gone to war. There must be either a general peace, which would include the independence of the United States, or there must be war, with Spain joining the allies. . . . It was in this condition of affairs that the position of Spain in 1778-'79 became of commanding importance. She offered herself as mediator between the allies and their common enemy, and through her the terms of pacification were discussed. In the negotiations, protracted and on both sides largely insincere, between Spain and Britain relative to the proposed pacification, the winter of 1778-'79 was consumed."—F. Wharton, *Introd. to The Revolutionary Diplomatic Correspondence of the U. S.*, ch. 5, sect. 86 (v. 1).

A. D. 1778-1779.—**The War carried into the South.**—Savannah taken and Georgia subdued.—Towards the end of November, 1778, a "body of troops, under Lieutenant-colonel Campbell, sailed [from New York] for Georgia in the squadron of Commodore Hyde Parker; the British cabinet having determined to carry the war into the Southern States. At the same time General Prevost, who commanded in Florida, was ordered by Sir Henry Clinton to march to the banks of the Savannah River, and attack Georgia in flank, while the expedition under Campbell should attack it in front on the seaboard. . . . The squadron of Commodore Hyde Parker anchored in the Savannah River towards the end of December. An American force of about 600 regulars, and a few militia under General Robert Howe, were encamped near the town, being the remnant of an army with which that officer had invaded Florida, in the preceding summer, but had been obliged to evacuate it by a mortal malady which desolated

his camp. Lieutenant-colonel Campbell landed his troops on the 29th of December, about three miles below the town. The whole country bordering the river is a deep morass, cut up by creeks, and only to be traversed by causeways. Over one of these, 600 yards in length, with a ditch on each side, Colonel Campbell advanced, putting to flight a small party stationed to guard it. General Howe had posted his little army on the main road, with the river on his left and a morass in front. A negro gave Campbell information of a path leading through the morass, by which troops might get unobserved to the rear of the Americans. Sir James Baird was detached with the light infantry by this path, while Colonel Campbell advanced in front. The Americans, thus suddenly attacked in front and rear, were completely routed; upwards of 100 were either killed on the spot, or perished in the morass; 38 officers and 415 privates were taken prisoners, the rest retreated up the Savannah River and crossed into South Carolina. Savannah, the capital of Georgia, was taken possession of by the victors, with cannon, military stores and provisions; their loss was only seven killed and nineteen wounded. Colonel Campbell conducted himself with great moderation; protecting the persons and property of the inhabitants, and proclaiming security and favor to all that should return to their allegiance. Numbers in consequence flocked to the British standard: the lower part of Georgia was considered as subdued, and posts were established by the British to maintain possession. While Colonel Campbell had thus invaded Georgia in front, General Prevost "entered the State from Florida, "took Sunbury, the only remaining fort of importance, and marched to Savannah, where he assumed the general command, detaching Colonel Campbell against Augusta. By the middle of January (1779) all Georgia was reduced to submission. A more experienced American general than Howe had by this time arrived to take command of the Southern Department, Major-general Lincoln, who had gained such reputation in the campaign against Burgoyne, and whose appointment to this station had been solicited by the delegates from South Carolina and Georgia. He had received his orders from Washington in the beginning of October."—W. Irving, *Life of Washington*, v. 3, ch. 37.

A. D. 1778-1779.—**Washington guarding the Hudson.**—**The storming of Stony Point.**—**Marauding warfare of the British.**—"After Clinton slipped away from Monmouth and sought refuge in New York, Washington took post at convenient points and watched the movements of the enemy. In this way the summer passed. As always, Washington's first object was to guard the Hudson, and while he held this vital point firmly, he waited, ready to strike elsewhere if necessary. It looked for a time as if the British intended to descend on Boston, seize the town, and destroy the French fleet, which had gone there to refit. Such was the opinion of Gates, then commanding in that department, and as Washington inclined to the same belief, the fear of this event gave him many anxious moments. He even moved his troops so as to be in readiness to march eastward at short notice; but he gradually became convinced that the

enemy had no such plan. . . . The main army, therefore, remained quiet, and when the autumn had passed went into winter-quarters in well-posted detachments about New York. In December Clinton made an ineffectual raid [in New Jersey], and then all was peaceful again, and Washington was able to go to Philadelphia and struggle with Congress, leaving his army more comfortable and secure than they had been in any previous winter. . . . He now hoped and believed that the moment would come when, by uniting his army with the French, he should be able to strike the decisive blow. Until that time came, however, he knew that he could do nothing on a great scale, and he felt that meantime the British, abandoning practically the eastern and middle States, would make one last desperate struggle for victory, and would make it in the south. Long before any one else, he appreciated this fact, and saw a peril looming large in that region. . . . All this, however, did not change his own plans one jot. He believed that the south must work out its own salvation, as New York and New England had done with Burgoyne, and he felt sure that in the end it would be successful. But he would not go south, nor take his army there. . . . The British might overrun the north or invade the south, but he would stay where he was, with his grip upon New York and the Hudson River. The tide of invasion might ebb and flow in this region or that, but the British were doomed if they could not divide the eastern colonies from the others. When the appointed hour came, he was ready to abandon everything and strike the final and fatal blow; but until then he waited and stood fast with his army, holding the great river in his grasp. He felt much more anxiety about the south than he had felt about the north, and expected Congress to consult him as to a commander, having made up his mind that Greene was the man to send. But Congress still believed in Gates, who had been making trouble for Washington all winter; and so Gates was sent, and Congress in due time got their lesson, and found once more that Washington understood men better than they did. In the north the winter was comparatively uneventful. The spring passed, and in June Clinton came out and took possession of Stony Point and Verplanck's Point, and began to fortify them. It looked a little as if Clinton might intend to get control of the Hudson by slow approaches, fortifying, and then advancing until he reached West Point. With this in mind, Washington at once determined to check the British by striking sharply at one of their new posts. Having made up his mind, he sent for Wayne and asked him if he would storm Stony Point. Tradition says that Wayne replied, 'I will storm hell, if you will plan it.' A true tradition, probably, in keeping with Wayne's character, and pleasant to us to-day as showing with a vivid gleam of rough human speech the utter confidence of the army in their leader, that confidence which only a great soldier can inspire. So Washington planned, and Wayne stormed [July 15, 1779], and Stony Point fell. It was a gallant and brilliant feat of arms, one of the most brilliant of the war. Over 500 prisoners were taken, the guns were carried off, and the works destroyed, leaving the British to begin afresh with a good deal of increased caution and respect. Not long

after, Harry Lee stormed Paulus Hook with equal success, and the British were checked and arrested, if they intended any extensive movement. On the frontier, Sullivan, after some delays, did his work effectively. . . . In these various ways Clinton's circle of activity was steadily narrowed, but it may be doubted whether he had any coherent plan. The principal occupation of the British was to send out marauding expeditions and cut off outlying parties. Tryon burned and pillaged in Connecticut [at New Haven, Fairfield and Newark], Matthews in Virginia [at Norfolk, Portsmouth and elsewhere], and others on a smaller scale elsewhere in New Jersey and New York. . . . It was enough for Washington to hold fast to the great objects he had in view, to check Clinton and circumscribe his movements. Steadfastly he did this through the summer and winter of 1779.—H. C. Lodge, *George Washington*, v. 1, ch. 8.

A. D. 1779 (August-September).—General Sullivan's expedition against the Senecas.—For the purpose of putting an end to the destructive and bloody incursions of Tories and Indians from western New York, directed against the border settlements of that state and Pennsylvania—as at Cherry Valley and Wyoming—General Washington, in the early part of the year 1779, determined upon a measure for carrying the war into the home of the invaders. "The command was entrusted to Gen. Sullivan. The army organized for the expedition was in three divisions. That part of it under the immediate command of Gen. Sullivan, coming from Pennsylvania, ascended the Susquehanna to Tioga Point. Another division under the command of Gen. James Clinton, constructing bateaux at Schenectady, ascended the Mohawk and rendezvoused at Canajoharrie, opened a road to the head of Otsego Lake, and from thence proceeded in a formidable fleet of over 300 bateaux, to Tioga Point, forming a junction with the force under Gen. Sullivan, on the 22d of August. Previous to the arrival of Gen. Clinton, Sullivan had sent forward a detachment which fell in with a scouting party of Indians, and a skirmish ensued. The combined forces amounted to 5,000 men. The expedition had been so long preparing, and upon the march, that the enemy were well apprized of all that was going on. Their plan of defence contemplated a decisive engagement upon the Chemung river. For this purpose the Rangers and regular British troops, under the command of Col. John Butler, Cols. Guy and Sir John Johnson, Major Walter N. Butler and Capt. McDonald, and the Indians under Brant, had concentrated their forces upon a bend of the river, near the present village of Elmira [then called Newtown], where they had thrown up a long breast work of logs. The united forces of the British allies, as computed by Gen. Sullivan, was about 1,500. Having ascertained their position, Gen. Sullivan marched in full force and attacked them in the forenoon of the 29th of August. . . . The battle had been

waged about two hours, when the British and Indians perceiving their forces inadequate, and that a maneuver to surround them was likely to be successful, broke and fled in great disorder. 'This,' says John Salmon, of Livingston county, who belonged to the expedition and gave an account of it to the author of the *Life of Mary Jemison*, 'was the only regular stand made by the Indians. In their retreat they were pursued by our men to the Narrows, where they were attacked and killed in great numbers, so that the sides of the rocks next the River looked as if blood had been poured on them by pulfuls.' The details of all that transpired in this campaign are before the public in so many forms, that their repetition here is unnecessary. The route of the army was via 'French Catherine's Town,' head of Seneca Lake, down the east shore of the Lake to the Indian village of Kanadesaga (Old Castle), and from thence to Canandaigua, Honeye, head of Conesus Lake, to Groveland. The villages destroyed (with the apple trees and growing crops of the Indians,) were at Catherinestown, Keadal, or 'Apple Town' on the east side of the Lake, eleven miles from its foot, Kanadesaga, Honeye, Conesus, Canaseraga, Little Beard's Town, Big Tree, Canawagus, and on the return of the army, Senawace, a village between the Cayuga and Seneca Lakes, and several other Cayuga villages. . . . The march of Sullivan, the devastations committed by his army, would at this distant period seem like Vandalism, in the absence of the consideration that he was acting under strict orders; and that those orders were approved, if not dictated, by Washington. The campaign was a matter of necessity; to be effectual, it was not only necessary that its acts should be retaliatory and retributive, but that the haunts, the retreats, of a foe so ruthless, must be broken up. The object was to destroy all the means of subsistence of the Senecas, desolate their homes, prevent their return to them, and if possible, induce their permanent retreat beyond the Niagara River. The imprudence, the want of sagacity, which Col. Stone has imputed to Gen. Sullivan in alarming every village he approached by the sound of his cannon, the author conceives a misapprehension of his motives. Stealthy, quiet approaches, would have found as victims, in every village, the old men, the women and children—the warriors away, banded with their British allies. Humanity dictated the forewarning, that those he did not come to war against could have time to flee. . . . The march of Gen. Sullivan, after leaving the Chemung, was bloodless, except in a small degree—just as it should have been, if he could not make victims of those he was sent to punish. The third expedition of this campaign, which has generally been lost sight of by historians, was that of Gen. Broadhead. He left Fort Pitt in August with 600 men, and destroyed several Mingo and Munciey tribes living on the Allegany, French Creek, and other tributaries of the Ohio. The heavy artillery that Gen. Sullivan brought as far as Newton, would indicate that Niagara was originally the destination. There the General and his officers, seeing how long it had taken to reach that point, in all probability determined that too much of the season had been wasted, to allow of executing their tasks in the Indian country, making their roads and moving the army and

all its appointments to Niagara before the setting in of winter. Besides, before the army had reached the valley of the Chemung, the fact was ascertained that there would be a failure in a contemplated junction with the army under Gen. Broadhead. After the expedition of Gen. Sullivan, the Indians never had any considerable permanent re-occupancy of their villages east of the Genesee river. They settled down after a brief flight, in their villages on the west side of the river in the neighborhood of Genesee, Mt. Morris and Avon, and at Gardena; Canadea, Tonawanda, Tuscarora, Buffalo Creek, Cattaraugus and Allegany."—O. Turner, *Hist. of the Pioneer Settlement of Phelps and Gorham's Purchase*, pt. 1, ch. 4.—"In his general orders of the 17th of October, General Washington announced to the army the result of the expedition, as follows: 'The Commander-in-chief has now the pleasure of congratulating the army on the complete and full success of Maj. Gen. Sullivan, and the troops under his command, against the Seneca and other tribes of the Six Nations, as a just and necessary punishment for their wanton depredations, their unparalleled and innumerable cruelties, their deafness to all remonstrances and entreaty, and their perseverance in the most horrid acts of barbarity. Forty of their towns have been reduced to ashes, some of them large and commodious; that of the Genesee alone containing one hundred and twenty-eight houses. Their crops of corn have been entirely destroyed, which, by estimation, it is said, would have provided 160,000 bushels, besides large quantities of vegetables of various kinds. Their whole country has been overrun and laid waste, and they themselves compelled to place their security in a precipitate flight to the British fortress at Niagara. And the whole of this has been done with the loss of less than forty men on our part, including the killed, wounded, captured, and those who died natural deaths. The troops employed in this expedition, both officers and men, throughout the whole of it, and in the action they had with the enemy, manifested a patience, perseverance and valor that do them the highest honor. In the course of it, when there still remained a large extent of the enemy's country to be prostrated, it became necessary to lessen the issues of provisions to half the usual allowance. In this the troops acquiesced with a most general and cheerful concurrence, being fully determined to surmount every obstacle, and to prosecute the enterprise to a complete and successful issue. Maj. Gen. Sullivan, for his great perseverance and activity, for his order of march and attack, and the whole of his dispositions; the Brigadiers and officers of all ranks, and the whole of the soldiers engaged in the expedition, merit and have the Commander-in-chief's warmest acknowledgements for their important services upon this occasion.' On the 9th of November, 1779, General Sullivan wrote to the President of Congress: 'It is with the deepest regret I find myself compelled to request from Congress liberty to retire from the army. My health is so much impaired by a violent bilious disorder, which seized me in the commencement and continued during the whole of the western expedition, that I have not the smallest hope of a perfect recovery.' . . . General Sullivan, in transmitting to Congress an official account of his operations, reported that . . . 'Every creek and

river has been traced, and the whole country explored in search of Indian settlements, and I am well persuaded that, except one town situated near the Alleghany, about fifty-eight miles from the country of the Five Nations. . . . I flatter myself that the orders with which I was entrusted are fully executed, as we have not left a single settlement or field of corn in the country of the Five Nations, or in there even the appearance of an Indian on this side of Niagara. Messengers and small parties have been constantly passing, and some imprudent soldiers who straggled from the army mistook the route and went back almost to Chinese without discovering even the track of an Indian. Sullivan was mistaken in regard to the destruction of all the Indian towns as there were several small villages undiscovered by his troops. The principal villages, however, and probably nine-tenths of the growing crops, upon which the Indians had depended for subsistence during the following winter, were effectually destroyed. . . . While Sullivan fully accomplished the task given him to perform, the results expected were not fully realized. The power of the savages had been weakened, but they were not entirely subdued until years afterward, when 'Mad Anthony Wayne' defeated the confederated bands of the Indians of the west, in 1794, a measure which thoroughly humbled the Indians of Western New York, and gave to the settlers peace and security. Sullivan's expedition was fruitful of great results in other ways, however, than the temporary subjugation of the Indians. The fertile and beautiful country now forming the western part of the State of New York, was then an unknown wilderness, and its value and attractiveness were first made known to the white people through this expedition. . . . Soon after the close of the war the tide of emigration commenced to flow westward. From the New England States, Pennsylvania and New Jersey, came hardy pioneers, led on by the glowing accounts they had heard of the new country, and the vicinity of the inland lakes, the borders of the flowing streams, the forest-covered hills became the dwelling places of a rapidly growing band of settlers. The road which Sullivan had opened from the Susquehanna valley was followed by many of the settlers, even to the banks of the Genesee. Thus many of those who had shared the perils and privations of Sullivan's expedition against the Indian tribes of Western New York, afterward became settlers of the land they had aided to conquer."—A. T. Norton, *History of Sullivan's Campaign against the Iroquois*, ch. 11.

A. D. 1779 (September).—Paul Jones' great sea-fight.—The Bon Homme Richard and the Serapis.—"Near the end of July [1779], Paul Jones, a Scot by birth, in the service of the United States, sailed from l' Orient as commander of a squadron, consisting of the Poor Richard ['Bon Homme Richard,' Jones named her, in compliment to Franklin and to the language of

the country from which Franklin's influence procured the ship] of 40 guns, many of them un-serviceable; the Alliance of 36 guns, both American ships-of-war; the Pallas, a French frigate of 32; and the Vengeance, a French brig of 12 guns. They ranged the western coast of Ireland, turned Scotland, and, cruising off Flamborough Head, despoiled the British merchant fleet from the Baltic, under the convoy of the Serapis of 44 guns and the Countess of Scarborough of 20 guns. An hour after sunset, on the 23d of September, the Serapis, having a great superiority in strength, engaged the Poor Richard. Paul Jones, after suffering exceedingly in a contest of an hour and a half within musket-shot, bore down upon his adversary, whose anchor he hooked to his own quarter. The muzzles of his guns touched each other's sides. Jones could use only three nine-pounders beside muskets from the round-tops, but combustible matters were thrown into every part of the Serapis, which was on fire no less than ten or twelve times. There were moments when both ships were on fire. After a two-hours' conflict in the first watch of the night, the Serapis struck its flag. Jones raised his pendant on the captured frigate, and the next day had but time to transfer to it his wounded men and his crew before the Poor Richard went down. The French frigate engaged and captured the Countess of Scarborough. The Alliance, which from a distance had raked the Serapis during the action, not without injuring the Poor Richard, had not a man injured. On the fourth of October the squadron entered the Texel with its prizes. The British ambassador, of himself and again under instructions, re-claimed the captured British ships and their crews, 'who had been taken by the pirate Paul Jones of Scotland, a rebel and a traitor.' 'They,' he insisted, 'are to be treated as pirates whose letters of marque have not emanated from a sovereign power.' The grand pensionary would not apply the name of pirate to officers bearing the commissions of congress. In spite of the stadholder, the squadron enjoyed the protection of a neutral port."—G. Buncroft, *Hist. of the U. S. (Author's last rec.)*, v. 5, p. 350.

A. D. 1779 (September-October).—Unsuccessful attack on Savannah by the Americans and French.—"The state of affairs in the South had called so imperatively for the attention of Congress that a portion of Washington's army had been detached to join General Lincoln. Washington solicited more powerful aid from D'Estaing, who then commanded in the West Indies an army sufficiently powerful to crush entirely the English in Georgia. The French admiral received this application just after having fought a hard battle against Commodore Byron without any decisive result, yet such as obliged the latter to go into port to refit. The former, being thus for a time master of the sea, determined at once to comply with the request, took on board 6,000 land-troops, and steered direct for Savannah, where, arriving quite unexpectedly, he captured by surprise a fifty-gun ship and three frigates. Prevost, too, was very unprepared, having his force broken up into detachments distributed along the frontier; but

these being instantly ordered in, obeyed with such promptitude that, before the French had landed and formed a junction with Lincoln, nearly all had arrived. On the 16th of September, D'Estaing appeared before the place and summoned it to surrender. Prevost, under pretext of negotiation, obtained a suspension for twenty-four hours, during which Colonel Maitland entered with the last and largest detachment, eluding the Americans by a route supposed impassable; and the full determination to resist was then announced. The opinion of all military men now is that D'Estaing was guilty of the most outrageous folly in not marching at once to the attack of the city, without summoning the weakened garrison to surrender at all. The surprise would have then been complete, and the victory sure. . . . A regular siege was now commenced. Heavy ordnance and stores were brought up from the fleet, and the besieging army broke ground. By the 1st of October they had pushed their sap within 300 yards of the abatis, on the left of the British lines. Several batteries were opened on the besieged, which played almost incessantly upon their works, but made no impression on them. The situation of D'Estaing was becoming critical. More time had already been consumed on the coast of Georgia than he had supposed would be necessary for the destruction of the British force in that State. He became uneasy for the possessions of France in the West Indies, and apprehensive for the safety of the ships under his command. The naval officers remonstrated strenuously against longer exposing his fleet on an insecure coast, at a tempestuous season of the year, and urged the danger of being overtaken by a British squadron when broken and scattered by a storm." D'Estaing accordingly decided that he must either raise the siege or attempt the enemy's works by storm. "The latter part of the alternative was adopted. . . . On the morning of the 9th of October, before day, . . . about 3,500 French and 1,000 Americans, of whom between 600 and 700 were regulars and the residue militia of Charleston, advanced in three columns, led by D'Estaing and Lincoln, aided by the principal officers of both nations, and made a furious assault on the British lines. Their reception was warmer than had been expected. . . . Both the French and Americans planted their standards on the walls, and were killed in great numbers while endeavoring to force their way into the works. For about fifty minutes the contest was extremely obstinate." Then the assailants gave way and a retreat was ordered. "In this unsuccessful attempt the French lost in killed and wounded about 700 men. Among the latter were the Count D'Estaing himself, Major General De Fontanges, and several other officers of distinction. The continental troops lost 234 men, and the Charleston militia, who, though associated with them in danger, were more fortunate, had one captain killed and six privates wounded. Count Pulaski was among the slain. The loss of the garrison was astonishingly small. In killed and wounded it amounted only to 55. So great was the advantage of the cover afforded by their works. . . . Count D'Estaing, having committed a blunder at the beginning, had committed a worse blunder at the end, by insisting on the assault, as unnecessary as it was rash. . . . He [now] insisted on raising the siege, and

both the French and American armies moved from their ground on the evening of the 18th of October. D'Estaing sailed for the West Indies; and Lincoln recrossed the Savannah at Zully's Ferry and again encamped in South Carolina."—C. B. Hartley, *Life of General Marion (Hero and Patriots of the South)*, ch. 11.

A. D. 1780 (January—April).—The gloomy winter at Morristown.—Depreciation to worthlessness of the Continental Currency.—Consequent sufferings of the army and the country.—"The year 1780 opened upon a famishing camp. 'For a fortnight past,' writes Washington, on the 8th of January, 'the troops, both officers and men, have been almost perishing with want. Yet,' adds he, feelingly, 'they have borne their sufferings with a patience that merits the approbation, and ought to excite the sympathies, of their countrymen.' The severest trials of the Revolution, in fact, were not in the field, where there were shouts to excite and laurels to be won; but in the squalid wretchedness of ill-provided camps, where there was nothing to cheer and everything to be endured. To suffer was the lot of the revolutionary soldier. A rigorous winter had much to do with the actual distresses of the army, but the root of the evil lay in the derangement of the currency. Congress had commenced the war without adequate funds, and without the power of imposing direct taxes. To meet pressing emergencies, it had emitted paper money, which, for a time, passed currently at par; but sank in value as further emissions succeeded, and that already in circulation remained unredeemed. The several States added to the evil by emitting paper in their separate capacities: thus the country gradually became flooded with a 'continental currency,' as it was called; irredeemable, and of no intrinsic value. The consequence was a general derangement of trade and finance. The continental currency declined to such a degree that forty dollars in paper were equivalent to only one in specie. Congress attempted to put a stop to this depreciation by making paper money a legal tender, at its nominal value, in the discharge of debts, however contracted. This opened the door to knavery, and added a new feature to the evil. The commissaries now found it difficult to purchase supplies for the immediate wants of the army, and impossible to provide any stores in advance. They were left destitute of funds, and the public credit was prostrated by the accumulating debts suffered to remain uncancelled. The changes which had taken place in the commissary department added to this confusion. The commissary-general, instead of receiving, as heretofore, a commission on expenditures, was to have a fixed salary in paper currency, and his deputies were to be compensated in like manner, without the usual allowance of rations and forage. No competent agents could be procured on such terms. . . . In the present emergency Washington was reluctantly compelled, by the distresses of the army, to call upon the counties of the State for supplies of grain and cattle, proportioned to their respective abilities. . . . Wherever a compliance with this call was refused, the articles required were to be impressed: it was a painful

alternative, yet nothing else could save the army from dissolution or starving. . . . As the winter advanced, the cold increased in severity. It was the most intense ever remembered in the country. The great bay of New York was frozen over. . . . The insular security of the place was its end. . . . Washington was aware of the opportunity which offered itself for a signal 'coup de main,' but was not in a condition to profit by it."—W. Irving, *Life of Washington*, v. 4, ch. I and 4.—"Paper for \$9,000,000 was issued before any depreciation began. The issues of the separate colonies must have affected it, but the popular enthusiasm went for something. Pelatiah Webster, almost alone as it seems, insisted on taxation, but a member of Congress indignantly asked if he was to help tax the people when they could go to the printing-office and get a cartload of money. In 1776, when the depreciation began, Congress took harsh measures to try to sustain the bills. Committees of safety also took measures to punish those who 'forested' or 'engrossed,' these being the terms for speculators who bought up for a rise. . . . The enemy, perceiving the terrible harm the Americans were doing themselves, thought it well to help on the movement. They counterfeited the bills and passed them through the lines. At the end of 1779 Congress was at its wit's end for money. Its issues had put specie entirely out of reach, and the cause was in danger of being drowned under the paper sea. . . . The French alliance helped more by giving means of procuring loans in Europe than by military assistance. Congress promised to limit its issues to \$200,000,000, and tried a new form of note; also loan offices and lotteries. Over 350,000,000 were issued in all, but it is doubtful if more than 200,000,000 were out at any one time. In the spring of 1780 the bills were worth two cents on the dollar, and then ceased to circulate. Specie now came into circulation, being brought by the French, and also that expended by the English passing the lines. The paper was now worth more for an advertisement or a joke than for any prospect of any kind of redemption. A barber's shop in Philadelphia was papered with it, and a dog, coated with tar, and with the bills stuck all over him, was paraded in the streets."—W. G. Sumner, *Hist. of Am. Currency*, pp. 44-47.

A. D. 1780 (February—August).—The siege and capture of Charleston by the British.—Defeat of Gates at Camden.—South Carolina subdued.—"After the failure of the attack on Savannah was learned by Sir Henry Clinton, he sent a large additional force to the South. Reinforcements were also sent on to Lincoln, while the main body of the American army went into winter quarters near Morristown, New Jersey. Sir Henry Clinton, as soon as his forces, which had been dispersed by a storm, had been collected at Savannah, proceeded to invest Charleston," landing his troops on St. John's Island in February. The blockading of the port and operations for the investment of the city were conducted cautiously and with success. On the 12th of May, the American commander, General Lincoln, "finding himself incapable of

defending Charleston, decided on capitulating; and he acceded to the terms which the besiegers had first offered. The fortifications, shipping, artillery, and public stores were all surrendered. The garrison, and all who had borne arms, were prisoners of war. The militia were allowed to return home on parole. In the siege the British lost 76 killed, and 189 wounded. The Americans about an equal number. The prisoners, exclusive of sailors, amounted to 5,618, counting all the adult males of the town. To bring the country entirely under subjection, Clinton sent forth three detachments. The first and largest, in the northern part of the State, was under Lord Cornwallis. He detached Colonel Tarleton with his legion of cavalry and mounted infantry, to disperse Colonel Buford, then encamped near the North Carolina line. [Buford] was overtaken at the Waxhaws, and, on his refusal to surrender, Tarleton made a furious charge on Buford's men, when some, in dismay, threw down their arms and asked for quarter, and some fired on the enemy. After this partial resistance, no quarter was given. Colonel Buford, with a few of the horse, and about 100 infantry, escaped; 113 were killed on the spot; 150 so badly wounded as to be incapable of being moved; and 53 were brought away as prisoners. The American officers deny (what the British assert), that any who had laid down their arms had again taken them up. All further resistance to the enemy in South Carolina and Georgia seems then to have ceased. The two other detachments of the British army every where received the submission of the inhabitants, who either gave their parole not again to bear arms against the king, or took the oath of allegiance. In a proclamation for settling the government, Sir Henry Clinton required all to return to their allegiance on pain of being treated as rebels and enemies. He then returned to New York, leaving Lord Cornwallis in command, with 4,000 troops. . . . Lord Cornwallis, considering South Carolina as entirely reannexed to Great Britain, would admit of no neutrality among the inhabitants; but insisted on their taking the oath of allegiance, which, however, was generally taken with reluctance by the people of the lower country. . . . A considerable force, under Baron de Kalb, had been ordered for the northern army by Congress; but, for want of money, and a sufficient Commissary department, they were so delayed in their march, that it was late in July before they reached Cape Fear River. Here they were joined by General Gates, who had been appointed to the command of the Southern army. The men of this detachment, ill-fed, suffered greatly from dysentery. In South Carolina, Gates was joined by Porterfield's Virginia regiment, Rutherford's corps of North Carolina militia, and Arnaud's legion. . . . Gates having under him about 4,000 men, of whom the regulars were less than 1,000, took post at Clermont. As the force of the Americans was daily increasing, Cornwallis, having under him about 2,000 men, of whom 1,900 were regulars, decided on attacking the American army. It so happened, that the period chosen by Cornwallis to surprise Gates, was the very moment in which Gates proposed to surprise his adversary; and thus the advanced corps of both armies unexpectedly met at two o'clock in the morning [Aug. 6, near Camden]. After some

skirmishing, in which the British seemed to have had a decided advantage, both parties suspended their operations till the morning. On the first onset of the British, the Virginia militia under General Stevens fled with precipitation, and were followed by the infantry of Armstrong; and, except Colonel Dixon's regiment, the whole South Carolina division followed the example. Very few of the militia of either State discharged a single musket. Gates was borne away by the torrent, and, with General Caswell, retreated to Clermont, in the hope of collecting a sufficient number of the fugitives to cover the retreat of the regulars; but the hope was vain. He was fain to proceed to Hillsborough, to concert the future plan of operations. Thus left with an inadequate force on the field, De Kalb made a stout resistance; but in an impetuous charge he fell, after having received twelve wounds. His troops were then unable to rally, and their discomfiture was complete. Their loss, in killed, wounded and prisoners, could not have been less than 1,000 men. The British lost 325 men. Just before the action, Sumter had captured a convoy, and made 200 prisoners; but was subsequently surprised by Tarleton, who recaptured the stores, killed 150, and took 300 prisoners. Sumter escaped with difficulty. There was no longer any armed American force in South Carolina, and Cornwallis resorted to energetic means of preventing disaffection. All those who were found in arms after they had submitted to British protection were considered as having forfeited their lives, and several of them were hung on the spot. But these severities, instead of their intended effect, produced a strong reaction; and Sumter was able to collect a new force, with which he greatly annoyed the north-western parts of the State."—G. Tucker, *Hist. of the U. S.*, ch. 3 (v. 1).

A. D. 1780 (July).—Fresh help from France.—The arrival of Rochambeau and his army, with a fleet.—"La Fayette's second visit to his native country [1779], was most opportune. He arrived in Paris at the moment when the war for the independence of America was in high popularity throughout France. He was put in arrest a week for his disobedience to the order not to leave France, but this was a mere formality. Vergennes received him in private. His example had roused the spirit of the French nobles. The stage resounded with his applauses. Crowds followed his steps. Marie Antoinette, with her quick, enthusiastic spirit, joyed at his distinction. The council of state, the Parliament, the towns, the corporations mingled in the noble excitement. The Royal Treasury was assured support by patriotic offers of contributions, and then was formed the auxiliary army that was to bear succor to America. This public enthusiasm triumphed over the hesitating reluctance of Maurepas, and the economical prudence of Necker. The army, placed under the command of the veteran Rochambeau, commended for his 'steadiness, wisdom, ability and prudence,' a pupil of the Marshal de Belle Isle, distinguished in frequent service, was to be composed of 6,000 troops. Among these shone forth the most brilliant of the nobility."—J. C. Hamilton, *Hist. of*

the U. S., as traced in the Writings of Alex. Hamilton, ch. 20 (v. 2).—"La Fayette . . . made the ministers understand that if he was not placed in command of the expedition, which would surprise the Americans, at least it was imperative to place over it a French general who would consent to serve under the American commander-in-chief. But he knew well that his old companions in arms in France were jealous of his rapid military fortune and brilliant renown. He knew still better that the officers who were his seniors in rank would be unwilling to serve under him. His first proposition, therefore, was only made to satisfy public feeling in America, which left the management of this affair almost entirely in his hands. In view of the serious difficulties that necessarily would result from the adoption of such a decision—difficulties that might have most disastrous consequences for the cause to which he had devoted himself—he promised to make the Americans understand that he had preferred remaining at the head of one of their divisions and that he had refused the command of the French forces. But he insisted upon this point, that, in order to avoid wounding the self-respect of the Americans, it was indispensable to choose a general to command the expedition, whose promotion had been recent and whose talents were certainly equal to his mission, but who, considering this mission as a distinction, would consent to acknowledge General Washington's supremacy. The choice that was made, under these conditions, of the Count de Rochambeau was perfectly satisfactory to him, and, without waiting for the departure of the expedition, he embarked at Rochefort, on February the 18th, 1780, on board the frigate *Hermione*, which the king had given him as being a swift sailer. . . . He was anxious to inform Washington of the good news himself, and immediately upon his landing at Boston, on April the 28th, he hastened to Morristown to rejoin his well-beloved and revered friend, as he called him in his letters. . . . General Heath, who commanded the militia in the State of Rhode Island, announced on the 11th of July, the arrival of the French squadron to General Washington, who was then with his staff at Bergen. La Fayette set out almost immediately, provided with instructions from the commander-in-chief, dated the 15th, to repair to the French general and admiral to confer with them. For some time Washington had been considering a plan of offensive operation for the capture of the city and the garrison of New York. This plan, which conformed with the wishes of the French government, was only to be carried out upon certain conditions. First, it was necessary that the French troops should unite with the American forces, and, secondly, that the French should have a naval superiority over the forces of Admirals Graves and Arbutnot, who had effected their junction at New York the day after the arrival of the French at Newport. This last condition was far from being fulfilled. . . . It had been foreseen that the English, who had concentrated their land and naval forces at New York, would not give the French time to establish themselves on Rhode Island; and Washington informed Rochambeau that Sir Henry Clinton was embarking his troops and would come shortly to attack the forces of the expedition with the squadrons assembled under the com-

mand of Admiral Arbuthnot, which were anchored at Sandy Hook, beyond New York, at the mouth of the Hudson River. The American general watched these movements, and, while he gave frequent information to the French of the projected attack upon them, he tried to prevent it. . . . At the same time, Washington crossed the Hudson above West Point with the greater part of his troops, and proceeded to King's Bridge, at the northern end of the island, where he made some hostile demonstrations. This manoeuvre detained General Clinton, who had already embarked eight thousand men upon the ships of Arbuthnot. He huddled his troops and gave up his project. Nevertheless, the English admiral set sail and appeared before Rhode Island with eleven ships of the line and a few frigates, twelve days after the French had landed. . . . On August the 9th, when La Fayette had returned to the headquarters of Washington, which were at Dobb's Ferry, ten miles above King's Bridge, on the right bank of the North River, he wrote to Rochambeau and de Ternay an urgent dispatch, in which he finished, in the name of the American general, by proposing to the French generals to come at once to attempt an attack on New York. . . . On the other hand, the same courier brought a letter from Washington which made no mention of this project, but which only replied by a kind of refusal to the request of Rochambeau for a conference, "wherein in an hour of conversation they could agree upon more things than in volumes of correspondence." Washington said with truth that he did not dare to leave his army in front of New York, for it might be attacked at any moment, and that by his presence he prevented the departure of the large body of the English forces that might have been sent against Rhode Island. Indeed, it is certain that if some differences had not arisen between General Clinton and Admiral Arbuthnot, the French might have found themselves in a dangerous position at the beginning. From the earliest letters exchanged upon this occasion some discord resulted between La Fayette, Rochambeau and Washington, but, owing to the good sense of Rochambeau, matters were soon smoothed over. He wrote in English to the American general to ask him thereafter to address himself directly to him, and to explain the reasons that induced him to postpone assuming the offensive. At the same time he urgently requested a conference. From that moment the relations between the two leaders were excellent. The mere presence of the French squadron and army, though they were still paralyzed and really blockaded by Admiral Arbuthnot, had effected a useful diversion, since the English had not been able to profit by all the advantages resulting from the capture of Charleston, and, instead of carrying on operations in the Carolinas with superior forces, they had had to bring the greater part of them back to New York."—T. Balch, *The French in America in the War of Independence*, ch. 10-11.

A. D. 1780 (August—September).—The Treason of Benedict Arnold.—"Washington contemplated the aspect of affairs with the greatest alarm. Doubtful if the army could be kept together for another campaign, he was exceedingly anxious to strike some decisive blow. He proposed to Rochambeau, commanding the French troops at Newport, an attack upon New

York; but that was not thought feasible without a superior naval force. Letters were sent to the French admiral in the West Indies entreating assistance; and Washington presently proceeded to Hartford, there to meet Rochambeau, to devise some definite plan of operations. During Washington's absence at Hartford, a plot came to light for betraying the important fortress of West Point and the other posts of the Highlands into the hands of the enemy, the traitor being no other than Arnold, the most brilliant officer and one of the most honored in the American army. The qualities of a brilliant soldier are unfortunately often quite distinct from those of a virtuous man and a good citizen. . . . Placed in command at Philadelphia, . . . he [Arnold] lived in a style of extravagance far beyond his means, and he endeavored to sustain it by entering into privateering and mercantile speculations, most of which proved unsuccessful. He was even accused of perverting his military authority to purposes of private gain. The complaints on this point, made to Congress by the authorities of Pennsylvania, had been at first unheeded; but, being presently brought forward in a solemn manner, and with some appearance of offended dignity on the part of the Pennsylvania council, an interview took place between a committee of that body and a committee of Congress, which had resulted in Arnold's trial by a court martial. Though acquitted of the more serious charges, on two points he had been found guilty, and had been sentenced to be reprimanded by the commander-in-chief. Arnold claimed against the United States a large balance, growing out of the unsettled accounts of his Canada expedition. This claim was greatly cut down by the treasury officers and when Arnold appealed to Congress, a committee reported that more had been allowed than was actually due. Mortified and soured, and complaining of public ingratitude, Arnold attempted, but without success, to get a loan from the French minister. Some months before, he had opened a correspondence with Sir Henry Clinton under a feigned name, carried on through Major Andre, adjutant general of the British army. Having at length made himself known to his correspondents, to give importance to his treachery, he solicited and obtained from Washington, who had every confidence in him, the command in the Highlands, with the very view of betraying that important position into the hands of the enemy. To arrange the terms of the bargain, an interview was necessary with some confidential British agent; and Andre, though not without reluctance, finally volunteered for that purpose. Several previous attempts having failed, the British sloop-of-war *Vulture*, with Andre on board, ascended the Hudson as far as the mouth of Croton River, some miles below King's Ferry. Information being sent to Arnold under a flag, the evening after Washington left West Point for Hartford he dispatched a boat to the *Vulture*, which took Andre on shore, for an interview on the west side of the river, just below the American lines. Morning appeared before the arrangements for the betrayal of the fortress could be definitely completed, and Andre was reluctantly persuaded to come within the American lines, and to remain till the next night at the house of one Smith, a dupe or tool of Arnold's, the same who

had been employed to bring Andre from the ship. For some reason not very clearly explained, Smith declined to convey Andre back to the Vulture. . . . Driven thus to the necessity of returning by land, Andre laid aside his uniform, assumed a citizen's dress, and, with a pass from Arnold in the name of John Anderson, a name which Andre had often used in their previous correspondence, he set off toward sunset on horseback, with Smith for a guide. They crossed King's Ferry, passed all the American guards in safety, and spent the night near Crom Pond, with an acquaintance of Smith's. The next morning, having passed Pine's Bridge, across Croton River, Smith left Andre to pursue his way alone. The road led through a district extending some thirty miles above the island of New York, not included in the lines of either army, and thence known as the 'Neutral Ground,' a populous and fertile region, but very much infested by bands of plunderers called 'Cow Boys' and 'Skinners.' The 'Cow Boys' lived within the British lines, and stole or bought cattle for the supply of the British army. The rendezvous of the 'Skinners' was within the American lines. They professed to be great patriots, making it their ostensible business to plunder those who refused to take the oath of allegiance to the State of New York." On the morning of Andre's journey, the road to Tarrytown, on which he rode, was being guarded by a small party of men, who watched for cattle thieves, and for suspicious travelers generally. Three of these intercepted the unfortunate young officer and discovered his character. Arnold received intelligence of what had happened in time to make his escape to the Vulture. Andre was examined before a board of which Lafayette, Steuben and Greene were members, and on his own statements was executed as a spy. The sympathy with him was very great, among Americans as well as among his own countrymen; but lenity in the case appeared too dangerous to Washington and his military advisers.—R. Hildreth, *Hist. of the U. S.*, ch. 41 (p. 3).

A. D. 1780 (August-December).—Partisan warfare in South Carolina.—Sumter and Marion.—A name "which recalls thrilling tales of desperate enterprise, surprises at midnight, sudden attacks in the gray twilight of morning, lurking-places in the depths of forests, restless activity, and untiring perseverance, is the name of Thomas Sumter. He comes before us tall, vigorous, dauntless, with a bold bearing, and imperious brow, stern to look upon, fierce in his self-will, arrogant in his decisions, tenacious in his prejudices, resolute and vigorous in the execution of his own plans, remiss and almost lukewarm in carrying out the plans of others. Born in South Carolina just as that colony had passed from the control of the Proprietaries to the control of the King, he lived to see her take the first decided step towards passing out of the Union.

Little has been preserved of his early life, although his subsequent career in the Senate of the United States proves that he was not deficient in education then, wherever or whenever acquired. In the Revolution he took an early part, and soon made himself conspicuous as a bold and enterprising officer. But it was not till after the siege of Charleston that his talents were brought fully into play. Then at the head of a body of volunteers he moved rapidly from point to point, keeping alive the hopes of the Whigs and the fears of the Tories in the regions watered by the Broad River, the Ennoree, and the Tiger. . . . History, like tradition, has her favorite characters, on which she dwells with peculiar fondness, delighting itself in preserving the memory of every exploit, and giving the brightest tints to every circumstance connected with their career. . . . Of these children of a happy star, no one holds in our Revolutionary history the same place as Francis Marion. His story, irregularly told by a friend and companion, took an early hold upon the heart of the people; and the romantic traits of his career, warming the imagination of a great poet, have been recorded in beautiful verse. Impartial judgment and sober research have left his own laurels unimpaired, although they have dissipated the halo which tradition and fancy had shed around his men. His life forms one of those pictures upon which the mind loves to dwell, from the singular combination of rare qualities which it displays. His ancestors were Huguenot exiles, who took refuge in South Carolina, from the dragoonades of Louis XIV. His father was a planter near Georgetown, who, portioning out his estate to his children as they came of age, had nothing left for Francis, the youngest, and his next nearest brother, while they were yet children. At sixteen Francis found himself compelled to choose a pursuit for his support. With only a common English education, and no money to carry him through the preparatory courses, he could neither be a physician nor a lawyer. He resolved to be a sailor, and started upon a voyage to the West Indies. But his ship was burnt in a gale, and after tossing about eight days in an open boat, without water and with nothing but the raw flesh and skin of a single dog to eat, and seeing several of his companions die of hunger, he, with the starving survivors, were rescued, barely alive. He renounced the sea, returned to Georgetown, and engaged in farming. The Cherokee war of 1759 found him hard at his work. He was now twenty-six, small in frame, low in stature, but vigorous, active, and healthy. By nature he was taciturn and reticent, with nothing in the expression of his face to attract or interest a casual observer, but still inspiring confidence and commanding respect in those who were brought into intimate relations with him. When, therefore, a company of volunteers was raised to serve against the Indians, he was chosen lieutenant. In a second expedition, which soon after became necessary, he was made captain. Next came the War of Independence; and joining the first South Carolina levies, he was presently made a major; and with this rank took part in the gallant defense of Fort Moultrie in 1776. His next promotion was to the command of a regiment as lieutenant-colonel. During the siege of Charleston his leg was accidentally broken, a lucky accident, which

left him free when the city fell, to engage in an adventurous system of warfare which was the only possible system in that low state of our fortunes. In the course of this he was promoted by Governor Rutledge to a brigadiership. When he first appeared in Gates's camp, he had but twenty men with him, or rather twenty between men and boys. Some of them were negroes. With these he rescued 150 of the prisoners of Camden, coming upon the British escort by surprise and overpowering it. Early in September a body of 200 Tories attempted to surprise him. He had 53 men with him when he heard of their intention, and instantly setting forward, surprised an advance party of 45, killing or wounding all but 15, and then attacked the main body of 200, and put them to flight. Before the end of the month he surprised another body of 60 men; and in October one of 200. His force was constantly fluctuating between 20 men and 70. Up to the 18th of October he had never had over 70. They went and came as they chose, their number ever ebbing and flowing like the tide. Sometimes the very men who had fought with him were ranged in arms against him; a few only serving from honest zeal and true love of country. . . . As his slender form concealed a lion heart, so under his cold, impassive face, there was a perpetual glow of tender sympathies. . . . Without claiming for Marion those powers of combination which belong to the highest order of military genius, he must be allowed to have excelled in all the qualities which form the consummate partisan,—vigilance, promptitude, activity, energy, dauntless courage, and unshaken self-control. . . . Two principles controlled all his actions, and shaped all his ends; the love of country, pure, earnest, and profound; the love of right, sincere, unyielding, and incorruptible."—G. W. Greene, *Life of Nathanael Greene*, bk. 4, ch. 7 (v. 3).—"The other partisans . . . had been compelled to take refuge in the mountains. Marion found his security in the swamps. This able partisan maintained his ground below and along the Santee river, and managed, among the defiles and swamps of that region, to elude all the activity of his enemies. His force had been collected chiefly among his own neighbors, were practised in the swamps, and familiar with the country. Like Sumter, utterly unfurnished with the means of war at first, he procured them by similar means. He took possession of the saws from the mills, and converted them into sabres. So much was he distressed for ammunition that he has engaged in battle when he had not three rounds of powder to each man of his party. . . . Various were the means employed to draw off or drive away his followers. The houses on the banks of the Pedee, Lynch's Creek, and Black river, from whence they were chiefly taken, were destroyed by fire, the plantations devastated, and the negroes carried away. But the effect of this wantonness was far other than had been intended. Revenge and despair confirmed the patriotism of these ruined men, and strengthened their resolution. . . . For months, their only shelter was the green wood and the swamp—their only cover the broad forest and the arch of heaven. . . . With a policy that nothing could distract—a caution that no artifice could mislead—Marion led his followers from thicket to thicket in safety, and was never more perfectly secure

than when he was in the neighborhood of his foe. He hung upon his flanks along the march—he skirted his camp in the darkness of the night—he lay in wait for his foraging parties—he shot down his sentries, and, flying or advancing, he never failed to harass the invader, and extort from him a bloody toll at every passage through swamp, thicket, or river, which his smaller parties made. In this sort of warfare—which is peculiarly adapted to the peculiarities of the country in Carolina, and consequently to the genius of her people—he contrived almost wholly to break up the British communications by one of the most eligible routes between the seaboard and the interior."—W. G. Simms, *Hist. of S. Carolina*, bk. 5, ch. 0.

A. D. 1780-1781.—Vermont as an independent State negotiating with the British. See VERMONT: A. D. 1781.

A. D. 1780-1781.—Greene's campaign in the south.—King's Mountain.—The Cowpens.—Guilford Court House.—Hobkirk's Hill.—Eutaw Springs.—The British shut up in Charleston.—Cornwallis withdrawn to Virginia.—"After his victory at Camden, Lord Cornwallis found it necessary to give his army some rest from the intense August heat. In September he advanced into North Carolina, boasting that he would soon conquer all the states south of the Susquehanna river. . . . In traversing Mecklenburg county Cornwallis soon found himself in a very hostile and dangerous region, where there were no Tories to befriend him. One of his best partisan commanders, Major Ferguson, penetrated too far into the mountains. The backwoodsmen of Tennessee and Kentucky, the Carolinas, and western Virginia were aroused; and under their superb partisan leaders—Shelby, Sevier, Cleveland, McDowell, Campbell, and Williams—gave chase to Ferguson, who took refuge upon what he deemed an impregnable position on the top of King's Mountain. On the 7th of October the backwoodsmen stormed the mountain, Ferguson was shot through the heart, 400 of his men were killed and wounded, and all the rest, 700 in number, surrendered at discretion. The Americans lost 28 killed and 60 wounded. . . . In the series of events which led to the surrender of Cornwallis, the battle of King's Mountain played a part similar to that played by the battle of Bennington in the series of events which led to the surrender of Burgoyne. It was the enemy's first serious disaster, and its immediate result was to check his progress until the Americans could muster strength enough to overthrow him. The events, however, were much more complicated in Cornwallis's case, and took much longer to unfold themselves. . . . As soon as he heard the news of the disaster he fell back to Wimsborough, in South Carolina, and called for reinforcements. While they were arriving, the American army, recruited and reorganized since its crushing defeat at Camden, advanced into Mecklenburg county. Gates was superseded by Greene, who arrived upon the scene on the 2d of December. Under Greene were three Virginians of remarkable ability,—Daniel Morgan; William Washington, who was a distant cousin of the commander-in-chief; and Henry

Lee, familiarly known as 'Light-horse Harry,' father of the great general, Robert Edward Lee. The little army numbered only 2,000 men, but a considerable part of them were disciplined veterans, fully a match for the British infantry." To increase this small force, Steuben (Baron Steuben, the military organizer and disciplinarian of the Revolutionary armies,—see above: A. D. 1777 (JANUARY—DECEMBER)) was sent down to Virginia, for the purpose of recruiting and organizing troops. Thereupon detachments from the British army at New York were dispatched by sea to Virginia, and Arnold, the traitor, was given command of them. "The presence of these subsidiary forces in Virginia was soon to influence in a decisive way the course of events. Greene, on reaching South Carolina, acted with boldness and originality. He divided his little army into two bodies, one of which cooperated with Marion's partisans in the northeastern part of the state, and threatened Cornwallis's communications with the coast. The other body he sent under Morgan to the southwestward, to threaten the inland posts and their garrisons. Thus worried on both flanks, Cornwallis presently divided his own force, sending Tarleton with 1,100 men to dispose of Morgan. Tarleton came up with Morgan on the 17th of January, 1781, at a grazing-ground known as the Cowpens, not far from King's Mountain. The battle which ensued was well fought, and on Morgan's part it was a wonderful piece of tactics. With only 900 men in open field he surrounded and nearly annihilated a superior force. The British lost 230 in killed and wounded, 600 prisoners, and all their guns. Tarleton escaped with 270 men. The Americans lost 12 killed and 61 wounded. The two battles, King's Mountain and the Cowpens, deprived Cornwallis of nearly all his light-armed troops, and he was just entering upon a game where swiftness was especially required. It was his object to intercept Morgan and defeat him before he could effect a junction with the other part of the American army. It was Greene's object to march the two parts of his army in converging directions northwards across North Carolina and unite them in spite of Cornwallis. By moving in this direction Greene was always getting nearer to his reinforcements from Virginia, while Cornwallis was always getting further from his supports in South Carolina. . . . The two wings of the American army came together and were joined by the reinforcements; so that at Guilford Court House, on the 15th of March, Cornwallis found himself obliged to fight against heavy odds, 200 miles from the coast and almost as far from the nearest point in South Carolina at which he could get support. The battle of Guilford was admirably managed by both commanders and stubbornly fought by the troops. At nightfall the British held the field, with the loss of nearly one third of their number, and the Americans were repulsed. But Cornwallis could not stay in such a place, and could not afford to risk another battle. There was nothing for him to do but retreat to Wilmington, the nearest point on the coast. There he stopped and pondered. His own force was sadly depleted, but he knew that Arnold in Virginia was being heavily reinforced from New York. The only safe course seemed to march northward and join the operations in Virginia; then afterwards to return southward. This course Corn-

wallis pursued, arriving at Petersburg and taking command of the troops there on the 20th of May. Meanwhile Greene, after pursuing Cornwallis for about 50 miles from Guilford, faced about and marched with all speed upon Camden, 160 miles distant. . . . Lord Rawdon held Camden. Greene stopped at Hobkirk's Hill, two miles to the north, and sent Marlow and Lee to take Fort Watson, and thus cut the enemy's communications with the coast. On April 23 Fort Watson surrendered; on the 25th Rawdon defeated Greene at Hobkirk's Hill, but as his communications were cut the victory did him no good. He was obliged to retreat toward the coast, and Greene took Camden on the 10th of May. Having thus obtained the commanding point, Greene went on until he had reduced every one of the inland posts. At last, on the 8th of September, he fought an obstinate battle at Eutaw Springs, in which both sides claimed the victory. . . . Here, however, as always after one of Greene's battles, it was the enemy who retreated and he who pursued. His strategy never failed. After Eutaw Springs the British remained shut up in Charleston under cover of their ships, and the American government was re-established over South Carolina. Among all the campaigns in history that have been conducted with small armies, there have been few, if any, more brilliant than Greene's."

A. D. 1781 (January).—The Mutiny of the Pennsylvania Line.—"As the year 1781 opened and the prospect of a new year of struggle became certain, and the invasion of the Southern States began to indicate the prospect of a southern campaign, which was at all times unpopular with northern troops, a disaffection was developed which at last broke forth in open mutiny, and a peremptory demand for discharge. This irritation was aggravated by hunger, cold, and poverty. Marshall says: 'The winter brought not much relaxation from toil, and none from suffering. The soldiers were perpetually on the point of starvation, were often entirely without food, were exposed without proper clothing to the rigors of winter; and had now served almost twelve months without pay.' . . . On the 1st of January the Pennsylvania line revolted; Captain Billings was killed in an attempt to suppress the mutiny; General Wayne was powerless to restore order, and 1,300 men, with six guns, started to Princeton, with the declared purpose to march to Philadelphia, and obtain redress. They demanded clothing, the residue of their bounty, and full arrears of pay. A committee from Congress and the State authorities of Pennsylvania at once entered into negotiations with the troops for terms of compromise. The American Commander-in-chief was then at New Windsor. A messenger from General Wayne informed him on the 3d of January of the revolt, and the terms demanded. It appears from Washington's letters that it was his impulse, at the first intimation of the trouble, to go in person and attempt its control. His second impression was to reserve his

influence and authority until all other means were exhausted. The complaint of the mutineers was but a statement of the condition of all the army, so far as the soldiers had served three years; and the suffering and failure to receive pay were absolutely universal. Leaving the preliminary discussion with the civil authorities who were responsible for much of the trouble, the Commander-in-chief appealed to the Governors of the northern States for a force of militia to meet any attacks from New York, and declined to interfere until he found that the passion had passed and he could find troops who would at all hazards execute his will. It was one of the most difficult passages in the war, and was so handled that the Commander-in-chief retained his prestige and regained control of the army. . . . General Clinton received information of the revolt as early as Washington, on the morning of the 23d, and sent messengers to the American army with propositions, looking to their return to British allegiance. He entirely misconceived the nature of the disaffection, and his agents were retained in custody. It is sufficient to say that a portion of the troops were discharged without critical examination of their enlistments, on their own oath; that many promptly re-enlisted, that as soon as Washington found that he had troops who did not share in the open mutiny, he used force and suppressed the disaffection, and that the soldiers themselves hung several agents who brought propositions from General Clinton which invited them to abandon their flag and join his command. The mutiny of the American army at the opening of the campaign of 1781, was a natural outbreak which human nature could not resist, and whatever of discredit may attach to the revolt, it will never be unassociated with the fact that, while the emergency was one that overwhelmed every military obligation by its pressure, it did not affect the fealty of the soldiers to the cause for which they took up arms. . . . La Fayette thus wrote to his wife, "Human patience has its limits. No European army would suffer the tenth part of what the Americans suffer. It takes citizens to support hunger, nakedness, toil, and the total want of pay, which constitute the condition of our soldiers, the hardest and most patient that are to be found in the world."—H. B. Carrington, *Battles of the Am. Revolution*, ch. 67.

A. D. 1781 (January—May).—Benedict Arnold and the British in Virginia.—Opening of Lafayette's campaign in that state.—"In January, 1781, the news reached headquarters in the Highlands of New York that General [Benedict] Arnold had landed in Virginia with a considerable force, was laying waste the country, and had already destroyed the valuable stores collected at Richmond; opposed to him were only the small commands of Steuben and Muhlenberg. The situation was very alarming, and threatened to place all the Southern States in the hands of the British. If Arnold succeeded in destroying the few American troops in Virginia, he could then march to the assistance of Cornwallis, who, with a superior force, was pressing General Greene very hard in the Carolinas. To defeat or capture Arnold before he could further prosecute his designs was, therefore, of the

utmost importance. For this purpose it was necessary to send a detachment from the main army against Arnold by land, and a naval force to Chesapeake Bay to prevent his escape by sea. Washington at once communicated the state of affairs to Rochambeau, who, with the French fleet, had long been blockaded at Newport. Taking advantage of the serious injuries lately suffered by the blockading English fleet in consequence of a storm, Admiral Destouches despatched M. de Tilly to the Chesapeake with a ship-of-the-line and two frigates. To cooperate with these French vessels, Washington detached 1,200 light infantry from the main army, and placed them under the command of Lafayette. That officer was particularly chosen for this important trust, because the confidence reposed in him by both the American and French troops made him, in Washington's opinion, the fittest person to conduct a combined expedition. Thus opened the only campaign in America which afforded Lafayette an opportunity to show what abilities he possessed as an independent commander, and on this campaign his military reputation must chiefly rest. Lafayette moved rapidly southward," to Annapolis; but, the cooperating movement of the French fleet having, meantime, been frustrated by an attack from the English squadron, his instructions required him to abandon the expedition and return. He had already set his troops in motion northward when different instructions reached him. Two more British regiments had been sent to Virginia, under General Philips, who now took command of all the forces there, and this had increased the anxiety of Washington. "The situation of the Southern States had become extremely perilous. General Greene had all he could do to fight Lord Cornwallis's superior force in North Carolina. Unless a vigorous opposition could be made to Philips, he would have no difficulty in dispersing the militia of Virginia, and in effecting a junction with Cornwallis. With their forces so combined, the British would be masters in the South. Washington at once determined to place the defence of Virginia in Lafayette's hands. . . . Lafayette marched with such rapidity . . . that he reached Richmond, where there were valuable stores to be protected, a day in advance of General Philips. From his post on the heights of the town he saw the British set fire to the tobacco warehouses at Manchester, just across the river, but there were neither men nor boats enough to make an attack possible. Philips, on his part, was too much impressed with the show of strength made by the Americans to prosecute his plans on Richmond, and retreating down the James river, burning and laying waste as he went, he camped at Hog Island. Lafayette followed, harassing the enemy's rear, as far as the Chickahominy. Here the situation underwent a considerable change. Lord Cornwallis, after his long and unsuccessful campaign against Greene in North Carolina, made up his mind that his exhausting labors there would prove unprofitable until Virginia should be subjugated. His men were worn out with incessant marching and fighting, while no substantial advantage had been gained. Hearing that General Greene had marched to attack Lord Rawdon at Camden in South Carolina, he determined to join Philips. That officer, accordingly, received orders while at Hog Island to take possession of

Petersburg and there await Cornwallis's arrival. . . . On the 13th of May, General Phillips died at Petersburg of a fever. . . . Cornwallis arrived at Petersburg on the 20th of May. His forces now amounted to over 5,000 men, which number was soon increased to 8,000."—B. Tuckerman, *Life of Lafayette*, ch. 6.

A. D. 1781 (May—October).—Cornwallis in Virginia and the trap into which he fell.—Siege of Yorktown by the French and Americans.—Surrender of the British army.—"On the 24th of May, Cornwallis, having rested his troops, marched from Petersburg, and endeavored to engage the American forces. But Lafayette, having removed the military stores from Richmond, retreated across the Chickahominy to Fredericksburg, where he expected to meet General Wayne and a battalion of Pennsylvania troops, without whose assistance he could not venture any fighting. . . . Cornwallis . . . moved between Lafayette and the town of Albemarle, where had been placed a great part of the military stores from Richmond, which now seemed doomed to destruction. But on the 10th of June Lafayette had received his expected reinforcement of Wayne's Pennsylvanians, and thus strengthened felt able to assume the offensive. Rapidly crossing the Rapidan he approached close to the British army which blocked the road to Albemarle. Nothing could have better suited Cornwallis, who prepared for a conflict in which he felt sure of a decisive victory. Lafayette, however, had not lost sight of the vital feature of his campaign,—to protect the property of the State without losing his army. Through his scouts he discovered an old unused road to Albemarle, unknown to the enemy. While Cornwallis was preparing for battle, he had the road cleared, and under cover of the night marched his men through it and took up a strong position before the town. There he was joined by militia from the neighboring mountains, and he showed so strong a front that the British commander did not venture an attack. . . . The British commander, so far foiled in his objects, had to march back to Richmond and thence to Williamsburg, near the coast, thus practically abandoning control over any part of Virginia except where naval forces gave possession. Lafayette effected a junction with Baron Steuben on the 18th of June, and thus increased his force to about four thousand men. The Americans had now become the pursuers instead of the pursued, and followed the British, harassing their rear and flanks."—B. Tuckerman, *Life of General Lafayette*, v. 1, ch. 6.—"There now came a pause in the Virginia Campaign, at least in daily operations and excitements. The State north of the James was relieved. Cornwallis crossed to the south side, at Cobham, on the 7th [July]; and Lafayette, retiring up the river, encamped, about the 20th, on the now historic Malvern Hill, then described as one of the healthiest and best watered spots in the State. . . . The entire British army was soon after concentrated at Portsmouth, and preparations made to transport a considerable portion of it to New York. Lafayette, meanwhile, at Malvern Hill, could only await developments. He thought of sending re-enforcements to Greene, and asked Washington if, in case Cornwallis left Virginia, he might not return to the Northern army. . . .

But while the marquis and Washington and Greene were speculating on the future movements of Cornwallis and were persuaded, from embarkations at Portsmouth, that he was to be deprived of a large part of his force by Clinton, unexpected intelligence came to hand. Instead of any part going to New York, the British force suddenly made its appearance, during the first days in August, at Yorktown, on the Virginia peninsula, which it had abandoned but three weeks before. Here again was a new situation. Cornwallis, at last, at Yorktown—the spot he was not to leave except as a prisoner of war. Why he went there is a simple explanation. Clinton decided, upon certain dissenting opinions expressed by Cornwallis respecting the situation in Virginia, not to withdraw the force in the Chesapeake which he had called for, and which was about to sail for New York, but permitted Cornwallis to retain the whole—all with which he had been pursuing Lafayette and the large garrison at Portsmouth, a total of about seven thousand, rank and file. His new instructions, conveyed at the same time, were to the effect that his Lordship should abandon Portsmouth, which both generals agreed was too unhealthy for the troops, and fortify Old Point Comfort, where Fort Monroe now stands, as a naval station for the protection of the British shipping. In addition, if it appeared necessary, for the better security of the Point, to occupy Yorktown also, that was to be done. Obeying these instructions, Cornwallis ordered a survey of Old Point Comfort; but, upon the report of his engineers, was obliged to represent to Clinton that it was wholly unfit and inadequate for a naval station, as it afforded little protection for ships, and could not command the channel, on account of its great width. Then, following what he believed to be the spirit of his orders, Cornwallis, before hearing from Clinton, moved up to Yorktown, and began to fortify it in connection with Gloucester, on the opposite shore, as the best available naval station. Clinton made no subsequent objections, and there Cornwallis remained until his surrender. His occupation of the place was simply an incident of the campaign—a move taken for convenience and in the interests of the navy and the health of his command."—H. P. Johnston, *The Yorktown Campaign*, ch. 3.—"The march of Lord Cornwallis into Virginia was the first emphatic fact which enabled General Washington to plan an efficient offensive. The repeated detachment of troops from New York so sensibly lessened the capacity of its garrison for extensive field service at the north, that the American Commander-in-chief determined to attack that post, and as a secondary purpose, thereby to divert General Clinton from giving further aid to troops in the Southern States. As a matter of fact, the prudent conduct of the Virginia campaign eventually rallied to the support of General Lafayette an army, including militia, nearly as large as that of Washington, and the nominal strength of the allied army near Yorktown, early in September, was nearly or quite as great as that of Lord Cornwallis. There were other elements which, as in previous campaigns, hampered operations at the north. The Indians were still troublesome in Western New York, and the Canadian frontier continued to demand attention. The American navy had practically disappeared. The scarcity of money and a

powerless recruiting service, increased the difficulties of carrying on the war in a manner that would use to the best advantage the troops of France. . . . The position of the American Commander-in-chief at this time was one of peculiar personal mortification. Appeals to State authorities failed to fill up his army. Three thousand Hessian reinforcements had landed at New York, and the government as well as himself would be compromised before the whole world by failure to meet the just demands which the French auxiliaries had a right to press upon his attention. Relief came most opportunely. The frigate *Concorde* arrived at Newport, and a reiteration of the purpose of Count de Grasse to leave St. Domingo on the 3d of August, for the Chesapeake direct, was announced by a special messenger. The possibilities of the future at once quickened him to immediate action. With a reliance so close that the army could not fathom his plans, he re-organized his forces for a false demonstration against New York and a real movement upon Yorktown. . . . Letters to the Governors of northern States called for aid as if to capture New York. Letters to La Fayette and the Count de Grasse embodied such intimations of his plans as would induce proper caution to prevent the escape of Lord Cornwallis, and secure transportation at Head of Elk. Other letters to authorities in New Jersey and Philadelphia, expressly defining a plan of operations against New York via Staten Island, with the assurance of ample naval support, were exposed to interception and fell into the hands of General Clinton. As late as the 10th, the roads leading to King's Bridge were cleared of obstructions, and the army was put in readiness to advance against New York Island. On the same day the New Jersey regiment and that of Colonel Hazen crossed the Hudson at Dobb's Ferry, to threaten Staten Island, and ostensibly to cover some batteries which were being erected for the purpose of giving color to the show of operations against New York. The plan of a large encampment had been prepared, which embraced Springfield and the Chatham Pass to Morristown, and this was allowed to find its way to Clinton's headquarters. General Heath was assigned to command of the Hudson-river posts, with two regiments from New Hampshire, ten from Massachusetts, five from Connecticut, the Third artillery, Sheldon's dragoons, the invalid corps, all local companies, and the militia. The following forces were selected to accompany the Commander-in-chief, viz., the light infantry under Colonel Scammell, four light companies from New York and Connecticut, the Rhode Island regiment, under the new army establishment, two New York regiments, that of New Jersey and Hazen's regiment, (the last two already across the Hudson) and Lamb's artillery, in all about 2,000 men. The American troops crossed on the 21st, at King's Ferry, and encamped near Haverstraw. The French army followed, and the army was united on the 25th. . . . General Washington and suite reached Philadelphia about noon, August 30th. The army had already realized the fact that they were destined southward. Some dissatisfaction was manifested; but Count de Rochambeau advanced \$20,000 in gold upon the pledge of Robert Morris that he would refund the sum by the 1st of October, and the effect upon the troops, who

had long been without any pay, was inspiring."—H. B. Carrington, *Battles of the Am. Rev.*, ch. 74. —"Leaving Philadelphia, with the Army, on the 5th of September, Washington meets an express near Chester, announcing the arrival, in Chesapeake Bay, of the Count de Grasse, with a fleet of twenty-eight ships of the line, and with 3,500 additional French troops, under the command of the Marquis de St. Simon, who had already been landed at Jamestown, with orders to join the Marquis de La Fayette! 'The joy' says the Count William de Deux-Ponts, in his precious journal, 'the joy which this welcome news produces among all the troops, and which penetrates General Washington and the Count de Rochambeau, is more easy to feel than to express.' But, in a foot-note to that passage, he does express and describe it, in terms which cannot be spared and could not be surpassed, and which add a new and charming illustration of the emotional side of Washington's nature. 'I have been equally surprised and touched,' says the gallant Deux-Ponts, 'at the true and pure joy of General Washington. Of a natural coldness and of a serious and noble approach, which in him is only true dignity, and which adorn so well the chief of a whole nation, his features, his physiognomy, his deportment, all were changed in an instant. He put aside his character as arbiter of North America, and contented himself for a moment with that of a citizen, happy at the good fortune of his country. A child, whose every wish had been gratified, would not have experienced a sensation more lively, and I believe I am doing honor to the feelings of this rare man in endeavoring to express all their ardor.' Thanks to God, thanks to France, from all our hearts at this hour, for 'this true and pure joy' which lightened the heart, and at once dispelled the anxieties of our incomparable leader. It may be true that Washington seldom smiled after he had accepted the command of our Revolutionary Army, but it is clear that on the 5th of September he not only smiled but played the boy. . . . 'All now went merry,' with him, 'as a marriage bell.' Under the immediate influence of this joy, which he had returned for a few hours to Philadelphia to communicate in person to Congress, . . . and while the Allied Armies are hurrying southward, he makes a hasty trip with Colonel Humphreys to his beloved Mount Vernon and his more beloved wife—his first visit home since he left it for Cambridge in 1775. Rochambeau, with his suite, joins him there on the 10th, and Chastellux and his aids on the 11th; and there with Mrs. Washington, he dispenses for two days, 'a princely hospitality' to his foreign guests. But the 13th finds them all on their way to rejoin the Army at Williamsburg, where they arrive on the 15th, 'to the great joy of the troops and the people,' and where they dine with the Marquis de St. Simon. On the 18th Washington and Rochambeau, with Knox and Chastellux and Du Portail, and with two of Washington's aids, Colonel Cobb of Massachusetts, and Colonel Jonathan Trumbull, jr., of Connecticut, embark on the 'Princess Charlotte' for a visit to the French fleet. . . . A few days more are spent at Williamsburg on their return, where they find General Lincoln already arrived with a part of the troops from the North, having hurried them as Washington besought him, 'on the wings of speed,' and where the word is soon

given, 'Ou, on, to York and Gloucester!' Washington takes his share of the exposure of this march, and the night of the 28th of September finds him, with all his military family, sleeping in an open field within two miles of Yorktown, without any other covering, as the journal of one of his aids states, 'than the canopy of the heavens, and the small spreading branches of a tree,' which the writer predicts 'will probably be rendered venerable from this circumstance for a length of time to come.' . . . Everything now hurries, almost with the rush of a Niagara cataract, to the grand fall of Arbitrary Power in America. Lord Cornwallis had taken post here at Yorktown as early as the 4th of August, after being foiled so often by 'that boy' as he called La Fayette, whose Virginia campaign of four months was the most effective preparation for all that was to follow, and who, with singular foresight, perceived at once that his lordship was now fairly entrapped, and wrote to Washington, as early as the 21st of August, that 'the British army must be forced to surrender.' Day by day, night by night, that prediction presses forward to its fulfillment. The 1st of October finds our engineers reconnoitering the position and works of the enemy. The 2d witnesses the gallantry of the Duke de Lauzun and his legion in driving back Tarleton, whose raids had so long been the terror of Virginia and the Carolinas. On the 6th, the Allied Armies broke ground for their first parallel, and proceeded to mount their batteries on the 7th and 8th. On the 9th, two batteries were opened—Washington himself applying the torch to the first gun; and on the 10th three or four more were in play—'silencing the enemy's works, and making,' says the little diary of Colonel Cobb, 'most noble music.' On the 11th, the indefatigable Baron Steuben was breaking the ground for our second parallel, within less than four hundred yards of the enemy, which was finished the next morning, and more batteries mounted on the 13th and 14th. But the great achievement of the siege still awaits its accomplishment. Two formidable British advanced redoubts are blocking the way to any further approach, and they must be stormed. The allied troops divide the danger and the glory between them, and emulate each other in the assault. One of these redoubts is assigned to the French grenadiers and chasseurs, under the general command of the Baron de Viomesnil. The other is assigned to the American light infantry, under the general command of La Fayette. But the detail of special leaders to conduct the two assaults remains to be arranged. Viomesnil readily designates the brave Count William to lead the French storming party, who, though he came off from his victory wounded, counts it 'the happiest day of his life.' A question arises as to the American party, which is soon solved by the impetuous but just demand of our young Alexander Hamilton to lead it. And lead it he did, with an intrepidity, a heroism, and a dash unsurpassed in the whole history of the war. . . . Both redoubts were soon captured; and these brilliant actions virtually sealed the fate of Cornwallis. 'A small and precipitate sortie,' as Washington calls it, was made by the British on the following evening, resulting in nothing; and the next day a vain attempt to evacuate their works, and to escape by crossing over to Gloucester, was defeated by a violent and, for

us . . . most providential storm of rain and wind. . . . A suspension of hostilities, to arrange terms of capitulation, was proposed by Cornwallis on the 17th; the 18th was occupied at Moore's House in settling those terms; and on the 19th the articles were signed by which the garrison of York and Gloucester, together with all the officers and seamen of the British ships in the Chesapeake, 'surrender themselves Prisoners of War to the Combined Forces of America and France.'—Robert C. Winthrop, *Address at the Centennial Celebration of the Surrender of Lord Cornwallis at Yorktown, Oct. 19, 1881.*

A. D. 1781-1782.—Practical suspension of hostilities.—Difficulty of maintaining the army.—Financial distress of the country.—"Immediately after the surrender of Yorktown Washington returned with his army to the vicinity of New York [see NEWBURGH], but he felt himself far too weak to attempt its capture, and hostilities were restricted to a few indecisive skirmishes or predatory enterprises. It is curious to notice how far from sanguine Washington appeared even after the event which in the eyes of most men, outside America, had determined the contest without appeal. It was still impossible, he maintained, to do anything decisive unless the sea were commanded by a naval force hostile to England, and France alone could provide this force. The difficulties of maintaining the army were unabated. 'All my accounts,' he wrote in April 1782, 'respecting the recruiting service are unfavourable; indeed, not a single recruit has arrived to my knowledge from any State except Rhode Island, in consequence of the requisitions of Congress in December last.' He strongly urged the impossibility of recruiting the army by voluntary enlistment, and recommended that, in addition to the compulsory enrolment of Americans, German prisoners should be taken into the army. Silas Deane, in private letters, expressed at this time his belief that it would be utterly impossible to maintain the American army for another year; and even after the surrender of Cornwallis, no less a person than Sir Henry Clinton assured the Government that, with a reinforcement of only 10,000 men he would be responsible for the conquest of America. . . . Credit was gone, and the troops had long been unpaid. 'The long sufferance of the army,' wrote Washington in October 1782, 'is almost exhausted. It is high time for a peace.' Nothing, indeed, except the great influence, the admirable moderation and good sense, and the perfect integrity of Washington could have restrained the army from open revolt. . . . Holland, immediately after the surrender of Yorktown, had recognised the independence of America, which had as yet only been recognised by France. John Adams was received as representative at the Hague, and after several abortive efforts he succeeded in raising a Dutch loan. France, as her ablest ministers well knew, was drifting rapidly towards bankruptcy, yet two

American loans, amounting together to £600,000, were extorted in the last year of the war. Up to the very eve of the formal signature of peace, and long after the virtual termination of the war, the Americans found it necessary to besiege the French Court for money. As late as December 5, 1782, Franklin wrote from Paris to Livingston complaining of the humiliating duty which was imposed on him. . . . The reply of Livingston was dated January 6, 1783, and it paints vividly the extreme distress in America. 'I see the force,' he writes, 'of your objections to soliciting the additional twelve millions, and I feel very sensibly the weight of our obligations to France, but every sentiment of this kind must give way to our necessities. It is not for the interest of our allies to lose the benefit of all they have done by refusing to make a small addition to it. . . . The army demand with impertunity their arrears of pay. The treasury is empty, and no adequate means of filling it presents itself. The people pant for peace; should contributions be exacted, as they have hitherto been, at the point of the sword, the consequences may be more dreadful than is at present apprehended. I do not pretend to justify the negligence of the States in not providing greater supplies. Some of them might do more than they have done; none of them all that is required. It is my duty to confide to you, that if the war is continued in this country, it must be in a great measure at the expense of France. If peace is made, a loan will be absolutely necessary to enable us to discharge the army, that will not easily separate without pay.' It was evident that the time for peace had come. The predatory expeditions which still continued in America could only exasperate still further both nations, and there were some signs—especially in the conflicts between loyalists and revolutionists—that they were having this effect. England had declared herself ready to concede the independence America demanded. Georgia and South Carolina, where the English had found so many faithful friends, were abandoned in the latter half of 1782, and the whole force of the Crown was now concentrated at New York and in Canada. France and Spain for a time wished to protract negotiations in hopes that Rodney might be crushed, that Jamaica and afterwards Gibraltar might be captured; but all these hopes had successively vanished. . . . If the war continued much longer America would almost certainly drop away, and France, and perhaps Spain, become bankrupt.—W. E. H. Lecky, *Hist. of Eng. in the 18th Century*, ch. 15 (v. 4).

A. D. 1781-1786.—The cession of Western Territory by the States to the Federal Union.—The Western Reserve of Connecticut.—Although the Articles of Confederation were adopted by Congress in 1777 and ratified immediately by most of the States, it was not until 1781 that they became operative by the assent of all. "New Jersey, Delaware and Maryland held out against ratifying them for from two to four years. The secret of their resistance was in the claims to the western territory. . . . The three recalcitrant States had always had fixed western boundaries, and had no legal claim to a share in the western territory. . . . New Jersey and Delaware gave up the struggle in 1778 and 1779; but Maryland would not and did not yield, until her claims were satisfied. Dr. H. B. Adams has

shown that the whole question of real nationality for the United States was bound up in this western territory; that even a 'league government' could not continue long to govern a great and growing territory like this without developing into a real national government, even without a change of strict law; and that the Maryland leaders were working under a complete consciousness of these facts."—A. Johnston, *The United States: Its Hist. and Const.*, sect. 89-90.—The western claims of Virginia were the most sweeping and were founded upon the oldest historical document. "The charter granted by James I. to South Virginia, in 1609 [see VIRGINIA: A. D. 1609-1616] . . . embraced the entire north-west of North America, and, within certain limits, all the islands along the coast of the South Sea or Pacific Ocean. . . . The following is the grant: 'All those lands, countries and territories situate, lying and being in that part of America called Virginia, from the point of land called Cape or Point Comfort, all along the sea-coast to the northward 200 miles; and from the said Point or Cape Comfort, all along the sea-coast to the southward 200 miles; and all that space and circuit of land lying from the sea-coast of the precinct aforesaid, up into 'the land throughout, from sea to sea, west and north-west; and also all the islands lying within 100 miles along the coast of both seas of the precinct aforesaid.' The extraordinary ambiguity of this grant of 1609, which was always appealed to as a legal title by Virginia, was first shown by Thomas Paine. . . . The chief ambiguity . . . lay in the interpretation of the words 'up into the land throughout, from sea to sea, west and north-west.' From which point was the north-west line to be drawn, from the point on the sea-coast 200 miles above, or from the point 200 miles below Cape Comfort? . . . The more favorable interpretation for Virginia and, perhaps, in view of the expression 'from sea to sea,' more natural interpretation, was to draw the north-western line from the point on the sea-coast 200 miles above Point Comfort, and the western line from the southern limit below Point Comfort. This gave Virginia the greater part, at least, of the entire north-west, for the lines diverged continually. . . . At the outbreak of the Revolution, Virginia had annexed the 'County of Kentucky' to the Old Dominion, and, in 1778, after the capture of the military posts in the north-west by Colonel George Rogers Clarke, . . . that enterprising State proceeded to annex the lands beyond the Ohio, under the name of the County of Illinois [see, above: A. D. 1778-1779, CLARKE'S CONQUEST]. The military claims of Virginia were certainly very strong, but it was felt by the smaller States that an equitable consideration for the services of other colonies in defending the back country from the French, ought to induce Virginia to dispose of a portion of her western territory for the common good. It is easy now to conceive how royal grants to Massachusetts and Connecticut of lands stretching from ocean to ocean, must have conflicted with the charter claims and military title of Virginia to the great north-west. . . . The claims of Massachusetts were based upon the charter granted by William and Mary, in 1691, and those of Connecticut upon the charter granted by Charles II., in 1662. . . . The former's claim embraced the lands which now lie in southern

Michigan and Wisconsin, or, in other words, the region comprehended by the extension westward of her present southern boundary and of her ancient northern limit, which was 'the latitude of a league north of the inflow of Lake Winnipisogee in New Hampshire. The western claims of Connecticut [the zone lying between her northern and southern boundaries—41° and 42° 2' north latitude—extended westward] covered portions of Ohio, Indiana, Illinois, and Michigan. . . . The extension of charter boundaries over the far west by Massachusetts and Connecticut led to no trespass on the intervening charter claims of New York. Connecticut fell into a serious controversy, however, with Pennsylvania, in regard to the possession of certain lands in the northern part of the latter State, but the dispute, when brought before a court appointed by Congress, was finally decided in favor of Pennsylvania. But in the western country, Massachusetts and Connecticut were determined to assert their chartered rights against Virginia and the treaty claims of New York; for, by virtue of various treaties with the Six Nations and allies, the latter State was asserting jurisdiction over the entire region between Lake Erie and the Cumberland mountains, or, in other words, Ohio and a portion of Kentucky. These claims were strengthened by the following facts: First, that the chartered rights of New York were merged in the Crown by the accession to the throne, in 1685, of the Duke of York as James II.; again, that the Six Nations and tributaries had put themselves under the protection of England, and that they had always been treated by the Crown as appendant to the government of New York; moreover, in the third place, the citizens of that State had borne the burden of protecting these Indians for over a hundred years. New York was the great rival of Virginia in the strength and magnitude of her western claims." In 1780, Maryland still insisting upon the surrender of these western land claims to the federal government, and refusing to ratify the Articles of Confederation until such cession was made, the claimant States began to yield to her firmness. On the 1st of March, 1781, the offer of New York to cede her claims, providing Congress would confirm her western boundary, was made in Congress. "On that very day, Maryland ratified the Articles and the first legal union of the United States was complete. The coincidence in dates is too striking to admit of any other explanation than that Maryland and New York were acting with a mutual understanding. . . . The offer of Virginia, reserving to herself jurisdiction over the County of Kentucky; the offer of Connecticut, withholding jurisdiction over all her back lands; and the offer of New York, untrammelled by burdensome conditions and conferring upon Congress complete jurisdiction over her entire western territory,—these three offers were now prominently before the country. . . . On the 29th of October, 1782, Mr. Daniel Carroll, of Maryland, moved that Congress accept the right, title, jurisdiction, and claim of New York, as ceded by the agents of that state on the first of March, 1781. . . . On the 13th day of September, 1783, it was voted by Congress to accept the cession offered by Virginia, of the territory north-west of the Ohio, provided that state would waive the obnoxious conditions concerning the guaranty of Virginia's

boundary, and the annulling of all other titles to the north-west territory. Virginia modified her conditions as requested, and on the 20th of October, 1783, empowered her delegates in Congress to make the cession, which was done by Thomas Jefferson, and others, March 1, 1784."—I. B. Adams, *Maryland's Influence upon Land Cessions to the U. S. (Johns Hopkins Univ. Studies, 3d ser. No. 1), pp. 9-11, 19-22, 30-39.*—The Massachusetts deed of cession was executed April 19, 1785. It conveyed the right and title of the state to all lands "west of a meridian line drawn through the western bent or inclination of Lake Ontario, provided such line should fall 20 miles or more west of the western limit of the Niagara River"—that being the western boundary of New York, fixed four years before. In May, 1786, Connecticut authorized a cession which was not complete. Instead of beginning at the western boundary line of Pennsylvania, her conveyance was of lands beyond a line 120 miles west of the Pennsylvania line—thus retaining her claim to the large tract in Ohio known subsequently as the Western Reserve, or Connecticut Reserve. "The acceptance of this cession was strongly opposed in Congress. . . . After a severe struggle it was accepted, May 26, 1786, Maryland alone voting in the negative."—B. A. Hinsdale, *The Old Northwest, ch. 13.*—South Carolina executed the cession of her western claims in 1787; North Carolina in 1790, and Georgia in 1802.—A. Johnston, *Connecticut, ch. 15.*

A. D. 1782 (February—May).—Peace Resolutions in the British House of Commons.—Retirement of Lord North.—Pacific overtures through General Carleton.—"Fortunately for the United States, the temper of the British nation on the question of continuing the American war was not in unison with that of its sovereign. That war into which the nation had entered with at least as much eagerness as the minister had now become almost universally unpopular. Motions against the measures of administration respecting America were repeated by the opposition, and on every new experiment the strength of the minority increased. At length, on the 27th of February [1782], general Conway moved in the house of commons, 'that it is the opinion of this house that a further prosecution of offensive war against America, would, under present circumstances, be the means of weakening the efforts of this country against her European enemies, and tend to increase the mutual enmity so fatal to the interests both of Great Britain and America.' The whole force of administration was exerted to get rid of this question, but was exerted in vain; and the resolution was carried. An address to the king in the words of the motion was immediately voted, and was presented by the whole house. The answer of the crown being deemed inexplicit, it was on the 4th of March resolved by the commons, 'that the house will consider as enemies to his majesty and the country, all those who should advise or attempt a further prosecution of offensive war on the continent of North America.' These votes were soon followed by a change of administration [Lord North resigning and being succeeded by Lord Rockingham, with Fox, Shelburne, Burke and Sheridan for colleagues], and by instructions to

the commanding officers of his Britannic majesty's forces in America which conformed to them. . . . Early in May, sir Guy Carleton, who had succeeded sir Henry Clinton in the command of all the British forces in the United States, arrived at New York. Having been also appointed in conjunction with admiral Digby a commissioner to negotiate a peace, he lost no time in conveying to general Washington copies of the votes of the British parliament, and of a bill which had been introduced on the part of administration, authorizing his majesty to conclude a peace or truce with those who were still denominated the revolted colonies of North America. These papers he said would manifest the dispositions prevailing with the government and people of England towards those of America, and if the like pacific temper should prevail in this country, both inclination and duty would lead him to meet it with the most zealous concurrence. He had addressed to congress, he said, a letter containing the same communications, and he solicited from the American general a passport for the person who should convey it. At this time, the bill enabling the British monarch to conclude a peace or truce with America had not passed into a law; nor was any assurance given that the present commissioners possessed the power to offer other terms, than those which had formerly been rejected. General Carleton therefore could not hope that negotiations would commence on such a basis; nor be disappointed that the passports he requested were refused by congress, to whom the application was, of course, referred. . . . The several states passed resolutions expressing their objections to separate negotiations, and declaring those to be enemies to America who should attempt to treat without the authority of congress. But the public votes which have been stated, and probably the private instructions given to the British general, restrained him from offensive war, and the state of the American army disabled general Washington from making any attempt on the posts held by the enemy. The campaign of 1782 consequently passed away without furnishing any military operations of moment between the armies under the immediate direction of the respective commanders in chief."—J. Marshall, *Life of Washington*, v. 4, ch. 11.

A. D. 1782 (April).—Recognition by the Dutch Republic.—"Henry Laurens, the American plenipotentiary to the Netherlands, having been taken captive and carried to England, John Adams was appointed in his place. The new envoy had waited more than eight months for an audience of reception. Encouraged by the success at Yorktown, on the 9th of January 1782 Adams presented himself to the president of the states-general, renewed his formal request for an opportunity of presenting his credentials, and 'demanded a categorical answer which he might transmit to his sovereign.' He next went in person to the deputies of the several cities of Holland, and, following the order of their rank in the confederation, repeated his demand to each one of them. The attention of Europe was drawn to the sturdy diplomatist, who dared, alone and unsupported, to initiate so novel and bold a procedure. Not one of the representa-

tives of foreign powers at the Hague believed that it could succeed;" but, beginning with Friesland, in February, the seven states, one by one, declared in favor of receiving the American envoy. "On the day which chanced to be the seventh anniversary of 'the battle of Lexington' their high mightnesses, the states-general, reporting the unanimous decision of the seven provinces, resolved that John Adams should be received as the minister of the United States of America. The Dutch republic was the second power in the world to recognise their independence."—G. Bancroft, *Hist. of the U. S. (Author's last revision)*, v. 5, p. 527.

A. D. 1782 (September).—The opening of negotiations for Peace.—"The Rockingham ministry, which succeeded Lord North's in the British government, in March, 1782 (see ENGLAND: A. D. 1782-1783), "though soon dissolved by the death of the Marquis of Rockingham, were early distracted by a want of unanimity, and early lost the confidence of the people. The negotiation with America during May and June made no progress. Mr. Oswald was the agent of Lord Shelburne, known to be opposed to the acknowledgment, and Mr. Grenville, of Mr. Fox. This ministry had been forced upon the king by a vote of the House of Commons. The hopes of regaining America were again excited by the decisive victory of Lord Rodney in the West Indies [see ENGLAND: A. D. 1780-1782], and the unexpected success of Sir Eyre Coote against Hyder Ali in the East; and, if credit may be given to the reports of the day, the government looked forward with some confidence to the making a separate peace with Congress by means of Sir Guy Carleton, who had been appointed to the command of the forces in North America. . . . Mr. Adams, writing from the Hague, June 13, '82, observes, 'I cannot see a probability that the English will ever make peace, until their finances are ruined, and such distress brought upon them, as will work up their parties into a civil war.' It was not till September of the same year, under Lord Shelburne's administration, formed upon the dissolution of the Rockingham, that the British government took a decisive and sincere step to make peace, and authorized their commissioner, Mr. Oswald, at Paris, to acknowledge the independence of the colonies. . . . This is the first instruction given by the British Ministry in which it was proposed to recognize the celebrated act of July 4th, 1776. A great and immediate progress was now made in the preliminaries. . . . The commission, under which the preliminaries of the treaty were actually concluded, was issued by Congress in June '81. It empowered 'John Adams, Benjamin Franklin, John Jay, Henry Laurens, and Thomas Jefferson, or the majority of them, or such of them as may assemble, or in case of the death, absence, indisposition, or other impediment of the others, to any one of them, full power and authority, general and special commission, . . . to sign, and thereupon make a treaty or treaties, and to transact every thing that may be necessary for completing, securing and strengthening the great work of pacification, in as ample form, and with the same effect, as if we were personally present and acted therein.' All the commissioners, except Mr. Jefferson, were present

during the discussions, being in Europe at the time the meeting was appointed. Mr. Jefferson was in America, and did not leave it, as a report reached the government that the preliminaries were already signed. Mr. Oswald's commission in proper form was not issued till the 21st of September."—*The Diplomacy of the U. S., ch. 8.*—"At the moment . . . that negotiations were set on foot, there seemed but little hope of finding the Court of France peaceably inclined. Fox alone among the Ministers, though strongly opposed to a French alliance, inclined to a contrary opinion, and imagined that the independence of America once recognized, no further demands would be made upon England. It was therefore his wish to recognize that independence immediately, and by a rapid negotiation to insure the conclusion of what he believed would prove a favourable peace. Shelburne on the contrary believed that further concessions would be asked by France, and that the best chance England possessed of obtaining honourable terms, was to reserve the recognition of independence as part of the valuable consideration to be offered to the Colonies for favourable terms, and to use the points where the interests of France, Spain, and the Colonies were inconsistent, to foment difficulties between them, and be the means of negotiating, if necessary, a separate peace with each of the belligerents, as opportunity might offer. The circumstances of the time favoured the design. Vergennes had not gone to war for the sake of American independence, but in order to humiliate England. He not only did not intend to continue the war a day longer than was necessary to establish a rival power on the other side of the Atlantic, but was desirous of framing the peace on conditions such as would leave England, Spain, and the United States to balance one another, and so make France paramount. He therefore intended to resist the claim which the Colonies had invariably advanced of pushing their frontiers as far west as the Mississippi, and proposed following the example of the Proclamation of 1763, to leave the country between Florida and the Cumberland to the Indians, who were to be placed under the protection of Spain and the United States, and the country north of the Ohio to England, as arranged by the Quebec Act of 1774. Nor was he prepared to support the claim of the New Englandmen to fish on the banks off Newfoundland, over a considerable portion of which he desired to establish an exclusive right for his own countrymen, in keeping with the French interpretation of the Treaties of Utrecht and Paris. Of a still more pronounced character were the views of Spain. Her troops had recently conquered West Florida and threatened East Florida as well. She had determined to obtain formal possession of these territories, and to claim that they ran into the interior till they reached the great lakes. The United States, according to both the French and Spanish idea, were therefore to be restricted to a strip of land on the coast of the Atlantic Ocean, bounded by almost the same line which France had contended for against England after the Treaty of Utrecht. In 1779, when the alliance of France was not a year old, and the great triumph over Burgoyne was fresh, Congress notwithstanding the pressure of M. Gerard, the French envoy, had adopted the following conditions as the ultimatum of peace: (1.) The acknowledgment

of the independence of the United States by Great Britain, previous to any treaty or negotiation for peace. (2.) The Mississippi as their western boundary. (3.) The navigation of that river to the southern boundary of the States with a port below it. They also passed a resolution to the effect that any interference after the conclusion of peace by any power with the fishery off Newfoundland hitherto exercised by the inhabitants of the Colonies, should be regarded as a *casus belli*. 'The advice of the allies, their knowledge of American interests, and their own discretion,' were in other matters to guide the American Commissioners sent to the European Courts. As however the war progressed, and French assistance, especially in money, became of greater and greater importance to the Congress, the tone of their instructions became sensibly modified, under the pressure, first of M. Gérard and then of Count Luzerne, his successor. On the 25th January 1780, M. Gérard having obtained the appointment of a Committee of Congress, informed them that the territories of the United States extended no further west than the limits to which settlements were permitted by the English proclamation of 1763; that the United States had no right to the navigation of the Mississippi, having no territories adjoining any part of the river; that Spain would probably conquer both Floridas, and intended holding them; and that the territory on the east side of the Mississippi belonged to Great Britain, and would probably be conquered by Spain. He at the same time urged upon Congress the immediate conclusion of an alliance with that power, to which Jay had been sent as Commissioner in 1779. On the 15th February, Congress having considered this communication, resolved to instruct Jay to abandon the claim to 'the navigation of the Mississippi. This practically implied the abandonment of the claim to that river as the western boundary. Shortly after, and again on the demand of Luzerne, the instructions to Adams, who had been appointed Commissioner for negotiating a peace, and was then in Europe, were altered. Independence was to be the sole ultimatum, and Adams was to undertake to submit to the guidance of the French Minister in every respect. 'You are to make the most candid and confidential communications,' so his amended instructions ran, 'upon all subjects to the Ministers of our generous ally the King of France; to undertake nothing in the negotiations for peace or truce without their knowledge or concurrence, and to make them sensible how much we rely upon his Majesty's influence for effectual support in every thing that may be necessary to the present security or future prosperity of the United States of America.' As a climax Count Luzerne suggested and Congress agreed to make Jay, Franklin, Jefferson, and Laurens, joint Commissioners with Mr. Adams. Of the body thus appointed Jefferson refused to serve, while Laurens, as already seen, was captured on his way to England. Of the remaining Commissioners, John Adams was doubly odious to the diplomatists of France and Spain, because of his fearless independence of character, and because of the tenacity with which as a New Englander he clung to the American rights in the Newfoundland fisheries; Jay had been an enthusiastic advocate for the Spanish alliance, but the cavalier treatment he

had received at Madrid, and the abandonment of the Mississippi boundary by Congress, had forced upon him the conviction that his own country was being used as a tool by the European powers, for their own ulterior objects. The French he hated. He said 'they were not a moral people, and did not know what it was.' Not so Franklin, influenced partly by his long residence in the French capital, and by the idea that the Colonies were more likely to obtain their objects, by a firm reliance upon France than by confidence in the generosity of England. He also joined to the terms of the treaty he had negotiated with the former power, which forbade either party to conclude a separate peace without the leave previously obtained of the other, as imposing a moral and legal obligation on his countrymen to follow the policy which he believed their interests as a power required them to adopt. Meanwhile the King of France congratulated Congress on having entrusted to his care the interests of the United States, and warned them that if France was to be asked to continue hostilities for purely American objects it was impossible to say what the result might be, for the system of France depended not merely on America, but on the other powers at war.—Lord E. Fitzmaurice, *Life of William, Earl of Shelburne*, v. 3, ch. 4.—“Benjamin Franklin, now venerable with years, had been doing at the court of Versailles a work hardly less important than that of Washington on the battle-fields of America. By the simple grace and dignity of his manners, by his large good sense and freedom of thought, by his fame as a scientific discoverer, above all by his consummate tact in the management of men, the whilom printer, king's postmaster-general for America, discoverer, London colonial agent, delegate in the Continental Congress, and signer of the Declaration of Independence, had completely captivated elegant, free-thinking France. Learned and common folk, the sober and the frivolous alike swore by Franklin. Snuff-boxes, furniture, dishes, even stoves were gotten up 'à la Franklin.' The old man's portrait was in every house. That the French Government, in spite of a monarch who was half afraid of the rising nation beyond sea, had given America her hearty support, was in no small measure due to the influence of Franklin. And his skill in diplomacy was of the greatest value in the negotiations now pending.”—E. B. Andrews, *Hist. of the U. S.*, v. 1, pp. 208-209.

A. D. 1782 (September-November).—The Peace parleyings at Paris.—Distrust of French aims by Jay and Adams.—A secret and separate negotiation with England.—“The task of making a treaty of peace was simplified both by [the change of ministry which placed Lord Shelburne at the head of affairs in England] . . . and by the total defeat of the Spaniards and French at Gibraltar in September [see ENGLAND: A. D. 1780-1782]. Six months before, England had seemed worsted in every quarter. Now England, though defeated in America was victorious as regarded France and Spain. The avowed object for which France had entered into alliance with the Americans, was to secure the independence of the United States,

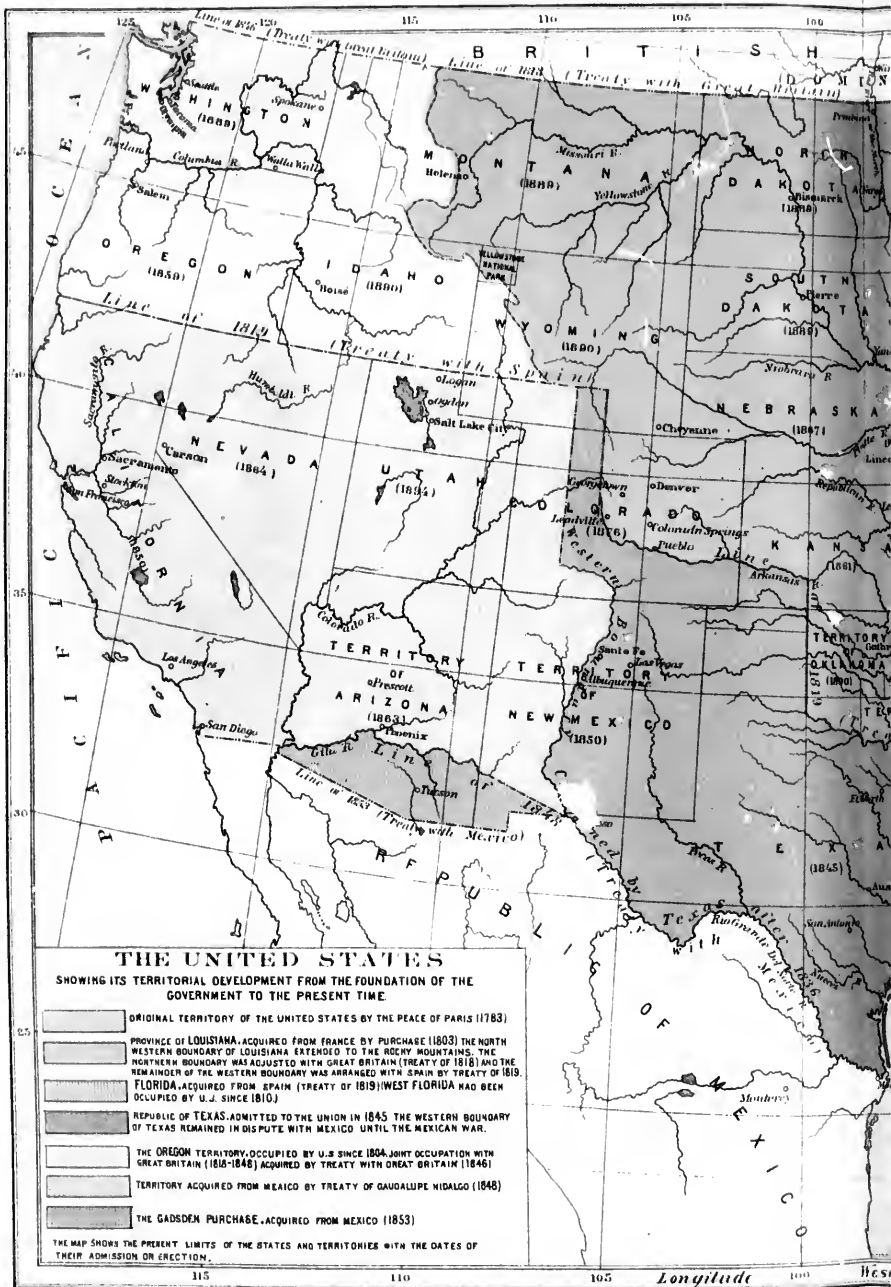

and this point was now substantially gained. The chief object for which Spain had entered into alliance with France was to drive the English from Gibraltar, and this point was now decidedly lost. France had bound herself not to desist from the war until Spain should recover Gibraltar; but now there was little hope of accomplishing this, except by some fortunate bargain in the treaty, and Vergennes tried to persuade England to cede the great stronghold in exchange for West Florida, which Spain had lately conquered, or for Oran or Guadalupe. Failing in this, he adopted a plan for satisfying Spain at the expense of the United States; and he did this the more willingly as he had no love for the Americans, and did not wish to see them become too powerful. France had strictly kept her pledges; she had given us valuable and timely aid in gaining our independence; and the sympathies of the French people were entirely with the American cause. But the object of the French government had been simply to humiliate England, and this end was sufficiently accomplished by depriving her of her thirteen colonies. The immense territory extending from the Alleghany Mountains to the Mississippi River, and from the border of West Florida to the Great Lakes, had passed from the hands of France into those of England at the peace of 1763; and by the Quebec Act of 1774 England had declared the southern boundary of Canada to be the Ohio River. . . . Vergennes maintained that the Americans ought to recognize the Quebec Act, and give up to England all the territory north of the Ohio River. The region south of this limit should, he thought, be made an Indian territory, and placed under the protection of Spain and the United States. . . . Upon another important point the views of the French government were directly opposed to American interests. The right to catch fish on the banks of Newfoundland had been shared by treaty between France and England; and the New England fishermen, as subjects of the king of Great Britain, had participated in this privilege. The matter was of very great importance, not only to New England, but to the United States in general. . . . The British government was not inclined to grant the privilege, and on this point Vergennes took sides with England, in order to establish a claim upon her for concessions advantageous to France in some other quarter. . . . Jay [who had lately arrived in Paris to take part in the negotiations] soon began to suspect the designs of the French minister. He found that he was sending M. de Rayneval as a secret emissary to Lord Shelburne under an assumed name; he ascertained that the right of the United States to the Mississippi valley was to be denied; and he got hold of a dispatch from Marbois, the French secretary of legation at Philadelphia, to Vergennes, opposing the American claim to the Newfoundland fisheries. As soon as Jay learned these facts, he sent his friend Dr. Benjamin Vaughan to Lord Shelburne to put him on his guard, and while reminding him that it was greatly for the interest of England to dissolve the alliance between America and France, he declared himself ready to begin the negotiations without waiting for the recognition of independence, provided that Oswald's commission should speak of the thirteen United States of America, instead of calling them colonies and naming

them separately. This decisive step was taken by Jay on his own responsibility, and without the knowledge of Franklin, who had been averse to anything like a separate negotiation with England. It served to set the ball rolling at once. . . . Lord Shelburne at once perceived the antagonism that had arisen between the allies, and promptly took advantage of it. A new commission was made out for Oswald, in which the British government first described our country as the United States; and early in October negotiations were begun and proceeded rapidly. On the part of England the affair was conducted by Oswald, assisted by Strachey and Fitzherbert, who had succeeded Grenville. In the course of the month John Adams arrived in Paris, and a few weeks later Henry Laurens. . . . The arrival of Adams fully decided the matter as to a separate negotiation with England. He agreed with Jay that Vergennes should be kept as far as possible in the dark until everything was cut and dried, and Franklin was reluctantly obliged to yield. The treaty of alliance between France and the United States had expressly stipulated that neither power should ever make peace without the consent of the other. . . . In justice to Vergennes, it should be borne in mind that he had kept strict faith with us in regard to every point that had been expressly stipulated. . . . At the same time, in regard to matters not expressly stipulated, Vergennes was clearly playing a sharp game against us; and it is undeniable that, without departing technically from the obligations of the alliance, Jay and Adams—two men as honourable as ever lived—played a very sharp defensive game against him. . . . The treaty with England was not concluded until the consent of France had been obtained, and thus the express stipulation was respected; but a thorough and detailed agreement was reached as to what the purport of the treaty should be, while our not too friendly ally was kept in the dark.”—J. Fiske, *The Critical Period of Am. Hist.*, ch. 1.—“If his [Vergennes'] policy had been carried out, it seems clear that he would have established a claim for concessions from England by supporting her against America on the questions of Canada and the Canadian border and the Newfoundland fishery. . . . The success of such a policy would have been extremely displeasing to the Congress, and Jay and Adams defeated it. . . . The act was done, and if it can be justified by success, that justification, at least, is not wanting.”—W. E. H. Lecky, *Hist. of Eng. in the 18th Century*, ch. 15 (v. 4).—“The instructions of congress, given to the American commissioners under the instigation of the French court, were absolute and imperative, ‘to undertake nothing without the knowledge and concurrence of that court, and ultimately to govern themselves by their advice and opinion.’ These orders, transmitted at the time of the enlargement of the commission, had just been reinforced by assurances given to quiet the uneasiness created in France by the British overtures through Governor Carleton. Thus far, although the commissioners had felt them to be derogatory to the honor of their country, as well as to their own character as its representatives, there had been no necessity for action either under or against them. But now the matters were coming to the point of a serious negotiation, and the secondary questions of interest to America were to be

determined, especially those to which France had shown herself indifferent, not to say adverse, it seemed as if no chance remained of escaping a decision. Mr. Jay, jealous of the mission of De Rayneval, of which not a hint had been dropped by the French court, suspicious of its good faith from the disclosures of the remarkable dispatch of Marbois, and fearful of any advice like that of which he had received a foretaste through M. de Rayneval, at the same time provoked that the confidence expected should be all on one side, the Count communicating nothing of the separate French negotiation, came to the conclusion that the interests of America were safest when retained in American hands. He therefore declared himself in favor of going on to treat with Great Britain, without consulting the French court. Dr. Franklin, on the other hand, expressing his confidence in that court, secured by his sense of the steady reception of benefits by his country, signified his willingness to abide by the instructions he had received. Yet it is a singular fact, but lately disclosed, that, notwithstanding this general feeling, which was doubtless sincerely entertained, Dr. Franklin had been the first person to violate those instructions, at the very inception of the negotiations, by proposing to Lord Shelburne the cession of Canada, and covering his proposal with an earnest injunction to keep it secret from France, because of his belief that she was adverse to the measure. . . . It may fairly be inferred that, whatever Franklin might have been disposed to believe of the French court, his instincts were too strong to enable him to trust them implicitly with the care of interests purely American. And, in this, there can be no reasonable cause for doubt that he was right. The more full the disclosures have been of the French policy from their confidential papers, the more do they show Count de Vergennes assailing England in America, with quite as fixed a purpose as ever Chatham had to conquer America in Germany. Mr. Adams had no doubt of it. He had never seen any signs of a disposition to aid the United States from affection or sympathy. On the contrary, he had perceived their cause everywhere made subordinate to the general considerations of continental politics. Perhaps his impressions at some moments carried him even further, and led him to suspect in the Count a positive desire to check and depress America. In this he fell into the natural mistake of exaggerating the importance of his own country. In the great game of nations which was now playing at Paris under the practised eye of France's chief (for Count de Maurepas was no longer living), the United States probably held a relative position, in his mind, not higher than that of a pawn, or possibly a knight, on a chess-table. Whilst his attention was absorbed in arranging the combinations of several powers, it necessarily followed that he had not the time to devote that attention to any one, which its special representative might imagine to be its due. But even this hypothesis was to Mr. Adams justification quite sufficient for declining to submit the interests of his country implicitly to the Count's control. If not so material in the Count's eyes, the greater the necessity of keeping them in his own care. He therefore seized the first opportunity to announce to his colleagues his preference for the views of Mr. Jay. After some little reflection, Dr. Frank-

lin signified his acquiescence in this decision. His objections to it had doubtless been increased by the peculiar relations he had previously sustained to the French court, and by a very proper desire to be released from the responsibility of what might from him be regarded as a discourteous act. No such delinquency was called for on the part of the other commissioners. Neither does it appear that Count de Vergennes manifested a sign of discontent with them at the time. He saw that little confidence was placed in him, but he does not seem to have made the slightest effort to change the decision or even to get an explanation of it. The truth is, that the course thus taken had its conveniences for him, provided only that the good faith of the American negotiators, not to make a separate peace, could be depended upon. Neither did he ever affect to complain of it, excepting at one particular moment when he thought he had cause to fear that the support he relied on might fall.—J. Q. and C. F. Adams, *The Life of John Adams*, v. 2, ch. 7.—“The radical difference between Franklin and his colleagues was in the question of trust. Franklin saw no reason to distrust the fidelity of France at any time to her engagements to the United States during the revolutionary war. His colleagues did not share this confidence, and yet, while impressed by this distrust of their ally, they made no appeal for explanation. The weight of opinion, as will hereafter be more fully seen, is now that Franklin was right, and they in this respect wrong. But whatever may have been the correctness of their view, it was proper that, before making it the basis of their throwing off the burden of treaty obligation and their own instructions, they should have first notified France of their complaint. Obligations cannot be repudiated by one party on the ground of the failure of the other party to perform some condition imposed on him, without giving him notice of the charge against him, so that he could have the opportunity of explanation. It may be added, on the merits, that the extenuation set up by Jay and Adams, that France was herself untrue to her obligations, however honestly they believed it, can not now be sustained. Livingston, who knew more of the attitude of France than any public man on the American side except Franklin, swept it aside as groundless. Edward Everett, one of the most accomplished historical writers and diplomatists the country has ever produced, speaks, as we shall see, to the same effect, and other historical critics of authority, to be also hereafter cited, give us the same conclusion. Yet there are other reasons which may excuse their course, and that of Franklin, who concurred with them rather than defeat a peace. In the first place, such was their isolation, that their means of communication with Congress was stopped; and they might well have argued that if Congress knew that the English envoys refused to treat with them except in secret conference their instructions would have been modified. In the second place we may accept Adams' statement that Vergennes was from time to time informally advised of the nature of the pending propositions. In the third place, the articles agreed on in 1782 were not to be a definite treaty except with the assent of France. . . . It now appears that the famous Marbois letter, handed to Jay by one of the British loyalists, and relied

on by him as showing France's duplicity, was disavowed by Marbois; and there are, aside from this, very strong reasons to distrust its genuineness. In the second place, we have in the correspondence of George III a new light thrown on the action taken by Jay in consequence of this letter. . . . Benjamin Vaughan, while a gentleman of great amiability and personal worth, was, when Jay sent him without Franklin's knowledge on a confidential mission to the British ministry, in the employ of that ministry as secret agent at Paris. It is due to Jay to say that he was ignorant of this fact, though he would have been notified of it had he consulted Franklin. One of the most singular incidents of this transaction is that George III, seeking double treachery in thus sending back to him his own agent in the guise of an agent from the American legation, regarded it as a peculiarly subtle machination of Franklin, which it was his duty to baffle by utterly discrediting Benjamin Vaughan. It should be added that Franklin's affection for Benjamin Vaughan was in no wise diminished by Vaughan's assumption, with an honesty which no one who knew him would question, of this peculiar kind of mediatorship. And in Jay Franklin's confidence was unabated. He more than once said that no one could be found more suited than Jay to represent the United States abroad. And when, in view of death, he prepared to settle his estate, he selected Jay as his executor.”—F. Wharton, *The Revolutionary Diplomatic Correspondence of the U. S.*, ch. 9, sect. 111, and ch. 13, sect. 158 (v. 1). Writing to M. de la Luzerne, the French Minister in the United States, under date of December 19, 1782, Count de Vergennes expressed himself on the conduct of the American Commissioners as follows: “You will surely be gratified, as well as myself, with the very extensive advantages, which our allies, the Americans, are to receive from the peace; but you certainly will not be less surprised than I have been, at the conduct of the Commissioners. According to the instructions of Congress, they ought to have done nothing without our participation. I have informed you, that the King did not seek to influence the negotiation any further than his offices might be necessary to his friends. The American Commissioners will not say that I have interfered, and much less that I have wearied them with my curiosity. They have cautiously kept themselves at a distance from me. Mr. Adams, one of them, coming from Holland, where he had been received and served by our ambassador, had been in Paris nearly three weeks, without imagining that he owed me any mark of attention, and probably I should not have seen him till this time, if I had not caused him to be reminded of it. Whenever I have had occasion to see any one of them, and inquire of them briefly respecting the progress of the negotiation, they have constantly clothed their speech in generalities, giving me to understand that it did not go forward, and that they had no confidence in the sincerity of the British ministry. Judge of my surprise, when, on the 30th of November, Dr. Franklin informed me that the articles were signed. The reservation retained on our account does not save the infraction of the promise, which we have mutually made, not to sign except conjointly. I owe Dr. Franklin the justice to state, however, that on

the next day he sent me a copy of the articles. He will hardly complain that I received them without demonstratious of sensibility. It was not till some days after, that, when this minister had come to see me, I allowed myself to make him perceive that his proceeding in this abrupt signature of the articles had little in it, which could be agreeable to the King. He appeared sensible of it, and excused, in the best manner he could, himself and his colleagues. Our conversation was amicable."—J. Bigelow, *Life of Benjamin Franklin*, v. 3, p. 207, note.

A. D. 1782-1783.—Grievances of the Army.—The Newburgh Addresses.—"Nothing had been done by Congress for the claims of the army, and it seemed highly probable that it would be disbanded without even a settlement of the accounts of the officers, and if so, that they would never receive their dues. Alarmed and irritated by the neglect of Congress; destitute of money and credit and of the means of living from day to day; oppressed with debts; saddened by the distresses of their families at home, and by the prospect of misery before them,—they presented a memorial to Congress in December [1782], in which they urged the immediate adjustment of their dues, and offered to commute the half-pay for life, granted by the resolve of October, 1780, for full pay for a certain number of years, or for such a sum in gross as should be agreed on by their committee sent to Philadelphia to attend the progress of the memorial through the house. It is manifest from statements in this document, as well as from other evidence, that the officers were nearly driven to desperation, and that their offer of commutation was wrung from them by a state of public opinion little creditable to the country. . . . The committee of the officers were in attendance upon Congress during the whole winter, and early in March, 1783, they wrote to their constituents that nothing had been done. At this moment, the predicament in which Washington stood, in the double relation of citizen and soldier, was critical and delicate in the extreme. In the course of a few days, all his firmness and patriotism, all his sympathies as an officer, on the one side, and his fidelity to the government, on the other, were severely tried. On the 10th of March, an anonymous address was circulated among the officers at Newburgh, calling a meeting of the general and field officers, and of one officer from each company, and one from the medical staff, to consider the late letter from their representatives at Philadelphia, and to determine what measures should be adopted to obtain that redress of grievances which they seemed to have solicited in vain. It was written with great ability and skill [by John Armstrong, afterwards General]. . . . Washington met the crisis with firmness, but also with conciliation. He issued orders forbidding an assemblage at the call of an anonymous paper, and directing the officers to assemble on Saturday, the 15th, to hear the report of their committee, and to delib-

erate what further measures ought to be adopted as most rational and best calculated to obtain the just and important object in view. The senior officer in rank present [General Gates] was directed to preside, and to report the result to the Commander-in-chief. On the next day after these orders were issued, a second anonymous address appeared from the same writer. In this paper he affected to consider the orders of General Washington, assuming the direction of the meeting, as a sanction of the whole proceeding which he had proposed. Washington saw, at once, that he must be present at the meeting himself, or that his name would be used to justify measures which he intended to discountenance and prevent. He therefore attended the meeting, and under his influence, seconded by that of Putnam, Knox, Brooks, and Howard, the result was the adoption of certain resolutions, in which the officers, after reasserting their grievances, and rebuking all attempts to seduce them from their civil allegiance, referred the whole subject of their claims again to the consideration of Congress. Even at this distant day, the peril of that crisis can scarcely be contemplated without a shudder. Had the Commander-in-chief been other than Washington, had the leading officers by whom he was surrounded been less than the noblest of patriots, the land would have been deluged with the blood of a civil war."—G. T. Curtis, *Hist. of the Const. of the U. S.*, bk. 2, ch. 1 (p. 1).

A. D. 1783 (September).—The definitive Treaty of Peace between Great Britain and the United States.—The four difficult questions on which the British and American negotiators at Paris arrived, after much discussion and wise compromise, at a settlement of differences originally wide, were (1) Boundaries; (2) Fishing rights; (3) Payment of debts from American to British merchants that were outstanding when the war began; (4) Amnesty to American loyalists, or Tories, and restoration of their confiscated property. Within two months after the separate negotiations with England opened an agreement had been reached, and preliminary or provisional articles were signed on the 30th of November, 1783. The treaty was not to take effect, otherwise than by the cessation of hostilities, until terms of peace should be agreed upon between England and France. This occurred in the following January, and on the 3d of September, 1783, the definitive Treaty of Peace between Great Britain and the United States was signed [at Paris]. Its essential provisions were the following: "Art. I. His Britannic Majesty acknowledges the said United States, viz. New Hampshire, Massachusetts Bay, Rhode Island, and Providence Plantations, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, North Carolina, South Carolina, and Georgia, to be free, sovereign and independent States; that he treats with them as such, and for himself, his heirs and successors, relinquishes all claims to the Government, pro-

priety and territorial rights of the same, and every part thereof. Art. II. And that all disputes which might arise in future, on the subject of the boundaries of the United States may be prevented, it is hereby agreed and declared, that the following are, and shall be their boundaries, viz: From the north-west angle of Nova Scotia, viz. that angle which is formed by a line drawn due north from the source of Saint Croix River to the Highlands; along the said Highlands which divide those rivers that empty themselves into the river St. Lawrence, from those which fall into the Atlantic Ocean, to the northwesternmost head of Connecticut River; thence down along the middle of that river, to the 45th degree of north latitude; from thence, by a line due west on the said latitude, until it strikes the river Iroquois or Cataraqui; thence along the middle of said river into Lake Ontario, through the middle of said lake until it strikes the communication by water between that lake and Lake Erie; thence along the middle of said communication into Lake Erie, through the middle of said lake until it arrives at the water communication between that lake and Lake Huron; thence along the middle of said water communication into the Lake Huron; thence through the middle of said lake to the water communication between that lake and Lake Superior; thence through Lake Superior northward to the Isles Royal and Philippeaux, to the Long Lake; thence through the middle of said Long Lake, and the water communication between it and the Lake of the Woods, to the said Lake of the Woods; thence through the said lake to the most northwestern point thereof, and from thence on a due west course to the river Mississippi; thence by a line to be drawn along the middle of the said river Mississippi until it shall intersect the northernmost part of the 31st degree of north latitude. South, by a line to be drawn due east from the determination of the line last mentioned, in the latitude of 31 degrees north of the Equator, to the middle of the river Apalachicola or Catahouche; thence along the middle thereof to its junction with the Flint River; thence strait to the head of St. Mary's River, and thence down along the middle of St. Mary's River to the Atlantic Ocean. East, by a line to be drawn along the middle of the river St. Croix, from its mouth in the Bay of Fundy to its source, and from its source directly north to the aforesaid Highlands, which divide the rivers that fall into the Atlantic Ocean from those which fall into the river St. Lawrence; comprehending all islands within twenty leagues of any part of the shores of the United States, and lying between lines to be drawn due east from the points where the aforesaid boundaries between Nova Scotia on the one part, and East Florida on the other, shall respectively touch the Bay of Fundy and the Atlantic Ocean; excepting such islands as now are, or heretofore have been, within the limits of the said province of Nova Scotia. Art. III. It is agreed that the people of the United States shall continue to enjoy unmolested the right to take fish of every kind on the Grand Bank, and on all the other banks of Newfoundland; also in the Gulph of Saint Lawrence, and at all other places in the sea where the inhabitants of both countries used at any time heretofore to fish. And also that the inhabitants of the United States shall have lib-

erty to take fish of every kind on such part of the coast of Newfoundland as British fishermen shall use (but not to dry or cure the same on that island) and also on the coasts, bays, and creeks of all other of His Britannic Majesty's dominions in America; and that the American fishermen shall have liberty to dry and cure fish in any of the unsettled bays, harbours, and creeks of Nova Scotia, Magdalen Islands, and Labrador, so long as the same shall remain unsettled; but so soon as the same or either of them shall be settled, it shall not be lawful for the said fishermen to dry or cure fish at such settlement, without a previous agreement for that purpose with the inhabitants, proprietors, or possessors of the ground. Art. IV. It is agreed that creditors on either side shall meet with no lawful impediment to the recovery of the full value in sterling money, of all bona fide debts heretofore contracted. Art. V. It is agreed that the Congress shall earnestly recommend it to the legislatures of the respective States, to provide for the restitution of all estates, rights, and properties which have been confiscated, belonging to real British subjects, and also of the estates, rights, and properties of persons resident in districts in the possession of His Majesty's arms, and who have not borne arms against the said United States. . . . Art. VI. That there shall be no future confiscations made, nor any prosecutions commenc'd, against any person or persons for, or by reason of the part which he or they may have taken in the present war. . . . Art. VII. There shall be a firm and perpetual peace between His Britannic Majesty and the said States, and between the subjects of the one and the citizens of the other, wherefore all hostilities, both by sea and land, shall from henceforth cease: All prisoners on both sides shall be set at liberty, and His Britannic Majesty shall, with all convenient speed, and without causing any destruction, or carrying away any negroes or other property of the American inhabitants; withdraw all his armies, garrisons, and fleets from the said United States. . . . Art. VIII. The navigation of the river Mississippi, from its source to the ocean, shall forever remain free and open to the subjects of Great Britain, and the citizens of the United States."—*Doc's Illustrative of Am. Hist.*, ed. by H. W. Preston, p. 232.

A. D. 1783 (November—December).—The British evacuation of New York.—Dissolution of the Continental Army and Washington's farewell to it.—"The definitive treaty had been signed at Paris on the 3d of September, 1783, and was soon to be ratified by the United States in Congress assembled. The last remnant of the British army in the east had sailed down the Narrows on the 25th of November, a day which, under the appellation of Evacuation Day, was long held in grateful remembrance by the inhabitants of New York, and was, till a few years since, annually celebrated with fireworks and with military display. Of the continental army scarce a remnant was then [at the beginning of 1784] in the service of the States, and these few were under the command of General Knox. His great work of deliverance over, Washington had resigned his commission, had gone back to his estate on the banks of the

Potomac, and was deeply engaged with plans for the improvement of his plantations. The retirement to private life of the American Fabius, as the newspapers delighted to call him, had been attended by many pleasing ceremonies, and had been made the occasion for new manifestations of affectionate regard by the people. The same day that witnessed the departure of Sir Guy Carleton from New York also witnessed the entry into that city of the army of the States. Nine days later Washington bid adieu to his officers. About noon on Thursday, the 4th of December, the chiefs of the army assembled in the great room of Fraunces's Tavern, then the resort of merchants and men of fashion, and there Washington joined them. Rarely as he gave way to his emotions, he could not on that day get the mastery of them. . . . He filled a glass from a decanter that stood on the table, raised it with a trembling hand, and said: 'With a heart full of love and gratitude I now take leave of you, and most devoutly wish your latter days may be as prosperous and happy as your former ones have been glorious and honorable.' Then he drank to them, and, after a pause, said: 'I cannot come to each of you to take my leave, but shall be obliged if you will each come and shake me by the hand.' General Knox came forward first, and Washington embraced him. The other officers approached one by one, and silently took their leave. A line of infantry had been drawn up extending from the tavern to Whitehall ferry, where a barge was in waiting to carry the commander across the Hudson to Paulus Hook. Washington, with his officers following, walked down the line of soldiers to the water. The streets, the balconies, the windows, were crowded with gazers. All the churches in the city sent forth a joyous din. Arrived at the ferry, he entered the barge in silence, stood up, took off his hat and waved farewell. Then, as the boat moved slowly out into the stream amid the shouts of the citizens, his companions in arms stood barcheaded on the shore till the form of their illustrious commander was lost to view."—J. B. McMaster, *Hist. of the People of the U. S.*, ch. 2 (v. 1).

A. D. 1783-1787.—After the war.—Resistance to the stipulations of the Treaty of Peace.—National feebleness and humiliation.—Failure of the Articles of Confederation.—Movements toward a firmer Constitution.—"The revolution was at last accomplished. The evils it had removed, being no longer felt, were speedily forgotten. The evils it had brought pressed heavily upon them. They could devise no remedy. They saw no way of escape. They soon began to grumble, became sullen, hard to please, dissatisfied with themselves and with everything done for them. The States, differing in habits, in customs, in occupations, had been during a few years united by a common danger. But the danger was gone; old animosities and jealousies broke forth again with all their strength, and the union seemed likely to be dissolved. In this state of public discontent the House met at Philadelphia early in January, 1784. Some days were spent in examining credentials of new members, and in waiting for the delinquents to come in. It was not till the 14th of

the month that the definitive treaty was taken under consideration and duly ratified. Nothing remained, therefore, but to carry out the stipulations with as much haste as possible. But there were some articles which the people had long before made up their minds never should be carried out. While the treaty was yet in course of preparation the royal commissioners had stoutly insisted on the introduction of articles providing for the return of the refugees and the payment of debts due to British subjects at the opening of the war. The commissioners on behalf of the United States, who well knew the tempers of their countrymen, had at first firmly stood out against any such articles. But some concessions were afterward made by each party, and certain stipulations touching the debts and the refugees inserted. Adams, who wrote in the name of his fellow-commissioners, . . . hoped that the middle line adopted would be approved. The middle line to which Adams referred was that Congress should recommend the States to make no more seizures of the goods and property of men lately in arms against the Confederation, and to put no bar in the way of the recovery of such as had already been confiscated. It was distinctly understood by each side that these were recommendations, and nothing more than recommendations. Yet no sooner were they made known than a shout of indignation and abuse went up from all parts of the country. The community in a moment was divided between three parties. The smallest of the three was made up of the Tories, who still hoped for place and power, and still nursed the delusion that the past would be forgotten. Yet they daily contributed to keep the remembrance of it alive by a strong and avowed attachment to Great Britain. Opposed to these was the large and influential body of violent Whigs, who insisted vehemently that every loyalist should instantly be driven from the States. A less numerous and less violent body of Whigs constituted the third party." The fury of the violent Whigs proved generally irresistible and great numbers of the obnoxious Tories fled (see **TORIES OF THE AMERICAN REVOLUTION**) before it. Some "sought a refuge in Florida, then a possession of Spain, and founded settlements which their descendants have since raised to prosperous and beautiful villages, renowned for groves of orange-trees and fields of cane. Others embarked on the British ships of war, and were carried to Canada or the island of Bermuda; a few turned pirates, obtained a sloop, and scoured the waters of Chesapeake bay. Many went to England, beset the ministry with petitions for relief, wearied the public with pathetic stories of the harsh ingratitude with which their sufferings had been requited, and were accused, with much show of reason, by the Americans of urging the severe restrictions which England began to lay on American commerce. Many more . . . set out for Nova Scotia. . . . The open contempt with which, in all parts of the country, the people treated the recommendation of Congress concerning the refugees and the payment of the debts, was no more than any man of ordinary sagacity could have foretold. Indeed, the state into which Congress had fallen was most wretched. . . . Each of the thirteen States the Union bound together retained all the rights of sovereignty, and asserted them punctiliously against

the central government. Each reserved to itself the right to put up mints, to strike money, to levy taxes, to raise armies, to say what articles should come into its ports free and what should be made to pay duty. Toward the Continental Government they acted precisely as if they were dealing with a foreign power. In truth, one of the truest patriots of New England had not been ashamed to stand up in his place in the Massachusetts House of Deputies and speak of the Congress of the States as a foreign government. Every act of that body was scrutinized with the utmost care. The transfer of the most trivial authority beyond the borders of the State was made with protestations, with trembling, and with fear. Under such circumstances, each delegate felt himself to have much the character, and to be clothed with very much of the power, of ambassadors. He was not responsible to men, he was responsible to a State. . . . From beginning to end the system of representation was bad. By the Articles of Confederation each of the thirteen little republics was annually to send to Congress not more than seven and not less than two delegates. No thought was taken of population. . . . But this absolute equality of the States was more apparent than real. Congress possessed no revenue. The burden of supporting the delegates was cast on those who sent them, and, as the charge was not light, a motive was at once created for preferring a representation of two to a representation of seven, or, indeed, for sending none at all. While the war was still raging and the enemy marching and counter-marching within the border of every State, a sense of fear kept up the number of delegates to at least two. Indeed, some of the wealthier and more populous States often had as many as four congressmen on the floor of the House. But the war was now over. The stimulus derived from the presence of a hostile army was withdrawn, and the representation and attendance fell off fast. Delaware and Georgia ceased to be represented. From the ratification of the treaty to the organization of the Government under the Constitution six years elapsed, and during those six years Congress, though entitled to 91 members, was rarely attended by 25. The House was repeatedly forced to adjourn day after day for want of a quorum. On more than one occasion these adjournments covered a period of thirteen consecutive days. . . . No occasion, however impressive or important, could call out a large attendance. Seven States, represented by twenty delegates, witnessed the resignation of Washington. Twenty-three members, sitting for eleven States, voted for the ratification of the treaty. . . . It is not surprising, therefore, that Congress speedily degenerated into a debating club, and a debating club of no very high order. Neglected by its own members, insulted and threatened by its mutinous troops, reviled by the press, and forced to wander from city to city in search of an abiding place, its acts possessed no national importance whatever. It voted monuments that never were put up, rewarded meritorious services with sums of money that never were paid, formed wise schemes for the relief of the finances that never were carried out, and planned on paper a great city that never was built. In truth, to the scoffers and malcontents of that day, nothing was more diverting than the un-

certain wanderings of Congress. . . . In the coffee-houses and taverns no toasts were drunk with such uproarious applause as 'A hoop to the barrel' and 'Cement to the Union'; toasts which not long before had sprung up in the army and come rapidly into vogue. . . . The men who, in after years, came to eminence as the framers of the Constitution, who became renowned leaders of the Federalists, presidents, cabinet ministers, and constitutional statesmen, were then in private life, abroad, or in the State Assemblies. Washington was busy with his negroes and tobacco; Adams was minister to Holland; Jefferson still sat in Congress, but was soon to be sent as minister to France; Madison sat in the Virginia House of Deputies; Hamilton was wrangling with Livingston and Burr at the bar of New York; Jay was minister to Spain."—J. B. McMaster, *Hist. of the People of the U. S.*, v. 1, ch. 2.—Hamilton's description, in one of the papers of the Federalist, of the state of the country in 1787, is very graphic: "We may indeed, with propriety," he wrote, "be said to have reached almost the last stage of National humiliation. There is scarcely anything that can wound the pride, or degrade the character of an independent nation, which we do not experience. Are there engagements, to the performance of which we are held by every tie respectable among men? These are the subjects of constant and unblushing violation. Do we owe debts to foreigners, and to our own citizens, contracted in a time of imminent peril, for the preservation of our political existence? These remain without any proper or satisfactory provision for their discharge. Have we valuable territories and important posts in the possession of a foreign power, which, by express stipulations, ought long since to have been surrendered? These are still retained, to the prejudice of our interests not less than of our rights. Are we in a condition to resent or to repel the aggression? We have neither troops, nor treasury, nor Government. Are we even in a condition to remonstrate with dignity? The just imputations on our own faith, in respect to the same treaty, ought first to be removed. Are we entitled by nature and compact to a free participation in the navigation of the Mississippi? Spain excludes us from it. Is public credit an indispensable resource in time of public danger? We seem to have abandoned its cause as desperate and irretrievable. Is commerce of importance to National wealth? Ours is at the lowest point of declension. Is respectability in the eyes of foreign powers a safeguard against foreign encroachments? The imbecility of our Government even forbids them to treat with us. Our ambassadors abroad are the mere pageants of mimic sovereignty. Is a violent and unnatural decrease in the value of land a symptom of National distress? The price of improved land in most parts of the country is much lower than can be accounted for by the quantity of waste land at market, and can only be fully explained by that want of private and public confidence, which are so alarmingly prevalent among all ranks, and which have a direct tendency to depreciate property of every kind. Is private credit the friend and patron of industry? The most useful kind which relates to borrowing and lending is reduced within the narrowest limits, and this still more from an

opinion of insecurity than from the scarcity of money. To shorten an enumeration of particulars which can afford neither pleasure nor instruction, it may in general be demanded what indication is there of National disorder, poverty, and insignificance, that could befall a community so peculiarly blessed with natural advantages as we are, which does not form a part of the dark catalogue of our public misfortunes? . . . The great and radical vice in the construction of the existing Confederation is in the principle of legislation for States or Governments, in their corporate or collective capacities, and as contradistinguished from the individuals of which they consist. Though this principle does not run through all the powers delegated to the Union, yet it pervades and governs those on which the efficacy of the rest depends. Except as to the rule of apportionment, the United States have an indefinite discretion to make requisitions for men and money, but they have no authority to raise either, by regulations extending to the individual citizens of America. The consequence of this is, that, though in theory their resolutions concerning those objects are laws, constitutionally binding on the members of the Union, yet in practice they are mere recommendations, which the States observe or disregard at their option. . . . There is nothing absurd or impracticable in the idea of a league or alliance between independent nations, for certain defined purposes precisely stated in a treaty; regulating all the details of time, place, circumstance, and quantity; leaving nothing to future discretion; and depending for its execution on the good faith of the parties. . . . If the particular States in this country are disposed to stand in a similar relation to each other, and to drop the project of a general discretionary superintendence, the scheme would indeed be pernicious, and would entail upon us all the mischiefs which have been enumerated under the first head; but it would have the merit of being, at least, consistent and practicable. Abandoning all views towards a Confederate Government, this would bring us to a simple alliance offensive and defensive; and would place us in a situation to be alternately friends and enemies of each other, as our mutual jealousies and rivalships, nourished by the intrigues of foreign nations, should prescribe to us. But if we are unwilling to be placed in this perilous situation; if we still will adhere to the design of a National Government, or, which is the same thing, of a superintending power, under the direction of a common Council, we must resolve to incorporate into our plan those ingredients which may be considered as forming the characteristic difference between a league and a Government; we must extend the authority of the Union to the persons of the citizens,—the only proper objects of Government."—Alexander Hamilton, *The Federalist*, no. 15.—"Many of the States refused or neglected to pay even their allotted shares of interest upon the public debt, and there was no power in Congress to compel payment. Eighteen months were required to collect only one-fifth of the taxes assigned to the States in 1783. The national credit became worthless. Foreign nations refused to make commercial treaties with the United States, preferring a condition of affairs in which they could lay any desired burden upon American

commerce without fear of retaliation by an impotent Congress. The national standing army had dwindled to a corps of 80 men. In 1785 Algiers declared war against the United States. Congress recommended the building of five 40-gun ships of war, but Congress had only power to recommend. The ships were not built, and the Algerines were permitted to prey on American commerce with impunity. England still refused to carry out the Treaty of 1783, or to send a Minister to the United States. The Federal Government, in short, was despised abroad and disobeyed at home. The apparent remedy was the possession by Congress of the power of levying and collecting internal taxes and duties on imports, but, after long urging, it was found impossible to gain the necessary consent of all the States to the article of taxation by Congress. In 1786, therefore, this was abandoned, and, as a last resort, the States were asked to pass an Amendment intrusting to Congress the collection of a revenue from imports. This Amendment was agreed to by all the States but one. New York alone rejected it, after long debate, and her veto seemed to destroy the last hope of a continuance of national union in America. Perhaps the dismay caused by the action of New York was the most powerful argument in the minds of many for an immediate and complete revision of the government. The first step to Revision was not so designed. In 1785 the Legislatures of Maryland and Virginia, in pursuance of their right to regulate commerce, had appointed Commissioners to decide on some method of doing away with interruptions to the navigation of Chesapeake Bay. The Commissioners reported their inability to agree, except in condemning the Articles of Confederation. The Legislature of Virginia followed the report by a resolution, inviting the other States to meet at Annapolis, consider the defects of the government, and suggest some remedy. In September, 1786, delegates from five of the Middle States assembled, but confined themselves to discussion, since a majority of the States were not represented. The general conclusion was that the government, as it then stood, was inadequate for the protection, prosperity or comfort, of the people, and that some immediate and thorough reform was needed. After drawing up a report for their States and for Congress, recommending another Convention to be held at Philadelphia, in May, 1787, they adjourned. Congress, by resolution, approved their report and the proposed Convention. The Convention met, as proposed, May 14th, 1787."—A. Johnston, *Hist. of Am. Politics*, 2d ed., ch. 1.—"Four years only elapsed, between the return of peace and the downfall of a government which had been framed with the hope and promise of perpetual duration. . . . But this brief interval was full of suffering and peril. There are scarcely any evils or dangers, of a political nature, and springing from political and social causes, to which a free people can be exposed, which the people of the United States did not experience during that period."—G. T. Curtis, *Hist. of the Const.*, bk. 3, ch. 1.—"It is not too much to say that the period of five years following the peace of 1783 was the most critical moment in all the history of the American people."—J. Flske, *Critical Period of Am. Hist.*, p. 65.

A. D. 1783-1789.—Depressed state of Trade and Industry.—Commercial consequences of the want of nationality.—"The effect of the Revolutionary War on the merchant marine of the colonies, which thereby secured their independence as the United States, was not so disastrous as might have been expected. Many ships were lost or captured, and the gains of maritime commerce were reduced; but to offset these losses an active fleet of privateers found profitable employment in the seizure of English merchantmen, and thus kept alive the maritime spirit of the country, and supplied a revenue to the shipowners whose legitimate pursuits were suspended by the war. In 1783, therefore, the American merchant marine was in a fairly healthy condition. During the next six years the disadvantages of the new situation made themselves felt. Before the Revolution the colonies had had open trade with their fellow-subjects in the British West India Islands. The commerce thus carried on was a very profitable business. The island colonies were supplied with lumber, corn, fish, live stock, and surplus farm produce, which the continent furnished in abundance, together with rough manufactured articles such as pipe staves, and in return the ships of New York and New England brought back great quantities of coffee, sugar, cotton, rum, and indigo. . . . As a result of independence, the West India business was entirely cut off. The merchantmen of the United States then came in on the footing of foreign vessels, and all such vessels, under the terms of the Navigation Act, were rigorously excluded from trade with the British colonies. It was evident, however, that the sudden cessation of this trade, whatever loss it might inflict on the newly created state, would be tenfold more harmful to the islands, which had so long depended upon their neighbors of the mainland for the necessaries of life. Pitt, then Chancellor of the Exchequer, appreciated this difficulty, and in 1783 brought a bill into Parliament granting open trade as to articles that were the produce of either country. The measure failed, owing to Pitt's resignation, and the next ministry, in consequence of the violent opposition of British shipowners, passed a merely temporary act, vesting in the crown the power of regulating trade with America. This power was occasionally exercised by suspending certain provisions of the navigation laws, under annual proclamations, but it did not serve to avert the disaster that Pitt had foreseen. Terrible sufferings visited the population of the West India colonies, and between 1780 and 1787 as many as 15,000 slaves perished from starvation, having been unable to obtain the necessary supply of food when their own crops had been destroyed by hurricanes. Apart from the unfavorable condition of the West India trade, another and more important cause had operated to check the prosperous development of American commerce. The only bond of political union at this time was that formed by the Articles of Confederation, constituting a mere league of independent States, any one of which could pass laws calculated to injure the commerce of the others."—J. R. Soley, *Maritime Industries of Am. (The United States of Am., ed. by N. S. Shaler, v. 1, ch. 10)*.—"The general commerce of the granulated mass of communities called the United States, from 1783 to 1789, was probably

the poorest commerce known in the whole history of the country. England sent America £3,700,000 worth of merchandise in 1784, and took in return only £750,000. The drain of specie to meet this difference was very severe, and merchants could not meet the engagements so rashly made. They had imported luxuries for customers who were poor, and non-payment through all the avenues of trade was the consequence. One circumstance and detail of the internal management of this commerce added to the distress and to the necessary difficulties of the time. Immediately after the peace, British merchants, factors, and clerks came across the seas in streams, to take advantage of the new opportunities for trade. It seemed to the citizens to be a worse invasion of their economic rights than the coming of the troops had been to the political rights of the old colonists. The whole country was agitated, but action was initiated in Boston in 1785. The merchants met and discussed all these difficulties. They pledged themselves to buy no more goods of British merchants or factors in Boston. In about three weeks the mechanics and artisans met in the old Green Dragon Tavern and committed themselves to the same policy. But the merchants went beyond mere non-intercourse with traders at home. The root of the difficulty was in the ill-regulation or want of regulation of our commerce with all foreign countries. The confederation was giving and not getting. Where it should have gotten, foreigners were getting, because the parts of the country had not agreed to unite in acquiring for the common benefit, lest some part should be injured in the process. Congress made treaties for the Confederation. But if unable to treat with any power which excluded American shipping from its ports, or laid duties on American produce, Congress did not control our ports in an equivalent manner. Each individual state was to decide whether the unfriendly power should trade at its own ports. This in effect nullified any retaliatory action. England, being the best market, virtually controlled any change in commerce, as it was then conducted. Her ports were closed to American products unless they were brought in British vessels. France admitted our vessels to her ports, but her merchants cried out against the competition. It was feared that the ministers would be obliged to yield to their clamor and close the ports. Probably the poor economic condition of the country affected the foreign trade even more than the bad adjustment of foreign relations. All causes combined to form two parties, one advocating imposts upon foreign trade or a Navigation Act, the other opposing this scheme, and insisting upon absolute freedom of commerce. It was in this direction that the Boston people moved, after they had instituted non-intercourse in their own market with British traders. They petitioned Congress to remedy these embarrassments of trade, and sent a memorial to their own legislature. This document urged that body to insist on action by Congress. They formed a Committee of Correspondence to enforce these plans upon the whole country."—W. B. Weedon, *Economic and Social Hist. of New Eng., 1620-1789, ch. 23 (v. 2)*.

A. D. 1784.—The financial administration of Robert Morris.—Cost of the war.—From May, 1781, until April, 1783, the burden of the financial management of the revolutionary struggle rested upon Robert Morris, of Philadelphia, who held the office which Congress had created and entitled "the Superintendent of Finances." Morris's detractors argued that he deserved no great credit for his management of the finances as compared with his predecessors, because in his time everything turned in his favour. It is true that if things had remained as before, he could not have restored the finances; for the miracle of carrying on a war without means has never yet been performed by anybody. The events which gave him an opportunity to restore the finances, by intelligent and energetic action, were as follows. The first was the collapse of the paper currency and its absolute removal from circulation, in May, 1781, just before he took office. As soon as it was out of the way, specie came in. He was able to throw aside all the trammels in which the treasury operations had been entangled by the paper system. It is true that he did not succeed in his attempt to relieve himself entirely from these anticipations, which, inasmuch as they were anticipations, would have used up the revenues of his time; but it was a great gain for him to be able to conduct his current operations at least in terms of specie. The second thing in his favour was the great help granted by France in 1781, and especially the importation of a part of this in specie. This enabled him to found the bank, from which he borrowed six times what he put into it. The chief use of the bank to him, however, was to discount the notes which he took for bills of exchange. Then also it was possible for him to reduce the expenses in a way which his predecessors had not had the courage or the opportunity to accomplish, because in their time the abuses of the old method had not gone far enough to force acquiescence in the reforms. In Morris's time, and chiefly, as it appears; by his exertions and merit, the expenditures were greatly reduced for an army of a given size. When the war came to an end, it was possible for him to reduce the entire establishment to a very low scale. Next we notice that the efforts to introduce taxation bore fruit which, although it was trivial in one point of view, was large enough to be very important to him in his desperate circumstances. Finally, when his need was the greatest, and these advantages and opportunities proved inadequate, the rise of American credit made the loan in Holland possible, and this carried him through to the result. . . . By the Report of 1790 the total amount of expenditures and advances at the treasury of the United States, during the war, in specie value, was estimated as follows: 1775 and 1776, \$20,064,666.—1777, \$24,936,646.—1778, \$24,289,438.—1779, \$10,794,620.—1780, \$3,000,000.—1781, \$1,942,465.—1782, \$3,632,745.—1783, \$3,226,583.—1784, \$548,525 to November 1.—Total \$92,485,693. This table shows how the

country lapsed into dependence on France after the alliance was formed. The round number opposite 1780 is very eloquent. It means anarchy and guesswork. . . . According to the best records we possess, the cost of the war to the United States, reduced to specie value year by year at the official scale of depreciation, which, being always below the truth, makes these figures too high, was, as above stated, \$92,485,693, at the treasury. There were also certificates of indebtedness out for \$14,708,000. There had been expended in Europe, which never went through the treasury, \$5,000,000. The States were estimated to have expended \$21,000,000. Total, \$135,000,000. Jefferson calculated it at \$140,000,000, by adding the debts incurred and the continental currency. The debt contracted by England during the war was £115,000,000, for which £91,000,000 were realized. The Comptroller of the Treasury of France said that it cost 60,000,000 livres a year to support the army in America. Vergennes told Lafayette, in November, 1782, that France had expended 250,000,000 livres in the war. There is an often-repeated statement that the war cost France 1,200,000,000 livres, or 1,280,000,000, or 1,500,000,000. Arthur Young put it at £50,000,000, sterling. Probably if 60,000,000 a year for five years, or \$60,000,000, was taken as the amount directly expended for and in America by France, it would be as fair a computation as could be made of her contribution to American independence. She had large expenditures elsewhere in the prosecution of her war against Great Britain, and her incidental losses of ships, etc., were great. When England abandoned the effort to subdue the colonies, she was in a far better position for continuing it than either of her adversaries. George III. was by no means stupid in his comments and suggestions about the war. No Englishman of the period said things which now seem wiser in the retrospect. As early as September, 1780, he said: 'America is distressed to the greatest degree. The finances of France, as well as Spain, are in no good situation. This war, like the last, will prove one of credit.' This opinion was fully justified in 1782. French finances were then hastening toward bankruptcy, so that France could not continue the war expenses or the loans and subsidies to America. English credit was high. October 2, 1782, Vergennes wrote to Montmorin, that the English fleet was stronger than at the beginning of the war, while the fleets of France and Spain were weaker; that French finances were greatly weakened, while English credit was high; that England had recovered influence in Russia and through Russia on Prussia and Austria. He wanted peace and reconciliation with England in order to act with her in eastern Europe. If England had chosen to persevere in the war, the matter of credit would have been the most important element in her chances of success, aside from the natural difficulties of the enterprise."—W. G. Sumner, *The Financier and the Finances of the Am. Revolution*, ch. 23 (v. 2).

A. D. 1784-1788.—Disputes with England over the execution of the Treaty of Peace.—Difficulties with Spain.—The question of the Navigation of the Mississippi.—Eastern jealousy and Western excitement.—"Serious disputes soon arose, concerning the execution of the

treaty of peace; and each nation complained of infractions by the other. On the part of the United States, it was alleged that negroes had been carried away, contrary to the treaty; and as early as May, 1783, congress instructed their ministers for negotiating peace to remonstrate to the British court against this conduct of their commander in America, and to take measures to obtain reparation. The United States, also, complained that the western posts had not been surrendered, agreeably to treaty stipulations. Great Britain, on her part, alleged that legal impediments had been interposed to prevent the collection of British debts in America; and that the 5th and 6th articles, relating to the property of the loyalists, had not been complied with. In June, 1784, the legislature of Virginia not only declared that there had been an infraction on the part of Great Britain of the 7th article, in detaining the slaves and other property of the citizens of the United States, but instructed their delegates in congress to request that a remonstrance be presented to the British court against such infraction and to require reparation. They also directed them to inform congress that the state of Virginia conceived a just regard to the national honor and interest obliged her assembly to withhold their co-operation in the complete fulfilment of the treaty until the success of such remonstrance was known, or they should have further directions from congress. They at the same time declared, that as soon as reparation for such infraction should be made, or congress should judge it indispensably necessary, such acts as inhibited the recovery of British debts should be repealed, and payment made, in such time and manner as should consist with the exhausted situation of the state. In consequence of these difficulties and disputes, congress, early in the year 1785, determined to send a minister plenipotentiary to Great Britain; and on the 24th of February John Adams was appointed to represent the United States at the court of London. He was instructed 'in a respectful but firm manner to insist that the United States be put, without further delay, into possession of all the posts and territories within their limits which are now held by British garrisons.' . . . Mr. Jefferson was soon after appointed to represent the United States at the court of Versailles, in the room of Dr. Franklin, who had leave to return home, after an absence of nine years. Mr. Livingston having resigned the office of secretary of foreign affairs, Mr. Jay, in March, 1784, and before his return from Europe, was appointed in his place. Mr. Adams repaired to the British court, and was received as the first minister from the United States since their independence was acknowledged. . . . In December, 1785, Mr. Adams presented a memorial to the British secretary of state, in which, after stating the detention of the western posts contrary to the stipulations in the treaty of peace, he in the name and in behalf of the United States required 'that all his majesty's armies and garrisons be forthwith withdrawn from the said United States, from all and every of the posts and fortresses before enumerated, and from every port, place and harbor, within the territory of the said United States, according to the true intention of the treaties.' To this memorial the British secretary, Lord Carmarthen, returned an answer, on the 28th of February, 1786, in which he acknowledges 'the detention of

the posts, but alleges a breach of the 4th article of the treaty of peace on the part of the United States, by interposing impediments to the recovery of British debts in America. . . . This answer was accompanied with a statement of the various instances in which the 4th article had been violated by acts of the states. The complaints of Great Britain also extended to breaches of the 5th and 6th articles of the treaty, relating to the recovery of certain property and to confiscations. The answer of the British secretary was submitted to congress; and in order to remove the difficulties complained of, that body, in March 1787, unanimously declared that all the acts, or parts of acts, existing in any of the states, repugnant to the treaty of peace, ought to be repealed; and they recommended to the states to make such repeal by a general law. . . . A circular letter to the states accompanied these declarations, in which congress say, 'we have deliberately and dispassionately examined and considered the several facts and matters urged by Great Britain, as infractions of the treaty of peace, on the part of America, and we regret that, in some of the states, too little attention has been paid to the public faith pledged by that treaty.' In consequence of this letter, the states of New Hampshire, Massachusetts, Rhode Island, Connecticut, Delaware, Maryland, Virginia, and North Carolina, passed acts complying with the recommendations contained in it. The operation of the act of Virginia, however, which repealed all acts preventing the recovery of debts due to British subjects, was suspended until the governor of that state should issue a proclamation, giving notice that Great Britain had delivered up the western posts, and was also taking measures for the further fulfilment of the treaty of peace by delivering up the negroes belonging to the citizens of that state, carried away contrary to the 7th article of the treaty, or by making compensation for the same. . . . The British court was not yet disposed to enter into any commercial treaty with the United States. The ministers were, no doubt, satisfied that the advantages they enjoyed under their own regulations were greater than could be obtained by any treaty they could make with America. And this was, probably, one of the principal reasons of their refusal to enter into any such treaty. As the British court declined sending a minister to the United States, Mr. Adams, in October, 1787, at his request, had leave to return home. . . . The United States had also at this period to encounter difficulties with Spain as well as Great Britain. The two Floridas having been ceded to his catholic majesty, serious disputes soon arose, not only on the old subject of the navigation of the Mississippi, but with respect to the boundaries of Louisiana and the ceded territory. The Spanish court still persisted in its determination to exclude the Americans from the navigation of the Mississippi. . . . In December, 1784, congress declared it necessary to send a minister to Spain, for the purpose of adjusting the interfering claims of the two nations respecting the navigation of the Mississippi, and other matters highly interesting to the peace and good understanding which ought to subsist between them. This was prevented by the appointment of Don Diego Gardoqui, a minister from Spain, who arrived in the United States and was acknowledged by congress in the summer of 1785. Soon after his

arrival, Mr. Jay, then secretary of foreign affairs, was appointed to treat with the Spanish minister on the part of the United States. . . . As Mr. Jay, by his instructions, was not to conclude a treaty until the same was communicated to congress and approved by them, and was also specially directed to obtain a stipulation acknowledging the right of the United States to their territorial claims and the free navigation of the Mississippi, as established in their treaty with Great Britain, he, on the 3d of August, 1786, submitted to congress the . . . plan of a commercial treaty, and stated the difficulties in obtaining the stipulation required. . . . 'Circumstances as we are [said Mr. Jay] I think it would be expedient to agree that the treaty should be limited to twenty five or thirty years, and that one of the articles should stipulate that the United States would forbear to use the navigation of that river below their territories to the ocean. Thus the duration of the treaty and of the forbearance in question should be limited to the same period.' . . . Among other reasons, Mr. Jay stated that the navigation of the Mississippi was not at that time very important, and would not probably become so in less than twenty five or thirty years, and that a forbearance to use it, while it was not wanted, was no great sacrifice — that Spain then excluded the people of the United States from that navigation, and that it could only be acquired by war, for which the United States were not then prepared; and that in case of war France would no doubt join Spain. Congress were much divided on this interesting subject. The seven states at the north, including Pennsylvania, were disposed, in case a treaty could not otherwise be made, to forbear the use of the navigation of the Mississippi below the southern boundary of the United States, for a limited time, and a resolution was submitted to congress repealing Mr. Jay's instructions of the 25th of August, 1785, and which was carried, seven states against five. . . . This, however, was to be on the express condition that a stipulation of forbearance should not be construed to extinguish the right of the United States, independent of such stipulation, to use and navigate said river from its source to the ocean; and that such stipulation was not to be made unless it should be agreed in the same treaty that the navigation and use of the said river above such intersection to its source should be common to both nations — and Mr. Jay was to make no treaty unless the territorial limits of the United States were acknowledged and secured according to the terms agreed between the United States and Great Britain. . . . As by the confederation the assent of nine states was necessary in making a treaty the same number was considered requisite in giving specific instructions in relation to it; . . . and it was questioned whether the previous instructions given to Mr. Jay could be rescinded without the assent of nine states. These proceedings in congress, though with closed doors, soon became partly known, and excited great alarm in Virginia and in the western settlements. . . . While these negotiations were pending, the fertile country at the west was settling with a rapidity beyond the most sanguine calculations; and it is not surprising that the news of an actual or intended abandonment of the navigation of the Mississippi, the only outlet for their productions, should have excited great alarm

among its inhabitants. They were much exasperated by the seizure and confiscation of American property by the Spaniards, on its way down the river, which took place about the same time. The proposition made in congress was magnified into an actual treaty, and called from the western people most bitter complaints and reproaches. . . . To quiet the apprehensions of the western inhabitants, the delegates from North Carolina, in September, 1788, submitted to congress a resolution declaring that 'whereas many citizens of the United States, who possess lands on the western waters, have expressed much uneasiness from a report that congress are disposed to treat with Spain for the surrender of their claim to the navigation of the river Mississippi; in order therefore to quiet the minds of our fellow citizens by removing such ill founded apprehensions, resolved, that the United States have a clear, absolute, and unalienable claim to the free navigation of the river Mississippi, which claim is not only supported by the express stipulations of treaties, but by the great law of nature.' The secretary of foreign affairs, to whom this resolution was referred, reported, that as the rumor mentioned in the resolution was not warranted by the negotiations between the United States and Spain, the members be permitted to contradict it, in the most explicit terms. Mr. Jay also stated, there could be no objection to declaring the right of the United States to the navigation of the river clear and absolute — that this had always been his opinion; and that the only question had been whether a modification of that right for equivalent advantages was advisable; and though he formerly thought such a modification might be proper, yet the circumstances and discounts had since intervened to render it questionable. He also advised that further negotiations with Spain be transferred to the new general government. On this report, congress, on the 16th of September, 1788, in order to remove the apprehensions of the western settlers, declared that the members be permitted to contradict the report referred to by the delegates from North Carolina; and at the same time resolved 'that the free navigation of the river Mississippi is a clear and essential right of the United States, and that the same ought to be considered and supported as such.' All further negotiations with Spain were also referred to the new federal government." — T. Pitkin, *Political and Civil Hist. of the U. S.*, ch. 17 (p. 2).—"It was important for the frontiersmen to take the Lake Posts from the British; but it was even more important to wrest from the Spaniards the free navigation of the Mississippi. While the Lake Posts were held by the garrisons of a foreign power, the work of settling the northwestern territory was bound to go forward slowly and painfully; but while the navigation of the Mississippi was barred, even the settlements already founded could not attain to their proper prosperity and importance. . . . The Westerners were right in regarding as indispensable the free navigation of the Mississippi. They were right also in their determination ultimately to acquire the control of the whole river, from the source to the mouth. However, the Westerners wished more than the privilege of sending down stream the products of their woods and pastures and tilled farms. They had already begun to cast longing eyes on the fair Spanish

possessions. . . . Every bold, lawless, ambitious leader among the frontier folk dreamed of wresting from the Spaniard some portion of his rich and ill-guarded domain. It was not alone the attitude of the frontiersmen towards Spain that was novel, and based upon a situation for which there was little precedent. Their relations with one another, with their brethren of the seaboard, and with the Federal Government, likewise had to be adjusted without much chance of profiting by antecedent experience. Many phases of these relations between the people who stayed at home and those who wandered off to make homes, between the frontiersmen as they formed young States, and the Central Government representing the old States, were entirely new, and were ill-understood by both parties. . . . The attitude towards the Westerners of certain portions of the population in the older States, and especially in the northeastern States, was one of unreasoning jealousy and suspicion; and though this mental attitude rarely crystallized into hostile deeds, its very existence, and the knowledge that it did exist, embittered the men of the West. . . . In the northeastern States, and in New England especially, this feeling showed itself for two generations after the close of the Revolutionary War. On the whole the New Englanders have exerted a more profound and wholesome influence upon the development of our common country than has ever been exerted by any other equally numerous body of our people. They have led the nation in the path of civil liberty and sound governmental administration. But too often they have viewed the nation's growth and greatness from a narrow and provincial standpoint, and have grudgingly acquiesced in, rather than led the march towards, continental supremacy. In shaping the nation's policy for the future their sense of historic perspective seemed imperfect. . . . The extreme representatives of this northeastern sectionalism not only objected to the growth of the West at the time now under consideration, but even avowed a desire to work it harm, by shutting the Mississippi, so as to benefit the commerce of the Atlantic States. . . . These intolerant extremists not only opposed the admission of the young western States into the Union, but at a later date actually announced that the annexation by the United States of vast territories beyond the Mississippi offered just cause for the secession of the northeastern States. Even those who did not take such an advanced ground felt an unreasonable dread lest the West might grow to overtop the East in power. . . . A curious feature of the way many honest men looked at the West was their inability to see how essentially transient were some of the characteristics to which they objected. Thus they were alarmed at the turbulence and the lawless shortcomings of various kinds which grew out of the conditions of ruder settlement and sparse population. They looked with anxious foreboding to the time when the turbulent and lawless people would be very numerous, and would form a dense and powerful population; failing to see that in exact proportion as the population became dense, the conditions which caused the qualities to which they objected would disappear. Even the men who had too much good sense to share these fears, even men as broadly patriotic as Jay, could not realize the

extreme rapidity of western growth. Kentucky and Tennessee grew much faster than any of the old frontier colonies had ever grown; and from sheer lack of experience, eastern statesmen could not realize that this rapidity of growth made the navigation of the Mississippi a matter of immediate and not of future interest to the West. . . . While many of the people on the eastern seaboard thus took an indefensible position in reference to the trans-Allegheny settlements, in the period immediately succeeding the Revolution, there were large bodies of the population of these same settlements, including very many of their popular leaders, whose own attitude towards the Union was, if anything, more blame-worthy. They were clamorous about their rights, and were not unready to use veiled threats of disunion when they deemed these rights infringed; but they showed little appreciation of their own duties to the Union. . . . They demanded that the United States wrest from the British the Lake Posts, and from the Spaniards the navigation of the Mississippi. Yet they seemed incapable of understanding that if they separated from the Union they would thereby forfeit all chance of achieving the very purposes they had in view, because they would then certainly be at the mercy of Britain, and probably, at least for some time, at the mercy of Spain also. They opposed giving the United States the necessary civil and military power, although it was only by the possession and exercise of such power that it would be possible to secure for the westerners what they wished. In all human probability, the whole country round the Great Lakes would still be British territory, and the mouth of the Mississippi still in the hands of some European power, had the folly of the separatists won the day and had the West been broken up into independent states. . . . This final triumph of the Union party in these first-formed frontier States was fraught with immeasurable good."—T. Roosevelt, *The Winning of the West*, v. 3, ch. 3.—See FLORIDA: A. D. 1783-1787; and LOUISIANA: A. D. 1785-1800.

A. D. 1787.—The framing of the Federal Constitution.—The Union constructed of compromises.—The convention of delegates appointed to revise the Articles of Confederation, but which took upon itself the task of framing anew a Federal Constitution for the States, assembled at Philadelphia on the 25th of May, 1787, eleven days later than the day appointed for its meeting. "The powers conferred by the several states were not uniform. Virginia, Pennsylvania, and New Jersey appointed their delegates 'for the purpose of revising the Federal Constitution;' North Carolina, New Hampshire, Delaware, and Georgia 'to decide upon the most effectual means to remove the defects of the Federal Union;' New York, Massachusetts, and Connecticut 'for the sole and

express purpose of revising the Articles of Confederation; South Carolina and Maryland 'to render the Federal Constitution entirely adequate to the actual situation.' Rhode Island held aloof. She was governed by a class of men who wanted to pay their debts in paper money, and she did not wish to surrender her power to collect duties upon the goods that came into her port. The trade of Newport at that day surpassed that of New York. Connecticut came in reluctantly, and New Hampshire late in July, 1787. . . . Washington was made president of the convention. . . . Many names great in the revolutionary struggle were absent from the roll of delegates. John and Samuel Adams, and John Hancock, were not there. Patrick Henry of Virginia refused to attend. Thomas Jefferson and John Jay were absent from the country. George Washington and Benjamin Franklin, however, were there. . . . Among the younger men was James Madison of Virginia. . . . Alexander Hamilton came from New York. . . . Charles C. Pinckney was a delegate from South Carolina. . . . James Wilson of Pennsylvania was a Scotchman. He surpassed all others in his exact knowledge of the civil and common law, and the law of nations. . . . Oliver Ellsworth and Roger Sherman came from Connecticut. . . . Many of the 55 delegates shared Hamilton's contempt for a democracy, but the strength they would repose in a government they preferred to retain in the states. . . . The first business of the convention was the adoption of rules. Each state was to have one vote. Such was the rule in the Confederate Congress. Seven states made a quorum. The convention was to sit with closed doors, and everything was to be kept secret; nothing was to be given to the public except the completed work. This injunction of secrecy was never removed. Fortunately James Madison kept a pretty full account of the debates and proceedings, all in his own hand."—J. S. Landon, *Const. Hist. and Gov't of the U. S.*, lect. 3.—"Madison tells us in his report of these debates that previous to the opening of the Convention it had been a subject of discussion among the members present, as to how the States should vote in the Convention. Several of the members from Pennsylvania had urged that the large States unite in refusing to the small States an equal vote, but Virginia, believing this to be injudicious if not unjust, 'discountenanced and stifled the project.' On the 29th the real business of the Convention was opened by Edmund Randolph, who as Governor of Virginia was put forward as spokesman by his colleagues. He began by saying that as the Convention had originated from Virginia, and the delegation from this State supposed that some proposition was expected from them, the task had been imposed on him. After enumerating the defects of the Confederation, he detailed the remedy proposed. This latter was set forth in fifteen resolutions and was called afterwards the Virginia plan of government. Charles Pinckney from South Carolina had also a draft of a federal government, which was read and like the former referred to a committee of the whole House. . . . The Committee of the Whole . . . debated from day to day the resolutions contained in the Virginia plan, and on the 13th of June they reported nineteen resolutions based upon those of Vir-

ginia, forming a system of government in outline. On the following day Mr. Patterson, of New Jersey, asked for time to prepare another plan founded on the Articles of Confederation. This was submitted to the Convention on the 15th. The Virginia and the New Jersey plan were contrasted briefly by one of the members: Virginia plan proposes two branches in the legislature, Jersey, a single legislative body; Virginia, the legislative powers derived from the people, Jersey, from the States; Virginia, a single executive, Jersey, more than one; Virginia, a majority of the legislature can act, Jersey, a small majority can control; Virginia, the legislature can legislate on all national concerns, Jersey, only on limited objects; Virginia, legislature to negative all State laws, Jersey, giving power to the executive to compel obedience by force; Virginia, to remove the executive by impeachment, Jersey, on application of a majority of the States; Virginia, for the establishment of inferior judiciary tribunals, Jersey, no provision. Neither of these plans commended themselves to men like Hamilton, who wanted a strong government, and were afraid of democracy or giving power to the people. He thought the Virginia plan 'but pork still with a little change of the sauce.' The Articles of Confederation amended, as in the New Jersey plan, set forth a government approved of by the opposite wing of the Convention, consisting of men like Lansing, who professed an ultra devotion to the rights and autonomy of the States. . . . The Convention did not go again into committee of the whole, but continued to debate the nineteen resolutions from the 19th of June until the 23d of July. Some of these were referred to grand committees, consisting of one member from each State, or they were referred to select committees consisting of five members."—K. M. Rowland, *Life of Geo. Mason*, v. 2, ch. 4.—"The plan presented by Mr. Patterson, called the New-Jersey plan, was concerted and arranged between the deputations of that State, of Delaware, of New York, and of Connecticut, with the individual cooperation of Mr. Luther Martin, one of the delegates of Maryland. The extreme jealousy . . . manifested by the representatives of the two first-named States with regard to the equal suffrage of the States in the common councils of the Confederacy, was the principal source of their aversion to the plan reported by the committee of the whole. The delegates of Connecticut, and Messrs. Lansing and Yates,—forming a majority of the delegation of New York,—united with the deputations of New Jersey and Delaware, not so much from an exclusive attachment to the principle of the sovereignty and equality of the States, as from the policy of preserving the existing framework of the confederation, and of simply vesting in Congress, as then organized, a few additional powers. It was under the influence of these mixed political views that the New-Jersey plan was conceived and prepared. It proposed to vest in the existing Congress,—a single body in which all the States had an equal suffrage,—in addition to the powers already given to it by the articles of confederation, that of raising revenue by imposts and stamp and postage duties, and also that of passing acts for the regulation of commerce with foreign nations and between the States; leaving the enforcement of all such acts,

in the first instance, to the State courts, with an ultimate appeal to the tribunals of the United States. Whenever requisitions on the States for contributions should be made, and any State should fail to comply with such requisitions within a specified time, Congress was to be authorized to direct their collection in the non-complying States, and to pass the requisite acts for that purpose. None of the foregoing powers, however, were to be exercised by Congress without the concurrence of a certain number of the States, exceeding a bare majority of the whole. The plan also proposed the organization of a Federal executive and a Federal judiciary. . . . It was, finally, provided that if any State, or any body of men in any State, shall oppose or prevent the carrying into execution any act of Congress passed in virtue of the powers granted to that body, or any treaty made and ratified under the authority of the United States, the Federal executive shall be authorized to call forth the power of the confederated States, or so much thereof as may be necessary, to enforce and compel an obedience to the acts, or an observance of the treaties, whose execution shall have been so opposed or prevented. Such were the salient features of the plan now brought forward as a substitute for the Virginia propositions, as reported by the committee of the whole. . . . In the progress of the discussion upon the two plans, Colonel Hamilton, of New York, made an elaborate speech, declaring himself to be opposed to both, and suggesting a third and more absolute plan, which he thought was alone adequate to the exigencies of the country. He frankly avowed his distrust of both republican and federal government, under any modification. He entered into a minute analysis of the various sources and elements of political power in order to show that all these would be on the side of the State governments, so long as a separate political organization of the States was maintained, and would render them an over-much for any general government that could be established, unless a 'complete sovereignty' was vested in the latter. He thought it essential, therefore, to the ends of a good and efficient government of the whole country, that the State governments, with their vast and extensive apparatus, should be extinguished; though 'he did not mean,' he said, 'to shock public opinion by proposing such a measure.' He also expressed his despair of the practicability of establishing a republican government over so extensive a country as the United States. He was sensible, at the same time, that it would be unwise to propose one of any other form. Yet 'he had no scruple,' he said, 'in declaring that, in his private opinion, the British government was the best in the world, and that he doubted much whether any thing short of it would do in America.' He descanted upon the securities against injustice, violence, and innovation, afforded, in the English system, by the permanent constitution of the House of Lords, and by the elevated and independent position of the monarch. He thence deduced the necessity of as permanent a tenure as public opinion in this country would bear, of the leading branches of the new government. 'Let one branch of the legislature,' he said, 'hold their places for life, or at least during good behavior. Let the executive also be for life.' In concluding, he expressed his conviction that 'a great progress

was going on in the public mind; that the people will, in time, be unshackled from their prejudices; and, whenever that happens, they will themselves not be satisfied at stopping where the plan brought forward by Mr. Randolph [the Virginia plan] would place them, but would be ready to go as far, at least, as he proposed.' He then read a plan of government he had prepared, which, he said, he did not submit as a proposition to the convention, but as giving a correct sketch of his ideas, and to suggest the amendment which he should probably offer to the Virginia plan in the future stages of its consideration. . . . The convention now had presented for their consideration three distinct schemes of government: one purely Federal, founded upon the idea of preserving undiminished the sovereignty and equality of the States, and of constituting a special political agency in Congress for certain purposes, but still under the dependence and control of the States; another of a consolidated character, bottomed on the principle of a virtual annihilation of the State sovereignties and the creation of a central government, with a supreme and indefinite control over both individuals and communities; the third a mixed and balanced system, resting upon an agreed partition of the powers of sovereignty between the States and the Union,—one portion to be vested in the Union for certain objects of common and national concern, the residue retained by the States for the regulation of the general mass of their interior and domestic interests. . . . On the 19th of June . . . Mr. King, of Massachusetts, moved that the committee do now rise, and report that they do not agree to the propositions offered by the Honorable Mr. Patterson; and that they report to the House the resolutions offered by the Honorable Mr. Randolph, heretofore reported from a committee of the whole.' The motion was carried by the votes of Massachusetts, Connecticut, Pennsylvania, Virginia, North Carolina, South Carolina, and Georgia, in the affirmative,—New York, New Jersey, and Delaware voting in the negative; and Maryland, divided."—W. C. Rives, *Life and Times of James Madison*, ch. 29. —"It appeared," wrote Madison, in a letter to Jefferson, October 24th "to be the sincere and unanimous wish of the Convention to cherish and preserve the Union of the States. No proposition was made, no suggestion was thrown out, in favor of a partition of the Empire into two or more Confederacies. It was generally agreed that the objects of the Union could not be secured by any system founded on the principle of a confederation of Sovereign States. A voluntary observance of the federal law by all the members could never be hoped for. A compulsive one could evidently never be reduced to practice, and if it could, involved equal calamities to the innocent and the guilty, the necessity of a military force, both obnoxious and dangerous, and, in general, a scene resembling much more a civil war than the administration of a regular Government. Hence was embraced the alternative of a Government which, instead of operating on the States, should operate without their intervention on the individuals composing them; and hence the change in the principle and proportion of representation. This ground-work being laid, the great objects which presented themselves were: 1. To unite a proper energy

in the Executive, and a proper stability in the Legislative departments, with the essential characters of Republican Government. 2. To draw a line of demarkation which would give to the General Government every power requisite for general purposes, and leave to the States every power, which might be most beneficially administered by them. 3. To provide for the different interests of different parts of the Union. 4. To adjust the clashing pretensions of the large and small States. Each of these objects was pregnant with difficulties. The whole of them together formed a task more difficult than can well be conceived by those who were not concerned in the execution of it. Adding to these considerations the natural diversity of human opinions on all new and complicated subjects, it is impossible to consider the degree of concord which ultimately prevailed as less than a miracle. The first of these objects, as respects the Executive, was peculiarly embarrassing. On the question whether it should consist of a single person or a plurality of co-ordinate members, on the mode of appointment, on the duration in office, on the degree of power, on the re-eligibility, tedious and reiterated discussions took place. The plurality of co-ordinate members had finally but few advocates. Governor Randolph was at the head of them. The modes of appointment proposed were various: as by the people at large, by electors chosen by the people, by the Executives of the States, by the Congress; some preferring a joint ballot of the two Houses; some, a separate concurrent ballot, allowing to each a negative on the other house; some, a nomination of several candidates by one House, out of whom a choice should be made by the other. Several other modifications were started. The expedient at length adopted seemed to give pretty general satisfaction to the members. As to the duration in office, a few would have preferred a tenure during good behaviour; a considerable number would have done so in case an easy and effectual removal by impeachment could be settled. It was much agitated whether a long term, seven years for example, with a subsequent and perpetual ineligibility, or a short term, with a capacity to be re-elected, should be fixed. In favor of the first opinion were urged the danger of a gradual degeneracy of re-elections from time to time, into first a life and then a hereditary tenure, and the favorable effect of an incapacity to be reappointed on the independent exercise of the Executive authority. On the other side it was contended that the prospect of necessary degradation would discourage the most dignified characters from aspiring to the office; would take away the principal motive to the faithful discharge of its duties—the hope of being rewarded with a reappointment; would stimulate ambition to violent efforts for holding over the constitutional term; and instead of producing an independent administration and a firmer defence of the constitutional rights of the department, would render the officer more indifferent to the importance of a place which he would soon be obliged to quit forever, and more ready to yield to the encroachments of the Legislature, of which he might again be a member. The questions concerning the degree of power turned chiefly on the appointment to offices, and the control on the Legislature. An absolute appointment to all offices, to some offices, to no

offices, formed the scale of opinions on the first point. On the second, some contended for an absolute negative, as the only possible mean of reducing to practice the theory of a free Government, which forbids a mixture of the Legislative and Executive powers. Others would be content with a revisionary power, to be overruled by three-fourths of both Houses. It was warmly urged that the judiciary department should be associated in the revision. The idea of some was, that a separate revision should be given to the two departments; that if either objected, two-thirds, if both, three-fourths, should be necessary to overrule. In forming the Senate, the great anchor of the government, the questions, as they come within the first object, turned mostly on the mode of appointment, and the duration of it. The different modes proposed were: 1. By the House of Representatives. 2. By the Electors. 3. By electors chosen by the people for the purpose. 4. By the State Legislatures. On the point of duration, the propositions descended from good behaviour to four years, through the intermediate terms of nine, seven, six, and five years. The election of the other branch was first determined to be triennial, and afterwards reduced to biennial. The second object, the due partition of power between the General and local Governments, was perhaps, of all, the most nice and difficult. A few contended for an entire abolition of the States; some, for indefinite power of Legislation in the Congress, with a negative on the laws of the States; some, for such a power without a negative; some, for a limited power of legislation, with such a negative; the majority, finally, for a limited power without the negative. The question with regard to the negative underwent repeated discussions, and was finally rejected by a bare majority. . . . I return to the third object above mentioned, the adjustments of the different interests of different parts of the continent. Some contended for an unlimited power over trade, including exports as well as imports, and over slaves as well as other imports; some, for such a power, provided the concurrence of two-thirds of both Houses were required; some, for such a qualification of the power, with an exemption of exports and slaves; others, for an exemption of exports only. The result is seen in the Constitution. South Carolina and Georgia were inflexible on the point of the slaves. The remaining object created more embarrassment, and a greater alarm for the issue of the Convention, than all the rest put together. The little States insisted on retaining their equality in both branches, unless a complete abolition of the State Governments should take place; and made an equality in the Senate a *sine qua non*. The large States, on the other hand, urged that as the new Government was to be drawn principally from the people immediately, and was to operate directly on them, not on the States; and, consequently, as the States would lose that importance which is now proportioned to the importance of their voluntary compliance with the requisitions of Congress, it was necessary that the representation in both Houses should be in proportion to their size. It ended in the compromise which you will see, but very much to the dissatisfaction of several members from the large States.—J. Madison, *Letters and other Writings*, v. 1, pp. 344-354.—“Those who pro-

posed only to amend the old Articles of Confederation and opposed a new Constitution, objected that a government formed under such a Constitution would be not a federal, but a national, government. Luther Martin said, when he returned to Maryland, that the delegates 'appeared totally to have forgot the business for which we were sent. . . . We had not been sent to form a government over the Inhabitants of America considered as individuals. . . . That the system of government we were intrusted to prepare was a government over these thirteen States; but that in our proceedings we adopted principles which would be right and proper only on the supposition that there were no state governments at all, but that all the inhabitants of this extensive continent were in their individual capacity, without government, and in a state of nature.' He added that, 'in the whole system there was but one federal feature, the appointment of the senators by the States in their sovereign capacity, that is by their legislatures, and the equality of suffrage in that branch; but it was said that this feature was only federal in appearance.' The Senate, the second house as it was called in the convention, was in part created, it is needless to say, to meet, or rather in obedience to, reasoning like this. . . . The Luther Martin protestants were too radical to remain in the convention to the end, when they saw that such a confederacy as they wanted was impossible. But there were not many who went the length they did in believing that a strong central government was necessarily the destruction of the state governments. Still fewer were those who would have brought this about if they could. . . . The real difficulty, as Madison said in the debate on that question, and as he repeated again and again after that question was settled, was not between the larger and smaller States, but between the North and South; between those States that held slaves and those that had none. Slavery in the Constitution, which has given so much trouble to the Abolitionists of this century, and, indeed, to everybody else, gave quite as much in the last century to those who put it there. Many of the wisest and best men of the time, Southerners as well as Northerners, and among them Madison, were opposed to slavery. . . . Everywhere north of South Carolina, slavery was looked upon as a misfortune which it was exceedingly desirable to be free from at the earliest possible moment; everywhere north of Mason and Dixon's Line, measures had already been taken, or were certain soon to be taken, to put an end to it; and by the Ordinance for the government of all the territory north of the Ohio River, it was absolutely prohibited by Congress, in the same year in which the Constitutional Congress met. But it was, nevertheless, a thing to the confined existence of which the anti-slavery people of that time could consent without any violation of conscience. Bad as it was, unwise, wasteful, cruel, a mockery of every pretense of respect for the rights of man, they did not believe it to be absolutely wicked. . . . The question with the North was, how far could it yield; with the South, how far could it encroach. It turned mainly on representation. . . . There were some who maintained at first that the slave population should not be represented at all. Hamilton proposed in the first days of the convention 'that the rights of suffrage in the national legislature

ought to be proportioned to the number of free inhabitants.'—S. H. Gay, *James Madison*, ch. 7-8.—'When the great document was at last drafted by Gouverneur Morris, and was all ready for the signatures [September 17, 1787], the aged Franklin produced a paper, which was read for him, as his voice was weak. Some parts of this Constitution, he said, he did not approve, but he was astonished to find it so nearly perfect. Whatever opinion he had of its errors he would sacrifice to the public good, and he hoped that every member of the convention who still had objections would on this occasion doubt a little of his own infallibility, and for the sake of unanimity put his name to this instrument. Hamilton added his plea. A few members, he said, by refusing to sign, might do infinite mischief. . . . From these appeals, as well as from Washington's solemn warning at the outset, we see how distinctly it was realized that the country was on the verge of civil war. Most of the members felt so, but to some the new government seemed far too strong, and there were three who dreaded despotism even more than anarchy. Mason, Randolph, and Gerry refused to sign. . . . In the signatures the twelve states which had taken part in the work were all represented, Hamilton signing alone for New York.'—J. Fiske, *The Critical Period of Am. Hist.*, p. 303.—A 'popular delusion with regard to the Constitution is that it was created out of nothing; or, as Mr. Gladstone puts it, that 'It is the greatest work ever struck off at any one time by the mind and purpose of man.' The radical view on the other side is expressed by Sir Henry Maine, who informs us that the 'Constitution of the United States is a modified version of the British Constitution . . . which was in existence between 1760 and 1787.' The real source of the Constitution is the experience of Americans. They had established and developed admirable little commonwealths in the colonies; since the beginning of the Revolution they had had experience of State governments organized on a different basis from the colonial; and, finally, they had carried on two successive national governments, with which they had been profoundly discontented. The general outline of the new Constitution seems to be English; it was really colonial. The President's powers of military command, of appointment, and of veto were similar to those of the colonial governor. National courts were created on the model of colonial courts. A legislature of two houses was accepted because such legislatures had been common in colonial times. In the English Parliamentary system as it existed before 1760 the Americans had had no share; the later English system of Parliamentary responsibility was not yet developed, and had never been established in colonial governments; and they expressly excluded it from their new Constitution. They were little more affected by the experience of other European nations. . . . The chief source of the details of the Constitution was the State constitutions and laws then in force. Thus the clause conferring a suspensive veto on the President is an almost literal transcript from the Massachusetts constitution. In fact, the principal experiment in the Constitution was the establishment of an electoral college; and of all parts of the system this has worked least as the framers expected. The Constitution represents,

therefore, the accumulated experience of the time. . . . The real boldness of the Constitution is the novelty of the federal system which it set up."—A. B. Hart, *Formation of the Union (Epochs of Am. Hist.)*, sect. 63.—"That a constitution should be framed in detail by a body of uninstructed delegates, expressly chosen for that purpose, was familiar in the States of the Union; but was perhaps unexampled elsewhere in the world, and was certainly unexampled in the history of federations. That the instrument of federal government should provide for proportional representation in one house, and for a federal court, was a step in federal organization which marks a new federal principle. For many purposes the Union then created was stronger than the Prussian monarchy at that moment. In many respects the States were left stronger than the little nominally independent German principalities. The great merit of the members of the convention is their understanding of the temper of their own countrymen. They selected out of English, or colonial, or State usages such practices and forms as experience had shown to be acceptable to the people. . . . The Convention had further the wisdom to express their work in general though carefully stated principles. All previous federal governments had been fettered either by an imperfect and inadequate statement, as in the constitution of the United Netherlands, or by an unwritten constitution with an accumulation of special precedents, as in the Holy Roman Empire. The phrases of the Constitution of 1787 were broad enough to cover cases unforeseen. A third distinction of the federal Convention is the skill with which it framed acceptable compromises upon the three most difficult questions before it. The two Houses of Congress satisfied both large and small States; the three-fifths representation of slaves postponed an inevitable conflict; the allowance of the slave trade for a term of years made it possible for Congress to perfect commercial legislation. The Convention had profited by the experience of the Confederation: on every page of the Constitution may be found clauses which would not have stood there had it been framed in 1781. An adequate revenue was provided; foreign and interstate commerce was put under the control of Congress; the charge of foreign affairs was given entirely to the central authority; the powers of government were distributed among three departments."—A. B. Hart, *Introduction to the Study of Federal Government*, ch. 4.

A. D. 1787-1789.—The struggle for the Federal Constitution in the States.—Its ratification.—The end of the Confederation.—"The fate of the proposed Constitution remained doubtful for many months after the adjournment of the convention. Hamilton said it would be arrogance to conjecture the result. . . .

Delaware was the first state to accept it [Dec. 7, 1787]. Gratified by the concession of equality in the federal Senate, the ratification was prompt, enthusiastic, and unanimous. Pennsylvania was the second [Dec. 12]. The opposition was sharp, but Franklin was president of the state, and Wilson a delegate to the state convention. Their influence was great. . . . The ratification was effected by a vote of 46 to 23. Then New Jersey [Dec. 18] and Georgia [Jan. 2, 1788] followed unanimously. Next came Connecticut [Jan. 9] by a vote of 128 to 40. The result in these five states was the more easily obtained because the friends of the Constitution were prompt to act. With delay in the other states came a bitterness of contention which made the result doubtful. The first close struggle was in Massachusetts. The public creditor favored the proposed Constitution. He saw in it some hope of his long deferred pay. But the debtor class opposed it; for it would put an end to cheap paper money, with which they hoped to pay their debts, when it became still cheaper. . . . Hancock and Adams scarcely favored the Constitution. They feared it infringed upon the rights of the people, and especially upon the rights of the states. . . . Hancock finally came forward as a mediator. He proposed that the Constitution be ratified, with an accompanying recommendation that it be amended in the particulars in which it was thought to be defective. His proposition was adopted, and the Constitution was ratified [Feb. 6] by a vote of 187 to 168. Maryland next ratified the Constitution with much unanimity [April 28], notwithstanding the strenuous opposition of Luther Martin. . . . South Carolina followed next [May 23], and ratified the Constitution by a majority of 76, but recommended amendments substantially like those of Massachusetts. South Carolina was the eighth state; and, if one more could be obtained, the Constitution would take effect between the nine ratifying states. There remained the five states of Virginia, New York, New Hampshire, North Carolina, and Rhode Island. The state convention of Virginia was called for the 2d of June 1788, of New York for the 17th, and of New Hampshire for the 18th of the same month. The result was expected to be adverse in every one of these states. In Virginia the opposition was led by Patrick Henry. . . . Henry was ably seconded by Richard Henry Lee, William Grayson, and George Mason. . . . James Monroe followed their lead. James Madison and Governor Randolph were the leading champions of the new Constitution. . . . John Marshall, afterwards chief justice, came to their assistance. . . . The debate lasted a month. It may be read with instruction, as it is reported in the volumes of Elliott. The ratification prevailed [June 25] by a majority of ten in a vote of 186. After all, the influence of Washington procured the result. . . . Meanwhile, the state of New Hampshire had ratified the Constitution [June 21], but the fact was not known in Virginia. The opposition to the Constitution was great and bitter in the State of New York. Fortunately the convention was held so late that New Hampshire, the ninth state, had ratified while the New York convention was engaged in its heated discussions. Two thirds of the delegates were elected to oppose it. . . . The friends of the Constitution felt, long before the convention assembled, that

public discussion might be useful in overcoming the hostile attitude of the state. Accordingly, a series of essays in exposition of the Constitution was written by Hamilton, Madison, and Jay, over the common signature of 'Publius.' These essays were published in a newspaper, between October, 1787, and June, 1788. . . . They were subsequently collected and published in a volume styled 'The Federalist.' From that day to this, 'The Federalist' has held unequalled rank as an authority upon the construction of the Constitution." On the 24th of June a fleet courier, employed by Hamilton, brought from Concord to Poughkeepsie, where the New York convention sat, news of the ratification of the Constitution by New Hampshire, the ninth state. "Now, indeed, the situation was changed. There was no longer a confederacy; the Union was already formed. . . . The state must either join the new system or stay out of it. New York was not favorably situated for a separate nation. New England on the east, and New Jersey and Pennsylvania on the south, belonged to the new Union. Canada was on the north. . . . Delay, with its altered circumstances, finally brought to Hamilton and his party the victory that had been denied to argument and eloquence. But the Anti-Federalists were reluctant to yield, and the debate was prolonged," until the 26th of July, when the ratification was carried by 30 votes against 27. "North Carolina remained out of the Union until November, 1789, and Rhode Island until June, 1790. . . . The ratification by nine states having been certified to the Congress of the Confederacy, that body adopted a resolution fixing the first Wednesday of March, 1789, as the day when the new government should go into operation. As the day fell on the 4th of March, that day became fixed for the beginning and the end of congressional and presidential terms."—J. S. Landon, *Const. Hist. and Gov't of the U. S.*, lect. 4.

A. D. 1789.—The First Presidential Election.—Washington called to the head of the new Government.—"The adoption of the Federal constitution was another epoch in the life of Washington. Before the official forms of an election could be carried into operation a unanimous sentiment throughout the Union pronounced him the nation's choice to fill the presidential chair. He looked forward to the possibility of his election with characteristic modesty and unfeigned reluctance; as his letters to his confidential friends bear witness. . . . The election took place at the appointed time [the first Wednesday in January, 1789], and it was soon ascertained that Washington was chosen President for the term of four years from the 4th of March. By this time the arguments and entreaties of his friends, and his own convictions of public expediency, had determined him to accept. . . . From a delay in forming a quorum of Congress the votes of the electoral college were not counted until early in April, when they

were found to be unanimous in favor of Washington. 'The delay,' said he in a letter to General Knox, 'may be compared to a reprieve; for in confidence I tell you (with the world it would obtain little credit), that my movements to the chair of government will be accompanied by feelings not unlike those of a culprit, who is going to the place of his execution; so unwilling am I, in the evening of a life nearly consumed in public cares, to quit a peaceful abode for an ocean of difficulties, without that competency of political skill, abilities and inclination, which are necessary to manage the helm.' . . . At length on the 14th of April he received a letter from the president of Congress, duly notifying him of his election; and he prepared to set out immediately for New York, the seat of government."—W. Irving, *Life of Washington*, v. 4, ch. 37.—The secondary electoral votes, by which the Vice President was, at that time, chosen, were scattered among eleven candidates. John Adams received the greater number (34) though not quite a majority of the 69, and was elected.

A. D. 1789-1792.—Hamilton's report on Manufactures. See TARIFF LEGISLATION (UNITED STATES); A. D. 1789-1791.

A. D. 1789-1792.—Organization of the Federal government and first administration of Washington.—The dividing of Parties.—Federalists and Democratic Republicans.—March 4th, 1789, had been appointed for the formal inauguration of the new Government, but the members elect had not yet unlearned the Confederacy's slovenly habits. It was not until April 6th that a sufficient number of members of Congress arrived in New York to form a quorum and count the electoral votes. At that time, and until 1805, no electoral votes were cast distinctively for President and Vice-President. Each elector voted by ballot for two persons. If a majority of all the votes were cast for any person, he who received the greatest number of votes became President, and he who received the next greatest number became Vice-President. When the votes were counted in 1789 they were found to be, for George Washington, of Virginia, 69 (each of the electors having given him one vote), for John Adams, of Massachusetts, 34, and 35 for various other candidates. Washington received notice of his election, and, after a triumphal progress northward from his home at Mount Vernon, was sworn into office April 30th [at Federal Hall, corner Wall and Nassau Streets, New York]. The Vice-President had taken his place as presiding officer of the Senate a few days before. Frederick A. Muhlenberg, of Pennsylvania, was chosen Speaker of the House, but the vote had no party divisions, for Parties were still in a state of utter confusion. Between the extreme Anti-federalists, who considered the Constitution a long step toward a despotism, and the extreme Federalists, who desired a monarchy modeled on that of England, there were all varieties of political opinion. . . . The extreme importance of Washington lay in his ability, through the universal confidence in his integrity and good judgment, to hold together this alliance of moderate men for a time, and to prevent party contests upon the interpretation of federal powers until the Constitution should show its

merit and be assured of existence. The President selected his Cabinet with a careful regard to the opposite opinions of his supporters. The Treasury Department was given to Alexander Hamilton, of New York, a Federalist. . . . The War Department was given to General Henry Knox, of Massachusetts, also a Federalist. The State Department was given to Thomas Jefferson, of Virginia, an Anti-federalist. . . . Edmund Randolph, of Virginia, also an Anti-federalist, was appointed Attorney-General, and John Jay, of New York, a Federalist, Chief Justice of the Supreme Court. Twelve Amendments were adopted by this Session of Congress, in order to meet the conscientious objections of many moderate Anti-federalists, and to take the place of a 'Bill of Rights.' Ten of these, having received the assent of the necessary number of States, became a part of the Constitution, and now stand the first ten of the Amendments. They were intended to guarantee freedom of religion, speech, person, and property. . . . January 9th [1790] Hamilton offered his famous Report on the Settlement of the Public Debt. It consisted of three recommendations, first, that the foreign debt of the Confederacy should be assumed and paid in full; second, that the domestic debt of the Confederacy, which had fallen far below par and had become a synonym for worthlessness, should also be paid at its par value; and third, that the debts incurred by the States during the Revolution, and still unpaid, should be assumed and paid in full by the Federal Government. Hamilton's First recommendation was adopted unanimously. The Second was opposed, even by Madison and many moderate Anti-federalists, on the ground that the domestic debt was held by speculators, who had bought it at a heavy discount, and would thus gain usurious interest on their investment. Hamilton's supporters argued that, if only for that reason, they should be paid in full, that holders of United States securities might learn not to sell them at a discount, and that the national credit might thus be strengthened for all time to come. After long debate the second recommendation was also adopted. Hamilton's Third recommendation involved a question of the powers of the Federal Government. It therefore for the first time united all the Anti-federalists in opposition to it. They feared that the rope of sand of the Confederacy was being carried to the opposite extreme; that the 'money power' would, by this measure, be permanently attached to the Federal Government; and that the States would be made of no importance. But even this recommendation was adopted, though only by a vote of 31 to 26 in the House. A few days later, however, the Anti-federalists received a reinforcement of seven newly arrived North Carolina members. The third resolution was at once reconsidered, and voted down by a majority of two. Hamilton secured the final adoption of the third resolution by a bargain which excited the deep indignation of the Anti-federalists. A National Capital was to be selected. The Federalists agreed to vote that it should be fixed upon the Potomac River [see WASHINGTON (CITY): A. D. 1791], after remaining ten years in Philadelphia, and two Anti-federalist members from the Potomac agreed in return to vote for the third resolution, which was then finally adopted. Hamilton's entire report was thus successful. Its

immediate effects were to appreciate the credit of the United States, and to enrich the holders of the Continental debt. Its further effect was to make Hamilton so much disliked by Anti-federalists that, despite his acknowledged talents, his party never ventured to nominate him for any elective office. . . . Party Organization may be considered as fairly begun about the close [of the first Session of the Second Congress, in 1792]. . . . The various Anti-federalist factions, by union in resisting the Federalists, had learned to forget minor differences and had been welded into one party which only lacked a name. That of Anti-federalist was no longer applicable, for its opposition to the Federal Union had entirely ceased. A name was supplied by Jefferson, the recognized leader of the party, after the French Revolution had fairly begun its course. That political convulsion had, for some time after 1789, the sympathy of both Federalists and Anti-federalists, for it seemed the direct outgrowth of the American Revolution. But, as its leveling objects grew cooler more apparent, the Federalists grew cooler and the Anti-federalists warmer towards it. The latter took great pains, even by dress and manners, to show the keenness of their sympathy for the Republicans of France, and about this time adopted the name Democratic-Republican, which seemed sufficiently comprehensive for a full indication of their principles. This has always been the official party title. It is now abbreviated to Democratic, though the name Democrat was at first used by Federalists as one of contempt, and the party called itself Republican, a title which it could hardly claim with propriety, for its tendency has always been toward a democracy, as that of its opponents has been toward a strong republic. The name Republican, therefore, belongs most properly to its present possessors (1870). But it must be remembered that the party which will be called Republican until about 1828 was the party which is now called Democratic.—A. Johnston, *Hist. of Am. Politics*, ch. 2.—Jefferson's bitterness of hostility to the Federalists was due to the belief that they aimed at the overthrow of the Republic. His conviction as to these really reasonable purposes in the leaders of the party was often expressed, but never more distinctly than in a letter written in 1813 to an English traveller, Mr. Melish. At the same time, he set forth the principles and aims of his own party: "Among that section of our citizens called federalists," he wrote, "there are three shades of opinion. Distinguishing between the leaders and people who compose it, the leaders consider the English constitution as a model of perfection, some, with a correction of its vices, others, with all its corruptions and abuses. This last was Alexander Hamilton's opinion, which others, as well as myself, have often heard him declare, and that a correction of what are called its vices would render the English an impracticable government. This government they wished to have established here, and only accepted and held fast, at first, to the present constitution, as a stepping-stone to the final establishment of their favorite model. This party has therefore always clung to England as their prototype and great auxiliary in promoting and effecting this change. A weighty minority, however, of these leaders, considering the voluntary conversion of our government into a monarchy as too distant, if not desperate, wish

to break off from our Union its eastern fragment, as being, in truth, the hot-bed of American monarchism, with a view to a commencement of their favorite government, from whence the other States may gangrene by degrees, and the whole be thus brought finally to the desired point. For Massachusetts, the prime mover in this enterprise, is the last State in the Union to mean a final separation, as being of all the most dependent on the others. Not raising bread for the sustenance of her own inhabitants, not having a stick of timber for the construction of vessels, her principal occupation, nor an article to export in them, where would she be, excluded from the ports of the other States, and thrown into dependence on England, her direct, and natural, but now insidious rival? At the head of this minority is what is called the Essex Junto of Massachusetts. But the majority of these leaders do not aim at separation. In this, they adhere to the known principle of General Hamilton, never, under any views, to break the Union. Anglomany, monarchy, and separation, then, are the principles of the Essex federalists. Anglomany and monarchy, those of the Hamiltonians, and Anglomany alone, that of the portion among the people who call themselves federalists. These last are as good republicans as the brethren whom they oppose, and differ from them only in their devotion to England and hatred of France which they have imbibed from their leaders. The moment that these leaders should avowedly propose a separation of the Union, or the establishment of regal government, their popular adherents would quit them to a man, and join the republican standard; and the partisans of this change, even in Massachusetts, would thus find themselves an army of officers without a soldier. The party called republican is steadily for the support of the present constitution. They obtained at its commencement all the amendments to it they desired. These reconciled them to it perfectly, and if they have any ulterior view, it is only, perhaps, to popularize it further, by shortening the Senatorial term, and devising a process for the responsibility of judges, more practicable than that of impeachment. They esteem the people of England and France equally, and equally detest the governing powers of both. This I verily believe, after an intimacy of forty years with the public councils and characters, is a true statement of the grounds on which they are at present divided, and that it is not merely an ambition for power. An honest man can feel no pleasure in the exercise of power over his fellow citizens. And considering as the only offices of power those conferred by the people directly, that is to say, the executive and legislative functions of the General and State governments, the common refusal of these, and multiplied resignations, are proofs sufficient that power is not alluring to pure minds, and is not, with them, the primary principle of contest. This is my belief of it; it is that on which I have acted; and had it been a mere contest who should be permitted to administer the government according to its genuine republican principles, there has never been a moment of my life in which I should have relinquished for it the enjoyments of my family, my farm, my friends and books. You expected to discover the difference of our party principles in General Washington's valedictory, and my inaugural address.

Not at all. General Washington did not harbor one principle of federalism. He was neither an Anglioman, a monarchist, nor a separatist. He sincerely wished the people to have as much self-government as they were competent to exercise themselves. The only point on which he and I ever differed in opinion, was, that I had more confidence than he had in the natural integrity and discretion of the people, and in the safety and extent to which they might trust themselves with a control over their government. He has asseverated to me a thousand times his determination that the existing government should have a fair trial, and that in support of it he would spend the last drop of his blood. He did this the more repeatedly, because he knew General Hamilton's political bias, and my apprehensions from it."—T. Jefferson, *Letter to Mr. Melish, Jan. 13, 1813* (*Writings, ed. by Washington, v. 6*). —The view taken at the present day of the Federalism and the Federalists of the first three decades of the Union, among those who see more danger in the centrifugal than in the centripetal forces in government, are effectively stated in the following: "The popular notion in regard to Federalism is that to which the name naturally gives rise. By Federalists are commonly understood those men who advocated a union of the States and an efficient Federal government. This conception is true, but is at the same time so limited that it may fairly be called superficial. The name arose from its first object which the friends of the Constitution strove to achieve; but this object, the more perfect union, and even the Constitution itself, were but means to ends of vastly more importance. The ends which the Federalists sought formed the great principles on which the party was founded, and it can be justly said that no nobler or better ends were ever striven for by any political party or by any statesmen. The first and paramount object of the Federalists was to build up a nation and to create a national sentiment. For this they sought a more perfect union. Their next object was to give the nation they had called into existence not only a government, but a strong government. To do this, they had not only to devise a model, to draw a constitution, to organize a legislature, executive, and judiciary, but they had to equip the government thus formed with all those adjuncts without which no government can long exist under the conditions of modern civilization. The Federalists had to provide for the debt, devise a financial and foreign policy, organize an army, fortify the ports, found a navy, impose and collect taxes, and put in operation an extensive revenue system. We of the English race—whose creed is that governments and great political systems grow and develop slowly, are the results of climate, soil, race, tradition, and the exigencies of time and place, who wholly disavow the theory that perfect governments spring in a night from the heated brains of Frenchmen or Spaniards—can best appreciate the task with which our ancestors grappled. . . . Upon a people lately convulsed by civil war, upon a people who had lost their old political habits and traditions without finding new ones in their stead, it was necessary to impose a government, and to create a national sentiment. This the Federalists did, and they need no other eulogy. With no undue national pride, we can justly say that the adoption and support of the

Constitution offer an example of the political genius of the Anglo-Saxon race to which history cannot furnish a parallel. The political party to whose exertions these great results were due was the Federal party. They were the party of order, of good government, and of conservatism. Against them was ranged a majority of their fellow-citizens. But this majority was wild, anarchical, disunited. The only common ground on which they could meet was that of simple opposition. The only name they had was anti-Federalists. They had neither leaders, discipline, objects, nor even a party cry. Before the definite aims and concentrated ability of the Federalists, they fled in helpless disorder, like an unarmed mob before advancing soldiers. But, though dispersed, the anti-Federalists were still in a numerical majority. They needed a leader, organization, and opportunity, and they soon found all three. Thomas Jefferson arrived in New York, not only to enter into Washington's cabinet, and lend the aid of his great talents to the success of the new scheme, but soon also to put himself at the head of the large though demoralized opposition to the administration he had sworn to support. Filled with the wild democratic theories which his susceptible nature had readily imbibed in France, Jefferson soon infused them into the minds of most of his followers. Instead of a vague dislike to any and all government, he substituted a sharp and factious opposition to each and every measure proposed by the friends of the Constitution."—H. C. Lodge, *Life and Letters of George C. C. Cabot*, ch. 11.

A. D. 1792.—Second Presidential Election.—George Washington re-elected with unanimity, receiving 132 votes of the Electoral College, John Adams, Vice President, receiving 77 votes, with 50 cast for George Clinton, 4 for Jefferson and 1 for Burr.

A. D. 1793.—The First Fugitive Slave Law.—For some time after the adoption of the Federal Constitution, its provision relating to the rendition of persons "held to service or labor in one State, under the laws thereof, escaping into another" remained without legislation to execute it; "and it is a striking fact that the call for legislation came not from the South, but from a free State; and that it was provoked, not by fugitive slaves, but by kidnappers. . . . A free negro named John was seized at Washington, Pennsylvania, in 1791, and taken to Virginia. The Governor of Pennsylvania, at the instigation of the Society for the Abolition of Slavery, asked the return of the three kidnappers; but the Governor of Virginia replied that, since there was no national law touching such a case, he could not carry out the request. On the matter being brought to the notice of Congress by the Governor of Pennsylvania, a bill was passed which "became law by the signature of the President, February 12, 1793. . . . The act provided at the same time for the recovery of fugitives from justice and from labor; but the alleged criminal was to have a protection through the requirement of a requisition, a protection denied to the man on trial for his liberty only. The act was applicable to fugitive apprentices as well as to slaves, a provision of some importance at the time. In the Northwest Territory there were so-called negro apprentices, who were virtually slaves, and to whom the law applied, since it was in terms extended to all the Territories. Proceedings began with the forcible seizure of the alleged fugitive. The act, it will be observed, does not admit a trial by jury. It

allowed the owner of the slave, his agent or attorney, to seize the fugitive and take him before any judge of a United States Circuit or District Court, or any local magistrate. The only requirement for the conviction of the slave was the testimony of his master, or the affidavit of some magistrate in the State from which he came, certifying that such a person had escaped. Hindering arrest or harboring a slave was punishable by a fine of five hundred dollars. The law thus established a system allowing the greatest harshness to the slave and every favor to the master. Even at that time, when persons might still be born slaves in New York and New Jersey, and gradual emancipation had not yet taken full effect in Rhode Island and Connecticut, it was repellant to the popular sense of justice; there were two cases of resistance to the principle of the act before the close of 1793. Until 1850 no further law upon this subject was passed, but as the provisions of 1793 were found ineffectual, many attempts at amendment were made."—M. G. McDougall, *Fugitive Slaves, 1619-1865 (Fay House Monographs, no. 3), pp. 17-19.*—"The fugitive-slave clause in the Constitution is of course obligatory, but there is a wide distinction between the fugitive-slave clause and the fugitive-slave law. The Constitution gives no power to Congress to legislate on the subject, but imposes on the States the obligation of rendition. Chief-Justice Horblower, of New York, and Chancellor Walworth, of New York, long since pronounced the fugitive law of '93 unconstitutional on this very ground."—William Jay, *Letter to Josiah Quincy (quoted in B. Tuckerman's "William Jay and the Constitutional Movement for the Abolition of Slavery")*.

A. D. 1793.—Popular sympathy with the French Revolution.—Washington's Proclamation of Neutrality.—Insolent conduct of the French minister, Genet.—"The French Revolution, as was natural from the all-important services rendered by France to the United States in their own revolutionary struggle, enlisted the warm sympathy of the American people. . . . As the United States were first introduced to the family of nations by the alliance with France of 1778, the very important question arose, on the breaking out of the war between France and England, how far they were bound to take part in the contest. The second article of the treaty of alliance seemed to limit its operation to the then existing war between the United States and Great Britain; but by the eleventh article the two contracting powers agreed to 'guarantee mutually from the present time and forever, against all other powers,' the territories of which the allies might be in possession respectively at the moment the war between France and Great Britain should break out, which was anticipated as the necessary consequence of the alliance. Not only were the general sympathies of America strongly with France, but the course pursued by Great Britain toward the United States, since the peace of 1783, was productive of extreme irritation, especially her refusal to give up the western posts, which . . . had the effect of involving the northwestern frontier in a prolonged and disastrous Indian war. These causes, together with the recent recollections of the revolutionary struggle, disposed the popular mind to make common cause with France, in what was regarded as the war of

a people struggling for freedom against the combined despots of Europe. Washington, however, from the first, determined to maintain the neutrality of the country;" and, with the unanimous advice of his cabinet, he issued (April 22, 1793) a proclamation of neutrality. "This proclamation, though draughted by Mr. Jefferson and unanimously adopted by the Cabinet, was violently assailed by the organs of the party which followed his lead. . . . The growing excitement of the popular mind was fanned to a flame by the arrival at Charleston, South Carolina [April 9], of 'Citizen' Genet, who was sent as the minister of the French Republic to the United States. Without requiring to the seat of government, or being accredited in any way, in his official capacity, he began to fit out privateers in Charleston, to cruise against the commerce of England. Although the utmost gentleness and patience were observed by the executive of the United States in checking this violation of their neutrality, Genet assumed from the first a tone of defiance, and threatened before long to appeal from the government to the people. These insolent demonstrations were of course lost upon Washington's firmness and moral courage. They distressed, but did not in the slightest degree intimidate him; and their effect on the popular mind was to some extent neutralized by the facts, that the chief measures to maintain the neutrality of the country had been unanimously advised by the Cabinet, and that the duty of rebuking his intemperate course had devolved upon the secretary of state [Jefferson], the recognized head of the party to which Genet looked for sympathy."—E. Everett, *Life of Washington, ch. 8.*—A demand for "Genet's recall was determined on during the first days of August. There was some discussion over the manner of requesting the recall, but the terms were made gentle by Jefferson, to the disgust of the Secretary of the Treasury and the Secretary of War [Hamilton and Knox], who desired direct methods and stronger language. As finally toned up and agreed upon by the President and cabinet, the document was sufficiently vigorous to annoy Genet, and led to bitter reproaches addressed to his friend in the State Department. . . . The letter asking Genet's recall, as desired by Washington, went in due time, and in the following February came a successor. Genet, however, did not go back to his native land, for he preferred to remain here and save his head, valueless as that article would seem to have been. He spent the rest of his days in America, married, harmless, and quite obscure. His noise and fireworks were soon over, and one wonders now how he could ever have made as much flare and explosion as he did."—H. C. Lodge, *George Washington, v. 2, pp. 155-156.*

A. D. 1793.—Whitney's Cotton-gin and the series of inventions which it made complete.—Their political effect.—The strengthening of the Slave Power, and the strengthening of Unionism.—"Some English artisans, who, about the middle of the last century, were obtaining a scanty living by spinning, weaving and other such occupations, turned their inventive talent to the improvement of their art. Paul and

Wyatt introduced the operation of spinning by rollers; Higs, or Hargreaves, invented the jenny, by which a great many threads could be spun as easily as one. Paul devised the rotating carding-engine; Crompton the mule; Arkwright the water-frame, which produced any number of threads of any degree of fineness and hardness. These ingenious machines constituted a very great improvement on the spindle and distaff of ancient times, and on the spinning-wheel, originally brought from Asia, or perhaps reinvented in Europe. At length one spinner was able to accomplish as much work as one hundred could have formerly done. While the art of producing threads was undergoing this singular improvement, Cartwright, a clergyman, invented, in 1785, the power-loom, intended to supersede the operation of weaving by hand, and to make the production of textile fabrics altogether the result of machinery. After some modifications, that loom successfully accomplished the object for which it was devised. As these inventions succeeded, they necessarily led to a demand for motive power. In the first little cotton factory, the germ of that embodiment of modern industry, the cotton-mill, a water-wheel was employed to give movement to the machinery. The establishment was, therefore, necessarily placed near a stream, where a sufficient fall could be obtained. The invention of the steam-engine by Watt, which was the consequence of the new and correct views of the nature of vapors that had been established by Dr. Black, supplied, in due time, the required motive power, and by degrees the water-wheel went almost out of use. Textile manufacture needed now but one thing more to become of signal importance—it needed a more abundant supply of raw material. . . . Cotton, the fibre chiefly concerned in these improvements, was obtained in limited quantities from various countries; but, at the time of the adoption of the Constitution, not a single pound was exported from the United States. What was grown here was for domestic consumption. Every good housewife had her spinning-wheel, every plantation its hand-loom. The difficulty of supplying cotton fibre in quantity sufficient to meet the demands of the new machinery was due to the imperfect means in use for separating the cotton from its seeds—a tedious operation, for the picking was done by hand. Eli Whitney, a native of Massachusetts, by his invention of the cotton-gin in 1793, removed that difficulty. The fibre could be separated from the seeds with rapidity and at a trifling cost. There was nothing now to prevent an extraordinary development in the English manufactures. A very few years showed what the result would be. In 1790 no cotton was exported from the United States. Whitney's gin was introduced in 1793. The next year about 1½ million of pounds were exported; in 1795, about 5½ millions; in 1800, the quantity had reached 2,000 millions of pounds. The political effect of this mechanical invention, which thus proved to be the completion of all the previous English inventions, being absolutely necessary to give them efficacy, was at once seen in its accomplishing a great increase and a redistribution of population in England. . . . In the United States the effects were still more important. Cotton could be grown through all the Southern Atlantic and the Gulf States. It was more profitable than any other crop—but it was

raised by slaves. Whatever might have been the general expectation respecting the impending extinction of slavery, it was evident that at the commencement of this century the conditions had altogether changed. A powerful interest had come into unforeseen existence both in Europe and America which depended on perpetuating that mode of labor. Moreover, before long it was apparent that, partly because of the adaptation of their climate to the growth of the plant, partly because of the excellence of the product, and partly owing to the increasing facilities for interior transportation, the cotton-growing states of America would have a monopoly in the supply of this staple. But, though mechanical invention had reinvigorated the slave power by bestowing on it the cotton-gin, it had likewise strengthened unionism by another inestimable gift—the steam-boat. At the very time that the African slave-trade was prohibited, Fulton was making his successful experiment of the navigation of the Hudson River by steam. This improvement in inland navigation rendered available, in a manner never before contemplated, the river and lake system of the continent; it gave an instantaneous value to the policy of Jefferson, by bringing into effectual use the Mississippi and its tributaries; it crowded with population the shores of the lakes; it threw the whole continent open to commerce, it strengthened the central power at Washington by diminishing space, and while it extended geographically the domain of the republic, it condensed it politically. It bound all parts of the Union more firmly together. . . . In the Constitution it had been agreed that three fifths of the slaves should be accounted as federal numbers in the apportionment of federal representation. A political advantage was thus given to slave labor. This closed the eyes of the South to all other means of solving its industrial difficulties. . . . To the cotton-planter two courses were open. He might increase his manual force, or he might resort to machinery. . . . It required no deep political penetration for him to perceive that the introduction of machinery must in the end result in the emancipation of the slave. Machinery and slavery are incompatible—the slave is displaced by the machine. In the Southern States political reasons thus discouraged the introduction of machinery. Under the Constitution an increased negro force had a political value, machinery had none. The cotton interest was therefore persuaded by those who were in a position to guide its movements, that its prosperity could be secured only through increased manual labor.”—Dr. J. W. Draper, *History of the American Civil War*, sect. 3, ch. 16 (p. 1).—See, also, below: A. D. 1818-1821.

A. D. 1794-1795.—Threatening relations with Great Britain.—The Jay Treaty.—“The daily increasing ‘love-frenzy for France,’ and the intemperate language of the Democratic press, naturally emphasized in England that reaction against America which set in with the treaty of peace. On the other hand, the retention of the frontier posts in violation of that treaty was a thorn in the side of the young Republic. In the course of the war England had adopted, by successive Orders in Council, a policy ruinous to the

commerce of neutral nations, especially of the United States. In the admiralty courts of the various British West India Islands hundreds of ships from New England were seized and condemned, for carrying French produce or bearing cargoes of provisions chartered to French ports. The New England fishermen and shipowners were vociferous for war, and the Democratic clubs denounced every British insult and celebrated every French victory. On March 26, 1794, an embargo against British ships was proclaimed for thirty days, and then extended for thirty days longer. The day after the embargo was laid, Dayton, of New Jersey, moved in Congress to sequester all moneys due to British creditors, and apply it towards indemnifying shipowners for losses incurred through the Orders in Council; and on April 21st the Republicans moved a resolution to suspend all commercial intercourse with Great Britain till the western posts should be given up, and indemnity be paid for injuries to American commerce in violation of the rights of neutrals. The passage of such an act meant war; and for war the United States was never more unprepared. . . . Peace could be secured only by immediate negotiation and at least a temporary settlement of the causes of neutral irritation, and for such a task the ministers at London and Washington were incompetent or unsuited. . . . In this crisis Washington decided to send to England a special envoy. Hamilton was his first choice, but Hamilton had excited bitter enmities." On Hamilton's recommendation, John Jay, the Chief Justice, was chosen for the difficult mission, and he sailed for England in May, 1794, landing at Falmouth on the 8th of June. Within the succeeding five months he accomplished the negotiation of a treaty, which was signed on the 19th of November. "The main points that Jay had been instructed to gain were compensation for negroes [carried away by the British armies on the evacuation of the country in 1783], surrender of the posts, and compensation for spoiliations; in addition, a commercial treaty was desired. When Secretary for Foreign Affairs, Jay had argued that the negroes, some 3,000 in number, who, at the time of the evacuation, were within the British lines, relying on proclamations that offered freedom, and who followed the troops to England, came within that clause of the treaty of peace which provided that the army should be withdrawn without 'carrying away any negroes or other property.' Lord Grenville, however, insisted upon refusing any compensation. Once within the British lines, he said, slaves were free for good and all. . . . From any point of view the matter was too insignificant to wreck the treaty upon it, and Jay waived the claim. As to the western posts [Oswego, Niagara, Detroit, Mackinaw, etc.], it was agreed that they should be surrendered by June 12, 1796. But compensation for the detention was denied on the ground that it was due to the breach of the treaty by the United States in permitting the States to prevent the recovery of British debts." For the determination and payment of such debts, it was now provided that a board of five commissioners should sit at Philadelphia; while another similar board at London should award compensation for irregular and illegal captures or condemnations made during the war between Great Britain and France. "Under this clause Ameri-

can merchants received \$10,845,000. . . . The disputed questions of boundaries, arising from the construction of the treaty of peace, were referred to joint commissioners: properly enough, as the confusion was due to ignorance of the geography of the Northwest. British and American citizens holding lands at the time respectively in the United States and in any of the possessions of Great Britain were secured in their rights; a clause much objected to in America, but which was obviously just. A still more important provision followed, a novelty in international diplomacy, and a distinct advance in civilization: that war between the two countries should never be made the pretext for confiscation of debts or annulment of contracts between individuals. In the War of 1812 the United States happened for the moment to be the creditor nation, and the millions which this provision saved to her citizens it would be difficult to estimate. . . . It was the commercial articles which excited the most intense hostility in America. . . . To unprejudiced eyes, after the lapse of a hundred years, considering the mutual exasperation of the two peoples, the pride of England in her successes in the war with France, the weakness and division of the United States, the treaty seems a very fair one. Certainly one far less favorable to America would have been infinitely preferable to a war, and would probably in the course of time have been accepted as being so. The commercial advantages were not very considerable, but they at least served as 'an entering wedge,' to quote Jay's expression, and they were 'pro tanto' a clear gain to America. . . . The treaty was not published till July 2d. . . . Even before its contents were known, letters, signed 'Franklin,' appeared abusing the treaty; and in Philadelphia an effigy of Jay was placed in the pillory, and finally taken down, guillotined, the clothes fired, and the body blown up. It was clear, then, that it was not this particular treaty, but any treaty at all with Great Britain, that excited the wrath of the Republicans. On July 4th toasts insulting Jay or making odious puns on his name, were the fashion. . . . On June 24th the treaty was ratified by the Senate, with the exception of the article about the West India trade. On August 15th it was signed, with the same exception by Washington."—G. Pellow, *John Jay*, ch. 11.—"The reception given to the treaty cannot be fully explained by the existing relations between the United States and England. It was only in consequence of its Francomania that the opposition assumed the character of blind rage."—H. von Holst, *Const. and Political Hist. of the U. S.*, v. 1, p. 124.

A. D. 1796.—Washington's Farewell Address.—"The period for the presidential election was drawing near, and great anxiety began to be felt that Washington would consent to stand for a third term. No one, it was agreed, had greater claim to the enjoyment of retirement, in consideration of public services rendered; but it was thought the affairs of the country would be in a very precarious condition should he retire

before the wars of Europe were brought to a close. Washington, however, had made up his mind irrevocably on the subject, and resolved to announce, in a farewell address, his intention of retiring. Such an instrument, it will be recollected, had been prepared for him from his own notes, by Mr. Madison, when he had thought of retiring at the end of his first term. As he was no longer in confidential intimacy with Mr. Madison, he turned to Mr. Hamilton as his adviser and coadjutor, and appears to have consulted him on the subject early in the present year [1796], for, in a letter dated New York, May 10th, Hamilton writes: "When last in Philadelphia, you intreated to me your wish that I should 're-dress' a certain paper which you had prepared. As it is important that a thing of this kind should be done with great care and much at leisure, touched and retouched, I submit a wish that, as soon as you have given it the body you mean it to have, it may be sent to me." The paper was accordingly sent, on the 15th of May, in its rough state, altered in one part since Hamilton had seen it. "If you should think it best to throw the whole into a different form," writes Washington, "let me request, notwithstanding, that my draft may be returned to me (along with yours) with such amendments and corrections as to render it as perfect as the formation is susceptible of; curtailed if too verbose, and relieved of all tautology not necessary to enforce the ideas in the original or quoted part. My wish is, that the whole may appear in a plain style; and be handed to the public in an honest, unaffected, simple garb." We forbear to go into the vexed question concerning this address; how much of it is founded on Washington's original 'notes and heads of topics'; how much was elaborated by Madison, and how much is due to Hamilton's recasting and revision. The whole came under the supervision of Washington; and the instrument, as submitted to the press, was in his handwriting, with many ultimate corrections and alterations. Washington had no pride of authorship; his object always was to effect the purpose in hand, and for that he occasionally invoked assistance, to ensure a plain and clear exposition of his thoughts and intentions. The address certainly breathes his spirit throughout, is in perfect accordance with all his words and actions, and "in an honest, unaffected, simple garb," embodies the system of policy on which he had acted throughout his administration. It was published in September [17], in a Philadelphia paper called the Daily Advertiser. The publication of the Address produced a great sensation. Several of the State legislatures ordered it to be put on their journals."—W. Irving, *Life of Washington*, v. 5, ch. 30.

The following is the text of the Address.

"To the people of the United States. Friends and Fellow-Citizens: The period for a new election of a citizen, to administer the executive government of the United States, being not far distant, and the time actually arrived, when your thoughts must be employed in designating the person, who is to be clothed with that important trust, it appears to me proper, especially as it may conduce to a more distinct expression of the public voice, that I should now apprise you of the resolution I have formed, to decline being considered among the number of those, out of whom a choice is to be made. I beg you,

at the same time, to do me the justice to be assured, that this resolution has not been taken without a strict regard to all the considerations appertaining to the relation, which binds a dutiful citizen to his country; and that, in withdrawing the tender of service, which silence in my situation might imply, I am influenced by no diminution of zeal for your future interest; no deficiency of grateful respect for your past kindness; but am supported by a full conviction that the step is compatible with both. The acceptance of, and continuance hitherto in, the office to which your suffrages have twice called me, have been a uniform sacrifice of inclination to the opinion of duty, and to a deference for what appeared to be your desire. I constantly hoped, that it would have been much earlier in my power, consistently with motives, which I was not at liberty to disregard, to return to that retirement, from which I had been reluctantly drawn. The strength of my inclination to do this, previous to the last election, had even led to the preparation of an address to declare it to you; but mature reflection on the then perplexed and critical posture of our affairs with foreign nations, and the unanimous advice of persons entitled to my confidence, impelled me to abandon the idea. I rejoice, that the state of your concerns, external as well as internal, no longer renders the pursuit of inclination incompatible with the sentiment of duty, or propriety; and am persuaded, whatever partiality may be retained for my services, that, in the present circumstances of our country, you will not disapprove my determination to retire. The impressions, with which I first undertook the arduous trust, were explained on the proper occasion. In the discharge of this trust, I will only say, that I have, with good intentions, contributed towards the organization and administration of the government the best exertions of which a very fallible judgment was capable. Not unconscious, in the outset, of the inferiority of my qualifications, experience in my own eyes, perhaps still more in the eyes of others, has strengthened the motives to diffidence of myself; and every day the increasing weight of years admonishes me more and more, that the shade of retirement is as necessary to me as it will be welcome. Satisfied, that, if any circumstances have given peculiar value to my services, they were temporary, I have the consolation to believe, that, while choice and prudence invite me to quit the political scene, patriotism does not forbid it. In looking forward to the moment, which is intended to terminate the career of my public life, my feelings do not permit me to suspend the deep acknowledgment of that debt of gratitude, which I owe to my beloved country for the many honors it has conferred upon me; still more for the steadfast confidence with which it has supported me; and for the opportunities I have thence enjoyed of manifesting my inviolable attachment, by services faithful and persevering, though in usefulness unequal to my zeal. If benefits have resulted to our country from these services, let it always be remembered to your praise, and as an instructive example in our annals, that under circumstances in which the passions, agitated in every direction, were liable to mislead, amidst appearances sometimes dubious, vicissitudes of fortune often discouraging, in situations in which not unfrequently want of

success has countenanced the spirit of criticism, the constancy of your support was the essential prop of the efforts, and a guarantee of the plans by which they were effected. Profoundly penetrated with this idea, I shall carry it with me to my grave, as a strong incitement to unceasing vows that Heaven may continue to you the choicest tokens of its beneficence; that your union and brotherly affection may be perpetual; that the free constitution, which is the work of your hands, may be sacredly maintained; that its administration in every department may be stamped with wisdom and virtue; that, in fine, the happiness of the people of these States, under the auspices of liberty, may be made complete, by so careful a preservation and so prudent a use of this blessing, as will acquire to them the glory of recommending it to the applause, the affection, and adoption of every nation, which is yet a stranger to it. Here, perhaps, I ought to stop. But a solicitude for your welfare, which cannot end but with my life, and the apprehension of danger, natural to that solicitude, urge me, on an occasion like the present, to offer to your solemn contemplation, and to recommend to your frequent review, some sentiments, which are the result of much reflection, of no inconsiderable observation, and which appear to me all-important to the permanency of your felicity as a People. These will be offered to you with the more freedom, as you can only see in them the disinterested warnings of a parting friend, who can possibly have no personal motive to bias his counsel. Nor can I forget, as an encouragement to it, your indulgent reception of my sentiments on a former and not dissimilar occasion. Interwoven as is the love of liberty with every ligament of your hearts, no recommendation of mine is necessary to fortify or confirm the attachment. The unity of Government, which constitutes you one people, is also now dear to you. It is justly so: for it is a main pillar in the edifice of your real independence, the support of your tranquillity at home, your peace abroad; of your safety; of your prosperity; of that very Liberty, which you so highly prize. But as it is easy to foresee, that, from different causes and from different quarters, much pains will be taken, many artifices employed, to weaken in your minds the conviction of this truth; as this is the point in your political fortress against which the batteries of internal and external enemies will be most constantly and actively (though often covertly and insidiously) directed, it is of infinite moment, that you should properly estimate the immense value of your national Union to your collective and individual happiness; that you should cherish a cordial, habitual, and immovable attachment to it; accustoming yourselves to think and speak of it as of the Palladium of your political safety and prosperity; watching for its preservation with jealous anxiety; discountenancing whatever may suggest ever a suspicion, that it can in any event be abandoned; and indignantly frowning upon the first dawning of every attempt to alienate any portion of our country from the rest, or to enfeeble the sacred ties which now link together the various parts. For this you have every inducement of sympathy and interest. Citizens, by birth or choice, of a common country, that country has a right to concentrate your affections. The name of Ameri-

can, which belongs to you, in your national capacity, must always exult the just pride of Patriotism, more than any appellation derived from local discriminations. With slight shades of difference, you have the same religion, manners, habits, and political principles. You have in a common cause fought and triumphed together; the Independence and Liberty you possess are the work of joint counsels, and joint efforts, of common dangers, sufferings, and successes. But these considerations, however powerfully they address themselves to your sensibility, are greatly outweighed by those, which apply more immediately to your interest. Here every portion of our country finds the most commanding motives for carefully guarding and preserving the Union of the whole. The North, in an unrestrained intercourse with the South, protected by the equal laws of a common government, finds, in the productions of the latter, great additional resources of maritime and commercial enterprise and precious materials of manufacturing industry. The South, in the same intercourse, benefiting by the agency of the North, sees its agriculture grow and its commerce expand. Turning partly into its own channels the stream of the North, it finds its particular navigation invigorated; and, while it contributes, in different ways, to nourish and increase the general mass of the national navigation, it looks forward to the protection of a maritime strength, to which itself is unequally adapted. The East, in a like intercourse with the West, already finds, and in the progressive improvement of interior communications by land and water, will more and more find, a valuable vent for the commodities which it brings from abroad, or manufactures at home. The West derives from the East supplies requisite to its growth and comfort, and, what is perhaps of still greater consequence, it must of necessity owe the secure enjoyment of indispensable outlets for its own productions to the weight, influence, and the future maritime strength of the Atlantic side of the Union, directed by an indissoluble community of interest as one nation. Any other tenure by which the West can hold this essential advantage, whether derived from its own separate strength, or from an apostate and unnatural connexion with any foreign power, must be intrinsically precarious. While, then, every part of our country thus feels an immediate and particular interest in Union, all the parts combined cannot fail to find in the united mass of means and efforts greater strength, greater resource, proportionably greater security from external danger, a less frequent interruption of their peace by foreign nations; and, what is of inestimable value, they must derive from Union an exemption from those broils and wars between themselves, which so frequently afflict neighbouring countries not tied together by the same governments, which their own rivalships alone would be sufficient to produce, but which opposite foreign alliances, attachments, and intrigues would stimulate and embitter. Hence, likewise, they will avoid the necessity of those overgrown military establishments, which, under any form of government, are inauspicious to liberty, and which are to be regarded as particularly hostile to Republican Liberty. In this sense it is, that your Union ought to be considered as a main prop of your liberty, and that

the love of the one ought to endear to you the preservation of the other. These considerations speak a persuasive language to every reflecting and virtuous mind, and exhibit the continuance of the Union as a primary object of Patriotic desire. Is there a doubt, whether a common government can embrace so large a sphere? Let experience solve it. To listen to mere speculation in such a case were criminal. We are authorized to hope, that a proper organization of the whole, with the auxiliary agency of governments for the respective subdivisions, will afford a happy issue to the experiment. It is well worth a fair and full experiment. With such powerful and obvious motives to Union, affecting all parts of our country, while experience shall not have demonstrated its impracticability, there will always be reason to distrust the patriotism of those, who in any quarter may endeavour to weaken its bands. In contemplating the causes, which may disturb our Union, it occurs as matter of serious concern, that any ground should have been furnished for characterizing parties by Geographical discriminations, Northern and Southern, Atlantic and Western; whence designing men may endeavour to excite a belief, that there is a real difference of local interests and views. One of the expedients of party to acquire influence, within particular districts, is to misrepresent the opinions and aims of other districts. You cannot shield yourselves too much against the jealousies and heart-burnings, which spring from these misrepresentations; they tend to render alien to each other those, who ought to be bound together by fraternal affection. The inhabitants of our western country have lately had a useful lesson on this head; they have seen, in the negotiation by the Executive, and in the unanimous ratification by the Senate, of the treaty with Spain, and in the universal satisfaction at that event, throughout the United States, a decisive proof how unfounded were the suspicions propagated among them of a policy in the General Government and in the Atlantic States unfriendly to their interests in regard to the Mississippi; they have been witnesses to the formation of two treaties, that with Great Britain, and that with Spain, which secure to them every thing they could desire, in respect to our foreign relations, towards confirming their prosperity. Will it not be their wisdom to rely for the preservation of these advantages on the Union by which they were procured? Will they not henceforth be deaf to those advisers, if such there are, who would sever them from their brethren, and connect them with aliens? To the efficacy and permanency of your Union, a Government for the whole is indispensable. No alliances, however strict, between the parts can be an adequate substitute; they must inevitably experience the infractions and interruptions, which all alliances in all times have experienced. Sensible of this momentous truth, you have improved upon your first essay, by the adoption of a Constitution of Government better calculated than your former for an intimate Union, and for the efficacious management of your common concerns. This Government, the offspring of our own choice, uninfluenced and unawed, adopted upon full investigation and mature deliberation, completely free in its principles, in the distribution of its powers, uniting security with energy, and containing within itself a provision

for its own amendment, has a just claim to your confidence and your support. Respect for its authority, compliance with its laws, acquiescence in its measures, are duties enjoined by the fundamental maxims of true Liberty. The basis of our political systems is the right of the people to make and to alter their Constitutions of Government. But the Constitution which at any time exists, till changed by an explicit and authentic act of the whole people, is sacredly obligatory upon all. The very idea of the power and the right of the people to establish Government presupposes the duty of every individual to obey the established Government. All obstructions to the execution of the Laws, all combinations and associations, under whatever plausible character, with the real design to direct, control, counteract, or awe the regular deliberation and action of the constituted authorities, are destructive of this fundamental principle, and of fatal tendency. They serve to organize faction, to give it an artificial and extraordinary force; to put, in the place of the delegated will of the nation, the will of a party, often a small but artful and enterprising minority of the community; and, according to the alternate triumphs of different parties, to make the public administration the mirror of the ill-concerted and incongruous projects of faction, rather than the organ of consistent and wholesome plans digested by common counsels, and modified by mutual interests. However combinations or associations of the above descriptions may now and then answer popular ends, they are likely, in the course of time and things, to become potent engines, by which cunning, ambitious, and unprincipled men will be enabled to subvert the power of the people, and to usurp for themselves the reins of government; destroying afterwards the very engines, which have lifted them to unjust dominion. Towards the preservation of your government, and the permanency of your present happy state, it is requisite, not only that you steadily discountenance irregular oppositions to its acknowledged authority, but also that you resist with care the spirit of innovation upon its principles, however specious the pretences. One method of assault may be to effect, in the forms of the constitution, alterations, which will impair the energy of the system, and thus to undermine what cannot be directly overthrown. In all the changes to which you may be invited, remember that time and habit are at least as necessary to fix the true character of governments, as of other human institutions; that experience is the surest standard, by which to test the real tendency of the existing constitution of a country; that facility in changes, upon the credit of mere hypothesis and opinion, exposes to perpetual change, from the endless variety of hypothesis and opinion; and remember, especially, that, for the efficient management of your common interests, in a country so extensive as ours, a government of as much vigor as is consistent with the perfect security of liberty is indispensable. Liberty itself will find in such a government, with powers properly distributed and adjusted, its surest guardian. It is, indeed, little else than a name, where the government is too feeble to withstand the enterprise of faction, to confine each member of the society within the limits prescribed by the laws, and to maintain all in the secure and true-

quill enjoyment of the rights of person and property. I have already intimated to you the danger of parties in the state, with particular reference to the founding of them on geographical discriminations. Let me now take a more comprehensive view, and warn you in the most solemn manner against the baneful effects of the spirit of party, generally. This spirit, unfortunately, is inseparable from our nature, having its root in the strongest passions of the human mind. It exists under different shapes in all governments, more or less stilted, controlled, or repressed; but, in those of the popular form, it is seen in its greatest rankness, and is truly their worst enemy. The alternate domination of one faction over another, sharpened by the spirit of revenge, natural to party dissension, which in different ages and countries has perpetrated the most horrid enormities, is itself a frightful despotism. But this leads at length to a more formal and permanent despotism. The disorders and miseries, which result, gradually incline the minds of men to seek security and repose in the absolute power of an individual; and sooner or later the chief of some prevailing faction, more able or more fortunate than his competitors, turns this disposition to the purposes of his own elevation, on the ruins of Public Liberty. Without looking forward to an extremity of this kind, (which nevertheless ought not to be entirely out of sight,) the common and continual mischiefs of the spirit of party are sufficient to make it the interest and duty of a wise people to discourage and restrain it. It serves always to distract the Public Councils, and enfeeble the Public Administration. It agitates the Community with ill-founded jealousies and false alarms; kindles the animosity of one part against another, fomenting occasionally riot and insurrection. It opens the door to foreign influence and corruption, which find a facilitated access to the government itself through the channels of party passions. Thus the policy and the will of one country are subjected to the policy and will of another. There is an opinion, that parties in free countries are useful checks upon the administration of the Government, and serve to keep alive the spirit of Liberty. This within certain limits is probably true; and in Governments of a Monarchical cast, Patriotism may look with indulgence, if not with favor, upon the spirit of party. But in those of the popular character, in Governments purely elective, it is a spirit not to be encouraged. From their natural tendency, it is certain there will always be enough of that spirit for every salutary purpose. And, there being constant danger of excess, the effort ought to be, by force of public opinion, to mitigate and assuage it. A fire not to be quenched, it demands a uniform vigilance to prevent its bursting into a flame, lest, instead of warming, it should consume. It is important, likewise, that the habits of thinking in a free country should inspire caution, in those intrusted with its administration, to confine themselves within their respective constitutional spheres, avoiding in the exercise of the powers of one department to encroach upon another. The spirit of encroachment tends to consolidate the powers of all the departments in one, and thus to create, whatever the form of government, a real despotism. A just estimate of that love of power, and proneness to abuse it, which predominates in the

human heart, is sufficient to satisfy us of the truth of this position. The necessity of reciprocal checks in the exercise of political power, by dividing and distributing it into different depositories, and constituting each the Guardian of the Public Weal against invasions by the others, has been evinced by experiments ancient and modern; some of them in our country and under our own eyes. To preserve them must be as necessary as to institute them. If, in the opinion of the people, the distribution or modification of the constitutional powers be in any particular wrong, let it be corrected by an amendment in the way, which the constitution designates. But let there be no change by usurpation; for, though this, in one instance, may be the instrument of good, it is the customary weapon by which free governments are destroyed. The precedent must always greatly overbalance in permanent evil any partial or transient benefit, which the use can at any time yield. Of all the dispositions and habits, which lead to political prosperity, Religion and Morality are indispensable supports. In vain would that man claim the tribute of Patriotism, who should labor to subvert these great pillars of human happiness, these firmest props of the duties of Men and Citizens. The mere Politician, equally with the pious man, ought to respect and to cherish them. A volume could not trace all their connexions with private and public felicity. Let it simply be asked, Where is the security for property, for reputation, for life, if the sense of religious obligation desert the oaths, which are the instruments of investigation in Courts of Justice? And let us with caution indulge the supposition, that morality can be maintained without religion. Whatever may be conceded to the influence of refined education on minds of peculiar structure, reason and experience both forbid us to expect, that national morality can prevail in exclusion of religious principle. It is substantially true, that virtue or morality is a necessary spring of popular government. The rule, indeed, extends with more or less force to every species of free government. Who, that is a sincere friend to it, can look with indifference upon attempts to shake the foundation of the fabric? Promote, then, as an object of primary importance, institutions for the general diffusion of knowledge. In proportion as the structure of a government gives force to public opinion, it is essential that public opinion should be enlightened. As a very important source of strength and security, cherish public credit. One method of preserving it is, to use it as sparingly as possible; avoiding occasions of expense by cultivating peace, but remembering also that timely disbursements to prepare for danger frequently prevent much greater disbursements to repel it; avoiding likewise the accumulation of debt, not only by shunning occasions of expense, but by vigorous exertions in time of peace to discharge the debts, which unavoidable wars may have occasioned, not ungenerously throwing upon posterity the burthen, which we ourselves ought to bear. The execution of these maxims belongs to your representatives, but it is necessary that public opinion should cooperate. To facilitate to them the performance of their duty, it is essential that you should practically bear in mind, that towards the payment of debts there must be Revenue; that to have Revenue there must be taxes; that

no taxes can be devised, which are not more or less inconvenient and unpleasant, than the intrinsic embarrassment, inseparable from the selection of the proper objects (which is always a choice of difficulties), ought to be a decisive motive for a candid construction of the conduct of the government in making it, and for a spirit of acquiescence in the measures for obtaining revenue, which the public exigencies may at any time dictate. Observe good faith and justice towards all Nations; cultivate peace and harmony with all. Religion and Morality enjoin this conduct; and can it be, that good policy does not equally enjoin it? It will be worthy of a free, enlightened, and, at no distant period, a great Nation, to give to mankind the magnanimous and too novel example of a people always guided by an exalted justice and benevolence. Who can doubt, that, in the course of time and things, the fruits of such a plan would richly repay any temporary advantages, which might be lost by a steady adherence to it? Can it be, that Providence has not connected the permanent felicity of a Nation with its Virtue? The experiment, at least, is recommended by every sentiment which ennobles human nature. Alas! is it rendered impossible by its vices? In the execution of such a plan, nothing is more essential, than that permanent, inveterate antipathies against particular Nations, and passionate attachments for others, should be excluded; and that, in place of them, just and amicable feelings towards all should be cultivated. The Nation, which indulges towards another an habitual hatred, or an habitual fondness, is in some degree a slave. It is a slave to its animosity or to its affection, either of which is sufficient to lead it astray from its duty and its interest. Antipathy in one nation against another disposes each more readily to offer insult and injury, to lay hold of slight causes of umbrage, and to be haughty and intractable, when accidental or trifling occasions of dispute occur. Hence frequent collisions, obstinate, envenomed, and bloody contests. The Nation, prompted by ill-will and resentment, sometimes impels to war the Government, contrary to the best calculations of policy. The Government sometimes participates in the national propensity, and adopts through passion what reason would reject; at other times, it makes the animosity of the nation subservient to projects of hostility instigated by pride, ambition, and other sinister and pernicious motives. The peace often, sometimes perhaps the liberty, of Nations has been the victim. So likewise, a passionate attachment of one Nation for another produces a variety of evils. Sympathy for the favorite Nation, facilitating the illusion of an imaginary common interest, in cases where no real common interest exists, and infusing into one the enmities of the other betrays the former into a participation in the quarrels and wars of the latter, without adequate inducement or justification. It leads also to concessions to the favorite Nation of privileges denied to others, which is apt doubly to injure the Nation making the concessions; by unnecessarily parting with what ought to have been retained; and by exciting jealousy, ill-will, and a disposition to retaliate, in the parties from whom equal privileges are withheld. And it gives to ambitious, corrupted, or deluded citizens, (who devote themselves to the favorite nation,) facility to betray or sacrifice the interests of their own

country, without odium, sometimes even with popularity; gilding, with the appearances of a virtuous sense of obligation, a commendable deference for public opinion, or a laudable zeal for public good, the base of foolish compliances of ambition, corruption, or infatuation. As avenues to foreign influence in innumerable ways, such attachments are particularly alarming to the truly enlightened and independent Patriot. How many opportunities do they afford to tamper with domestic factions, to practise the arts of seduction, to mislead public opinion, to influence or awe the Public Councils! Such an attachment of a small or weak, towards a great and powerful nation, dooms the former to be the satellite of the latter. Against the insidious wiles of foreign influence (I conjure you to believe me, fellow-citizens,) the jealousy of a free people ought to be constantly awake; since history and experience prove, that foreign influence is one of the most baneful foes of Republican Government. But that jealousy, to be useful, must be impartial; else it becomes the instrument of the very influence to be avoided, instead of a defence against it. Excessive partiality for one foreign nation, and excessive dislike of another, cause those whom they actuate to see danger only on one side, and serve to veil and even second the arts of influence on the other. Real patriots, who may resist the intrigues of the favorite, are liable to become suspected and odious; while its tools and dupes usurp the applause and confidence of the people, to surrender their interests. The great rule of conduct for us, in regard to foreign nations, is, in extending our commercial relations, to have with them as little political connexion as possible. So far as we have already formed engagements, let them be fulfilled with perfect good faith. Here let us stop. Europe has a set of primary interests, which to us have none, or a very remote relation. Hence she must be engaged in frequent controversies, the causes of which are essentially foreign to our concerns. Hence, therefore, it must be unwise in us to implicate ourselves, by artificial ties, in the ordinary vicissitudes of her politics, or the ordinary combinations and collisions of her friendships or enmities. Our detached and distant situation invites and enables us to pursue a different course. If we remain one people, under an efficient government, the period is not far off, when we may defy material injury from external annoyance; when we may take such an attitude as will cause the neutrality, we may at any time resolve upon, to be scrupulously respected; when belligerent nations, under the impossibility of making acquisitions upon us, will not lightly hazard the giving us provocation; when we may choose peace or war, as our interest, guided by justice, shall counsel. Why forego the advantages of so peculiar a situation? Why quit our own to stand upon foreign ground? Why, by interweaving our destiny with that of any part of Europe, entangle our peace and prosperity in the toils of European ambition, rivalry, interest, humor, or caprice? It is our true policy to steer clear of permanent alliances with any portion of the foreign world; so far, I mean, as we are now at liberty to do it; for let me not be understood as capable of patronizing infidelity to existing engagements. I hold the maxim no less applicable to public than to private affairs, that honesty is always the best policy. I repeat it, therefore,

let those engagements be observed in their genuine sense. But, in my opinion, it is unnecessary and would be unwise to extend them. Taking care always to keep ourselves, by suitable establishments, on a respectable defensive posture, we may safely trust to temporary alliances for extraordinary emergencies. Harmony, liberal intercourse with all nations, are recommended by policy, humanity, and interest. But even our commercial policy should hold an equal and impartial hand; neither seeking nor granting exclusive favors or preferences; consulting the natural course of things; diffusing and diversifying by gentle means the streams of commerce, but forcing nothing; establishing, with powers so disposed, in order to give trade a stable course, to define the rights of our merchants, and to enable the government to support them, conventional rules of intercourse, the best that present circumstances and mutual opinion will permit, but temporary, and liable to be from time to time abandoned or varied, as experience and circumstances shall dictate; constantly keeping in view, that it is folly in one nation to look for disinterested favors from another; that it must pay with a portion of its independence for whatever it may accept under that character; that, by such acceptance, it may place itself in the condition of having given equivalents for nominal favors, and yet of being reproached with ingratitude for not giving more. There can be no greater error than to expect or calculate upon real favors from nation to nation. It is an illusion, which experience must cure, which a just pride ought to discard. In offering to you, my countrymen, these counsels of an old and affectionate friend, I dare not hope they will make the strong and lasting impression I could wish; that they will control the usual current of the passions, or prevent our nation from running the course, which has hitherto marked the destiny of nations. But, if I may even flatter myself, that they may be productive of some partial benefit, some occasional good; that they may now and then recur to moderate the fury of party spirit, to warn against the mischiefs of foreign intrigue, to guard against the impostures of pretended patriotism; this hope will be a full recompense for the solicitude for your welfare, by which they have been dictated. How far I am the discharge of my official duties, I have been guided by the principles which have been delineated, the public records and other evidences of my conduct must witness to you and to the world. To myself, the assurance of my own conscience is, that I have at least believed myself to be guided by them. In relating to the still subsisting war in Europe, my Proclamation of the 23d of April, 1793, is the index to my Plan. Sanctioned by your approving voice, and by that of your Representatives in both Houses of Congress, the spirit of that measure has continually governed me, uninfluenced by any attempts to deter or divert me from it. After deliberate examination, with the aid of the best lights I could obtain, I was well satisfied that our country, under all the circumstances of the case, had a right to take, and was bound in duty and interest to take, a neutral position. Having taken it, I determined, as far as should depend upon me, to maintain it, with moderation, perseverance, and firmness. The considerations, which respect the right to hold this conduct, it

is not necessary on this occasion to detail. I will only observe, that, according to my understanding of the matter, that right, so far from being denied by any of the Belligerent Powers, has been virtually admitted by all. The duty of holding a neutral conduct may be inferred, without anything more, from the obligation which justice and humanity impose on every nation, in cases in which it is free to act, to maintain inviolate the relations of peace and amity towards other nations. The inducements of interest for observing that conduct will best be referred to your own reflections and experience. With me, a predominant motive has been to endeavour to gain time to our country to settle and mature its yet recent institutions, and to progress without interruption to that degree of strength and consistency, which is necessary to give it, humanly speaking, the command of its own fortunes. Though, in reviewing the incidents of my administration, I am unconscious of intentional error, I am nevertheless too sensible of my defects not to think it probable that I may have committed many errors. Whatever they may be, I fervently beseech the Almighty to avert or mitigate the evils to which they may tend. I shall also carry with me the hope, that my Country will never cease to view them with indulgence; and that, after forty-five years of my life dedicated to its service with an upright zeal, the faults of incompetent abilities will be consigned to oblivion, as myself must soon be to the mansions of rest. Relying on its kindness in this as in other things, and actuated by that fervent love towards it, which is so natural to a man, who views in it the native soil of himself and his progenitors for several generations; I anticipate with pleasing expectation that retreat, in which I promise myself to realize, without alloy, the sweet enjoyment of partaking, in the midst of my fellow-citizens, the benign influence of good laws under a free government, the ever favorite object of my heart, and the happy reward, as I trust, of our mutual cares, labors, and dangers. GEORGE WASHINGTON."

A. D. 1796.—Third Presidential Election.—
Washington succeeded by John Adams.—After the appearance of Washington's Farewell Address, the result of the Presidential election became exceedingly doubtful. "There was no second man to whom the whole of the nation could be won over. The Federalists . . . could not bring forward a single candidate who could calculate on the unanimous and cheerful support of the entire party. There still prevailed at the time a feeling among the people that the vice-president had a sort of claim to the succession to the presidency. But even apart from this, Adams would have been one of the most prominent candidates of the Federalists. The great majority of them soon gave him a decided preference over all other possible candidates. On the other hand, some of the most distinguished and influential of the Federalists feared serious consequences to the party and the country from the vanity and violence as well as from the egotism and irresolution with which he was charged. But to put him aside entirely was not possible, nor was it their wish. They thought, however, to secure a greater number of electoral votes for Th. Pinckney, the Federal candidate for the vice-presidency, which, as the constitution then stood, would have made him presi-

dent and Adams vice president. Although this plan was anxiously concealed from the people, it caused the campaign to be conducted by the party with less energy than if the leaders had been entirely unanimous. France was naturally desirous of Jefferson's success. . . . Wolcott asserted that Adet had publicly declared that France's future policy towards the United States would depend on the result of the election. Some did not hesitate to say that, on this account, Jefferson should have the preference, but on the more thoughtful Federalists it excited the very opposite influence. There is no reason for the assumption that the issue of the election would have been different, had Adet behaved more discreetly. But his indiscretion certainly contributed to make the small majority expected for Adams completely certain, while Hamilton's flank movement in favor of Pinckney helped Jefferson to the vice-presidency. . . . The result of the election, however, left the country in a very serious condition. Washington's withdrawal removed the last restraint from party passion."—H. von Holst, *The Constitutional and Political History of the United States*, v. 1, ch. 3.—Adams received 71 votes in the Electoral College and Jefferson 68. As the constitution then provided, the majority of votes elected the President and the next greatest number of votes elected the Vice President.

A. D. 1797-1799.—Troubles with the French Republic.—The X, Y, Z correspondence.—On the brink of war.—"Mr. Adams took his cabinet from his predecessor; it was not a strong one, and it was devoted to Hamilton, between whom and the new President there was soon a divergence, Hamilton being fond of power, and Adams having a laudable purpose to command his own ship. The figure of speech is appropriate, for he plunged into a sea of troubles, mainly created by the unreasonable demands of the French government. The French 'Directory,' enraged especially by Jay's treaty with England, got rid of one American minister by remonstrance, and drove out another [Pinckney] with contempt. When Mr. Adams sent three special envoys [Gerry, Marshall, and Pinckney], they were expected to undertake the most delicate negotiations with certain semi-official persons designated in their correspondence only by the letters X, Y, Z. The plan of this covert intercourse came through the private secretary of M. de Talleyrand, then French Minister for Foreign Affairs; and the impudence of these three letters of the alphabet went so far as to propose a bribe of 1,200,000 francs (some \$230,000) to be paid over to this minister. 'You must pay money, a great deal of money,' remarked Monsieur Y ('Il faut de l'argent, beaucoup de l'argent'). The secret of these names was kept, but the diplomatic correspondence was made public, and created much wrath in Europe as well as in America. Moreover, American vessels were constantly attacked by France, and yet Congress refused to arm its own ships. At last the insults passed beyond bearing, and it was at this time that 'Millions for defence, not one cent for tribute,' first became a proverbial phrase, having been originally used by Charles C. Pinckney. . . . Then, with tardy decision, the Republicans yielded to the necessity of action, and the Federal party took the lead. War was not formally proclaimed, but

treaties with France were declared to be no longer binding. An army was ordered to be created, with Washington as Lieutenant-general and Hamilton as second in command; and the President was authorized to appoint a Secretary of the Navy and to build twelve new ships-of-war. Before these were ready, naval hostilities had actually begun; and Commodore Truxtun, in the U. S. frigate *Constellation*, captured a French frigate in West Indian waters (Feb. 9, 1799), and afterwards silenced another, which however escaped. Great was the excitement over these early naval successes of the young nation. Merchant-ships were authorized to arm themselves, and some 300 acted upon this authority. . . . The result of it all was that France yielded. Talleyrand, the very minister who had dictated the insults, now disavowed them, and pledged his government to receive any minister the United States might send. The President, in the most eminently courageous act of his life, took the responsibility of again sending ambassadors; and did this without even consulting his cabinet, which would, as he well knew, oppose it. They were at once received, and all danger of war with France was at an end. This bold stroke separated the President permanently from at least half of his own party, since the Federalists did not wish for peace with France. His course would have given him a corresponding increase of favor from the other side, but for the great mistake the Federalists had made in passing certain laws called the 'Alien' law and the 'Sedition' law."—T. W. Higginson, *Larger Hist. of the U. S.*, ch. 14.

A. D. 1797-1800.—Early attitude of the Slavocracy in Congress.—Treatment of Free Blacks.—"Many people will not allow the least blame to be cast on this period [the later years of the 18th century], because it does not harmonize with their admiration of the 'fathers,' and because they have adopted, without any proof, the common view that the deeper shadows of slavery and slavocracy first appeared comparatively late. . . . In reading through the debates [in Congress], single striking instances of injustice do not make the deepest impression. It is the omnipresent unwillingness to practice justice towards colored persons,—yes, even to recognize them as actual beings. When the defense of their rights is demanded, then congress has always a deaf ear. . . . Swanwick of Pennsylvania laid before the house of representatives, Jan. 30, 1797, a petition from four North Carolina negroes who had been freed by their masters. Since a state law condemned them to be sold again, they had fled to Philadelphia. There they had been seized under the fugitive slave law . . . and now prayed congress for its intervention. Blount of North Carolina declared that only when it was proved that these men were free, could congress consider the petition. Sitgreaves of Pennsylvania asked, in reply to this, what sort of proof was offered that the four negroes were not free. This question received no answer. Smith of South Carolina and Christie of Maryland simply expressed their amazement that any member whatever could have presented a petition of 'such an unheard-of nature.' Swanwick and some other representatives affirmed

that the petition must be submitted to a committee for investigation and consideration, because the petitioners complained of violation of their rights under a law of the Union. No reply could be made to this and no reply was attempted. This decisive point was simply set aside, and it was voted by fifty yeas to thirty-three noes not to receive the petition. . . . In order to reach this result, Smith had produced the customary impression by the declaration that the refusal of the demand made by the representatives from the southern states would drive a 'wedge' into the Union. When, three years later, the same question was brought before congress again by a petition of the free negroes of Philadelphia, Rutledge of South Carolina declared in even plainer terms that the south would be forced to the sad necessity of going its own way. . . . The whites who troubled themselves about slaves or free colored persons had no better reception. Year after year the Quakers came indefatigably with new petitions, and each time had to undergo the same scornful treatment. . . . In all the cases mentioned, the tactics of the representatives of the slaveholding interest were the same and they maintained them unchanged up to the last. If congress was urged to act in any way which did not please them, then slavery was always a 'purely municipal affair.'—H. von Holst, *Const. and Political Hist. of the U. S.*, v. 1, ch. 8.

A. D. 1798.—The Alien and Sedition Laws and the Virginia and Kentucky Resolutions.—"The outrages which we suffered from the injustice of England and France gave additional bitterness to the strife between parties at home. The anti-federal press was immoderate in its assaults upon the administration. It so happened that several of the anti-federal papers were conducted by foreigners. Indeed, there were many foreigners in the country whose sympathies were with the French, and their hostility to the administration was open and passionate. The federal leaders determined to crush out by the strong arm of the law these publishers of slanders and fomenters of discontent. Hence the famous 'alien and sedition laws' were passed. The remedy devised was far worse than the disease. It hastened the federal party to its tomb, and was the occasion of the formulation of that unfortunate creed of constitutional construction and of state sovereignty known as the 'Virginia and Kentucky Resolutions' of 1798-99."—J. S. Landou, *Const. Hist. and Govt. of the U. S.*, lect. 6.—The series of strong measures carried by the Federalists comprised the Naturalization Act of June 18, the Alien Act of June 25, the second Alien Act, of July 6, and the Sedition Act of July 14, 1798.

The text of the Naturalization Act is as follows:

June 18, 1798. Acts of the Fifth Congress, Statute II., Chap. liv.: "An Act supplementary to, and to amend the act, intitled 'An act to establish an uniform rule of naturalization; and to repeal the act heretofore passed on that subject.'

Section 1. Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That no alien shall be admitted to become a citizen of the United States, or of any state, unless in the manner prescribed by the act, intitled 'An act to

establish an uniform rule of naturalization; and to repeal the act heretofore passed on that subject,' he shall have declared his intention to become a citizen of the United States, five years, at least, before his admission, and shall, at the time of his application to be admitted, declare and prove, to the satisfaction of the court having jurisdiction in the case, that he has resided within the United States fourteen years, at least, and within the state or territory where, or for which such court is at the time held, five years, at least, besides conforming to the other declarations, renunciations and proofs, by the said act required, anything therein to the contrary hereof notwithstanding; Provided, that any alien, who was residing within the limits, and under the jurisdiction of the United States, before the twenty-ninth day of January, one thousand seven hundred and ninety-five, may, within one year after the passing of this act—and any alien who shall have made the declaration of his intention to become a citizen of the United States, in conformity to the provisions of the act, intitled 'An act to establish an uniform rule of naturalization; and to repeal the act heretofore passed on that subject,' may, within four years after having made the declaration aforesaid, be admitted to become a citizen, in the manner prescribed by the said act, upon his making proof that he has resided five years, at least, within the limits, and under the jurisdiction of the United States: And provided also, that no alien, who shall be a native, citizen, denizen or subject of any nation or state with whom the United States shall be at war, at the time of his application, shall be then admitted to become a citizen of the United States."—*Statutes at Large of the United States*, ed. 1850, v. 1, pp. 566-567.

The following is the text of the two Alien Acts:

June 25, 1798. Statute II., Chap. liviii.—'An Act Concerning Aliens.

Section 1. Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That it shall be lawful for the President of the United States at any time during the continuance of this act, to order all such aliens as he shall judge dangerous to the peace and safety of the United States, or shall have reasonable grounds to suspect are concerned in any treasonable or secret machinations against the government thereof, to depart out of the territory of the United States, within such time as shall be expressed in such order, which order shall be served on such alien by delivering him a copy thereof, or leaving the same at his usual abode, and returned to the office of the Secretary of State, by the marshal or other person to whom the same shall be directed. And in case any alien, so ordered to depart, shall be found at large within the United States after the time limited in such order for his departure, and not having obtained a license from the President to reside therein, or having obtained such license shall not have conformed thereto, every such alien shall, on conviction thereof, be imprisoned for a term not exceeding three years, and shall never after be admitted to become a citizen of the United States. Provided always and be it further enacted, that if any alien so ordered to depart shall prove to the satisfaction of the President, by evidence to be taken before such person or persons as the President shall

direct, who are for that purpose hereby authorized to administer oaths, that no injury or danger to the United States will arise from suffering such alien to reside therein, the President may grant a license to such alien to remain within the United States for such time as he shall judge proper, and at such place as he may designate. And the President may also require of such alien to enter into a bond to the United States, in such penal sum as he may direct, with one or more sufficient sureties to the satisfaction of the person authorized by the President to take the same, conditioned for the good behavior of such alien during his residence in the United States, and not violating his license, which license the President may revoke whenever he shall think proper.

Sec. 2. And be it further enacted, That it shall be lawful for the President of the United States, whenever he may deem it necessary for the public safety, to order to be removed out of the territory thereof, any alien who may or shall be in prison in pursuance of this act; and to cause to be arrested and sent out of the United States such of those aliens as shall have been ordered to depart therefrom and shall not have obtained a license as aforesaid, in all cases where, in the opinion of the President, the public safety requires a speedy removal. And if any alien so removed or sent out of the United States by the President shall voluntarily return thereto, unless by permission of the President of the United States, such alien on conviction thereof, shall be imprisoned so long as, in the opinion of the President, the public safety may require.

Sec. 3. And be it further enacted, That every master or commander of any ship or vessel which shall come into any port of the United States after the first day of July next, shall immediately on his arrival make report in writing to the collector, or other chief officer of the customs of such port, of all aliens, if any, on board his vessel, specifying their names, age, the place of nativity, the country from which they shall have come, the nation to which they belong and owe allegiance, their occupation and a description of their persons, as far as he shall be informed thereof, and on failure, every such master and commander shall forfeit and pay three hundred dollars, for the payment whereof on default of such master or commander, such vessel shall also be holden, and may by such collector or other officer of the customs be detained. And it shall be the duty of such collector, or other officer of the customs, forthwith to transmit to the officer of the department of state true copies of all such returns.

Sec. 4. And be it further enacted, That the circuit and district courts of the United States, shall respectively have cognizance of all crimes and offences against this act. And all marshals and other officers of the United States are required to execute all precepts and orders of the President of the United States issued in pursuance or by virtue of this act.

Sec. 5. And be it further enacted, That it shall be lawful for any alien who may be ordered to be removed from the United States, by virtue of this act, to take with him such part of his goods, chattels, or other property, as he may find convenient; and all property left in the United States by any alien, who may be removed, as aforesaid, shall be, and remain subject to his

order and disposal, in the same manner as if this act had not been passed.

Sec. 6. And be it further enacted, That this act shall continue and be in force for and during the term of two years from the passing thereof.

Approved, June 25, 1798."—*Statutes at Large of the United States*, ed. 1850, Vol. I., pp. 570-573.

July 6, 1798. Statute II., Chap. lxvi.—"An Act respecting Alien Enemies.

Section 1. Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That whenever there shall be a declared war between the United States and any foreign nation or government, or any invasion or predatory incursion shall be perpetrated, attempted, or threatened against the territory of the United States, by any foreign nation or government, and the President of the United States shall make public proclamation of the event, all natives, citizens, denizens, or subjects of the hostile nation or government, being males of the age of fourteen years and upwards, who shall be within the United States, and not actually naturalized, shall be liable to be apprehended, restrained, secured and removed, as alien enemies. And the President of the United States shall be, and he is hereby authorized, in any event, as aforesaid, by his proclamation thereof or other public act, to direct the conduct to be observed, on the part of the United States, towards the aliens who shall become liable as aforesaid; the manner and degree of the restraint to which they shall be subject, and in what cases, and upon what security their residence shall be permitted, and to provide for the removal of those, who, not being permitted to reside within the United States, shall refuse or neglect to depart therefrom; and to establish any other regulations which shall be found necessary in the premises and for the public safety: Provided, that aliens resident within the United States, who shall become liable as enemies, in the manner aforesaid, and who shall not be chargeable with actual hostility, or other crime against the public safety, shall be allowed for the recovery, disposal, and removal of their goods and effects, and for their departure, the full time which is, or shall be stipulated by any treaty, where any shall have been between the United States and the hostile nation or government, of which they shall be natives, citizens, denizens, or subjects; and when no such treaty shall have existed, the President of the United States may ascertain and declare such reasonable time as may be consistent with the public safety, and according to the dictates of humanity and national hospitality.

Sec. 2. And be it further enacted, That after any proclamation shall be made as aforesaid, it shall be the duty of the several courts of the United States, and of each state, having criminal jurisdiction, and of the several judges and justices of the courts of the United States, and they shall be, and are hereby respectively, authorized upon complaint, against any alien or alien enemies, as aforesaid, who shall be resident and at large within such jurisdiction or district, to the danger of the public peace or safety, and contrary to the tenor or intent of such proclamation, or other regulations which

the President of the United States shall and may establish in the premises, to cause such alien or aliens to be duly apprehended and conveyed before such court, judge or justice; and after a full examination and hearing on such complaint, and sufficient cause therefor appearing, shall and may order such alien or aliens to be removed out of the territory of the United States, or to give such sureties for their good behaviour, or to be otherwise restrained, conformably to the proclamation or regulations which shall or may be established as aforesaid, and may imprison, or otherwise secure such alien or aliens, until the order which shall and may be made, as aforesaid, shall be performed.

Sec. 3. And be it further enacted, That it shall be the duty of the marshal of the district in which any alien enemy shall be apprehended, who by the President of the United States, or by the order of any court, judge or justice, as aforesaid, shall be required to depart, and to be removed, as aforesaid, to provide therefor, and to execute such order, by himself or his deputy, or other discreet person or persons to be employed by him, by causing a removal of such alien out of the territory of the United States; and for such removal the marshal shall have the warrant of the President of the United States, or of the court, judge or justice ordering the same, as the case may be.

Approved, July 6, 1798.—*Statutes at Large of the United States*, ed. of 1850, Vol. I., p. 577.

The text of the Sedition Act is as follows:

JULY 14, 1798. Chap. lxxiv.—“An Act in addition to the act, entitled ‘An Act for the punishment of certain crimes against the United States.’

Section 1. Be it enacted by the Senate and House of Representatives of the United States of America, in Congress assembled, That if any persons shall unlawfully combine or conspire together, with intent to oppose any measure or measures of the government of the United States, which are or shall be directed by proper authority, or to impede the operation of any law of the United States, or to intimidate or prevent any person holding a place or office in or under the government of the United States, from undertaking, performing or executing, his trust or duty; and if any person or persons, with intent as aforesaid, shall counsel, advise or attempt to procure any insurrection, riot, unlawful assembly, or combination, whether such conspiracy, threatening, counsel, advice, or attempt shall have the proposed effect or not, he or they shall be deemed guilty of a high misdemeanor, and on conviction before any court of the United States having jurisdiction thereof, shall be punished by a fine not exceeding five thousand dollars and by imprisonment during a term not less than six months nor exceeding five years; and further at the discretion of the court may be held to find sureties for his good behavior in such sum, and for such time, as the said court may direct.

Sec. 2. And be it further enacted, That if any person shall write, print, utter, or publish, or shall cause or procure to be written, printed, uttered or published or shall knowingly and willingly assist or aid in writing, printing, uttering or publishing any false, scandalous and ma-

licious writing or writings against the government of the United States, or either house of the Congress of the United States, or the President of the United States, with intent to defame the said government, or either house of the said Congress, or the said President, or to bring them or either of them, into contempt or disrepute; or to excite against them, or either, or any of them, the hatred of the good people of the United States, or to stir up sedition within the United States, or to excite any unlawful combinations therein, for opposing or resisting any law of the United States, or any act of the President of the United States, and one in pursuance of any such law, or of the powers in him vested by the constitution of the United States, or to resist, oppose or defeat any such law or act, or to aid, encourage or abet any hostile designs of any foreign nation against the United States, their people or government, then such person, being thereof convicted before any court of the United States having jurisdiction thereof, shall be punished by a fine not exceeding two thousand dollars, and by imprisonment not exceeding two years.

Sec. 3. And be it further enacted and declared, That if any person shall be prosecuted under this act, for the writing or publishing any libel aforesaid, it shall be lawful for the defendant, upon the trial of the cause, to give in evidence in his defence, the truth of the matter contained in the publication charged as a libel. And the jury who shall try the cause, shall have a right to determine the law and the fact, under the direction of the court, as in other cases.

Sec. 4. And be it further enacted, That this act shall continue and be in force until the third day of March, one thousand eight hundred and one, and no longer: Provided that the expiration of the act shall not prevent or defeat a prosecution and punishment of any offence against the law, during the time it shall be in force. Approved July 14, 1798.”

“There has been a general effort on the part of biographers to clear their respective heroes from all responsibility for these ill-fated measures. The truth is, that they had the full support of the congressmen and senators who passed them, of the President who signed them, and of all the leaders in the States, who almost all believed in them; and they also met with very general acceptance by the party in the North. Hamilton went as far in the direction of sustaining the principle of these laws as any one. He had too acute a mind to believe with many of the staunch Federalist divines of New England, that Jefferson and Madison were Marats and Robespierres, and that their followers were Jacobins who, when they came to power, were ready for the overthrow of religion and society, and were prepared to set up a guillotine and pour out blood in the waste places of the federal city. But he did believe, and so wrote to Washington, after the appearance of the X. Y. Z. letters that there was a party in the country ready to ‘new model’ the constitution on French principles, to form an offensive and defensive alliance with France, and make the United States a French province. He felt, in short, that there was a party in America ready for confiscation and social confusion. A year later, in 1799, he wrote to Dayton, the speaker of the national House of Representatives, a long letter in which

he set forth very clearly the policy which he felt ought to be pursued. He wished to give strength to the government, and increase centralization by every means, by an extension of the national judiciary, a liberal system of internal improvements, an increased and abundant revenue, an enlargement of the army and navy, permanence in the laws for the volunteer army, extension of the powers of the general government, subdivision of the States as soon as practicable, and finally a strong sedition law, and the power to banish aliens. This was what was termed at that day a 'strong and spirited' policy; it would now be called repressive, but by whatever name it is designated, it was the policy of Hamilton, and is characteristic of both his talents and temperament. Except as to the subdivision of States, it was carried out pretty thoroughly in all its main features by the Federalists. The alien and sedition laws, although resisted in Congress, did not much affect public opinion at the elections which immediately ensued, and the Federalists came into the next Congress with a large majority."—H. C. Lodge, *Alexander Hamilton*, ch. 9.—"The different portions of the country were affected according to the dominant political opinion. Where the Federalists were strong political feeling bore them headlong into prosecutions under the new powers. In the Republican States a sense of injury and danger went hand in hand, and the question of the hour was how to repel the threatening destruction. Mr. Jefferson did not fail to see that the great opportunity for his party had come. His keen political sagacity detected in an instant the fatal mistake the administration had made, and he began at once to look about him for the best means to turn his opponents' mistake to his own advantage. Naturally he felt some delicacy in appearing too forward in assailing a government of which he himself was the second in office. Nevertheless he lent himself willingly to the task of organizing, in a quiet way, a systematic assault upon these laws of Congress, and at once opened a correspondence calculated to elicit the best judgment of his condutors and gradually drew out a programme of action. Virginia was by no means unanimous in reproaching these laws. She had a large and influential body of Federalists. . . . But the influence of Jefferson was paramount and the result of Jeffersonian principles soon appeared on every hand. Meetings were held in many of the counties upon their county court days at which were adopted addresses or series of resolutions condemning or praying for the repeal of these laws. . . . New York, New Jersey, and Pennsylvania sent petitions of appeal to Congress. . . . But it was in Kentucky that the greatest resistance was evoked. The feeling in that State was, indeed, little short of frenzy, and a singular unanimity was displayed even in the most extreme acts and sentiments. This grew out of no passing passion. It was based upon the most vigorous elements in her character as a people. Kentucky was at this time somewhat apart from the rest of the Union. . . . Her complaints, just and unjust, had been many, but hitherto she had not gained the nation's ear. But the time was now ripe for her to assert herself."—E. D. Warfield, *The Kentucky Resolutions of 1798*, ch. 1.—"The famous Kentucky Resolutions" substantially drafted by Jefferson, as

he acknowledged fifteen years afterwards, but introduced in the Legislature of Kentucky by John Breckenridge, on the 8th of November, 1798, were adopted by that body, in the lower branch on the 10th and in the upper on the 13th. Approved by the Governor on the 16th, they were immediately printed and copies officially sent to every other state and to members of Congress. They were as follows:

"I. Resolved, that the several states composing the United States of America, are not united on the principle of unlimited submission to their General Government; but that by compact under the style and title of a Constitution for the United States and of amendments thereto, they constituted a General Government for special purposes, delegated to that Government certain definite powers, reserving each state to itself, the residuary mass of right to their own self Government; and that whenever the General Government assumes undelegated powers, its acts are unauthorized, void, and are of no force; That to this compact each state acceded as a state, and is an integral party, its co-states forming as to itself, the other party; That the Government created by this compact was not made the exclusive or final judge of the extent of the powers delegated to itself; since that would have made its discretion, and not the constitution, the measure of its powers; but that as in all other cases of compact among parties having no common judge, each party has an equal right to judge for itself, as well of infractions as of the mode and measure of redress.

II. Resolved, that the Constitution of the United States having delegated to Congress a power to punish treason counterfeiting the securities and current coin of the United States, piracies and felonies committed on the High Seas, and offences against the laws of nations, and no other crimes whatever, and it being true as a general principle, and one of the amendments to the Constitution having also declared, 'that the powers not delegated to the United States by the Constitution, nor prohibited by it to the states, are reserved to the states respectively, or to the people,' therefore also the same act of Congress passed on the 14th day of July, 1798, and entitled 'An act in addition to the act entitled an act for the punishment of certain crimes against the United States;' as also the act passed by them on the 27th of June, 1798, entitled 'An act to punish frauds committed on the Bank of the United States' (and all other their acts which assume to create, define, or punish crimes other than those enumerated in the constitution) are altogether void and of no force, and that the power to create, define, and punish such other crimes is reserved, and of right appertains solely and exclusively to the respective states, each within its own Territory.

III. Resolved, that it is true as a general principle, and is also expressly declared by one of the amendments to the Constitution that 'the powers not delegated to the United States by the Constitution, nor prohibited by it to the states, are reserved to the states respectively or to the people;' and that no power over the freedom of religion, freedom of speech, or freedom of the press being delegated to the United States by the Constitution, nor prohibited by it to the states, all lawful powers respecting the same did of right remain, and were reserved to the states, or

to the people: That thus was manifested their determination to retain to themselves the right of judging how far the licentiousness of speech and of the press may be abridged without lessening their useful freedom, and how far those abuses which cannot be separated from their use, should be tolerated, rather than the use be destroyed; and thus also they guarded against all abridgment by the United States of the freedom of religious opinions and exercises, and retained to themselves the right of protecting the same, as this State by a Law passed on the general demand of its Citizens, had already protected them from all human restraint or interference; and that in addition to this general principle and express declaration, another and more special provision has been made by one of the amendments to the Constitution which expressly declares that 'Congress shall make no law respecting an Establishment of religion, or prohibiting the free exercise thereof, or abridging the freedom of speech, or of the press,' thereby guarding in the same sentence, and under the same words, the freedom of religion, of speech, and of the press, inasmuch, that whatever violates either, throws down the sanctuary which covers the others, and that libels, falsehoods, and defamation, equally with heresy and false religion, are withheld from the cognizance of federal tribunals. That therefore the act of the Congress of the United States passed on the 14th day of July, 1798, entitled 'An act in addition to the act for the punishment of certain crimes against the United States,' which does abridge the freedom of the press, is not law, but is altogether void and of no effect.

IV. Resolved, that alien friends are under the jurisdiction and protection of the laws of the state wherein they are; that no power over them has been delegated to the United States, nor prohibited to the individual states distinct from their power over citizens; and it being true as a general principle, and one of the amendments to the Constitution having also declared, that 'the powers not delegated to the United States by the Constitution nor prohibited by it to the states are reserved to the states respectively or to the people,' the act of the Congress of the United States passed on the 22d day of June, 1798, entitled 'An act concerning aliens,' which assumes power over alien friends not delegated by the Constitution, is not law, but is altogether void and of no force.

V. Resolved, that in addition to the general principle as well as the express declaration, that powers not delegated are reserved, another and more special provision inserted in the Constitution from abundant caution has declared, 'that the migration or importation of such persons as any of the states now existing shall think proper to admit, shall not be prohibited by the Congress prior to the year 1808.' That this Commonwealth does admit the migration of alien friends described as the subject of the said act concerning aliens; that a provision against prohibiting their migration, is a provision against all acts equivalent thereto, or it would be nugatory; that to remove them when migrated is equivalent to a prohibition of their migration, and is therefore contrary to the said provision of the Constitution, and void.

VI. Resolved, that the imprisonment of a person under the protection of the Laws of this

Commonwealth on his failure to obey the simple order of the President to depart out of the United States, as is undertaken by the said act entitled 'An act concerning aliens,' is contrary to the Constitution, one amendment to which has provided, that 'no person shall be deprived of liberty without due process of law,' and that another having provided 'that in all criminal prosecutions the accused shall enjoy the right to a public trial by an impartial jury, to be informed of the nature and cause of the accusation, to be confronted with the witnesses against him, to have compulsory process for obtaining witnesses in his favour, and to have the assistance of counsel for his defence,' the same act undertaking to authorize the President to remove a person out of the United States who is under the protection of the Law, on his own suspicion, without accusation, without jury, without public trial, without confrontation of the witnesses against him, without having witnesses in his favour, without defence, without counsel, is contrary to these provisions also of the Constitution, is therefore not law but utterly void and of no force. That transferring the power of judging any person who is under the protection of the laws, from the Courts to the President of the United States, as is undertaken by the same act concerning Aliens, is against the article of the Constitution which provides, that 'the judicial power of the United States shall be vested in Courts, the Judges of which shall hold their offices during good behaviour,' and that the said act is void for that reason also; and it is further to be noted, that this transfer of Judiciary powers is to that magistrate of the General Government who already possesses all the Executive, and a qualified negative in all the Legislative power.

VII. Resolved, that the construction applied by the General Government (as is evinced by sundry of their proceedings) to those parts of the Constitution of the United States which delegate to Congress a power to lay and collect taxes, duties, imposts, and excises; to pay the debts, and provide for the common defence, and general welfare of the United States, and to make all laws which shall be necessary and proper for carrying into execution the powers vested by the Constitution in the Government of the United States, or any department thereof, goes to the destruction of all the limits prescribed to their power by the Constitution — That words meant by that instrument to be subsidiary only to the execution of the limited powers, ought not to be so construed as themselves to give unlimited powers, nor a part so to be taken, as to destroy the whole residue of the instrument: That the proceedings of the General Government under colour of these articles, will be a fit and necessary subject for revision and correction at a time of greater tranquillity, while those specified in the preceding resolutions call for immediate redress.

VIII. Resolved, that the preceding Resolutions be transmitted to the Senators and Representatives in Congress from this Commonwealth, who are hereby enjoined to present the same to their respective Houses, and to use the best endeavours to procure at the next session of Congress, a repeal of the aforesaid unconstitutional and obnoxious acts.

IX. Resolved lastly, that the Governor of this Commonwealth be, and is hereby authorised

and requested to communicate the preceding Resolutions to the Legislatures of the several States, to assure them that this Commonwealth considers Union for specified National purposes, and particularly for those specified in their late Federal compact, to be friendly to the peace, happiness, and prosperity of all the states; that faithful to that compact, according to the plain intent and meaning in which it was understood and acceded to by the several parties, it is sincerely anxious for its preservation: that it does also believe, that to take from the states all the powers of self government, and transfer them to a general and consolidated Government, without regard to the special delegations and reservations solemnly agreed to in that compact, is not for the peace, happiness, or prosperity of these states: And that therefore, this Commonwealth is determined, as it doubts not its Co-states are, tamely to submit to undelegated and consequently unlimited powers in no man or body of men on earth: that if the acts before specified should stand, these conclusions would flow from them; that the General Government may place any act they think proper on the list of crimes and punish it themselves, whether enumerated or not enumerated by the Constitution as cognizable by them: that they may transfer its cognizance to the President or any other person, who may himself be the accuser, counsel, judge, and jury, whose suspicions may be the evidence, his order the sentence, his officer the executioner, and his breast the sole record of the transaction: that a very numerous and valuable description of the inhabitants of these states, being by this precedent reduced as outlaws to the absolute dominion of one man and the barrier of the Constitution thus swept away from us all, no rampart now remains against the passions and the power of a majority of Congress, to protect from a like exportation or other more grievous punishment the minority of the same body, the Legislatures, Judges, Governors, and Counsellors of the states, nor their other peaceable inhabitants who may venture to reclaim the constitutional rights and liberties of the states and people, or who for other causes, good or bad, may be obnoxious to the views or marked by the suspicions of the President, or be thought dangerous to his or their elections or other interests public or personal: that the friendless alien has indeed been selected as the safest subject of a first experiment: but the citizen will soon follow, or rather has already followed; for already has a Sedition Act marked him as its prey: that these and successive acts of the same character, unless arrested on the threshold, may tend to drive these states into revolution and blood, and will furnish new calumnies against Republican Governments, and new pretexts for those who wish it to be believed that man cannot be governed but by a rod of iron: that it would be a dangerous delusion were a confidence in the men of our choice to silence our fears for the safety of our rights: that confidence is everywhere the parent of despotism: free government is founded in jealousy and not in confidence; it is jealousy and not confidence which prescribes limited Constitutions to bind down those whom we are obliged to trust with power: that our Constitution has accordingly fixed the limits to which and no further our confidence may go; and let the honest advocate of confidence read the Alien

and Sedition Acts, and say if the Constitution has not been wise in fixing limits to the Government it created, and whether we should be wise in destroying those limits? Let him say what the Government is if it be not a tyranny, which the men of our choice have conferred on the President, and the President of our choice has assented to and accepted over the friendly strangers, to whom the mild spirit of our Country and its laws had pledged hospitality and protection: that the men of our choice have more respected the bare suspicions of the President than the solid rights of Innocence, the claims of justification, the sacred force of truth, and the forms and subsistence of law and justice. In questions of power then let no more be heard of confidence in man, but bind him down from mischief by the chains of the Constitution. That this Commonwealth does therefore call on its Co-states for an expression of their sentiments on the acts concerning Aliens, and for the punishment of certain crimes heretofore specified, plainly declaring whether these acts are or are not authorized by the Federal Compact? And it doubts not that their sense will be so announced as to prove their attachment unaltered to limited Government, whether general or particular, and that the rights and liberties of their Co-states will be exposed to no dangers by remaining embarked on a common bottom with their own: That they will concur with this Commonwealth in considering the said acts so palpably against the Constitution as to amount to an undisguised declaration, that the compact is not meant to be the measure of the powers of the General Government, but that it will proceed in the exercise over these states of all powers whatsoever: That they will view this as seizing the rights of the states and consolidating them in the hands of the General Government with a power assumed to bind the states (not merely in cases made federal) but in all cases whatsoever, by laws made, not with their consent, but by others against their consent: That this would be to surrender the form of Government we have chosen, and to live under one deriving its powers from its own will, and not from our authority; and that the Co-states recurring to their natural right in cases not made federal, will concur in declaring these acts void and of no force, and will each unite with this Commonwealth in requesting their repeal at the next session of Congress.

In the month following this declaration from Kentucky, on the 21st of December, Virginia affirmed substantially the same threatening doctrine, more temperately and cautiously set forth in resolutions drawn by Madison as follows:

"Resolved, that the General Assembly of Virginia doth unequivocally express a firm resolution to maintain and defend the constitution of the United States, and the constitution of this state against every aggression, either foreign or domestic, and that they will support the government of the United States in all measures warranted by the former.

That this Assembly most solemnly declares a warm attachment to the union of the states, to maintain which, it pledges all its powers; and that for this end it is their duty to watch over and oppose every infraction of those principles which constitute the only basis of that union, because a faithful observance of them can alone secure its existence, and the public happiness.

That this Assembly doth explicitly and peremptorily declare that it views the powers of the Federal Government, as resulting from the compact, to which the states are parties; as limited by the plain sense and intention of the instrument constituting that compact; as no farther valid than they are authorized by the grants enumerated in that compact, and that in case of a deliberate, palpable and dangerous exercise of other powers not granted by the said compact, the states who are parties thereto have the right, and are in duty bound to interpose for arresting the progress of the evil, and for maintaining within their respective limits, the authorities, rights and liberties appertaining to them.

That the General Assembly doth also express its deep regret that a spirit has in sundry instances, been manifested by the Federal Government, to enlarge its powers by forced constructions of the constitutional charter which defines them; and that indications have appeared of a design to expound certain general phrases (which having been copied from the very limited grant of powers in the former articles of confederation were the less liable to be misconstrued), so as to destroy the meaning and effect of the particular enumeration, which necessarily explains and limits the general phrases; and so as to consolidate the states by degrees into one sovereignty, the obvious tendency and inevitable consequence of which would be to transform the present republican system of the United States into an absolute, or at best a mixed monarchy.

That the General Assembly doth particularly protest against the palpable and alarming infractions of the Constitution, in the two late cases of the 'Allen and Sedition Acts,' passed at the last session of Congress, the first of which exercises a power nowhere delegated to the Federal Government; and which by uniting legislative and judicial powers to those of executive, subverts the general principles of free government, as well as the particular organization and positive provisions of the federal constitution: and the other of which acts, exercises in like manner a power not delegated by the constitution, but on the contrary expressly and positively forbidden by one of the amendments thereto; a power which more than any other ought to produce universal alarm, because it is levelled against the right of freely examining public characters and measures, and of free communication among the people thereon, which has ever been justly deemed the only effectual guard of every other right.

That this state having by its convention which ratified the federal constitution, expressly declared, 'that among other essential rights, the liberty of conscience and of the press cannot be cancelled, abridged, restrained or modified by any authority of the United States,' and from its extreme anxiety to guard these rights from every possible attack of sophistry or ambition, having with other states recommended an amendment for that purpose, which amendment was in due time annexed to the constitution, it would mark a reproachful inconsistency and criminal degeneracy, if an indifference were now shown to the most palpable violation of one of the rights thus declared and secured, and to the establishment of a precedent which may be fatal to the other.

That the good people of this commonwealth having ever felt and continuing to feel the most sincere affection to their brethren of the other states, the truest anxiety for establishing and perpetuating the union of all, and the most scrupulous fidelity to that constitution which is the pledge of mutual friendship, and the instrument of mutual happiness: The General Assembly doth solemnly appeal to the like dispositions of the other states, in confidence that they will concur with this commonwealth in declaring, as it does hereby declare, that the acts aforesaid are unconstitutional, and that the necessary and proper measures will be taken by each for co-operating with this state, in maintaining unimpaired the authorities, rights, and liberties, reserved to the states respectively, or to the people.

That the Governor be desired to transmit a copy of the foregoing resolutions to the executive authority of each of the other states, with a request, that the same may be communicated to the legislature thereof.

And that a copy be furnished to each of the Senators and Representatives, representing this state in the Congress of the United States.

In later years, after Calhoun and his school had pushed these doctrines to their logical conclusion, Madison shrank from the result, and endeavored to disown the apparent meaning of what Jefferson had written and he had seemed to endorse in 1798. He denounced Nullification and Secession as "twin heresies," and denied that they were contained or implied in the resolutions of 1798—either those adopted in Kentucky or the responsive ones written by himself for the legislature of Virginia. The Kentucky Resolutions of 1798 were followed in 1799 by another series, in which the right of a sovereign State to nullify obnoxious laws of the Federal Government was no longer asserted by implication, but was put into plain terms—as follows: "That the principle and construction, contended for by sundry of the state legislatures, that the general government is the exclusive judge of the extent of the powers delegated to it, stop not short of despotism,—since the discretion of those who administer the government, and not the Constitution, would be the measure of their powers: That the several states who formed that instrument, being sovereign and independent, have the unquestionable right to judge of the infraction; and, That a nullification, by those sovereignties, of all unauthorized acts done under color of that instrument, is the rightful remedy." It was Mr. Madison's desire to cast on these resolutions of 1799, with which Jefferson had nothing to do, the odium of the nullification doctrine, and to remove the stigma from the resolutions of 1798, in which the word "nullification" makes no appearance; "neither that," pleaded Madison, "nor any equivalent term." But, when Madison made this plea, in 1830, "it was not then generally known, whether Mr. Madison knew it or not, that one of the resolutions and part of another which Jefferson wrote to be offered in the Kentucky legislature in 1798 were omitted by Mr. Nicholas [to whom Mr. Jefferson had entrusted them], and that therein was the assertion . . . 'where powers are assumed which have not been delegated, a nullification of the act is the rightful remedy.' The next year, when additional resolutions were offered by Mr. Breckenridge, this idea in similar, though not in precisely the same language, was

presented [as quoted above]. . . . In 1832, this fact, on the authority of Jefferson's grandson and executor, was made public; and further, that another declaration of Mr. Jefferson's in the resolution not used was an exhortation to the co-States, 'that each will take measures of its own for providing that neither these acts nor any others of the general government, not plainly and intentionally authorized by the Constitution, shall be exercised within their respective territories.'—S. H. Gay, *James Madison*, ch. 15.—“The publication of the Kentucky resolutions . . . was instantly followed by a new crop of remonstrances and petitions from the people. . . . Memorials by scores came in from each State, and the signatures appended to some were as many as sixteen hundred. Those from Pennsylvania alone bore over eighteen thousand names. . . . Such memorials as reached the House were sent to a committee, who, late in February, reported. . . . The report closed with three resolutions, and these were: that it was not in the interest of the public good to repeal either the Alien Law, or the Sedition Law, or any of the laws respecting the army, the navy, or the revenue of the United States. On the twenty-fifth of February, the House being in Committee of the Whole, the three resolutions were taken up one by one. Gallatin spoke long and well against the first; but it was carried. Mr. Nicholas spoke at greater length against agreeing to the second. But the Federalists had made up their minds to accept the report, and, as Nicholas went on, treated him with great disrespect. They assembled in groups about the House, laughed, coughed, and talked at the top of their voices; nor would the Speaker command order in the room. When Nicholas finished, shouts of ‘Question! Question!’ rose from all sides. A member from North Carolina hoped the question would not be taken. The hour was late. Other members had something to say. An hour or two on the morrow might well be spent in discussion. He moved the committee should rise. . . . The motion to rise was lost, the question on the second resolution was carried, the question on the third resolution was carried, then the committee rose. The House then agreed to the action of the committee on each of the three resolutions. The Federal party was now at the height of its prosperity and power. It controlled the Senate. It controlled the House. Outwardly it was great and powerful, but within that dispute had begun which, in a few short months, drove Pickens and M’Henry from the Cabinet, split the party in twain, and gave to the country the strange spectacle of staunch and earnest Federalists wrangling and contending and overwhelming each other with abuse.”—J. B. McMaster, *A History of the United States*, ch. 11 (v. 2).

A. D. 1800.—The convention with France and the French Spoliation Claims incident to it.—“In the instructions to the American envoys in France they had been directed to secure a claims commission, the abrogation of the former treaties, and the abolition of the guarantee of

1778, as it was called, contained in Article XI. of the Treaty of Alliance of that year, and covering ‘the present possessions of the Crown of France in America, as well as those which it may acquire by the future treaty of peace.’ Upon none of these points were the envoys able to carry out their instructions. In reference to claims, a distinction, which was finally embodied in the treaty, was drawn by the French government between two classes of claims: first, debts due from the French government to American citizens for supplies furnished, or prizes whose restoration had been decreed by the courts; and secondly, indemnities for prizes alleged to have been wrongfully condemned. The treaty provided that the first class, known as debts, should be paid, but excluded the second, or indemnity class. In reference to the indemnity claims, and to the questions involved in the old treaties, including, of course, the guarantee of 1778, the envoys were not able to come to an agreement, the treaty declared that the negotiation was postponed. The Senate of the United States expunged this latter article, inserting in its place a clause providing for the duration of the present convention; and this amendment was accepted by the French government, with the proviso that both governments should renounce the pretensions which were the object of the original article. To this the Senate also agreed, and upon this basis the convention was finally ratified. It thus appears that the United States re-rendered the claims of its citizens against France for wrongful seizures, in return for the surrender by France of whatever claim it might have had against the United States for the latter's failure to fulfil the obligations assumed in the earlier treaties [especially the guaranty of the possessions of France in America, which was undertaken in the treaty of 1778]. The United States, therefore, having received a consideration for its refusal to prosecute the claims of its citizens, thereby took the place, with respect to the claimants, of the French government, and virtually assumed the obligations of the latter. . . . The claims for indemnity thus devolving upon the United States, known as the French Spoliation Claims, have been from that day to this the subject of frequent report and discussion in Congress, but with no result until the passage of the act of Jan. 20, 1885, referring them to the Court of Claims. At the present time (1898) they are undergoing judicial examination before that tribunal.”—J. R. Soley, *The Wars of the U. S., 1789–1850 (Narrative and Critical Hist. of Am., v. 7, ch. 6; and ed's foot-note).*

Also in: F. Wharton, *Digest of the International Law of the U. S.*, sect. 248 (v. 2, pp. 714–728).—D. Webster, *Works*, v. 4, pp. 152–178.—T. H. Benton, *Thirty Years' View*, v. 1, ch. 117–120.—W. H. Seward, *Works*, v. 1, pp. 132–155.—*Rept of Sec. of State (U. S. Senate, Ex. Doc. no. 74 and 102, 49th Cong. 1st sess.)*.—Spoliations committed by the French in the Revolutionary and Napoleonic wars subsequently to the year 1800, were indemnified under the provisions of the treaty for the Louisiana purchase (see LOUISIANA: A. D. 1788–1803); under the treaty with Spain in 1819, and under a later treaty with France which was negotiated in Andrew Jackson's most imperative manner in 1831. These do not enter into what have become historically specialized as the French Spoliation Claims.

A. D. 1800.—The Second Census.—Total population, 5,805,937, (an increase of slightly more than 35 per cent. since 1790), classed and distributed as follows:

North.			
	White.	Free black.	Slave.
Connecticut	244,721	5,330	951
Indiana	4,577	163	135
Maine	150,901	818
Massachusetts	410,793	6,452
New Hampshire	182,898	856	8
New Jersey	195,125	4,402	12,422
New York	556,039	10,374	20,343
Ohio	45,028	337
Pennsylvania	586,094	14,561	1,706
Rhode Island	65,437	3,304	381
Vermont	153,908	557
	2,601,521	47,154	35,946

South.			
	White.	Free black.	Slave.
Delaware	49,852	8,268	6,153
District of Columbia	10,000	783	3,244
Georgia	101,078	1,019	59,404
Kentucky	179,871	741	40,343
Maryland	216,326	19,587	105,635
Mississippi	5,179	182	3,489
North Carolina	337,764	7,043	133,290
South Carolina	196,255	3,185	140,151
Tennessee	91,709	300	13,584
Virginia	514,280	20,124	345,796
	1,702,980	61,241	857,095

A. D. 1800-1801.—The Fourth Presidential Election.—Inauguration of Jefferson.—“Adams, whom Dr. Franklin aptly described as ‘always an honest man, often a wise one, but sometimes and in some things absolutely out of his senses,’ was approaching the end of his term as President, and public attention was absorbed in the task of choosing a successor. . . . At the time of Adams’s election, a sectional feeling, destined in the future to work so much evil, had already been developed; and he in consequence received from States south of the Potomac but two electoral votes. New York had given him her twelve, yet the entire majority over his competitor was but three in all the colleges. The national parties were not unequally matched in the State; and it was evident that, could its vote be diverted to Jefferson in the next contest, his victory would be assured. Hence, strenuous efforts were made to accomplish this end, and for months society was like a seething caldron. The trouble with France had, for the moment, swelled the numbers of the Federalists, and closed up their ranks; but the capricious course of the President, and the violent disruption of the cabinet, rent them asunder, never to be reunited. . . . During the French excitement, it seemed almost certain that, after the local election, they would have a majority in the new Legislature, and thus retain for their candidate the electoral vote of New York. This pleasing prospect was soon obscured. When its people found Mr. Adams sternly enforcing the Sedition Law, and exercising the power it conferred in an unfeeling manner upon one of their most esteemed citizens [Judge Peck], they turned with disgust from a party which they held responsible for its enactment, as well as for this violent

procedure. The permanent ascendancy which the Republicans seemed to have acquired in the metropolis had been wrested from them, in the spring of 1799, by the unpopularity of a scheme of Burr’s, already conspicuous in the State as an unscrupulous political tactician. He had been a member of the assembly the preceding year, and, under the pretence of supplying pure and wholesome water, obtained a charter which enabled the corporators to engage in banking. In consequence of the feeling this aroused, he did not dare present himself again as a candidate, but, with great tact and unwearied efforts, succeeded in healing divisions in his party, and nominating a delegation for the assembly, which embraced the Republicans most eminent for wealth, station, or family influence. Gov. Clinton headed the list. . . . The result followed which Burr had anticipated. The Federal majority of the last year was overcome, and New York City secured by the Republicans, giving them control of the State. Adams subsequently received but four electoral votes south of Maryland, and Jefferson became his successor. Burr, to whose untiring exertions this great victory was due, was thereby inducted into the office of Vice-President. At that time, the Legislature appointed the electors for the State; and the Republicans, then anticipating a defeat, had at a previous session advocated that, for the future, these should be chosen directly by the people in separate districts, hoping thus to secure a sufficient number to elect their Presidential candidate. The Federalists, thinking their supremacy in the assembly assured, refused to support the plan. Now, however, when it became known that their adversaries had gained a majority in the Legislature on which would devolve the duty of choosing the electors, Hamilton addressed a letter to Gov. Jay, suggesting that the present body, whose term would not expire before July, should be again convened, in order to pass a measure which, when before proposed by the Republicans, had been denounced as unconstitutional. Jay had too much regard for principle to entertain the idea. After his death, the letter was found among his papers, endorsed, ‘Proposing a measure for party purposes which I think it would not become me to adopt.’ It is related that a noted French duellist, when required to forgive his enemies before receiving absolution, exclaimed, ‘My enemies? I have none. I have killed them all!’ Mr. Jefferson might have responded in the same manner, the morrow after the Presidential election. To the one party, the result seemed like the breaking up of an ice gorge—the harbinger of spring. To the other it appeared as an avalanche of French principles, destructive alike of religion and established government. Both were at fault. President Jefferson was quite as unable to destroy the work of his predecessors as he was to depart from their policy of neutrality. The Sedition and Alien Laws soon expired by limitation; but the great measures of the former administrations were too wise, and had struck their roots too deep into the national sentiment, to be suddenly overturned.”—W. Whitelock, *Life and Times of John Jay*, ch. 23.—In the Electoral College, Thomas Jefferson and Aaron Burr, both Democratic Republicans, received an equal number of votes (73), and the election was carried into the House of Representatives, where Jefferson was chosen

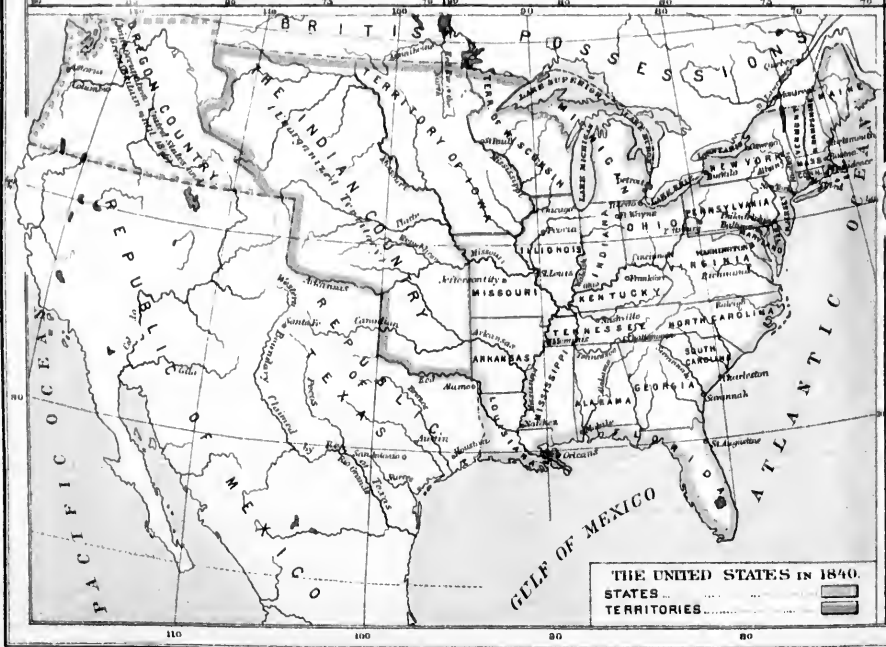

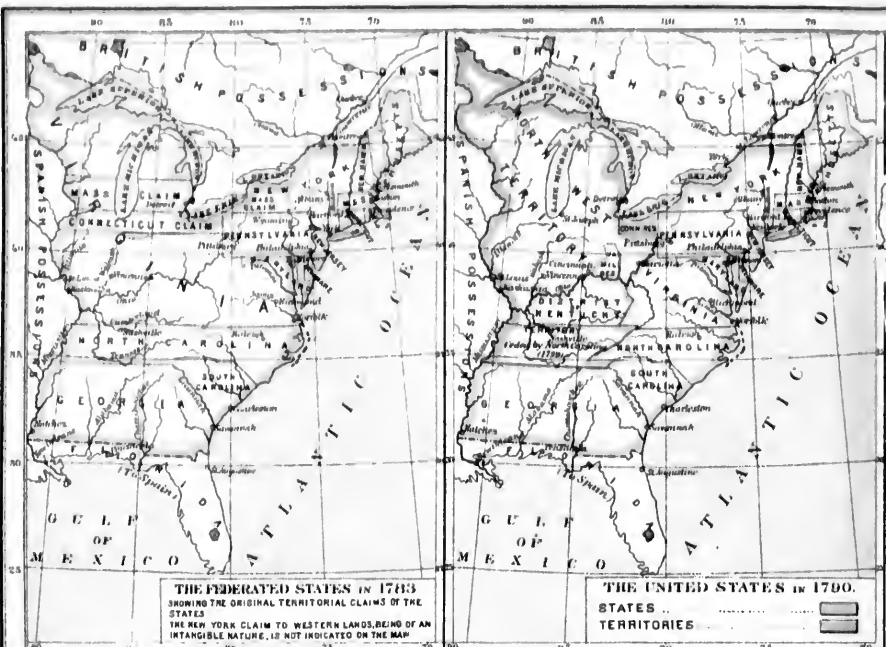

President and Burr Vice President. "Adams, stung to the heart by the election of Jefferson, refused to witness the hateful spectacle of his successor's inauguration. He spent his last hours in filling up vacancies to place patronage out of Jefferson's reach; then he departed, the old order in his person giving place with a frown and a shudder to the new. Adams did not hate monarchy, he thought that for England it was good. In the eyes of Jefferson monarchy was the incarnate spirit of evil and to rid mankind of it by example was the mission of the American Republic. Every vestige of the half-monarchical state which Washington had retained was now banished from the President's mansion and life. No more coaches-and-six, no more court dress, no more levêe. Although Jefferson did not, as legend says, ride to his inauguration and tie his horse to the fence, he was inaugurated with as little ceremony as possible. He received an ambassador in slippers down at the heel, and in the arrangement of his dinner parties was so defiant of the rules of etiquette as to breed trouble in the diplomatic circle. Yet with all his outward simplicity the Virginian magnate and man of letters, though he might be a Republican, could not in himself be a true embodiment of democracy. He was the friend of the people, but not one of them. . . . The desired day had come when the philosopher was to govern. The words of the address which Jefferson, unlike the demagogic sons of thunder in the present day, read in a very low voice, are the expression by its great master and archetype of the republican idea which has hitherto reigned supreme in the mind of the American people. These words are monumental, 'Equal and exact justice to all men, of whatever state or persuasion, religious or political; peace, commerce, and honest friendship with all nations, entangling alliances with none; the support of the State governments in all their rights, as the most competent administrations for our domestic concerns and the surest bulwarks against anti-republican tendencies, the preservation of the general government in its whole constitutional vigour, as the sheet-anchor of our peace at home and safety abroad; a jealous care of the right of election by the People; a mild and safe correction of abuses which are lopped by the sword of revolution where peaceable remedies are unprovided; absolute acquiescence in the decisions of the majority, the vital principle of republics, from which there is no appeal but to force, the vital principle and immediate parent of despotism; a well-disciplined militia, our best reliance in peace and for the first movements in war, till regulars may relieve them; the supremacy of the civil over the military authority; economy in the public expense, that labour may be lightly burdened; the honest payment of our debts, and sacred preservation of the public faith; encouragement of agriculture, and of commerce as its handmaid, the diffusion of information, and arraignment of all abuses at the bar of public reason; freedom of religion, freedom of the press, and freedom of person under the protection of the "habeas corpus," and trial by jurors impartially selected;—these principles form the bright constellation which has gone before us and guided our steps through an age of revolution and reformation.' Jefferson's wand was the pen. Yet he is strangely apt to fall into mixed

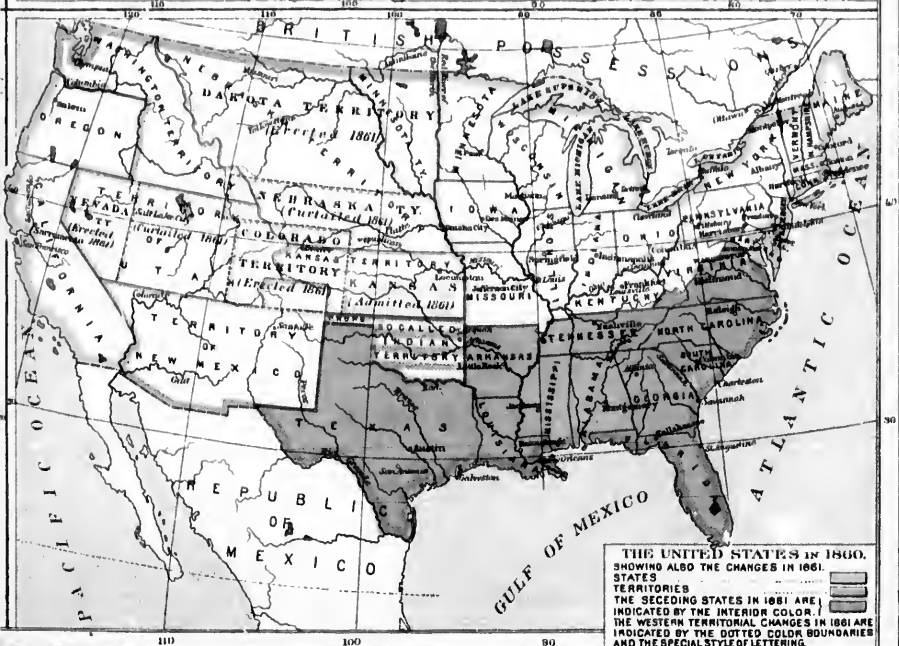

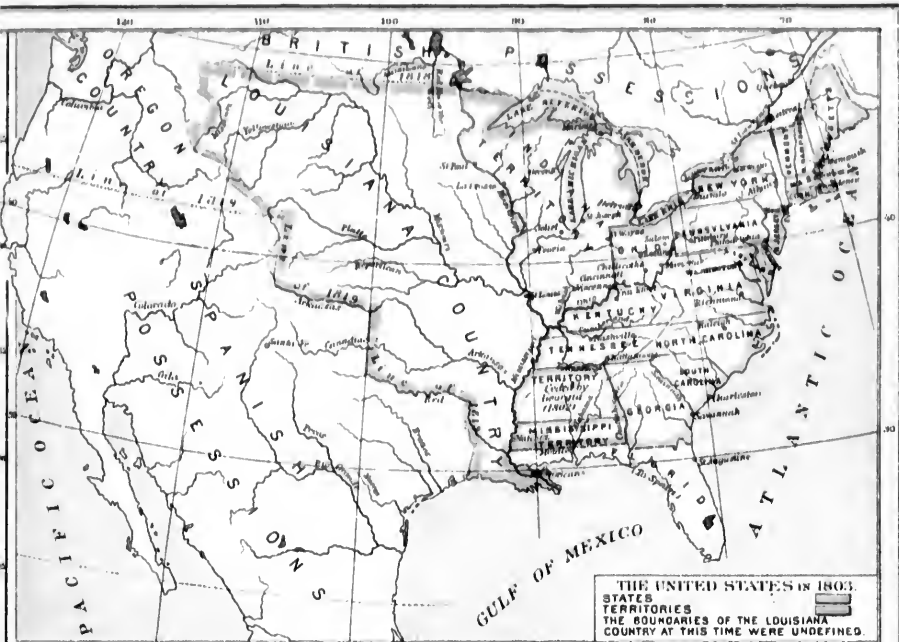

metaphors and even into platitudes. This address has not escaped criticism."—Goldwin Smith, *The United States*, ch. 3.—"Jefferson had reached the presidential chair at a most fortunate moment. . . . The prospect of a speedy peace in Europe promised effectual and permanent relief from those serious embarrassments to which, during war on the ocean, American commerce was ever exposed from the aggressions of one or of all the belligerents. The treasury was fuller, the revenue more abundant than at any previous period. Commerce was flourishing, and the pecuniary prosperity of the country very great. All the responsibility of framing institutions, laying taxes, and providing for debts, had fallen on the ousted administration. Succeeding to the powers and the means of the Federal government without sharing any of the unpopularity at the expense of which they had been attained, and ambitious not so much of a splendid as of a quiet and popular administration, the new president seemed to have before him a very plain and easy path. . . . To the offices of Secretary of State, Secretary of the Treasury, and Attorney General, left vacant by the resignation of the late incumbents, Jefferson nominated James Madison, Henry Dearborn, and Levi Lincoln, the latter an early leader of the opposition in Massachusetts. . . . As the Senate stood at present, still containing, as it did, of the members present a majority of Federalists, Jefferson did not think proper to make any further nominations; but, soon after the adjournment, he appointed as Secretary of the Treasury Albert Gallatin, all along the financial member of the opposition. . . . The Navy Department, after being refused by Chancellor Livingston, was given to Robert Smith, brother of the Baltimore member of Congress. Livingston, however, having reached the age of sixty, and being obliged, under a Constitutional provision, to vacate the chancellorship of New York, consented to accept the embassy to France. . . . Habersham was continued as post-master-general for some six months. . . . but he presently gave way to Gideon Granger, a leader of the Connecticut Republicans."—R. Hildreth, *Hist. of the U. S.*, 2d series, ch. 16 (v. 2, or v. 5 of whole work).—"The first act of the new Cabinet was to reach a general understanding in regard to the objects of the Administration. These appear to have been two only in number: reduction of debt and reduction of taxes, and the relation to be preserved between them."—H. Adams, *Life of Albert Gallatin*, p. 276.—"Under President Jefferson, the heads of the great departments of the government were changed, nor was there any just reason to complain of this measure; as they formed a part of his political council; and, as the chief executive officer of government, he had a perfect right to select his confidential friends and advisers. But when afterwards, and within a few months, he removed able and upright men from offices of a subordinate grade, his conduct was considered improper and arbitrary, and as partaking somewhat of the 'right of prerogative,' usually claimed and exercised by royal princes. . . . In his inaugural address, Mr. Jefferson said, 'We have gained little, if we encourage a political intolerance as wicked as impolitic. We are all brethren of the same principles; we are all republicans, and all federalists.' Yet in less than fifty days he removed fourteen federal

officers, without any allegation of unfaithfulness or inefficiency; on the plea, indeed, that his predecessor had removed two public officers on account of their political opinions; and had appointed none to office in the government but such as were of the same sentiments and views as the administration. 'Few died, and none resigned,' he said; and therefore, to equalize public offices between the two great political parties, it was necessary, in his opinion, to remove a part of those then employed, and to appoint others more friendly to the new administration. For a very few of the removals there might have been sufficient or justifiable reasons offered; but in most instances the changes were made merely for political opinions."—A. Bradford, *Hist. of the Federal Gov't*, 1789-1839, ch. 6.

A. D. 1801.—Appointment of John Marshall to be Chief Justice of the Supreme Court.—His Constitutional decisions.—On the 31st of January, 1801, near the close of the term of President Adams, the latter appointed John Marshall, who had been Secretary of State in his cabinet since the previous May, to be Chief Justice of the Supreme Court. It was a memorable appointment,—the most memorable, perhaps, that has ever been made by official and not popular selection, in America, since Washington was appointed to the command of the continental army. Its result was to place the new, uninterpreted, plastic Constitution of the Federal Republic under the hands of a master, during thirty-four years of the period in which it hardened into practical, determined law. It decided the character of the Constitution, and by that decision the great instrument was made a bond of nationality, firm, strenuous and enduring. "The abilities of the new Chief Justice were recognized by the profession and the public at the time of his appointment, but the attractive qualities of his heart and his kindly manners soon caused respect and reverence to ripen into affection. Perhaps no American citizen since Washington ever conciliated so large a measure of popularity and public esteem. . . . In surveying the results of the labors of thirty-four years recorded in thirty-two volumes of reports, it is obvious that it was in the decision of cases involving International and constitutional law that the force and clearness of the Chief Justice's intellect shone most conspicuous. Such was the ready assent of his colleagues on the bench to his supremacy in the exposition of constitutional law, that in such causes a dissenting opinion was almost unknown. Having had occasion to discuss and thoroughly study the Constitution, both in the Virginia convention which adopted it and afterward in the legislature, he had pre-conceived opinions concerning it, as well as perfect familiarity with it. But in the hot contest waging between the friends of a strict and those of a liberal construction of its language, he wished to take no part. He stated that there should be neither a liberal nor a strict construction, but that the simple, natural, and usual meaning of its words and phrases should govern their interpretation. In the case of *Gibbons v. Ogden*, in which he is called upon to define the true rule of construction of the United States Constitution regarding the rights of the States and the rights and powers of the general government, he studiously avoids each extreme, steering safely in the middle course. He lays

down his own rule thus clearly and definitely:— 'This instrument contains an enumeration of the powers expressly granted by the people to their government. It has been said that these powers ought to be construed strictly; but why ought they to be so construed? Is there one sentence in the Constitution which gives countenance to this rule? In the last of the enumerated powers, that which grants expressly the means for carrying all others into execution, Congress is authorized to make all laws that shall be necessary and proper for the purpose. But this limitation on the means which may be used is not extended to the powers which are conferred, nor is there one sentence in the Constitution which has been pointed out by the gentlemen of the bar, or which we have been able to discern, that prescribes this rule. We do not therefore think ourselves justified in adopting it. If they contend only against that enlarged construction which would extend words beyond their natural and obvious import, we might question the application of the term but should not controvert the principle. If they contend for that narrow construction which, in support of some theory not to be found in the Constitution, would deny to the government those powers which the words of the grant, as usually understood, import, and which are consistent with the general views and objects of the instrument; for that narrow construction which would cripple the government, and render it unequal to the objects for which it is declared to be instituted, and to which the powers given, as fairly understood, render it competent; then we cannot perceive the propriety of this strict construction, nor adopt it as a rule by which the Constitution is to be expounded.' . . . Marshall's dictum that there must be neither a strict nor a liberal construction of the Constitution, but that the natural meaning of the words must govern, was undoubtedly sound and wise. The broad proposition was above criticism; it meant only that the language of the instrument should not be stretched or wrenched in any direction; and however politicians or even statesmen might feel, there was no other possible ground for a judge to take. Jefferson might regard it as a duty to make the Constitution as narrow and restricted as possible; Hamilton might feel that there was an actual obligation upon him to make it as broad and comprehensive as its words would admit. But Jefferson and Hamilton, in a different department of public life from Marshall, had duties and obligations correspondingly different from his. They might properly try to make the Constitution mean what it seemed to them for the public welfare that it should mean. Marshall could not consider any such matter; he had only to find and declare what it did mean, what its words actually and properly declared, not what they might possibly or desirably be supposed or construed to declare. This was the real force and the only real force of his foregoing assertion. As an abstract statement of his function it was impregnable. But, as with most broad principles, the difficulty lay in the application of it to particular cases. The constitutional questions which came before Marshall chiefly took the form of whether or not the Constitution conferred some power or authority upon Congress, or upon the Executive. Then the Federalist lawyers tried to show how much the language could mean, and the anti-Federal-

lat counsel sought to show how little it could mean, and each urged that public policy was upon his side. The decision must be yes or no; the authority did or did not rest in the government. It was easy to talk about the natural and proper meaning of the words; but after all it was the question at issue; did they (not could they) say yes, or did they (not could they) say no, to the special authority sought to be exercised. Now it is one thing to be impartial and another to be colorless in mind. Judge Marshall was impartial and strongly possessed of the judicial instinct or faculty. But he was by no means colorless. He could no more eliminate from his mind an interest in public affairs, and opinions as to the preferable forms of government and methods of administration, than he could cut out and cast away his mind itself. Believing that the Constitution intended to create and did create a national government, and having decided notions as to what such a government must be able to do, he was subject to a powerful though insensible influence to find the existence of the required abilities in the government. . . . The great majority of his decisions were in accordance with Federalist principles of construction and of policy. The Republicans all denounced him as a Federalist, even of an extreme type."—A. B. Magruder, *John Marshall*, ch. 10.

A. D. 1803.—The Louisiana Purchase.—Its constitutional and political aspects.—"The Mississippi question, which had played so important a part in the times of the confederation, had arisen again and demanded a solution, as Spain had, on the 1st of October, 1800, ceded the whole of Louisiana to France. The United States had had experience enough already of how dangerous and how great an obstacle in the way of the commercial development of the country it might become, if the mouth of the Mississippi were in the possession of a foreign power, even if it were no stronger than Spain. Jefferson had not shared in this experience in vain. This was one of the instances in which he gave evidence of a really statesmanlike foresight. He wrote on the 18th of April, 1802, to his ambassador Livingston in Paris: This cession 'completely reverses all the political relations of the United States, and will form a new epoch in our political course. . . . There is on the globe one single spot, the possessor of which is our natural and habitual enemy.' Livingston was instructed to enter into negotiations immediately for the cession of New Orleans and the Floridas, in case France should consider the possession of Louisiana indispensably necessary. As Bonaparte at this very time entertained the idea of resuming the old French colonial policy, the negotiations remained long without result. The uprising of the negroes in San Domingo and the

warlike turn which the affairs of Europe began again to assume, disposed him more favorably towards the American offer. On the 30th of April, 1803, the treaty, ceding the whole of Louisiana to the United States for \$15,000,000, was concluded in Paris [see LOUISIANA: A. D. 1798-1803]. Hamilton shared Jefferson's view, that the purchase of Louisiana was a question of the greatest, and even of vital, importance for the Union. His opposition on other occasions to the policy of the administration, and his personal enmity to the president, did not prevent his lending him a helping hand in this matter when an opportunity offered. The great majority of the Federalists opposed this increase of the territory of the Union with as much decision as Hamilton advocated it. They showed in their attitude towards this question a shortsightedness which would have been astonishing even among the doctrinaires of the opposite party."—H. von Holst, *Const. and Pol. Hist. of the U. S.*, v. 1, pp. 183-185.—"Mr. Jefferson belonged to the school of strict construction, and was in fact its leader and apostle. . . . Under a construction of the Constitution as strict as he had been insisting upon, it was plain that the government would have no power to acquire foreign territory by purchase, and that any attempt in that direction would be usurpation. . . . To give the necessary authority an amendment of the Constitution would be essential, and amendment would be a slow process which might not be accomplished in time to meet the emergency. The case would be complicated by the fact that if the territory was acquired a considerable population would be brought into the Union and thus made citizens by a process of naturalization not contemplated by the Constitution. Mr. Madison, the Secretary of State, agreed with the President in his views. To use Mr. Jefferson's words, 'The Constitution has made no provision for our holding foreign territory; still less for incorporating foreign nations into our Union.' But under circumstances so imperative he thought the political departments of the government should meet the emergency by consummating the purchase, and 'then appeal to the nation for an additional article in the Constitution approving and confirming an act which the nation had not previously authorized.' He did not conceal from himself, however, that in so doing ground would be occupied which it would be difficult to defend, and he proceeds to say: 'The less that is said about any constitutional difficulty the better. Congress should do what is necessary in silence. I find but one opinion as to the necessity of shutting up the Constitution for some time.' Mr. John Quincy Adams held similar views. . . . But it is difficult to conceive of any doctrine more dangerous or more distinctly antagonistic to the fundamental ideas of the American Union than the doctrine that the Constitution may be 'shut up' for a time in order that the government may accomplish something not warranted by it. The political immorality was obvious and glaring; more so in the case of the apostle of strict construction than it could have been if advanced by any other statesman of the day. . . . But Mr. Jefferson's political mistake was scarcely greater than that committed by his opponents: and, indeed, from a party standpoint it was no mistake whatsoever, but a bold measure of wise policy.

. . . The purchase, according to the Federal view of the Constitution, was perfectly legitimate. . . . But the Federalists in general took narrow and partisan views, and in order to embarrass the administration resorted to quibbles which were altogether unworthy the party which had boasted of Washington as its chief and Hamilton as the exponent of its doctrines. . . . The Federal leaders did not stop at cavils; they insisted that the unconstitutional extension of territory was in effect a dissolution of the Union, so that they were at liberty to contemplate and plan for a final disruption."—Judge T. M. Cooley, *The Acquisition of Louisiana (Indiana Hist. Soc. Pamphlets, no. 3)*.—The result of the debates on the Louisiana treaty, in the Senate and the House, "decided only one point. Every speaker, without distinction of party, agreed that the United States government had the power to acquire new territory either by conquest or by treaty; the only difference of opinion regarded the disposition of this territory after it was acquired. Did Louisiana belong to the central government at Washington, or to the States? . . . Whether the government at Washington could possess Louisiana as a colony or admit it as a State, was a difference of no great matter if the cession were to hold good; the essential point was that for the first time in the national history all parties agreed in admitting that the government could govern. . . . Even in 1804 the political consequences of the act were already too striking to be overlooked. Within three years of his inauguration Jefferson bought a foreign colony without its consent and against its will, annexed it to the United States by an act which he said made blank paper of the Constitution; and then he who had found his predecessors too monarchical, and the Constitution too liberal in powers,—he who had nearly dissolved the bonds of society rather than allow his predecessor to order a dangerous alien out of the country in a time of threatened war,—made himself monarch of the new territory, and wielded over it, against its protests, the powers of its old kings. Such an experience was final; no century of slow and half-understood experience could be needed to prove that the hopes of humanity lay thenceforward, not in attempting to restrain the government from doing whatever the majority should think necessary, but in raising the people themselves till they should think nothing necessary but what was good."—H. Adams, *Hist. of the U. S. of Am. during the first Administration of Jefferson*, v. 2, ch. 4-6.

A. D. 1803.—Report on the British Impressment of seamen from American ships.—"In consequence of a resolution of the Senate, calling upon the President for information respecting the violation of the national flag, and the impressment of American seamen, he communicated to that body a letter from the Secretary of State, specifying all the cases of impressment which had come to the knowledge of that Department. The Secretary had no information of the violation of the national flag, except in the recent aggression of Morocco. It appeared, by this report, that 43 citizens of the United States had been impressed by the British, of whom 12 had protections. Ten were natives of the British dominions, and 17 of other

countries, none of whom were stated to have been naturalized. Thus a practice which, even within the British dominions, violates the dearest rights of personal liberty, and which their courts have never ventured to justify, and which is excused and acquiesced in on the plea of necessity, was unhesitatingly exercised by British navy officers on board of American vessels."—G. Tucker, *Hist. of the U. S.*, ch. 12 (p. 2).—"When the captain of a British frigate overhauled an American merchant-vessel for enemy's property or contraband of war, he sent an officer on board who mustered the crew, and took out any seamen whom he believed to be British. The measure, as the British navy regarded it, was one of self-protection. If the American government could not or would not discourage desertion, the naval commander would recover his men in the only way he could. Thus a circle of grievances was established on each side. . . . The growth of American shipping stimulated desertions from the British service to the extent of injuring its efficiency; and these desertions in their turn led to a rigorous exercise of the right of impressment. To find some point at which this vicious circle could be broken was a matter of serious consequence to both countries, but most so to the one which avowed that it did not mean to protect its interest by force. Great Britain could have broken the circle by increasing the pay and improving the condition of her seamen; but she was excessively conservative, and the burdens already imposed on her commerce were so great that she could afford to risk nothing. . . . Conscious of her own power, she thought that the United States should be first to give way. Had the American government been willing to perform its neutral obligations strictly, the circle might have been broken without much trouble; but the United States wished to retain their advantage, and preferred to risk whatever England might do rather than discourage desertion, or enact and enforce a strict naturalization law, or punish fraud. The national government was too weak to compel the States to respect neutral obligations, even if it had been disposed to make the attempt. The practice of impressment brought the two governments to a deadlock on an issue of law. No one denied that every government had the right to command the services of its native subjects, and as yet no one ventured to maintain that a merchant-ship on the high seas could lawfully resist the exercise of this right; but the law had done nothing to define the rights of naturalized subjects or citizens. The British government might, no doubt, impress its own subjects; but almost every British sailor in the American service carried papers of American citizenship, and although some of these were fraudulent, many were genuine. The law of England, as declared from time out of mind by every generation of her judges, held that the allegiance of a subject was indefeasible, and therefore that naturalization was worthless. The law of the United States, as declared by Chief-Justice Ellsworth in 1799, was in effect the same."—H. Adams, *History of the U. S. of Am. during the first Administration of Thomas Jefferson*, v. 2, ch. 14.—"Great Britain was clearly in the wrong. She ought to have kept her seamen by increasing their pay and putting an end to the grievances which produced the mutiny of the *Nore*. In heartlessly neglecting to render the service just

to the common sailor, and at the same time making a brutal use of impressment, aristocratic government showed its dark side. It is true that impressment was conscription in a coarse form, and that the extreme notion of indefeasible allegiance still prevailed. But the practice, however lawful, was intolerable, and its offensiveness was sure to be aggravated by the conduct of British commanders full of the naval pride of their nation and perhaps irritated by the loss of their crews; for it is not denied that many British seamen were seduced from the service and that the American marine, both mercantile and national, was largely manned in this way."—Goldwin Smith, *The United States*, ch. 3.—See, also, below: A. D. 1804-1809.

A. D. 1803-1804.—Federalist Secession movement.—"In the winter . . . of 1803-4, immediately after, and as a consequence of, the acquisition of Louisiana, certain leaders of the Federal party conceived the project of the dissolution of the Union, and the establishment of a Northern Confederacy. The justifying causes to those who entertained it were, that the annexation of Louisiana to the Union transcended the constitutional powers of the government of the United States; that it created, in fact, a new confederacy, to which the States, united by the former compact, were not bound to adhere; that it was oppressive to the interests and destructive to the influence of the Northern section of the Confederacy, whose right and duty it therefore was to secede from the new body politic, and to constitute one of their own. It was lamented that one inevitable consequence of the annexation of Louisiana to the Union would be to diminish the relative weight and influence of the Northern section; that it would aggravate the evil of the slave representation; and endanger the Union itself, by the expansion of its bulk, and the enfeebling extension of its line of defence against foreign invasion. A Northern Confederacy was thought to be the only probable counterpoise to the manufacture of new States in the South. This project was quietly and extensively discussed at the time, by the members of Congress from Massachusetts and Connecticut especially. General Hamilton, indeed, was chosen as the person to be placed, at the proper time, at the head of the military movement which, it was foreseen, would be necessary for carrying the plan into execution. He was consulted on the subject; and although it is quite certain that he was opposed to it, he consented to attend a meeting of Federalists in Boston in the autumn of 1804, but his untimely death, in the summer of that year, prevented the meeting. To whatever proportions, however, the project might otherwise have gone, it was checked by the advantage which was evident to all of the securing of so large a domain, by the great desirableness of preventing France from holding the mouth of our great river, and by the settlement of the question of our national boundaries. These considerations gave a quietus for a time to the suggestions of sectional jealousy."—C. F. Robertson, *The Louisiana Purchase in its Influence upon the Am. System (Papers of the Am. Hist. Ass'n, v. 1)*, pp. 262-263.

A. D. 1804.—Fifth Presidential Election.—Thomas Jefferson, Democratic Republican, re-elected by the vote of 162 Electors in the College, against 14 voting for Charles C. Pinckney,

Federalist. George Clinton chosen Vice President.

A. D. 1804-1805.—Impeachment and trial of Judge Chase.—In the closing hours of the session of Congress which expired March 4, 1803, proceedings of impeachment were begun for the removal from the bench of Judge Pickering, United States District Judge of New Hampshire, who had become mentally incapable of discharging the duties of his office. "By the federalists, the attack on Judge Pickering was taken as the first of a series of impeachments, intended to revolutionize the political character of the courts, but there is nothing to prove that this was then the intent of the majority. The most obnoxious justice on the supreme bench was Samuel Chase of Maryland, whose violence as a political partisan had certainly exposed him to the danger of impeachment; but two years had now passed without producing any sign of an intention to disturb him, and it might be supposed that the administration thus condoned his offenses. Unluckily, Judge Chase had not the good taste or the judgment to be quiet. He irritated his enemies by new indiscretions, and on May 13, 1803, nearly three months after Pickering's impeachment, Mr. Jefferson, in a letter to Joseph H. Nicholson, suggested that it would be well to take him in hand:—'You must have heard of the extraordinary charge of Chase to the grand jury at Baltimore. Ought this seditious and official attack on the principles of our Constitution and on the proceedings of a State to go unpunished? And to whom so pointedly as yourself will the public look for the necessary measures? I ask these questions for your consideration. As for myself, it is better that I should not interfere.' . . . Nicholson seems to have passed on to Randolph the charge he had received from the President. . . . On January 5, 1804, Randolph rose to move for an inquiry into the conduct of Judge Chase. . . . After a long debate, the inquiry was ordered, and Randolph, with his friend Nicholson, was put at the head of the committee. On March 26, 1804, they reported seven articles of impeachment. . . . With this session ended, and the trial went over to the next year. . . . The impeachment of Justice Chase is a landmark in American history, because it was here that the Jeffersonian republicans fought their last aggressive battle, and, wavering under the shock of defeat, broke into factions which slowly abandoned the field and forgot their discipline. That such a battle must one day be fought for the control of the Judiciary was from the beginning believed by most republicans who understood their own principles. Without controlling the Judiciary, the people could never govern themselves in their own way; and although they might, over and over again, in every form of law and resolution, both state and national, enact and proclaim that theirs was not a despotic but a restricted government, which had no right to exercise powers not delegated to it, and over which they, as States, had absolute control, it was none the less certain that Chief Justice Marshall and his associates would disregard their will, and would impose upon them his own. The people were at the mercy of their creatures. The Constitutions of England, of Massachusetts, of Pennsylvania, authorized the removal of an obnoxious judge on a mere address of the legislature, but the Constitution of

the United States had so fenced and fortified the Supreme Court that the legislature, the Executive, the people themselves, could exercise no control over it. A judge might make any decision, violate any duty, trample on any right, and if he took care to commit no indictable offence he was safe in office for life. On this license the Constitution imposed only one check: it said that all civil officers should be removed from office 'on impeachment for, and conviction of, treason, bribery, or other high crimes and misdemeanors.' This right of impeachment was as yet undefined, and if stretched a little beyond strict construction it might easily be converted into something for which it had not been intended. . . . Judge Chase's offences were serious. The immediate cause of impeachment, his address to the grand jury at Baltimore on the 2d May, 1803, proved that he was not a proper person to be trusted with the interpretation of the laws. In this address he said that those laws were rapidly destroying all protection to property and all security to personal liberty. 'The late alteration of the federal Judiciary,' said he, 'by the abolition of the office of the sixteen circuit judges, and the recent change in our state Constitution by the establishing of universal suffrage, and the further alteration that is contemplated in our state Judiciary, if adopted, will, in my judgment, take away all security for property and personal liberty. The independence of the national Judiciary is already shaken to its foundations, and the virtue of the people alone can restore it.' That by this reference to the virtue of the people he meant to draw a contrast with the want of virtue in their government was made clear by a pointed insult to Mr. Jefferson: 'The modern doctrines by our late reformers, that all men in a state of society are entitled to enjoy equal liberty and equal rights, have brought this mighty mischief upon us, and I fear that it will rapidly progress until peace and order, freedom and property, shall be destroyed.' . . . There was gross absurdity in the idea that the people who, by an immense majority, had decided to carry on their government in one way should be forced by one of their own servants to turn about and go in the opposite direction; and the indecorum was greater than the absurdity, for if Judge Chase or any other official held such doctrines, even though he were right, he was bound not to insult officially the people who employed him. On these grounds Mr. Jefferson privately advised the impeachment, and perhaps Randolph might have acted more wisely had he followed Mr. Jefferson's hint to rely on this article alone, which in the end came nearer than any other to securing conviction. . . . The articles of impeachment which Randolph presented to the House on March 26, 1804, and which were, he claimed, drawn up with his own hand, rested wholly on the theory of Chase's criminality; they contained no suggestion that impeachment was a mere inquest of office. But when Congress met again, and, on December 3, the subject came again before the House, it was noticed that two new articles, the fifth and sixth, had been quietly interpolated, which roused suspicion of a change in Randolph's plan. . . . No one could doubt that Randolph and his friends, seeing how little their ultimate object would be advanced by a conviction on the old charges, inserted these new articles in order to correct their mistake and to

make a foundation for the freer use of impeachment as a political weapon. The behavior of Giles and his friends in the Senate strengthened this suspicion. He made no concealment of his theories, and labored earnestly to prevent the Senate from calling itself a court, or from exercising any functions that belonged to a court of law."—H. Adams, *John Randolph*, ch. 4-6. The doctrine of impeachment which Giles (Senator from Virginia) and John Randolph maintained, in connection with the trial of Judge Chase, and which seems to have been acquiesced in by the majority of their party, is reported by John Quincy Adams from a conversation to which he was a listener. In Mr. Adams' Memoirs, under date of December 21, 1804, the incident is related as follows: "There was little business to do [in the Senate], and the adjournment took place early. Sitting by the fireside afterwards, I witnessed a conversation between Mr. Giles and Mr. Israel Smith, on the subject of impeachments; during which Mr. John Randolph came in and took part in the discussion. Giles labored with excessive earnestness to convince Smith of certain principles, upon which not only Mr. Chase, but all the other Judges of the Supreme Court, excepting the one last appointed, must be impeached and removed. He treated with the utmost contempt the idea of an 'independent' judiciary—said there was not a word about such an independence in the Constitution, and that their pretensions to it were nothing more nor less than an attempt to establish an aristocratic despotism in themselves. The power of impeachment was given without limitation to the House of Representatives; the power of trying impeachments was given equally without limitation to the Senate; and if the Judges of the Supreme Court should dare, as they had done, to declare an act of Congress unconstitutional, or to send a mandamus to the Secretary of State, as they had done, it was the undoubted right of the House of Representatives to impeach them, and of the Senate to remove them, for giving such opinions, however honest and sincere they may have been in entertaining them. Impeachment was not a criminal prosecution; it was no prosecution at all. The Senate sitting for the trial of impeachments was not a court, and ought to discard and reject all process of analogy to a court of justice. A trial and removal of a judge upon impeachment need not imply any criminality or corruption in him. Congress had no power over the person, but only over the office. And a removal by impeachment was nothing more than a declaration by Congress to this effect: 'You hold dangerous opinions, and if you are suffered to carry them into effect you will work the destruction of the nation. We want your offices, for the purpose of giving them to men who will fill them better. In answer to all this, Mr. Smith only contended that honest error of opinion could not, as he conceived, be a subject of impeachment. And in pursuit of this principle he proved clearly enough the persecution and tyranny to which those of Giles and Randolph inevitably lead. It would, he said, establish 'a tyranny over opinions,' and he traced all the arguments of Giles to their only possible issue of rank absurdity. In all this conversation I opened my lips but once, in which I told Giles that I could not assent to his definition of the term impeachment."—J. Q. Adams, *Memoirs*, ed. by C. F. Adams, v. 1, pp. 322-323.—The trial of

Chase was opened on the 9th of February, 1805, and ended on the 23d. By votes ranging from 15 to 34 (the total number of Senators being 34), he was acquitted on each of the charges—a result attributed considerably to the offensive and incapable manner in which the prosecution had been conducted by John Randolph.—J. Schouler, *Hist. of the U. S.*, v. 2, p. 77.

A. D. 1804-1805.—Expedition of Lewis and Clark across the continent.—The first exploration of the Missouri and beyond.—Captain Meriwether Lewis and Captain William Clark "were the first men to cross the continent in our zone, the truly golden zone. A dozen years before them, Mackenzie had crossed in British dominions far north, but settlements are even now sparse in that parallel. Still earlier had Mexicans traversed the narrowing continent from the Gulf to the Pacific, but seemed to find little worth discovery. It was otherwise in the zone penetrated by Lewis and Clark. There development began at once and is now nowhere surpassed. Along their route ten States, with a census in 1800 of eight and a half millions, have arisen in the wilderness. . . . The credit of our Great Western discovery is due to Jefferson, though he never crossed the Alleghanics. When Columbus saw the Orinoco rushing into the ocean with irresistible power and volume, he knew that he had anchored at the mouth of a continental river. So Jefferson, ascertaining that the Missouri, though called a branch, at once changed the color and character of the Mississippi, felt sure that whoever followed it would reach the innermost recesses of our America. Learning afterward that Capt. Gray had pushed into the mouth of the Columbia only after nine days' breasting its outward current, he deemed that river a worthy counterpart of the Missouri, and was convinced that their headwaters could not be far apart in longitude. Inaugurated in 1801, before his first Presidential term was half over he had obtained, as a sort of secret-service fund, the small sum which sufficed to fit out the expedition. He had also selected Lewis, his private secretary, for its head, and put him in a course of special training. But the actual voyage up the Missouri, purchased April 30, 1803, was not begun till the middle of May, 1804. Forty-five persons in three boats composed the party. . . . After 171 days the year's advance ended with October, for the river was ready to freeze. The distance up stream they reckoned at 1,800 miles, or little more than 9 miles a day, a journey now made by railroad in forty-four hours. . . . Winter quarters were thirty miles above the Bismarck of our day. Here they were frozen in about five months. The huts they built and abundant fuel kept them warm. Thanks to their hunters and Indian traffic, food was seldom scarce. Officials of the Hudson's Bay Company (who had a post within a week's journey) and many inquisitive natives paid them visits. From all these it was their tireless endeavor to learn everything possible concerning the great unknown of the river beyond. Scarcely one could tell about distant places from personal observation, but some second-hand reports were afterward proved strangely accurate, even as to the Great Falls, which turned out to be a thousand miles away. It was not long, however, before they learned that the wife of Chaboneau, whom they had taken as a local interpreter, was

a captive whose birth had been in the Rocky Mountains. She, named the Bird-woman, was the only person discoverable after a wulter's search who could by possibility serve them as interpreter and guide among the unknown tongues and labyrinthine fastnesses which they must encounter. Early in April, 1805, the explorers, now numbering thirty-two, again began to urge their boats up the river, for their last year's labors had brought them no more than half-way to their first objective, its source. No more Indian purveyors or pilots: their own rides were the sole reliance for food. Many a wigwam, but no Indian, was espied for four months and four days after they left their winter camp. It was through the great Lone Land that they groped their dark and perilous way. In twenty days after the spring start they arrived at the Yellowstone, and in thirty more they first sighted the Rocky Mountains. Making the portage at the Great Falls cost them a month of vexatious delay. Rowing on another month brought them on August 12 to a point where one of the men stood with one foot each side of the rivulet, and thanked God that he had lived to bestride the Missouri, heretofore deemed endless. They dragged their canoes, however, up the rivulet for five days longer. It was 400 days since they had left the mouth of the river, and their mileage on its waters had been 3,096 miles. A mile further they stood on the great divide, and drank of springs which sent their water to the Pacific. But meantime they had been ready to starve in the mountains. Their hunters were of the best, but they found no game: buffaloes had gone down into the lowlands, the birds of heaven had fled, and edible roots were mostly unknown to them. For more than four months they had looked, and lo! there was no man. It was not till August 13 that, surprising a squaw so encumbered with papooses that she could not escape, and winning her heart by the gift of a looking-glass and painting her cheeks, they formed friendship with her nation, one of whose chiefs proved to be a brother of their Bird-woman. Horses were about all they could obtain of these natives, streams were too full of rapids to be navigable, or no timber fit for canoes was within reach. So the party, subsisting on horse-flesh, and afterwards on dog-meat, toiled along one of the worst possible routes. Nor was it till the 7th of October that they were able to embark in logs they had burned hollow, upon a branch of the Columbia, which, after manifold portages and perils, bore them to its mouth and the goal of their pilgrimage, late in November. Its distance from the starting-point, according to their estimate, was 4,134 miles. . . . Many an episode in this eventful transcontinental march and countermarch will hereafter glorify with romantic associations islands, rivers, rocks, cañons, and mountains all along its track. Among these none can be more touching than the story of the Bird-woman, her divination of routes, her courage when men quailed, her reunion with a long-lost brother, her spreading as good a table with bones as others could with meat, her morsel of bread for an invalid benefactor, her presence with her infant attesting to savages that the expedition could not be hostile. But when bounties in land and money were granted to others, she was unthought of. Statues of her, however, must yet be reared by grateful dwellers in lands

she laid open for their happy homes. Western poets will liken her to Ariadne and Beatrice."—*The Nation*, Oct. 26, 1893 (*Reviewing Dr. Coues' edition of "History of the Expedition under the Command of Lewis and Clark"*).

A. D. 1804-1805.—Jefferson's Plans of National Defense.—His Gunboat fleet.—Mr. Jefferson's views as to the measures required for national defense, in the disturbed foreign relations of the country, were indicated in his message to Congress, when it assembled in November, 1804, but were afterwards communicated more fully to Mr. Nicholson, of Maryland, chairman of the committee to which the subject was referred. "Concerning fortifications, he remarks that the plans and estimates of those required for our principal harbours, made fifty millions of dollars necessary for their completion. It would require 2,000 men to garrison them in peace, and 50,000 in war. When thus completed and manned, they would avail but little, as all military men agree that when vessels might pass a fort without tacking, though it may annoy, it cannot prevent them. Two modes of effecting the same object might be 'adopted in aid of each other.' 1. Heavy cannon on travelling carriages, with militia trained to the management of them. 2. Floating batteries or gunboats. There were, he estimated, fifteen harbours in the United States needing and deserving defence. They would require 250 gunboats. The cost of these had been estimated at 2,000 dollars each, but he puts it down at 4,000, amounting in all to 1,000,000 dollars. Such of them as were kept under a shelter, ready to be launched, when wanted, would cost nothing more than an inclosure, or sentinel; those that were afloat, with men enough to take care of them, about 2,000 dollars a year each; and those fully manned for action about 8,000 dollars a year. He thought twenty-five of the second description enough, when France and England were at war. When at war ourselves, some of the third description would be required, the precise number depending on circumstances. There were ten then built and building, and fifteen more it was thought would be sufficient to put every harbour into a respectable state of defence. Congress, neither fulfilling the wishes of the President, nor altogether resisting them, gave the President the means of partially trying his favourite scheme, by the appropriation of 60,000 dollars. The sufficiency of this species of naval defence occasioned a good deal of discussion about this time between the opponents and the supporters of the administration. . . . The scheme was vehemently assailed by his adversaries in every form of argument and ridicule, and was triumphantly adduced as a further proof that he was not a practical statesman. The officers of the navy were believed to be, with scarcely an exception, opposed to the system of gunboats, especially those who were assigned to this service, partly because it was found to be personally very uncomfortable, and yet more, perhaps, because the power they wielded was so inferior, and their command so insignificant, compared with that to which they had been familiarized. It was like compelling a proud man to give up a fine richly caparisoned charger for a pair of panniers and a donkey. To stem the current of public opinion, which so far as it was manifested, set so strong against

these gunboats, and to turn it in their favour, Mr. Jefferson prevailed on Paine, who, and since his return been addressing the people of the United States on various topics, through the newspapers, to become their advocate. He set about it with his wonted self-confidence and real talent in enforcing his views, and proceeded to show that a gun from a gunboat would do the same execution as from a seventy-four, and cost no more, perhaps less; but a ship carrying seventy-four guns, could bring only one half to bear on an enemy at once, whereas if they were distributed among seventy-four boats, they could all be equally effective at once. In spite of this logic, the public, pinning its faith on experienced men, remained incredulous; and when, soon afterwards, many of the new marine were driven ashore in a tempest, or were otherwise destroyed, no one seemed to regard their loss as a misfortune, and the officers of the navy did not affect to conceal their satisfaction; nor has any attempt been since made to replace them. . . . The error of Mr. Jefferson was not, as his enemies charged, in adopting a visionary scheme of defence, but in limiting his views from a motive of economy, to the protection of the harbours, and in leaving his country's commerce and seamen, on the ocean, defenceless."—G. Tucker, *The Life of Thomas Jefferson*, v. 2, ch. 8.

A. D. 1804-1809.—Difficulties with Great Britain.—Neutral rights.—The Right of Search.—Impressment.—Blockade by Orders in Council and the Berlin and Milan Decrees.—Embargo and Non-intercourse.—For a time, after 1803, almost the whole carrying trade of Europe was in American hands. "The merchant flag of every belligerent, save England, disappeared from the sea. France and Holland absolutely ceased to trade under their flags. Spain for a while continued to transport her specie and her bullion in her own ships protected by her men-of-war. But this, too, she soon gave up, and by 1806 the dollars of Mexico and the ingots of Peru were brought to her shores in American bottoms. It was under our flag that the gum trade was carried on with Senegal; that the sugar trade was carried on with Cuba; that coffee was exported from Caracas; and hides and indigo from South America. From Vera Cruz, from Carthagena, from La Plata, from the French colonies in the Antilles, from Cayenne, from Dutch Guiana, from the Isles of France and Reunion, from Batavia and Manila, great fleets of American merchantmen sailed for the United States, there to neutralize the voyage and then go on to Europe. They filled the warehouses at Cadiz and Antwerp to overflowing. They glutted the markets of Embden and Lisbon, Hamburg and Copenhagen with the produce of the West Indies and the fabrics of the East, and, bringing back the products of the looms and forges of Germany to the New World, drove out the manufactures of Yorkshire, Manchester, and Birmingham. But this splendid trade was already marked for destruction. That Great Britain should long treat it with indifference was impossible. . . . She determined . . . to destroy it, and to destroy it in two ways: by paper blockades and by admiralty decisions. In January, 1804, accordingly, Great Britain blockaded the ports of Guadeloupe and Martinique. In April her commander at Jamaica blockaded Curaçoa. In August she extended the blockade to the

Straits of Dover and the English Channel."—J. B. McMaster, *Hist. of the People of the U. S.*, s. 3, pp. 225-226.—"It had not yet come to be the acknowledged law of nations that free ships make free goods. But nearly the same purpose was answered, if the property of belligerents could be safely carried in neutral ships under the pretense of being owned by neutrals. The products of the French colonies, for example, could be loaded on board of American vessels, taken to the United States and reshipped there for France as American property. England looked upon this as an evasion of the recognized public law that property of belligerents was good prize. . . . It was denied that neutrals could take advantage of a state of war to enter upon a trade which had not existed in time of peace; and American ships were seized on the high seas, taken into port, and condemned in the Admiralty Courts for carrying enemy's goods in such a trade. The exercise of that right, if it were one by the recognized law of nations, would be of great injury to American commerce, unless it could be successfully resisted. . . . A war with England must be a naval war; and the United States not only had no navy of any consequence, but it was a part of Mr. Jefferson's policy, in contrast with the policy of the preceding administrations, that there should be none, except . . . gunboats kept on wheels and under cover in readiness to repel an invasion. But there was no fear of invasion, for by that England could gain nothing. 'She is renewing,' Madison wrote in the autumn of 1805, 'her depredations on our commerce in the most ruinous shapes, and has kindled a more general indignation among our merchants than was ever before expressed.' These depredations were not confined to the seizing and confiscating American ships under the pretense that their cargoes were contraband. Seamen were taken out of them on the charge of being British subjects and deserters, not only on the high seas in larger numbers than ever before, but within the waters of the United States. No doubt these seamen were often British subjects and their seizure was justifiable, provided England could rightfully extend to all parts of the globe and to the ships of all nations the merciless system of impressment to which her own people were compelled to submit at home. . . . But even if it could be granted that English naval officers might seize such men without recourse to law, wherever they should be found and without respect for the flag of another nation, it was a national insult and outrage, calling for resentment and resistance, to impress American citizens under the pretense that they were British subjects. But what was the remedy? As a last resort in such cases, nations have but one. Diplomacy and legislation may be first tried, but if these fail, war must be the final ordeal. For this the Administration made no preparation, and the more evident the unreadiness the less was the chance of redress in any other way. . . . The first measure adopted to meet the aggressions of the English was an act prohibiting the importation of certain British products. This had always been a favorite policy with Madison. . . . The President and Secretary were in perfect accord; for Jefferson preferred anything to war, and Madison was persuaded that England would be brought to terms by the loss of the best market

for her manufactures. . . . But the Administration did not rely upon legislation alone in this emergency. The President followed up the act prohibiting the introduction of British goods by sending William Pinkney to England in the spring of 1806, to John Monroe, the resident minister, in an attempt at negotiation. These commissioners soon wrote that there was good reason for hoping that a treaty would be concluded, and thereupon the non-importation act was for a time suspended. In December came the news that a treaty was agreed upon, and soon after it was received by the President. . . . Monroe and Pinkney were enjoined, in the instructions written by the Secretary of State, to make the abandonment of impressment the first condition of a treaty. A treaty, nevertheless, was agreed upon, without this provision. . . . Without consulting the Senate, though Congress was in session when the treaty was received, and although the Senate had been previously informed that one had been agreed upon, the President rejected it. . . . As England's need of seamen increased, the captains of her cruisers, encouraged by the failure of negotiation, grew bolder in overhauling American ships. . . . In the summer of 1807 an outrage was perpetrated on the frigate *Chesapeake*, as if to emphasize the contempt with which a nation must be looked upon which only screamed like a woman at wrongs which it wanted the courage and strength to resent, or the wisdom to compound for. The *Chesapeake* was followed out of the harbor of Norfolk by the British man-of-war *Leopard*, and when a few miles at sea, the *Chesapeake* being brought to under the pretense that the English captain wished to put some dispatches on board for Europe, a demand was made for certain deserters supposed to be on the American frigate. Commodore Barron replied that he knew of no deserters on his ship, and that he could permit no search to be made, even if there were. After some further altercation the Englishman fired a broadside, killing and wounding a number of the *Chesapeake's* crew. Commodore Barron could do nothing else but surrender, for he had only a single gun in readiness for use, and that was fired only once and then with a coal from the cook's galley. The ship was then boarded, the crew mustered, and four men arrested as deserters. Three of them were negroes,—two natives of the United States, the other of South America. The fourth man, probably, was an Englishman. . . . For this direct national insult, explanation, apology, and reparation were demanded, and at the same time the President put forth a proclamation forbidding all British ships of war to remain in American waters. . . . Some preparation was made for war, but it was only to call upon the militia to be in readiness, and to order Mr. Jefferson's gunboats to the most exposed ports. Great Britain was not alarmed. The captain of the *Leopard*, indeed, was removed from his command, as having exceeded his duty; but a proclamation on that side was also issued, requiring all ships of war to seize British seamen on board foreign merchantmen, to demand them from foreign ships of war, and if the demand was refused to report the fact to the admiral of the fleet. . . . New perils all the while were besetting American commerce. In November, 1806, Napoleon's Berlin decree was promulgated, for-

bidding the introduction into France of the products of Great Britain and her colonies, whether in her own ships or those of other nations. . . . The decree, it was declared, was a rightful retaliation of a British order in council of six months before, which had established a partial blockade of a portion of the French coast. . . . In the autumn of 1807 [the President] called a special session of Congress. . . . He sent a special message to the Senate, recommending an embargo. An act was almost immediately passed, which, if anything more was needed to complete the ruin of American commerce, supplied that deficiency. A month before this time the English ministry had issued a new order in council—the news of which reached Jefferson as he was about to send in his message—proclaiming a blockade of pretty much all Europe, and forbidding any trade in neutral vessels, unless they had first gone into some British port and paid duties on their cargoes; and within 24 hours of the President's message, recommending the embargo, Napoleon proclaimed a new decree from Milan, by which it was declared that any ship was lawful prize that had anything whatever to do with Great Britain. . . . Within four months of its enactment, Josiah Quincy of Massachusetts declared, in a debate in Congress, that 'an experiment, such as is now making, was never before—I will not say tried—it never before entered into the human imagination. There is nothing like it in the narrations of history or in the tales of fiction.' . . . The prosperity and tranquillity which marked the earlier years of Jefferson's administration disappeared in its last year. . . . The mischievous results of the embargo policy were evident enough to a sufficient number of Republicans to secure, in February, 1809, the repeal [by the Non-intercourse Bill] of that measure, to take effect the next month as to all countries except England and France."—S. H. Gay, *James Madison*, ch. 17.—The Non-intercourse Bill which repealed the general provisions of the Embargo Act "excluded all public and private vessels of France and England from American waters; forbade under severe penalties the importation of British or French goods; . . . and gave the President authority to reopen by proclamation the trade with France or England in case either of these countries should cease to violate neutral rights. . . . Such a non-intercourse merely sanctioned smuggling."—H. Adams, *Hist. of the U. S.: Second Administration of Jefferson*, v. 2, p. 445.

A. D. 1806-1807.—Aaron Burr's filibustering scheme.—His arrest and trial.—Aaron Burr had been chosen vice-president in 1800. But he had lost all his friends in both parties in the election. In the course of a bitter political quarrel in New York, in 1804, he challenged Hamilton to a duel. Hamilton was mad enough to accept the challenge and was killed. Burr, "after his duel with Gen. Hamilton, and after the term of his office as vice-president had expired, . . . seemed to be left alone, and abandoned by all

political parties. The state of public feeling in New-York was such, after the death of Hamilton, that his presence in that city could not be endured. In New-Jersey he had been indicted by a grand jury for murder. Thus situated, his ambitious, active and restless spirit rendered his condition intolerable to himself. On the 22nd March, but a few days after he left forever the presidency of the United States senate, he wrote to his son-in-law, Mr. Joseph Alton, that he 'was under ostracism. In New-York,' said he, 'I am to be disfranchised, and in New-Jersey to be hanged. Having substantial objections to both, I shall not, for the present, hazard either, but shall seek another country.' Accordingly, early in May, he left Philadelphia for the western country, and arrived at Lexington, in Kentucky, on the 20th of that month. After travelling with great rapidity through that state, he directed his course to Nashville, in Tennessee, and from thence he journeyed through the woods to Natchez. From Natchez he went by land to New-Orleans, where he arrived on the 25th June, 1805. At that time, Gen. Wilkinson was in that city, or in its neighborhood, and commanded the United States troops stationed there. It does not appear that he remained long in New-Orleans, but soon again returned to Lexington, in Kentucky, by the way of Nashville. He was at Cincinnati, and at several places in Ohio, but in a very short time made his appearance at St. Louis, in Missouri, and from thence he travelled to Washington, at which place he arrived on the 29th day of November. These immense journeys he performed in a little more than six months; before the great western rivers were rendered navigable by steam, and when the roads were badly constructed; and through a considerable part of the country traversed by him there were no roads at all. His movements were veiled in mystery, and all men wondered what could be the motive which induced these extraordinary journeys. From January, 1806, to the month of August following, he spent his time principally in Washington and Philadelphia; but, in the month of August, he again set his face towards the west, and was soon afterwards found in Kentucky. About this time boats were provided, provisions and munitions of war were collected, and men were gathering at different points on the Ohio and Cumberland rivers. Government now began to be alarmed. Mr. Tiffin, governor of Ohio, under the advice of the president (Jefferson), seized the boats and their cargo, and Burr was arrested in Kentucky; but no sufficient proof appearing against him he was discharged. On the 23d January, 1807, Mr. Jefferson sent a message to congress, accompanied by several affidavits, in which he gave the history of Burr's transactions, so far as they had come to the knowledge of the administration. The message stated that, on the 21st of October, Gen. Wilkinson wrote to the president that, from a letter he had received from Burr, he had ascertained that his objects were, a severance of the union on the line of the Allegany mountains, an attack upon Mexico, and the establishment of an independent government in Mexico, of which Burr was to be the head. That to cover his movements, he had purchased, or pretended to have purchased, of one Lynch, a tract of country claimed by Baron Bastiop, lying near Natchitoches, on which he proposed to

make a settlement. That he had found, by the proceedings of the governor and people of Ohio and Kentucky, that the western people were not prepared to join him; but notwithstanding, there was reason to believe that he intended, with what force he could collect, to attack New-Orleans, get the control of the funds of the bank, seize upon the military and naval stores which might be found there, and then proceed against Mexico. The president assured congress that there was no reason to apprehend that any foreign power would aid Col. Burr. A considerable part of the evidence going to show that Burr entertained criminal designs, depended on the affidavit of Wilkinson. It is not my intention to examine into the proofs of the guilt or innocence of Burr, further than to remark, that from the character of the vain, vaporing and unprincipled Wilkinson, as before and since developed, no dependence can safely be placed upon his statements, unless supported by strong circumstances, or other evidence; and I believe it will not at this day be doubted, that if Burr plotted treason, Wilkinson, in the first instance, agreed to be his accomplice; that, as their operations progressed, he began seriously to doubt of success, and then communicated his knowledge of the affair to the government, in order to save himself, and perhaps obtain a reward. . . . That Burr himself was deceived by Wilkinson, there can be no doubt. . . . But there was other evidence besides that of Wilkinson, against Burr, which has never been explained. . . . If his object was merely an attack upon Mexico, why did he not openly avow it, when charged and indicted for treason against his country? . . . Again, unless Col. William Eaton, the man who had then recently so gallantly distinguished himself on the Barbary coasts, has perjured himself, Burr did form a treasonable plot against his country. Col. Eaton, on the 26th January, deposed, in open court, held before Judge Cranch and others, at Washington, that during the preceding winter (1806), Burr called upon him, and, in the first instance, represented that he was employed by the government to raise a military force to attack the Spanish Provinces in North America, and invited Eaton to take a command in the expedition; that Eaton, being a restless, enterprising man, readily acceded to the proposal; that Burr made frequent calls upon him, and in his subsequent interviews complained of the inefficiency and timidity of the government, and, eventually, fully developed his project; which was to separate the western states from the union, and establish himself as sovereign of the country. . . . Burr did not succeed in collecting and organizing a force on the western waters; but, on the 1st day of March, he was discovered wandering alone in the Tombigbee country, near the line of Florida. . . . The trial of the indictment against Burr, for treason, occupied many weeks, but he was finally acquitted by the jury, without swearing any witness in his defence. The acquittal seems to have been on technical grounds. . . . After his acquittal, Col. Burr appears still to have persevered in the project of making an effort to detach Mexico from the Spanish government. On the 7th of June, 1808, he sailed from New-York for Europe, it would seem in the hope of engaging the British government to fit out an expedition against Mexico,

in which he would take a part. In this he was entirely unsuccessful. His application to the French government was equally vain and useless. He spent four years wandering about in Europe."—J. D. Hammond, *Hist. of Political Parties in the State of N. Y.*, ch. 12 (v. 1).

A. D. 1806-1812.—The Cumberland Road.
—The first National work of "Internal Improvement."—"In 1806 the United States began the Cumberland Road, its first work of the kind; but it was intended to open up the public lands in Ohio and the country west, and was nominally paid for out of the proceeds of those public lands. Just as the embargo policy was taking effect, Gallatin, encouraged by the accumulation of a surplus in the Treasury, brought in a report, April 4, 1808, suggesting the construction of a great system of internal improvements: it was to include coastwise canals across the isthmuses of Cape Cod, New Jersey, upper Delaware and eastern North Carolina; roads were to be constructed from Maine to Georgia, and thence to New Orleans, and from Washington westward to Detroit and St. Louis. He estimated the cost at twenty millions, to be provided in ten annual instalments. Jefferson himself was so carried away with this prospect of public improvement that he recommended a constitutional amendment to authorize such expenditures. The whole scheme disappeared when the surplus vanished; but from year to year small appropriations were made for the Cumberland Road, so that up to 1812 more than \$200,000 had been expended upon it."—A. B. Hart, *Formation of the Union (Epochs of Am. Hist.)*, sect. 121.—"The Cumberland Road was always a pet enterprise with Mr. Clay. . . . Its eastern terminus was Cumberland on the Potomac, from which it takes its name. Thence it was projected to Wheeling on the Ohio, crossing the Alleghanies; from Wheeling to Columbus, Ohio; and thence westward through Indiana, Illinois, and Missouri, to Jefferson, the capital of the latter State. . . . After Mr. Clay went to Congress in 1806, and while he was there, this great national work required and realized his constant attention and zealous advocacy. It was owing to his exertions chiefly that it ever reached Wheeling, and passed on so far into the State of Ohio. The last appropriations made for this road were in 1834 and 1835, with a view of repairing it, and giving it over to the States through which it passed, if they would accept it, and keep it in repair."—C. Colton, *Life, Corr., and Speeches of Henry Clay*, v. 6, p. 7.

A. D. 1807.—Practical beginning of steamboat navigation.—See STEAM NAVIGATION.

A. D. 1807.—Abolition of the Slave-Trade.
—The measure in Congress.—Significance of Southern action.—By the terms of the Constitution, Congress was deprived of power to interfere with the importation of slaves before the year 1808, but no longer. The time now approached when that restraint would cease, and the President in his annual message brought the subject to notice. "It was referred to a com-

mittee of which Mr. Early of Georgia was the chairman. There was no difference of opinion as to the prohibition of the traffic, or at least no expression of any; but the practical details of the law, the penalties by which it was to be enforced, and, above all, the disposition to be made of such negroes as might be brought into the country in violation of it, gave rise to violent and excited debates. The committee reported a law prohibiting the slave-trade after the 31st of December, 1807, imposing certain penalties for its breach, and providing that all negroes imported after that date should be forfeited. The object of this provision undoubtedly was to obtain directly what the Constitution only gave indirectly and by implication.—the sanction of the government of the United States to the principle of slave-holding, by making it hold and sell men as property. The astuteness of the slave-holding mind on all points touching slavery was shown in this proposition, and all the tactics of bullying and bluster with which later Congressional campaigns have made us familiar, were employed in the debate to which it gave rise. It having been moved that the words 'shall be entitled to his or her freedom' should be inserted after the word 'forfeited,' a furious fight ensued over this amendment. The Southern members resisted it, on the ground that the emancipation of the imported Africans would increase the number of free negroes, who, as Mr. Early affirmed, 'were considered in the States where they are found in considerable numbers as instruments of murder, theft, and conflagration.' And so craftily was this proposition of forfeiture to the government qualified, that its drift was not at first discerned by the Northern members. For, strong as was their disapprobation of slavery in the abstract, they felt no disposition to expose their Southern brethren to all the horrors of insurrection which it was assumed would follow the multiplication of free negroes. Indeed, Mr. Early candidly said, that, if these negroes were left free in the Southern States, not one of them would be alive in a year. And although the Federalists as a party, and Mr. Quincy eminently among them, regarded the political element of slavery as full of dangers to the future of the nation, these opinions had worked no personal and social alienation between Northern and Southern men, such as has since taken place. . . . There was, therefore, quite disposition enough to arrange this matter in the way the most satisfactory to the masters, without so rigid a regard to the rights of the negroes as, it is to be hoped, would have been had in later times. Mr. Quincy at first opposed striking out the forfeiture clause, on the ground that this was the only way in which the United States could get the control of the Africans, so as to dispose of them in the manner most for their own interest. . . . These views influenced a majority of the Northern members until the question of the final passage of the bill approached. At last they came to a sense of the disgrace which the forfeiture of the negroes to the government, and the permission to it to sell them as slaves if it so pleased, would bring upon the nation, and the whole matter was recommitted to a committee of one from each State. . . . This committee reported a bill providing that such imported negroes should be sent to such States as had abolished slavery, there

to be bound out as apprentices for a term of years, at the expiration of which they should be free. This bill produced a scene of great and violent excitement on the part of the slaveholders. Mr. Early declared that the people of the South would resist this provision with their lives! This resistance to a measure which proposed doing all the slaveholders had demanded for their own safety, to wit, removing the imported negroes from the slaveholding domain and providing for them in the Free States, showed that their purpose was, at least in part, to have the negroes sold as slaves to themselves. This object they did virtually gain at last, as the final settlement was by a bill originating in the Senate, providing that, though neither importer nor purchaser should have a title to such negroes, still the negroes should be subject to any regulation for their disposal that should be made by the States into which they might be brought. The design of the slaveholding party to make the United States recognize the rightfulness of property in man was thus avoided, but it was at the cost of leaving the imported Africans to the tender mercies of the Slave States. The fact that the slaveholders were greatly incensed at the result, and regarded it as an injury and an affront, does not make this disposition of these unfortunates any the less creditable to Congress or the nation."—E. Quincy, *Life of Josiah Quincy*, ch. 5.—See, also, SLAVERY, NEGRO: A. D. 1792-1807.

A. D. 1808.—The effects of the Embargo.—"The dread of war, radical in the Republican theory, sprang not so much from the supposed waste of life or resources as from the retroactive effects which war must exert upon the form of government; but the experience of a few months showed that the embargo as a system was rapidly leading to the same effects. . . . Personal liberties and rights of property were more directly curtailed in the United States by embargo than in Great Britain by centuries of almost continuous foreign war. . . . While the constitutional cost of the two systems was not altogether unlike, the economical cost was a point not easily settled. No one could say what might be the financial expense of embargo as compared with war. Yet Jefferson himself in the end admitted that the embargo had no claim to respect as an economical measure. . . . As the order was carried along the seacoast, every artisan dropped his tools, every merchant closed his doors, every ship was dismantled. American produce—wheat, timber, cotton, tobacco, rice—dropped in value or became unsalable; every imported article rose in price; wages stopped; swarms of debtors became bankrupt; thousands of sailors hung idle round the wharves trying to find employment on coasters, and escape to the West Indies or Nova Scotia. A reign of idleness began; and the men who were not already ruined felt that their ruin was only a matter of time. The British traveller, Lambert, who visited New York in 1808, described it as resembling a place ravaged by pestilence:—'The port indeed was full of shipping, but they were dismantled and laid up; their decks were cleared, their hatches fastened down, and scarcely a sailor was to be found on board. Not a box, bale, cask, barrel, or package was to be seen upon the wharves.' . . . In New England, where the struggle of existence was keenest, the embargo

struck like a thunderbolt, and society for a moment thought itself at an end. Foreign commerce and shipping were the life of the people,—the ocean, as Pickering said, was their farm. The outcry of suffering interests became every day more violent, as the public learned that this paralysis was not a matter of weeks, but of months or years. . . . The belief that Jefferson, sold to France, wished to destroy American commerce and to strike a deadly blow at New and Old England at once, maddened the sensitive temper of the people. Immense losses, sweeping away their savings and spreading bankruptcy through every village, gave ample cause for their complaints. Yet in truth, New England was better able to defy the embargo than she was willing to suppose. She lost nothing except profits which the belligerents had in any case confiscated; her timber would not harm for keeping, and her fish were safe in the ocean. The embargo gave her almost a monopoly of the American market for domestic manufactures; no part of the country was so well situated or so well equipped for smuggling. . . . The growers of wheat and livestock in the Middle States were more hardly treated. Their wheat, reduced in value from two dollars to seventy-five cents a bushel, became practically unsalable. . . . The manufacturers of Pennsylvania could not but feel the stimulus of the new demand; so violent a system of protection was never applied to them before or since. Probably for that reason the embargo was not so unpopular in Pennsylvania as elsewhere, and Jefferson had nothing to fear from political revolution in this calm and plodding community. The true burden of the embargo fell on the Southern States, but most severely upon the great State of Virginia. Slowly decaying, but still half patriarchal, Virginia society could neither economize nor liquidate. Tobacco was worthless; but 400,000 negro slaves must be clothed and fed, great establishments must be kept up, the social scale of living could not be reduced, and even bankruptcy could not clear a large landed estate without creating new encumbrances in a country where land and negroes were the only forms of property on which money could be raised. Stay-laws were tried, but served only to prolong the agony. With astonishing rapidity Virginia succumbed to ruin, while continuing to support the system that was draining her strength.”—H. Adams, *Hist. of the U. S.; Second Administration of Jefferson*, v. 2, ch. 12.—“Our passion,” said Jefferson, “is peace.” He not only receded as a philanthropist from bloodshed, but as a politician he with reason dreaded military propensities and sabre sway. Such preparations for war as he could be induced to make were scrupulously defensive, and his fleet of gun-boats for the protection of the coast to be launched when the invader should appear excited a smile. Alone among all statesmen he tried to make war without bloodshed by means of an embargo on trade. . . . It is not the highest of his titles to fame in the eyes of his countrymen, but it may be not the lowest in the court of humanity, that he sacrificed his popularity in the attempt to find a bloodless substitute for war. His memory recovered from the shock and his reign over American opinion endured.”—Goldwin Smith, *The United States: An outline of Political History*, 1492-1871, ch. 3.

A. D. 1808.—Sixth Presidential Election.—Jefferson succeeded by Madison.—“In anticipation of Jefferson's retirement there had been . . . no little dispute and lively canvassing as to the next incumbency of the presidential chair. . . . Upon Madison, it was generally considered that Jefferson had fixed his personal preference. . . . But Madison had many political enemies in the Republican ranks among Virginians themselves. . . . Monroe was the growing favorite. Republicans in Congress, who, from one cause or another, had become disaffected to the Secretary of State, made their new choice manifest. The Quids [see Quibs], having courted Monroe by letter when he was abroad, crowded about him when he passed through Washington on his way home, just as the Embargo became a law. . . . Monroe hesitated, unwilling to make a breach; and rather than hazard the Republican cause, or the future prospects of their favorite, his more temperate friends took him off the list of candidates, so that at the usual Congressional caucus, held at the capital, Madison was nominated almost unanimously for President, and George Clinton for Vice-President. But out of 139 Republican Senators and Representatives only 89 were present at this caucus, some being sick or absent from the city, and others keeping away because dissatisfied. Clinton had been a disappointed candidate, as well as Monroe, for the highest honors. . . . His ambition was pursued beyond the caucus, notwithstanding his renomination as Vice-President, until the friends of Madison, who had profited by the diversion among competitors, threatened to drop Clinton from the regular ticket unless he relinquished his pretensions to a higher place than that already assigned him. Meantime the schismatic Republicans had united in protesting to the country against Congressional dictation, at the same time pronouncing that the caucus which had nominated Madison was irregularly held. This open letter was signed by 17 Republican members of Congress. . . . Unfortunately for their influence in the canvass, however, they could not agree as to whether Monroe or Clinton should head the ticket. Objectionable, moreover, as the Congressional caucus might be, many more Presidential terms elapsed before other nominating machinery superseded it. National delegates, the national congress or convention of a party, was an idea too huge as yet for American politics to grasp in these days of plain frugality. . . . Harassed with foes within and without, with dissensions among the friends of rival candidates for the succession, with an odious and profitless measure to execute, against which citizens employed both cunning and force, it seemed, at one time, as if the administration party would go down in the fall elections. But Jefferson's wonderful popularity and the buoyancy of Republican principles carried the day. The regular Presidential ticket prevailed, not without a diminished majority.”—J. Schouler, *Hist. of the U. S., ch. 6, sect. 2 (v. 2)*.—James Madison, Democratic Republican, was elected, receiving 122 votes in the Electoral College; George Clinton, of the same party, receiving 6, and Charles C. Pinckney, Federalist, 47. George Clinton was chosen Vice President.

A. D. 1808-1810. — Substitution of Non-Intercourse for Embargo. — Delusive conduct of Napoleon.—"All through the year 1808 and the first two months of 1809, the heavy hand of the embargo was laid on American commerce. The close of Jefferson's administration was signalized by an important change in the policy of the American Government. Almost the last act which Jefferson performed as President was to sign the new law which repealed the embargo, and substituted non-intercourse—a law which instead of universal prohibition of trade, merely prohibited commerce with Great Britain and with the countries under French control. The statute further authorized the President to suspend this prohibition as to either Great Britain or France as soon as one or the other should desist from violating neutral rights. An excuse for renewing commercial relations was not long delayed. On April 21, 1809, immediately upon the rather unexpected conclusion of a liberal and satisfactory diplomatic arrangement with Erskine, the British minister in Washington, the non-intercourse act was suspended as to Great Britain; and foreign trade, long dormant, suddenly sprang into excessive activity. This happy truce was short-lived. Erskine had effected his arrangement by a deliberate and almost defiant disregard of Canning's instructions; and his acts were promptly disavowed by his government. His recall was followed by a renewal of non-intercourse under a presidential proclamation of August 9, 1809. But notwithstanding the disavowal of Erskine, the British Government had made an apparent concession to the United States by the adoption of new orders in council which revoked the stringent prohibitions of the orders of 1807, and substituted a paper blockade of all ports and places under the government of France—a distinction which, on the whole, was perhaps without any important difference. France, on the other hand, entered upon a course of further aggressions. Louis Bonaparte was driven from his kingdom of Holland because he refused to attack neutral commerce, and all American ships found lying at Amsterdam were seized. Finally, by the decree of Rambouillet, every American ship found in any French port was confiscated and ordered sold. England and the United States thus seemed for the moment to be slowly drawing together in the presence of a common enemy, when suddenly the whole situation of affairs was changed by the formal announcement on August 5, 1810, of the Emperor's intended revocation of the decrees of Berlin and Milan, such revocation to take place on the first day of the following November, provided the British Government revoked their orders in council, or (and this was the important provision) the United States caused their rights to be respected. This promise, as Napoleon had privately pointed out a few days before, committed him to nothing; but it was accepted with all seriousness on the part of the United States. In reliance upon the imperial word, commercial intercourse with Great Britain—which had been once more resumed in May, 1810—was for the third time suspended. This, it was thought, was 'causing American rights to be respected'; and although the condemnation of American ships went on without a pause in every continental port, the Government of the United States clung with the strongest pertinacity to

the belief that Napoleon's declarations were sincere. The practical effect of all this was to bar the door against any possible settlement with Great Britain. Commerce was now permanently suspended; there was a long list of grievances to be redressed, and negotiation was exhausted."—G. L. Rives, ed., *Selections from the Corr. of Thomas Barclay*, ch. 6.

A. D. 1810. — The Third Census.—Total population, 7,215,791 (being an increase of nearly 36½ per cent. over the population shown in 1800), classed and distributed as follows:

A. D. 1810-1812. — Continued provocation from England and France. — The "War of 1812" against Great Britain declared.—"Congress, on May 1, 1810, passed an act providing that commercial non-intercourse with the belligerent powers should cease with the end of the session, only armed ships being excluded from American ports; and further, that, in case either of them should recall its obnoxious orders or decrees, the President should announce the fact by proclamation, and if the other did not do the same within three months, the non-intercourse act should be revived against that one,—a measure adopted only because Congress, in its helplessness, did not know what else to do. The conduct of France had meanwhile been no less offensive than that of Great Britain. On all sorts of pretexts American ships were seized in the harbors and waters controlled by French power. A spirited remonstrance on the part of Armstrong, the American Minister, was answered by the issue of the Rambouillet Decree in May, 1810, ordering the sale of American vessels and cargoes seized, and directing like confiscation of all American vessels entering any

ports under the control of France. This decree was designed to stop the surreptitious trade that was still being carried on between England and the continent in American bottoms. When it failed in accomplishing that end, Napoleon instructed his Minister of Foreign Affairs, Champagny, to inform the American Minister that the Berlin and Milan Decrees were revoked, and would cease to have effect on November 1, 1810, if the English would revoke their Orders in Council, and recall their new principles of blockade, or if the United States would 'cause their rights to be respected by the English,'—in the first place restore the non-intercourse act as to Great Britain. . . . The British government, being notified of this by the American Minister, declared on September 29 that Great Britain would recall the Orders in Council when the revocation of the French decrees should have actually taken effect, and the commerce of neutrals should have been restored. . . . Madison, . . . leaning toward France, as was traditional with the Republican party, and glad to grasp even at the semblance of an advantage, chose to regard the withdrawal of the Berlin and Milan Decrees as actual and done in good faith, and announced it as a matter of fact on November 1, 1810. French armed ships were no longer excluded from American ports. On February 2, 1811, the non-importation act was revived as to Great Britain. In May the British Court of Admiralty delivered an opinion that no evidence existed of the withdrawal of the Berlin and Milan Decrees, which resulted in the condemnation of a number of American vessels and their cargoes. Additional irritation was caused by the capture, off Sandy Hook, of an American vessel bound to France, by some fresh cases of search and impressment, and by an encounter between the American frigate *President* and the British sloop *Little Belt*, which fired into one another, the British vessel suffering most. But was American commerce safe in French ports? By no means. . . . Outrages on American ships by French men-of-war and privateers went on as before. . . . The pretended French concession was, therefore, a mere farce. Truly, there were American grievances enough. Over 900 American ships had been seized by the British, and more than 550 by the French. . . . By both belligerents the United States had been kicked and cuffed like a mere interloper among the nations of the earth, who had no rights entitled to respectful consideration. Their insolence seemed to have been increased by the irresolution of the American government, the distraction of counsel in Congress, and the division of sentiment among the people. . . . But . . . young Republican leaders came to the front to interpret the 'national spirit and expectation.' They totally eclipsed the old chiefs by their dash and brilliancy. Foremost among them stood Henry Clay; then John C. Calhoun, William Lowndes, Felix Grundy, Langdon Cheves, and others. They believed that, if the American Republic was to maintain anything like the dignity of an independent power, and to preserve, or rather regain, the respect of mankind in any degree,—ay, its self-respect,—it must cease to submit to humiliation and contemptuous treatment; it must fight,—fight somebody who had wronged or insulted it. The Republicans having always a tender side for France, and the fiction of

French concessions being accepted, the theory of the war party was that, of the two belligerents, England had more insolently maltreated the United States. Rumors were spread that an Indian war then going on, and resulting in the battle of Tippecanoe on November 7, 1811, was owing to English intrigues. Adding this to the old Revolutionary reminiscences of British oppression, it was not unnatural that the national wrath should generally turn against Great Britain. . . . Not only the regular army was increased, but the President was authorized to accept and employ 50,000 volunteers. Then a bill was introduced providing for the building of ten new frigates. . . . The war spirit in the country gradually rose, and manifested itself noisily in public meetings, passing resolutions, and memorializing Congress. It was increased in intensity by a sensational 'exposure,' a batch of papers laid before Congress by the President in March, 1812. They had been sold to the government by John Henry, an Irish adventurer, and disclosed a confidential mission to New England, undertaken by Henry in 1809 at the request of Sir James Craig, the governor of Canada, to encourage a disunion movement in the Eastern States. This was the story. Whatever its foundation, it was believed, and greatly increased popular excitement." On the 4th of April the President signed a bill laying an embargo on commerce with Great Britain for ninety days. "All over the country the embargo was understood as meaning an immediate preparation for war. . . . In May, 1812, President Madison was nominated for reelection by the congressional caucus. It has been said that he was dragged into the war policy by Clay and his followers with the threat that, unless he yielded to their views, another candidate for the presidency would be chosen. This Clay denied, and there was no evidence to discredit his denial. Madison was simply swept into the current by the impetuosity of Young America. . . . On June 1 the President's war message came. On June 18 a bill in accordance with it, which had passed both Houses, was signed by the President, who proclaimed hostilities the next day. Thus Young America, led by Henry Clay, carried their point. But there was something disquieting in their victory. The majority they commanded in Congress was not so large as a majority for a declaration of war should be. In the House, Pennsylvania and the states south and west of it gave 63 votes for the war, and 32 against it; the states north and east of Pennsylvania gave 17 yeas and 33 nays,—in all 79 for and 49 against war. This showed a difference of sentiment according to geographical divisions. Not even all the Republicans were in favor of war. . . . Nor were the United States in any sense well prepared for a war with a first-class power."—C. Schurz, *Life of Henry Clay*, v. 1, ch. 5.

A. D. 1811.—General Harrison's campaign against Tecumseh and his league.—The Battle of Tippecanoe.—"During the interval

between the Tripolitan war and the war of 1812, one noticeable campaign was made against the Indians. The operation took place in 1811, under General William H. Harrison, governor of Indiana Territory, and was directed against the Shawnees and other tribes which adhered to Tecumseh. This chief, with his brother, known as 'the Prophet,' had been engaged since 1806 in planning a species of crusade against the whites, and had acquired great influence among the northwestern Indians. For the previous two years Harrison's suspicions had been aroused by reports of Tecumseh's intrigues, and attempts had been made from time to time to negotiate with him, but without satisfactory results. In the summer of 1811 it was decided to strike a decisive blow at the Indians, and in the autumn Harrison, with a regiment of militia under Colonel Boyd, and a force of militia, marched upon Tecumseh's town, situated on the Tippecanoe River. On the 7th of November the Indians, in Tecumseh's absence, attempted to surprise Harrison's camp, but in the battle which followed they were driven off, and presently abandoned their town, which Harrison burned. The invading force then retired. The importance of the expedition was largely due to the military reputation which Harrison acquired by it."—J. R. Soley, *The Wars of the U. S. (Narrative and Critical Hist. of the U. S., v. 7, ch. 6).*

A. D. 1812 (April).—Admission of Louisiana into the Union. See LOUISIANA: A. D. 1812.

A. D. 1812 (June—October).—Rioting at Baltimore.—The opening of the war and the unreadiness of the nation for it.—Hull's disastrous campaign and surrender, at Detroit.—"It was perhaps characteristic of the conduct of the war, that the first blood spilled should be American blood, shed by Americans. . . . In the night of June 23d, three days after the proclamation of war, a mob in Baltimore sacked the office of the 'Federal Republican,' edited by Alexander Hanson, because he had opposed the war policy. The mob also attacked the residences of several prominent Federalists, and burned one of them. Vessels in the harbor, too, were visited and plundered. About a month later Hanson resumed the publication of his paper, and in the night of July 26th the mob gathered again." This time they were resisted and one was killed; whereupon the authorities seized Hanson and his friends and lodged them in jail. "The rioters, thus encouraged by those whose business it was to punish them, attacked the jail the next night, murdered General Langan [one of Hanson's defenders], injured General [Henry] Lee so that he was a cripple for the rest of his life, and beat several of the other victims and subjected them to torture. The leaders of the mob were brought to trial, but were acquitted! In this state of affairs, the war party in the country being but little stronger than the peace party, the youngest and almost the weakest of civilized nations went to war with one of the oldest and most powerful. The regular army of the United States numbered only 6,000 men; but Congress had passed an act authori-

zing its increase to 25,000, and in addition to this the President was empowered to call for 50,000 volunteers, and to use the militia to the extent of 100,000. Henry Dearborn, of Massachusetts, was made a major-general and appointed to command the land forces. Against the thousand vessels and 144,000 sailors of the British navy, the Americans had 20 war-ships and a few gunboats, the whole carrying about 300 guns. But these figures, taken alone, are deceptive; since a very large part of the British force was engaged in the European wars, and the practical question was, what force the United States could bring against so much as England could spare for operations on the high seas and on this side of the Atlantic. In that comparison, the discrepancy was not so great, and the United States had an enormous element of strength in her fine merchant marine. Her commerce being temporarily suspended to a large degree, there was an abundance both of ships and sailors, from which to build up a navy and fit out a fleet of privateers. Indeed, privateering was the business that now offered the largest prizes to masters and ship-owners. . . . War with Great Britain being determined upon, the plan of campaign that first and most strongly presented itself to the Administration was the conquest of the British provinces on our northern border. . . . In planning for the invasion of Canada, the Administration counted largely upon a supposed readiness of the Canadians to throw off their allegiance to Great Britain and join with the United States. Such expectations have almost never been realized, and in this instance they were completely disappointed. In the preceding February, William Hull, Governor of the Territory of Michigan, who had rendered distinguished service in the Revolution, had been made a brigadier-general and placed in command of the forces in Ohio, with orders to march them to Detroit, to protect the Territory against the Indians, who were becoming troublesome. In June he was in command of about 2,000 men, in northern Ohio, moving slowly through the wilderness. On the day when war was declared, June 18th, the Secretary of War wrote him two letters. The first, in which the declaration was not mentioned, was despatched by a special messenger, and reached General Hull on the 24th. The other informed him of the declaration of war, but was sent by mail to Cleveland, there to take its chance of reaching the General by whatever conveyance might be found. The consequence was, that he did not receive it till the 2d of July. But every British commander in Canada learned the news several days earlier. Hull arrived at Detroit on the 5th of July and set about organizing his forces. On the 9th he received from the War Department orders to begin the invasion of Canada by taking possession of Malden, 15 miles below Detroit, on the other side of the river, if he thought he could do so with safety to his own posts. He crossed on the 12th, and issued a proclamation to the Canadians. "He found the enemy too strongly fortified at Malden to be prudently assaulted with raw troops and without artillery. "So it was decided to defer the attack, and in a few days came the news that, on the declaration of war, a force of over 600—British and Indians—had promptly moved against the American post at Michilimackinac—on the rocky little island of

Mackinaw, commanding the strait between Lake Huron and Lake Michigan—and the garrison of 61 officers and men capitulated on the 16th of July. This disaster to the Americans roused the Indians to renewed hostility against them, while it proportionately disheartened Hull, and seems to have been the first step in the breaking down of his courage. After a few skirmishes, he recrossed to Detroit on the 7th of August. Meanwhile the British Colonel Proctor had arrived at Malden with reinforcements, and on Hull's withdrawal to Detroit he threw a force across the river to intercept his supplies. This force consisted of a small number of British regulars and a considerable number of Indians commanded by the famous Tecumseh." Two considerable engagements occurred between this force and detachments sent out to meet an expected supply train. In the first, the Americans were badly beaten; in the second, they drove the enemy to their boats with heavy loss; but the supply train was not secured. "During this gloomy state of things at Detroit, a bloody affair took place on ground that is now within the city of Chicago. Fort Dearborn stood at the mouth of Chicago River, and was occupied by a garrison of about 50 soldiers, with several families. Captain Nathan Heald, commanding the post, had been ordered by General Hull to abandon it and remove his force to Detroit." To conciliate the neighboring Indians who professed friendship, he promised to give them all the property in the fort which he could not carry; but before making the delivery to them he foolishly destroyed all the arms, the gunpowder and the liquors. Enraged by this proceeding, which they considered a trick, the savages pursued Captain Heald's small party, waylaid them among the Sauc-hills on the lake shore, and massacred the greater part, twelve children included. The scalps which they took were sold to Colonel Proctor, "who had offered a premium for American scalps." The same day on which this occurred, August 15th, "the British General Isaac Brock, who had arrived at Malden a few days before and assumed command there, formally demanded the surrender of Detroit. This demand included a plain threat of massacre in case of refusal. Said Brock in his letter: 'It is far from my intention to join in a war of extermination; but you must be aware that the numerous bodies of Indians who have attached themselves to my troops will be beyond my control the moment the contest commences.' . . . Brock's force, according to his own testimony, numbered 1,330 men, including 600 Indians, and he had also two ships of war. Hull had present for duty about 1,000 men. Brock sent a large body of Indians across the river that night, at a point five miles below the fort, and early in the morning crossed with the remainder of his troops, and at once marched on the place." On the approach of the attacking force Hull offered to surrender. "The articles of capitulation were drawn up, and the American general surrendered, not merely the fort and its garrison, but the whole Territory of Michigan, of which he was Governor. . . . Hull's officers were incensed at his action, as he was subsequently court-martialled, convicted of cowardice, and condemned to death; but the President pardoned him, in consideration of his age and his services in the Revolution. . . . Subsequent investiga-

tions, if they do not exonerate General Hull, have at least greatly modified the blame attached to him."—H. Johnson, *Hist. of the War of 1812-15*, ch. 2.

A. D. 1812.—The opposition of the Federalists to the war.—"Unfortunately for the Federalists, while they were wholly right in many of their criticisms on the manner in which the war came about, they put themselves in the wrong as to its main feature. We can now see that in their just wrath against Napoleon they would have let the nation remain in a position of perpetual childhood and subordination before England. No doubt there were various points at issue in the impending contest, but the most important one, and the only one that remained in dispute all through the war, was that of the right of search and impressment. . . . It must be understood that this was not a question of reclaiming deserters from the British navy, for the seamen in question had very rarely belonged to it. There existed in England at that time an outrage on civilization, now abandoned, called impressment, by which any sailor and many who were not sailors could be seized and compelled to serve in the navy. The horrors of the 'press-gang,' as exhibited in the sea-side towns of England, have formed the theme of many novels. It was bad enough at home, but when applied on board the vessels of a nation with which England was at peace, it became one of those outrages which only proceed from the strong to the weak, and are never reciprocated. Lord Collingwood said well, in one of his letters, that England would not submit to such an aggression for an hour. Merely to yield to visitation for such a purpose was a confession of national weakness; but the actual case was far worse than this. . . . We have . . . Cobbett's statement of the consequences. 'Great numbers of Americans have been impressed,' he adds, 'and are now in our navy. . . . That many of these men have died on board our ships, that many have been worn out in the service, there is no doubt.' . . . In 1806 the merchants of Boston had called upon the general government to 'assert our rights and support the dignity of the United States.' . . . Yet it shows the height of party feeling that when, in 1812, Mr. Madison's government finally went to war for these very rights, the measure met with the bitterest opposition from the whole Federalist party, and from the commercial States generally. A good type of the Federalist opposition on this particular point is to be found in the pamphlets of John Lowell. John Lowell was the son of the eminent Massachusetts judge of that name; he was a well-educated lawyer, who was president of the Massachusetts Agricultural Society, and wrote under the name of 'A New England Farmer.' In spite of the protests offered half a dozen years before by his own neighbors, he declared the whole outcry against impressment to be a device of Mr. Madison's party. . . . He argued unflinchingly for the English right of search, called it a 'consecrated' right, main-

tained that the allegiance of British subjects was perpetual, and that no residence in a foreign country could absolve them. . . . While such a man, with a large party behind him, took this position, it must simply be said that the American republic had not yet asserted itself to be a nation. Soon after the Revolution, when some one spoke of that contest to Franklin as the war for independence, he said, 'Say rather the war of the Revolution; the war for independence is yet to be fought.' The war of 1812 was just the contest he described. To this excitement directed against the war, the pulpit very largely contributed, the chief lever applied by the Federalist clergy being found in the atrocities of Napoleon. . . . The Federalist leaders took distinctly the ground that they should refuse to obey a conscription law to raise troops for the conquest of Canada; and when that very questionable measure failed by one vote in the Senate, the nation may have escaped a serious outbreak. . . . It might, indeed, have been far more dangerous than the Hartford Convention of 1814 [see below: A. D. 1814 (DECEMBER)], which was, after all, only a peaceable meeting of some two dozen men, with George Cabot at their head—men of whom very few had even a covert purpose of dissolving the Union, but who were driven to something very near desperation by the prostration of their commerce and the defencelessness of their coast."—T. A. D. 1812 (September—November).—The opening of the war on the New York frontier.—The Battle of Queenstown Heights.—"To put Dearborn [who commanded in the northern department] in a condition to act with effect, Governor Tompkins [of the state of New York] made the greatest efforts to get out the New York quota of militia. The Democratic Legislature of Vermont voted to add to the pay of their militia in service as much as was paid by the United States. At the same time they passed a stringent drafting law, and offered \$30 bounty to volunteers. By the co-operating exertions of these states and of the war department, some 3,000 regulars and 2,000 militia were presently assembled on Lake Champlain, under Dearborn's immediate command. Another force of 2,000 militia was stationed at different points along the south bank of the St. Lawrence, their left resting on Sackett's Harbor. A third army was collected along the Niagara River, from Fort Niagara to Buffalo, then a village of a thousand or two inhabitants, in the midst of a newly-settled district. This latter force of nearly 6,000 men, half regulars and volunteers and half militia, was under the immediate command of Major-general Van Rensselaer, a Federalist. . . . The first skirmishes on the New York frontier grew out of attempts, not unsuccessful, made principally from Ogdensburg, a new but much the largest village on the American side of the St. Lawrence, to intercept the British supplies proceeding upward in boats. The militia officer in command at Ogdensburg was General Jacob Brown. A Pennsylvanian by birth, a Quaker by education, while employed as a teacher in

the city of New York, some newspaper essays of his had attracted the attention of Alexander Hamilton, to whom, during the quasi war of '08, he became military secretary. Removing afterward to the new settlements of Northwestern New York, his enterprise had founded the flourishing village of Browns' Hill, not far from Sackett's Harbor. . . . His success in repulsing a British force of 700 men, which attempted to cross from Prescott to attack Ogdensburg, laid the foundation of a military reputation which soon placed him at the head of the American army. There had been built on Lake Ontario, out of the gun-boat appropriations, but by a fortunate improvement upon Jefferson's model, a sloop of war of light draft, mounting 16 guns. This vessel, called the Oneda, just before the breaking out of the war had been furnished with a regular-bred commander and crew. She was attacked shortly after at Sackett's Harbor by five British vessels, three of them larger than herself, but manned only by lake watermen. By landing part of her guns, and establishing a battery on shore, she succeeded, however, in beating them off. Hull's failure having shown how important was the control of the lakes, a judicious selection was made of Captain Chauncey, hitherto at the head of the New York Navy Yard, to take command on those waters. Along with Henry Eckford as naval constructor, and soon followed by ship-carpenters, naval stores, guns, and presently by parties of seamen, he was sent to Sackett's Harbor [September, 1812], then held by a garrison of 200 regulars. That newly-settled region could supply nothing but timber; every thing else had to be transported from Albany at vast expense. . . . A 24-gun ship was at once commenced; for immediate use, Chauncey purchased six of the small schooners employed in the then infant commerce of the lake, which, though very ill adapted for war, he armed with four guns each. With these and the Oneda he put out on the lake, and soon [November 8] drove the British ships into Kingston. . . . While thus employed, Chauncey had sent Lieutenant Elliot to Buffalo, with a party of seamen, to make arrangements for a force on the upper lakes. Elliot, soon after his arrival, succeeded in cutting out [October 9] from under the guns of Fort Erie, nearly opposite Buffalo, two British vessels just arrived from Detroit. One, the late Adams, which the British had armed and equipped, grounded, and it became necessary to destroy her. The other, the Caledonia, of two guns, was brought off, and became the nucleus of the naval force of Lake Erie. Elliot also purchased several small schooners lying in the Niagara River; but they, as well as the Caledonia, lay blockaded at Black Rock [now a part of the city of Buffalo], the passage into the lake being commanded by the guns of Fort Erie. The troops along the Niagara frontier, highly excited by Elliot's exploit, demanded to be led against the enemy; and, under the idea that the British village of Queenstown, at the foot of the falls [a few miles below] might furnish comfortable winter quarters for a part of his troops, Van Rensselaer resolved to attack it."—R. Hildreth, *Hist. of the U. S.*, 2d series, ch. 25 (v. 3).—"The Niagara River, 35 miles long, which conducts the waters of the upper lakes through Erie into Ontario, constituted an important military frontier in such a war; its banks sparsely

settled, and the crossing a narrow one. Below the roaring cataracts had assembled another little army, supplied in great measure by regiments of the New York quota, Major-General Van Rensselaer, of the militia of that State, a prominent Federalist, being in command. Hull's sudden surrender left Brock free to confront this second adversary with a moderate force from the Canada side, not without feeling uncertain as to where the American blow would be struck. By October Van Rensselaer had 6,000 men, half of them regulars; and, yielding to the impatience of his volunteers and the public press, he gave orders to cross the river from Lewiston to Queenston. High bluffs arose on either side. There were not boats enough provided to carry more than half the advance party at a time. Too much reliance was placed upon militia, while regulars won the laurels. Wool, a young captain, and Lieutenant-Colonel Scott did gallant work on Queenston Heights; and General Brock, the conqueror of Detroit, fell mortally wounded; but reinforcements crossed too slowly, and with the green militia dreading death, many of the reserve pleading legal exemption from service in an enemy's country, their deserted comrades on the Canada side, unable to return, were forced to surrender. Van Rensselaer, whose advance had been premature, resigned in disgust, leaving a less capable but more pretentious officer, of Virginia birth, General Alexander Smyth, to succeed him. Smyth had a gift of windy composition, which fortunately, imposed upon the inhabitants of Western New York just long enough to check despondency and restore a glow to the recruiting service. 'Come on, my heroes,' was his cry, 'and when you attack the enemy's batteries let your rallying word be: "The cannon lost at Detroit, or death!"' All this inkshed promised an exploit for invading Canada from the upper end of the Niagara, between Fort Erie and Chippewa. By the 27th of November Smyth had concentrated at Black Rock, near Buffalo, a fair army, 4,500 troops, comprising, in addition to the regulars, volunteer regiments from Maryland, Pennsylvania, and New York; the last under the command of General Porter, the representative in Congress, whose report, twelve months before, had given the first loud note of war. The big moment approached; but, notwithstanding the sonorous promise of 'memorable to-morrows,' and an embarkation to the music of 'Yankee Doodle,' one or two shivering attempts were made to land on the opposite shore, and then the volunteers were dismissed to their homes, and regulars ordered into winter-quarters. Disorderly scenes ensued. Our insubordinate and mortified soldiers discharged their muskets in all directions. Porter having openly charged Smyth with cowardice, the two crossed to Grand Island to fight a duel, and then shook hands. . . . But the country could not be reconciled to such generalship, and Smyth was presently cashiered."—J. Schouler, *Hist. of the U. S.*, v. 2, ch. 8, sect. 2.

A. D. 1812-1813.—Indifference to the Navy at the beginning of the war.—Its Efficiency and its Early Successes.—"The young leaders of the war party in congress looked to successes on land and territorial conquest, and had an indifference to the field which the ocean afforded. And yet the triumphs of our young fleet in the Revolution, the alarm which John Paul Jones excited in English homes, and, later, the brilliant achievements in the Mediterranean, the heroes of which were still in the prime of their service, might have inspired better counsel. Madison's cabinet were said to have without exception opposed the increase and use of our navy; indeed, somewhat after Jefferson's idea in imposing the embargo—to save our vessels by laying them up. The advice of Captains Charles Stewart and William Bainbridge, who happened to be in Washington at the time of the declaration of war, determined Madison to bring the navy into active service. One of the chief causes of the war being the impressment of our seamen, it seems to-day surprising that their ardor in defense of 'Free Trade and Sailors' Rights,'—the cry under which our greatest triumphs were won—should have been either passed by or deprecated."—J. A. Stevens, *Second War with Great Britain (Mag. of Am. Hist., May—June, 1893)*.—"Although [the American navy] had never been regarded by the government with favor, it happened that the three most essential measures had been adopted to secure its efficiency,—the ships built for it were the best of their class in the world, the officers had been carefully selected (200 out of a total of 500 having been retained under the Peace Establishment Act), and they had received—at least a large number of them—in Preble's squadron at Tripoli a training such as had fallen to the lot of few navies, either before or since. To these three causes the successes of 1812 were directly due; and although Commodore Preble died in 1807, the credit of the later war belongs more to him than to any other one man. It was not only that he formed many of the individual officers who won the victories of 1812-15,—for Hull, Decatur, Bainbridge, Macdonough, Porter, Lawrence, Biddle, Chauncey, Warrington, Charles Morris, and Stewart were all in his squadron,—but he created in the navy the professional spirit or idea, which was the main quality that distinguished it from the army in the war with Great Britain. At the outbreak of the war there were 18 vessels in the navy, ranging from 44-gun frigates to 12-gun brigs. There were also 176 gunboats, on which a large sum of money had been expended, but which were of no use whatever. . . . Immediately after the declaration of war, the frigates in commission in the home ports, together with two of the sloops, put to sea as a squadron under Commodore John Rodgers. They fell in with the English frigate 'Belvidera,' but she got away from them; and after an ineffectual cruise across the Atlantic, they returned home, without meeting anything of conse-

quence. Three weeks later, the 'Constitution,' under Captain Hull, sailed from Annapolis. Soon after leaving the Chesapeake she came upon a British squadron of one sixty-four and four frigates, and then ensued the famous three days' chase, in the course of which, by a marvel of good seamanship and good discipline, the American frigate escaped. After a short respite in Boston, Hull set out again, and on the 19th of August he fought and captured the 'Guerrière,' Captain Dacres, in an engagement lasting about an hour. The 'Constitution,' being armed with 24-pounders instead of 18's, threw at a broadside a weight of shot half as large again as that of the 'Guerrière,' and her crew was numerically superior in a still greater degree. Nevertheless, the immensely greater disproportion in the casualties which the 'Constitution' inflicted and received, and the short time which she took to do the work, cannot be explained by the difference in force alone; for the 'Guerrière' had five times as many killed and wounded as her opponent, and at the close of the engagement she was a dismantled wreck, while the 'Constitution' had suffered no injury of importance. The essential point of difference lay in the practical training and skill of the crews in gunnery. . . . In the next action, in October, the sloop 'Wasp,' Captain Jacob Jones, captured the English brig 'Frolic,' of approximately the same force. The relative loss of English and Americans was again five to one. Both vessels were soon after taken by a seventy-four. Later in the same month, another frigate action took place, the 'United States,' under Decatur, capturing the 'Macedonian.' The advantage of the Americans in men was about the same as in the first action, while in guns it was greater. The American casualties were 13, the English 104. This difference was not due to the fact that the American guns were 24's and 42's, instead of 18's and 32's, or that the Americans had three more of them in a broadside; it was really due to the way in which the guns on both sides were handled. Shortly after this capture, a cruise in the Pacific was projected for a squadron to be composed of the 'Constitution,' 'Essex,' and 'Hornet.' The 'Essex' failed to meet the other vessels at the rendezvous off the coast of Brazil, and went on the Pacific cruise alone [having great success]. The 'Constitution,' now commanded by Bainbridge, met the frigate 'Java,' near Brazil, on the 20th of December. The antagonists were more nearly matched than in the previous frigate actions, but the fight, lasting a little over an hour, resulted in the total defeat and surrender of the 'Java,' with a loss of 124 to the Americans' 34. The 'Java' was a wreck, and could not be taken into port, and Bainbridge returned home. Two months later, February 24, 1813, the 'Hornet,' commanded by Lawrence, met the 'Peacock' off the Demerara, and reduced her in fifteen minutes to a sinking condition, while the 'Hornet's' hull was hardly scratched. The English sloop sank so quickly that she carried down part of her own crew and three of the 'Hornet's' who were trying to save them. The casualties, apart from those drowned, were 5 in the 'Hornet' and 38 in the 'Peacock.' . . . The moral effect in England of these defeats was very great. . . . In March, 1813, Admiral Sir John Warren assumed the command of the British squadron on the American coast. Although rather

past his prime, his defects were more than compensated by the activity of his second in command, Rear-Admiral Cockburn, who during this summer and the next kept the coasts of Chesapeake Bay in a continuous state of alarm by successful raids, in which much valuable property was destroyed. Among the more important of the actions of 1813 were the capture and destruction (in part) of Havre de Grace, Md., early in May, and an attack on the village of Hampton, Va., on the 25th of June. 'Acts of rapine and violence' on the part of the invading forces characterized the latter attack, which excited intense indignation throughout the country. . . . In the summer of 1813 occurred the first serious reverse of the navy during the war. On the 1st of June the frigate 'Chesapeake,' Captain James Lawrence, sailed from Boston to engage the 'Shannon,' which was lying outside, waiting for the battle. The two ships were nearly matched in guns and men, what slight difference there was being in favor of the 'Chesapeake'; but the crew of the latter had been recently shipped and was partly composed of disaffected men, and Lawrence had had no time to discipline them. The engagement was short and decisive. Ranging up alongside of the 'Shannon,' whose crew had been brought to the highest state of efficiency by Captain Broke their commander, the 'Chesapeake' at the first fire received a severe injury in the loss of several of her officers. Failing foul of the 'Shannon' she was effectually raked, and presently a boarding party, led by Captain Broke, got possession of her deck. The great mortality among the officers [including Captain Lawrence, who had received a mortal wound just before his ship was boarded, and whose dying appeal, 'Don't give up the ship,' became the battle cry of the American navy during the remainder of the war], and the want of discipline in the crew, resulted in a victory for the boarders. The battle lasted fifteen minutes only, and the 'Chesapeake' was carried as a prize to Halifax. During this summer the naval war on the ocean continued with varying fortunes, two important actions being fought. The brig 'Argus,' Captain Allen, after a successful voyage in the Irish Sea, in which many prizes were taken and destroyed, was captured by the English brig 'Pelican,' on the 14th of August. Early in September the brig 'Enterprise,' commanded by Lieutenant Burrows, captured the English brig 'Boxer,' near Portland, Me.—J. R. Soley, *The Wars of the U. S. (Narrative and Critical Hist. of the U. S., v. 7, ch. 6).*

A. D. 1812-1813.—Harrison's northwestern campaign.—Winchester's defeat.—Perry's naval victory on Lake Erie.—The Battle of the Thames and death of Tecumseh.—Recovery of Detroit and Michigan.—"Great was the indignation of the West, great the mortification of our whole people, on learning that, instead of capturing Upper Canada at the first blow, we had lost our whole Michigan Territory. The task now was to retake Detroit under a competent commander. Ohio and Kentucky went on filling rapidly their quotas, while urging the administration to march

them under Harrison. The President hesitated, doubtful whether Harrison was a man of sufficient military experience. He proposed that Monroe should go to the scene, as a volunteer, if not to command; but Monroe restrained his first military ardor, as was prudent, and Winchester, of Tennessee, another of the recent brigadiers, and a revolutionary veteran, was selected. The selection, however, gave umbrage to the Kentuckians, whose State government had already made Harrison a brevet major-general of militia. The hero of Tippecanoe was finally assigned to the chief command of the Western army, Madison countermanding his first orders. Harrison's route for Detroit was by way of Fort Wayne and Fort Defiance to the falls of the Maumee. But it was late in the fall [October 1812] before the new military arrangements could be completed; and through a swampy wilderness, infested as it was with hostile Indians, the progress of the column was toilsome and discouraging; and, except for the destruction of a few Indian villages on the way, the deeds of prowess were reserved for a winter campaign. . . . The winter expedition of the Northwest army . . . [was] retarded by a disaster which overtook Winchester's command near the Maumee Rapids, at a little village on the River Raisin. By Harrison's orders Winchester had started for these Rapids, whence, having first concentrated troops as if for winter quarters, the design was that he should advance 50 miles farther, when weather permitted, cross the frozen Detroit, and fall suddenly upon Malden. Winchester not only pushed on incautiously to his first destination, but, with a design more humane than prudent, undertook to protect against a British and Indian raid the alarmed inhabitants of Frenchtown [now Monroe, Michigan], a place 80 miles nearer Malden. Here [January 22, 1813] he was overpowered by the enemy, which fell upon the American force suddenly at daybreak, with yells and a shower of bombshells and canister. Winchester having been taken prisoner, Colonel Proctor, the British commander, extorted from him the unconditional surrender of all his troops, some 700 in number, as the only means of saving them from the tomahawk and scalping-knife. . . . Our sick and wounded . . . the British commander shamefully abandoned to their fate. . . . Officers and men, many of them the flower of Kentucky, perished victims to barbarities . . . abhorrent to civilized warfare, of which the British Colonel Proctor and Captain Elliott were not innocent. Besides the American loss in prisoners at the sad affair of the Raisin, nearly 200 were killed and missing. Hearing at the Upper Sandusky of Winchester's intended movement, Harrison had pressed to his relief with reinforcements, but fugitives from Frenchtown brought the melancholy tidings of disaster; and Harrison fell back to the Rapids, there to strengthen the post known as Fort Meigs, and go into winter quarters. The terms of many of his troops having now expired, the Northwestern army was for many months too feeble to begin a forward movement. But Harrison possessed the unabated confidence of the West, and, promoted to be one of the new major-generals, he received, through the zealous co-operation of Ohio and Kentucky, whose people were inflamed to take vengeance, enough volunteer reinforce-

ments [May] to relieve Fort Meigs [which was twice besieged in 1813 by British and Indians] from Proctor's investment in the spring, and at length the quota requisite for resuming the offensive; other frontier plans of the War Department having long deranged his own in this quarter. The splendid co-operation of an American flotilla on Lake Erie opened the way to Detroit and victory. For that memorable service Commodore Chauncey had detailed an aspiring young naval officer, Captain Oliver H. Perry, of Rhode Island. Our little Lake squadron was tediously constructed at Presque Isle (now Erie). When all at last was ready [in August, 1813], Perry, who had long chafed in spirit while the British fleet hovered in sight like a hawk, sailed forth to dispute the supremacy of the broad inland waters. His heavier vessels were floated over the bar not without difficulty. After conferring at Sandusky upon the combined plan of operations with General Harrison, from whom he received a small detail of soldiers to act as marines and supply vacancies in his crews, he offered battle to Barclay, the British commander,—the latter a veteran in naval experience, who had served under Nelson at Trafalgar. Barclay had lain idly for several weeks at Malden, in hopes of procuring additional sailors, purposely avoiding an action meanwhile. But Proctor's army having now run short of provisions, longer delay was inexpedient. At sunrise on September 10th Perry descried the approaching British fleet from his look-out, a group of islands off Sandusky. Ten miles to the north of this locality, which was known as Put-in-bay, the two squadrons at noon engaged one another,—Perry approaching at an acute angle, and keeping the weather-gage, while Barclay's vessels hove to in close order. In officers and men the fleets were about equally matched; there were 6 British vessels to the American 9, but the former carried more guns, and were greatly superior for action from a distance. With 80 long guns to Perry's 15, Barclay had the decided advantage at first, and our flag-ship, the Lawrence, exposed to the heaviest of the British cannonade, became terribly battered, her decks wet with carnage, her guns dismounted. Undismayed by this catastrophe, Perry dropped into a little boat with his broad pennant and banner, and crossed to his next largest vessel, the Niagara, the target for 15 minutes of a furious fire while being rowed over. Climbing the Niagara's deck, and hoisting once more the emblems of commander, our brave captain now pierced the enemy's line with his new flag-ship, followed by his smaller vessels, and, gaining at last that advantage of a close engagement which for nearly three hours had eluded him, he won the fight in eight minutes. The colors of the Detroit, Barclay's flag-ship, struck first, three others followed the example, and two of the British squadron attempting to escape were overtaken and brought back triumphantly. 'We have met the enemy and they are ours,' was Perry's laconic dispatch to Harrison, written in pencil on the back of an old letter, with his navy-cap for a crest; 'two ships, two brigs, one schooner, and one sloop.' . . . Barclay lay dangerously wounded, and his next in command died that evening. . . . To Harrison's expectant army, augmented by 3,500 mounted Kentuckians, whom Governor Shelby led in per-

son, the word of advance was now given. . . . Perry's flotilla, aided by the captured vessels, presently landed the American troops on the Canada side. Proctor had already begun the retreat, having first dismantled the fort at Malden and burned the barracks. Harrison pursued him beyond Sandwich, covered by the flotilla, until near a Moravian town, on the river Thames [some 30 miles east of Lake St. Clair], the enemy was overtaken, with Tecumseh's braves. Here, upon well-chosen ground, the British made a final stand [October 5], but at the first impetuous charge of our cavalry their line broke, and only the Indians remained to engage in a desperate hand-to-hand fight. Among the slain was the famous Tecumseh, dispatched, as tradition asserts, by the pistol of Colonel Johnson, a Kentucky officer prominent in the battle. Proctor himself escaped in a carriage with a few followers, incurring afterwards the royal reprimand. . . . The baleful British and Indian alliance was broken up by these victories, while Detroit, Michigan, and all that Hull had lost, and a fair portion of Upper Canada besides, passed into American control. Among American generals in this war Harrison enjoyed the rare felicity of having fully accomplished his undertaking."—J. Schouler, *Hist. of the U. S.*, ch. 8, sect. 2 and ch. 9, sect. 1 (v. 2).—"The victory of Lake Erie was most important, both in its material results and in its moral effect. It gave us complete command of all the upper lakes, prevented any fears of invasion from that quarter, increased our prestige with the foe and our confidence in ourselves, and ensured the conquest of Upper Canada; in all these respects its importance has not been overrated. But the 'glory' acquired by it most certainly has been estimated at more than its worth. . . . The simple truth is, that, where on both sides the officers and men were equally brave and skilful, the side which possessed the superiority in force, in the proportion of three to two, could not well help winning. . . . Though we had nine guns less, yet, at a broadside, they threw half as much metal again as those of our antagonist."—T. Roosevelt, *The Naval War of 1812*, ch. 6.

A. D. 1813 (April-July).—The burning of Toronto.—The capture of Fort George.—"The American fleet on Lake Ontario had been increased, and in 1813 controlled the lake. General Sheaffe had succeeded Brock as Governor as well as commander of the forces. Some 600 troops were in York [now Toronto], the capital. York had about 1,000 inhabitants, and was not regarded as of strategic importance. The Americans, however, set sail from Sackett's Harbour with 16 sail and 2,500 men to attack it. The enemy landed [April 27] to the west of the town, and General Sheaffe evacuated the works, and retired down the Kingston Road. The Americans invested the town, and though skirmishing took place, had an easy victory. The land force was under General Pike, an officer well known as having, when a lieutenant, explored the sources of the Mississippi. Just as the Americans had

well filled the fort, the powder-magazine exploded with violence, killing and wounding about 250. General Pike, struck in the breast by a flying stone, died soon after. The Americans, contrary to the articles of surrender, shamefully burnt the town, and retired from York on the 2nd of May, 1813. While the squadron was absent, Sackett's Harbour was attacked by a strong force. The garrison seemed to be on the point of surrendering the fort, when Sir George Prevost, to the surprise of all, ordered a retreat. Little York taken, Commodore Chauncey then crossed the lake to Fort George at the mouth of the Niagara River. General Vincent commanded the fort. Twenty-four of Hull's guns frowned from its bastions. Its defender had 1,340 men. The American army on the Niagara frontier numbered 6,000. Chauncey had eleven war-vessels and 900 seamen. On the 27th of May the expected day came. Vincent drew his men out about a mile from the fort and awaited the attack. He was overpowered and retired, having lost nearly 450 soldiers. The Canadian force retired to a strong position, 'Beaver Dams,' twelve miles from Niagara on the heights, having given up Fort Erie and Chippewa and blown up Fort George. Vincent had now 1,600 men, and with these he retired to Burlington Heights, near the present city of Hamilton. An American army of 2,500 men followed General Vincent to Stony Creek. On the night of the 8th of June, Colonel Harvey of the British force, with upwards of 750 men, fell stealthily on the sleeping American army, scattered the troops, killed many, captured the American generals Chandler and Winder, and about 100 men, along with guns and stores. The adventurers then retired to their camp. The scattered American soldiers reassembled in the morning and retired in a disorderly manner down the country to Fort George. Vincent now followed the retreating army and reoccupied Beaver Dams. One of his outposts was held by Lieutenant Fitzgibbon and 30 men. Smarting with defeat, the American general sought to surprise this station as a basis for future attacks. He secretly despatched Colonel Boerstler with nearly 700 men to capture it. A wounded militiaman, living within the lines at Queenston, heard by chance of the expedition. . . . The alarm was given [by the militiaman's wife, who travelled 20 miles through the forest, at night] and that night the men lay on their arms. Early next morning the American party came, but an ambuscade had been prepared for them, and after severe fighting 543 men surrendered into the hands of some 260. General Dearborn soon after retired from the command of the American army, to be succeeded by General Boyd. British parties captured Fort Schlosser and Black Rock on the Niagara River at this time, though at the latter place with the loss of Colonel Biskopp, the idol of his men. Colonel Scott, in command of troops on board Commodore Chauncey's fleet, again scoured Lake Ontario. Landing at Burlington Heights on the 31st of July, they did nothing more than reoccupy the works and depart. Afterwards the attack on York was made and the barracks burnt. After this a trial of strength took place between Sir James Yeo's fleet, now sent forth from Kingston Harbour, and Chauncey's squadron. The Americans lost two vessels in a squall, and two were cap-

tured by the British, but the result between the two fleets was indecisive."—G. Bryce, *Short Hist. of the Canadian People*, ch. 8, sect. 5.

A. D. 1813 (October—November).—The abortive expedition against Montreal.—“While Perry and Harrison were . . . reclaiming our lost ground on Lake Erie and in the northwest, Armstrong was preparing to carry out his favorite plan of a descent on Kingston and Montreal. When he accepted the post of Secretary of War, he transferred his department from Washington to Sackett’s Harbor, so that he might superintend in person the progress of the campaign. . . . Although Wilkinson had superseded Dearborn, as commander-in-chief of this district in July, he did not issue his first orders to the army till the 23d of August. . . . General Wade Hampton, who had been recalled from the fifth military district to the northern frontier, encamped with his army, 4,000 strong, at Plattsburg, on Lake Champlain. The plan finally adopted by the Secretary was, to have Wilkinson drop down the St. Lawrence, and without stopping to attack the English posts on the river, form a junction with General Hampton, when the two armies should march at once on Montreal. These two Generals were both Revolutionary officers, and consequently too advanced in years to carry such an expedition through with vigor and activity. Besides, a hostile feeling separated them, rendering each jealous of the other’s command. . . . Chauncey, in the mean time, after an action with Yeo, in which both parties claimed the victory, forced his adversary to take refuge in Burlington Bay. He then wrote to Wilkinson that the lake was clear of the enemy, and reported himself ready to transport the troops down the St. Lawrence. The greatest expectations were formed of this expedition. The people knew nothing of the quarrel between Wilkinson and Hampton, and thought only of the strength of their united force. . . . While Wilkinson was preparing to fulfill his part of the campaign, Hampton made a bold push into Canada on his own responsibility. Advancing from Plattsburg, he marched directly for St. John, but finding water scarce for his draft cattle, owing to a severe drought, he moved to the left, and next day arrived at Chateaugay Four Corners, a few miles from the Canada line. Here he was overtaken by an order from Armstrong, commanding him to remain where he was, until the arrival of Wilkinson. But jealous of his rival, and wishing to achieve a victory in which the honor would not be divided, he resolved to take upon himself the responsibility of advancing alone. Several detachments of militia had augmented his force of 4,000, and he deemed himself sufficiently strong to attack Prevost, who he was told had only about 2,000 ill assorted troops under him. He therefore gave orders to march, and cutting a road for 24 miles through the wilderness, after five days great toil, reached the British position. Ignorant of its weakness, he dispatched Colonel Purdy at night by a circuitous route to gain the enemy’s flank and rear and assail his works, while he attacked them in front. Bewildered by the darkness, and led astray by his guide, Colonel Purdy waded through the forest, entirely ignorant of the whereabouts of the enemy

or of his own. General Hampton, however, supposing that he had succeeded in his attempt, ordered General Izard to advance with the main body of the army, and as soon as firing was heard in the rear to commence the attack in front. Izard marched up his men and a skirmish ensued, when Colonel De Salaberry, the British commander, who had but a handful of regulars under him, ordered the bugles, which had been placed at some distance apart on purpose to represent a large force, to sound the charge. The ruse succeeded admirably, and a halt was ordered. The bugles brought up the lost detachment of Purdy, but suddenly assailed by a concealed body of militia, his command was thrown into disorder and broke and fled. Disconcerted by the defeat of Purdy, Hampton ordered a retreat, without making any attempt to carry the British intrenchments. . . . Hampton, defeated by the blasts of a few bugles, took up his position again at the Four Corners, to wait further news from Wilkinson’s division. The latter having concentrated his troops at Grenadier Island, embarked them again the same day that Hampton advanced, against orders, towards Montreal. Three hundred boats, covering the river for miles, carried the infantry and artillery, while the cavalry, 500 strong, marched along the bank. . . . They were two weeks in reaching the river. Wilkinson, who had been recalled from New Orleans, to take charge of this expedition, was prostrated by the lake fever, which, added to the infirmities of age, rendered him wholly unfit for the position he occupied. General Lewis, his second in command, was also sick. The season was already far advanced—the autumnal storms had set in earlier than usual—everything conspired to ensure defeat; and around this wreck of a commander, tossed an army, dispirited, disgusted, and doomed to disgrace. General Brown led the advance of this army of invasion, as it started for Montreal, 180 miles distant. . . . When it reached the head of the long rapids at Hamilton, 20 miles below Ogdensburg, Wilkinson ordered General Brown to advance by land and cover the passage of the boats through the narrow defiles, where the enemy had established block houses. In the mean time the cavalry had crossed over to the Canadian side and, with 1,500 men under General Boyd, been despatched against the enemy, which was constantly harassing his rear. General Boyd, accompanied by Generals Swartwout and Covington as volunteers, moved forward in three columns. Colonel Ripley advancing with the 21st Regiment, drove the enemy’s sharp shooters from the woods, and emerged on an open space, called Chrystler’s Field, and directly in front of two English regiments. Notwithstanding the disparity of numbers this gallant officer ordered a charge, which was executed with such firmness that the two regiments retired. Rallying and making a stand, they were again charged and driven back. . . . At length the British retired to their camp and the Americans maintained their position on the shore, so that the flotilla passed the Saut in safety. This action [called the battle of Chrystler’s Farm, or Williamsburg] has never received the praise it deserves—the disgraceful failure of the campaign having cast a shadow upon it. The British, though inferior in numbers, had greatly the advantage in having possession of a stone house

in the midst of the field. . . . Nearly one-fifth of the entire force engaged were killed or wounded. . . . The army, however, still held its course for Montreal. Young Scott, who had joined the expedition at Ogdensburg, was 15 miles ahead, clearing, with a detachment of less than 800 men, the river banks as he went. Montreal was known to be feebly garrisoned, and Wilkinson had no doubt it would fall an easy conquest. He therefore sent forward to Hampton to join him at St. Regis, with provisions. Hampton, in reply, said, that his men could bring no more provisions than they wanted for their own use, and informed him, in short, that he should not co-operate with him at all, but make the best of his way back to Lake Champlain. On receiving this astounding news, Wilkinson called a council of war, which reproached in strong terms the conduct of Hampton, and decided that in consideration of his failure, and the lateness of the season, the march should be suspended, and the army retire to winter quarters. This was carried into effect, and Wilkinson repaired to French Mills, on Salmon river, for the winter, and Hampton to Plattsburg."—J. T. Headley, *The Second War with England*, v. 1, ch. 13.

A. D. 1813 (December).—Retaliatory devastation of the Niagara frontier.—Fort Niagara surprised.—The burning of Buffalo.—"The withdrawal of troops from the Niagara frontier to take part in Wilkinson's expedition left the defence of that line almost entirely to militia, and the term for which the militia had been called out expired on the 9th of December. The next day General George McClure, who had been left in command at Fort George, found himself at the head of but 60 effective men, while the British General Drummond had brought up to the peninsula 400 troops and 70 Indians—released by the failure of Wilkinson's expedition—and was preparing to attack him. McClure thereupon determined to evacuate the fort, as the only alternative from capture or destruction, and remove his men and stores across the river to Fort Niagara. He also determined to burn the village of Newark, that the enemy might find no shelter. The laudable part of this plan was but imperfectly carried out; he failed to destroy the barracks, and left unharmed tents for 1,500 men, several pieces of artillery, and a large quantity of ammunition, all of which fell into the hands of Drummond's men. But the inexcusable part—the burning of a village in midwinter, inhabited by noncombatants who had been guilty of no special offence—was only too faithfully executed. The inhabitants were given twelve hours in which to remove their goods, and then the torch was applied, and not a house was left standing. This needless cruelty produced its natural result; Drummond determined upon swift and ample retaliation. In the night of December 18th, just one week after the burning of Newark, he threw across the Niagara a force of 550 men. They landed at Five Mile Meadows, three miles above Fort Niagara, and marched upon it at once, arriving there at four o'clock in the morning. McClure, who had received an intimation of the enemy's intention to

devastate the American frontier, had gone to Buffalo to raise a force to oppose him. The garrison of the fort consisted of about 450 men, a large number of whom were in the hospital. The command had been left to a Captain Leonard, who at this time was three miles away, sleeping at a farm-house. The most elaborate preparations had been made for the capture of the fort, including scaling-ladders for mounting the bastions. But the Americans seemed to have studied to make the task as easy as possible. The sentries were seized and silenced before they could give any alarm, and the main gate was found standing wide open, so that the British had only to walk straight in and begin at once the stabbing which had been determined upon. The guard in the south-east block-house fired one volley, by which the British commander, Colonel Murray, was wounded, and a portion of the invalids made what resistance they could. A British lieutenant and five men were killed, and a surgeon and three men wounded. Sixty-five Americans, two-thirds of whom were invalids, were bayoneted in their beds; 15 others, who had taken refuge in the cellars, were despatched in the same manner, and 14 were wounded; 20 escaped, and all the others, about 340, were made prisoners. . . . On the same morning, General Riall, with a detachment of British troops and 600 Indians, crossed from Queens-town." Lewiston, Youngstown, Tuscarora and Manchester (now Niagara Falls) were plundered and burned, and the houses and barns of farmers along the river, within a belt of several miles, were destroyed. "The bridge over Tonawanda Creek had been destroyed by the Americans, and at this point the enemy turned back, and soon recrossed the Niagara to the Canada side. The alarm at Buffalo brought General Hall, of the New York militia, to that village, where he arrived the day after Christmas. He found collected there a body of 1,700 men, whom it would have been gross flattery to call a 'force.' They were poorly supplied with arms and cartridges, and had no discipline and almost no organization. Another regiment of 300 soon joined them, but without adding much to their efficiency. On the 28th of December, Drummond reconnoitred the American camp, and determined to attack it; for which purpose he sent over General Riall on the evening of the 29th with 1,450 men, largely regulars, and a body of Indians. One detachment landed two miles below Black Rock, crossed Canajohatie [or Scajajunda] Creek in the face of a slight resistance, and took possession of a battery. The remainder landed at a point between Buffalo and Black Rock [two villages then, now united in one city], under cover of a battery on the Canadian shore. Poor as Hall's troops were, they stood long enough to fire upon the invaders and inflict considerable loss. . . . Both sides had artillery, with which the action was opened. As it progressed, however, the American line was broken in the centre, and Riall was compelled to fall back. His subsequent attempts to rally his men were of no avail, and he himself seems to have lost heart, as Lieutenant Riddle, who had about 80 regulars, offered to place them in front for the encouragement of the militia to new exertion, but Riall declined. . . . Both Buffalo and Black Rock were sacked and burned, and no mercy was shown. With but two or three exceptions, those of the inhab-

itants who were not able to run away were massacred. . . . It is related that in Buffalo a widow named St. John 'had the address to appease the ferocity of the enemy so far as to remain in her house uninjured.' Her house and the stone jail were the only buildings not laid in ashes. In Black Rock every building was either burned or blown up, except one log house, in which a few women and children had taken refuge. . . . Five vessels lying at the wharves were also burned. In this expedition the British lost 108 men, killed, wounded or missing. More than 50 of the Americans were found dead on the field. Truly, an abundant revenge had been taken for the burning of Newark. . . . On New Year's day of 1814 the settlers along the whole length of the Niagara—those of them who survived—were shivering beside the smouldering embers of their homes."—R. Johnson, *Hist. of the War of 1812-15*, ch. 9.

A. D. 1813-1814.—British blockade of the Atlantic coast.—"The blockade of the Atlantic coast was enforced by British vessels from the beginning of the year 1813. At first they were inclined to spare the coast of New England, which they supposed to be friendly to Great Britain, but this policy was soon abandoned, and the whole coast was treated alike. Groups of war-vessels were stationed before each of the principal sea-ports, and others were continually in motion along the coast, from Halifax on the north to the West Indies. Early in 1813, they took possession of the mouth of Chesapeake Bay as a naval station, and the American Government ordered all the lights to be put out in the neighboring light-houses. The Atlantic coast was thus kept in a state of almost constant alarm, for the British vessels were continually landing men at exposed points to burn, plunder, and destroy. . . . In 1813, the defenceless towns of Lewes, Havre de Grace, and Hampton (near Fortress Monroe) were bombarded, and Stonington, Conn., in 1814; and a number of smaller towns were burned or plundered. Attacks on New York and other larger cities were prevented only by fear of torpedoes, by means of which the Americans had nearly blown up one or two British ships which ventured too near New York. . . . Maine, as far as the Penobscot River, was seized by the British in 1814, and was held until the end of the war."—A. Johnston, *Hist. of the U. S. for Schools*, sec. 384-386.

A. D. 1813-1814 (August—April).—The Creek War.—General Jackson's first campaign.—"The great Indian chief Tecumseh had been trying for years to unite all the red men against the whites. There would have been an Indian war if there had been no war with England, but the latter war seemed to be Tecumseh's opportunity. Among the southwestern Indians he found acceptance only with the Creeks, who were already on the verge of civil war, because some wanted to adopt civilized life, and others refused. The latter became the war party, under Weatherford [Red Eagle], a very able half-breed chief. The first outbreak in the Southwest, although there had been some earlier hostilities,

was the massacre of the garrison and refugees at Fort Mims, at the junction of the Alabama and Tombigbee rivers, August 30, 1813. There were 553 persons in the fort, of whom only 5 or 6 escaped. . . . The result of the massacre at Fort Mims was that Alabama was almost abandoned by whites. Terror and desire for revenge took possession of Georgia and Tennessee. September 25th the Tennessee Legislature voted to raise men and money to aid the people of Mississippi territory against the Creeks." Andrew Jackson, one of the two major-generals of the Tennessee militia, was then confined to his bed by a wound received in a recent fight with Thomas H. Benton and Benton's brother. "As soon as he possibly could, Jackson took the field. Georgia had a force in the field under General Floyd. General Claiborne was acting at the head of troops from Louisiana and Mississippi. This Indian war had a local character and was outside the federal operations, although in the end it had a great effect upon them. . . . The Creek war was remarkable for three things: (1) the quarrels between the generals, and the want of concert of action; (2) lack of provisions; (3) insubordination in the ranks. . . . On three occasions Jackson had to use one part of his army to prevent another part from marching home, he and they differing on the construction of the terms of enlistment. He showed very strong qualities under these trying circumstances. . . . In the conduct of the movements against the enemy his energy was very remarkable. So long as there was an enemy unsubdued Jackson could not rest, and could not give heed to anything else. . . . At the end of March [1814] Jackson destroyed a body of the Creeks at Tohopeka, or Horse-Shoe Bend, in the northeast corner of the present Tallapoosa County, Alabama. With the least possible delay he pushed on to the last refuge of the Creeks, the Hickory Ground, at the confluence of the Coosa and Tallapoosa, and the Holy Ground a few miles distant. The medicine men, appealing to the superstition of the Indians, had taught them to believe that no white man could tread the latter ground and live. In April the remnant of the Creeks surrendered or fled to Florida, overcome as much by the impetuous and relentless character of the campaign against them as by actual blows. Fort Jackson was built on the Hickory Ground. The march down through Alabama was a great achievement, considering the circumstances of the country at the time. . . . The Creek campaign lasted only seven months. In itself considered, it was by no means an important Indian war, but in its connection with other military movements it was very important. Tecumseh had been killed at the battle of the Thames, in Canada, October 5, 1813. His scheme of a race war died with him. The Creek campaign put an end to any danger of hostilities from the southwestern Indians, in alliance either with other Indians or with the English. . . . This campaign . . . was the beginning of Jackson's fame and popularity, and from it dates his career. He was 47 years old. On the 31st of May he was appointed a major-general in the army of the United States, and was given command of the department of the South. He established his headquarters at Mobile in August, 1814."—W. G. Sumner, *Andrew Jackson as a Public Man*, ch. 2.

A. D. 1814 (July—September).—On the Niagara Frontier.—Chippewa.—Lundy's Lane.—Fort Erie.—"After the desolation of the Niagara frontier in 1813, there appeared to be nothing for the parties to contend for in that quarter. No object could be obtained by a victory on either side, but the temporary occupation of a vacant territory; yet both parties seemed to have selected this as the principal theatre on which to display their military prowess in the year 1814. Lieutenant General Drummond, governor of Upper Canada, concentrated the forces of that province at fort George, and retained the possession of Niagara. The American Generals Smyth, Hampton, Dearborn, and Wilkinson, under whose auspices the campaigns of 1813 and 18, on the Canada border, were conducted, had retired from that field; and General Brown was appointed major general, and, with the assistance of Brigadiers Scott and Ripley, designated to the command of the Niagara frontier. He left Sackett's Harbour in May, with a large portion of the American troops. . . . On his arrival at Buffalo, calculating upon the co-operation of the Ontario fleet, he determined on an attempt to expel the British from the Niagara peninsula. With this view he crossed the river on the 3d of July. . . . On the same day he invested fort Erie, and summoned it to surrender, allowing the commandant two hours to answer the summons. At five in the afternoon the fort surrendered, and the prisoners, amounting to 187, were removed to Buffalo. On the morning of the fourth General Scott advanced with his brigade and corps of artillery, and took a position on the Chippewa plain, half a mile in front of the village, his right resting on the river, and his front protected by a ravine. The British were encamped in force at the village. In the evening General Brown joined him with the reserve under General Ripley, and the artillery commanded by Major Hindman. General Porter arrived the next morning, with the New-York and Pennsylvania volunteers, and a number of Indians of the six nations. . . . At four in the afternoon, General Porter advanced, taking the woods in order to conceal his approach, and . . . met the whole British force approaching in order of battle. General Scott, with his brigade and Tower's artillery, met them on the plain, in front of the American encampment, and was directly engaged in close action with the main body. General Porter's command gave way. . . . The reserve were now ordered up, and General Ripley passed to the woods in left of the line to gain the rear of the enemy; but before this was effected, General Scott had compelled the British to retire. Their whole line now fell back, and were eagerly pursued. . . . The British left 200 dead on the ground. . . . The American loss was 60 killed, and 268 wounded and missing. After the battle of Chippewa, the British retired to fort George; and General Brown took post at Queenston, where he remained some time, expecting reinforcements. . . . On the 20th, General Brown advanced with his army towards fort George, drove in the outposts, and encamped near the fort, in the expectation that the British would come out

and give him battle. On the 23d, he returned to his former position at Queenston; here he received a letter from General Gaines, informing him that the heavy guns, and the rifle regiment, which he had ordered from Sackett's harbour, together with the whole fleet, were blockaded in that port, and no assistance was to be expected from them. On the 24th, he fell back to Chippewa, and on the 25th received intelligence that the enemy, having received large reinforcements from Kingston, were advancing upon him. The first brigade under General Scott, Towser's artillery, all the dragoons and mounted men, were immediately put in motion on the Queenston road. On his arrival at the Niagara cataract, General Scott learned that the British were in force directly in his front, separated only by a narrow piece of wood. Having despatched this intelligence to General Brown, he advanced upon the enemy, and the action commenced at six o'clock in the afternoon. . . . The British artillery had taken post on a commanding eminence, at the head of Lundy's lane, supported by a line of infantry, out of the reach of the American batteries. This was the key of the whole position; from hence they poured a most deadly fire on the American ranks. It became necessary either to leave the ground, or to carry this post and seize the height. The latter desperate task was assigned to Colonel Miller. On receiving the order from General Brown, he calmly surveyed the position, and answered 'I will try, sir,' which expression was afterwards the motto of his regiment. . . . Colonel Miller advanced coolly and steadily to his object, amid a tremendous fire, and at the point of the bayonet, carried the artillery and the height. The guns were immediately turned upon the enemy; General Ripley now brought up the 23d regiment, to the support of Colonel Miller; the first regiment was milled and brought into line, and the British were driven from the hill. . . . The British rallied under the hill, and made a desperate attempt to regain their artillery, and drive the Americans from their position, but without success; a second and third attempt was made with the like result. General Scott was engaged in repelling these attacks, and though with his shoulder fractured, and a severe wound in the side, continued at the head of his column, endeavouring to turn the enemy's right flank. The volunteers under General Porter, during the last charge of the British, precipitated themselves upon their lines, broke them, and took a large number of prisoners. General Brown . . . received a severe wound on the thigh, and in the side, and . . . consigned the command to General Ripley. At twelve o'clock, both parties retired from the field to their respective encampments, fatigued and sated with slaughter. . . . The battle [called Lundy's Lane, or Bridge-water, or Niagara] was fought to the west of, and within half a mile of the Niagara cataract. . . . Considering the numbers engaged, few contests have ever been more sanguinary. . . . General Brown states his loss to be, killed, 171; wounded, 572; missing, 117; [total] 860. General Drummond acknowledges a loss of, killed, 84; wounded, 559; missing and prisoners, 235; [total] 878. . . . General Ripley, on the 26th, fell back to fort Erie. General Brown retired to Buffalo, and General Scott to Batavia, to recover from their wounds."—S. Perkins, *List.*

of the Late War, ch. 17.—“Fort Erie was a small work with two demi-bastions; one upon the north and the other upon the south front. It was built of stone, but was not of sufficient strength to resist ordnance heavier than the field artillery of that day. Ripley at once commenced to strengthen the position. Fortunately, General Drummond delayed his advance for two days, giving the Americans an opportunity of which they industriously availed themselves. . . . Fort Erie was changed into an entrenched camp, with its rear open toward the river. General Drummond appeared before the fort, on the 3d of August, with a force of 5,350 men. He established his camp two miles distant, back of Waterloo, and commenced a double line of entrenchments within 400 yards of the main work. The same morning he threw a force of about 1,000 men across the river, and landed them below Squaw Island, with the intention of seizing Buffalo, destroying the stores gathered there, and interrupting the communications of the American army. This soldierly plan was happily frustrated by Major Morgan with a battalion of the First Rifles, 250 strong. . . . During the following fortnight several skirmishes occurred in front of Fort Erie, in one of which the gallant Colonel Morgan was killed. General Drummond, having been still further reinforced, determined not to wait for the slow results of a siege, but to carry the place by assault. At two o'clock in the morning of the 3d of August, the British army moved to the attack in three columns. One was ordered to carry the Douglass battery, upon the extreme right of our position; another column was to engage the fort itself; but the main attack was directed against the Towson battery upon Snake Hill. Brigadier-General Gaines, who had lately arrived, was now in command of the American forces. . . . The evening before, a shell had exploded a small magazine in Fort Erie, and General Gaines was apprehensive that the enemy would take advantage of this disaster and attack him,—one-third of the troops were therefore kept at their post through the night, which was dark and rainy. His precautions were well taken. At half-past two the tramp of a heavy column was heard approaching Towson's redoubt. Instantly a sheet of fire flashed from our lines, lighting up the night, and revealing the enemy 1,500 strong. They had been ordered to attack with the bayonet; and, to insure obedience, the flints had been removed from their muskets. With complete courage they approached to within reach of the light battals, between Snake Hill and the lake. But after a desperate struggle they fell back. Again they advanced, and this time succeeded in planting scaling ladders in the ditch in front of the redoubt. But their ladders were too short, and the assailants were driven off with severe loss. Meanwhile a detachment endeavored to turn our position by wading out into the river, and passing round our left. Ripley met them promptly. Numbers were killed or wounded, and were carried off by the current, and the remainder of the detachment were captured. Five times the obstinate English returned to the assault, but each time without success. . . . The other British columns waited until the engagement on the left was at its height. On our right the enemy advanced to within 50 yards of the Douglass battery, but were then driven back.

At the fort the contest was more severe. The assailants, led by Colonel Drummond, an officer of singular determination, advanced through a ravine north of the fort, and attacking simultaneously all the salient points, they swarmed over the parapet into the north bastion. . . . The garrison of the fort rallied, and after a severe contest succeeded in regaining possession of the bastion. A second and third time Drummond returned to the assault with no better success. But with invincible tenacity he clung to his purpose. Moving his troops, under cover of the night and the dense cloud of battle which hung along the ramparts, silently round the ditch, he suddenly repeated the charge. The English ran up their ladders so quickly that they gained the top of the glacis before the defenders could rally to resist them. . . . The garrison of the fort made repeated unsuccessful efforts to retake the bastion; but at day-break it was still in the enemy's possession. Powerful detachments were then brought up from the left and center, and a combined attempt was made from several different directions to drive the British from their position; but, after a desperate struggle, this likewise failed. The guns of the Douglass battery, and those under Captain Fenning, were turned upon the bastion, and Captain Bliddle was placing a piece of artillery to enfilade it, while several hundred of the American reserve stood ready to rush upon it. At this moment a loud explosion shook the earth, and the whole bastion leaped into the air, carrying with it both its assailants and defenders. The cause of this explosion has never been accurately ascertained. It is generally supposed to have been accidental. . . . The shattered columns of the foe now retired to their encampment. The British report stated their loss at 905 killed, wounded and missing; of whom 223 were killed, including 14 officers; 174 wounded; and 186 prisoners remained in our hands. Our loss, including 11 prisoners, was 84 men. In the bombardment of the day before we had 45 killed and wounded; swelling our total loss to 129. A few days after this, Drummond was reinforced by two regiments, and reopened fire along his own line. The bombardment continued through the remainder of the month of August. On the 28th, General Gaines was wounded by a shell, which fell into his quarters, and General Ripley again assumed the command, but was soon superseded by General Brown, who had recovered from the wound received at Lundy's Lane. General Porter, by dint of superhuman efforts, gathered a considerable body of militia at Buffalo, to reinforce the fort. . . . Notwithstanding the victory I have just described, and the reinforcements brought by Porter, the American army at Fort Erie was in a very dangerous situation. Their foe was daily increasing in number, and three new batteries were thrown up, whose fire was rapidly making the position untenable. . . . Under the pressure of this great necessity, General Porter planned a sortie, which was submitted to General Brown; who approved it, and ordered it to be carried out. . . . By this enterprise, altogether the most brilliant military event which occurred on this frontier during the war, all of the enemy's guns in position were made useless, and their entrenchments destroyed. We took 385 prisoners, including 11 commissioned officers,

and killed or wounded 600 men. Our own loss was 510. . . . Four days after this, General Drummond raised the siege, and fell back to Fort George."—W. Dorsheimer, *Buffalo during the War of 1812* (*Buffalo Hist. Soc. Pub's*, v. 1).

A. D. 1814 (August—September).—Capture and destruction of the national Capital.—Attempt against Baltimore.—Early in the "summer of 1814, rumors spread through the capital of a great British armament preparing at Bermuda, some said for an attack on New York, others on Baltimore and Annapolis, while others asserted quite as vehemently that the national capital was the chosen object of British vengeance. How easy it would be, they argued, for Admiral Sir George Cockburn, who had been a year with his fleet in Chesapeake Bay, when reinforced by the Bermuda armament to disembark a strong column at any point on the western shore of the Chesapeake—but forty miles distant—and by a forced march capture the city. But by some strange fatuity, the President and his cabinet treated these possibilities as unworthy of credence. 'The British come here! a Cabinet officer is reported to have said, in answer to the representations of citizens. 'What should they come here for?' Sure enough: a provincial village of 6,000 inhabitants. But then there were the state papers and public buildings, the moral effect of capturing an enemy's capital, and the satisfaction of chastising the city where a British minister had been obliged to ask for his recall on the ground of ill-treatment. . . . Colonel James Monroe, a gallant soldier of the Revolution, was now Secretary of State; another Revolutionary soldier, General Armstrong, was Secretary of War, and acting on their advice, President Madison did substantially nothing for the defence of his capital. Fort Washington, commanding the Potomac, which Major L'Enfant had planned early in the war, was hurried forward to completion; but no defences on the landward side were erected, and no army was called out to defend it. What was done was this: The District of Columbia, Maryland, and that part of Virginia north of the Rappahannock, were created a tenth military district under command of General W. H. Winder, a brave officer, who had seen service in the Northwest, and who had recently returned from long detention in Canada as prisoner of war. General Winder on taking command (June 26, 1814) found for the defence of Washington detachments of the 36th and 38th regulars, amounting to a few hundred men, but nothing more—no forts, no guns, no army. A force of 13 regiments of Virginia, Maryland, and Pennsylvania militia had been drafted, but were not to be called into active service until the enemy should appear—an arrangement against which General Winder protested in vain. . . . While these weak and ineffectual preparations are being made, the enemy has been marshalling his forces. Early in August Rear-Admiral Cockburn's blockading squadron had been joined in the Potomac by the

fleet of Vice-Admiral Cochrane, who as ranking officer at once took command." A few days later the expected Bermuda expedition arrived, bringing 4,000 troops—veterans from Wellington's army—under General Ross. A little flotilla of gunboats on the Chesapeake, commanded by Commodore Barney, was driven into Patuxent River and there abandoned and burned. Then the enemy landed in force at Benedict and marched on Washington, while the Secretary of War still insisted that Baltimore must be, in the nature of things, the place they would strike. At Bladensburg they were met (August 24th) by General Winder with some 5,000 hastily collected militia and volunteers and less than 1,000 regular troops, sailors, and marines—poor materials for an army with which to face 4,000 hardened veterans of the Peninsular War. The battle ended in the utter routing of the American forces and the abandonment of Washington to the British invaders.—C. B. Todd, *The Story of Washington*, ch. 8.—"This battle, by which the fate of the American capital was decided, began about one o'clock in the afternoon, and lasted till four. The loss on the part of the English was severe, since, out of two-thirds of the army, which were engaged, upwards of 500 men were killed and wounded; and what rendered it doubly severe was, that among these were numbered several officers of rank and distinction. . . . On the side of the Americans the slaughter was not so great. Being in possession of a strong position, they were of course less exposed in defending than the others in storming it; and had they conducted themselves with coolness and resolution, it is not conceivable how the battle could have been won. But the fact is that, with the exception of a party of sailors from the gun boats, under the command of Commodore Barney, no troops could behave worse than they did."—G. R. Gleig, *Campaigns of the British Army at Washington and New Orleans*, ch. 9.—When Winder's troops abandoned Washington "fire was put at the navy yard to a new frigate on the stocks, to a new sloop-of-war lately launched, and to several magazines of stores and provisions, for the destruction of which ample preparations had been made. By the light of this fire, made lurid by a sudden thunder-gust, Ross, toward evening, advanced into Washington, at that time a straggling village of some 8,000 people, but, for the moment, almost deserted by the male part of the white inhabitants. From Gallatin's late residence, one of the first considerable houses which the column reached, a shot was fired which killed Ross's horse, and which was instantly revenged by putting fire to the house. After three or four volleys at the Capitol, the two detached wings were set on fire. The massive walls defied the flames, but all the interior was destroyed, with many valuable papers, and the library of Congress—a piece of Vandalism alleged to be in revenge for the burning of the Parliament House at York. [Chaplain Gleig, who was with the British forces under Ross, states in the narrative quoted from above that the party fired upon from Gallatin's house bore a flag of truce, and that Ross's destructive proceedings in Washington were consequent on that fact.] . . . The president's house, and the offices of the Treasury and State Departments near by, were set on fire. . . . The next morning the

War Office was burned. . . . Several private houses were burned, and some private warehouses broken open and plundered; but, in general, private property was respected." On the night of the 25th the British withdrew, returning as they came; but on the 29th their frigates, ascending the Potomac, arrived at Alexandria and plundered that city heavily. "Within less than a fortnight after the re-embarkation of Ross's army, the British fleet, spreading vast alarm as it ascended the Chesapeake, appeared off the Patuxent [September 12]. . . . A landing was effected the next day at North Point, on the northern shore of that estuary, some eight miles up which was Fort M'Henry, an open work only two miles from Baltimore, commanding the entrance into the harbor, which found, however, its most effectual protection in the shallowness of the water. The defense of the city rested with some 10,000 militia. . . . A corps 3,000 strong had been thrown forward toward North Point. As Ross and Cockburn, at the head of a reconnoitering party, approached the outposts of this advanced division, a skirmish ensued, in which Ross was killed. . . . The fleet, meanwhile, opened a tremendous cannonade on Fort M'Henry; but . . . at such a distance as to render their fire ineffectual. It was under the excitement of this cannonade that the popular song of the 'Star Spangled Banner' was composed, the author [Francis Scott Key] being then on board the British fleet, whither he had gone to solicit the release of certain prisoners, and where he was detained pending the attack. An attempt to land in boats also failed; and that same night, the bombardment being still kept up, the British army, covered by rain and darkness, retired silently to their ships and re-embarked."—R. Hildreth, *Hist. of the U. S.*, v. 6, pp. 510-520.

A. D. 1814 (September).—Prevost's invasion of New York.—Macdonough's naval victory on Lake Champlain.—Lake Champlain, "which had hitherto played but an inconspicuous part, was now to become the scene of the greatest naval battle of the war. A British army of 11,000 men under Sir George Prevost undertook the invasion of New York by advancing up the western bank of Lake Champlain. This advance was impracticable unless there was a sufficiently strong British naval force to drive back the American squadron at the same time. Accordingly, the British began to construct a frigate, the *Confiance*, to be added to their already existing force, which consisted of a brig, two sloops, and 12 or 14 gun-boats. The Americans already possessed a heavy corvette, a schooner, a small sloop, and 10 gun-boats or row-galleys; they now began to build a large brig, the *Eagle*, which was launched about the 16th of August. Nine days later, on the 25th, the *Confiance* was launched. The two squadrons were equally deficient in stores, etc.; the *Confiance* having locks to her guns, some of which could not be used, while the American schooner *Ticonderoga* had to fire her guns by means of pistols flashed at the touchholes (like *Barclay* on Lake Erie). Macdonough and Downie were hurried into action before they had time to prepare themselves thoroughly; but it was a disadvantage common to both, and arose from the nature of the case,

which called for immediate action. The British army advanced slowly toward Plattsburg, which was held by General Macomb with less than 2,000 effective American troops. Captain Thomas Macdonough, the American commodore, took the lake a day or two before his antagonist, and came to anchor in Plattsburg harbor. The British fleet, under Captain George Downie, moved from Isle-aux-Noix on Sept. 8th, and on the morning of the 11th sailed into Plattsburg harbor." The American force consisted of the ship *Saratoga*, Captain Macdonough, the brig *Eagle*, the schooner *Ticonderoga*, the sloop *Preble*, and ten row-galleys, or gunboats mounting one or two guns each—"In all, 14 vessels of 2,344 tons and 893 men, with 60 guns throwing at a broadside 1,194 lbs. of shot, 480 from long, and 714 from short guns. The force of the British squadron in guns and ships is known accurately, as most of it was captured." It consisted of the frigate *Confiance*, the brig *Linnet*, the sloops *Chubb* and *Fluch*, and twelve gunboats—"In all, 16 vessels, of about 2,403 tons, with 937 men, and a total of 93 guns, throwing at a broadside 1,193 lbs., 660 from long and 533 from short pieces. . . . Young Macdonough (then but 28 years of age) calculated all . . . chances very coolly and decided to await the attack at anchor in Plattsburg Bay, with the head of his line so far to the north that it could hardly be turned. . . . The morning of September 11th opened with a light breeze from the northeast. Downie's fleet weighed anchor at daylight, and came down the lake with the wind nearly aft, the booms of the two sloops swinging out to starboard. At half-past seven, the people in the ships could see their adversaries' upper sails across the narrow strip of land ending in Cumberland Head, before the British doubled the latter. . . . As the English squadron stood bravely in, young Macdonough, who feared his foes not at all, but his God a great deal, knelt for a moment, with his officers, on the quarter-deck; and then ensued a few minutes of perfect quiet." The fierce battle which followed lasted about two hours and a half, with terribly destructive effects on both sides. The British commander, Downie, was killed early in the action. "On both sides the ships had been cut up in the most extraordinary manner; the *Saratoga* had 55 shot-holes in her hull, and the *Confiance* 105 in hers, and the *Eagle* and *Linnet* had suffered in proportion. The number of killed and wounded can not be exactly stated; it was probably about 200 on the American side, and over 300 on the British. . . . The effects of the victory were immediate and of the highest importance. Sir George Prevost and his army [which had arrived before Plattsburg on the 6th, and which, simultaneously with the naval advance, had made an unsuccessful attack on the American defensive works, at the mouth of the Saranac, held by General Alexander Macomb] at once fled in great haste and confusion back to Canada, leaving our northern frontier clear for the remainder of the war; while the victory had a very great effect on the negotiations for peace. In this battle the crews on both sides behaved with equal bravery, and left nothing to be desired in this respect; but from their rawness they of course showed far less skill than the crews of most of the American and some of the British ocean cruisers. . . . Macdonough in this battle won a higher fame than any other commander of the war,

British or American. He had a decidedly superior force to contend against, the officers and men of the two sides being about on a par in every respect; and it was solely owing to his foresight and resource that we won the victory. He forced the British to engage at a disadvantage by his excellent choice of position, and he prepared beforehand for every possible contingency. . . . Down to the time of the Civil War he is the greatest figure in our naval history."—T. Roosevelt, *The Naval War of 1812*, ch. 8.

A. D. 1814 (December).—The Hartford Convention.—"The commercial distress in New England, the possession by the enemy of a large part of the District of Maine, the fear of their advance along the coast, and the apparent neglect of the Federal Government to provide any adequate means of resistance, had led the Legislature of Massachusetts, in October, to invite the other New England States to send delegates to Hartford, Connecticut, 'to confer upon the subject of their public grievances.' Delegates [26 in number] from Massachusetts, Rhode Island and Connecticut, and from parts of Vermont and New Hampshire, met at Hartford in December and remained in session for three weeks. In their report to their State Legislatures they reviewed the state of the country, the origin and management of the war, and the strong measures lately proposed in Congress, and recommended several Amendments to the Constitution, chiefly with intent to restrict the powers of Congress over commerce, and to prevent naturalized citizens from holding office. In default of the adoption of these Amendments, another convention was advised, 'in order to decide on the course which a crisis so momentous might seem to demand.' This was the famous Hartford Convention. The peace which closely followed its adjournment removed all necessity or even desire for another session of it. Its objects seem to have been legitimate. But the unfortunate secrecy of its proceedings, and its somewhat ambiguous language, roused a popular suspicion, sufficient for the political ruin of its members, that a dissolution of the Union had been proposed, perhaps resolved upon, in its meetings. Some years afterward those concerned in it were compelled in self-defense to publish its journal, in order to show that no treasonable design was officially proposed. It was then, however, too late, for the popular opinion had become fixed. Neither the Federal party which originated, nor the Federalist politicians who composed, the assembly, were ever freed from the stigma left by the mysterious Hartford Convention."—A. Johnston, *Hist. of Am. Politics*, 2d ed., ch. 8.—The language of the report of the Hartford Convention "was so skillfully selected that it cannot be said with certainty whether the convention deduced from the nature of the Union a positive right in the individual states to withdraw from the Union, or whether it claimed only a moral justification for revolution. It was prudent enough in the declaration of its position on the constitutional question not to venture beyond vague, double-meaning expressions, except so far as it could appeal to its opponents. But it went just far enough to repeat almost verbatim the declaration of faith laid down in the Ken-

tucky resolutions of 1798. If the members of the convention, and those in sympathy with them, were 'Maratists,' they could claim that they had become so in the school of Madison and Jefferson."—H. von Holst, *Const. and Pol. Hist. of the U. S.*, v. 1, p. 208.

A. D. 1814 (December).—The Treaty of Peace concluded at Ghent.—"In September, 1812, Count Romanzoff suggested to Mr. [John Quincy] Adams the readiness of the Emperor [of Russia] to act as mediator in bringing about peace between the United States and England. The suggestion was promptly acted upon, but with no directly fortunate results. The American government acceded at once to the proposition, and, at the risk of an impolitic display of readiness, dispatched Messrs. Gallatin and Bayard to act as Commissioners jointly with Mr. Adams in the negotiations. These gentlemen, however, arrived in St. Petersburg only to find themselves in a very awkward position," since the offered mediation of the Czar was declined by England. The latter power preferred to negotiate directly with the United States, and presently made proposals to that effect, intimating her readiness "to send Commissioners to Göttingen, for which place Ghent was afterwards substituted, to meet American Commissioners and settle terms of pacification. The United States renewed the powers of Messrs. Adams, Bayard, and Gallatin, . . . and added Jonathan Russell, then Minister to Sweden, and Henry Clay. England deputed Lord Gambier, an Admiral, Dr. Adams, a publicist, and Mr. Goulbourn, a member of Parliament and Under Secretary of State. These eight gentlemen accordingly met in Ghent on August 7, 1814. It was upwards of four months before an agreement was reached. . . . The eight were certainly an odd assemblage of peacemakers. The ill-blood and wranglings between the opposing Commissions were bad enough, yet hardly equalled the intestine dissensions between the American Commissioners themselves. . . . The British first presented their demands, as follows: 1. That the United States should conclude a peace with the Indian allies of Great Britain, and that a species of neutral belt of Indian territory should be established between the dominions of the United States and Great Britain, so that these dominions should be nowhere continuous, upon which belt or barrier neither power should be permitted to encroach even by purchase, and the boundaries of which should be settled in this treaty. 2. That the United States should keep no naval force upon the Great Lakes, and should neither maintain their existing forts nor build new ones upon their northern frontier; it was even required that the boundary line should run along the southern shore of the lakes; while no corresponding restriction was imposed upon Great Britain, because she was stated to have no projects of conquest as against her neighbor. 3. That a piece of the province of Maine should be ceded, in order to give the English a road from Halifax to Quebec. 4. That the stipulations of the treaty of 1783, conferring on English subjects the right of navigating the Mississippi, should be now formally renewed. The Americans were astounded; it seemed to them

hardly worth while to have come so far to listen to such propositions." But, after long and apparently hopeless wrangling, events in Europe rather than in America brought about a change of disposition on the part of the British government; instructions to the commissioners were modified on both sides, and, quite to their own surprise, they arrived at agreements which were formulated in a Treaty and signed, December 24, 1814. "Of the many subjects mooted between the negotiators scarcely any had survived the fierce contests which had been waged concerning them. The whole matter of the navigation of the Mississippi, access to that river, and a road through American territory, had been dropped by the British; while the Americans had been well content to say nothing of the Northeastern Fisheries [see FISHERIES, NORTH AMERICAN: A. D. 1814-1818], which they regarded as still their own. The disarmament on the lakes and along the Canadian border, and the neutralization of a strip of Indian territory, were yielded by the English. The Americans were content to have nothing said about impressment; nor was any one of the many illegal rights exercised by England formally abandoned. The Americans satisfied themselves with the reflection that circumstances had rendered these points now only matters of abstract principle, since the pacification of Europe had removed all opportunities and temptations for England to persist in her previous objectionable courses. For the future it was hardly to be feared that she would again undertake to pursue a policy against which it was evident that the United States were willing to conduct a serious war. There was, however, no provision for indemnification. Upon a fair consideration, it must be admitted that, though the treaty was silent upon all the points which the United States had made war for the purpose of enforcing, yet the country had every reason to be gratified with the result of the negotiation."—J. T. Morse, *John Quincy Adams*, pp. 75-96.—"Instead of wearing themselves out over impracticable, perhaps impossible, questions, the commissioners turned their attention to the northern boundary between the two countries, and it was by them forever settled, and in such manner as to give the United States the foundation for its future greatness. . . . The victory of the American diplomats at Ghent was two-fold: first, they secured the benefits desired without enumerating them—even to a greater extent than if the benefits had been enumerated; and second, if they had insisted upon an enumeration of the benefits obtained, it is apparent they would have periled the entire treaty and lost all."—T. Wilson, *The Treaty of Ghent* (*Mag. of Am. Hist.*, Nov., 1888).

ALSO IN: C. Schurz, *Life of Henry Clay*, ch. 6 (v. 1).—J. Q. Adams, *Memoirs* (*Diary*) ch. 9 (v. 2-3). Following is the text of the treaty:

Article I. There shall be a firm and universal peace between His Britannic Majesty and the United States, and between their respective countries, territories, cities, towns, and people, of every degree, without exception of places or persons. All hostilities, both by sea and land, shall cease as soon as this treaty shall have been ratified by both parties, as hereinafter mentioned. All territory, places, and possessions whatsoever,

taken by either party from the other during the war, or which may be taken after the signing of this treaty, excepting only the islands hereinafter mentioned, shall be restored without delay, and without causing any destruction or carrying away any of the artillery or other public property originally captured in the said forts or places, and which shall remain therein upon the exchange of the ratifications of this treaty, or any slaves or other private property. And all archives, records, deeds, and papers, either of a public nature or belonging to private persons, which, in the course of the war, may have fallen into the hands of the officers of either party, shall be, as far as may be practicable, forthwith restored and delivered to the proper authorities and persons to whom they respectively belong. Such of the islands in the Bay of Passamaquoddy as are claimed by both parties, shall remain in the possession of the party in whose occupation they may be at the time of the exchange of the ratifications of this treaty, until the decision respecting the title to the said islands shall have been made in conformity with the fourth article of this treaty. No disposition made by this treaty as to such possession of the islands and territories claimed by both parties shall, in any manner whatever, be construed to affect the right of either.

Article II. Immediately after the ratification of this treaty by both parties, as hereinafter mentioned, orders shall be sent to the armies, squadrons, officers, subjects and citizens of the two Powers to cease from all hostilities. And to prevent all causes of complaint which might arise on account of the prizes which may be taken at sea after the said ratifications of this treaty, it is reciprocally agreed that all vessels and effects which may be taken after the space of twelve days from the said ratifications, upon all parts of the coast of North America, from the latitude of twenty-three degrees north to the latitude of fifty degrees north, and as far eastward in the Atlantic Ocean as the thirty-sixth degree of west longitude from the meridian of Greenwich, shall be restored on each side: that the time shall be thirty days in all other parts of the Atlantic Ocean north of the equinoctial line or equator, and the same time for the British and Irish Channels, for the Gulf of Mexico, and all parts of the West Indies; forty days for the North Seas, for the Baltic, and for all parts of the Mediterranean; sixty days for the Atlantic Ocean south of the equator, as far as the latitude of the Cape of Good Hope; ninety days for every other part of the world south of the equator; and one hundred and twenty days for all other parts of the world, without exception.

Article III. All prisoners of war taken on either side, as well by land as by sea, shall be restored as soon as practicable after the ratifications of this treaty, as hereinafter mentioned, on their paying the debts which they may have contracted during their captivity. The two contracting parties respectively engage to discharge, in specie, the advances which may have been made by the other for the sustenance and maintenance of such prisoners.

Article IV. Whereas it was stipulated by the second article in the treaty of peace of one thousand seven hundred and eighty-three, between His Britannic Majesty and the United States of America, that the boundary of the United States should

comprehend all islands within twenty leagues of any part of the shores of the United States, and lying between lines to be drawn due east from the points where the aforesaid boundaries, between Nova Scotia on the one part, and East Florida on the other, shall respectively touch the Bay of Fundy and the Atlantic Ocean, excepting such islands as now are, or heretofore have been, within the limits of Nova Scotia; and whereas the several islands in the Bay of Passamaquoddy, which is part of the Bay of Fundy, and the Island of Grand Menan, in the said Bay of Fundy, are claimed by the United States as being comprehended within their aforesaid boundaries, which said islands are claimed as belonging to His Britannic Majesty, as having been, at the time of and previous to the aforesaid treaty of one thousand seven hundred and eighty-three, within the limits of the Province of Nova Scotia: In order, therefore, finally to decide upon these claims, it is agreed that they shall be referred to two Commissioners to be appointed in the following manner, viz: One Commissioner shall be appointed by His Britannic Majesty, and one by the President of the United States, by and with the advice and consent of the Senate thereof; and the said two Commissioners so appointed shall be sworn impartially to examine and decide upon the said claims according to such evidence as shall be laid before them on the part of His Britannic Majesty and of the United States respectively. The said Commissioners shall meet at St. Andrews, in the Province of New Brunswick, and shall have power to adjourn to such other place or places as they shall think fit. The said Commissioners shall, by a declaration or report under their hands and seals, decide to which of the two contracting parties the several islands aforesaid do respectively belong, in conformity with the true intent of the said treaty of peace of one thousand seven hundred and eighty-three. And if the said Commissioners shall agree in their decision, both parties shall consider such decision as final and conclusive. It is further agreed that, in event of the two Commissioners differing upon all or any of the matters so referred to them, or in the event of both or either of the said Commissioners refusing, or declining, or wilfully omitting to act as such, they shall make, jointly or separately, a report or reports, as well to the Government of His Britannic Majesty as to that of the United States, stating in detail the points on which they differ, and the grounds upon which their respective opinions have been formed, or the grounds upon which they, or either of them, have so refused, declined, or omitted to act. And His Britannic Majesty and the Government of the United States hereby agree to refer the report or reports of the said Commissioners to some friendly sovereign or State, to be then named for that purpose, and who shall be requested to decide on the differences which may be stated in the said report or reports, or upon the report of one Commissioner, together with the grounds upon which the other Commissioner shall have refused, declined or omitted to act, as the case may be. And if the Commissioner so refusing, declining or omitting to act, shall also wilfully omit to state the grounds upon which he has so done, in such manner that the said statement may be referred to such friendly sovereign or State, together with the report of such

other Commissioner, then such sovereign or State shall decide ex parte upon the said report alone. And His Britannic Majesty and the Government of the United States engage to consider the decision of such friendly sovereign or State to be final and conclusive on all the matters so referred.

Article V. Whereas neither that point of the highlands lying due north from the source of the river St. Croix, and designated in the former treaty of peace between the two Powers as the northwest angle of Nova Scotia, nor the northwesternmost head of Connecticut River, has yet been ascertained; and whereas that part of the boundary line between the dominions of the two Powers which extends from the source of the river St. Croix directly north to the above mentioned northwest angle of Nova Scotia, thence along the said highlands which divide those rivers that empty themselves into the river St. Lawrence from those which fall into the Atlantic Ocean to the northwesternmost head of Connecticut River, thence down along the middle of that river to the forty-fifth degree of north latitude; thence by a line due west on said latitude until it strikes the river Iroquois or Cataraquy, has not yet been surveyed: it is agreed that for these several purposes two Commissioners shall be appointed, sworn, and authorized to act exactly in the manner directed with respect to those mentioned in the next preceding article, unless otherwise specified in the present article. The said Commissioners shall meet at St. Andrews, in the Province of New Brunswick, and shall have power to adjourn to such other place or places as they shall think fit. The said Commissioners shall have power to ascertain and determine the points above mentioned, in conformity with the provisions of the said treaty of peace of one thousand seven hundred and eighty-three, and shall cause the boundary aforesaid, from the source of the river St. Croix to the river Iroquois or Cataraquy, to be surveyed and marked according to the said provisions. The said Commissioners shall make a map of the said boundary, and annex to it a declaration under their hands and seals, certifying it to be the true map of the said boundary, and particularizing the latitude and longitude of the northwest angle of Nova Scotia, of the northwesternmost head of Connecticut River, and of such other points of the said boundary as they may deem proper. And both parties agree to consider such map and declaration as finally and conclusively fixing the said boundary. And in the event of the said two Commissioners differing, or both or either of them refusing, declining, or wilfully omitting to act, such reports, declarations, or statements shall be made by them, or either of them, and such reference to a friendly sovereign or State shall be made in all respects as in the latter part of the fourth article is contained, and in as full a manner as if the same was herein repeated.

Article VI. Whereas by the former treaty of peace that portion of the boundary of the United States from the point where the forty-fifth degree of north latitude strikes the river Iroquois or Cataraquy to the Lake Superior, was declared to be "along the middle of said river into Lake Ontario, through the middle of said lake, until it strikes the communication by water between that lake and Lake Erie, thence along the middle of

said communication into Lake Erie, through the middle of said lake until it arrives at the water communication into the Lake Huron, thence through the middle of said lake to the water communication between that lake and Lake Superior;" and whereas doubts have arisen what was the middle of the said river, lakes, and water communications, and whether certain islands lying in the same were within the dominions of His Britannic Majesty or of the United States: In order, therefore, finally to decide these doubts, they shall be referred to two Commissioners, to be appointed, sworn, and authorized to act exactly in the manner directed with respect to those mentioned in the next preceding article, unless otherwise specified in this present article. The said Commissioners shall meet, in the first instance, at Albany, in the State of New York, and shall have power to adjourn to such other place or places as they shall think fit. The said Commissioners shall, by a report or declaration, under their hands and seals, designate the boundary through the said river, lakes and water communications, and decide to which of the two contracting parties the several islands lying within the said rivers, lakes, and water communications, do respectively belong, in conformity with the true intent of the said treaty of one thousand seven hundred and eighty-three. And both parties agree to consider such designation and decision as final and conclusive. And in the event of the said two Commissioners differing, or both or either of them refusing, declining, or wilfully omitting to act, such reports, declarations, or statements shall be made by them, or either of them, and such reference to a friendly sovereign or State shall be made in all respects as in the latter part of the fourth article is contained, and in as full a manner as if the same was herein repeated.

Article VII. It is further agreed that the said two last-mentioned Commissioners, after they shall have executed the duties assigned to them in the preceding article, shall be, and they are hereby, authorized upon their oaths impartially to fix and determine, according to the true intent of the said treaty of peace of one thousand seven hundred and eighty-three, that part of the boundary between the dominions of the two Powers which extends from the water communication between Lake Huron and Lake Superior, to the most northwestern point of the Lake of the Woods, to decide to which of the two parties the several islands lying in the lakes, water communications, and rivers, forming the said boundary, do respectively belong, in conformity with the true intent of the said treaty of peace of one thousand seven hundred and eighty-three; and to cause such parts of the said boundary as require it to be surveyed and marked. The said Commissioners shall, by a report or declaration under their hands and seals, designate the boundary aforesaid, state their decision on the points thus referred to them, and particularize the latitude and longitude of the most northwestern point of the Lake of the Woods, and of such other parts of the said boundary as they may deem proper. And both parties agree to consider such designation and decision as final and conclusive. And in the event of the said two Commissioners differing, or both or either of them refusing, declining, or wilfully omitting to act, such reports, declarations, or statements

shall be made by them, or either of them, and such reference to a friendly sovereign or State shall be made in all respects as in the latter part of the fourth article is contained, and in as full a manner as if the same was herein repeated.

Article VIII. The several boards of two Commissioners mentioned in the four preceding articles shall respectively have power to appoint a Secretary, and to employ such surveyors or other persons as they shall judge necessary. Duplicates of all their respective reports, declarations, statements and decisions and of their accounts, and of the journal of their proceedings, shall be delivered by them to the agents of His Britannic Majesty and to the agents of the United States, who may be respectively appointed and authorized to manage the business on behalf of their respective Governments. The said Commissioners shall be respectively paid in such manner as shall be agreed between the two contracting parties, such agreement being to be settled at the time of the exchange of the ratifications of this treaty. And all other expenses attending the said Commissions shall be defrayed equally by the two parties. And in the case of death, sickness, resignation or necessary absence, the place of every such Commissioner, respectively, shall be supplied in the same manner as such Commissioner was first appointed, and the new Commissioner shall take the same oath or affirmation, and do the same duties. It is further agreed between the two contracting parties, that in case any of the islands mentioned in any of the preceding articles, which were in the possession of one of the parties prior to the commencement of the present war between the two countries, should, by the decision of any of the Boards of Commissioners aforesaid, or of the sovereign or State so referred to, as in the four next preceding articles contained, fall within the dominions of the other party, all grants of land made previous to the commencement of the war, by the party having had such possession, shall be as valid as if such island or islands had, by such decision or decisions, been adjudged to be within the dominions of the party having had such possession.

Article IX. The United States of America engage to put an end, immediately after the ratification of the present treaty, to hostilities with all the tribes or nations of Indians with whom they may be at war at the time of such ratification; and forthwith to restore to such tribes or nations, respectively, all the possessions, rights and privileges which they may have enjoyed or been entitled to in one thousand eight hundred and eleven, previous to such hostilities: Provided always that such tribes or nations shall agree to desist from all hostilities against the United States of America, their citizens and subjects, upon the ratification of the present treaty being notified to such tribes or nations, and shall so desist accordingly. And His Britannic Majesty engages, on his part, to put an end immediately after the ratification of the present treaty, to hostilities with all the tribes or nations of Indians with whom he may be at war at the time of such ratification, and forthwith to restore to such tribes or nations respectively all the possessions, rights and privileges which they may have enjoyed or been entitled to in one thousand eight hundred and eleven, previous to such hostilities: Provided always that such tribes or

nations shall agree to desist from all hostilities against His Britannic Majesty, and his subjects, upon the ratification of the present treaty being notified to such tribes or nations, and shall so desist accordingly.

Article X. Whereas the traffic in slaves is irreconcilable with the principles of humanity and justice, and whereas both His Majesty and the United States are desirous of continuing their efforts to promote its entire abolition, it is hereby agreed that both the contracting parties shall use their best endeavors to accomplish so desirable an object.

Article XI. This treaty, when the same shall have been ratified on both sides, without alteration by either of the contracting parties, and the ratifications mutually exchanged, shall be binding on both parties and the ratifications shall be exchanged at Washington, in the space of four months from this day, or sooner if practicable. In faith whereof we, the respective Plenipotentiaries, have signed this treaty, and have thereto affixed our seals. Done, in triplicate, at Ghent, the twenty-fourth day of December, one thousand eight hundred and fourteen.

A. D. 1814.—The last fighting at Sea.—The exploits of "Old Ironsides."—"During the latter part of the war, as might have been foreseen, there was little opportunity for American frigates to show that they could keep up the fame they had so gloriously won. The British were determined that none of them that ventured out to sea should escape; and by stationing a squadron, which their great resources enabled them to do, before each port where a frigate lay, they succeeded in keeping it cooped up and inactive. . . . The 'Adams,' which had been a 28-gun frigate, but which was now a corvette, managed to slip out from Washington in January, 1814, under the command of Charles Morris. . . . Six months were passed in cruising, part of the time off the Irish coast, but with no great success." Returning home, the "Adams" went ashore at the mouth of the Penobscot, but was got off, much injured, and was taken up the river for repairs. An English expeditionary force pursued the crippled vessel, and her commander was forced to set her on fire. "At this time the 'Constitution' [Old Ironsides, as she was popularly called] was . . . lying at Boston, watched by a squadron of the enemy. She had proved a lucky ship, . . . and her present captain, Charles Stewart, who had been one of Preble's lieutenants at Tripoli, was certainly a man well fitted to make the most of any chance he had. The frigate had been in port since April, at first repairing, and later unable to get out owing to the presence of the enemy's squadron." In December, however, the "Constitution" contrived to give the blockaders the slip and made her way across the Atlantic to the neighborhood of Madeira, where she fought and captured, at one time, two British war vessels—the corvette "Cyana" of 22 guns, and the sloop "Levant," of 20 guns. A few days afterwards, as the "Constitution," with her two prizes, was lying at anchor in Port Praya, Cape de Verde Islands, Capt. Stewart sighted, outside, no less than three ships of the very blockading squadron which he had slipped away from at Boston, and which had pursued him across the ocean. He made his escape from the port, with both his prizes, in time to avoid being hemmed in, and

speedily outsailed his pursuers. The latter, giving up hope of the "Constitution," turned their attention to one of the prizes and succeeded in recovering her. "The only other frigate that left port in the last year of the war was less fortunate than the 'Constitution.' This was the 'President,' now under Commodore Decatur. She was at New York, and for some time had lain at anchor off Staten Island watching for an opportunity to pass the blockading squadron." On a stormy night in January, 1815 (after the treaty of peace had been actually signed at Ghent, but before news of it had reached America), he made the attempt, but was discovered and chased by four of the blockading ships. After a race which lasted from dawn until nearly midnight, and a running fight of two hours, Decatur found escape to be impossible and surrendered his ship.—J. R. Soley, *The Boys of 1812*, ch. 17.

A. D. 1815 (January).—Jackson's victory at New Orleans.—In October of the last year "dispatches from the American envoys abroad announced that 12,000 to 15,000 British troops would leave Ireland early in September for New Orleans and Mobile. Intelligence reached Washington, December 9th, by way of Cuba, that the British Chesapeake force, under Admiral Cochrane, had united at Jamaica with these other troops, and all were ready to sail for the mouths of the Mississippi. 'Hasten your militia to New Orleans,' now urged Monroe upon the Executives of Tennessee, Kentucky, and Georgia; 'do not wait for this government to arm them; put all the arms you can find into their hands; let every man bring his rifle or musket with him; we shall see you paid.' . . . Great results had been expected by Great Britain from the secret expedition fitted out against Louisiana. . . . Fifty British vessels, large and small, bore 7,000 British land troops—comprising the invading force from the Chesapeake and a veteran reinforcement from England—across the Gulf of Mexico from Jamaica to the ship channel near the entrance of Lake Borgne, thus approaching New Orleans midway between the Mississippi River and Mobile Bay. Here the fleet anchored; and, after dispersing a meagre flotilla of American gunboats, which opposed their progress in vain, the invaders took full possession of Lake Borgne, and, by means of lighter transports, landed troops upon a lonely island at the mouth of the Pearl River, which served as the military rendezvous. Crossing thence to the northwestern end of Lake Borgne, a sparsely-settled region, with plantations and sugar-works, half of this invading army, by the 23d [December], struck the Mississippi at a point within nine miles of New Orleans. Not a gun had been fired since the trifling engagement with the American flotilla. The British believed their near approach unknown, and even unsuspected, in the city; they meant to capture it by an assault both brilliant and sudden. . . . But Jackson had received his instructions in good season, and from the 2d of December New Orleans had been, under his vigilant direction, a camp in lively motion." Martial law was proclaimed; "free men of color were enrolled; convicts were released to become soldiers; the civic force was

increased to its utmost. Jackson inspected and strengthened the defences in the vicinity, erecting new batteries. . . . With his newly arrived volunteers from neighboring States, quite expert, many of them, in the use of the rifle and eager for fight, Jackson found himself presently at the head of 5,000 effective men, less than 1,000 of whom were regulars." With a portion of these, supported by one of the two armed vessels on the river, he boldly attacked the enemy, on the evening of the 23d, but accomplished little more than to demonstrate the energy of the defence he was prepared to make. On the 28th the English (having previously destroyed one of the troublesome vessels in the river, the Carolina, with hot shot) returned the attack, but did not break the American lines. Then General Pakenham, the English commander, brought up heavy guns from the fleet, and soon convinced General Jackson that cotton bales, which the latter had piled up before his men, were too light and too combustible for breastworks against artillery; but the lesson proved more useful than otherwise, and the British batteries were answered with fully equal effect by an American cannonade. "Pakenham's last and boldest experiment was to carry Jackson's lines by storm on both sides of the river; and this enterprise, fatal, indeed, to those who conceived it, gives immortal date to the 8th of January,—the day on which the battle of New Orleans was fought. Four days before this momentous battle, over 2,000 Kentucky militia, under General Adair, arrived at New Orleans, ready soldiers, but miserably equipped. Of their number 700 were marched to the front. Pakenham's army, swelled by a body of reinforcements, commanded by General Lambert, another of Wellington's officers, now consisted in all of 10,000 troops, the flower of British veterans. On the day of the battle Jackson had only half as many soldiers on the New Orleans side of the river, and of these the greater part were new recruits under inexperienced officers. On the opposite bank General Morgan, with about 1,500 men, among them detachments of Kentuckians and Louisiana militia, had entrenched himself in expectation of an assault. Jackson had penetrated the enemy's design, which was to make the main attack upon his lines, while a lesser force crossed the Mississippi to drive Morgan up the bank. Jackson's grand defences, extending for a mile and a half from the Mississippi, along his ditch or canal, to an impassable cypress swamp, consisted of earthworks, a redoubt next the river to enfilade the ditch, and eight batteries, all well mounted. The schooner Louisiana and Commander Patterson's marine battery across the river protected this line. Another intrenchment had been thrown up a mile and a half in the rear, as a rallying-point in case of need. There was a third line just below the city. . . . The morning fog rolled away on the 8th of January. Pakenham, under the fire of a battery he had erected during the night, advanced with the main body of British troops to storm Jackson's position." The Americans, behind their breastworks, withheld their fire until the storming columns were 200 yards away, and then poured volley on volley into the approaching mass of men. "This, with the steady fire from the American batteries all along the line, as the foe advanced over a large bare plain, made hideous

gaps in the British ranks, throwing them into utter confusion. It was a fearful slaughter. Dead bodies choked the ditch and strewed the plain. Gallant Highlanders flung themselves forward to scale the ramparts only to fall back lifeless. Soldiers who had served under Wellington in Spain broke, scattered, and ran. Of the four British generals commanding, Pakenham was killed, Gibbs mortally wounded, Keane disabled by a shot in the neck; only Lambert remained. Thornton, across the river, had driven Morgan from his lines meantime, and silenced Patterson's battery; but this enterprise might have cost him dearly, had he not in season received orders from Lambert to return instantly. In this battle the British lost not less than 2,000, all but 500 of whom were killed or wounded; while only 8 were killed and 13 wounded on the American side. Having buried his dead presently under a flag of truce, Lambert, whom this calamity had placed in command, retreated hastily under cover of the night, abandoning the expedition. Re-embarking at Lake Borgue, and rejoining the fleet, he next proceeded to invest Fort Bowyer, at the entrance of Mobile Bay, only to learn, after its little garrison had surrendered, that a treaty of peace [signed December 24, 1814, two weeks before the battle of New Orleans was fought] annulled the conquest. . . . Rude and illiterate as he was, Jackson showed at New Orleans the five prime attributes of military genius: decision, energy, forethought, dispatch, skill in employing resources."—J. Schouler, *Hist. of the U. S. of Am.*, ch. 9, sect. 1 (v. 2).

A. D. 1816.—Eighth Presidential Election.—James Monroe, Democratic Republican, was elected over Rufus King, Federalist, receiving 183 out of 217 votes cast in the electoral college. Daniel D. Tompkins was chosen Vice President. "Opposition to the War of 1812 proved fatal to the Federal party, which ceased to exist as a national party with the close of Mr. Madison's administration. Not only did the odium of opposing the war tend to annihilate that party, but the questions upon which the two parties differed were, in a great measure, settled or disposed of by the war; others, relating to the general interests of the country, such as a tariff, internal improvements, the chartering of a national bank, erecting fortifications, etc., taking their place, and finding advocates and opponents in both the old parties. Candidates for President and Vice-President were then selected by

the respective parties by what was termed a Congressional caucus. Mr. Monroe was placed in nomination for President by a caucus of the Republican members of Congress, Daniel D. Tompkins, of New York, being nominated by the same caucus for Vice-President. Mr. Crawford, of Georgia, was Mr. Monroe's competitor, and fell but few votes behind him in the caucus. Rufus King was the candidate of the Federal party, or what there was left of it, against Mr. Monroe. The latter received 183 electoral votes, the former 34. No President ever encountered less opposition during his four or eight years' service than Mr. Monroe. Parties and the country seemed to be tired of contention, and desirous to enjoy repose. A most able cabinet was selected, consisting of Mr. J. Q. Adams as Secretary of State; William H. Crawford, Secretary of the Treasury; John C. Calhoun, Secretary of War; Smith Thompson, Secretary of the Navy; and William Wirt, Attorney-General."—N. Sargent, *Public Men and Events, 1817-1853*, v. 1, ch. 1.—"Remembering only the almost unopposed election and second election of Mr. Monroe, we are apt to think of him as the natural and easy choice of the people. As a matter of fact he was not a great favorite with Republican politicians. He was first nominated by a narrow majority. . . . Numerous meetings were held in various parts of the country to protest against the caucus system, the most noteworthy of which, perhaps, was held in Baltimore, in which meeting Roger B. Taney, afterward Chief Justice, took a most prominent part. The nomination being made, the presidential election was practically decided. There was no canvass, worthy of the name."—E. Stanwood, *Hist. of Presidential Elections*, ch. 9.

A. D. 1816-1817.—The opening of the question of "Internal Improvements."—"The passage of the bank bill in 1816 was to give the United States a million and a half of dollars. Calhoun, therefore, came forward, Dec. 23, 1816, with a bill proposing that this sum be employed as a fund 'for constructing roads and canals and improving the navigation of water-courses.' 'We are,' said he, 'a rapidly-growing country. . . . This is our pride and danger, our weakness and our strength.' The constitutional question he settled with a phrase: 'If we are restricted in the use of our money to the enumerated powers, on what principle can the purchase of Louisiana be justified?' The bill passed the House by 86 to 84; it was strongly supported by New York members, because it was expected that the general government would begin the construction of a canal from Albany to the Lakes; it had also large support in the South, especially in South Carolina. In the last hours of his administration Madison vetoed it. His message shows that he had selected this occasion to leave to the people a political testament; he was at last alarmed by the progress of his own party, and, like Jefferson, he insisted that internal improvements were desirable, but needed a constitutional amendment. The immediate effect of the veto was that New York, seeing no prospect of federal aid, at once herself began the construction of the Erie Canal, which was opened eight years later."—A. B. Hart, *Formation of the Union (Epochs of Am. Hist.)*, sect. 121.—"Mr. Monroe came out, in his first message to Congress, coinciding, on this point, with Mr. Madison's veto. It is

due to both of them, however, to say that they were the advocates of internal improvement, and recommended an amendment of the constitution with that view. Nevertheless, Mr. Madison, by his veto, had dashed the cup from the lips to the ground, as he went out of office; and Mr. Monroe coming in, at least for four years, probably for eight—it proved to be eight—broke the cup in advance, so that it could not be used during his term of office, without an amendment of the constitution. . . . Three presidents successively, Mr. Jefferson, Mr. Madison, and Mr. Monroe, had officially expressed their opinion adverse to a power vested in Congress by the constitution for projects of internal improvement, as contemplated by the measures proposed. Not satisfied with these decisions, Mr. Clay and his friends were instrumental in having a resolution brought forward, in the fifteenth Congress, declaring that Congress had power, under the constitution, to make appropriations for the construction of military roads, post-roads, and canals. . . . The resolution declaring the power to be vested in Congress by the constitution, to make appropriations for the construction of military roads, post-roads, and canals, was adopted by a vote of 90 to 75; and the principle involved has been practically applied by acts of Congress, from that time to the present."—C. Colton, *Life, Corr., and Speeches of Henry Clay*, v. 1, ch. 19.

A. D. 1818-1821.—The first bitter Conflict concerning Slavery.—The Missouri Compromise, on the admission of Missouri to the Union.—"On March 6, 1818, a petition was presented in the House of Representatives praying that Missouri be admitted as a state. A bill authorizing the people of Missouri to form a state government was taken up in the House on February 13, 1819, and Tallmadge of New York moved, as an amendment, that the further introduction of slavery should be prohibited, and that all children born within the said state should be free at the age of twenty-five years. Thus began the struggle on the slavery question in connection with the admission of Missouri, which lasted, intermittently, until March, 1821. No sooner had the debate on Tallmadge's proposition begun than it became clear that the philosophical anti-slavery sentiment of the revolutionary period [see SLAVERY, NEGRO: A. D. 1776-1808] had entirely ceased to have any influence upon current thought in the South. The abolition of the foreign slave-trade had not, as had been hoped, prepared the way for the abolition of slavery or weakened the slave interest in any sense. On the contrary, slavery had been immensely strengthened by an economic devel-

opment making it more profitable than it ever had been before. The invention of the cotton-gin by Eli Whitney, in 1793 [see above: A. D. 1793], had made the culture of cotton a very productive source of wealth. In 1800 the exportation of cotton from the United States was 19,000,000 pounds, valued at \$5,700,000. In 1820 the value of the cotton export was nearly \$30,000,000, almost all of it the product of slave labor. The value of slaves may be said to have at least trebled in twenty years. The breeding of slaves became a profitable industry. Under such circumstances the slave-holders arrived at the conclusion that slavery was by no means so wicked and hurtful an institution as their revolutionary fathers had thought it to be. . . . On the other hand, in the Northern States there was no such change of feeling. Slavery was still, in the nature of things, believed to be a wrong and a sore. . . . The amendment to the Missouri bill, providing for a restriction with regard to slavery, came therefore in a perfectly natural way from that Northern sentiment which remained still faithful to the traditions of the revolutionary period. And it was a great surprise to most Northern people that so natural a proposition should be so fiercely resisted on the part of the South. It was the sudden revelation of a change of feeling in the South which the North had not observed in its progress. 'The discussion of this Missouri question has betrayed the secret of their souls,' wrote John Quincy Adams. The slave-holders watched with apprehension the steady growth of the Free States in population, wealth, and power. In 1790 the population of the two sections had been nearly even. In 1820 there was a difference of over 600,000 in favor of the North in a total of less than ten millions. In 1790 the representation of the two sections in Congress had been about evenly balanced. In 1820 the census promised to give the North a preponderance of more than 30 votes in the House of Representatives. As the slave-holders had no longer the ultimate extinction, but now the perpetuation, of slavery in view, the question of sectional power became one of first importance to them, and with it the necessity of having more Slave States for the purpose of maintaining the political equilibrium at least in the Senate. A struggle for more Slave States was to them a struggle for life. This was the true significance of the Missouri question. The debate was the prototype of all the slavery debates which followed in the forty years to the breaking out of the civil war. . . . The dissolution of the Union, civil war, and streams of blood were freely threatened by Southern men, while some anti-slavery men declared themselves ready to accept all these calamities rather than the spread of slavery over the territories yet free from it. . . . On February 16, 1819, the House of Representatives adopted the amendment restricting slavery, and thus passed the Missouri bill. But the Senate, eleven days afterwards, struck out the anti-slavery provision and sent the bill back to the House. A bill was then passed organizing the Territory of Arkansas, an amendment moved by Taylor of New York prohibiting the further introduction of slavery there having been voted down. . . . Thus slavery was virtually fastened on Arkansas. But the Missouri bill failed in the fifteenth Congress. The popular excitement steadily increased. The

sixteenth Congress met in December, 1819. In the Senate the admission of Missouri with slavery was coupled with the admission of Maine, on the balance-of-power principle that one free state and one slave state should always be admitted at the same time. An amendment was moved absolutely prohibiting slavery in Missouri, but it was voted down. Then Mr. Thomas, a Senator from Illinois, on January 18, 1820, proposed that no restriction as to slavery be imposed upon Missouri in framing a state constitution, but that in all the rest of the country ceded by France to the United States north of 36° 30', this being the southern boundary line of Missouri, there should be neither slavery nor involuntary servitude. This was the essence of the famous Missouri Compromise, and, after long and acrimonious debates and several more votes in the House for restriction and in the Senate against it, this compromise was adopted. By it the slave power obtained the present tangible object it contended for; free labor won a contingent advantage in the future. . . . Clay has been widely credited with being the 'father' of the Missouri Compromise. As to the main features of the measure this credit he did not deserve. So far he had taken a prominent but not an originating part in the transaction." But, at the next session of Congress, when the Missouri question was unexpectedly reopened, and as threateningly as ever, Clay assumed a more important part in connection with the final settlement of it. "The bill passed at the last session had authorized the people of Missouri to make a state constitution without any restriction as to slavery. The formal admission of the state was now to follow. But the Constitution with which Missouri presented herself to Congress not only recognized slavery as existing there; it provided also that it should be the duty of the legislature to pass such laws as would be necessary to prevent free negroes or mulattoes from coming into or settling in the state." This provoked a new revolt; on the part of the Northern opponents of slavery, and it was only through Clay's exertions as a pacificator that Missouri was conditionally admitted to the Union at length [March 3, 1820], the condition being that "the said state shall never pass any law preventing any description of persons from coming to or settling in the said state who now are, or hereafter may become, citizens of any of the states of this Union." The legislature of Missouri gave its assent, as required, to this "fundamental condition," and the "compromise" became complete. "The public mind turned at once to things of more hopeful interest, and the Union seemed safer than ever. The American people have since become painfully aware that this was a delusion."—C. Schurz, *Life of Henry Clay*, ch. 8 (p. 1).—"The immediate contest was not over the question of the prohibition of slavery in the Territories. The great struggle lasted for nearly three years, but the final proposition which closed the controversy and which prohibited slavery in almost all the then Federal territory was probably not debated more than three hours. It was accepted without discussion by the great bulk of the advocates of Missouri's free admission. Very few slavery extensionists questioned the right and power of Congress to prevent the spread of slavery to the Territories. That question, in the minds of those who opposed restriction in

Missouri, was incidental to the question of the right of Congress to impose conditions upon a State. Incidentally the question of slavery in the Territories came up in the case of Arkansas, a country south of Missouri, in which slavery was already a fact. The restrictionists themselves recognized the fact that the plain, simple issue of limiting the area of human slavery would be strengthened by bringing it before the country unincumbered with the question of imposing conditions on a State, though most of them never wavered in their belief that conditions might be imposed. On the one hand it was only Southern zealots who denied to Congress the power to prohibit slavery in the Territories; on the other hand many in the North who opposed slavery believed that Congress might not impose conditions upon a State. In the cabinet of Monroe, in which sat Wirt, Crawford, and Calhoun, it was unanimously agreed that Congress had power to prohibit slavery in the Territories. But John Quincy Adams, also a member of that cabinet, who hated slavery with all the strength of his soul, thought it was unconstitutional to bind a State by conditions. . . . The struggle indicated a notable change in the southern mind on the slavery question, and that a slave power was forming which would attempt to control all legislation of the federal Union affecting slavery. . . . The struggle and the compromise afford the first clear demarcation between the sections. From this time the equilibrium of political power was a matter of first concern to a section of States and to a powerful political interest. Mason and Dixon's line is extended toward the west, and now marks a political division. The slave States were now, and for the first time, clearly separated from the free. A geographical line dividing the sections was established."

A. D. 1820.—Ninth Presidential Election.—"Monroe like Washington was re-chosen President by a vote practically unanimous. One, however, of the 232 electoral votes cast was wanting to consummate this exceptional honor; for a New Hampshire elector, with a boldness of discretion which, in our days and especially upon a close canvass, would have condemned him to infamy, threw away upon John Quincy Adams the vote which belonged like those of his colleagues to Monroe, determined, so it is said, that no later mortal should stand in Washington's shoes. Of America's Presidents elected by virtual acclamation history furnishes but these two examples; and as between the men honored by so unapproachable a tribute of confidence, Monroe entered upon his second term of office with less of real political opposition than

Washington."—J. Schouler, *Hist. of the U. S.*, ch. 10, sect. 2 (v. 3).—Daniel D. Tompkins was re-elected Vice President.

A. D. 1820.—The Fourth Census.—Total population, 9,638,191 (an increase exceeding 33 per cent. over the enumeration of 1810), classed and distributed as follows:

A. D. 1821.—Beginning of emigration to Texas. See TEXAS: A. D. 1819-1835.

A. D. 1821-1824.—The Era of Good Feeling.—With the closing of the war of 1812-14, and the disappearance of the party of the Federalists, there came a period of remarkable quietude in the political world. "Then followed the second administration of Monroe, to which was given, perhaps by the President himself, a name which has secured for the whole period a kind of peaceful eminence. It was probably fixed and made permanent by two lines in Halleck's once famous poem of 'Alwreck Castle,' evidently written during the poet's residence in England in 1822-23. Speaking of the change from the feudal to the commercial spirit, he says: 'Tis what our President, Monroe, Has called "the era of good feeling."'. . . It would seem from this verse that Monroe himself was credited with the authorship of the phrase; but I have been unable to find it in his published speeches or messages, and it is possible that it may be of newspaper origin, and that Halleck, writing in England, may have fathered it on the President himself."—T. W. Higginson, *Larger Hist. of the U. S.*, p. 394.

A. D. 1823.—The emancipation of the Monroe Doctrine.—One lasting mark of distinction than

given to the administration of President Monroe by the importance which came to be attached to his enunciation of the principle of policy since known as the "Monroe Doctrine." This was simply a formal and official statement of the national demand that foreign nations shall not interfere with the affairs of the two American continents. "There has been a good deal of dispute as to the real authorship of this announcement, Charles Francis Adams claiming it for his father, and Charles Sumner for the English statesman Canning. Mr. Gilman, however, in his late memoir of President Monroe, has shown with exhaustive research that this doctrine had grown up gradually into a national tradition before Monroe's time, and that he merely formulated it, and made it a matter of distinct record. The whole statement is contained in a few detached passages of his message of December 2, 1823. In this he announces that 'the American continents, by the free and independent condition which they have assumed and maintain, are not to be considered as subjects for colonization by European powers.' Further on he points out that the people of the United States have kept aloof from European dissensions, and ask only in return that North and South America should be equally left alone. 'We should consider any attempt on their part to extend their system to any portion of this hemisphere as dangerous to our peace and safety; and while no objection is made to any existing colony or dependency of theirs, yet any further intrusion or interference would be regarded as 'the manifestation of an unfriendly spirit towards the United States.' This in brief, is the 'Monroe doctrine' as originally stated; and it will always remain a singular fact that this President—the least original or commanding of those who early held that office—should yet be the only one whose name is identified with what amounts to a wholly new axiom of international law."—T. W. Higginson, *Larger Hist. of the U. S.*, ch. 16.—"At a cabinet meeting May 13, 1818, President Monroe propounded several questions on the subject of foreign affairs, of which the fifth, as recorded by J. Q. Adams, was this: 'Whether the ministers of the United States in Europe shall be instructed that the United States will not join in any project of interposition between Spain and the South Americans, which should not be to promote the complete independence of those provinces; and whether measures shall be taken to ascertain if this be the policy of the British government, and if so to establish a concert with them for the support of this policy.' He adds that all these points were discussed, without much difference of opinion. On July 31, 1818, Rush had an important interview with Castlereagh in respect to a proposed mediation of Great Britain between Spain and her colonies. The cooperation of the United States was desired. Mr. Rush informed the British minister that 'the United States would decline taking part, if they took part at all, in any plan of pacification, except on the basis of the independence of the colonies.' 'This,' he added, 'was the determination to which his government had come on much deliberation.' . . . Gallatin writes to J. Q. Adams, June 24, 1823, that before leaving Paris he had said to M. Chateaubriand on May 13, 'The United States would undoubtedly preserve their

neutrality provided it were respected, and avoid every interference with the politics of Europe. . . . On the other hand, they would not suffer others to interfere against the emancipation of America.' . . . After Canning had proposed to Rush (September 19, 1823) that the United States should cooperate with England in preventing European interference with the Spanish-American colonies, Monroe consulted Jefferson as well as the cabinet, on the course which it was advisable to take, and with their approbation prepared his message. . . . Enough has been quoted to show that Mr. Sumner is not justified in saying that the 'Monroe doctrine proceeded from Canning,' and that he was 'its inventor, promoter, and champion, at least so far as it bears against European intervention in American affairs.' Nevertheless, Canning is entitled to high praise for the part which he took in the recognition of the Spanish republics, a part which almost justified his proud utterance, 'I called the New World into existence to redress the balance of the Old.'"—D. C. Gilman, *James Monroe*, ch. 7.

A. D. 1824.—The Protective Tariff. See TARIFF LEGISLATION (UNITED STATES); A. D. 1816-1824.

A. D. 1824.—Tenth Presidential Election.—No choice by the People.—Election of John Quincy Adams by the House of Representatives.—"In 1823, as the Presidential election approached, the influences to control and secure the interests predominating in the different sections of the country became more active. Crawford of Georgia, Calhoun of South Carolina, Adams of Massachusetts, and Clay of Kentucky, were the most prominent candidates. In December, Barbour of Virginia was superseded, as Speaker of the House of Representatives, by Clay of Kentucky; an event ominous to the hopes of Crawford, and to that resistance to the tariff and to internal improvements which was regarded as dependent on his success. The question whether a Congressional caucus, by the instrumentality of which Jefferson, Madison, and Monroe had obtained the Presidency, should be again held to nominate a candidate for that office, was the next cause of political excitement. The Southern party, whose hopes rested on the success of Crawford, were clamorous for a caucus. The friends of the other candidates were either lukewarm or hostile to that expedient. Pennsylvania, whose general policy favored a protective tariff and public improvements, hesitated. . . . But the Democracy of that state . . . held meetings at Philadelphia, and elsewhere, recommending a Congressional caucus. This motion would have been probably adopted, had not the Legislature of Alabama, about this time, nominated Andrew Jackson for the Presidency, and accompanied their resolutions in his favor with a recommendation to their representatives to use their best exertions to prevent a Congressional nomination of a President. The popularity of Jackson, and the obvious importance to his success of the policy recommended by Alabama, fixed the wavering counsels of Pennsylvania, so that only three representatives from that state attended the Congressional caucus, which was soon after called, and which consisted of only 60 members, out of

261, the whole number of the House of Representatives; of which Virginia and New York, under the lead of Mr. Van Buren, constituted nearly one half. Notwithstanding this meagre assemblage, Mr. Crawford was nominated for the Presidency. . . . But the days of Congressional caucuses were now numbered. The people took the nomination of President into their own hands [and John Quincy Adams and Henry Clay were brought into the field]. . . . The result of this electioneering conflict was that, by the returns of the electoral colleges of the several states, it appeared that none of the candidates had the requisite constitutional majority; the whole number of votes being 261—of which Andrew Jackson had 99, John Quincy Adams 84, William H. Crawford 41, and Henry Clay 37. [The popular vote cast as nearly as can be determined, was: Jackson, 153,544; Adams, 168,740; Crawford, 40,618; Clay, 47,136.] For the office of Vice-President, John C. Calhoun had 180 votes, and was elected. . . . Of the 84 votes cast for Mr. Adams, not one was given by either of the three great Southern slaveholding states. Seventy-seven were given to him by New England and New York. The other seven were cast by the Middle or recently admitted states. The selection of President from the candidates now devolved on the House of Representatives, under the provisions of the constitution. But, again, Mr. Adams had the support of none of those slaveholding states, with the exception of Kentucky, and her delegates were equally divided between him and General Jackson. The decisive vote was, in effect, in the hands of Mr. Clay, then Speaker of the House, who cast it for Mr. Adams; a responsibility he did not hesitate to assume, notwithstanding the equal division of the Kentucky delegation, and in defiance of a resolution passed by the Legislature of that state, declaring their preference for General Jackson. On the final vote Andrew Jackson had 7 votes, William H. Crawford 4, and John Quincy Adams 13; who was, therefore, forthwith declared President of the United States for four years ensuing the 4th of March, 1825. . . . Immediately after his inauguration, Mr. Adams appointed Henry Clay, of Kentucky, Secretary of State. . . . General Jackson was deeply mortified and irritated by Mr. Clay's preference of Mr. Adams. . . . He immediately put into circulation among his friends and partisans an unqualified statement to the effect that Mr. Adams had obtained the Presidency by means of a corrupt bargain with Henry Clay, on the condition that he should be elevated to the office of Secretary of State. To this calumny Jackson gave his name and authority, asserting that he possessed evidence of its truth; and, although Mr. Clay and his friends publicly denied the charge, and challenged proof of it, two years elapsed before they could compel him to produce his evidence. This, when adduced, proved utterly groundless, and the charge false; the whole being but the creation of an irritated and disappointed mind. Though detected and exposed, the calumny had the effect for which it was calculated. Jackson's numerous partisans and friends made it the source of an uninterrupted stream of abuse upon Mr. Adams, through his whole administration."—J. Quincy, *Memoir of the Life of John Quincy Adams*, ch. 6-7.—The new administration "stood upon the same political basis as that of Mr. Monroe. It

was but a continuance of the same party ascendancy. It looked to no change of measures, and to no other change of men than became inevitably necessary to supply the vacancies which the accidents of political life had created. Mr. Clay was called to the State Department [and was maliciously accused of having bargained for it when he threw his influence at last in Mr. Adams' favor]. . . . The country . . . indulged the hope of a prosperous career in the track which had been opened by M^r Madison, and so successfully pursued by Mr. Monroe. Less confidently, however, it indulged the hope of a continuance of that immunity from party contention and exasperation which had characterized the last eight years. The rising of an opposition was seen, at the very commencement of this administration, like a dark cloud upon the horizon, which gradually spread towards the zenith, not without much rumbling of distant thunder and angry flashes of fire. It was quite obvious to shrewd observers that the late election had disappointed many eager spirits, whose discontent was likely to make head against the predominant party, and, by uniting the scattered fragments of an opposition which had heretofore only slept, whilst the country had supposed it extinct, would present a very formidable antagonist to the new administration. The extraordinary popularity of General Jackson, the defeat of his friends by the vote of the House of Representatives, the neutrality of his political position, his avowed toleration towards political opponents, and what was thought to be his liberal views in regard to prominent political measures—for as yet nothing was developed in his opinions to set him in direct opposition to the policy or principles which governed the administration either of Madison or Monroe—all these considerations gave great strength to the position which he now occupied, and, in the same degree, emboldened the hopes of those who looked to him as the proper person to dispute the next election against the present incumbent. Many of those who had hoped to see the reign of good feeling and of abstinence from party strife prolonged, will remember with what surprise they saw this gathering of hostile elements, and heard it proclaimed by an authoritative political leader [Colonel Richard M. Johnson], in the first days of the new administration, that it should be and ought to be opposed, 'even if it were as pure as the angels at the right hand of the throne of God.' Such a declaration was not less ominous of what was to come than it was startling for its boldness and its novelty in the history of the government. . . . The opposition . . . took an organized form—became compact, eager, intolerant and even vindictive."—J. P. Kennedy, *Memoirs of the Life of William Wirt*, v. 2, ch. 10.—"Monroe was the last President of the Virginian line, John Quincy Adams the last from New England. The centre of power was passing from the east to the west. Adams was a genuine New Englander of the Puritan stock, austere moral, from his boyhood laboriously self-trained, not only staid but solemn in his teens, intensely self-conscious, ever engaged in self-examination, the punctual keeper of a voluminous diary, an invariably early riser, a daily reader of the Bible even in the White House, scrupulously methodical and strictly upright in all his ways; but testy, unconciliatory, unsympathetic, absolutely destitute of all the

arts by which popularity is won. His election does the highest credit to the respect of the electors for public virtue unadorned. The peculiar features of his father's character were so intensified in him that he may be deemed the typical figure rather than his father. In opinions he was a Federalist who having broken with his party on the question of foreign relations and the embargo had been put out of its pale but had retained its general mould. As he was about the last President chosen for merit not for availability, so he was about the last whose only rule was not party but the public service. So strictly did he observe the principle of permanency and purity in the Civil Service, that he refused to dismiss from office a Postmaster-General whom he knew to be intriguing against him. The demagogic era had come but he would not recognize its coming. He absolutely refused to go on the stump, to conciliate the press, to do anything for the purpose of courting popularity and making himself a party. His obstinacy was fatal to his ambition but is not dishonourable to his memory."—Goldwin Smith, *The United States*, ch. 4.

A. D. 1824-1825.—The visit of Lafayette.—One of the most deeply interesting events of the year 1824 was the arrival in the country of the honored Lafayette, companion of Washington and friend of the American Republic in its struggle for independence. He came on the invitation of the national Government and was entertained as its guest. "He arrived at Staten Island on Sunday, 15th of August, 1824, accompanied by his son, George Washington Lafayette, and his son-in-law, M. Le Vasseur. Here he remained until Monday, and was then met and welcomed by a distinguished committee from New York, who escorted him to that city. . . . The arrival of Lafayette was an event which stirred the whole country; everybody was anxious to see him, and every State and city in the Union extended an invitation to him to visit such State or city; and he did so, being everywhere received with the most enthusiastic manifestations of love and respect. . . . He spent a little over a year in the United States, traveling most of the time. . . . Having visited every portion of the United States and received the affectionate homage of the people, General Lafayette returned to Washington, where he became in fact 'the Nation's Guest' at the Presidential mansion. Soon after the meeting of Congress, in December, 1824, a bill was reported by a joint committee of the two Houses granting to him a township of land and the sum of \$200,000, which became a law."—N. Sargent, *Public Men and Events*, 1817-1853, v. 1, pp. 89-91.

A. D. 1824-1836.—Schemes of the Slave Power for acquiring Texas. See TEXAS: A. D. 1824-1836.

A. D. 1825-1828.—Opposition to the Administration.—The question of Internal Improvements.—Reconstruction of Parties.—Democrats and National Republicans.—The inaugural address of President Adams "furnished a topic" against him, and "went to the reconstruction of parties on the old line of strict, or latitudinous, construction of the constitution.

It was the topic of internal national improvement by the federal government. The address extolled the value of such works, considered the constitutional objections as yielding to the force of argument, expressed the hope that every speculative (constitutional) scruple would be solved in a practical blessing; and declared the belief that, in the execution of such works, posterity would derive a fervent gratitude to the founders of our Union and most deeply feel and acknowledge the beneficent action of our government. The declaration of principles which would give so much power to the government . . . alarmed the old republicans, and gave a new ground of opposition to Mr. Adams's administration, in addition to the strong one growing out of the election in the House of Representatives. . . . This new ground of opposition was greatly strengthened at the delivery of the first annual message, in which the topic of internal improvement was again largely enforced, other subjects recommended which would require a liberal use of constructive powers, and Congress informed that the President had accepted an invitation from the American States of Spanish origin, to send ministers to their proposed Congress on the Isthmus of Panama [see COLOMBIAN STATES: A. D. 1826]. It was, therefore, clear from the beginning that the new administration was to have a settled and strong opposition. . . . There was opposition in the Senate to the confirmation of Mr. Clay's nomination to the State department, growing out of his support of Mr. Adams in the election of the House of Representatives, and acceptance of office from him; but overruled by a majority of two to one."—T. H. Benton, *Thirty Years' View*, v. 1, ch. 21.—"From the very beginning of this Administration both factions of the Strict Constructionists united in an opposition to the President which became stronger through his whole term of office, until it overcame him. His ill-advised nomination of Clay to a post in his Cabinet gave color to the charge of a corrupt bargain between him and Clay, by which Adams was to receive the Clay vote in the House, and Clay was to be rewarded by the position of Secretary of State, which was then usually considered a stepping stone to the Presidency. Clay angrily denied any such bargain, and the renewal of charges and denials, each with its appropriate arguments, gave abundant material for debate. The Clay and Adams factions soon united and took the distinctive party name of National Republicans. Some years afterward this name was changed to that of Whigs. They maintained the loose constructionist principles of the Federalists, and, in addition, desired a Protective Tariff and a system of public improvements at national expense. . . . In October, 1825, the Tennessee Legislature nominated Jackson for the Presidency in 1828, and Jackson accepted the nomination. Crawford's continued ill-health compelled his adherents to look elsewhere for a candidate, and they gradually united upon Jackson. At first the resulting coalition was known as 'Jackson Men,' but, as they began to take the character of a national party, they assumed the name of Democrats, by which they have since been known. They maintained the strict constructionist principles of the Republican party, though the Crawford faction in the South went further, and held the extreme

ground of the Kentucky Resolutions of 1790."

A. D. 1828.—The Tariff "Bill of Abominations."—Change of front in New England. See TARIFF LEGISLATION (UNITED STATES: A. D. 1828).

A. D. 1828.—Eleventh Presidential Election.—Triumph of Jackson and the new Democracy.—Andrew Jackson was again put in nomination for the Presidency, while President Adams was supported for re-election by the National Republicans. "The campaign was conducted, on both sides, on very ruthless methods. Niles said it was worse than the campaign of 1798. Campaign extras of the 'Telegraph' were issued weekly, containing partisan material, refutations of charges against Jackson, and slanders on Adams and Clay. The Adams party also published a monthly of a similar character. The country was deluged with pamphlets on both sides. These pamphlets were very poor stuff, and contain nothing important on any of the issues. They all appeal to low tastes and motives, prejudices and jealousies. . . . In September, 1827, the Tammany General Committee and the Albany 'Argus' came out for Jackson, as it had been determined, in the programme, that they should do. A law was passed for casting the vote of New York in 1828 by districts. The days of voting throughout the country ranged from October 31st to November 19th. The votes were cast by the Legislature in Delaware and South Carolina; by districts in Maine, New York, Maryland, Tennessee; elsewhere, by general ticket. Jackson got 178 votes to 83 for Adams. The popular vote was 648,273 for Jackson; 508,064 for Adams. Jackson got only one vote in New England. . . . For Vice-President, Richard Rush got all the Adams votes; Calhoun [who was elected] got all the Jackson votes except 7 of Georgia, which were given to William Smith, of South Carolina. General Jackson was therefore triumphantly elected President of the United States, in the name of reform, and as the standard-bearer of the people, rising in their might to overthrow an extravagant, corrupt, aristocratic, federalist administration, which had encroached on the liberties of the people, and had aimed to corrupt elections by an abuse of federal patronage. Many people believed this picture of Adams's administration to be true. Andrew Jackson no doubt believed it. Many people believe it yet. Perhaps no administration, except that of the elder Adams, is under such odium. There is not, however, in our history any administration which, upon a severe and impartial scrutiny, appears more worthy of respectful and honorable memory. Its chief fault was that it was too good for the wicked world in which it found itself. In 1836 Adams said, in the House, that he had never removed one person from office for political causes, and that he thought that was one of the principal reasons why he was not re-elected."—W. G. Sumner, *Andrew Jackson as a Public Man*, ch. 5.—"In this election there was a circumstance to be known and remembered. Mr. Adams and Mr. Rush were both from the non-slaveholding; General Jackson and Mr. Calhoun from the slaveholding States, and both

large slave owners themselves, and both received a large vote (73 each) in the free States—and of which at least 40 were indispensable to their election. There was no jealousy, or hostile or aggressive spirit in the North at that time against the South!"—T. H. Benton, *Thirty Years' View*, v. 1, ch. 38.

A. D. 1828-1833.—The Nullification doctrine and ordinance of South Carolina.—The Hayne and Webster debate.—President Jackson's proclamation.—The Compromise Tariff.—"In May, 1828, a meeting of the South Carolina delegation in Congress was held in Washington, at the rooms of General Hayne, one of the Senators of that State, to concert measures against the tariff and the protective policy which it embodied. From the history of the times, and the disclosures subsequently made, it is apparent that some violent things were said at this meeting, but it broke up without any definite plan. In the course of the following summer, there were many popular meetings in South Carolina, largely attended, at which the tariff of 1824 was treated as an act of despotism and usurpation, which ought to be openly resisted. . . . They occasioned anxiety and regret among the friends of the Union throughout the country, though nothing more. But, in the autumn, the Legislature of South Carolina adopted an 'Exposition and Protest,' which gave form and substance to the doctrines which thenceforward became known as 'Nullification.' In order to understand them, however, as a theory of the Federal Constitution, it is necessary to state the theory to which they are opposed, and to overthrow which they were brought forward. The Government of the United States, under the Constitution, had hitherto been administered upon the principle that the extent of its powers is to be finally determined by its supreme judicial tribunal, not only when there is any conflict of authority between its several departments, but also when the authority of the whole Government is denied by one or more of the States. . . . Aside from the authority of [the Virginia and Kentucky resolutions of 1798]—an authority that was doubtful, because their interpretation was not clear—there had been no important assertion of the principle that a State can determine for its citizens whether they are to obey an act of Congress, by asserting its unconstitutional character, and that the right to do this is implied as a right inherent in a State, under the Constitution, and results from the nature of the Government. This, however, was what the advocates of nullification now undertook to establish. The remedy which they sought, against acts which they regarded as usurpations, was not revolution, and not the breaking up the Union, as they claimed; but it was a remedy which they held to exist within the Union, and to have been contemplated by the people of the States when they established the Constitution. How far they considered such a theory compatible with the continued existence of the Union, I am not aware that they undertook to explain. . . . Although the Legislature of South Carolina had thus pronounced a theory of resistance, and held that there was then a case in the tariff which would justify a resort to it, no steps were yet taken toward the immediate exercise of the asserted power." In the great debate between General Hayne of South Carolina and Daniel Webster,

which occurred in the Senate, in January, 1830, the doctrine of nullification received for the first time a discussion which sank deep into the mind of the nation. The original subject-matter of the debate was a resolution relating to Western land-sales; but Hayne in his first speech made an attack on New England which drew out Webster in vindication, and then, when the South Carolinian replied, he boldly and broadly set forth the nullifying theory which his State had accepted from the sophistical brain of John C. Calhoun. It received its refutation then and there, in Webster's dual speech. "The effect of this speech upon the country, that immediately followed its delivery, it is not easy for us at the present day to measure. . . . Vast numbers of Mr. Webster's speech were . . . published and circulated in pamphlet editions, after all the principal newspapers of the country had given it entire to their readers. The popular verdict, throughout the Northern and Western and many of the Southern States was decisive. A great majority of the people of the United States, of all parties, understood, appreciated, and accepted the view maintained by Mr. Webster of the nature of the Constitution, and the character of the government which it establishes."—G. T. Curtis, *Life of Daniel Webster*, ch. 16 (v. 1).—If Webster's speech had solidified the majority opinion of the country in resistance to nullification, it had not paralyzed the nullifying movement. In the summer of 1831, and again in August, 1832, Calhoun published addresses to the people of South Carolina, elaborating his doctrine, and "urging an immediate issue on account of the oppressive tariff legislation under which the South was then suffering. The Legislature of South Carolina was convened by the governor to meet on October 23, for the purpose of calling a convention 'to consider the character and extent of the usurpations of the general government.' The convention met on November 19, and adopted without delay an 'ordinance' declaring that the tariff act of 1828, and the amendments thereto passed in 1832, were null and void; that it should be held unlawful to enforce the payment of duties thereunder within the State of South Carolina; that it should be the duty of the legislature to make laws giving effect to the ordinance; . . . and that, if the general government should attempt to use force to maintain the authority of the federal law, the State of South Carolina would secede from the Union,—the ordinance to go into full effect on February 1, 1833. The legislature, which met again on November 19, passed the 'appropriate' laws. But these enactments were not very fierce; as Webster said, they 'limped far behind the ordinance.' Some preparation, although little, was made for a conflict of arms;" nor was there any certain show of readiness in other Southern States to stand by South Carolina in the position she had taken. "President Jackson's annual message, which went to Congress on December 4, 1832, was remarkably quiet in tone," and neither alarmed the nullifiers nor gave confidence to the friends of the Union; but "six days later, on December 10, came out Jackson's famous proclamation against the nullifiers, which spoke thus: 'The Constitution of the United States forms a government, not a league. . . . Our Constitution does not contain the absurdity of giving power to make laws, and another power

to resist them. To say that any state may at pleasure secede from the Union is to say that the United States are not a nation.' He appealed to the people of South Carolina, in the tone of a father, to desist from their ruinous enterprise; but he gave them also clearly to understand that, if they resisted by force, the whole power of the Union would be exerted to maintain its authority. All over the North, even where Jackson had been least popular, the proclamation was hailed with unbounded enthusiasm. . . . The nullifiers in South Carolina received the presidential manifesto apparently with defiance. The governor of the state issued a counter-proclamation. Calhoun resigned the vice-presidency, and was immediately sent to the Senate to fight the battle for nullification there." The president, now thoroughly roused, called on Congress for extraordinary powers to meet the emergency, and a bill embodying his wishes—called the "Force Bill"—was introduced. But, at the same time, while they showed this bold front to the nullifiers, Congress and the executive began to prepare a retreat from the ground they had held on the tariff. Henry Clay took the field again, in the exercise of his peculiar talents for compromise, and the result was the nearly simultaneous passage (February 26 and 27, 1833) through Congress of the "Force bill" and of a compromise tariff bill, which latter provided for a graduated reduction of the duties year by year, until 1842, when they should stand at 20 per cent., as a horizontal rate, with a large free-list. "The first object of the measure was attained: South Carolina repealed her nullification ordinance. . . . But before long it became clear that, beyond the repeal of the nullification ordinance, the compromise had settled nothing. The nullifiers strenuously denied that they had in any sense given up their peculiar doctrine."—C. Schurz, *Life of Henry Clay*, ch. 14 (v. 2).—"The theory of nullification, as set forth by Calhoun, even now, after it has received the benefit of careful study and able expounding by historians, is not clear. He always avowed a loyalty to the Union, but the arguments by which he sought to demonstrate that nullification was compatible with the existence of the Union, and indeed a guarantee of its perpetuity, did not occasion much solicitude to the majority of his party. But no one at the North understood the fallacy of his reasoning or the real end and aim of his party more clearly than did the Union men of his state. They reasoned simply. Said the Camden, S. C. 'Gazette': 'We know of only two ways, under our government, to get rid of obnoxious legislation. We must convince a majority of the nation that a given enactment is wrong and have it repealed in the form prescribed by the constitution, or resist it extra-constitutionally by the sword. . . . But this everlasting cant of devotion to the Union, accompanied by a recommendation to do those acts that must necessarily destroy it, is beyond patient endurance from a people not absolutely confined in their own mad-houses.' . . . A fact . . . that historians have failed to lay any stress upon, and that nevertheless deserves some notice, is the holding of a state convention of the Union party of South Carolina immediately after the nullification convention had completed its work. It was the last important action of that party in the state. Randell Hunt, who

presented the first resolutions, epitomized the views of the convention and the question it should consider in three sentences: "That the Union party acknowledges no allegiance to any government except that of the United States. That in referring this resolution to the general committee they be instructed to inquire whether it is not expedient to give a military organization to the Union party throughout the state. Whether it will not be necessary to call in the assistance of the general government for maintaining the laws of the United States against the arbitrary violence which is threatened by the late convention." The resolutions which were adopted declared that the ordinance of nullification violated the constitution of the United States and had virtually destroyed the Union, since by preventing the general government from enforcing its laws within the boundaries of the state, it made the state a sovereignty paramount to the United States. They denounced the provisions of the ordinance as tyrannical and oppressive, and the test oath as especially incompatible with civil liberty, in that it disfranchised nearly half the citizens of the state. They pointed scornfully to the project of a standing army in the state. . . . They concluded by declaring the continued opposition of the signers to the tariff, and their determination to protect themselves against intolerable oppression. The resolutions were signed by all the members of the convention, about 180 in number. In point of fact, the Unionists were not disposed to favor any compromise measures, and looked rather with disfavor upon Mr. Clay's bill, as a measure which was being forced upon the country. Congress, they thought, ought not to modify the tariff until the nullification ordinance had been repealed. But the greater force was with the nullifiers, and the number of their opponents was dwindling. Caught by the enthusiasm and fighting spirit of their neighbors, some of the Unionists joined the nullification military companies that were being organized, and others, seeing the hopelessness of the struggle against a superior force, in sorrow and disgust shook the dust of South Carolina from their feet, preferring to begin life over again in other parts of the South, less charged with sentiments that they believed to be treasonable. . . . The Unionist party, crushed and helpless, was only too anxious to bury all feuds. It never was an active force in the state again, but the bold spirit which had actuated its members was manifested later, when the struggle for state sovereignty was more widespread; and some of the most intrepid Union men of the South in the civil war were those who had fled from South Carolina years before, when the nullification party had triumphed."—G. Hunt, *South Carolina during the Nullification Struggle* (Pol. Sci. Quarterly, June, 1891).

The following is the text of the "Ordinance to nullify certain acts of the Congress of the United States, purporting to be laws laying duties and imposts on the importation of foreign

commodities," adopted by the State Convention of South Carolina on the 24th of November, 1832:

"Whereas the Congress of the United States by various acts, purporting to be acts laying duties and imposts on foreign imports, but in reality intended for the protection of domestic manufactures, and the giving of bounties to classes and individuals engaged in particular employments, at the expense and to the injury and oppression of other classes and individuals, and by wholly exempting from taxation certain foreign commodities, such as are not produced or manufactured in the United States, to afford a pretext for imposing higher and excessive duties on articles similar to those intended to be protected, hath exceeded its just powers under the constitution, which confers on it no authority to afford such protection, and hath violated the true meaning and intent of the constitution, which provides for equality in imposing the burdens of taxation upon the several States and portions of the confederacy: And whereas the said Congress, exceeding its just power to impose taxes and collect revenue for the purpose of effecting and accomplishing the specific objects and purposes which the constitution of the United States authorizes it to effect and accomplish, hath raised and collected unnecessary revenue for objects unauthorized by the constitution. We, therefore, the people of the State of South Carolina, in convention assembled, do declare and ordain, and it is hereby declared and ordained, that the several acts and parts of acts of the Congress of the United States, purporting to be laws for the imposing of duties and imposts on the importation of foreign commodities, and now having actual operation and effect within the United States, and, more especially, an act entitled 'An act in alteration of the several acts imposing duties on imports,' approved on the nineteenth day of May, one thousand eight hundred and twenty-eight, and also an act entitled 'An act to alter and amend the several acts imposing duties on imports,' approved on the fourteenth day of July, one thousand eight hundred and thirty-two, are unauthorized by the constitution of the United States, and violate the true meaning and intent thereof and are null, void, and no law, nor binding upon this State, its officers or citizens; and all promises, contracts, and obligations, made or entered into, or to be made or entered into, with purpose to secure the duties imposed by said acts, and all judicial proceedings which shall be hereafter had in affirmance thereof, are and shall be held utterly null and void. And it is further ordained, that it shall not be lawful for any of the constituted authorities, whether of this State or of the United States, to enforce the payment of duties imposed by the said acts within the limits of this State; but it shall be the duty of the legislature to adopt such measures and pass such acts as may be necessary to give full effect to this ordinance, and to prevent the enforcement and arrest the operation of the said acts and parts of acts of the Congress of the United States within the limits of this State, from and after the 1st day of February next, and the duty of all other constituted authorities, and of all persons residing or being within the limits of this State, and they are hereby required and enjoined to obey and give effect to this ordinance,

and such acts and measures of the legislature as may be passed or adopted in obedience thereto. And it is further ordained, that in no case of law or equity, decided in the courts of this State, wherein shall be drawn in question the authority of this ordinance, or the validity of such act or acts of the legislature as may be passed for the purpose of giving effect thereto, or the validity of the aforesaid acts of Congress, imposing duties, shall any appeal be taken or allowed to the Supreme Court of the United States, nor shall any copy of the record be permitted or allowed for that purpose; and if any such appeal shall be attempted to be taken, the courts of this State shall proceed to execute and enforce their judgments according to the laws and usages of the State, without reference to such attempted appeal, and the person or persons attempting to take such appeal may be dealt with as for a contempt of the court. And it is further ordained, that all persons now holding any office of honor, profit, or trust, civil or military, under this State (members of the legislature excepted), shall, within such time, and in such manner as the legislature shall prescribe, take an oath well and truly to obey, execute, and enforce this ordinance, and such act or acts of the legislature as may be passed in pursuance thereof, according to the true intent and meaning of the same; and on the neglect or omission of any such person or persons so to do, his or their office or offices shall be forthwith vacated, and shall be filled up as if such person or persons were dead or had resigned; and no person hereafter elected to any office of honor, profit, or trust, civil or military (members of the legislature excepted), shall, until the legislature shall otherwise provide and direct, enter on the execution of his office, or be in any respect competent to discharge the duties thereof until he shall, in like manner, have taken a similar oath; and no juror shall be empanelled in any of the courts of this State, in any cause in which shall be in question this ordinance, or any act of the legislature passed in pursuance thereof, unless he shall first, in addition to the usual oath, have taken an oath that he will well and truly obey, execute, and enforce this ordinance, and such act or acts of the legislature as may be passed to carry the same into operation and effect, according to the true intent and meaning thereof. And we, the people of South Carolina, to the end that it may be fully understood by the government of the United States, and the people of the co-States, that we are determined to maintain this our ordinance and declaration, at every hazard, do further declare that we will not submit to the application of force on the part of the federal government, to reduce this State to obedience; but that we will consider the passage, by Congress, of any act authorizing the employment of a military or naval force against the State of South Carolina, her constitutional authorities or citizens; or any act abolishing or closing the ports of this State, or any of them, or otherwise obstructing the free ingress and egress of vessels to and from the said ports, or any other act on the part of the federal government, to coerce the State, shut up her ports, destroy or harass her commerce, or to enforce the acts hereby declared to be null and void, otherwise than through the civil tribunals of the country, as inconsistent with the longer continuance of South Carolina in the Union; and that

the people of this State will henceforth hold themselves absolved from all further obligation to maintain or preserve their political connection with the people of the other States; and will forthwith proceed to organize a separate government, and do all other acts and things which sovereign and independent States may of right do. Done in convention at Columbia, the twenty-fourth day of November, in the year of our Lord one thousand eight hundred and thirty-two, and in the fifty-seventh year of the declaration of the independence of the United States of America."

A. D. 1829.—Introduction of the "Spoils System." See CIVIL-SERVICE REFORM IN THE UNITED STATES.

A. D. 1829.—The Kitchen Cabinet of President Jackson.—Major Lewis, one of the Tennessee friends of General Jackson, who accompanied him to Washington and was persuaded to remain, with his residence at the White House; General Duff Green, editor of the "United States Telegraph"; Isaac Hill, editor of the "New Hampshire Patriot," and Amos Kendall, late the editor of a Jackson paper in Kentucky, but a native of Massachusetts;—"these were the gentlemen . . . who, at the beginning of the new administration, were supposed to have most of the President's ear and confidence, and were stigmatized by the opposition as the Kitchen Cabinet."—J. Parton, *Life of Andrew Jackson*, v. 3, ch. 16.—After the breach between Jackson and Calhoun, Duff Green adhered to the latter. The "Globe" newspaper was then founded, to be the organ of the administration, and Francis P. Blair, called from Kentucky to undertake the editorship, acquired at the same time Duff Green's vacated seat in the Kitchen Cabinet.—J. Schouler, *Hist. of the U. S.*, v. 3, p. 501.—"The establishment of the 'Globe,' the rupture with Calhoun, and the breaking up of the first cabinet had inaugurated a bitter war between the two rival papers, though really between the President and Mr. Calhoun, in consequence of which there were rich revelations made to the public."—N. Sargent, *Public Men and Events, 1817-1853*, v. 1, p. 186.

A. D. 1829-1832.—Rise of the Abolitionists.—"Between the years 1829 and 1832 took place a remarkable series of debates in Virginia on the subject of slavery, brought about by dissatisfaction with the State constitution and by the Nat Turner massacre, in which a number of slaves had risen against their masters. In these debates the evils of slavery were exposed as clearly as they were afterwards by the Abolitionists, and with an outspoken freedom which, when indulged in by Northern men, was soon to be denounced as treasonable and incendiary. These Southern speakers were silenced by the Slave Power. But there were men in the North who thought the same and who would not be silenced. Chief among these was William Lloyd Garrison. He had begun his memorable career by circulating petitions in Vermont in 1828 in favor of emancipation in the District of Columbia. Having joined Luady in Baltimore in editing the 'Genius of Universal Emancipation,' he had suffered ignominy in the cause, in a Southern jail; drawing from persecution and hardship only new inspiration, he began the publication of the 'Liberator' at Boston in January, 1831. In the following year, under his leadership, was formed

the New England Anti-Slavery Society, which placed itself on the new ground that immediate, unconditional emancipation, without expatriation, was the right of every slave and could not be withheld by his master an hour without sin. In March, 1833, the 'Weekly Emancipator' was established in New York, with the assistance of Arthur and Lewis Tappan, and under the editorship of William Goodell. In the same year appeared at Haverhill, Mass., a vigorous pamphlet by John G. Whittier, entitled 'Justice and Expediency, or Slavery considered with a View to its Rightful and Effectual Remedy, Abolition.' Nearly simultaneously were published Mrs. Lydia Maria Child's 'Appeal in Behalf of that Class of Americans called Africans,' and a pamphlet by Elizur Wright, Jr., a professor in the Western Reserve College, on 'The Sin of Slavery and its Remedy.' These publications and the doctrines of the 'Liberator' produced great excitement throughout the country."—B. Tuckerman, *William Lloyd Garrison and the Constitutional Movement for the Abolition of Slavery*, ch. 3.—The "Liberator" "was a weekly journal, bearing the names of William Lloyd Garrison and Isaac Knapp as publishers. Its motto was, 'Our Country is the World, Our Countrymen are Mankind,' a direct challenge to those whose motto was the Jungo cry of those days, 'Our Country, right or wrong!' It was a modest folio, with a page of four columns, measuring fourteen inches by nine and a quarter. . . . The paper had not a dollar of capital. It was printed at first with borrowed type. Garrison and Knapp did all the work of every kind between them, Garrison of course doing the editorials. That he wrote them can hardly be said; his habit was often to set up without manuscript. . . . The publishers announced in their first issue their determination to go on as long as they had bread and water to live on. In fact, they lived on bread and milk, with a little fruit and a few cakes, which they bought in small shops below. Garrison apologizes for the meagreness of the editorials, which, he says, he has but six hours, and those at midnight, to compose, all the rest of his time and the whole of that of his companion being taken up by the mechanical work. . . . It was against nothing less than the world, or at least the world in which he lived, that this youth of twenty-six, with his humble partner, took up arms. Slavery was at the height of its power. . . . The salutatory of the 'Liberator' avowed that its editor meant to speak out without restraint. 'I will be as harsh as truth and as uncompromising as justice. On this subject I do not wish to think or speak or write with moderation. No! No! Tell a man whose house is on fire to give a moderate alarm; tell him to moderately rescue his wife from the hands of the ravisher; tell the mother to gradually extricate her babe from the fire into which it has fallen—but urge me not to use moderation in a cause like the present. I am in earnest—I will not equivocate—I will not excuse—I will not retreat a single inch—and I will be heard.' This promise was amply kept. . . . In private and in his family he was all gentleness and affection. Let it be said, too, that he set a noble example to controversial editors in his fair treatment of his opponents. Not only did he always give insertion to their replies, but he copied their criticisms from other journals into his own.

Fighting for freedom of discussion, he was ever loyal to his own principle. What is certain is that the 'Liberator,' in spite of the smallness of its circulation, which was hardly enough to keep it alive, soon told. The South was moved to its centre. The editorials probably would not have caused much alarm, as the slaves could not read. What was likely to cause more alarm was the frontispiece, which spoke plainly enough to the slave's eye. It represented an auction at which 'slaves, horses and other cattle' were being offered for sale, and a whipping-post at which a slave was being flogged. In the background was the Capitol at Washington, with a flag inscribed 'Liberty' floating over the dome. . . . On seeing the 'Liberator,' the realm of slavery bestirred itself. A Vigilance Association took the matter in hand. First came fiery and bloodthirsty editorials; then anonymous threats; then attempts by legal enactment to prevent the circulation of the 'Liberator' at the South. The Grand Jury of North Carolina found a true bill against Garrison for the circulation of a paper of seditious tendency, the penalty for which was whipping and imprisonment for the first offence, and death without benefit of clergy for the second. The General Assembly of Georgia offered a reward of five thousand dollars to any one who, under the laws of that State, should arrest the editor of the 'Liberator,' bring him to trial, and prosecute him to conviction. The South reproached Boston with allowing a battery to be planted on her soil against the ramparts of Southern institutions. Boston felt the reproach, and showed that she would gladly have suppressed the incendiary print and perhaps have delivered up its editor; but the law was against her, and the mass of the people, though wavering in their allegiance to morality on the question of slavery, were still loyal to freedom of opinion. . . . It was just at this time that the South and its clientage at the North were thrown into a paroxysm of excitement by the Bloody Monday, as Nat Turner's rising at Southampton was called. The rising was easily suppressed, and Virginia saw, as Jamaica has since seen, how cruel is the panic of a dominant race. Not the slightest connection of the outbreak with Northern abolitionism was traced. That Garrison or any one connected with him ever incited the slaves to revolt, or said a word intentionally which could lead to servile war, seems to be utterly untrue. His preaching to the slaves, on the contrary, was always patience, submission, abstinence from violence, while in his own moral code he carried non-resistance to an extreme. Moreover, his championship held out hope, and what goes to insurrection is despair."—Goldwin Smith, *William Lloyd Garrison*, pp. 60-65.—"Mr. Emerson once said, 'Eloquence is dog-cheap in anti-slavery meetings.' . . . On the platform you would always see Garrison; with him was . . . Sam May. Stephen S. Foster was always there. . . . Parker Pillsbury, James Buffum, Arnold Buffum, Elizur Wright, Henry C. Wright, Abigail Kelley, Lucy Stone, Theo. D. Weld, the sisters Grinké, from South Carolina; John T. Sargeant, Mrs. Chapman, Mrs. Lydia M. Child, Fred Douglas, Wm. W. Brown and Francis Jackson. The last was a stern Puritan, conscientious, upright, clear-minded, universally respected. Edmund Quincy also was there, and he never spoke without saying something that

had a touch of wit as well as of logic. Oliver Johnson . . . was one of the very first members of the Society. Theodore Parker, Samuel J. May, John Pierpont, Chas. L. Stearns, Chas. L. Redwood, Geo. Thompson (another wonderfully eloquent man), and, above all, Wendell Phillips." —J. F. Clarke, *Anti-Slavery Days*, ch. 3.—See, also, SLAVERY, NEGRO: A. D. 1828-1832.

A. D. 1830.—The Fifth Census.—Total population, 12,860,030 (being about 33½ per cent. more than in 1820), classed and distributed as follows:

In the decade between 1820 and 1830 the immigrant arrivals in the United States, as officially recorded, numbered 143,439, of which 75,803 were from the British Islands. Prior to 1821, there is no official record of immigration.

A. D. 1832.—The prospective surplus and necessary tariff reduction.—Clay's delusive measure. See TARIFF LEGISLATION (UNITED STATES): A. D. 1832.

A. D. 1832.—Twelfth Presidential Election.—Re-election of General Jackson.—General Jackson, renominated by his party almost without question, was re-elected over three competitors, the popular vote being as follows: Andrew Jackson, Democrat, 687,502; Henry Clay, National Republican, 530,189; William Wirt, Anti-Masonic, 33,108; John Floyd (voted for only in South Carolina, where electors were chosen by the legislature). The vote in the elec-

toral college stood: Jackson 219, Clay 49, Floyd 11, Wirt 7. Martin Van Buren was elected Vice President.—"This election is notable for several reasons. It marks the beginning of the system of national nominating conventions; it gave Jackson a second term of office, in which he was to display his peculiar qualities more conspicuously than ever; it compacted and gave distinct character to the new Democratic party; and it practically settled directly the fate of the Bank of the United States, and indirectly the question of nullification. Jackson was easily re-elected, for he had established a great popularity, and the opposition was divided. A new party came into the field, and marked its advent by originating the national nominating convention. This was the Anti-Masonic party" (see NEW YORK: A. D. 1826-1832). Both the Democratic and the National Republican parties adopted the invention of the Anti-Masons, and made their nominations for the first time by the agency of great national conventions.—W. Wilson, *Division and Reunion*, 1829-1889, p. 62.

A. D. 1833-1836.—President Jackson's overthrow of the United States Bank.—The removal of the Deposits.—"The torrents of paper-money issued during the revolutionary war, which sunk in value to nothing, converted the old prejudice against paper promises-to-pay into an aversion that had the force of an instinct. To this instinctive aversion, as much as to the constitutional objections urged by Mr. Jefferson and his disciples, was owing the difficulty experienced by Alexander Hamilton in getting his first United States bank chartered. Hence, also, the refusal of Congress to recharter that bank in 1811. Hence the unwillingness of Mr. Madison to sanction the charter of the second bank of the United States in 1816. But the bank was chartered in 1816, and went into existence with the approval of all the great republican leaders, opposed only by the extreme Jeffersonians and by the few federalists who were in public life. . . . But, long before General Jackson came into power, the bank appeared to have lived down all opposition. In the presidential campaign of 1824 it was not so much as mentioned, nor was it mentioned in that of 1828. . . . At the beginning of the administration of General Jackson, the Bank of the United States was a truly imposing institution. Its capital was thirty-five millions. The public money deposited in its vaults averaged six or seven millions; its private deposits, six millions more; its circulation, twelve millions; its discounts, more than forty millions a year; its annual profits, more than three millions. Besides the parent bank at Philadelphia, with its marble palace and hundred clerks, there were 25 branches in the towns and cities of the Union. . . . Its bank-notes were as good as gold in every part of the country. . . . The bank and its branches received and disbursed the entire revenue of the nation. . . . There is a tradition in Washington to this day, that General Jackson came up from Tennessee to Washington, in 1829, resolved on the destruction of the Bank of the United States, and that he was only dissuaded from aiming a paragraph at it in his inaugural address by the prudence of Mr. Van Buren. . . . General Jackson had no thought of the bank until he had been President two months. He came to Washington expecting to serve but a single term, during

which the question of re-chartering the bank was not expected to come up. The bank was chartered in 1816 for twenty years, which would not expire until 1836." But, in 1829, the influence of Isaac Hill, one of the so-called "Kitchen Cabinet" at Washington, involved the intransigent President in an endeavor to bring about the removal of Jeremiah Mason, a political opponent, who had been appointed to the presidency of the branch of the United States Bank at Portsmouth, New Hampshire. "The correspondence began in June and ended in October. I believe myself warranted in the positive assertion, that this correspondence relating to the desired removal of Jeremiah Mason was the direct and real cause of the destruction of the bank."—J. Parton, *Life of Andrew Jackson*, v. 3, ch. 20.—"As soon as the issue between him and the Bank of the United States was declared, Jackson resolved that the bank must be utterly destroyed. The method was suggested by Kendall and Blair, of the Kitchen Cabinet. It was to cripple the available means of the bank by withdrawing from it and its branches the deposits of public funds. In the message of December, 1832, Jackson had expressed his doubt as to the safety of the government deposits in the bank, and recommended an investigation. The House, after inquiry, resolved on March 2, by 109 to 46 votes, that the deposits were safe. The bank was at that period undoubtedly solvent, and there seemed to be no reason to fear for the safety of the public money in its custody. But Jackson had made up his mind that the bank was financially rotten; that it had been employing its means to defeat his reelection; that it was using the public funds in buying up members of Congress for the purposes of securing a renewal of its charter, and of breaking down the administrative system; and that thus it had become a dangerous agency of corruption and a public enemy. Therefore the public funds must be withdrawn, without regard to consequences. But the law provided that the public funds should be deposited in the Bank of the United States or its branches, unless the Secretary of the Treasury should otherwise 'order and direct,' and in that case the Secretary should report his reasons for such direction to Congress. A willing Secretary of the Treasury was therefore needed. In May, 1833, Jackson reconstructed his Cabinet for the second time. . . . For the Treasury Department Jackson selected William J. Duane of Philadelphia, who was known as an opponent of the bank. Jackson, no doubt, expected him to be ready for any measure necessary to destroy it. In this he was mistaken. Duane earnestly disapproved of the removal of the deposits as unnecessary, and highly dangerous to the business interests of the country. . . . A majority of the members of the Cabinet thought the removal of the deposits unwise. . . . In the business community there seemed to be but one voice about it. The mere rumor that the removal of the deposits was in contemplation greatly disturbed the money market. But all this failed to stagger Jackson's resolution. . . . The Cabinet, with the exception of the Secretary of the Treasury, bowed to Jackson's will. But Duane would not shelter himself behind the President's assumed responsibility to do an act which, under the law, was to be his act. He also refused to resign. If he had to obey or go, he insisted upon being removed.

Jackson then formally dismissed him, and transferred Roger B. Taney from the attorney generalship to the treasury. Benjamin F. Butler of New York, a friend of Van Buren, was made Attorney General. Taney forthwith ordered the removal of the deposits from the Bank of the United States; that is to say, the public funds then in the bank were to be drawn out as the government required them, and no new deposits to be made in that institution. The new deposits were to be distributed among a certain number of selected state banks, which became known as the 'pet banks.' . . . The money market became stringent. Many failures occurred. The general feeling in business circles approached a panic." But the very disturbance was charged upon the Bank itself; the people rallied to the support of their favorite, "Old Hickory," and when the national charter of the Bank expired, in March, 1836, there was no hope of its renewal. It obtained a charter from the State of Pennsylvania, and continued business as a State institution until it went to pieces in the general commercial shipwreck of 1837-41.—C. Schurz, *Life of Henry Clay*, ch. 15 (v. 2).

A. D. 1834.—Organization of the Whig Party.—The largest section of the opposition to the Jacksonian Democracy "was organized in 1834 as the Whig party. According to the 'Whig Almanac' for 1838, the party as then constituted comprised: (1) Most of those who, under the name of National Republicans, had previously been known as supporters of Adams and Clay, and advocates of the American system [of tariff-protection]; (2) Most of those who, acting in defence of what they deemed the assailed or threatened rights of the States, had been stigmatized as Nullifiers, or the less virtuous State Rights' men, who were thrown into a position of armed neutrality towards the administration by the doctrines of the proclamation of 1832 against South Carolina; (3) A majority of those before known as Anti-Masons; (4) Many who had up to that time been known as Jackson men, but who united in condemning the high-handed conduct of the Executive, the immolation of Duane, and the subservience of Taney; (5) Numbers who had not before taken any part in politics, but who were now awakened from their apathy by the palpable usurpations of the Executive and the imminent peril of our whole fabric of constitutional liberty and national prosperity.' It was not to be expected that a party composed of such various elements would be able to unite on one candidate with heartiness; and, as the event proved, it was necessary that some time should elapse before anything like homogeneity could be given to the organization. Nullification was not popular among the Whigs of the North, nor did the State Rights' people of South Carolina and other States care about the war on the bank and the removal of the deposits."—E. Stanwood, *Hist. of Presidential Elections*, ch. 14.—"It was now felt instinctively that, in the existing struggle between the parties actually arrayed against each other, and in the principles and doctrines of those who

were in power, there was a peculiar fitness in the revival of a term which, on both sides of the Atlantic, had been historically associated with the side of liberty against the side of power. The revival of the name of Whigs was sudden, and it was a spontaneous popular movement. In progress of time, it enabled the public men who were leading the opposition to the party of the Administration to consolidate an organization of distinct political principles, and to strengthen it by accessions from those who had found reason to be dissatisfied with the opinions prevailing among the friends of the President."—G. T. Curtis, *Life of Daniel Webster*, v. 1, p. 499.

A. D. 1835.—First Petitions for the Abolition of Slavery in the District of Columbia.—Exclusion of Antislavery literature from the Mails.—"It was during the Twenty-third Congress, 1835, that the abolition of slavery, especially in the District of Columbia, may be said to have begun to move the public mind at the North. The first petitions presented to Congress for the abolition of slavery, at least the first to attract attention, were presented by Mr. Dickson, from the Canandaigua district, New York, who addressed the House in support of the prayer of the petitioners. Perhaps his speech, more than the petition he presented, served to stir up a feeling on the part of Southern men, and to cause other and numerous similar petitions to be gotten up at the North and sent to Congress. . . . The labors of the enemies of slavery, or 'Abolitionists,' had commenced, and by indefatigable men who believed they were serving God and the cause of humanity, and consequently it was with them a labor of conscience and duty, with which nothing should be allowed to interfere. Instead of petitions to Congress, they now sent large boxes of tracts, pamphlets, and various publications which the Southern people denominated 'incendiary,' to the post-office at Charleston, South Carolina, and other cities, to be distributed, as directed, to various persons. This increased the complaints and inflammatory articles in the Southern papers. The publications thus sent were stopped in the post-office, and the postmasters addressed the head of the department, Amos Kendall, on the subject, who replied that though the law authorized the transmission of newspapers and pamphlets through the mail, yet the law was intended to promote the general good of the public, and not to injure any section; and intimated that, such being the effect of these publications at the South, postmasters would be justified in withholding them."—N. Sargent, *Public Men and Events*, 1817-1853, v. 1, pp. 294-295.

A. D. 1835-1837.—The inflation of credits, and Speculation.—The great collapse.—"When the United States Bank lost the government deposits, late in 1833, they amounted to a little less than \$10,000,000. On January 1, 1835, more than a year after the state banks took the deposits, they had increased to a little more than \$10,000,000. But the public debt being then paid and the outgo of money thus checked, the deposits had by January 1, 1836, reached \$25,000,000, and by June 1, 1836, \$41,500,000. This enormous advance represented the sudden increase in the sales of public lands, which were paid for in bank paper, which in turn formed the bulk of the government deposits. . . . The in-

crease in the sales of public lands was the result of all the organic causes and of all the long train of events which had seated the fever of speculation so profoundly in the American character of the day. . . . The increase of government deposits was only fuel added to the flames. The craze for banks and credits was unbounded before the removal of the deposits had taken place, and before their great increase could have had serious effect. . . . The insanity of speculation was in ample though unobserved control of the country while Nicholas Biddle [President of the United States Bank] still controlled the deposits, and was certain to reach a climax whether they stayed with him or went elsewhere. . . . The distribution of the surplus among the states by the law of 1836 was the last and in some respects the worst of the measures which aided and exaggerated the tendency to speculation. By this bill, all the money above \$5,000,000 in the treasury on January 1, 1837, was to be 'deposited' with the states in four quarterly installments commencing on that day. . . . From the passage of the deposit bill in June, 1836, until the crash in 1837, this superb donation of thirty-seven millions was before the enraptured and deluded vision of the country. Over nine millions and a quarter to be poured into 'improvements' or loaned to the needy,—what a luscious prospect! The lesson is striking and wholesome, and ought not to be forgotten, that, when the land was in the very midst of these bargesses, the universal bankruptcy set in. During 1835 and 1836 there were omens of the coming storm. Some perceived the rabid character of the speculative fever. William L. Marey, governor of New York, in his message of January, 1836, answering the dipsomaniac cry for more banks, declared that an unregulated spirit of speculation had taken capital out of the state; but that the amount so transferred bore no comparison to the enormous speculations in stocks and in real property within the state. . . . The warning was treated contemptuously; but before the year was out the federal administration also became anxious, and the increase in land sales no longer signified to Jackson an increasing prosperity. . . . So Jackson proceeded with his sound defense of the famous specie circular, long and even still denounced as the 'causa causans' of the crisis of 1837. By this circular, issued on July 11, 1836, the secretary of the treasury had required payment for public lands to be made in specie, with an exception until December 15, 1836, in favor of actual settlers and actual residents of the state in which the lands were sold. . . . Jackson's specie circular toppled over the house of cards, which at best could have stood but little longer. . . . An insignificant part of the sales had been lately made to settlers. They were chiefly made to speculators. . . . Of the real money necessary to make good the paper bubble promises of the speculators not one tenth part really existed. Banks could neither make their debtors pay in gold and silver, nor pay their own notes in gold and silver. So they suspended. The great and long concealed devastation of physical wealth and of the accumulation of legitimate labor by premature improvements and costly personal living, became now quickly apparent. Fancied wealth sank out of sight."—E. M. Shepard, *Martin Van Buren*, ch. 8.

A. D. 1836.—The Atherton Gag.—“At this time [1835-36], the Northern abolitionists sent petitions to Congress for the abolition of slavery in the District of Columbia. They contended that as this territory was under the control of the United States' Government, the United States was responsible for slavery there; and that the Free States were bound to do what they could to have slavery brought to an end in that District. But the Slave States were not willing to have anything said on the subject, so they passed what was called a ‘gag’ law in the House of Representatives, and ruled that all petitions which had any relation to slavery should be laid on the table without being debated, printed or referred. John Quincy Adams opposed this rule resolutely, maintaining that it was wrong and unconstitutional. . . . He continued to present petitions, as before, for the abolition of slavery in the District. When the day came for petitions he was one of the first to be called upon; and he would sometimes occupy nearly the whole hour in presenting them, though each one was immediately laid on the table. One day he presented 511.”—J. F. Clarke, *Anti-Slavery Days*, p. 45.—The gag-law has sometimes taken the name of the Atherton gag from its New Hampshire author.—W. C. Bryant and S. H. Gay, *Popular Hist. of the U. S.*, v. 4, p. 338.

A. D. 1836.—Jackson's administration reviewed.—“What of the administration as a whole? Parson's view is as follows: ‘I must avow explicitly the belief that, notwithstanding the good done by General Jackson during his presidency, his elevation to power was a mistake on the part of the people of the United States. The good which he effected has not continued, while the evil which he began remains.’ Sumner, in commenting on ‘Jackson's modes of action in his second term,’ says: ‘We must say Jackson that he stumbled along through a magnificent career, now and then taking up a chance without really appreciating it; leaving behind him disturbed and discordant elements of good and ill just fit to produce turmoil and disaster in the future.’ Later he adds: ‘Representative institutions are degraded on the Jacksonian theory just as they are on the divine-right theory, or on the theory of the democratic empire. There is not a worse perversion of the American system of government conceivable than to regard the President as the tribune of the people.’ The view of von Holst may be inferred from the following passages: ‘In spite of the frightful influence, in the real sense of the expression, which he exercised during the eight years of his presidency, he neither pointed out nor opened new ways to his people by the superiority of his mind, but only dragged them more rapidly onward on the road they had long been travelling, by the demoniacal power of his will.’ The meaning of the oak struggle is thus defined: ‘Its significance lay in the elements

which made Jackson able actually and successfully to assert his claims, in conflict both with the constitution and with the idea of republicanism, to a position between Congress and the people as patriarchal ruler of the republic.’ Elsewhere he tells us that the ‘curse of Jackson's administration’ is that it weakened respect for law; that ‘the first clear symptom’ of ‘the decline of a healthy political spirit’ was the election and re-election of Jackson to the presidency; that his administration paved a ‘broad path for the demoralizing transformation of the American democracy’; and that ‘his “reign” receives the stamp which characterizes it precisely from the fact that the politicians knew how to make his character, with its texture of brass, the battering-ram with which to break down the last ramparts which opposed their will.’ According to Parson, Sumner, and von Holst, as I understand them, the net result of Jackson's influence upon the American people was to hasten their progress toward political ruin. I think this conclusion erroneous. The gravest accusation against Jackson is, that his influence undermined respect for law. It is plausibly argued that, since he himself was impatient of authority, his example must have stimulated lawlessness in his followers. It may be urged, in reply, that the history of the country does not support the charge. The worst exhibitions of general lawlessness which have disgraced the United States were the anti-abolitionist mobs of Jackson's own day—for which he was not responsible. Since then, the American people, in spite of the demoralizations of the war and reconstruction periods, have steadily grown in obedience to law. . . . It is a curious circumstance that the relation of Jackson to sectionalism has received very little attention; and yet the growth of sectionalism, i. e., the tendency to divide the Union into two portions, politically separate and independent, is the fact which, from the Missouri Compromise of 1820 to the ordinances of secession in 1860, gives our political history its distinctive character. The one important question concerning Jackson, as indeed concerning every public man during the forty years which precede the Civil War, is: What did he do towards saving the Union from sectionalism? . . . Jackson came before the country as a disciple of Jefferson, and therefore as a believer in state rights. There was, it is true, much in his temper and situation which favored centralization; nevertheless, he was an honest, though moderate and somewhat inconsistent Jeffersonian, and he won and retained the confidence of the state-rights element in the democratic party. Moreover, he identified himself with the newly enfranchised and poorer citizens just rising to political self-consciousness. In these ways, his following came to include a large majority of his fellow-citizens, and, what was of the utmost importance, by far the larger proportion of those whose political character and opinions were as yet plastic. . . . Jackson became, to a degree never realized by any other man in our history, the trusted leader and teacher of the masses. . . . This intimate relation to the people, and this unparalleled power over the people, Jackson used to impress upon them his own love of the Union and his own hatred of sectionalism. . . . His character was altogether national. It is easy to think of Calhoun as a southerner and a South Carolinian; but it would not be easy

to think of Jackson as belonging to Tennessee or to the border states. The distribution of his support in the election of 1833 is instructive. New Hampshire, New York and Pennsylvania, as well as Tennessee, Georgia, Missouri, were Jackson's str' s. He was not looked upon as the representative of any particular section. His policy as President showed no trace of sectionalism. Its aim was the welfare of the masses irrespective of section. To him state lines had little meaning; sectional lines, absolutely none. There is another way in which he rendered great though unconscious service to the cause of national unity: he made the government, hitherto an unmeaning abstraction, intelligible and attractive to the people. . . . The chief value, then, of Jackson's political career, was its educative effect. His strong conviction of the national character of the Union, his brave words and acts in behalf of the rights of the Union, sank deep into the hearts of followers and opponents."—A. D. Morse, *Political Influence of Andrew Jackson* (*Pol. Sci. Quarterly*, June, 1886).

A. D. 1836.—Thirteenth Presidential Election.—Martin Van Buren chosen.—"As Vice-president, Van Buren was at the side of Jackson during his second term as President. It was the period of the first experiment in producing panics; of reckless expansions of the currency; of extravagant speculation; of an accumulating surplus revenue; of the last struggles of the Bank of the United States for the continuance of its powers. There was not a difficult question on which Jackson did not open his mind to the Vice-president with complete and affectionate confidence. He has often been heard to narrate incidents illustrating the prompt decision and bold judgment of his younger friend; and in those days of vehement conflicts between the power of the people and interests embodied against that power, the darling energy of the one was well united with the more tranquil intrepidity of the other. How fully this was recognized by the people appears from the action of the Democratic party of the Union. In May, 1835, it assembled in convention at Baltimore, and by a unanimous vote placed Van Buren in nomination as their candidate for the Presidency. . . . The Democracy of the Union supported Van Buren with entire unanimity. Out of two hundred and eighty-six electoral votes he received one hundred and seventy; and, for the first time, the Democracy of the North saw itself represented in the Presidential chair. Electoral votes were given for Van Buren without regard to geographical divisions: New York and Alabama, Missouri and Maine, Virginia and Connecticut, were found standing together. His election seemed friendly to the harmony and the perpetuity of the Union."—G. Bancroft, *Martin Van Buren*, ch. 5.—Mr. Van Buren received a clear majority of the popular vote cast at the election, namely, 762,078, against 735,651 cast in opposition, but divided between four Whig candidates, namely, William H. Harrison, who received 73 electoral votes, Hugh L. White, who received 26, Daniel Webster who received 14, and Wille P. Mangum, who received 11. Richard M. Johnson was chosen Vice President.

A. D. 1837.—Admission of Michigan into the Union. See MICHIGAN: A. D. 1837.

A. D. 1837.—The introduction of the Sub-treasury system.—"When the banks went

down, they had the government deposits: this was in May, 1837. Van Buren's administration was only two months old. The President was a warm admirer of Jackson, and had formally announced that he would continue his predecessor's policy with respect to the management of the deposits. But the 'experiment' had suddenly culminated. The government deposits were not in its control, and could not be regained; their transfer from one part of the country to another had ceased. . . . Once more, therefore, the government was confronted with a grave question touching its deposits and the circulating medium. It now essayed a brand-new experiment. This was nothing less than keeping the deposits itself, and transferring and paying them as occasion required; while the people were left to regulate the currency themselves. This was a very wide departure from any former policy. The mode proposed of keeping the public deposits may be briefly described. The treasury building at Washington was to constitute the treasury of the United States, and the public money was to be kept within its vaults. The mint at Philadelphia, the branch at New Orleans, the new custom-houses in New York and Boston, were also to contain branch treasury vaults. Places were also to be prepared at Charleston, St. Louis, and elsewhere. The treasurer of the United States at Washington, and the treasurers of the mints at Philadelphia and New Orleans, were to be 'receivers-general,' to keep the public money. . . . At the extra session of Congress in 1837, the Executive recommended the sub-treasury experiment. Congress refused to try it, although a majority in both Houses belonged to the same political party as the President. Nevertheless, the system was continued, without legislative sanction, until 1840, when Congress finally passed a bill legalizing the measure. At the presidential election in 1840 a party revolution occurred, and the sub-treasury system, which had formed a prominent issue in the campaign, was unqualifiedly condemned by the people. Congress repealed the law, and passed a bill creating another national bank," which President Tyler vetoed—see below, A. D. 1841. "Thus the keeping of the public money remained in the hands of the government officials, without legislative regulation, until the passage of the sub-treasury bill, in 1846. The system established at that time has been maintained ever since."—A. S. Bolles, *Financial History of the U. S.*, 1789-1860, bk. 3, ch. 2.

Also in: T. H. Benton, *Thirty Years' View*, v. 2, ch. 29, 41, 64-65.—D. Kinley, *The Independent Treasury of the U. S.*

A. D. 1837-1838.—Antislavery Petitions in the Senate.—Calhoun's Resolutions, forcing the issue.—"The movements for and against slavery in the session of 1837-'38 deserve to be noted, as of disturbing effect at the time; and as having acquired new importance from subsequent events. Early in the session a memorial was presented in the Senate from the General Assembly of Vermont, remonstrating against the annexation of Texas to the United States, and praying for the abolition of slavery in the District of Columbia—followed by many petitions from citizens and societies in the Northern States to the same effect; and, further, for the abolition of slavery in the Territories—for the abolition of the slave trade between the States—

and for the exclusion of future slave States from the Union. . . . The question which occupied the Senate was as to the most judicious mode of treating these memorials, with a view to prevent their evil effects: and that was entirely a question of policy, on which senators disagreed who concurred in the main object. Some deemed it most advisable to receive and consider the petitions—to refer them to a committee—and subject them to the adverse report which they would be sure to receive; as had been done with the Quakers' petitions at the beginning of the government. Others deemed it preferable to refuse to receive them. The objection raised to this latter course was, that it would mix up a new question with the slavery agitation which would enlist the sympathies of many who did not co-operate with the Abolitionists—the question of the right of petition. . . . Mr. Clay, and many others were of this opinion; Mr. Calhoun and his friends thought otherwise; and the result was, so far as it concerned the petitions of individuals and societies, what it had previously been—a half-way measure between reception and rejection—a motion to lay the question of reception on the table. This motion, precluding all discussion, got rid of the petitions quietly, and kept debate out of the Senate. In the case of the memorial from the State of Vermont, the proceeding was slightly different in form, but the same in substance. As the act of a State, the memorial was received; but after reception was laid on the table. Thus all the memorials and petitions were disposed of by the Senate in a way to accomplish the two-fold object, first, of avoiding discussion; and, next, condemning the object of the petitioners. It was accomplishing all that the South asked; and if the subject had rested at that point, there would have been nothing in the history of this session, on the slavery agitation, to distinguish it from other sessions about that period: but the subject was revived; and in a way to force discussion, and to constitute a point for the retrospect of history. Every memorial and petition had been disposed of according to the wishes of the senators from the slaveholding States; but Mr. Calhoun deemed it due to those States to go further, and to obtain from the Senate declarations which should cover all the questions of federal power over the institution of slavery: although he had just said that paper reports would do no good. For that purpose, he submitted a series of resolves—six in number—which derive their importance from their comparison, or rather contrast, with others on the same subject presented by him in the Senate ten years later; and which have given birth to doctrines and proceedings which have greatly disturbed the harmony of the Union, and palpably endangered its stability. The six resolutions of this period ('37-'38) undertook to define the whole extent of the power delegated by the States to the federal government on the subject of slavery; to specify the acts which would exceed that power; and to show the consequences of doing anything not authorized to be done—always ending in a dissolution of the Union. The first four of these related to the States; about which, there being no dispute, there was no debate. The sixth, without naming Texas, was prospective, and looked forward to a case which might include her annexation; and was

laid upon the table to make way for an express resolution from Mr. Preston on the same subject. The fifth related to the territories, and to the District of Columbia, and was the only one which excited attention, or has left a surviving interest. It was in these words: 'Resolved that the intermeddling of any State, or States, or their citizens, to abolish slavery in this District, or any of the territories, on the ground or under the pretext that it is immoral or sinful, or the passage of any act or measure of Congress with that view, would be a direct and dangerous attack on the institutions of all the slaveholding States.' The dogma of 'no power in Congress to legislate upon the existence of slavery in territories' had not been invented at that time; and, of course, was not asserted in this resolve, intended by its author to define the extent of the federal legislative power on the subject. The resolve went upon the existence of the power, and deprecated its abuse." Mr. Clay offered an amendment, in the nature of a substitute, consisting of two resolutions, the first of which was in these words: "That the interference by the citizens of any of the States, with the view to the abolition of slavery in this District, is endangering the rights and security of the people of the District; and that any act or measure of Congress, designed to abolish slavery in this District, would be a violation of the faith implied in the cessions by the States of Virginia and Maryland—a just cause of alarm to the people of the slaveholding States—and have a direct and inevitable tendency to disturb and endanger the Union." The vote on the final adoption of the resolution was: [Yeas 37, Nays 8]. . . . The second resolution of Mr. Clay applied to slavery in a territory where it existed, and deprecated any attempt to abolish it in such territory, as alarming to the slave States, and as violation of faith towards its inhabitants, unless they asked it; and in derogation of its right to decide the question of slavery for itself when erected into a State. This resolution was intended to cover the case of Florida, and ran thus: 'Resolved that any attempt of Congress to abolish slavery in any territory of the United States in which it exists would create serious alarm and just apprehension in the States sustaining that domestic institution, and would be a violation of good faith towards the inhabitants of any such territory who have been permitted to settle with, and hold, slaves therein; because the people of any such territory have not asked for the abolition of slavery therein; and because, when any such territory shall be admitted into the Union as a State, the people thereof shall be entitled to decide that question exclusively for themselves.' And the vote upon it was— [Yeas 35, Nays 9]. . . . The general feeling of the Senate was that of entire repugnance to the whole movement—that of the petitions and memorials on the one hand, and Mr. Calhoun's resolutions on the other. The former were quietly got rid of, and in a way to rebuke, as well as to condemn their presentation; that is to say, by motions (sustained by the body) to lay them on the table. The resolutions could not so easily be disposed of, especially as their mover earnestly demanded discussion, spoke at large, and often himself; and 'desired to make the question, on their rejection or adoption, a test question.'"—T. H. Benton, *Thirty Years' View*, v. 2, ch. 33.

A. D. 1840.—The Sixth Census.—Total population, 17,000,453 (exceeding that of 1830 by nearly 33 per cent.), classed and distributed as follows:

	North.		
	White.	Free black.	Slave.
Connecticut	301,856	8,105	17
Illinois	472,254	3,598	331
Indiana	678,698	7,165	8
Iowa	42,924	172	16
Maine	500,438	1,355	...
Massachusetts	729,030	8,669	...
Michigan	211,500	707	...
New Hampshire	284,036	537	1
New Jersey	351,588	21,044	674
New York	2,378,800	50,027	4
Ohio	1,503,122	17,342	3
Pennsylvania	1,676,115	47,854	64
Rhode Island	105,587	3,238	5
Vermont	291,218	730	...
Wisconsin	30,740	185	11
	9,557,065	170,728	1,120
	South.		
	White.	Free black.	Slave.
Alabama	335,185	2,039	253,532
Arkansas	77,174	465	19,935
Delaware	58,561	16,919	2,605
District of Columbia	30,657	8,361	4,694
Florida	27,943	817	25,717
Georgia	407,695	2,753	280,944
Kentucky	590,253	7,317	182,258
Louisiana	158,457	25,502	168,452
Maryland	318,204	62,078	80,737
Mississippi	179,074	1,306	195,211
Missouri	323,888	1,574	58,240
North Carolina	484,870	22,732	245,817
South Carolina	259,084	8,276	327,038
Tennessee	640,627	5,524	183,059
Virginia	742,858	49,852	449,087
	4,632,530	215,575	2,480,326

The number of immigrants arriving in the United States between 1830 and 1840, according to official reports, was 590,125, of whom 283,191 were from the British Islands, and 212,497 from other parts of Europe.

A. D. 1840.—Fourteenth Presidential Election.—The Log-cabin and Hard-cider campaign.—William Henry Harrison, Whig, was elected President, over Martin Van Buren, Democrat, and James G. Birney, candidate of the "Liberty Party." The popular vote cast was: Harrison 1,275,016, Van Buren 1,129,102, Birney 7,069. The electoral vote stood: Harrison 234, Van Buren 60, Birney none. John Tyler was elected Vice President. In the early part of the campaign, a Baltimore newspaper, making a foolish attempt to cast ridicule on General Harrison, said that a pension of a few hundred dollars and a barrel of hard cider would content him in his log cabin for life. This fatuous remark gave the Whigs a popular cry which they used with immense effect, and "the log-cabin and hard-cider campaign," as it is known in American history, was memorable for its song-singing enthusiasm.—"If one could imagine a whole nation declaring a holiday or season of rollicking for a period of six or eight months, and giving themselves up during the whole time to the wildest freaks of fun and frolic, caring

nothing for business, singing, dancing, and carousing night and day, he might have some faint notion of the extraordinary scenes of 1840. It would be difficult, if not impossible, otherwise to form even a faint idea of the universal excitement, enthusiasm, activity, turmoil, and restlessness which pervaded the country during the spring, summer, and fall of that memorable year. Log cabins large enough to hold crowds of people were built in many places. Small ones, decorated with 'coon-skins, were mounted on wheels and used in processions. The use of the 'coon-skins soon led to the adoption of the 'coon (raccoon) itself as an emblem and adjunct of the log cabin, and its 'counterfeit presentment' was hoisted in all the Whig papers. Meetings were everywhere, and every day, held in neighborhoods, school-houses, villages, towns, counties, cities, States, varying in number from ten to one hundred thousand; and wherever there was a gathering there were also speaking and singing. Ladies attended these meetings, or conventions, in great numbers, and joined in the singing. Farmers, with big teams and wagons, would leave their fields and travel ten, twenty, or thirty miles, accompanied by their families and neighbors, to attend a convention or a barbecue and listen to distinguished orators. Crowds on the road, multitudes in big wagons drawn by four, six, or eight horses, made the welkin ring with their log-cabin songs. Nobody slept, nobody worked, nobody rested; at least so it seemed, for all were on the 'qu vive' and in motion. The entire population seemed to be absorbed in the great duty of electing General Harrison and thus changing the government. . . .

'What has caused this great commotion, motion, motion,

Our country through?

It is the ball a rolling on
For Tippecanoe and Tyler too,
For Tippecanoe and Tyler too.'

The original or special friends of General Harrison very naturally claimed that it was his popularity which produced such an unprecedented 'commotion' 'our country through.' But in this they were mistaken. The popularity of no one man could have produced such a universal outpouring of the people from day to day for weeks and months unceasingly, abandoning everything else, and giving time and money unstintedly to carry the election. General Harrison was but the figure-head,—the representative of the Whig party for the time being. Few had ever heard of him. The people knew from history and the campaign papers that he had been a general in the then late war with England; that he had won a victory at the battle of Tippecanoe over the British and Indians, and also at the battle of the Thames, in Canada, where Tecumseh, the noted Indian warrior, was killed. This was enough to make a hero of him by those who had a purpose to serve in doing so. As to his fitness for the Presidency, the people knew nothing and cared nothing. A change in the government was what they desired and were determined to have."—N. Sargent, *Public Men and Events*, v. 2, pp. 107-110.

A. D. 1841.—The Death of President Harrison.—Breach between President Tyler and the Whig Party which elected him.—President

Harrison died suddenly on the 4th of April, 1841, and Vice President John Tyler became President. Tyler was a Calhoun Democrat in politics, although nominated and elected by the Whigs, and the financial measures favored by the latter were especially obnoxious to him. "Congress met May 31st, 1841. . . . A bill to abolish the Sub-Treasury of the previous Administration was passed by both Houses and signed by the President. A bill to incorporate 'The Fiscal Bank of the United States' was passed by both Houses. It was weeded of many of the objectionable features of the old United States Bank, but was hardly less odious to the Democrats. It was vetoed by the President. . . . An effort to pass the bill over the veto did not receive a two-thirds majority. The Whig leaders, anxious to prevent a party disaster, asked from the President an outline of a bill which he would sign. After consultation with the Cabinet, it was given, and passed by both Houses. September 9th the President vetoed this bill also, and an attempt to pass it over the veto did not receive a two-thirds majority. The action of the President, in vetoing a bill drawn according to his own suggestions, and thus apparently provoking a contest with the party which had elected him, roused the unconcealed indignation of the Whigs. The Cabinet, with one exception [Daniel Webster, Secretary of State, who remained in President Tyler's cabinet until May, 1843], at once resigned. The Whig members of Congress issued Addresses to the People, in which they detailed the reforms designed by the Whigs and impeded by the President, and declared that 'all political connection between them and John Tyler was at an end from that day forth.' . . . The President filled the vacancies in the Cabinet by appointing Whigs and Conservatives. His position was one of much difficulty. His strict constructionist opinions, which had prevented him from supporting Van Buren, would not allow him to approve a National Bank, and yet he had accepted the Vice-Presidency from a party pledged to establish one. The over hasty declaration of war by the Whigs put a stop to his vacillations, and compelled him to rely upon support from the Democrats. But only a few members of Congress, commonly known as 'the corporal's guard,' recognized Tyler as a leader."—A. Johnston, *Hist. of Am. Politics*, 2d ed., ch. 15, sect. 2-4.

A. D. 1842.—Victory of John Quincy Adams in defending the Right of Petition.—"Jan. 21, 1842, Mr. Adams presented a petition from 45 citizens of Haverhill, Mass., praying for the dissolution of the Union, and moved it be referred to a select committee, with instructions to report why the petition should not be granted. There was at once great excitement and members called out, 'Expel him,' 'Censure him.' After a good deal of fruitless endeavor to accomplish something, the House adjourned, and forty or fifty slaveholders met to decide what kind of resolutions should be presented to meet the case. Thomas F. Marshall of Kentucky was selected by this caucus from Congress to propose the resolutions, which were to the effect that for

presenting such a petition to a body each of whom had taken an oath to maintain the Constitution, Mr. Adams was virtually inviting them to perjure themselves, and that therefore he deserved the severest censure. Marshall supported this with a very violent speech. Mr. Wise followed in another. Then Mr. Adams arose and asked the clerk to read the first paragraph of the Declaration of Independence, being the one which recognizes the right of every people to alter or abolish their form of Government when it ceases to accomplish its ends. He said that those who believed that the present Government was oppressive had the right (according to the Declaration of Independence, on which the whole of our national unity reposes), to petition Congress to do what they believed was desirable; and all that Congress could properly do would be to explain to them why such an act could not be performed. He replied with great severity to Mr. Wise and said that Mr. Wise had come into that Hall a few years before with his hands dripping with the blood of one of his fellow beings. In this he alluded to the part which Mr. Wise had taken in the duel between Mr. Graves of Kentucky, and Cilley of Maine, in which the latter had been killed. As for Mr. Marshall, who had accused him of treason, he spoke of him with great scorn. 'I thank God!' said he 'that the Constitution of my country has defined treason, and has not left it to the puny intellect of this young man from Kentucky to say what it is. If I were the father of this gentleman from Kentucky, I should take him from this House and put him to school where he might study his profession for some years until he became a little better qualified to appear in this place.' Mr. Adams had on his desk a great many books and references prepared for his use by some anti-slavery gentlemen then in Washington; after he had gone on for some time with his speech he was asked how much more time he would probably occupy. He replied 'I believe Mr. Burke took three months for his speech on Warren Hastings' indictment. I think I may probably get through in ninety days, perhaps in less time.' Thereupon they thought it just as well to have the whole thing come to an end and it was moved that the matter should be laid on the table. Mr. Adams consented, and it was done."—J. F. Clarke, *Anti-Slavery Days*, pp. 57-59.

A. D. 1842.—The tariff act. See TARIFF LEGISLATION (UNITED STATES): A. D. 1842.

A. D. 1842.—The Ashburton Treaty with England.—Settlement of Northeastern boundary questions.—"It was arranged in December by the Peel ministry that Lord Ashburton should be sent to Washington as a special minister from Great Britain, with full powers to settle the boundary, and all other pending disputes with the United States. . . . Ashburton, formerly Alexander Baring, of the eminent banking firm of Baring Brothers, and a son of its original founder, was now an old man, who had retired on a princely fortune, and being indifferent to fame, aspired only to bring these two countries to more friendly terms. Like his father before him, he had tact and plain good sense, and understood well the American character, having married here during his youth. Lord Ashburton arrived early the next April, and on the 13th of June entered upon the duties

of his mission. Maine and Massachusetts, the States most interested in the disputed boundary, sent commissioners of their own to yield an assent in this branch of the business. The whole business as conducted at our capital had an easy and informal character. Webster and Lord Ashburton represented alone their respective governments; no protocols were used, nor formal records; and the correspondence and official interviews went on after a friendly fashion in the heat of summer, and while Congress was holding its long regular session. . . . This Washington or Ashburton treaty, as it is called to this day, bore date of the day [August 9] when it was formally signed. It passed by the Oregon or north-western boundary, a point on which harmony was impossible, and this was the most pregnant omission of all; it passed by the 'Caroline' affair; it ignored, too, the 'Creole' case, for Great Britain would not consent to recognize the American claim of property in human beings. Nor, on the other side, were the debts of delinquent States assumed by the United States, as many British creditors had desired. Mutual extradition in crimes under the law of nations, and the delivery of fugitives from justice, were stipulated. But the two chief features of this treaty were: a settlement of the boundary between Great Britain and the United States on the north-east, extending westward beyond the great lakes, and a cruising convention for the mutual suppression of the slave-trade. As to the north-east territory in dispute, which embraced some 12,000 square miles, seven-twelfths, or about as much as the King of the Netherlands had awarded, were set off to the United States; Great Britain taking the residue and securing the highlands she desired which frowned upon the Canadian Gibraltar, and a clear though circuitous route between Quebec and Halifax. Our government was permitted to carry timber down the St. John's River, and though becoming bound to pay Maine and Massachusetts \$300,000 for the strip of territory relinquished to Great Britain, gained in return Rouse's Point, on Lake Champlain, of which an exact survey would have deprived us. By the cruising convention clause, which the President himself bore a conspicuous part in arranging, the delicate point of 'right of search' was avoided; for instead of trusting Great Britain as the police of other nations for suppressing the African slave-trade, each nation bound itself to do its full duty by keeping up a sufficient squadron on the African coast. It so happened that Great Britain, by softening the old phrase 'right of search' into 'right of visitation,' had been inducing other nations to guarantee this police inspection of suspected slave vessels. In December, 1841, ambassadors of the five great European powers arranged in London a quintuple league of this character. But France, hesitating to confirm such an arrangement, rejected that league when the Ashburton treaty was promulgated, and hastened to negotiate in its place a cruising convention similar to ours on the slave-trade suppression; nor was the right of search, against which America had fought in the war of 1812, ever again invoked, even as a mutual principle, until by 1862 the United States had grown as sincere as Great Britain herself in wishing to crush out the last remnant of the African traffic. This cruising convention, however, left the

abstract question of search untouched, and in that light Sir Robert Peel defended himself in Parliament. The Ashburton treaty was honorable, on the whole, for each side; what it arranged was arranged fairly, and what it omitted was deferred without prejudice. . . . So satisfactory, in fine, was the treaty, despite all criticism, that the Senate ratified it by more than a three-fourths vote, and at a time, too, when the Whig Congress was strongly incensed against the administration, and Webster had made bitter enemies."—J. Schouler, *Hist. of the United States*, v. 4, ch. 17, pp. 400-403.

A. D. 1844.—Fifteenth Presidential Election.—Choice of James K. Polk.—The Texas treaty of annexation had been held in committee in the Senate "till the national conventions of the two parties should declare themselves. Both conventions met in Baltimore, in May, to name candidates and avow policies. The Whigs were unanimous as to who should be their candidate: it could be no one but Henry Clay. Among the Democrats there was a very strong feeling in favor of the renomination of Van Buren. But both Clay and Van Buren had been asked their opinion about the annexation of Texas, both had declared themselves opposed to any immediate step in that direction, and Van Buren's declaration cost him the Democratic nomination. He could have commanded a very considerable majority in the Democratic convention, but he did not command the two-thirds majority required by its rules, and James K. Polk of Tennessee became the nominee of his party." Polk had been Speaker of the House of Representatives, and was honorably though slightly known to the country. The only new issue presented in the party "platform" was offered by the Democrats in their resolution demanding "the reoccupation of Oregon and the reannexation of Texas, at the earliest practicable period"; and this proved the make-weight in the campaign. . . . The 'Liberty Party,' the political organization of the Abolitionists, commanded now, as it turned out, more than 60,000 votes. . . . Had the 'Liberty' men in New York voted for Clay, he would have been elected."—W. Wilson, *Division and Reunion*, 1829-1889, sect. 73 (ch. 6).—Polk received of the popular votes, 1,337,243, against 1,299,062 cast for Henry Clay, Whig, and 62,900 cast for James G. Birney, candidate of the Liberty Party. Electoral vote: Polk, 170; Clay, 105; Birney, none. George M. Dallas was elected Vice President.

1845.—Preserving the equilibrium between free and Slave States.—Admission of Iowa and Florida.—"The slave-masters . . . had long pretended that the equilibrium between the free and slave States must be preserved at all hazards, and twice had they resorted to the violent device of arbitrarily linking two measures

that had nothing in common for that purpose,—in 1820 combining the bills for the admission of Missouri and Maine, and in 1836 those for the admission of Michigan and Arkansas. In pursuance of the same purpose and line of policy, they were now unwilling to receive without a consideration the free State of Iowa, which had framed a constitution in the autumn of 1844, and was asking for admission. Some makeweight must be found before this application could be compiled with. This they managed to discover in an old constitution, framed by the Territory of Florida five years before. Though Florida was greatly deficient in numbers, and her constitution was very objectionable in some of its features, they seized this occasion to press its claims, and to make its admission a condition precedent to their consent that Iowa should be received. The House Committee on Territories reported in favor of the admission of the two in a single measure. In the closing hours of the XXVIIIth Congress the bill came up for consideration. . . . The constitution of Florida not only expressly denied to the legislature the power to emancipate slaves, but gave it the authority to prevent free colored persons from immigrating into the State, or from being discharged from vessels in her ports." All attempts to require an amendment of the Florida constitution in these particulars before recognizing that ill-populated territory as a State, were defeated, and the bill admitting Florida and Iowa became a law on the 31 of March, 1845.—H. Wilson, *Hist. of the rise and Fall of the Slave Power in Am.*, v. 2, ch. 1.

A. D. 1845-1846.—The Slavery question in the Democratic Party.—Hunkers and Barnburners.—The Wilmot Proviso.—With Polk's accession and the Mexican war, the schism in the Democratic ranks over the extension of American slave territory became plainer. Even during the canvass of 1844 a circular had been issued by William Cullen Bryant, David Dudley Field, John W. Edmonds, and other Van Buren men, supporting Polk, but urging the choice of congressmen opposed to annexation. Early in the new administration the division of New York Democrats into 'Barnburners' and 'Old Hunkers' appeared. The former were the strong pro-Van Buren, anti-Texas men, or 'radical Democrats,' who were likened to the farmer who burned his barn to clear it of rats. The latter were the 'northern men with southern principles,' the supporters of annexation, and the respectable, dull men of easy consciences, who were said to hunker after the offices. The Barnburners were led by men of really eminent ability and exalted character: Silas Wright, then governor, Benjamin F. Butler, John A. Dix, chosen in 1845 to the United States senate, Azariah C. Flagg, the famous comptroller, and John Van Buren, the ex-president's son. . . . Daniel S. Dickinson and William L. Marcy were the chief figures in the Hunker ranks. Polk seemed inclined, at the beginning, to favor, or at least to placate, the Barnburners. . . . Jackson's death in June, 1845, deprived the Van Buren men of the tremendous moral weight which his name carried, and which might have daunted Polk. It perhaps also helped to loosen the weight of party ties on the Van Buren men. After this the schism rapidly grew. In the fall election of 1845 the Barnburners pretty thoroughly con-

trolled the Democratic party of the state [of New York] in hostility to the Mexican war, which the annexation of Texas had now brought. Samuel J. Tilden of Columbia county, and a profound admirer of Van Buren, became one of their younger leaders. Now arose the strife over the 'Wilmot proviso,' in which was embodied the opposition to the extension of slavery into new territories. Upon this proviso the modern Republican party was formed eight years later; upon it, fourteen years later, Abraham Lincoln was chosen president; and upon it began the war for the Union, out of whose throes came the vastly grander and unsought beneficence of complete emancipation. David Wilmot was a Democratic member of Congress from Pennsylvania; in New York he would have been a Barnburner. In 1846 a bill was pending to appropriate \$3,000,000 for use by the president in a purchase of territory from Mexico as part of a peace. Wilmot proposed an amendment that slavery should be excluded from any territory so acquired. All the Democratic members, as well as the Whigs from New York, and most strongly the Van Buren or Wright men, supported the proviso. The Democratic legislature [of New York] approved it by the votes of the Whigs with the Barnburners and the Soft Hunkers, the latter being Hunkers less friendly to slavery. It passed the house at Washington, but was rejected by the senate."—E. M. Shepard, *Martin Van Buren*, ch. 11.—In the slang nomenclature which New York politics have always produced with great fertility Hard-Shell and Soft-Shell were terms often used instead of Hunker and Barnburner.

A. D. 1847.—Calhoun's aggressive policy of agitation, forcing the Slavery issue upon the North.—His program of disunion.—"On Friday, the 19th of February [1847], Mr. Calhoun introduced into the Senate his new slavery resolutions, prefaced by an elaborate speech, and requiring an immediate vote upon them. They were in these words: 'Resolved, That the territories of the United States belong to the several States composing this Union, and are held by them as their joint and common property. Resolved, That Congress, as the joint agent and representative of the States of this Union, has no right to make any law, or do any act whatever, that shall directly, or by its effects, make any discrimination between the States of this Union, by which any of them shall be deprived of its full and equal right in any territory of the United States acquired or to be acquired. Resolved, That the enactment of any law which should liberally, or by its effects, deprive the citizens of any of the States of this Union from emigrating, with their property, into any of the territories of the United States, will make such discrimination, and would, therefore, be a violation of the constitution, and the rights of the States from which such citizens emigrated, and in derogation of that perfect equality which belongs to them as members of this Union, and would tend directly to subvert the Union itself. Resolved,

That it is a fundamental principle in our political creed, that a people, in forming a constitution, have the unconditional right to form and adopt the government which they may think best calculated to secure their liberty, prosperity, and happiness; and that, in conformity thereto, no other condition is imposed by the federal constitution on a State, in order to be admitted into this Union, except that its constitution shall be republican; and that the imposition of any other by Congress would not only be in violation of the constitution, but in direct conflict with the principle on which our political system rests.' These resolutions, although the sense is involved in circumlocutory phrases, are intelligible to the point, that Congress has no power to prohibit slavery in a territory, and that the exercise of such a power would be a breach of the constitution, and leading to the subversion of the Union. . . . Mr. Calhoun demanded the prompt consideration of his resolutions, giving notice that he would call them up the next day and press them to a speedy and final vote. He did call them up, but never called for the vote, nor was any ever had. . . . In the course of this year, and some months after the submission of his resolutions in the Senate denying the right of Congress to abolish slavery in a territory, Mr. Calhoun wrote a letter to a member of the Alabama Legislature, which furnishes the key to unlock his whole system of policy in relation to the slavery agitation, and its designs, from his first taking up the business in Congress in the year 1835, down to the date of the letter; and thereafter. The letter was in reply to one asking his opinion 'as to the steps which should be taken' to guard the rights of the South. . . . It opens with this paragraph: 'I am much gratified with the tone and views of your letter, and concur entirely in the opinion you express, that instead of shunning, we ought to court the issue with the North on the slavery question. I would even go one step further, and add that it is our duty—due to ourselves, to the Union, and our political institutions, to force the issue on the North. We are now stronger relatively than we shall be hereafter, politically and morally. Unless we bring on the issue, delay to us will be dangerous indeed. It is the true policy of those enemies who seek our destruction. Its effects are, and have been, and will be to weaken us politically and morally, and to strengthen them. Such has been my opinion from the first. Had the South, or even my own State backed me, I would have forced the issue on the North in 1835, when the spirit of abolitionism first developed itself to any considerable extent. It is a true maxim, to meet danger on the frontier, in politics as well as war. Thus thinking, I am of the impression, that if the South act as it ought, the Wilmot Proviso, instead of proving to be the means of successfully assailing us and our peculiar institution, may be made the occasion of successfully asserting our equality and rights, by enabling us to force the issue on the North. Something of the kind was indispensable to rouse and unite the South. On the contrary, if we should not meet it as we ought, I fear, greatly fear, our doom will be fixed. It would prove that we either have not the sense or spirit to defend ourselves and our institutions.' The phrase 'forcing the issue' is here used too often, and for a purpose too obvious, to need

remark. The reference to his movement in 1835 confirms all that was said of that movement at the time by senators from both sections of the Union. . . . At that time Mr. Calhoun characterized his movement as defensive—as done in a spirit of self-defence: it was then characterized by senators as aggressive and offensive: and it is now declared in this letter to have been so. He was then openly told that he was playing into the hands of the abolitionists, and giving them a champion to contend with, and the elevated theatre of the American Senate for the dissemination of their doctrines, and the production of agitation and sectional division. All that is now admitted, with lamentation that the South, and not even his own State, would stand by him then in forcing the issue. So that chance was lost. Another was now presented. The Wilmot Proviso, so much deprecated in public, is privately saluted as a fortunate event, giving another chance for forcing the issue. The letter proceeds: 'But in making up the issue, we must look far beyond the proviso. It is but one of many acts of aggression, and, in my opinion, by no means the most dangerous or degrading, though more striking and palpable. . . . So that, while this proviso was, publicly, the Pandora's box which filled the Union with evil, and while it was to Mr. Calhoun and his friends the theme of endless deprecation, it was secretly cherished as a means of keeping up discord, and forcing the issue between the North and the South. Mr. Calhoun then proceeds to the serious question of disunion, and of the manner in which the issue could be forced. 'This brings up the question, how can it be so met, without resorting to the dissolution of the Union? . . . There is, in my opinion, but one way in which it can be met; and that is . . . by retaliation.' . . . Then follows an argument to justify retaliation. . . . Retaliation by closing the ports of the State against the commerce of the offending State; and this called a constitutional remedy, and a remedy short of disunion. . . . The letter proceeds with further instructions upon the manner of executing the retaliation: 'My impression is, that it should be restricted to sea-going vessels, which would leave open the trade of the valley of the Mississippi to New Orleans by river, and to the other Southern cities by railroad; and tend thereby to detach the North-western from the North-eastern States.' . . . This confidential letter from Mr. Calhoun to a member of the Alabama legislature of 1847, has come to light, to furnish the key which unlocks his whole system of slavery agitation which he commenced in the year 1835. That system was to force issues upon the North under the pretext of self-defence, and to sectionalize the South, preparatory to disunion, through the instrumentality of sectional conventions, composed wholly of delegates from the slaveholding States.'—T. H. Benton, *Thirty Years' View*, v. 2, ch. 167-168.

A. D. 1848.—The Free Soil Convention at Buffalo and its nominations.—The "Barnburner" Democrats of New York, or Free Soilers as they began to be called, met in convention at Utica, February 16, 1848, and chose delegates to the approaching national Democratic Convention at Baltimore. In April the Barnburner members of the Legislature issued an elaborate address, setting forth the Free Soil principles of the Democratic fathers. The authors of the address were afterwards known to be Samuel J. Tilden and Martin and John Van Buren. The national Democratic Convention assembled in May, 1848. "It offered to admit the Barnburner and Hunker delegations together to cast the vote of the State. The Barnburners rejected the compromise as a simple nullification of the vote of the State, and then withdrew. Lewis Cass was nominated for president, the Wilmot proviso being thus emphatically condemned. For Cass had declared in favor of letting the new territories themselves decide upon slavery. The Barnburners, returning to a great meeting in the City Hall Park at New York, cried 'The lash has resounded through the halls of the Capitol!' and condemned the cowardice of northern senators who had voted with the South. . . . The delegates issued an address written by Tilden, fearlessly calling Democrats to independent action. In June a Barnburner convention met at Utica," which named Van Buren for the Presidency and called a national convention of all Free Soilers to meet at Buffalo, August 9, 1848. "Charles Francis Adams, the son of John Quincy Adams, presided at the Buffalo convention; and in it Joshua R. Giddings, the famous abolitionist, and Salmon P. Chase, were conspicuous. To the unspeakable horror of every Hunker there participated in the deliberations a negro, the Rev. Mr. Ward. Butler [Benjamin F., of New York], reported the resolutions in words whose inspiration is still fresh and ringing. . . . At the close were the stirring and memorable words: 'We inscribe on our banner, Free Soil, Free Speech, Free Labor, and Free Men; and under it we will fight on and fight ever, until a triumphant victory shall reward our exertions.' Joshua Leavitt of Massachusetts, one of the 'blackest' of abolitionists, reported to the convention the name of Martin Van Buren for president." The nomination was acclaimed with enthusiasm, and Charles Francis Adams was nominated for vice-president. "In September, John A. Dix, then a Democratic senator, accepted the Free-soil nomination for governor of New York. The Democratic party was aghast. The schismatics had suddenly gained great dignity and importance. . . . The Whigs had in June nominated Taylor, one of the two heroes of the Mexican war. . . . The anti-slavery Whigs hesitated for a time; but Seward of New York and Horace Greeley in the New York Tribune finally led most of them to Taylor, rather than, as Seward said, engage in 'guerrilla warfare' under Van Buren. . . . This launching of the modern Republican party was, strangely enough, to include in New York few besides Democrats."—E. M. Shepard, *Martin Van Buren*, ch. 11.—"The Buffalo Convention was one of the more important upheavals in the process of political disintegration which went steadily on between the years 1844, when the 'Birneyites' deprived Henry Clay of the electoral vote of

New York, and 1856, when the Whig party disappeared, and the pro-slavery Democracy found itself confronted by the anti-slavery Republican organization of the North. In 1848, though the Whig party was already doomed, its time had not yet come. The Free Soil movement of 1848 was, therefore, premature; and moreover, as the result afterwards showed, there was something almost ludicrous in a combination of 'Conscience Whigs' of Massachusetts, in revolt over the nomination of the slave-owning General Taylor, with the 'Barnburning' Democrats of New York, intent only upon avenging on Cass the defeat of Van Buren. None the less the Free Soil movement of 1848 clearly foreshadowed the Republican uprising of 1856, and of the men who took part in the Buffalo convention an unusually large proportion afterwards became prominent as political leaders."—C. F. Adams, *Richard Henry Dana*, v. 1, ch. 7.

A. D. 1848-1849.—Sixteenth Presidential Election.—Inauguration and death of General Taylor.—In the Presidential election of 1848, the Democratic party put forward as its candidate Lewis Cass; the Whigs named General Zachary Taylor; and the Free Soil Party placed Martin Van Buren in nomination. That the Whig Party should again have set aside its distinguished leader, Henry Clay, caused great grief among his devoted followers and friends. "But there were those in it who had grown gray in waiting for office under the banner of Mr. Clay, and whose memories were refreshed with what was effected by the éclat of military glory under General Jackson. It was hard, and might seem ungrateful, to abandon a great and long-tried leader. But the military feather waved before their eyes, and they were tempted. . . . It needed a leader, or a few leaders to give the signal of defection; and they were not wanting. One after another of the great names of the party fell off from Mr. Clay and inclined to General Taylor; and when the national Whig Convention met at Philadelphia, in June, 1848, to nominate a candidate for the Presidency, the first ballot showed that seven out of twelve of the Kentucky delegation, against the expectations and wishes of their constituency, had deserted Mr. Clay, and gone over to General Taylor. The influence of this fact was great—perhaps decisive. For if Mr. Clay's own State was against him, what could be expected of the other States? On the fourth ballot General Taylor had 52 majority, and was declared the nominee. . . . In November following, General Taylor was elected President of the United States, and Millard Fillmore Vice-President. As in the case of General Harrison, who died in thirty days after his inauguration, so in the case of General Taylor . . . he, too, died in sixteen months after he had entered on the duties of his office."—C. Colton, *Life, Corr. and Speeches of Henry Clay*, v. 3, ch. 4.—The popular vote cast at the election was, for Taylor, 1,360,099; Cass, 1,220,544; for Van Buren, 291,263. The electoral vote was, for Taylor, 163; for Cass, 127; for Van Buren, none. Millard Fillmore, elected Vice President, succeeded to the Presidency on the death of General Taylor, July 9, 1850.—O. O. Howard, *General Taylor*, ch. 21-24.

A. D. 1850.—The Seventh Census.—Total population, 23,191,876, nearly 36 per cent. greater than in 1840. The remnant of slavery in the northern States which appears in this census, still lingering in New Jersey, was not quite extinguished in the succeeding decade. The classification and distribution of population was as follows:

	North.	Free black.	Slave.
California.....	91,635	962
Connecticut.....	363,096	7,693
Illinois.....	846,034	9,426
Indiana.....	977,154	11,263
Iowa.....	191,881	333
Maine.....	581,813	1,856
Massachusetts.....	985,450	9,064
Michigan.....	396,971	2,583
Minnesota.....	6,038	39
New Hampshire.....	317,456	520
New Jersey.....	465,509	23,810	236
New York.....	3,048,325	49,069
Ohio.....	1,955,950	25,279
Oregon.....	13,987	207
Pennsylvania.....	2,258,160	53,626
Rhode Island.....	143,875	3,070
Utah.....	11,354	26
Vermont.....	813,402	718
Wisconsin.....	304,756	635
	13,269,149	196,262	262
	South.	Free black.	Slave.
Alabama.....	426,514	2,265	342,841
Arkansas.....	162,189	608	47,100
Delaware.....	71,169	18,078	2,290
District of Colum- bia.....	37,941	10,059	3,687
Florida.....	47,203	932	39,319
Georgia.....	521,572	2,931	881,682
Kentucky.....	761,413	10,011	210,981
Louisiana.....	255,491	17,462	244,809
Maryland.....	417,943	74,723	90,368
Mississippi.....	295,718	930	309,878
Missouri.....	562,904	2,618	87,422
New Mexico.....	61,547
North Carolina.....	553,928	27,463	288,548
South Carolina.....	274,563	8,960	384,984
Tennessee.....	756,836	6,422	239,459
Texas.....	154,034	397	58,161
Virginia.....	894,800	51,333	472,528
	6,283,965	238,197	3,204,051

The immigration in the decade preceding this census had risen to 1,713,261 in number of persons, 1,047,763 coming from the British Islands (mostly from Ireland), and 549,739 from other parts of Europe.

A. D. 1850.—Henry Clay's last "Compromise"—Free California, and the Fugitive Slave Law.—Webster's Seventh of March Speech and Seward's Declaration of the "Higher Law."—"In 1848 gold was discovered in California. The tide of adventurers poured in. They had no slaves to take with them and no desire to acquire any. In less than a year the newly gathered people outnumbered the population of some of the smaller states. They organized a state government with an antislavery constitution, and demanded admission into the Union. True, the greater part of the proposed state lies north of 36° 30' [the

dividing line of the Missouri Compromise], but its climate, tempered by the Pacific Ocean, is of rare mildness. If any part of the newly acquired territory should be opened to slavery, it seemed that California was the part best suited for it. If California repelled slavery, there was small hope that the remainder of the new territory would embrace it. Congress debated for ten months over the admission of California. The threatened inequality in numbers of the free and slave states was the central subject of contention, and the Union seemed again in danger of disruption."—J. S. Loudon, *Const. Hist. and Gov't of the U. S.*, lect. 8.—"One day toward the close of January [January 29, 1850], Henry Clay rose from his chair in the Senate Chamber, and waving a roll of papers, with dramatic eloquence and deep feeling, announced to a hushed auditory that he held in his hand a series of resolutions proposing an amicable arrangement of all questions growing out of the subject of slavery. Read and explained by its author this plan of compromise was to admit California, and to establish territorial governments in New Mexico, and the other portions of the regions acquired from Mexico, without any provisions for or against slavery—to pay the debt of Texas and fix her western boundary—to declare that it was 'inexpedient' to abolish slavery in the District of Columbia, but 'expedient' to put some restrictions on the slave trade there, to pass a new and more stringent fugitive slave law, and to formally deny that Congress had any power to obstruct the slave trade between the States. Upon this plan of compromise and the modifications afterward made in it, began that long debate, since become historic, which engrossed the attention of Congress and the country for eight weary months. At the outset, many of those who had threatened 'Disunion,' opposed 'Clay's Compromise,' because it did not go far enough, while the 'Wilnot Proviso' men were equally resolute in opposing it, because it went too far. Seward with many other Northern Whigs, adhered to the 'President's Plan' [which simply favored the admission of California and New Mexico under constitutions which he had invited their people to frame], as being a much more just and speedy way of solving the problem. Avowing himself unterrified by the threats of 'Disunion,' he insisted that neither 'Compromise' nor the 'Fugitive Slave Law' was necessary, and that it was both the right and the duty of Congress to admit the Territories as free States, to abolish slavery in the District of Columbia, and the slave trade between the States. Southern feeling was predominant in the Senate Chamber, as it had been for many years. Neither of the two great parties was opposed to slavery, and the recognized leaders of both were men of Southern birth. . . . Mr. Clay's resolutions, unsatisfactory as they were, to anti-slavery men, at first met with objections from Southern members. One 'deeply regretted the admission that slavery did not exist in the territories.' Several would 'never assent to the doctrine that slaveholders could not go there, taking their property with them.' Some questioned the validity of the Mexican decree, abolishing slavery in New Spain, and doubted the constitutionality of any attempt on the part of Congress to exclude it. Prognostications of threatened 'Disunion' were

freely made. On the other hand, there began to be signs of a growing disposition, on the part of many Northern men, to give up the 'Proviso' for the sake of peace; and to follow the lead of Mr. Clay. Conservative Southern Whigs were quite ready to meet these half-way. Seward's position was regarded as 'ultra' by both classes; and it not infrequently happened that, on questions in the Senate relating to slavery, only three Senators, Seward, Chase, and Hale, would be found voting together, on one side, while all the other Senators present were arrayed against them, on the other. Newspapers, received from all parts of the country, showed that elsewhere, as well as at the capital, the proposed compromise was an engrossing topic. Great meetings were held at the North in support of it. State Legislatures took ground, for and against it. Fresh fuel was added to the heated discussion by a new 'Fugitive Slave Law,' introduced by Senator Mason of Virginia, and by the talk of Southern Conventions, and 'Secret Southern Conferences.' . . . March was an eventful month. Time enough had elapsed for each Senator to receive, from the press and people of his State, their response, in regard to Clay's proposed compromise. Resolutions pro and con had come from different Legislatures. . . . Each of the leaders in senatorial debate felt that the hour had come for him to declare whether he was for or against it. . . . Mr. Calhoun, though in failing health, obtained the floor for a speech. Everybody awaited it with great interest, regarding him as the acknowledged exponent of Southern opinion. . . . An expectant throng filled the Senate Chamber. His gaunt figure and attenuated features attested that he had risen from a sick bed; but his fiery eyes and unshaken voice showed he had no intention of abandoning the contest. In a few words he explained that his health would not permit him to deliver the speech he had prepared, but that 'his friend the Senator behind him (Mason) would read it for him.' Beginning by saying that he had 'believed from the first that the agitation of the subject of slavery would, if not prevented by some timely and effective measure, end in "disunion,"—the speech opposed Clay's plan of adjustment; attacked the President's plan; adverted to the growing feeling that the South could not remain in Union 'with safety and honor'; pointed out the gradual snapping, one after another, of the links which held the Union together, and expressed the most gloomy forebodings for the future. Three days later a similar, or greater, throng gathered to listen to Webster's great '7th of March speech,' which has ever since been recorded as marking an era in his life. He rose from his seat near the middle of the chamber, wearing his customary blue coat with metal buttons, and with one hand thrust into the buff vest, stood during his opening remarks, as impressive as a statue; but growing slightly more animated as he proceeded. Calm, clear, and powerful, his sonorous utterances, while they disappointed thousands of his friends at the North, lent new vigor to the 'Compromisers,' with whom, it was seen, he would henceforth act."—F. W. Seward, *Seventy at Washington*, 1846-1861, ch. 16.—The first and longer part of Mr. Webster's speech was an historical review of the slavery question, and an argument maintaining the proposition, as he afterwards

stated it in a few words, that there is "not a square rod of territory belonging to the United States the character of which, for slavery, or no slavery is not already fixed by some irrepealable law." The concluding part of his speech contained the passages which caused me grief among and gave most offense to his friends and admirers at the North. They are substantially comprised in the quotations following,—together with his eloquent declamation against the thought of secession: "Mr. President, in the excited times in which we live, there is found to exist a state of crimination and recrimination between the North and South. There are lists of grievances produced by each; and those grievances, real or supposed, alienate the minds of one portion of the country from the other, exasperate the feelings, and subdue the sense of fraternal affection, patriotic love, and mutual regard. I shall bestow a little attention, Sir, upon these various grievances existing on the one side and on the other, beginning with complaints of the South. I will, in answer, further than I have, the general statements of the honorable Senator from South Carolina, that the North has prospered at the expense of the South in consequence of the manner of administering this government, in the collecting of its revenues, and so forth. These are disputed topics, and I have no inclination to enter into them. But I will allude to other complaints of the South, and especially to one which has in my opinion just foundation; and that is, that there has been found at the North, among individuals and among legislators, a disinclination to perform fully their constitutional duties in regard to the return of persons bound to service who have escaped into the free States. In that respect, the South, in my judgment, is right, and the North is wrong. Every member of every Northern legislature is bound by oath, like every other officer in the country, to support the Constitution of the United States; and the article of the Constitution which says to these States that they shall deliver up fugitives from service is as binding in honor and conscience as any other article. No man fulfills his duty in any legislature who sets himself to find excuses, evasions, escapes from this constitutional obligation. I have always thought that the Constitution addressed itself to the legislatures of the States or to the States themselves. It says that those persons escaping to other States 'shall be delivered up,' and I confess I have always been of the opinion that it was an injunction upon the States themselves. When it is said that a person escaping into another State, and coming therefore within the jurisdiction of that State, shall be delivered up, it seems to me the import of the clause is, that the State itself, in obedience to the Constitution, shall cause him to be delivered up. That is my judgment. I have always entertained that opinion, and I entertain it now. But when the subject, some years ago, was before the Supreme Court of the United States, the majority of the judges held that the power to cause fugitives from service to be delivered up was a power to be exercised under the authority of this government. I do not know, on the whole, that it may not have been a fortunate decision. My habit is to respect the result of judicial deliberations and the solemnity of judicial decisions. As it now stands, the business of seeing

that these fugitives are delivered up resides in the power of Congress and the national judiciary, and my friend at the head of the Judiciary Committee has a bill on the subject now before the Senate, which with some amendments to it, I propose to support, with all its provisions, to the fullest extent. And I desire to call the attention of all sober-minded men at the North, of all conscientious men, of all men who are not carried away by some fanatical idea or some false impression, to their constitutional obligations. I put it to all the sober and sound minds at the North as a question of morals and a question of conscience. What right have they, in their legislative capacity or any other capacity, to endeavor to get round this Constitution, or to embarrass the free exercise of the rights secured by the Constitution to the persons whose slaves escape from them? None at all; none at all. Neither in the forum of conscience, nor before the face of the Constitution, are they, in my opinion, justified in such an attempt. . . . I repeat, therefore, Sir, that here is a well-founded ground of complaint against the North, which ought to be removed, which it is now in the power of the different departments of this government to remove; which calls for the enactment of proper laws authorizing the judicature of this government, in the several States, to do all that is necessary for the recapture of fugitive slaves and for their restoration to those who claim them. . . . Complaint has been made against certain resolutions that emanate from legislatures at the North, and are sent here to us, not only on the subject of slavery in this District, but sometimes recommending Congress to consider the means of abolishing slavery in the States. I should be sorry to be called upon to present any resolutions here which could not be referable to any committee or any power in Congress; and therefore I should be unwilling to receive from the legislature of Massachusetts any instructions to present resolutions expressive of any opinion whatever on the subject of slavery, as it exists at the present moment in the States, for two reasons; first, because I do not consider that the legislature of Massachusetts has anything to do with it; and next, because I do not consider that I, as her representative here, have anything to do with it. It has become, in my opinion, quite too common; and if the legislatures of the States do not like that opinion, they have a great deal more power to put it down than I have to uphold it; it has become in my opinion quite too common a practice for the State legislatures to present resolutions here on all subjects and to instruct us on all subjects. There is no public man that requires instruction more than I do, or who requires information more than I do, or desires it more heartily; but I do not like to have it in too imperative a shape. . . . Then Sir, there are the Abolition societies, of which I am unwilling to speak, but in regard to which I have very clear notions and opinions. I do not think them useful. I think their operations for the last twenty years have produced nothing good or valuable. At the same time, I believe thousands of their members to be honest and good men, perfectly well-meaning men. They have excited feelings; they think they must do something for the cause of liberty; and, in their sphere of action, they do not see what else they can do than to contribute to an Abolition press, or an Abolition society,

or to pay an Abolition lecturer. I do not mean to impute gross motives even to the leaders of these societies, but I am not blind to the consequences of their proceedings. I cannot but see what mischiefs their interference with the South has produced. And is it not plain to every man? Let any gentleman who entertains doubts on this point recur to the debates in the Virginia House of Delegates in 1832, and he will see with what freedom a proposition made by Mr. Jefferson Randolph for the gradual abolition of slavery was discussed in that body. Every one spoke of slavery as he thought; very ignominious and disparaging names and epithets were applied to it. The debates in the House of Delegates on that occasion, I believe, were all published. They were read by every colored man who could read, and to those who could not read, those debates were read by others. At that time Virginia was not unwilling or afraid to discuss this question, and to let that part of her population know as much of the discussion as they could learn. That was in 1832. As has been said by the honorable member from South Carolina, these Abolition societies commenced their course of action in 1835. It is said, I do not know how true it may be, that they sent incendiary publications into the slave States; at any rate, they attempted to arouse, and did arouse, a very strong feeling; in other words they created great agitation in the North against Southern slavery. Well, what was the result? The bonds of the slaves were bound more firmly than before, their rivets were more strongly fastened. Public opinion, which in Virginia had begun to be exhibited against slavery, and was opening out for the discussion of the question, drew back and shut itself up in its castle. I wish to know whether any body in Virginia can now talk openly as Mr. Randolph, Governor McDowell, and others talked in 1832, and sent their remarks to the press? We all know the fact, and we all know the cause; and everything that these agitating people have done has been, not to enlarge, but to restrain, not to set free, but to bind faster, the slave population of the South. Again, Sir, the violence of the Northern press is complained of. The press violent! Why, Sir, the press is violent everywhere. There are outrageous reproaches in the North against the South, and there are reproaches as vehement in the South against the North. Sir, the extremists of both parts of this country are violent; they mistake loud and violent talk for eloquence and for reason. They think that he who talks loudest reasons best. And this we must expect, when the press is free, as it is here, and I trust always will be. . . . Well, in all this I see no solid grievance, no grievance presented by the South, within the redress of the government, but the single one to which I have referred; and that is, the want of a proper regard to the injunction of the Constitution for the delivery of fugitive slaves. There are also complaints of the North against the South. I need not go over them particularly. The first and gravest is, that the North adopted the Constitution, recognizing the existence of slavery in the States, and recognizing the right, to a certain extent, of the representation of slaves in Congress, under a state of sentiment and expectation which does not now exist; and that, by events, by circumstances, by the eagerness of

the South to acquire territory and extend her slave population, the North finds itself, in regard to the relative influence of the South and the North, of the free States and the slave States, where it never did expect to find itself when they agreed to the compact of the Constitution. They complain, therefore, that, instead of slavery being regarded as an evil, as it was then, an evil which all hoped would be extinguished gradually, it is now regarded by the South as an institution to be cherished, and preserved, and extended; an institution which the South has already extended to the utmost of her power by the acquisition of new territory. Well, then, passing from that, every body in the North reads; and every body reads whatsoever the newspapers contain; and the newspapers, some of them, especially those presses to which I have alluded, are careful to spread about among the people every reproachful sentiment uttered by any Southern man bearing at all against the North; every thing that is calculated to exasperate and to alienate; and there are many such things, as every body will admit, from the South, or some portion of it, which are disseminated among the reading people; and they do exasperate, and alienate, and produce a most mischievous effect upon the public mind at the North. Sir, I would not notice things of this sort appearing in obscure quarters; but one thing has occurred in this debate which struck me very forcibly. An honorable member from Louisiana addressed us the other day on this subject. I suppose there is not a more amiable and worthy gentleman in this chamber, nor a gentleman who would be more slow to give offence to any body, and he did not mean in his remarks to give offence. But what did he say? Why, Sir, he took pains to run a contrast between the slaves of the South and the laboring people of the North, giving the preference, in all points of condition, and comfort, and happiness, to the slaves of the South. The honorable member, doubtless, did not suppose that he gave any offence, or did any injustice. He was merely expressing his opinion. But does he know how remarks of that sort will be received by the laboring people of the North? Why, who are the laboring people of the North? They are the whole North. They are the people who till their own farms with their own hands; freeholders, educated men, independent men. Let me say, Sir, that five sixths of the whole property of the North is in the hands of the laborers of the North; they cultivate their farms, they educate their children, they provide the means of independence. . . . There is a more tangible and irritating cause of grievance at the North. Free blacks are constantly employed in the vessels of the North, generally as cooks or stewards. When the vessel arrives at a Southern port, these free colored men are taken on shore, by the police or municipal authority, imprisoned, and kept in prison till the vessel is again ready to sail. This is not only irritating, but exceedingly unjustifiable and oppressive. Mr. Hoar's mission, some time ago, to South Carolina, was a well-intended effort to remove this cause of complaint. The North thinks such imprisonments illegal and unconstitutional; and as the cases occur constantly and frequently, they regard it as a great grievance. Now, Sir, so far as any of these grievances have their foundation

in matters of law, they can be redressed, and ought to be redressed; and so far as they have their foundation in matters of opinion, in sentiment, in mutual crimination and recrimination, all that we can do is to endeavor to allay the agitation, and cultivate a better feeling and more fraternal sentiments between the South and the North. Mr. President, I should much prefer to have heard from every member on this floor declarations of opinion that this Union could never be dissolved, than the declaration of opinion by any body, that, in any case, under the pressure of any circumstances, such a dissolution was possible. I hear with distress and anguish the word 'secession,' especially when it falls from the lips of those who are patriotic, and known to the country, and known all over the world, for their political services. Secession! Peaceable secession! Sir, your eyes and mine are never destined to see that miracle. The dismemberment of this vast country without convulsion! The breaking up of the fountains of the great deep without ruffling the surface! Who is so foolish, I beg every body's pardon, as to expect to see any such thing? Sir, he who sees these States, now revolving in harmony around a common centre, and expects to see them quit their places and fly off without convulsion, may look the next hour to see the heavenly bodies rush from their spheres, and jostle against each other in the realms of space, without causing the wreck of the universe. There can be no such thing as a peaceable secession. Peaceable secession is an utter impossibility. Is the great Constitution under which we live, covering this whole country, is it to be thawed and melted away by secession, as the snows on the mountain melt under the influence of a vernal sun, disappear almost unobserved, and run off? No, Sir! No, Sir! I will not state what might produce the disruption of the Union; but, Sir, I see as plainly as I see the sun in heaven what that disruption itself must produce; I see that it must produce war, and such a war as I will not describe, in its twofold character. Peaceable secession! Peaceable secession! The concurrent agreement of all the members of this great republic to separate! A voluntary separation, with alimony on one side and on the other. Why, what would be the result? Where is the line to be drawn? What States are to secede? What is to remain American? What am I to be? An American no longer? Am I to become a sectional man, a local man, a separatist, with no country in common with the gentlemen who sit around me here, or who fill the other house of Congress? Heaven forbid! Where is the flag of the republic to remain? Where is the eagle still to tower? or is he to cower, and shrink, and fall to the ground? Why, Sir, our ancestors, our fathers, and our grandfathers, those of them that are yet living amongst us with prolonged lives, would rebuke and reproach us; and our children and our grandchildren would cry out shame upon us, if we of this generation should dishonor these emblems of the power of the government and the harmony of that Union which is every day felt among us with so much joy and gratitude. . . . Sir, nobody can look over the face of this country at the present moment, nobody can see where its population is the most dense and growing, without being ready to admit, and compelled to admit, that ere long the strength of America

will be in the Valley of the Mississippi. Well, now, Sir, I beg to inquire what the wildest enthusiast has to say on the possibility of cutting that river in two, and leaving free States at its source and on its branches, and slave States down near its mouth, each forming a separate government? . . . To break up this great government! to dismember this glorious country! To astonish Europe with an act of folly such as Europe for two centuries has never beheld in any government or any people! No, Sir! no, Sir! There will be no secession! Gentlemen are not serious when they talk of secession."—Daniel Webster, *Works*, v. 5, p. 324.—"The speech, if exactly defined, is, in reality, a powerful effort, not for compromise or for the Fugitive Slave Law, or any other one thing, but to arrest the whole anti-slavery movement, and in that way put an end to the dangers which threatened the Union and restore lasting harmony between the jarring sections. It was a mad project. Mr. Webster might as well have attempted to stay the incoming tide at Marshfield with a rampart of sand as to seek to check the anti-slavery movement by a speech. Nevertheless, he produced a great effect. . . . The blow fell with terrible force, and here . . . we come to the real mischief which was wrought. The 7th of March speech demoralized New England and the whole North. The abolitionists showed by bitter anger the pain, disappointment, and dismay which this speech brought. The Free-Soil party quivered and sank for the moment beneath the shock. The whole anti-slavery movement recoiled. The conservative reaction which Mr. Webster endeavored to produce came and triumphed. Chiefly by his exertions the compromise policy was accepted and sustained by the country. The conservative elements everywhere rallied to his support, and by his ability and eloquence it seemed as if he had prevailed and brought the people over to his opinions. It was a wonderful tribute to his power and influence, but the triumph was hollow and short-lived. He had attempted to compass an impossibility. Nothing could kill the principles of human liberty, not even a speech by Daniel Webster, backed by all his intellect and knowledge, his eloquence and his renown. The anti-slavery movement was checked for the time, and pro-slavery democracy, the only other positive political force, reigned supreme. But amid the falling ruins of the Whig party, and the nascent success of the Native Americans, the party of human rights revived; and when it rose again, taught by the trials and misfortunes of 1850, it rose with a strength which Mr. Webster had never dreamed of."—H. C. Lodge, *Daniel Webster*, ch. 9.—"A public meeting in Faneuil Hall condemned the action of Webster. Theodore Parker, who was one of the principal speakers, said: 'I know no deed in American history done by a son of New England to which I can compare this but the act of Benedict Arnold. . . . The only reasonable way in which we can estimate this speech is as a bid for the presidency.' In the main, the Northern Whig press condemned the salient points of the speech. . . . Whittier, in a song of plaintive vehemence called 'Ichabod,' mourned for the 'fallen' statesman whose faith was lost, and whose honor was dead. . . . This was the instant outburst of opinion; but friends for Webster and his cause

came with more deliberate reflectiveness. . . . When the first excitement had subsided, the friends of Webster bestirred themselves, and soon testimonials poured in, approving the position which he had taken. The most significant of them was the one from eight hundred solid men of Boston, who thanked him for 'recalling us to our duties under the Constitution,' and for his 'broad national and patriotic views.' The tone of many of the Whig papers changed, some to positive support, others to more qualified censure. The whole political literature of the time is full of the discussion of this speech and its relation to the compromise. It is frequently said that a speech in Congress does not alter opinions; that the minds of men are determined by set political bias or sectional considerations. This was certainly not the case in 1850. Webster's influence was of the greatest weight in the passage of the compromise measures, and he is as closely associated with them as is their author. Clay's adroit parliamentary management was necessary to carry them through the various and tedious steps of legislation. But it was Webster who raised up for them a powerful and much-needed support from Northern public sentiment. At the South the speech was cordially received; the larger portion of the press commended it with undisguised admiration. . . . On the 11th of March, Seward spoke. . . . When Seward came to the territorial question, his words created a sensation. 'We hold,' he said, 'no arbitrary authority over anything, whether acquired lawfully or seized by usurpation. The Constitution regulates our stewardship; the Constitution devotes the domain (i. e. the territories not formed into States) to union, to justice, to defence, to welfare, and to liberty. But there is a higher law than the Constitution, which regulates our authority over the domain, and devotes it to the same noble purposes. The territory is a part, no inconsiderable part, of the common heritage of mankind, bestowed upon them by the Creator of the Universe. We are his stewards, and must so discharge our trust as to secure in the highest attainable degree their happiness.' This remark about 'a higher law,' while far inferior in rhetorical force to Webster's 'I would not take pains uselessly to reaffirm an ordinance of Nature, nor to re-enact the will of God,' was destined to have transcendent moral influence. A speech which can be condensed into an aphorism is sure to shape convictions. These, then, are the two maxims of this debate; the application of them shows the essential points of the controversy."—J. F. Rhodes, *History of the United States from the Compromise of 1850*, v. 1, ch. 2.—In the political controversies which accompanied and followed the introduction of the Compromise measures, the Whigs who supported the Compromise were called "Silver-Grays," or "Snuff-Takers," and those who opposed it were called "Woolly-Heads," or "Seward-Whigs."

A. D. 1850.—Mr. Clay's last compromise.—The Omnibus Bill.—The Fugitive Slave Law as passed.—On the 17th of April, "a select committee of the Senate, headed by Mr. Clay, reported a bill consisting of 39 sections, embodying most of the resolutions which had been discussed. From its all-comprehensive nature it was called the Omnibus Bill. The points comprehended in the omnibus bill were as

follows: 1st. When new states formed out of Texas present themselves, it shall be the duty of Congress to admit them; 2d. The immediate admission of California, with the boundaries which she has proposed; 3d. The establishment of territorial governments for Utah and New Mexico, without the Wilmot proviso; 4th. The combination of points 2 and 3 in one bill; 5th. The exclusion from Texas of all New Mexico, rendering therefor a pecuniary equivalent; 6th. The enactment of a law for the effectual rendition of fugitive slaves escaping into the free states; 7th. No interference with slavery in the District of Columbia, but the slave trade therein should be abolished, under heavy penalties. This bill was discussed until the last of July, and then passed by the Senate, but it had been so pruned by successive amendments that it contained only a provision for the organization of a territorial government for Utah. In this condition it was sent to the House. There, as a whole, the bill was rejected, but its main heads were passed in August as separate bills, and were designated the compromise measures of 1850, and, in their accepted shape, required: (1) Utah and New Mexico to be organized into territories, without reference to slavery; (2) California to be admitted as a free state; (3) \$10,000,000 to be paid to Texas for her claim to New Mexico; (4) fugitive slaves to be returned to their masters; and (5) the slave trade to be abolished in the District of Columbia. The compromises were received by the leaders of the two great parties as a final settlement of the vexed questions which had so long troubled Congress and agitated the country, but the storm was only temporarily allayed. In accordance with these measures California became a state of the Union September 9, 1850. The most important feature of this bill, in its bearing upon future struggles and conflicts, was the fugitive slave law. . . . In the midst of the discussion of these topics occurred the death of the President, July 9, 1850, one year and four months after his inauguration. . . . Mr. Fillmore was inaugurated on the 10th of July, 1850. He departed from the policy of his predecessor, organized a new cabinet, used his influence in favor of the compromise measures," and gave his signature to the Fugitive Slave Law.—W. R. Houghton, *Hist. of Am. Politics*, ch. 15.—"It was apparent to every one who knew anything of the sentiments of the North that this law could not be executed to any extent. Seward had truly said that if the South wished their runaway negroes returned they must alleviate, not increase, the rigors of the law of 1793; and to give the alleged fugitive a jury trial, as Webster proposed, was the only possible way to effect the desired purpose. If we look below the surface we shall find a strong impelling motive of the Southern clamor for this harsh enactment other than the natural desire to recover lost property. Early in the session it took air that a part of the game of the disunionists was to press a stringent fugitive slave law, for which no Northern man could vote; and when it was defeated, the North would be charged with refusing to carry out a stipulation of the Constitution. Douglas stated in the Senate that while there was some ground for complaint on the subject of surrender of fugitives from service, it had been greatly exaggerated. The excitement and virulence were not along the

line bordering on the free and slave States, but between Vermont and South Carolina, New Hampshire and Alabama, Connecticut and Louisiana. Clay gave vent to his astonishment that Arkansas, Louisiana, Georgia, and South Carolina, States which very rarely lost a slave, demanded a stricter law than Kentucky, which lost many. After the act was passed Senator Butler, of South Carolina, said: "I would just as soon have the law of 1793 as the present law, for any purpose, so far as regards the reclamation of fugitive slaves;" and another Southern ultra never thought it would be productive of much good to his section. Six months after the passage of the law, Seward expresses the matured opinion 'that political ends—merely political ends—and not real evils, resulting from the escape of slaves, constituted the prevailing motives to the enactment.'—J. F. Rhodes, *History of the U. S. from the Compromise of 1850*, ch. 2 (v. 1).—"The fugitive-slave law was to make the citizens of the Free States do for the slave-holders what not a few of the slave-holders were too proud to do for themselves. Such a law could not but fail. But then it would increase the exasperation of the slave-holders by its failure, while exasperating the people of the Free States by the attempts at enforcement. Thus the compromise of 1850, instead of securing peace and harmony, contained in the most important of its provisions the seeds of new and greater conflicts. One effect it produced which Calhoun had clearly predicted when he warned the slave-holding states against compromises as an invention of the enemy: it adjourned the decisive conflict until the superiority of the North over the South in population and material resources was overwhelming."—C. Schurz, *Life of Henry Clay*, ch. 26 (v. 2).

The following is the complete text of the Fugitive Slave Law:

"An act to amend, and supplementary to, the Act entitled 'An Act respecting Fugitives from Justice, and Persons escaping from the Service of their Masters,' approved February twelfth, one thousand seven hundred and ninety-three.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the persons who have been, or may hereafter be, appointed commissioners, in virtue of any act of Congress, by the Circuit Courts of the United States, and who, in consequence of such appointment, are authorized to exercise the powers that any justice of the peace, or other magistrate of any of the United States, may exercise in respect to offenders for any crime or offence against the United States, by arresting, imprisoning, or bailing the same under and by virtue of the thirty-third section of the act of the twenty-fourth of September seventeen hundred and eighty-nine, entitled 'An Act to establish the judicial courts of the United States,' shall be, and are hereby, authorized and

required to exercise and discharge all the powers and duties conferred by this act.

Sec. 2. And be it further enacted, That the Superior Court of each organized Territory of the United States shall have the same power to appoint commissioners to take acknowledgments of bail and affidavits, and to take depositions of witnesses in civil causes, which is now possessed by the Circuit Court of the United States; and all commissioners who shall hereafter be appointed for such purposes by the Superior Court of any organized Territory of the United States, shall possess all the powers, and exercise all the duties, conferred by law upon the commissioners appointed by the Circuit Courts of the United States for similar purposes, and shall moreover exercise and discharge all the powers and duties conferred by this act.

Sec. 3. And be it further enacted, That the Circuit Courts of the United States, and the Superior Courts of each organized Territory of the United States, shall from time to time enlarge the number of commissioners, with a view to afford reasonable facilities to reclaim fugitives from labor, and to the prompt discharge of the duties imposed by this act.

Sec. 4. And be it further enacted, That the commissioners above named shall have concurrent jurisdiction with the judges of the Circuit and District Courts of the United States, in their respective circuits and districts within the several States, and the judges of the Superior Courts of the Territories, severally and collectively, in term-time and vacation; and shall grant certificates to such claimants, upon satisfactory proof being made, with authority to take and remove such fugitives from service or labor, under the restrictions herein contained, to the State or Territory from which such persons may have escaped or fled.

Sec. 5. And be it further enacted, That it shall be the duty of all marshals and deputy marshals to obey and execute all warrants and precepts issued under the provisions of this act, when to them directed; and should any marshal or deputy marshal refuse to receive such warrant, or other process, when tendered, or to use all proper means diligently to execute the same, he shall, on conviction thereof, be fined in the sum of one thousand dollars, to the use of such claimant, on the motion of such claimant by the Circuit or District Court for the district of such marshal; and after arrest of such fugitive, by such marshal or his deputy, or whilst at any time in his custody under the provisions of this act, should such fugitive escape, whether with or without the assent of such marshal or his deputy, such marshal shall be liable, on his official bond, to be prosecuted for the benefit of such claimant, for the full value of the service or labor of said fugitive in the State, Territory, or District whence he escaped: and the better to enable the said commissioners, when thus appointed, to execute their duties faithfully and efficiently, in conformity with the requirements of the Constitution of the United States and of this act, they are hereby authorized and empowered, within their counties respectively, to appoint, in writing under their hands, any one or more suitable persons, from time to time, to execute all such warrants and other process as may be issued by them in the lawful performance of their respective duties; with authority to such commissioners, or the

persons to be appointed by them, to execute; recess as aforesaid, to summon and call to their aid the bystanders, or posse comitatus of the proper county, when necessary to insure a faithful observance of the clause of the Constitution referred to, in conformity with the provisions of this act; and all good citizens are hereby commanded to aid and assist in the prompt and efficient execution of this law, whenever their services may be required, as aforesaid, for that purpose; and said warrants shall run, and be executed by said officers, anywhere in the State within which they are issued.

Sec. 6. And be it further enacted, That when a person held to service or labor in any State or Territory of the United States, has heretofore or shall hereafter escape into another State or Territory of the United States, the person or persons to whom such service or labor may be due, or his, her, or their agent or attorney, duly authorized, by power of attorney, in writing, acknowledged and certified under the seal of some legal officer or court of the State or Territory in which the same may be executed, may pursue and reclaim such fugitive person, either by procuring a warrant from some one of the courts, judges, or commissioners aforesaid, of the proper circuit, district, or county, for the apprehension of such fugitive from service or labor, or by seizing and arresting such fugitive, where the same can be done without process, and by taking, or causing such person to be taken, forthwith before such court, judge, or commissioner, whose duty it shall be to hear and determine the case of such claimant in a summary manner; and upon satisfactory proof being made, by deposition or affidavit, in writing, to be taken and certified by such court, judge, or commissioner, or by other satisfactory testimony, duly taken and certified by some court, magistrate, justice of the peace, or other legal officer authorized to administer an oath and take depositions under the laws of the State or Territory from which such person owing service or labor may have escaped, with a certificate of such magistracy or other authority, as aforesaid, with the seal of the proper court or officer thereto attached, which seal shall be sufficient to establish the competency of the proof, and with proof, also by affidavit, of the identity of the person whose service or labor is claimed to be due as aforesaid, that the person so arrested does in fact owe service or labor to the person or persons claiming him or her, in the State or Territory from which such fugitive may have escaped as aforesaid, and that said person escaped, to make out and deliver to such claimant, his or her agent or attorney, a certificate setting forth the substantial facts as to the service or labor due from such fugitive to the claimant, and of his or her escape from the State or Territory in which such service or labor was due, to the State or Territory in which he or she was arrested, with authority to such claimant, or his or her agent or attorney, to use such reasonable force and restraint as may be necessary, under the circumstances of the case, to take and remove such fugitive person back to the State or Territory whence he or she may have escaped as aforesaid. In no trial or hearing under this act shall the testimony of such alleged fugitive be admitted in evidence; and the certificates in this and the first [fourth] section mentioned, shall be conclusive of the right of the person or persons in

whose favor granted, to remove such fugitive to the State or Territory from which he escaped, and shall prevent all molestation of such person or persons by any process issued by any court, judge, magistrate, or other person whomsoever.

Sec. 7. And be it further enacted, That any person who shall knowingly and willingly obstruct, hinder, or prevent such claimant, his agent or attorney, or any person or persons lawfully assisting him, her, or them, from arresting such a fugitive from service or labor, either with or without process as aforesaid, or shall rescue, or attempt to rescue, such fugitive from service or labor, from the custody of such claimant, his or her agent or attorney, or other person or persons lawfully assisting as aforesaid, when so arrested, pursuant to the authority herein given and declared; or shall aid, abet, or assist such person so owing service or labor as aforesaid, directly or indirectly, to escape from such claimant, his agent or attorney, or other person or persons legally authorized as aforesaid; or shall harbor or conceal such fugitive, so as to prevent the discovery and arrest of such person, after notice or knowledge of the fact that such person was a fugitive from service or labor as aforesaid, shall, for either of said offences, be subject to a fine not exceeding one thousand dollars, and imprisonment not exceeding six months, by indictment and conviction before the District Court of the United States for the district in which such offence may have been committed, or before the proper court of criminal jurisdiction, if committed within any one of the organized Territories of the United States; and shall moreover forfeit and pay, by way of civil damages to the party injured by such illegal conduct, the sum of one thousand dollars, for each fugitive so lost as aforesaid, to be recovered by action of debt, in any of the District or Territorial Courts aforesaid, within whose jurisdiction the said offence may have been committed.

Sec. 8. And be it further enacted, That the marshals, their deputies, and the clerks of the said District and Territorial Courts, shall be paid, for their services, the like fees as may be allowed to them for similar services in other cases; and where such services are rendered exclusively in the arrest, custody, and delivery of the fugitive to the claimant, his or her agent or attorney, or where such supposed fugitive may be discharged out of custody for the want of sufficient proof as aforesaid, then such fees are to be paid in the whole by such claimant, his agent or attorney; and in all cases where the proceedings are before a commissioner, he shall be entitled to a fee of ten dollars in full for his services in each case, upon the delivery of the said certificate to the claimant, his or her agent or attorney; or a fee of five dollars in cases where the proof shall not, in the opinion of such commissioner, warrant such certificate and delivery, inclusive of all services incident to such arrest and examination, to be paid, in either case, by the claimant, his or her agent or attorney. The person or persons authorized to execute the process to be issued by such commissioners for the arrest and detention of fugitives from service or labor as aforesaid, shall also be entitled to a fee of five dollars each for each person he or they may arrest and take before any such commissioner as aforesaid, at the instance and request of such claimant, with such other

fees as may be deemed reasonable by such commissioner for such other additional services as may be necessarily performed by him or them; such as attending at the examination, keeping the fugitive in custody, and providing him with food and lodging during his detention, and until the final determination of such commissioner; and, in general, for performing such other duties as may be required by such claimant, his or her attorney or agent, or commissioner in the premises, such fees to be made up in conformity with the fees usually charged by the officers of the courts of justice within the proper district or county, as near as may be practicable, and paid by such claimants, their agents or attorneys, whether such supposed fugitives from service or labor be ordered to be delivered to such claimants by the final determination of such commissioners or not.

Sec. 9. And be it further enacted, That, upon affidavit made by the claimant of such fugitive, his agent or attorney, after such certificate has been issued, that he has reason to apprehend that such fugitive will be rescued by force from his or their possession before he can be taken beyond the limits of the State in which the arrest is made, it shall be the duty of the officer making the arrest to retain such fugitive in his custody, and to remove him to the State whence he fled, and there to deliver him to said claimant, his agent, or attorney. And to this end, the officer aforesaid is hereby authorized and required to employ so many persons as he may deem necessary to overcome such force, and to retain them in his service so long as circumstances may require. The said officer and his assistants, while so employed, to receive the same compensation, and to be allowed the same expenses, as are now allowed by law for transportation of criminals, to be certified by the judge of the district within which the arrest is made, and paid out of the treasury of the United States.

Sec. 10. And be it further enacted, That when any person held to service or labor in any State or Territory, or in the District of Columbia, shall escape therefrom, the party to whom such service or labor shall be due, his, her, or their agent or attorney, may apply to any court of record therein, or judge thereof in vacation, and make satisfactory proof to such court, or judge in vacation, of the escape aforesaid, and that the person escaping owed service or labor to such party. Whereupon the court shall cause a record to be made of the matters so proved, and also a general description of the person so escaping, with such convenient certainty as may be; and a transcript of such record, authenticated by the attestation of the clerk and of the seal of the said court, being produced in any other State, Territory, or district in which the person so escaping may be found, and being exhibited to any judge, commissioner, or other officer authorized by the law of the United States to cause persons escaping from service or labor to be delivered up, shall be held and taken to be full and conclusive evidence of the fact of escape, and that the service or labor of the person escaping is due to the party in such record mentioned. And upon the production by the said party of other and further evidence if necessary, either oral or by affidavit, in addition to what is contained in the said record of the identity of the person escaping, he or she shall be delivered up to the claimant.

And the said court, commissioner, judge, or other person authorized by this act to grant certificates to claimants of fugitives, shall, upon the production of the record and other evidences aforesaid, grant to such claimant a certificate of his right to take any such person identified and proved to be owing service or labor as aforesaid, which certificate shall authorize such claimant to seize or arrest and transport such person to the State or Territory from which he escaped: Provided, That nothing herein contained shall be construed as requiring the production of a transcript of such record as evidence as aforesaid. But in its absence the claim shall be heard and determined upon other satisfactory proofs, competent in law.

Approved, September 18, 1850."—*Statutes at Large*, ix. 402-405.

A. D. 1850-1851.—The Hulsemann Letter.—Kossuth in America.—In July, 1850, Daniel Webster became Secretary of State in the cabinet of President Fillmore and retained that post until his death, in October, 1852. "The best-known incident of this period was that which gave rise to the famous 'Hulsemann letter.' President Taylor had sent an agent to Hungary to report upon the condition of the revolutionary government, with the intention of recognizing it if there were sufficient grounds for doing so. When the agent arrived, the revolution was crushed, and he reported to the President against recognition. These papers were transmitted to the Senate in March, 1850. Mr. Hulsemann, the Austrian Chargé, thereupon complained of the action of our administration, and Mr. Clayton, then Secretary of State, replied that the mission of the agent had been simply to gather information. On receiving further instructions from his government, Mr. Hulsemann rejoined to Mr. Clayton, and it fell to Mr. Webster to reply, which he did on December 21, 1850. The note of the Austrian Chargé was in a hectoring and highly offensive tone, and Mr. Webster felt the necessity of administering a sharp rebuke. 'The Hulsemann letter,' as it was called, was, accordingly dispatched. It set forth strongly the right of the United States and their intention to recognize any de facto revolutionary government, and to seek information in all proper ways in order to guide their action. . . . Mr. Webster had two objects. One was to awaken the people of Europe to a sense of the greatness of this country, the other to touch the national pride at home. He did both. . . . The affair did not, however, end here. Mr. Hulsemann became very mild, but he soon lost his temper again. Kossuth and the refugees in Turkey were brought to this country in a United States frigate. The Hungarian hero was received with a burst of enthusiasm that induced him to hope for substantial aid, which was, of course, wholly visionary. The popular excitement made it difficult for Mr. Webster to steer a proper course, but he succeeded, by great tact, in showing his own sympathy, and, so far as possible, that of the government, for the cause of Hungarian independence and for its leader, without going too far. . . . Mr. Webster's course, . . . although carefully guarded, aroused the ire of Mr. Hulsemann, who left the country, after writing a let-

ter of indignant farewell to the Secretary of State."—H. C. Lodge, *Daniel Webster*, ch. 10.

A. D. 1852.—Appearance of the Know Nothing or American Party.—"A new party had by this time risen to active importance in American politics. It appeared in 1852, in the form of a secret, oath-bound organization, of whose name, nature, and objects nothing was told even to its members until they had reached its higher degrees. Their consequent declaration that they knew nothing about it gave the society its popular name: Know Nothings. It accepted the name of the American Party. Its design was to oppose the easy naturalization of foreigners, and to aid the election of native-born citizens to office. Its nominations were made by secret conventions of delegates from the various lodges, and were voted for by all members under penalty of expulsion in case of refusal. At first, by endorsing the nominations of one or other of the two great parties, it decided many elections. After the passage of the Kansas-Nebraska Bill, the Know Nothing organization was adopted by many Southern Whigs who were unwilling to unite with the Democracy, and became, for a time, a national party. It carried nine of the State elections in 1855, and in 1856 nominated Presidential candidates. After that time its Southern members gradually united with the Democracy, and the Know Nothing party disappeared from politics."—A. Johnston, *Hist. of Am. Politics*, 2d ed., ch. 18, sect. 4.—The ritual, rules, etc., of the American, or Know Nothing party are given in the following work.—T. V. Cooper, *American Politics*, pp. 56-68.

ALSO IN: A. Holmes, *Parties and their Principles*, pp. 287-295.

A. D. 1852.—Seventeenth Presidential Election.—Franklin Pierce.—"The question of slavery, in its comprehensive bearings, formed the turning point in the presidential canvass of 1852. . . . The national democratic convention which nominated Mr. Pierce, unanimously adopted a platform approving the compromise of 1850 as the final decision of the slavery question. The whig party were widely divided on the question of acquiescence in the compromise measures, and still more at variance in regard to the claims of rival candidates for the presidency. Mr. Seward's friends in the free states united in the support of General Scott, who had, to a considerable extent, stood aloof from the agitations of the last few years. On the other hand, the exclusive supporters of the compromise, as a condition of party allegiance, were divided between Millard Fillmore, at that time acting president, and Daniel Webster, secretary of state. The whig convention met in Baltimore on the 17th of June, 1852, two weeks after the democratic convention, and nominated General Scott as their candidate for president. A large majority of the delegates from New York, and a considerable number from other states, maintained their opposition to the test resolutions which were proposed by the other branch of the party. These resolutions, however, were adopted, and a platform was thus established resembling, in its main features, that of the democrats. . . . Supported by several advocates

of this new platform on the ground of his personal popularity, General Scott received the nomination. He was, however, regarded with great suspicion by a large number of whigs in the slaveholding states. . . . Many ardent friends of the compromise . . . refused to rally around General Scott, distrusting his fidelity to the compromise platform; while a large number of the whigs of the free states, through aversion to the platform, assumed a neutral position or gave their support to a third candidate. Another portion of the whig party nominated Mr. Webster, who died [October 24, 1852], not only refusing to decline the nomination, but openly avowing his disgust with the action of the party."—G. E. Baker, *Memoir of Wm. H. Seward* (*Seward's Works*, v. 4).—"The Democratic convention was held, first, on June 1, 1852, at Baltimore. It was a protracted convention, for it did not adjourn until the 6th of the month, but it was not very interesting. . . . After a short contest, the two-thirds rule was adopted by an overwhelming majority. The struggle under the nomination was protracted. On the first ballot, General Cass had 116; James Buchanan, 93; William L. Marcy, 27; Stephen A. Douglas, 20; Joseph Lane, 13; Samuel Houston, 8; and there were 4 scattering. The number necessary to a choice was 188. . . . On the twenty-ninth trial, the votes were: for Cass, 27; for Buchanan, 43; for Douglas, 91; and no other candidate had more than 26. At this point Cass began to recover his strength, and reached his largest number on the thirty-fifth trial, namely, 131. On that same ballot, Virginia gave 15 votes to Franklin Pierce. Mr. Pierce gained 15 more votes on the thirty-sixth trial; but at that point his increase ceased, and was then slowly resumed, as the weary repetition of balloting without effect went on. The forty-eighth trial resulted as follows: for Cass, 73; for Buchanan, 28; for Douglas, 33; for Marcy, 90; for Pierce, 55; for all others, 8. The forty-ninth trial was the last. There was a 'stampede' for Pierce, and he received 282 votes to 6 for all others. Ten candidates were voted for as a candidate for the vice-presidency. . . . On the second ballot, William R. King of Alabama was unanimously nominated. . . . The anti-slavery organization, the Free Soil Democrats, though a much less important political factor than they had been four years earlier, held their convention in Pittsburg on August 11. Henry Wilson of Massachusetts presided. John P. Hale of New Hampshire was nominated for President, and George W. Julian of Indiana for Vice-President. . . . The canvass was not a very spirited one. All the early autumn elections were favorable to the Democrats, and the result in November was a crushing defeat of the Whigs in the popular vote and one still more decisive in the electoral vote. . . . The popular and electoral votes were as follows." Popular vote: Franklin Pierce, 1,601,274; Winfield Scott, 1,386,530; John P. Hale, 155,825. Electoral vote: Pierce, 254; Scott, 42.—E. Stanwood, *Hist. of Presidential Elections*, ch. 18.

A. D. 1852.—The appearance of Uncle Tom's Cabin, and its effect.—"Of the literary forces that aided in bringing about the immense revolution in public sentiment between 1852 and 1860, we may affirm with confidence that by far the most weighty was the influence spread by this book. This story, when published [1851-2]

as a serial in the 'National Era,' an anti-slavery newspaper at Washington, attracted little attention, but after it was given to the world in book form in March, 1852, it proved the most successful novel ever written. The author felt deeply that the Fugitive Slave law was unjust, and that there was cruelty in its execution; this inspired her to pour out her soul in a protest against slavery. She thought that if she could only make the world see slavery as she saw it, her object would be accomplished; she would then have induced people to think right on the subject. The book was composed under the most disheartening circumstances. Worn out with the care of many young children; overstrained by the domestic trials of a large household, worried because her husband's small income did not meet their frugal needs; eking out the poor professor's salary by her literary work in a house too small to afford a study for the author—under such conditions there came the inspiration of her life. . . . The effect produced by the book was immense. Whittier offered up 'thanks for the Fugitive Slave law; for it gave occasion for Uncle Tom's Cabin.' Longfellow thought it was one of the greatest triumphs in literary history, but its moral effect was a higher triumph still. Lowell described the impression which the book made as a 'whirl of excitement.' Chouteau is reported to have said: 'That book will make two millions of abolitionists.' Garrison wrote the author: 'All the defenders of slavery have let me alone and are abusing you.'—J. F. Rhodes, *Hist. of the U. S. from 1850*, v. 1, pp. 278-280.—Writing only nine months after the publication of "Uncle Tom's Cabin," C. F. Briggs, in Putnam's Monthly Magazine, said: "Never since books were first printed has the success of Uncle Tom been equalled; the history of literature contains nothing parallel to it, nor approaching it; it is, in fact, the first real success in bookmaking, for all other successes in literature were failures when compared with the success of Uncle Tom. . . . There have been a good many books which were considered popular on their first appearance, which were widely read and more widely talked about. But what were they all, compared with Uncle Tom, whose honest countenance now overshadows the reading world, like the dark cloud with a silver lining. Don Quixote was a popular book on its first coming out, and so was Gil Blas, and Richardson's Pamela, and Fielding's Tom Jones, and Hannah More's Celebs, and Gibbon's Decline and Fall; and so were the Vicar of Wakefield, and Rasselas, and the Tale of a Tub, and Evelina, the Lady of the Lake, Waverley, the Sorrows of Werter, Childe Harold, the Spy, Pelham, Vivian Grey, Pickwick, the Mysteries of Paris, and Macaulay's History. These are among the most famous books that rose suddenly in popular esteem on their first appearance, but the united sale of the whole of them, within the first nine months of their publication, would not equal the sale of Uncle Tom in the same time. . . . It is but nine months since this Illud of the blacks, as an English reviewer calls Uncle Tom, made its appearance among books, and already its sale has exceeded a million of copies; author and publisher have made fortunes out of it, and Mrs. Stowe, who was before unknown, is as familiar a name in all parts of the civilized world as that of Homer or Shakspeare. Nearly 200,000 copies of the first edition of the

work have been sold in the United States, and the publishers say they are unable to meet the growing demand. The book was published on the 20th of last March, and on the 1st of December there had been sold 120,000 sets of the edition in two volumes, 50,000 copies of the cheaper edition in one, and 3,000 copies of the costly illustrated edition. . . . They [the publishers] have paid to the author \$20,300 as her share of the profits on the actual cash sales of the first nine months. But it is in England where Uncle Tom has made his deepest mark. Such has been the sensation produced by the book there, and so numerous have been the editions published, that it is extremely difficult to collect the statistics of its circulation with a tolerable degree of exactness. But we know of twenty rival editions in England and Scotland, and that millions of copies have been produced. . . . We have seen it stated that there were thirty different editions published in London, within six months of the publication of the work here, and one firm keeps 400 men employed in printing and binding it. . . . Uncle Tom was not long in making his way across the British Channel, and four rival editions are claiming the attention of the Parisians, one under the title of 'le Père Tom,' and another of 'la Case de l'Oncle Tom.'—*Uncle Tomitudes (Putnam's Monthly Mag., Jan., 1853)*.—"In May, 1852, Whitier wrote to Garrison: 'What a glorious work Harriet Beecher Stowe has wrought. Thanks for the Fugitive Slave Law. Better for slavery that that law had never been enacted, for it gave occasion for Uncle Tom's Cabin.' . . . Macaulay wrote, thanking her for the volume, assuring her of his high respect for the talents and for the benevolence of the writer. Four years later, the same illustrious author, essayist, and historian wrote to Mrs. Stowe: 'I have just returned from Italy, where your fame seems to throw that of all other writers into the shade. There is no place where Uncle Tom, transformed into Il Zio Tom, is not to be found.' From Lord Carlisle she received a long and earnest epistle, in which he says he felt that slavery was by far the 'topping' question of the world and age, and that he returned his 'deep and solemn thanks to Almighty God, who has led and enabled you to write such a book.' The Rev. Charles Kingsley, in the midst of illness and anxiety, sent his thanks, saying: 'Your book will do more to take away the reproach from your great and growing nation than many platform agitations and speechifying.' Said Lord Palmerston, 'I have not read a novel for thirty years; but I have read that book three times, not only for the story, but for the statesmanship of it.' Lord Cockburn declared: 'She has done more for humanity than was ever before accomplished by any single book of fiction.' Within a year Uncle Tom's Cabin was scattered all over the world. Translations were made into all the principal languages, and into several obscure dialects, in number variously estimated at a twenty to forty. The librarian of the British Museum, with an interest and enterprise which might well put our own countrymen to blush, has made a collection which is unique and very remarkable in the history of books. American visitors may see there thirty-five editions (Uncle Tom's Cabin) of the original English, and the complete text, and eight of abridgments and adaptations. Of translations into different languages there are nineteen, viz.:

Armenian, one; Bohemian, one; Danish, two distinct versions; Dutch, one; Finnish, one; French, eight distinct versions, and two dramas; German, five distinct versions, and four abridgments; Hungarian, one complete version, one for children, and one versified abridgment; Illyrian, two distinct versions; Italian, one; Polish, two distinct versions; Portuguese, one; Roman, or modern Greek, one; Russian, two distinct versions; Spanish, six distinct versions; Swedish, one; Wallachian, two distinct versions; Welsh, three distinct versions."—Mrs. F. T. McCray, *Uncle Tom's Cabin (Mag. of Am. Hist., Jan., 1860)*.

A. D. 1854.—The Kansas-Nebraska Bill.—Repeal of the Missouri Compromise.—The doctrine of "Squatter Sovereignty."—"The slavery agitation apparently had died away both in congress and throughout the country. This calm, however, was doomed to a sudden interruption. The prospect of . . . beneficent legislation was destroyed by the introduction of a measure which at once supplanted all other subjects in congress and in the political interests of the people. This was the novel and astounding proposal of Mr. Douglas [Senator Stephen A. Douglas, of Illinois], in relation to the Kansas and Nebraska territories. . . . The measure . . . alluded to . . . was a provision in the bill for the organization of a territory in Nebraska, declaring that the states which might at any future time be formed in the new territory should leave the question of slavery to be decided by the inhabitants thereof on the adoption of their constitution,—[this being in accordance with the doctrine which its advocates styled 'Popular Sovereignty,' but which took the commoner name of 'Squatter Sovereignty' from its opponents]. This provision was, as explained by the bill itself, the application of the compromise policy of 1850 to Nebraska, and, as was evident, virtually repealed the Missouri Compromise of 1820, which guaranteed that slavery should be forever excluded from the territory in question. But, in order to bring the supporters of the bill and its opponents to a more decided test, an amendment was moved expressly annulling that portion of the Missouri Compromise which related to the subject. Mr. Douglas, after some deliberation, accepted the amendment, and modified his plan so far as to introduce a new bill for the organization of Nebraska and Kansas within the same limits, instead of the territory of Nebraska alone, according to the original programme. The administration lost no time in adopting this policy as their own. It was at first proposed to hasten the passage of the bill through both houses so rapidly as to prevent any remonstrance on the part of the people. But the opponents of the measure, including Mr. Seward, Mr. Chase, Mr. Sumner, Mr. Truman Smith, Mr. Wade, Mr. Everett, Mr. Bell, Mr. Houston, and Mr. P. S. Pender, combined against it such an earnest and effective resistance that the attention of the country was aroused, and an indignant protest called forth from the people of the free states. The bill, however, passed the senate on the 4th day of March, 1854, after a discussion which had occu-

pled nearly every day of the session since the 23d of January. . . . On the 21st of March, Mr. Richardson of Illinois, in the house, moved to refer the bill, as it came from the senate, to the committee on territories, of which he was the chairman. Mr. Francis B. Cutting, of New York, moved that it be sent to the committee of the whole, where it could be freely discussed. His motion was carried, after a severe struggle, by a vote of 110 to 95. This was regarded as a triumph of the enemies of the bill and inspired hopes of its ultimate defeat in the house. On the 23d of May, after a most exciting contest, lasting nearly two months, in committee of the whole, Mr. Alex. H. Stephens of Georgia, by an extraordinary stratagem in parliamentary tactics, succeeded in closing the debate and bringing the bill to a vote in the house, where it finally passed, before adjournment, by a vote of 113 to 100." Returned to the senate, on account of amendments which had been made to it, it passed that body again "by vote of 35 to 13; and amid the firing of cannon and the shouting of its friends, it was sent to the president for his signature, at three o'clock in the morning of May 2d, 1854. President Pierce promptly gave it his approval, and the odious measure became the law of the land. Thus was abrogated the Missouri Compromise—a law enacted thirty years before with all the solemnity of a compact between the free and the slave states—and a territory as large as the thirteen original states opened to slavery. The act was consummated by the cooperation of the north. Originating with a senator from a free state, it was passed by a congress containing in each branch a majority of members from the free states, and was sanctioned by the approval of a free state president. The friends of this legislation attempted to defend it on the pretence that it was not an original act, but only declaratory of the true intent and significance of the compromise measures of 1850."—G. E. Baker, *Memoir of William H. Seward* (v. 4 of *Seward's Works*), pp. 24-27.—Senator Douglas' explanation of the reasons on which he grounded his Kansas-Nebraska Bill is given in a report made by Lieutenant-Colonel Cutts, of conversations held by him with the Senator in 1859, and taken down in writing at the time, in the exact language of Mr. Douglas. "There was," said Senator Douglas, "a necessity for the organization of the Territory, which could no longer be denied or resisted. . . . Mr. Douglas, as early as the session of 1843, had introduced a bill to organize the Territory of Nebraska, for the purpose of opening the line of communication between the Mississippi Valley and our possessions on the Pacific Ocean, known as the Oregon country, and which was then under the operation of the treaty of joint occupation, or rather nonoccupation, with England, and was rapidly passing into the exclusive possession of the British Hudson's Bay Fur Company, who were establishing posts at every prominent and commanding point in the country. . . . Mr. Douglas renewed the introduction of his bill for the organization of Nebraska Territory, each session of Congress, from 1844 to 1854, a period of ten years, and while he had failed to secure the passage of the act, in consequence of the Mexican war intervening, and the slavery agitation which ensued, no one had objected to it upon the ground that there was no necessity for

the organization of the Territory. During the discussions upon our Territorial questions during this period, Mr. Douglas often called attention to the fact that a line of policy had been adopted many years ago, and was being executed each year, which was entirely incompatible with the growth and development of our country. It had originated as early as the administration of Mr. Monroe, and had been continued by Mr. Adams, General Jackson, Mr. Van Buren, Harrison, and by Tyler, by which treaties had been made with the Indians to the east of the Mississippi River, for their removal to the country bordering upon the States west of the Mississippi or Missouri Rivers, with guaranties in said treaties that the country within which these Indians were located should never be embraced within any Territory or State, or subjected to the jurisdiction of either, so long as grass should grow and water should run. These Indian settlements, thus secured by treaty, commenced upon the northern borders of Texas, or Red River, and were continued from year to year westward, until when, in 1844, Mr. Douglas introduced his first Nebraska Bill, they had reached the Nebraska or Platte River, and the Secretary of War was then engaged in the very act of removing Indians from Iowa, and settling them in the valley of the Platte River, with similar guaranties of perpetuity, by which the road to Oregon was forever to be closed. It was the avowed object of this Indian policy to form an Indian barrier on the western borders of Arkansas, Missouri, and Iowa, by Indian settlements, secured in perpetuity by a compact that the white settlements should never extend westward of that line. This policy originated in the jealousy, on the part of the Atlantic States, of the growth and expansion of the Mississippi Valley, which threatened in a few years to become the controlling power of the nation. . . . This restrictive system received its first check in 1844, by the introduction of the Nebraska Bill, which was served on the Secretary of War, by its author, on the day of its introduction, with a notice that Congress was about to organize the Territory, and therefore he must not locate any more Indians there. In consequence of this notice, the Secretary (by courtesy) suspended his operations until Congress should have an opportunity of acting upon the bill; and inasmuch as Congress failed to act that session, Mr. Douglas renewed his bill and notice to the Secretary each year, and thus prevented action for ten years, and until he could procure action on the bill. . . . When Congress assembled at the session of 1853-'54, in view of this state of facts, Mr. Douglas renewed his Nebraska Act, which was modified, pending discussion, by dividing into two Territories, and became the Kansas-Nebraska Act. . . . The jealousies of the two great sections of the Union, North and South, had been sorely excited by the slavery agitation. The Southern States would never consent to the opening of those Territories to settlement, so long as they were excluded by act of Congress from moving there and holding their slaves; and they had the power to prevent the opening of the country forever, inasmuch as it had been forever excluded by treaties with the Indians, which could not be changed or repealed except by a two-third vote in the Senate. But the South were willing to consent to remove the Indian restric-

tions, provided the North would at the same time remove the Missouri restriction, and thus throw the country open to settlement on equal terms by the people of the North and South, and leave the settlers at liberty to introduce or exclude slavery as they should think proper." The same report gives a distinction which Senator Douglas drew between "Popular Sovereignty" and "Squatter Sovereignty," as follows: "The name of Squatter Sovereignty was first applied by Mr. Calhoun, in a debate in the United States Senate in 1848, between himself and General Cass, in respect to the right of the people of California to institute a government for themselves after the Mexican jurisdiction had been withdrawn from them, and before the laws of the United States had been extended over them. General Cass contended that in such a case the people had a right, an inherent and inalienable right, to institute a government for themselves and for their own protection. Mr. Calhoun replied that, with the exception of the native Californians, the inhabitants of that country were mere squatters upon the public domain, who had gone there in vast crowds, without the authority of law, and were in fact trespassers as well as squatters upon the public lands, and to recognize their right to set up a government for themselves was to assert the doctrine of 'Squatter Sovereignty.' The term had no application to an organized Territory under the authority of Congress, or to the powers of such organized Territory, but was applied solely to an unorganized country whose existence was not recognized by law. On the other hand, what is called 'Popular Sovereignty' in the Territories, is a phrase used to designate the right of the people of an organized Territory, under the Constitution and laws of the United States, to govern themselves in respect to their own internal polity and domestic affairs."—S. A. Douglas, *Brief Treatise upon Const. and Party Questions* (reported by J. M. Cutts), pp. 86-93, and 123-124.—"The repeal of the Missouri Compromise was the beginning of the end, the fatal step of the South on its road to destruction. Throughout the North the conviction grew that Union and slavery could not exist much longer together. On the 4th of July, 1854, Garrison publicly burned a copy of the Constitution of the United States with the words, 'The Union must be dissolved!' He represented only an extreme sentiment. But the people at large began to calculate the value of this Union for which so many sacrifices had been made. Slavery became odious to many persons hitherto indifferent to the subject, on the ground that it persistently and selfishly placed the Union in peril."—B. Tuckerman, *William Jay and the Constitutional Movement for the Abolition of Slavery*, ch. 7.

A. D. 1854-1855.—Solidification of Anti-slavery sentiment in the North.—The birth

of the new Republican Party.—"The determined purpose of the Slave Power to make slavery the predominant national interest was never more clearly revealed than by the proposed repeal of the Missouri compromise. This was a deliberate and direct assault upon freedom. Many, indeed, under the pleas of fraternity and loyalty to the Union, palliated and apologized for this breach of faith; but the numbers were increasing every hour, as the struggle progressed, who could no longer be deceived by these hollow pretences. . . . Pulpits and presses which had been dumb, or had spoken evasively and with slight fealty to truth, gave forth no uncertain sound. . . . To the utterances of the sacred desk were added the action of ecclesiastical bodies, contributions to the press, and petitions to State legislatures and to Congress. . . . These discussions from pulpit, platform, and press, all pointed to political action as the only adequate remedy. In the Northern States there were Abolitionists, Free-Soilers, anti-slavery Whigs, anti-Nebraska Democrats, and anti-slavery members of the American party, which had just come into existence. . . . As the conflict progressed, large and increasing numbers saw that no help could be reasonably hoped but through the formation of a new party that could act without the embarrassment of a Southern wing. But the formation of a national and successful party from materials afforded by the disintegration of hitherto hostile organizations was a work of great delicacy and difficulty. Such a party could not be made;—it must grow out of the elements already existing. It must be born of the nation's necessities and of its longings for relief from the weakness, or wickedness, of existing organizations. The mode of organizing this new party of freedom varied according to the varying circumstances of different localities and the convictions of different men. . . . One of the earliest, if not the earliest, of the movements that contemplated definite action and the formation of a new party, was made in Ripon, Fond du Lac County, Wisconsin, in the early months of 1854." A public meeting, held in one of the churches of the town, was followed by a second meeting, on the 20th of March, at which definite proceedings were taken. "By formal vote the town committees of the Whig and Free Soil parties were dissolved, and a committee of five, consisting of three Whigs, one Free-Soiler, and one Democrat, was chosen. 'The work done on that evening,' says Mr. Bovey [one of its originators], 'was fully accepted by the Whig and Free Soil parties of all this section immediately; and very soon—that is to say, in a few months—by those parties throughout the entire State.' A State convention was held in July, by which the organization of the party was perfected for the State, a majority of the delegation was secured for the next Congress, and a Free-Soiler, Charles Durkee, was elected to the Senate of the United States. At the meeting of the 20th of March, Mr. Bovey, though stating his belief that the party should and probably would take the name of 'Republican,' advised against such a christening at that time and by that small local body of men. He, however, wrote to the editor of the New York 'Tribune,' suggesting the name. . . . But that 'little eddy' on that far-off margin was only one of many similar demonstrations,—signs of a turn of the tide in the great sea of Ameri-

can politics. In Washington, on the morning after the passage of the Kansas-Nebraska bill, there was a meeting of some thirty members of the House at the rooms of Thomas D. Eliot and Edward Dickinson, of Massachusetts, called at the instance of Israel Washburn, Jr., of Maine, for consultation in regard to the course to be adopted in the exigencies of the case. The hopelessness of any further attempts through existing organizations was generally admitted; though a few still counselled adherence to the Whig party, in the expectation of securing its aid for freedom. But most present had become convinced that in a new party alone lay any reasonable hope of successful resistance to the continued aggressions of the arrogant and triumphant Slave Power. The name 'Republican' was suggested, discussed, and finally agreed upon as appropriate for the new organization. . . . But, whatever suggestions others may have made, or whatever action may have been taken elsewhere, to Michigan belongs the honor of being the first State to form and christen the Republican Party." A mass convention of Whigs and Free Soilers in that State was held on the 6th of July, at which the name was formally adopted, along with a "platform" of principles opposing the extension of slavery and demanding its abolition in the District of Columbia. "Though the Republican Party was not immediately organized in all the free States, its spirit inspired and its ideas largely pervaded the North. Within one year eleven Republican Senators were elected and fifteen States had secured anti-Nebraska majorities. Out of 142 Northern members of the House, 120 were opposed to the iniquitous measure. They were in sufficient numbers not only to control the election of Speaker, but they were able, by a majority of 15, to declare that 'in the opinion of this House, the repeal of the Missouri compromise of 1820, prohibiting slavery north of 36° 30', was an example of useless and factious agitation of the slavery question, unwise and unjust to the American people.' Several States which had failed to organize a Republican Party in 1854 did so in 1855."—H. Wilson, *Rise and Fall of the Slave Power in Am.*, v. 2, ch. 31.—"The refusal of the Whigs in many States to surrender their name and organization, and more especially the abrupt appearance of the Know-Nothings on the field of parties, retarded the general coalition between the Whigs and the Free-soilers which so many influences favored. As it turned out, a great variety of party names were retained or adopted in the Congressional and State campaigns of 1854, the designation of 'anti-Nebraska' being perhaps the most common, and certainly for the moment the most serviceable, since denunciation of the Nebraska bill was the one all-pervading bond of sympathy and agreement among men who differed very widely on almost all other political topics. This affiliation, however, was confined exclusively to the free States. In the slave States, the opposition to the Administration dared not raise the anti-Nebraska banner, nor could it have found followers; and it was not only inclined but forced to make its battle either under the old name of Whigs, or, as became more popular, under the new appellation of 'Americans,' which grew into a more dignified synonym for Know-Nothings. . . . While the measure was yet under discussion in the House in March, New

Hampshire led off by an election completely obliterating the eighty-nine Democratic majority in her Legislature. Connecticut followed in her footsteps early in April. Long before November it was evident that the political revolution among the people of the North was thorough, and that election day was anxiously awaited merely to record the popular verdict already decided. The influence of this result upon parties, old and new, is perhaps best illustrated in the organization of the Thirty-fourth Congress, chosen at these elections during the year 1854, which witnessed the repeal of the Missouri Compromise. Each Congress, in ordinary course, meets for the first time about one year after its members are elected by the people, and the influence of politics during the interim needs always to be taken into account. In this particular instance this effect had, if anything, been slightly reactionary, and the great contest for the Speakership during the winter of 1855-6 may therefore be taken as a fair manifestation of the spirit of politics in 1854. The strength of the preceding House of Representatives, which met in December, 1853, had been: Whigs, 71; Free-soilers, 4; Democrats, 159—a clear Democratic majority of 84. In the new Congress there were in the House, as nearly as the classification could be made, about 108 anti-Nebraska members, nearly 40 Know-Nothings, and about 75 Democrats; the remaining members were undecided. The proud Democratic majority of the Pierce election was annihilated."—J. G. Nicolay and J. Hay, *Abraham Lincoln*, v. 1, ch. 20.

A. D. 1855-1856.—Long contest for the Speakership of the House.—Election of Mr. Banks, Republican.—Mr. Giddings' account.—"The free-soil party was now rapidly increasing in numbers and influence. The Whig organization had disbanded; yet its leaders had too much pride of opinion to admit that the anti-slavery men were right in their policy or in their construction of the Constitution. Indeed, their prejudices were too strong to permit them to join any other existing organization. They therefore instituted a new party called the 'Know Nothings' or 'American party.' Their leading policy was the exclusion of foreigners from office. . . . It was a secret society, known to each other by signs, grips and passwords. It increased rapidly in numbers, and in the autumn of 1844 they elected a large majority of officers in all of the free States. . . . The effect of their success became apparent at the assembling of the thirty-fourth Congress. It had placed the democratic party in a very decided minority in the House of Representatives. . . . And the Free-soilers or Republicans were placed in a most critical position. Their difficulty arose from the determination of aspiring politicians to give all influence into the hands

of the organization which had recently sprung up. Members of this new party were at the city of Washington some weeks before the assembling of Congress, making such political arrangements as they regarded necessary to secure the success for the 'Know Nothings.' But all were conscious that neither they nor the Free-soilers could succeed except by uniting with each other." A partial combination of Know Nothings with the Republicans was effected at a meeting on Friday before the opening of the session of Congress. "Late in the day a resolution was introduced pledging the members to vote for any man on whom a majority of the members should unite, provided he stood pledged by his past life or present declarations so to arrange the committees of the House as to give respectful answers to petitions concerning slavery. This resolution was adopted by a unanimous vote of more than 70 members. But the leading members of the 'Know Nothings' did not appear at any of the caucuses. It was in this unorganized form that members opposed to the extension of slavery met their associates on Monday in the Hall of Representatives, to enter upon a contest unequalled in the previous history of our Government. The House consisted of 234 members—225 of whom answered to their names at the first calling of the roll. The first business in order was the election of Speaker: And the ballots being counted, it was found that William A. Richardson, the democratic candidate, had 74 votes; Lewis D. Campbell, of Ohio, the 'Know Nothing' candidate, had 53 votes; Humphrey Marshall, of Kentucky, the southern Know Nothing candidate, 30 votes; Nathaniel P. Banks, of Massachusetts, was supported by those Free-soilers or Republicans who refused to support any man placed in nomination by the Know Nothings; and Hiram M. Fuller, of Pennsylvania, received the votes of 17 members of the Know Nothing party who refused to support any other candidate. There were several other ballots cast during the day, with little change. The voting continued on the second, third, fourth and fifth days, without material change, except that Mr. Campbell's vote rose on one occasion as high as 75. After the result of the twenty-third ballot was announced, Mr. Campbell withdrew his name from the list of candidates. On the withdrawal of Mr. Campbell, Mr. Banks' rose regularly until the 15th December, when it reached 107. . . . On the 19th December, the ballot showed Mr. Banks to have 106, and Mr. Richardson 75. Messrs. Marshall and Fuller, with their adherents, continuing to vote by themselves. During the debates the Republicans were constantly assailed, and as the writer [Joshua R. Giddings, of Ohio] was the oldest member of that party, he felt constrained to vindicate their cause. He assured the Democrats and 'Know Nothings' that the Republicans must soon come into power: And when once in power they would not permit southern members to dissolve the Union. This seemed to arouse much angry feeling. Mr. McMullen, of Virginia, replied with much spirit, declaring that whenever a northern President should be elected the South would dissolve the Union. This is believed to be the first distinct enunciation in Congress that the Union was to be dissolved upon the election of a northern President. Northern Democrats appeared mortified at the imprudence of Mr.

McMullen. Mr. Banks, in a public speech made some two years previously in Maine, had said, that if we were to extend slavery or dissolve the Union, he would say, 'Let the Union slide.' This saying was now seized upon by southern men as an insuperable objection to Mr. Banks' election: While, at the same time, Mr. Brooks, of South Carolina, assured the House and the country that unless slavery were extended he desired to see the Union slide. Members appeared by common consent to enter upon a general debate, which was suspended on the 24th so long as to take a ballot, which showed no substantial change in the parties. On the 27th, four ballots were taken with a similar result. . . . On the 28th December the balloting was resumed, and continued through that and the following day without material change of parties, and debate was again renewed. . . . The President of the United States sent his annual message to the Senate on the 31st December, and his private secretary appeared at the entrance of the House of Representatives and announced that he had brought with him the annual message of the President, to be presented to that body. Aware that this was intended to exert an influence against the Republicans, the author at once objected to receiving it, as it was an attempt to introduce a new practice—for up to that time no President had ever presumed to thrust his message upon an unorganized body—and that it could not constitutionally be received by members until a Speaker were elected. But a majority voted to receive it. The next attempt was to read it to the House; but it was again objected that it was not addressed to members in their disorganized condition, but was addressed to the Senate and House of Representatives, which had not then been organized. This objection was sustained, and although they had received the message, they refused to read it. The new year found the House unorganized, with the President's message lying upon the Clerk's desk unopened and unread. One ballot was taken. A motion was next made to take up and read the President's message; but, after debate, the motion was laid on the table. Members now began to make arrangements for continuing the contest indefinitely. Most of them had expected to draw their mileage to defray their current expenses; but being unable to do that until the House were organized, found themselves out of funds. In many Republican districts the people met in public conventions and passed resolutions approving the action of their Representatives, made provisions for their members to draw on their local banks for such funds as they deemed necessary for defraying expenses at Washington. To meet these expenses, some State Legislatures made appropriations from their State funds. Soon as the republican party became consolidated, its members became more confident. Those of greatest experience assured their friends that as the President, officers of government, and the army and navy must go without pay until the House should be organized, the pressure would soon be so great upon the democratic party that they would be compelled to submit to the election of a republican Speaker. Some State Legislatures passed resolutions sustaining the action of their Representatives, declaring the issue involved to be the extension or non-extension of

slavery. . . . On the 29th January several propositions were made for an immediate organization. They were rejected, but by such small majorities as to indicate an organization at no very distant period; and the Republicans now felt one, and only one doubt in regard to success. The southern 'Know Nothings' had been Whigs, and bitterly hated the Democrats; and the question now presented was, whether they would unite with their old enemies rather than see a republican Speaker elected. On the 3d February a resolution was presented, declaring that three more ballots should be taken and if no election were had, the candidate having the highest number of votes on the 4th ballot should be declared Speaker. Soon after this vote was announced the House adjourned. Members now felt that the contest was drawing to a close. The next morning . . . Mr. Aiken, of South Carolina, was announced as the democratic candidate. And the first ballot, under the resolution, showed little change of parties. Banks received 102 votes; Aiken, 92; Fuller, 13; Campbell, 4; and Wells, 2. By this time the spacious galleries were filled with eager spectators, the lobbies and passages were crowded by men and ladies anxious for the result. The next ballot was taken without any change of parties. A motion was made to adjourn, but it was voted down by 159 to 52. Mr. Fuller announced that he was no longer a candidate. The result now appeared to be anticipated by all, and as the Clerk commenced calling the roll of members for the final vote, there appeared to be the most intense interest felt on all sides of the House. . . . When the roll had been called through there was so much confusion that it was difficult for any one to be heard. But the clerks and tellers proceeded in their duties, and when the count was completed, Mr. Benson, of Maine—one of the tellers—rose, and in a loud voice proclaimed that 'On the one hundred and thirty-third ballot Nathaniel P. Banks had received 103 votes; Mr. Aiken had received 100 votes; Mr. Fuller had received 6 votes; and Mr. Campbell had received 4 votes. That Mr. Banks having received the highest number of votes on this ballot, was declared duly elected Speaker of the thirty-fourth Congress.' At this announcement the spectators in the galleries broke forth in wild excitement. Cheer after cheer went up, amid the waving of handkerchiefs and demonstrations of unrestrained exultation, which were responded to by hisses from the Administration side of the House. . . . The effect of this victory was felt through the country. . . . Sixteen years before this occurrence Mr. Adams and the author of these sketches were the only representatives in Congress of the doctrines now supported by a majority of the House. The slaveholders and those who sympathized with them appeared to realize that political power was gradually escaping from their grasp, and that the day was rapidly approaching when the people would resume control of the Government."—J. R. Giddings, *Hist. of the Rebellion*, ch. 26.

A. D. 1856.—Senator Sumner's speech on "The Crime against Kansas," and the assault

upon him by Brooks of South Carolina.—"The most startling speech made during the debate [on affairs in Kansas], and which, from the events succeeding, became the most celebrated, was that of Charles Sumner. It was delivered on the 19th and 20th days of May and was published under the title of 'The Crime against Kansas.' . . . If there had been no more to Sumner's speech than the invective against the slave power, he would not have been assaulted by Preston Brooks. Nor is it probable that the bitter attack which the senator made on South Carolina would have provoked the violence, had it not been coupled with personal allusions to Senator Butler, who was a kinsman of Brooks. . . . It was said that Seward, who read the speech before delivery, advised Sumner to tone down its offensive remarks, and he and Wade regretted the personal attack. But Sumner was not fully 'conscious of the stinging force of his language.' To that, and because he was terribly in earnest, must be attributed the imperfections of the speech. He would annihilate the slave power, and he selected South Carolina and her senator as vulnerable points of attack. . . . Two days after this exciting debate (May 22d) when the Senate, at the close of a short session adjourned, Sumner remained in the Chamber, occupied in writing letters. Becoming deeply engaged, he drew his arm-chair close to his desk, bent over his writing, and while in this position was approached by Brooks, a representative from South Carolina and a kinsman of Senator Butler. Brooks, standing before and directly over him, said: 'I have read your speech twice over carefully. It is a libel on South Carolina and Mr. Butler, who is a relative of mine.' As he pronounced the last word, he hit Sumner on the head with his cane with the force that a dragon would give to a sabre-blow. Sumner was more than six feet in height and of powerful frame, but penned under the desk he could offer no resistance, and Brooks continued the blows on his defenceless head. The cane broke, but the South Carolinian went on beating his victim with the butt. The first blows stunned and blinded Sumner, but instinctively and with powerful effort he wrenched the desk from its fastenings, stood up, and with spasmodic and wildly directed efforts attempted unavailingly to protect himself. Brooks took hold of him, and, while he was reeling and staggering about, struck him again and again. The assailant did not desist until his arm was seized by one who rushed to the spot to stop the assault. At that moment Sumner, reeling, staggering backwards and sideways, fell to the floor bleeding profusely and covered with his blood. The injury received by Sumner was much more severe than was at first thought by his physicians and friends. Four days after the assault, he was able to give at his lodgings his relation of the affair to the committee of the House of Representatives. But, in truth, the blows would have killed most men. Sumner's iron constitution and perfect health warded off a fatal result; but it soon appeared that the injury had affected the spinal column. The next three years and a half was a search for cure. . . . At last he went to Paris and put himself under the care of Dr. Brown-Séquard, whose treatment of actual cauterization of the back eventually restored him to a fair degree of health; but he never regained his former physical vigor. He

was not able to enter regularly again on his senatorial career until December, 1859. . . . The different manner in which the North and the South regarded this deed is one of the many evidences of the deep gulf between these two people caused by slavery. . . . When Brooks returned to South Carolina he received an enthusiastic welcome. He was honored as a glorious son of the Palmetto State, and making him the present of a cane was a favorite testimonial. . . . At the North the assault of Brooks was considered brutal and cowardly; at the South, his name was never mentioned without calling him gallant or courageous, spirited or noble. . . . A committee was appointed by the House which took a large amount of evidence, and the majority reported a resolution in favor of the expulsion of Brooks. On this resolution, the vote was 121 to 95; but as it required two thirds, it was not carried. Only three Southern representatives publicly condemned the assault; only one voted to expel Brooks. After the decision by the House, Brooks made a speech, which he ended by resigning his place as representative. His district re-elected him almost unanimously: there were only six votes against him."—J. F. Rhodes, *List of the U. S. from 1850, ch. 7 (v. 2)*.

A. D. 1856.—Eighteenth Presidential Election.—Buchanan made President.—"The presidential campaign of . . . 1856, showed a striking disintegration and re-formation of political groups. Nominally there were four parties in the field: Democrats, Whigs, Native Americans or Know-Nothings, and Republicans. The Know-Nothings had lately won some State elections, but were of little account as a national organization, for they stood upon an issue hopelessly insignificant in comparison with slavery. Already many had gone over to the Republican camp; those who remained nominated as their candidates Millard Fillmore and Andrew J. Donelson. The Whigs were the feeble remnant of a really dead party, held together by affection for the old name; too few to do anything by themselves, they took by adoption the Know-Nothing candidates. The Republican party had been born only in 1854. Its members, differing on other matters, united upon the one doctrine, which they accepted as a test: opposition to the extension of slavery. They nominated John C. Fremont and William L. Dayton, and made a platform whereby they declared it to be 'both the right and the duty of Congress to prohibit in the Territories those twin relics of barbarism, polygamy and slavery.' . . . In this Convention 110 votes were cast for Lincoln for the second place on the ticket. . . . In the Democratic party there were two factions. The favorite candidate of the South was Franklin Pierce, for reelection, with Stephen A. Douglas as a substitute or second choice; the North more generally preferred James Buchanan, who was understood to be displeased with the repeal of the Missouri Compromise. The struggle was sharp, but was won by the friends of Buchanan, with whom John C. Breckenridge was coupled. The campaign was eager, for the Republicans soon developed a strength beyond what had been expected and which put the Democrats to their best exertions. The result was: popular vote, Democrats [Buchanan] 1,838,160, Republics [Fremont] 1,341,264, Know-Nothings and Whigs

[Fillmore] 874,534; electoral vote, Democrats 174, Republicans 11.' Know-Nothings and Whigs, 8. Thus James Buchanan became President of the United States, March 4, 1857. . . . Yet, while the Democrats triumphed, the Republicans enjoyed the presage of the future; they had polled a total number of votes which surprised every one; on the other hand, the Democrats had lost ten States which they had carried in 1852 and had gained only two others, showing a net loss of eight States; and their electoral votes had dwindled from 254 to 174."—J. T. Morse, Jr., *Abraham Lincoln, v. 1, ch. 4*.

A. D. 1856-1859.—The continued struggle in Kansas.—The Topeka vs. the Lecompton Constitution. See KANSAS: A. D. 1854-1859.

A. D. 1857.—The Dred Scott decision.—"Dred Scott was a negro slave, the property of Dr. Emerson, a surgeon in the army. In 1834, Dred was carried by his master from the slave state of Missouri, first, to the military post at Rock Island in the free state of Illinois, where he remained till April or May, 1836; and, thence, to Fort Snelling, in the territory known as Upper Louisiana, and lying north of the line of the Missouri Compromise, in both of which places he was held as a slave. At Fort Snelling, in the year 1836, he was married to Harriet, a negro slave, who had also been brought to Fort Snelling by her master, Major Tulliaferro, and there sold to Dr. Emerson. In 1838, Dred, with his wife and a child which had been born to him, was carried back by his master to the state of Missouri. Subsequently, Dred, with his wife, his daughter Eliza, and another daughter, Lizzie, who was born after the return of her family to Missouri, was sold to John F. A. Sandford—the defendant in the present case. Dred commenced his efforts for the establishment of the freedom of himself and family in the state courts of Missouri. The suit was brought in the Circuit Court of St. Louis county. Before this court, the judgment was in his favor, but, on appeal by writ of error to the Supreme Court of the state, this judgment was reversed, and the case remanded to the court below,—where it remained, awaiting the decision of the suit which, in the meanwhile, Dred had brought in the United States courts. This second suit was brought before the Circuit Court of the United States for the district of Missouri, and thence carried, by writ of error, to the Supreme Court at Washington. It may be added that the first suit was brought against Dr. Emerson, but the second against Mr. Sandford, to whom Dred had been sold. The action, though brought to assert the title of Dred Scott and his family to freedom, was, in form, an action of trespass 'vi et armis,' which is the usual form employed in that state to try questions of this kind. The plaintiff, Scott, in his writ both makes a declaration of the acts of trespass—which of course are the acts of restraint necessarily implied in holding himself and family as slaves—and avers, what was necessary to give the court jurisdiction, that he and the defendant are citizens of different states; that is, that he is a citizen of Missouri, and the defendant a citizen of New York. At the Appeal term of the court, in 1854, the defendant Sandford pleads, that the court has not jurisdiction, because the plaintiff is not a citizen of Missouri, but a negro of African descent, whose ancestors,

of pure African blood, were brought into this country and sold as slaves. To this plea the plaintiff demurs as insufficient; the demurrer is argued at the same term, and is sustained by the court, that is, the court asserts its jurisdiction over the case." It was on this plea that the case went finally to the Supreme Court of the United States and was decided in 1857. "The question of negro citizenship came up in the consideration of the question of jurisdiction. For the question of jurisdiction was the question, whether the plaintiff was a citizen of Missouri, as he had averred in his declaration; and the only fact pleaded to disprove his citizenship was the fact that Scott was a negro of African descent, whose ancestors had been sold as slaves in the United States. The court, however, decided that this fact did not exclude the possibility of his being a citizen; in other words, it decided that a negro of this description can be a citizen of the United States. The first question before the Supreme Court was, whether it could rejudge this determination of the circuit court."—W. A. Larned, *Negro Citizenship* (*New Englander*, Aug., 1857).—The decision of the Supreme Court, delivered by Chief Justice Taney, March 6, 1857, not only closed the door of freedom to Dred Scott, but shut the doors of the United States courts against him and all those of his race who were or had been slaves, or who sprang from an ancestry in the servile state. The opinion of Chief Justice Taney was concurred in by all the justices except Curtis and McLean—Justice Nelson dissenting on one point only. The arguments and the sentiments in the opinion which gave most offence to the conscience and the reason of the country were the following: "It becomes . . . our duty to decide whether the facts stated in the plea are or are not sufficient to show that the plaintiff is not entitled to sue as a citizen in a court of the United States. This is certainly a very serious question, and one that now for the first time has been brought for decision before this court. But it is brought here by those who have a right to bring it, and it is our duty to meet it and decide it. The question is simply this: Can a negro, whose ancestors were imported into this country, and sold as slaves, become a member of the political community formed and brought into existence by the Constitution of the United States, and as such become entitled to all the rights, and privileges, and immunities, guaranteed by that instrument to the citizen? One of which rights is the privilege of suing in a court of the United States in the cases specified in the Constitution. It will be observed, that the plea applies to that class of persons only whose ancestors were negroes of the African race, and imported into this country, and sold and held as slaves. The only matter in issue before the court, therefore, is whether the descendants of such slaves, when they shall be emancipated, or who are born of parents who had become free before their birth, are citizens of a State, in the sense in which the word citizen is used in the Constitution of the United States. And this being the only matter in dispute on the pleadings, the court must be understood as speaking in this opinion of that class only, that is, of those persons who are the descendants of Africans who were imported into this country, and sold as slaves. . . . The words 'people of the United

States' and 'citizens' are synonymous terms, and mean the same thing. They both describe the political body who, according to our republican institutions, form the sovereignty, and who hold the power and conduct the Government through their representatives. They are what we familiarly call the 'sovereign people,' and every citizen is one of this people, and a constituent member of this sovereignty. The question before us is, whether the class of persons described in the plea in abatement compose a portion of this people, and are constituent members of this sovereignty? We think they are not, and that they are not included, and were not intended to be included, under the word 'citizens' in the Constitution, and can therefore claim none of the rights and privileges which that instrument provides for and secures to citizens of the United States. On the contrary, they were at that time considered as a subordinate and inferior class of beings, who had been subjugated by the dominant race, and, whether emancipated or not, yet remained subject to their authority, and had no rights or privileges but such as those who held the power and the Government might choose to grant them. It is not the province of the court to decide upon the justice or injustice, the policy or impolicy, of these laws. The decision of that question belonged to the political or law-making power. . . . In discussing this question, we must not confound the rights of citizenship which a State may confer within its own limits, and the rights of citizenship as a member of the Union. It does not by any means follow, because he has all the rights and privileges of a citizen of a State, that he must be a citizen of the United States. He may have all of the rights and privileges of the citizen of a State, and yet not be entitled to the rights and privileges of a citizen in any other State. . . . The question then arises, whether the provisions of the Constitution, in relation to the personal rights and privileges to which the citizen of a State should be entitled, embraced the negro African race, at that time in this country, or who might afterwards be imported, who had then or should afterwards be made free in any State; and to put it in the power of a single State to make him a citizen of the United States, and endue him with the full rights of citizenship in every other State without their consent? . . . The court think the affirmative of these propositions cannot be maintained. And if it cannot, the plaintiff in error could not be a citizen of the State of Missouri, within the meaning of the Constitution of the United States, and, consequently, was not entitled to sue in its courts. It is true, every person, and every class and description of persons, who were at the time of the adoption of the Constitution recognised as citizens in the several States, became also citizens of this new political body; but none other. . . . It becomes necessary, therefore, to determine who were citizens of the several States when the Constitution was adopted. And in order to do this, we must recur to the Governments and institutions of the thirteen colonies, when they separated from Great Britain and formed new sovereignties, and took their places in the family of independent nations. We must inquire who, at that time, were recognised as the people or citizens of a State, whose rights and liberties had been outraged by the English

Government; and who declared their independence, and assumed the powers of Government to defend their rights by force of arms. In the opinion of the court, the legislation and histories of the times, and the language used in the Declaration of Independence, show that neither the class of persons who had been imported as slaves, nor their descendants, whether they had become free or not were then acknowledged as a part of the people, and were not intended to be included in the general words used in that memorable instrument. It is difficult at this day to realize the state of public opinion in relation to that unfortunate race, which prevailed in the civilized and enlightened portions of the world at the time of the Declaration of Independence, and when the Constitution was framed and adopted. But the public history of every European nation displays it in a manner too plain to be mistaken. They had for more than a century before been regarded as beings of an inferior order, and altogether unfit to associate with the white race, either in social or political relations; and so far inferior that they had no rights which the white man was bound to respect; and that the negro might justly and lawfully be reduced to slavery for his benefit. He was bought and sold, and treated as an ordinary article of merchandise and traffic, whenever a profit could be made by it. This opinion was at that time fixed and universal in the civilized portion of the white race." Finally, having, with great elaboration, decided the question of citizenship adversely to Dred Scott and all his kind, the Court proceeded to obliterate the antislavery provision of the Missouri Compromise, which constituted one of the grounds on which Dred Scott claimed his freedom. "It is the opinion of the court," wrote Chief Justice Taney, "that the act of Congress which prohibited a citizen from holding and owning property of this kind in the territory of the United States north of the line therein mentioned, is not warranted by the Constitution, and is therefore void; and that neither Dred Scott himself, nor any of his family, were made free by being carried into this territory; even if they had been carried there by the owner, with the intention of becoming a permanent resident. We have so far examined the case, as it stands under the Constitution of the United States, and the powers thereby delegated to the Federal Government. But there is another point in the case which depends on State power and State law. And it is contended, on the part of the plaintiff, that he is made free by being taken to Rock Island, in the State of Illinois, independently of his residence in the territory of the United States; and being so made free, he was not again reduced to a state of slavery by being brought back to Missouri. Our notice of this part of the case will be very brief; for the principle on which it depends was decided in this court, upon much consideration, in the case of Strader et al. v. Graham, reported in 10th Howard, 82. In that case, the slaves had been taken from Kentucky to Ohio, with the consent of the owner, and afterwards brought back to Kentucky. And this court held that their status or condition, as free or slave, depended upon the laws of Kentucky, when they were brought back into that State, and not of Ohio; and that this court had no jurisdiction to revise the judgment of a State court upon its own laws. This was the

point directly before the court, and the decision that this court had not jurisdiction turned upon it, as will be seen by the report of the case. So in this case. As Scott was a slave when taken into the State of Illinois by his owner, and was there held as such, and brought back in that character, his status, as free or slave, depended on the laws of Missouri, and not of Illinois. . . . Upon the whole, therefore, it is the judgment of this court, that it appears by the record before us that the plaintiff's error is not a citizen of Missouri, in the sense in which that word is used in the Constitution; and that the Circuit Court of the United States, for that reason, had no jurisdiction in the case, and could give no judgment in it. Its judgment for the defendant must, consequently, be reversed, and a mandate issued, directing the suit to be dismissed for want of jurisdiction."—*Report of the Decision of the Supreme Court of the U. S. in the case of Dred Scott vs. John F. A. Sandford* (Howard's Reports, v. 19).—"By this presentation of the iniquity, naked and in its most repulsive form, Taney did no small harm to the party which he intended to aid. It has been said that slavery plucked ruin on its own head by its aggressive violence. It could not help showing its native temper, nor could it help feeding its hunger of land, insisting on the restoration of its runaways, or demanding a foreign policy such as would fend off the approach of emancipation. But Taney's judgment was a gratuitous aggression and an insult to humanity at the same time, for which, supposing that the Southern leaders inspired it, they paid dear. If the slave was mere property, his owner might be entitled to take him anywhere, and thus slavery might be made national. The boast of a daring partisan of slavery might be fulfilled, that the day would come when men might be bought and sold in Boston as freely as any other goods. The issue, which all the politicians had striven to keep out of sight, was presented in its most startling and shocking form."—Goldwin Smith, *The United States*, p. 235.

A. D. 1858.—The Lincoln and Douglas debate in Illinois.—The senatorial term of Mr. Stephen A. Douglas being about to expire, the choice of his successor became an issue which controlled the election of members of the Illinois Legislature, in the fall of 1858. Mr. Douglas received an endorsement at the hands of the Democratic State Convention, in April, which virtually nominated him for re-election. Abraham Lincoln, who had come markedly to the front in his state during the Kansas discussions, "was the man already chosen in the hearts of the Republicans of Illinois for the same office, and therefore with singular appropriateness they passed, with great unanimity, at their convention in Springfield on the 16th of June, the characteristic resolution: 'That Hon. Abraham Lincoln is our first and only choice for United

States Senator to fill the vacancy about to be created by the expiration of Mr. Douglas' term of office.' There was of course no surprise in this for Mr. Lincoln. He had been all along led to expect it, and with that in view had been earnestly and quietly at work preparing a speech in acknowledgment of the honor about to be conferred on him. This speech he wrote on stray envelopes and scraps of paper, as ideas suggested themselves, putting them into that miscellaneous and convenient receptacle, his hat. As the convention drew near he copied the whole on connected sheets, carefully revising every line and sentence, and fastened them together, for reference during the delivery of the speech, and for publication. The former precaution, however, was unnecessary, for he had studied and read over what he had written so long and carefully that he was able to deliver it without the least hesitation or difficulty. . . . Before delivering his speech he invited a dozen or so of his friends over to the library of the State House, where he read and submitted it to them. After the reading he asked each man for his opinion. Some condemned and not one endorsed it. One man, more forcible than elegant, characterized it as a 'd—d fool utterance;' another said the doctrine was 'ahead of its time;' and still another contended that it would drive away a good many voters fresh from the Democratic ranks. Each man attacked it in his criticism. I was the last to respond. Although the doctrine announced was rather rank, yet it suited my views, and I said, 'Lincoln, deliver that speech as read and it will make you President.' At the time I hardly realized the force of my prophecy. Having patiently listened to these various criticisms from his friends—all of which with a single exception were adverse—he rose from his chair, and after alluding to the careful study and intense thought he had given the question, he answered all their objections substantially as follows: 'Friends, this thing has been retarded long enough. The time has come when these sentiments should be uttered; and if it is decreed that I should go down because of this speech, then let me go down linked to the truth—let me die in the advocacy of what is just and right.' The next day, the 17th, the speech was delivered just as we had heard it read. [The part of this famous speech which made the profoundest impression and gave rise to the most discussion was the opening part, contained in the following sentences: 'If we could first know where we are, and whither we are tending, we could better judge what to do, and how to do it. We are now far into the fifth year since a policy was initiated with the avowed object and confident promise of putting an end to slavery agitation. Under the operation of that policy, that agitation has not only not ceased, but has constantly augmented. In my opinion, it will not cease until a crisis shall have been reached and passed. "A house divided against itself cannot stand." I believe this government cannot endure permanently half slave and half free. I do not expect the Union to be dissolved—I do not expect the house to fall—but I do expect it will cease to be divided. It will become all one thing, or all the other. Either the opponents of slavery will arrest the further spread of it, and place it where the public mind shall rest in the belief that it is in the course of ultimate extinc-

tion; or its advocates will push it forward till it shall become alike lawful in all the States, old as well as new, North as well as South. Have we no tendency to the latter condition? Let any one who doubts carefully contemplate that now almost complete legal combination—piece of machinery, so to speak—compounded of the Nebraska doctrine and the Dred Scott decision. Let him consider not only what work the machinery is adapted to do, and how well adapted; but also let him study the history of its construction, and trace, if he can, or rather fail, if he can, to trace the evidences of design and concert of action among its chief architects, from the beginning.] . . . Lincoln had now created in reality a more profound impression than he or his friends anticipated. Many Republicans deprecated the advanced ground he had taken, the more so as the Democrats rejoiced that it afforded them an issue clear and well-defined. Numbers of his friends distant from Springfield, on reading his speech, wrote him censorious letters; and one well-informed co-worker predicted his defeat, charging it to the first ten lines of the speech. These complaints, coming apparently from every quarter, Lincoln bore with great patience. To one complainant who followed him into his office he said proudly, 'If I had to draw a pen across my record, and erase my whole life from sight, and I had one poor gift or choice left as to what I should save from the wreck, I should choose that speech and leave it to the world uncrushed.' Meanwhile Douglas had returned from Washington to his home in Chicago. Here he rested for a few days until his friends and co-workers had arranged the details of a public reception on the 9th of July, when he delivered from the balcony of the Tremont House a speech intended as an answer to the one made by Lincoln in Springfield. Lincoln was present at this reception, but took no part in it. The next day, however, he replied. Both speeches were delivered at the same place. Leaving Chicago, Douglas passed on down to Bloomington and Springfield, where he spoke on the 16th and 17th of July respectively. On the evening of the latter day Lincoln responded again in a most effective and convincing effort. The contest now took on a different phase. Lincoln's Republican friends urged him to draw Douglas into a joint debate, and he accordingly sent him a challenge on the 24th of July. . . . On the 30th Douglas finally accepted the proposition to 'divide time, and address the same audiences,' naming seven different places, one in each Congressional district, outside of Chicago and Springfield, for joint meetings. The places and dates were, Ottawa, August 21; Freeport, August 27; Jonesboro, September 15; Charleston, September 18; Galesburg, October 7; Quincy, October 13; and Alton, October 15. . . . During the canvass Mr. Lincoln, in addition to the seven meetings with Douglas, filled thirty-one appointments made by the State Central Committee, besides speaking at many other times and places not previously advertised. . . . The election took place on the second of November, and while Lincoln received of the popular vote a majority of over 4,000, yet the returns from the legislative districts foreshadowed his defeat. In fact, when the Senatorial election took place in the Legislature, Douglas received 54 and Lincoln 46 votes—one of the results of the lamentable apportionment law then in operation."—W. H.

Herndon and J. W. Weik, *Lincoln, the True Story of a Great Life*, ch. 13 (v. 2).

A. D. 1859.—Admission of Oregon into the Union, with a constitution excluding free colored People. See OAKOON: A. D. 1859.

A. D. 1859.—John Brown's attack on Slavery in Virginia.—The tragedy at Harper's Ferry.—“On the 17th of October, 1859, this country was bewildered and astounded while the fifteen Slave States were convulsed with fear, rage, and hate, by telegraphic dispatches from Baltimore and Washington, announcing the outbreak, at Harper's Ferry, of a conspiracy of Abolitionists and negroes, having for its object the devastation and ruin of the South, and the massacre of her white inhabitants. . . . As time wore on, further advices, with particulars and circumstances, left no room to doubt the substantial truth of the original report. An attempt had actually been made to excite a slave insurrection in Northern Virginia, and the one man in America to whom such an enterprise would not seem utter insanity and suicide, was at the head of it.” This was John Brown, of Osawatimie, who had been fighting slavery and the border ruffians in Kansas (see Kansas: A. D. 1854-1859) for five years, and had now changed his field. “A secret convention, called by Brown, and attended only by such whites and blacks as he believed in thorough sympathy with his views, had assembled in a negro church at Chatham, Canada West, May 8, 1858; at which Convention a ‘Provisional Constitution and Ordinances for the People of the United States’ had been adopted. It was, of course, drafted by Brown, and was essentially an embodiment of his political views. . . . John Brown was chosen Commander-in-Chief; J. H. Kagi, Secretary of War; Owen Brown (son of John), Treasurer; Richard Realf, Secretary of State. Brown returned to the States soon after his triumphal entry into Canada as a liberator. . . . He was in Hagerstown, Md., on the 30th [of June, 1859], where he registered his name as ‘Smith, and two sons, from Western New York.’ He told his landlord that they had been farming in Western New York, but had been discouraged by losing two or three years’ crops by frost, and they were now looking for a milder climate, in a location adapted to wool-growing, etc. After looking about Harper's Ferry for several days, they found, five or six miles from that village, a large farm, with three unoccupied houses, the owner, Dr. Booth Kennedy, having died the last Spring. These houses they rented for a trifle until the next March, paying the rent in advance. . . . After they had lived there a few weeks, attracting no observation, others joined them from time to time, including two of Brown's young daughters; and one would go and another come, without exciting any particular remark. . . . Meantime, the greater number of the men kept out of sight during the day, so as not to attract attention, while their arms, munitions, etc., were being gradually brought from Chambersburg, in well-secured boxes. No meal was eaten on the farm, while old Brown was there, until a blessing had been asked upon it; and his Bible was in daily requisition. The night of the 24th of October was originally fixed upon by Brown for the first blow against Slavery in Virginia, by the capture of the Federal Arsenal at Harper's Ferry; and his biographer, Redpath, alleges that many

were on their way to be with him on that occasion, when they were paralyzed by the intelligence that the blow had already been struck, and had failed. The reason given for this, by one who was in his confidence, is, that Brown, who had been absent on a secret journey to the North, suspected that one of his party was a traitor, and that he must strike prematurely, or not at all. But the women who had been with them at the Kennedy farm—the wives or daughters of one or another of the party—had already been quietly sent away; and the singular complexion of their household had undoubtedly begun to excite curiosity, if not alarm, among their neighbors. . . . Harper's Ferry was then a village of some 5,000 inhabitants, lying on the Virginia side of the Potomac, and on either side of its principal tributary, the Shenandoah, which here enters it from the South. Its site is a mere nest or cup among high, steep mountains. . . . Here the Baltimore and Ohio Railroad crosses the Potomac. . . . Washington is 57 miles distant by turnpike; Baltimore 80 miles by railroad. . . . One of its very few streets was entirely occupied by the work-shops and offices of the National Armory, and had an iron railing across its entrance. In the old Arsenal building, there were usually stored from 100,000 to 200,000 stand of arms. The knowledge of this had doubtless determined the point at which the first blow of the liberators was to be struck. The forces with which Brown made his attack consisted of seventeen white and five colored men, though it is said that others who escaped assisted outside, by cutting the telegraph wires and tearing up the railroad track. The entrance of this petty army into Harper's Ferry on Sunday evening . . . seems to have been effected without creating alarm. They first rapidly extinguished the lights of the town; then took possession of the Armory buildings, which were only guarded by three watchmen, whom, without meeting resistance or exciting alarm, they seized and locked up in the guard-house. It is probable that they were aided, or, at least, guided, by friendly negroes belonging in the village. . . . At a quarter-past one, the western train arrived, and its conductor found the bridge guarded by armed men. . . . A little after midnight, the house of Col. Washington was visited by six of Brown's men under Capt. Stevens, who captured the Colonel, seized his arms, horses, etc., and liberated his slaves. On their return, Stevens and party visited the house of Mr. Alstadt and his son, whom they captured, and freed their slaves. These, with each male citizen as he appeared in the street, were confined in the Armory until they numbered between forty and fifty. Brown informed his prisoners that they could be liberated on condition of writing to their friends to send a negro apiece as ransom. At daylight, the train proceeded, Brown walking over the bridge with the conductor. Whenever any one asked the object of their captors, the uniform answer was, ‘To free the slaves;’ and when one of the workmen, seeing an armed guard at the Arsenal gate, asked by what authority they had taken possession of the public property, he was answered, ‘By the authority of God Almighty!’ The passenger train that sped eastward from Harper's Ferry, by Brown's permission, in the early morning of Monday, October 17th, left that place

completely in the military possession of the insurrectionists. . . . But it was no longer entirely one-sided. The white Virginians, who had arms, and who remained unmolested in their houses, prepared to use them. . . . Several Virginians soon obtained possession of a room overlooking the Armory gates, and fired thence at the sentinels who guarded them, one of whom fell dead, and another—Brown's son Watson—was mortally wounded. Still, throughout the forenoon, the liberators remained masters of the town. . . . Had Brown chosen to fly to the mountains with his few followers, he might still have done so, though with a much slenderer chance of impunity than if he had, according to his original plan, decamped at midnight, with such arms and ammunition as he could bear away. Why he lingered, to brave inevitable destruction, is not certain; but it may fairly be presumed that he had private assurances that the negroes of the surrounding country would rise. . . . At all events, if his doom was already sealed, his delay at least hastened it. Half an hour after noon, a militia force, 100 strong, arrived from Charlestown, the county seat, and were rapidly disposed so as to command every available exit from the place. . . . Militia continued to pour in; the telegraph and railroad having been completely repaired, so that the Government at Washington, Gov. Wise at Richmond, and the authorities at Baltimore, were in immediate communication with Harper's Ferry, and hurrying forward troops from all quarters. . . . Night found Brown's forces reduced to three unwounded whites beside himself, with perhaps half a dozen negroes from the vicinity. Eight of the insurgents were already dead; another lay dying beside the survivors; two were captives mortally wounded, and one other unhurt. Around the few survivors were 1,500 armed, infuriated foes. . . . During that night, Col. Lee, with 80 United States marines and two pieces of artillery, arrived, and took possession of the Armory guard, very close to the engine-house. . . . At seven in the morning, after a parley which resulted in nothing, the marines advanced to the assault, broke in the door of the engine-house by using a ladder as a battering-ram, and rushed into the building. One of the defenders was shot and two marines wounded; but the odds were too great; in an instant, all resistance was over. Brown was struck in the face with a sabre and knocked down, after which the blow was several times repeated, while a soldier ran a bayonet twice into the old man's body.—H. Greeley, *The American Conflict*, v. 1, ch. 20.—“The Virginians demonstrated amply during the Civil War that they were not cowards. What made them shake in their shoes was not John Brown and his handful of men, but the shadows which their excited imagination saw standing behind them. . . . The best evidence of the frightful genuineness of the panic is the brazen impudence with which it was brought forward as the justifying motive for the many atrocities which marked the trial. The brutalizing influences of slavery came to light with terrible vividness. Kapp's statement that Brown ‘enjoyed very careful treatment’ is not mistaken, but it is true only of the later period of his imprisonment. Watson Brown, whose life was prolonged until the early morning of the 19th of October, complained of the hard bench he was forced to lie on. His

fellow-prisoner, Coppoe, begged for a mattress, or at least a blanket, for the dying man, but could obtain neither. Both Brown himself and Stevens, who was even more seriously wounded, had nothing furnished them but wretched straw. Redpath (p. 373) assures us that ‘from October 19 till November 7 no clean clothing was given to Brown, but that he lay in his soiled and blood-stained garments just as he had fallen at Harper's Ferry.’ On the 25th of October he was brought before the court; he was not at first carried there on a camp-bed, as was the case afterward, but compelled to walk, leaning on two men. Virginia could not wait till he could stand. . . . There was no such haste to carry out the sentence as there had been to bring the trial to a close. On the 2d of November, Brown was sentenced to suffer death by hanging on the 2d of December.”—H. von Holst, *John Brown*, pp. 139-155. “Brown actually expected that the raid on Harper's Ferry would be the stroke with which Moses called forth water from the rock. The spring was to turn southward, and in its swift course to swell to a mighty river. He declared expressly to Governor Wise, and later still in his letters, that he had not intended simply to break the chains of a few dozen or a few hundred slaves, and to take them again to Canada. Emancipation was to be spread farther and farther, and the freedmen were to remain in the Southern States. Heaven itself could not have brought this about, unless it had sent the angel of judgment to cast down into the dust the whole white population from Florida to Maine.” At the last, when John Brown, wounded and a prisoner, lay waiting his death, “he did not perceive that his undertaking could not have succeeded under any circumstances; but he did see that his failure and its consequences achieved much greater results than its most complete success could have done. . . . ‘I can leave to God,’ he writes, ‘the time and manner of my death, for I believe now that the sealing of my testimony before God and man with my blood will do far more to further the cause to which I have earnestly devoted myself, than anything else I have done in my life.’ And a few days later, ‘My health improves slowly, and I am quite cheerful concerning my approaching end, since I am convinced that I am worth infinitely more on the gallows than I could be anywhere else.’ . . . One year after the execution of Brown, on the 20th of December, 1860, South Carolina declared its secession from the Union, and on May 11, 1861, the Second Massachusetts Regiment of infantry was raised, which was first to sing on its march South,—‘John Brown's body lies mouldering in the grave, His soul goes marching on.’”—H. von Holst, *John Brown*, pp. 139-155, 125-126, 167-175.—“Editors persevered for a good while in saying that Brown was crazy; but at last they said only that it was ‘a crazy scheme,’ and the only evidence brought to prove it was that it cost him his life. I have no doubt that if he had gone with 5,000 men, liberated 1,000 slaves, killed a hundred or two slaveholders, and had as many more killed on his own side, but not lost his own life, these same editors would have called it by a more respectable name. Yet he has been far more successful than that.”—H. D. Thoreau, *The Last Days of John Brown (Anti-Slavery and Reform Papers)*.

Immigration in the preceding decade added 2,598,214 to the population, being 1,338,093 from the British Islands, and 1,114,564 from other parts of Europe.

A. D. 1860.—The Southern view of Slavery.—The state of opinion and feeling on the subject of slavery to which the people of the southern states had arrived in 1860 is set forth with brevity and distinctness in Claiborne's *Life of General Quitman*, which was published that year: "In the early stages of African slavery in the South," says the writer, "it was by many

considered an evil, that had been inflicted upon the country by British and New England cupidity. The Africans were regarded as barbarians, and were governed by the lash. The very hatred of the 'evil' forced upon us was, in a measure, transferred to the unhappy victims. They were treated with severity, and no social relations subsisted between them and the whites. By degrees slavery began to be considered 'a necessary evil,' to be got rid of by gradual emancipation, or perhaps not at all, and the condition of the slave sensibly improved. The natural sense of justice in the human heart suggested that they had been brought here by compulsion, and that they should be regarded not as savages, but as captives, who were to be kindly treated while laboring for their ultimate redemption. The progress of anti-slavery sentiment in the Northern States (once regarded by the South as a harmless fanaticism), the excesses it has occasioned, and the unconstitutional power it claims, at length prompted a general and searching inquiry into the true status of the negro. The moment that the Southern mind became convinced, that slavery, as it exists among us, instead of being a moral, social, and political evil, is a moral, social, and political good, and is the natural condition of the negro, as ordained by Providence, and the only condition in which he can be civilized and instructed, the condition of the Southern slave underwent a thorough change. As a permanent fixture, as a hereditary hell-loom, as a human being with an immortal soul, intrusted to us by God for his own wise purposes, his value increased, and his relation to his owner approximated to the relation of guardian and ward. Interest taught us that it would be wise to cherish what was to be the permanent means of production and profit, and religion exacted the humane and judicious employment of the 'talent' committed to our care. Thus the most powerful influences that sway the heart and the judgment are in operation for the benefit of the slave, and hence his present comfortable and constantly ameliorating condition. It is due, almost solely, to the moral convictions of the slaveholder. Our laws protect the slave in life and limb, and against cruel and inordinate punishment. Those laws are rigorously applied, though rarely necessary, for public opinion, more formidable than law, would condemn to execration and infamy the unjust and cruel master. Since these convictions in regard to slavery have been adopted almost unanimously in the South, the value of negroes has quadrupled. This, however, is in some measure an evil, because the tendency is to concentrate the slaves in the hands of the few, who are able to pay the extraordinary rates now demanded. It would be better for the commonwealth, and give additional solidity to our system of domestic servitude, if every family had an interest in it, secured, to a limited extent, against liability for debt. It should constitute in the South, if practicable, a part of every homestead, and then interest, and household tradition, and the friendly, confidential, and even affectionate relations that in the present state of public feeling prevail between master and slave, would unite all men in its defense. Neither land, nor slaves, which are here more valuable than land, should, by either direct or indirect legislation, be concentrated in few hands. Every citizen should have, if possible, that immediate interest in them

which would make him feel that, in defending the commonwealth and its institutions, he is defending his own inheritance."—J. F. H. Claiborne, *Life and Corr. of John A. Quitman*, v. 1, ch. 4.

A. D. 1860 (April—November).—Nineteenth Presidential Election.—Division of the Democratic Party.—Four candidates in the field.—A victory for freedom in the choice of Abraham Lincoln.—"Mr. J. W. Fell, a politician of Pennsylvania, says that after the debates of 1858 [with Douglas] he urged Lincoln to seek the Republican nomination for the presidency in 1860. Lincoln, however, replied curtly that men like Seward and Chase were entitled to take precedence, and that no such 'good luck' was in store for him. . . . In the winter of 1859-60 sundry 'intimate friends,' active politicians of Illinois, pressed him to consent to be mentioned as a candidate. He considered the matter over night and then gave them the desired permission, at the same time saying that he would not accept the vice-presidency. . . . With the opening of the spring of 1860 the several parties began the campaign in earnest. The Democratic Convention met first, at Charleston, April 23; and immediately the line of disruption opened. Upon the one side stood Douglas, with the moderate men and nearly all the Northern delegates, while against him were the advocates of extreme Southern doctrines, supported by the administration and by most of the delegates from the 'Cotton States.' The majority of the committee appointed to draft the platform were anti-Douglas men; but their report was rejected, and that offered by the pro-Douglas minority was substituted, 165 yeas to 138 nays. Thereupon the delegations of Alabama, Mississippi, Florida, and Texas, and sundry delegates from other States, withdrew from the Convention, taking away 45 votes out of a total of 303. Those who remained declared the vote of two thirds of a full Convention, i. e., 203 votes, to be necessary for a choice. Then during three days 57 ballots were cast, Douglas being always far in the lead, but never polling more than 152½ votes. At last, on May 3, an adjournment was had until June 18, at Baltimore. At this second meeting contesting delegations appeared, and the decisions were uniformly in favor of the Douglas men, which provoked another secession of the extremist Southern men. A ballot showed 173½ votes for Douglas out of a total of 191½; the total was less than two thirds of the full number of the original Convention, and therefore it was decided that any person receiving two thirds of the votes cast by the delegates present should be deemed the nominee. The next ballot gave Douglas 181½. Herschel V. Johnson of Georgia was nominated for vice-president. On June 23, also at Baltimore [after a meeting and adjournment from Richmond, June 11], there came together a collection composed of original seceders at Charleston, and of some who had been rejected and others who had seceded at Baltimore. Very few Northern men were present, and the body in fact represented the Southern wing of the Democracy. Having, like its competitor, the merit of knowing its own mind, it promptly nominated John C. Breckenridge of Kentucky and Joseph Lane of Oregon, and adopted the radical platform which had been reported at Charleston. These doings opened, so that it

could never be closed, that seam of which the thread had long been visible athwart the surface of the old Democratic party. . . . In May the Convention of the Constitutional Union party met, also at Baltimore. This organization was a sudden outgrowth designed only to meet the present emergency. . . . The party died, of necessity, upon the day when Lincoln was elected, and its members were then distributed between the Republicans, the Secessionists, and the Copperheads. John Bell, of Tennessee, the candidate for the presidency, joined the Confederacy; Edward Everett, of Massachusetts, the candidate for the vice-presidency, became a Republican. The party never had a hope of electing its men; but its existence increased the chance of throwing the election into Congress; and this hope inspired exertions far beyond what its own prospects warranted. On May 13 the Republican Convention came together at Chicago, where the great 'Wigwam' had been built to hold 10,000 persons. . . . Many candidates were named, chiefly Seward, Lincoln, Chase, Cameron, Edward Bates of Missouri, and William L. Dayton of New Jersey. Thurlow Weed was Seward's lieutenant. Horace Greeley, chiefly bent upon the defeat of Seward, would have liked to achieve it by the success of Bates, David Davis, aided by Judge Logan and a band of personal friends from Illinois, was manager for Lincoln. Primarily the contest lay between Seward and Lincoln. . . . Upon the third ballot . . . those who were keeping the tally saw that it stood:—Seward, 180; Lincoln, 231½; Chase, 24½; Bates, 22; Dayton, 1; McLean, 5; Scattering, 1. . . . Before the count could be announced, a delegate from Ohio transferred four votes to Lincoln. This settled the matter; and then other delegations followed, till Lincoln's score rose to 354. . . . Later in the day the convention nominated Hannibal Hamlin of Maine, on the second ballot, by 307 votes, for the vice-presidency. . . . Almost from the beginning it was highly probable that the Republicans would win, and it was substantially certain that none of their competitors could do so. The only contrary chance was that no election might be made by the people, and that it might be thrown into Congress."—J. T. Morse, Jr., *Abraham Lincoln*, v. 1, ch. C.—At the popular election, the votes were: Lincoln, 1,860,452 (Free-States vote, 1,840,022, Slave States vote, 26,430); Douglas, 1,375,157 (Free States vote, 1,211,632, Slave States vote, 163,525); Breckenridge, 847,053 (Free States vote, 277,082, Slave States vote, 570,871); Bell, 500,631 (Free States vote, 74,658, Slave States vote, 515,973). In the Electoral College, the four candidates were voted for as follows: Lincoln, 180; Breckenridge, 72; Bell, 39; Douglas, 12.—E. Stanwood, *Hist. of Presidential Elections*, ch. 20.

ALSO IN: H. W. Raymond, *Life of Lincoln*, ch. 4.—E. McPherson, *Pol. Hist. of the U. S. during the Great Rebellion*, p. 1.—J. G. Holland, *Life of Lincoln*, ch. 15-16.—J. G. Nicolay and J. Hay, *Abraham Lincoln*, v. 2, ch. 13-16.—J. F. Rhodes, *Hist. of the U. S. from 1850*, ch. 11 (v. 2).

A. D. 1860 (November—December).—The plotting of the rebellion.—Secession of South Carolina.—"The long-hoped-for opportunity of trying the experiment of secession was now at last presented. Abraham Lincoln had been

elevated to the presidency by a strictly sectional vote; and though the fact could not be denied that he had been elected in a perfectly constitutional manner, . . . yet, no sooner was it ascertained that it was almost certain that he would receive a majority of the electoral votes of the whole Union, than steps began to be taken for carrying into effect a revolutionary project which had engrossed the thoughts and sensibilities of a small class of extreme Southern politicians, mainly confined to the State of South Carolina, for some thirty years preceding. . . . So thoroughly matured was the project of secession in the minds of Southern extremists in South Carolina, that they are known actually to have commenced movements looking to this desired end before even the presidential election had taken place, and when the result which soon ensued was yet but a strong probability. Accordingly we find Governor Gist, as early as the 5th of November, 1860, addressing a message to the South Carolina Legislature, embodying the following bold and explicit declarations. . . .

"That an exposition of the will of the people may be obtained on a question involving such momentous consequences, I would earnestly recommend that, in the event of Abraham Lincoln's election to the presidency, a Convention of the people of this state be immediately called, to consider and determine for themselves the mode and measure of redress. My own opinions of what the Convention should do are of little moment; but, believing that the time has arrived when every one, however humble he may be, should express his opinions in unmistakable language, I am constrained to say that the only alternative left, in my judgment, is the secession of South Carolina from the Federal Union. The indications from many of the Southern States justify the conclusion that the secession of South Carolina will be immediately followed, if not adopted simultaneously by them, and ultimately by the entire South. . . . I would also respectfully recommend a thorough reorganization of the militia, so as to place the whole military force of the state in a position to be used at the shortest notice and with the greatest efficiency. . . . In addition to this general preparation, I would recommend that the services of 10,000 volunteers be immediately accepted. . . . I desire not to particularize on this painful subject to an extent which might now prove annoying, and therefore proceed briefly to state that the Legislature of South Carolina provided for the assembling of a state Convention, the members of which were to be elected on the 6th of December, while the conventional body itself was to come together on the 19th of the same month; that the Convention did assemble on the last-mentioned day, and, after an excited debate of several days' continuance, adopted an Ordinance of Secession on the 20th of December. Commissioners were sent with a copy of the ordinance to each of the slave states, in order to quicken co-operative action, and notification was duly made us to these events to the Federal government in Washington City. The next secession movement it was expected would come off in the State of Georgia. A Convention for this purpose had been already called. It was known that Alexander H. Stephens, Herschel V. Johnson, and other public men, of elevated standing and of extended influence, would be members of

the Convention, and it was expected that they would exert themselves to the utmost to prevent the imitation by the State of Georgia of the rash example which had just been set by South Carolina; and it was likewise known that eminent personages from the State of South Carolina would attend the Convention of Georgia, in order to urge immediate co-operation. Under these circumstances, I took it upon myself to persuade the public men of most influence in the city of Nashville, where I was then residing, to send ten or fifteen delegates forthwith to Milledgeville, respectfully and earnestly to protest against extreme action on the part of Georgia. . . . I urged these views for several days most zealously, but, I regret to say, without success; some supposing that there was no serious danger of the Convention of Georgia adopting an Ordinance of Secession, and others that there was reason to fear, if we should send delegates to Milledgeville, it might result in fatally compromising our own attitude. The manly opposition made by Mr. Stephens to the attempt to draw Georgia into the Secession maelstrom is well known. This want of success is a circumstance which I shall ever deplore as the most unfortunate event of a public nature which has occurred within my recollection. Alabama, Florida, Mississippi, Louisiana, and Texas were now soon enrolled among the seceded States. Tennessee, North Carolina, Virginia, Arkansas, Kentucky, Maryland, Missouri, and Delaware still stood firm, despite all the efforts essayed to shake their constancy. It is indeed true, as Mr. Greeley has deliberately recorded, that after the secession 'conspiracy had held complete possession of the Southern mind for three months, with the Southern members of the cabinet, nearly all the Federal officers, most of the governors and other state functionaries, and seven eighths of the prominent and active politicians pushing it on, and no force exerted against nor in any manner threatening to resist it, a majority of the slave states, with two thirds of the free population of the entire slaveholding region, was openly and positively adverse to it, either because they regarded the alleged grievances of the South as exaggerated if not unreal, or because they believed that those wrongs would rather be aggravated than cured by disunion.'"—H. S. Foote, *War of the Rebellion*, ch. 15.

The following is the South Carolina Ordinance of Secession, adopted December 20, together with the Declaration of Causes which was promulgated by the Convention four days later:

"An Ordinance to dissolve the Union between the State of South Carolina and other States united with her under the compact entitled 'The Constitution of the United States of America.'

We, the People of the State of South Carolina, in Convention assembled, do declare and ordain, and it is hereby declared and ordained. That the Ordinance adopted by us in Convention, on the twenty-third day of May, in the year of our Lord one thousand seven hundred and eighty-eight, whereby the Constitution of the United States of America was ratified, and also, all Acts and parts of Acts of the General Assembly of this State, ratifying amendments of the said Con-

stitution, are hereby repealed; and that the union now subsisting between South Carolina and other States, under the name of 'The United States of America,' is hereby dissolved."

"Declaration of the immediate causes which induce and justify the secession of South Carolina from the Federal Union:

The People of the State of South Carolina, in Convention assembled, on the 20th day of April, A. D., 1853, declared that the frequent violations of the Constitution of the United States, by the Federal Government, and its encroachments upon the reserved rights of the States, fully justified this State in then withdrawing from the Federal Union; but in deference to the opinions and wishes of the other slaveholding States, she forbore at that time to exercise this right. Since that time, these encroachments have continued to increase, and further forbearance ceases to be a virtue. And now the State of South Carolina having resumed her separate and equal place among nations, deems it due to herself, to the remaining United States of America, and to the nations of the world, that she should declare the immediate causes which have led to this act. In the year 1765, that portion of the British Empire embracing Great Britain, undertook to make laws for the government of that portion composed of the thirteen American Colonies. A struggle for the right of self-government ensued, which resulted, on the 4th July, 1776, in a Declaration, by the Colonies, 'that they are, and of right ought to be, free and independent States; and that, as free and independent States, they have full power to levy war, conclude peace, contract alliances, establish commerce, and to do all other acts and things which independent States may of right do.' They further solemnly declared that whenever any 'form of government becomes destructive of the ends for which it was established, it is the right of the people to alter or abolish it, and to institute a new government.' Deeming the Government of Great Britain to have become destructive of these ends, they declared that the Colonies 'are absolved from all allegiance to the British Crown, and that all political connection between them and the State of Great Britain is, and ought to be, totally dissolved.' In pursuance of this Declaration of Independence, each of the thirteen States proceeded to exercise its separate sovereignty; adopted for itself a Constitution, and appointed officers for the administration of government in all its departments—Legislative, Executive and Judicial. For purposes of defence, they united their arms and their counsels; and, in 1778, they entered into a League known as the Articles of Confederation, whereby they agreed to entrust the administration of their external relations to a common agent, known as the Congress of the United States, expressly declaring, in the first article, 'that each State retains its sovereignty, freedom and independence, and every power, jurisdiction and right which is not, by this Confederation, expressly delegated to the United States in Congress assembled. Under this Confederation the War of the Revolution was carried on, and on the 3d September, 1783, the contest ended, and a definitive Treaty was signed by Great Britain, in which she acknowledged the Independence of the Colonies in the following terms: 'Article 1.—His Britannic Majesty acknowledges the said United States, viz: Hamp-

shire, Massachusetts Bay, Rhode Island and Providence Plantations, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, North Carolina, South Carolina and Georgia, to be free, sovereign and independent States; that he treats with them as such; and for himself, his heirs and successors, relinquishes all claims to the government, propriety and territorial rights of the same and every part thereof.' Thus were established the two great principles asserted by the Colonies, namely: the right of a State to govern itself; and the right of a people to abolish a Government when it becomes destructive of the ends for which it was instituted. And concurrent with the establishment of these principles, was the fact, that each Colony became and was recognized by the mother country as a free, sovereign and independent State. In 1787, Deputies were appointed by the States to revise the Articles of Confederation, and on 17th September, 1787, these Deputies recommended, for the adoption of the States, the Articles of Union, known as the Constitution of the United States. The parties to whom this Constitution was submitted, were the several sovereign States; they were to agree or disagree, and when nine of them agreed, the compact was to take effect among those concurring; and the General Government, as the common agent, was then to be invested with their authority. If only nine of the thirteen States had concurred, the other four would have remained as they were—separate sovereign States, independent of any of the provisions of the Constitution. In fact, two of the States did not accede to the Constitution until long after it had gone into operation among the other eleven; and during that interval, they each exercised the functions of an independent nation. By this Constitution, certain duties were imposed upon the several States, and the exercise of certain of their powers was restrained, which necessarily implied their continued existence as sovereign States. But, to remove all doubt, an amendment was added, which declared that the powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States, respectively, or to the people. On 23d May, 1788, South Carolina, by a Convention of her people, passed an Ordinance assenting to this Constitution, and afterwards altered her own Constitution, to conform herself to the obligations she had undertaken. Thus was established, by compact between the States, a Government, with defined objects and powers, limited to the express words of the grant. This limitation left the whole remaining mass of power subject to the clause reserving it to the States or to the people, and rendered unnecessary any specification of reserved rights. We hold that the Government thus established is subject to the two great principles asserted in the Declaration of Independence; and we hold further, that the mode of its formation subjects it to a third fundamental principle, namely: the law of compact. We maintain that in every compact between two or more parties, the obligation is mutual; that the failure of one of the contracting parties to perform a material part of the agreement, entirely releases the obligation of the other; and that where no arbiter is provided, each party is remitted to his own judgment to determine the fact of failure, with all its consequences.

In the present case, that fact is established with certainty. We assert, that fourteen of the States have deliberately refused for years past to fulfil their constitutional obligations, and we refer to their own Statutes for the proof. The Constitution of the United States, in its 4th Article, provides as follows: 'No person held to service or labor in one State, under the laws thereof, escaping into another, shall, in consequence of any law or regulation therein, be discharged from such service or labor, but shall be delivered up, on claim of the party to whom such service or labor may be due.' This stipulation was so material to the compact, that without it that compact would not have been made. The greater number of the contracting parties held slaves, and they had previously evinced their estimate of the value of such a stipulation by making it a condition in the Ordinance for the government of the territory ceded by Virginia, which now composes the States north of the Ohio river. The same article of the Constitution stipulates also for rendition by the several States of fugitives from justice from the other States. The General Government, as the common agent, passed laws to carry into effect these stipulations of the States. For many years these laws were executed. But an increasing hostility on the part of the non-slaveholding States to the institution of Slavery has led to a disregard of their obligations, and the laws of the General Government have ceased to effect the objects of the Constitution. The States of Maine, New Hampshire, Vermont, Massachusetts, Connecticut, Rhode Island, New York, Pennsylvania, Illinois, Indiana, Michigan, Wisconsin and Iowa, have enacted laws which either nullify the Acts of Congress or render useless any attempt to execute them. In many of these States the fugitive is discharged from the service or labor claimed, and in none of them has the State Government complied with the stipulation made in the Constitution. The State of New Jersey, at an early day, passed a law in conformity with her constitutional obligation; but the current of anti-slavery feeling has led her more recently to enact laws which render inoperative the remedies provided by her own law and by the laws of Congress. In the State of New York even the right of transit for a slave has been denied by her tribunals; and the States of Ohio and Iowa have refused to surrender to justice fugitives charged with murder, and with inciting servile insurrection in the State of Virginia. Thus the constitutional compact has been deliberately broken and disregarded by the non-slaveholding States, and the consequence follows that South Carolina is released from her obligation. The ends for which this Constitution was framed are declared by itself to be 'to form a more perfect union, establish justice, insure domestic tranquility, provide for the common defence, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity.' These ends it endeavored to accomplish by a Federal Government, in which each State was recognized as an equal, and had separate control over its own institutions. The right of property in slaves was recognized by giving to free persons distinct political rights, by giving them the right to represent, and burthening them with direct taxes for three-fifths of their slaves; by authorizing the importation of slaves for

twenty years; and by stipulating for the rendition of fugitives from labor. We affirm that these ends for which this Government was instituted have been defeated, and the Government itself has been made destructive of them by the action of the non-slaveholding States. Those States have assumed the right of deciding upon the propriety of our domestic institutions; and have denied the rights of property established in fifteen other States and recognized by the Constitution; they have denounced as sinful the institution of Slavery; they have permitted the open establishment among them of societies, whose avowed object is to disturb the peace and to claim the property of the citizens of other States. They have encouraged and assisted thousands of our slaves to leave their homes; and those who remain, have been incited by emissaries, books and pictures to servile insurrection. For twenty-five years this agitation has been steadily increasing, until it has now secured to its aid the power of the Common Government. Observing the forms of the Constitution, a sectional party has found within that article establishing the Executive Department, the means of subverting the Constitution itself. A geographical line has been drawn across the Union, and all the States north of that line have united in the election of a man to the high office of President of the United States whose opinions and purposes are hostile to slavery. He is to be entrusted with the administration of the Common Government, because he has declared that that Government cannot endure permanently half slave, half free, and that the public mind must rest in the belief that Slavery is in the course of ultimate extinction. This sectional combination for the subversion of the Constitution, has been aided in some of the States by elevating to citizenship, persons, who, by the Supreme Law of the land, are incapable of becoming citizens; and their votes have been used to inaugurate a new policy, hostile to the South, and destructive of its peace and safety. On the 4th March next, this party will take possession of the Government. It has announced, that the South shall be excluded from the common Territory; that the Judicial Tribunals shall be made sectional, and that a war must be waged against slavery until it shall cease throughout the United States. The Guaranties of the Constitution will then no longer exist; the equal rights of the States will be lost. The slaveholding States will no longer have the power of self-government, or self-protection, and the Federal Government will have become their enemy. Sectional interest and animosity will deepen the irritation, and all hope of remedy is rendered vain, by the fact that public opinion at the North has invested a great political error with the sanctions of a more erroneous religious belief. We, therefore, the people of South Carolina, by our delegates, in Convention assembled, appealing to the Supreme Judge of the world for the rectitude of our intentions, have solemnly declared that the Union heretofore existing between this State and the other States of North America, is dissolved, and that the State of South Carolina has resumed her position among the nations of the world, as a separate and independent State; with full power to levy war, conclude peace, contract alliances, establish commerce, and to do all other acts and things which independent States may of right do."

A. D. 1860 (December).—President Buchanan's surrender.—His disunion message and its evil effects.—Congress met on the first Monday of December and received from President Buchanan "his mischievous and deplorable message . . . —a message whose evil effect can never be estimated, and whose evil character can hardly be exaggerated. The President informed Congress that 'the long-continued and intemperate interference of the Northern people with the question of slavery in the Southern States has at last produced its natural effect.' . . . The President found that the chief grievance of the South was in the enactments of the Free States known as 'personal liberty laws' [designed to protect free citizens, black or white, in their right to trial by jury, while the fugitive slave law denied to a black man claimed as a slave]. . . . Very likely these enactments, inspired by an earnest spirit of liberty, went in many cases too far, and tended to produce conflicts between National and State authority. That was a question to be determined finally and exclusively by the Federal Judiciary. Unfortunately Mr. Buchanan carried his argument beyond that point. . . . After reciting the statutes which he regarded as objectionable and hostile to the constitutional rights of the South, and after urging their unconditional appeal upon the North, the President said: 'The Southern States, standing on the basis of the Constitution, have a right to demand this act of justice from the States of the North. Should it be refused, then the Constitution, to which all the States are parties, will have been wilfully violated. . . . In that event, the injured States, after having used all peaceful and constitutional means to obtain redress, would be justified in revolutionary resistance to the government of the Union.' By this declaration the President justified, and in effect advised, an appeal from the constitutional tribunals of the country to a popular judgment in the aggrieved States, and recognized the right of those States, upon such popular judgment, to destroy the Constitution and the Union. . . . Mr. Buchanan proceeded to argue ably and earnestly against the assumption by any State of an inherent right to secede from the government at its own will and pleasure. But he utterly destroyed the force of his reasoning by declaring that, 'after much serious reflection' he had arrived at 'the conclusion that no power has been delegated to Congress, or to any other department of the Federal Government, to coerce a State into submission which is attempting to withdraw, or has actually withdrawn,' from the Union. . . . Under these doctrines the Government of the United States was shorn of all power to preserve its own existence, and the Union might crumble and fall while its constituted authorities stood paralyzed and impotent. This construction was all that the extremists of the South desired. With so much conceded, they had every thing in their own hands. . . . Men who, under the wholesome restraint of executive power, would have refrained from taking aggressive steps against the National Government, were by Mr. Buchanan's action forced into a position of hostility. Men in the South, who were disposed to avoid extreme measures, were by taunt and reproach driven into the ranks of Secession. . . . The evil effects of Mr. Buchanan's message were not confined to the slave States. It did incalculable

harm in the free States. It fixed in the minds of tens of thousands of Northern men who were opposed to the Republican party, the belief that the South was justified in taking steps to break up the government, if what they termed a war on Southern institutions should be continued. This feeling had in turn a most injurious influence in the South."—J. G. Blaine, *Twenty Years in Congress*, v. 1, ch. 10.

ALSO IN: G. T. Curtis, *Life of James Buchanan*, v. 2, ch. 16-17.

A. D. 1860 (December).—Vain concessions and humiliations of the North proposed.—The Crittenden compromise.—"When, in the House of Representatives, Mr. Boteler, of Virginia, proposed to refer so much of the President's Message as related to the perilous condition of the country to a committee of thirty-three—one from each state—not less than 52 members from the Slave States refused to vote. 'I pay no attention to any action taken in this body,' said one. 'I am not sent here to patch up difficulties,' said another. The Democratic members from the Free States did their utmost to compose the dissension—some of them who subsequently became conspicuous in the war—suggesting concessions which doubtless they looked back upon with regret. It was proposed that persons of African blood should never be considered as citizens of the United States; that there should never be any interference with slavery in the Territories, nor with the interstate slave-trade; that the doctrine of state-rights should be admitted, and power of coercion denied to the government. Among the dissatisfied members, one would allow any state at pleasure to secede, and allot it a fair share of the public property and territory. Another would divide the Union into four republics; another would abolish the office of President, and have in its stead a council of three, each of whom should have a veto on every public act. Propositions such as these show to what length the allies of the slave power would have gone to preserve it and give it perpetuity. At this stage, Mr. Crittenden [Senator John J. Crittenden of Kentucky], proposed in the Senate certain amendments of the Constitution, and resolutions known subsequently as the Crittenden Compromise. The essential features of his plan were the re-establishing of the Missouri Compromise: that in all territory of the United States north of 36° 30' slavery should be prohibited; in all south of that line, not only permitted, but protected; that from such territory north or south states might be admitted with or without slavery, as the Constitution of each might determine; that Congress should have no power to abolish slavery in places under its jurisdiction in a slave state, nor in the District of Columbia, without the consent of the adjoining states, nor without compensation to the slaveholders, nor to prevent persons connected with the government bringing their slaves into the District; that Congress should have no power to hinder the interstate or territorial transport of slaves; that the national government should pay a full value to the owner of a fugitive slave who might have been rescued from the officers; that no amendments of the Constitution should ever be made which might affect these amendments, or other slave compromises already existing in the Constitution. He also recommended to the states that had enacted

laws in conflict with the existing fugitive slave acts, their repeal; and in four resolutions made provision for the more perfect execution of those acts. But the dissension was too deep to be closed by such a measure as Mr. Crittenden's, which contained nothing that could satisfy the North. The South was resolved not to be satisfied with any thing. It had taken what was plainly an irreversible step. Accordingly, Mr. Crittenden's proposition was eventually lost."—J. W. Draper, *Hist. of the Am. Civil War*, ch. 31 (sect. 6, v. 1).

ALSO IN: H. Greeley, *The Am. Conflict*, v. 1, ch. 24.—E. McPherson, *Pol. Hist. of the U. S. during the Great Rebellion*, pp. 48—90.—J. A. Logan, *The Great Conspiracy*, ch. 8.

A. D. 1860 (December).—Major Anderson at Fort Sumter.—Floyd's treachery in the War Department.—Cabinet rupture.—Loyalty reinstated in the national government.—"In November, 1860, the fortifications of Charleston Harbor consisted of three works—Castle Pinckney, an old-fashioned, circular brick fort, on Slaters' Folly Island, and about one mile east of the city; Fort Moultrie, on Sullivan's Island, still farther to the east, and famous as being on the site of the old fort of palmetto logs, where, during the long bombardment by the British fleet in Revolutionary days, the gallant William Jasper leaped from the low rampart upon the beach below, and seizing the flag that had been shot down, rehoisted it above the fort; and lastly, Fort Sumter, an unfinished fortification, named after General Thomas Sumter, the famous partisan leader of the Revolution, and who was familiarly known as the 'gamecock of the Carolinas.' The armament of Castle Pinckney consisted of 22 cannon, 2 mortars, and 4 light pieces; that of Moultrie of 45 cannon and 7 light pieces; while Sumter mounted 78 heavy guns of various calibre. The entire force of United States troops in these fortifications was composed of two weak companies of artillery under command of Major Robert Anderson, and a few engineer employees under Captain John G. Foster. Of these a sergeant and squad of men were stationed at Castle Pinckney for the care of the quarters and the guns; a similar handful were at Sumter; while most of the little force were at Moultrie, where Anderson had his headquarters. Such was the military situation when South Carolina began to proclaim, without disguise, her purpose to secede and to possess herself of the fortifications on her coast. . . . Our Government paid no apparent heed, and yet the authorities at Washington were fully and betimes forewarned. . . . On the files of the Engineer Department I found a letter, which still remains there, dated as early as November 24, 1860, from Captain Foster to Colonel De Russy, then the chief of the engineer corps, in which the captain states that, at the request of Major Anderson, he has, in company with that officer, made a thorough inspection of the forts in the harbor; that, in the opinion of Anderson, one additional company of artillery should at once be sent to garrison Castle Pinckney, which in the terse language of the letter, 'commands the city of Charleston.' Upon the back of the letter is the simple but significant indorsement, in his own hand-writing, 'Return to Governor Floyd.' You may recall him as Mr. Buchanan's Secretary of War. On November 30, Captain Foster again writes to

Colonel De Russy, saying: 'I think that more troops should have been sent here to guard the forts, and I believe that no serious demonstration on the part of the populace would have met such a course.' On this is indorsed: 'Colonel Cooper says this has been shown to the Secretary of War. H. G. W.' The Indians, placed there by himself, are those of the gallant Horatio G. Wright, who succeeded to the command of the Sixth Army Corps after the loved Sedgwick fell. On December 2, application was made by Captain Foster for the small supply of four boxes of muskets and sixty rounds of cartridge per man, to arm the few civilians or hired laborers who constituted the engineer corps. These arms and ammunition were in the United States arsenal at Charleston, a building which still had a Federal keeper, and over which still floated the Federal flag. On this application is the following indorsement, in General Wright's handwriting: 'Handed to adjutant-general, and by him laid before the Secretary of War on the sixth of December. Returned by adjutant-general on the seventh. Action deferred for the present. See Captain Foster's letter of December 4.' . . . On December 17, Captain Foster, acting on his own patriotic judgment, but without orders, went to Charleston and took from the Federal arsenal forty muskets, with which to arm his laborers. Early on the morning of the 19th, he received a telegram from Secretary Floyd, directing him instantly to return the arms to the arsenal. On the next day, the 20th, the South Carolinians decided, in State convention, to secede, and proclaimed their State an independent sovereignty. . . . All alike were delirious with the epidemic madness of the hour, were hopeful, resolute, enthusiastic. Bells pealed and cannon boomed. . . . But few ventured to breast the storm. There was one, whose name should live honored in a nation's memory, a wise, true man, the greatest lawyer of his State, James L. Pettigrew, who, when his minister first dropped from the service the prayer for the President of the United States, rose in his pew in the middle aisle of Charleston's most fashionable church, and slowly and with distinct voice repeated: 'Most humbly and heartily we beseech Thee with Thy favor to behold and bless Thy servant, the President of these United States.' Then, placing his prayer-book in the rack, and drawing his wife's arm within his own, he left the church, nor entered it again until his body was borne there for burial. To their honor be it said, that even the Carolinians respected his sincerity and candor, and never molested him. . . . On the night of December 26, Major Anderson evacuated Fort Moultrie, which was untenable by his small force, spiked his guns, burned the gun-carriages, and transferred his small command in two schooners to Fort Sumter. This act was without orders and against the do-nothing and helpless policy which had thus far controlled the Government. But it showed the wisdom and prompt decision of the trained soldier and the spirit of the loyal citizen. . . . Let us recall the appearance of Sumter when Anderson transferred his feeble garrison to its protection. The fort was built on an artificial island, which had been constructed by dumping stone upon a shoal that lay on the south side of the principal ship channel to Charleston Harbor. Sumter was pentagonal in form, and its five sides of brick, made solid by

concrete, rose 60 feet above the water. It was pierced for an armament of 135 guns, which were to be placed in three tiers. Two tiers were to be in casemates, and one 'en barbette,' or on the top of the wall. The casemates of the upper tier of casemates were never completed. They were filled up with brick during Major Anderson's occupation of the fort, and so remained during all the succeeding operations and sieges. Seventy-eight guns of various calibre composed its then armament, the most efficient of which were placed 'en barbette.' On the east and west sides of the parade were barracks for the privates, and on the south side were the officers' quarters. These were all wooden structures. The wharf by which access was had to the fort was on the southern side against the gorge wall. Looking from the sea front, Sumter lay nearly midway between Sullivan's Island on the north and the low, sandy ridges of Morris on the south, and about 1,400 yards from either. The main ship channel was between Sumter and Sullivan's Island. The water between the fort and Morris Island was for the most part comparatively shallow. James Island lay to the west and southwest, while to the northwest, and at a distance of three and one-third miles, rose the steeples of Charleston. The city could have been barely reached by the heaviest guns of the barbette battery. Castle Pinckney lay in the direction of the city, and was distant about two and one-third miles. Sullivan's, Morris, and James Islands thus formed a segment of three-fourths of a circle around Sumter. They were so close under the guns of the fort that, with the then limited experience in the construction of earthworks, no batteries could have been erected under fire from Sumter sufficiently strong to prevent the re-enforcement and supplying of the fort, had Anderson been allowed to open fire at the first upon the rebel working parties. . . . At noon of December 27, the flag of the nation was raised over the defender of the fort. Major Anderson knelt, holding the halliards, while Rev. Matthew Harris, an army chaplain, offered fervent prayer for that dear flag and for the loyal few who stood beneath its folds. . . . And then all wearily the days and weeks dragged on. New fortifications rose day by day on each sand-hill about the harbor; vessels of war, bearing the Confederate flag, steamed insultingly near, and the islands were white as harvest fields, with the tents of the fast-gathering rebel soldiery; and still, by positive orders, Anderson was bidden to stand in idle helplessness beside his silent indignant cannon."—Gen. Stewart L. Woodford, *The Story of Fort Sumter (Personal Recollections of the War of the Rebellion, pp. 259-266)*.—On the 29th of December, three days after Anderson had transferred his command to Fort Sumter, Floyd gave up his work of treachery in the War Department, and resigned. Howell Cobb had resigned the Treasury Department previously, on the 10th. A few days later, January 8, Jacob Thompson withdrew from the Interior Department. Loyal men now replaced these secessionists in the Cabinet. Joseph Holt of Kentucky took the place of Floyd in the War Department; John A. Dix of New York succeeded Cobb in the Treasury, and the place of Thompson was not filled. Edwin M. Stanton entered the Cabinet as Attorney-General, taking the place of Jeremiah S. Black who became

Secretary of State. General Cass had held the State Department until December 12, when he, too, resigned, but for reasons opposite to those of Floyd and Cobb. He left the Government because it would not reinforce the Charleston forts.—E. McPherson, *Political Hist. of the U. S. during the Great Rebellion, p. 28*.

Also in: S. W. Crawford, *Genesis of the Civil War: The Story of Sumter, ch. 1, and 6-10*.—J. G. Nicolay and J. Hay, *Abraham Lincoln, v. 2, ch. 18-20, and v. 3, ch. 1-6*.

A. D. 1860-1861 (December—February).—**Seizure of arms, arsenals, forts, and other public property by the Southern insurgents.—Base surrender of an army by Twiggs.**—“Directly after Major Anderson's removal to Fort Sumter, the Federal arsenal in Charleston, containing many thousand stand of arms and a considerable quantity of military stores, was seized by the volunteers, now flocking to that city by direction of the State authorities; Castle Pinckney, Fort Moultrie, and Sullivan's Island were likewise occupied by them, and their defenses vigorously enlarged and improved. The Custom-House, Post-Office, etc., were likewise appropriated, without resistance or commotion. . . . Georgia having given [January 2, 1861] a large popular majority for Secession, her authorities immediately took military possession of the Federal arsenal at Augusta, as also of Forts Pulaski and Jackson, commanding the approaches by sea to Savannah. North Carolina had not voted to secede, yet Gov. Ellis simultaneously seized the U. S. Arsenal at Fayetteville, with Fort Macon, and other fortifications commanding the approaches to Beaufort and Wilmington. Having done so, Gov. E. coolly wrote to the War Department that he had taken the step to preserve the forts from seizure by mobs! In Alabama, the Federal arsenal at Mobile was seized on the 4th, by order of Gov. Moore. It contained large quantities of arms and munitions. Fort Morgan, commanding the approaches to Mobile, was likewise seized, and garrisoned by State troops. . . . In Louisiana, the Federal arsenal at Baton Rouge was seized by order of Gov. Moore on the 11th. Forts Jackson and St. Philip, commanding the passage up the Mississippi to New Orleans, and Fort Pike, at the entrance of Lake Pontchartrain, were likewise seized and garrisoned by State troops. The Federal Mint and Custom-House at New Orleans were left untouched until February 1st, when they, too, were taken possession of by the State authorities. . . . In Florida, Fort Barrancas and the Navy Yard at Pensacola were seized by Florida and Alabama forces on the 13th; Commander Armstrong surrendering them without a struggle. He ordered Lieut. Semmer, likewise, to surrender Forts Pickens and McRae; but the intrepid subordinate defied the order, and, withdrawing his small force from Fort McRae to the stronger and less accessible Fort Pickens, announced his determination to hold out to the last. He was soon after besieged therein by a formidable volunteer force; and a dispatch from Pensacola announced that 'Fort McRae is being occupied and the guns manned by the allied forces of Florida, Alabama, and Mississippi.' . . . The revenue cutter Cass, stationed at Mobile, was turned over by Capt. J. J. Morrison to the authorities of Alabama at the end of January. The McClellan, Capt. Bresh-

wood, stationed on the Mississippi below New Orleans, was, in like manner, handed over to those of Louisiana. Gen. Dix had sent down a special agent to secure them, but he was too late. The telegraph dispatch whereby Gen. Dix directed him, "If any person attempts to haul down the American flag, shoot him on the spot," sent an electric thrill through the loyal heart of the country. Finally, tidings reached Washington, about the end of February, that Brig.-Gen. Twiggs, commanding the department of Texas, had disgracefully betrayed his trust, and turned over his entire army, with all the posts and fortifications, arms, munitions, horses, equipments, etc., to Gen. Ben. McCulloch, representing the authorities of Texas, now fully launched upon the rushing tide of treason. The Union lost by that single act at least half its military force, with the State of Texas, and the control of our Mexican frontier. . . . The defensive fortifications located within the seceding States were some 30 in number, mounting over 3,000 guns, and having cost at least \$20,000,000. Nearly all these had been seized and appropriated by the Confederates before Mr. Lincoln's inauguration, with the exception of Fortress Monroe (Virginia), Fort Sumter (South Carolina), Fort Pickens (Florida), and the fortresses on Key West and the Tortugas, off the Florida coast."—H. Greeley, *The American Conflict*, v. 1, ch. 26.

ALSO IN: *Official Records of the War of the Rebellion*, series 1, v. 1.

A. D. 1861 (January—February).—**Secession of Georgia, Mississippi, Florida, Louisiana, Alabama, and Texas.—Opposition of Alexander H. Stephens, in Georgia.**—"On the 9th day of January, 1861, the State of Mississippi seceded from the Union. Alabama and Florida followed on the 11th day of the same month; Georgia on the 20th; Louisiana on the 26th; and Texas on the 1st of February. Thus, in less than three months after the announcement of Lincoln's election, all the Cotton States . . . had seceded from the Union, and had, besides, secured every Federal fort within their limits, except the forts in Charleston harbor, and Fort Pickens, below Pensacola, which were retained by United States troops."—E. A. Pollard, *The First Year of the War*, ch. 1.—The secession of Georgia was powerfully but vainly opposed by the foremost citizen of that state, Alexander H. Stephens, whose speech before the Legislature of Georgia, in protest against the disruption of the Union, had been one of the notable utterances of the time. "Shall the people of the South," asked Mr. Stephens, "secede from the Union in consequence of the election of Mr. Lincoln to the Presidency of the United States? My countrymen, I tell you frankly, candidly, and earnestly, that I do not think that they ought. In my judgment, the election of no man, constitutionally chosen to that high office, is sufficient cause for any State to separate from the Union. It ought to stand by and aid still in maintaining the constitution of the country. To make a point of resistance to the government, to withdraw from it because a man has been constitutionally elected, puts us in the wrong. We are pledged to maintain the constitution. Many of us have sworn to support it. Can we, therefore, for the mere election of a man to the presidency, and that, too, in accordance with the prescribed forms of the constitution, make a point

of resistance to the government, without becoming the breakers of that sacred instrument ourselves, by withdrawing ourselves from it? Would we not be in the wrong? Whatever fate is to befall this country, let it never be laid to the charge of the people of the South, and especially to the people of Georgia, that we were untrue to our national engagements. Let the fault and the wrong rest upon others. . . . Let the fanatics of the North break the constitution, if such is their fell purpose. Let the responsibility be upon them. . . . We went into the election with this people. The result was different from what we wished; but the election has been constitutionally held. Were we to make a point of resistance to the government and go out of the Union on that account, the record would be made up hereafter against us. But it is said Mr. Lincoln's policy and principles are against the constitution, and that, if he carries them out, it will be destructive of our rights. Let us not anticipate a threatened evil. If he violates the constitution, then will come our time to act. Do not let us break it because, forsooth, he may. If he does, that is the time for us to strike. I think it would be injudicious and unwise to do this sooner. I do not anticipate that Mr. Lincoln will do anything to jeopard our safety or security, whatever may be his spirit to do it; for he is bound by the constitutional checks which are thrown around him, which at this time render him powerless to do any great mischief. This shows the wisdom of our system. The President of the United States is no emperor, no dictator—he is clothed with no absolute power. He can do nothing unless he is backed by power in Congress. The House of Representatives is largely in a majority against him. In the very face and teeth of the heavy majority which he has obtained in the northern States, there have been large gains in the House of Representatives to the conservative constitutional party of the country, which here I will call the national democratic party, because that is the cognomen it has at the North. . . . Is this the time, then, to apprehend that Mr. Lincoln, with this large majority in the House of Representatives against him, can carry out any of his unconstitutional principles in that body? In the Senate he will also be powerless. There will be a majority of four against him. . . . Mr. Lincoln cannot appoint an officer without the consent of the Senate—he cannot form a cabinet without the same consent. He will be in the condition of George the Third (the embodiment of torquism), who had to ask the whigs to appoint his ministers, and was compelled to receive a cabinet utterly opposed to his views; and so Mr. Lincoln will be compelled to ask of the Senate to choose for him a cabinet, if the democracy of that party chose to put him on such terms. He will be compelled to do this, or let the government stop, if the national democratic men (for that is their name at the North), the conservative men in the Senate, should so determine. Then how can Mr. Lincoln obtain a cabinet which would aid him, or allow him to violate the constitution? Why then, I say, should we disrupt the ties of this Union when his hands are tied—when he can do nothing against us?"—A. H. Stephens, *Speech against Secession*, Nov. 14, 1860 (in "*Alexander H. Stephens in Public and Private*;" by H. Cleveland).—But when

Georgia, despite his exertions, was drawn into the movement of rebellion, Mr. Stephens surrendered to it, and lent his voice to the undertaking which he had proved to be without excuse. See below: A. D. 1861 (MARCH).

A. D. 1861 (February).—The Peace Convention.—"The General Assembly of Virginia, on the 19th of January, adopted resolutions inviting representatives of the several States to assemble in a Peace Convention at Washington, which met on the 4th of February. It was composed of 133 Commissioners, many from the border States, and the object of these was to prevail upon their associates from the North to unite with them in such recommendations to Congress as would prevent their own States from seceding and enable them to bring back six of the cotton States which had already seceded." On the 15th of February a committee of the Convention reported certain proposed amendments to the Constitution which "were substantially the same with the Crittenden Compromise [see above: A. D. 1860 (DECEMBER) VAIN CONCESSIONS]; but on motion of Mr. Johnson, of Maryland, the general terms of the first and by far the most important section were restricted to the present Territories of the United States. On motion of Mr. Franklin, of Pennsylvania, this section was further amended, but not materially changed, by the adoption of the substitute offered by him. Nearly in this form it was afterwards adopted by the Convention. The following is a copy: 'In all the present territory of the United States north of the parallel of thirty-six degrees and thirty minutes of north latitude, involuntary servitude, except in punishment of crime, is prohibited. In all the present territory south of that line, the status of persons held to involuntary service or labor, as it now exists, shall not be changed; nor shall any law be passed by Congress or the Territorial Legislature to prevent the taking of such persons from any of the States of this Union to said territory, nor to impair the rights arising from said relation; but the same shall be subject to judicial cognizance in the Federal courts, according to the course of the common law. When any Territory north or south of said line, within such boundary as Congress may prescribe, shall contain a population equal to that required for a member of Congress, it shall, if its form of government be republican, be admitted into the Union on an equal footing with the original States, with or without involuntary servitude, as the Constitution of such State may provide.' . . . More than ten days were consumed in discussion and in voting upon various propositions offered by individual commissioners. The final vote was not reached until Tuesday, the 26th February, when it was taken on the first vitally important section, as amended. This section, on which all the rest depended, was negatived by a vote of eight States to eleven. Those which voted in its favor were Delaware, Kentucky, Maryland, New Jersey, Ohio, Pennsylvania, Rhode Island, and Tennessee. And those in the negative were Connecticut, Illinois, Iowa, Maine, Massachusetts, Missouri, New York, North Carolina, New Hampshire, Vermont, and Virginia." A reconsideration of the vote was moved, however, and on the day following (February 27), "the first section was adopted, but only by a majority of nine to eight States, nine being less than a

majority of the States represented. . . . From the nature of this vote, it was manifestly impossible that two-thirds of both Houses of Congress should act favorably on the amendment, even if the delay had not already rendered such action impracticable before the close of the session. The remaining sections of the amendment were carried by small majorities," and the proposed amendment of the Constitution was reported to Congress, with a request that it be submitted to the Legislatures of the States, but no action upon it was taken.—T. V. Cooper, *American Politics*, pp. 106-108. — "Most of the Southerners thought these propositions worse than nothing. Hunter preferred the present position under the constitution, with the Dred Scott decision as its exposition. Mason, the other Senator from the state that had issued the call for the Peace Convention, said that he would consider himself a traitor if he should recommend such propositions. Wigfall of Texas, however, bore off the palm by saying: 'If those resolutions were adopted, and ratified by three-fourths of the states of this Union, and no other cause ever existed, I make the assertion that the seven states now out of the Union would go out upon that.' Many of the Republicans were equally strong in their opposition to them. Chandler of Michigan spoke the substance of the opinions of several on his side of the Senate when he expressed himself in the language of the 'stump' by saying: 'No concession, no compromise,—ay, give us strife, even to blood,—before a yielding to the demands of traitorous insolence.' . . . John Tyler, the president of the convention that passed them, and Seddon returned to their state and denounced the recommendations of the Peace Convention as a delusion, a sham and an insult to the South. . . . Hawkins of Florida told the House, when the question was first touched upon, that the day of compromise was past and that he and his state were opposed to all and every compromise. Pugh and Clopton of Alabama both spoke boldly for secession and against any temporizing policy. Congress had been in session but ten days, and neither of the committees on compromise had had time to report, when a large number of the members of Congress from the extreme Southern States issued a manifesto declaring that 'argument was exhausted' and that 'the sole and primary aim of each slaveholding state ought to be its speedy and absolute separation from an unnatural and hostile Union.' . . . The boldness of these facts is startling, even when viewed at this distance. They make it perfectly evident that it was not the constitution which the South was desirous of saving, but the institution of slavery which she was determined to preserve. Likewise on the Northern side we find that those who were courageous, logical, and intellectually vigorous in political speculation considered the constitution of less importance than the development of their ideas of freedom. These people were called Abolitionists. Although their political strength was not great, some one of their many ideas found sympathy in the mind of almost every Northerner of education or of clear moral intentions. This explains how John A. Andrew could be elected governor of Massachusetts, although known to have presided over a John Brown meeting. The purpose of the Abolitionists was 'the utter extermination of

slavery wheresoever it may exist.' Wendell Phillips surprised very few Abolitionists when, knowing that the Confederacy was forming, he rejoiced that 'the covenant with death' was annulled and 'the agreement with hell' was broken in pieces, and exclaimed: 'Union or no Union, constitution or no constitution, freedom for every man between the oceans, and from the hot Gulf to the frozen pole! You may as well dam up Niagara with bulrushes as bind our anti-slavery purpose with Congressional compromise.' Congress had to consider such facts as these, as well as the compromises which were proposed. Stephen A. Douglas felt compelled to say, as early as January, 1861, that there were Democrats in the Senate who did not want a settlement. And it was plain to all that most of the Republicans discouraged further concessions. Nor would a constitutional amendment have been possible unless the Northern members had first recognized the seven states as being out of the Union, for it would otherwise have required the support of all but one of the states that were still active. That the 'personal liberty' laws were a violation of the constitution, and that the execution of the fugitive slave law of 1850 had been unconstitutionally obstructed, were unquestioned facts, directly or indirectly recognized by many of the Republican leaders. Nevertheless, the North was much more inclined to continue in this unconstitutional position than to yield to the demands of the South.—F. Bancroft, *The Final Efforts at Compromise* (Pol. Sci. Quarterly, Sept., 1891).

A. D. 1861 (February).—Adoption of a Constitution for "The Confederate States of America."—Election of a President and Vice President.—"Early in February, 1861, a convention of six seceding states, South Carolina, Georgia, Alabama, Mississippi, Louisiana, Florida, was held at Montgomery, Alabama. They were represented by 43 persons. Measures were taken for the formation of a provisional government. After the vote on the provisional Constitution was taken, Jefferson Davis was elected President, and Alexander H. Stephens Vice-President of the Confederacy for the current year. The inauguration of Mr. Davis took place on February 18th. Both were shortly after re-elected permanently for six years. . . . The permanent Constitution adopted for 'The Confederate States of America,' the title now assumed, was modeled substantially on that of the United States. It was remarked that, after all, the old Constitution was the most suitable basis for the new Confederacy. Among points of difference must be noticed that the new instrument broadly recognized, even in its preamble, the contested doctrine of state-rights. . . . Inducements and threats were applied to draw Virginia and the other Border States into the Confederacy. . . . With an ominous monition, the second article reads, 'Congress shall . . . have power to prohibit the introduction of slaves from any state not a member of this Confederacy.' At this time Virginia was receiving an annual income of \$12,000,000 from the

sale of slaves. In 1830 12,000 slaves were sent over her railroads to the South and Southwest. One thousand dollars for each was considered a low estimate. Notwithstanding this, the Ordinance of Secession did not pass the Virginia Convention until some weeks subsequently (April 17).—J. W. Draper, *Hist. of the Am. Civil War*, ch. 32 (v. 1).—The preamble of the Constitution declared that "the people of the Confederate States, each State acting in its sovereign and independent character, invoking the favor and guidance of Almighty God, ordained a Constitution to form a permanent Federal Government and for other purposes. The change in phraseology was obviously to assert the derivative character of the Federal Government and to exclude the conclusion which Webster and others had sought to draw from the phrase, 'We, the people of the United States.' In the Executive department, the Constitution provided, in accordance with the early agreement of the Convention of 1787, that the President should be elected for six years and be ineligible. A seat upon the floor of either House of Congress might be granted to the principal officer in each of the Executive departments with the privilege of discussing any measures appertaining to his department. The President was empowered to remove at pleasure the principal officer in each of the Executive departments and all persons connected with the diplomatic service. To give entire control of Cabinet officers and of foreign ministers was considered to be necessary for the proper discharge of the President's duties and for the independence of his department. All other civil officers could be removed when their services were unnecessary, or for dishonesty, inefficiency, misconduct, or neglect of duty, but the removals in such cases, with the reasons therefor, were to be reported to the Senate, and no person rejected by the Senate could be reappointed to the same office during the recess of the Senate. The President was empowered, while approving portions of an appropriation bill, to disapprove particular items, as in other like cases of veto, the object being to defeat log-rolling combinations against the Treasury. Admitting members of the Cabinet to seats upon the floor of Congress with right of discussion (which worked well during the brief life of the Confederacy), was intended to secure greater facility of communication betwixt the Executive and the Legislative departments and enforce upon the heads of the departments more direct personal responsibility. By ineligibility of the President and restriction of the power of removal, the Congress, acting as a convention, sought to secure greater devotion to public interests, freedom from the corrupting influences of Executive patronage, and to break up the iniquitous spoils system which is such a peril to the purity and perpetuity of our Government. The Judicial department was permitted to remain substantially as it was in the old Government. The only changes were to authorize a tribunal for the investigation of claims against the Government, the withholding from the Federal Courts jurisdiction of suits between citizens of different States, and the enactment of a wise provision that any judicial or other Federal officer, resident and acting solely within the limits of any State, might be impeached by a vote of two thirds of both branches of the Legislature thereof.

The provisions in reference to the election of Senators and Representatives and the powers and duties of each House were unaltered except that the electors of each State were required to be citizens, and the Senators were to be chosen by the Legislatures of the State at the session next immediately preceding the beginning of the term of service. In reference to the general powers of Congress, some of the changes were more vital. The general welfare clause was omitted from the taxing grant. Bounties from the Treasury and extra compensation to contractors, officers, and agents were prohibited. 'A Protective Tariff' was so far forbidden that no duties or taxes on importations could be laid to promote or foster any branch of industry. Export duties were allowed with the concurrence of two thirds of both Houses. Congress was forbidden to make internal improvements except to furnish lights, beacons, buoys, to improve harbors, and to remove obstructions in river navigation, and the cost of these was to be paid by duties levied on the navigation facilitated. That the objects might be better attained, States, with the consent of Congress and under certain other restrictions, were allowed to lay a duty on the sea-going tonnage participating in the trades of the river or harbor improved. States, divided by rivers, or through which rivers flowed, could enter into compacts for improving their navigation. Uniform laws of naturalization and bankruptcy were authorized, but bankruptcy could not affect debts contracted prior to the passage of the law. A two-thirds vote was made requisite to appropriate money unless asked and estimated for by some one of the heads of the departments. Every law must relate but to one subject, and that was to be expressed in the title. To admit new States required a vote of two thirds of each House, the Senate voting by States. Upon the demand of any three States, legally assembled in their several conventions, Congress could summon a convention to consider amendments to the Constitution, but the convention was confined in its action to propositions suggested by the States making the call. . . . 'The importation of negroes of the African race was forbidden, and Congress was required to pass laws effectually to prevent it.' The right of transit or sojourn with slaves in any State was secured and fugitive slaves—called 'slaves' without the euphemism of the old instrument—were to be delivered up on the claim of the party to whom they belonged. Congress could prohibit the introduction of slaves from States and Territories not included in the Confederacy, and laws impairing the right of property in negro slaves were prohibited. Slaves could be carried into any Territory of the Confederacy by citizens of the Confederate States and be protected as property. This clause was intended to forbid 'squatter sovereignty,' and to prevent adverse action against property in slaves, until the Territory should emerge from a condition of pupillage and dependence into the dignity, equality, and sovereignty of a State, when its right to define 'property' would be beyond the interference or control of Congress."—J. L. M. Curry, *The Southern States of the American Union*, ch. 13.—Alexander H. Stephens, in his "Constitutional view of the late War between the States," expresses the opinion that the selection of Jeffer-

son Davis for the Presidency of the Confederacy was due to a misunderstanding. He says that a majority of the states were looking to Georgia for the President, and the Georgia delegation had unanimously agreed to present Mr. Toombs, who would have been acceptable. But a rumor got currency that Georgia would put forward Howell Cobb, whereupon the other states took up Davis, and united upon him. It was generally understood, says Mr. Stephens, that Davis "did not desire the office of President. He preferred a military position, and the one he desired above all others was the chief command of the army."—A. H. Stephens, *Constitutional View of the War between the States*, v. 2, pp. 328-333.

Davis, *Rise and Fall of the Confederate Gov't*, pt. 3, ch. 5, and app. K (v. 1). The text of both the Provisional and the Permanent Constitution of the Confederate States is given in the appendix referred to.

A. D. 1861 (February).—Urgency of South Carolina for the reduction of Fort Sumter before the inauguration of President Lincoln.—"I am perfectly satisfied," wrote Governor Pickens of South Carolina to Howell Cobb, "President of the Provisional Congress" of the Confederacy, in a letter dated February 13, 1861,—"I am perfectly satisfied that the welfare of the new confederation and the necessities of the State require that Fort Sumter should be reduced before the close of the present administration at Washington. If an attack is delayed until after the inauguration of the incoming President of the United States, the troops now gathered in the capital may then be employed in attempting that which, previous to that time, they could not be spared to do. They dare not leave Washington now and do that which then will be a measure too inviting to be resisted. Mr. Lincoln cannot do more for this State than Mr. Buchanan has done. Mr. Lincoln will not concede what Mr. Buchanan has refused. Mr. Buchanan has placed his refusal upon grounds which determine his reply to six States, as completely as to the same demand if made by a single State. If peace can be secured, it will be by the prompt use of the occasion, when the forces of the United States are withheld from our harbor. If war can be averted, it will be by making the capture of Fort Sumter a fact accomplished during the continuance of the present administration, and leaving to the incoming administration the question of an open declaration of war. Such a declaration, separated, as it will be, from any present act of hostilities during Mr. Lincoln's administration, may become to him a matter requiring consideration. That consideration will not be expected of him, if the attack on the fort is made during his administration, and becomes, therefore, as to him, an act of present hostility. Mr. Buchanan cannot resist, because he has not the power. Mr. Lincoln may not attack, because the cause of the quarrel will have been, or may be, considered by him as past. Upon this line of policy I have acted, and upon the adherence to it may be found, I think, the most rational expectation of seeing that fort, which is even now a source of danger to the State, restored to the possession of the State without those consequences which I should most deeply deplore."—*Official Records*, v. 1, p. 256.

A. D. 1861 (February—March).—The inauguration and the inaugural address of President Lincoln.—"On the 11th of February, with his family and some personal friends, Lincoln left his home at Springfield for Washington. . . . On his way to Washington, he passed through the great states of Indiana, Ohio, New York, New Jersey, and Pennsylvania, and was everywhere received with demonstrations of loyalty, as the representative of the national government. He addressed the people at the capitals of these states, and at many of their chief towns and cities. The city of Washington was surrounded by slave territory, and was really within the lines of the insurgents. Baltimore was not only a slaveholding city, but nowhere was the spirit of rebellion more hot and ferocious than among a large class of its people. The lower classes, the material of which mobs are made, were reckless, and ready for any outrage. From the date of his election to the time of his start for Washington, there had often appeared in the press and elsewhere, vulgar threats and menaces that he should never be inaugurated, nor reach the capital alive. Little attention was paid to these threats, yet some of the President's personal friends, without his knowledge, employed a detective, who sent agents to Baltimore and Washington to investigate. . . . The detectives ascertained the existence of a plot to assassinate the President elect, as he passed through Baltimore. The first intelligence of this conspiracy was communicated to Lincoln at Philadelphia. On the facts being laid before him, he was urged to take the train that night (the 21st of February), by which he would reach Washington the next morning, passing through Baltimore earlier than the conspirators expected, and thus avoid the danger. Having already made appointments to meet the citizens of Philadelphia at, and raise the United States flag over, Independence Hall, on Washington's birthday, the 22nd, and also to meet the Legislature of Pennsylvania at Harrisburgh, he declined starting for Washington that night. Finally his friends persuaded him to allow the detectives and the officers of the railways to arrange for him to return from Harrisburgh, and, by special train, to go to Washington the night following the ceremonies at Harrisburgh. . . . He went to Harrisburgh according to arrangement, met the Legislature, and retired to his room. In the meanwhile, General Scott and Mr. Seward had learned, through other sources, of the existence of the plot to assassinate him, and had despatched Mr. F. W. Seward, a son of Senator Seward, to apprise him of the danger. Information coming to him from both of these sources, each independent of the other, induced him to yield to the wishes of his friends, and anticipate his journey to Washington. Besides, there had reached him from Baltimore no committee, either of the municipal authorities or of citizens, to tender him the hospitalities, and to extend to him the courtesies of that city, as had been done by every other city through which he had passed. He was persuaded to permit the detective to arrange for his going to Washington that night. The telegraph wires to Baltimore were cut, Harrisburgh was isolated, and, taking a special train, he reached Philadelphia, and driving to the Baltimore depot, found the Washington train waiting his arrival, stepped on board, and passed on

without interruption through Baltimore to the national capital. . . . He afterwards declared: 'I did not then, nor do I now believe I should have been assassinated, had I gone through Baltimore as first contemplated, but I thought it wise to run no risk where no risk was necessary.' . . . On the 4th of March, 1861, he was inaugurated President of the United States. . . . In the open air, and with a voice so clear and distinct that he could be heard by thrice ten thousand men, he read his inaugural address, and on the very verge of civil war, he made a most earnest appeal for peace."—I. N. Arnold, *Life of Abraham Lincoln*, ch. 11-12.

The following is the full text of the inaugural address, from Lincoln's "Complete Works."

"Fellow-Citizens of the United States: In compliance with a custom as old as the government itself, I appear before you to address you briefly, and to take, in your presence, the oath prescribed by the Constitution of the United States to be taken by the President 'before he enters on the execution of his office.' I do not consider it necessary, at present, for me to discuss those matters of administration about which there is no special anxiety or excitement. Apprehension seems to exist among the people of the southern states, that, by the accession of a republican administration, their property and their peace and personal security are to be endangered. There has never been any reasonable cause for such apprehension. Indeed, the most ample evidence to the contrary has all the while existed and been open to their inspection. It is found in nearly all the published speeches of him who now addresses you. I do but quote from one of those speeches, when I declare that 'I have no purpose, directly or indirectly, to interfere with the institution of slavery in the states where it exists. I believe I have no lawful right to do so, and I have no inclination to do so.' Those who nominated and elected me did so with full knowledge that I had made this and many similar declarations, and had never recanted them. And, more than this, they placed in the platform, for my acceptance, and as a law to themselves and to me, the clear and emphatic resolution which I now read: 'Resolved, That the maintenance inviolate of the rights of the states, and especially the right of each state to order and control its own domestic institutions according to its own judgment exclusively, is essential to that balance of power on which the perfection and endurance of our political fabric depend, and we denounce the lawless invasion by armed force of the soil of any state or territory, no matter under what pretext, as among the gravest of crimes.' I now reiterate these sentiments; and in doing so I only press upon the public attention the most conclusive evidence of which the case is susceptible, that the property, peace, and security of no section are to be in any wise endangered by the now incoming administration. I add, too, that all the protection which, consistently with the Constitution and the laws, can be given, will be cheerfully given to all the states when lawfully demanded, for whatever cause—as cheerfully to one section as to another. There is much

controversy about the delivering up of fugitives from service or labor. The clause I now read is as plainly written in the Constitution as any other of its provisions: 'No person held to service or labor in one state under the laws thereof, escaping into another, shall, in consequence of any law or regulation therein, be discharged from such service or labor, but shall be delivered up on claim of the party to whom such service or labor may be due.' It is scarcely questioned that this provision was intended by those who made it for the reclaiming of what we call fugitive slaves; and the intention of the law-giver is the law. All members of Congress swear their support to the whole Constitution—to this provision as much as to any other. To the proposition, then, that slaves whose cases come within the terms of this clause 'shall be delivered up,' their oaths are unanimous. Now, if they would make the effort in good temper, could they not, with nearly equal unanimity, frame and pass a law by means of which to keep good that unanimous oath? There is some difference of opinion whether this clause should be enforced by national or by state authority; but surely that difference is not a very material one. If the slave is to be surrendered, it can be of but little consequence to him or to others by which authority it is done. And should any one, in any case, be content that this oath shall go unkept on a merely unsubstantial controversy as to how it shall be kept? Again, in any law upon this subject, ought not all the safeguards of liberty known in civilized and humane jurisprudence to be introduced, so that a free man be not, in any case, surrendered as a slave? And might it not be well at the same time to provide by law for the enforcement of that clause in the Constitution which guarantees that 'the citizens of each state shall be entitled to all privileges and immunities of citizens in the several states'? I take the official oath today with no mental reservations, and with no purpose to construe the Constitution or laws by any hypocritical rules. And while I do not choose now to specify particular acts of Congress as proper to be enforced, I do suggest that it will be much safer for all, both in official and private stations, to conform to and abide by all those acts which stand unrepelled, than to violate any of them, trusting to find impunity in having them held to be unconstitutional. It is seventy-two years since the first inauguration of a President under our National Constitution. During that period, fifteen different and greatly distinguished citizens have in succession administered the executive branch of the Government. They have conducted it through many perils, and generally with great success. Yet, with all this scope of precedent, I now enter upon the same task, for the brief constitutional term of four years, under great and peculiar difficulty. A disruption of the Federal Union, heretofore only menaced, is now formidably attempted. I hold that in the contemplation of universal law and of the Constitution, the union of these states is perpetual. Perpetuity is implied, if not expressed, in the fundamental law of all national governments. It is safe to assert that no government proper ever had a provision in its organic law for its own termination. Continue to execute all the express provisions of our National Constitution, and the Union will endure forever, it being

impossible to destroy it except by some action not provided for in the instrument itself. Again, if the United States be not a government proper, but an association of states in the nature of a contract merely, can it, as a contract, be peaceably unmade by less than all the parties who made it? One party to a contract may violate it—break it, so to speak; but does it not require all to lawfully rescind it? Descending from these general principles, we find the proposition that in legal contemplation the Union is perpetual, confirmed by the history of the Union itself. The Union is much older than the Constitution. It was formed, in fact, by the Articles of Association in 1774. It was matured and continued by the Declaration of Independence in 1776. It was further matured, and the faith of all the then thirteen states expressly pledged and engaged that it should be perpetual, by the Articles of Confederation, in 1778. And finally, in 1787, one of the declared objects for ordaining and establishing the Constitution was 'to form a more perfect Union.' But if the destruction of the Union by one or by a part only of the states be lawfully possible, the Union is less perfect than before the Constitution, having lost the vital element of perpetuity. It follows from these views that no state, upon its own mere motion, can lawfully get out of the Union; that resolves and ordinances to that effect are legally void; and that acts of violence within any state or states against the authority of the United States are insurrectionary or revolutionary, according to circumstances. I therefore consider that, in view of the Constitution and the laws, the Union is unbroken; and, to the extent of my ability, I shall take care, as the Constitution itself expressly enjoins upon me, that the laws of the Union be faithfully executed in all the states. Doing this I deem to be only a simple duty on my part; and I shall perform it so far as practicable, unless my rightful masters, the American people, shall withhold the requisite means, or in some authoritative manner direct the contrary. I trust this will not be regarded as a menace, but only as the declared purpose of the Union that it will constitutionally defend and maintain itself. In doing this there needs to be no bloodshed or violence, and there shall be none unless it be forced upon the national authority. The power confided to me will be used to hold, occupy, and possess the property and places belonging to the Government, and to collect the duties and imposts; but beyond what may be necessary for these objects there will be no invasion, no using of force against or among the people anywhere. Where hostility to the United States in any interior locality shall be so great and universal as to prevent competent resident citizens from holding the federal offices, there will be no attempt to force obnoxious strangers among the people for that object. While the strict legal right may exist in the Government to enforce the exercise of these offices, the attempt to do so would be so irritating, and so nearly impracticable withal, that I deem it better to forego, for the time, the uses of such offices. The mails, unless repelled, will continue to be furnished in all parts of the Union. So far as possible, the people everywhere shall have that sense of perfect security which is most favorable to calm thought and reflection. The course here indicated will be followed, unless current events

and experience shall show a modification or change to be proper; and in every case and exigency my best discretion will be exercised according to circumstances actually existing, and with a view and a hope of a peaceful solution of the national troubles, and the restoration of fraternal sympathies and affections. That there are persons, in one section or another, who seek to destroy the Union at all events, and are glad of any pretext to do it, I will neither affirm nor deny; but if there be such, I need address no word to them. To those, however, who really love the Union, may I not speak? Before entering upon so grave a matter as the destruction of our national fabric, with all its benefits, its memories, and its hopes, would it not be wise to ascertain precisely why we do it? Will you hazard so desperate a step, while there is any possibility that any portion of the ills you fly from have no real existence? Will you, while the certain ills you fly to are greater than all the real ones you fly from—will you risk the commission of so fearful a mistake? All profess to be content in the Union if all constitutional rights can be maintained. Is it true, then, that any right, plainly written in the Constitution, has been denied? I think not. Happily the human mind is so constituted that no party can reach to the audacity of doing this. Think, if you can, of a single instance in which a plainly written provision of the Constitution has ever been denied. If, by the mere force of numbers, a majority should deprive a minority of any clearly written constitutional right, it might, in a moral point of view, justify revolution—certainly would if such a right were a vital one. But such is not our case. All the vital rights of minorities and of individuals are so plainly assured to them by affirmations and negations, guarantees and prohibitions in the Constitution, that controversies never arise concerning them. But no organic law can ever be framed with a provision specifically applicable to every question which may occur in practical administration. No foresight can anticipate, nor any document of reasonable length contain, express provisions for all possible questions. Shall fugitives from labor be surrendered by national or by state authority? The Constitution does not expressly say. May Congress prohibit slavery in the Territories? The Constitution does not expressly say. Must Congress protect slavery in the Territories? The Constitution does not expressly say. From questions of this class spring all our constitutional controversies, and we divide upon them into majorities and minorities. If the minority will not acquiesce, the majority must, or the Government must cease. There is no other alternative; for continuing the Government is acquiescence on one side or the other. If a minority in such case will secede rather than acquiesce, they make a precedent which, in turn, will divide and ruin them; for a minority of their own will secede from them whenever a majority refuses to be controlled by such minority. For instance, why may not any portion of a new Confederacy, a year or two hence, arbitrarily secede again, precisely as portions of the present Union now claim to secede from it? All who cherish disunion sentiments are now being educated to the exact temper of doing this. Is there such perfect identity of interests among the states to compose a new Union as to produce harmony only,

and prevent renewed secession? Plainly, the central idea of secession is the essence of anarchy. A majority held in restraint by constitutional checks and limitations, and always changing easily with deliberate changes of popular opinions and sentiments, is the only true sovereign of a free people. Whoever rejects it, does, of necessity, fly to anarchy or to despotism. Unanimity is impossible; the rule of a minority, as a permanent arrangement, is wholly inadmissible; so that, rejecting the majority principle, anarchy or despotism, in some form, is all that is left. I do not forget the position assumed by some that constitutional questions are to be decided by the Supreme Court; nor do I deny that such decisions must be binding in any case upon the parties to a suit, as to the object of that suit, while they are also entitled to very high respect and consideration in all parallel cases by all other departments of the Government; and while it is obviously possible that such decision may be erroneous in any given case, still the evil effect following it, being limited to that particular case, with the chance that it may be overruled and never become a precedent for other cases, can better be borne than could the evils of a different practice. At the same time the candid citizen must confess that if the policy of the Government upon vital questions affecting the whole people is to be irrevocably fixed by decisions of the Supreme Court, the instant they are made, in ordinary litigation between parties in personal actions, the people will have ceased to be their own rulers, having to that extent practically resigned their Government into the hands of that eminent tribunal. Nor is there in this view any assault upon the Court or the Judges. It is a duty from which they may not shrink, to decide cases properly brought before them, and it is no fault of theirs if others seek to turn their decisions to political purposes. One section of our country believes slavery 's right and ought to be extended, while the other believes it is wrong and ought not to be extended. This is the only substantial dispute. The fugitive-slave clause of the Constitution, and the law for the suppression of the foreign slave-trade, are each as well enforced, perhaps, as any law can ever be in a community where the moral sense of the people imperfectly supports the law itself. The great body of the people abide by the dry legal obligation in both cases, and a few break over in each. This, I think, cannot be perfectly cured; and it would be worse in both cases after the separation of the sections than before. The foreign slave-trade, now imperfectly suppressed, would be ultimately revived, without restriction, in one section; while fugitive slaves, now only partially surrendered, would not be surrendered at all by the other. Physically speaking, we cannot separate; we cannot remove our respective sections from each other, nor build an impassable wall between them. A husband and wife may be divorced, and go out of the presence and beyond the reach of each other; but the different parts of our country cannot do this. They cannot but remain face to face; and intercourse, either amicable or hostile, must continue between them. Is it possible, then, to make that intercourse more advantageous or more satisfactory after separation than before? Can aliens make treaties easier than friends can

make laws? Can treaties be more faithfully enforced between aliens than laws can among friends? Suppose you go to war, you cannot fight always; and when, after much loss on both sides and no gain on either, you cease fighting, the identical old questions as to terms of intercourse are again upon you. This country, with its institutions, belongs to the people who inhabit it. Whenever they shall grow weary of the existing government, they can exercise their constitutional right of amending it, or their revolutionary right to dismember or overthrow it. I cannot be ignorant of the fact that many worthy and patriotic citizens are desirous of having the National Constitution amended. While I make no recommendation of amendments, I fully recognize the rightful authority of the people over the whole subject, to be exercised in either of the modes prescribed in the instrument itself; and I should, under existing circumstances, favor, rather than oppose, a fair opportunity being afforded the people to act upon it. I will venture to add that to me the convention mode seems preferable, in that it allows amendments to originate with the people themselves, instead of only permitting them to take or reject propositions originated by others not especially chosen for the purpose, and which might not be precisely such as they would wish to either accept or refuse. I understand a proposed amendment to the Constitution—which amendment, however, I have not seen—has passed Congress, to the effect that the Federal Government shall never interfere with the domestic institutions of the states, including that of persons held to service. To avoid misconstruction of what I have said, I depart from my purpose not to speak of particular amendments, so far as to say that, holding such a provision to now be implied constitutional law, I have no objection to its being made express and irrevocable. The Chief Magistrate derives all his authority from the people, and they have conferred none upon him to fix terms for the separation of the states. The people themselves can do this also if they choose, but the Executive, as such, has nothing to do with it. His duty is to administer the present government as it came to his hands, and to transmit it unimpaired by him to his successor. Why should there not be a patient confidence in the ultimate justice of the people? Is there any better or equal hope in the world? In our present differences is either party without faith of belief in the right? If the Almighty Ruler of Nations, with his eternal truth and justice, be on your side of the North, or on yours of the South, that truth and that justice will surely prevail by the judgment of this great tribunal, the American people. By the frame of the Government under which we live, this same people have wisely given their public servants but little power for mischief; and have with equal wisdom provided for the return of that little to their own hands at very short intervals. While the people retain their virtue and vigilance, no administration, by any extreme of wickedness or folly, can very seriously injure the Government in the short space of four years. My countrymen, one and all, think calmly and well upon this whole subject. Nothing valuable can be lost by taking time. If there be an object to hurry any of you, in hot haste, to a step which you would never take deliberately, that object

will be frustrated by taking time; but no good object can be frustrated by it. Such of you as are now dissatisfied still have the old Constitution unimpaired, and on the sensitive point, the laws of your own framing under it; while the new administration will have no immediate power, if it would, to change either. If it were admitted that you who are dissatisfied hold the right side in the dispute, there still is no single good reason for precipitate action. Intelligence, patriotism, Christianity, and a firm reliance on Him who has never yet forsaken this favored land, are still competent to adjust, in the best way, all our present difficulties. In your hands, my dissatisfied fellow-countrymen, and not in mine, is the momentous issue of civil war. The Government will not assail you. You can have no conflict without being yourselves the aggressors. You have no oath registered in heaven to destroy the Government, while I shall have the most solemn one to 'preserve, protect, and defend it.' I am loth to close. We are not enemies, but friends. We must not be enemies. Though passion may have strained, it must not break, our bonds of affection. The mystic cords of memory, stretching from every battle-field and patriot grave to every living heart and hearthstone all over this broad land, will yet swell the chorus of the Union, when again touched, as surely they will be, by the better angels of our nature."

A. D. 1861 (March).—President Lincoln and his Cabinet.—Secretary Seward.—President Lincoln, "in selecting his cabinet, which he did substantially before he left Springfield for Washington, . . . thought it wise to call for his assistance the strong men of his party, especially those who had given evidence of the support they commanded as his competitors in the Chicago convention. . . . This was sound policy under the circumstances. It might indeed have been foreseen that among the members of a cabinet so composed, troublesome disagreements and rivalries would break out. But it was better for the President to have these strong and ambitious men near him as his coöperators than to have them as his critics in Congress, where their differences might have been composed in a common opposition to him. As members of his cabinet he could hope to control them, and to keep them busily employed in the service of a common purpose, if he had the strength to do so. Whether he did possess this strength was soon tested by a singularly rude trial. There can be no doubt that the foremost members of his cabinet, Seward and Chase, the most eminent Republican statesmen, had felt themselves wronged by their party when in its national convention it preferred to them for the presidency a man whom, not unnaturally, they thought greatly their inferior in ability and experience as well as in service. . . . Seward, who, as Secretary of State, considered himself next to the Chief Executive, and who quickly accustomed himself to giving orders and making arrangements upon his own motion, thought it necessary that he should rescue the direction of public affairs from hands so unskilled, and take full charge of them himself. At the end of the first month of the administration he submitted a 'memorandum' to President Lincoln, which has been first brought to light by Nicolay and Hay, and is one of their most valuable contributions to the history of those days.

In that paper Seward actually told the President that, at the end of a month's administration, the government was still without a policy, either domestic or foreign; that the slavery question should be eliminated from the struggle about the Union; that the matter of the maintenance of the forts and other possessions in the South should be decided with that view; that explanations should be demanded categorically from the governments of Spain and France, which were then preparing, one for the annexation of San Domingo, and both for the invasion of Mexico; that if no satisfactory explanations were received war should be declared against Spain and France by the United States; that explanations should also be sought from Russia and Great Britain, and a vigorous continental spirit of independence against European intervention be aroused all over the American continent; that this policy should be incessantly pursued and directed by somebody; that either the President should devote himself entirely to it, or devolve the direction on some member of his cabinet, whereupon all debate on this policy must end. This could be understood only as a formal demand that the President should acknowledge his own incompetency to perform his duties, content himself with the amusement of distributing post offices, and resign his power as to all important affairs into the hands of his Secretary of State. . . . Had Lincoln, as most Presidents would have done, instantly dismissed Seward, and published the true reason for that dismissal, it would inevitably have been the end of Seward's career. But Lincoln did what not many of the noblest and greatest men in history would have been noble and great enough to do. He considered that Seward was still capable of rendering great service to his country in the place in which he was, if rightly controlled. He ignored the insult, but firmly established his superiority. In his reply, which he forthwith dispatched, he told Seward that the administration had a domestic policy as laid down in the inaugural address with Seward's approval; that it had a foreign policy as traced in Seward's dispatches with the President's approval; that if any policy was to be maintained or changed, he, the President, was to direct that on his responsibility; and that in performing that duty the President had a right to the advice of his secretaries. Seward's fantastic schemes of foreign war and continental policies Lincoln brushed aside by passing them over in silence. Nothing more was said. Seward must have felt that he was at the mercy of a superior man."—Carl Schurz, *Abraham Lincoln*, pp. 67-73.

A. D. 1861 (March).—Surrender of Alexander H. Stephens to Secession.—His "Corner-stone" speech at Savannah.—The following is from a speech made by Alexander H. Stephens at Savannah, on the evening after the secession of Georgia, which he had opposed, but to which he now yielded himself without reserve. It is a speech that became famous on account of its bold declaration that Slavery formed the "corner-stone" of the New Confederacy. "The new constitution," said Mr. Stephens, "has put at rest, forever, all the agitating questions relating to our peculiar institution—African slavery as it exists amongst us—the proper status of the

negro in our form of civilization. This was the immediate cause of the late rupture and present revolution. Jefferson, in his forecast, had anticipated this, as the 'rock upon which the old Union would split.' He was right. What was conjecture with him, is now a realized fact. But whether he fully comprehended the great truth upon which that rock stood and stands may be doubted. The prevailing ideas entertained by him and most of the leading statesmen at the time of the formation of the old constitution, were that the enslavement of the African was in violation of the laws of nature; that it was wrong in principle, socially, morally, and politically. It was an evil they knew not well how to deal with, but the general opinion of the men of that day was that, somehow or other in the order of Providence, the institution would be evanescent and pass away. This idea, though not incorporated in the constitution, was the prevailing idea at that time. The constitution, it is true, secured every essential guarantee to the institution while it should last, and hence no argument can be justly urged against the constitutional guarantees thus secured, because of the common sentiment of the day. Those ideas, however, were fundamentally wrong. They rested upon the assumption of the equality of races. This was an error. It was a sandy foundation, and the government built upon it fell when the 'storm came and the wind blew.' Our new government is founded upon exactly the opposite idea; its foundations are laid, its corner-stone rests upon the great truth, that the negro is not equal to the white man; that slavery—subordination to the superior race—is his natural and normal condition. This, our new government, is the first, in the history of the world, based upon this great physical, philosophical, and moral truth. This truth has been slow in the process of its development, like all other truths in the various departments of science. It has been so even amongst us."—A. H. Stephens, *Speech in Savannah, March 21, 1861* (in *Alexander H. Stephens in Public and Private; by H. Cleveland*).

A. D. 1861 (March—April).—The breaking of rebellion into open war by the attack on Fort Sumter.—President Lincoln's statement of the circumstances.—His first difficulties.—Attitude of the Border States.—The circumstances under which the first blow of the civil war was struck by the rebels at Charleston were recited by President Lincoln, in his Message to Congress, at the special session convened July 4, 1861: "On the 5th of March (the present incumbent's first full day in office), a letter of Major Anderson, commanding at Fort Sumter, written on the 28th of February and received at the War Department on the 4th of March, was by that department placed in his hands. This letter expressed the professional opinion of the writer that reinforcements could not be thrown into that fort within the time for his relief, rendered necessary by the limited supply of provisions, and with a view of holding possession of the same, with a force of less than 20,000 good and well-disciplined men. This opinion was concurred in by all the officers of his command, and their memoranda on the subject were made inclosures of Major Anderson's letter. The whole was immediately laid before Lieutenant-General Scott, who at once concurred

with Major Anderson in opinion. On reflection, however, he took full time, consulting with other officers, both of the army and the navy, and at the end of four days came reluctantly but decidedly to the same conclusion as before. He also stated at the same time that no such sufficient force was then at the control of the government, or could be raised and brought to the ground within the time when the provisions in the fort would be exhausted. In a purely military point of view, this reduced the duty of the administration in the case to the mere matter of getting the garrison safely out of the fort. It was believed, however, that to so abandon that position, under the circumstances, would be utterly ruinous; that the necessity under which it was to be done would not be fully understood; that by many it would be construed as a part of a voluntary policy; that at home it would discourage the friends of the Union, embolden its adversaries, and go far to insure to the latter a recognition abroad; that, in fact, it would be our national destruction consummated. This could not be allowed. Starvation was not yet upon the garrison, and ere it would be reached Fort Pickens might be reinforced. This last would be a clear indication of policy, and would better enable the country to accept the evacuation of Fort Sumter as a military necessity. An order was at once directed to be sent for the landing of the troops from the steamship 'Brooklyn' into Fort Pickens. This order could not go by land, but must take the longer and slower route by sea. The first return news from the order was received just one week before the fall of Fort Sumter. The news itself was that the officer commanding the 'Sabine,' to which vessel the troops had been transferred from the 'Brooklyn,' acting upon some quasi armistice of the late administration (and of the existence of which the present administration, up to the time the order was despatched, had only too vague and uncertain rumors to fix attention), had refused to land the troops. To now reinforce Fort Pickens before a crisis would be reached at Fort Sumter was impossible—rendered so by the near exhaustion of provisions in the latter-named fort. In precaution against such a conjuncture, the government had, a few days before, commenced preparing an expedition as well adapted as might be to relieve Fort Sumter, which expedition was intended to be ultimately used, or not, according to circumstances. The strongest anticipated case for using it was now presented, and it was resolved to send it forward. As had been intended in this contingency, it was also resolved to notify the governor of South Carolina that he might expect an attempt would be made to provision the fort; and that, if the attempt should not be resisted, there would be no effort to throw in men, arms, or ammunition, without further notice, or in case of an attack upon the fort. This notice was accordingly given; whereupon the fort was attacked and bombarded to its fall, without even awaiting the arrival of the provisioning expedition. It is thus seen that the assault upon and reduction of Fort Sumter was in no sense a matter of self-defense on the part of the assailants."—Abraham Lincoln, *Complete Works*, v. 2, pp. 56-57.—The President's delay of action in the case of Fort Sumter was mainly due, on the political side of the question, to the state of

things in the border states—especially in Virginia. "There were fifteen slave states, which those engaged in the rebellion hoped to lead or to force into secession. At the time of the inauguration, only seven of these fifteen—less than a majority—had revolted. The cotton states alone had followed the lead of South Carolina out of the Union. Several weeks had passed since a state had seceded; and unless other states could be dragged into the movement, the rebellion would be practically a failure from the start. Such a confederacy could not hope to live a year, and would be obliged to find its way back into the Union upon some terms. In the meantime, two or three conventions in the border states [Virginia, April 4, and Missouri, March], delegated freshly from the people, had voted distinctly and decidedly not to secede. [Kentucky and Tennessee had refused even the call of conventions; while North Carolina, Feb. 28, and Arkansas, March 18, of the states farther south, had voted secession down.] The affairs of the confederacy were really in a very precarious condition when Mr. Lincoln came into power. The rebel government was making very much more bluster than progress. It became Mr. Lincoln's policy so to conduct affairs as to strengthen the Union feeling in the border states, and to give utterance to no sentiment and to do no deed which should drive these states toward the confederacy. . . . The confederacy found that it must make progress or die. The rebel Congress passed a measure for the organization of an army, on the 9th of March, and on the 12th two confederate commissioners—Mr. Forsyth of Alabama and Mr. Crawford of Georgia—presented themselves at the State Department at Washington for the purpose of making a treaty with the United States. They knew, of course, that they could not be received officially, and that they ought to be arrested for treason. The President would not recognize them, but sent to them a copy of his Inaugural, as the embodiment of the views of the government. . . . In the meantime, Lieutenant Talbot, on behalf of Mr. Lincoln, was having interviews with Governor Pickens of South Carolina and with General Beauregard, in command of the confederate forces there, in which he informed them that provisions would be sent to Fort Sumter, peaceably if possible,—otherwise by force. This was communicated to L. P. Walker, then rebel Secretary of War. Before Talbot had made his communication, Beauregard had informed Major Anderson, in command of Fort Sumter, that he must have no further intercourse with Charleston; and Talbot himself was refused permission to visit that gallant and faithful officer. . . . The wisdom of Mr. Lincoln's waiting became evident at a day not too long delayed. Fort Pickens, which the rebels had not taken, was quietly reinforced [April 12], and when the vessels which carried the relief [to Sumter] were dispatched, Mr. Lincoln gave official information to General Beauregard that provisions were to be sent to Major Anderson in Fort Sumter, by an unarmed vessel. He was determined that no hostile act on the part of the government should commence the war, for which both sides were preparing; although an act of open war had already transpired in Charleston harbor"—the rebel batteries having

fired upon and driven off the unarmed steamer *Star of the West*, which had been sent to convey troops and provisions to Fort Sumter on the 9th of January, two months before Lincoln's inauguration. "Beauregard hid this last intelligence before his Secretary of War, and, under special instructions, on the 12th of April, he demanded the surrender of Fort Sumter. He was ready to make the demand, and to back it by force. The city of Charleston was full of troops, and, for months, batteries had been in course of construction, with the special purpose of compelling the surrender of the fort. Major Anderson had seen these batteries going up, day after day, without the liberty to fire a gun. He declined to surrender. He was called upon to state when he would evacuate the fort. He replied that on the 15th he would do so, should he not meantime receive controlling instructions from the government, or additional supplies. The response which he received was that the confederate batteries would open on Fort Sumter in one hour from the date of the message. The date of the message was 'April 12, 1861, 3:30 A. M.' Beauregard was true to his word. At half past four the batteries opened upon the Fort, which, after a long and terrible bombardment, and a gallant though comparatively feeble defense by a small and half-starved garrison, was surrendered the following day. . . . The fall of Sumter was the resurrection of patriotism. The North needed just this. Such a universal burst of patriotic indignation as ran over the North under the influence of this insult to the national flag has never been witnessed. It swept away all party lines as if it had been flame and they had been flax."—J. G. Holland, *Life of Lincoln*, ch. 18.

A. D. 1861 (April).—President Lincoln's call to arms.—The mighty uprising of the North.—The response of disloyal Governors.—"By the next morning (Sunday April 14) the news of the close of the bombardment and capitulation of Sumter was in Washington. In the forenoon, at the time Anderson and his garrison were evacuating the fort, Lincoln and his Cabinet, together with sundry military officers, were at the Executive Mansion, giving final shape to the details of the action the Government had decided to take. A proclamation, drafted by himself, copied on the spot by his secretary, was concurred in by his Cabinet, signed, and sent to the State Department to be sealed, filed, and copied for publication in the next morning's newspapers. The document bears date April 15 (Monday), but was made and signed on Sunday." It was as follows:

"Whereas the laws of the United States have been for some time past and now are opposed, and the execution thereof obstructed, in the States of South Carolina, Georgia, Alabama, Florida, Mississippi, Louisiana, and Texas, by combinations too powerful to be suppressed by

the ordinary course of judicial proceedings, or by the powers vested in the marshals by law: Now, therefore, I, Abraham Lincoln, President of the United States, in virtue of the power in me vested by the Constitution and the laws, have thought it to call forth, and hereby do call forth, the militia of the several States of the Union, to the aggregate number of seventy-five thousand, in order to suppress said combinations, and to cause the laws to be duly executed. The details for this object will be immediately communicated to the State authorities through the War Department. I appeal to all loyal citizens to favor, facilitate, and aid this effort to maintain the honor, the integrity, and the existence of our National Union, and the perpetuity of popular government; and to redress wrongs already long enough endured. I deem it proper to say that the first service assigned to the forces hereby called forth will probably be to repossess the forts, places, and property which have been seized from the Union; and in every event the utmost care will be observed, consistently with the objects aforesaid, to avoid any devastation, any destruction of or interference with property, or any disturbance of peaceful citizens in any part of the country. And I hereby command the persons composing the combination aforesaid to disperse and retire peacefully to their respective abodes within twenty days from date. Deeming that the present condition of public affairs presents an extraordinary occasion, I do hereby, in virtue of the power in me vested by the Constitution, convene both Houses of Congress. Senators and Representatives are therefore summoned to assemble at their respective chambers, at twelve o'clock noon, on Thursday the fourth day of July next, then and there to consider and determine such measures as, in their wisdom, the public safety and interest may seem to demand. In witness whereof, I have hereunto set my hand, and caused the seal of the United States to be affixed. Done at the city of Washington, this 15th day of April, in the year of our Lord one thousand eight hundred and sixty-one, and of the Independence of the United States the eighty-fifth. Abraham Lincoln. By the President: William H. Seward, Secretary of State."—Abraham Lincoln, *Complete Works*, v. 2, p. 34.

"In view of the subsequent gigantic expansion of the civil war, eleventh-hour critics continue to insist that a larger force should have been called at once. They forget that this was nearly five times the then existing regular army; that only very limited quantities of arms, equipments, and supplies were in the Northern arsenals; that the treasury was bankrupt; and that an insignificant eight million loan had not two weeks before been discounted nearly six per cent. by the New York bankers, some bids ranging as low as eighty-five. They forget that the shameful events of the past four months had elicited scarcely a spark of war feeling; that the loyal States had suffered the siege of Sumter and firing on the 'Star of the West' with a dangerous indifference. They forget the doubt and dismay, the panic of commerce, the division of counsels, the attacks from within, the sneers from without—that faith seemed gone and patriotism dead. Twenty-four hours later all this was measurably changed. . . . The guns of the Sumter bombardment woke the country

from the political nightmare which had so long tormented and paralyzed it. The lion of the North was fully roused. Betrayed, insulted, outraged, the free States arose as with a cry of pain and vengeance. War sermons from pulpits; war speeches in every assemblage; tenders of troops; offers of money; military proclamations and orders in every newspaper; every city radiant with bunting; every village-green a mustering ground; war appropriations in every legislature and in every city or town council; war preparations in every public or private workshop; gun-casting in the great foundries; cartridge-making in the principal towns; camps and drills in the fields; parades, drums, flags, and bayonets in the streets; knitting, bandage-rolling, and lint-scraping in nearly every household. Before the lapse of forty-eight hours a Massachusetts regiment, armed and equipped, was on its way to Washington; within the space of a month the energy and intelligence of the country were almost completely turned from the industries of peace to the activities of war."—J. G. Nicolay and J. Hay, *Abraham Lincoln*, v. 4, ch. 4-5.—"In intelligence no army, except perhaps the Athenian, can have ever equalled or approached that of the North. Most of the soldiers carried books and writing materials in their knapsacks, and mail bags heavily weighted with letters were sent from every cantonment. Such privates would sometimes reason instead of obeying, and they would see errors of their commanders to which they had better have been blind. But on the whole, in a war in which much was thrown upon the individual soldier, intelligence was likely to prevail. In wealth, in the means of providing the weapons and ammunitions of war, the North had an immense advantage, which, combined with that of numbers, could not fail, if, to use Lincoln's homely phrase, it 'pegged away,' to tell in the end. It was also vastly superior in mechanical invention; which was destined to play a great part, and in mechanical skill; almost every Yankee regiment was full of mechanics, some of whom could devise as well as execute. In artillery and engineering the North took the lead from the first, having many civil engineers, whose conversion into military civil engineers was easy. The South, to begin with, had the contents of Federal arsenals and armouries, which had been well stocked by the provident treason of Buchanan's Minister of War. . . . But when these resources were exhausted, replacement was difficult, the blockade having been established, though extraordinary efforts in the way of military manufacture were made. To the wealthy North, besides its own factories, were opened the markets of England and the world. Of the small regular army the Confederacy had carried off a share, with nearly half the regular officers. The South had the advantage of the defensive, which, with long-range muskets and in a difficult country, was reckoned in battle as five to two. The South had the superiority of the unity, force, and secrecy which autocracy lends to the operations of war. On the side of the North these were comparatively wanting."—Goldwin Smith, *The United States*, ch. 5.—In six of the eight Slave-labor States included in the call, the President's Proclamation and the requisition of the Secretary of War "were treated by the authorities with words of scorn and def-

ance. The exceptions were Maryland and Delaware. In the other States, disloyal Governors held the reins of power. 'I have only to say,' replied Governor Letcher of Virginia, 'that the militia of this State will not be furnished to the powers at Washington for any such purpose as they have in view. Your object is to subjugate the Southern States, and a requisition made upon me for such an object—an object, in my judgment, not within the province of the Constitution or the Act of 1795—will not be complied with. You have chosen to inaugurate civil war, and, having done so, we will meet it in a spirit as determined as the Administration has exhibited toward the South.' Governor Ellis, of North Carolina, answered:—'Your dispatch is received, and if genuine, which its extraordinary character leads me to doubt, I have to say in reply, that I regard the levy of troops, made by the Administration for the purpose of subjugating the States of the South, as in violation of the Constitution, and a usurpation of power. I can be no party to this wicked violation of the laws of the country, and to this war upon the liberties of a free people. You can get no troops from North Carolina.' Governor Magoffin, of Kentucky, replied:—'Your dispatch is received. I say emphatically that Kentucky will furnish no troops for the wicked purpose of subduing her sister Southern States.' Governor Harris, of Tennessee, said:—'Tennessee will not furnish a single man for coercion, but 50,000, if necessary, for the defense of our rights, or those of our Southern brethren.' Governor Rector, of Arkansas, replied:—'In answer to your requisition for troops from Arkansas to subjugate the Southern States, I have to say that none will be furnished. The demand is only adding insult to injury.' . . . Governor Jackson, of Missouri, responded:—'There can be, I apprehend, no doubt that these men are intended to make war upon the seceded States. Your requisition, in my judgment, is illegal, unconstitutional, and revolutionary in its objects, inhuman and diabolical, and cannot be complied with. Not one man will the State of Missouri furnish to carry on such an unholy crusade.' . . . Governor Hicks, of Maryland, appalled by the presence of great dangers, and sorely pressed by the secessionists on every side, hastened, in a proclamation, to assure the people of his State that no troops would be sent from Maryland unless it might be for the defense of the National Capital, and that they (the people) would, in a short time, 'have the opportunity afforded them, in a special election for members of the Congress of the United States, to express their devotion to the Union, or their desire to see it broken up.' Governor Burton, of Delaware, made no response until the 26th, when he informed the President that he had no authority to comply with his requisition. At the same time he recommended the formation of volunteer companies for the protection of the citizens and property of Delaware, and not for the preservation of the Union. . . . In the seven excepted Slave-labor States in which insurrection prevailed, the proclamation and the requisition produced hot indignation, and were assailed with the bitterest scorn. . . . Even in the Slave States, there were vehement opposers of the war policy of the Government from its inception." But, speaking generally, "the uprising of the people of the Free-labor States in defense

of Nationality was a sublime spectacle. Nothing like it had been seen on the earth since the preaching of Peter the Hermit and of Pope Urban the Second filled all Christian Europe with religious zeal, and sent armed hosts, with the cry of 'God wills it! God wills it!' to rescue the sepulcher of Jesus from the hands of the infidel."—B. J. Lossing, *Piel's Book of the Civil War*, v. 1, ch. 14.

A. D. 1861 (April).—The Morrill Tariff Act. See TARIFF LEGISLATION: A. D. 1861-1864 (UNITED STATES).

A. D. 1861 (April).—Secession of Virginia. See VIRGINIA: A. D. 1861 (JANUARY—JUNE).

A. D. 1861 (April).—Activity of Rebellion in Virginia and Maryland.—Peril of the national capital.—Attack on Massachusetts volunteers in Baltimore.—"Massachusetts, always the most zealous, was the first in the field [with troops in response to the President's call], and on the 17th [April] she forwarded a regiment of volunteers from Boston to Washington. Pennsylvania, although nearly one-half of her votes had been given for Mr. Breckinridge, followed this example; and, owing to her geographical position, her volunteers reached the shores of the Potomac in advance of all the others. After passing through the great city of Baltimore in the midst of an incipient insurrection, they encamped around the Capitol, on the 18th of April. The seceders, on their side, had not lost a moment in Virginia. They were in possession of Richmond, where the convention was in session. . . . The workshops and arsenal of Harper's Ferry, situated at the confluence of the Potomac and the Shenandoah, on a spot which was destined to play an important part during the war, were only guarded by a detachment of 64 dismounted dragoons; and the Virginia volunteers, assembled in the valleys of the Blue Ridge, were ready to take possession of them as soon as the ordinance for the secession of Virginia should furnish them a pretext. They were then to cross the Potomac and join the insurgents of Maryland, for the purpose of attempting the capture of Washington, where their accomplices were expecting them. On the morning of the 18th [April], a portion of them were on their march, in the hope of seizing the prey which was to be of so much value to the future armies of the Confederacy. But Lieutenant Jones, who was in command at Harper's Ferry, had been informed of the approach of the Confederate troops under the lead of Ashby—a chief well known since; notwithstanding their despatch, they only arrived in sight of Harper's Ferry in time to see from a distance a large conflagration that was consuming the workshops, store-houses, and the enormous piles of muskets heaped in the yards, while the Federal soldiers who had just kindled it were crossing the Potomac on their way to Washington. The Confederates found nothing but smoking ruins, and some machinery, which they sent to Richmond; their allies from Maryland had not made their appearance, and they did not feel strong enough to venture alone to the other side of the Potomac. During the last few days the authorities of Virginia had been making preparations for capturing the Norfolk [or Gosport] arsenal (navy-yard). That estab-

lishment possessed a magnificent granite basin, construction docks, and a dépôt of artillery with more than 2,000 guns; a two-decked vessel was on the stocks, two others, with a three-decker, three frigates, a steam sloop, and a brig, lay dismantled in the port; the steam frigate *Merrimac* was there undergoing repairs; the steam sloop *Germantown* was in the harbor ready to go to sea, while the sailing sloop *Cumberland* was lying to at the entrance of the port. . . . Commodore McCauley, the Federal commandant, was surrounded by traitors," and, being deficient in energy and capability, he allowed himself to be put in a position where he thought it necessary to sink all the vessels in the harbor except the *Cumberland*. As they were sinking, reinforcements arrived from Washington, under Captain Paulding, who superseded McCauley in command. But they came too late. Captain Paulding could do nothing except hastily destroy as far as possible the sinking ships and the arsenal buildings, and then retreat. "The Confederates found abundant resources in artillery and 'matériel' of every description in Norfolk; the fire was soon extinguished, the docks repaired, and they succeeded in raising the *Merrimac*, which we shall see at work the following year. Fort Mifflin had just been occupied by a small Federal garrison. Its loss would have been even more disastrous to the Federal cause than that of the Norfolk navy-yard and arsenal, because the Confederates, instead of having to cover Richmond, would have been able to blockade Washington by sea and besiege it by land. . . . The example of Virginia fired the enthusiasm of the secessionists everywhere, and they applied themselves to the task of drawing into the conflict those slave States which were still hesitating. . . . The sight of the Pennsylvania volunteers had caused a great irritation in Baltimore. That city, the largest in the slave States, . . . warmly sympathized with the South. Her location on the railway line which connects Washington with the great cities of the North imparted to her a peculiar importance. Consequently, the accomplices of the South, who were numerous in Baltimore, determined to seize the first opportunity that might offer to drag that city into the rebellion. . . . The looked-for opportunity occurred . . . April 19. When the Sixth Massachusetts Regiment, with a few battalions of Pennsylvania volunteers, arrived at the northern station, an immense crowd bore down upon them. A line of rails, laid in the centre of the streets, connected this with the southern station, and enabled the cars, drawn by horses, to pass through the city. The crowd surround the soldiers of the Sixth Massachusetts, who occupy these cars. The last cars are stopped, and the occupants, being obliged to get out, endeavor to make their way through the crowd. But, being hemmed in on all sides, they are soon attacked by a shower of stones, which wound many of them, and injure a few mortally. The soldiers have to defend themselves, and the first discharge of musketry, which has considerable effect, opens them a passage. But the aggressors, being armed, rally, and a regular battle ensues. . . . The ground is strewn with the wounded of both parties. At last, the Massachusetts soldiers re-join their comrades at the southern station," and are conveyed to Washington. "Baltimore was thenceforth in possession of the secessionists,

who were fully determined to take advantage of the situation of that city to intercept all communications between Washington and the North. Accordingly, they hastened to burn the railroad bridges which had been constructed over large estuaries north of Baltimore, and to cut the telegraph wires. Deprived of all sources of information from the North, the capital of the Union was soon wrapped in mournful silence. For some days the occupant of the White House was unable to forward any instructions to the people who had remained faithful to the Union; but their zeal did not abate on that account. Patriotism extinguished all party animosities in the hearts of most of the Democrats who had opposed the election of Mr. Lincoln. In the presence of the national peril they loyally tendered their assistance to the President; and breaking loose from their former accomplices of the South, they assumed the name of War Democrats in opposition to that of Peace Democrats."—Comte de Paris, *Hist. of the Civil War in Am.*, v. 1, bk. 2, ch. 4.

A. D. 1861 (April: South Carolina).—Monarchical cravings.—Intensity of the Carolinian hatred of New England and the North.—Mr. Russell, who was famous in his day as a correspondent of "The Times" (London), spent some time in South Carolina at the beginning of the war, and described the state of feeling there in a letter from Charleston, written at the end of April: "Nothing I could say," he wrote, "can be worth one fact which has forced itself upon my mind in reference to the sentiments which prevail among the gentlemen of this State. I have been among them for several days. I have visited their plantations, I have conversed with them freely and fully, and I have enjoyed that frank, courteous and graceful intercourse which constitutes an irresistible charm of their society. From all quarters have come to my ears the echoes of the same voice. . . . That voice says, 'If we could only get one of the royal race of England to rule over us, we should be content.' Let there be no misconception on this point. That sentiment, varied in a hundred ways, has been repeated to me over and over again. There is a general admission that the means to such an end are wanting, and that the desire cannot be gratified. But the admiration for monarchical institutions on the English model, for privileged classes, and for a landed aristocracy and gentry, is undisguised and apparently genuine. With the pride of having achieved their independence is mingled in the South Carolinians' hearts a strange regret at the result and consequences, and many are they who 'would go back to-morrow if we could.' An intense affection for the British connection, a love of British habits and customs, a respect for British sentiment, law, authority, order, civilization, and literature, preëminently distinguish the inhabitants of this State, who, glorying in their descent from ancient families on the three islands, whose fortunes they still follow, and with whose members they maintain not unfrequently familiar relations, regard with an aversion of which it is impossible to give an idea to one who has not seen

its manifestations, the people of New England and the populations of the Northern States, whom they regard as tainted beyond cure by the venom of 'Puritanism.' Whatever may be the cause, this is the fact and the effect. 'The State of South Carolina was,' I am told, 'founded by gentlemen.' It was not established by witch-burning Puritans, by cruel persecuting fanatics, who implanted in the North the standard of Torquemada, and breathed into the nostrils of their newly-born colonies all the ferocity, blood-thirstiness, and rabid intolerance of the Inquisition. . . . 'We could have got on with these fanatics if they had been either Christians or gentlemen,' says [one], 'for in the first case they would have acted with common charity, and in the second they would have fought when they insulted us; but there are neither Christians nor gentlemen among them!' 'Any thing on earth!' exclaims [another], 'any form of government, any tyranny or despotism you will; but'—and here is an appeal more terrible than the adjuration of all the Gods—'nothing on earth shall ever induce us to submit to any union with the brutal, bigoted blackguards of the New England States, who neither comprehend nor regard the feelings of gentleman! Man, woman and child, we'll die first. . . . The hatred of the Italian for the Tedesco, of the Greek for the Turk, of the Turk for the Russ, is warm and fierce enough to satisfy the prince of darkness, not to speak of a few little pet aversions among allied powers and the atoms of composite empires; but they are all mere indifference and neutrality of feeling compared to the animosity evinced by the 'gentry' of South Carolina for the 'rabble of the North.' The contests of Cavalier and Roundhead, of Vendean and Republican, even of Orangeman and Croppy, have been elegant joustings, regulated by the finest rules of chivalry, compared with those which North and South will carry on if their deeds support their words. 'Immortal hate, the study of revenge' will acute every blow, and never in the history of the world, perhaps, will go forth such a 'væ victis' as that which may be heard before the fight has begun. There is nothing in all the dark caves of human passion so cruel and deadly as the hatred the South Carolinians profess for the Yankees. That hatred has been swelling for years, till it is the very life-blood of the state. . . . Believe a southern man as he believes himself, and you must regard New England and the kindred States as the birthplace of impurity of mind among men and of unchastity in women—the home of free love, of Fourierism, of infidelity, of abolitionism, of false teachings in political economy and in social life; a land saturated with the drippings of rotten philosophy, with the poisonous infections of a fanatic press; without honor or modesty; whose wisdom is paltry cunning, whose valor and manhood have been swallowed up in a corrupt, howling demagogy, in the marts of a dishonest commerce."—W. H. Russell, *Letter to the Times* (London), April 30, 1861.

A. D. 1861 (April—May).—Proclamation by the Confederate President.—President Lincoln's proclamation of a Blockade of Southern ports.—The Queen's proclamation of British neutrality.—On the 17th of April, two days after President Lincoln's call for troops, Jefferson Davis, the chief of the rebellious Con-

federacy, published a counter-proclamation, giving notice of the intention of the government at Montgomery to issue letters of marque to privateers, for the destruction of American commerce. It was as follows:

"Whereas, Abraham Lincoln, the President of the United States has, by proclamation announced the intention of invading this Confederacy with an armed force, for the purpose of capturing its fortresses, and thereby subverting its independence, and subjecting the free people thereof to the dominion of a foreign power; and whereas it has thus become the duty of this Government to repel the threatened invasion, and to defend the rights and liberties of the people by all the means which the laws of nations and the usages of civilized warfare place at its disposal: Now, therefore, I, Jefferson Davis, President of the Confederate States of America, do issue this my Proclamation, inviting all those who may desire, by service in private armed vessels on the high seas, to aid this Government in resisting so wanton and wicked an aggression, to make application for commissions or Letters of Marque and Reprisal, to be issued under the Seal of these Confederate States. And I do further notify all persons applying for Letters of Marque, to make a statement in writing, giving the name and a suitable description of the character, tonnage, and force of the vessel, and the name and place of residence of each owner concerned therein, and the intended number of the crew, and to sign said statement and deliver the same to the Secretary of State, or to the Collector of any port of entry of these Confederate States, to be by him transmitted to the Secretary of State. And I do further notify all applicants aforesaid that before any commission or Letter of Marque is issued to any vessel, the owner or owners thereof, and the commander for the time being, will be required to give bond to the Confederate States, with at least two responsible sureties, not interested in such vessel, in the penal sum of five thousand dollars; or if such vessel be provided with more than one hundred and fifty men, then in the penal sum of ten thousand dollars, with condition that the owners, officers, and crew who shall be employed on board such commissioned vessel, shall observe the laws of these Confederate States and the instructions given to them for the regulation of their conduct. That they shall satisfy all damages done contrary to the tenor thereof by such vessel during her commission, and deliver up the same when revoked by the President of the Confederate States. And I do further specially enjoin on all persons holding offices, civil and military, under the authority of the Confederate States, that they be vigilant and zealous in discharging the duties incident thereto; and I do, moreover, solemnly exhort the good people of these Confederate States as they love their country, as they prize the blessings of free government, as they feel the wrongs of the past and these now threatened in aggravated form by those whose enmity is more implacable because unprovoked, that they exert themselves in preserving order, in promoting concord, in maintaining the authority and efficacy of the laws, and in supporting and invigorating all the measures which may be adopted for the common defence, and by which, under the blessing of Divine Providence, we may hope for a speedy, just, and honorable peace. In testimony where-

of, I have hereunto set my hand, and caused the Seal of the Confederate States to be affixed, this seventeenth day of April 1861. By the President, (Signed) Jefferson Davis. R. Toombs, Secretary of State."

The response to this menace was a second proclamation by President Lincoln, announcing a blockade of the ports of the Confederacy, and warning all persons who should accept and act under the proposed letters of marque that they would be held amenable to the laws against piracy. This proclamation was in the following language:

"Whereas an insurrection against the government of the United States has broken out in the States of South Carolina, Georgia, Alabama, Florida, Mississippi, Louisiana, and Texas, and the laws of the United States for the collection of the revenue cannot be effectually executed therein conformably to that provision of the Constitution which requires duties to be uniform throughout the United States: And whereas a combination of persons engaged in such insurrection have threatened to grant pretended letters of marque to authorize the bearers thereof to commit assaults on the lives, vessels, and property of good citizens of the country lawfully engaged in commerce on the high seas, and in waters of the United States: And whereas an executive proclamation has been already issued requiring the persons engaged in these disorderly proceedings to desist therefrom, calling out a militia force for the purpose of repressing the same, and convening Congress in extraordinary session to deliberate and determine thereon: Now, therefore, I, Abraham Lincoln, President of the United States, with a view to the same purposes before mentioned, and to the protection of the public peace, and the lives and property of quiet and orderly citizens pursuing their lawful occupations, until Congress shall have assembled and deliberated on the said unlawful proceedings, or until the same shall have ceased, have further deemed it advisable to set on foot a blockade of the ports within the States aforesaid, in pursuance of the laws of the United States, and of the law of nations in such case provided. For this purpose a competent force will be posted so as to prevent entrance and exit of vessels from the ports aforesaid. If, therefore, with a view to violate such blockade, a vessel shall approach or shall attempt to leave either of the said ports, she will be duly warned by the commander of one of the blockading vessels, who will indorse on her register the fact and date of such warning, and if the same vessel shall again attempt to enter or leave the blockaded port, she will be captured and sent to the nearest convenient port, for such proceedings against her and her cargo, as prize, as may be deemed advisable. And I hereby proclaim and declare that if any person, under the pretended authority of the said States, or under any other pretense, shall molest a vessel of the United States, or the persons or cargo on board of her, such person will be held amenable to the laws of the United States for the prevention and punishment of piracy. In witness whereof, I have hereunto set my hand and caused the seal of the United States to be affixed. Done at the city of Washington, this nineteenth day of April, in the year of our Lord one thousand eight hundred and

sixty-one, and of the independence of the United States the eighty-fifth. Abraham Lincoln. By the President: William H. Seward, Secretary of State."—Abraham Lincoln, *Complete Works*, v. 2, pp. 35-36.

Apparently on unofficial information of these announcements, indicating a state of civil war in the United States, the Government of Great Britain made haste—unfriendly haste, as the United States complained—to declare neutrality between the belligerents, thus placing the insurgent Confederacy on an exactly equal footing with the United States so far as a foreign recognition might do so. The Queen's Proclamation was as follows:

"Whereas, We are happily at peace with all Sovereigns, Powers, and States; And whereas hostilities have unhappily commenced between the Government of the United States of America and certain States styling themselves 'the Confederate States of America'; And whereas we, being at peace with the Government of the United States, have declared our Royal determination to maintain a strict and impartial neutrality in the contest between the said contending parties; We, therefore, have thought fit, by and with the advice of our Privy Council, to issue this our Royal Proclamation: And we do hereby strictly charge and command all our loving subjects to observe a strict neutrality in and during the aforesaid hostilities, and to abstain from violating or contravening either the laws and statutes of the realm in this behalf, or the law of nations in relation thereto, as they will answer to the contrary at their peril." After reciting the language of certain statutes which forbid the subjects of Her Majesty to engage, without leave and license from the Crown, in any foreign military or naval service, or to furnish or equip any ship or vessel for service against any state with which Her Majesty is not at war, the Proclamation proceeds as follows: "Now, in order that none of our subjects may unwarily render themselves liable to the penalties imposed by said statute, we do hereby strictly command, that no person or persons whatsoever do commit any act, matter or thing whatsoever; contrary to the provisions of the said statute, upon pain of the several penalties by the said statute imposed, and of our high displeasure. And we do hereby further warn all our loving subjects, and all persons whatsoever entitled to our protection, that if any of them shall presume, in contempt of this Royal Proclamation, and of our high displeasure, to do any acts in derogation of their duty as subjects of a neutral sovereign, in the said contest, or in violation or contravention of the law of nations in that behalf—as, for example and more especially, by entering into the military service of either of the said contending parties as commissioned or non-commissioned officers or soldiers; or by serving as officers, sailors, or marines on board any ship or vessel of war or transport of or in the service of either of the said contending parties; or by serving as officers, sailors, or marines on board any privateer bearing letters of marque of or from either of the said contending parties; or by engaging to go or going to any place beyond the seas with intent to enlist or engage in any such service, or by procuring or attempting to procure, within Her Majesty's dominions, at home or abroad, others to do so; or
