by fitting out, arming, or equipping, any ship or vessel to be employed as a ship-of-war, or privateer, or transport, by either of the said contending parties; or by breaking, or endeavoring to break, any blockade lawfully and actually established by or on behalf of either of the said contending parties; or by carrying officers, soldiers, despatches, arms, military stores or materials, or any article or articles consigned and deemed to be contraband of war according to the law of modern usage of nations, for the use or service of either of the said contending parties, all persons so offending will incur and be liable to the several penalties and penal consequences by the said statute, or by the law of nations, in that behalf imposed or denounced. And we do hereby declare that all our subjects and persons entitled to our protection who may misconduct themselves in the premises will do so at their peril and of their own wrong, and that they will in no wise obtain any protection from us against any liability or penal consequences, but will, on the contrary, incur our high displeasure by such misconduct. Given at our Court at the White Lodge, Richmond Park, this 13th day of May, in the year of our Lord 1861, and in the 24th year of our reign. God save the Queen."

In the complaint of the United States subsequently submitted to the Tribunal of Arbitration at Geneva, the facts attending this remarkably hastened Proclamation of Neutrality were set forth as follows: "Before any armed collision had taken place, there existed an understanding between Her Majesty's Government and the Government of the Emperor of the French, with a view to securing a simultaneous and identical course of action of the two Governments on American questions. . . . The fact that it had been agreed to by the two Governments was communicated to Mr. Dallas, by Lord John Russell, on the first day of May, 1861. There was nothing in the previous relations between Great Britain and the United States which made it necessary for Her Majesty's Government to seek the advice or to invite the support of the Emperor of the French in the crisis which was threatened. . . . When the news of the bloodless attack upon Fort Sumter became known in Europe, Her Majesty's Government apparently assumed that the time had come for the joint action which had been previously agreed upon; and, without waiting to learn the purposes of the United States, it announced its intention to take the first step by recognizing the insurgents as belligerents. The President's Proclamation, which has since been made the ostensible reason for this determination, was issued on the 19th of April, and was made public in the Washington newspapers of the morning of the 20th. An imperfect copy of it was also telegraphed to New York, and from thence to Boston, in each of which cities it appeared in the newspapers of the morning of the 20th. The New York papers of the 20th gave the substance of the Proclamation, without the official commencement and close, and with several errors of more or less importance. The Boston papers of the same date, in addition to the errors in the New York copy, omitted the very important statement in regard to the collection of the revenue, which appears in the Proclamation as the main cause of its issue. During the morning of the 19th of April,

a riot took place in Baltimore, which ended in severing direct communication, by rail or telegraph, between Washington and New York. Telegraphic communication was not restored until the 30th of the month. The regular passage of the mails and trains was resumed about the same time. . . . It is absolutely certain that no full copy of the text of the Proclamation could have left Washington by the mails of the 19th, and equally certain that no copy could have reached New York from Washington after the 19th for several days. On the 20th the steamer Canadian sailed from Portland, taking the Boston papers of that day, with the imperfect copy of the Proclamation, in which the clause in regard to the collection of the revenue was suppressed. This steamer arrived at Londonderry on the 1st of May, and the 'Daily News' of London, of the 2d of May, published the following telegraphic items of news: 'President Lincoln has issued a Proclamation, declaring a blockade of all the ports in the seceded States. The Federal Government will condemn as pirates all private-vessels which may be seized by Federal ships.' The Canadian arrived at Liverpool on the 2d of May, and the 'Daily News,' of the 3d, and the 'Times,' of the 4th of May, published the imperfect Boston copy of the Proclamation. . . . No other than the Boston copy of the Proclamation appears to have been published in the London newspapers. It is not likely that a copy was received in London before the 10th, by the Fulton from New York. It was on this meager and incorrect information that the advice of the British Law Officers was based, upon which that Government acted. . . . On the 5th of May the steamship Persia arrived at Liverpool with advices from New York to the 25th of April. Lord John Russell stated on Monday, the 6th of May, in a communication to Lord Cowley, 'that Her Majesty's Government received no dispatches from Lord Lyons by the mail which has just arrived, [the Persia,] the communication between Washington and New York being interrupted.' In the same dispatch Lord Cowley is informed 'that Her Majesty's Government cannot hesitate to admit that such Confederacy is entitled to be considered as a belligerent, and as such invested with all the rights and prerogatives of a belligerent,' and he is instructed to invite the French Government to a joint action, and a line of joint policy with the British Government, toward the United States.—*The Case of the United States before the Tribunal of Arbitration at Geneva* [42d cong., 2d sess., Senate ex. doc. 31], pp. 24-27.—"The British government is accustomed to preserve an attitude of neutrality towards contending nations; but it would seem that neutrality does not so far interfere with the sympathies and freedom of its subjects as to compel it to issue proclamations against Irishmen enlisting with Francis Joseph, or Englishmen fighting for Victor Emanuel and Garibaldi. . . . In the case of the United States, the laws of England and its treaty stipulations with our Government already forbade its subjects from engaging in a conspiracy to overthrow our Institutions. The proclamation, therefore, in forbidding English subjects to fight in the service of the rebels against the United States, simply declared the law as it was already understood; while in forbidding Englishmen to fight for the United States against the rebels, it intervened to change the existing

practice, to revive the almost obsolete act of Geo. III. forbidding English subjects from engaging in foreign service without the royal consent, which had slumbered in regard to Austria and Italy, for the purpose of forbidding Englishmen from assisting to maintain in the United States constitutional order against conspiracy and rebellion, and the cause of freedom against chattel slavery. The first effect of the proclamation, therefore, was to change the position in which England and Englishmen stood to the United States, to the disadvantage of the latter. Before the proclamation, for an Englishman to serve the United States Government in maintaining its integrity was regarded honorable; after the proclamation such service became a crime. The proclamation makes it an offence now for an Englishman to fight for the Government at Washington as great as it was for Englishmen before the proclamation to fight for the rebels of Montgomery. It thus, in a moral view, lowered the American Government to the level of the rebel confederacy, and in the next place, it proceeded, in an international view, to place the rebel confederacy on a par with the American Government. . . . No ingenuity can blind us to these facts:—Before the proclamation, to support our Government was an honorable office for the subjects of Great Britain, and the rebels were insurgents, with no rights save under the American Constitution. After the proclamation, for an Englishman to serve the United States is a crime, and the rebels are elevated into a belligerent power—and this intervention of England, depriving us of a support which her practice permitted, and giving the rebels a status and right they did not possess, we are coolly told is neutrality. . . . What would England have said to such a proclamation of neutrality from us in her domestic troubles in Canada, in Ireland, or in India? What would the English people have thought of a state paper from Washington, declaring it the sovereign will of the people of the United States to remain perfectly neutral in the contest being waged in Hindostan between the British government on the one side and the Mogul dynasty on the other, and forbidding American citizens to enter the services of either of the said belligerents? What would they have thought of the American President intimating with cold etiquette that it was a matter of profound indifference to this Government which of the belligerents should be victorious, the King of Oude and Nana Sahib, or Lord Canning and the immortal Havelock?"—John Jay, *The Great Conspiracy: Address at Mount Kisco, July 4, 1861.*

A. D. 1861 (April—May: Maryland).—The ending of rebellious trouble in Baltimore and the state.—General Butler in the field.—The Eighth Massachusetts Regiment, Colonel Monroe, arrived at Philadelphia on the 20th of April, the day following the passage of the Sixth Massachusetts Regiment through Baltimore, and its battle with the rebel mob of that city. The Eighth was accompanied by General Benjamin

F. Butler, who had been appointed by the Governor of Massachusetts to command the first brigade from that state. At Philadelphia General Butler "first heard of the attack on the Sixth, in Baltimore. His orders commanded him to march through that city. It was now impossible to do so with less than 10,000 armed men. He counselled with Major-General Robert Patterson, who had just been appointed commander of the 'Department of Washington,' which embraced the States of Pennsylvania, Delaware, and Maryland, and the District of Columbia, and whose headquarters were at Philadelphia. Commodore Dupont, commandant of the Navy Yard there, was also consulted, and it was agreed that the troops should go by water from Perryville, at the mouth of the Susquehanna River, to Annapolis, and thence across Maryland to Washington." "This route was accordingly taken by General Butler. Colonel Lefferts, who had reached Philadelphia with the New York Seventh Regiment, preferred to attempt going directly to Washington by a steamer which he secured for the purpose; but a report of rebel batteries on the Potomac turned him back, and his regiment, likewise, proceeded to Annapolis, arriving there some hours after the Eighth Massachusetts. Despite the protests and remonstrances of the Governor of Maryland—who was striving hard to put his state in an attitude of "neutrality," and to persuade the national government to respect it by passing no armed troops across Maryland soil—both regiments were landed, and took possession of the town, where the secessionists were making ready to capture the Naval Academy and the training ship Constitution. The track of the railroad from Annapolis had been torn up and the locomotives disabled. The mechanics of the Massachusetts Eighth proceeded quickly to repair both, and the two regiments moved forward. "The troops reached Annapolis Junction on the morning of the 25th, when the co-operation of the two regiments ceased, the Seventh New York going on to Washington, and the Eighth Massachusetts remaining to hold the road they had just opened. Before their departure from Annapolis, the Baltic, a large steamship transport, had arrived there with troops, and others speedily followed. General Scott ordered General Butler to remain there, hold the town and the road, and superintend the forwarding of troops to the Capital. The 'Department of Annapolis,' which embraced the country twenty miles on each side of the railway, as far as Bladensburg, was created, and General Butler was placed in command of it, with ample discretionary powers to make him a sort of military dictator. . . . At the close of April, General Butler had full 10,000 men under his command at Annapolis, and an equal number were guarding the seat of Government [Washington]." "Meanwhile, Baltimore had been given up to the control of the Secessionists, though the Maryland Unionists were numerous and strong and were gathering courage to assert themselves. But the rebellious and riotous city was now brought to its senses. On the 5th of May General Butler sent two regiments to occupy the Relay House, within nine miles of Baltimore. On the 9th, a force of 1,200 Pennsylvania troops and regulars, ordered forward by General Patterson from Philadelphia, were landed near Fort McHenry, under the guns of a United States vessel, and

marched through the city. On the night of the 13th, General Butler, in person, with about 1,000 men, including the Massachusetts Sixth, entered the place and took a commanding position on Federal Hill, which was afterwards permanently fortified. From that day the disloyalty in Baltimore gave no trouble to the Government.—B. J. Lossing, *Field Book of the Civil War*, v. 1, ch. 18.

A. D. 1861 (May).—Call for additional volunteers.—On the 3d of May the President issued a call for forty additional regiments of volunteers; directed an increase of the regular army by ten regiments, and ordered the enlistment of 18,000 seamen—acts subsequently legalized by Congress.

A. D. 1861 (May).—Exportation of cotton from the Confederacy, excepting through its seaports, prohibited.—On the 21st of May, 1861, the Congress of the Confederate States passed an act declaring that "from and after the 1st day of June next, and during the existence of the blockade of any of the ports of the Confederate States of America by the Government of the United States, it shall not be lawful for any person to export any raw cotton or cotton yarn from the Confederate States of America except through the seaports of the said Confederate States."

A. D. 1861 (May).—Secession of North Carolina. See NORTH CAROLINA: A. D. 1861 (JANUARY—MAY).

A. D. 1861 (May).—General Butler at Fortress Monroe and his "Contrabands."—The first military thrust at Slavery.—General Butler was commissioned as Major-General of Volunteers on the 16th of May, and on the 20th he was ordered to the command at Fortress Monroe. He arrived at the Fortress on the 22d and assumed the command. "On the evening of the second day after his arrival at the post, the event occurred which will for ever connect the name of General Butler with the history of the abolition of slavery in America. Colonel Phelps's visit to Hampton [the previous day] had thrown the white inhabitants into such alarm that most of them prepared for flight, and many left their homes that night, never to see them again. In the confusion three negroes escaped, and, making their way across the bridges, gave themselves up to a Union picket, saying that their master, Colonel Mallory, was about to remove them to North Carolina to work upon rebel fortifications there, far away from their wives and children, who were to be left in Hampton. They were brought to the fortress, and the circumstance was reported to the general in the morning. . . . He needed laborers. He was aware that the rebel batteries that were rising around him were the work chiefly of slaves, without whose assistance they could not have been erected in time to give him trouble. He wished to keep these men. The garrison wished them kept. The country would have deplored or resented the sending of them away. If they had been Colonel Mallory's horses, or Colonel Mallory's spades, or Colonel Mallory's percussion caps, he would have seized them and

used them without hesitation. Why not property more valuable for the purposes of the rebellion than any other? He pronounced the electric words, "These men are Contraband of War; set them at work." "An epigram," as Winthrop remarks, "abolished slavery in the United States." The word took; for it gave the country an excuse for doing what it was longing to do. . . . By the time the three negroes were comfortably at work upon the new bake-house, General Butler received the following brief epistle, signed 'J. B. Carey, major-acting, Virginia volunteers': "He pleased to designate some time and place when it will be agreeable to you to accord to me a personal interview." The general complied with the request." The interview occurred that afternoon, and was not between strangers; for General Butler and Major Carey were old political allies—hard-shell democrats both. The essential part of the conversation which ensued was as follows: "Major Carey: 'I am informed that three negroes, belonging to Colonel Mallory, have escaped within your lines. I am Colonel Mallory's agent and have charge of his property. What do you intend to do with regard to those negroes?' General Butler: 'I propose to retain them.' Major Carey: 'Do you mean, then, to set aside your constitutional obligations?' General Butler: 'I mean to abide by the decision of Virginia, as expressed in her ordinance of secession, passed the day before yesterday. I am under no constitutional obligations to a foreign country, which Virginia now claims to be.' Major Carey: 'But you say, we can't secede, and so you cannot consistently detain the negroes.' General Butler: 'But you say, you have seceded, and so you cannot consistently claim them. I shall detain the negroes as contraband of war. You are using them upon your batteries. It is merely a question whether they shall be used for or against the government. Nevertheless, though I greatly need the labor which has providentially fallen into my hands, if Colonel Mallory will come into the fort, and take the oath of allegiance to the United States, he shall have his negroes, and I will endeavor to hire them from him.' Major Carey: 'Colonel Mallory is absent.' The interview here terminated, and each party, with polite farewell, went its way. This was on Friday, May 24. On Sunday morning, eight more negroes came in. . . . They continued to come in daily, in tens, twenties, thirties, till the number of contrabands in the various camps numbered more than 900. A commissioner of negro affairs was appointed, who taught, fed and governed them." General Butler reported his action to the Government, and on the 30th of May the Secretary of War wrote to him: "Your action in respect to the negroes who came within your lines, from the service of the rebels, is approved. . . . While . . . you will permit no interference, by persons under your command, with the relations of persons held to service under the laws of any state, you will, on the other hand, so long as any state within which your military operations are conducted remain under the control of . . . armed combinations, refrain from surrendering to alleged masters any persons who come within your lines." "So the matter rested for two months, at the expiration of which events revived the question."—J. Par-ton, *General Butler in New Orleans*, ch. 6.

A. D. 1861 (May; Virginia).—First Advance of Union Troops across the Potomac.—Death of Ellsworth at Alexandria.—"Already 'Confederate' pickets were occupying Arlington Heights and the Virginia shore of the Long Bridge, which spans the Potomac at Washington City; and engineers had been seen on those heights select'ng eligible positions for batteries. A crisis was evidently at hand, and the General-in-chief was now persuaded to allow an immediate invasion of Virginia. Orders were at once issued [May 23] for the occupation of the shores of the Potomac opposite, and also the city of Alexandria, nine miles below, by National troops. General Mansfield was in command of about 13,000 men at the Capital. Toward midnight, these forces in and around Washington were put in motion for the passage of the river, at three different points. One column was to cross at the Aqueduct Bridge, at Georgetown; another at the Long Bridge, at Washington; and a third was to proceed in vessels, and seize the city of Alexandria. The three invading columns moved almost simultaneously. . . . The troops moving by land and water reached Alexandria at about the same time. The National frigate Pawnee was lying off the town, and her commander had already been in negotiation for the evacuation of Alexandria by the insurgents. A detachment of her crew, bearing a flag of truce, now hastened to the shore in boats, and leaped eagerly upon the wharf just before the zouaves [the New York Fire Zouave Regiment, under Colonel Ellsworth] reached it. They were fired upon by some Virginia sentries, who instantly fled from the town. Ellsworth, ignorant of any negotiations, advanced to the center of the city, and took possession of it in the name of his Government, while the column under Wilcox marched through different streets to the Station of the Orange and Alexandria Railway, and seized it, with much rolling stock. They there captured a small company (thirty-five men) of Virginia cavalry, under Captain Ball. Other Virginians, who had heard the firing of the insurgent pickets, escaped by way of the railroad. Alexandria was now in quiet possession of the National troops, but there were many violent secessionists there who would not submit. Among them was a man named Jackson, the proprietor of an inn called the Marshall House. The Confederate flag had been flying over his premises for many days, and had been plainly seen from the President's house in Washington. It was still there, and Ellsworth went in person to take it down. When descending an upper staircase with it, he was shot by Jackson, who was waiting for him in a dark passage, with a double-barreled gun, loaded with buckshot. Ellsworth fell dead, and his murderer met the same fate an instant afterward, at the hands of Francis E. Brownell, of Troy, who, with six others, had accompanied his commander to the roof of the house. He shot Jackson through the head with a bullet, and pierced his body several times with his saber-bayonet. . . . Ellsworth was a very young and extremely handsome man, and was greatly beloved for his generosity, and admired for his bravery and patriotism. His death produced great excitement throughout the country. It was the first of note that had occurred in consequence of the National troubles, and the very first since the campaign had actually begun, a few hours before. It

intensified the hatred of rebellion and its abettors; and a regiment was raised in his native State (New York) called the Ellsworth Avengers. Intrenching tools were sent over the Potomac early on the morning of the 24th, and the troops immediately commenced casting up intrenchments and redoubts, extending from Roach's Spring, on the Washington and Alexandria Road, across Arlington Heights, almost to the Chain Bridge."—B. A. D. 1861 (June: Virginia).—The fight at Big Bethel.—Major-General Butler and staff arrived at Fortress Monroe Wednesday afternoon, May 22d. . . . Colonel Magruder—late Colonel in the U. S. service, and an officer of much distinction as an obstinate combatant—was placed in command (rebel) of the Peninsula. . . . Troops rapidly poured into Butler's department, and he soon found himself in a condition to act on the offensive. Magruder's scouts and cavalry greatly annoyed the two camps mentioned. They had, also, seized several Union men. These raids became so frequent and annoying that a night attack was concerted upon their positions at Little Bethel and Big Bethel—the latter, near the north branch of Back River, where it was understood Magruder's outposts were throwing up strong works. Brigadier-General Pierce, of the Massachusetts troops, was detailed to command the expedition. . . . Approaching the enemy's position at Big Bethel, it was found that their guns commanded all points of approach. The road leading up to the bridge over the creek was swept by their artillery. A thick woods to the left of the road afforded some protection to the Federal left. An open field on the right of the approach only offered a house and out-buildings as a cover. The enemy occupied a hill, beyond the creek, which almost completely secured their front. At their rear was a dense wood. This gave them the advantage of ground, greatly. A reconnaissance would have demonstrated the futility of a front attack except by artillery. The only hope for the Federals was in a flank movement, higher up the creek, by which, the stream being passed, the enemy could be assaulted in their works, at the point of the bayonet, if necessary. This movement was only attempted partially at a late hour in the day. The rebels were well prepared, and only awaited the appearance of the head of the Federal advance to open a sharp fire. . . . The fight was, from the first, extremely unequal. A front attack was sheer folly. But, the flank movement was not ordered. . . . The fortunes of the day needed but

a master-hand to direct them, to have turned in favor of the Union troops. . . . Lieutenant-Colonel Washburne had . . . arranged for a flank movement which, with a combined attack from the front, must have ended the struggle; but the order for retreat was given before the movement could be executed. . . . The Federal loss was 14 killed, 49 wounded and five missing. Among the killed were two of the most gallant and noble men in the service—Major Theodore Winthrop, Secretary and Aid to General Butler, and first-Lieutenant John T. Groble, of the United States regular artillery, Second regiment. The rebels pronounced their loss to have been but one killed and four wounded. The retreat was accomplished in good order—the enemy not pursuing."—C. J. Victor, *Hist. of the Southern Rebellion*, v. 2, div. 4, ch. 18.

A. D. 1861 (June—July: West Virginia).—General McClellan's campaign in the mountains.—Rich Mountain and Carrick's Ford.—"Although some thousands of West Virginians had volunteered to fight for the Union, none of them were encamped on the soil of their State until after the election held [May 23] to ratify or reject the Ordinance of Secession [see VIRGINIA: A. D. 1861 (JANUARY—JUNE)] . . . The Virginians who volunteered were mustered in and organized at Camp Carlile, in Ohio, opposite Wheeling, under the command of Col. Kelly, himself a Virginian. George B. McClellan, who had been appointed a Major-General and assigned to the command of the Department of the Ohio, remained at Cincinnati, his home. Three days after the election aforesaid, he issued from that city a spirited address 'To the Union men of Western Virginia.' . . . A brief and stirring address to his soldiers was issued simultaneously with the above; and, both being read to those in Camp Carlile that evening, the 1st Virginia, 1,100 strong, Col. Kelly, crossed to Wheeling early next morning, closely followed by the 16th Ohio, Col. Irvine. The 14th Ohio, Col. Steedman, crossed simultaneously, and quietly occupied Parkersburg, the terminus of the Northwestern branch of the Baltimore and Ohio road. A Rebel force, then holding Grafton, which connected the branch aforesaid with the main or Wheeling division of the railroad, had meditated a descent on Wheeling; but, finding themselves anticipated and outnumbered, they obstructed and destroyed the railroad west of them," and fell back to Philippi, some fifteen miles southward. "General McClellan having ordered that Philippi be captured by surprise, the attempt was made on the night of June 2d. Two brigades of two regiments each approached the Rebel camp by different roads" and dispersed it completely, with some loss on both sides, capturing the tents, provisions and munitions. The Rebel commander, Colonel Porterfield, "gathering up such portion of his forces as he could find, retreated hastily to Beverly, and thence to Huttonsville; where the Rebel array was rapidly increased by conscription, and Gov. Wise placed in command. Gen. McClellan arrived at Grafton on the 23d. . . . His forces were rapidly augmented, till they amounted, by the 4th of July, to over 80,000 men; while the

Rebels in his front could hardly muster 10,000 in all. He therefore resolved to advance. The Rebel main force, several thousand strong, under Gen. Robert S. Garnett, was strongly entrenched on Laurel Hill, a few miles north of Beverly, . . . while a smaller detachment, under Col. John Pegram was entrenched upon the summit and at either base of High Mountain . . . three or four miles distant from the Rebel main body." General Rosecrans, sent by a detour of eight miles through the mountains to Pegram's rear, drove the rebels (July 11) from their position, at the point of the bayonet; and the following day their commander, with about 600 men, was forced to surrender. "Gen. McClellan pushed on to Beverly, which he entered early next morning, flanking Gen. Garnett's position at Laurel Hill and compelling him to a precipitate flight northward. Six cannon, 200 tents, 60 wagons and over 100 prisoners, were the trophies of this success. The Rebel loss in killed and wounded was about 150; the Union about 50. Gen. Garnett, completely flanked, thoroughly worsted, and fearfully outnumbered, abandoned his camp at Laurel Hill without a struggle, crossing the Laurel Mountains eastward, by a by-road, into the narrow valley of Cheat river. . . . At length, having crossed the Cheat at a point known as Carriek's Ford, which proffered an admirable position for defense, Garnett turned [July 14] to fight." But the Union force which pursued him was overpowering; Garnett himself was killed in the battle at the Ford and his command fled in confusion. Gen. McClellan telegraphed to Washington, next day, from Huttonsville: "We have completely annihilated the enemy in Western Virginia. Our loss is about 13 killed and not more than 40 wounded; while the enemy's loss is not far from 200 killed; and the number of prisoners we have taken will amount to at least 1,000. We have captured seven of the enemy's guns in all. A portion of Garnett's forces retreated; but I look for their capture by Gen. Hill, who is in hot pursuit." "This expectation was not realized. The pursuit was only continued two miles beyond the ford; when our weary soldiers halted, and the residue of the Rebels, under Col. Ramsey, turning sharply to the right, made their way across the mountains, and joined Gen. Jackson at Monterey." Meantime, simultaneously with General McClellan's advance on Beverly, another strong Union force, under General Cox, had moved from Guyandotte to the Kanawha, and up that river to Charleston, which it reached on the 25th of July. Governor Wise, who commanded the rebels in the Kanawha Valley, retreated, General Cox pursuing, until the pursuit was checked on the 29th by Wise's destruction of Gauley bridge. The rebels then made good their flight to Lewisburg, in Greenbrier county, where Wise was reinforced and superseded by General John B. Floyd.—H. Greeley, *The American Conflict*, v. 1 ch. 32.—"The war in Western Virginia seemed to have ended with the dispersion of Garnett's forces, and there was much rejoicing over the result. It was premature. The 'Confederates' were not disposed to surrender to their enemy the granaries that would be needed to supply the troops in Eastern Virginia, without a severer struggle. General Robert E. Lee succeeded Garnett, and more important men than Wise

and Floyd took the places of these incompetents. Rosecrans succeeded McClellan, who was called to the command of the Army of the Potomac, and the war in the mountain region of Virginia was soon renewed."—B. J. Lossing, *Field Book of the Civil War*, v. 1, ch. 22.

A. D. 1861 (July).—First depredations of the Confederates' cruiser Sumter. See ALABAMA CLAIMS: A. D. 1861-1862.

A. D. 1861 (July; Virginia).—The seat of the rebel government transferred to Richmond. See VIRGINIA: A. D. 1861 (JULY).

A. D. 1861 (July; Virginia).—On to Richmond.—The First Battle of Bull Run, or Manassas.—"The Southern Government having inclined to the defensive policy as that upon which they should act, their first object was to prevent an advance of any Federal force into Virginia. Early in the month of May troops were assembled in Richmond, and pushed forward toward the northeastern boundary of the State, to a position known as Manassas Junction. . . . It is here that a railroad from Alexandria, another from Staunton up the valley and through Manassas Gap, and another from Gordonsville unite. At Gordonsville the railroad from Richmond and the line from East Tennessee unite. As a point for concentration none more eligible exists in northeastern Virginia. The advantages for fortification are naturally such that the place can be rendered impregnable. Here the centre of the northern force of the Southern army was posted, with the left wing pushed forward to Winchester [under the command of General Joseph E. Johnston, with the Union General Patterson opposed to him] and the right extended to the Potomac, and sustained by heavy batteries which served to blockade the river. The Federal force, the advance of which was assembled at Washington for the defence of that city against any attack by the Southern troops, was posted on the Virginia side of the Potomac, on Arlington Heights, which were strongly fortified. Their right was pushed some distance up the Potomac, and chiefly on the Maryland side, while their left occupied Alexandria. The armies of both sides consisted of raw militia hastily brought together, and of volunteers who for the first time had put on the uniform, and taken up the weapons of the soldier. On both sides the forces were constantly accumulating. On the morning of June 27th, the consolidated report of Gen. Mansfield, commanding the Department of Washington, gives the number of troops in that city and vicinity. The privates, including regulars and volunteers present for duty, numbered 22,846 men. The grand aggregate of the force, including officers, etc., present and absent, was 34,160 men. The force of Gen. Patterson, commanding in Maryland above Washington, and also on the Virginia side of the Potomac, on the 28th of June, was returned, embracing officers and men enlisted and present for duty, 15,923. Of these about 550 were reported as sick."—W. J. Tenney, *Military and Naval History of the Rebellion*, p. 67.—"The return of Johnston's [Confederate] army for June 30th showed his total force present for duty to have

been 10,654; but this includes some troops which, though assigned to his army, did not join him till after July 31. . . . A prime object of Johnston in taking post at Winchester was, that he might be enabled to join the army at Manassas in case of need. On June 24, only a week after Johnston's arrival at Harper's Ferry, Beauregard had reached Manassas and assumed command. He and Johnston at once communicated with each other, and agreed in their views of the importance of mutual support. . . . As soon as Johnston ascertained . . . that McClellan [from West Virginia] was not moving on Romney and Winchester, the feasibility of this movement to Manassas at the right time became greater. The only problem then remaining was to so time it as to arrive just long enough before the impending battle to take part in it, and not so long as to cause, by the news of his arrival, a corresponding transfer of Patterson. . . . It was for the purpose of gaining as much start as possible on Patterson that Johnston had retired to Winchester, instead of remaining opposite the Northern force at Martinsburg. He kept his cavalry well out, in order to be informed as promptly as possible of the slightest change in Patterson's position. Meanwhile the grand Federal advance upon Manassas had commenced."—R. M. Hughes, *General Johnston*, pp. 47-51.—The advance from Washington, which began on the 16th of July, and which resulted in the grievous defeat of the Union forces at Bull Run, or Manassas, on Sunday, the 21st, was undertaken to appease the impatient, ignorant clamor of Northern newspapers, and in opposition to the judgment and the plans of General Scott, who was then at the head of the National Army. The cry "On to Richmond" was taken up by Congressmen and Senators, and the pressure on the government became too strong to be resisted. Instead of keeping the raw troops, hurriedly gathered at Washington, in camps of instruction, until they were properly drilled and until their officers had acquired some experience in handling them, they were hurriedly pushed into a serious campaign movement, against an enemy likewise untrained, to be sure, but who was far better prepared to receive an attack than the assailants were to make one. General Irwin McDowell had been recently placed in command of the army intended for the field, with General Mansfield commanding the troops in Washington. The former had "entered on his new and responsible duties with great alacrity, working night and day to prepare his command for the approaching conflict. . . . McDowell was laboring at a great disadvantage—drilling and preparing his troops as best he could—under the heavy pressure from the North to deliver battle to the enemy in his front. Secretary Chase was the champion, in the Cabinet, of the intense feeling in the North that the war should be pushed at once, with a vigor that would end it soon. . . . There is no doubt that General Scott was weakened with the administration, for the reason that he did not believe in the prevailing opinion that a few days would crush the rebellion; and the more the old hero insisted, or faithfully stood by his views, the more it antagonized the opinion of those who hoped and said it would end speedily. At the Cabinet meeting a week before, General Hamilton says: 'General Montgomery Blair said he would march to Richmond with 10,000 men,

armed with lathes.' 'Yes,' said General Scott, 'as prisoners of war.' Continuing General Hamilton's statement of the events which occurred prior to the battle and during its progress, he says: 'On the Sunday preceding the battle of Bull Run, Scott directed me, his military secretary, to say to McDowell that he wished him to dine with him without fail. At the dinner, at which General McDowell appeared, General Scott used every possible argument to dissuade General McDowell from fighting the first battle of Bull Run under the then existing condition of public affairs. . . . He then begged General McDowell to go to Secretary Chase, his kinsman, and aid him (General Scott) in preventing a forward movement at that moment; one of the arguments used by General Scott being that the Union sentiment of the South had been surprised by the suddenness and promptitude of the movement in favor of secession; that he (General Scott) was well advised that the Union sentiment was recovering itself, and gaining head in the South; that from the moment blood was shed the South would be made a unit. General McDowell regretted that he could not agree with General Scott in his views, and arose and retired. . . . In the course of the succeeding week General McDowell reported to General Scott his proposed plan of battle. It was hung upon the wall, and I followed with a pointer the positions indicated by General McDowell as those he intended the forces under his command should occupy. After General McDowell had gone through a detailed statement of his plan, and had finished, General Scott remarked, "General McDowell, that is as good a plan of battle as I ever saw upon paper." General McDowell said in reply: "General Scott, the success of this whole plan depends upon General Patterson holding General Johnston in check at Winchester." General Scott remarked that General Johnston was a very able soldier, that he had a railroad at his command with which to move his troops, and if General McDowell's plan of battle, which had just been presented to him, depended upon General Patterson holding General Johnston in check, his plan was not worth the paper it was drawn upon.' That ended that interview."—J. H. Stine, *History of the Army of the Potomac*, pp. 7-10.—Says General McDowell, in his subsequent report of the movement and the disastrous battle: "When I submitted to the General-in-Chief, in compliance with his verbal instructions, the plan of operations and estimate of force required, the time I was to proceed to carry it into effect was fixed for the 8th of July (Monday). Every facility possible was given me by the General-in-Chief and heads of the administrative departments in making the necessary preparations. But the regiments, owing, I was told, to want of transportation, came over slowly. Many of them did not come across until eight or nine days after the time fixed upon, and went forward without my ever seeing them and without having been together before in a brigade. The sending re-enforcements to General Patterson by drawing off the wagons was a further and unavoidable cause of delay. Notwithstanding the herculean efforts of the Quartermaster-General, and his favoring me in every possible way, the wagons for ammunition, subsistence, &c., and the horses for the trains and for the artillery, did not all arrive for more than

a week after the time appointed to move. I was not even prepared as late as the 15th ultimo, and the desire I should move became great, and it was wished I should not, if possible, delay longer than Tuesday, the 16th ultimo. When I did set out on the 16th I was still deficient in wagons for subsistence, but I went forward, trusting to their being procured in time to follow me. The trains thus hurriedly gotten together, with horses, wagons, drivers, and wagon-masters all new and unused to each other, moved with difficulty and disorder, and was the cause of a day's delay in getting the provisions forward, making it necessary to make on Sunday the attack we should have made on Saturday. I could not, with every exertion, get forward with the troops earlier than we did. I wished them to go to Centreville the second day, which would have taken us there on the 17th, and enabled us, so far as they were concerned, to go into action on the 19th instead of the 21st; but when I went forward from Fairfax Court-House beyond Germantown to urge them forward, I was told it was impossible for the men to march farther. They had only come from Vienna, about 6 miles, and it was not more than $6\frac{1}{2}$ miles farther to Centreville, in all a march of $12\frac{1}{2}$ miles; but the men were foot-weary, not so much, I was told, by the distance marched, as by the time they had been on foot, caused by the obstructions in the road and the slow pace we had to move to avoid ambuscades. The men were, moreover, unaccustomed to marching, their bodies not in condition for that kind of work, and not used to carrying even the load of "light marching order."—Brig. Gen. I. McDowell, *Report (Official Records, series 1, v. 2, pp. 323-324)*.—The advance of the Union Army was made "in five divisions, commanded by Generals Tyler, Hunter, Heintzelman, Runyon, and Miles. Among the brigade commanders that afterward rose to eminence were William T. Sherman, Ambrose E. Burnside, Erastus D. Keyes, and Oliver O. Howard. The total force was somewhat over 34,000 men; but Runyon's division was left to guard the line of communication with Washington, and the number that actually moved against the enemy was about 28,000 with 49 guns and a battalion of cavalry. So little did strict military discipline as yet enter into the policy of the Government that a large number of civilians, including several members of Congress, obtained passes enabling them to ride out in carriages, close in the rear of the army, to witness the expected battle. . . . The troops marched by the Warrenton turnpike, and found themselves in the presence of the enemy on the banks of Bull Run on the 18th. . . . The enemy's outposts had fallen back as the army advanced, and the first serious opposition was met at Blackburn's Ford," where some sharp fighting occurred between Tyler's division and the Confederate troops under Longstreet. "McDowell, finding that Beauregard was very strongly entrenched on his right, and that the roads in that direction were not good, changed his plan and determined to attack on the north or left wing. Another reason for doing this lay in the fact that McDowell had distrusted Patterson from the first, having no faith that he would hold Johnston. . . . The action at Blackburn's Ford had been fought on Thursday. Friday and Saturday were consumed in reconnaissances and searching for a suitable ford

on the upper part of the stream, where a column could cross and, marching down on the right bank, uncover the fords held by the enemy and enable the remainder of the army to cross. Such a ford was found at length, and on Sunday morning, the 21st, the army was put in motion. McDowell did not know that Johnston had easily eluded Patterson and with two fifths of his forces joined Beauregard on Saturday. . . . The Confederate commanders had actually ordered a forward movement of their own right wing; but as they saw the development of McDowell's plan they recalled that, and gradually strengthened their left to meet the onset. . . . The battleground was a plateau, wooded and broken."—R. Johnson, *Short Hist. of the War of Rebellion, ch. 4*.—In the Report of the Confederate General Beauregard, the plateau which now became the principal battle ground of the conflict is described as follows: "It is inclosed on three sides by small water-courses, which empty into Bull Run within a few yards of each other a half a mile to the south of the stone bridge. Rising to an elevation of quite 100 feet above the level of Bull Run at the bridge, it falls off on three sides to the level of the enclosing streams in gentle slopes, but which are furrowed by ravines of irregular direction and length, and studded with clumps and patches of young pines and oaks. The general direction of the crest of the plateau is oblique to the course of Bull Run in that quarter and to the Brentsville and turnpike roads, which intersect each other at right angles. Immediately surrounding the two houses. . . [mentioned below] are small open fields of irregular outline, not exceeding 150 acres in extent. The houses, occupied at the time, the one by the Widow Henry and the other by the free negro Robinson, are small wooden buildings, the latter densely embowered in trees and environed by a double row of fences on two sides. Around the eastern and southern brow of the plateau an almost unbroken fringe of second-growth pines gave excellent shelter for our marksmen, who availed themselves of it with the most satisfactory skill. To the west, adjoining the fields, a broad belt of oaks extends directly across the crest on both sides of the Sudley road, in which during the battle regiments of both armies met and contended for the mastery. From the open ground of this plateau the view embraces a wide expanse of woods and gently undulating open country of broad grass and grain fields in all directions."—Gen. G. T. Beauregard, *Report (Official Records, series 1, v. 2, pp. 493-494)*.—At an early hour in the afternoon, the Union forces had driven the enemy from this plateau and seemed to be in a position which promised victory to them. Says General McDowell in his official report: "The enemy was evidently disheartened and broken. But we had then been fighting since 10.30 o'clock in the morning, and it was after 3 o'clock in the afternoon. The men had been up since 2 o'clock in the morning, and had made what to those unused to such things seemed a long march before coming into action, though the longest distance gone over was not more than 9½ miles; and though they had three days' provisions served out to them the day before, many, no doubt, either did not get them, or threw them away on the march or during the battle, and were therefore without food. They had done much severe fighting. Some of the

regiments which had been driven from the hill in the first two attempts of the enemy to keep possession of it had become shaken, were unsteady, and had many men out of the ranks. It was at this time that the enemy's re-enforcements came to his aid from the railroad train (understood to have just arrived from the valley with the residue of Johnston's army). They threw themselves in the woods on our right, and opened a fire of musketry on our men, which caused them to break and retire down the hillside. This soon degenerated into disorder, for which there was no remedy. Every effort was made to rally them, even beyond the reach of the enemy's fire, but in vain. The battalion of regular infantry alone moved up the hill opposite to the one with the house, and there maintained itself until our men could get down to and across the Warrenton turnpike on the way back to the position we occupied in the morning. The plain was covered with the retreating groups, and they seemed to infect those with whom they came in contact. The retreat soon became a rout, and this soon degenerated still further into a panic. Finding this state of affairs was beyond the effort of all those who had assisted so faithfully during the long and hard day's work in gaining almost the object of our wishes, and that nothing remained on that field but to recognize what we could no longer prevent, I gave the necessary orders to protect their withdrawal, begging the men to form a line, and offer the appearance, at least, of organization and force. They returned by the fords to the Warrenton road, protected, by my order, by Colonel Porter's force of regulars. Once on the road, and the different corps coming together in small parties, many without officers, they became intermingled, and all organization was lost."—Brig. Gen. I. McDowell, *Report (Official Records, series 1, v. 2, p. 320)*.—"The battle of Bull Run was a misfortune, and not a disgrace, to the Federal arms; but the reports of losses on both sides prove that it was bravely disputed. . . . The rout—or, in other words, the panic— . . . was one of those accidents to which even victorious armies are sometimes liable, and against which old troops are not always able to guard. The importance of the battle of Bull Run cannot be measured by the amount of losses sustained by the two contending parties. . . . Its immediate effect upon military operations was to produce a sudden change in the attitude of the belligerents. The possession of Virginia, with the exception of that portion which had been recaptured by McClellan, was secured to the Confederates. Richmond was beyond danger of any attack, and Washington was threatened anew. . . . But it was chiefly through its moral effect that this first encounter was to exercise a powerful influence upon the war of which it was only the prelude. The South saw in this victory a kind of ratification of her claims. It was not only the Federal soldiers who were vanquished on that day, but with them all who had remained more or less openly loyal to the Union in the Southern States. . . . This disaster, which might have discouraged the North, proved, on the contrary, a salutary lesson."—Comte de Paris, *Hist. of the Civil War in Am., v. 1, bk. 3, ch. 2*.—"Those only can realize the condition of our Army, at that time, who can recall the incidents of this memorable campaign and the battle

with which it closed. The crowds of curious and impertinent spectators who accompanied and often rode through our ranks; the long and fatal delay of Hunter's column, on the morning of the battle—a delay occasioned by a few baggage-waggons, which should have been miles in rear—the many ludicrous, yet sad, scenes on the field; the heroic, but fruitless, gallantry of separate regiments, each attempting, in detail, the accomplishment of a work which required the combined effort of all; the dread, on the part of our men, of those terrible 'masked batteries' and 'the fierce Black-horse Cavalry,' neither of which ever had an existence except in the imaginative brains of our newspaper reporters, all help to fill up the picture. . . . I believe the plan of this battle to have been well-conceived, notwithstanding its disastrous result. We were compelled to take the offensive against troops in position, and upon a field, the topography of which was unknown to nearly all our officers. Notwithstanding these facts, successes would have been achieved but for the impatient spirit which hurried us on, without the slightest preparation. Of the march, the battle, the rout, and the disorderly retreat to Washington, the description given by William H. Russell was not greatly exaggerated. It was far more truthful than many of the descriptions given by the reporters of our own papers. Who has forgotten the newspaper accounts of the conduct of the celebrated Fire Zouaves—of the prodigies of valor performed by them—of their bayonet charges—of their heroic assaults—of the fearful destruction inflicted by them upon the enemy—and, finally, when the order to retreat came, of the great difficulty experienced by the officers in forcing 'these gallant, but bloodthirsty lambs,' as they were called, to cease fighting and commence retreating? We all remember these accounts, and many others of a similar character; and yet, every intelligent officer who was on the field knows that this regiment dispersed at the first fire, and so thoroughly was it dispersed that it was from that day never again known as a military organization. This campaign, and every subsequent one, of the War, taught us that the rough element of our cities—the prize-fighter, the veteran of a score of street-fights—does not necessarily make the most valuable soldier. On the contrary, many a pale-faced boy, who, from a sense of duty, has left school or counting-room to join our Army, has exhibited a degree of endurance on the march and of bravery on the field, seldom equaled by the rough element of our cities."—Gen. H. W. Slocum, *Military Lessons taught by the War (Historical Mag., Feb. 1871)*.—"The failure of the Confederate army to pursue after the battle of Manassas has been much criticised, and has caused much acrimonious discussion. General Johnston, however, never hesitated to assume his share of the responsibility for the action taken, though insisting that the course pursued was proper, and the only practicable one under the circumstances. . . . The troops who had been actually engaged all day, in the hot summer season, were in no condition to follow up the enemy. But the great obstacle to any effective pursuit was the weakness of the cavalry arm in the Southern army. Its entire strength was considerably under 2,000 men, and a large proportion of these were not in call. Many of those

within reach had been fighting for hours, and were in little better condition than the infantry. All who were available were sent off in immediate pursuit, with the result of greatly swelling the number of prisoners and captured guns. But by the time the captors turned their prizes over to proper guards, the Northern army had covered a sufficient distance to be out of danger, being protected in their retreat by large bodies of troops that had not been engaged. This was all that could be accomplished. . . . The fact that the condition of the Confederate troops put any active pursuit out of the question is established by the official reports. General Johnston's report says: 'Our victory was as complete as one gained by infantry and artillery can be.' . . . The same reasons apply with equal force to any attempted advance during the few days succeeding the battle. The army was not in a condition to make the movement, being itself much demoralized by the engagement. Many thought the war over and went home; many accompanied wounded comrades to their homes; for the ties of discipline were not as strong then as in a veteran army. But a yet stronger obstacle to an advance was the lack of necessary transportation. . . . Even if the Confederates had advanced and captured the intrenchments opposite Washington, they could have accomplished nothing. They could not have crossed the river on the bridge under the fire of the Federal vessels of war. They had no artillery of sufficient range to bombard Washington from the southern side, even if they had been disposed to wage war in that manner. They had no sufficient supply of ammunition."—R. M. Hughes, *General Johnston*, ch. 6.

Beauregard*, v. 1, ch. 9.

A. D. 1861 (July).—Enlistment of volunteers authorized by Congress.—The enlistment of 500,000 volunteers was authorized by Acts of Congress passed July 22 and 25.

A. D. 1861 (July—September: Missouri).—Sigel's well-conducted retreat from Carthage.—Death of Lyon at Wilson's Creek.—Siege of Lexington.—Fremont in command.—The flight of Governor Jackson and his followers from Booneville—see MISSOURI: A. D. 1861 (FEBRUARY-JULY)—was westward, to Warsaw, on the Osage, first, and thence into Vernon County, where they were joined, July 3, by General Sterling Price. "Their united force is stated by Pollard, at 3,600. Being pursued by Lyon, they continued their retreat next day, halting at 9 P. M., in Jasper County, 23 miles distant. Ten miles hence, at 10 A. M. next morning, they were confronted by a Union force 1,500 strong, under Col. Franz Sigel, who had been dispatched from St. Louis by the Southwestern Pacific road, to Rolla, had marched thence to Springfield, and had pushed on to Mount Vernon, Lawrence County, hoping to prevent a junction between Jackson and some forces which his Brigadiers were hurrying to his support. Each army appears to have started that morning with intent to find and fight the other; and such mutual intentions are seldom

frustrated. Sigel found the Rebels, halted after their morning march, well posted, vastly superior in numbers and in cavalry, but inferior in artillery, which he accordingly resolved should play a principal part in the battle. In the cannonade which ensued, he inflicted great damage on the Rebels and received very little, until, after a desultory combat of three or four hours, the enemy resolved to profit by their vast superiority in cavalry by outflanking him, both right and left. This compelled Sigel to fall back. . . . The retreat was made in perfect order . . . to Carthage, and through that town to Sarcoxie, some fifteen miles eastward. It was well, indeed, that he did so; for Jackson's force was augmented, during that night and next morning, by the arrival of Price from the southward, bringing to his aid several thousand Arkansas and Texas troops, under Gens. Ben McCulloch and Pearce. Our loss in the affair of Carthage was 13 killed and 31 wounded—not one of them abandoned to the enemy; while the Rebels reported their loss at 40 to 50 killed and 125 to 150 wounded. Sigel, now outnumbered three or four to one, was constrained to continue his retreat, by Mount Vernon, to Springfield; where Gen. Lyon, who had been delayed by lack of transportation, joined and outranked him on the 10th."—H. Greeley, *The American Conflict*, v. 1, ch. 35.

—"The month of August came, and found General Lyon at Springfield, hoping to receive reinforcements; but the battle of Bull Run had occurred, and rendered it impossible to send him aid. Major General Fremont had been appointed [July 9] to the command of the Western Department, and had reached St. Louis (July 25). Meantime Confederate troops were pouring over the southern frontier of Missouri, and Lyon, finding that they were advancing upon him in two columns, determined to strike before he should be overwhelmed by the combined Louisiana, Missouri, Arkansas, and Texas troops. His force did not exceed 5,500, his antagonist had more than 12,000. A skirmish occurred at Dug Spring (August 1st), in which he had the advantage; but he could not prevent the junction of the two columns. Hereupon he fell back to Springfield. His position had now become one of great difficulty. Political as well as military considerations rendered it almost impossible for him to retreat farther. He therefore determined to resume the offensive, and compensate for his weakness by audacity. Moving out of Springfield on a very dark night (August 9-10), and having ordered Sigel, with 1,200 men and six guns, to gain the enemy's rear by their right, he was ready, as soon as day broke, to make an attack on their front [on Wilson's Creek]. But the disparity of force was too great. Sigel was overwhelmed. He lost five out of his six guns, and more than half his men. The attack in front was conducted by Lyon in person with very great energy. His horse was shot under him; he was twice wounded, the second time in the head. In a final charge he called to the Second Kansas Regiment, whose colonel was at that moment severely wounded, 'Come on, I will lead you,' and in so doing was shot through the heart. After the death of Lyon the battle was still continued, their artillery preserving the national troops from total defeat. News then coming of Sigel's disaster, a retreat to Springfield, distant about nine miles, was resolved on. It was

executed without difficulty. In this battle of Wilson's Creek there were 223 killed, 721 wounded, 292 missing, on the national side; and, as may be inferred from the determined character of the assault, the loss of the Confederates was very great. They had been so severely handled that they made no attempt at pursuit, and the retreat was continued by the national troops, who, on the 19th, had fallen back to Rolla. After this action, the Confederate commanders, McCulloch and Price, quarreling with each other, and unable to agree upon a plan for their campaign, the former returned to Arkansas, the latter advanced from Springfield toward Lexington. Here he found a national force of about three thousand (2,780) under Colonel Mulligan. Attempts were made by General Fremont to re-enforce Mulligan, but they did not succeed. Meantime the assailing forces were steadily increasing in number, until they eventually reached 28,000, with 13 pieces of artillery. They surrounded the position and cut off the beleaguered troops from water. They made repeated assaults without success until [September] 20th, when they contrived a movable breastwork of hemp-bales, which they rolled before them as they advanced, and compelled Mulligan, who had been twice wounded, to surrender unconditionally. On receiving news of this disaster, Fremont at once left St. Louis with the intention of attacking Price, but that general instantly retreated, making his way back to the southwest corner of the state, where he rejoined McCulloch and his Confederate troops."—J. W. Draper, *Hist. of the Am. Civil War*, ch. 47 (v. 2).

A. D. 1861 (July—November).—McClellan's rise to the chief command.—Creation of the Army of the Potomac.—Reorganization of the western armies.—"Immediately after the battle of Bull Run, Major General McClellan was assigned to the command of the Military Department of Washington and Northeastern Virginia. Lieutenant General Scott retained his command as general in chief of the American army, until the end of October. 'I found,' says General McClellan in his report, 'no army to command—a mere collection of regiments cowering on the banks of the Potomac, some perfectly raw, others dispirited by the recent defeat. Nothing of any consequence had been done to secure the southern approaches to the capital by means of defensive works; nothing whatever had been undertaken to defend the avenues to the city on the northern side of the Potomac. The number of troops in and around the city was about 50,000 infantry, less than 1,000 cavalry, 650 artillerymen, with nine imperfect field batteries of 30 pieces.' . . . General McClellan at once commenced the organization of the great army authorized by Congress. His views of the military position and appropriate military conduct were, for the most part, accepted, and such was the patriotism of the people, the resolution of Congress, the energy of the executive, that the Army of the Potomac had reached, on October 27th, a strength of . . . 168,318. It was the general's opinion that the advance upon the enemy at Manassas should not be postponed be-

yond the 25th of November. It was his desire that all the other armies should be stripped of their superfluous strength, and, as far as possible, every thing concentrated in the force under his command. On the 31st of October, General Scott, having found his bodily infirmities increasing, addressed a letter to the Secretary of War requesting to be placed on the retired list. . . . His desire was granted. An order was simultaneously issued appointing General McClellan commander-in-chief under the President. This change in his position at once produced a change in General McClellan's views. Hitherto he had undervalued the importance of what was to be done in the West. He had desired the Western armies to act on the defensive. Now he wished to institute an advance on East Tennessee, and capture Nashville contemporaneously with Richmond. . . . In preparation for this, the Department of the West was reorganized. On the day following that of McClellan's promotion, Fremont was removed from his command. His department was subdivided into three: (1.) New Mexico, which was assigned to Colonel Canby; (2.) Kansas, to General Hunter; (3.) Missouri, to General Halleck. To General Buell was assigned the Department of the Ohio, and to General Rosecrans that of West Virginia. The end of November approached, and still the Army of the Potomac had not moved. The weather was magnificent, the roads excellent. . . . Winter at last came, and nothing had been done. . . . Considering the military condition of the nation when General McClellan undertook the formation and organization of the great Army of the Potomac, the time consumed in bringing that force into a satisfactory condition was far from being too long. . . . From the resources furnished without stint by Congress McClellan created that army. Events showed that his mental constitution was such that he could not use it on the battlefield. . . . There probably never was an army in the world so lavishly supplied as that of the Potomac before the Peninsular expedition. General McDowell, who knew the state of things well, declared, in his testimony before the Congressional Committee on the Conduct of the War, 'There never was an army in the world supplied as well as ours. I believe a French army of half the size could be supplied with what we waste.'—J. W. Draper, *Hist. of the Am. Civil War*, ch. 44 and 49 (v. 2).—"Some persons, who ought to have known better, have supposed that in organizing the Army of the Potomac I set too high a model before me and consumed unnecessary time in striving to form an army of regulars. This was an unjustifiable error on their part. I should, of course, have been glad to bring that army to the condition of regulars, but no one knew better than myself that, with the means at my command, that would have been impossible within any reasonable or permissible time. What I strove for and accomplished was to bring about such a condition of discipline and instruction that the army could be handled on the march and on the field of battle, and that orders could be reasonably well carried out. . . . In spite of all the clamor to the contrary, the time spent in the camps of instruction in front of Washington was well bestowed, and produced the most important and valuable results. Not a day of it was wasted. The fortifications then erected, both directly and

indirectly, saved the capital more than once in the course of the war, and enabled the army to manoeuvre freely and independently. . . . No other army we possessed could have met and defeated the Confederate Army of Northern Virginia. And, with all the courage, energy, and intelligence of the Army of the Potomac, it probably would not have been equal to that most difficult task without the advantage it enjoyed during its sojourn in the camps around Washington."—G. B. McClellan, *McClellan's Own Story*, ch. 6.

A. D. 1861 (August).—Act of Congress freeing Slaves employed in the service of the Rebellion.—In August, Congress passed an "Act to confiscate property used for insurrectionary purposes." As originally framed, it only confiscated "any property used or employed in aiding, abetting or promoting insurrection, or resistance to the laws," which would not include slaves. A new section was added, declaring that "whenever hereafter during the present insurrection against the Government of the United States, any person held to labor or service under the law of any State shall be required or permitted by the person to whom such labor or service is due to take up arms against the United States, or to work in or upon any fort, dock, navy-yard, armory, intrenchment or in any military or naval service whatever against the Government of the United States, the person to whom such service or labor is due shall forfeit his claim thereto." The law further provided that, "whenever any person shall seek to enforce his claim to a slave, it shall be a sufficient answer to such claim, that the slave had been employed in the military or naval service against the United States contrary to the provisions of this Act."—J. G. Blaine, *Twenty Years of Congress*, v. 1, p. 342.

A. D. 1861 (August: North Carolina).—The Hatteras expedition.—"General Wool relieved General Butler Aug. 16th, 1861, of the command at Fortress Monroe. Butler was detailed to active duty. The War and Navy Departments having arranged the first of a series of expeditions against the Southern coast, the command of the land forces was conferred upon Butler—Commodore S. H. Stringham directing the naval arm. Materials for the adventure were rapidly gathered at Fortress Monroe from the date of August 16th to the 26th, on which day the fleet took its departure. . . . Not until the vessels were at sea were any but the directors of the enterprize aware of the point of attack. Forts Hatteras and Clark commanded the entrance to the Sounds of Pamlico and Albemarle, whose waters were a great rendezvous for traders running the blockade. . . . Fort Hatteras was an exceedingly formidable battery. It was nearly surrounded by water, and was only approached by a circuitous and narrow neck of land. . . . The secrecy and rapidity of preparation by the Federals caught the rebels

somewhat unprepared for the attack. . . . The bombardment opened Wednesday morning, at ten o'clock, preparatory to the landing of the land forces on the beach above Fort Hatteras. . . . A heavy surf rolled in upon the treacherous sands. After infinite labor, and the beaching of three small boats, the landing was suspended for the day. Those already on shore—315 in number—were safe under the guns of the fleet. . . . The bombardment continued during the entire first day. No land assault was attempted. Fort Hatteras replied with great vigor, but with little avail. . . . On the morning of the 29th, the cannonade opened early. A cloudless sky and a clear sea blessed the cause of the assailants. During the night a transport heavily laden with troops reinforced the fort, running down the Sound which was yet open. Fort Clark was occupied by the Federal forces, and refused its aid to assist its late confederate. The conflict soon raged with extreme vigor on both sides. At eleven o'clock the Confederate flag fluttered uneasily a moment—then ran down the masts and a white flag was slowly run to the peak. . . . Articles of capitulation were signed on board the flag-ship *Minnesota*. Butler then landed and took formal possession of the largest fortification. The number of prisoners surrendered was 615, who were all placed on the *Minnesota*. In four days time they were in New York harbor. . . . The first design, it would appear, was to destroy the forts, stop up the channel with old hulks, and to return, temporarily at least, to Fortress Monroe with the entire force; but the place proved to be so strong that Butler left Weber and Hawkins' commands in possession."—O. J. Victor, *Hist. of the Southern Rebellion*, v. 2, div. 5, ch. 11.

A. D. 1861 (August—October: Missouri).—Fremont's premature proclamation of freedom to slaves of rebels and Lincoln's modification of it.—"The change of command."—"On the 31st of August, General Fremont [commanding in the West] issued a proclamation declaring martial law, defining the lines of the army of occupation, and threatening with death by the bullet all who should be found within those lines with arms in their hands. Furthermore, the real and personal property of all persons in the state [Missouri] who should take up arms against the United States was declared confiscated to the public use, and their slaves, if they had any, were declared free men. This proclamation produced a strong effect upon the public mind. The proclaiming of freedom to the slaves of rebels struck the popular chord, particularly among thoroughly loyal men in the free states. Of course, it maddened all the sympathizers with the rebellion, infuriated the rebels themselves, and perplexed those loyal men who had upon their hands the task of so conducting affairs as to hold to their allegiance the border slave states which had not seceded. Mr. Lincoln did not approve some features of General Fremont's proclamation. As soon as he read it, he wrote, under date of September 2d, to the General, that there were two points in it which gave him anxiety. The first was, that, if he should shoot a man according to his proclamation, 'the confederates would certainly shoot our best men in their hands in retaliation, and so,

man for man, indefinitely.' He therefore ordered him to allow no man to be shot under the proclamation without first having his (the President's) approbation or consent. The second cause of anxiety was that the paragraph relating to the confiscation of property and the liberation of slaves of traitorous owners would alarm Unionists at the South, and perhaps ruin the fair prospect of saving Kentucky to the Union. He, therefore, wished General Fremont, as of his own motion, so to modify his proclamation as to make it conformable to the confiscation act just passed by the extra session of Congress, which only freed such slaves as were engaged in the rebel service. . . . General Fremont received the President's letter respectfully, and replied to it September 8th, stating the difficulties under which he labored, with communication with the government so difficult, and the development of perplexing events so rapid in the department under his command. As to the part of his proclamation concerning the slaves, he wished the President openly to order the change desired, as, if he should do it of his own motion, it would imply that he thought himself wrong, and that he had acted without the reflection which the gravity of the point demanded. This the President did, in a dispatch under date of September 11th, in the words: 'It is therefore ordered that the said clause of said proclamation be so modified, held, and construed, as to conform to, and not to transcend, the provisions on the same subject contained in the act of Congress entitled, An act to confiscate property used for insurrectionary purposes, approved August 6, 1861; and that such act be published at length with this order.' Before this order had been received, or on the day following its date, General Fremont, though acquainted with the President's wishes, manumitted two slaves of Thomas L. Snead of St. Louis, in accordance with the terms of his proclamation. Although Mr. Lincoln desired General Fremont so to modify his proclamation as to make it accordant with the act of Congress approved August 6th, it is hardly to be supposed that he did it solely out of respect to that act. . . . If he had believed that the time had come for the measure of liberating the slaves of rebels by proclamation, the act of Congress would not have stood in his way. This act was an embodiment of his policy at that time, and he used it for his immediate purpose. . . . Complications in the personal relations of General Fremont and Colonel F. P. Blair, under whose personal and family influence General Fremont had received his position, occurred at an early day. Colonel Blair doubtless thought that he had not sufficient weight in the General's counsels, and the General, doubtless, exercised his right in choosing his own counselors. . . . It was a very unhappy quarrel, and it is quite likely that there was blame upon both sides, though it occurred between men equally devoted to the sacred cause of saving the country to freedom and justice. . . . Mr. Lincoln always gave to each the credit due to his motives, and so far refused to mingle in the general quarrel that grew out of the difficulty, that he kept the good-will of both sides, and compelled them to settle their own differences. . . . General Fremont at length took the field in person. On the 8th of October he left Jefferson City for Sedalia. As he advanced with his forces, Price retreated, until it

was widely reported that he would give battle to the national forces at Springfield. Just as Fremont was making ready to engage the enemy, he was overtaken by an order relieving him of his command. He was succeeded by General Hunter; but Hunter's command was brief, and was transferred at an early day to General Halleck. General Fremont was relieved of his command by the President not because of his proclamation, not because he hated slavery, and not because he believed him corrupt or vindictive or disloyal. He relieved him simply because he believed that the interests of the country, all things considered, would be subserved by relieving him and putting another man in his place. The matter was the cause of great excitement in Missouri, and of much complaint among the radical anti-slavery men of the country; but the imputations sought to be cast upon the President were not fastened to him; and did not, four years later, when Fremont himself became a candidate for the presidency, prevent the warmest anti-slavery men from giving Mr. Lincoln their support. The federal army under General Hunter retreated without a battle; and thus the campaign, inaugurated with great show and immense expense, was a flat failure.—J. G. Holland, *Life of Abraham Lincoln*, ch. 20.

A. D. 1861 (August—December: West Virginia).—Rosecrans against Lee.—Battles of Carnifex Ferry and Cheat Summit.—"When General McClellan was called [July 22] to take General McDowell's place at the head of the Army of the Potomac, Brigadier-General William S. Rosecrans was left in command of the troops in West Virginia. General Robert E. Lee, the Confederate commander, who had gathered together the forces which had been defeated under Garnett and Pegram, and some others, found himself in August at the head of about 16,000 men. Lee made his headquarters at Huntersville, while General John B. Floyd . . . took up a position on the Gauley River for the purpose of cutting off General Cox of Ohio, who, with a brigade of Rosecrans's army, had just driven a Confederate force under ex-Governor Henry A. Wise of Virginia out of the Kanawha Valley. Floyd surprised and routed the Seventh Ohio under Colonel Tyler, and then moved to a place on the Gauley River called Carnifex Ferry, hoping to cut off Cox from Rosecrans. But early in September Rosecrans, leaving part of his army under General Joseph J. Reynolds to watch Lee, marched southward with about 10,000 men and [September 10] attacked Floyd, who had strongly fortified himself with about 2,000 men on the banks of the river. After a severe fight of three or four hours, in which the Union troops lost heavily, Rosecrans, finding the position much stronger than he expected, gave orders at twilight to stop the assault until morning; but when morning came no enemy was to be seen; Floyd, finding his enemy much superior in numbers, had crossed the river in the night over a bridge hastily built of logs, and retreated to the mountains 30 miles away. Rosecrans followed, but finally fell back again to

the Gauley. When Rosecrans marched against Floyd, Reynolds took up a strong position on Cheat Mountain.—J. D. Champlin, *Young Folks' Hist. of the War for the Union*, ch. 10.—“General Lee proposed first to win a victory, if possible, over Reynolds. He was combative, anxious to strike, but many difficulties confronted him. He fully realized he had been sent to West Virginia to retrieve Confederate disasters, and that he had a most difficult task to perform. The Federal commander [his main force at Elk Water] held the center summit of Cheat Mountain pass, the mountain having three well-defined summits. . . . It was necessary first to carry this well-selected position of the Federal troops. A citizen surveyor, in sympathy with the South and familiar with the mountain paths, had made a trip to an elevated point where he could clearly see the Federal position, and reported his observations to General Lee. Afterward he made a second reconnoissance, accompanied by Colonel Albert Rust, of the Third Arkansas Regiment, who was anxious to see the nature of the ground and the strength of the position for himself. They reported to General Lee that in their opinion the enemy's position could be assailed with success with troops which could be guided to the point they had reached. General Lee decided to make the attack, and gave to Rust a column of 1,200 infantry. . . . The movement was to begin at night, which happened to be a very rainy one. All the troops, however, got in the positions assigned to them without the knowledge of the enemy, where they waited, every moment expecting to hear the rattle of Rust's muskets, who had been charged with the capture of the pass on Cheat Mountain; but hour after hour passed, and no sounds were heard. After a delay of many hours, and the enemy had divined the nature of the attack, the troops were ordered back to their former position. There had been only a small conflict between cavalry, in which Colonel John A. Washington, General Lee's aide-camp, who had been sent with Major W. H. F. Lee to reconnoiter the enemy, was killed from an ambuscade. . . . Rust claims in his reports that spies had communicated the movements of the Confederate troops to the enemy. This officer evidently did not attack, because he found, on getting close to the Federal position, that it was much stronger than he had thought it was from the preliminary reconnoissances he had made. As the attack of the whole depended on the assault of this force, the failure to attack caused a corresponding failure of the whole movement. . . . This movement having failed, and knowing that the enemy would be prepared for any second attempt which, from the nature of the country, would have to be similar to the one already tried, General Lee decided to turn his attention to the commands of Wise and Floyd in front of Rosecrans, leaving General H. R. Jackson in Reynolds's front. He proceeded at once to Floyd's command, which he reached on September 20th, and then to Wise's camp, closely inspecting both. He at once perceived that Wise's position was the strongest and offered the best means for successful defense, and promptly concentrated his forces at that point. . . . Rosecrans had advanced to the top of Big Sewell Mountain and had placed his army in a strong position. General Lee, with the troops of Wise,

Floyd, and Loring—about 8,000 men—occupied a position on a parallel range. The two armies were now in close proximity to each other, both occupying strong defensive positions. Lee and Rosecrans, having no officers of the engineers, were fully aware of the great disadvantage an attacking army would have, and each waited, hoping the other would attack. After occupying these positions for twelve days, Rosecrans, on the night of October 6th, retreated. The condition of the roads, the mud, the swollen streams, the large numbers of men with typhoid fever and measles, the condition of the horses, of the artillery, and transportation, were such that Lee decided not to pursue. . . . The rapid approach of winter and the rainy season terminated the campaign in this section. . . . At the termination of this campaign of General Lee's the Confederate Government did not bestow much attention upon this section. The majority of the people seemed inclined to support the Federal side. . . . It must be admitted that General Lee retired from West Virginia with diminished military reputation. Great results had been expected from his presence there. Garnett's defeat and death were to be avenged, and the whole of that portion of Virginia speedily wrested from the Federal arms. The public did not understand the difficulties of the situation, or comprehend why he did not defeat Reynolds, or the failure to attack Rosecrans.—F. Lee, *General Lee*, ch. 6.—After Lee left General H. R. Jackson in front of Reynolds' position, the former established himself in a fortified camp on Buffalo Hill, and was unsuccessfully attacked there by Reynolds, October 3. Two months later, on the 13th of December, the attack was repeated by Reynolds' successor in command, General Milroy, and again without success. Meantime, Floyd had been driven into the mountains, with little fighting, by Rosecrans, and military operations, for the time, were at an end.—Comte de Paris, *Hist. of the Civil War in America*, v. 1, bk. 4, ch. 2.

A. D. 1861 (September—November: On the Mississippi).—General Grant's first battle, at Belmont.—In August, General Ulysses S. Grant, who had been serving for a few weeks in Missouri, first as Colonel of the 21st Illinois Regiment, and later as a brigadier-general, was assigned by General Fremont to “the command of the district of south-east Missouri, embracing all the territory south of St. Louis, in Missouri, as well as all southern Illinois.” On the 4th of September he established his headquarters at Cairo, Illinois, and the next day, having learned from a scout that the rebels were preparing to seize Paducah, at the mouth of the Tennessee River, he placed a couple of regiments of troops and a light battery on board of steamers: and occupied the place on the 6th,—telegraphing meanwhile for orders, but not waiting for them. His movement anticipated the enemy by a few hours, only, and secured a command of the Tennessee, the importance of which was afterward demonstrated by Grant, himself, when he moved on Forts Henry and Donelson. In his “Memoirs” General Grant says: “From the occupation of Paducah up to the early part of November, nothing important occurred with the troops under my command. I was reinforced

from time to time and the men were drilled and disciplined preparatory for the service which was sure to come. By the 1st of November I had not fewer than 30,000 men. . . . About the 1st of November I was directed from department headquarters to make a demonstration on both sides of the Mississippi River with the view of detaining the rebels within their lines. Before my troops could be got off, I was notified from the same quarter that there were some 3,000 of the enemy on the St. Francis River about 50 miles west, or south-west, from Cairo, and was ordered to send another force against them. I dispatched Colonel Oglesby at once with troops sufficient to compete with the reported number of the enemy. On the 5th word came from the same source that the rebels were about to detach a large force from Columbus to be moved by boats down the Mississippi and up the White River, in Arkansas, in order to reinforce Price, and I was directed to prevent this movement if possible." To carry out these orders, General Grant directed a demonstration to be made from Paducah towards Columbus, while, at the same time, he conveyed some 3,000 troops down the river, in steamers, and attacked a camp of rebels at Belmont, immediately opposite Columbus. The battle was a severe one. "The officers and men engaged at Belmont were then under fire for the first time. Veterans," says General Grant, "could not have behaved better than they did up to the moment of reaching the rebel camp. At this point they became demoralized from their victory and failed to reap its full reward. . . . The moment the camp was reached our men laid down their arms and commenced rummaging the tents to pick up trophies. Some of the higher officers were little better than the privates. They galloped about from one cluster of men to another and at every halt delivered a short eulogy upon the Union cause and the achievements of the command." The result was a rallying of the defeated rebels and a reinforcement from Columbus which forced the Unionists to retire with haste. "Our loss at Belmont was 485 killed, wounded and missing. About 125 of our wounded fell into the hands of the enemy. We returned with 175 prisoners and two guns, and spiked four other pieces. The loss of the enemy, as officially reported, was 642 men, killed, wounded and missing. We had engaged about 2,500 men, exclusive of the guard left with the transports. The enemy had about 7,000; but this includes the troops brought over from Columbus who were not engaged in the first defence of Belmont. The two objects for which the battle of Belmont was fought were fully accomplished. The enemy gave up all idea of detaching troops from Columbus. . . . If it had not been fought, Colonel Oglesby would probably have been captured or destroyed with his 3,000 men. Then I should have been culpable indeed."—U. S. Grant, *Personal Memoirs*, ch. 19-20 (p. 1).

ALSO IN: A. Badeau, *Military Hist. of U. S. Grant*, ch. 1.—W. P. Johnston, *Life of Gen. Albert Sidney Johnston*, ch. 24.—*Official Records*, series 1, v. 3.

A. D. 1861 (October; Virginia).—Confederate project for the invasion of the North vetoed by Jefferson Davis.—"Between the 4th of August and the 15th of October more than 110 regiments and thirty batteries, comprising

at least 100,000 men, were added to the forces in Washington and its neighborhood, and there appeared to be no limit to the resources and patriotism of the North. Moreover, the Northern troops were so well provided for in all respects, owing to the immense resources at the disposal of the United States Government, that there was every reason to expect in the spring of 1862 a decidedly improved condition in health and vigor, in self-confidence, and in all soldierly qualities, on the part of the soldiers. The army at Manassas, on the other hand, owing to the straitened means of the Confederate Government, was barely kept comfortable in the matter of clothing and shelter, and its chief officers looked forward with undisguised apprehension to the coming winter. . . . It was easy for any one instructed in military matters to see that if the Federal authorities would only be content to defer active operations until the patriotic levies of the North should have learned 'the trade of the soldier,'—should have acquired familiarity with the use of arms, habits of obedience, trust in their officers and superiors, discipline,—the Federal general would enter on the next campaign with all those chances of success which attend largely superior numbers, better arms and equipment, and a sound and thorough organization of his army. Such in fact was the view of the situation taken by the sagacious officer who commanded the lately victorious army at Manassas Junction, Joseph E. Johnston. In his opinion his two corps commanders, Beauregard . . . and G. W. Smith, . . . entirely concurred. They saw that something must be done to break up this constantly increasing Federal army while it was yet in the process of formation. The Confederate generals determined to urge their views upon the President of the Southern Confederacy. Mr. Davis responded at once to their expressed wish for a conference upon the military situation, and he reached Manassas on September 30, 1861. The conference was held the next day. The generals strongly advised Mr. Davis to reinforce the army at Manassas so that they might cross the Potomac, cut the communications of Washington with the North, and carry the war into the enemy's country. Johnston and Beauregard fixed the strength of an army adequate to these tasks at 60,000 men. Smith was content with a force of 50,000. Additional transportation and supplies of ammunition were also demanded. The army then at Manassas numbered about 40,000 men. With the quality of the soldiers the generals seemed to be perfectly content. They only asked that the additional troops sent should be of an equal degree of efficiency,—'seasoned soldiers' as distinguished from 'fresh volunteers.' But President Davis decided that he could not furnish the required reinforcement without 'a total disregard of the safety of other threatened positions.' The project was therefore dropped, and no further attempt was made during the ensuing autumn and winter to interfere with the uninterrupted development of the Federal army at and near Washington in organization and efficiency. . . . It is altogether probable that the Confederate army was at that time decidedly the superior of its antagonist in many important respects. It had the prestige of victory. . . . We may fairly say therefore, that an invasion of the North, undertaken in October, 1861, held out a very fair

promise of a successful result for the Confederate arms."—J. C. Ropes, *The Story of the Civil War*, ch. 10.

A. D. 1861 (October: Virginia).—The affair at Ball's Bluff, or Leesburg.—"The true story of the affair of Ball's Bluff, is, in brief, as follows: One of Gen. Stone's officers, Capt. Philbrick, of the 15th Mass., thought that he had discovered a camp of the enemy about one mile beyond Harrison's Island in the direction of Leesburg. Having completed the feint of crossing made in the course of the 20th, Gen. Stone at 10.30 p. m. of the same day issued his orders for the surprise of the supposed camp at daybreak of the 21st. Col. Devens, of the 15th Mass., was entrusted with the duty, with four companies of his regiment. Col. Lee, of the 20th Mass., was directed to replace Col. Devens in Harrison's island with four companies of his own regiment, one of which was to pass over to the Virginia shore and hold the heights there to cover Col. Devens's return. Colonel Devens was directed to 'attack the camp at daybreak, and, having routed, to pursue them as far as he deems prudent, and to destroy the camp, if practicable, before returning.' . . . 'Having accomplished this duty, Col. Devens will return to his present position, unless he shall see one on the Virginia side near the river which he can undoubtedly hold until reinforced, and one which can be successfully held against largely superior numbers. In which case he will hold on and report.' In obedience to these orders Col. Devens crossed about midnight with five companies (instead of four), numbering about 300 men, and halted until daybreak in an open field near the bluffs bordering the shore. While there he was joined by Col. Lee with 100 men of the 20th Mass., who halted here to cover his return. At daybreak he advanced about a mile towards Leesburg, and then discovered that the supposed camp did not exist. After examining the vicinity and discovering no traces of the enemy, he determined not to return at once, but at about half-past six A. M. sent a non-commissioned officer to report to Gen. Stone that he thought he could remain where he was until reinforced. At about seven o'clock a company of hostile riflemen were observed on the right, and a slight skirmish ensued. A company of cavalry being soon observed on the left, the skirmishers were drawn back to the woods, and, after waiting half an hour for attack, the command was withdrawn to the position held by Col. Lee; but, after again scouting the woods, Col. Devens returned to his advanced position. About eight o'clock the messenger returned from Gen. Stone with orders for Col. Devens to remain where he was, and that he would be reinforced. The messenger was again sent back to report the skirmish that had taken place. Col. Devens then threw out skirmishers and awaited reinforcements. At about ten o'clock the messenger again returned with the information that Col. Baker [Senator Edward D. Baker, of California] would soon arrive with his brigade and take command. Between nine and eleven Col. Devens was joined by Lieut.-Col. Learned with the remainder of the 15th, bringing up his command to 28 officers and 625 men. About midday Col. Devens learned that the enemy were gathering on his left, and about half-past twelve or one he was strongly attacked; and as he was in great

danger of being outflanked, and no reinforcements had arrived, at about a quarter-past two he fell back to the bluff, where he found Col. Baker, who directed him to take the right of the position he proposed to occupy. . . . At about three o'clock the enemy attacked in force, the weight of his attack being on our centre and left. At about four our artillery was silenced, and Col. Devens was ordered to send two of his companies to support the left of our line; shortly after he learned that Col. Baker had been killed. Col. Cogswell then assumed command, and, after a vain attempt to cut his way through to Edward's Ferry, was obliged to give the order to retreat to the river-bank and direct the men to save themselves as best they could. I have gone thus much into detail because at the time I was much criticised and blamed for this unfortunate affair, while I was in no sense responsible for it."—G. B. McClellan, *McClellan's Own Story*, ch. 11.—In connection with the disaster at Ball's Bluff (called the battle of Leesburg by the Confederates) a great wrong seems to have been done to General Stone. Accused of disloyalty, he was arrested, but on no specific charge, imprisoned for six months, denied a trial, and set free without explanation. He went abroad and for many years was Chief of the General Staff to the Khedive of Egypt.—J. G. Blaine, *Twenty Years of Congress*, v. 1, ch. 17.

ALSO IN: R. B. Irwin, *Ball's Bluff and the arrest of General Stone (Battles and Leaders of the Civil War, v. 2, pp. 123-134).—Report of Joint Com. on the Conduct of the War, 37th Cong., 3d sess., H. R., pt. 2.*

A. D. 1861 (October—December: South Carolina—Georgia).—The Port Royal Expedition.—Capture of Hilton Head.—Extensive occupation of the coast.—Savannah threatened.—"On the 29th of October, another and far stronger naval and military expedition [than that against the Hatteras forts] set forth from Hampton Roads, and, clearing the capes of Virginia, moved majestically southward. General T. W. Sherman [not to be confused with General William T. Sherman of the Western armies] commanded the land forces, consisting of 13 volunteer regiments, forming three brigades, and numbering not less than 10,000 men; while the fleet—commanded by Com. Samuel F. Du Pont—embraced the steam-frigate *Wabash*, 14 gunboats, 22 first-class and 12 smaller steamers, with 26 sailing vessels. After a stormy passage, in which several transports were disabled and four absolutely lost, Com. Du Pont, in his flag-ship, came to off Port Royal, S. C., during the night of November 3d and 4th; and, after proper soundings and reconnaissances, which developed the existence of a new fort on either side of the entrance, the commodore brought his most effective vessels into action at 9 A. M., on Thursday, November 7th, taking the lead in his flag-ship, the *Wabash*—the gunboats to follow at intervals in duo order. Thus the fighting portion of the fleet steamed slowly up the bay by the forts, receiving and returning the fire of the batteries on Bay Point as they passed up, and exchanging like compliments with the stronger fort on Hilton Head as they came down. Thus no vessel remained stationary under fire; so that the enemy were at no time enabled to gain, by experiment and observation, a perfect aim. The day was lovely; the spectacle magnificent; the

flight spirited, but most unequal. Despite the general presumption that batteries, well manned and served, are superior to ships when not bronzed, the terrible rain of shot and shell upon the gunners in the Rebel forts soon proved beyond human endurance. . . . The battle . . . raged nearly five hours, with fearful carnage and devastation on the part of the Rebels, and very little on ours, when the overmatched Confederates, flinging themselves slaughtered to no purpose, suddenly and unanimously took to flight. . . . The Rebel forts were fully manned by 1,700 South Carolinians, with a field battery of 500 more stationed not far distant. The negroes, save those who had been driven off by their masters, or shot while attempting to evade them, had stubbornly remained on the isles."—H. Greeley, *The American Conflict*, ch. 36.—"The effect of the battle of Port Royal was as largely felt in the North, where it revived the hopes of her people, as in the South, to whose people it revealed the presence of a new and pressing danger. The Federals had conquered a strong base of operations on the enemy's coast; they had carried the war into South Carolina. . . . Sherman might, perhaps, at the first moment of his adversary's disorder, have been able to push his success farther, and to lead his army upon Charleston, or Savannah. But he was afraid of risking such a venture. . . . The occupation of most of the islands in the vicinity of the St. Helena group was the natural consequence of the victory of Hilton Head. It was effected gradually before the end of the year. Among all the points of the coast which the Federals had thus seized without striking a blow, thanks to the prestige of their success, the most important was Tybee Island, at the entrance of the Savannah River. Situated on the right bank of the mouth of that river, and being the spot where the lighthouse stands, Tybee Island enabled the Federals, as soon as they became masters of it, to obstruct the passage of the blockade-runners on their way to the great mart of Savannah. At a distance of about 600 feet from its borders, on an islet in the middle of the river, stood Fort Pulaski. . . . A few days after, the navy extended its conquests still farther south," occupying the channel between the Tybee Island group and the Warsaw Islands, "and thus opening a passage for future operations, which would enable them to reach Savannah by turning Fort Pulaski. . . . At the end of the year, Dupont's fleet, supported by detachments from Sherman's army, was in possession of the five large bays of North Edisto, St. Helena, Port Royal, Tybee, Warsaw, and the whole chain of islands which forms the coast of Carolina and Georgia between those bays."—Comte de Paris, *Hist. of the Civil War in Am.*, bk. 4, ch. 3 (p. 1).

A. D. 1861 (November).—The Trent affair.—Arrest of Mason and Slidell.—"On the 8th of November, 1861, Captain Charles Wilkes, of the U. S. Steamer San Jacinto, intercepted on the ocean H. B. M. mail packet boat Trent, having on board four rebel emissaries bound for England. Having boarded the Trent, an officer of the San Jacinto, with an armed guard, arrested the rebels Mason, Slidell, McFarland and Eustis,

and transferred them to the San Jacinto. The Trent then proceeded on her voyage. Captain Wilkes conveyed his captives to Boston, where they were consigned to Fort Warren, then a receptacle for political prisoners. When this transaction became known to the British government, immediate preparations were made for war. In the United States, the act was hailed as a victory. The Secretary of the Navy publicly applauded Captain Wilkes, and the House of Representatives did the same. The Secretary of State, upon whom the chief responsibility in the matter rested, saw, more clearly than others, that a breach of international law had been committed by the commander of the San Jacinto. The President concided with Mr. Seward and it was at once resolved to restore the rebel captives to the protection of the British flag."—G. E. Baker, *Biographical Memoir of William H. Seward* (v. 5 of *Seward's Works*, pp. 10-11).—In his diplomatic correspondence as quoted in the volume cited above, under the caption "Diary or Notes on the War," Secretary Seward wrote: "November 30, 1861.—Captain Wilkes, in the Steamer San Jacinto, has boarded a British colonial steamer, and taken from her deck two insurgents who were proceeding to Europe on an errand of treason against their own country. Lord Lyons has prudently refrained from opening the subject to me, as, I presume, waiting instructions from home. We have done nothing on the subject to anticipate the discussion, and we have not furnished you with any explanations. We adhere to that course now, because we think it more prudent that the ground taken by the British government should be first made to us here, and that the discussion, if there must be one, shall be had here. In the capture of Messrs. Mason and Slidell on board a British vessel, Captain Wilkes having acted without any instructions from the government, the subject is therefore free from the embarrassment which might have resulted if the act had been specially directed by us. . . . January 20, 1862.—We have reason to be satisfied with our course in the Trent affair. The American people could not have been united in a war which, being waged to maintain Captain Wilkes's act of force, would have practically been a voluntary war against Great Britain. At the same time it would have been a war in 1861 against Great Britain for a cause directly the opposite of the cause for which we waged war against the same power in 1812." In a despatch to Lord Lyons, British Minister, Mr. Seward had written: "If I decide this case in favor of my own government, I must disavow its most cherished principles, and reverse and forever abandon its essential policy. The country cannot afford the sacrifice. If I maintain those principles, and adhere to that policy, I must surrender the case itself. It will be seen, therefore, that this government could not deny the justice of the claim presented to us in this respect upon its merits. We are asked to do to the British nation just what we have always insisted all nations ought to do to us. . . . By the adjustment of the present case upon principles confessedly American, and yet, as I trust, mutually satisfactory to both of the nations concerned, a question is finally and rightly settled between them, which, heretofore exhausting not only all forms of peaceful discussion, but also the arbitrament of war itself, for more than half a century alienated the two

countries from each other."—W. H. Seward, *To Lord Lyons, Dec. 26, 1861* (*Works, v. 5, Diplomatic Hist. of the War, pp. 308-309*).

A. D. 1861-1862 (December — March: Virginia).—Protracted inaction of McClellan.—**His Plan of Campaign and its frustration by the rebel evacuation of Centreville.**—"When Congress assembled . . . in the beginning of December, 1861, so successful had been the exertions of the authorities, and so zealously had the people responded to their country's call, that the consolidated morning reports, furnished your committee by the adjutant general of the army, showed that, exclusive of the command of General Dix, at Baltimore, the army of the Potomac consisted of about 185,000 men. During the time this large army had been collecting and organizing, nothing of importance had transpired in connexion with it, except the closing of the navigation of the Potomac by the rebels, which your committee treat of more at length in another part of this report, and the melancholy disaster of Ball's Bluff, which is made the subject of a separate report. The weather during the fall season, and for some weeks after the convening of Congress, continued unusually favorable for active military operations. As month after month passed without anything being done by the army of the Potomac, the people became more and more anxious for the announcement that the work of preparation had been completed and active operations would soon be commenced. From the testimony before your committee it appeared that the army of the Potomac was well armed and equipped, and had reached a high state of discipline by the last of September or the first of October. The men were ready and eager to commence active operations. The generals in command of the various divisions were opposed to going into winter quarters, and the most of them declared they had no expectation of doing so. . . . Your committee endeavored to obtain as accurate information as possible in relation to the strength and position of the enemy in front of Washington. The testimony of the officers in our army here upon that point, however, was far from satisfactory. Early in December an order had been issued from headquarters prohibiting the commanders in the front from examining any persons who should come into our lines from the direction of the enemy; but all such persons were to be sent, without examination, to the headquarters of the army. Restrictions were also placed upon the movements of scouts. The result was, that the generals examined appeared to be almost entirely ignorant of the force of the enemy opposed to them, having only such information as they were allowed to obtain at headquarters. The strength of the enemy was variously estimated at from 70,000 to 210,000 men. Those who formed the highest estimate based their opinion upon information received at headquarters. . . . Subsequent events have proved that the force of the enemy was below even the lowest of these estimates, and the strength of their fortifications very greatly overestimated. Your committee also sought to ascertain what number of men could be spared from this army for offensive operations elsewhere, as-

suming that the works of the enemy in front were of such a character that it would not be advisable to move directly upon them. The estimate of the force necessary to be left in and around Washington to act entirely on the defensive, to render the capital secure against any attack of the enemy, as stated by the witnesses examined upon that point, was from 50,000 to 80,000 men, leaving 100,000 or upwards that could be used for expeditions at other points. . . . The subject of the obstruction of the navigation of the Potomac naturally demanded the consideration of your committee. . . . As was well urged by the Navy Department, the whole question amounted simply to this: Would the army co-operate with the navy in securing the unobstructed navigation of the Potomac, or, by withholding that co-operation at that time, permit so important a channel of communication to be closed. After repeated efforts, General McClellan promised that 4,000 men should be ready at a time named to proceed down the river. . . . The troops did not arrive, and the Navy Department was informed of the fact by Captain Craven. Assistant Secretary Fox, upon inquiring of General McClellan why the troops had not been sent according to agreement, was informed by him that his engineers were of the opinion that so large a body of troops could not be landed, and therefore he had concluded not to send them. Captain Fox replied that the landing of the troops was a matter of which the Navy Department had charge. . . . It was then agreed that the troops should be sent the next night. Captain Craven was again notified, and again had his flotilla in readiness for the arrival of the troops. But no troops were sent down at that time, nor were any ever sent down for that purpose. Captain Fox, in answer to the inquiry of the committee as to what reason was assigned for not sending the troops according to the second agreement, replied that the only reason, so far as he could ascertain, was, that General McClellan feared it might bring on a general engagement. . . . Upon the failure of this plan of the Navy Department, the effective vessels of the Potomac flotilla left upon the Port Royal expedition. The navigation of the river was almost immediately thereafter closed, and remained closed until the rebels voluntarily evacuated their batteries in the March following, no steps having been taken, in the meantime, for reopening communication by that route. On the 19th of January, 1862, the President of the United States, as commander-in-chief of the army and navy, issued orders for a general movement of all the armies of the United States, one result of which was the series of victories at Fort Henry, Fort Donelson, &c., which so electrified the country and revived the hopes of every loyal man in the land. After this long period of inaction of the army of the Potomac, the President of the United States, on the 31st of January, 1862, issued the following order: . . . 'Ordered, That all the disposable force of the army of the Potomac, after providing safely for the defence of Washington, be formed into an expedition for the immediate object of seizing and occupying a point upon the railroad southwestward of what is known as Manassas Junction; all details to be in the discretion of the general-in-chief, and the expedition to move before or on the 23d day of February next. Abraham Lin-

coln.' To this order General McClellan wrote an elaborate reply of the same date, objecting to the plan therein indicated as involving 'the error of dividing our army by a very difficult obstacle, (the Occoquan), and by a distance too great to enable the two portions to support each other, should either be attacked by the masses of the enemy, while the other is held in check.' He then proceeded to argue in favor of a movement by way of the Rappahannock or Fortress Monroe, giving the preference to the Rappahannock route. He stated that 30 days would be required to provide the necessary means of transportation. He stated that he regarded 'success as certain, by all the chances of war,' by the route he proposed, while it was 'by no means certain that we can beat them (the enemy) at Manassas.' . . . Your committee have no evidence, either oral or documentary, of the discussions that ensued or the arguments that were submitted to the consideration of the President that led him to relinquish his own line of operations and consent to the one proposed by General McClellan, except the result of a council of war, held in February, 1862. That council, the first, so far as your committee have been able to ascertain, ever called by General McClellan, and then by direction of the President, was composed of twelve generals. . . . To them was submitted the question whether they would indorse the line of operations which General McClellan desired to adopt. The result of the deliberation was a vote of eight to four in favor of the movement by way of Annapolis, and thence down the Chesapeake bay, up the Rappahannock, landing at Urbana, and across the country to Richmond. The four generals who voted against the proposed movement were Generals McDowell, Sumner, Heintzelman, and Barnard. General Keyes voted for it with the qualification that no change should be made until the enemy were driven from their batteries on the Potomac. . . . Before the movement by way of Annapolis could be executed, the enemy abandoned their batteries upon the Potomac, and evacuated their position at Centreville and Manassas, retreating to the line of the Rappahannock. When General McClellan, then in the city of Washington, heard that the enemy had evacuated Manassas, he proceeded across the river and ordered a general movement of the whole army in the direction of the position lately occupied by the enemy. The enemy moved on the morning of the 10th of March, the greater part of it proceeding no further than Fairfax Court-House. A small force of the army proceeded to Manassas and beyond to the line of the Rappahannock, ascertaining that the enemy had retired beyond that river and destroyed the railroad bridge across it. . . . On the 13th of March General McClellan convened at Fairfax Court-House a council of war, consisting of four of the five commanders of army corps, (General Banks being absent,) and informed them that he proposed to abandon his plan of movement by way of the Rappahannock, and submitted to them instead a plan of movement by way of the York and James rivers."—*Rep't of Joint Committee on the Conduct of the War, 37th Cong., 3d sess., H. R. Rep., pt. 1, pp. 6-12.*—The Joint Committee on the Conduct of the War, consisting of Senators Wade, Chandler, and Andrew Johnson, and of Representatives Gooch, Covode,

Julian, and Odell, was appointed in December, 1861. This Committee "was for four years one of the most important agencies in the country. It assumed, and was sustained by Congress in assuming, a great range of prerogative. It became a stern and zealous censor of both the army and the Government; it called soldiers and statesmen before it, and questioned them like refractory schoolboys. . . . It was often hasty and unjust in its judgments, but always, earnest, patriotic, and honest. . . . General McClellan and his immediate following treated the committee with something like contempt. But the President, with his larger comprehension of popular forces, knew that he must take into account an agency of such importance; and though he steadily defended General McClellan and his deliberateness of preparation before the committee, he constantly assured him in private that not a moment ought to be lost in getting himself in readiness for a forward movement. . . . December was the fifth month that General McClellan had been in command of the greatest army ever brought together on this continent. It was impossible to convince the country that a longer period of preparation was necessary before this army could be led against one inferior in numbers, and not superior in discipline or equipment. . . . McClellan reported to the Secretary of War, that Johnston's army, at the end of October, numbered 150,000, and that he would therefore require, to make an advance movement with the Army of the Potomac, a force of 240,000. Johnston's report of that date shows an effective total of 41,000 men. . . . Aware that his army was less than one-third as strong as the Union forces, Johnston contented himself with neutralizing the army at Washington, passing the time in drilling and disciplining his troops, who, according to his own account, were seriously in need of it. He could not account for the inactivity of the Union army. Military operations, he says, were practicable until the end of December; but he was never molested."—J. G. Nicolay and J. Hay, *Abraham Lincoln, v. 5, ch. 9.*—McClellan says, "It certainly was not till late in Nov., 1861, that the Army of the Potomac was in any condition to move, nor could then were they capable of assaulting entrenched positions. By that time the roads had ceased to be practicable for the movement of armies, and the experience of subsequent years proved that no large operations could be advantageously conducted in that region during the winter season. Any success gained at that time in front of Washington could not have been followed up and a victory would have given us the barren possession of the field of battle, with a longer and more difficult line of supply during the rest of the winter. If the Army of the Potomac had been in condition to move before winter, such an operation would not have accorded with the general plan I had determined upon after succeeding General Scott as general in command of the armies."—G. B. McClellan, *McClellan's Own Story, pp. 199-200.*

A. D. 1861-1862 (December—April: Virginia).—Jackson's first campaign in the Shenandoah Valley.—Battle of Kernstown.—"Soon after the battle of Bull Run Stonewall Jackson was promoted to major-general, and the Confederate Government having on the 21st of October, 1861, organized the Department of Northern Virginia, under command of General Joseph E. Johnston, it was divided into the Valley District, the Potomac District, and Aquia District, to be commanded respectively by Major-Generals Jackson, Beauregard, and Holmes." In November, Jackson's force was about 10,000 men. "His only movement of note in the winter of 1861-62 was an expedition at the end of December to Bath and Romney, to destroy the Baltimore and Ohio railroad and a dam or two near Hancock, on the Chesapeake and Ohio canal. . . . In March Johnston withdrew from Manassas, and General McClellan collected his army of more than 100,000 men on the Peninsula. . . . Jackson's little army in the Valley had been greatly reduced during the winter from various causes, so that at the beginning of March he did not have over 5,000 men of all arms available for the defense of his district, which began to swarm with enemies all around its borders, aggregating more than ten times his own strength. Having retired up the Valley, he learned that the enemy had begun to withdraw and send troops to the east of the mountains to cooperate with McClellan. This he resolved to stop by an aggressive demonstration against Winchester, occupied by General Shields, of the Federal army, with a division of 8,000 to 10,000 men. A little after the middle of March, Jackson concentrated what troops he could, and on the 23d he occupied a ridge at the hamlet of Kernstown, four miles south of Winchester. Shields promptly attacked him, and a severe engagement of several hours ensued, ending in Jackson's repulse about dark, followed by an orderly retreat up the Valley to near Swift Run Gap in Rockingham county. The pursuit was not vigorous nor persistent. Although Jackson retired before superior numbers, he had given a taste of his fighting qualities that stopped the withdrawal of the enemy's troops from the Valley. The result was so pleasing to the Richmond government and General Johnston that it was decided to reinforce Jackson by sending General Ewell's division to him at Swift Run Gap, which reached him about the 1st of May."

—J. D. Imboden, *Stonewall Jackson in the Shenandoah* (*Battles and Leaders*, v. 2, pp. 282-285).—"The losses at Kernstown were: Union, 118 killed, 450 wounded, 22 missing—590; Confederate, 80 killed, 375 wounded, 263 missing—718."—N. Kimball, *Fighting Jackson at Kernstown* (*Battles and Leaders*, v. 2, p. 307, footnote).

A. D. 1861-1863.—President Lincoln's suspension of the writ of Habeas Corpus.—On the 27th of April, 1861, President Lincoln issued the following order "To the Commanding General, Army of the United States"—at that time, General Scott: "You are engaged in suppressing an insurrection against the laws of the United

States. If at any point on or in the vicinity of any military line which is now or which shall be used between the city of Philadelphia and the city of Washington you find resistance which renders it necessary to suspend the writ of habeas corpus for the public safety, you personally, or through the officer in command at the point at which resistance occurs, are authorized to suspend that writ." On the 2d of July, another order was issued in exactly the same language, except that it gave authority to suspend the writ at "any point on or in the vicinity of any military line . . . between the city of New York and the city of Washington." On the 14th of October, a third order to General Scott declared: "The military line of the United States for the suppression of the insurrection may be extended so far as Bangor, Maine. You and any officer acting under your authority are hereby authorized to suspend the writ of habeas corpus in any place between that place and the city of Washington." On the 2d of December a specific order to General Halleck, commanding in the Department of Missouri, authorized the suspension of the writ within the limits of his command; and a similar order, long previously, had specially empowered the commander of the forces of the United States on the coast of Florida to do the same. On the 24th of September, 1862, a general proclamation by the President subjected to martial law "all rebels and insurgents, their aiders and abettors within the United States, and all persons discouraging volunteer enlistments, resisting militia drafts, or guilty of any disloyal practice affording aid and comfort to rebels against the authority of the United States"; and suspending the writ of habeas corpus "in respect to all persons arrested, or who are now, or hereafter during the rebellion shall be, imprisoned in any fort, camp, arsenal, military prison, or other place of confinement, by any military authority, or by the sentence of any court martial or military commission." On the 3d of March, 1863, the authority of the President to suspend habeas corpus (which some thought questionable) was confirmed by act of Congress; and on the 15th of September in that year another general proclamation was issued, referring to the act and declaring a suspension of the writ "throughout the United States, in the cases where, by the authority of the President of the United States, military, naval, and civil officers of the United States, or any of them, hold persons under their command, or in their custody, either as prisoners of war, spies, or aiders or abettors of the enemy, or officers, soldiers, or seamen enrolled or drafted or mustered or enlisted in, or belonging to, the land or naval forces of the United States, or as deserters therefrom, or otherwise amenable to military law, or the rules and articles of war, or the rules or regulations prescribed for the military or naval service by authority of the President of the United States; or for resisting a draft, or for any other offense against the military or naval service."—Abraham Lincoln, *Complete Works*, v. 2, pp. 38, 45, 54, 85, 93, 239, 406.—"Whether it is the President or Congress that has power under the constitution to suspend the privilege of the writ of habeas corpus was a burning question during the civil war. . . . The case of John Merryman . . . was the first to come up for judicial interpretation. Merryman lived near Baltimore, and appears to have

been suspected of being captain of a secession troop, of having assisted in destroying railroads and bridges for the purpose of preventing troops from reaching Washington, and of obstructing the United States mail. By order of General Keim of Pennsylvania he was arrested at night in his own house, and taken to Fort McHenry at that time in command of General George Cadwallader. Taney, who was then chief justice of the United States, granted a habeas corpus, but Cadwallader refused to obey it, saying that the privilege had been suspended by the President. On the return of the writ, the Chief Justice filed an opinion denying that the President had any power to suspend habeas corpus and affirming that such power rested with Congress alone. Lincoln continued to arrest and imprison without any regard to this opinion, and indeed was advised by his Attorney-General that he was not bound to notice it. . . . The writ of habeas corpus was . . . not suspended by Congress until the rebellion was half over. In other words, Lincoln suspended it for two years of his own accord and without authority from any one; for two years he made arrests without warrants and held men in prison as long as he pleased. . . . There are few things in American history more worthy of discussion than the power exercised by Lincoln in those two years. It was absolute and arbitrary and, if unauthorized, its exercise was a tremendous violation of the constitution. Whether it was justifiable and necessary is another matter. If it was unconstitutional and yet necessary in order to save the Union, it shows that the constitution is defective in not allowing the government the proper means of protecting itself. That Lincoln used this power with discretion and forbearance there is no doubt. He was the most humane man that ever wielded such authority. He had no taste for tyranny, and he knew the temper of the American people. But, nevertheless, injustice was sometimes done. His subordinates had not always their master's nature."—S. G. Fisher, *The Suspension of Habeas Corpus during the War of the Rebellion* (*Pol. Sci. Quarterly*, Sept., 1888).—The view which President Lincoln himself entertained, and under which he assumed and exercised authority to suspend the writ of habeas corpus, was submitted to Congress in his first Message, when it convened in special session, July 4, 1861. He said: "Soon after the first call for militia, it was considered a duty to authorize the commanding general in proper cases, according to his discretion, to suspend the privilege of the writ of habeas corpus, or, in other words, to arrest and detain, without resort to the ordinary processes and forms of law, such individuals as he might deem dangerous to the public safety. This authority has purposely been exercised but very sparingly. Nevertheless, the legality and propriety of what has been done under it are questioned, and the attention of the country has been called to the proposition that one who has sworn to 'take care that the laws be faithfully executed' should not himself violate them. Of course some consideration was given to the questions of power and propriety before this matter was acted upon. The whole of the laws which were required to be faithfully executed were being resisted and failing of execution in nearly one third of the States. Must they be allowed to finally fail of execution, even had it been per-

fectly clear that by the use of the means necessary to their execution some single law, made in such extreme tenderness of the citizen's liberty that, practically, it relieves more of the guilt than of the innocent, should to a very limited extent be violated? To state the question more directly, are all the laws but one to go unexecuted, and the government itself go to pieces lest that one be violated? Even in such a case, would not the official oath be broken if the government should be overthrown, when it was believed that disregarding the single law would tend to preserve it? But it was not believed that this question was presented. It was not believed that any law was violated. The provision of the Constitution that 'the privilege of the writ of habeas corpus shall not be suspended, unless when, in cases of rebellion or invasion, the public safety may require it,' is equivalent to a provision—is a provision—that such privilege may be suspended when, in case of rebellion or invasion, the public safety does require it. It was decided that we have a case of rebellion, and that the public safety does require the qualified suspension of the privilege of the writ which was authorized to be made. Now it is insisted that Congress, and not the executive, is vested with this power. But the Constitution itself is silent as to which or who is to exercise the power; and as the provision was plainly made for a dangerous emergency, it cannot be believed the framers of the instrument intended that in every case the danger should run its course until Congress could be called together, the very assembling of which might be prevented, as was intended in this case, by the rebellion. . . . Whether there shall be any legislation upon the subject, and if any, what, is submitted entirely to the better judgment of Congress."—Abraham Lincoln, *Complete Works*, v. 2, pp. 50-60.—Congress gave tacit approval to this view of the President's powers by passing no act on the subject until nearly two years afterwards, as shown above.

A. D. 1862 (January—February: Kentucky—Tennessee).—The first breaking of the Confederate line.—Grant's capture of Fort Henry and Fort Donelson.—"At the beginning of the new year the Union armies were over 600,000 strong, backed by a fleet of 212 vessels. McClellan lay quiet upon the Potomac all winter, drilling, organizing, disciplining the Army of the Potomac. In his front was Joe Johnston, with a much smaller force, pushing forward with equal energy the schooling of his soldiers. The Western generals were more active. Albert Sidney Johnston, perhaps the most promising Southern officer, was in command in the West, with headquarters at Bowling Green. Buell lay in Johnston's front, having superseded Sherman, whose 'crazy' suggestion that 250,000 men would be required for operations on the Western field had lost him the confidence of his superiors. There was abundant method in his madness, as time all too fully showed. In [Eastern] Kentucky the Confederate Humphrey Marshall had been creating more or less political trouble, and General Garfield was sent against him with some 2,000 men. Marshall somewhat outnumbered Garfield; but in a vigorous January campaign [beginning at Paintsville, January 7, and] culminating at Prestonburg [January 10], Garfield quite dispersed his forces, and drove him into the moun-

t. Ins. About the same time, Zollicoffer, with some 12,000 men, had retreated from his post in advance of Cumberland Gap, where he held the extreme right of the Southern line, to Mill Spring, in Central Kentucky. General George H. Thomas was charged with the duty of disposing of him. With about an equal force Thomas promptly moved upon his enemy, and in a sharp action at Mill Spring [January 19] utterly broke up his army. He thus early showed the rare vigor he afterwards so fully developed. Zollicoffer was killed. This first of our substantial western victories (called 'Fishing Creek' by the enemy) [and also called the battle of Logan Cross Roads by some Union writers] was a great encouragement to our arms. Crittenden, who succeeded to the command, withdrew his troops across the Cumberland, abandoning his artillery and trains. Eastern Kentucky was thus freed from the Confederates. Halleck's first task as commander of the Western armies was to penetrate the Confederate line of defense. This could be done by breaking its centre or by turning one of its flanks. The former appeared most feasible to Grant, and Commodore Foote, who commanded the naval forces. Under instructions from Halleck, seven of the gun-boat flotilla, with Grant's 17,000 men in reserve, moved up the Tennessee river to attack Fort Henry and essay the value of gun-boats in amphibious warfare. Grant landed below the fort, and Foote then opened fire upon it. Tilghman, in command, foreseeing its capture, was shrewd enough to send off the bulk of his force to Fort Donelson. He himself made a mock defense with a handful of men, surrendering the fort after the garrison was well on its way. Without the twin citadel of Donelson [distant about eleven miles, southeastwardly, on the Cumberland River], however, Fort Henry was but a barren triumph, for no column could advance up the Tennessee river while this garrison threatened its flank. It was here that Grant earned his first laurels as a stanch soldier, by compelling, after a stubborn fight, the surrender of this second fortress with its entire garrison. Every effort had been made by Johnston to hold the place. He must here fight for the possession of Nashville. Fort Donelson was strongly fortified and garrisoned. Grant moved against it from Fort Henry with 15,000 men, 5,000 less than the enemy. The ground is difficult; the troops are green. But reinforcements and the fleet come to Grant's assistance. The fort is fully invested, under great difficulties from severity of weather and the inexperience of the men. Happily there is not much ability in the defense. Floyd, the senior officer, determines to cut his way out. He falls heavily upon Grant's right, held by McClernand and backed by Wallace, thinking to thrust them aside from the river and to escape over the road so won. A stubborn resistance defeats this sortie, though but narrowly. A general assault is ordered, which effects a lodgment in the works. Divided responsibilities between Floyd, Buckner, and Pillow weaken the defense so as to operate a surrender. Our loss was 2,300. The Confederates captured were over 15,000 men. These successes broke through the centre of the Confederate line, established with so much pains, and compromised its flanks. Johnston found that he must retire to a new line. This lay naturally along the Memphis and

Charleston Railroad. He had retreated from Bowling Green on receipt of the news of the fall of Fort Henry, and was forced thereby to cede to Buell possession of Nashville, and practically of Kentucky. The advanced flank on the Mississippi at Columbus was likewise compromised, and with the bulk of the armament was withdrawn to Island No. 10, some forty miles below Cairo. We could congratulate ourselves upon a very substantial gain."—T. A. Dodge, *Bird's-Eye View of Our Civil War*, ch. 6.

A. D. 1862 (January—March: Missouri—Arkansas).—Expulsion of the Confederates from Missouri.—Battle of Pea Ridge.—Late in December General Samuel R. Curtis took command of 12,000 National troops at Rolla, and advanced against Price, who retreated before him to the northwestern corner of Arkansas, where his force was joined by that of General McCulloch, and together they took up a position in the Boston Mountains. Curtis crossed the line into Arkansas, chose a strong place on Pea Ridge, in the Ozark Mountains, intrenched, and awaited attack. Because of serious disagreements between Price and McCulloch, General Earl Van Dorn, who ranked them both, was sent to take command of the Confederate force, arriving late in January. There is no authentic statement as to the size of his army. He himself declared that he had but 14,000 men, while no other estimate gave fewer than twice that number. Among them was a large body of Cherokee Indians, recruited for the Confederate service by Albert Pike, who thirty years before had won reputation as a poet. On March 5, 1862, Van Dorn moved to attack Curtis, who knew of his coming and formed his line on the bluffs along Sugar Creek, facing southward. His divisions were commanded by Generals Franz Sigel and Alexander S. Asboth and Colonels Jefferson C. Davis and Eugene A. Carr, and he had somewhat more than 10,000 men in line, with 48 guns. The Confederates, finding the position too strong in front, made a night march to the west, with the intention of striking the Nationals on the right flank. But Curtis discovered their movement at dawn, promptly faced his line to the right about, and executed a grand left wheel. His army was looking westward toward the approaching foe, Carr's division being on the right, then Davis, then Asboth, and Sigel on the left. But they were not fairly in position when the blow fell. Carr was struck most heavily, and, though reinforced from time to time, was driven back a mile in the course of the day. Davis, opposed to the corps of McCulloch, was more successful; that General was killed and his troops were driven from the field. In the night Curtis reformed and strengthened his lines, and in the morning the battle was renewed. This day Sigel executed some brilliant and characteristic manoeuvres. To bring his division into its place on the left wing, he pushed a battery forward, and while it was firing rapidly its infantry supports were brought up to it by a right wheel; this movement was repeated with another battery and its supports to the left of the first, and again, till

the whole division had come into line, pressing back the enemy's right. Sigel was now so far advanced that Curtis's whole line made a curve, enclosing the enemy, and by a heavy concentrated artillery fire the Confederates were soon driven to the shelter of the ravines, and finally put to rout. The National loss in this action [called the battle of Elk Horn by the Confederates]—killed, wounded, and missing—was over 1,300, Carr and Asboth being among the wounded. The Confederate loss is unknown. Generals McCulloch and McIntosh were killed, and Generals Price and Slack wounded. Owing to the nature of the ground, any effective pursuit of Van Dorn's broken forces was impracticable."—R. Johnson, *Short Hist. of the War of Secession*, ch. 6.

A. D. 1862 (January—April: North Carolina).—Burnside's expedition to Roanoke and capture of Newbern and Beaufort.—"Roanoke Island, lying behind Bodie's Island, the sand-bar that shuts off Upper North Carolina from the Atlantic Ocean, offers some of the most interesting souvenirs of early American history. . . . As stated by General Wise, to whom its defense was intrusted by the Confederate government, it was the key to all the rear defenses of Norfolk. It unlocked two sounds, eight rivers, four canals, two railroads. It guarded more than four fifths of the supplies of Norfolk. The seizure of it endangered the subsistence of the Confederate army there, threatened the navy yard, interrupted the communication between Norfolk and Richmond, and intervened between both and the South. . . . After the capture of Hatteras Inlet in August, 1861, light-draught steamers, armed with a rifle gun, often stealthily came out of these waters to prey upon commerce. . . . An expedition for operating on this part of the North Carolina coast was placed under command of General Burnside, who was ordered (January 7th, 1862) to unite with Flag-officer Goldsborough, in command of the fleet, at Fortress Monroe, capture Newbern, seize the Weldon Railroad, and reduce Fort Macon. The force consisted of 31 steam gun-boats, some of them carrying heavy guns; 11,500 troops, conveyed in 47 transports; a fleet of small vessels for the transportation of sixty days' supplies. It left Hampton Roads on the night of January 11th, and arrived off Hatteras in two days, as a storm was coming on. The commander found with dismay that the draught of several of his ships was too great to permit them to enter. . . . Some dishonest ship-sellers in New York had, by misrepresentation, palmed off on the government unsuitable transport vessels, of which several were lost in that tempestuous sea. . . . It was only by the greatest exertion and perseverance, and not until a whole fortnight had elapsed, that the entrance to Pamlico Sound was completed. The villainy that led to this delay gave the Confederates ample time for preparation. Not until the end of another week (February 7th) had the reorganized expedition gained the entrance to Croatan Sound, and worked through its shallow, marshy passes. The weather was beautiful by day; there was a bright moonshine at night. The gun-boats

found a Confederate fleet drawn up behind the obstructions, across the channel, near Pork Point. They opened fire on the fort at that point. It was returned both from the works and the shipping. Meantime troops were being landed at Ashby's, a small force, which was attempting to resist them, being driven off by the fire of the ships. The debarkation went on, though it was raining heavily and night had set in. It was continued until 10,000 men had been landed on the marsh. Before dark, however, the work at Pork Point had been silenced, and the Confederate fleet had retired to Weir's Point. . . . When day broke, Burnside commenced forcing his way up the island. He moved in three columns, the central one, preceded by a howitzer battery, upon the only road, the right and left through the woods. The battery that obstructed this road was soon carried, though not without resistance. The men had to wade waist-deep in the water of the pond that protected it. . . . Toward Nag's Head the Confederate force, expelled from the captured work, attempted to retreat. They were, however, overtaken, and the rest of the command on the north of the island, 2,500 strong, was compelled to surrender. The Confederate fleet was pursued to Elizabeth City, whither it had fled, and there destroyed. A large part of the town was burned. A portion of the national fleet went into the harbor of Edenton and captured that town. Winton, on the Chowan River, shared the same fate. Burnside next made an attack (March 14th) on Newbern, one of the most important sea-ports of North Carolina. As the troops advanced from the place of landing, the gun-boats shelled the woods in front of them, and thereby cleared the way. A march of 18 miles in a rain-storm, and over execrable roads, did not damp the energy of the soldiers. . . . Newbern was captured, and with it 46 heavy guns, 3 batteries of light artillery, and a large amount of stores. Burnside's losses were 90 killed and 466 wounded. Preparations were next made for the reduction of Fort Macon, which commands the entrance of Beaufort Harbor. On April 25th it was bombarded by three steamers and three shore batteries; the former, however, in the course of an hour and a half, were compelled to withdraw. But the shore batteries, continuing their attack, silenced the guns of the garrison, and, in the course of the afternoon, compelled the surrender of the fort. In connection with this expedition some operations of minor importance occurred. . . . The chief result, however, was the closure of the ports and suppression of commerce. General Burnside's forces were eventually, for the most part, withdrawn. They were taken to Alexandria, and joined the army of General Pope."—J. W. Draper, *Hist. of the Am. Civil War*, ch. 59 (v. 2).

A. D. 1862 (February—April: Georgia—Florida).—Siege and capture of Fort Pulaski.—Temporary occupation of Florida.—Discouragement of Unionists.—The blockade of Fort Pulaski may be dated from the 22d of February. Preparations were then made on Tybee

Island to bombard it. The most of the work had to be done in the night. The work was carried on under the supervision of General Gillmore, who was in chief command, and on the 9th of April eleven batteries, containing an aggregate of 36 guns, were in readiness to open fire. General David Hunter, who had just succeeded General Sherman in command of the Department, arrived at Tybee on the evening of the 8th. At sunrise, on the morning of the 10th, Hunter sent Lieutenant J. H. Wilson to the fort, with a summons to the commander of the garrison to surrender. The latter refused, saying: "I am here to defend this fort, not to surrender it." At a few minutes after eight o'clock the batteries opened fire, and at the end of thirty hours the garrison surrendered. In reporting the capture, General Hunter wrote: "At the end of eighteen hours' firing the fort was breached in the southeast angle, and at the moment of surrender, 2 p. m. on the 11th instant, we had commenced preparations for storming. The whole armament of the fort—47 guns, a great supply of fixed ammunition, 40,000 pounds of powder, and large quantities of commissary stores, have fallen into our hands; also 360 prisoners, of whom the officers will be sent North by the first opportunity that offers. The result of this bombardment must cause, I am convinced, a change in the construction of fortifications as radical as that foreshadowed in naval architecture by the conflict between the Monitor and Merrimac. No works of stone or brick can resist the impact of rifled artillery of heavy caliber." General Benham, immediately commanding the operations, remarked in his report: "This siege is . . . the first trial, at least on our side of the Atlantic, of the modern heavy and rifled projectiles against forts erected and supposed to be sufficiently strong prior to these inventions, almost equaling, as it would appear, the revolution accomplished in naval warfare by the iron-clad vessels recently constructed." Captain (acting Brigadier-General) Q. A. Gillmore, the officer immediately in charge of the works on Tybee Island, has given, in a report made in 1865 to the Adjutant-General of the U. S. A., an account of the difficulties under which the batteries which performed the chief part in the siege were erected: "Tybee Island is mostly a mud marsh, like other marsh islands on this coast. Several ridges and hummocks of firm ground, however, exist upon it, and the shore of Tybee Roads, where the batteries were located, is partially skirted by low sand banks, formed by the gradual and protracted action of the wind and tides. The distance along this shore from the landing place to the advanced batteries is about 2½ miles. The last mile of this route, on which the seven most advanced batteries were placed, is low and marshy, lies in full view of Fort Pulaski, and is within effective range of its guns. The construction of a causeway resting on fascines and brush-wood over this swampy portion of the line; the erection of the several batteries, with the magazines, gun platforms, and splinter-proof shelters; the transportation of the heaviest ordnance in our service by the labor of men alone; the hauling of ordnance stores and engineer supplies, and the mounting of the guns and mortars on their carriages and beds had to be done almost exclusively at night, alike regardless of the inclemency of the weather and of

the miasma from the swamps. No one except an eye-witness can form any but a faint conception of the herculean labor by which mortars of 8½ tons' weight and columbiads but a trifle lighter were moved in the dead of night over a narrow causeway, bordered by swamps on either side, and liable at any moment to be overturned and buried in the mud beyond reach. The stratum of mud is about 12 feet deep, and on several occasions the heaviest pieces, particularly the mortars, became detached from the sling-carts, and were with great difficulty, by the use of planks and skids, kept from sinking to the bottom. Two hundred and fifty men were barely sufficient to move a single piece on sling-carts. The men were not allowed to speak above a whisper, and were guided by the notes of a whistle. The positions selected for the five most advanced batteries were artificially screened from view from the fort by a gradual and almost imperceptible change, made little by little every night, in the condition and appearance of the brush-wood and bushes in front of them. No sudden alteration of the outline of the landscape was permitted. After the concealment was once perfected to such a degree as to afford a good and safe parapet behind it less care was taken, and some of the work in the batteries requiring mechanical skill was done in the daytime, the fatigue parties going to their labor before break of day and returning in the evening after dark. . . . The three breaching batteries—Sigel, Scott, and McClellan—were established at a mean distance of 1,700 yards from the scarp walls of Fort Pulaski. The circumstance, altogether new in the annals of sieges, that a practicable breach, which compelled the surrender of the work, was made at that distance in a wall 7½ feet thick, standing obliquely to the line of fire and backed by heavy casemate piers and arches, cannot be ignored by a simple reference to the time-honored military maxims that 'Forts cannot sustain a vigorous land attack,' and that 'All masonry should be covered from land batteries.'" —*Official Records, series 1, v. 6, pp. 134-135, 155, 161.*—"By this victory, won on the first anniversary of the fall of Fort Sumter [April 12], the port of Savannah was sealed against blockade-runners. The capture of Fort Jackson above, and of the city, would have been of little advantage to the Nationals then, for the forces necessary to hold them were needed in more important work farther down the coast. While Gillmore and Vele were besieging Fort Pulaski, Commodore Dupont and General Wright were making easy conquests on the coast of Florida." Fort Clinch, on Amelia Island, Fernandina, Jacksonville, St. Augustine, and other places, were abandoned by the Rebels on the approach of the National forces. But these conquests proved rather unfortunate than otherwise. "At first, the hopes they inspired in the breasts of the Union people developed quite a widespread loyalty. A Union convention was called to assemble at Jacksonville on the 10th of April, to organize a loyal State Government, when, to the dismay of those engaged in the matter, General Wright prepared to withdraw his forces, two days before the time when the convention was to meet. . . . In consequence, . . . very little Union feeling was manifested in Florida during the remainder of the war."—B. J. Lossing, *Field Book of the Civil War, v. 2, ch. 12.*

A. D. 1862 (February—April: Tennessee).—The advance up River.—Battle of Shiloh, or Pittsburg Landing.—"By the end of February, 1862, Major-General Halleck commanded all the armies in the valley of the Mississippi, from his headquarters in St. Louis. These were, the Army of the Ohio, Major-General Buell, in Kentucky; the Army of the Tennessee, Major-General Grant, at Forts Henry and Donelson; the Army of the Mississippi, Major-General Pope; and that of General S. R. Curtis, in Southwest Missouri. He posted his chief of staff, General Cullum, at Cairo, and me [General Sherman] at Paducah, chiefly to expedite and facilitate the important operations then in progress up the Tennessee and Cumberland Rivers. . . . General Buell had also followed up the rebel army, which had retreated hastily from Bowling Green to and through Nashville, a city of so much importance to the South that it was at one time proposed as its capital. Both Generals Grant and Buell looked to its capture as an event of great importance. On the 21st General Grant sent General Smith with his division to Clarksville, 50 miles above Donelson, toward Nashville, and on the 27th went himself to Nashville to meet and confer with General Buell, but returned to Donelson the next day." Orders sent by General Halleck to Grant did not reach the latter, and a supposed disobedience occurred which caused him to be hastily relieved from his command, which was transferred to General C. F. Smith, on the 4th of March. Halleck's purpose "was evidently to operate up the Tennessee River, to break up Bear Creek Bridge and the railroad communications between the Mississippi and Tennessee Rivers, and no doubt he was provoked that Generals Grant and Smith had turned aside to Nashville. In the mean time several of the gunboats, under Captain Phelps, United States Navy, had gone up the Tennessee as far as Florence, and on their return had reported a strong Union feeling among the people along the river. On the 10th of March, having received the necessary orders from General Halleck, I embarked my division at Paducah. . . . I . . . steamed up the Tennessee River, following the two gunboats, and, in passing Pittsburg Landing, was told by Captain Gwin that, on his former trip up the river, he had found a rebel regiment of cavalry posted there, and that it was the usual landing-place for the people about Corinth, distant 30 miles. I sent word back to General Smith that, if we were detained up the river, he ought to post some troops at Pittsburg Landing. We went on up the river cautiously, till we saw Eastport and Chickasaw, both of which were occupied by rebel batteries and a small rebel force of infantry. We then dropped back quietly to the mouth of Yellow River, a few miles below," where the troops were landed and an attempt made to push out and destroy the Memphis and Charleston railroad; but heavy rains had so swollen all the streams that the expedition was foiled and returned. "Once more embarked, I concluded to drop down to Pittsburg Landing, and to make the attempt from there. During the night of the 14th, we dropped down to Pittsburg Landing, where I found Hurlbut's division in boats. Leaving my command there, I steamed down to Savannah, and reported to General Smith in person, who saw in the flooded Tennessee the full truth of my

report; and he then instructed me to disembark my own division, and that of General Hurlbut, at Pittsburg Landing; to take positions well back, and to leave room for his whole army; telling me that he would soon come up in person, and move out in force to make the lodgment on the railroad, contemplated by General Halleck's orders. . . . Within a few days, Prentiss's division arrived and camped on my left, and afterward McClelland's and W. H. L. Wallace's divisions, which formed a line to our rear. Lew Wallace's division remained on the north side of Snake Creek, on a road leading from Savannah or Crump's Landing to Paducah. General C. F. Smith remained back at Savannah, in chief command, and I was only responsible for my own division. I kept pickets well out on the roads, and made myself familiar with all the ground inside and outside my lines. . . . We were all conscious that the enemy was collecting at Corinth, but in what force we could not know, nor did we know what was going on behind us. On the 17th of March, General U. S. Grant was restored to the command of all the troops up the Tennessee River, by reason of General Smith's extreme illness, and because he had explained to General Halleck satisfactorily his conduct after Donelson; and he too made his headquarters at Savannah, but frequently visited our camps. . . . From about the 1st of April we were conscious that the rebel cavalry in our front was getting bolder and more saucy. . . . On Sunday morning, the 6th, early, there was a good deal of picket-firing, and I got breakfast, rode out along my lines, . . . and saw the rebel lines of battle in front coming down on us as far as the eye could reach. All my troops were in line of battle, ready, and the ground was favorable to us. . . . In a few minutes the battle of 'Shiloh' began with extreme fury, and lasted two days. . . . Probably no single battle of the war gave rise to such wild and damaging reports. It was publicly asserted that the North that our army was taken completely by surprise; that the rebels caught us in our tents; bayoneted the men in their beds; that General Grant was drunk; that Buell's opportune arrival saved the Army of the Tennessee from utter annihilation, etc. These reports were in a measure sustained by the published opinions of Generals Buell, Nelson, and others, who had reached the steambot-landing from the east, just before nightfall of the 6th, when there was a large crowd of frightened, stampeded men, who clamored and declared that our army was all destroyed and beaten. Personally I saw General Grant, who with his staff visited me about 10 A. M. of the 6th, when we were desperately engaged. But we had checked the headlong assault of our enemy, and then held our ground. This gave him great satisfaction, and he told me that things did not look as well over on the left. . . . He came again just before dark, and described the last assault made by the rebels at the ravine, near the steambot-landing, which he had repelled by a heavy battery collected under Colonel J. D. Webster and other officers, and he was convinced that the battle was over for that day. He ordered me to be ready to assume the offensive in the morning, saying that, as he had observed at Fort Donelson at the crisis of the battle, both sides seemed defeated, and whoever assumed the offensive was sure to win. General

Grant also explained to me that General Buell had reached the bank of the Tennessee River opposite Pittsburg Landing, and was in the act of ferrying his troops across at the time he was speaking to me. About half an hour afterward General Buell himself rode up to where I was. . . . Buell said that Nelson's, McCook's, and Crittenden's divisions of his army, containing 18,000 men, had arrived and could cross over in the night, and be ready for the next day's battle. I argued that with these reinforcements we could sweep the field. Buell seemed to mistrust us, and repeatedly said that he did not like the looks of things, especially about the boat-landing, and I really feared he would not cross over his army that night, lest he should become involved in our general disaster. . . . Buell did cross over that night, and the next day we assumed the offensive and swept the field, thus gaining the battle decisively. Nevertheless, the controversy was started and kept up, mostly to the personal prejudice of General Grant, who as usual maintained an imperturbable silence. . . . Beauregard [who took the rebel command after General Albert Sidney Johnston fell in the first day's battle] afterward reported his entire loss as 10,699. Our aggregate loss, made up from official statements, shows 1,700 killed, 7,495 wounded, 3,022 prisoners; aggregate, 12,217, of which 2,167 were in Buell's army, leaving for that of Grant 10,050. This result is a fair measure of the amount of fighting done by each army. . . . The battle of Shiloh, or Pittsburg Landing, was one of the most fiercely contested of the war. On the morning of April 6, 1862, the five divisions of McClelland, Prentiss, Hurlbut, W. H. L. Wallace, and Sherman, aggregated about 32,000 men. We had no intrenchments of any sort, on the theory that as soon as Buell arrived we would march to Corinth to attack the enemy. The rebel army, commanded by General Albert Sidney Johnston, was, according to their own reports and admissions, 45,000 strong."—W. T. Sherman, *Memoirs*, 4th ed., ch. 10 (v. 1); or 1st ed., ch. 9 (v. 1).

A. D. 1862 (March).—President Lincoln's proposal of **Compensated Emancipation** approved by Congress.—On the 6th of March President Lincoln addressed to Congress the following Special Message: "Fellow-citizens of the Senate and House of Representatives: I recommend the adoption of a joint resolution by your honorable bodies, which shall be substantially as follows: Resolved, That the United States ought to cooperate with any State which may adopt gradual abolishment of slavery, giving to such State pecuniary aid, to be used by such State, in its discretion, to compensate for the inconveniences, public and private, produced by such change of system. If the proposition contained in the resolution does not meet the approval of Congress and the country, there is the end; but if it does command such approval, I deem it of importance that the States and people immediately interested should be at once distinctly notified of the fact, so that they may begin to consider whether to accept or reject it.

The Federal Government would find its highest interest in such a measure, as one of the most efficient means of self-preservation. The leaders of the existing insurrection entertain the hope that this government will ultimately be forced to acknowledge the independence of some part of the disaffected region, and that all the slave States north of such part will then say, 'The Union for which we have struggled being already gone, we now choose to go with the Southern section.' To deprive them of this hope substantially ends the rebellion; and the initiation of emancipation completely deprives them of it as to all the States initiating it. The point is not that all the States tolerating slavery would very soon, if at all, initiate emancipation; but that while the offer is equally made to all, the more Northern shall, by such initiation, make it certain to the more Southern that in no event will the former ever join the latter in their proposed confederacy. I say 'initiation' because, in my judgment, gradual and not sudden emancipation is better for all. In the mere financial or pecuniary view, any member of Congress, with the census tables and treasury reports before him, can readily see for himself how very soon the current expenditures of this war would purchase, at fair valuation, all the slaves in any named State. Such a proposition on the part of the General Government sets up no claim of a right by Federal authority to interfere with slavery within State limits, referring, as it does, the absolute control of the subject in each case to the State and its people immediately interested. It is proposed as a matter of perfectly free choice with them. In the annual message, last December, I thought fit to say, 'The Union must be preserved, and hence all indispensable means must be employed.' I said this not hastily, but deliberately. War has been made, and continues to be, an indispensable means to this end. A practical reacknowledgment of the national authority would render the war unnecessary, and it would at once cease. If, however, resistance continues, the war must also continue; and it is impossible to foresee all the incidents which may attend and all the ruin which may follow it. Such as may seem indispensable, or may obviously promise great efficiency, toward ending the struggle, must and will come. The proposition now made, though an offer only, I hope it may be esteemed no offense to ask whether the pecuniary consideration tendered would not be of more value to the States and private persons concerned than are the institution and property in it, in the present aspect of affairs? While it is true that the adoption of the proposed resolution would be merely initiatory, and not within itself a practical measure, it is recommended in the hope that it would soon lead to important practical results. In full view of my great responsibility to my God and to my country, I earnestly beg the attention of Congress and the people to the subject. Abraham Lincoln, Washington, March 6, 1862."—*Abraham Lincoln, Complete Works*, v. 2, pp. 129-130.—"Mr. Stevens, of Pa., having moved and carried a reference of this Message by the House to a Committee of the Whole on the State of the Union, and Mr. R. Conkling, of N. Y., having moved the resolve above recommended, a debate sprung up thereon; which is notable only as developing the repugnance of

the Unionists of the Border Slave States, with that of the Democrats of all the States, to compensated or any other Emancipation. . . . It passed the House by 89 Yeas (Republicans, West Virginians, and a few others not strictly partisans) to 31 Nays." On the 2d of April, the resolution passed the Senate, by 32 Yeas to 10 Nays. "The President of course approved the measure; but no single Slave State ever claimed its benefits; and its only use inhered in its demonstration of the willingness of the Unionists to increase their already heavy burdens to pay for the slaves of the Border States—a willingness which the infatuation of the ruling class in those States rendered abortive."—H. Greeley, *The American Conflict*, v. 2, ch. 12.

A. D. 1862 (March).—The Battle of the Monitor and the Merrimack.—"In August 1861 the Northern States had determined to obtain ironclad steam vessels, and at the end of that month Ericsson offered to construct in a few months a vessel which would destroy the rebel squadron. A board of officers was appointed to consider plans proposed, and in September it recommended that a vessel on Ericsson's design should be built. She was commenced in October, launched on January 30th, 1862, and completed on February 15th, 1862. The design provided for a hull not more than 2 ft. above the water, and with a flat bottom, that the draught might not exceed 10 ft. The sides, to a short distance below the water line, were protected with 4-in. plates. In the centre of the deck was built a circular turret, revolving on a central spindle, and protected with 8 in. of iron. Inside the turret were mounted two 11-in. smooth bore guns, pointing through port holes. They could thus fire in any direction without turning the vessel, an obvious advantage not only on the open sea but especially in narrow waters, for which she was more intended. Such was the famous 'Monitor,' a name given by Ericsson to his creation to admonish the leaders of the Southern Rebellion, and to be also a monitor to the Lords of the Admiralty in England, suggesting to them doubts as to the propriety of their building four broadside ironclads at three and a half million dollars each."—S. Eardley-Wilmot, *The Development of Navies*, ch. 4.—"While the Secretary of the Navy was urging forward the construction of the first iron-clads, it was known that the rebel government was making great exertions in the same direction. Iron-clad vessels were under way at New Orleans, Charleston, and at some other points, while at Norfolk the Merrimack [the old frigate of that name, roofed slopingly with railroad iron,—see above: 1861 (APRIL) ACTIVITY OF REBELLION] was very near completion in the winter of 1861-62. The formidable character of this mailed frigate constrained the Government to make every effort to complete the Monitor [the first of the turreted iron-clads, invented by John C. Ericsson] in season to meet her whenever she should come out; and it is stated that information obtained by a rebel spy of the state of forwardness in which the Monitor was, induced the rebels to put a double force upon their frigate, so that she might be able to attack our fleet in Hampton Roads before the Monitor's arrival, and,

if possible, also to make a raid upon Washington or the Northern cities. This extra labor, it is said, gained the one day in which the Merrimack destroyed the Cumberland and Congress. . . . The Monitor, commanded by Lieutenant John L. Worden, reached the scene of late disaster to our cause, and of her coming triumph, on the 8th of March, at 9 o'clock P. M., and Lieutenant Worden reported for orders to Captain Marston, the commander of the Roanoke. The Minnesota, one of our noblest frigates, the Roanoke of the same class, but partially disabled, the frigate Congress, and the sloop Cumberland, had been stationed at the mouth of the James River to watch for, to engage, and, if possible, destroy, capture, or stop the expected rebel iron-clad frigate then ready for sea at Norfolk. These vessels carried very heavy batteries, and it was hoped that they would be able to cope with the Merrimack. How vain such an expectation was, her first day's operations fully and sadly demonstrated. It is probably no exaggeration to say that she would have destroyed easily, and without any material damage to herself, every wooden ship then in our Navy, had they been within her reach, and with none but themselves to oppose her."—C. B. Boynton, *Hist. of the Navy during the Rebellion*, ch. 21.—"Such was the state of affairs when the Monitor arrived at Hampton Roads, that the sturdy commanders trembled in face of the coming day, and all was silence and gloom. The sloop-of-war Cumberland, having a crew of 300 men, and mounting 24 guns, now lay on the bottom with only her top-gallant masts and pennant above the water, marking the spot where 117 mangled bodies lay buried beneath the waves. The Congress, a 50-gun frigate, had also met her destruction, and now lay on shore with the flames kindled by hot shot of the Merrimack sweeping out her hull. The Roanoke and Minnesota, steam frigates of 40 guns each, the pride of the navy and the most perfect of any men-of-war of the period, laid hard and fast on shore, with broken machinery and as powerless as if they had been unarmed. The capture or entire destruction of the Federal fleet at Hampton Roads and the escape of the Merrimack and the rebel cruisers seemed inevitable." Arriving in the evening of the 8th, the Monitor anchored near the frigate Minnesota at Newport News. "At half-past five in the morning all hands were called, and the ship was immediately cleared of her sea-rig and got ready for battle. . . . At half-past seven o'clock a long line of black smoke was seen, preceded by the steamers Jamestown, Patrick Henry and Teazer. It was the signal for battle. The crews of the different vessels stood by their guns, fuzes in hands. The Monitor steamed slowly from beneath the bows of the Minnesota, where she had been partly concealed, to meet the challenger in an open field. It was alike an astonishment to the rebels and our own people; neither had seen her when she arrived, and many were the conjectures of what it could be. Some said a huge water tank; others an infernal machine; none that she had guns, and not till they saw steam rise from her deck did they think she had power to move herself. . . . The Merrimack stopped her engines, as if to survey and wonder at the audacity of the nondescript. The Monitor was approaching on her starboard bow. Then, as if seized with impulsive rage, and as if a huge breath would waft

her enemy away, the Merrimac poured a broadside of solid shot at her. For an instant she was enveloped in smoke, and people who were looking on held their breath in doubt of seeing the Monitor again. It was a moment of great suspense. Then as a gentle breeze swept over the scene the Monitor appeared. At this instant the flash of her own guns was seen, and then their report, louder than any cannon that had ever been heard, thundered across the sea. It seemed to jar the very earth, and the iron scales of the invincible crumbled and cracked from their fastenings. One on board the Merrimac at this time has told me that, though at first entirely confident of victory, consternation took hold of them all. 'D—n it!' said one, 'the thing is full of guns!' The enthusiasm at this moment among the thousand of civilians and soldiers, who lined the shore to witness the fight, was beyond description and their own control. Such a spontaneous burst of cheers was never before heard. Men were frantic with joy. The Monitor continued her approach, reserving fire that every shot might take effect, until she came parallel with the Merrimac, but heading in the opposite direction. In this way they passed slowly within a few yards of each other, both delivering and receiving the other's fire. . . . Captain Worden headed again towards the Merrimac with renewed confidence and engaged her at close quarters. Again they joined in close combat, the Monitor lying bow on, at times touching, both delivering their fire as rapidly as possible. At the same time the marines on the Merrimac poured an incessant fire of musketry at the peck-holes about the pilot-house and turret. The speed of the two vessels was about equal, but the light draught of the Monitor gave her an advantage. The rebels finding that they could make nothing of the invulnerable cheese-box, as they called her, and foiled and maddened at the loss of their coveted prize, turned towards the Minnesota, determined, if possible, to destroy her. The Merrimac went head on and received a full broadside of the Minnesota. Fifty solid nine-inch shot struck square. Any wooden vessel that ever floated would have gone to pieces under such a fire. The Merrimac was unharmed. She returned the fire with her forward rifle guns. One shell passed through four rooms, tearing away partitions and setting the ship on fire. Another passed through the boiler of the steamer Dragon which lay alongside, blowing her up and killing and wounding 17 men. Before a third was fired the Monitor interposed, compelling the Merrimac to change her position. The two combatants then made a complete circle in their endeavors to get a favorable position, each seeking to discharge a broadside into some vital part. The Merrimac then turned sharp and made a plunge towards the Minnesota, but Worden was vigilant, and crossed the stern of the Merrimac, sending two solid shot into her. To get back again between her and the Minnesota, the Monitor had almost to cross her bow. The Merrimac steamed up quickly, and finding that the Monitor would be struck with her prow Worden sheered towards the enemy's stern, avoiding a direct blow, and, as they came into collision, each vessel delivered a broadside into the other. At this point a shell from the Merrimac struck the pilot-house exactly over the peck-hole through which Captain Worden was looking. The shell exploding, filled his

face and eyes with powder and fragments of iron, utterly blinding and for a time rendering him unconscious. Lieutenant Greene, who had been in charge of the turret division, immediately left the guns and spent full thirty minutes nursing the wounded commander, during which time the gunners shotted the guns, and, as the Merrimac was turning away, discharged them at close range into her stern, a blow that made her whole frame shudder and seemed at once to be fatal. There was no officer to direct the movements of the vessel except the pilot Howard. As the two combatants parted from the struggle they were headed in opposite directions, both away from their goal. Presuming that the fight would be continued, Pilot Howard ran the vessel a short distance down the channel and turning brought her again close to the protection of the Minnesota, when Lieutenant Greene stepped into the pilot-house and assumed command. It was then observed that the Merrimac had taken the channel and was heading towards Norfolk. She was soon joined by her consorts, and taken up to their refuge under the batteries of Craney Island, the Merrimac apparently sagging down astern. Thus ended the greatest naval battle of the world. . . . The only perceptible danger to those on board the Monitor, after the first round from the Merrimac, was to those in the turret, who were in great danger from the flying of bolt-heads driven with great force across the turret, and from the concussion, which would for a time paralyze a man if he should in any way be in contact with the turret when struck by a shot."—F. B. Butts, *The Monitor and the Merrimac (Soldiers' and Sailors' Hist. Soc. of R. I., Fourth series, No. 6)*.—"The engagement in Hampton Roads on the 8th of March, 1862, between the Confederate iron-clad Virginia, or the Merrimac, as she is known at the North, and the United States wooden fleet, and that on the 9th, between the Virginia and the Monitor, was, in its results, in some respects the most momentous naval conflict ever witnessed. No battle was ever more widely discussed or produced a greater sensation. It revolutionized the navies of the world. . . . Rams and iron-clads were in future to decide all naval warfare. In this battle old things passed away, and the experience of a thousand years of battle and breeze was forgotten. The naval supremacy of England vanished in the smoke of this fight, only to reappear some years later more commanding than ever. The effect of the news was best described by the London 'Times,' which said: 'Whereas we had available for immediate purposes 149 first-class war-ships: we have now two, these two being the Warrior and her sister Ironside. There is not now a ship in the English navy apart from these two that it would not be madness to trust to an engagement with that little Monitor.' The Admiralty at once proceeded to reconstruct the navy. . . . The same results were produced in France, which had but one sea-going iron-clad, La Gloire, and this one, like the Warrior, was only protected amidsthips. . . . And so with all the maritime powers. In this race the United States took the lead, and at the close of the war led all the others in the numbers and efficiency of its iron-clad fleet. . . . Our loss [that is, the Confederate loss on the Virginia, or Merrimac, in the first day's battle, with the wooden ships] in killed and wounded was 21. The armor was hardly damaged, though at one

time our ship was the focus on which were directed at least 100 heavy guns aloft and ashore. But nothing outside escaped. . . . We slept at our guns, dreaming of other victories in the morning. But at daybreak we discovered, lying between us and the Minnesota, a strange-looking craft, which we knew at once to be Ericsson's Monitor, which had long been expected in Hampton Roads, and of which, from different sources, we had a good idea. She could not possibly have made her appearance at a more inopportune time for us, changing our plans, which were to destroy the Minnesota, and then the remainder of the fleet below Fortress Monroe. She appeared but a pigmy compared with the lofty frigate which she guarded. . . . In her size was one great element of her success. . . . After an early breakfast, we got under way and steamed out toward the enemy, opening fire from our bow pivot, and closing in to deliver our starboard broadside at short range, which was returned promptly from her 11-inch guns. Both vessels then turned and passed again still closer. The Monitor was firing every seven or eight minutes, and nearly every shot struck. Our ship was working worse and worse, and after the loss of the smoke-stack, Mr. Ramsay, chief engineer, reported that the draught was so poor that it was with great difficulty he could keep up steam. Once or twice the ship was on the bottom. Drawing 22 feet of water, we were confined to a narrow channel, while the Monitor, with only 12 feet immersion, could take any position, and always have us in range of her guns. . . . Several times the Monitor ceased firing, and we were in hopes she was disabled, but the revolution again of her turret and the heavy blows of her 11-inch shot on our sides soon undid her. . . . Lieutenant Jones now determined to run her down or board her. For nearly an hour we manoeuvred for a position. . . . The ship was as unwieldy as Noah's Ark. . . . And so, for six or more hours, the struggle was kept up. At length, the Monitor withdrew over the middle ground where we could not follow. . . . The battle was a drawn one, so far as the two vessels engaged were concerned. But in its general results the advantage was with the Monitor." —J. T. Wood, *The First Fight of Iron Clads (Battles and Leaders of the Civil War, v. 1, pp. 692-711)*.

Church, *Life of John Ericsson, ch. 15-18 (v. 1)*. —Gideon Welles, *The First Iron-Clad Monitor (Annals of the War by leading Participants), p. 17*. —C. B. Boynton, *Hist. of the Navy during the Rebellion, ch. 21*. —On the evacuation of Norfolk by the Confederates, in May, 1862, the Merrimac was destroyed. The following December the Monitor went down in a storm at sea, while on her way to Charleston, and only a few of her crew were saved.

A. D. 1862 (March).—Amendment of the Military Code.—Officers forbidden to surrender fugitive Slaves.—"As the formal orders of the government regarding the treatment of slaves who sought refuge near the armies were not always executed, Congress determined to give them a legal sanction; and on the 25th of February and the 13th of March both the Senate and the House of Representatives introduced a new article in the military code, prohibiting officers, at the risk of dismissal, from interfering to re-

store fugitive slaves to their masters. Notwithstanding the powers with which the government was thus armed, great difficulty was experienced in applying this law in those regiments whose commanders openly professed their sympathies in favor of slavery."—Comte de Paris, *Hist. of the Civil War in Am., v. 2, p. 731*.

A. D. 1862 (March—April): On the Mississippi.—New Madrid and Island No. 10.—On the surrender of Fort Donelson to General Grant, Columbus, on the Mississippi, was lastly abandoned by the rebels, who fell back to Island Number Ten, thirty miles below, where strong works had been erected. There it was hoped would command the passage of the river. "Following the course of the Mississippi, this island is about ten miles above New Madrid, Missouri, which is 70 miles below Cairo; but on account of a long bend in the river . . . the island is really farther south than New Madrid. New Madrid is at the most northerly part of the bend, and its guns were so placed as to be able to fire at vessels coming either way. Besides Fort Thompson, named after Jeff Thompson, it was defended by several batteries and by six gunboats, mounting heavy guns, which had come up the river from New Orleans and were under the command of Commodore Hollins. . . . As the land around New Madrid is very flat, these gunboats could fire upon troops approaching the place by land. On the same day when the flag of the Union was hoisted over the deserted works of the Confederates at Columbus [March 4], a Union army under General John Pope, who had been commanding in eastern Missouri, appeared before New Madrid. Seeing that he could do but little with his field artillery, he sent to Cairo for heavy guns; and while waiting for these he built a battery at Point Pleasant, about ten miles below New Madrid, so as to blockade the river at that place and prevent supplies from being sent up to the town. Meanwhile the Confederates strengthened their works and reinforced the garrison with men from Island Number Ten, while their fleet of gunboats was increased to nine. Four heavy guns were sent from Bird's Point to General Pope by the Cairo and Fulton Railway, which brought them within 20 miles of where they were wanted. . . . On the night of March 12 a thousand spades were at work within half a mile of Fort Thompson, and at daylight the guns were in position ready for action. Pope opened a cannonade at once on the gunboats and on Fort Thompson, both of which replied vigorously. The fight raged all day long; several of the gunboats were disabled and the Union army was gradually shutting in the Confederates on the land side, when their commander, General McCown, seeing the danger of capture, left the place in the night, during a heavy thunder-storm, and removed all his troops to Island Number Ten. . . . General Pope lost 51 men in killed and wounded during the day's bombardment; the loss of the Confederates is not known, but is thought to have been more than a hundred. About the time of the capture of New Madrid, Commodore Foote sailed from Cairo with a fleet of seven iron-clad gunboats, one wooden gunboat, and ten mortar-boats, for the purpose of aiding General Pope in the attack on Island Number Ten. He came in sight of the island on Saturday, March 15, and on the next morning opened the bombardment with the

rified guns of the Benton, his flag-ship. The mortar-boats, moored at convenient places along the shore, soon took part in the firing, and rained bombs into the Confederate works. . . . Commodore Foote kept up the bombardment for many days, without doing much damage to the Confederate works. But while he kept the enemy busy, General Pope had been engaged in digging a canal across the swampy peninsula formed by the bend of the river, so that vessels could go through to New Madrid without having to pass Island Number Ten. . . . A large number of men were employed, and after nineteen days of hard labor a channel deep enough for light-draught vessels was cut through. In the night of April 1 a few men from the gunboats, aided by some of Pope's soldiers, landed on the Kentucky shore, opposite Island Number Ten, took one of the batteries by surprise and spiked its six guns. . . . A few nights afterward the Carondelet [gunboat] ran safely by all the batteries at midnight, during a heavy thunder-storm. . . . Two nights afterward the Pittsburgh, another gunboat, performed the same feat, with the same good fortune; and a few days later the Confederates were astonished to see a fleet of transports laden with troops and several floating batteries join the gunboats at New Madrid. . . . The gunboats soon silenced the one-gun batteries on the opposite side of the river below New Madrid," and the Confederates, attempting to escape, were intercepted and captured (April 7), both those on the mainland and those on the Island.—J. D. Champlin, Jr., *Young Folks' Hist. of the War for the Union*, ch. 16.—Said General Pope in his report: "It is almost impossible to give a correct account of the immense quantity of artillery, ammunition, and supplies of every description which fell into our hands. Three generals, 273 field and company officers, 6,700 privates, 123 pieces of heavy artillery, 35 pieces of field artillery (all of the very best character and latest patterns), 7,000 stand of small-arms, tents for 12,000 men, several wharfb-boat loads of provisions, an immense quantity of ammunition of all kinds, many hundred horses and mules, with wagons and harness, &c., are among the spoils. Very few, if any, of the enemy escaped, and only by wading and swimming through the swamps. The conduct of the troops was splendid throughout, as the results of this operation and its whole progress very plainly indicate. We have crossed this great river, the banks of which were lined with batteries and defended by 7,000 men. We have pursued and captured the whole force of the enemy and all his supplies and material of war, and have again recrossed and reoccupied the camps at New Madrid, without losing a man or meeting with any accident. Such results bespeak efficiency, good conduct, high discipline, and soldierly deportment of the best character far more conclusively than they can be exhibited in pitched battle or the storming of fortified places."—*Official Records*, series 1, v. 8.—"In the years since 1862, Island No. 10 . . . has disappeared. The river, constantly wearing at its upper end, has little by little swept away the whole. . . . On the other shore a new No. 10 has risen."—A. T. Mahan, *The Navy in the Civil War: The Gulf and Inland Waters*, ch. 2.

A. D. 1862 (March—May; Virginia).—The Peninsular Campaign.—McClellan before

Yorktown.—"When Manassas had been abandoned by the enemy [see above: A. D. 1861—1862 (December—March; Virginia)] and he had withdrawn behind the Rapidan, the Urbana movement lost much of its promise, as the enemy was now in position to reach Richmond before we could do so. The alternative remained of making Fort Monroe and its vicinity the base of operations. The plan first adopted was to commence the movement with the First Corps as a unit, to land north of Gloucester and move thence on West Point; or, should circumstances render it advisable, to land a little below Yorktown to turn the defenses between that place and Fort Monroe. The Navy Department were confident that we could rely upon their vessels to neutralize the Merrimac and aid materially in reducing the batteries on the York River. . . . As transports arrived very slowly, especially those for horses, and the great impatience of the Government grew apace, it became necessary to embark divisions as fast as vessels arrived, and I decided to land them at Fort Monroe, holding the First Corps to the last, still intending to move it in mass to turn Gloucester. On the 17th of March the leading division embarked at Alexandria. The campaign was undertaken with the intention of taking some 145,000 troops, to be increased by a division of 10,000 drawn from the troops in the vicinity of Fort Monroe. . . . On the 12th of March I learned that there had appeared in the daily papers the order relieving me from the general command of all the armies and confining my authority to the Department of the Potomac. I had received no previous intimation of the intention of the Government in this respect. . . . On my arrival at Fort Monroe on the 2d of April, I found five divisions of infantry, Sykes's brigade of regulars, two regiments of cavalry, and a portion of the reserve artillery disembarked. Another cavalry regiment and a part of a fourth had arrived, but were still on ship-board; comparatively few wagons had come. . . . The best information obtainable represented the Confederate troops around Yorktown as numbering at least 15,000, with about an equal force at Norfolk; and it was clear that the army lately at Manassas, now mostly near Gordonsville, was in position to be thrown promptly to the Peninsula. . . . On my arrival at Fort Monroe I learned, in an interview with Flag-Officer Goldsborough, that he could not protect the James as a line of supply, and that he could furnish no vessels to take an active part in the reduction of the batteries at York and Gloucester or to run by and gain their rear. He could only aid in the final attack after our land batteries had essentially silenced their fire. I thus found myself with 53,000 men in condition to move, faced by the conditions of the problem just stated. Information was received that Yorktown was already being reinforced from Norfolk, and it was apprehended that the main Confederate army would promptly follow the same course. I therefore determined to move at once with the force in hand, and endeavor to seize a point—near the Halfway House—between Yorktown and Williamsburg, where the Peninsula is reduced to a narrow neck, and thus cut off the retreat of the Yorktown garrison and prevent the arrival of reinforcements. The advance commenced on the morning of the 4th of April, and was arranged to turn successively the intrench-

ments on the two roads; the result being that, on the afternoon of the 5th, the Third Corps was engaged with the enemy's outposts in front of Yorktown and under the artillery fire of the place. The Fourth Corps came upon Lee's Mills and found it covered by the unfordable line of the Warwick, and reported the position so strong as to render it impossible to execute its orders to assault. Thus all things were brought to a stand-still, and the intended movement on the Halfway House could not be carried out. Just at this moment came a telegram, dated the 4th, informing me that the First Corps [McDowell's] was withdrawn from my command. Thus, when too deeply committed to reeade, I found that another reduction of about 43,000 . . . diminished my paper force to 92,000, instead of the 155,000 on which the plans of the campaign had been founded, . . . which reduced the numbers actually available for battle to some 67,000 or 68,000. The order withdrawing the First Corps also broke up the Department of the Potomac, forming out of it the Department of the Shenandoah, under General Banks, and the Department of the Rappahannock, under General McDowell, the latter including Washington. . . . In our front was an entrenched line, apparently too strong for assault, and which I had now no means of turning, either by land or water. . . . Whatever may have been said afterward, no one at the time—so far as my knowledge extended—thought an assault practicable without certain preliminary siege operations. . . . We were thus obliged to resort to siege operations in order to silence the enemy's artillery fire, and open the way to an assault. All the batteries would have been ready to open fire on the 5th, or, at latest, on the morning of the 6th of May; . . . but during the night of the 3d and 4th of May the enemy evacuated his positions. . . . Meanwhile, on the 22d of April, Franklin's division of McDowell's corps had joined me by water, in consequence of my urgent calls for reinforcements. . . . [and, May 7th] disembarked near West Point and took up a suitable position to hold its own and cover the landing of reinforcements."—G. B. McClellan, *The Peninsular Campaign (Battles and Leaders, v. 2, pp. 160-187)*.—General Joseph E. Johnston, who assumed command of the Confederate forces on the Peninsula, April 17, says in his "Narrative": "I went to the Peninsula as soon as possible, reaching General Magruder's headquarters early in the morning. . . . That officer had estimated the importance of at least delaying the invaders until an army capable of coping with them could be formed; and opposed them with about a tenth of their number, on a line of which Yorktown, entrenched, made the left flank. This boldness imposed upon the Federal general, and made him halt to besiege instead of assailing the Confederate position. This resolute and judicious course on the part of General Magruder was of incalculable value. It saved Richmond, and gave the Confederate Government time to swell that officer's handful to an army. . . . The arrival of Smith's and Longstreet's divisions increased the army on the Peninsula to about 53,000 men, including 3,000 sick. . . . I could see no other object in holding the position than that of delaying the enemy's progress, to gain time."—J. E. Johnston, *Narrative of Military Operations, ch. 4-5*.

A. D. 1862 (March—June).—Appointment of Military Governors in Tennessee, North Carolina, and Louisiana.—"By the Union victories in the spring of 1862 very considerable areas of territory in States in rebellion came under the control and occupation of the Union armies. . . . The sudden change from Confederate to Federal authority involved everywhere either a serious derangement or total cessation of the ordinary administration of local civil law, and the displacement from the occupied territory of State governments and State officials who claimed to be exercising functions under ordinances of secession, and yielding obedience to the self-styled Confederate States. A similar displacement had occurred in Virginia and in Missouri during the year 1861, but in those States prompt remedies were available," by means of popular movements, through delegated conventions, which abrogated the rebellions and reinstated loyal State governments in operation. The courses pursued in Virginia and Missouri were not practicable, however, in other cases, and "a substitute was found in the appointment of military governors to represent and exert such State and local authority as the anomalous conditions made practicable, and as the supreme military necessities might allow. The first of these appointments occurred in Tennessee. Nashville, the capital, having been evacuated about February 23, 1862, President Lincoln nominated, and the Senate confirmed, Andrew Johnson (March 4, 1862) as military governor with the rank of brigadier-general. . . . Conforming to this precedent, Mr. Lincoln, through the Secretary of War, appointed Edward Stanley military governor of North Carolina, 'with authority to exercise and perform, within the limits of that State, all and singular the powers, duties, and functions pertaining to the office of military governor (including the power to establish all necessary offices and tribunals, and suspend the writ of habeas corpus) during the pleasure of the President, or until the loyal inhabitants of that State shall organize a civil government in conformity with the Constitution of the United States.' . . . In like manner, soon after news was received of the successes in the Gulf, Colonel G. F. Shepley (of the 12th Maine Infantry) of Butler's army was appointed military governor of Louisiana, this selection being made because General Butler had already designated him to act as mayor of the city of New Orleans, and it was thought best to combine both functions in the same individual."—J. G. Nicolay and J. Hay, *Abraham Lincoln, v. 6, ch. 16*.

A. D. 1862 (April: On the Mississippi).—Farragut's passage of the lower forts and capture of New Orleans.—"About the close of the gloomy and disastrous year 1861, the Government of the United States determined to regain control of the Mississippi. . . . After long consideration, Farragut was chosen as the naval officer to command in the Gulf. The story of his southern birth, and of his steadfast loyalty to his flag, is too well known to be here repeated. His formal orders put him in command of the 'Western Gulf Blockading Squadron,' and these were issued in January, 1862. But confidential

instructions were also given him, by which he was especially charged with the 'reduction of the defences guarding the approaches to New Orleans, and the taking possession of that city.' He was to be assisted by a mortar-fleet of schooners, under commander D. D. Porter. . . . On February 2d, 1862, Farragut sailed for the Gulf, in the sloop-of-war Hartford, which was so long to bear his flag, successfully, through manifold dangers. The Hartford was a wooden screw-steamer, full ship-rigged, and of 1,900 tons burthen. She was of comparatively light draught, and, therefore, well suited to the service she was called upon to perform. . . . The Hartford arrived at her rendezvous, Ship Island, 100 miles north-northeast of the mouths of the Mississippi, on February 20th. A military force, to co-operate with Farragut's fleet, was sent out, under General B. F. Butler, and arrived at Ship Island on March 25th.—E. Shippen, *Naval Battles*, ch. 41.—'At a point about 30 miles above the head of the passes, where the river makes its last great bend—the lowest favorable locality for defense before reaching the Gulf—the United States Government had erected two forts, St. Philip on the left or north bank, and Jackson a little farther down stream on the right. . . . The Confederate Government had early taken possession of these forts, and put them in complete order. When Farragut's fleet appeared before them, Fort Jackson, with its water battery, mounted 75 guns, and St. Philip about 40. . . . Just above the forts lay a rebel fleet of 15 vessels, under Commodore J. K. Mitchell, including the iron-clad ram Manassas and an immense floating battery covered with railroad iron, called the Louisiana. Just below Fort Jackson the Confederates had obstructed the river with a heavy chain, brought from Pensacola. . . . The task that lay before Farragut was, to break through the obstructions, pass between the forts, conquer the rebel fleet, and then steam up to New Orleans, lay the city under his guns, and demand its surrender. For its accomplishment he had 6 sloop-of-war, 16 gunboats, 21 schooners, each carrying a 13-inch mortar, and 5 other vessels. The fleet carried over 200 guns. . . . The schooners sailed up partly, or were towed by steamers, and on the morning of the 18th of April they had all reached their positions, ready to open fire. . . . For six days and nights the mortars kept up an unremitting fire, mainly on Fort Jackson, throwing nearly 6,000 shells. The Confederates acknowledged a loss of 14 killed and 30 wounded by the bombardment. . . . Farragut's patience was sorely tried by this delay. He had never had much faith in the mortars, and now it was evident, as he had anticipated, that almost the only practical effect of the bombardment was, to give the enemy long warning of the attack by the ships. . . . Having decided to run by the forts, he confided to his trusted Fleet Captain, Bell, the dangerous mission of proceeding with the gunboats Pinola and Itasca to make a passage for his fleet through the chain obstructions. . . . A sufficient opening was made for the fleet to pass through, in spite of the heavy fire to which the party were subjected. . . . Farragut had made up his mind to run by the forts at the close of the fifth day's bombardment; but the necessity of repairing damages to two of his vessels delayed him twenty-four hours longer. He had intended to

lead the column in his flag-ship Hartford; but in the final disposition he gave that post to Captain Theophilus Bailey, at his own earnest request, who hoisted his red flag on the gunboat Cayuga. . . . The attempt to pass was to be made in the night, April 23-24; and, as the moon would rise about half past 3 o'clock in the morning, the fleet were warned to expect the signal for sailing at about 2 o'clock. . . . Lieutenant Commanding Caldwell sent up in the Itasca to examine the obstructions and find whether the passage was still open. At 11 o'clock he gave the signal that it was, and about the same time the enemy opened fire on him, sent down burning rafts, and lighted the immense piles of wood which they had prepared on the shore near the ends of the chain. . . . It was half past 3, the hour of moonrise, before all was ready. In the light of the blazing rafts and bonfires, moon or no moon made little difference now. . . . Captain Bailey led off with his division of 8 vessels, whose objective was Fort St. Philip, and all of them passed through the opening in the cable. Both forts opened fire upon his flag-ship, the Cayuga, soon after she had passed the hulks. Five minutes later she was pouring grape and canister into St. Philip, and in ten minutes more she had passed beyond range of that work, to find herself surrounded by 11 rebel gun-boats. Three of them attempted to board her at once. An 11-inch shot was sent through one of them at the close range of 30 yards, and she immediately ran aground and burned up. The Parrott gun on the fore-castle drove off another; and Bailey was preparing to close with the third, when the Onelda and Varuna, which had run in close to St. Philip, thus availing the elevated guns of the fort, while they swept its bastions with grape and scarpnel, came up to the assistance of the Cayuga. The Onelda ran under full steam into one of the rebel ships, cut her nearly in two, and left her to float down stream a helpless wreck. She fired right and left into the others, and then went to the assistance of the Varuna, which was ashore on the left bank, hard pressed by the Governor Moore and another, said to be the Manassas. The Varuna was rammed by them both, and sank at the end of 15 minutes; but in that time it is claimed that she put three 8-inch shells into the Governor Moore, and so crippled her with solid shot that she surrendered to the Onelda, and drove five 8-inch shells into another, which sent her ashore. Still another of her shells exploded the boiler of a rebel steamer. The Pensacola steamed steadily but slowly by, firing with great deliberation and regularity. . . . The Mississippi was fought regularly in line, like the Pensacola, but escaped with light losses. She encountered the ram Manassas, which gave her a severe cut on the port quarter below the water-line, and disabled her machinery. But she riddled the ram with shot, boarded her, and set her on fire, so that she drifted below the forts and blew up. The Katahdin ran close to the forts, steamed by rapidly, and got near the head of the line, where she put a few good shots into the iron-clad Louisiana. The Kinca ran by close under St. Philip, and then assisted the Mississippi in handling the ram Manassas; but she was afterward attacked by three rebel gun-boats at once, and her pivot-gun carriage becoming injured, she withdrew and continued on up stream. The Wissahickon ran ashore before

she reached the forts, got off, passed them, and above ran ashore again. Most of these operations were carried on in the darkness occasioned by the thick smoke, lighted, however, by the lurid flashes of more than 200 guns. The Hartford, bearing Flag-Officer Farragut, led the second division of the fleet. . . . In attempting to avoid a fire-raft, she grounded on a shoal near St. Philip. At the same time the ram Manassas pushed a raft upon her port quarter, and in an instant she was on fire. A part of the crew went to 'fire quarters' and soon subdued the flames, while the working of her guns was steadily continued, and she was then backed off into deep water. This movement turned the ship's head down stream, and it was with some difficulty that she was turned around against the current; but this was finally accomplished, and she continued to steam up the river, firing into several of the enemy's vessels as she passed. Among these was a steamer full of men, apparently a boarding-party. She was making straight for the Hartford when Captain Broome's gun, manned by marines, planted a shell in her, which exploded, and she disappeared. . . . The Brooklyn got out of her course, ran over one of the hulks, and became entangled in the raft, where she suffered a raking fire from Fort Jackson, and a pretty severe one from St. Philip. Scarcely was she disentangled and on her way up stream when she was butted by the Manassas, which, however, had not headw. enough to damage her much, and slid off in the darkness. Then she was attacked by a large rebel steamer, but gave her the port broadside at fifty yards and set her on fire. Groping along through a black cloud of smoke from a fire-raft, she came close abreast of St. Philip, into which she poured such tremendous broadsides that by the flashes the gunners were seen running to shelter, and for the time the fort was silenced. The Brooklyn then passed on, and engaged several of the enemy's gunboats at short range. One of these, the Warrior, came under the port broadside, when eleven 5-second shells were instantly planted in her, all of which exploded, setting her on fire, and she was run ashore. The Brooklyn was under fire an hour and a half, and her losses were almost as severe as those of the Pensacola. The Richmond, a slow ship, brought up the rear of the second division, steaming steadily and working her guns with great regularity. . . . The Sciota, carrying Fleet-Captain Bell, led the third division. She steamed by the forts, firing as she passed, and above them burned two steamboats. . . . The Iroquois passed within 50 yards of Fort Jackson without injury, but was subjected to a terrible raking cross-fire from St. Philip, and was also raked by the McCrea. . . . Her losses were heavy. The Pinola passed up in line, firing her 11-inch pivot-gun and Parrott rifles at the flashes of Fort Jackson's guns, which at first were all that could be seen; then she emerged from the cloud of smoke, stood over toward St. Philip, and in the light of the blazing rafts received the discharges of its 40 guns. She was the last vessel that passed the forts, and got up in time to put one or two shells into the gunboats of the enemy. The Kennebec got out of her course, became entangled in the rafts, and did not get free till it was broad daylight and too late to attempt a passage. The Itasca, arriving in front of Fort Jackson, received a shot in

her boiler, which made it impossible for her to proceed, and was turned down stream. The Winona got astray among the hulks, and lost so much time that when she came within range of Fort Jackson it was daylight, and the fleet had passed on. The first three or four shots from the fort swept away the entire crew of her rifled gun, save one man. Still she kept on, until the lower battery of St. Philip opened on her at less than point-blank range; this was too much for her, and she prudently headed down stream and ran out of the fire. Thus was accomplished a feat in naval warfare which had no precedent, and which is still without a parallel except the one furnished by Farragut himself, two years later, at Mobile. Starting with 17 wooden vessels, he had passed with all but 3 of them, against the swift current of a river but half a mile wide, between two powerful earthworks which had long been prepared for him, his course impeded by blazing rafts, and immediately thereafter had met the enemy's fleet of 15 vessels, two of them iron-clad, and either captured or destroyed every one of them. And all this with a loss of but one ship from his own squadron."—L. Farragut, *Life of Farragut*, ch. 18-19.—Commander Porter, who kept up the mortar fire while Farragut was forcing his way, says of the battle: "No grander or more beautiful sight could have been realized than the scenes of that night. From silence, disturbed now and then only by the slow fire of the mortars,—the phantom-like movements of the vessels giving no sound—an increased roar of heavy guns began, while the mortars burst forth into rapid bombardment, as 'he fleet drew near the enemy's works. Vessel after vessel added her guns to those already at work, until the very earth seemed to shake from their reverberations. A burning raft added its lurid glare to the scene, and the fiery tracks of the mortar-shells, as they passed through the darkness aloft, and sometimes burst in mid-air, gave the impression that heaven itself had joined in the general strife. The succeeding silence was almost as sudden. From the weighing of the anchors, one hour and ten minutes saw the vessels by the forts, and Farragut on his way to New Orleans, the prize staked upon the fierce game of war just ended."—D. D. Porter, *Naval Hist. of the Civil War*, p. 185."—"General Lovell, who was in command at New Orleans, had come down the river in a steamboat to observe the operations and was very nearly captured; he hastened back to the city to withdraw his forces. When the news spread through the streets that the Federal fleet had passed the forts and had destroyed the Confederate flotilla, a strange scene followed; a scene impossible, perhaps, in any other American city under parallel circumstances. The brave, active, fighting men of New Orleans were far away in the armies of the South; but they had left behind a sinking swarm of human vermin. . . . These, when they saw a hopeless panic seize the good people of the city, poured forth from their dens and began an indiscriminate pillaging of houses, shops, and storage-sheds. Thus while the better class of citizens were frantically setting fire to the cotton (some 12,000 bales) the cut-throats and ruffians, the hardened women and even the lawless children, were raging from place to place, back and forth, here and there, wildly plundering and aimlessly destroying. . . . All the pub-

lic materials, consisting of army supplies, were heaped up in the middle of the streets and burned. General Lovell withdrew his soldiers on the evening of the 24th, leaving the city at the mercy of the Federal fleet, which at 1 o'clock on the following day steamed up the river and anchored in the middle of the stream not far from the foot of Canal Street. . . . The mob which lately had been committing such foul deeds, now swayed back and forth in the streets, hooting, yelling and cursing, urging the people to resist the landing of the Federals. Commodore Farragut demanded the formal surrender of the city, but the mayor was powerless. He could not surrender the city while the people were controlled by an unreasoning mob. Consequently, on the 29th, a detachment under command of Fleet Captain H. H. Bell was sent ashore to take possession of the public buildings."—M. Thompson, *The Story of Louisiana*, ch. 11.—"The success was almost beyond price to the Union Government from its moral importance on both sides of the Atlantic. As to the material advantage won, it may be best judged of by the statement of the well-known Confederate writer, Mr. Pollard: . . . 'It was a heavy blow to the Confederacy. It annihilated us in Louisiana; separated us from Texas and Arkansas; diminished our resources and supplies by the loss of one of the greatest grain and cattle countries within the limits of the Confederacy; gave to the enemy the Mississippi River, with all its means of navigation, for a base of operations.'

. . . In calling the capture of New Orleans 'one of the most remarkable triumphs in the whole history of naval operations' he [Mr. Welles, Secretary of the Navy] is fully justified."—C. C. Chesney, *Essays in Military Biog.*, pp. 167-168.

A. D. 1862 (April—May: Alabama).—General Mitchell's expedition.—The division of Buell's army commanded by General Ormsby M. Mitchell left Nashville with the other divisions of that army, late in March, but took the road to Murfreesboro, while the latter marched toward Pittsburg Landing. On the 4th of April General Mitchell marched from Murfreesboro to Shelbyville, 26 miles distant. "On the 7th he advanced to Fayetteville, 27 miles farther, and the next forenoon, the 8th, 15 miles beyond, he crossed the State line of Alabama. Continuing his march six miles farther, and being within ten miles of Huntsville, Ala., he halted for the artillery and infantry to come up." At an early hour the next morning he entered the town, taking it completely by surprise. "Before the close of the day 100 miles of the Memphis and Charleston railroad were in his possession, stretching in one direction as far as Stevenson, and in the other as far as Decatur. . . . From Decatur he pushed on to one to Tusculumbia. Thus, without the loss of a single life, Gen. Mitchell placed his army midway between Corinth and Chattanooga, prevented the destruction of a fine bridge at Decatur, opened communication with Gen. Buell, and also the navigation of the Tennessee. The occupation of Huntsville also cut off all communication between the east and west by the Memphis and Charleston

railroad. . . . This extension of Gen. Mitchell's lines to hold the railroad rendered his situation precarious. Soon the enemy began to gather in force and threaten him. . . . He was raised to the rank of a major-general, and ordered to report directly to the [war] department, and his force was constituted an independent corps. But he got no reinforcements. He was left in such a condition that he at first hardly had anything to report but that he had been gradually driven from those positions, the gaining of which had made him a major-general." Subsequently he advanced upon Chattanooga; but that important position was not secured. A little later General Mitchell was transferred to Port Royal, South Carolina.—W. J. Tenney, *Military and Naval Hist. of the Rebellion*, ch. 15.—It was in connection with General Mitchell's expedition that the thrilling episode of the railroad raid in Georgia occurred, narratives of which have been published by one of the participants, Rev. William Pittenger, first under the title of "Capturing a Locomotive," and afterwards with the title "Daring and Suffering," and also as "The Great Locomotive Chase." Volume Two of "Battles and Leaders of the Civil War" also contains the story, entitled "The Locomotive Chase in Georgia," preceded by General Buell's critical account of Mitchell's entire operations.

A. D. 1862 (April—May: Tennessee—Mississippi).—The bloodless and bootless conquest of Corinth.—"General Halleck arrived at Pittsburg landing on the 11th of April and immediately assumed command in the field. On the 21st General Pope arrived with an army 30,000 strong, fresh from the capture of Island Number Ten in the Mississippi River. He went into camp at Hamburg landing five miles above Pittsburg. Halleck had now three armies: the Army of the Ohio, Buell commanding; the Army of the Mississippi, Pope commanding; and the Army of the Tennessee. His orders divided the combined force into the right wing, reserve, centre, and left wing. . . . I [General Grant] was named second in command of the whole, and was also supposed to be in command of the right wing and reserve. . . . Preparations were at once made upon the arrival of the new commander for an advance on Corinth. . . . Corinth, Mississippi, lies in a south-westerly direction from Pittsburg landing and about 19 miles away as the bird would fly, but probably 22 by the nearest wagon-road. It is about four miles south of the line dividing the States of Tennessee and Mississippi, and at the junction of the Mississippi and Chattanooga Railroad with the Mobile and Ohio road which runs from Columbus to Mobile. . . . Corinth was a valuable strategic point for the enemy to hold, and consequently a valuable one for us to possess ourselves of. We ought to have seized it immediately after the fall of Donelson and Nashville, when it could have been taken without a battle, but falling then it should have been taken, without delay, on the concentration of troops at Pittsburg landing after the battle of Shiloh. In fact, the arrival of Pope should not have been awaited. There was no time from the battle of Shiloh up to the evacuation of Corinth when the enemy would not have left if pushed. . . . On the 30th of April the grand army commenced its advance from Shiloh upon Corinth. The movement was a siege from the start to the close.

The National troops were always behind intrenchments, except of course the small reconnoitring parties sent to the front to clear the way for an advance. Even the commanders of these parties were cautioned, 'not to bring on an engagement.' . . . For myself, I was little more than an observer. Orders were sent direct to the right wing or reserve, ignoring me, and advances were made from one line of intrenchments to another without notifying me. My position was so embarrassing in fact that I made several applications during the siege to be relieved. . . . On the 28th of May, General Logan, whose command was then on the Mobile and Ohio railroad, said to me that the enemy had been evacuating for several days, and that if allowed he could go into Corinth with his brigade. . . . Beauregard published his orders for the evacuation of Corinth on the 26th of May and fixed the 29th for the departure of his troops, and on the 30th of May General Halleck had his whole army drawn up prepared for battle and announced in orders that there was every indication that our left was to be attacked that morning. Corinth had already been evacuated and the National troops marched on and took possession without opposition. Everything had been destroyed or carried away. The Confederate commander had instructed his soldiers to cheer on the arrival of every train, to create the impression among the Yankees that reinforcements were arriving. There was not a sick or wounded man left by the Confederates, nor stores of any kind. Some ammunition had been blown up—not removed—but the trophies of war were a few Quaker guns, logs of about the diameter of ordinary cannon, mounted on wheels of wagons and pointed in the most threatening manner towards us. The possession of Corinth by the National troops was of strategic importance, but the victory was barren in every other particular. . . . General Halleck at once commenced erecting fortifications around Corinth on a scale to indicate that this one point must be held if it took the whole National army to do it. . . . They were laid out on a scale that would have required 100,000 men to fully man them. . . . These fortifications were never used. . . . After the capture of Corinth a movable force of 80,000 men, besides enough to hold all the territory acquired, could have been set in motion for the accomplishment of any great campaign for the suppression of the rebellion. In addition to this fresh troops were being raised to swell the effective force. But the work of depletion commenced."—U. S. Grant, *Personal Memoirs*, ch. 26 (v. 1).

A. D. 1862 (April–June).—Abolition of Slavery in the District of Columbia and in the Territories.—On the 10th of December, 1861, Mr. Wilson, of Massachusetts, introduced in the Senate of the United States a bill for the immediate emancipation of the slaves in the District of Columbia; "for the payment to their loyal owners of an average sum of \$300; for the appointment of a commission to assess the sum to be paid; and the appropriation of \$1,000,000. This bill was reported back on the 13th of February, 1862, with amendments. On the 24th he

introduced a bill which, he said, was supplementary to that already before the Senate, to repeal the act extending the laws of Maryland over the District, and to annul all those statutes which gave the cities of Washington and Georgetown authority to pass ordinances discriminating against persons on account of color. On the 12th of March it came up for debate in committee of the whole. The debate on these resolutions, the bill, and other cognate measures exhibit elements of interest hardly found in any other session of the American Congress on record. It was emphatically a new departure. . . . No important change was made, and on the 3d of April, 1862, the bill introduced by Mr. Wilson more than three months before was passed by a vote of 29 to 14. The bill was taken up in the House the next week, and gave rise to a brief but brilliant debate. . . . The bill . . . passed the House by a vote of 92 to 38, and received the approval of the President on the 10th day of April, 1862. The President, in his message accompanying his approval of the bill, had stated some objections to it. These objections were that certain classes, such as married women, minors, and persons absent from the District, were not sufficiently protected and provided for; and he suggested that these defects should be remedied by additional legislation"—which was done. "On the 24th of March, 1862, Mr. Arnold, of Illinois, introduced a bill into the House of Representatives to render freedom national and slavery sectional. It was referred to the Committee on Territories, was reported on the 1st of May, with an amendment, and made the order of the day for the 8th. It provided that freedom should be the fundamental law of the land, and that slavery should no longer exist in all places under the direct and exclusive control of the Federal government. It prohibited slavery in all Territories, then or hereafter existing; in all places purchased by the government, with the consent of the legislatures of the several States, for forts, magazines, arsenals, dock-yards, and other needful buildings; in all vessels on the high seas, and on all national highways, beyond the territory and jurisdiction of the several States. . . . The difficulties, . . . real or seeming, constitutional or other, were too great to secure the united action of the friends of the underlying principle of the bill as reported by the committee. Mr. Lovejoy, therefore, moved a substitute restricting its action entirely to the Territories. The substitute was accepted, and the bill as thus amended was carried by a vote of 85 to 50. The preamble was so amended as to read, 'An act to secure freedom to all persons within the Territories of the United States.' In the Senate, on the 15th of May, Mr. Browning, reported the bill from the Committee on Territories with an amendment that, from and after the passage of the act, there should be neither slavery nor involuntary servitude in any existing Territory, or in any Territory hereafter formed or acquired. It was, substantially, the application of the principle of the ordinance of 1787 to all the territory then possessed or hereafter to be acquired. On the 9th of June the Senate proceeded to its consideration, adopted the amendment, and passed the bill by a vote of 28 to 10. The House agreed to the Senate amendment, and the bill thus amended was passed on the 17th, and approved by the President on the 19th of

June."—H. Wilson, *Hist. of the Rise and Fall of the Slave Power in Am.*, v. 3, ch. 21 and 24.

A. D. 1862 (May).—Passage of the Homestead Act.—"The homestead bill, or the granting of free homes from and on the public domain, became a national question in 1852. The Free Soil Democracy, at Pittsburg, Pa., August 11, 1852, in National Convention, nominated John P. Hale, of New Hampshire, and George W. Julian, of Indiana, for President and Vice-President, and adopted the following as the 12th plank or resolution in their platform: 'That the public lands of the United States belong to the people, and should not be sold to individuals, nor granted to corporations, but should be held as a sacred trust for the benefit of the people, and should be granted in limited quantities, free of cost, to landless settlers.' Thereafter it became a national question until its passage in 1862, and was in the platforms of political parties. It was petitioned for and against. Public sentiment was aroused. It was a serious innovation and would cause an almost entire change in the settlement laws. Instead of the public lands being sold for cash, for profit, or being taken, first, under the pre-emption system, which eventuated in cash purchases, they were to be given to actual settlers who would occupy, improve, and cultivate them for a term of years, and then receive a patent free of acreage charges, with fees paid by the homesteader sufficient to cover cost of survey and transfer of title. . . . The rich and fertile lands of the Mississippi Valley were fast filling up with settlers. Agricultural lands in the Middle States, which, after the year 1824, were bought for \$1.25 per acre, now sold at from \$50 to \$80 per acre. Former purchasers of these Government lands in the Middle, Western, and Southern States, were selling their early purchases for this great advance, and moving west, to Iowa, Wisconsin, Minnesota, and Missouri, and there again taking cheap Government lands under the pre-emption laws. The western emigration caused a rush—a migration of neighborhoods in many localities of the older Western States. Following the sun, their pillar of fire, these State founders moved westward, a restless army of agents of American civilization, and there was a demand for homes on the public lands, and a strong pressure for the enactment of a law which should confine locators to small tracts, and require actual occupation, improvement, and cultivation. A fierce political battle now ensued, beginning in 1854, and continuing until 1862, the year of the passage of the law. The demand of the settlers was incessant and constant." Mr. Galusha A. Grow, of Pennsylvania, made himself the special champion of the measure in Congress. On the 1st of February, 1859, a bill embodying its principles was carried in the House, but was not permitted to reach a vote in the Senate. The slaveholding interest was almost solidly against it. In March, 1860, a similar bill was again passed by the House. The Senate substituted a bill granting homesteads to actual settlers at twenty-five cents per acre, instead of free of cost. After protracted conferences, the House was forced to accept the Senate bill, with slight amendments. But if the enemies of the measure had so nearly lost their

control of Congress, they still owned the President—Buchanan—and he killed it by a veto. Then came the rebellion and civil war, absorbing all minor questions, and nearly two years went by before the law which opened the public lands freely to all actual settlers was adopted. It became a law by the signature of President Lincoln on the 20th of May, 1862. The following are the essential provisions of the Act: "That any person who is the head of a family, or who has arrived at the age of twenty-one years, and is a citizen of the United States, or who shall have filed his declaration of intention to become such, as required by the naturalization laws of the United States, and who has never borne arms against the United States Government or given aid and comfort to its enemies, shall, from and after the first January, eighteen hundred and sixty-three, be entitled to enter one quarter-section or a less quantity of unappropriated public lands, upon which said person may have filed a pre-emption claim, or which may, at the time the application is made, be subject to pre-emption at one dollar and twenty-five cents, or less, per acre; or eighty acres or less of such unappropriated lands, at two dollars and fifty cents per acre, to be located in a body, in conformity to the legal subdivisions of the public lands, and after the same shall have been surveyed: Provided, That any person owning or residing on land may, under the provisions of this act, enter other land lying contiguous to his or her said land, which shall not, with the land so already owned and occupied, exceed in the aggregate one hundred and sixty acres. . . . That the person applying for the benefit of this act shall, upon application to the register of the land office in which he or she is about to make such entry, make affidavit before the said register or receiver that he or she is the head of a family, or is twenty-one or more years of age, or shall have performed service in the Army or Navy of the United States, and that he has never borne arms against the Government of the United States or given aid and comfort to its enemies, and that such application is made for his or her exclusive use and benefit, and that said entry is made for the purpose of actual settlement and cultivation, and not, either directly or indirectly, for the use or benefit of any other person or persons whomsoever; and upon filing the said affidavit with the said register or receiver, and on payment of ten dollars, he or she shall thereupon be permitted to enter the quantity of land specified: Provided, however, That no certificate shall be given or patent issued therefor until the expiration of five years from the date of such entry; and if, at the expiration of such time, or at any time within two years thereafter, the person making such entry—or if he be dead, his widow; or in case of her death, his heirs or devisee; or in case of a widow making such entry, her heirs or devisee, in case of her death—shall prove by two credible witnesses that he, or she, or they have resided upon or cultivated the same for the term of five years immediately succeeding the time of filing the affidavit aforesaid, and shall make affidavit that no part of said land has been alienated, and that he has borne true allegiance to the Government of the United States; then, in such case, he, she, or they, if at that time a citizen of the United States, shall be entitled to a patent, as in other

cases provided for by law: And provided, further, That in case of the death of both father and mother, leaving an infant child or children under twenty-one years of age, the right and fee shall inure to the benefit of said infant child or children; and the executor, administrator, or guardian may, at any time within two years after the death of the surviving parent, and in accordance with the laws of the State in which such children for the time being have their domicile, sell said land for the benefit of said infants, but for no other purpose; and the purchaser shall acquire the absolute title by the purchase, and be entitled to a patent from the United States, on payment of the office fees and sum of money herein specified. . . . That if, at any time after the filing of the affidavit, . . . and before the expiration of the five years aforesaid, it shall be proven, after due notice to the settler, to the satisfaction of the register of the land office, that the person having filed such affidavit shall have actually changed his or her residence, or abandoned the said land for more than six months at any time, then and in that event the land so entered shall revert to the Government. . . . This original homestead act has been amended several times. . . . The principal amendments were in the nature of extension of its privileges, and the limit of 80 acres of land of the double minimum class, \$2.50 per acre, within certain road limits, has since been done away with by acts of March 3, 1879, July 1, 1879, and June 15, 1880; there now being but one class of agricultural lands, so far as regards the minimum quantity in homestead entries. The act of June 8, 1872, was known as the soldiers' and sailors' homestead act. It gave honorably discharged soldiers and sailors from the Army and Navy of the United States lands under the homestead act in any locality, and deducted from the five years' residence which was required to make title their term of service in the Army and Navy during the war of the Rebellion. One year's residence and cultivation, however, were necessary. . . . The soldiers' additional homestead provision was to give those soldiers who had had the benefit of the homestead act, to the extent of a quantity under 160 acres, an additional amount, so as to make their allowance 160 acres."—T. Donaldson, *The Public Domain*, ch. 27.

A. D. 1862 (May).—General Hunter's Emancipation Order, rescinded by President Lincoln.—Major General David Hunter, having lately succeeded to the command at Hilton Head, South Carolina, issued, on the 9th of May, 1862, a General Order (No. 11), declaring martial law in Georgia, Florida and South Carolina, and adding: "Slavery and martial law in a free country are altogether incompatible; the persons in these States . . . heretofore held as slaves are therefore declared forever free." This order was rescinded by President Lincoln in a Proclamation, dated May 19, in which he used the following language: "Whether it be competent for me, as Commander-in-Chief of the Army and Navy, to declare the slaves of any State or States free; and whether at any time, or in any case, it shall have become a necessity indispensable to the maintenance of the Government, to exercise such supposed power, are questions which, under my responsibility, I reserve to myself, and which I cannot feel justified in leaving to the decision of commanders in

the field."—E. McPherson, *Pol. Hist. of the U. S. during the Great Rebellion*, pp. 250-251.

ALSO IN: J. G. Nicolay and J. Hay, *Abraham Lincoln*, v. 6, ch. 5.

A. D. 1862 (May; South Carolina).—Employment of the freed Negroes as armed soldiers.—The negroes within the Union lines in South Carolina, at Hilton Head and elsewhere, were placed under the charge, at first, of agents appointed by the Treasury Department; but disagreements arose between these agents and the military authorities, and the former were recalled. "These several agents had been replaced by a superior officer of the staff, General Saxton, who was himself placed under the orders of General Hunter with the rank of a military commander. By this action the government at Washington sustained Hunter in his conflict with the agents of the Treasury Department—a conflict originating in very serious causes, for it affected the question of slavery in its most vital points. . . . Mr. Cameron [Secretary of the Treasury] had authorized General Sherman to organize the negroes into squads and companies. The latter had at first only been employed in manual labor, such as the construction of forts, roads and wharves; but Hunter, on taking Sherman's place, saw that he could give a much wider interpretation to the Secretary's instructions. He substituted muskets for the pick-axes used by the detachments of negro laborers organized by his predecessor; and, instead of making them dig the earth, he had them taught military exercises. Nor did he stop here; but wishing to increase the number of these new soldiers, he gathered up the adult negroes residing on the adjoining islands at Hilton Head on the 12th of May, in order to induce them to enter the military service. . . . The civil agents complained bitterly of the trouble this measure had created among the people entrusted to their charge, and thence sprung the quarrel which Mr. Lincoln cut short by deciding in favor of Hunter. The protection granted to fugitive slaves was the first logical consequence of the war; their enrolment in the Federal armies was the second. As untimely and impolitic as was the proclamation by which Hunter had taken upon himself to free the slaves outside of his jurisdiction, the creation of the first negro regiment was an act skilfully conceived. It was essentially a military act; it raised and ennobled the freedman by entrusting him with arms; its legality was unquestionable from the moment that the President approved of it, for there was no law to prevent him from enlisting colored volunteers. In short, it showed to the Confederates that the Washington government was determined not to allow itself to be any longer paralyzed by the vain hope of reconciliation. . . . But notwithstanding the success of this first experiment, considerable time elapsed before the Federal government concluded to follow Hunter in this direction."—Comte de Paris, *Hist. of the Civil War in Am.*, v. 2, bk. 7, ch. 3.

A. D. 1862 (May; Virginia).—The Peninsula Campaign: The Battle of Williamsburg and the slow advance to the Chickahominy.—On the evacuation of the rebel works at Yorktown, "our columns followed on in pursuit, McClellan remaining in Yorktown, busy with

questions of transportation. The enemy under Longstreet had awaited our approach at Williamsburg. Hooker first attacked, having been brought to a stand by a work known as Fort Magruder, and kept up a heavy pounding all the forenoon [May 5]. Kearny came to his rescue when Hooker's men were all but spent. Hancock moved around the enemy's left, seized some abandoned redoubts, and made a brilliant diversion. But there was no cooperation in our attack; no one on the field was in supreme command, and the day was fruitlessly spent in partial blows. The enemy retreated at night. Our loss was 2,200; theirs in all probability less."—T. A. Dodge, *Bird's-eye View of our Civil War*, ch. 11.—"Gen. Johnston says ['Narrative,' p. 124]: 'We fought for no other purpose than to hold the ground long enough to enable our baggage-trains to get out of the way of the troops. This object was accomplished without difficulty. There was no time during the day when the slightest uncertainty appeared.' He also says that Longstreet's and Hill's divisions slept on the field; that what deserves to be called fighting ceased two hours before dark, yet the Confederates held the field until the next morning, when they resumed their march. . . . There may be a little rose-color about these statements, but the substantial facts seem to be accurately stated. . . . Gen. McClellan made no pursuit after Williamsburg, for reasons which he who will may find stated in his Report; and we may pass on with the single additional remark that the battle of Williamsburg was unnecessary, for the position might have been turned by a movement by our right. This was actually accomplished by Hancock, after Hooker had met with all his heavy loss; and it might as well have been done before as after. . . . The three weeks which followed the battle of Williamsburg were so devoid of incident that it seems to be sufficient to say that the Confederates moved up the Peninsula in two columns. The right column, composed of the divisions of Smith and Magruder, followed the road by New Kent Court House, and in three marches reached the Baltimore Cross Roads, 19 miles from Barhamsville. The left column, composed of the divisions of Longstreet and D. H. Hill, reached in the same number of marches the Long Bridges. The army remained five days in this position, facing to the east. . . . The iron-clad Virginia [better known as the Merrimac] was destroyed on, or just before, the 14th of May. This event opened the James River to our navy; and, to be ready to meet an advance up that river as well as from the direction of West Point, the Confederate forces were ordered to cross the Chickahominy on the 15th May. On the 17th their army encamped about three miles from Richmond, in front of the line of redoubts constructed in 1861. . . . During this period the weather was generally fine, cool and breezy, but gradually tending towards heat. . . . McClellan sent out cavalry reconnoissances from Williamsburg on the 5th and 7th May. . . . The advance of the main body began on the 8th; and on the 10th headquarters were at Roper's Church, 19 miles from Williamsburg, with all the troops which had arrived by land, except Hooker's, in the vicinity of that place. . . . By the 15th, headquarters, and the divisions of Franklin, Porter, Sykes, and Smith, reached Cumberland

on the Pamunkey. . . . On the 19th of May, headquarters and the corps of Porter and Franklin moved to Tunstall's Station on the railroad, five miles from White House. On the 20th, Casey's division forded the Chickahominy, where Bottom's Bridge had been, and occupied the opposite heights. Bottom's Bridge was immediately rebuilt. . . . On the 22d, headquarters moved to Cold Harbor. On the 24th, we carried the village of Mechanicsville, but the enemy destroyed the bridge on which the Mechanicsville Turnpike crossed the river. On the same day our left advance secured a position at Seven Pines, the point of junction of the Nine-Mile Road with the Williamsburg road, which last road crosses the Chickahominy at Bottom's Bridge. . . . It is difficult to account for, or justify, the slowness of McClellan's march. The distance from Bottom's Bridge to the middle of a line drawn from Bottom's Bridge to Cold Harbor, measuring by the road, is about 40 miles. That from West Point to the same point, measuring in the same way, is considerably less. One might almost say that, in the three weeks which McClellan took to accomplish this distance, he might have marched his army all the way in order of battle, bridging streams, felling trees, making roads, and supplying his army as he advanced. 'I had hoped,' he says, 'by rapid movements to drive before me, or capture, the enemy on the Peninsula, open the James River, and press on to Richmond, before he should be materially re-enforced.' What was there to hinder his making the attempt? Instead of that he followed him at the average rate of rather less than two miles a day."—F. W. Palfrey, *After the fall of Yorktown* (*Mass. Military Hist. Soc. Papers*, v. 1, pp. 95-114).

ALSO IN: J. E. Johnston, *Narrative of Military Operations*, ch. 5.—*Report of Joint Com. on the Conduct of the War*, 38th Cong. 2d sess., v. 1.—*Official Records*, series 1, v. 11, pt. 1.

A. D. 1862 (May: Virginia).—Evacuation of Norfolk by the Rebels.—Destruction of the Merrimac.—"The movement of our grand army up the Peninsula, in connection with Burnside's successes and captures in North Carolina, had rendered the possession of Norfolk by the Rebels no longer tenable. . . . Gen. Wool, commanding at Fortress Monroe, having organized an expedition designed to reduce that important city, led it thither on the 10th; finding the bridge over Tanner's Creek on fire, but no enemy to dispute possession of Norfolk, which was quietly surrendered by its Mayor. The Navy Yard and Portsmouth were in like manner repossessed; the Rebels, ere they left, destroying every thing that would burn, partially blowing up the Dry Dock, and completely destroying their famous iron-clad known to us as the Merrimac. They left about 300 cannon. . . . Two unfinished iron-clads were among the vessels fired by the Rebels ere they left."—H. Greeley, *The Am. Conflict*, v. 2, p. 127.

A. D. 1862 (May: Virginia).—The Peninsular Campaign: Fair Oaks, or Seven Pines.—"On the 25th of May Gen. McClellan issued a general order, which was read throughout the camps, directing the troops, as they advanced beyond the Chickahominy, to be prepared for battle at a moment's notice, and to be entirely unencumbered, with the exception of ambulances; to carry three days rations in their haver-

sacks, leaving their knapsacks with their wagons, which were on the eastern side of the river, carefully parked. . . . The divisions from the corps of Gens. Heintzelman and Keyes were among the first to cross the Chickahominy. They took a position on the right bank somewhat advanced therefrom. The right wing rested near New Bridge, the centre at Seven Pines, and the left flank on the White Oak Swamp. Gen. Sumner's corps remained on the east side of the river. On the 30th the Confederate Gen. Johnston made arrangements for an attack upon the Federal army, for the purpose of cutting off, if possible, the corps of Gens. Heintzelman and Keyes before they could be joined by Gen. Sumner. He selected the divisions of Gens. Longstreet, Huger, G. W. Smith, D. H. Hill, and Whiting. His plan was that Gens. Hill and Longstreet should advance by the road to Williamsburg and make the attack in front, and that Gen. Huger should move on the road to Charles City and attack in flank the troops assailed by Gens. Hill and Longstreet. Gen. Smith was ordered to the junction of the New Bridge Road and the Nine Mile Road, and to be in readiness to fall on the right flank of Gen. Keyes and to cover the left of Gen. Longstreet. The forces of Gens. Hill, Longstreet, and Smith were in position early on the morning of Saturday, May 31, and waited until afternoon for Gen. Huger to get into position. Prince de Joinville, who was a competent spectator, thus describes [*Campagne de l'Armée du Potomac, Mars-Juillet, 1862*] the scenes which followed this attack: 'At the moment it was thus attacked the Federal army occupied a position having the form of a V. The base of the V is at Bottom's Bridge, where the railroad crosses the Chickahominy. The left arm stretches toward Richmond, with this railroad and the road from that city to Williamsburg. There stood the left wing, composed of four divisions echeloned, one behind the other, between Fair Oaks and Savage stations, and encamped in the woods on both sides of the road. The other arm of the V, the right, follows the left bank of the river; that is the right wing. There are these five divisions and the reserve. Should one desire to communicate from one extremity to the other of those two wings, going by Bottom's Bridge, the way is very long, not less than 12 or 15 miles. In an air line the distance, on the contrary, is very trifling, but between the two arms of the V flows the Chickahominy. It was to connect both arms, in the space between them, that the construction of 3 or 4 bridges had been undertaken, only one of which was serviceable on the 31st of May. It had been built by Gen. Sumner, nearly half way between Bottom's Bridge and the most advanced point of the Federal lines. It saved the army that day from a disaster.' The other bridges were not ready. They were structures of logs, and time was required to build them. The approaches were always bad, and the tedious labor of cord-roving long distances was necessary. 'It was against the left wing of the army that every effort of the enemy was directed. That wing had its outposts at Fair Oaks station, on the York river railroad, and at a place called Seven Pines, on the Williamsburg road. There the Federals had thrown up a redoubt in a clearing, where a few houses were to be seen, and constructed abatis, to increase the field for sharpshooting of

the troops posted there. The rest of the country was completely covered with woods. The previous day there had been a frightful storm, with torrents of rain, and the roads were frightful. All at once, about one o'clock in the afternoon, the weather being dark and gloomy, a very spirited fusilade is heard. The pickets and sentries are violently driven in; the woods which surround Fair Oaks and Seven Pines are filled with clouds of the enemy's sharpshooters. The troops rush to arms and fight in desperation; but their adversaries' forces constantly increase, and their losses do not stop them. The redoubt of the Seven Pines is surrounded, and its defenders die bravely. . . . Meanwhile Heintzelman rushes to the rescue with his two divisions. As at Williamsburg, Kearney arrives in good time to reestablish the fight. Berry's brigade, of this division, composed of Michigan regiments and an Irish battalion, advances firm as a wall into the midst of the disordered mass which wanders over the battle field, and does more by its example than the most powerful reinforcements. About a mile of ground has been lost, 15 pieces of cannon, the camp of the division of the advance guard, that of Gen. Casey; but now we hold our own. A sort of line of battle is formed across the woods, perpendicularly to the road and the railroad, and there the repeated assaults of the enemy's masses are resisted. The left cannot be turned, where is the White Oak Swamp, an impassable morass; but the right may be surrounded. At this very moment, in fact, a strong column of Confederates has been directed against that side. If it succeeds in interposing between Bottom's Bridge and the Federal troops, which hold beyond Savage's Station, the entire left wing is lost. It will have no retreat, and is doomed to yield to numbers; but precisely at this moment—that is to say, at 6 o'clock in the evening—new actors appear on the scene. Gen. Sumner, who has succeeded in passing the Chickahominy, with Sedgwick's division, over the bridge constructed by his troops, and who, like a brave soldier, has marched straight through the woods to the sound of the cannon, arrived suddenly on the left flank of the column with which the enemy is endeavoring to cut off Heintzelman and Keyes. He plants in the clearing a battery which he has succeeded in bringing with him. . . . In vain Johnston sends against this battery his best troops, those of South Carolina—the Hampton Legion among others. In vain he rushes on it himself; nothing can shake the Federals, who, at nightfall, valiantly led by Gen. Sumner in person, throw themselves upon the enemy at the point of the bayonet, and drive him furiously, with frightful slaughter and fear, back as far as Fair Oaks Station. Night put an end to the combat. On both sides nothing was known of the result of the battle but what each one had seen with his own eyes. . . . Evidently Johnston had flattered himself, in throwing all his forces on the four divisions of the left wing, that he could annihilate them before any aid could come to them from the main body of the army on the left bank of the Chickahominy. For the moment he had recoiled before the energetic resistance of those four divisions, and also before the furious and unforeseen attack of Sumner's troops. No doubt he had counted on the terrible storm of the previous day to have swelled the Chickahominy

so as to render the establishment of a bridge impossible, or to sweep away in its overflowing waters those already established; but the capricious river baffled his plans, as it did some hours later those of his adversaries. The effect of the deluge was not immediate; the rise in the water delayed its appearance 24 hours. Was this unlooked-for delay turned to account with all desirable activity on the part of the Federals? That is a question which will remain always in dispute. . . . It was not until 7 o'clock in the evening that the idea of securing all the bridges without delay, and causing the whole army to cross at daybreak to the right bank of the Chickahominy, was entertained. It was now too late. Four hours had been lost, and the opportunity—that moment so fleeting, in war as in other circumstances—had gone. The rise, on which Johnston had vainly counted, and which had not hindered Sumner from crossing, came on during the night. The river rose suddenly from two feet, and continued to swell with rapidity, carrying away the new bridges, tearing up and sweeping off the trees which formed the planking of Sumner's bridges, and covering the entire valley with its overflowing waters. Nothing could cross. At the earliest dawn of day the combat was resumed with great fury on the left bank. The enemy came on in a body, but without order or method, and rushed upon the Federals, who, knowing that they were inferior in numbers and without hope of being supported, did not attempt to do more than resist and hold their ground. They fought with fierce determination on both sides, without any noise, without any cries, and whenever they were too hardly pressed they made a charge with the bayonet. . . . Toward midday the fire gradually diminished, then ceased. The enemy retreated; but the Federals were not in a position to pursue them. No one then knew what a loss the Southerners had just suffered in the person of their commander, Gen. Johnston, who was severely wounded. It was to his absence that was owing, in a great measure, the unskillful attacks against the Federal army in the morning. . . . Who can say what would have been the result if at this moment the 35,000 fresh troops left on the other side of the Chickahominy had appeared on the flank of this disordered mass after having successfully crossed the bridges?" —W. J. Tenney, *Military and Naval Hist. of the Rebellion*, ch. 19 (quoting and translating from *Prince de Joinville's "Campagne de l'Armée du Potomac"*).—"After this battle of Seven Pines—or Fair Oaks, as the Northern people prefer to call it—General McClellan made no step forward, but employed his troops industriously in intrenching themselves."—J. E. Johnston, *Narrative of Military Operations*, p. 142.

A. D. 1862 (May—June: Virginia).—**Stonewall Jackson's second campaign in the Shenandoah Valley.**—**Winchester.**—**Cross Keys.**—**Port Republic.**—"At the time the Army of the Potomac was tolling painfully up the Peninsula towards Richmond, the remaining forces in Northern Virginia presented the extraordinary spectacle of three distinct armies, planted on three separate lines of operations, under three

independent commanders. The highland region of West Virginia had been formed into the 'Mountain Department' under command of General Fremont; the Valley of the Shenandoah constituted the 'Department of the Shenandoah' under General Banks; and the region covered by the direct lines of approach to Washington had been erected into the 'Department of the Rappahannock,' and assigned to General McDowell. . . . The Administration, growing more easy touching the safety of the capital, determined, in response to General McClellan's oft-repeated appeals for re-enforcements, to send forward McDowell's corps,—not, indeed, as he desired, to re-enforce him by water, but to advance overland to attack Richmond in co-operation with the Army of the Potomac. . . . After numerous delays, the time of advance of this column was at length fixed for the 20th of May, a date closely coincident with the arrival of the Army of the Potomac on the Chickahominy. "The head of McDowell's column had already been pushed eight miles south of Fredericksburg; and McClellan, to clear all opposition from his path, sent forward Porter's corps to Hanover Junction, where he had a sharp encounter with a force of the enemy under General Branch, whom he repulsed with a loss of 200 killed and 700 prisoners, and established the right of the Army of the Potomac within fifteen miles, or one march, of McDowell's van. McDowell was eager to advance, and McClellan was equally anxious for his arrival, when there happened an event which frustrated this plan and all the hopes that had been based thereon. This event was the irruption of Stonewall Jackson in the Shenandoah Valley. The keen-eyed soldier at the head of the main Confederate army, discerning the intended junction between McDowell and McClellan, quickly seized his opportunity, and intrusted the execution of a bold 'coup' to that vigorous lieutenant who had already made the Valley ring with his exploits." Jackson, who had been resting for a time in a position between the south fork of the Shenandoah and Swift Run Gap, was joined, on the 30th of April, by Ewell's division from Gordonsville, and by other re-enforcements, which "raised his force to about 15,000 men. Banks' force, reduced by the detachment of Shields' division, sent to General McDowell, to about 5,000 men, was posted at Harrisonburg. Fremont was at Franklin, across the mountains; but one of his brigades, under Milroy, had burst beyond the limits of the Mountain Department, and seemed to be moving to make a junction with Banks, with the design, as Jackson thought, of advancing on Staunton. Jackson determined to attack these forces in detail. Accordingly, he posted Ewell so as to hold Banks in check, whilst he himself moved to Staunton. From here he threw forward five brigades, under General Edward Johnson (May 7), to attack Milroy. The latter retreated to his mountain fastness, and took position at a point named McDowell, where, re-enforced by the brigade of Schenck, he engaged Johnson, but was forced to retire on Fremont's main body at Franklin. Having thus thrown off Milroy eccentrically from communication with Banks, Jackson returned (May 14) to destroy the force under that officer." Banks retreated down the Valley, followed by Jackson, who diverged a little to capture a garrison of 700 men at Front Royal. On the 24th, Banks

made a stand on the heights of Winchester and gave fight, "till, being assailed on both flanks, he retired hastily to the north bank of the Potomac (May 25), making a march of 53 miles in 48 hours. Jackson continued the pursuit as far as Hallsboro, within two miles of Harper's Ferry, where he remained till the 30th, when, finding heavy forces converging on his rear, he began a retrograde movement up the Valley. The tidings of Jackson's apparition at Winchester on the 24th, and his subsequent advance to Harper's Ferry, fell like a thunderbolt on the war-council at Washington. The order for McDowell's advance from Fredericksburg, to unite with McClellan, was instantly countermanded; and he was directed to put 20,000 men in motion at once for the Shenandoah Valley, by the line of the Manassas Gap Railroad. . . . In vain he pointed out that it was impossible for him either to succor Banks or co-operate with Fremont; . . . that it would take him a week or ten days to reach the Valley, and that by this time the occasion for his services would have passed by. In vain General McClellan urged the real motive of the raid — to prevent reinforcements from reaching him." McDowell moved from the east and Fremont from the west, converging on Strasburg. "The two columns moved rapidly; they had almost effected a junction on the 31st; but that very day Jackson, falling back from Harper's Ferry, slipped between the two, and made good his retreat up the Valley. . . . The pursuers did their best: they pushed on, Fremont following in the path of Jackson up the Valley of the Shenandoah; while McDowell sent forward Shields' division by the lateral Luray Valley, with a view to head him off when he should attempt to break through the gaps of the Blue Ridge." On the 8th of June Ewell's division of Jackson's army "repulsed Fremont, while Jackson held Shields in check. Early next morning, drawing in Ewell and concentrating his forces, Jackson threw himself across the river, burned the bridge to prevent Fremont from following; fell upon Shields' advance, consisting of two brigades under General Tyler, and repulsed him, capturing his artillery. The former of these affairs figures in history as the battle of Cross Keys, and the latter as the battle of Port Republic. In this exciting month's campaign, Jackson made great captures of stores and prisoners; but this was not its chief result. Without gaining a single tactical victory he had yet achieved a great strategic victory; for by skillfully manoeuvring 15,000 men he succeeded in neutralizing a force of 60,000. It is perhaps not too much to say that he saved Richmond." — W. Swinton, *Campaigns of the Army of the Potomac*, pp. 122-128.

A. D. 1862 (May—July: On the Mississippi). — The first undertakings against Vicksburg. — "New Orleans once secured and handed over to General Butler, Farragut pushed up the Mississippi, and in the course of the next two months the Union flag was hoisted at Baton Rouge, Natchez, and every town of importance as high as Vicksburg. This city, strong by its natural position on high bluffs sloping gently landward, and already partly converted into a fortress

by intrenchments heavily armed, was now (since the surrender of Memphis on the 6th of June) the only point of importance held by the Confederates on the banks of the great river. It at once, therefore, assumed an importance well warranted by its later history. Summoned on the 18th of May to evacuate the place, General M. L. Smith, who held it, gave a decided refusal; and Farragut found it necessary to await once more the arrival of Porter's flotilla, which was not brought up and reported ready until the 27th of June. On the 28th a general attack took place, Farragut succeeding in taking two of his three frigates and six gun-boats above the batteries, but producing no effect on the defences. 'The enemy leave their guns for the moment,' says his hasty report, 'but return to them as soon as we have passed, and rake us.' About 50 men were killed and wounded on board, and the Brooklyn frigate, with two gun-boats, forced to retreat below the place. The bombardment continued at intervals, pending an application to General Halleck at Corinth for a corps of his army to aid the fleet, and the result of an experiment (the first of three) made to cut a ship canal through the isthmus opposite Vicksburg, and leave the Federal ships an independent passage. On the 15th of July their possession of the river was suddenly challenged by a large ram, the Arkansas, which the Confederates had been fitting on the Yazoo, a considerable stream entering the Mississippi just above Vicksburg. . . . Her plating, however, proved to be weak, and her machinery very defective." The career of the Arkansas was brief and harmless. In August she was knocked to pieces by the shells of the Essex, "whose commander had taken charge of the Lower Mississippi on the departure of Farragut. The latter officer, in compliance with orders from Mr. Welles, had abandoned his contest with the Vicksburg works on the 20th of July, and made down stream for New Orleans, whence he proceeded with his squadron to carry on operations along the coast of Texas, where the chief posts were (for the time) recovered to the Union by his detachments in the course of a few weeks. 'All we want,' he wrote on the 15th of October, 'is a few soldiers to hold the places, and we will soon have the whole coast. It is a more effectual blockade to have the vessels inside instead of outside.'" — C. C. Chesney, *Essays in Military Biog.*, pp. 169-171.

A. D. 1862 (May—December: Louisiana). — New Orleans under General Butler. — The army which accompanied Farragut's naval expedition against New Orleans, to assist its operations and to occupy the city and the lower Mississippi region when taken, was placed under the command of General Benjamin F. Butler. It consisted nominally of 18,000 men, but is said to have actually mustered less than 14,000. It was composed of regiments which had been raised by Butler in New England especially for the enterprise, his preparations having commenced as early as September, 1861. These troops were partly gathered at Ship Island, in the Gulf, some time before Farragut made ready his fleet; the remainder were at the rendezvous in good time, and the whole were in waiting, on board

transporta, at the passes, when Farragut carried his fleet past Forts Jackson and St. Philip. "General Butler . . . now proceeded to execute his part of the duty. He brought his forces into the rear of St. Philip, Porter keeping up a bombardment. On the 27th of April the garrison had become so demoralized as to refuse to fight any longer. The forts were therefore surrendered on the next day. . . . On the 1st of May New Orleans was formally occupied by United States troops. The loss on the national side in achieving this great victory was 40 killed and 177 wounded. . . . General Butler now entered on the difficult task of governing New Orleans. Its population, though greatly diminished to strengthen the Confederate armies in the Border States—a cause of bitter complaint to the inhabitants—still numbered about 140,000. Almost one half of it was of foreign birth. Perhaps no city in the world had in its lower classes a more dangerous and desperate population. There was a wide-spread hope that a French force would soon come to their help. By firmness, strict yet considerate, he controlled the municipal authorities; by severity he put down the mob. He was a terror to tricky tradesmen, a benefactor to the starving poor. He cleaned the streets, enforced sanitary regulations, and kept out yellow fever. He put an effectual stop to the operations of Confederate agents, who were illicitly obtaining supplies for their cause. . . . He arrested Mumford, the person who had hauled down the national flag at the Mint [where it had been raised by one of Farragut's officers before the arrival of the troops], brought him before a military commission, convicted and executed him." This execution of Mumford (by hanging) drew from the Confederate President, Davis, a proclamation denouncing Butler as "an outlaw and common enemy of mankind"; directing that, if captured, he should be immediately hung; declaring the commissioned officers of his command "not entitled to be considered as soldiers engaged in honorable warfare, but as robbers and criminals"; and ordering that "no commissioned officer of the United States taken captive shall be released on parole before exchange until the said Butler shall have met with due punishment for his crimes." "Some women of New Orleans, relying on the immunity of their sex, gratified their animosity by insulting national officers in public places. One of them ventured so far as to spit in the face of an officer who was quietly walking in the street. Hereupon was issued 'General Order No. 28' [known as 'the Woman Order,' which gave notice that] . . . 'hereafter, when any female shall, by word, gesture, or movement, insult or show contempt for any officer or soldier of the United States, she shall be regarded and held liable to be treated as a woman of the town plying her vocation.' . . . The feeling of personal hatred to Butler grew daily more and more intense. He was accused of improper tampering with the banks, speculating in sequestered property, and, through the agency of his brother, carrying on illegal but profitable transactions in sugar and cotton. In South Carolina a reward of \$10,000 had been offered for his assassination. Throughout the Confederacy he received an ignominious surname, and was known as 'Butler the Beast.' The government felt constrained to send a commission to New

Orleans to investigate his transactions. Its conclusion was that he had evidently acted 'under a misapprehension, to be referred to the patriotic zeal which governs him.'" In December General Butler was recalled and General Banks was sent to take his place.—J. W. Draper, *Hist. of the Am. Civil War*, ch. 52 (v. 2).

A. D. 1862 (June: On the Mississippi).—**The capture of Memphis.**—The naval fight before the city.—After the evacuation of Corinth by Beauregard, "Fort Pillow, 40 miles above Memphis, was no longer of any account, for the Union army could take it from the rear. The Confederates, therefore, spiked the guns, burned their barracks and what supplies they could not take away; and the Confederate gunboats went down the river to Memphis, where several of the boats had been built. Commodore Montgomery commanded the fleet. He had eight vessels. . . . Fort Pillow evacuated! It was astounding news to the people of Memphis. They learned it at noon, June 5th. The merchants closed their stores. Some of them began to pack their goods. Some of the citizens jumped on board the cars and fled from the city. The Confederate fleet made its appearance. 'I shall retreat no farther,' said Commodore Montgomery; 'I shall fight a battle in front of the city, and to-morrow morning you will see Lincoln's gunboats sent to the bottom.' The dawn is breaking when I step from the Benton, the flag-ship of Commodore Davis [commanding the Union river fleet], to the tugboat Jessie Benton. . . . The Union fleet is at anchor three miles above the city. 'Drop down below the city and see if you can discover the Confederate fleet,' is the order to the captain of the Jessie Benton. We sweep around the majestic bend of the river and behold the city. The first rays of the sun are gilding the spires of the churches. A crowd of people is upon the levee—men, women, and children—who have come out to see the Union fleet sent to the bottom. . . . Suddenly a vessel with a black cloud of smoke rolling from the chimneys shoots into the stream. It is the Little Rebel, Commodore Montgomery's flag-ship. One by one the other vessels follow, forming in two lines of battle. In the front line, nearest the city, is the Beauregard, next the Little Rebel, then the Price and Sumter. In the second line, behind the Beauregard, is the Lovell, then the Thompson, Bragg, and Van Dorn. . . . There are five gunboats in the Union fleet. The Benton is nearest the Tennessee shore, then the Carondelet, Louisville, St. Louis, and Cairo. There are also two rams—the Queen City and Monarch. The rams are river steamers, with thick oak sides; they carry no cannon, but on each boat are 100 riflemen. 'Round to; head down stream; keep in line with the flag-ship,' was the order which we on board the Jessie Benton carried to each boat of the line." In the fight which followed, and which is graphically described by the eye-witness here quoted, the Price and the Lovell were run down by the rams; the Little Rebel, the Lovell, the Thompson and the Bragg were destroyed by shot and shell; the Sumter driven ashore, and the Van Dorn alone escaped. On the Union side, only the ram Queen City was disabled. "In an hour's time the Confederate

fleet was annihilated. . . . It is not known how many men were lost on the Confederate side, but probably from 80 to 100. Colonel Ellet was the only one injured on board the Union fleet. . . . The victory opens the Upper Mississippi from Cairo to Vicksburg."—C. C. Coffin, *Drumbeat of the Nation*, ch. 10.

A. D. 1862 (June: Virginia).—The Peninsular Campaign: McClellan fortifying and Lee preparing for a bold attack.—“When McClellan crossed the Chickahominy it was thought he would advance immediately upon Richmond. This expectation was disappointed, however, for instead of advancing he began to fortify his position. The right wing rested on the Chickahominy a little below New Bridge, and the left extended to the White Oak Swamp, embracing a front of about four miles, nearly parallel with that of the Confederates. The opposing lines were separated by an interval but little exceeding a mile, but each was obscured from the other's view by the intervening forest. The picket-lines were often within close musket-range of each other. . . . The strength of the Confederate force was always greatly overestimated by McClellan, and his frequent and urgent calls for reinforcements exposed his want of confidence in his own strength. General Lee [who took command of the Confederate army June 1, General Johnston being disabled], knowing this uneasy, insecure feeling of his antagonist, and McDowell's force, which had always been a thorn in his side, being about this time withdrawn from Fredericksburg for the support of Banks and Shields in the Valley, prepared . . . to assume the offensive. He conceived the bold plan of crossing the Chickahominy, and, attacking the Federal right wing, to force it back and seize McClellan's line of communication with his base of operations. This plan being successfully executed, the Federal general would be compelled to save his army as best he could by retreat. Preparatory to the execution of this plan General J. E. B. Stuart was ordered to make a reconnaissance in the rear of the Federal position. This officer, with a force of about 1,000 cavalry, executed his instructions with great boldness and success. He made the entire circuit of the Federal army and gained much important information, . . . captured many prisoners and destroyed Federal stores to the value of \$7,000,000. . . . His design being confirmed by Stuart's successful reconnaissance, Lee proceeded to organize a force requisite for the accomplishment of his proposed enterprise. The troops that could be conveniently spared from North Carolina, South Carolina, and Georgia were ordered to Richmond. . . . At the same time General Jackson was ordered to withdraw secretly from the Valley and proceed with such expedition as would enable him to reach Hanover Junction by the afternoon of the 25th of June. In order to mask his designs from the Federals, Lee directed Whiting's division and Lawton's brigade to proceed to Staunton, apparently with the view of reinforcing Jackson, but really under orders to return immediately and join that general on the 25th at Hanover Junction. This movement further strengthened McClellan in his opinion of Lee's vastly superior force, and completely blinded him in regard to the real intentions of that general. General Lee determined to attack the Federal right wing on the morning of the 26th of

June.”—A. L. Long, *Memoirs of Robert E. Lee*, p. 169.

A. D. 1862 (June—July: Virginia).—The Peninsular Campaign: The Seven Days Battle and Retreat.—Mechanicville.—Gaines' Mill.—Savage Station.—Glendale.—Malvern Hill.—“Since the battle of Fair Oaks the Second Corps (Sumner) had remained on the right bank of the Chickahominy, where it had been followed in the month of June by the Sixth Corps (Franklin). So that only the Fifth Corps (Porter) remained on the left bank, recently reinforced by McCall's division. All the efforts of the enemy were made there, and there the great seven days' contest commenced. On the 26th of June, A. P. Hill, preceding Jackson by twenty-four hours, endeavored to force the passage of Beaver Dam Creek, defended by the Pennsylvanians under McCall. He was repulsed with considerable loss on the Mechanicville road. But, during the night, Porter was compelled to fall back to a position more tenable against a force become much superior to his own, Jackson and Longstreet having united against his lines. On the 27th, then, the Fifth Corps, with about 25,000 men, was assailed by 70,000 Confederates on Gaines' Mill Heights, and defended itself there obstinately, until our own cavalry came fatally to the enemy's aid. Unskillfully handled and roughly repulsed, it fell back in disorder on our lines, where it put everything into confusion, artillery and infantry. The Confederates, coming on at the charge, finished the overthrow, and the Fifth Corps would have been destroyed if the coming of the night had not enabled our decimated troops to cross to the right bank of the Chickahominy, destroying the bridges behind them. [This battle, called Gaines' Mill by the Federals, was named Cold Harbor, or Chickahominy, by the Rebels.] . . . As soon as Porter had crossed safely on the 28th, the general retreat commenced. Keyes crossed White Oak swamp first, and took position to protect the passage of the immense army trains and the great herds of cattle. Then, on the 29th, after having repulsed a cavalry attack, he continued his way towards the James, where he arrived on the 30th, at the same time that Porter reached Haxall's Landing. Much less favored, the three other corps suspended their march only to fight and ceased to fight only to march. But all this was done without any general system, in the absence of superior supervision, and of orders in accordance with circumstances. On the 29th the enemy crossed the Chickahominy to unite all his force on the right bank; Franklin advised Sumner, and the two, acting together, fell back on Savage Station, where they took up position, with the intention, aided by Heintzelman, of repelling the dangerous attack which menaced them. But Heintzelman, adhering to his general instructions, after destroying the material of the railroad, the provisions, munitions of war, arms and baggage that there was neither time nor means of carrying away, hastened to cross White Oak swamp, uncovering Sumner's left. The latter learned of the retreat of the Third Corps only from a furious attack by the enemy on the very side which he believed protected by Heintzelman. He did not the less sustain the shock with an unshakable solidity, and fought all the afternoon with four divisions without being broken at any point. The enemy, worn out by

the useless attacks, retired at nightfall. Then only did he receive any news from McClellan, under the form of an order to Sumner to fall back, along with Franklin, to the other side of White Oak swamp, abandoning our general hospitals at Savage Station, and the 2,500 sick and wounded in them. On the morning of the 30th, Jackson presented himself, to cross the swamp after us. He found the bridge destroyed, and endeavored to force a passage at several points. He was everywhere repulsed and kept in check the whole day by the obstinate resistance of Franklin, while farther on, towards the James, Longstreet was held by Heintzelman and McCall, who prevented him from cutting our army in two at Glendale. This was not done without hard fighting. The Confederates, arriving by the New Market road at a right angle to the Quaker road, which was our line of march, struck, in the first place, the Pennsylvania reserves, broke their line, outflanking it on the right and on the left, captured a battery of artillery, and pushed resolutely on through that dangerous breach. They then struck Hooker's division, which threw them obliquely on Sumner's Corps. Soon afterward, Kearney occupied the vacant space, and, as on the evening before, the sun set with the rebels unsuccessful. [This day's battle is variously named after Glendale, New Market, Frazier's Farm, and Nelson's Farm.] But, the same evening, Franklin, left without orders, and seeing his position was becoming more and more dangerous, abandoned White Oak swamp and fell back towards the James. At that news, which was promptly sent to him from several directions, Heintzelman sent in vain to headquarters to ask for instructions. Left to his own devices, he concluded that the wisest course was to follow the retrograde movement, and retreated with his corps. Sumner still remained, and, seeing himself left alone and without support, he decided, in his turn, to do as the others had done. On the morning of the 31st, he arrived on the Malvern Heights, where the three corps, the Second, Third, and Sixth, found themselves united, not, as has been benevolently said, by the wise combinations of General McClellan, but by the fortunate inspiration of the commanders, who had received no orders to that effect. 'At daylight,' said General Sumner, in his testimony before the Congressional committee, 'I called on General McClellan, on the banks of the James. He told me that he had intended that the army should hold the position it had the night before, and that no order for retreat had been sent; but that, since the rest of the army had fallen back, he was glad that I had done the same.' It was found that the plateau of Malvern Hill was admirably formed for a defensive position. General Humphreys, of the corps of topographical engineers, was ordered to examine the position, and he traced a formidable line with the left resting at Haaxall's Landing on the James, where it was protected by the gunboats, while the right was thrown back on some fields covered with thick woods, and cut up by marshy streams. The summits and slopes of the plateau were bristling with cannon, sweeping the plain over the heads of our infantry deployed in front of them. In that position, the army awaited a last attack. The enemy played there his last card, and lost the game. . . . He tried his fortune and gave battle July 1. On every

point his columns were thrown back in disorder, crushed in every attack by the double fire of artillery and infantry. Dash was not enough now. On this occasion, the enemy was compelled to acknowledge himself beaten and incapable of pursuing us any further. But our men were slow to believe in success. On receiving the order, a few hours later, after night had put an end to the contest, to retire to Harrison's Landing, they naturally concluded that we were not strong enough to hold out long against the enemy. . . . Worn out by fatigue and fighting, exhausted by privations and by vigils, discouraged, and suspecting that it was not fortune alone that had betrayed them, they dragged themselves along without order. . . . during that last night march, which had all the character of a rout."—R. de Trobriand, *Four Years with the Army of the Potomac*, ch. 13.—"If McClellan deserves sharp criticism for not having sooner made up his mind, and still more for his failure to discover and use the absence of the Confederates in his front, when his advance in mass, according to General Magruder's officially expressed opinion, 'would have insured his success, and the occupation of the works about Richmond, and consequently the city,' his character as a commander never shone so brightly as in the hour of disaster and danger, when Porter's wing was driven in upon his centre. The ill-success of his campaign as a whole has caused his conduct at this crisis to be done scant justice to. But there is no military reputation in the world which would not be increased by the manner in which that retreat to the James was conducted from the moment it began."—C. C. Chesney, *Essays in Military Biography*, p. 114.

A. D. 1862 (June—October): Tennessee—Kentucky.—Ineffective dispersion of Western armies.—Failure to secure Chattanooga and Vicksburg.—Bragg's invasion of Kentucky.—The race for Louisville.—Battle of Perryville.—End of Buell's campaign.—"We left the Federals in possession of Corinth and Memphis, the army of Beauregard disappearing in the depths of semi-tropical forests where the Tombigbee takes its source, and Montgomery's ships lying at the bottom of the Mississippi [see, above, A. D. 1862 (APRIL—MAY: TENNESSEE—MISSISSIPPI) and (JUNE: ON THE MISSISSIPPI)]. The part to be played by the Federal fleets was fully laid out; Farragut, by ascending the river, and Davis, by descending it, were to endeavor to join hands and destroy all the obstacles which still obstructed its course. What, in the mean time, was the large army employed at Corinth going to do? It had allowed Beauregard to escape at the very moment when it felt sure of crushing him; but it could yet strike some decisive blows either to eastward or westward, the Confederates being nowhere sufficiently numerous to make any strong opposition. Eastward, Mitchell had forced open the way to Chattanooga and approached the gap which opens south-east

of that town, before which, at a subsequent period, so much blood was shed at the battles of Chickamauga and Missionary Ridge. He was master of the passes of the Tennessee, and the Federals, stationed at Corinth, could reach Chattanooga much more speedily than their adversary encamped at Tupelo. They might probably conquer by the same stroke the whole upper course of the river which waters this town. Westward, the Federals could sweep both sides of the Mississippi, cause all the Confederate works which defended them to fall, and perhaps prevent the enemy from erecting the formidable citadels of Vicksburg and Port Hudson, the capture of which, at a later period, cost so dear. . . . Everything . . . was in favor of prompt and vigorous action. But Halleck divided his army, and notwithstanding the resources he had at his disposal, allowed his adversaries to forestall him everywhere. . . . The army of the Ohio left Corinth on the 10th of June, and Buell was ordered to proceed with it in the direction of Chattanooga, where Mitchell was beginning to be sorely pressed; but this movement was slowly executed. Sherman, at the head of his own division and that of Harbit, proceeded toward Memphis, dropping detachments of troops as far as Holly Springs to cover his left flank. The rebuilding of the Mobile Railway, which had been completely destroyed by the enemy, was a considerable undertaking. Begun on the 9th of June, it was only finished on the 26th. The Confederates had profited by this delay. The new general-in-chief, Braxton Bragg [who had superseded Beauregard], had boldly divided his army and abandoned the position of Tupelo, which Halleck still believed him to occupy. He had determined to cover at once the two points we have already indicated as being of the greatest importance for the future of the war, Chattanooga and Vicksburg. He proceeded toward the first with all the old army of Johnston, consisting of the corps of Hardee and Polk, as rapidly as the difficulties of communication in that portion of the Southern States allowed. He had the merit and good fortune to reach Chattanooga before Buell. It was not too soon, for a few days previous, the 7th of June, the Federal General Negley, with his single brigade and some cannon, had nearly taken possession of this city by surprise. Bragg found it of great advantage to transfer the war to the vicinity of Chattanooga. Master of this position, indeed, he could menace either Tennessee or Kentucky, Nashville or Louisville and wrest from the Federals all the conquests they had achieved during the last few months by taking them in rear. He was also drawing near Virginia."—Comte de Paris, *Hist. of the Civil War in Am.*, v. 2, bk. 2, ch. 3.—"Halleck soon leaves for Washington to assume supreme control of the Union forces from the War Department. Grant is left in command of the Army of the Tennessee, Buell of the Army of the Ohio, Pope of the Army of the Mississippi. Every one is without definite instructions; there is no one head; and the Western armies are practically put upon the defensive. Rosecrans succeeds Pope, who is transferred to Virginia, and to Grant's lot now fall the armies of the Mississippi and Tennessee, 42,000 effectives, with which to keep open his communications with Buell and guard the railroad from Memphis to Decatur. While Grant

and Sherman devote their energies to the line of the Mississippi, Buell is ordered to regain East Tennessee, where the loyal population is in extreme suffering. Mitchell [General O. M. Mitchell] capture of Huntsville [in Alabama, which he surprised, by a remarkable forced march, from Nashville, in April], and some hundred miles of the Memphis and Charleston Railroad, which he had held, together with all territory north of the Tennessee river, had been full of possibilities. Had he but received the authority, he might readily have anticipated Bragg in taking possession of Chattanooga, and have saved much subsequent blood and treasure. For this town is the key to that entire strategic field. . . . Buell supposed that Bragg would attempt to turn his right in order to obtain possession of Nashville. He therefore concentrated the bulk of his force at Murfreesboro'. Thomas, then commanding a wing of the Army of the Ohio, whose military intuitions were as keen as his judgment was reliable, . . . was shrewd enough to recognize Bragg's crossing of the Tennessee river as a threat to invade Kentucky. Not so Buell, to his sorrow. By a sudden movement, Bragg steals a march around Buell's left, through the Sequatchie Valley [August 28], and marches straight toward Louisville, while Kirby Smith turns Cumberland Gap, defeats Nelson at Richmond, and makes for Cincinnati. . . . Thoroughly alarmed, as is also the country, Buell at once swings his left in pursuit of Bragg, while he endeavors to retain his grasp on Nashville with his right. Bragg has the shorter line and the start. But he is delayed a day or two [September 16-17] by the capture of Mumfordsville, and by scattering his forces instead of pushing home. This is a serious fault on Bragg's part. He fairly holds success in his hand, but forfeits it by this delay. After some rapid marching and maneuvering, Buell enters Louisville just ahead of his opponent. The authorities in Washington have lost all confidence in Buell. He is summarily relieved from command and Thomas appointed to succeed him. But this magnanimous soldier, though far from always agreeing with the methods of his chief, declines the proffered honor, and, at his earnest solicitation, Buell is reinstated. The Army of the Ohio marches out to meet Bragg, with Thomas second in command. Bragg expects to defend the line of the Kentucky and Duck rivers, but divides his forces, leaving Kirby Smith near Frankfort. Buell makes a demonstration upon Bragg's communications. After some cautious feeling, Buell comes upon Hardee with only 15,000 men, at Perryville, where, had he at once attacked, he could have punished Bragg severely for this division. But, owing to lack of water, one-half of Buell's army is distant from the field, and he in turn pays the penalty of lack of concentration. Polk joins Hardee, and the latter [October 8] falls heavily upon McCook, who holds Buell's left, and bears him back. But he cannot break the Union centre; and after a stubborn conflict Bragg retires, leaving to our forces the field. Our left has not been engaged. The loss is nearly 5,000 men on either side, a quarter of the numbers actually engaged. On being followed up, Bragg retreats through Cumberland Gap, and leaves Kentucky and Tennessee once more in our possession. His retreat ends only at Chattanooga. What Bragg expected to obtain

In Kentucky was a vast accession of recruits and horses, as did Lee in Maryland. Both fell short of their calculations, though Bragg carried off a goodly train of supplies. Forgetful of what he had really done, the South was bitter in its criticism of Bragg's failure to hold Eastern Tennessee and Kentucky. . . . Halleck now insists that Buell shall undertake a campaign in East Tennessee, still occupied by the enemy. But Buell alleges the utter impossibility of subsisting his troops so far from the railroad; and again concentrates at Nashville. Here he is relieved (October 30) and Gen. Rosecrans is appointed to the command."—T. A. Dodge, *Bird's-Eye View of our Civil War*, ch. 15.

A. D. 1862 (July).—Confiscation of the property of rebels, giving freedom to their slaves.—Immediately on the assembling of Congress at its regular session in December, 1861, "Mr. Trumbull of Illinois introduced a bill, providing that the slaves of all who had taken up arms against the United States should 'become forever thereafter free, any law to the contrary notwithstanding.' . . . On the 25th of February it came up for general debate, which was very extended. . . . Divergences of views, even among those who had been most prominent and pronounced in their antislavery action, and the general drift of the discussion, seemed to preclude any reasonable hope of agreement upon any motion or measure then before the Senate. It was therefore moved by Mr. Clark of New Hampshire to refer the whole matter, the original bill, and all motions, amendments, and substitutes, to a select committee. This, too, gave rise to a sharp debate. . . . The motion was carried by a vote of 24 to 14; and the committee, consisting of Clark, Collamer, Trumbull, Cowan, Wilson, Harris, Sherman, Henderson, and Willey, was appointed. Mr. Trumbull declining, Mr. Harlan was appointed in his place. The committee reported 'a bill to suppress insurrection, and punish treason and rebellion'; and on the 16th of May it came up for consideration. Its main provision was that at any time after the passage of the act, the President might issue his proclamation that the slaves of persons found, 30 days after the issuing of the proclamation, in arms against the government, will be free, any law or custom to the contrary; that no slave escaping from his master shall be given up, unless the claimant proves he has not given aid or comfort to the Rebellion; and that the President shall be authorized to employ persons of African descent for the suppression of the Rebellion. . . . The bill

was further debated, but did not reach a vote. In the House a substantially similar course was pursued. On the first day of the regular session Mr. Elliot of Massachusetts introduced a resolution confiscating the property and freeing the slaves of those engaged in the Rebellion. It did not, however, come up for consideration till the close of the following week. . . . A motion was finally made and carried to refer the whole subject to a select committee of seven, consisting of Olin, Elliot, Neell, Hutchins, Mallory, Beaman, and Cobb. Mr. . . . was excused, and Mr. Sedgwick of New York was appointed in his place. On the 14th of May Mr. Elliot from the committee reported two bills,—the one confiscating Rebel property, and the other freeing the slaves of Rebels,—and opened the debate on 'the twin measures of confiscation and emancipation.' . . . On the 20th of May Mr. Elliot closed the debate, and the two bills he had reported from the special committee were brought to a vote. The first, or that providing for the confiscation of Rebel property, was passed by a strong majority. The second, or that freeing the slaves of Rebels, coming up for action, the first business was the disposal of the several amendments that had been offered. The amendments having all been voted down, the original bill was lost by a vote of 74 to 78. That vote was, however, reconsidered and the bill was recommitted. On the 18th of June Mr. Elliot moved a substitute for the bill reported by the committee, which was accepted by the House, and the bill, as thus amended, was passed by a vote of 82 to 51. The gist of this bill consisted in the provision, that all slaves of persons found in rebellion 60 days after the President shall issue his proclamation should be free; and the President should appoint commissioners to carry its provisions into effect. The House confiscation bill was taken up in the Senate on the 23d of June. An amendment was moved by Mr. Clark combining confiscation and emancipation. The amendment was sharply debated, but was adopted on the 28th. The bill as amended was adopted by a vote of 28 to 13. The bill as thus amended was taken up in the House on the 3d of July, and the House non-concurred in the Senate's amendment. . . . A committee of conference was appointed, which reported, on the 11th, in substance the Senate amendment. The report was accepted by both bodies, . . . and the President gave it his approval on the 17th. It provided that all slaves of Rebels coming into the possession or under the protection of the government should be deemed captives of war, and made free; that fugitive slaves should not be surrendered; that no person engaged in the military or naval service should render fugitives on pain of being dismissed from the service; and that the President might employ persons of the African race for the suppression of the Rebellion in such manner as he might deem best."—H. Wilson, *Hist. of the Rise and Fall of the Slave Power in America*, v. 3, ch. 25.

A. D. 1862 (July—August: Virginia).—The end of the Peninsular Campaign.—The army at Harrison's Landing.—Results of the Seven Days fighting.—Withdrawal from the Peninsula.—"On reaching Harrison's Landing there were scarcely 50,000 men in the ranks, but on the

4th of July, when the corps commanders made their reports, it was found that the net losses of the army since the 20th of June amounted to 15,249 men, of whom 1,582 had been killed, 7,700 wounded, and 5,958 missing. This last figure comprised, besides prisoners, all the soldiers who had been left on the field of battle, whose fate, whether killed or wounded, could not be ascertained; to this number may be added, without exaggeration, 6,000 sick or lame who had gone to the hospital in consequence of the excessive fatigues of the preceding days. McClellan therefore found himself with about 84,000 men under arms, not counting those who had just joined him. The losses of Lee's army during the seven days amounted to 20,000 men, to which number must also be added at least 5,000 rendered unfit for active service by the same causes which had operated with his adversaries; this army, therefore, had undergone a diminution of 25,000 men. This was more than one-fourth of its effective force on the 26th of June. An interlude was to follow this great struggle. While McClellan was fortifying himself at Harrison's Landing, Lee, hampered like himself by the difficulty of subsisting his army, was obliged to fall back as far as the environs of Richmond. . . . In the estimation of those who did not allow themselves to be troubled by foolish alarms and were not blinded by party prejudices, McClellan's situation was far from bad. . . . Planted on the James, McClellan could, either by ascending this river or by seizing upon Petersburg, strike much deadlier blows at Richmond than when his army lay across the Chickahominy, far from any water communication. Such was the position of the two armies about the 7th of July. On this day the steamer coming from Fortress Monroe landed a passenger at Harrison's Landing, whose dress, as simple as his manners, did not at first attract any attention, but in whom people soon recognized President Lincoln. He had come to consult with the commander of the army of the Potomac about the measures to be adopted under those grave circumstances. . . . On the occasion of his interview with McClellan at Harrison's Landing, the latter had so thoroughly demonstrated the importance of that position that [the President] went back fully determined to allow the chief of the army of the Potomac full freedom of action. But General Halleck . . . claimed for himself, as commander-in-chief [atly so appointed], the exclusive direction of all the armies in the field, and Mr. Lincoln, conscious of his own incompetency, submitted to this new authority." Measures taken during July for placing the army of the Potomac again upon the offensive were altered on the 3d of August, when Halleck gave orders to McClellan to transfer his army with all possible expedition to Aquia Creek, on the Potomac, for the support of General Pope and the Army of Virginia. — Comte de Paris, *Hist. of the Civil War in Am.*, v. 2, bk. 1, ch. 4 and bk. 3, ch. 1.

ALSO IN: J. G. Nicolay and J. Hay, *Abraham Lincoln*, v. 5, ch. 24.

A. D. 1862 (July—August: Virginia).—The beginning of Pope's Campaign: Cedar Mountain, or Cedar Run.—"While Lee and McClellan were resting, important events were taking place at Washington and in Northern Virginia. The Federal administration, satisfied of the im-

policy of the separate departments and independent commands which they had organized in that region, had determined to unite under one leader the three armies of Banks, Fremont, and McDowell, which Jackson had beaten or baffled in succession. . . . Their united armies were henceforth to be styled the Army of Virginia, while McClellan's forces continued to be known as the Army of the Potomac. General John Pope, whose deeds and still more his dispatches in the West, had given him some reputation, was called to Washington and placed at the head of the new army. General Pope was assigned to command on the 26th of June. . . . The unification of these commands under Pope was followed by another and still more important change of the same kind. The dissatisfaction of the Federal administration with General McClellan had been steadily growing for many months. This officer's caution often exposed him, and sometimes not unjustly, to the charge of timidity. . . . No doubt other causes, such as his moderation and his conservative political views, rendered him distasteful to the progressive radicals who at this time predominated in Mr. Lincoln's cabinet; but it must be confessed that McClellan's military conduct was not such as to inspire confidence or diminish antagonisms, and it, alone, is sufficient to account for the manner in which he was treated by his government. . . . After the Seven Days' Battles, the Federal government called General Halleck from the West . . . and placed him in chief command of the armies of the United States, the position from which McClellan had been deposed in March. The order assigning General Halleck was dated July 11, but the latter did not arrive in Washington and enter upon his duties until July 23. By this appointment it was designed to give a common head to the two armies in Virginia, and insure the cooperation of McClellan and Pope. The first great question that presented itself to Halleck was, what to do with McClellan's forces, and on the day after assuming command he left Washington to visit this army. The visit seems to have satisfied him of the propriety of withdrawing the Army of the Potomac at once from the Peninsula, and of placing it on the line of the Rappahannock. . . . During the month of July, while McClellan was resting at Westover, General Pope, though in Washington, was not idle. Having devoted some days to the reorganization and equipment of his command, he directed the concentration of the mass of his forces at the eastern base of the Blue Ridge Mountains in Rappahannock County, from which position he could cover the approach to Washington, or threaten the flank of any columns going toward the Shenandoah Valley, while he prepared for an aggressive campaign. . . . General Lee on July 13 ordered Jackson with the veteran troops of his own and Ewell's division to Gordonsville to oppose Pope's advance. The force thus sent numbered about 11,000 men. Robertson's brigade of cavalry, which was already in Pope's front, added 1,000 or 1,200 more. General Lee remained with some 65,000 men between McClellan and Richmond. General Jackson reached the vicinity of Gordonsville on July 19. His arrival was opportune. The Federal reconnoirring parties had already advanced through Culpeper to the Rapidan, and on July 14 Banks had been ordered to send

forward all his cavalry under Hatch to seize Gordonsville."—Wm. Allan, *The Army of Northern Virginia in 1862*, ch. 20.—"After ascertaining that the enemy were in large force under General Pope . . . Jackson applied to General Lee for reinforcements. The division of A. P. Hill was immediately sent to him, and, with this accession to his small army, Jackson had no intention of remaining idle or of awaiting an attack from so powerful a foe, but determined to strike a blow himself before the enemy had time to concentrate all their forces. He therefore advanced towards them on the 7th of August. Before taking this step, it was observed that he was much in prayer, but this was his custom previous to every battle. . . . Pope's army was gathering in all its strength at Culpepper Court-House, and on the 9th of August Jackson's little army came in contact with his advance-guard about six miles from the Court-House, on the borders of a little stream called Cedar Run. Here hostilities began by a furious cannonade on both sides, lasting two hours, when, about five o'clock in the afternoon, the infantry of both armies became hotly engaged. The conflict was fierce and stubborn, but the overwhelming numbers of the enemy swept down with such impetuosity that the weaker party were forced to yield, and it looked as if it were doomed to destruction. Ewell, Early, A. P. Hill, Winder, and other commanders all fought their bravest and best—the gallant Winder receiving a mortal wound—and still they were pressed back. 'It was at this tearful moment,' says his late chief-of-staff, Dr. Dabney, 'that the genius of the storm reared his head, and in an instant the tide was turned. Jackson appeared in the mid-torrent of the highway, . . . he drew his sword (the first time in the war), and shouted to the broken troops with a voice which pealed higher than the roar of battle: "Rally, brave men! Press forward! Your general will lead you! Jackson will lead you! Follow me!" This appeal was not in vain, and the Federals, started by this unexpected rally, were driven from the field. They afterwards made an attempt to retrieve the fortunes of the day, which they had so nearly won, by an assault from a magnificent body of cavalry, but even this was repelled, and the troopers driven in full retreat. . . . This battle of Cedar Run [called Cedar Mountain by the Unionists] Jackson himself pronounced the most successful of his exploits. . . . In this battle the Confederates had between eighteen and twenty thousand men engaged, while the Federals, according to their own returns, had thirty-two thousand. Jackson, however, had one incalculable advantage over the enemy, which he gained by his promptitude in seizing and holding Slaughter's Mountain—an elevation which commanded all the surrounding plains, and enabled him to overlook the whole scene of action. . . . It was to the advantage of this position as well as the bravery of his troops that he was indebted for his complete success. By this victory Pope received such a blow that he was deterred from making another advance until he could gather reinforcements. Burnside's corps was withdrawn from North Carolina and sent on to Culpepper Court-House, and it was believed that McClellan's remaining forces would be recalled from James River and sent also to swell the ranks of the grand 'Army of Virginia,' as the command of

Pope was called. At all events, General Lee was convinced that McClellan was incapable of further aggression, and that the most effective way to dislodge him from the Peninsula was to threaten Washington! He therefore determined to move his army from Richmond to Gordonsville. He began his march on the 13th, and four days after, on the 17th, McClellan evacuated the Peninsula and removed his troops to the Potomac." Pope's army was withdrawn behind the Rappahannock. "General Lee now ordered Jackson to cross the Rappahannock high up, and by a forced march go to Manassas and get in Pope's rear. Other divisions were sent to Pope's front, and the two hostile armies marched along on either side of the stream, opening fire upon each other whenever the opportunity offered. Jackson continued his march up stream until he reached Warrenton Springs, on the 23d, where he found the bridge destroyed, but he passed Early's brigade over on a mill-dam, and took possession of the Springs. Before other troops could be crossed to his support, a sudden and heavy rainfall swelled the river so as to render it impassable, and Early was thus cut off from his friends and surrounded by the enemy. His situation was one of extreme peril, but he managed to conceal his troops in the woods, and hold his foes at bay with artillery, until Jackson had constructed a temporary bridge, and by the dawn of the morning of the 24th the gallant Early, with his command, had recrossed the river without the loss of a man. While a fierce artillery duel was going on across the river between A. P. Hill and the enemy, Jackson left the river-bank a few miles, and marched to the village of Jeffersonton. He was thus lost sight of by the Federals, and to Longstreet was given the task of amusing Pope by the appearance of a crossing at Warrenton Springs. Jackson was now preparing to obey Lee's order to separate himself from the rest of the army, pass around Pope to the westward, and place his corps between him and Washington at Manassas Junction."—Mrs. M. A. Jackson, *Life and letters of General Thomas J. Jackson*, ch. 17.

A. D. 1862 (July—September: Missouri—Arkansas).—**Warfare with the Rebel Guerrillas.**—"Since the autumn of 1861, General J. M. Schofield, Lyon's second at the battle of Wilson's Creek, had been in command of the militia of Missouri, and in June, 1862, that State was erected into a separate military district, with Schofield at its head. He was vigilant and active; but when Curtis withdrew to the Mississippi, and left Arkansas and Southern Missouri open to the operations of guerrilla bands, ten numerous in the western part of the former State, he found his forces inadequate to keep down the secessionists in his district. When Price crossed the Mississippi, early in May, he sent back large numbers of Missourians to recruit guerrilla bands for active service during the summer, and these, at the middle of July, were very numerous in the interior, and were preparing to seize important points in the State. To meet the danger, Schofield obtained authority from the Governor to organize all the militia of the State. This drew a sharp dividing line

between the loyal and disloyal inhabitants. He soon had 50,000 names on his rolls, of whom nearly 20,000 were ready for effective service at the close of July, when the failure of the campaign against Richmond so encouraged the secessionists in Missouri that it was very difficult to keep them in check. Schofield's army of volunteers and militia was scattered over Missouri in six divisions, and for two months a desperate and sanguinary guerrilla warfare was carried on in the bosom of that Commonwealth, the chief theater being northward of the Missouri River, in McNeill's division, where insurgent bands under leaders like Poindexter, Porter, Cobb, and others, about 5,000 strong, were very active." They were also aided by incursions from Arkansas, under Hughes, Coffey and other leaders. The encounters were many and fierce. At Kirksville, August 6, and Chariton River, four days later, the loyal forces achieved considerable victories; at Independence (which was captured) August 11, and at Lone Jack, about the same time, they suffered defeat. These were the principal engagements of the month. With the co-operation of General Blunt, commanding in Kansas, the Arkansas invasion was driven back. "Missouri was now somewhat relieved, but the Confederates were gathering in force in Arkansas, where they were joined by conscripts from Southern Missouri and a large number of troops from Texas. Their entire number was estimated to be 50,000 at the middle of September, with General T. C. Hindman in chief command. . . . So threatening was this gathering that Schofield took the field in person, and General Curtis succeeded him in command of the District of Missouri." Schofield's vanguard, under General Salomon, encountered the enemy at Newtonia, September 30, and was defeated; but the Confederates retreated before the united forces of Schofield and Blunt and "were chased about 30 miles into Arkansas."—B. J. Lossing, *Field Book of the Civil War*, v. 2, ch. 20.

A. D. 1862 (August).—Draft of Militia for nine months.—By proclamation, August 4, the President ordered a draft of 300,000 militia, for nine months service unless sooner discharged.

A. D. 1862 (August).—President Lincoln's "policy" explained to Horace Greeley.—"Executive Mansion, Washington, August 22, 1862. Hon. Horace Greeley. Dear Sir: I have just read yours of the 19th, addressed to myself through the New York 'Tribune.' If there be in it any statements or assumptions of fact which I may know to be erroneous, I do not, now and here, controvert them. If there be in it any inferences which I may believe to be falsely drawn, I do not, now and here, argue against them. If there be perceptible in it an impatient and dictatorial tone, I waive it in deference to an old friend whose heart I have always supposed to be right. As to the policy I 'seem to be pursuing,' as you say, I have not meant to leave any one in doubt. I would save the Union. I would save it the shortest way under the Constitution. The sooner the national authority can be restored, the nearer the Union will be 'the Union as it was.' If there be those who would not save the Union unless they could at the same time save slavery, I do not agree with them. If there be those who would not save the Union unless they

could at the same time destroy slavery, I do not agree with them. My paramount object in this struggle is to save the Union, and is not either to save or to destroy slavery. If I could save the Union without freeing any slave, I would do it; and if I could save it by freeing all the slaves, I would do it; and if I could save it by freeing some and leaving others alone, I would also do that. What I do about slavery and the colored race, I do because I believe it helps to save the Union; and what I forbear, I forbear because I do not believe it would help to save the Union. I shall do less whenever I shall believe what I am doing hurts the cause, and I shall do more whenever I shall believe doing more will help the cause. I shall try to correct errors when shown to be errors, and I shall adopt new views so fast as they shall appear to be true views. I have here stated my purpose according to my view of official duty; and I intend no modification of my oft-expressed personal wish that all men everywhere could be free. Yours, A. Lincoln."—Abraham Lincoln, *Complete Works*, v. 2, pp. 227-228.

A. D. 1862 (August : Virginia).—General Pope's campaign: Stonewall Jackson's movement into the rear of the Federal Army.—"By the capture of Pope's papers [effected in a raid of Stuart's cavalry to the Federal rear] Lee gained an accurate knowledge of the situation of the Federal army. Acting on it, he ordered Jackson to advance his corps to Jeffersonton and secure the bridge over the Rappahannock at Warrenton Springs. . . . Jackson, on arriving at Jeffersonton in the afternoon of the 22d, found that the bridge on the Warrenton turnpike had been destroyed by the Federals. . . . On the 23d Lee ordered Longstreet's corps to follow Jackson and mass in the vicinity of Jeffersonton. The headquarters of the army was also moved to that place. . . . General Longstreet made a feint on the position of Warrenton on the morning of the 24th, under cover of which Jackson's corps was withdrawn from the front to the vicinity of the road from Jeffersonton to the upper folds of the Rappahannock. Jackson was then directed to make preparations to turn the Federal position and seize their communications about Manassas Junction. Longstreet continued his cannonade at intervals throughout the day, to which the Federals replied with increasing vigor, showing that Pope was massing his army in Lee's front. It was the object of Lee to hold Pope in his present position by deluding him with the belief that it was his intention to force a passage of the river at that point, until Jackson by a flank movement could gain his rear. Longstreet, on the morning of the 25th, resumed his cannonade with increased energy, and at the same time made a display of infantry above and below the bridge. Jackson then moved up the river to a ford eight miles above; crossing at that point and turning eastward, by a rapid march he reached the vicinity of Salem. Having made a march of 25 miles, he bivouacked for the night. Stuart's cavalry covered his right flank, the movement being masked by the natural features of the country. The next morning at dawn the march was resumed by the route through Thoroughfare Gap. The cavalry, moving well to the right, passed around the west end of Bull Run Mountain and joined the infantry at the village of Gainesville, a few miles from

the Orange and Alexandria Railroad. Pressing forward, still keeping the cavalry well to the right, Jackson struck the railroad at Bristoe Station late in the afternoon, where he captured two empty trains going east. After dark he sent a detachment under Stuart to secure Manassas Junction, the main dépôt of supplies of the Federal army. The cavalry moved upon the flanks of this position, while the infantry, commanded by Trimble, assaulted the works in front and carried them with insignificant loss, capturing two battalions of light artillery with their horses and a detachment of 300 men, besides an immense amount of army supplies. The next morning, after effectually destroying the railroad at Bristoe, Jackson . . . moved his main body to Manassas, where he allowed his troops a few hours to refresh themselves upon the abundant stores that had been captured. About 12 o'clock the sound of artillery in the direction of Bristoe announced the Federal advance. Not having transportation to remove the captured supplies, Jackson directed his men to take what they could carry off, and ordered the rest to be destroyed. General Ewell, having repulsed the advance of two Federal columns [at Bristoe Station], rejoined Jackson at Manassas. The destruction of the captured stores having been completed, Jackson retired with his whole force to Bull Run, and took a position for the night, a part of his troops resting on the battle-field of the previous year. Pope, . . . upon learning that Jackson was in his rear, . . . immediately abandoned his position on the Rappahannock and proceeded with all despatch to intercept him before he could be reinforced by Lee. His advance having been arrested on the 27th by Ewell, he did not proceed beyond Bristoe that day. Lee on the 26th withdrew Longstreet's corps from its position in front of Warrenton Springs, covering the withdrawal by a small rear-guard and artillery, and directed it to follow Jackson by the route he had taken the day before. . . . The corps bivouacked for the night in the vicinity of Salem. On the morning of the succeeding day, the 27th, a messenger appeared bringing the important and cheering news of the success of Jackson at Bristoe and Manassas. . . . Thoroughfare Gap was reached about noon of the 28th. It was quickly found to be occupied by a Federal force. Some slight attempt was made to dislodge the enemy, but without success, as their position proved too strong, and it seemed as if the movement of the Confederate army in that direction was destined to be seriously interfered with. Meanwhile, nothing further had been heard from Jackson, and there was a natural anxiety in regard to his position and possible peril. . . . Under these critical circumstances General Lee made every effort to find some available route over the mountains, and had already succeeded in doing so when his adversary saved him further trouble. "Pope . . . had ordered McDowell to retire from the Gap and join him to aid in the anticipated crushing of Jackson. McDowell did so, leaving Rickett's division to hold the Gap. In evident ignorance of the vicinity of Longstreet's corps, this force was also withdrawn during the night, and on the morning of the 29th Lee found the Gap unoccupied, and at once marched through at the head of Longstreet's column. . . . Pope had unknowingly favored the ad-

vance of the Confederate commander. His removal of McDowell from his position had been a tactical error of such magnitude that it could not well be retrieved. . . . The cannonade at the Gap on the 28th had informed Jackson of Lee's proximity. He at once took a position north of the Warrenton turnpike, his left resting on Bull Run. . . . About three o'clock the Federals bore down in heavy force upon Ewell and Talliaferro, who maintained their positions with admirable firmness, repelling attack after attack until night. The loss on both sides was considerable. . . . Jackson, with barely 20,000 men, now found himself confronted by the greater part of the Federal army. Any commander with less firmness would have sought safety in retreat. But having heard the Confederate guns at Thoroughfare Gap, he knew that Lee would join him the next day. Therefore he determined to hold his position at all hazards. By the morning of the 29th . . . Hood's division had reached the south side of the mountain, and early in the day was joined by the remainder of Longstreet's corps, by way of the open Gap. While these important movements were in progress, Pope had resumed his attack upon Jackson. . . . On the arrival of Lee, Pope discontinued his attack, and retired to the position which the year before had been the scene of the famous battle of Bull Run, or Manassas."—

A. D. 1862 (August—September: Virginia).—The end of General Pope's campaign: Groveton.—Second Bull Run.—Chantilly.—"By contradictory orders and the useless marches and counter-marches they involved, Pope's opportunity was thrown away, and instead of fighting Jackson's corps alone, it was the entire army of Lee with which he had to deal,—this, too, with his forces very much out of position, and he himself ignorant both of his own situation and that of the enemy. When, towards noon [August 29], Pope, coming from Centreville, reached the field near Groveton, he found the situation as follows: Heintzelman's two divisions, under Hooker and Kearney, on the right, in front and west of the Sudley Springs road; Reno and Sigel holding the centre,—Sigel's line being extended a short distance south of the Warrenton turnpike; Reynolds with his division on the left. But the commander was ignorant of the whereabouts of both Porter and McDowell, and he knew not that Longstreet had joined Jackson! The troops had been considerably cut up by the brisk skirmishing that had been going on all morning. An artillery contest had also been waged all forenoon between the opposing lines; but it was at long range and of no effect. The position of the troops in front of Jackson's entrenched line was one that promised very little success for a direct attack, and especially for a partial attack. Nevertheless, at three o'clock, Pope ordered Hooker to assault. The attempt was so unpromising that that officer remonstrated against it; but the order being imperative, he made a very determined attack with his division," and was driven back. "Too late for united action, Kearney was sent to Hooker's

assistance, and he also suffered repulse. Meanwhile, Pope had learnt the position of Porter's command, and, at half-past four in the afternoon, sent orders to that officer to assail the enemy's right flank and rear,—Pope erroneously believing the right flank of Jackson, near Groveton, to be the right of the Confederate line. Towards six, when he thought Porter should be coming into action, he directed Heintzelman and Rebo to assault the enemy's left. The attack was made with vigor, especially by Kearney," but the enemy brought up heavy reserves and repelled the assault. "Turning now to the left, where Porter was to have assailed the Confederate left [right], it appears that the order which Pope sent at half-past four did not reach Porter till about dusk. He then made dispositions for attack, but it was too late. It is, however, more than doubtful that, even had the order been received in time, any thing but repulse would have resulted from its execution. . . . Contrary to Pope's opinion, he [Porter] had then, and had had since noon, Longstreet's entire corps before him. So, as firing now died away in the darkling woods on the right, a pause was put for the day to the chaos and confusion of this mismanaged battle [known as the battle of Groveton], in which many thousand men had fallen on the Union side. It would have been judicious for General Pope, in the then condition of his army, to have that night withdrawn across Bull Run and taken position at Centreville, or even within the fortifications of Washington. By doing so he would have united with the corps of Franklin and Sumner, then between Washington and Centreville. . . . With untimely obstinacy, Pope determined to remain and again try the issue of battle. To utilize Porter's corps, he drew it over from the isolated position it held the previous day to the Warrenton road. . . . Now, by one of those curious conjunctures which sometimes occur in battle, it so was that the opposing commanders had that day formed each the same resolution: Pope had determined to attack Lee's left flank, and Lee had determined to attack Pope's left flank. And thus it came about that when Heintzelman pushed forward to feel the enemy's left, the refusal of that flank by Lee, and his withdrawal of troops to his right for the purpose of making his contemplated attack on Pope's left, gave the impression that the Confederates were retreating up the Warrenton turnpike towards Gainesville. . . . Pope . . . telegraphed to Washington that the enemy was 'retreating to the mountains,'—a dispatch which, flashed throughout the land, gave the people a few hours, at least, of unmixed pleasure. To take advantage of the supposed 'retreat' of Lee, Pope ordered McDowell with three corps—Porter's in the advance—to follow up rapidly on the Warrenton turnpike, and 'press the enemy vigorously during the whole day.' But no sooner were the troops put in motion to make this pursuit of a supposed flying foe, than the Confederates, hitherto concealed in the forest in front of Porter, uncovered themselves." The result of this misdirected movement was a fatal check, Porter's troops being fearfully cut up and driven back. "Jackson immediately took up the pursuit, and was joined by a general advance of the whole Confederate line—Longstreet extending his right so as, if possible, to cut off the retreat of the Union

forces." In this attempt, however, he was foiled, and "under cover of the darkness the wearied troops retired across Bull Run, by the stone bridge, and took position on the heights of Centreville. Owing to the obscurity of the night, and the uncertainty of the fords of Bull Run, Lee attempted no pursuit." The engagement of this day is called the Second Battle of Bull Run, or the Second Battle of Manassas, as it was named by the Confederate victors. "At Centreville, Pope united with the corps of Franklin and Sumner, and he remained there during the whole of the 31st. But Lee had not yet given up the pursuit. Leaving Longstreet on the battle-field, he sent Jackson by a detour on Pope's right, to strike the Little River turnpike, and by that route to Fairfax Courthouse, to intercept, if possible, Pope's retreat to Washington. Jackson's march was much retarded by a heavy storm that commenced the day before and still continued. Pope, meantime, fell back to positions covering Fairfax Courthouse and Germantown; and on the evening of the 1st of September, Jackson struck his right, posted at Ox Hill." The short but severe action which then occurred (called the battle of Chantilly) was indecisive. Jackson's attack was repelled, but the repulse cost the lives of two excellent officers of high rank and reputation, Generals Kearney and Stevens, besides many men. "On the following day, September 2d, the army was, by order of General Halleck, drawn back within the lines of Washington."—W. Swinton, *Campaigns of the Army of the Potomac*, pp. 184-193.—"The Second Battle of Bull Run . . . was a severe defeat for General Pope; but it was nothing else. It was not a rout, nor anything like a rout. . . . Lee claims to have captured in these engagements 30 pieces of artillery and 7,000 un wounded prisoners."—J. C. Hopes, *The Army under Pope (Campaigns of the Civil War, v. 4), ch. 8-11.*

A. D. 1862 (September: Maryland).—Lee's first invasion: His cold reception and disappointment.—"The defeat of General Pope opened the way for movements not contemplated, probably, by General Lee, when he marched from Richmond. . . . He accordingly determined to advance into Maryland—the fortifications in front of Washington, and the interposition of the Potomac, a broad stream easily defended, rendering a movement in that direction unpromising. On the 3d of September, therefore, and without waiting to rest his army, which was greatly fatigued with the nearly continuous marching and fighting since it had left the Rapidan, General Lee moved toward Leesburg, crossed his forces near that place, and to the music of the bands playing the popular air, 'Maryland, my Maryland,' advanced to Frederick City, which he occupied on the 7th of September. Lee's object in invading Maryland has been the subject of much discussion. . . . It can only be said that General Lee, doubtless, left the future to decide his ultimate movements; meanwhile he had a distinct and clearly-defined aim, which he states in plain words. His object was

to draw the Federal forces out of Virginia. . . . The condition of affairs in Maryland, General Lee says, 'encouraged the belief that the presence of our army, however inferior to that of the enemy, would induce the Washington Government to retain all its available force to provide for contingencies which its course toward the people of that State gave it reason to apprehend,' and to cross the Potomac 'might afford us an opportunity to aid the citizens of Maryland in any efforts they might be disposed to make to recover their liberty.' It may be said, in summing up on this point, that Lee expected volunteers to enroll themselves under his standard, tempted to do so by the hope of throwing off the yoke of the Federal Government, and the army certainly shared this expectation. The identity of sentiment generally between the people of the States of Maryland and Virginia, and their strong social ties in the past, rendered this anticipation reasonable, and the feelings of the country at the result afterward was extremely bitter. Such were the first designs of Lee; his ultimate aim seems as clear. By advancing into Maryland and threatening Baltimore and Washington, he knew that he would force the enemy to withdraw all their troops from the south bank of the Potomac, where they menaced the Confederate communications with Richmond; when this was accomplished, as it clearly would be, his design was, to cross the Maryland extension of the Blue Ridge, called there the South Mountain, advance by way of Hagerstown into the Cumberland Valley, and, by thus forcing the enemy to follow him, draw them to a distance from their base of supplies, while his own communications would remain open by way of the Shenandoah Valley. . . . The Southern army was concentrated in the neighborhood of Frederick City by the 7th of September, and on the next day General Lee issued an address to the people of Maryland. . . . This address, couched in terms of such dignity, had little effect upon the people. Either their sentiment in favor of the Union was too strong, or they found nothing in the condition of affairs to encourage their Southern feelings. A large Federal force was known to be advancing; Lee's army, in tatters, and almost without supplies, presented a very uninviting appearance to recruits, and few joined his standard, the population in general remaining hostile or neutral. . . . Lee soon discovered that he must look solely to his own men for success in his future movements. He faced that conviction courageously; and, without uttering a word of comment, or indulging in any species of crimination against the people of Maryland, resolutely commenced his movements looking to the capture of Harper's Ferry and the invasion of Pennsylvania."—J. E. Cooke, *Life of Robert E. Lee*, pt. 5, ch. 1-2.

ALSO IN: A. L. Long, *Memoirs of Robert E. Lee*, ch. 12.

A. D. 1862 (September: Maryland).—Lee's first invasion: Harper's Ferry.—South Mountain.—Antietam.—"On the 2d of September the President went to General McClellan's house in Washington, asked him to take command again of the Army of the Potomac, in which Pope's army had now been merged, and verbally authorized him to do so at once. The first thing that McClellan wanted was the withdrawal of Miles's force, 11,000 men, from Harper's Ferry—where, he said, it was useless and helpless—and its ad-

dition to his own force. All authorities agree that in this he was obviously and unquestionably right; but the marplot hand of Halleck intervened, and Miles was ordered to hold the place. Halleck's principal reason appeared to be a reluctance to abandon a place where so much expense had been laid out. Miles, a worthy subordinate for such a chief, interpreted Halleck's orders with absolute literalness, and remained in the town, instead of holding it by placing his force on the heights that command it. As soon as it was known that Lee was in Maryland, McClellan set his army in motion northward, to cover Washington and Baltimore and find an opportunity for a decisive battle. He arrived with his advance in Frederick on the 12th, and met with a reception in striking contrast to that accorded to the army that had left the town two days before. . . . But this flattering reception was not the best fortune that befell the Union army in Frederick. On his arrival in the town General McClellan came into possession of a copy of General Lee's order, dated three days before, in which the whole campaign was laid out. . . . General Lee had taken it for granted that Martinsburg and Harper's Ferry would be evacuated at his approach (as they should have been); and when he found they were not, he had so far changed or suspended the plan with which he set out as to send back a large part of his army to capture those places and not leave a hostile force in his rear." This was easily accomplished by Jackson and McLaws, the latter of whom took possession of the heights commanding the town, where Miles waited to be trapped. "A bombardment the next day compelled a surrender when Jackson was about to attack. General Miles was mortally wounded by one of the last shots. About 11,000 men were included in the capitulation, with 73 guns. . . . Jackson, leaving the arrangements for the surrender to A. P. Hill, hurried with the greater part of his force to rejoin Lee, and reached Sharpsburg on the morning of the 16th. The range known as the South Mountain, which is a continuation of the Blue Ridge north of the Potomac, is about 1,000 feet high. The two principal gaps are Turner's and Crampton's, each about 400 feet high, with the hills towering 600 feet above it. When McClellan learned the plans of the Confederate commander, he set his army in motion to thwart them. He ordered Franklin's corps to pass through Crampton's Gap and press on to relieve Harper's Ferry; the corps of Reno and Hooker, under command of Burnside, he moved to Turner's Gap. The movement was quick for McClellan, but not quite quick enough for the emergency. He might have passed through the Gaps on the 13th with little or no opposition, and would then have had his whole army between Lee's divided forces, and could hardly have failed to defeat them disastrously and perhaps conclusively. But he did not arrive at the passes till the morning of the 14th; and by that time Lee had learned of his movement and recalled Hill and Longstreet, from Boonsboro and beyond, to defend Turner's Gap, while he ordered McLaws to look out for Crampton's. . . . There was stubborn and bloody fighting all day, with the Union forces slowly but constantly gaining ground, and at dark the field was won," at both the passes. The two engagements were called the battle of South

Mountain by the Federals, the Battle of Boonsboro by the Confederates. At Turner's Gap there was a loss of about 1,500 on each side, and 1,500 Confederates were made prisoners; at Crampton's Gap, the loss in killed and wounded was some 500 on each side, with 400 Confederate prisoners taken. The Union army had forced the passage of the mountains, but Lee had gained time to unite his scattered forces. "He withdrew across the Antietam, and took up a position on high ground between that stream and the village of Sharpsburg. . . . Lee now had his army together and strongly posted. But it had been so reduced by losses in battle and straggling that it numbered but little over 40,000 combatants. . . . McClellan had somewhat over 70,000 men. . . . The ground occupied by the Confederate army, with both flanks resting on the Potomac, and the Antietam flowing in front, was advantageous. The creek was crossed by four stone bridges and a ford, and all except the northernmost bridge were strongly guarded. The land was occupied by meadows, cornfields, and patches of forest, and was much broken by outcropping ledges. McClellan only reconnoitered the position on the 15th. On the 16th he developed his plan of attack, which was simply to throw his right wing across the Antietam by the upper and unguarded bridge, assail the Confederate left, and when this had sufficiently engaged the enemy's attention and drawn his strength to that flank, to force the bridges and cross with his left and centre. . . . All day long an artillery duel was kept up. . . . It was late in the afternoon when Hooker's corps crossed by the upper bridge, advanced through the woods, and struck the left flank, which was held by two brigades of Hood's men. Scarcely more than a skirmish ensued, when darkness came on, and the lines rested for the night where they were." At sunrise, next morning, Hooker assaulted Jackson and was seriously wounded in the fighting which followed. Sumner's corps finally joined in the attack, and all the forenoon the battle was desperate in that part of the field. "But while this great struggle was in progress on McClellan's right, his centre and left, under Porter and Burnside, did not make any movement to assist. At noon Franklin arrived from Crampton's Gap, and was sent over to help Hooker and Sumner, being just in time to check a new advance by more troops brought over from the Confederate right. At eight o'clock in the morning Burnside had been ordered to carry the bridge in his front, cross the stream, and attack the Confederate right. But, though commanded and urged repeatedly, it was one o'clock before he succeeded in doing this, and two more precious hours passed away before he had carried the ridge commanding Sharpsburg and captured the Confederate battery there. Then came up the last division of Lee's forces (A. P. Hill's) from Harper's Ferry, 2,000 strong, united with the other forces on his left, and drove Burnside from the crest and re-took the battery. Here ended the battle; not because the day was closed, or any apparent victory had been achieved, but because both sides had been so severely punished that neither was inclined to resume the fight. Every man of Lee's force had been actively engaged, but not more than two thirds of McClellan's. The reason why the Confederate army was not annihilated or captured must be plain to

any intelligent reader. . . . General McClellan reported his entire loss at 12,469, of whom 2,010 were killed. General Lee reported his total loss in the Maryland battles as 1,567 killed and 8,724 wounded, saying nothing of the missing; but the figures given by his division commanders foot up 1,842 killed, 9,399 wounded, and 2,292 missing—total 14,533. . . . Nothing was done on the 18th, and when McClellan determined to renew the attack on the 19th, he found that his enemy had withdrawn from the field and crossed to Virginia by the ford at Shepherdstown. The National commander reported the capture of more than 6,000 prisoners, 13 guns, and 39 battle-flags, and that he had not lost a gun or a color. As he was also in possession of the field . . . and had rendered Lee's invasion fruitless of anything but the prisoners carried off from Harper's Ferry, the victory was his."—R. Johnson, *Short Hist. of the War of Secession*, ch. 12.

A. D. 1862 (September).—President Lincoln's Preliminary Proclamation of Emancipation, and the attitude of Northern parties on the Slavery question.—Abraham Lincoln "believed that without the Union permanent liberty for either race on this continent would be impossible. And because of this belief, he was reluctant, perhaps more reluctant than most of his associates, to strike slavery with the sword. For many months, the passionate appeals of millions of his associates seemed not to move him. He listened to all the phases of the discussion, and stated in language clearer and stronger than any opponent had used, the dangers, the difficulties, and the possible futility of the act. In reference to its practical wisdom, Congress, the Cabinet, and the country were divided. Several of his generals had proclaimed the freedom of slaves within the limits of their commands. The President revoked their proclamations. His first Secretary of War had inserted a paragraph in his annual report advocating a similar policy. The President suppressed it. On the 19th of August, 1862, Horace Greeley, published a letter addressed to the President, entitled 'The Prayer of Twenty Millions,' in which he said, 'On the face of this wide earth, Mr. President, there is not one disinterested, determined, intelligent champion of the Union cause who does not feel that all attempts to put down the rebellion and at the same time uphold its inciting cause are preposterous and futile.' To this the President responded in that ever-memorable reply of August 22, in which he said:—'If there be those who would not save the Union unless they could at the same time save slavery, I do not agree with them. If there be those who would not save the Union unless they could at the same time destroy slavery, I do not agree with them. My paramount object is to save the Union, and not either to save or to

destroy slavery. If I could save the Union without freeing any slave, I would do it. If I could save it by freeing all the slaves, I would do it,—and if I could do it by freeing some and leaving others alone, I would also do that. What I do about slavery and the colored race, I do because I believe it helps to save the Union; and what I forbear, I forbear because I do not believe it would help to save the Union. I shall do less whenever I shall believe that what I am doing hurts the cause, and I shall do more whenever I believe doing more will help the cause.' Thus, against all importunities on the one hand and remonstrances on the other, he took the mighty question to his own heart, and, during the long months of that terrible battle-summer, wrestled with it alone. But at length he realized the saving truth, that great unsettled questions have no ply for the repose of nations. On the 23d of September, he summoned his Cabinet to announce his conclusion. It was my good fortune, on that same day, and a few hours after the meeting, to hear, from the lips of one who participated, the story of the scene. As the chiefs of the Executive Departments came in, one by one, they found the President reading a favorite chapter from a popular humorist. He was lightening the weight of the great burden which rested upon his spirit. He finished the chapter, reading it aloud. And here I quote, from the published Journal of the late Chief Justice, an entry, written immediately after the meeting, and bearing unmistakable evidence that it is almost a literal transcript of Lincoln's words: 'The President then took a graver tone and said: "Gentlemen I have, as you are aware, thought a great deal about the relation of this war to slavery; and you all remember that, several weeks ago, I read to you an order I had prepared upon the subject, which, on account of objections made by some of you, was not issued. Ever since then my mind has been much occupied with this subject, and I have thought all along that the time for acting on it might probably come. I think the time has come now. I wish it was a better time. I wish that we were in a better condition. The action of the army against the rebels has not been quite what I should have best liked. But they have been driven out of Maryland, and Pennsylvania is no longer in danger of invasion. When the rebel army was at Frederick, I determined as soon as it should be driven out of Maryland to issue a proclamation of emancipation, such as I thought most likely to be useful. I said nothing to any one, but I made a promise to myself and (hesitating a little) to my Maker. The rebel army is now driven out, and I am going to fulfill that promise. I have got you together to hear what I have written down. I do not wish your advice about the main matter, for that I have determined for myself. This I say without intending anything but respect for any one of you. But I already know the views of each on this question. They have been heretofore expressed, and I have considered them as thoroughly and carefully as I can. What I have written is that which my reflections have determined me to say. If there is anything in the expressions I use, or in any minor matter which any of you thinks had best be changed, I shall be glad to receive your suggestions. One other observation I will make I know very well that many others might, in

this matter as in others, do better than I can; and if I was satisfied that the public confidence was more fully possessed by any one of them than by me, and knew of any constitutional way in which he could be put in my place, he should have it. I would gladly yield it to him. But though I believe I have not so much of the confidence of the people as I had some time since, I do not know that, all things considered, any other person has more; and, however this may be, there is no way in which I can have any other man put where I am. I am here. I must do the best I can and bear the responsibility of taking the course which I feel I ought to take." The President then proceeded to read his Emancipation Proclamation, making remarks on the several parts as he went on, and showing that he had fully considered the subject in all the lights under which it had been presented to him.' The Proclamation was amended in a few matters of detail. It was signed and published that day."—J. A. Garfield, *Works*, v. 2, pp. 538-540.—"I was alone with Mr. Lincoln more than two hours of the Sunday next after Pope's defeat in August, 1862. That was the darkest day of the sad years of the war. . . . When the business to which I had been summoned by the President was over—strange business for the time: the appointment of assessors and collectors of internal revenue—he was kind enough to ask my opinion as to the command of the army. The way was thus opened for conversation, and for me to say at the end that I thought our success depended upon the emancipation of the slaves. To this he said: 'You would not have it done now, would you? Must we not wait for something like a victory?' This was the second and most explicit intimation to me of his purpose in regard to slavery. In the preceding July or early in August, at an interview upon business connected with my official duties, he said, 'Let me read two letters,' and taking them from a pigeon-hole over his table he proceeded at once to do what he had proposed. I have not seen the letters in print. His correspondent was a gentleman in Louisiana, who claimed to be a Union man. He tendered his advice to the President in regard to the reorganization of that State, and he labored zealously to impress upon him the dangers and evils of emancipation. The reply of the President is only important from the fact that when he came to that part of his correspondent's letter he used this expression: 'You must not expect me to give up this government without playing my last card.' Emancipation was his last card. He waited for the time when two facts or events should coincide. Mr. Lincoln was as devoted to the Constitution as was ever Mr. Webster. In his view, a military necessity was the only ground on which the overthrow of slavery in the States could be justified. Next, he waited for a public sentiment in the loyal States not only demanding emancipation but giving full assurance that the act would be sustained to the end. As for himself, I cannot doubt that he had contemplated the policy of emancipation for many months, and anticipated the time when he should adopt it."—G. S. Boutwell, *Reminiscences of Abraham Lincoln by Distinguished Men of his Time*, pp. 123-125.—"It was after all efforts for voluntary emancipation by the states interested, with pecuniary aid from the national treasury,

had failed [that the President determined to decree emancipation in the rebellious states by a military order]. To Mr. Seward and myself the President communicated his purpose, and asked our views, on the 13th of July 1862. It was the day succeeding his last unsuccessful and hopeless conference with the representatives in Congress from the border slave states, at a gloomy period of our affairs, just after the reverses of our armies under McClellan before Richmond. The time, he said, had arrived when we must determine whether the slave element should be for or against us. Mr. Seward . . . was appalled and not prepared for this decisive step, when Mr. Lincoln made known to us that he contemplated, by an executive order, to emancipate the slaves. Startled with so broad and radical a proposition, he informed the President that the consequences of such an act were so momentous that he was not prepared to advise on the subject without further reflection. . . . While Mr. Seward hesitated and had the subject under consideration, the President deliberately prepared his preliminary proclamation, which met the approval, or at least the acquiescence, of the whole Cabinet, though there were phases of opinion not entirely in accord with the proceedings. Mr. Blair, an original emancipationist, and committed to the principle, thought the time to issue the order inopportune, and Mr. Bates desired that the deportation of the colored race should be coincident with emancipation. Aware that there were shades of difference among his counsellors, and hesitation and doubt with some, in view of the vast responsibility and its consequences, the President devised his own scheme, held himself alone accountable for the act, and, unaided and unassisted, prepared each of the proclamations of freedom."—G. Wells, *Lincoln and Seward*, pp. 210-212.—The preliminary or monitory Proclamation of Emancipation, issued on the 23d of September, 1862, was as follows:

"I, Abraham Lincoln, President of the United States of America, and Commander-in-Chief of the Army and Navy thereof, do hereby proclaim and declare that hereafter, as heretofore, the war will be prosecuted for the object of practically restoring the constitutional relations between the United States and each of the States and the people thereof, in which States that relation is or may be suspended or disturbed. That it is my purpose, upon the next meeting of Congress, to again recommend the adoption of a practical measure, tendering pecuniary aid to the free acceptance or rejection of all the slave States, so-called, the people whereof may not then be in rebellion against the United States, and which States may then have voluntarily adopted, or hereafter may voluntarily adopt, the immediate or gradual abolishment of slavery within their respective limits; and that the effort to colonize persons of African descent, with their consent, upon this continent or elsewhere, with the previously obtained consent of the governments existing there, will be continued. That on the first day of January, in the year of our Lord one thousand eight hundred and sixty-three, all persons held as slaves within any State, or designated part of a State, the people whereof shall then be in rebellion against the United States, shall be then, thenceforward, and forever free; and the Executive Government of the United States, including the military and naval author-

ities thereof, will recognize and maintain the freedom of such persons, and will do no act or acts to repress such persons, or any of them, in any efforts they may make for their actual freedom. That the Executive will, on the first day of January aforesaid, by proclamation, designate the States, or parts of States if any, in which the people thereof, respectively, shall then be in rebellion against the United States; and the fact that any State, or the people thereof, shall, on that day, be in good faith represented in the Congress of the United States by members chosen thereto at elections, wherein a majority of the qualified voters of such State shall have participated, shall, in the absence of strong countervailing testimony, be deemed conclusive evidence that such State, and the people thereof, are not then in rebellion against the United States." Then, after reciting the language of 'An act to make an additional article of war,' approved March 13, 1862, and also sections 9 and 10 of the Confiscation Act, approved July 17, 1862, and enjoining their enforcement upon all persons in the military and naval service, the proclamation concludes: 'And I do hereby enjoin upon and order all persons engaged in the military and naval service of the United States to observe, obey, and enforce, within their respective spheres of service, the acts and sections above recited. And the Executive will, in due time, recommend that all citizens of the United States, who shall have remained loyal thereto throughout the rebellion, shall, upon the restoration of the constitutional relations between the United States and the people, if that relation shall have been suspended or disturbed, be compensated for all losses by acts of the United States, including the loss of slaves.'"—J. G. Nicolay and J. Hay, *Abraham Lincoln*, v. 6, ch. 6 and 8.

A. D. 1862 (September—October: Mississippi).—Union successes under Grant.—Iuka and Corinth.—"In July, Pope was ordered to Virginia, and on the 17th of that month Halleck was assigned to the command of all the armies, superseding McClellan. He repaired at once to Washington, and Grant was directed to establish his headquarters at Corinth. Grant's jurisdiction was not, however, enlarged by the promotion of Halleck: on the contrary, the new general-in-chief first offered the command of the Army of the Tennessee to Colonel Robert Allen, a quarter-master, who declined it, whereupon it was allowed to remain under Grant. He was, however, left somewhat more independent than while Halleck had been immediately present in the field. Four divisions of his army (including Thomas's command), were within the next two months ordered to Buell, who was stretching out slowly, like a huge, unwieldy snake, from Eastport to Decatur, and from Decatur towards Chattanooga. This subtraction put Grant entirely on the defensive. He had possession of Corinth, the strategic point, but was obliged to hold the railroads from that place and Bolivar, north to Columbus, which last, on account of the low water in the Tennessee, he had made his base of supplies. . . . He remained himself eight weeks at Corinth, narrowly watching the enemy, who, commanded by U. S. Dorn and Price, harassed and threatened him continually.

During this time, he directed the strengthening and remodeling of the fortifications of Corinth. . . . New works, closer to the town, were . . . erected. . . . Van Dorn at last determined to move part of his force (under Price), east of Grant, apparently with a view to crossing the Tennessee and reinforcing Bragg in the Kentucky campaign. Grant notified Halleck of the probability of such a movement, and of his intention to prevent it. . . . On the 13th [of September], Price advanced from the south and seized Iuka, 21 miles east of Corinth. . . . Grant had called in his forces some days before to the vicinity of Corinth, had repeatedly cautioned all his commanders to hold their troops in readiness, and when the enemy's cavalry moved towards Iuka, and cut the railroad and telegraph wires between that place and Burnsville, seven miles to the westward, Grant began his operations. Price was at Iuka, and Van Dorn four days off, to the southwest, threatening Corinth. Grant's object was to destroy Price, before the two could concentrate, and then to get back to Corinth and protect it against Van Dorn. He accordingly ordered Brigadier-General Rosecrans, whose troops were posted south of Corinth, to move by way of Rienzi, along the south side of the Memphis and Charleston Railroad, and attack Iuka from that direction; while Major-General Ord, with a force brought hurriedly from Bolivar and Jackson, was to push towards Burnsville, and from there take roads on the north side of the railroad, attacking Iuka from that quarter. Ord had 8,000 men, and Rosecrans reported 9,000, a greater force combined than Price had, according to Grant's estimate." Rosecrans's movement was delayed, and he was attacked (September 19) in heavy force as he neared Iuka, Ord's advance having been held back waiting for him. He kept his ground, but lost in the action a battery of artillery, besides 736 men, killed and wounded. That night the enemy retreated from Iuka, over a road which Rosecrans was expected to occupy, but did not. "By the battle of Iuka, the enemy was simply checked in his plans, not seriously crippled in his force. Price moved around by a circuitous route and joined Van Dorn, and the same state of affairs continued which had annoyed Grant for so many weeks. He put Rosecrans in command at Corinth, and Ord at Bolivar, and on the 23d of September removed his own headquarters to Jackson, from which point he could communicate more readily with all points of his district, including Memphis and Cairo. The rebels were in force at La Grange and Ripley. . . . At last it was rendered certain . . . that Corinth was to be the place of attack. Grant thereupon directed Rosecrans to call in his forces, and sent Brigadier-General McPherson to his support from Jackson, with a brigade of troops." He also "hurried Ord and Hurlbut by way of Pocahontas from Bolivar, 44 miles away, to be ready to strike Van Dorn in flank or rear, as he advanced, and at least to create a diversion, if they could not get into the town. On the 2d of October the rebel army, under Van Dorn, Price, Lovell, Villepigue, and Rust, appeared in front of Corinth. . . . On the 3d the fighting began in earnest. Rosecrans had about 19,000 men, and the enemy had collected 38,000 for this important movement, which was to determine the possession of northern Missis-

sippi and West Tennessee. Rosecrans pushed out about five miles, towards Chewnla, Grant having ordered him to attack, if opportunity offered; but the enemy began the fight, and, on the afternoon of the 3d, the battle turned in favor of Van Dorn. Rosecrans was driven back to his defences on the north side of Corinth, and it was now found how important was the labor bestowed on these fortifications, by Grant's order, a month previous. The enemy was checked until morning; but, early on the 4th, the whole rebel army, flushed with the success of the day before, assaulted the works. The fighting was fierce; the rebels charging almost into the town, when an unexpected fire from the forts drove them back in confusion. Again and again, they advanced to the works, but each time were received with a determination equal to their own. Once, the national troops came near giving way entirely, but Rosecrans rallied them in person, and the rebels were finally repulsed before noon, with a loss admitted by themselves to be double that of Rosecrans. The national loss was 315 killed, 1,812 wounded, and 232 prisoners and missing. Rosecrans reported the rebel dead at 1,423, and took 2,225 prisoners. . . . The repulse was complete, by 11 o'clock in the morning, but unfortunately was not followed up by Rosecrans, till the next day. The rebels, however, started off in haste and disorder immediately after the fight; and on the 5th, while in full retreat, were struck in flank, as Grant had planned, by Hurlbut and Ord, and the disaster was rendered final. This occurred early on the morning of the 5th, at the crossing of the Hatchie river, about ten miles from Corinth. . . . A battery of artillery and several hundred men were captured, and the advance was dispersed or drowned. . . . Had Rosecrans moved promptly the day before, he would have come up in the rear of Van Dorn, either as he was fighting Ord, or while attempting to pass this defile [six miles up the stream, where Van Dorn feebly made his crossing]. In either event, the destruction of the rebels must have been complete. . . . These two fights relieved the command of West Tennessee from all immediate danger."—A. Badeau, *Military Hist. of Ulysses S. Grant*, v. 1, ch. 4.—"Satisfied that the enemy was retreating [on the 4th], I ordered Sullivan's command to push him with a heavy skirmish line, and to keep constantly feeling them. I rode along the lines of the commands, told them that, having been moving and fighting for three days and two nights, I knew they required rest, but that they could not rest longer than was absolutely necessary. I directed them to proceed to their camps, provide five days' rations, take some needed rest, and be ready early next morning for the pursuit."—W. S. Rosecrans, *The Battle of Corinth (Battles and Leaders*, v. 2), p. 753.

A. D. 1862 (September—December: Missouri—Arkansas).—Social demoralizations of the Civil War.—Battle of Prairie Grove.—"The dispersion and suppression of the guerrilla bands [in Missouri] did not serve wholly to terminate local disturbances and offenses. The restraints of a common public opinion no longer existed. Neighborhood good-will had become changed to neighborhood hatred and feud. Men took advantage of the license of war to settle personal grudges by all the violations of law, varying from petty theft to assassination; and

parallel with this thirst for private revenge was the cupidity which turned crime into a source of private gain. . . . A rearrangement of military command appears in an order of the President under date of September 19, 1862, directing that Missouri, Arkansas, Kansas, and the bordering Indian Territory should constitute a new department to be called the Department of the Missouri, to be commanded by Major-General Samuel R. Curtis. . . . This new arrangement served to change the relative positions of Schofield and Curtis. The former, gathering what troops he could, took the field in a campaign towards Southwest Missouri to meet the expected invasion from Arkansas, while the latter, recalled from a short leave of absence, came to St. Louis (September 24, 1862) to take up his headquarters and assume the general administration of the new Department of the Missouri. . . . The difficulties in the military situation had grown primarily out of the error of Halleck. . . . In postponing the opening of the Mississippi River. When, in the spring and summer of 1862, Halleck abandoned all thought of pursuing that primo and comprehensive object, and left Vicksburg to grow up into an almost impregnable Confederate citadel, he blighted the possibility of successful Union campaigns on both sides of the great river. . . . From the midsummer of 1862, therefore, until the fall of Vicksburg in midsummer of 1863, military campaigning in the trans-Mississippi country ceases to have any general significance. . . . The only action of importance which marks the military administration of Curtis was the battle of Prairie Grove in the northwest corner of Arkansas, where on the 7th of December the detachments respectively commanded by the Union generals James G. Blunt (who had been hovering all summer along the border of Kansas) and Francis J. Herron, who, finding Blunt pressed by the enemy coming northward with a view of entering Missouri, advanced by forced marches from near Springfield and formed a junction with Blunt just in the nick of time to defeat the Confederates under General Hindman. The losses on each side were about equal, and on the day following the engagement the Confederates retreated southward across the protecting barrier of the Boston Mountains. It was in diminished degree a repetition of the battle of Pea Ridge, fought in the preceding March within 20 or 30 miles of the same place. . . . So effectually did this engagement serve to scatter the rebel forces that Schofield reported January 31, 1863, 'There is no considerable force of the enemy north of the Arkansas River; indeed I believe they have all gone or are going, as rapidly as possible, to Vicksburg. Ten thousand infantry and artillery can be spared from Southern Missouri and Northern Arkansas.'—J. G. Nicolay and J. Hay, *Abraham Lincoln*, v. 6, ch. 18.

ALSO IN: W. Baxter, *Pea Ridge and Prairie Grove*.—O. J. Victor, *Hist. of the Southern Rebellion*, div. 10, ch. 4 (v. 3).—W. Britton, *Memoirs of the Rebellion on the Border*, ch. 1.

A. D. 1862 (October—December—Virginia).—The final removal of McClellan.—Burnside at Fredericksburg.—'Both armies . . . felt the need of some repose; and, glad to be freed from each other's presence, they rested on their arms—the Confederates in the Shenandoah Valley, in the vicinity of Winchester, and the army of the Potomac near the scene of its late

exploits, amid the picturesque hills and vales of Southwestern Maryland. The movement from Washington into Maryland to meet Lee's invasion was defensive in its purpose, though it assumed the character of a defensive-offensive campaign. Now that this had been accomplished and Lee driven across the frontier, it remained to organize on an adequate scale the means of a renewal of grand offensive operations directed at the Confederate army and towards Richmond. The completion of this work, including the furnishing of transportation, clothing, supplies, etc., required upwards of a month, and during this period no military movement occurred, with the exception of a raid into Pennsylvania by Stuart. About the middle of October, that enterprising officer, with twelve or fifteen hundred troopers, crossed the Potomac above Williamsport, passed through Maryland, penetrated Pennsylvania, occupied Chambersburg, where he burnt considerable government stores, and after making the entire circuit of the Union army, recrossed the Potomac below the mouth of the Monocacy. He was all the way closely pursued by Pleasonton with 800 cavalry. . . . On the recrossing of the Potomac by Lee after Antietam, McClellan hastened to seize the débouché of the Shenandoah Valley, by the possession of Harper's Ferry. . . . At first McClellan contemplated pushing his advance against Lee directly down the Shenandoah Valley, as he found that, by the adoption of the line east of the Blue Ridge, his antagonist, finding the door open, would again cross to Maryland. But this danger being removed by the coming of the season of high-water in the Potomac, McClellan determined to operate by the east side of the Blue Ridge, and on the 26th his advance crossed the Potomac by a ponton-bridge at Berlin, five miles below Harper's Ferry. By the 2d November the entire army had crossed at that point. Advancing due southward towards Warrenton, he masked the movement by guarding the passes of the Blue Ridge, and by threatening to issue through these, he compelled Lee to retain Jackson in the Valley. With such success was this movement managed, that on reaching Warrenton on the 9th, while Lee had sent half of his army forward to Culpepper to oppose McClellan's advance in that direction, the other half was still west of the Blue Ridge, scattered up and down the Valley, and separated from the other moiety by at least two days' march. McClellan's next projected move was to strike across obliquely westward and interpose between the severed divisions of the Confederate force; but this step he was prevented from taking by his sudden removal from the command of the Army of the Potomac, while on the march to Warrenton. Late on the night of November 7th, amidst a heavy snow-storm, General Buckingham, arriving post-haste from Washington, reached the tent of General McClellan at Rectortown. He was the bearer of the following dispatch, which he handed to General McClellan: . . . 'By direction of the President of the United States it is ordered that Major-General McClellan be relieved from the command of the Army of the Potomac, and that Major-General Burnside take the command of that army.' . . . It chanced that General Burnside was at the moment with him in his tent. Opening the dispatch and reading it, without a change of countenance or of voice,

McClellan passed over the paper to his successor, saying, as he did so: 'Well, Burnside, you are to command the army.' Thus ended the career of McClellan as head of the Army of the Potomac. . . . The moment chosen was an inopportune and an ungracious one; for never had McClellan acted with such vigor and rapidity — never had he shown so much confidence in himself or the army in him. And it is a notable fact that not only was the whole body of the army — rank and file as well as officers — enthusiastic in their affection for his person, but that the very general appointed as his successor was the strongest opponent of his removal."—W. Swinton, *Campaigns of the Army of the Potomac*, ch. 6, sect. 2-3. — "It is dangerous to shift commanders on the eve of battle, and our cavalry had already engaged the Confederates"; it is more dangerous to change the plans of troops moving in the vicinity of the enemy. But as if impelled to do some new thing . . . the new commander of the Army of the Potomac determined upon a flank movement by his left on the north of the river towards Fredericksburg. . . . Only by movements equally wary and rapid, as well as by sure means of crossing the river, could Burnside's manoeuvre possibly succeed. In this last element he counted on Halleck, and, of course, failed. The promised pontoons did not, and could scarcely have been expected to come. Arrived at Fredericksburg Burnside still might have crossed by the fords, for the water was low. And once in possession of the heights beyond the city he could afford to wait. But, slower than even his predecessor, Burnside sat down at Falmouth, on the north side of the river, while Lee, having learned of his movement, by forced marches concentrated his army on the opposite bank, and prepared to erect impregnable defences in his front. . . . Before Burnside got ready to take any active steps, Marye's Heights, back of Fredericksburg, had been crowned by a triple line of works, and Lee had brought together nearly 90,000 troops to man them. Two canals and a stone wall in front of the left, as well as open, sloping ground on both flanks, served to retain an attacking party for a long period under fire. To assault these works in front was simple madness. To turn them below necessitated the crossing of a wide and now swollen river, in the face of a powerful enemy in his immediate front. . . . To turn them above was practicable, but it was a confessed return to McClellan's plan. Burnside chose the first. Preparations for crossing were begun. The better part of three days [December 11-13] was consumed in throwing the bridges and putting over the two Grand Divisions of Franklin and Sumner, all of which was accomplished under fire. But Lee was by no means unwilling to meet the Army of the Potomac after this fashion. Such another happy prospect for him was not apt soon again to occur. He did not dispute the crossing in force. Burnside's one chance in a hundred lay in a concentrated assault sharply pushed home before the enemy could oppose an equal force. But in lieu of one well-sustained attack, or of two quite simultaneous, Burnside frittered away this single chance by putting in Franklin on the left and Sumner on the right, without concerted action." Both assaults were bloodily repulsed. "Hooker is ordered across. Under protest, and yet Hooker lacked not stomach for a fight, he

obeys the useless order, and lends his men into the slaughter pen. . . . All is in vain. Even the Army of the Potomac cannot do the impossible. The defeated troops are huddled into Fredericksburg, and gradually withdrawn across the river. Burnside was insane enough to wish to repeat the assault next day. But the counsels of his officers prevailed on him to desist. No such useless slaughter, with the exception, perhaps, of Cold Harbor, occurred during our war, and 13,000 men paid the penalty. The enemy's loss was but one in three of ours."—T. A. Dodge, *Bird's-Eye View of Our Civil War*, ch. 21.

A. D. 1862 (December: On the Mississippi). —The second attempt against Vicksburg.—General Sherman and Admiral Porter.—Mis- carriage of Grant's plans.—"Rear-Admiral Porter took command of the Mississippi squadron in October, 1862. . . . Up to this time the gun-boats had, strictly speaking, been under the control of the Army, but now all this was changed, and the Mississippi Squadron, like all the other naval forces, was brought directly under the supervision of the Secretary of the Navy. . . . The new arrangement left the commander of the squadron at liberty to undertake any expedition he thought proper, and he was not in the least hampered by any instructions from the Navy Department. . . . Before Admiral Porter left Washington he was informed by the President that General McClelland had been ordered to raise an Army at Springfield, Ill., to prosecute the siege of Vicksburg. The President expressed the hope that the rear-admiral would co-operate heartily with General McClelland in the operations to be carried on. But as Vicksburg never would have been taken if it had depended on General McClelland's raising an Army sufficient for the purpose, the Admiral, immediately on his arrival at Cairo, sent a message to General Grant, at Holly Springs, Miss., informing him of McClelland's intention; that he, Porter, had assumed command of the Mississippi Squadron, and was ready to cooperate with the Army on every occasion where the services of the Navy could be useful. A few days afterwards General Grant arrived at Cairo and proposed an expedition against Vicksburg, and asking the rear-admiral, if he could furnish a sufficient force of gun-boats, to accompany it. Grant's plan was to embark Sherman from Memphis, where he then was, with 30,000 soldiers, to be joined at Helena, Arkansas, by 10,000 more. Grant himself would march from Holly Springs with some 60,000 men upon Granada. General Pemberton would naturally march from Vicksburg to stop Grant at Granada, until reinforcements could be thrown into Vicksburg from the south, and while Pemberton was thus absent with the greater part of his Army, Sherman and Porter could get possession of the defences of Vicksburg. General Grant having been informed that the gun-boats would be ready to move at short

notice, and having sent orders to Sherman to put his troops aboard the transports as soon as the gun-boats arrived in Memphis, returned immediately to Holly Springs to carry out his part of the programme. . . . The expedition from Memphis got away early in December, 1862, Commander Walke, in the 'Carondelet,' being sent ahead with [three iron-clads and two so-called 'tin-clads'] . . . to clear the Yazoo River of torpedoes and cover the landing of Sherman's Army when it should arrive. This arduous and perilous service was well performed," but one of the iron-clads engaged in it, the *Cairo*, was sunk by a torpedo. "General Sherman moved his transports to a point on the river called Chickasaw Bayou without the loss of a man from torpedoes or sharpshooters, his landing [December 27] being covered in every direction by the gun-boats. Sherman first made a feint on Haines' Bluff, as if to attack the works, and then landed at Chickasaw Bayou. Owing to the late heavy rains he found the roads to Vicksburg heights almost impassable, and when he attempted to advance with his Army he was headed off by innumerable bayous, which had to be bridged, or corduroy roads built around them. It was killing work. Even at this time Vicksburg had been fortified at every point, and its only approaches by land led through dense swamps or over boggy open ground, where heavy guns were placed, so as to mow down an advancing Army. A general has seldom had so difficult a task assigned him, and there was little chance of Sherman's succeeding unless Pemberton had drawn off nearly all his forces to oppose Grant's advance on Granada. . . . Sherman and his Army overcame everything and at last reached terra firma. In the meanwhile the Navy was doing what it could to help the Army. . . . Grant had left Holly Springs with a large Army at the time he had appointed, merely with the design of drawing Pemberton from Vicksburg and thus helping Sherman in his attack on that place. . . . Grant moved towards Granada, and everything looked well; but the Confederate General, Earl Van Dorn, dashed into Holly Springs, 28 miles in the rear of the Union Army, capturing the garrison and all their stores. At the same time General Forrest pushed his cavalry into West Tennessee, cutting the railroad to Columbus at several points between that place and Jackson. . . . Due precautions had been taken to prevent this mishap by leaving a strong force behind at Holly Springs, but the commanding officer was not on the alert and his capture was a complete surprise. In this raid of the Confederates a million dollars' worth of stores were destroyed. Under the circumstances it was impossible for Grant to continue his march on Granada, which Pemberton perceiving, the latter returned to Vicksburg in time to assist in Sherman's repulse. . . . Sherman made all his arrangements to attack the enemy's works on the 29th of December, 1862, and the assault took place early on that day. One division succeeded in occupying the batteries on the heights, and hoped shortly to reach those commanding the city of Vicksburg, but the division that was to follow the advance was behind time and the opportunity was lost. A portion of Pemberton's Army had returned from Granada just in time to overwhelm and drive back the small force that had gained the hills. . . . The enemy did not

follow, being satisfied with driving our troops from the heights, and there was nothing left for Sherman to do but to get his Army safely back to the transports."—D. D. Porter, *Naval Hist. of the Civil War*, ch. 24.

A. D. 1862-1863 (December—January: Tennessee).—Bragg and Rosecrans.—The Battle of Stone River, or Murfreesborough.—"The Confederate government was greatly disappointed with the issue of Bragg's campaign. Scarcely had he reached Chattanooga when he was ordered to move northward again. Rosecrans, on assuming command of Buell's army, . . . concentrated his forces at Nashville, and there accumulated large supplies. . . . Bragg had already reached Murfreesborough on his second northward march from Chattanooga. Rosecrans had given out that it was his intention to take up his winter quarters at Nashville, and Bragg, supposing that this would be the case, sent out strong detachments of cavalry under Morgan and Forrest, the former being ordered to break Rosecrans's communications. As it was about the season of Christmas, Murfreesborough was the scene of much gaiety. . . . and the giddy Confederates danced on floors carpeted with the American flag. Suddenly, on the 26th of December, Rosecrans moved. His march commenced in a heavy rain. The Confederate outposts retired before his advance, the pressure upon them being so vigorous that they had not time to destroy the bridges on the Jefferson and Murfreesborough turnpikes. On the 30th, Bragg, finding he was about to be assailed, had concentrated his army a couple of miles in front of Murfreesborough. The position of the national army, which was 43,000 strong on the evening of that day, was on the west side of Stone River, a sluggish stream fringed with cedar brakes, and here flowing in a north-northwesterly course. The line ranged nearly north and south, and was three or four miles in length. Crittenden was on its left, with three divisions, Wood, Vaneleve, Palmer; Thomas in the centre, with two divisions, Negley and Rousseau, the latter in reserve; McCook on the right with three, Sheridan, Davis, Johnson. The left wing touched the river. . . . Bragg's army, 62,000, stood between Rosecrans and Murfreesborough. . . . Breckinridge's division formed his right, in his centre, under Polk, were two divisions, those of Withers and Cheatham; on his left, under Hardee, two divisions, Cleburne and McCown. The river separated Breckinridge from the rest of the Confederate army. Rosecrans had concentrated two thirds of his force on his left. His intention was that his right wing, standing on the defensive, should simply hold its ground; but his extreme left, the divisions of Wood and Vaneleve, crossing Stone River, should assail Breckinridge's division, exposed there, and seize the heights. . . . On his part, also, Bragg had determined to take the offensive. . . . Both intended to strike with the left, and therefore both massed their force on that wing. . . . In the dawn of the last day of the year (1862), while Rosecrans's left was rapidly crossing Stone River to make its expected attack, Bragg, with his left, had already anticipated him. Coming out of a fog which had settled on the battle-field, he fell

furiously upon Johnson's division, and so unexpectedly that two of its batteries were taken before a gun could be fired. The Confederate success was decisive. Johnson's division, which was on the extreme national right, was instantly swept away. Davis, who stood next, was assailed in front and on his uncovered flank. He made a stout resistance, but the shock was too great; he was compelled to give way, with the loss of many guns. And now the triumphant Confederate left, the centre also coming into play, rushed upon the next division—but that was commanded by Sheridan. Rosecrans's aggressive movement was already paralyzed; nay, more, it had to be abandoned. He had to withdraw his left for the purpose of saving his right and defending his communications. He must establish a new line. The possibility of doing this—the fate of the battle—rested on Sheridan." He held his ground for an hour, until "the cartridge-boxes of his men were empty. The time had come when even Sheridan must fall back. But, if he had not powder, he had steel. The fixed bayonets of his reserve brigade covered him, and he retired, unconquered and unshaken, out of the cedar thicket toward the Nashville road. In this memorable and most glorious resistance he had lost 1,630 men. 'Here's all that are left,' he said to Rosecrans, whom he had saved and now met. After Sheridan had been pushed back, there was nothing for Negley but to follow. . . . Meantime, on a knoll in the plain to which these divisions had receded, Rosecrans had massed his artillery. He was forming a new line, in which the army would face south-westwardly, with the Nashville turnpike on its rear." Against this new line the Confederates dashed themselves, desperately but vainly, four times that day, and were repelled with horrible slaughter. "Bragg, unwilling to be folled, now brought Breckinridge, who had hitherto been untouched, across the river to make a final attempt on Rosecrans's left flank with 7,000 fresh men. His first attack was repulsed; he made a second; it shared the same fate. So stood affairs when night came. . . . the closing night of 1862. On New Year's Day nothing was done; the two armies, breathless with their death-struggle, stood looking at each other. On January 2d Rosecrans was found, not retreating, but busily engaged in trying to carry out his original plan. He had made his position impregnable; he had thrown a force across Stone River, and, as he at first intended, was getting ready to crown with artillery the heights beyond the east bank. Hereupon Bragg brought Breckinridge back to his old position, ordering him to drive the enemy across the river—a task which that officer bravely tried, but only imperfectly accomplished, for the artillery on the opposite bank tore his division to pieces. In twenty minutes he lost 2,000 men. A violent storm prevented the renewal of the battle on the 3d. On that night Bragg, despairing of success, withdrew from Murfreesborough, retreating to Tullahoma. . . . In these dreadful battles the Confederates lost 14,700 men. On the national side there were killed 1,553, wounded more than 7,000, prisoners more than 3,000; more than one third of its artillery and a large portion of its train were taken. The losses were about one fourth of each army. Henceforth the Confederates abandoned all thought of crossing the Ohio

River."—J. W. Draper, *Hist. of the Am. Civil War*, ch. 53 (p. 2).—"The enemy in retreating did not fall back very far—only behind Duck River to Shelbyville and Tullahoma—and but little endeavor was made to follow him. Indeed, we were not in condition to pursue, even if it had been the intention at the outset of the campaign. . . . The victory quieted the fears of the West and Northwest, destroyed the hopes of the secession element in Kentucky, renewed the drooping spirits of the East Tennesseans, and demoralized the disunionists in Middle Tennessee; yet it was a negative victory so far as concerned the result on the battle-field. Rosecrans seems to have planned the battle with the idea that the enemy would continue passive, remain entirely on the defensive, and that it was necessary only to push forward our left in order to force the evacuation of Murfreesboro'. . . . Had Bragg followed up with the spirit which characterized its beginning the successful attack by Hardee on our right wing—and there seems no reason why he should not have done so—the army of Rosecrans still might have got back to Nashville, but it would have been depleted and demoralized."—P. G. Sheridan, *Personal Memoirs*, v. 1, ch. 12-14.

A. D. 1863 (January).—The final Proclamation of Emancipation.—The immediate practical effect of the warning Proclamation of Emancipation issued by President Lincoln on the 22d of September, 1862, "did, perhaps, more nearly answer the apprehensions of the President than the expectations of those most clamorous for it. It did, as charged, very much 'unite the South and divide the North.' The cry of 'the perversion of the war for the Union into a war for the negro' became the Democratic watchword, and was sounded everywhere with only too disastrous effect, as was plainly revealed by the fall elections with their large Democratic gains and Republican losses. Indeed, it was the opinion of Mr. Greeley that, could there have been a vote taken at that time on the naked issue, a large majority would have pronounced against emancipation. But Mr. Lincoln did not falter. Notwithstanding these discouraging votes at the North, and the refusal of any Southern State to avail itself of the proffered immunity and aid of his Proclamation of September, he proceeded, at the close of the hundred days of grace allowed by it, to issue his second and absolute Proclamation, making all the slaves of the Rebel States and parts of States forever and irreversibly free." It was in the following words:

"Whereas, on the twenty-second day of September, in the year of our Lord one thousand eight hundred and sixty-two, a proclamation was issued by the President of the United States, containing, among other things, the following, to wit: 'That on the first day of January, in the year of our Lord one thousand eight hundred and sixty-three, all persons held as slaves within any state, or designated part of a state, the people whereof shall then be in rebellion against the United States, shall be then, thenceforward, and forever free; and the Executive Government of the United States, including the military and naval authority thereof, will recognize and main-

tain the freedom of such persons, and will do no act or acts to repress such persons or any of them, in any efforts they may make for their actual freedom. That the Executive will, on the first day of January aforesaid, by proclamation, designate the states and parts of states, if any, in which the people thereof respectively shall then be in rebellion against the United States; and the fact that any state, or the people thereof, shall on that day be in good faith represented in the Congress of the United States, by members chosen thereto at elections wherein a majority of the qualified voters of such state shall have participated, shall, in the absence of strong countervailing testimony, be deemed conclusive evidence that such state, and the people thereof, are not then in rebellion against the United States.' Now, therefore, I, Abraham Lincoln, President of the United States, by virtue of the power in me vested as Commander-in-Chief of the army and navy of the United States, in time of actual armed rebellion against the authority and government of the United States, and as a fit and necessary war measure for suppressing said rebellion, do, on this first day of January, in the year of our Lord one thousand eight hundred and sixty-three, and in accordance with my purpose so to do, publicly proclaimed for the full period of one hundred days from the day first above mentioned, order and designate, as the states and parts of states wherein the people thereof respectively are this day in rebellion against the United States, the following, to wit: Arkansas, Texas, Louisiana (except the parishes of St. Bernard, Plaquemines, Jefferson, St. John, St. Charles, St. James, Ascension, Assumption, Terre Bonne, Lafourche, St. Mary, St. Martin, and Orleans, including the city of New Orleans), Mississippi, Alabama, Florida, Georgia, South Carolina, North Carolina, and Virginia (except the forty-eight counties designated as West Virginia, and also the counties of Berkeley, Accomac, Northampton, Elizabeth City, York, Princess Ann, and Norfolk, including the cities of Norfolk and Portsmouth), and which excepted parts are for the present left precisely as if this proclamation were not issued. And, by virtue of the power and for the purpose aforesaid, I do order and declare that all persons held as slaves within said designated states and parts of states are and henceforward shall be free; and that the Executive Government of the United States, including the military and naval authorities thereof, will recognize and maintain the freedom of said persons. And I hereby enjoin upon the people so declared to be free, to abstain from all violence, unless in necessary self-defense; and I recommend to them that, in all cases when allowed, they labor faithfully for reasonable wages. And I further declare and make known that such persons of suitable condition will be received into the armed service of the United States, to garrison forts, positions, stations, and other places, and to man vessels of all sorts in said service. And upon this act, sincerely believed to be an act of justice, warranted by the Constitution, upon military necessity, I invoke the considerate judgment of mankind and the gracious favor of Almighty God. In witness whereof, I have hereunto set my hand, and caused the seal of the United States to be affixed. Done at the city of Washington, this first day of January, in the year of our Lord one thousand eight hun-

dred and sixty-three, and of the Independence of the United States of America the eighty-seventh. Abraham Lincoln. By the President: William H. Seward, Secretary of State."

"Though the immediate effects of the Proclamation might not have answered all that was expected of it, it was not many months before its happy influences became manifest. Its tendency from the first was to unify and consolidate the antislavery and Christian sentiment of the land, to give dignity and consistency to the conflict. . . . It strengthened, too, the cause immensely with other nations, secured the sympathy and moral support of Christendom, and diminished, if it did not entirely remove, the danger of foreign intervention."—H. Wilson, *Hist. of the Rise and Fall of the Slave Power*, v. 3, ch. 28.—"Fame is due Mr. Lincoln, not alone because he decreed emancipation, but because events so shaped themselves under his guidance as to render the conception practical and the decree successful. Among the agencies he employed none proved more admirable or more powerful than this two-edged sword of the final proclamation, blending sentiment with force, leaguering liberty with Union, filling the voting armies at home and the fighting armies in the field. In the light of history we can see that by this edict Mr. Lincoln gave slavery its vital thrust, its mortal wound. It was the word of decision, the judgment without appeal, the sentence of doom."—J. G. Nicolay and J. Hay, *Abraham Lincoln*, v. 0, ch. 19.

A. D. 1863 (January: Arkansas).—The capture of Arkansas Post, or Fort Hindman.—Sherman withdrew his troops from the attempt against Vicksburg on the 2d of January, and on the 4th he relinquished the command to General McClernand, who had come down the river with orders to assume it. On that same day "the expedition sailed on the same transports that had brought them from Vicksburg, convoyed by Admiral Porter's fleet of gunboats, to attack Fort Hindman, commonly known as Arkansas Post, an old French settlement situated on the left or north bank of the Arkansas River, 50 miles from its mouth and 117 below Little Rock. . . . The expedition moved up the White River through the cut-off which unites its waters with those of the Arkansas, up the latter stream to Notrib's farm, three miles below Fort Hindman. . . . By noon on the 10th the landing was completed, and the troops were on the march to invest the post. . . . The gunboats opened a terrific fire upon the enemy during the afternoon, to distract his attention. By nightfall the troops were in position." Next morning a combined attack began, which the garrison endured until 4 o'clock P. M. when the white flag was raised. "Our entire loss in killed was 129; in wounded, 831; and in missing, 17; total, 977. . . . By the surrender there fell into our hands 5,000 men. . . . After sending the prisoners to St. Louis, having destroyed the defences and all buildings used for military purposes, on the 15th of January the troops re-embarked on the transports and proceeded to Napoleon, Arkansas, whence on the 17th . . . they returned to Milliken's Bend."—S. M. Bowman and R. B. Irwin, *Sherman and his Campaigns*, ch. 7-8.

A. D. 1863 (January—April: Virginia).—**Command given to Hooker.**—President Lincoln's Letter to him.—Demoralized state of the Army of the Potomac, and its improvement.—“General Burnside retired from a position he had never sought, to the satisfaction, and, he it said to his credit, with the warm personal regard of all. Sumner, whom the weight of years had robbed of strength, but not of gallantry, was relieved at his own request; Franklin was shelved. Hooker thus became senior general officer, and succeeded to the command. No man enjoyed a more enviable reputation in the Army of the Potomac. . . . His commands so far had been limited; and he had a frank, manly way of winning the hearts of his soldiers. He was in constant motion about the army while it lay in camp; his appearance always attracted attention; and he was as well known to almost every regiment as his own commander. He was a representative man. . . . Nothing shows more curiously a weak spot in Hooker's character than the odd pride he took in Mr. Lincoln's somewhat equivocal letter to him at the time of his appointment: . . . ‘I have placed you [wrote the President] at the head of the Army of the Potomac. Of course, I have done this upon what appears to me to be sufficient reasons, and yet I think it best for you to know that there are some things in regard to which I am not quite satisfied with you. I believe you to be a brave and skilful soldier, which of course I like. I also believe you do not mix politics with your profession, in which you are right. You have confidence in yourself; which is a valuable, if not an indispensable quality. You are ambitious, which, within reasonable bounds, does good rather than harm; but I think that, during General Burnside's command of the army, you have taken counsel of your ambition and thwarted him as much as you could, in which you did a great wrong to the country and to a most meritorious and honorable brother-officer. I have heard, in such a way as to believe it, of your recently saying that both the army and the Government needed a dictator. Of course, it was not for this, but in spite of it, that I have given you the command. Only those generals who gain success can set up dictators. What I now ask of you is military success, and I will risk the dictatorship. The Government will support you to the utmost of its ability, which is neither more nor less than it has done or will do for all commanders. I much fear that the spirit you have aided to infuse into the army, of criticising their commander and withholding confidence from him, will now turn upon you. I shall assist you as far as I can to put it down. Neither you nor Napoleon, if he were alive again, could get any good out of an army while such a spirit prevails in it. And now, beware of rashness! Beware of rashness, but with energy and sleepless vigilance go forward, and give us victories!’ . . . Hooker was appointed Jan. 26, 1863; and Burnside, with a few earnest words, took leave of the army. The troops received their new chief with a heartiness and confidence which, since McClellan's re-instatement, had not been equalled. Hooker was to all the soul and embodiment of the growth and history of this weather-beaten Army of the Potomac. And the salutary changes he at once began to make,—for Hooker never lacked the power of

organization—were accepted with alacrity; and a spirit of cheerful willingness succeeded speedily to what had been almost a defiant obedience. The army was in a lamentably low state of efficiency. Politics mingled with camp duties; and the disaffection of officers and men, coupled with an entire lack of confidence in the ability of the Army of the Potomac to accomplish anything, were pronounced. Desertions occurred at the rate of 200 a day. . . . Hooker states that he found 2,923 officers, and 81,964 enlisted men, entered as absent on the rolls of the army, a large proportion from causes unknown. Sharp and efficient measures were at once adopted, which speedily checked this alarming depletion of the ranks. . . . The testimony of all general officers of the Army of the Potomac concurs in awarding the highest praise to Hooker for the manner in which he improved the condition of the troops during the three months he was in command prior to Chancellorsville. . . . On the 30th of April the Army of the Potomac, exclusive of provost-guard, consisted of about 130,000 men under the colors,—‘for duty equipped,’ according to the morning report. . . . While the Army of the Potomac lay about Falmouth [opposite Fredericksburg], awaiting orders to move, Lee occupied the heights south of the Rappahannock, from Banks's Ford above to Port Royal (or Skunker's Neck), below Fredericksburg, a line some 15 miles in length as the crow flies. . . . Lee's forces numbered about 60,000 men, for duty.”—T. A. Dodge, *The Campaign of Chancellorsville*, ch. 3-4.

A. D. 1863 (January—April: On the Mississippi).—**Grant's Campaign against Vicksburg.**—Futile operations of the first four months.—“General Grant took personal command of the movement against Vicksburg on the 30th of January, 1863. . . . The first plan made was to dig a canal across the neck of land, or peninsula in front of Vicksburg,—below the city,—at a point where the isthmus was only a mile and a fifth in width. This had been begun before General Grant's arrival. If a canal could have been made large enough for large steamboats, then no matter how strong were the fortifications of Vicksburg, the boats would pass through, far away from their fire. So a canal ten feet wide and six deep was made here, in the hope that the freshets of the river would widen it, and so make it large enough for large steamers. But very little came of the canal. When the river did rise, it would not flow where it was meant to do. It flooded the camps of the workmen. Meanwhile the Rebels had made new batteries below it. Thus ended plan number one. Another similar plan, to open a route by Lake Providence and Bayou Baxter, Bayou Macon, and the Washita and Red River, did not succeed better. The canals attempted here were both on the west of the river. A very bold attempt was made on the east side, by what was known as the Yazoo Pass, into the Tallahatchee and Yazoo River. The expeditions sent out by this route would come out above Vicksburg; but it was hoped that thus the Rebel gunboats on the Yazoo River might be destroyed. If a practicable route were made here, the whole army could be moved to Haine's Bluff,—above Vicksburg,

—an upland region very desirable for occupation. But nothing came of this movement, though some hard work and some hard fighting were done in it. What resulted of importance was, that the troops found their way into the granary from which Vicksburg had been fed; and in the resistance, many of the Rebels were destroyed. In such attempts February and March passed away. Meanwhile Admiral Farragut, of the navy, ran by the Rebel batteries at Port Hudson, so that communication with Grant below Vicksburg,—and Grant could communicate with General Banks, who was trying to do at Port Hudson what Grant was trying to do above. The distance from Vicksburg to Port Hudson is about 120 miles in a straight line, and more than twice that by the crooked river. Grant now determined to pass the city of Vicksburg on the west side of the river by marching his army by land—with the help of boats on some baysous if possible—from Milliken's Bend, which is twenty miles above Vicksburg, to New Carthage, which is about as far below. At his request Admiral Porter sent seven of his iron-clads, with three steamers and ten barges, down the river, past the Rebel batteries. They were well laden with forage and supplies. The crews of all but one refused to go. But volunteers from the army offered, enough to man a hundred vessels had they been needed. On a dark night of the 16th of April, led by Admiral Porter, they steamed down, with the barges in tow. They turned the bend without being noticed. Then the first batteries opened on them. The Rebels set fire to houses so as to light up the scene; and from the ships the crews could see the men at the batteries and in the streets of Vicksburg. Though every vessel was hit, all got by, except the Henry Clay steamer. Finding she was sinking, her commander cut off the barge he was towing, which drifted safely down, and, soon after, the vessel herself took fire. The crew escaped in their boats,—the vessel blazed up and lighted up all around. At last, however, after the boats had been under fire two hours and forty minutes, the whole fleet except the Henry Clay arrived safely below the batteries. Grant had thus secured, not only forage and stores, but the means of transportation. On the 26th of April five more vessels passed successfully, one being lost as before. Grant was now strong enough to cross the Mississippi River. His army had to march seventy miles on the west side by muddy roads, scarcely above the river line. He feared he might have to go as far down as a little town called Rodney for a good landing-place on the east side. But a friendly negro man, who knew the country, brought in information that there was a good road inland from Bruinsburg,—and so it proved. Grand Gulf, on the river, where the Rebels had a post, was still between Grant and Bruinsburg. Porter attacked it with his gunboats, and Grant was ready to land 10,000 troops to storm the place if the batteries were silenced. But Porter did not succeed. Grant therefore marched his troops down on the west side of the river. Porter ran by Grand Gulf with transports in the night, and, on the morning of the 30th of April, Grant crossed the river with 10,000 men. They did not carry a tent nor a wagon. General Grant and his staff went without their horses. It was said afterwards

that his whole baggage was a toothbrush! Other divisions followed, and on the 3d of May he left the river, and marched, not directly on Vicksburg, but more inland, to cut off all communication with that city. His army took three days' rations with them, and relied principally for provisions on the stores in the rich country through which they marched."—E. E. Hale, *Stories of War told by Soldiers*, ch. 7.

A. D. 1863 (February—April: Tennessee).—Engagements at Dover and Franklin.—"In February [on the 3d], General Wheeler, Bragg's chief of Cavalry, tried to capture Fort Donelson, so as to stop the navigation of the Cumberland River, by which some of Rosecrans's supplies came in steamboats to Nashville. The fort had not been repaired after its capture by Grant, but the Village of Dover near it had been fortified, and it was then held by Colonel A. C. Harding with about 600 men. The Union men fought bravely, and in the evening the gunboat *Fair Play* came up and opened a fire on the Confederates which drove them away in confusion, with a loss of more than 500 men. Harding's loss was 126. Early in March, General Van Dorn appeared near Franklin [a little below Nashville] with a large force of mounted men. Colonel Colburn, of the 33d Indiana, moved Southward from Franklin with 2,700 men. Van Dorn and Forrest met him, and after a fight of several hours [March 5] Colburn had to surrender with 1,300 of his men."—J. D. Champlin, Jr., *Young Folks' Hist. of the War for the Union*, ch. 31.—"Sheridan, with his division, and about 1,800 cavalry, under Colonel Minty, first swept down toward Shelbyville, and then around toward Franklin, skirmishing in several places with detachments of Van Dorn's and Forrest's men. In a sharp fight at Thompson's Station, he captured some of the force which encountered Colburn. He finally drove Van Dorn beyond the Duck River, and then returned to Murfreesboro', with a loss during his ten days' ride and skirmishing of only five men killed and five wounded. His gain was nearly 100 prisoners. On the 18th of March, Col. A. S. Hall, with a little over 1,400 men, moved eastward from Murfreesboro' to surprise a Confederate camp at Gainesville. He was unexpectedly met by some of Morgan's cavalry, when he fell back to Milton, twelve miles northeast of Murfreesboro' and took a strong position on Vaught's Hill. There he was attacked by 2,000 men, led by Morgan in person. With the aid of Harris's Battery skillfully worked, Hall repulsed the foe after a struggle of about three hours. Morgan lost between 300 and 400 men killed and wounded. Among the latter was himself. Hall's loss was 55 men, of whom only 6 were killed. Early in April, General Granger, then in command at Franklin, with nearly 5,000 troops, was satisfied that a heavy force under Van Dorn was about to attack him. He was then constructing a fort (which afterwards bore his name), but only two siege-guns and two rifled cannon, belonging to an Ohio battery, were mounted upon it. The fort . . . completely commanded

the approaches to Franklin. . . . On the 10th, Van Dorn, with an estimated force of 9,000 mounted men and two regiments of foot, pressed rapidly forward along the Columbia and Lewisburg turnpikes, and fell upon Granger's front. The guns from the fort opened destructively upon the assailants, and their attack was manfully met by Granger's troops. Van Dorn soon found himself in a perilous situation, for Stanley [commanding cavalry] came up and struck him a heavy blow on the flank. Smith [with cavalry] was ordered forward to support Stanley, and Baird's troops were thrown across the river to engage in the fight. The Confederates were routed at all points on Granger's front, with a heavy loss in killed and wounded, and about 500 prisoners. Van Dorn then turned his whole force upon Stanley before Smith reached him, and with his overwhelming numbers pushed him back and recovered most of the captured men. By this means Van Dorn extricated himself from his perilous position, and, abandoning his attempt to capture Franklin, he retired to Spring Hill, with a loss of about three hundred men in killed, wounded and prisoners. The Union loss was about 37 killed, wounded and missing."—B. J. Lossing, *Field Book of the Civil War*, v. 3, ch. 4.

A. D. 1863 (March).—The Conscription Act.—"The Rebel Congress having long since passed [April 16, 1862] a conscription act whereby all the White males in the Confederacy between the ages of 18 and 35 were placed at the disposal of their Executive, while all those already in the service, though they had enlisted and been accepted for specific terms of one or two years, were held to serve through the war, our Congress was constrained to follow afar off in the footsteps of the enemy; since our ranks, [after] our heavy losses in the bloody struggles of 1862, were filled by volunteers too slowly for the exigencies of the service. The act providing 'for the enrollment of the National forces' was among the last passed [March 3, 1863] by the XXXVIIth Congress prior to its dissolution. It provided for the enrollment, by Federal provost-marshal and enrolling officers, of all able-bodied male citizens (not Whites only), including aliens who had declared their intention to become naturalized, between the ages of 18 and 45—those between 20 and 35 to constitute the first class; all others the second class—from which the President was authorized, from and after July 1, to make drafts at his discretion of persons to serve in the National armies for not more than three years; any one drafted and not reporting for service to be considered and treated as a deserter. A commutation of \$300 was to be received in lieu of each service; and there were exemptions provided of certain heads of Executive Departments; Federal judges; Governors of States; the only son of a widow, or of an aged and infirm father, dependent on that son's labor for support; the father of dependent motherless children under 13 years of age, or the only adult brother of such children, being orphans; or the residue of a family which has already two members in the service, &c., &c. The passage and execution of this act inevitably intensified and made active the spirit of opposi-

tion to the War. Those who detested every form of 'coercion' save the coercion of the Republic by the Rebels, with those who especially detested the National effort under its present aspects as 'a war not for the Union, but for the Negro,' were aroused by it to a more determined and active opposition. The bill passed the House by Yeas 115, Nays 40—the division being so nearly as might be, a party one—while in the Senate a motion by Mr. Bayard that it be indefinitely postponed was supported by 11 Yeas (all Democrats) to 35 Nays: consisting of every Republican present; with Messrs. McDougall, of California, Harding and Nesmith of Oregon. The bill then passed without a call of the Yeas and Nays."—H. Greeley, *The American Conflict*, v. 2, ch. 21.

A. D. 1863 (April: South Carolina).—The naval attack on Charleston.—Repulse of the Monitors.—"The engagements in which turret iron-clads had been concerned had given to the government and the public a high opinion of their offensive and defensive qualities. It seemed as if nothing could withstand the blow of their heavy shot, and no projectile penetrate their invulnerable turrets. It was supposed that a fleet of such ships could without difficulty force a passage through Charleston Harbor, in spite of its numerous defenses, and, appearing before the city, compel its surrender. . . . On the 7th of April [1863] Admiral Dupont made the experiment. He had seven Ericsson Monitors, the frigate Ironsides, partially iron-clad, and a frailer iron-clad, the Keokuk, constructed on a plan differing from that of the Monitors. His intention was to disregard the batteries on Morris's Island, attack the northwest face of Sumter, and force his way up to the city. His fleet had 32 guns; the opposing forts, in the aggregate, 300. At noon on that day the signal was given to weigh anchor. The Weehawken, a Monitor, took the lead. She had a raft-like contrivance attached to her bows, for the purpose of removing obstructions and exploding torpedoes. This occasioned some delay at the outset, through its interference with her movements. On her way up she exploded a torpedo, which, though it lifted her a little, did no damage. At 2.10 P. M. she encountered obstructions extending across the harbor from Fort Moultrie to Fort Sumter; beyond these, piles were seen extending from James's Island to the Middle Ground. At 2.50 P. M. the guns of Fort Moultrie opened upon her, followed shortly after by all the batteries on Sullivan's Island, Morris's Island, and Fort Sumter. Not being able to pass the obstructions, the Weehawken, and subsequently other Monitors, the Passaic, Nahant, etc., were obliged to turn, which threw the line into confusion, as the other vessels, advancing, approached. This was particularly the case with the flag-ship Ironsides, which became entangled with the Monitors, and could not bring her batteries to bear upon Fort Sumter without risk of firing into them; she was obliged, on her way up, to anchor twice to avoid going ashore, on one of these occasions in consequence of having come into collision with two of the Monitors. The plan of the Confederates was, by means of obstructions, to detain the ships, while a concentrated fire was poured upon them in this 'first circle,' as it was termed. Two other still more powerful

circles of fire must be passed before the city could be reached. While in the centre of the first circle, it was apparent that the Monitors were at a fearful disadvantage. The forts and earth-works were armed with heavy guns of the best construction. No ship was exposed to the severest fire of the enemy for more than forty minutes, yet in that brief period five of the iron-clads were wholly or partially disabled. In these forty minutes the battle was substantially over, the question settled. The *Keokuk* was struck 99 times, of which 19 were under her water-line. She was in a sinking condition. She had been able to return only three shots. The *Passaic* was struck 27 times; her turret was jammed, and could not for some time be turned. The *Nahant* was most seriously damaged; her turret was jammed, her captain wounded, her quarter-master killed by a bolt which flew off and struck him on the head. Many of the bolts of both turret and pilot-house were thus broken; the latter became nearly untenable in consequence of the nuts and ends flying across it. All the other Monitors had received damages more or less severe. The mailed frigate *Ironclad* had lost one port shutter, her bow was penetrated by a red-hot shot. The damage inflicted on Fort Sumter was comparatively insignificant. It was Dupont's belief that, had the iron-clads been in action half an hour longer, they would all have been disabled. 'To my regret,' he says, 'I soon became convinced of the utter impracticability of taking the city of Charleston by the force under my command.' . . . The iron-clad fleet had therefore been unable to pass the first line of obstructions, or to get out of 'the first circle of fire.' The slowness of its fire was no match for the rapidity and weight of that of the forts. The iron-clads were able to fire only 139 times from the 14 guns they could bring into action; the forts, from 76 guns, fired 2,209 times. The projectiles they used were wrought-iron bolts, some of them tipped with steel, solid shot, shells, of which 40 were filled with melted cast-iron, others with incendiary composition. The total amount of cannon-powder used by the forts was 21,003 pounds. The government, thus satisfied that its iron-clad fleet was insufficient for the forcing of Charleston Harbor and the capture of the city, now changed its purposes, restricting its attempts to a more complete blockade, the detention of a large confederate force in the vicinity by continually threatening military operations, and the destruction of Fort Sumter for the sake of a moral effect." — J. W. Draper, *Hist. of the Am. Civil War*, ch. 72 (v. 3).

A. D. 1863 (April—May: Virginia).—**Hooker's disastrous movement.—Chancellorsville.—Stonewall Jackson's last flank movement.**—"Being now [April 28] fully prepared for active operations, Hooker determined to take the initiative by moving on the left of his opponent's position. By careful study of Lee's position he correctly concluded that his left was his most vulnerable point. In order to mask his real design he sent forward a force of 10,000 cavalry

under General Stoneman to operate upon Lee's lines of communication with Richmond, and sent Sedgwick with a force of 30,000 men still further to mask his movement. Stoneman crossed the Rappahannock at Kelly's Ford on the 29th, and Sedgwick appeared on the 28th on the heights below Fredericksburg. These preparatory measures having been taken, Hooker proceeded to the execution of his plan. Swinton, after a picturesque description of the passage of the Rappahannock and the *Rajidan*, tells us 'that on the afternoon of the 30th of April four corps of the Federal army had gained the position of Chancellorsville, where Hooker at the same time established his headquarters.' Chancellorsville is situated ten miles southwest of Fredericksburg. It is not, as its name implies, a town or village, but simply a farm-house with its usual appendages, situated at the edge of a small field surrounded by a dense thicket of second growth, which sprang up after the primeval forest had been cut to furnish fuel to a neighboring furnace. This thicket extends for miles in every direction, and its wild aspect very properly suggests its name, The Wilderness. The intersection of several important roads gives it the semblance of strategic importance, while in reality a more unfavorable place for military operations could not well be found. Hooker, however, seemed well pleased with his acquisition, for on reaching Chancellorsville on Thursday night he issued an order to the troops in which he announced that 'the enemy must either ingloriously fly or come out from behind his defences and give us battle on our own ground, where certain destruction awaits him.' . . . General Lee was fully aware of the preparations that were being made by his adversary, but calmly awaited the complete development of his plans before exerting his strength to oppose him. . . . On the 28th . . . Lee ordered Jackson to concentrate his whole corps in the immediate vicinity of Fredericksburg. Early on the morning of the 29th Sedgwick crossed the Rappahannock below the mouth of Deep Run, but made no other aggressive movement on that day or the day following. On the night of the 30th, Lee was informed of Hooker's arrival at Chancellorsville. He had been previously informed of Stoneman's movements against his line of operations by General Stuart, and was now satisfied that the main attack of the enemy would come from the direction of Chancellorsville. Therefore on the morning of the 1st of May he made the necessary preparations to meet it. Accompanied by his staff, he took a position on a height where one of his batteries overlooked the Rappahannock. He there observed carefully the position of Sedgwick, while waiting for information from the direction of Chancellorsville. . . . Very soon the sound of cannon indicated that the work had begun. At the same time couriers arrived from Stuart and Anderson informing the general that the enemy were advancing on the old turnpike, the plank road, and on the river roads, and asking for reinforcements. McLaws was immediately ordered to the support of Anderson, and shortly after Jackson was ordered to follow with three of his divisions, leaving . . . a force of about 9,000 men and 45 pieces of artillery in observation of Sedgwick. When Jackson joined McLaws and Anderson a lively skirmish was in progress, in which he im-

mediately participated. When General Lee arrived he found the Federals were being driven back to Chancellorsville. At the close of the afternoon they had retired within their lines. General Lee occupied the ridge about three-quarters of a mile south-east and south of Chancellorsville. The opposing armies were hidden from each other by the intervening thicket of brushwood. . . . It was obvious that the Federal position was too formidable to be attacked in front with any hope of success; therefore Lee proceeded to devise a plan by which the position of Hooker might be turned and a point of attack gained from which no danger was apprehended by the Federal commander. . . . The execution of a movement so much in accordance with his genius and inclination was assigned to General Jackson. . . . At dawn on the morning of the 2d, Jackson's corps, 22,000 strong, was in motion, and while it was making one of the most famous flank movements on record, General Lee, with the divisions of Anderson and McLaws, with 20 pieces of artillery, a force not exceeding 12,000 men, occupied the position he had assumed the previous evening, and General Hooker, with 90,000 men, lay behind his breastworks awaiting the Confederate attack. . . . After making a circuitous march of 15 miles, Jackson reached a point on the Orange Court-house road three miles in the rear of Chancellorsville. Had Hooker possessed a handful of cavalry equal in spirit to the 'Virginia horse-men' under W. H. F. Lee that neutralized Stoneman's ten thousand, he might have escaped the peril that now awaited him. On the arrival of Jackson on the plank road, Fitz Lee, who had covered his movement with his brigade of cavalry, conducted him to a position from which he obtained a view of the enemy, which disclosed the following scene: 'Below and but a few hundred yards distant ran the Federal line of battle. There was the line of defence, with abatis in front, and long lines of stacked arms in rear. . . . The soldiers were in groups in the rear, laughing, chatting, and smoking, probably engaged here and there in games of cards and other amusements indulged in while feeling safe and comfortable, awaiting orders. In the rear of them were other parties driving up and butchering beaves.' Returning from this point of observation, Jackson proceeded to make his dispositions of attack, which by six o'clock were completed. . . . Howard's corps was first assailed. This corps, being surprised, was panic-stricken and fled precipitately, and in its flight communicated the panic to the troops through which it passed. Jackson's forces followed, routing line after line, until arrested by the close of day. The rout of the Federal army was fast becoming general, and it was only saved from entire defeat by the interposition of night. When compelled to halt Jackson remarked that with one more hour of daylight he could have completed the destruction of the Federal army. This, the most famous of all Jackson's brilliant achievements, closed his military career. After his troops had halted, and while the lines were being adjusted, he rode forward with several of his staff to reconnoitre the Federal position. "The party were mistaken by some of their own men for Federal horsemen and received a volley which struck down Stonewall Jackson. He was wounded in both arms by three bullets, and

died from the effects eight days afterward. "Early on the morning of the 3d the attack was resumed by the Confederates with great vigor. Hooker, taking advantage of the night, had restored order in his army and strengthened his position; his troops regained courage and contested the field with great stubbornness until ten o'clock when they yielded at every point and rapidly retreated. . . . within the strong line of defences which had been previously constructed to cover the road to the United States Ford. . . . While the operations above described were in progress at Chancellorsville, General Early, by skilful manoeuvring, had detained Sedgwick at Fredericksburg until the 3d, when that general, by a determined advance, forced back Early, carried Marye's Heights, and proceeded toward Chancellorsville. The condition of affairs was communicated to General Lee during the forenoon. Wilcox's brigade, then at Banks's Ford, was ordered to intercept Sedgwick and retard his advance, while McLaws's division was ordered to support him. Wilcox on reaching Salem Church, six miles from Chancellorsville, encountered the Federal advance, and after a sharp conflict he repulsed it with loss. The success of Wilcox delayed Sedgwick until Anderson and McLaws could come up. The premeditated attack on Hooker being thus interrupted, Lee, on the forenoon of the 4th, repaired to the neighborhood of Fredericksburg. A combined attack was then directed to be made by Early on the rear, while McLaws and Anderson bore down upon the front. The battle was hotly contested during the afternoon, in which the forces of Sedgwick were defeated, and were only saved from destruction by a night-passage across the Rappahannock at Banks's Ford. On the 5th Lee collected his forces at Chancellorsville to give the 'coup de grâce' to Hooker, but that general, under cover of a dark and stormy night, effected his retreat beyond the Rappahannock at the United States Ford."—A. L. Long, *Memoirs of Robert E. Lee*, ch. 14.—The Federal loss at Chancellorsville, in killed and wounded, was 12,197; missing 5,000; total, 17,197. Confederate loss, killed and wounded, 10,266; missing 2,753; total, 13,019.—A. Doubleday, *Chancellorsville and Gettysburg (Campaigns of the Civil War*, v. 6), ch. 8.

ALSO IN: T. A. Dodge, *Campaign of Chancellorsville*.—W. Swinton, *Campaigns of the Army of the Potomac*, ch. 8.—D. N. Couch, O. O. Howard, and others, *Chancellorsville (Battles and Leaders*, v. 3).—J. G. Nicolay and J. Hay, *Abraham Lincoln*, v. 7, ch. 4.—*Official Records*, Series 1, v. 25.

A. D. 1863 (April—May: Mississippi).—Grierson's Raid.—Reporting to headquarters at Washington, on the 5th of May, 1863, General Hurlbut, commanding at Memphis, Tennessee, said: "As the spring opened, I was daily more and more impressed with the feasibility of a plan, long entertained, of pushing a flying column of cavalry through the length of Mississippi, cutting the Southern Railroad. By consent and approval of General Grant, I prepared a system of movements along my entire line from Memphis to Corinth for the purpose of covering this cavalry dash. At the same time General Rosecrans proposed to me to cover a movement of 1,800 cavalry from Tusculumbia down into Alabama and Georgia. This did not interfere

with my plan, but simply required extra force to be developed from Corinth. Delays incident to combined movements, especially from separate commands, kept his expeditionary column back for six days. I commenced the movement from Corinth on the 15th [April]. . . . On the 17th, Col. B. H. Grierson, Sixth Illinois Cavalry, with his own regiment, the Seventh Illinois, and Second Iowa, moved from La Grange, by way of Pontotoc, with orders, after passing Pontotoc, to proceed straight down, throwing one regiment to the left toward Okolona, and to push for and destroy the Chunky River Bridge and any others they could reach, and either return, or proceed to Baton Rouge, as might be found advisable. On the same day, April 17, a column of infantry 1,500 strong, and one battery, moved by railroad from La Grange to Coldwater, with orders to push rapidly between Coldwater and the Tallahatchee, and take Chalmers in flank and rear while attacked in front by three regiments, a battery, and 200 cavalry from Memphis, which left here on the 18th. I considered that the effect of these movements would be to puzzle the enemy and withdraw his force from the central line, which has proven to be correct. . . . Grierson, on the 19th, detached the Second Iowa below Pontotoc, which fought its way gallantly back to La Grange and came home well mounted. The main cavalry column (Sixth and Seventh Illinois) proceeded, without loss or engagement, to Newton, on the Southern Mississippi Railroad, and there destroyed bridges." Col. Grierson, in his own full report of the remarkable expedition thus set on foot, after narrating the proceedings of his command until it struck Newton Station, on the 24th of April, continues: "From captured mails and information obtained by my scouts, I knew that large forces had been sent out to intercept our return, and having instructions from Major-General Hurlbut and Brigadier-General Smith to move in any direction from this point which, in my judgment, would be best for the safety of my command and the success of the expedition, I at once decided to move south, in order to secure the necessary rest and food for men and horses, and then return to La Grange through Alabama, or make for Baton Rouge, as I might hereafter deem best. . . . After resting about three hours, we moved south to Garlandville. At this point we found the citizens, many of them venerable with age, armed with shot-guns and organized to resist our approach. As the advance entered the town, these citizens fired upon them and wounded one of our men. We charged upon them and captured several. After disarming them, we showed them the folly of their actions, and released them. Without an exception they acknowledged their mistake, and declared that they had been grossly deceived as to our real character. One volunteered his services as guide, and upon leaving us declared that hereafter his prayers should be for the Union Army. I mention this as a sample of the feeling which exists, and the good effect which our presence produced among the people in the country through which we passed. Hundreds who are skulking and hiding out to avoid conscription, only await the presence of our arms to sustain them, when they will rise up and declare their principles; and thousands who have been deceived, upon the vindication of our cause would immediately return to loyalty."

It was not until the 2d of May that Grierson and his small force reached the Union lines at Baton Rouge. The total accomplishments of the expedition—aside from the important revelation it made of the condition of things in that region of the Confederacy—are summed up in the Colonel's report as follows: "During the expedition we killed and wounded about 100 of the enemy, captured and paroled over 500 prisoners, many of them officers, destroyed between 50 and 60 miles of railroad and telegraph, captured and destroyed over 3,000 stand of arms, and other army stores and Government property to an immense amount; we also captured 1,000 horses and mules. Our loss during the entire journey was 3 killed, 7 wounded, 5 left on the route sick; the sergeant-major and surgeon of the Seventh Illinois left with Lieutenant-Colonel Blackburn, and 9 men missing, supposed to have straggled. We marched over 600 miles in less than sixteen days. The last twenty-eight hours we marched 76 miles, had four engagements with the enemy, and forded the Comite River, which was deep enough to swim many of the horses. During this time the men and horses were without food or rest. Much of the country through which we passed was almost entirely destitute of forage and provisions, and it was but seldom that we obtained over one meal per day. Many of the inhabitants must undoubtedly suffer for want of the necessaries of life, which have reached most fabulous prices."—*Official Records, series 1, v. 24, pt. 1, pp. 520-529.*

A. D. 1863 (April—July): On the Mississippi.—Grant's Campaign against Vicksburg.—The final operations.—His personal account of the siege and capture.—"April 30th was spent in transporting troops across the river [to Bruinsburg]. The troops were moved out towards Port Gibson as fast as they were landed. On the 1st of May the advance met the enemy under Bowen about four miles west of Port Gibson, where quite a severe battle was fought, resulting in the defeat of the enemy, who were driven from the field. On May 2d our troops moved into Port Gibson, and, finding that the bridges over Bayou Pierre were destroyed, spent the balance of the day in rebuilding and crossing them, and marching to the North Fork, where we encamped for the night. During the night we rebuilt the bridge across the North Fork, which had also been destroyed, and the next day (the 3d) pushed on, and, after considerable skirmishing, reached the Big Black, near Hankinson's Ferry, and the Mississippi at Grand Gulf. . . . Here I [General Grant] . . . received a letter from Banks stating that he could not be at Port Hudson [which Grant had intended to join Banks in attacking, before he turned against Vicksburg] for some days, and then, with an army of only 15,000 men. As I did not regard this force of as much value as the time which would be lost in waiting for it, I determined to move on to Vicksburg. The 4th, 5th, and 6th of May were spent in reconnoitering towards Vicksburg, and also in crossing Sherman's troops over to Grand Gulf. On the 7th, Sherman having joined the main body of the army, the troops across the Big Black were withdrawn, and the movement was commenced to get in position on the Vicksburg and Jackson railroad so as to attack Vicksburg from the rear. This occupied the army from the 7th to the 12th, when our

position was near Fourteen Mile creek, Raymond being our right flank, our left resting on the Big Black. To obtain this position we fought the battle of Raymond, where Logan's and Crocker's divisions of McPherson's corps defeated the Confederates under General Gregg, driving him back on Jackson; Sherman and McClelland both having some skirmishing where they crossed Fourteen Mile creek. As the army under Pemberton was on my left flank, and that under General Joseph E. Johnston on my right at Jackson, I determined to move the army rapidly on Jackson, capturing and destroying that place as a military depot; then turn west and destroy the army under Pemberton, or drive it back into Vicksburg. The 13th was spent in making the first of these moves. On the 14th Jackson was attacked with Sherman's and McPherson's corps. The place was taken, and all supplies that could be of service to the enemy were destroyed, as well as the railroad bridge. On the 15th the troops were faced to the west and marched towards Pemberton, who was near Edwards's Station. The next day, the 16th, we met the enemy at Champion's Hill, and, after a hard-fought battle, defeated and drove him back towards Vicksburg, capturing 18 guns and nearly 3,000 men. This was the hardest-fought battle of the campaign. On the 17th we reached the Big Black, where we found the enemy entrenched. After a battle of two or three hours' duration we succeeded in carrying their works by storm, capturing much artillery and about 1,200 men. . . . We crossed on the morning of the 18th, and the outworks of Vicksburg were reached before night, the army taking position in their front. On the 19th there was continuous skirmishing with the enemy while we were getting into better positions. . . . At two o'clock I ordered an assault. It resulted in securing more advanced positions for all our troops, where they were fully covered from the fire of the enemy, and the siege of Vicksburg began. . . . Most of the army had now been for three weeks with only five days' rations issued by the commissary. They had had an abundance of food, however, but had begun to feel the want of bread. . . . By the night of the 21st full rations were issued to all the troops. . . . I now determined on a second assault. . . . The attack was ordered to commence on all parts of the line at ten o'clock A. M. on the 22d with a furious cannonade from every battery in position. All the corps commanders set their time by mine, so that all might open the engagement at the same minute. The attack was gallant, and portions of each of the three corps succeeded in getting up to the very parapets of the enemy . . . but at no place were we able to enter. . . . As soon as it was dark our troops that had reached the enemy's line and had been obliged to remain there for security all day were withdrawn, and thus ended the last assault on Vicksburg. A regular siege was now determined upon. . . . The Union force that had crossed the Mississippi river up to this time was less than 43,000 men. . . . The enemy had at Vicksburg, Grand Gulf, Jackson, and on the roads between these places, quite 60,000 men. . . . My line was more than 15 miles long, extending from Haines's Bluff to Vicksburg, thence to Warrenton. The line of the enemy was about seven. In addition to this, having an enemy at Canton and Jackson in our

rear, who was being constantly reinforced, we required a second line of defense, facing the other way. I had not troops enough under my command to man this. General Halleck appreciated the situation and, without being asked for reinforcements, forwarded them with all possible dispatch. . . . Johnston . . . abstained from making an assault on us, because it would simply have inflicted loss on both sides without accomplishing any result. We were strong enough to have taken the offensive against him; but I did not feel disposed to take any risk of losing our hold upon Pemberton's army, while I would have rejoiced at the opportunity of defending ourselves against an attack by Johnston." The siege was of six weeks' duration, ending on the memorable 4th of July with the surrender of Pemberton and 31,000 men, who were released on parole. "Our men were no sooner inside the lines than the two armies began to fraternize. We had had full rations from the time the siege commenced to the close. The enemy had been suffering, particularly towards the last. I myself saw our men taking bread from their haversacks and giving it to those whom they had so recently been engaged in starving out."—U. S. Grant, *The Siege of Vicksburg* (*Century Magazine*, Sept., 1885).

A. D. 1863 (May—June).—**The arrest of Vallandigham.—President Lincoln to the Copperheads.**—"The man whose name became unfortunately pre-eminent for disloyalty at this time was Clement L. Vallandigham, a Democrat, of Ohio. General Burnside was placed in command of the Department of the Ohio, March 25, 1863, and having for the moment no Confederates to deal with, he turned his attention to the Copperheads, whom he regarded with even greater animosity. His Order No. 38, issued on April 13, . . . warned persons with reasonable tongues that, unless they should keep that little member in order, they might expect either to suffer death as traitors, or to be sent southward within the lines of 'their friends.' Now Mr. Vallandigham had been a member of Congress since 1856; . . . he was the popular and rising leader of the Copperhead wing of the Democracy. Such was his position that it would have been ignominious for him to allow any Union general to put a military gag in his mouth. Nor did he. On the contrary he made speeches which at that time might well have made Unionists mad with rage, and which still seem to have gone far beyond the limit of disloyalty which any government could safely tolerate. Therefore on May 4 he was arrested by a company of soldiers, brought to Cincinnati, and thrown into jail. His friends gathered in anger, and a riot was narrowly avoided. At once, by order of General Burnside, he was tried by a military commission. He was charged with 'publicly expressing sympathy for those in arms against the government of the United States, and declaring disloyal sentiments and opinions, with the object and purpose of weakening the power of the Gov-

erument in its efforts to suppress an unlawful rebellion. . . . The evidence conclusively sustained the indictment, and the officers promptly pronounced him guilty, whereupon he was sentenced by Burnside to confinement in Fort Warren. . . . The Democrats throughout the North, rapidly surveying the situation, seized the opportunity which perhaps had been too inconsiderately given them. The country rang with plausible oracles and high sounding oratory concerning military usurpation, violation of the Constitution, and stifling freedom of speech. . . . Mr. Lincoln only showed that he felt the pressure of the criticism and denunciation by commencing the sentence, and directing that Vallandigham should be released from confinement and sent within the Confederate lines,—which was, indeed, a very shrewd and clever move, and much better than the imprisonment. Accordingly the quasi rebel was tendered to and accepted by a Confederate picket, on May 25. He protested vehemently, declared his loyalty, and insisted that his character was that of a prisoner of war. But the Confederates, who had no objection whatsoever to his peculiar methods of demonstrating 'loyalty' to their opponents, insisted upon treating him as a friend, the victim of an enemy common to themselves and him; and instead of exchanging him as a prisoner, they facilitated his passage through the blockade on his way to Canada. There he arrived in safety, and thence issued sundry manifestoes to the Democracy. On June 11 the Democratic Convention of Ohio nominated him as their candidate for governor, and it seems that for a while they really expected to elect him. . . . On May 16 a monster meeting of the Democrats of New York was told by Governor Seymour that the question was: 'whether this war is waged to put down rebellion at the South, or to destroy free institutions at the North.' Excited by such instigation, the audience passed sundry damnable resolutions and sent them to the President. Upon receiving these Mr. Lincoln felt that he must come down into the arena, without regard to official conventionality. On June 12 he replied by a full presentation of the case, from his point of view. He had once more to do the same thing in response to another address of like character which was sent to him on June 11 by the Democratic State Convention of Ohio."—J. T. Morse, *Abraham Lincoln*, v. 2, ch. 6.—To the New York Democrats, Mr. Lincoln said: "It is asserted in substance, that Mr. Vallandigham was, by a military commander, seized and tried 'for no other reason than words addressed to a public meeting in criticism of the course of the administration, and in condemnation of the military orders of the general.' Now, if there be no mistake about this, if this assertion is the truth and the whole truth, if there was no other reason for the arrest, then I concede that the arrest was wrong. But the arrest, as I understand, was made for a very different reason. Mr. Vallandigham avows his hostility to the war on the part of the Union; and his arrest was made because he was laboring, with some effect, to prevent the raising of troops, to encourage desertions from the army, and to leave the rebellion without an adequate military force to suppress it. He was not arrested because he was damaging the political prospects of the administration or the personal interests of the commanding general,

but because he was damaging the army, upon the existence of which the life of the nation depends. He was warring upon the military, and this gave the military constitutional jurisdiction to lay hands upon him. If Mr. Vallandigham was not damaging the military power of the country, then his arrest was made on mistake of fact, which I would be glad to correct on reasonably satisfactory evidence. I understand the meeting whose resolutions I am considering to be in favor of suppressing the rebellion by military force—by armies. Long experience has shown that armies cannot be maintained unless desertion shall be punished by the severe penalty of death. The case requires, and the law and the Constitution sanction, this punishment. Must I shoot a simple-minded soldier boy who deserts, while I must not touch a hair of a wily agitator who induces him to desert? This is none the less injurious when effected by getting a father, or brother, or friend into a public meeting, and there working upon his feelings till he is persuaded to write the soldier boy that he is fighting in a bad cause, for a wicked administration of a contemptible government, too weak to arrest and punish him if he shall desert. I think that, in such a case, to silence the agitator and save the boy is not only constitutional, but withal a great mercy. If I be wrong on this question of constitutional power, my error lies in believing that certain proceedings are constitutional when, in cases of rebellion or invasion, the public safety requires them, which would not be constitutional when, in absence of rebellion or invasion, the public safety does not require them; in other words, that the Constitution is not in its application in all respects the same in cases of rebellion or invasion involving the public safety, as it is in times of profound peace and public security. The Constitution itself makes the distinction, and I can no more be persuaded that the government can constitutionally take no strong measures in time of rebellion, because it can be shown that the same could not be lawfully taken in time of peace, than I can be persuaded that a particular drug is not good medicine for a sick man because it can be shown to not be good food for a well one. Nor am I able to appreciate the danger apprehended by the meeting, that the American people will by means of military arrests during the rebellion lose the right of public discussion, the liberty of speech and the press, the law of evidence, trial by jury, and habeas corpus throughout the indefinite peaceful future which I trust lies before them, any more than I am able to believe that a man could contract so strong an appetite for emetics during temporary illness as to persist in feeding upon them during the remainder of his healthful life. In giving the resolutions that earnest consideration which you request of me, I cannot overlook the fact that the meeting speak as 'Democrats.' Nor can I, with full respect for their known intelligence, and the fairly presumed deliberation with which they prepared their resolutions, be permitted to suppose that this occurred by accident, or in any way other than that they preferred to designate themselves 'Democrats' rather than 'American citizens.' In this time of national peril I would have preferred to meet you upon a level one step higher than any party platform, because I am sure that from such more elevated position

we could do better battle for the country we all love than we possibly can from those lower ones where, from the force of habit, the prejudices of the past, and selfish hopes of the future, we are sure to expend much of our ingenuity and strength in finding fault with and aiming blows at each other. But since you have denied me this, I will yet be thankful for the country's sake that not all Democrats have done so. He on whose discretionary judgment Mr. Vallandigham was arrested and tried is a Democrat, having no old party affinity with me, and the judge who rejected the constitutional view expressed in these resolutions, by refusing to discharge Mr. Vallandigham on habeas corpus is a Democrat of better days than these, having received his judicial mantle at the hands of President Jackson. And still more, of all those Democrats who are nobly exposing their lives and shedding their blood on the battle-field, I have learned that many approve the course taken with Mr. Vallandigham, while I have not heard of a single one condemning it. I cannot assert that there are none such."—Abraham Lincoln, *Complete Works*, v. 2, pp. 349-350.—To the Ohio Democrats, the President wrote as follows: "You claim, as I understand, that according to my own position in the Albany response, Mr. Vallandigham should be released; and this because, as you claim, he has not damaged the military service by discouraging enlistments, encouraging desertions or otherwise; and that if he had he should have been turned over to the civil authorities under the recent acts of Congress. I certainly do not know that Mr. Vallandigham has specifically and by direct language advised against enlistments and in favor of desertion and resistance to drafting. We all know that combinations, armed in some instances, to resist the arrest of deserters began several months ago; that more recently the like has appeared in resistance to the enrolment preparatory to a draft; and that quite a number of assassinations have occurred from the same animus. These had to be met by military force, and this again has led to bloodshed and death. And now, under a sense of responsibility more weighty and enduring than any which is merely official, I solemnly declare my belief that this hindrance of the military, including maiming and murder, is due to the course in which Mr. Vallandigham has been engaged in a greater degree than to any other cause; and it is due to him personally in a greater degree than to any other one man. These things have been notorious, known to all, and of course known to Mr. Vallandigham. Perhaps I would not be wrong to say they originated with his special friends and adherents. With perfect knowledge of them, he has frequently if not constantly made speeches in Congress and before popular assemblies; and if it can be shown that, with these things staring him in the face, he has ever uttered a word of rebuke or counsel against them, it will be a fact greatly in his favor with me, and one of which as yet I am totally ignorant. When it is known that the whole burden of his speeches has been to stir up men against the prosecution of the war, and that in the midst of resistance to it he has not been known in any instance to counsel against such resistance, it is next to impossible to repel the inference that he has counseled directly in favor of it. With all this before their eyes, the

convention you represent have nominated Mr. Vallandigham for governor of Ohio, and both they and you have declared the purpose to sustain the National Union by all constitutional means. But of course they and you in common reserve to yourselves to decide what are constitutional means; and, unlike the Albany meeting, you omit to state or intimate that in your opinion an army is a constitutional means of saving the Union against a rebellion, or even to intimate that you are conscious of an existing rebellion being in progress with the avowed object of destroying that very Union. At the same time your nominee for governor, in whose behalf you appeal, is known to you and to the world to declare against the use of an army to suppress the rebellion. Your own attitude, therefore, encourages desertion, resistance to the draft, and the like, because it teaches those who incline to desert and to escape the draft to believe it is your purpose to protect them, and to hope that you will become strong enough to do so. After a short personal intercourse with you, gentlemen of the committee, I cannot say I think you desire this effect to follow your attitude; but I assure you that both friends and enemies of the Union look upon it in this light. It is a substantial hope, and by consequence a real strength to the enemy. If it is a false hope and one which you would willingly dispel, I will make the way exceedingly easy. I send you duplicates of this letter in order that you, or a majority of you, may, if you choose, indorse your names upon one of them and return it thus indorsed to me with the understanding that those signing are thereby committed to the following propositions and to nothing else: 1. That there is now a rebellion in the United States, the object and tendency of which is to destroy the National Union; and that, in your opinion, an army and navy are constitutional means for suppressing that rebellion; 2. That no one of you will do anything which, in his own judgment, will tend to hinder the increase, or favor the decrease, or lessen the efficiency of the army or navy while engaged in the effort to suppress that rebellion; and 3. That each of you will, in his sphere, do all he can to have the officers, soldiers, and seamen of the army and navy, while engaged in the effort to suppress the rebellion, paid, fed, clad, and otherwise well provided for and supported. And with the further understanding that upon receiving the letter and names thus indorsed, I will cause them to be published, which publication shall be, within itself, a revocation of the order in relation to Mr. Vallandigham. It will not escape observation that I consent to the release of Mr. Vallandigham upon terms not embracing any pledge from him or from others as to what he will or will not do. I do this because he is not present to speak for himself, or to authorize others to speak for him; and because I should expect that on his returning he would not put himself practically in antagonism with the position of his friends. But I do it chiefly because I thereby prevail on other influential gentlemen of Ohio to so define their position as to be of immense value to the army—thus more than compensating for the consequences of any mistake in allowing Mr. Vallandigham to return; so that, on the whole, the public safety will not have suffered by it. Still, in regard to Mr. Vallandigham and all others, I must hereafter, as hereto-

fore, do so much as the public safety may seem to require. I have the honor to be respectfully yours."—Abraham Lincoln, *Complete Works*, v. 2, pp. 362-363.

A. D. 1863 (May—July: On the Mississippi).—Siege and Capture of Port Hudson.—The clear opening of the great River.—'About the middle of May all the available force near the river was concentrated at Baton Rouge, to assist in the attack on Port Hudson. Tiaence Gens. Augur and Sherman moved to the south and east of that position, to cooperate with Gen. Banks. From Simmesport Gen. Banks moved his army to invest Port Hudson. . . . It was on the 21st of May that Gen. Banks landed, and on the next day a junction was effected with the advance of Maj.-Gen. Augur and Brig.-Gen. Sherman. . . . On the 25th, the enemy was compelled to abandon his first line of works. On the next day Gen. Weitzel's brigade, which had covered the rear in the march from Alexandria, arrived, and on the morning of the 27th a general assault was made on the fortifications. Port Hudson, or Hickey's Landing, as it was called some years ago, is situated on a bend in the Mississippi river, about 23 miles above Baton Rouge, and 147 above New Orleans." It was strongly fortified and well defended by Colonel Frank Gardner. The artillery of General Banks opened fire on the 27th, and at ten o'clock the same day an assault was made, in which the colored soldiers showed much firmness and bravery. The assault failed and the losses in it were heavy. "A bombardment of the position had been made by the fleet under Admiral Farragut, for a week previous to this assault. Reconnoissances had discovered that the defences were very strong, consisting of several lines of intrenchments and rifle pits, with abatis of heavy trees felled in every direction. The upper batteries on the river were attacked by the Hartford and Albatross, which had run the blockade, and the lower by the Monongahela, Richmond, Genesee, and Essex. On the 14th of June, after a bombardment of several days, another assault on Port Hudson was made. . . . All the assaulting columns were compelled to fall back under the deadly fire of the enemy, and the fighting finally ceased about 11 o'clock in the morning. The loss of Gen. Banks was nearly 700 in killed and wounded. . . . Thus, these two attempts to reduce Port Hudson by a land assault, on the 27th of May and 14th of June, the purpose to make another was given up by Gen. Banks, until he had fully invested the place by a series of irresistible approaches. He was thus engaged in pushing forward his works when Vicksburg was surrendered. Information of this surrender was sent to Gen. Banks, and it was made the occasion for firing salutes and a general excitement in his camp, which attracted the attention of the enemy, to whom the surrender was communicated. Gen. Gardner, upon receiving the information, sent by flag of truce, about midnight of the 7th, the following note to Gen. Banks: . . . 'Having received information from your troops that Vicksburg has been surrendered, I make this communication to request you to give me the official assurance whether this is true or not, and if true, I ask for a cessation of hostilities, with a view to the consideration of terms

for surrendering this position.'"—W. J. Tenney, *Military and Naval Hist. of the Rebellion*, ch. 20.

A. D. 1863 (June).—Call for Six-Months Men.—A call for 100,000 men to serve six months, for the repulse of the invasion of Pennsylvania, Maryland, West Virginia, and Ohio, was issued June 15.

A. D. 1863 (June: Virginia).—Lee's second movement of invasion and the inducements to it.—Northern invitation and Southern clamor.—The Southern view.—"The defeat of General Hooker at Chancellorsville was the turning-point of the war, and for the first time there was apparently a possibility of inducing the Federal Government to relinquish its opposition to the establishment of a separate authority in the South. The idea of the formation of a Southern Confederacy, distinct from the old Union, had, up to this time, been repudiated by the authorities at Washington as a thing utterly out of the question; but the defeat of the Federal arms in the two great battles of the Rappahannock had caused the most determined opponents of separation to doubt whether the South could be coerced to return to the Union; and, what was equally or more important, the proclamations of President Lincoln, declaring the slaves of the South free, and placing the United States virtually under martial law, aroused a violent clamor from the great Democratic party of the North, who loudly asserted that all constitutional liberty was disappearing. This combination of non-success in military affairs and usurpation by the Government emboldened the advocates of peace to speak out plainly, and utter their protest against the continuance of the struggle, which they declared had only resulted in the prostration of all the liberties of the country. Journals and periodicals, violently denunciatory of the course pursued by the Government, all at once made their appearance in New York and elsewhere. A peace convention was called to meet in Philadelphia. . . . On all sides the advocates of peace on the basis of separation were heard raising their importunate voices. . . . The plan of moving the Southern army northward, with the view of invading the Federal territory, seems to have been the result of many circumstances. The country [Southern] was elated with the two great victories of Fredericksburg and Chancellorsville, and the people were clamorous for active operations against an enemy who seemed powerless to stand the pressure of Southern steel. The army, which had been largely augmented by the return of absentees to its ranks, new levies, and the recall of Longstreet's two divisions from Suffolk, shared the general enthusiasm; and thus a very heavy pressure was brought to bear upon the authorities and on General Lee, in favor of a forward movement, which, it was supposed, would terminate in a signal victory and a treaty of peace. Lee yielded to this view of things rather than urged it. . . . Another important consideration was the question of supplies. . . . More than ever before, these supplies were now needed; and when Gen-

eral Lee sent, in May or June, a requisition for rations to Richmond, the commissary-general is said to have endorsed upon the paper, 'If General Lee wishes rations, let him seek them in Pennsylvania.' The considerations here stated were the main inducements for that great movement northward which followed the battle of Chancellorsville. . . . Throughout the month of May, Lee was busily engaged in organizing and equipping his forces for the decisive advance. Experience had now dictated many alterations and improvements in the army. It was divided into three 'corps d'armée,' each consisting of three divisions, and commanded by an officer with the rank of lieutenant-general. Longstreet remained at the head of his former corps, Ewell succeeded Jackson in command of 'Jackson's old corps,' and A. P. Hill was assigned to a third corps made up of portions of the two others. . . . On the last day of May, General Lee had the satisfaction of finding himself in command of a well-equipped and admirably-officered army of 68,352 bayonets, and nearly 10,000 cavalry and artillery—in all, about 80,000 men. . . . Lee began his movement northward on the 3d day of June, just one month after the battle of Chancellorsville. . . . Pursuing his design of manœuvring the Federal army out of Virginia, without coming to action, Lee first sent forward one division of Longstreet's corps in the direction of Culpepper, another then followed, and, on the 4th and 5th of June, Ewell's entire corps was sent in the same direction—A. P. Hill remaining behind on the south bank of the Rappahannock, near Fredericksburg, to watch the enemy there, and bar the road to Richmond. These movements became speedily known to General Hooker, whose army lay north of the river near that point, and on the 5th he laid a pontoon just below Fredericksburg, and crossed about a corps to the south bank, opposite Hill. This threatening demonstration, however, was not suffered by Lee to arrest his own movements. . . . He continued the withdrawal of his troops, by way of Culpepper, in the direction of the Shenandoah Valley." On the morning of the 9th of June, "two divisions of Federal cavalry, supported by two brigades of 'picked infantry,' were sent across the river at Kelly's and Beverley's Fords, east of the court-house, to beat up the quarters of Stuart and find what was going on in the Southern camps. The most extensive cavalry fight [known as the battle of Brandy Station, or the battle of Fleetwood], probably, of the whole war, followed. . . . This reconnoissance in force . . . had no other result than the discovery of the fact that Lee had infantry in Culpepper. . . . This attempt of the enemy to penetrate his designs had not induced General Lee to interrupt the movement of his infantry toward the Shenandoah valley. The Federal corps sent across the Rappahannock at Fredericksburg, still remained facing General Hill, and, two days after the Fleetwood fight, General Hooker moved up the river with his main body, advancing the Third Corps to a point near Beverley's Ford. But these movements were disregarded by Lee. On the same day Ewell's corps moved rapidly toward Chester Gap, passed through that defile in the mountain, pushed on by way of Front Royal, and reached Winchester on the evening of the 13th, having in three days marched 70 miles. The position of the Southern army now

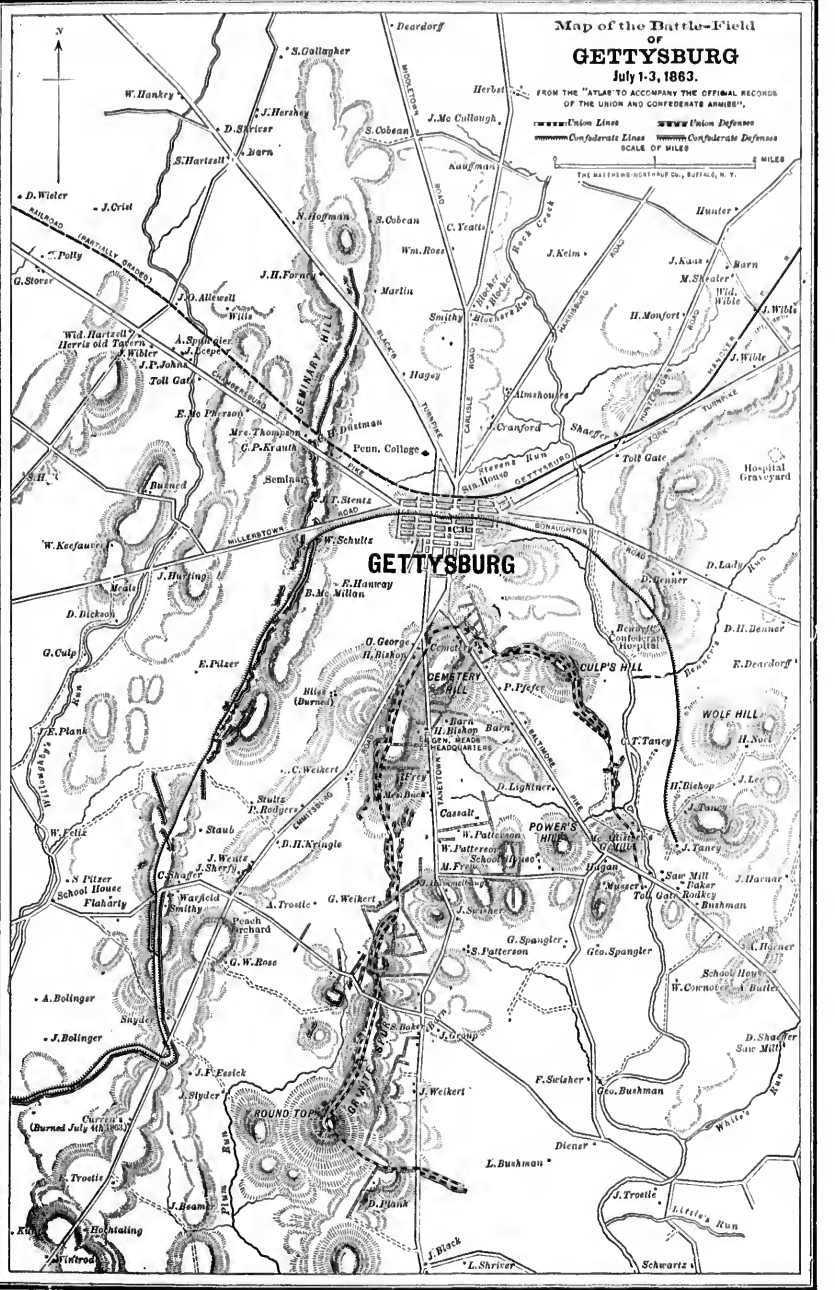

exposed it to very serious danger, and at first sight seemed to indicate a deficiency of soldiery in the general commanding it. In face of an enemy whose force was at least equal to his own, Lee had extended his line until it stretched over a distance of about 100 miles. . . . When intelligence now reached Washington that the head of Lee's column was approaching the Upper Potomac, while the rear was south of the Rappahannock, the President wrote to General Hooker: 'If the head of Lee's army is at Martinsburg, and the tail of it on the plank road, between Fredericksburg and Chancellorsville, the animal must be very slim somewhere—could you not break him?' . . . It would seem that nothing could have been plainer than the good policy of an attack upon Hill at Fredericksburg, which would certainly have checked Lee's movement by recalling Longstreet from Culpepper, and Ewell from the Valley. But . . . instead of reinforcing the corps sent across at Fredericksburg and attacking Hill, General Hooker withdrew the corps, on the 13th, to the north bank of the river, got his forces together, and began to fall back toward Manassas."—J. E. Cooke, *Life of Gen. Robert E. Lee*, pt. 6, ch. 9-12.

A. D. 1863 (June—July: Pennsylvania).—Lee's Invasion.—The Battle of Gettysburg.—"Hooker started toward Washington. Ewell gained possession of Winchester and Martinsburg, but not of Harper's Ferry. There is a rocky and thickly wooded range of heights called the Bull Run Mountains, running from Leesburg south. As Hooker had not occupied them but was farther to the East, Lee desired to do so, for it would give him a strong position on Hooker's flank and bring him (Lee) very near to Washington. He therefore directed his cavalry to reconnoiter in that direction. Stuart's reconnoitering party met the Union cavalry at Aldie, and after a hard battle retreated. A series of cavalry combats ensued, ending in the retreat of Stuart's cavalry behind the Blue Ridge. Hooker was strongly posted east of the Bull Run range and could not be attacked with much chance of success. As Lee could not well remain inactive or retreat, he resolved to invade Pennsylvania. This was a hazardous enterprise, for Hooker might intervene between him and Richmond. Stuart's cavalry was left to prevent this catastrophe by guarding the passes in the Blue Ridge. Stuart was also directed to harass Hooker and attack his rear should he attempt to cross the Potomac in pursuit of Lee. Lee reached Chambersburg with Longstreet's and Hill's corps. Ewell's corps was in advance at Carlisle [June 27] and York, and advance bodies of cavalry were threatening Harrisburg. The militia of Pennsylvania, New York and Maryland were called out in force, but arms and ammunition for them were inadequate. "On June 28th, Hooker determined to send Slocum's corps and the garrison of Harper's Ferry—the latter about 10,000 strong—to operate against Lee's rear. This was an excellent plan, but Hooker's superior, General Halleck, refused to allow him to remove the troops from Harper's Ferry; and Hooker said if he could not manage the campaign in his own way, he preferred to give up the command of the army." He was accordingly

relieved and the command was given to Major-General George G. Meade, of the Fifth Corps, Meantime (June 25-27) the Union army had crossed the Potomac and advanced to Frederick, Md. "On June 28th, Lee learned from a scout that the Union army was in his rear and that his communication with Richmond was seriously endangered. . . . In this emergency he concluded to threaten Baltimore. As a preliminary measure, he directed his entire army to move on Gettysburg. This he hoped would induce Meade to concentrate in his front and leave his rear free; which was precisely what Meade did do. . . . Under the impression that Lee's army was spread out along the Susquehanna from Carlisle to York, Meade threw out his own forces fan-shaped to march in that direction. . . . The Union corps were marching on and getting farther apart, while the enemy were concentrating. The advance of Hill's corps, on the morning of July 1st, struck Buford's division of Union cavalry a short distance to the west of Gettysburg, and in spite of a stout resistance forced it slowly back towards the town. The First Corps at this time was five miles south of Gettysburg. General Reynolds went to the support of Buford with the nearest division of the First Corps—Wadsworth's—and directed that the others follow. While forming his line of battle he was killed. General Howard succeeded to the command of the field, but did not issue any orders to the First Corps until the afternoon. In the meantime General Doubleday continued the contest, captured a great part of the forces that had assailed him, and cleared his immediate front of all enemies. Before the Eleventh Corps came up the enemy could have walked right over the small force opposed to them, but owing to the absence of Stuart's cavalry [which, not crossing the Potomac to follow Lee until the 27th, had undertaken a long raid around the Union forces, and did not succeed in joining the main body of the Confederates until July 2d] they had not been kept informed as to the movements Meade was making, and fearing that the whole Union army was concentrated in their front they were overcautious. There was now a lull in the battle for about an hour. The remainder of the First Corps came up and was followed soon after by the Eleventh Corps under General Schurz. About the same time the Confederate corps of General Ewell arrived and made a junction with that of Hill. General Howard assumed command of the Union forces. Repeated attacks were now made against the First Corps by Ewell from the north and Hill from the west; but the Confederate charges were successfully repulsed. . . . Ewell's attack also struck the Eleventh Corps on the right and front with great force. . . . General Meade, when he heard of Reynold's death, was 14 miles from Gettysburg at Taneytown, preparing to form line of battle along Pipe Creek. He at once sent General Hancock forward with orders to assume command of the field. Hancock, perceiving that Cemetery Ridge [about half a mile south of Gettysburg] was an admirable position for a defensive battle, determined to hold it if possible. This was not an easy thing to do, for the enemy were in overwhelming force, and the feeble remnants of the First and Eleventh Corps were not in a condition to make a prolonged resistance. . . . Hancock directed Doubleday to

send a force to Culp's Hill on the right, while he instructed Buford to parade up and down on the extreme left with his cavalry. The enemy were thus led to suppose that the Union line was a long one and had been heavily reinforced. As the losses on both sides had been tremendous, probably not exceeded for the same number of troops during the war, the enemy hesitated to advance, particularly as some movements of Kilpatrick's cavalry seemed to threaten their rear. They therefore deferred action until Meade concentrated the next day. On General Hancock's recommendation General Meade ordered his entire army to Gettysburg. By dusk part of the Third Corps had arrived, and soon after the Twelfth Corps and the Second Corps were close at hand. . . . Most of the troops, though worn out with hard marching, arrived by midday of July 2d. The Sixth Corps had 34 miles to march and came later in the afternoon. . . . The attack as ordered by General Lee was to begin with Longstreet on the right and be made 'en echelon.' That is, as soon as Longstreet was fairly engaged, Hill's corps was to take up the fight and go in, and as soon as Hill was fairly engaged, Ewell's corps on the right was to attack. The object was to keep the whole Union line in a turmoil at once, and prevent reinforcements going from any corps not engaged to another that was fighting; but Hill did not act until Longstreet's fight was over, and Ewell did not act until Hill had been repulsed. . . . The enemy. . . failed in every attack against Meade's main line, with the exception of that portion south of Culp's Hill. Elated by the fact that he had made a lodgement there, Ewell determined to hold on at all hazards and sent heavy reinforcements during the night to aid Johnson to make an attack in the morning. . . . So ended the battle of the second day. At day dawn [July 3] General Warren, acting for General Meade, established a cordon of troops and batteries which drove Johnson out of his position on the right. . . . Lee having failed in his attacks both on Meade's left and right had to decide at once whether he would give up the contest and retreat, or make another attempt to force the Union line. As he had been reinforced by Stuart's cavalry, and as a fresh division under Pickett was available, he determined to try to pierce the left center of the Union army and disperse the force opposed to him. To this end he directed Longstreet to form a strong column of attack to be composed of Pickett's division and Pettigrew's division and two brigades of Fender's division, under Trimble, of Hill's corps. To create confusion and prevent General Meade from sending reinforcements to the menaced point, Stuart was ordered to ride around the right of the Union army and make an attack in rear. And still more to facilitate the attack 135 guns were to concentrate their fire against the Union center and disperse the forces assembled there. About 1 P. M. the terrific cannonade began and lasted for two hours, by which time the Confederate ammunition was nearly exhausted. . . . Stuart's cavalry attack proved abortive, for it was met and frustrated by two brigades of Gregg's cavalry aided by Custer's brigade, after a severe battle, which was hotly contested on both sides. Stuart's further progress was checked and he was forced to retreat. . . . Pickett formed his great column of attack and came for-

ward as soon as the fire from the Union batteries slackened." Fresh guns had, however, been brought into position and swept the ground over which Pickett moved. His charge, one of the most desperately determined of the whole war, was heroically met by Gibbon's division of the Second Corps and by part of the First Corps, under the personal direction of General Hancock, who was severely wounded in the terrible conflict. Pickett was forced to retreat with the survivors of his onslaught, and "the whole plain was soon covered with fugitives; but, as no pursuit was ordered, General Lee in person succeeded in rallying them and in re-forming the line of battle. The next day, July 4th, General Lee drew back his flanks and at evening began his retreat by two routes—the main body on the direct road to Williamsport through the mountains, the other via Chambersburg, the latter including the immense train of the wounded. Gregg's division (except Hucy's brigade) was sent in pursuit by way of Chambersburg, but the enemy had too much the start to render the chase effective. Kilpatrick, however, got in front of the main body on the direct route and, after a midnight battle at Monterey, fought during a terrific thunder storm, succeeded in making sad havoc of Ewell's trains. . . . Lee concentrated his army in the vicinity of Williamsport, but as French had destroyed his pontoon bridge, and as the Potomac had risen, he was unable to cross. He therefore fortified his position. Meade did not follow Lee directly, but went around by way of Frederick. After considerable delay the Union army again confronted that of Lee and were about—under orders from President Lincoln—to make an 'attack, when Lee slipped away on the night of July 14th to the Virginia side of the Potomac. This ended the campaign of Gettysburg. The Union loss was 3,073 killed, 14,497 wounded, 5,434 missing=Total, 23,003. The Confederate loss was 3,592 killed, 12,709 wounded, 5,150 missing=Total, 20,451."—A. Donbleday, *Gettysburg made plain* (with 29 maps).

A. D. 1863 (June—July: Tennessee).—The Tullahoma campaign.—"During the first six months of the year 1863 the Army of the Cumberland remained at Murfreesboro' and was comparatively inactive. The troops were employed in the construction of elaborate fortifications and in divers minor operations with defensive or tentative objects. . . . Late in June the Army of the Cumberland advanced against its old enemy, the Confederate Army of the Tennessee, then holding the line of Duck River. In this movement the Fourteenth Corps [General Thomas] was in the centre, its appropriate place, and drove the enemy from Hoover's Gap and from several positions in front of that gap. General McCook [Twentieth Corps] on the right had a severe combat at Liberty Gap, but finally pressed the enemy from the hills. General Crittenden [Twenty-first Corps] on the left did not

meet much opposition. When Bragg's army had been driven from its defensive line on Duck River, Gen. Rosecrans moved his army towards Manchester, and regarding this movement as indicating either an attack upon his position at Tullahoma, or the interruption of his communications, Bragg fell back from that place. He did not consider himself strong enough to meet Rosecrans in battle, and he consequently retreated first to the Cumberland Mountains, and soon after, across the Tennessee River to Chattanooga. The Tullahoma campaign was begun on the 23d of June and terminated on the 4th of July. The enemy fought at the gaps of the mountains, but the defense on the whole was feeble. The result was the possession by the Army of the Cumberland of the region from Murfreesboro' to Bridgeport, Alabama. At the close of the campaign the army advanced to the northern base of the Cumberland Mountains, and there halted to make preparations for a campaign south of the Tennessee River."—T. B. Van Horne, *Life of General Geo. H. Thomas*, ch. 5.

A. D. 1863 (July: On the Mississippi).—The Defence of Helena.—"One of the most brilliant of the minor victories of the war was gained at Helena, Arkansas, on the west bank of the Mississippi, on the 4th of July. General Holmes [Confederate] had asked and received permission to take that place, in the middle of June, and had mustered for that purpose an army of nearly 10,000 men. The garrison of Helena consisted of a division of the Thirteenth Corps and a brigade of cavalry numbering in all 4000 men, commanded by Major-General B. M. Prentiss. Holmes felt so sure of victory that he doubtless selected the 4th of July for his attack in a mere spirit of bravado. He assaulted at daylight with converging columns, two of which made considerable impression upon the outworks, but never reached the town. The defense of the Union troops was singularly skillful and energetic, and, after a few hours of fighting, Holmes, finding himself utterly defeated, retired at half-past ten. The little army of Prentiss was, of course, too small to pursue. The last Confederate attempt to hold the Mississippi River thus ended in a complete and most humiliating repulse."—J. G. Nicolay and J. Hay, *Abraham Lincoln*, v. 7, ch. 11.

A. D. 1863 (July: Mississippi).—The capture and destruction of Jackson.—When Vicksburg surrendered, Johnston was hovering in the rear of Grant's army, and Sherman was watching his movements. On the very day the surrender was completed the latter marched rapidly upon Jackson, with 50,000 men, Johnston retreating before him. The city was invested on the 10th, and defended by the Confederates until the night of the 16th when they evacuated with haste. General Sherman, writing to Admiral Porter on the 19th of July, said: "We . . . have 500 prisoners, are still pursuing and breaking railroads, so that the good folks

of Jackson will not soon again hear the favorite locomotive whistle. The enemy burned nearly all the handsome dwellings round about the town because they gave us shelter or to light up the ground to prevent night attacks. He also set fire to a chief block of stores in which were commissary supplies, and our men, in spite of guards, have widened the circle of fire, so that Jackson, once the pride and boast of Mississippi, is now a ruined town. State-house, Governor's mansion, and some fine dwellings, well within the lines of intrenchments, remain untouched. I have been and am yet employed in breaking up the railroad 40 miles north and 60 south; also 10 miles east. My 10-miles break west, of last May, is still untouched, so that Jackson ceases to be a place for the enemy to collect stores and men."—*Official Records, series 1, v. 24, pt. 3, p. 531.*

A. D. 1863 (July: Kentucky).—John Morgan's Raid into Ohio and Indiana.—“The most famous raid of this time was that made in July by John Morgan across the Ohio River. General Buckner was then in East Tennessee, near the borders of Kentucky, getting ready to make another dash toward Louisville, and Morgan went ahead to prepare the way. He crossed the Cumberland River into Kentucky with about 3,000 mounted men, sacked Columbia, captured Lebanon with 400 prisoners, and rode on through Bardstown to Brandenburg on the Ohio River, plundering and destroying as he went. Many Kentuckians had joined him on the way, and he then had 4,000 men and ten pieces of artillery. The advance of Rosecrans's army just at that time prevented Buckner from joining him, and Morgan determined to cross into Indiana. There were two gunboats in the river, but he kept them off with his artillery while his men crossed on two captured steamboats. Morgan then rode through Indiana toward Cincinnati fighting home guards, tearing up railroads, burning bridges and mills and capturing much property. The whole State was aroused by the danger, and thousands of armed men started after the bold riders. Morgan became alarmed, and after passing around Cincinnati, almost within sight of its steeples, turned toward the Ohio to cross again into Kentucky. A large Union force was following, others were advancing on his flanks, and gunboats and steamboats filled with armed men were moving up the river to cut him off. The people aided the pursuers all they could by cutting down trees and barricading the roads to stop Morgan's march. He was so delayed by these and other things that he did not reach the Ohio until July 19th. He hoped to cross at a place called Buffington Ford, but the Union men were upon him and he had to turn and fight. After a severe battle, in which the Union troops were helped by gunboats which cut off the raiders from crossing the ford, about 800 of Morgan's men surrendered, and the rest, with Morgan himself, fled up the river fourteen miles to Bellville, where they tried to cross by swimming their horses. About 300 men had succeeded in getting over when the gunboats came up and opened fire on them. A fearful scene ensued, for it was a struggle of life and death. . . . Some got across, some were shot and some drowned. Morgan was not among the fortunate ones who escaped. With about 200 men he fled

further up the river to New Lisbon, where he was surrounded and forced to surrender. This was a wonderful raid, but it did not do the Confederate cause any good. A large part of the property destroyed was private property, and this roused the anger of all the people of the Border States. . . . Morgan and some of his officers were sent to Columbus and confined in the penitentiary, from which he and six others escaped in the following November by making a hole through the bottom of their cell and digging a tunnel under the foundations of the building.”—J. D. Champlin Jr., *Young Folk's List of the War for the Union, ch. 31.*

A. D. 1863 (July: New York).—The Draft Riots. See NEW YORK (CITY): A. D. 1863.

A. D. 1863 (July: South Carolina).—The lodgement on Morris Island, and the assault on Fort Wagner.—After Du Pont's attack upon the forts in Charleston harbor—see above: A. D. 1863 (APRIL: S. CAROLINA)—“the Confederates enjoyed two months of undisturbed leisure for the construction and strengthening of their works, though all this time the matter of a new essay at the reduction of Sumter occupied more than its proper share of the attention of the Government. The forces in the Department of the South were not sufficient to undertake a siege of Charleston by land, and the exigencies of the more important campaigns going forward in Virginia, Tennessee and Mississippi prevented their being reinforced. It was resolved, therefore, to restrict operations to the harbor and the islands immediately adjoining, and Admiral John A. Dahlgren—after the death of Admiral Foote, who had been designated for the purpose—and General Q. A. Gillmore were charged with the command of the military and naval forces engaged. . . . Admiral Dahlgren . . . assumed command on the 6th of July. Gillmore had already been on the ground some three weeks, and had nearly completed his preparations for a descent upon Morris Island, when Dahlgren arrived. The admiral, without a moment's delay, entered into the plans of the general, and within forty-eight hours collected his scattered monitors and steamed away to the harbor of Charleston. Morris Island is a low strip of sandy beach, which lies to the south of Charleston and, with Sullivan's Island to the north, guards the entrance to the harbor, the two stretching out to sea like the open jaws of an alligator. They are each about three and a half miles long, separated from the mainland on the north, and from the high ground of James Island on the south, by miry and impracticable marshes stretching a distance of two or three miles. Their inner ends are a little less than four miles from the Charleston wharves, with Fort Sumter lying midway. Gillmore resolved to make his attack from Folly Island, which lies on the coast directly south of Morris, which it greatly resembles in conformation, and from which it is separated by Light House Inlet. It was occupied by a brigade under General Israel Vogdes, who had fortified the southern end of it, controlling the waters of Stono harbor and the approaches of James Island. There was a heavy growth of underbrush at both ends of the island; taking advantage of this, Vogdes, under

Gillmore's direction, constructed ten powerful batteries near its southern extremity, completely masked from the enemy's view; their purpose being to operate against the enemy's guns near the landing place, to protect the debarkation of the troops, and to cover their retreat in case of necessity. Most of this work was done at night, and all of it as silently as possible. . . .

Alfred H. Terry's division of 4,000 and George C. Strong's brigade of 2,500 were quietly brought together on Folly Island, and on the afternoon of the 8th of July the former force was sent up the Stono to make a demonstration against James Island, while Strong's brigade was ordered to descend upon Morris Island at daybreak of the 9th. Colonel T. W. Higginson of the First South Carolina Volunteers, colored, was ordered at the same time to cut the railroad between Charleston and Savannah; a duty in which General Gillmore says he 'signally failed.' The others punctually performed the tasks assigned them. Terry's feint against Stono was so imposing as to be taken for the real attack, by Beauregard, who hastily gathered together a considerable force to resist him, and paid little attention to the serious movement on the beach." The Confederate troops on Morris Island, taken by surprise, were "speedily driven out of all their batteries south of Wagner, and abandoned to Gillmore three-fourths of the island, with 11 pieces of heavy ordnance. The next day he ordered Strong's brigade to assault Fort Wagner, an attempt which failed, with slight loss on each side. On the 16th Terry was attacked by a superior force on James Island, and although he repulsed the enemy with the assistance of the gunboats which accompanied him, he was recalled to Folly Island, the purpose of his demonstration having been accomplished. Although General Gillmore had as yet no conception of the enormous strength of Fort Wagner, the assault and repulse of the 11th of July convinced him that it could not be carried off-hand. He therefore determined, on consultation with Admiral Dahlgren, to establish counter-batteries against it, hoping with the combined fire of these and the gunboats to dismount the guns of the work and so shake its defense as to carry it by a determined assault. The preparations were made with great energy, and by the morning of the 18th, exactly one week after the first assault, General Gillmore was ready for the second." The batteries and the fleet opened fire on the fort at noon of July 18th; its defenders were soon driven from the parapets, and "in the course of the afternoon the whole work seemed to be beaten out of shape"; but, being constructed of fine quartz sand, it had suffered damage only in appearance. At twilight, the storming party, headed by Colonel Robert G. Shaw and his Fifty-fourth Massachusetts Regiment of colored troops, made a most brave and resolute assault, actually climbing the parapet of the fort, but only to leave 1500 dead, dying and wounded upon its treacherous sands. The heroic young Colonel Shaw fell dead among the foremost men; General Strong, Colonel Chatfield and Colonel Putnam were killed or mortally wounded; General Truman Seymour was wounded severely, and many other excellent officers were in the lists of the slain; the sadly disabled. "The death of Colonel Shaw was widely lamented, not only because of his personal

worth, but because he had become in a certain sense the representative of the best strain of New England anti-slavery sentiment. The Confederates recognized this representative character by their treatment of his corpse, replying to a request of his friends for his remains, that they 'had buried him under a layer of his niggers.'"—J. G. Nicolay and J. Hay, *Abraham Lincoln*, v. 7, ch. 15.

A. D. 1863 (July—November; Virginia).—Meade and Lee on the Rapidan.—Bristoe Station.—Rappahannock Station.—Kelly's Ford.—Mine Run.—The 18th of July found the whole army of General Meade once more on the Virginia side of the Potomac. "His plan for the pursuit of Lee was not unlike that of McClellan a year before, but although he displayed much greater expedition and energy in the execution of it than were shown by his predecessor, the results, through no fault of his own, were unimportant. General French, who had taken no part in the battle of Gettysburg, had been placed in command of the Third Corps; he was an old officer of the regular army, excellent in drill, in routine, and all the every-day details of the service, but utterly unfit for an enterprise requiring great audacity and celerity. He was assigned upon this expedition to the duty of throwing his corps through Manassas Gap and attacking the flank of the enemy as he moved southward by Front Royal. Meade succeeded in getting French into the Gap in time to have broken the rebel army in two; but when he attacked, it was in so inefficient a manner, and with so small a portion of his force, that the day was wasted and the enemy made their way down the Valley to the lower gaps. This failure was a source of deep mortification to General Meade. . . . The pursuit of the enemy was not continued further. . . . The months of August and September were a period of repose for the Army of the Potomac. It was in fact in no condition to undertake active operations; a considerable body of troops had been taken from Meade for service in South Carolina, and a strong detachment had been sent to the City of New York for the purpose of enforcing the draft there. General Lee had retired behind the Rapidan for several weeks of rest; neither army was ready at that time to attack the other." Early in September Longstreet's Corps was detached from Lee's army and sent west to strengthen Bragg at Chattanooga, and in the latter part of the same month about 13,000 men (Eleventh and Twelfth Corps) were taken from Meade and sent, under Hooker's command, to the same scene of pending conflict. "But, even with this reduction of his command, after the return of the troops detached to the North, Meade found himself with an army of about 68,000 men; and, knowing this force to be somewhat superior to that of the enemy, he resolved to cross the Rapidan and attack him; but again, as so often happened in the history of the contending armies in Virginia, Lee had formed

the project of a similar enterprise, and began its execution a day or two in advance. He had learned of the departure of two corps for the West." On the 9th of October "he began a flanking movement to the right of the Union line."—J. G. Nicolay and J. Hay, *Abraham Lincoln*, v. 8, ch. 9.—"Conceiving that the Confederates would move by the Warrenton pike, in order to cross Bull Run and get possession of Centreville—thus to interpose between the Federal army and Washington—Meade retired as speedily as possible. He had, in reality, the start in the race, notwithstanding the day's loss in the return movement. . . . On the morning of the 14th, Lee advanced from Warrenton in two columns, but not by the 'pike.' The left, under Hill, moving by the turnpike to New Baltimore, was ordered to strike the railroad at Bristoe Station; the right column, under Ewell, taking a more easterly route, was directed to effect a junction at the same point. When Hill approached Bristoe, Meade's army, with the exception of Warren's corps, had passed that point. As the head of this column came up, the 5th Corps, under General Sykes, had just crossed Broad Run. Hill at once formed a line of battle to attack the rear of that corps, when Warren came up, and, by a bold onset, drove the enemy back, securing 450 prisoners and 5 guns. The National army, having won the race for position, and obtained possession of the heights of Centreville, Lee's movement was at an end, and he had but to retire to his old line again. . . . and, on the 18th, began his retrograde movement. The following day Meade commenced pursuit, with the intention of attacking the enemy on his retreat, but did not overtake him, being detained by a heavy rain storm, which so raised Bull Run as to render it unfordable. . . . On the 7th of November the whole army was put in motion toward the Rappahannock, along which river the enemy was in position at Rappahannock Station and Kelly's Ford. In two columns Meade advanced toward these points. Gen'l French, commanding the left wing—composed of the 1st, 2d and 3d Corps—was directed to cross at Kelly's Ford, while the right wing—comprising the 5th and 6th Corps, under General Sedgwick—marched upon Rappahannock Station. The 3d Corps, under Birney, led the advance on Kelly's Ford. Reaching that point, without waiting for pontoons, Birney crossed his own division by wading, carried the rifle-pits, captured 500 prisoners and prevented the enemy re-enforcing their troops at the Ford, by means of batteries which he planted on the hills that commanded the crossing. At the same time the right wing was contending against more formidable obstacles at Rappahannock Station. Early's division of Ewell's corps occupied a series of works on the north side of the river. . . . Gaining a good position, commanding the fort from the rear, Sedgwick planted his guns and opened a fierce cannonade upon the enemy's several batteries. Under cover of this fire, the temporary works were assaulted and carried at the bayonet's point. Over 1,500 prisoners, 4 guns and 8 standards were captured. Sedgwick's loss was about 300 in killed and wounded. The right column now crossed the river without opposition, and, uniting with French's forces, advanced to Brandy Station. November 8th was lost in getting forward the trains, and in re-

connoitering. Under cover of that night Lee withdrew across the Rapidan. Taking position between the Rappahannock and the Rapidan, Meade remained quietly and undisturbed for two weeks. Finding Lee indisposed for action, the Federal leader resolved once more to try and bring on a general engagement. . . . The Confederate army having gone into winter quarters, was located over a wide extent of country. . . . This separation of the enemy's corps, led Meade to hope, that, by crossing the lower fords of the Rapidan, and advancing rapidly on the plank and turnpike roads to Orange, C. H., he could concentrate his army against Ewell's corps, cripple or destroy it, and then be able to turn upon Hill, and in this way break Lee's army in detail." But delays occurred which "frustrated the object of the movement; . . . disclosed Meade's intention to the enemy, who at once concentrated his entire force behind Mine Run, having also time given for additional entrenchments along the menaced points. The enemy's position was found to be exceedingly strong by nature, and further perfected by the skill of busy hands. . . . In front was Mine Run, a shallow stream, but difficult to cross on account of its steep banks, the marshy nature of the ground, and the dense undergrowth with which it was flanked. . . . 'In view of the season of the year [said General Meade in his subsequent report], the impossibility of moving from that place if there came on even a couple of days of rain; having failed in my first plan, which was to attack the enemy before they could concentrate; and then having failed in my plan to attack them after they had concentrated, in the manner which I have related, I concluded that, under the circumstances, it was impossible for me to do anything more.' And this was the end of a movement, which, like Hooker's advance to flank Fredericksburg, opened with fair promise of success, and, like that advance, was a failure from incidents which the situation permitted rather than asserted."—O. J. Victor, *Hist. of the Southern Rebellion*, div. 12, ch. 1 (v. 4).

A. D. 1863 (August: Missouri—Kansas).—Quantrell's guerrilla raid.—The sacking and burning of Lawrence.—"Since the fall of Vicksburg many rebel soldiers had returned from Arkansas to their homes in Western Missouri, and under the secret orders so frequently sent from commanders in the South into that State, the guerrilla bands along the Kansas border suddenly grew in numbers and audacity. Though the whole region was patrolled almost day and night by Union detachments and scouts, a daring leader named Quantrell, who had been for some weeks threatening various Kansas towns, assembled a band of 300 picked and well-mounted followers at a place of rendezvous near the line, about sunset of August 20. His object being divined, half a dozen Union detachments from different points started in chase of him; but skillfully eluding all of them by an eccentric march, Quantrell crossed the State line, and, reaching the open prairie country, where roads were unnecessary, pushed directly for Lawrence, Kansas. . . . This town was 40 miles in the interior,

and had no reason to apprehend an attack, and though it could have assembled several hundred men under arms in half an hour, its inhabitants had no dream of danger when the marauders entered the place at sunrise of August 21. Quantrell stationed detachments to prevent any assembling or concentration of the citizens, and then began a scene of pillage, arson and massacre too horrible to relate. Stores and banks were robbed, 185 buildings burned, and from 150 to 200 inhabitants murdered with a cold-blooded fendishness which seems impossible to believe of Americans. The dreiful work occupied but three or four hours, when the perpetrators remounted their horses and departed. Though they managed their retreat with such skill as to avoid a general encounter, the pursuit was so hot that in several skirmishes, and by cutting off stragglers and laggards, 100 or more of the band were killed. The sudden calamity raised excitement on the Kansas border to almost a frenzy."—J. G. Nicolay and J. Hay, *Abraham Lincoln*, v. 8, p. 211.

A. D. 1863 (August—September: Tennessee).—Burnside's deliverance of East Tennessee.—The Union Army in Knoxville.—"Ever since the Federals had become masters of Kentucky they had projected an expedition into East Tennessee . . . Early in the year 1863 the Federals had taken the defile of Cumberland Gap, the principal door to East Tennessee; but drawn into the pursuit of their adversaries in other directions, they had very wisely renounced proceeding beyond the gap, and shortly thereafter the Confederates had retaken the defile. In 1863 the rôle of liberator of East Tennessee was reserved for General Burnside: it was an honorable compensation accorded to the unfortunate but gallant soldier vanquished at Fredericksburg. Two divisions of the Ninth Corps designated to undertake this campaign having been, on June 4th, sent to the aid of Grant, it became necessary to commence new preparations. The scattered troops in Kentucky, several regiments recruited in that State or composed of refugees from East Tennessee, and a part of the fresh levies made in Ohio and Indiana, formed the Twenty-third Corps, under the orders of General Hartsuff. At the end of June . . . this little army was in readiness to move, when Morgan started on his raid [and Burnside's troops were sent in the pursuit]. Six weeks were lost. It was the beginning of August. The Ninth Corps was coming back from Vicksburg. But the men, worn out by the climate, had need of rest. Burnside could not wait for them." He set out upon his movement into East Tennessee with about 20,000 men, leaving Camp Nelson, near Lexington, on the 10th of August. The Confederate General Buckner opposed him with an equal number, including 3000 under General Fraser at Cumberland Gap. Instead of attempting to force the passage of the gap, Burnside "determined to make a flank movement around the defile, by traversing more to the south, in the State of Tennessee, the high table-land which on that side bears the designation of Cumberland plateau. The roads which Burnside would have to cross were long and difficult to travel, and that portion of the country was little known, besides being bare of resources; but the very difficult character of the roads warranted the belief that the Confederates would be ill-

prepared for defence in that region. No precaution was neglected to ensure the success of this laborious and perilous march," and the success achieved was perfect. "One can understand with what joy the Federals, after eleven days of toilsome march, entered the rich valley, a kind of promised land, which stretched out before them. Public rumor had greatly exaggerated their numbers. . . . Bragg, fearing with reason lest by its flanking movements it [the division which Burnside led in person] should separate him from Buckner and then fall upon Chattanooga, had sent his lieutenant an order to evacuate Knoxville." Buckner withdrew and Burnside made a triumphal entry into Knoxville on the 3d of September. "According to the testimony of eye-witnesses, the joy of the people was beyond description. Innumerable Federal flags which had been preserved in secret were displayed at the windows." Fraser, who had not been withdrawn from Cumberland Gap, found himself entrapped, when, on the 9th of September, Burnside appeared before his works, and he surrendered without a shot.—Comte de Paris, *Hist. of the Civil War in Am.*, v. 4, bk. 1, ch. 2.

A. D. 1863 (August—September: Tennessee).—Rosecrans's advance to Chattanooga.—Evacuation of the place by the Confederates.—Battle of Chickamauga.—"The seizure and occupation of the strategic point Chattanooga was an essential part of the campaign by the national forces against the Confederates. The Atlantic portion of the Southern States is separated from the Mississippi Valley by majestic folds of the earth's surface, constituting the Appalachian Ranges. These folds run, in a general manner, parallel to each other, and at intervals are crossed by transverse depressions or gaps. Such passages or gateways are therefore of great commercial, political and military importance. Chattanooga, which in the Cherokee language means 'The Hawk's Nest,' is a little town seated in one of these transverse depressions, through which the Tennessee River and a system of railroads pass. . . . From the region of Chattanooga the earth-folds range in a southwesterly direction. Enumerating such of them as are of interest on the present occasion, they are from west to east as follows: Raccoon or Sand Mountain, Lookout Mountain, Missionary Ridge, Pigeon Mountain, Chickamauga Hills. . . . Chattanooga Valley . . . through which runs a stream of the same name, is formed on the west by Lookout Mountain, here about 2,400 feet high, and on the east by Missionary Ridge, so called because Catholic Missionaries had established, many years ago, churches and schools upon it among the Cherokee Indians. From the summit of Lookout Mountain portions of not fewer than six States may be seen." In his Tullahoma campaign—See above: 1863 (June—July: Tennessee)—Rosecrans, in July, had compelled Bragg and the Confederate army, by skillful flanking movements, to fall back to Chattanooga. He had ever since been urged from Washington to pursue his attack and dislodge the enemy from the mountains. But he delayed further movements for a month, repair-

ing his railroad communications, asking for re-inforcements, and waiting for corn to ripen for food and forage. When he advanced, it was to turn the left of Bragg's position at Chattanooga, and "reach his rear between Dalton and Atlanta. To do this, he had to cross the Tennessee River below Chattanooga, and then pass the three or four successive mountain ridges. . . . Rosecrans reached the Tennessee River on the evening of the 20th of August, and shelled Chattanooga from the heights on the north bank on the 21st. Bridges were thrown over the river at Caperton's Ferry, mouth of Battle Creek, and Shell Mound, and the army, except the cavalry, safely crossed in face of the enemy. By the 8th of September" the several movements planned for Thomas, McCook and Crittenden were successfully accomplished, and Chattanooga was abandoned by the Confederates. "Thus the first object of Rosecrans's campaign was accomplished: the important strategic point Chattanooga was obtained. . . . Rosecrans, believing himself perfectly secure in Chattanooga, and being convinced that Bragg was fleeing southward, did nothing to fortify himself. Taking measures to pursue his antagonist, he directed Crittenden to leave one brigade at Chattanooga as a garrison, and with the rest move forward to Ringgold. Thomas was to march to Lafayette, and McCook upon Alpine and Sumner Creek. But Bragg, so far from continuing, had stopped his retreat—he was concentrating at Lafayette. He had received, or was on the point of receiving, the powerful re-enforcements directed to join him. He was strictly ordered to check the farther advance of the Army of the Cumberland. . . . Rosecrans had separated three corps of his army by mountain ridges and by distances greater than those intervening between each of them and the enemy. Bragg had concentrated opposite his centre, and was holding such a position that he could attack any of them with overwhelming numbers. He had caused deserters and citizens to go into Rosecrans's lines to confirm him in the impression that the Confederates were in rapid retreat. . . . On the 11th of September, Crittenden, not stopping to fortify Chattanooga, pushed on toward Ringgold to cut off Buckner, who he had heard was coming from East Tennessee to the support of Bragg. Finding that Buckner had already passed, he turned toward Lafayette to follow him, going up the east side of the Chickamauga, but meeting a steadily increasing resistance he took alarm, and fell back across that stream at Lee and Gordon's Mills. The forces he had encountered were Cheatham's and Walker's divisions. Thomas, who had now discovered Bragg's position, directed McCook, who was advancing on Rome, to fall back instantly and connect with him. Rosecrans's troops had thus become scattered along an extended line from Lee and Gordon's Mills to Alpine, a space of about forty miles. By the 17th they were brought more within supporting distance, and on the morning of the 18th a concentration was begun toward Crawfish Spring, but it was slowly executed. At this time the two armies were confronting each other on the opposite banks of the Chickamauga, a stream which, rising at the junction of Missionary Ridge and Pigeon Mountain . . . empties into the beautiful Tennessee River above Chattanooga. In the Indian tongue

Chickamauga means 'The Stagnant Stream,' 'The River of Death'—a name, as we shall soon find, of ominous import. Rosecrans was on the west bank of the Chickamauga. . . . On the 18th his right was . . . at Gordon's Mills, his left near the road across from Rossville. Bragg's intention was to flank this left and interpose between it and Chattanooga. . . . On the 18th Longstreet's troops were arriving from Virginia, and Bragg was ready. . . . The battle of Chickamauga commenced on the morning of the 19th." Bragg's flanking movement, executed under General Polk, and directed against the left of Rosecrans's line, where Thomas had command, did not succeed. "The centre was then assailed and pressed back, but, having been re-enforced, it recovered its ground. Night came, and the battle was thus far indecisive. . . . The night was spent in preparation. Thomas constructed abatis and breastworks before his lines. . . . Bragg was still determined to flank the national left, and intervene between it and Chattanooga. He had ordered Polk to begin the battle as soon as it was light enough to see," but Polk delayed and it was not until 10 o'clock that "Breckenridge's division, followed by Cleburne's, advanced against the breastworks of Thomas, which were mostly in Cleburne's front. Cleburne moved directly upon them, Breckenridge swinging round to flank them. With so much energy were these attacks made, that Thomas had to send repeatedly to Rosecrans for help. The Confederates had been gaining ground, but with these re-enforcements Thomas succeeded in driving back Cleburne with very great loss, and even in advancing on the right of Breckenridge." But, presently, by some blunder in the giving or construing of an order, one division—that of General Wood—was withdrawn from Rosecrans line and posted uselessly in the rear. "By this unfortunate mistake a gap was opened in the line of battle, of which Hindman, of Longstreet's corps, took instant advantage, and, striking Davis in flank and rear, threw his whole division into confusion. . . . That break in the line was never repaired. Longstreet's masses charged with such terrible energy that it was impossible to check them. The national right and centre were dispersed, flying toward Rossville and Chattanooga. Sheridan, however, at length succeeded in rallying a considerable portion of his division, and managed to reach Thomas. On Thomas, who, in allusion to these events, is often called 'The Rock of Chickamauga,' the weight of the battle now fell. Everything depended on his firmness. . . . In the flight of the right and part of the centre from the field, Rosecrans, McCook and Crittenden were enveloped and carried away. . . . Rosecrans . . . went to Chattanooga, and thence telegraphed to Washington that his army had been beaten. Thomas still remained immovable in his position," and at a critical moment he was saved from a movement into his rear, by General Gordon Granger, who pushed to the front with some reserves. "Night came, and the Confederates were still unable to shake him. But, as most of the army had retreated to Chattanooga, he now deliberately fell back to Rossville. . . . The dead and wounded he left in the hands of the enemy. On the 21st he offered battle again, and that night withdrew into the defences of Chattanooga."—J. W.

Draper, *Hist. of the Am. Civil War*, ch. 67, v. 3. — "During the heavy fighting of the 20th, Thomas was the only general officer on the field of rank above a division commander. . . . Well was he called the 'Rock of Chickamauga.' . . . There is nothing finer in history than Thomas at Chickamauga. All things considered, the battle of Chickamauga, for the forces engaged, was the hardest fought and the bloodiest battle of the Rebellion. . . . The largest number of troops Rosecrans had of all arms on the field during the two days' fighting was 55,000 effective men. . . . Rosecrans's losses aggregated killed, 1,687; wounded, 9,394; missing, 5,255. Total loss, 16,336. Bragg, during the battle, when his entire five corps were engaged, had about 70,000 effective troops in line. . . . His losses, in part estimated, were 2,673 killed, 16,274 wounded, and 2,003 missing, a total of 20,950. A full report of the rebel losses was never made."—H. M. Cist, *The Army of the Cumberland (Campaign of the Civil War*, v. 7), ch. 11-12.

A. D. 1863 (August—October: Arkansas—Missouri).—The breaking of Confederate authority in Arkansas.—Occupation of Little Rock by national forces.—Rebel raids into Missouri.—After the surrender of Vicksburg, the Federal Gen. Steele was sent to Helena, with a considerable force, and instructed to form a junction with Gen. Davidson, who was moving south from Missouri, by way of Crowley's Ridge, west of the St. Francis, and with the combined force drive the Confederates south of the Arkansas River. Having effected this junction and established his depot and hospitals at Duvall's Bluff, on the White River, Gen. Steele, on the 1st of August, advanced against the Confederate army, which fell back toward Little Rock. After several successful skirmishes, he reached the Arkansas River, and threw part of his force upon the south side, to threaten the Confederate communications with Arkadelphia, their depot of supplies, and flank their position at Little Rock. Gen. Marmaduke was sent out with a cavalry force to beat the Federals back, but was completely routed. Seeing what must be the inevitable result of this movement of Gen. Steele, the Confederate Gen. Holmes destroyed what property he could, and after a slight resistance retreated with his army in great disorder, pursued by the Federal cavalry, and on the 10th of September Gen. Steele, with the Federal army, entered the capital of Arkansas. His entire losses in killed, wounded and missing, in this whole movement, did not exceed 100. He captured 1,000 prisoners, and such public property as the Confederates had not time to destroy. The Federal cavalry continued to press the retreating Confederates southward; but a small force, which had eluded pursuit and moved eastward, attacked the Federal garrison at Pine Bluff, on the Arkansas, south of Little Rock, hoping to recapture it and thus cripple the Federals and break their communications. The at-

tempt, which was made on the 28th of October, was repulsed with decided loss on the part of the Confederates, and the same day the Federal cavalry occupied Arkadelphia, and the Confederates retreated to ward the Red River. This completely restored Arkansas to the Federal authority, except a small district in the extreme southwest, and the region of Northwest Arkansas, over which the guerrilla and other irregular troops of the Confederates continued to roam, in their plundering excursions into Missouri, Kansas, and the Indian Territory. Some of these were conducted on a large scale. . . . The Confederate Gen. Cabell, collecting together as many of the guerrillas and Indians as possible, and some of the routed troops driven from Little Rock and its vicinity, started with a force variously estimated at from 4,000 to 10,000, in the latter part of September, from the Choctaw settlements of the Indian Territory, crossed the Arkansas River east of Fort Smith, and, on the 1st of October, a detachment of his troops, under Gen. Shelby, joined Coffee at Crooked Prairie, Mo., intending to make a raid into Southwestern Missouri. This combined force, numbering 2,000 or 2,500 men, penetrated as far as the Missouri River at Booneville, but were pursued by the Missouri militia, and finally brought to a stand about eight miles southwest of Arrow Rock, on the evening of the 12th of October. Gen. E. B. Brown, who commanded the Federal troops, fought them till dark that evening, and during the night, having detached a small force to attack them in the rear, renewed the battle the next morning at eight A. M. After a sharp contest they fled, completely routed and broken up, with a loss of several hundred killed, wounded and prisoners. They were pursued to the Arkansas line and prisoners gleaned all the way. . . . With these last convulsive throes, the active existence of the Confederate authority in Arkansas died out. On the 12th of November a meeting was held at Little Rock, to consult on measures for the restoration of the State to the Union, and was succeeded by others in different parts of the State."—W. J. Tenney, *Military and Naval Hist. of the Rebellion*, ch. 36.

A. D. 1863 (August—December: South Carolina).—Siege and Reduction of Fort Wagner.—Bombardment of Fort Sumter and Charleston.—After the unsuccessful assault and bloody repulse of July 18th—See above: A. D. 1863 (JULY: SOUTH CAROLINA)—General Gillmore began against Fort Wagner the operations of a regular siege. "Trenches were dug, and by the middle of August the batteries were within a quarter-mile of Wagner and within two and a half miles of Sumter. The work on these batteries had to be done mostly by night, for the forts kept up a heavy fire. Another battery was also begun in the marsh on the west side of Morris Island. The black mud there was so soft that it would not bear the weight of a man, and was at least 16 feet deep. After the site was chosen, a lieutenant was ordered to superintend the work, and told to call for whatever materials he wanted. Being something of a wag, he sent to the quartermaster for 100 men 18 feet high, to work in mud 16 feet deep; for as men of that height could not be had, he had to be satis-

fled with workmen of common stature. All the work had to be done in the dark, for it was within range of the guns of the forts. During fourteen nights piles were driven through the mud into the solid ground beneath, and on them were piled 15,000 bags of sand to form a parapet. After breaking down several trucks, a monster eight-inch Parrott gun, a 200-pounder, was dragged across the swamp and mounted, and about the middle of August the Swamp Angel, as the soldiers named it, was ready to throw shells into Charleston, nearly five miles away. On the 17th of August twelve land-batteries and the monitors opened fire on Sumter, Wagner, and Gregg. The heaviest of the fire was aimed at Sumter, as General Gillmore wished to silence it before he made another assault on Wagner. The bombardment was kept up for seven days, when Gillmore sent a dispatch to General Halleck, saying: 'Fort Sumter is to-day (Aug. 24) a shapeless and harmless mass of ruins.' On the 21st of August, General Gillmore wrote to General Beauregard, who was in command in Charleston, demanding the evacuation of Fort Sumter and of Morris Island, threatening, in case of refusal, to bombard Charleston. Not hearing from him, he ordered a few shells to be thrown into the city from the Swamp Angel. Some of them fell in the streets and frightened the people, but did little damage. Beauregard then wrote him a letter in which he accused him of barbarity in 'turning his guns against the old men, the women and children, and the hospitals of a sleeping city,' and called the act 'unworthy of any soldier.' General Gillmore replied that it was the duty of the commander of an attacked place to 'see to it that the non-combatants were removed,' and that he (Beauregard) had had forty days' time in which to do it. But the Swamp Angel was fired only a few times. At the thirty-sixth shot it burst and blew out the whole of its breech, and no other gun was mounted in its place. Gillmore then turned his attention once more to Fort Wagner, which he determined to assault again. To do this it was necessary to silence its guns and drive its defenders into the bomb-proofs; so a heavy fire was opened on it by the batteries, while the armored frigate *New Ironsides* poured eleven-inch shells into it from the sea side. The bombardment was kept up day and night, strong calcium lights being used by night to blind the Confederates and to show all parts of their works. The Confederates, driven from their guns, were obliged to fly for safety to their bomb-proofs. In the morning of September 7, the troops, under General Terry, were about ready to make the assault, when it was reported that the fort was empty. The garrisons of both Wagner and Gregg had fled during the night, and the whole of Morris Island was at last in possession of the Union troops. The next night an attack was made on Sumter by thirty boat-loads of men from the fleet. They reached the base of the walls and began to go up, thinking that the garrison was asleep; but before they reached the top a fire of musketry and hand-grenades was opened on them by the Confederates within, aided by some gun boats outside, and the assailants were driven off with a loss of about 200. But little more was done against Charleston during the rest of the year. General Gillmore thought that, as Sumter's guns were silenced, the fleet might easily

pass into the harbor and capture Charleston. But Admiral Dahlgren did not care to run the risk of the torpedoes and powder-mines over which he knew he would have to pass. Besides, General Beauregard had taken advantage of the long delay in taking Wagner to strengthen the inner forts. Fort Johnson had been made into a powerful earthwork, and the fleet, even if Sumter were passed, would meet with as hot a fire as had been experienced outside. General Gillmore therefore contented himself with repairing Wagner and Gregg and turning their guns on Charleston and the forts defending it. As they were a mile nearer the city than the Swamp Angel battery, a slow bombardment was kept up until near the end of the year. About half of Charleston was reached by the shells, and many buildings were greatly injured. As the wharfs and most of the harbor were under fire, blockade-runners could no longer run in, and the business of the city was thus wholly destroyed."—J. D. Champlin, Jr., *Young Folk's Hist. of the War for the Union*, ch. 32.

A. D. 1863 (October—November: Tennessee).—The raising of the siege of Chattanooga.—"Battle above the Clouds," on Lookout Mountain.—Assault of Missionary Ridge.—The Rout of Bragg's army.—After its defeat at Chickamauga the National Army was practically besieged on Chattanooga. Bragg acquired strong positions on Lookout Mountain and Missionary Ridge, and was able to cut off all of Rosecrans's routes of supply, except one long and difficult wagon-road. On the 17th of October an important reorganization of the Union armies in the West was effected. "The departments of the Ohio, the Cumberland, and the Tennessee, were united under the title of Military Division of the Mississippi, of which General Grant was made commander, and Thomas superseded Rosecrans in command of the Army of the Cumberland. General Hooker, with two corps, was sent to Tennessee. Grant arrived at Chattanooga on the 23d of October, and found affairs in a deplorable condition. It was impossible to supply the troops properly by the one wagon-road, and they had been on short rations for some time, while large numbers of the mules and horses were dead. Grant's first care was to open a new and better line of supply. Steamers could come up the river as far as Bridgeport, and he ordered the immediate construction of a road and bridge to reach that point by way of Brown's River, which was done within five days, the 'cracker line,' as the soldiers called it, was opened, and thenceforth they had full rations and abundance of everything. The enemy attempted to interrupt the work on the road; but Hooker met them at Wauhatchie, west of Lookout Mountain, and after a three-hours' action drove them off [with a loss of 416 killed and wounded, the Confederate loss being unknown]. Chattanooga was now no longer in a state of siege; but it was still seriously menaced by Bragg's army, which held a most singular position. Its flanks were on the northern ends of Lookout Mountain and Missionary Ridge, and its front was on the southern end of Missionary Ridge, and its rear was on the northern end of Missionary Ridge. The only communication with the north was by a narrow path through the mountains, and the only communication with the south was by a narrow path through the mountains. The only communication with the east was by a narrow path through the mountains, and the only communication with the west was by a narrow path through the mountains. The only communication with the north was by a narrow path through the mountains, and the only communication with the south was by a narrow path through the mountains. The only communication with the east was by a narrow path through the mountains, and the only communication with the west was by a narrow path through the mountains."—J. D. Champlin, Jr., *Young Folk's Hist. of the War for the Union*, ch. 32.

--- Union Forces
--- Confederate Forces
--- Line of Movement

Ridge, the crests of which were occupied for some distance, and its centre stretched across Chattanooga valley. This line was twelve miles long, and most of it was well entrenched. Grant ordered Sherman [coming from Memphis] to join him with one corps, and Sherman promptly obeyed, but as he did considerable railroad repairing on the way, he did not reach Chattanooga till the 15th of November. Meanwhile Longstreet with 20,000 troops had been detached from Bragg's army and sent against Burnside at Knoxville. After Sherman's arrival, Grant had about 80,000 men."—R. Johnson, *Short Hist. of the War of Secession*, ch. 20.—"My orders for battle," writes General Grant, "were all prepared in advance of Sherman's arrival, except the dates, which could not be fixed while troops to be engaged were so far away. The possession of Lookout Mountain was of no special advantage to us now. Hooker was instructed to send Howard's corps to the north side of the Tennessee, thence up behind the hills on the north side, and to go into camp opposite Chattanooga; with the remainder of the command, Hooker was, at a time to be afterwards appointed, to ascend the western slope between the upper and lower palisades, and so get into Chattanooga Valley. The plan of battle was for Sherman to attack the enemy's right flank, form a line across it, extend our left over South Chickamauga River so as to threaten or hold the railroad in Bragg's rear, and thus force him either to weaken his lines elsewhere or lose his connection with his base at Chickamauga Station. Hooker was to perform like service on our right. His problem was to get from Lookout Valley to Chattanooga Valley in the most expeditious way possible; cross the latter valley rapidly to Rossville, south of Bragg's line on Missionary Ridge, form line there across the ridge facing north, with his right flank extended to Chickamauga Valley east of the ridge, thus threatening the enemy's rear on that flank and compelling him to reinforce this also. Thomas, with the Army of the Cumberland, occupied the centre, and was to assault while the enemy was engaged with most of his forces on his two flanks. To carry out this plan, Sherman was to cross at Brown's Ferry and move east of Chattanooga to a point opposite the north end of Mission Ridge, and to place his command back of the foot-hills out of sight of the enemy on the ridge." Remaining in this concealed position until the time of attack, Sherman's army was then, under cover of night, to be rapidly brought back to the south side of the Tennessee, at a point where Missionary Ridge prolonged would touch the river, this being done by pontoons ready provided at a spot also concealed. The execution of the plan was delayed by heavy rains until November 23, when Burnside's distress at Knoxville forced Grant to begin his attack on Bragg by an advance of Thomas's army, at the center, before the flanking preparations [were completed. "This movement [General Grant's narrative continues] secured to us a line fully a mile in advance of the one we occupied in the morning, and the one which the enemy had occupied to this time. The fortifications were rapidly turned to face the other way. During the following night they were made strong. We lost in this preliminary action about 1,100 killed and wounded, while the enemy probably lost quite as heavily, including the prisoners that were captured. With the exception of the firing

of artillery, kept up from Missionary Ridge and Fort Wood until night closed in, this ended the fighting for the first day. . . . By the night of the 23d Sherman's command was in a position to move," and by daylight two divisions of his command were on the south side of the river, "well covered by the works they had built. The work of laying the bridge, on which to cross the artillery and cavalry, was now begun. . . . By a little past noon the bridge was completed, as well as one over the South Chickamauga . . . and all the infantry and artillery were on the south side of the Tennessee. Sherman at once formed his troops for assault on Missionary Ridge. . . . By half-past three Sherman was in possession of the height without having sustained much loss. . . . Artillery was dragged to the top of the hill by hand. The enemy did not seem to be aware of this movement until the top of the hill was gained. There had been a drizzling rain during the day, and the clouds were so low that Lookout Mountain and the top of Missionary Ridge were obscured from the view of persons in the valley. But now the enemy opened fire upon their assailants, and made several attempts with their skirmishers to drive them away, but without avail. Later in the day a more determined attack was made, but this, too, failed, and Sherman was left to fortify what he had gained. . . . While these operations were going on to the east of Chattanooga, Hooker was engaged on the west. He had three divisions . . . all west of Lookout Creek. The enemy had the east bank of the creek strongly picketed and entrenched. . . . The side of Lookout Mountain confronting Hooker's command was rugged, heavily timbered, and full of chasms. . . . Early on the morning of the 24th Hooker moved Geary's division, supported by a brigade of Crutt's, up Lookout Creek, to effect a crossing. The remainder of Crutt's division was to seize the bridge over the creek, near the crossing of the railroad. . . . This attracted the enemy so that Geary's movement farther up was not observed. A heavy mist obscured him from the view of the troops on the top of the mountain. He crossed the creek almost unobserved, and captured the picket of over 40 men on guard near by. He then commenced ascending the mountain directly in his front. . . . By noon Geary had gained the open ground on the north slope of the mountain, with his right close up to the base of the upper palisade, but there were strong fortifications in his front. The rest of the command coming up, a line was formed from the base of the upper palisade to the mouth of Chattanooga Creek. Thomas and I were on the top of Orchard Knob. Hooker's advance now made our line a continuous one. . . . The day was hazy, so that Hooker's operations were not visible to us except at the moments when the clouds would rise. But the sound of his artillery and musketry was heard incessantly. The enemy on his front was partially fortified, but was soon driven out of his works. During the afternoon the clouds, which had so obscured the top of Lookout all day as to hide whatever was going on from the view of those below, settled down and made it so dark where Hooker was as to stop operations for the time. At four o'clock Hooker reported his position as impregnable. By a little after five direct communication was established, and a brigade of troops was sent from Chattanooga to relieve

him. . . . The morning of the 25th opened clear and bright, and the whole field was in full view from the top of Orchard Knob. It remained so all day. Bragg's headquarters were in full view. . . . Sherman was out as soon as it was light enough to see, and by sunrise his command was in motion. Three brigades held the hill already gained. Morgan L. Smith moved along the east base of Missionary Ridge; Loomis along the west base . . . and Corse with his brigade was between the two, moving directly towards the hill to be captured." The fighting was severe for hours, and Bragg moved heavy masses of troops to resist Sherman's advance, while a division from Thomas was sent to reinforce the latter. "It had now got to be late in the afternoon, and I had expected before this to see Hooker crossing the ridge in the neighborhood of Rossville and compelling Bragg to mass in that direction also. The enemy had evacuated Lookout Mountain during the night, as I expected he would. In crossing the valley he burned the bridge over Chattanooga Creek, and did all he could to obstruct the roads behind him. Hooker was off bright and early, with no obstructions in his front but distance and the obstruction above named. He was detained four hours crossing Chattanooga Creek, and thus was lost the immediate advantage I expected from his forces. . . . But Sherman's condition was getting so critical that the assault for his relief could not be delayed any longer. Sheridan's and Wood's divisions had been lying under arms from early morning, ready to move the instant the signal was given. I now directed Thomas to order the charge at once." In this splendid charge the Union troops drove the Confederates from the first line of their works and then pushed on, with no further orders, to the second line, with the same success. "The retreat of the enemy along most of his line was precipitate, and the panic so great that Bragg and his officers lost all control over their men. Many were captured and thousands threw away their arms in their flight. Sheridan pushed forward until he reached the Chickamauga River at a point above where the enemy crossed. . . . To Sheridan's prompt movement the Army of the Cumberland and the nation are indebted for the bulk of the capture of prisoners, artillery, and small arms that day. . . . The enemy confronting Sherman, now seeing everything to their left giving way, fled also. . . . Hooker [pushing on to Rossville as soon as he had succeeded in getting across Chattanooga Creek] . . . came upon the flank of a division of the enemy, which soon commenced a retreat along the ridge. This threw them on Palmer. They could make but little resistance in the position they were caught in, and as many of them as could do so escaped. Many, however, were captured. . . . The victory at Chattanooga was won against great odds, considering the advantage the enemy had of position."—U. S. Grant, *Personal Memoirs*, ch. 42-44 (v. 2).—"Grant's losses in these battles were 757 killed, 4,529 wounded, and 330 missing; total 5,616. The enemy's losses were fewer in killed and wounded, owing to the fact that he was protected by intrenchments, while the national soldiers were without cover. Grant captured 6,142 prisoners, 40 pieces of artillery, 69 artillery carriages and caissons, and 7,000 stand of small arms; by far the greatest capture, in the open field, which had

then been made during the war. The battle of Chattanooga was the grandest ever fought west of the Alleghenies. It covered an extent of 13 miles, and Grant had over 60,000 men engaged. The rebels numbered only 45,000 men, but they enjoyed immense advantages of position in every part of the field." Pursuit of the retreating Confederates began early in the morning of the 26th, and considerable fighting occurred on that day and the next. At Ringgold, Hooker was checked by Cleburne's division, which held an easily defended gap while the main column with its trains were moved beyond reach. In this battle at Ringgold Hooker lost 65 killed and 377 wounded. He took three pieces of artillery and 230 prisoners.—A. Badeau, *Military Hist. of U. S. Grant*, ch. 11-12 (v. 1).

A. D. 1863 (October—December: Tennessee). —The Siege of Knoxville.—"The Army of the Cumberland remaining quiet at Chattanooga, Bragg (or his superiors) conceived the idea of improving his leisure by a movement on Burnside, which Longstreet was assigned to lead. Burnside had by this time spread his force very widely, holding innumerable points and places southward and eastward of Knoxville by brigades and detachments; and Longstreet advancing silently and rapidly, was enabled to strike heavily [October 20] at the little outpost of Philadelphia, held by Col. F. T. Wolford, with the 1st, 11th, and 12th Kentucky cavalry and 45th Ohio mounted infantry—in all about 2,000 men. Wolford . . . withstood several hours, hoping that the sound of guns would bring him assistance from Loudon in his rear; but none arrived; and he was at length obliged to cut his way out; losing his battery and 32 wagons, but bringing off most of his command, with 51 prisoners. . . . Our total loss in prisoners to Longstreet southward of Loudon is stated by Halleck at 650. The enemy advancing resolutely yet cautiously, our troops were withdrawn before them from Lenoir and from Loudon, concentrating at Campbell's Station—Gen. Burnside, who had hastened from Knoxville at the tidings of danger, being personally in command. Having been joined by his old (9th) corps, he was now probably as strong as Longstreet; but a large portion of his force was still dispersed far to the eastward, and he apprehended being flanked by an advance from Kingston on his left. He found himself so closely pressed, however, that he must either fight or sacrifice his trains; so he chose an advantageous position and suddenly faced the foe: his batteries being all at hand, while those of his pursuers were behind; so that he had decidedly the advantage in the fighting till late in the afternoon, when they brought up three batteries and opened, while their infantry were extended on either hand, as if to outflank him. He then fell back to the next ridge, and again faced about; holding his position firmly till after nightfall; when—his

trains having meantime obtained a fair start—he resumed his retreat, and continued it unmolested until safe within the sheltering entrenchments of Knoxville. Our loss in this affair was about 300; that of the enemy was probably greater. . . . Longstreet continued his pursuit and in due time beleaguered the city [November 17], though he can hardly be said to have invested it. . . . The defenses were engineered by Capt. Poe, and were signally effective. Directly on getting into position, a smart assault was delivered on our right, held by the 12th Illinois, 45th Ohio, 3d Michigan, and 12th Kentucky, and a hill carried; but it was not essential to the defenses. Our loss this day was about 100; among them was Gen. W. P. Sanders, of Kentucky, killed. Shelling and skirmishing barely served to break the monotony for ten weary days, when—having been reinforced by Sam Jones, and one or two other small commands from Virginia—Longstreet delivered an assault, by a picked storming party of three brigades, on an unfinished but important work known as Fort Sanders, on our left, but was bloodily repelled by Gen. Ferrero, who held it—the loss of the assailants being some 800, . . . while on our side the entire loss that night was about 100; only 15 of these in the fort. And now—Bragg having been defeated by Grant before Chattanooga, and a relieving force under Sherman being close at hand—Longstreet necessarily abandoned the siege, and moved rapidly eastward unassailed to Russellville, Virginia: our entire loss in the defense having been less than 1,000; while his must have been twice or thrice that number. Sherman's advance reached the city, and Burnside officially announced the raising of the siege, Dec. 5th.”—H. Greeley, *The American Conflict*, v. 2, ch. 18.

Also in: A. Woodbury, *Burnside and the Ninth Army Corps*, pt. 3, ch. 6.—*Official Records, Series 1*, v. 31, pt. 1.—T. W. Humes, *The Loyal Mountaineers of E. Tennessee*, ch. 14-16.

A. D. 1863 (November).—President Lincoln's Address at Gettysburg.—“By the retreat of Lee from Gettysburg and the immediate pursuit by Meade, the burial of the dead and care of the wounded on that great battlefield were left largely to the military and local authorities of the State of Pennsylvania. Governor Andrew G. Curtin gave the humane and patriotic duty his thoughtful attention; and during its execution the appropriate design of changing a portion of the field into a permanent cemetery, where the remains of the fallen heroes might be brought together, and their last resting-place suitably protected and embellished, was conceived and begun. The citizen soldiery from seventeen of the loyal States had taken part in the conflict on the Union side, and the several Governors of these States heartily coöperated in the project, which thus acquired a National character. This circumstance made it natural that the dedication ceremonies should be of more than usual interest and impressiveness. Accordingly, at the beginning of November, 1863, when the work was approaching its completion, Mr. David Wills, the special agent of Governor Curtin, and also acting for the several States, who had not only originated, but mainly superintended, the enterprise, wrote the following letter of invitation to President Lincoln: ‘The several States having soldiers in the Army of the Potomac, who were killed at the battle of Gettys-

burg, or have since died at the various hospitals which were established in the vicinity, have procured grounds on a prominent part of the battlefield for a cemetery, and are having the dead removed to them and properly buried. These grounds will be consecrated and set apart to this sacred purpose, by appropriate ceremonies, on Thursday, the 10th instant. Hon. Edward Everett will deliver the oration. I am authorized by the Governors of the different States to invite you to be present and participate in these ceremonies, which will doubtless be very imposing and solemnly impressive. It is the desire that after the oration, you, as Chief Executive of the nation, formally set apart these grounds to their sacred use by a few appropriate remarks. It will be a source of great gratification to the many widows and orphans that have been made almost friendless by the great battle here, to have you here personally; and it will kindle anew in the breasts of the comrades of these brave dead, who are now in the tented field or nobly meeting the foe in the front, a confidence that they who sleep in death on the battlefield are not forgotten by those highest in authority; and they will feel that, should their fate be the same, their remains will not be uncared for. We hope you will be able to be present to perform this last solemn act to the soldier dead on this battlefield.’ President Lincoln expressed his willingness to perform the duty requested of him. . . . At the appointed hour on the 19th a vast procession, with military music, moved to the cemetery grounds where, in the midst of a distinguished auditory, the orator of the day, Edward Everett, made an address worthy alike of his own fame and the extraordinary occasion. . . . Mr. Everett ended in a brilliant peroration, the echoes of which were lost in the long and hearty plaudits of the great multitude, and then President Lincoln arose to fill the part assigned him in the programme. It was a trying ordeal to fitly crown with a few brief sentences the ceremonies of such a day, and such an achievement in oratory; finished, erudite, apparently exhaustive of the theme, replete with all the strength of scholastic method and the highest graces of literary culture. If there arose in the mind of any discriminating listener on the platform a passing doubt whether Mr. Lincoln would or could properly honor the unique occasion, that doubt vanished with his opening sentence; for then and there the President pronounced an address of dedication so pertinent, so brief yet so comprehensive, so terse yet so eloquent, linking the deeds of the present to the thoughts of the future, with simple words, in such living, original, yet exquisitely molded, maxim-like phrases that the best critics have awarded it an unquestioned rank as one of the world's masterpieces in rhetorical art. He said: ‘Four-score and seven years ago our fathers brought forth on this continent a new nation, conceived in liberty, and dedicated to the proposition that all men are created equal. Now we are engaged in a great civil war, testing whether that nation, or any nation so conceived and so dedicated, can long endure. We are met on a great battlefield of that war. We have come to dedicate a portion of that field, as a final resting-place for those who here gave their lives that that nation might live. It is altogether fitting and proper that we should do this. But, in a larger sense,

we cannot dedicate—we cannot consecrate—we cannot hallow—this ground. The brave men, living and dead, who struggled here, have consecrated it, far above our poor power to add or detract. The world will little note, nor long remember, what we say here, but it can never forget what they did here. It is for us the living, rather, to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us,—that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion—that we here highly resolve that these dead shall not have died in vain—that this nation, under God, shall have a new birth of freedom—and that government of the people, by the people, for the people, shall not perish from the earth.”
—J. G. Nicolay and J. Hay, *Abraham Lincoln*, v. 8, ch. 7.

A. D. 1863 (December). — The President's Message to Congress, at the opening of its session, December 8, was accompanied by the following Proclamation of Amnesty, which made known the terms of political reconstruction and rehabilitation that would be favored by the Executive, in dealing with rebellious citizens who might return to their allegiance:

“Whereas, in and by the Constitution of the United States, it is provided that the President ‘shall have power to grant reprieves and pardons for offenses against the United States, except in cases of impeachment;’ and Whereas a rebellion now exists whereby the loyal State governments of several States have for a long time been subverted, and many persons have committed and are now guilty of treason against the United States; and Whereas, with reference to said rebellion and treason, laws have been enacted by Congress declaring forfeitures and confiscation of property and liberation of slaves, all upon terms and conditions therein stated, and also declaring that the President was thereby authorized at any time thereafter, by proclamation, to extend to persons who may have participated in the existing rebellion, in any State or part thereof, pardon and amnesty, with such exceptions and at such times and on such conditions as he may deem expedient for the public welfare; and Whereas the congressional declaration for limited and conditional pardon accords with well established judicial exposition of the pardoning power; and Whereas, with reference to said rebellion, the President of the United States has issued several proclamations, with provisions in regard to the liberation of slaves; and Whereas it is now desired by some persons heretofore engaged in said rebellion to resume their allegiance to the United States, and to reinaugurate loyal State governments within and for their respective States: Therefore, I, Abraham Lincoln, President of the United States, do proclaim, declare and make known to all persons who have directly, or by implication, participated in the existing rebellion, except as hereinafter excepted, that a full pardon is hereby granted to them and each of them, with restoration of all rights of property, except as to slaves, and in property cases where rights of third parties shall have intervened, and upon the condition that every such person shall take and subscribe an oath, and thenceforward keep and maintain said oath in-

violate; and which oath shall be registered for permanent preservation, and shall be of the tenor and effect following, to wit: ‘I, _____, do solemnly swear, in presence of Almighty God, that I will henceforth faithfully support, protect, and defend the Constitution of the United States, and the union of the States thereunder; and that I will, in like manner, abide by and faithfully support all acts of Congress passed during the existing rebellion with reference to slaves, so long and so far as not repealed, modified, or held void by Congress, or by decision of the Supreme Court; and that I will, in like manner, abide by and faithfully support all proclamations of the President made during the existing rebellion having reference to slaves, so long and so far as not modified or declared void by decision of the Supreme Court. So help me God.’ The persons excepted from the benefits of the foregoing provisions are all who are, or shall have been, civil or diplomatic officers or agents of the so-called Confederate Government; all who have left judicial stations under the United States to aid the rebellion; all who are, or shall have been, military or naval officers of said so-called Confederate Government above the rank of colonel in the Army, or of lieutenant in the Navy; all who left seats in the United States Congress to aid the rebellion; all who resigned commissions in the Army or Navy of the United States, and afterwards aided the rebellion; and all who have engaged in any way in treating colored persons, or white persons in charge of such, otherwise than lawfully as prisoners of war, and which persons may have been found in the United States service as soldiers, seamen, or in any other capacity. And I do further proclaim, declare, and make known that w. never in any of the States of Arkansas, Texas, Louisiana, Mississippi, Tennessee, Alabama, Georgia, [Virginia?], Florida, South Carolina, and North Carolina, a number of persons, not less than one tenth in number of the votes cast in such State at the presidential election of the year of our Lord one thousand eight hundred and sixty, each having taken the oath aforesaid and not having since violated it, and being a qualified voter by the election law of the State existing immediately before the so-called act of secession, and excluding all others, shall re-establish a State government which shall be republican, and in no wise contravening said oath, such shall be recognized as the true government of the State, and the State shall receive thereunder the benefits of the constitutional provision which declares that ‘the United States shall guaranty to every State in this Union a republican form of government, and shall protect each of them against invasion; and, on application of the Legislature, or the Executive (when the Legislature cannot be convened), against domestic violence.’ And I do further proclaim, declare, and make known that any provision which may be adopted by such State government in relation to the freed people of such State, which shall recognize and declare their permanent freedom, provide for their education, and which may yet be consistent, as a temporary arrangement, with their present condition as a laboring, landless, and homeless class, will not be objected to by the national Executive. And it is suggested as not improper, that, in constructing a loyal State government in any

State, the name of the State, the boundary, the subdivisions, the constitution, and the general code of laws, as before the rebellion, be maintained, subject only to the modifications made necessary by the conditions hereinbefore stated, and such others, if any, not contravening said conditions, and which may be deemed expedient by those framing the new State government. To avoid misunderstanding, it may be proper to say that this proclamation, so far as it relates to State governments, has no reference to States wherein loyal State governments have all the while been maintained. And for the same reason, it may be proper to further say, that whether members sent to Congress from any State shall be admitted to seats constitutionally rests exclusively with the respective Houses, and not to any extent with the Executive. And still further, that this proclamation is intended to present the people of the States wherein the national authority has been suspended, and loyal State governments have been subverted, a mode in and by which the national authority and loyal State governments may be re-established within said States, or in any of them; and, while the mode presented is the best the Executive can suggest, with his present impressions, it must not be understood that no other possible mode would be acceptable. Given under my hand, at the City of Washington, the eighth day of December, in the year of our Lord, one thousand eight hundred and sixty-three, and of the independence of the United States of America the eighty-eighth. ABRAHAM LINCOLN."

In the Message Mr. Lincoln gave his reasons for the Proclamation, and explained the grounds on which he rested the policy declared in it, as follows: "On examination of this proclamation it will appear, as is believed, that nothing is attempted beyond what is amply justified by the Constitution. True, the form of an oath is given, but no man is coerced to take it. The man is only promised a pardon in case he voluntarily takes the oath. The Constitution authorizes the Executive to grant or withhold the pardon at his own absolute discretion; and this includes the power to grant on terms, as is fully established by judicial and other authorities. It is also proffered that if, in any of the States named, a State government shall be, in the mode prescribed, set up, such government shall be recognized and guaranteed by the United States, and that under it the State shall, on the constitutional conditions, be protected against invasion and domestic violence. The constitutional obligation of the United States to guarantee to every State in the Union a republican form of government, and to protect the State, in the cases stated, is explicit and full. But why tender the benefits of this provision only to a State government set up in this particular way? This section of the Constitution contemplates a case wherein the element within a State, favorable to republican government, in the Union, may be too feeble for an opposite and hostile element external to or even within the State; and such are precisely the cases with which we are now dealing. An attempt to guarantee and protect a revived State government, constructed in whole, or in preponderating part, from the very element against whose hostility and violence it is to be protected, is simply absurd. There must be a test by which to separate the opposing elements

so as to build only from the sound; and that test is a sufficiently liberal one which accepts as sound whoever will make a sworn recantation of his former unsoundness. But if it be proper to require, as a test of admission to the political body, an oath of allegiance to the Constitution of the United States, and to the Union under it, why also to the laws and proclamations in regard to slavery? Those laws and proclamations were enacted and put forth for the purpose of aiding in the suppression of the rebellion. To give them their fullest effect, there had to be a pledge for their maintenance. In my judgment they have aided, and will further aid, the cause for which they were intended. To now abandon them would be not only to relinquish a lever of power, but would also be a cruel and an astounding breach of faith. I may add at this point, that while I remain in my present position I shall not attempt to retract or modify the Emancipation Proclamation; nor shall I return to slavery any person who is free by the terms of that proclamation, or by any of the acts of Congress. For these and other reasons it is thought best that support of these measures shall be included in the oath; and it is believed the Executive may lawfully claim it in return for pardon and restoration of forfeited rights, which he has clear constitutional power to withhold altogether, or grant upon the terms which he shall deem wisest for the public interest. It should be observed, also, that this part of the oath is subject to the modifying and abrogating power of legislation and supreme judicial decision. The proposed acquiescence of the national Executive in any reasonable temporary State arrangement for the freed people is made with the view of possibly modifying the confusion and destitution which must at best attend all classes by a total revolution of labor throughout whole States. It is hoped that the already deeply afflicted people in those States may be somewhat more ready to give up the cause of their affliction, if, to this extent, this vital matter be left to themselves; while no power of the national Executive to prevent an abuse is abridged by the proposition. The suggestion in the proclamation as to maintaining the political frame-work of the States on what is called reconstruction, is made in the hope that it may do good without danger of harm. It will save labor, and avoid great confusion. But why any proclamation now upon this subject? This question is beset with the conflicting views that the step might be delayed too long or be taken too soon. In some States the elements for resumption seem ready for action, but remain inactive, apparently for want of a rallying-point—a plan of action. Why shall A adopt the plan of B, rather than B that of A? And if A and B should agree, how can they know but that the General Government here will reject their plan? By the proclamation a plan is presented which may be accepted by them as a rallying-point, and which they are assured in advance will not be rejected here. This may bring them to act sooner than they otherwise would. The objection to a premature presentation of a plan by the national Executive consists in the danger of commitments on points which could be more safely left to further developments. Care has been taken to so shape the document as to avoid embarrassments from this source. Say-

ing that, on certain terms, certain classes will be pardoned, with rights restored, it is not said that other classes, or other terms, will never be included. Saying that reconstruction will be accepted if presented in a specified way, it is not said it will never be accepted in any other way. The movements, by State action, for emancipation in several of the States, not included in the Emancipation Proclamation, are matters of profound gratulation. And while I do not repeat in detail what I have heretofore so earnestly urged upon this subject, my general views and feelings remain unchanged; and I trust that Congress will omit no fair opportunity of aiding these important steps to a great consummation. In the midst of other cares, however important, we must not lose sight of the fact that the war power is still our main reliance. To that power alone we can look, yet for a time, to give confidence to the people in the contested regions, that the insurgent power will not again overrun them. Until that confidence shall be established, little can be done anywhere for what is called reconstruction. Hence our chiefest care must still be directed to the army and navy, who have thus far borne their harder part so nobly and well. And it may be esteemed fortunate that in giving the greatest efficiency to these indispensable arms, we do also honorably recognize the gallant men, from commander to sentinel, who compose them, and to whom, more than to others, the world must stand indebted for the home of freedom disenthralled, regenerated, enlarged, and perpetuated. Abraham Lincoln."—A. Lincoln, *Complete Works*, v. 2, pp. 442-456.

A. D. 1863-1864 (December—April: Tennessee—Mississippi).—Winter operations.—Sherman's Meridian Expedition.—Longstreet's withdrawal from East Tennessee.—Sherman was at Vicksburg. On a line with Vicksburg, but almost on the eastern boundary of the State, was the town of Meridian. Here two railroads crossed, one running north and south, extending from Mobile into the heart of Tennessee, and the other extending to the eastward into Alabama and Georgia. Railroads were few in the South at that time and the junction had made Meridian an important point. Here the Confederates had erected great warehouses for the storage of provisions and munitions of war. A considerable body of troops, too, was maintained at this point, whence they could be sent speedily by rail north or south, east or west, as the necessity might arise. General Sherman determined to fall upon Meridian, drive away the Confederate garrison, burn the arsenal and tear up the railroads so as to isolate the different parts of the Confederacy thenceforth. But in addition to accomplishing this he desired to effect the defeat and dispersal of the Confederate cavalry force under General Forrest, which was operating in Northern Mississippi and Southern Tennessee. Forrest was a brave and dashing leader. His men were hardy troops, used to quick marches and reckless of danger. To crush him and annihilate his command would be a notable victory for the Union cause. Full of this project, Sherman boarded a steamer at Vicksburg and set out for Memphis, where were the headquarters of General W. S. Cooy Smith, then chief of cavalry in the division of the Mississippi. The river was full of great cakes of floating ice that bumped against the prow of the boat and ground against

her sides until those on board feared that she might be sent to the bottom. But Memphis was reached without accident, and Sherman and the chief of cavalry were soon in earnest consultation. General Smith was ordered to take the field against Forrest with a force of 7,000 men. . . . It was agreed that General Smith should start from Memphis on February 1 and march southeast, while Sherman should leave Vicksburg February 3, and march due east. Thus they would effect a junction in the vicinity of Meridian. Sherman then re-embarked on the icy river and made his way back to Vicksburg. Promptly on the appointed day the head of Sherman's column passed out through the chain of earthworks that girdled the landward side of Vicksburg. It was to be an expedition of destruction—a raid. His force of 25,000 men was in light marching order and advanced with such rapidity that the Confederates were driven from the very first, without having time to rally and oppose the advance of the invaders. Jackson was reached without any fighting, other than slight skirmishing with Polk's cavalry. The ministerial general had but 9,000 men in all, so he dared not make a determined stand against Sherman, but fled, without even destroying his pontoon bridge across the Pearl River, whereby the Federal advance was much expedited. From Jackson eastward the path of Sherman's army was marked by a broad belt of ashes and desolation. No public property was spared, nor anything which could be applied to public uses. Mills, railway stations, and rolling stock were burned. Railway tracks were torn up, the ties heaped on roaring fires and the rails heated red-hot and twisted out of shape. Sometimes the soldiers would twine a hot rail about a young tree, making what they facetiously termed 'Jeff Davis's neck-ties.' To Sherman's lines came escaping slaves in droves, old and young men, women and pickaninnies. . . . The slaves still further impoverished their masters by taking horses and mules with them when they fled, so that after Sherman's army had passed, most of the plantations in its track were stripped of their live-stock, both cattle and human. When Meridian was reached its defenders were nowhere to be seen. Sherman took possession and waited for Smith. Days passed without any word coming from the cavalry column. After a week in Meridian, Sherman set the torch to the public buildings and retraced his steps toward Vicksburg. He had taken 400 prisoners, destroyed 150 miles of track, 87 bridges, 20 locomotives and 28 cars; had burned several thousand bales of cotton, a number of steam mills, and over 2,900,000 bushels of corn. Over 1,000 Union white refugees and 8,000 negroes followed in his wake. In 1866, the historian Lossing, passing through Meridian, asked the Mayor of the town if Sherman had done the place much injury. 'Injury!' was the emphatic reply, 'Why, he took it away with him.'—W. J. Abbot, *Battle Fields and Victory*, ch. 1.—General Smith, in his report to General Sherman, gave the reasons for the falling back of the cavalry expedition, as follows: "We advanced to West Point and felt of the enemy, who was posted back of the Sakatonchee on our right and the Oktibbeha in our front, in force fully equal to my own that was available for service, encumbered as we were with our pack-mules and the captured stock, which by this time must have

numbered full 3,000 horses and mules. The force consisted of mounted infantry, which was dismounted and in strong position under good cover, and beyond obstacles which could only be passed by defiles. To attempt to force my way through under such circumstances would have been the height of folly. I could not cross the Tombigbee, as there were no bridges and the stream could not be forded. To have attempted to turn the position by our right would have carried me all the way round to Houston again, and Forrest could again check me at the Houlika Swamp. I was ten days behind time; could get no communication through to you; did not know but what you were returning, and so determined to make a push at Forrest in front while I retired all my incumbrances and my main body rapidly toward Okolona, just in time to prevent a rebel brigade from getting in my rear, which had been thrown back for that purpose. We then retired, fighting for over 60 miles day and night."—*Official Records, Series 1, v. 82, pt. 1, p. 252.*—In East Tennessee, during the winter little was done by either army. A slight encounter occurred at Dandridge, in January, between Longstreet's forces and those of the Union General Parke. In April Longstreet was recalled by Lee, and the Ninth Corps, with Burnside again in command, went back to the army of the Potomac.—J. D. Cox, *Atlanta (Campaigns of the Civil War, v. 9), ch. 1-2.*

A. D. 1863-1864 (December—July).—President Lincoln's plan of reconstruction, and its application to Louisiana.—The opposing Congressional plan.—"The proclamation which accompanied the Annual Message of the President for 1864 embodied the first suggestions of the Administration on the important subject of reconstructing the Governments of those States which had joined in the secession movement. The matter had been canvassed somewhat extensively by the public press, and by prominent politicians, in anticipation of the overthrow of the rebellion. . . . A considerable number of the friends of the Government, in both houses, maintained that, by the act of secession, the revolted States had put themselves outside the pale of the Constitution, and were henceforth to be regarded and treated, not as members of the Union, but as alien enemies:—that their State organizations and State boundaries had been expunged by their own act; and that they were to be readmitted to the jurisdiction of the Constitution, and to the privileges of the Union, only upon such terms and conditions as the Federal Government of the loyal States might prescribe. . . . After the appearance of the President's proclamation, the movement towards reconstruction in Louisiana assumed greater consistency, and was carried forward with greater steadiness and strength. On the 8th of January a very large Free State Convention was held at New Orleans, at which resolutions were adopted indorsing all the acts and proclamations of the President, and urging the immediate adoption of measures for the restoration of the State to its old place in the Union. On the 11th, General Banks issued a proclamation, appointing

an election for State officers on the 22d of February, who were to be installed on the 4th of March, and another election for delegates to a convention to revise the Constitution of the State on the first Monday in April. The old Constitution and laws of Louisiana were to be observed, except so far as they relate to slavery. . . . Under this order, parties were organized for the election of State officers. The friends of the National Government were divided, and two candidates were put in nomination for Governor, Hon. Michael Hahn being the regular nominee, and representing the supporters of the policy of the President, and Hon. B. F. Flanders being put in nomination by those who desired a more radical policy than the President had proposed. Both took very decided ground against the continued existence of slavery within the State. . . . The election resulted in the election of Mr. Hahn. . . . Mr. Hahn was inaugurated as Governor on the 4th of March. On the 15th he was clothed with the powers previously exercised by General Banks, as military governor. . . . On March 16th, Governor Hahn issued a proclamation, notifying the electors of the State of the election for delegates to the convention previously ordered by General Banks. The party which elected Governor Hahn succeeded also in electing a large majority of the delegates to the convention, which met in New Orleans on the 6th of April. On the 11th of May it adopted, by a vote of 70 to 16, a clause of the new Constitution, by which slavery was forever abolished in the State. The Constitution was adopted on the 5th of September, by a vote of 6,836 to 1,566. Great umbrage was taken at these proceedings by some of the best friends of the cause, as if there had been an unauthorized and unjustifiable interference on the part of the President. . . . In Arkansas, where a decided Union feeling had existed from the outbreak of the rebellion, the appearance of the proclamation was the signal for a movement to bring the State back into the Union. On the 20th of January, a delegation of citizens from that State had an interview with the President, in which they urged the adoption of certain measures for the re-establishment of a legal State Government, and especially the ordering of an election for Governor. . . . Meantime, a convention had assembled at Little Rock, composed of delegates elected without any formality, and not under the authority of the General Government, and proceeded to form a new State Constitution, and to fix a day for an election. . . . The convention framed a constitution abolishing slavery, which was subsequently adopted by a large majority of the people. It also provided for the election of State officers on the day appointed for the vote upon the constitution; and the legislature chosen at that election elected two gentlemen, Messrs. Fishback and Baxter, as United States Senators, and also Representatives. These gentlemen presented their credentials at Washington. . . . The whole matter was referred to the Judiciary Committee, who . . . reported on the 27th of June that on the facts it did not appear that the rebellion was so far suppressed in Arkansas as to entitle the State to representation in Congress, and that therefore Messrs. Fishback and Baxter were not entitled to seats as Senators from the State of Arkansas. And the Senate on the next day adopted their report by a vote of 27 to 6. In the House, meanwhile,

the Committee on Elections, to whom the application of the Arkansas members had been referred, reported to postpone their admission until a commission could be sent to inquire into and report the facts of the election, and to create a commission for the examination of all such cases. This proposition was, however, laid on the table, and the members were not admitted. . . . The cause of the rejection of these Senators and Representatives was, that a majority in Congress had not agreed with the President in reference to the plan of reconstruction which he proposed. A bill for the reconstruction of the States was introduced into the Senate, and finally passed both Houses on the last day of the session. It provided that the President should appoint, for each of the States declared in rebellion, a Provisional Governor, who should be charged with the civil administration of the State until a State Government should be organized and such other civil officers as were necessary for the civil administration of the State; that as soon as military resistance to the United States should be suppressed and the people had sufficiently returned to their obedience, the Governor should make an enrolment of the white male citizens, specifying which of them had taken the oath to support the Constitution of the United States, and if those who had taken it were a majority of the persons enrolled, he should order an election for delegates to a Constitutional Convention, to be elected by the loyal white male citizens of the United States aged twenty-one years. . . . The bill further provided that when a constitution containing . . . provisions [excluding rebels from office, prohibiting slavery, and repudiating Confederate debts] should have been framed by the convention and adopted by the popular vote, the Governor should certify that fact to the President, who, after obtaining the assent of Congress, should recognize this government so established as the Government of the State, and from that date senators and representatives and electors for President and Vice-President should be elected in the State. . . . This bill thus passed by Congress was presented to the President just before the close of the session, but was not signed by him."—H. J. Raymond, *Life and Public Services of Abraham Lincoln*, ch. 16.—The President's reasons for not signing the bill were given to the public as well as to Congress in the following Proclamation:

"Whereas, at the late session, Congress passed a bill to 'guarantee to certain States, whose governments have been usurped or overthrown, a republican form of government,' a copy of which is hereunto annexed; And whereas the said bill was presented to the President of the United States for his approval less than one hour before the adjournment of said session, and was not signed by him; And whereas the said bill contains, among other things, a plan for restoring the States in rebellion to their proper practical relation in the Union, which plan expresses the sense of Congress upon that subject, and which plan it is now thought fit to lay before the people for their consideration: Now, therefore, I, Abraham Lincoln, President of the United States, do proclaim, declare, and make known, that, while I am (as I was in December last, when by proclamation I pronounced a plan for restoration) unprepared, by a formal approval of this bill, to be inflexibly committed to any

single plan of restoration; and, while I am altogether unprepared to declare that the free-State constitutions and governments already adopted and installed in Arkansas and Louisiana shall be set aside and held for nought, thereby repelling and discouraging the loyal citizens who have set up the same as to further effort, or to declare a constitutional competency in Congress to abolish slavery in States, but am at the same time sincerely hoping and expecting that a constitutional amendment abolishing slavery throughout the nation may be adopted, nevertheless I am fully satisfied with the system for restoration contained in the bill as one very proper plan for the loyal people of any State choosing to adopt . . . and that I am, and at all times shall be, prepared to give the executive aid and assistance to any such people, so soon as the military resistance to the United States shall have been suppressed in any such State, and the people thereof shall have sufficiently returned to their obedience to the Constitution and the laws of the United States, in which cases military governors will be appointed, with directions to proceed according to the bill. In testimony whereof, I have hereunto set my hand, and caused the seal of the United States to be affixed. Done at the city of Washington, this eighth day of July, in the year of our Lord one thousand eight hundred and sixty-four, and of the Independence of the United States the eighty-ninth. Abraham Lincoln. By the President: William H. Seward, Secretary of State."—A. Lincoln, *Complete Works*, v. 2, p. 545.

A. D. 1864 (January—February; Florida).—Unsuccessful Operations.—Battle of Olustee.—"Early in the winter of 1863-64, General Gillmore, commanding the Department of the South, . . . resolved upon an expedition into Florida to take possession of such portions of the Eastern and Northern sections of the State as could be easily held by small garrisons. . . . He afterwards added another detail to his plan: to assist in bringing Florida back into the Union, in accordance with the President's Proclamation of December 8, 1863. This came in time to be regarded by the opponents of the Administration as the sole purpose of the expedition, and Mr. Lincoln has received a great deal of unjust censure for having made a useless sacrifice of life for a political end. . . . The expedition to Florida was under the immediate charge of General Truman Seymour, an accomplished and gallant officer of the regular army. He landed at Jacksonville and pushed forward his mounted force 20 miles to Baldwin. . . . Gillmore himself arrived at Baldwin on the 9th of February, and after a full conference and, as he thought, understanding with Seymour, returned to Jacksonville. . . . On the 18th he was surprised at receiving a letter from Seymour, dated the day before, announcing his intention of moving at once to the Suwannee River without supplies, and asking for a strong demonstration of the army and navy in the Savannah River to assist his movement. . . . Gillmore wrote a peremptory letter, ordering him to restrict himself to holding Baldwin and the south prong of the St. Mary's River and occupying Palatka and Magnolia, and dispatched a staff officer to Florida with it. He arrived too late. Seymour had made up his mind that there was

less risk in going forward than in staying at Baldwin, and like the brave and devoted soldier that he was had resolved to take the responsibility. He marched rapidly out towards Olustee, where the enemy under General Joseph Finegan was supposed to be, but came upon them unexpectedly about two miles east of that place. The forces were equal in numbers, about 5,500 on each side; the advantage to the Confederates was that they were in a strong position selected by themselves and ready for the fight. General J. R. Hawley, who commanded a brigade of infantry in the battle, says: "We rushed in, not waiting for the proper full formation, and were fought in detail." . . . Seymour's attack was constantly repulsed with heavy loss, until at nightfall he fell back to a new line. He was not pursued, and retired in good order and unmolested to Jacksonville. The Union loss was 1861; the Confederate, 940. This misadventure put an end for the moment to the attempt to occupy Florida."—J. G. Nicolay and J. Hay, *Abraham Lincoln*, v. 8, ch. 11.

A. D. 1864 (February—March: Virginia).—Kilpatrick's and Dahlgren's Raid to Richmond.—"Public feeling throughout the North had been greatly excited by the deplorable condition of the prisoners of war held at Richmond. Early in the year, before the opening of the great campaign, some expeditions had been undertaken both from the Army of the Potomac and from Fortress Monroe, with the intention of relieving them. On February 27th, Custer, with 1500 horse, had crossed the Rapidan on a feint to the west of the Confederate army, while Kilpatrick, starting on the following day, moved down on its opposite flank, by Spotsylvania Court House, to within 3½ miles of Richmond, passing its first and second lines of defenses [March], but being obliged to fall back from its third. Pursued by a force of the enemy, he was compelled to cross the White House Railroad and move down the peninsula. A detachment of Kilpatrick's force, 400 strong, under Colonel Ulric Dahlgren, leaving the main body at Spotsylvania, had gone to the right through Louisa and Goochland Counties, intending to cross the James River and enter Richmond from the south, while Kilpatrick attacked it on the north. But the river was found to be too deep to be forded. Dahlgren passed down the north bank to the fortifications of Richmond, forcing his way through the outer works, but being repulsed from the inner. Finding that Kilpatrick's attempt had miscarried, he moved toward King and Queen Court House; but after crossing the Mattaponi at Dabney's Ferry, he fell into an ambuscade [March 3], his command being scattered, and himself killed. Under a false pretense that papers were found upon him showing an intention to set fire to Richmond, and take the lives of Davis and his cabinet, his corpse was insulted and the place of its interment concealed. At the time of his death he was but 21 years of age."—J. W. Draper, *Hist. of the Am. Civil War*, ch. 82 (p. 3).—"The document alleged to have been found upon the person of Colonel Dahlgren is utterly discredited by the fact that the signature attached to it cannot possibly be his own, because it is not his name,—a letter is misplaced, and the real name Dahlgren

is spelled 'Dahlgren'; hence it is undeniable that the paper is not only spurious, but is a forgery. . . . It is entirely certain that no such orders were ever issued by Colonel Dahlgren."—Admiral J. A. Dahlgren, *Memoir of Ulric Dahlgren*, pp. 233-234.

A. D. 1864 (March—April).—General Grant in chief command of the whole army.—His plans of campaign.—"Immediately after the victories at Chattanooga Mr. Washburne of Illinois, the devoted friend and firm supporter of General Grant through good and evil report, introduced a bill in Congress to revive the grade of lieutenant-general in the army. The measure occasioned a good deal of discussion. This high rank had never been conferred on any citizen of the republic except Washington, who held it for a short time before his death. It was discontinued for more than half a century and then conferred by brevet only upon General Scott. There were those who feared, or affected to fear, that so high a military rank was threatening to the liberties of the republic. The great majority of Congress, however, considered the liberties of the republic more robust than this fear would indicate, and the bill was finally passed on the 26th of February, and received the approval of the President on the 29th of February. . . . Immediately upon signing the bill the President nominated Grant to the Senate for the office created by it. . . . The Senate immediately confirmed his nomination, and on the 3d of March the Secretary of War directed him to report in person to the War Department as early as practicable. . . . He started for Washington the next day, but in the midst of his hurried preparations for departure he found time to write a letter of the most warm and generous friendship to Sherman." Grant's commission as Lieutenant-General of the Army of the United States was formally presented to him by President Lincoln on the 9th of March. "After the presentation of the commission a brief conversation took place. General Grant inquired what special service was expected of him. The President replied that our country wanted him to take Richmond; he said our generals had not been fortunate in their efforts in that direction and asked if the Lieutenant-General could do it. Grant, without hesitation, answered that he could if he had the troops. These the President assured him he should have. There was not one word said as to what route to Richmond should be chosen. The next day Grant visited General Meade at the headquarters of the Army of the Potomac at Brandy Station. . . . Meade said that it was possible Grant might want an officer to command the Army of the Potomac who had been with him in the West, and made especial mention of Sherman. He begged him if that was the case not to hesitate about making the change. . . . Grant assured him that he had no thought of making any change; and that Sherman could not be spared from the West. He returned to Washington on the 11th. The next day he was placed in command of all the armies by orders from the War Department; but without waiting for a single day to accept the lavish proffers of hospitality which were showered upon

him, he started West again on the evening of the 11th of March. In that short time he had utterly changed his views and plans for the future conduct of the war. He had relinquished the purpose he had hitherto firmly held of leading the Western armies on the great campaign to Atlanta and the sea, and had decided to take the field with the Army of the Potomac. . . . Sherman at his request was promoted to command the Military Division of the Mississippi, McPherson succeeded to Sherman's command of the Department of the Tennessee, and Logan was promoted to the command of McPherson's corps." The necessary arrangements were quickly made. General Sherman assumed his enlarged command on the 18th of March, and General Grant a few days later was with the Army of the Potomac. He "established his headquarters at Culpeper Court House near the end of March, and spent a month in preparations for the great campaign which he, in common with the entire North, hoped would end the war. . . . The plan of the Lieutenant-General, as set forth in his report, was extremely simple. So far as practicable, the armies were to move together, and towards one common center. Banks was to finish his operations in Louisiana, and leaving a small garrison on the Rio Grande, was to concentrate an army of some 25,000 men, and move on Mobile. Sherman was to move simultaneously with the other armies, General Johnston's army being his objective, and the heart of Georgia his ultimate aim. Sigel, who was in command in the Shenandoah, was to move to the front in two columns, one to threaten the enemy in the Valley, the other to cut the railroads connecting Richmond with the Southwest. Gillmore was to be brought north with his corps, and in company with another corps, under W. F. Smith, was to form an army under General B. F. Butler to operate against Richmond south of the James. Lee's army was to be the objective point of Meade, reinforced by Burnside. As to the route by which the Army of the Potomac was to advance, Grant reserved his decision until just before he started upon his march. . . . The two armies lay in their intrenchments on both sides of the Rapidan. The headquarters. . . of Lee [were] at Orange Court House; the Army of Northern Virginia guarded the south bank of the river for 18 or 20 miles, Ewell commanding the right half, A. P. Hill the left. The formidable works on Mine Run secured the Confederate right wing, which was further protected by the tangled and gloomy thickets of the Wilderness. Longstreet had arrived from Tennessee with two fine divisions, and was held in reserve at Gordonsville. The two armies were not so unequally matched as Confederate writers insist. The strength of the Army of the Potomac, present for duty equipped, on the 30th of April, was 122,146; this includes the 22,708 of Burnside's Ninth Corps. The Army of Northern Virginia numbered at the opening of this campaign not less than 61,953. While this seems like a great disparity of strength, it must not be forgotten that the Confederate general had an enormous advantage of position. The dense woods and the thickly timbered swamps. . . were as well known to him as the lines of his own hand, and were absolutely unknown to his antagonist."—J. G. Nicolay and J. Hay, *Abraham Lincoln*, v. 8, ch. 13-14.

A. D. 1864 (March—May; Louisiana).—**The Red River Expedition.**—"As the third year began, Gen. Banks conceived the idea that the trade of Western Louisiana could be opened by the medium of the Red river, and projected an expedition to take possession of the country adjacent to its course. This river is open for navigation by larger vessels, only during the high water of March and April. Porter was to command the fleet of twenty of the finest vessels on the Mississippi, and Sherman was persuaded to lend some of his troops for the purpose. A. J. Smith was to start from Vicksburg with 10,000 men, while Banks would proceed up river from New Orleans, with Franklin's division. Steele from Little Rock was to operate towards Shreveport to join the main army. General Taylor was in command of the enemy's forces at Shreveport. The fleet started up the Red river in company with the transports carrying A. J. Smith's column. Fort De Russy was captured [March 14], the enemy retiring before our troops, and Alexandria and Natchitoches fell into our hands as the joint force advanced. Banks put in an appearance a week later. There was more or less skirmishing with the enemy's horse and outposts along the entire route; and near Mansfield, at Sabine Cross-Roads, the vanguard met the enemy in force. Sufficient care had not been taken to keep the several bodies concentrated. It was on Smith that the attack fell [April 8], and though this general's record for endurance is of the best, he was nevertheless badly worsted with a loss of 2,000 men out of 8,000 engaged, and some twenty guns. Retiring to Pleasant Hill, another stand was made for the possession of what had been so far gained. . . . The fleet had meanwhile reached Grand Écône. High water was coming to an end, and Porter was obliged to return down river, to Alexandria. Here it was found that most of the vessels were of too heavy draught to pass the falls below the town; and the loss of most of them would have been certain, but for a dam and waterway ably constructed by Colonel Bailey, an engineer remarkably fertile in expedients. By means of this device the fleet was safely floated over. On the retreat, Alexandria was burned [May 15] by accident, traceable to no particular cause, though, naturally enough laid by the Confederates to our spirit of revenge."—T. A. Dodge, *Bird's-Eye View of our Civil War*, ch. 31.—"We prefer not to enter into the bitter discussions to which this disastrous campaign gave rise on both sides of the line. A life-long quarrel sprang up between Kirby Smith and Taylor, between Banks and Porter, while Franklin, Charles P. Stone (Banks's chief-of-staff), and Albert L. Lee, all of whom relinquished their commands, added their quota of misunderstanding and resentment. . . . The Committee on the Conduct of the War made an investigation of the matter in the year 1865, at the time when the antagonism between Mr. Lincoln and the Radicals in relation to the subject of reconstruction had assumed an acute form. . . . The charge was made by the committee against Banks, that what he had in view was to carry out measures for the establishment of a State government in Louisiana, and to afford an egress for cotton and other products of that region, and that the attention directed to the accomplishment of these

objects exerted an unfavorable influence on the expedition. . . . The honorable poverty in which General Banks has passed his subsequent life is the best answer to the reckless charges of his enemies."—J. G. Nicolay and J. Hay, *Abraham Lincoln*, v. 8, ch. 11.

A. D. 1864 (March—October: Arkansas—Missouri).—Last important operations in the West.—Price's raid.—"During the winter of 1863-64 the forces of Generals Steele and Blunt held the Arkansas River as a Federal line of advance. . . . During this period of inactivity, however, Steele was making preparations for a vigorous spring campaign. It was decided that the column under General Banks and the column under General Steele from Little Rock and Fort Smith should converge toward Shreveport, Louisiana. The Federal columns under Steele left Little Rock and Fort Smith the latter part of March, moved toward the Southern part of the State, and after some fighting and manœuvring drove General Price's forces from Camden, Arkadelphia and Washington. In the midst of these successful operations, Steele received information that Banks' army had been defeated and was retreating [See above (MARCH—MAY: LOUISIANA)], and that Price had received reinforcements from Kirby Smith of 5000 infantry and a complement of artillery, and would at once assume the offensive. Not feeling strong enough to fight the combined Confederate forces, Steele determined to fall back upon Little Rock. He had scarcely commenced his retrograde movement when Smith and Price began to press him vigorously. A retreating fight was kept up for several days, until the Federal army reached Jenkins's Ferry on the Saline River," where Smith and Price made an energetic attack on the Federal army (April 30) and were repulsed with heavy loss. "After the battle of Jenkins's Ferry, instead of making preparations to attack the Federal forces at Little Rock and Fort Smith, Price commenced organizing his forces for an expedition into Missouri. . . . Price's army for the invasion of Missouri numbered some 15,000 men and 20 pieces of artillery before crossing the Arkansas River, and consisted of three divisions, commanded by Generals Fagan, Marmaduke and Shelby. . . . About the 1st of September, while strong demonstrations were being made against Fort Smith and Little Rock, Price, with his army, crossed the Arkansas River about half-way between those points, at Dardanelle, and marched to the northern part of the State without opposition, and, in fact, without his movements being definitely known to General Rosecrans, who then commanded the Department of the Missouri at St. Louis," to which he had been appointed in January. At Pilot Knob, where they arrived September 26th, the Confederates were opposed by General Thomas Ewing, Jr., with a small force of 1051 men. The fortifications at Pilot Knob were strong and Ewing held them against the vigorous attacks of Price throughout the 27th, but evacuated that night, blowing up the magazine and retreating safely. The Confederate invaders then marched on St. Louis and attacked the outer defences of

the city, some miles to the south of it, but found themselves opposed by the veterans of General A. J. Smith's division, which had been opportunely stopped on its way down the Mississippi River to join Sherman. Felled at St. Louis, Price then moved upon Jefferson City, the State capital, but was closely pursued and driven off. Advancing westward, he was met at Lexington, October 20th, by forces from Kansas, under General Blunt, but forced the latter to retire from the town, after severe fighting. Thence to Independence his progress was steadily resisted by Generals Blunt and Curtis, with volunteers and militia from Kansas. At Independence, on the 22d, Pleasanton's cavalry, of Rosecrans's army, came up and formed a junction with the forces of Curtis, and the next day they engaged Price in battle near Westport. "The opposing armies fought over an area of five or six square miles, and at some points the fighting was furious. . . . About the middle of the afternoon Price's lines began to give way, and by sundown the entire Confederate army was in full retreat southward along the State line, closely pursued by the victorious Federal forces." At the crossing of the Marais des Cygnes River he lost ten pieces of his artillery and a large number of prisoners, including Generals Marmaduke and Cabell. "At Newtonia in south-west Missouri, on the 28th of October, Price made another stand, and was attacked by the pursuing forces. . . . and finally driven from the field with heavy loss. This was next to the severest battle of the campaign. Blunt, and some of the Missouri troops, continued the pursuit to the Arkansas River, but Price did not again attempt to make a stand. His line of march from Westport to Newtonia was strewn with the débris of a routed army. He crossed the Arkansas River above Fort Smith with a few pieces of artillery, with his army demoralized and reduced by captures and dispersion to perhaps less than 5,000 men. Most of the noted guerrilla bands followed him from the State. The 'Price raid,' as it was called in the West, was the last military operation of much consequence that took place in Missouri and Arkansas. It is certain that Price lost more than he gained in war material and that the raid did not tend to strengthen the Confederate cause in the West."—W. Britton, *Résumé of Military Operations in Missouri and Arkansas, 1864-65 (Battles and Leaders*, v. 4).—"In General Price's report occurs the following summary of the campaign: 'I marched 1,434 miles, fought 43 battles and skirmishes, captured and paroled over 3,000 Federal officers and men, captured 18 pieces of artillery, 3,000 stand of small-arms, 16 stand of colors . . . and destroyed property to the cost of \$10,000,000. I lost ten pieces of artillery, 2 stand of colors, 1,000 small arms, while I do not think I lost 1,000 prisoners. . . . I brought with me at least 5,000 recruits.'"—*Editor's note to above.*

A. D. 1864 (April: Tennessee).—The Massacre at Fort Pillow.—After General Sherman's return from his raid to Meridian, and General William Sooy Smith's return to Memphis, the Confederate cavalry leader Forrest advanced into Tennessee, devastating the country. "He captured Jackson in that State, on the 23d of March, and moving northward, appeared before Paducah, held by Colonel Hicks with 650 men. His demand for a surrender was

accompanied with a threat: 'If you surrender, you shall be treated as prisoners of war; but if I have to storm your works, you may expect no quarter;' he made three assaults, and then retired, having lost 1,500 men. On the 12th of April he was at Fort Pillow, which was garrisoned by 19 officers and 588 men, of whom 262 were negroes. This force was not a part of the army, but a nondescript body in process of formation, placed there to cover a trading-post for the convenience of families supposed to be friendly, or at least not hostile; it had been left in violation of Sherman's peremptory orders. The attack was made before sunrise; and after some severe fighting, Major Booth, the commanding officer of the garrison, was killed. Major Bradford, who succeeded him, drew the troops from the outer line of intrenchments into the fort, and continued the contest until afternoon. A gun-boat which had been co-operating in the defense, withdrew to cool or clean her guns, and, the fire slackening, Forrest sent a summons to surrender, and shortly after a second, demanding that the surrender should be made in twenty minutes. These terms were declined by Bradford. But while the negotiations were in progress, the assailants were stealthily advancing, and gaining such positions that they could rush upon the fort. Accordingly, as soon as Bradford's answer was received, they sprang forward. The fort was instantly carried. Its garrison threw down their arms and fled, seeking refuge wherever they could. And now was perpetrated one of the most frightful acts of all recorded history. The carnage did not cease with the struggle of the storming, but was continued as a carnival of murder until night, and renewed again the next morning. Without any discrimination of color, age, or sex, the fugitives were dragged from their hiding-places, and cruelly murdered. Wounded men, who had made a gallant defense, were atrociously compelled to stand up and be shot; some were burnt in their tents, some were stabbed. For the black soldiers there was no mercy. 'They were massacred because they were negroes, and the whites 'because they were fighting with niggers.' General Stephen E. Lee, the superior of Forrest, partly denying and partly excusing this atrocity, says, 'It is generally conceded by all military precedent that, when the issue has been fairly presented and the ability displayed, fearful results are expected to follow a refusal to surrender. The case under consideration is almost an extreme one. You had a servile race armed against their masters, and in a country which had been desolated by almost unprecedented outrages.' The Committee of Congress on the Conduct of the War appointed a sub-committee to go to such places as they might deem necessary, and take testimony in relation to the Fort Pillow massacre. Their report presents facts in connection with this massacre of the deepest atrocity. Men were not only shot in cold blood and drowned, but were even crucified, buried alive, nailed to the floors of houses, which were then set on fire. 'No cruelty,' says this committee, 'which the most fiendish malignity could devise, was omitted by these murderers.' 'From 300 to 400 men are known to have been killed at Fort Pillow, of whom at least 300 were murdered in cold blood after the post was in possession of the rebels,

and our men had thrown down their arms and ceased to offer resistance.' . . . It should be mentioned in behalf of General Forrest that one of the witnesses, who had been rewounded, testified that 'Forrest gave orders to stop the firing.'—J. W. Draper, *Hist. of the Am. Civil War*, ch. 74 (c. 3).—"I arrived off the fort at 6 a. m. on the morning of the 13th inst. [April]. . . . About 8 a. m. the enemy sent in a flag of truce with a proposal from General Forrest that he would put me in possession of the fort and the country around until 5 p. m. for the purpose of burying our dead and removing our wounded, whom he had no means of attending to. I agreed to the terms proposed. . . . We found about 70 wounded men in the fort and around it, and buried, I should think, 150 bodies. . . . All the wounded who had strength enough to speak agreed that after the fort was taken an indiscriminate slaughter of our troops was carried on by the enemy with a furious and vindictive savageness which was never equalled by the most merciless of the Indian tribes. Around on every side horrible testimony to the truth of this statement could be seen. . . . Strawn from the fort to the river bank, in the ravines and hollows, behind logs and under the brush where they had crept for protection from the assassins who pursued them, we found bodies bayoneted, beaten, and shot to death, showing how cold blooded and persistent was the slaughter of our unfortunate troops."—*Rept. of Acting-Master W. Ferguson, U. S. Steamer Silver Clow (Official Records, Series 1, v. 32, pt. 1, p. 571).*

ALSO IN: *Rept. of Joint Com. on the Conduct of the War (30th Cong., 1st Sess., H. R. Rept. No. 65).*—Comte de Paris, *Hist. of the Civil War in Am.*, v. 4, bk. 4, ch. 1.

A. D. 1864 (April—May: North Carolina).—**Exploits of the ram Albemarle.—Surrender of Plymouth.**—"In the squadron [of the Confederates] we were gladdened by the success of our iron-clad ram Albemarle, which vessel, under Captain James B. Cooke, had (after overcoming innumerable difficulties) succeeded in descending the Roanoke river, April 19th [1864], and dispersing the Federal squadron off Plymouth, N. C. She sunk the steamer Southfield, and drove the other vessels off; and her presence led to the recapture of Plymouth by the Confederates. On the 5th of May the Albemarle started from Plymouth with the small steamer Bombshell in company, on what was called a secret expedition. I think it probable the intention was to destroy the wooden men-of-war in the sounds, and then tow troops in barges to Hatteras and retake it. If this could have been done the Albemarle would have had it all her own way, and Roanoke Island, Newbern and other places would again have fallen into the hands of the Confederates. Shortly after leaving Plymouth the Albemarle fell in with the Federal squadron, consisting of the steamers Mattabesett, Sassacus, Wyalusing, Whitehead, Miami, Ceres, Commodore Hull and Seymour—all under the command of Captain Melancton Smith, and after a desperate combat was forced to return to Plymouth."—W. H. Parker, *Recollections of a Naval Officer*, p. 330.

A. D. 1864 (May: Virginia).—Grant's movement on Richmond.—The Battle of the Wilderness.—"The movement of the Army of the Potomac commenced early on the morning of the 4th of May, under the immediate direction and orders of Major-General Mead, pursuant to instructions. Before night the whole army was across the Rapidan—the Fifth and Sixth Corps crossing at Germaun Ford, and the Second Corps at United States' (Ely's) Ford, the cavalry, under Major-General Sheridan, moving in advance,—with the greater part of its trains, numbering about 4,000 wagons, meeting with but slight opposition. The average distance traveled by the troops that day was about 12 miles. This I regarded as a great success, and it removed from my mind the most serious apprehensions I had entertained, that of crossing the river in the face of an active, large, well-appointed, and ably commanded army, and how so large a train was to be carried through a hostile country and protected. Early on the 5th, the advance corps (the Fifth, Maj. Gen. G. K. Warren commanding), met and engaged the enemy outside his intrenchments near Mine Run. The battle raged furiously all day, the whole army being brought into the fight as fast as the corps could be got upon the field, which, considering the density of the forest [See above: A. D. 1863 (April—May: Virginia)], and narrowness of the roads, was done with commendable promptness. General Burnside, with the Ninth Corps, was at the time the Army of the Potomac moved, left with the bulk of his corps at the crossing of the Rappahannock River and Alexandria railroad, holding the road back to Bull Run, with instructions not to move until he received notice that a crossing of the Rapidan was secured, but to move promptly as soon as such notice was received. This crossing he was apprised of on the afternoon of the 4th. By 6 o'clock of the morning of the 6th he was leading his corps into action near the Wilderness Tavern, some of his troops having marched a distance of over 30 miles, crossing both the Rappahannock and Rapidan Rivers. Considering that a large proportion (probably two-thirds), of his command was composed of new troops, unaccustomed to marches and carrying the accoutrements of a soldier, this was a remarkable march. The battle of the Wilderness was renewed by us at 5 o'clock on the morning of the 6th, and continued with unabated fury until darkness set in, each army holding substantially the same position that they had on the evening of the 5th. After dark the enemy made a feeble attempt to turn our right flank, capturing several hundred prisoners and creating considerable confusion. But the promptness of General Sedgwick, who was personally present and commanded that part of our line, soon reformed it and restored order. On the morning of the 7th reconnaissances showed that the enemy had fallen behind his intrenched lines, with pickets to the front, covering a part of the battle-field. From this it was evident to my mind that the two days' fighting had satisfied him of his inability to further maintain the contest in the open field, notwithstanding his advantage of position, and that he would await an attack behind his works. I therefore determined to push on and put my whole force between him and Richmond, and orders were at once issued for a movement by his right flank. On the night of the 7th the march was commenced

toward Spottsylvania Court House, the Fifth Corps moving on the most direct road. But the enemy having become apprised of our movement, and having the shorter line, was enabled to reach there first."—Gen. U. S. Grant, *Official Report (Official Records, Series 1, v. 36, pt. 1, p. 18)*.—"The casualties of the Army of the Potomac and Burnside's Ninth Corps (then not incorporated with it) in the battle of the Wilderness were "2,265 killed, 10,220 wounded, and 2,903 missing. Total, 15,387. Killed and wounded, 12,485. . . . The woods took fire in many places, and it is estimated that 200 of our wounded perished in the flames and smoke. According to the tabular statement, Part First, 'Medical and Surgical History of the War,' the casualties in the Army of Northern Virginia were 2,000 killed, 6,000 wounded, and 3,400 missing. The authority for this statement is not given, and I do not find any where records of the loss of that army in the Wilderness. . . . Both sides lost many valuable officers in this battle, [including, on the Union side, General Wadsworth]. . . . So far as I know, no great battle ever took place before on such ground. But little of the combats could be seen, and its progress was known to the senses chiefly by the rising and falling sounds of a vast musketry that continually swept along the lines of battle many miles in length, sounds which at times approached to the sublime."—A. A. Humphreys, *The Virginia Campaign of '64 and '65 (Campaigns of the Civil War, v. 12), ch. 2*.—"All the peculiar advantages of the Army of the Potomac were sacrificed in the jungle-fighting into which they were thus called to engage. Of what use here were the tactical skill and the perfection of form, acquired through long and patient exercise; of what use here the example and the personal influence of a Hays or a Hancock, a Brooke or a Barlow? How can a battle be fitly ordered in such a tangle of wood and brush, where troops can neither be sent straight to their destination nor seen and watched over, when, after repeatedly losing direction and becoming broken into fragments in their advance through thickets and jungles, they at last make their way up to the line of battle, perhaps at the point they were designed to reinforce, perhaps far from it? . . . It will never cease to be an object of amazement to me that, with such a tract in prospect, the character of it being known, in general, to army headquarters through the Chancellorsville campaign . . . a supreme effort was not made . . . to carry the Army of the Potomac either through these jungles toward Mine Run, or past it, toward Spottsylvania."—F. A. Walker, *Hist. of the Second Army Corps, ch. 13*. ALSO IN: E. M. Law, A. S. Webb, and others, *The Wilderness Campaign (Battles and Leaders, v. 4)*.—U. S. Grant, *Personal Memoirs, ch. 50-51 (v. 2)*.—W. Swinton, *The Twelve Decisive Battles of the War, ch. 9*.—A. L. Long, *Memoirs of Robt. E. Lee, ch. 17*.

A. D. 1864 (May: Virginia).—Sheridan's raid to Richmond.—"When the Army of the Potomac emerged from the Wilderness, Sheridan was sent to cut Lee's communications. This was the first of the remarkable raids of that remarkable leader, in Virginia, and, though short, was a destructive one. He took with him a greater portion of the cavalry led by Merritt, Gregg and Wilson, and, cutting loose from the

army, he swept over the Po and the Ta, crossed the North Anna on the 9th, and struck the Virginia Central railway at Beaver Dam Station, which he captured. He destroyed ten miles of the railway; also its rolling stock, with a million and a half of rations, and released 400 Union prisoners, on their way to Richmond from the Wilderness. There he was attacked in flank and rear by General J. E. B. Stuart and his cavalry, who had pursued him from the Rapid Anna (Rapidian), but was not much impeded thereby. He pushed on, crossed the South Anna at Ground-squirrel Bridge, and at daylight on the morning of the 11th, captured Ashland Station, on the Fredericksburg road, where he destroyed the railway property, a large quantity of stores, and the road itself for six miles. Being charged with the duty of not only destroying these roads, but of menacing Richmond and communicating with the army of the James, . . . Sheridan pressed on in the direction of the Confederate capital, when he was confronted by Stuart at Yellow Tavern, a few miles north of Richmond, where that able leader, having made a swift circuitous march, had concentrated all of his available cavalry. Sheridan attacked him at once, and, after a sharp engagement, drove the Confederates toward Ashland, on the north fork of the Chickahominy, with a loss of their gallant leader, who, with General Gordon, was mortally wounded. Inspired by this success, Sheridan pushed along the now open turnpike toward Richmond, and made a spirited dash upon the outer works. Custer's brigade carried them at that point and made 100 prisoners. As in the case of Kilpatrick's raid, so now, the second line of works were too strong to be carried by cavalry. The troops in and around the city had rallied for their defense, and in an attack the Nationals were repulsed. Then Sheridan led his command across the Chickahominy, at Meadow Bridge, where he beat off a considerable force of infantry sent out from Richmond, and who attacked him in the rear, while another force assailed his front. He also drove the foe on his front, when he destroyed the railway bridge there, and then pushed on southward to Haxall's Landing, on the James River, where he rested three days and procured supplies. Then, by way of White House and Hanover Court House, he leisurely returned to the Army of the Potomac, which he rejoined on the 25th of May.—B. J. Lossing, *Field Book of the Civil War*, v. 3, ch. 11.

A. D. 1864 (May; Virginia).—Grant's movement upon Richmond: Spottsylvania Court House.—The Bloody Angle.—"Throughout the entire day succeeding this first great conflict [in The Wilderness], General Lee remained quiet, watching for some movement of his adversary. His success in the preliminary struggle had been gratifying, considering the great disproportion of numbers, by which he indulged no expectation of a retrograde movement across the Rapidan, on the part of General Grant. He expected him rather to advance, and anxiously awaited some developments of such a design up to the night of the 7th,

but at that time, to use the words of a confidential member of Lee's staff, 'he all at once seemed to conceive the idea that his enemy was preparing to forsake his position, and move toward Hanover Junction via the Spottsylvania Court-House, and, believing this, he at once detailed Anderson's division with orders to proceed rapidly toward the court-house. General Anderson commenced his march about nine o'clock at night, when the Federal column was already upon its way. A race now began for the coveted position, and General Stuart, with his dismounted sharpshooters behind improvised breastworks, harassed and impeded the Federal advance, at every step, throughout the night. This greatly delayed their march, and their head of column did not reach the vicinity of Spottsylvania Court-House until past sunrise. General Warren, leading the Federal advance, then hurried forward, followed by General Hancock, when suddenly he found himself in front of breastworks, and was received with a fire of musketry. Lee had succeeded in interposing himself between General Grant and Richmond. On the same evening the bulk of the two armies were facing each other on the line of the Po. . . . General Lee had taken up his position on the south bank of one of the four tributaries of the Mattaponi. These four streams are known as the Mat, Ta, Po, and Nye Rivers, and bear the same relation to the main stream that the fingers of the open hand do to the wrist. General Lee was behind the Po, which is next to the Nye, the northernmost of these water-courses. Both were difficult to cross, and their banks heavily wooded. It was now to be seen whether, either by a front attack or a turning movement, General Grant could oust his adversary, and whether General Lee would stand on the defensive or attack. All day, during the 9th, the two armies were constructing breastworks along their entire fronts, and these works, from the Rapidan to the banks of the Chickahominy, remain yet [1871] in existence. On the evening of this day a Federal force was thrown across the Po, on the Confederate left, but soon withdrawn; and on the 10th a similar movement took place near the same point, which resulted in a brief but bloody conflict, during which the woods took fire, and many of the assaulting troops perished miserably in the flames. The force was then recalled, and, during that night and the succeeding day, nothing of importance occurred, although heavy skirmishing and an artillery-fire took place along the lines. On the morning of the 12th, at the first dawn of day, General Grant made a more important and dangerous assault than any yet undertaken in the campaign. This was directed at a salient on General Lee's right centre, occupied by Johnson's division of Ewell's corps, and was one of the bloodiest and most terrible incidents of the war. For this assault [made by three divisions of Hancock's corps] General Grant is said to have selected his best troops. These advanced in a heavy charging column, through the half-darkness of dawn, passed silently over the Confederate skirmishers, scarcely firing a shot, and, just as the first streak of daylight touched the eastern woods, burst upon the salient, which they stormed at the point of the bayonet. The attack was a complete surprise, and carried everything before it. The Southern troops, asleep in the trenches, woke to have the bayonet thrust

into them, to be felled with clubbed muskets, and to find the works apparently in secure possession of the enemy before they could fire a shot. Such was the excellent success of the Federal movement, and the Southern line seemed to be hopelessly disrupted. Nearly the whole of Johnson's division were taken prisoners—the number amounting to more than 3,000—and 18 pieces of artillery fell into the hands of the assaulting column. The position of affairs was now exceedingly critical; and, unless General Lee could reform his line at the point, it seemed that nothing was left him but an abandonment of his whole position. The Federal army had broken his line; was pouring into the opening; and, to prevent him from concentrating at the point to regain possession of the works, heavy attacks were begun by the enemy on his right and left wings. It is probable that at no time during the war was the Southern army in greater danger of a bloody and decisive disaster. At this critical moment General Lee acted with the nerve and coolness of a soldier whom no adverse event can shake. . . . Line of battle was promptly formed a short distance in rear of the salient then in the enemy's possession, and a fierce charge was made by the Southerners, under the eye of Lee, to regain it. . . . The word ferocious best describes the struggle which followed. It continued throughout the entire day, Lee making not less than five distinct assaults in heavy force to recover the works. The fight involved the troops on both flanks, and was desperate and unyielding. The opposing flags were at times within only a few yards of each other, and so incessant and concentrated was the fire of musketry that a tree of about 18 inches in diameter was cut down by bullets, and is still preserved, it is said, in the city of Washington, as a memorial of this bloody struggle. The fighting only ceased several hours after dark. Lee had not regained his advanced line of works, but he was firmly rooted in an interior and straighter line, from which the Federal troops had found it impossible to dislodge him."—*J. E. Cooke, Life of Gen. Robert E. Lee, pt. 8, ch. 4.*—"For the distance of nearly a mile, amid a cold, drenching rain, the combatants [on the 12th, at 'the salient'] were literally struggling across the breastworks. They fired directly into each other's faces, bayonet thrusts were given over the intrenchments; men even grappled their antagonists across the piles of logs and pulled them over, to be stabbed or carried to the rear as prisoners. . . . Never before, since the discovery of gunpowder, had such a mass of lead been hurled into a space so narrow as that which now embraced the scene of combat. Large standing trees were literally cut off and brought to the ground by infantry fire alone; their great limbs whipped into basket stuff that could be woven by the hand of a girl. . . . If any comparisons can be made between the sections involved in that desperate contest, the fiercest and deadliest fighting took place at the west angle, ever afterwards known as 'The Bloody Angle.' . . . All day the bloody work went on. . . . The trenches had more than once to be cleared of the dead, to give the living a place to stand. All day long, and even into the night, the battle lasted, for it was not till twelve o'clock, nearly twenty hours after the command 'Forward' had been given to the column at the Brown House, that the firing died down, and the

Confederates, relinquishing their purpose to retake the captured works, began in the darkness to construct a new line to cut off the salient."—*F. A. Walker, Hist. of the Second Army Corps, ch. 15.*—General Humphreys estimates Grant's losses in killed and wounded on the 12th at 6,020; missing 800. Lee's losses that day in killed, wounded and prisoners he concludes to have been between 9,000 and 10,000. His estimate of losses on the 10th is 4,100 (killed and wounded) on the Union side, and 2,000 on the Confederate side. Major General John Sedgwick, commanding the Sixth Army Corps, was killed in the skirmishing of the 9th.—*A. A. Humphreys, The Virginia Campaign of '64 and '65, ch. 3.*

A. D. 1864 (May; Virginia).—Grant's movement upon Richmond: from Spotsylvania to the Chickahominy.—"The lines of Spotsylvania remained still intact, and General Grant, who might easily have turned the position and manoeuvred his antagonist out of it, seemed bent on carrying it by direct attack. Accordingly, during the succeeding week [after the battle of the 12th], various movements of corps were made from flank to flank, in the endeavor to find a spot where the lines could be broken. These attempts were skillfully met at every point—the Confederates extending their line to correspond with the shiftings of the army; so that wherever attack was essayed, the enemy bristled out in breastworks, and every partial assault made was repulsed. Day by day Grant continued to throw out towards the left, in the hope of overlapping and breaking in the Confederate right flank: so that from occupying, as the army did on its arrival, a line extending four or five miles to the northwest of Spotsylvania Courthouse, it had at the end of ten days assumed a position almost due east of that place, the left resting at a distance of four miles at Massaponax Church. After twelve days of effort, the carrying of the position was seen to be hopeless; and General Grant, abandoning the attempt, resolved by a turning operation to disengage Lee from a position seen to be unassailable. Preparations for this movement were begun on the afternoon of the 19th; but the enemy, observing these, retarded its execution by a bold demonstration against the Union right. . . . This attack somewhat disconcerted the contemplated movement, and delayed it till the following night, May 20th, when the army, moving by the left, once more took up its march towards Richmond. Before the lines of Spotsylvania the Army of the Potomac had for twelve days and nights engaged in a fierce wrestle, in which it had done all that valor may do to carry a position by nature and art impregnable. . . . Language is inadequate to convey an impression of the labors, fatigues, and sufferings of the troops. . . . Above 40,000 men had already fallen in the bloody encounters of the Wilderness and Spotsylvania [Gen. Humphreys—in '*Virginia Campaign of '64 and '65*,' p. 117—makes the total of killed and wounded from May 5 to 21, to be 28,207, and the entire losses of the army, including the missing and the sick sent back to Washington, 37,335]. . . . The exhausted army began to lose its spirit. It was with joy, therefore, that it at length turned its back upon the lines of Spotsylvania. . . . The

two armies once fairly on the march . . . neither . . . seems to have sought to deal the other a blow . . . and both headed, as for a common goal, towards the North Anna . . . The advances of the 21st and 23d brought the different corps [of the Army of the Potomac], which had moved on parallel roads at supporting distance, within a few miles of the North Anna River. Resuming the march on the morning of Monday, May 23d, the army in a few hours reached the northern bank of that stream. But it was only to desert its old enemy planted on the opposite side." Warren's corps crossed the river at Jericho Ford without resistance, but was furiously assailed late in the afternoon and held its ground, taking nearly 1,000 prisoners. The left column, under Hancock, forced a passage in the face of the enemy, carrying a bridge by storm. But nothing was gained by these successes. "While Lee, after the passage of Hancock on the left, threw his right wing back from the North Anna, and on the passage of Warren on the right threw back his left wing, he continued to cling with his centre to the river; so that . . . his army took up a very remarkable line in the form of an obtuse-angled triangle. . . . The game of war seldom presents a more effectual checkmate than was here given by Lee; for after Grant had made the brilliantly successful passage of the North Anna, the Confederate commander, thrusting his centre between the two wings of the Army of the Potomac, put his antagonist at enormous disadvantage, and compelled him, for the reinforcement of one or the other wing, to make a double passage of the river. The more the position of Lee was examined, the more unpromising attack was seen to be; and after passing the two following days in reconnoissances, and destroying some miles of the Virginia Central Railroad, General Grant determined to withdraw across the North Anna and take up a new line of advance. The withdrawal from the North Anna was begun at dark of the 26th of May, when the Second, Fifth and Sixth Corps retired by different bridges to the north bank. . . . The Second Corps held position till the morning of the 27th, when it covered the rear. From the North Anna the line of march of the army made a wide circuit eastward and then southward to pass the Pamunkey. This river is formed by the confluence of the North and South Anna; and the Pamunkey in turn uniting with the Mattaponi forms the York River, emptying into Chesapeake Bay. Thus the successful passage of the Pamunkey would not only dislodge Lee from the lines of the North and South Anna, but would bring the army in communication with a new and excellent water-base." The crossing of the Pamunkey, at and near Hanover town, was accomplished without difficulty on the 27th and 28th, "and the routes to White House, at the head of York River, being opened up, the army was put in communication with the ample supplies floated by the waters of Chesapeake Bay. Grant's new turning movement was met by a corresponding retrograde movement on the part of Lee, and as he fell back on a direct line less than half the distance of the great detour made by the Army of the Potomac, it was not remarkable that, on crossing the Pamunkey, the Confederate force was again encountered, ready to accept the gauge of battle. Lee assumed a position in advance of the Chickahominy. . . . The

region in which the army was now operating revived many reminiscences in the minds of those who had made the Peninsular Campaign under McClellan. . . . Gaines' Mill and Mechanicsville were within an hour's ride; Fair Oaks could be reached in a two hours' trot; Richmond was ten miles off. . . . Reconnoissances showed Lee to be in a very strong position covering the approaches to the Chickahominy, the forcing of which it was now clear must cost a great battle." —W. Swinton, *Campaigns of the Army of the Potomac*, pt. 11, ch. 3-5.

A. D. 1864 (May: Virginia).—The Co-operative movement of the Army of the James.—

In the plan and arrangement of General Grant's campaign, General Butler, commanding at Fortress Monroe, was instructed "to collect all the forces of his command that could be spared from garrison duty estimated at not less than 20,000, and operate on the south side of James River, Richmond being his objective. To his force 10,000 men from South Carolina, under Gillmore, were to be added. He was ordered to take City Point as soon as notification of movement, was given, and fortify it. By this common advance from the Rapidan and Fortress Monroe the two armies would be brought into co-operation. . . . As arranged, Butler moved from Fortress Monroe on May 4th, Gillmore having joined him with the 10th Corps. The next day he occupied, without opposition, both City Point and Bermuda Hundred, his movement being a complete surprise. On the 7th he made a reconnoissance against the Richmond and Petersburg Railroad, destroying a portion of it after some fighting. On the night of the 9th he received dispatches from Washington informing him that Lee was retreating to Richmond and Grant in pursuit. He had, therefore, to act with caution, fearing that he might have Lee's whole army on his hands. On the evening of the 13th and morning of the 14th he carried a portion of the enemy's 2d line of defenses at Drury's Bluff, or Fort Darling. The time thus consumed from the 6th left no possibility of surprising and capturing Richmond and Petersburg, enabling, as it did, Beauregard to collect his forces in North and South Carolina, and bring them to the defense of these places. On the 16th the Confederates attacked Butler in his position in front of Drury's Bluff, forced him back into his entrenchments between the forks of James and Appomattox Rivers [in the district called Bermuda Hundred], and, intrenching strongly in his front, not only covered the railroads and city, but completely neutralized his forces. . . . Butler's army being confined at Bermuda Hundred, most of the re-enforcements from the South were now brought against the Potomac Army. In addition to this, probably not less than 15,000 men, under Breckenridge, arrived from the Western part of Virginia. The position of Bermuda Hundred being easy to defend, Grant, leaving only enough to secure what had been gained, took from it all available forces under W. F. Smith, and joined them to the Army of the Potomac."—J. W. Draper, *Hist. of the Am. Civil War*, v. 3, pp. 368 and 382-385.

ALSO IN: A. A. Humphreys, *The Virginia Campaign of '64 and '65*, ch. 5.—*Civil Records*, Series 1, v. 36, pt. 2.

A. D. 1864 (May; Georgia).—Sherman's Movement upon Atlanta: Johnston's Retreat.—Sherman now held command of the three armies of the Tennessee, the Cumberland, and the Ohio, having McPherson, Thomas and Schofield for their subordinate commanders, respectively. The main army of the rebellion in the West, Joe Johnston commanding, was at Dalton, northern Georgia, confronting Thomas at Chattanooga. Grant and Sherman had agreed to act in concert. While the former should thrust Lee back upon Richmond, his late lieutenant was to push Johnston towards Atlanta. And Banks was to transfer his forces from New Orleans to Mobile and thence move towards and join hands with the Western armies. Sherman devoted his earliest energies to the question of transportation and railroads. Baggage was reduced to the lowest limits, the higher officers setting the example. Actual supplies and fighting-material were alone to be carried. Luxuries were to be things of the past; comforts to be forgotten. War's stern reality was to be each one's lot. Probably no officer in such high command ever lived so entirely from hand to mouth as did Sherman and his military family during the succeeding campaigns. The entire equipment of his army head-quarters would have shamed the shabbiest regimental outfit of 1861. Spring was to open with a general advance. It was agreed to put and keep the Confederates on the defensive by a policy of constant hammering. Bragg had been removed to satisfy public opinion in the South, and was nominally called to Richmond to act as Mr. Davis' chief-of-staff. Johnston, as commander of the Department, had personally undertaken to hold head against Sherman. But the fact that he possessed neither the President's good opinion nor that of his new adviser, militated much against a happy conduct of the campaign. Sherman's forces occupied a front sixteen miles in advance of Ringgold, just south of Chattanooga. McPherson and the Army of the Tennessee was on his right with 25,000 men and 100 guns. Thomas and the Army of the Cumberland held the centre with 80,000 men and 130 guns. Schofield and the Army of the Ohio formed the left wing. His command was 15,000 men and 30 guns. This grand total of 100,000 men and 260 guns formed an army of as good stuff as ever bore arms, and the confidence of the leader in his men and of the men in their leader was unbounded. Johnston himself foresaw the necessity of a strictly defensive campaign, to which his far from sanguine character, as well as his judgment as to what the existing conditions demanded, made him peculiarly suited. Counted after the same fashion as Sherman's army, Johnston had some 75,000 men. . . . He intrenched every step he took; he fought only when attacked; he invited battle only when the conditions were largely in his favor. Subsequent events showed how wise beyond his critics he could be. Sherman took the measure of the intrenchments at Dalton with care, and, though he outnumbered his antagonist, preferred not to hazard an engagement at such odds when he might force one on better ground. This conduct shows in strong contrast with Grant's, when the latter first met his opponent at this same moment in Virginia. Sherman despatched McPherson towards Resaca, on the railroad in Johnston's

rear, with instructions to capture the town if possible. Combined with this flanking movement, a general advance was made upon the Confederate lines, and after tactical manœuvring of several days in front of Rocky Face Ridge, Johnston concluded to retire from his stronghold. McPherson had strangely failed to seize Resaca, though an excellent chance had offered, and at this place the Confederate army took up its new stand. . . . Sherman faced his antagonist on the line of Camp Creek in front of Resaca, with his right flank resting on the Oostanaula. From this position he operated by unintermitted tapping upon Johnston's defences at constantly varying points, without, however, bringing on a general engagement [though the losses were 2,747 Union and 2,800 Confederate]. . . . Sherman's uniform tactics during this campaign, varied indefinitely in details, consisted, as will be seen, in forcing the centre of the army upon Johnston's lines, while with the right and left he operated upon either flank as chance or ground best offered. Johnston did not propose to hazard an engagement unless all conditions were in his favor. He attempted a stand at Adairsville, twenty miles south of Resaca, but shortly withdrew to Kingston and Cassville. Each captain manœuvred for a chance to fight the other at a disadvantage. . . . From Cassville, Johnston retired across the Etowah. So far this campaign had been one of manœuvres. Neither combatant had suffered material loss. Like two wrestlers, as yet ignorant of each other's strength or quickness, they were sparring for a hold. . . . The Union army was growing skillful. Local difficulties multiplied many fold by bad maps and hostile population were overcome in considerable measure by an able corps of topographical engineers. . . . Bridges were uniformly burned and railroads wrecked by the retreating Confederates. To save delays in rebuilding, so far as possible, trestles were fitted in the rear to a scale with interchangeable timbers, so that bridges could be constructed with a speed never before dreamed of. No sooner had the Confederates put torch to a bridge, than a new one arose as by magic, and the whistle of the locomotive always followed hard upon the heels of the army."—T. A. Dodge, *Bird's-Eye View of our Civil War*, ch. 42-43.

A. D. 1864 (May—June; Virginia).—Grant's Movement upon Richmond: The Battle of Cold Harbor.—"The passage of [the Pamunkey] had been completed on May 28, and then, after three days of marching, interspersed with the usual amount of fighting, the army found itself again confronted by Lee's main line on the Potomac. The operations which followed were known as the battle of Cold Harbor. On the afternoon of May 31st, Sheridan, who was on the left flank of the army, carried, with his cavalry, a position near the old well and cross roads known as Old Cold Harbor, and, with his men dismounted behind rough breast-works, held it against Fitzhugh Lee until night. To this point, during the night, marched the vanguard of the Army of the Potomac. . . . About 9 the next day (June 1st) the head of the column reached Sheridan's position, and the cavalry was

withdrawn. The enemy, who had been seriously threatening Sheridan, withdrew from our immediate front within their lines and awaited us, occupying a strong outer line of intrenchments in front of our center, somewhat in advance of their main position, which included that on which the battle of Gaines' Mill had been fought two years before. It covered the approaches to the Chickahominy, which was the last formidable obstacle we had to meet before standing in front of the permanent works of Richmond. A large detachment, composed of the Eighteenth Corps and other troops from the Army of the James, under General W. F. Smith, had disembarked at Witte House on the Pamunkey, and was expected to connect that morning with the Sixth Corps at Cold Harbor. A mistake in orders caused an unnecessary march and long delay. In the afternoon, however, Smith was in position on the right of the Sixth Corps. Late in the afternoon both corps assaulted. The attack was made vigorously and with no reserves. The outer line in front of the right of the Sixth and the left of the Eighteenth was carried brilliantly, and the enemy was forced back, leaving several hundred prisoners in our hands. . . . This left the well and the old tavern at Cold Harbor in our rear, and brought us in front of the most formidable position yet held by the enemy. In front of him was a wooded country, interspersed with clearings here and there, sparsely populated, and full of swamps. Before daylight the Army of the Potomac stood together once more almost within sight of the spires of Richmond, and on the very ground where, under McClellan, they had defended the passage of the river they were now endeavoring to force. On the 2d of June our confronting line, on which the burden of the day must necessarily fall, consisted of Hancock on the left, Wright in the center, and Smith on the right. Warren and Burnside were still farther to the right, their lines refused, or drawn back, in the neighborhood of Bethesda Church, but not confronting the enemy. . . . No reconnoissance had been made other than the bloody one of the evening before. Every one felt that this was to be the final struggle. No further flanking marches were possible. Richmond was dead in front. No further wheeling of corps from right to left by the rear; no further dusty marches possible on that line, even "if it took all summer." The general attack was fixed for the afternoon of the 2d, and all preparations had been made, when the order was countermanded and the attack postponed until half-past four the following morning. Promptly at the hour named on the 3d of June the men moved from the slight cover of the rifle-pits, thrown up during the night, with steady, determined advance, and there rang out suddenly on the summer air such a crash of artillery and musketry as is seldom heard in war. No great portion of the advance could be seen from any particular point, but those of the three corps that passed through the clearings were feeling the fire terribly. Not much return was made at first from our infantry, although the fire of our batteries was incessant. The time of actual advance was not over eight minutes. In that little period more men fell bleeding as they advanced than in any other like period of time throughout the war. A strange and terrible feature of this battle was that as the three gal-

lant corps moved on [necessarily diverging, the enemy's line forming an arc of a circle, with its concave side toward them] each was enflanked while receiving the full force of the enemy's direct fire in front. . . . At some points the slashings and obstructions in the enemy's front were reached. Barlow, of Hancock's corps, drove the enemy from an advanced position, but was himself driven out by the fire of their second line. R. O. Tyler's brigade (the Corcoran Legion) of the same corps swept over an advance work, capturing several hundred prisoners. One officer alone, the colonel of the 164th New York [James P. McMahon], seizing the colors of his regiment from the dying color-bearer as he fell, succeeded in reaching the parapet of the enemy's main works, where he planted his colors and fell dead near the ditch, bleeding from many wounds. Seven other colonels of Hancock's command died within those few minutes. No troops could stand against such a fire, and the order to lie down was given all along the line. At points where no shelter was afforded, the men were withdrawn to such cover as could be found, and the battle of Cold Harbor, as to its result at least, was over. . . . Shortly after midday came the order to suspend for the present all further operations, and directing corps commanders to intrench, "including their advanced positions," and directing also that reconnoissances be made, "with a view to moving against the enemy's works by regular approaches". . . . When night came on the groans and moaning of the wounded, all our own, who were lying between the lines, were heart-rending. Some were brought in by volunteers from our intrenchments, but remained for three days uncared for beneath the hot summer suns and the unrefreshing dews of the sultry summer nights. . . . An impression prevails in the popular mind, and with some reason perhaps, that a commander who sends a flag of truce asking permission to bury his dead and bring in his wounded, has lost the field of battle. Hence the reluctance upon our part to ask a flag of truce. In effect it was done at last on the evening of the third day after the battle, when, for the most part, the wounded needed no further care and our dead had to be buried almost where they fell."—M. T. McMahon, *Cold Harbor (Battles and Leaders, v. 4)*.—"According to the report of the Medical Director, Surgeon McParlin, the wounded brought to the hospitals from the battle of the 3d of June numbered 4,517. The killed were at least 1,100. The wounded brought to the hospitals from the battle of the 1st of June were 2,125; the killed were not less than 500. The wounded on the 1st and 3d of June were, therefore, 6,642, and the killed not less than 1,600; but, adopting the number of killed and missing furnished General Budeau from the Adjutant General's office, 1,769 killed, 1,537 missing (many—most, indeed—of them, no doubt, killed), we have 8,411 for the killed and wounded, and for the total casualties, 9,948."—A. A. Humphreys, *The Virginia Campaign of '64 and '65 (Campaigns of the Civil War)*, p. 191.—"I have always regretted that the last assault at Cold Harbor was ever made. . . . At Cold Harbor no advantage whatever was gained to compensate for the heavy loss we sustained. Indeed, the advantages other than those of relative losses, were on the Confederate side. . . . This change seemed to revive their hopes temporarily;

but it was of short duration. The effect upon the Army of the Potomac was the reverse. When we reached the James River, however, all effects of the battle of Cold Harbor seemed to have disappeared."—U. S. Grant, *Personal Memoirs*, ch. 55 (v. 2).—*Official Records*, Series 1, v. 30.

A. D. 1864 (May—June; Virginia).—The Campaigning in the Shenandoah Valley, and Sheridan's raid to Trevillian Station.—"In the spring of 1864, the Department of West Virginia, which included the Shenandoah Valley, was under the command of Major-General Franz Sigel. A large portion of his forces was in the Kanawha region, under Brigadier-General George Crook. . . . In opening his Virginia campaign, Lieutenant-General Grant directed Sigel to form two columns, whereof one, under Crook, should break the Virginia and Tennessee Railroad at the New River bridge, and should also, if possible, destroy the salt-works at Saltville; while the other column, under Sigel himself, proceeding up the Shenandoah Valley, was to distract attention from Crook by menacing the Virginia Central Railroad at Staunton."—G. E. Pond, *The Shenandoah Valley in 1864 (Campaigns of the Civil War, v. 11), ch. 2.*—"Early in May, General Sigel entered the Valley with a force of 10,000 or 12,000 men [6,000 or 7,000, according to Pond, as above], and proceeded to advance toward Staunton. The Valley at that time was occupied only by a small force under General Imboden, which was wholly inadequate for its defence. General Breckenridge was therefore withdrawn from South-Western Virginia to oppose Sigel. On the 15th of May, Breckenridge with a force of 3,000 men [4,600 to 5,000—Pond] encountered Sigel at Newmarket and defeated him and compelled him to retire behind Cedar Creek. The cadets of the Virginia Military Institute formed a portion of Breckenridge's division, and behaved with distinguished gallantry. . . . After the battle of Newmarket Breckenridge was withdrawn from the Valley to reinforce Lee . . . in the neighborhood of Hanover Junction. In the meantime Crook and Averill had reached the Virginia and Tennessee Railroad, where they inflicted some damage, but were compelled to retire by a force sent against them by General Sam. Jones. They then proceeded to join the main column operating in the Valley. After the battle of Newmarket, Sigel was relieved by General David Hunter, who was instructed by General Grant to advance upon Staunton, thence to Charlottesville, and on to Lynchburg if circumstances favored that movement. Breckenridge having been withdrawn, General W. E. Jones was ordered to the Valley to oppose Hunter, who slowly advanced, opposed by Imboden with an almost nominal force. About the 4th of June, Imboden was joined by General Jones in the neighborhood of Harrisonburg with a force of between 3,000 and 4,000 men, which he had hastily collected in Southwestern Virginia. . . . Although greatly outnumbered, he [Jones] engaged Hunter near Port Republic [at the village of Piedmont, which gives its name to the battle], where he was defeated and killed. . . . After the fall of Jones, McCauslin opposed Hunter with gallantry and vigor, but his small force was no match for the greatly superior force against which he contended. The affairs in the Valley now began to attract the attention of the commanding generals of both armies. It was

evident that if Hunter could succeed in taking Lynchburg and breaking up the canal and Central Railroad, it would only be necessary to tap the Richmond and Danville and the Petersburg and Weldon railroads to complete a line of circumvallation around Richmond and Petersburg. On the 7th of June General Grant detached General Sheridan, with a large cavalry force, with instructions to break up the Central Railroad between Richmond and Gordonsville, then proceed to the James River and Kanawha Canal, break that line of communication with Richmond, and then to co-operate with Hunter in his operations against Lynchburg. About the same time General Lee sent General Breckenridge with his division, 2,500 strong, to occupy Rockfish Gap of the Blue Ridge to deflect Hunter from Charlottesville and protect the Central Railroad as far as practicable. A few days later General Early was detached by General Lee to oppose Hunter, and take such other steps as in his judgment would tend to create a diversion in favor of Richmond. General Sheridan, in compliance with his instructions, proceeded by a circuitous route to strike the railroad somewhere in the neighborhood of Gordonsville. This movement was, however, discovered by General Hampton, who, with a considerable force of cavalry encountered Sheridan on the 12th of June at Travillians [or Trevillian's] Station. After much severe and varied fighting Sheridan was defeated, and in order to escape was obliged to make a night-retreat. [In his 'Memoirs,' Sheridan claims the victory, having forced Hampton back and taken 500 prisoners; but learning that Hunter would not meet him, as expected, at Charlottesville, he turned back to rejoin Grant south of Richmond]. . . . This was one of the most masterly and spirited cavalry engagements of the war. Hunter, finding Rockfish Gap occupied in force, was unable to comply with that part of his instructions which directed him to Charlottesville. He therefore continued his march up the Valley, with the view of reaching Lynchburg by way of some one of the passes of the Blue Ridge south of the James River. In the neighborhood of Staunton he was joined by Crook and Averill, increasing his force to about 20,000 men, including cavalry and artillery. From Staunton he advanced by way of Lexington and Buchanan, burning and destroying everything that came in his way, leaving a track of desolation rarely witnessed in the course of civilized warfare." Before Hunter's arrival at Lynchburg, General Early, who withdrew his corps (formerly Stonewall Jackson's, and lately commanded by Ewell), from Richmond on the 13th of June, had reached that city and was prepared to defend it. "Hunter, finding himself unexpectedly confronted by Early, relinquished his intended attack upon the city and sought safety in a rapid night-retreat."—A. L. Long, *Memoirs of Robert E. Lee*, ch. 18.

A. D. 1864 (May—September; Georgia).—Sherman's Movement upon Atlanta: New Hope Church, Mesaw.—Peach Tree Creek.—The siege and capture of the city.—From Cassville, for reasons given in his memoirs, Johnston continued his retreat behind the next spur of mountains to Allatoona. "Pausing for a few days," writes General Sherman, "to repair the railroad without attempting Allatoona, of

AUTHOR OF "THE MOUNTAIN CAMPAIGN IN GEORGIA"

THE MATTHEWS-NORTHROP CO., BUFFALO, N. Y.

which I had personal knowledge acquired in 1844, I resolved to push on toward Atlanta by way of Dallas; Johnston quickly detected this, and forced me to fight him, May 25th-28th, at New Hope Church, four miles north of Dallas, with losses of 3,000 to the Confederates and 2,400 to us. The country was almost in a state of nature—with few or no roads, nothing that a European could understand; yet the bullet killed its victim there as surely as at Sevastopol. Johnston had meantime picked up his detachments, and had received reinforcements from his rear which raised his aggregate strength to 62,000 men, and warranted him in claiming that he was purposely drawing us far from our base, and that when the right moment should come he would turn on us and destroy us. We were equally confident, and not the least alarmed. He then fell back to his position at Marietta, with Brush Mountain on his right, Kenesaw his center and Lost Mountain his left. His line of ten miles was too long for his numbers, and he soon let go his flanks and concentrated on Kenesaw. We closed down in battle array, repaired the railroad up to our very camps, and then prepared for the contest. Not a day, not an hour, not a minute was there a cessation of fire. Our skirmishers were in absolute contact, the lines of battle and the batteries but little in rear of the skirmishers; and thus matters continued until June 27th, when I ordered a general assault, with the full cooperation of my great lieutenants, Thomas, McPherson and Schofield, as good and true men as ever lived or died for their country's cause; but we failed, losing 3,000 men to the Confederate loss of 630. Still, the result was that within three days Johnston abandoned the strongest possible position and was in full retreat for the Chattahoochee River. We were on his heels; skirmished with his rear at Smyrna Church on the 4th day of July, and saw him fairly across the Chattahoochee on the 10th, covered and protected by the best line of field intrenchments I have ever seen, prepared long in advance. . . . We had advanced into the enemy's country 120 miles, with a single-track railroad, which had to bring clothing, food, ammunition, everything requisite for 100,000 men and 23,000 animals. The city of Atlanta, the gate city, opening the interior of the important State of Georgia, was in sight; its protecting army was shaken but not defeated, and onward we had to go. . . . We feigned to the right, but crossed the Chattahoochee by the left, and soon confronted our enemy behind his first line of intrenchments at Peach Tree Creek, prepared in advance for this very occasion. At this critical moment the Confederate Government rendered us most valuable service. Being dissatisfied with the Fabian policy of General Johnston, it relieved him, and General Hood was substituted to command the Confederate army [July 18]. Hood was known to us to be a 'fighter' . . . and I confess I was pleased at this change. . . . I was willing to meet the enemy in the open country, but not behind well-constructed parapets. Promptly, as expected, General Hood sallied from his Peach Tree line on the 20th of July, about midday, striking the Twentieth Corps (Hooker), which had just crossed Peach Tree Creek by improvised bridges. The troops became commingled and fought hand to hand desperately for about four hours, when the Con-

federates were driven back within their lines, leaving behind their dead and wounded. These amounted to 4,700 men, to our loss of 1,710. We followed up and Hood fell back to the main lines of the city of Atlanta. We closed in, when again Hood, holding these lines with about one-half his force, with the other half made a wide circuit by night, under cover of the woods, and on the 22d of July enveloped our left flank 'in air,' a movement that led to the hardest battle of the campaign. He encountered the Army of the Tennessee—skilled veterans who were always ready to fight, were not alarmed by flank or rear attacks, and met their assailants with heroic valor. The battle raged from noon to night, when the Confederates, baffled and defeated, fell back within the intrenchments at Atlanta. Their losses are reported 8,499 to ours of 3,641; but among our dead was McPherson, the commander of the Army of the Tennessee. While this battle was in progress, Schofield at the center and Thomas on the right made efforts to break through the intrenchments at their fronts, but found them too strong to assault. The Army of the Tennessee was then shifted, under its new commander (Howard), from the extreme left to the extreme right, to reach if possible, the railroad by which Hood drew his supplies, when, on the 28th of July, he repeated his tactics of the 23d, sustaining an overwhelming defeat, losing 4,633 men to our 700. These three salles convinced him that his predecessor, General Johnston, had not erred in standing on the defensive. Thereafter the Confederate army in Atlanta clung to its parapets. I never intended to assault these, but gradually worked to the right to reach and destroy his line of supplies, because soldiers, like other mortals, must have food. Our extension to the right brought on numerous contacts, but nothing worthy of note, till about the end of August I resolved to leave one corps to protect our communications to the rear, and move with the other five to a point (Jonesboro) on the railroad 26 miles below Atlanta, not fortified. This movement was perfectly strategic, was successful, and resulted in our occupation of Atlanta, on the 2d of September, 1864. The result had a large effect on the whole country, at the time, for solid and political reasons. I claim no special merit to myself, save that I believe I followed the teachings of the best masters of the 'science of war' of which I had knowledge. . . . But I had not accomplished all, for Hood's army, the chief 'objective,' had escaped. Then began the real trouble. We were in possession of Atlanta, and Hood remained at Lovejoy's Station, 30 miles south-east, on the Savannah Railroad, with an army of about 40,000 veterans inured to war, and with a fair amount of wagons to carry his supplies, independent of the railroads."—W. T. Sherman and others, *Atlanta (Battles and Leaders, v. 4)*.

A. D. 1864 (May—November).—The Twentieth Presidential Election.—Renomination and Re-election of Abraham Lincoln.—“Preparations for the nomination of candidates

had begun to be made, as usual, early in the spring of 1864. Some who saw most clearly the necessities of the future, had for some months before expressed themselves strongly in favor of the renomination of President Lincoln. But this step was contested with great warmth and activity by prominent members of the political party by which he had been nominated and elected four years before. Nearly all the original Abolitionists and many of the more decidedly anti-slavery members of the Republican party were dissatisfied, that Mr. Lincoln had not more rapidly and more sweepingly enforced their extreme opinions. Many distinguished public men resented his rejection of their advice, and many more had been alienated by his inability to recognize their claims to office. The most violent opposition came from those who had been most persistent and most clamorous in their exactions. And as it was unavoidable that, in wielding so terrible and so absolute a power in so terrible a crisis, vast multitudes of active and ambitious men should be disappointed in their expectations of position and personal gain, the renomination of Mr. Lincoln was sure to be contested by a powerful and organized effort. At the very outset this movement acquired consistency and strength by bringing forward the Hon. S. P. Chase, Secretary of the Treasury, a man of great political boldness and experience, and who had prepared the way for such a step by a careful dispensation of the vast patronage of his department, as the rival candidate. But it was instinctively felt that this effort lacked the sympathy and support of the great mass of the people, and it ended in the withdrawal of his name as a candidate by Mr. Chase himself. The National Committee of the Union Republican party had called their convention, to be held at Baltimore, on the 8th of June. Those who opposed Mr. Lincoln's nomination issued a call for a convention to be held at Cleveland, Ohio, on the 81st of May. The Cleveland Convention, attended by about 150 persons, put in nomination General John C. Fremont, for President, and General John Cochrane, of New York, for Vice President. "General Fremont's letter of acceptance was dated June 4th. Its main scope was an attack upon Mr. Lincoln for unfaithfulness to the principles he was elected to defend, and upon his administration for incapacity and selfishness. . . . He intimated that if the Baltimore convention would nominate any one but Mr. Lincoln he would not stand in the way of a union of all upon the nominee. . . . The Convention, the nomination and the letter of acceptance, fell dead upon the popular feeling [and Fremont withdrew his candidacy in September]. . . . The next form which the effort to prevent Mr. Lincoln's nomination and election took was an effort to bring forward General Grant as a candidate." But this was decisively checked by General Grant, himself. The Convention at Baltimore, when it assembled on the 8th of June, showed no hesitation in nominating Abraham Lincoln for reelection, and it associated with him, Andrew Johnson, of Tennessee, as its candidate for Vice President. The National Convention of the Democratic party was held at Chicago, beginning August 29th. The second resolution which it adopted in its platform declared that, "after four years of failure to restore the Union by the experiment of war . . . justice, humanity, liberty and the public welfare

demand that immediate efforts be made for a cessation of hostilities, with a view to an ultimate convention of the States or other peaceable means, to the end that, at the earliest practicable moment, peace may be restored on the basis of the Federal Union of the States." On this issue, having nominated General George B. McClellan for President, and George H. Pendleton, of Ohio, for Vice President, the opponents of the war went to the country in the election, in November, and were overwhelmingly defeated. "Of all the States which voted on that day, General McClellan carried but three—New Jersey, Delaware and Kentucky."—H. J. Raymond, *Life and Public Services of Abraham Lincoln*, ch. 18.—The electoral vote was for Lincoln 212, for McClellan 21. The popular vote cast was, for Lincoln 2,213,065, for McClellan, 1,802,237. Many of the States had made provision for taking the votes of soldiers in the field, and the army vote was 116,887 for Lincoln against 83,738 for McClellan.—E. Stanwood, *Hist. of Presidential Elections*, ch. 21.

A. D. 1864 (June).—Repeal of the Fugitive Slave Laws.—At every session of Congress from 1861 to 1864 ineffectual attempts were made in the Senate and in the House of Representatives to accomplish the repeal of the Fugitive Slave Laws of 1793 and 1850. It was not until June of the latter year that the necessary bill was passed—by the House on the 6th, by a vote of 82 to 57, and by the Senate on the 23d by 27 to 12. The President approved it on the 28th, and it became a law.—H. Wilson, *Hist. of the Rise and Fall of the Slave Power*, v. 3, ch. 29.

A. D. 1864 (June: Virginia).—Grant's movement to the south of James River.—The Siege of Petersburg.—"In consequence of the check at Cold Harbor, a restlessness was becoming general among the people, which the government in vain pretended not to notice. . . . Public opinion, shaken in its confidence, already began to listen to the sinister interpretations of the opposition journals, when, in the last half of June, it learned that the Lieutenant-general had boldly crossed the James and laid siege before Petersburg. . . . This passage of the James was . . . a very fine movement, as ably executed as it was boldly conceived. It inaugurated a new phase in the campaign. . . . Henceforth, the battering not having produced the expected effect, Grant was about to try the resources of military science, and give precedence to strategic combinations. In the first place, he took his measures so well to conceal his intentions from the enemy that the latter did not recognize the character of the movement until it was already executed. Warren was ordered to occupy Lee's attention by the menace of an advance on Richmond from the direction of White Oak Swamp, while Smith (W. F.) disembarked from White House to return to Bermuda Hundred, and Hancock, with the Second Corps, would be transferred to the right bank of the James by a flotilla of large steamers collected at

Wilcox Landing for that purpose. At the same time, a bridge of boats was thrown across a little below, where there were thirteen fathoms of water in the channel, and where the river was more than 2,000 feet broad. The Fifth and Sixth Corps crossed over on the bridge. Grant hoped to get hold of Petersburg by a 'coup de main.' If he had succeeded, the fall of Richmond would have soon followed in all probability. Unfortunately, delays occurred and contretemps which caused the opportunity to fail and completely modified the course of events. General Smith (W. F.), after having carried the first line, which was defended by militia only, did not know how to take advantage of his first success. Proceeding methodically and cautiously, where it was, above all, necessary to act with vigor and promptness, he put off the serious work until the next morning. Hancock, in his turn, debarked on the right bank, did not receive the order to march on Petersburg until he had been delayed to wait for rations which were behind-hand, and went astray in his march owing to false indications on a map which had been sent to him as correct. In short, he lost precious hours in the afternoon of June 15, and on the morning of the 16th it was too late; Lee's troops had arrived. Nevertheless, the intrenchments thrown up hastily by the enemy were not so formidable that they might not be carried. In the morning, a fresh attack, with Birney's and Gibbon's divisions, met with some success, but with no decisive results. In the afternoon, the Ninth Corps having arrived, the attempt was renewed on a greater scale, and it ended by carrying the line at sundown, after a hard fight and considerable loss. On the next morning, a new assault, always by the Second Corps, supported by the Ninth. The enemy lost more ground and a redoubt of importance. In the evening, he succeeded in surprising the intrenchments which Burnside had taken from him. All these fights were not without cost; the loss of that day alone, on our side, amounted to 4,000 men. The Confederates defended the ground step by step, with such determination, only to gain the time necessary to finish a stronger and better selected line, on the hills immediately around the city. They retired to these lines in the following night, and during the whole of the 18th they sustained in them a series of attacks which met with no success. From that day, the siege of Petersburg was resolved upon, and regular works were begun. It must be remarked that this siege was not a siege, properly speaking. The place was never even invested. It lies 22 miles south of Richmond, on the right bank of the Appomattox, eight miles southwest of City Point, where that river empties into the James, and where the new base of supplies of the army was naturally established. So that we had turned Richmond to put ourselves across a part of the enemy's communications with the South, and directly threaten the rest. These communications were: the railroads to Norfolk, Weldon and Lynchburg, and the Jerusalem and Boynton roads, all ending at Petersburg. Besides these, the Confederate capital had only the James River Canal, to the west, and the Danville railroad, to the south. The latter did not extend beyond the limits of Virginia, but it crossed the Lynchburg railroad at Burksville, which doubled its resources. If, then, we suc-

ceeded in enveloping Petersburg only on the right bank of the Appomattox, the population and the Confederate army would be reduced to draw all their supplies from Richmond by a single-track railroad. To accomplish that was our effort; to prevent it, the enemy's: that was the point towards which all the operations of the siege were directed for nine months. On the day on which we finally succeeded, Petersburg and Richmond fell at the same blow, and the whole structure of the rebellion crumbled with these two cities."—R. de Trobriand, *Four Years with the Army of the Potomac*, ch. 28.

A. D. 1864 (July).—The Greeley and the Jaques-Gilmore Peace Missions.—"Two abortive efforts to open a door to accommodation between the belligerents were made during this gloomy period. One of these originated with certain Confederates then in Canada, one of whom wrote [July 5, 1864] to the author of this work [Horace Greeley], averring that Messrs. Clement C. Clay, of Alabama, James P. Holcombo, of Virginia, and George N. Sanders (the writer) would proceed to Washington in the interest of Peace, if full protection were accorded them. Being otherwise confidentially assured that the two former had full powers from Richmond, Mr. Greeley forwarded the application to President Lincoln, urging that it be responded to, and suggesting certain terms of reunion and peace which he judged might be advantageously proffered to the Rebels, whether they should be accepted or rejected. . . . The 'Plan of Adjustment,' which he suggested that the President might advantageously offer," contemplated the restoration of the Union, abolition of slavery, with \$400,000,000 paid in compensation to the slave states, and complete amnesty for all political offenses. "The President hereupon saw fit—alike to the surprise and the regret of his correspondent—to depute him to proceed to Niagara, and there communicate with the persons in question. He most reluctantly consented to go, but under a misapprehension which insured the failure of the effort in any event. Though he had repeatedly and explicitly written to the President that he knew nothing as to what the Confederates in Canada might or would propose as a basis of adjustment . . . it was expected on the President's part that he was virtually and substantially to negotiate and settle the basis of a pacification with them; so that their visit to Washington was, in effect, to be the result, and not the possible occasion, of adjustment and peace. . . . The whole matter thus terminated in failure and disappointment, with some exasperation on the Rebel side, and very decided condemnation on the part of the opposition. . . . Happily, another negotiation— even more irregular and wholly clandestine—had simultaneously been in progress at Richmond, with a similar result. Rev. Col. James F. Jaques, 73d Illinois, with Mr. J. R. Gilmore, of New York, had, with President Lincoln's knowledge, but without his formal permission, paid a visit to the Confederate capital on a Peace errand; being allowed to pass through the lines of both armies for the purpose. Arrived in Richmond they addressed a joint letter to Judah P. Benjamin, Secretary of

State, requesting an interview with President Davis, which was accorded; and a long, familiar, earnest colloquy ensued, wherein the Confederate chief presented his ultimatum in these terms: . . . 'The North was our' and blind; it would not let us govern ourselves; and so the war came; and now it must go on till the last man of this generation falls in his tracks, and his children seize his musket and fight our battle, unless you acknowledge our right to self-government. We are not fighting for Slavery, we are fighting for Independence; and that or extermination we will have'. . . Thus it was not only incontestably settled but proclaimed, through the volunteered agency of two citizens, that the War must go on until the Confederacy should be recognized as an independent power, or till it should be utterly, finally overthrown. The knowledge of this fact was worth more than a victory to the National cause."—H. Greeley, *The American Conflict*, v. 2, ch. 30.

A. D. 1864 (July: Virginia—Maryland).—Early in the Shenandoah Valley.—His invasion of Maryland and approach to Washington.—"When Early had forced Hunter into the Kanawha region [See above: A. D. 1864 (MAY—JUNE: VIRGINIA)], far enough to feel assured that Lynchburg could not again be threatened from that direction, he united to his own corps General John C. Breckenridge's infantry division and the cavalry of Generals J. H. Vaughn, John McCausland, B. T. Johnson, and J. D. Imboden, which heretofore had been operating in southwest and western Virginia under General Robert Ransom, Jr., and with the column thus formed, was ready to turn his attention to the lower Shenandoah Valley. At Early's suggestion General Lee authorized him to move north at an opportune moment, cross the upper Potomac into Maryland and threaten Washington. . . . By rapid marching Early reached Winchester on the 2d of July, and on the 4th occupied Martinsburg, driving General Sigel out of that place the same day that Hunter's troops, after their fatiguing retreat through the mountains, reached Charlestown, West Virginia. Early was thus enabled to cross the Potomac without difficulty, when, moving around Harper's Ferry, through the gaps of the South Mountain, he found his path unobstructed till he reached the Monocacy, where Ricketts's division of the Sixth Corps, and some raw troops that had been collected by General Lew Wallace, met and held the Confederates till the other reinforcements that had been ordered to the capital from Petersburg could be brought up. Wallace contested the line of the Monocacy with obstinacy, but had to retire finally toward Baltimore. The road was then open to Washington, and Early marched to the outskirts and began against the capital the demonstrations [July 11-12] which were designed to divert the Army of the Potomac from its main purpose in front of Petersburg. Early's audacity in thus threatening Washington had caused some concern to the officials in the city, but as the movement was looked upon by General Grant as a mere foray which could have no decisive issue, the Administration was not much disturbed till the Confederates came in close proximity. Then was repeated the alarm

and consternation of two years before, fears for the safety of the capital being magnified by the confusion and discord existing among the different generals in Washington and Baltimore; and the imaginary dangers vanished only with the appearance of General Wright, who with the Sixth Corps and one division of the Nineteenth Corps, pushed out to attack Early as soon as he could get his arriving troops in hand, but under circumstances that precluded celerity of movement; and as a consequence the Confederates escaped with little injury, retreating across the Potomac to Leesburg, unharassed save by some Union cavalry that had been sent out into Loudoun County by Hunter, who in the meantime had arrived at Harper's Ferry by the Baltimore and Ohio railroad. From Leesburg Early retired through Winchester toward Strasburg, but when the head of his column reached this place he found that he was being followed by General Crook with the combined troops of Hunter and Sigel only, Wright having returned to Washington under orders to rejoin Meade at Petersburg. This reduction of the pursuing force tempting Early to resume the offensive, he attacked Crook at Kernstown, and succeeded in administering such a check as to necessitate this general's retreat to Martinsburg, and finally to Harper's Ferry. Crook's withdrawal restored to Early the line of the upper Potomac, so, recrossing this stream, he advanced again into Maryland, and sending McCausland on to Chambersburg, Pennsylvania, laid that town in ashes [July 30] leaving 3,000 non-combatants without shelter or food. . . . This second irruption of Early and his ruthless destruction of Chambersburg led to many recommendations on the part of General Grant looking to a speedy elimination of the confusion then existing among the Union forces along the upper Potomac, but for a time the authorities at Washington would approve none of his propositions. . . . Finally the manoeuvres of Early and the raid to Chambersburg compelled a partial compliance, though Grant had somewhat circumvented the difficulty already by deciding to appoint a commander for the forces in the field that were to operate against Early. On the 31st of July General Grant selected me as this commander. . . . On the evening of August 1, I was relieved from immediate duty with the Army of the Potomac, but not from command of the cavalry as a corps organization. I arrived at Washington on the 4th of August, and the next day received instructions from General Halleck to report to General Grant at Monocacy Junction, whither he had gone direct from City Point, in consequence of a characteristic despatch from the President indicating his disgust with the confusion, disorder and helplessness prevailing along the upper Potomac, and intimating that Grant's presence there was necessary."—P. H. Sheridan, *Personal Memoirs*, v. 1, ch. 23.

A. D. 1864 (July: Virginia).—The siege of Petersburg: The Mine.—"Burnside's corps held a position directly in front of Petersburg, including a point where our lines, owing to the nature of the ground, had been pushed up to within 150 yards of the enemy's, where a fort projected beyond their average front.

Under this fort a mine had been run from a convenient ravine or hollow within our lines, which was entirely screened from the enemy's observation; and this mine would seem to have been completed not only without countermining by the Rebels, but without being even suspected by them; though a report of its existence (probably founded on the story of some deserter or prisoner) was printed in one of the Richmond journals. All being ready, the morning of July 30th was fixed for springing the mine; which was to be instantly followed, of course, by the opening of our guns all along the front, and by an assault at the chasm opened in the enemy's defences by the explosion. . . . The explosion took place; hoisting the fort into the air, annihilating its garrison of 300 men, and leaving in its stead a gigantic hollow or crater of loose earth, 150 feet long by some 60 wide and 25 to 30 deep. Instantly, our guns opened all along the front; and the astounded enemy may well have supposed them the thunders of doom. But it was indispensable to success that a column of assault should rush forward instantly and resolutely, so as to clear the chasm and gain the crest before the foe should recover from his surprise; and, on this vital point failure had already been secured. The 9th corps, as then constituted, was not that from which any commanding general would have selected a storming party; yet because it was Burnside's mine, his corps was, without discussion, allowed to furnish the column of assault. His inspecting officer had reported that, of its four divisions, that composed of Blacks was fittest for this perilous service; but Grant, discrediting this, had directed that one of the three White divisions should be chosen. Thereupon, the leaders of these divisions were allowed to cast lots to see which of them should go in—or rather which two of them should stay out—and the lot fell on the 1st, Brig.-Gen. Ledlie—and no man in the army believed this other than the worst choice of the three. . . . Several minutes passed—precious, fatal minutes!—before Ledlie's division, clearing with difficulty the obstacles in its path—went forward into the chasm, and there stopped, though the enemy at that point were still paralyzed and the deciding crest completely at our mercy. Then parts of Burnside's two remaining White divisions (Potter's and Wilcox's) followed; but once in the crater, Ledlie's men barred the way to a farther advance, and all huddled together, losing their formation and becoming mixed up; General Potter finally extricating himself, and charging toward the crest; but with so slender a following that he was soon obliged to fall back. Two hours were thus shamefully squandered, while the Rebels recovering their self-possession, were planting batteries on either side, and mustering their infantry in an adjacent ravine; and now—when more men in the crater could only render the confusion more hopeless and magnify the disaster—Burnside threw in his Black division; which, passing beyond and rather to the right of the crater, charged toward the crest, but were met by a fire of artillery and musketry which speedily hurled them back into the crater, where all order was lost, all idea of aught beyond personal safety abandoned, while the enemy's shells and balls poured into it like hail, rendering it an arena of unresisted slaughter. . . . A first Rebel

assault on our unfortunates was repulsed in sheer desperation; and thousands of course took the risk of darting out of the death-trap and racing at top speed to our lines; but our loss in killed, wounded, and prisoners was 4,400; while that of the enemy, including 300 blown up in the fort, was barely 1,000.—H. Greeley, *The American Conflict*, v. 2, pp. 590-591.

A. D. 1864 (August; Virginia).—The Siege of Petersburg: Fighting for the Weldon Road.—Battle of Reams's Station.—The Dutch Gap Canal.—“Taking advantage of the absence of many of Lee's troops from Petersburg, Grant made a vigorous movement for securing possession of the Weldon road, not more than three miles from the left flank of his lines on the Jerusalem plank road. This movement was made by Warren, with the Fifth Corps, on the morning of the 18th of August, and at noon he reached the coveted railway without opposition, where he left Griffin to hold the point seized, while with the divisions of Ayres and Crawford he moved toward Petersburg. He had marched but a short distance when a division of Confederates suddenly and heavily fell upon his flank. . . . Warren held the ground he had gained at a cost of 1,000 men killed, wounded and prisoners.” The next day (August 10), Lee sent Hill with a heavy force to drive Warren from the road, and the attempt, desperately made, was nearly successful, but not quite. Two days later it was repeated, and the Confederates were repulsed with a loss of 1,200 men. “In his entire movement for the possession of the road Warren lost, in killed, wounded and missing, 4,450 men. He now rendered his position almost impregnable, and General Lee was compelled to see one of his most important lines of communication wrested from him. On the day of Warren's Victory [August 21], Hancock, who . . . had been called from the north bank of the James [where an unsuccessful demonstration towards Richmond had been made from Deep Bottom], and who had moved with part of his corps rapidly toward the Weldon road, in the rear of Warren, struck that highway north of Reams's Station, and destroyed the track to that point and some miles south of it. He formed an entrenched camp at Reams's,” and was attacked there on the 25th by Hill with such determination that he was forced back to a rear line, “where the troops had been rallied, and when night fell Hancock withdrew from Reams's Station. He had lost in the fight 2,400 of his 8,000 men, and five guns; 1,700 of the men were made prisoners. Hill's loss was but little less, and he, too, withdrew from Reams's.” But this disaster did not loosen Warren's hold upon the Weldon road. . . . For about a month after the battle of Reams's Station there was comparative quiet along the lines of the opposing armies. . . . A strong party of colored soldiers had been set to work by General Butler on the north side of the James, under cover of a battery on that side mounting 100-pounder Parrott guns, in digging a canal across the narrow isthmus of a peninsula

formed by a sharp bend in the river, called Farrar's Island. By this canal it was intended to secure a nearer base of operations against Richmond, and afford a passage for the National war vessels, by which they might flank several important works of the Confederates." The Dutch Gap Canal, as it was called, did not prove successful, the necessary depth of water never being secured during the war, though the canal has been brought into use since.—B. J. Lossing, *Field Book of the Civil War*, v. 3, ch. 13.

A. D. 1864 (August: Alabama).—The Battle of Mobile Bay.—Capture of Confederate forts and fleet.—"After the capitulation of Vicksburg the vessels of the so-called Gulf Squadron which had been cruising on the lower Mississippi and its tributaries were in part joined to the Upper Squadron, under the command of Admiral Porter. The remainder were recalled to their duties on the outside blockade. Admiral Farragut was now free to turn his whole attention to the coast of the Gulf, whither he returned in January, 1864, after a well-earned rest at the North. Mobile was now the principal port in the possession of the Confederates in this quarter, and earnestly did the Admiral desire to attack and reduce the forts at the entrance of the bay. But troops were required to invest the forts after the fleet had passed them, and at this moment it seemed that there were no troops to be spared. It was also much to be desired that at least a few monitors should be added to the fleet, but neither were these as yet available. So the time wore on; winter passed into spring and spring into summer, but still the attack was not made. This delay was of incalculable advantage to the enemy, enabling him to complete his preparations. The Confederate force afloat in Mobile Bay was commanded by Admiral Franklin Buchanan. . . . This force consisted of only four vessels, but they nevertheless made an important addition to the defences of the place. Three of them were only paddle-wheel gunboats. . . . while the fourth was the iron-clad ram Tennessee. . . . the most formidable vessel that the Confederates had ever built. . . . The City of Mobile lies at the head of a long bay, which is about 20 miles wide at its lower end. The greater portion of the bay is very shallow, too shallow even for vessels of moderate draft. The entrance lies between a long sandspit. . . . and a shoal. . . . The ship-channel between the shoals, five miles in length, is perhaps half a mile wide at its narrowest point. Two forts guarded the passage,—on the right hand Fort Morgan, on Mobile Point, and on the left Fort Gaines, on Dauphin Island. . . . In addition to the land and naval defences, additional protection had been given by obstructions in the water. A line of piles ran out from Fort Gaines, which was continued nearly across the main ship-channel by a triple line of torpedoes. The eastern end of the row of torpedoes was marked by a red buoy, and between the buoy and Fort Morgan the channel had been left open for blockade runners. The open space, only 100 yards wide, lay directly under the guns of the fort, and it was through this narrow passage that Admiral Farragut intended to carry his fleet. The ships

were gradually assembled toward the latter part of July. The Admiral's plan of action was simple, but in the highest degree effective. His fleet consisted of four monitors and fourteen wooden vessels, seven of the latter large and seven small. The wooden vessels were arranged in pairs, as at Po - Hudson, each of the larger vessels having a smaller one lashed to her port side, so that if one was disabled the engines of the other would carry both past the forts. The four monitors were placed in a flanking column inshore, between the fleet and Fort Morgan. . . . At six o'clock on the morning of the 5th of August the fleet started with the flood tide. The Admiral took up his position in the port main rigging of the Hartford, so that he might have a good post of observation. [According to accounts given by officers who were on board the Hartford, Admiral Farragut eluded the rigging, after the battle began, in order to get above the thickest of the smoke, and Captain Drayton sent a man to lash him where he stood, so that, if wounded, he might not fall to the deck]. . . . Above the fort, and just beyond the obstructions, lay the Confederate ram Tennessee and her three attendant gunboats. . . . Soon after half-past six the Tecumseh [the leading monitor] fired the first two shots at Fort Morgan. For half an hour after this, the ships advanced in silence. Then the fort opened on the Brooklyn, and presently the whole line of vessels was hotly engaged. Their concentrated fire kept down that of the enemy, and all seemed at this time to be going well with the fleet. The Tecumseh, though all the while advancing, was now silent, reserving her fire for the Tennessee, which lay beyond the obstructions. Captain Craven saw the red buoy, but it seemed so close to the beach that he thought there must have been a mistake in his orders; and altering his course, he headed straight for the Tennessee, passing to the westward of the buoy right over the line of torpedoes. Suddenly there came a frightful explosion; the huge mass of iron gave a lurch first to one side, then to the other; her bow made one downward plunge, her screw was seen for a moment revolving high in air, and she sank to the bottom of the channel. Of 120 men on board only 21 were saved. . . . From the Brooklyn, leading the main column, something was now descried in the water ahead which resembled torpedo-buoys, and the sloop, with the Octorara lashed to her side, suddenly stopped, and in a moment they were backing down on the vessels astern of them. The bows of the two ships turned, falling off towards the fort, so that they blocked up the channel. The Hartford, the Admiral's flag-ship, which was next astern, also stopped to prevent a collision, but she was drifting fast with the Metacomb toward the two vessels ahead, and the Richmond and Port Royal were close upon them, followed by the others. At that moment it seemed as if nothing could save the vessels of the fleet from being thrown into hopeless confusion, massed together as they were directly under the guns of the fort. It was in that moment, at the crisis of the battle, that the calm and dauntless spirit of the Admiral rose to its greatest height. . . . 'Captain Drayton, go ahead! Joutt, full speed!' came the command, in clear, ringing tones from the Admiral's place in the rigging. In a moment the Hartford had turned, and dash-

ing with the *Metacomb* past the Brooklyn, rushed straight over the barrier. Snap, snap, went the primers of the torpedoes under the bottom of the ship,—the officers and men could hear them,—but no explosion followed, and the *Hartford* passed safely into the waters above. Meanwhile the four ships lay entangled under Fort Morgan. A collision seemed inevitable, but Captain Jenkins of the *Richmond*, an officer of cool head and splendid courage, backed away from the others, and began a furious cannonade on the fort with his whole broadside, driving the enemy out of the water-batteries. The *Brooklyn* was by this means able to recover, and presently she steamed ahead, followed by the *Richmond* and the rest of the fleet. . . . No sooner was the battle with the fort over than a new battle began with the *Tennessee*. The moment that the ships had fairly entered the bay, the *Confederate ram* . . . came charging down the whole line, taking each vessel in turn, but doing no serious injury to any. On the arrival of the monitors, which had lagged behind, "the *Tennessee* took refuge under the guns of the fort, and the fleet rejoined the *Hartford*, now four miles up the bay." Meantime the *Hartford* and the *Metacomb* had disposed of two of the Confederate gunboats: the *Selma*, which surrendered, and the *Gaines*, which had been run ashore and set on fire. The third, the *Morgan*, took shelter with the *Tennessee*, near the fort. "The *Hartford* had by this time come to anchor, and her crew went to breakfast. The other ships gradually joined her. But the battle was not yet over. It was now a little before nine o'clock, and suddenly the *Tennessee* was reported approaching." In the battle which ensued, the stout iron-clad was rammed repeatedly by the *Monongahela*, the *Laekawanna*, the *Hartford* and the *Ossipee*, and pounded by the terrible guns of the monitor *Chickasaw*, until, with her commander wounded, her tiller-chains and her armor starting from the frame, she raised the white flag. "A few days later the forts surrendered, and Mobile, as a Confederate port, ceased to exist. The fall of the city did not come about until some time afterward; indeed no immediate attempt was made upon it, for the capture of the forts and the occupation of Mobile Bay served every purpose of the Federal Government."—J. R. Soley, *The Sailor Boys of '61*, ch. 13.—"This great victory cost the Union fleet 335 men. . . . The losses in the rebel fleet were 10 killed and 16 wounded—confined to the *Tennessee* and *Selma*—and 280 prisoners taken. The loss in the forts is unknown."—L. Farragut, *Life of David Glasgow Farragut*, ch. 27.

A. D. 1864 (August—October: Virginia).—Sheridan's Victories in the Shenandoah Valley.—Winchester.—Fisher's Hill.—Cedar Creek.—The famous Ride.—"The events of July showed the urgent need of unity of command in Northern Virginia, and the lieutenant-general, in August, consolidated these four departments [of Washington, the Susquehanna,

West Virginia and the Middle Department] into one, named the Middle Military Division, under General Hunter. That officer, however, before entering on the proposed campaign, expressed a willingness to be relieved, and General P. H. Sheridan, who had been transferred from the Army of the Potomac to the command of the forces in the field under Hunter, was appointed in his stead." General Sheridan was appointed to the command on the 7th of August, and took the field with an effective force (which included the Sixth and Nineteenth Corps) of 40,000 men, 10,000 being cavalry. "His operations during that month and the fore part of September were mainly confined to manoeuvres having for their object to prevent the Confederates from gaining the rich harvests of the Shenandoah Valley. But after once or twice driving Early southward to Strasburg, he each time returned on his path towards Harper's Ferry. General Grant had hesitated in allowing Sheridan to take a real initiative, as defeat would lay open to the enemy the States of Maryland and Pennsylvania before another army could be interposed to check him. Finding, however, while on a personal visit to General Sheridan, in the month of September, that that officer expressed great confidence of success, he authorized him to attack. At this time the Confederate force held the west bank of Opequan Creek, covering Winchester; and the Union force lay in front of Berryville, twenty miles south of Harper's Ferry. The situation of the opposing armies was peculiar: each threatened the communications of the other, and either could bring on a battle at any time. It would appear that General Early had designed assuming the offensive." He made a movement which General Sheridan was prompt to take advantage of, on the morning of September 19th, and a battle ensued—known as the battle of Winchester, but some times called the battle of Opequan Creek—which resulted in a victory for the latter. "It is due to state that there was a great disparity in the numbers engaged—Early's force consisting of 8,500 muskets and 3,000 sabres, while Sheridan's strength was thrice that of the aggregate Confederate force. Sheridan's preponderance in horse enabled him to extend far beyond and overlap the Confederate left, and when, after several hours of indecisive fighting between the infantry, a general advance was, at four P. M., made by the whole line, the cavalry, by an impetuous charge, carried the fortified heights; the Confederates . . . broke in confusion, retiring from the field and through Winchester, with the Union forces in pursuit. Night, however, prevented Sheridan from following up the victory, among the trophies of which were 2,500 prisoners, five pieces of artillery, and nine battle-flags. . . . After his defeat at Winchester, Early did not pause in his southward retreat till he reached Fisher's Hill, near Strasburg, 30 miles south of Winchester. This is a very defensible position, commanding the débouché of the narrow Strasburg valley between the north fork of the Shenandoah River and the North Mountain. On these obstacles Early rested his flank. In front of this position Sheridan arrived on the morning of the 22d and formed his force for a direct attack, while he sent Torbert with two divisions of cavalry by the parallel Luray Valley, to gain New Market, 20 miles in Early's rear. After much manoeuvring, and several ineffectual efforts to

force the position, an attack of cavalry was made from the right. Under cover of this mask corps of infantry was moved to that flank, and by an impetuous assault carried the Confederate left resting on the North Mountain. A general attack in front then disrupted Early's whole line, and the Confederates retired in great disorder, leaving behind 10 pieces of artillery and several hundred prisoners. . . . Early's retreat was not stayed until he reached the lower passes of the Blue Ridge, whither he retired with a loss of half his army. Sheridan, after pushing the pursuit as far as Staunton, and operating destructively against the Virginia Central Railroad, returned and took position behind Cedar Creek near Strasburg. Previously to abandoning the country south of Strasburg, it was laid waste by the destruction of all barns, grain, forage, farming implements, and mills. The desolation of the Palatinate by Turenne was not more complete. On the withdrawal of Sheridan, Early, after a brief respite, and being re-enforced by Kershaw's division of infantry and 800 cavalry from Lee's army, again marched northward down the Valley, and once more ensconced himself at Fisher's Hill. Sheridan continued to hold position on the north bank of Cedar Creek. Nothing more important than cavalry combats, mostly favorable to the Federal arms, took place, until the 19th of October, when Early assumed a bold offensive that was near giving him a victory as complete as the defeat he had suffered. . . . The army was, at this time, temporarily under the command of General Wright—Sheridan being absent at Washington. The position held by the Union force was too formidable to invite open attack, and Early's only opportunity was to make a surprise. This that officer now determined on, and its execution was begun during the night of the 18-19th of October." A flanking column, "favored by a heavy fog . . . attained, unperceived, the rear of the left flank of the Union force, formed by Crook's Corps . . . and rushed into the camp—the troops awaking only to find themselves prisoners. To rally the men in their bewilderment was impossible, and Crook's Corps, being thoroughly broken up, fled in disorder, leaving many guns in the hands of the enemy. As soon as this flank attack was developed, Early, with his other column, emerged from behind the hills west of Cedar Creek, and crossing that stream, struck directly the troops on the right of Crook. This served to complete the disaster, and the whole Union left and centre became a confused mass, against which the Confederates directed the captured artillery (18 guns), while the flanking force swept forward to the main turnpike. Such was the scene on which the light of day dawned. The only force not yet involved in the enemy's onset was the Sixth Corps, which by its position was somewhat in rear. With this General Ricketts quickly executed a change of front, throwing it forward at right angles to its former position, and firmly withstood the enemy's shock. Its chief service was, however, to cover the general retreat which Wright now ordered, as the only practicable means of renouncing his force. . . . At the first good position between Middletown and Newtown, Wright was able to rally and reform the troops, form a compact line, and prepare either to resist further attack or himself resume the offensive. It was at this time, about half-past ten A. M., that General Sheridan

arrived upon the field from Winchester, where he had slept the previous night. Hearing the distant sounds of battle rolling up from the south, Sheridan rode post to the front, where arriving, his electric manner had on the troops a very inspiring effect. General Wright had already brought order out of confusion and made dispositions for attack. . . . A counter-charge was begun at three o'clock in the afternoon. . . . A large part of Early's force, in the intoxication of success, had abandoned their colors and taken to plundering the abandoned Federal camps. The reflux wave was as resistless as the Confederate surge had been. . . . The retreat soon became a rout. . . . In the pursuit all the captured guns were retaken and 23 in addition. The captures included, besides, near 1,500 prisoners. . . . With this defeat of Early all operations of moment in the Shenandoah forever ended," and most of the troops on both sides were recalled to the main field of operations, at Petersburg.—W. Swinton, *Campaigns of the Army of the Potomac*, ch. 12, pt. 8.

A. D. 1864 (September—October: Georgia) Atlanta cleared of its former inhabitants.—Sherman's Preparations for the March to the Sea.—Hood's Raid to the rear.—During the month of September, Sherman's army remained grouped about Atlanta. . . . The Army of the Cumberland, under Major-General Thomas, held Atlanta; the Army of the Tennessee, commanded by Major-General Howard, was at East Point; and the Army of the Ohio occupied Decatur. . . . Sherman now determined to make Atlanta exclusively a military post. On the 4th of September he issued the following orders: "The city of Atlanta belonging exclusively for warlike purposes, it will at once be vacated by all except the armies of the United States and such civilian employes as may be retained by the proper departments of the Government. . . . This order fell upon the ears of the inhabitants of Atlanta like a thunderbolt." To a remonstrance addressed to him by the mayor and two councilmen of the city, he replied: "We must have peace, not only at Atlanta, but in all America. To secure this we must stop the war that now desolates our once happy and favored country. To stop the war, we must defeat the rebel armies that are arrayed against the laws and Constitution, which all must respect and obey. To defeat these armies, we must prepare the way to reach them in their recesses. . . . My military plans make it necessary for the inhabitants to go away, and I can only renew my offer of services to make their exodus in any direction as easy and comfortable as possible. . . . War is cruelty and you cannot refine it; and those who brought war on our country deserve all the curses and maledictions a people can pour out. . . . You might as well appeal against the thunder-storm as against

these terrible hardships of war." A truce of ten days was arranged, during which "446 families were moved south, comprising 705 adults, 860 children and 79 servants, with an average of 1,651 pounds of furniture and household goods of all kinds to each family."—S. M. Bowman and R. B. Irwin, *Sherman and his Campaigns*, *ch.* 18.—"Gen. Hood, meanwhile, kept his forces in the neighborhood of Jonesboro, receiving his supplies by the Macon road. His army numbered about 40,000 men, exclusive of the Georgia militia; and, as if to show that no immediate offensive movement was contemplated, the latter were withdrawn from him by Gov. Brown soon after the evacuation of Atlanta. . . . To allow their principal Southern army to rust in inactivity, was not however the intention of the rebel authorities. . . . Something must be done, and that speedily, to arrest the progress of the Federal army, or Georgia and perhaps the Gulf States, would be irretrievably lost. . . . The whole army of Gen. Hood, it was decided, should rapidly move in a compact body to the rear of Atlanta, and, after breaking up the railroad between the Chatthoochee and Chattanooga, push on to Bridgeport and destroy the great railroad bridge spanning the Tennessee River at that place. Should this be accomplished, Atlanta would be isolated from Chattanooga, and the latter in turn isolated from Nashville, and Gen. Sherman, cut off from his primary and secondary bases, would find Atlanta but a barren conquest to be relinquished almost as soon as gained, and would be obliged to return to Tennessee. Atlanta would then fall from lack of provisions, or in consequence of the successful attacks of the Georgia militia. In connection with this movement, Gen. Forrest, confessedly their ablest cavalry officer, was already operating in Southern Tennessee. . . . A week sufficed to complete Gen. Hood's arrangements, and by the 2d of October his army was across the Chattahoochee and on the march to Dallas, where the different corps were directed to concentrate. At this point he was enabled to threaten Rome and Kingston, as well as the fortified places on the railroad to Chattanooga; and there remained open, in case of defeat, a line of retreat southwest into Alabama. From Dallas he advanced east toward the railroad, and, on the 4th, captured the insignificant stations of Big Shanty and Ackworth, effecting a thorough disconnection of the road between the two places. He also sent a division under Gen. French to capture the Federal post at Allatoona Pass, where he had ascertained that a million and a half of rations for the Federal army were stored, on which he probably depended to replenish his commissariat. . . . Gen. Sherman, . . . immediately upon hearing that Gen. Hood had crossed the Chattahoochee, . . . despatched Gen. Corse with reinforcements to Rome, which he supposed the enemy were aiming at. During the previous week he had sent Gen. Thomas with troops to Nashville to look after Forrest. His bridges having meanwhile been carried away by a freshet which filled the Chattahoochee, he was unable to move his main body until the 4th, when three pontoons were laid down, over which the armies of the Cumberland, the Tennessee, and the Ohio crossed, and took up their march in the direction of Marietta, with 15 days' rations. The 20th corps, Gen. Slocum, was left to garrison

Atlanta. Learning that the enemy had captured Big Shanty and Ackworth, and were threatening Allatoona, and alive to the imperative necessity of holding the latter place, Gen. Sherman at once communicated by signals instruction to Gen. Corse at Rome to reinforce the small garrison and hold the defences until the main body of the Federal army could come to his assistance. Upon receiving the message Gen. Corse placed 900 men on the cars, and reached Allatoona before the attack of French. With this addition the garrison numbered 1,700 men, with six guns. Early on the morning of the 5th, Gen. French, with 7,000 troops, approached Allatoona, and summoned the Federal commander, 'in order to save the unnecessary effusion of blood,' to make an immediate surrender; to which the latter replied: 'I shall not surrender, and you can commence the unnecessary effusion of blood whenever you please.' The battle opened at 8 A. M., and was waged hotly until 2 o'clock in the afternoon. Driven from fort to fort, until they reached their last defence, the garrison fought with an obstinacy and desperation worthy of the great stake for which they contended. Their general was wounded early in the action, but relaxed in no degree his efforts to repel the enemy. . . . During the heat of the contest Gen. Sherman reached the summit of Kennesaw Mountain, whence he repeatedly signalled to Gen. Corse to hold out to the last. The announcement of approaching succor animated the garrison to renewed exertions, and they threw back the assaulting columns of the enemy again and again, finally compelling them to retire, beaten and disheartened, in the direction of Dallas. Their retreat was hastened by the rapid approach of Stanley's (4th) corps from the direction of Pine Mountain. The enemy left 700 to 800 killed, wounded and prisoners in the hands of the Federals, and their total loss must have exceeded 1,000. The garrison lost 600 men. The town of Allatoona was reduced to a mere wreck by the severe fire of the enemy, and all the Federal artillery and cavalry horses were killed; but the valuable stores were saved, and the fort and pass held. The only important injury done by the rebels, was the destruction of six or seven miles of railroad between Big Shanty and Allatoona, which Gen. Sherman immediately commenced to repair. For several days subsequent to the fight at Allatoona, Gen. Sherman remained in the latter place, watching the movements of Hood, who, he suspected, would march for Rome, and thence toward Bridgeport, or else to Kingston. . . . Gen. Hood, however, crossing the Etowah and avoiding Rome, moved directly north, and on the 12th Stuart's corps of his army appeared in front of Resaca, the defences of which were held by Col. Weaver with 600 men and three pieces of artillery. . . . No serious attack was made upon the garrison, the enemy being more intent upon destroying the railroad toward Dalton than wasting their time or strength upon the reduction of a post, the possession of which they wisely considered would be of no particular advantage to them. . . . Meanwhile the rebel army, pursuing its devastating march north, reached Dalton on the 14th. . . . The 14th and 15th were employed by the enemy in continuing the destruction of the railroad as far as Tunnel Hill. . . . The approach of the Federal columns now warned Gen. Hood

to move off to the west, and the 10th found him in full retreat for Lafayette, followed by Gen. Sherman. . . . From Lafayette the enemy retreated in a southwesterly direction into Alabama through a broken and mountainous country, but scantily supplied with food for man or beast; and passing through Summerville, Gaylesville, and Blue Pond, halted at Gadsdens, on the Coosa River, 75 miles from Lafayette. Here he paused for several days, receiving a few reinforcements brought up by Gen. Beauregard, who had on the 17th assumed command of the Confederate military division of the West. . . . Gen. Hood still retained his special command, subject to the supervision or direction of Gen. Beauregard, and his army, after remaining a few days in Gadsden, moved, about the 1st of November, for Warrington, on the Tennessee River, 30 miles distant. Gen. Sherman meanwhile remained at Gaylesville, which place his main body reached about the 21st, watching the enemy's movements. . . . Whatever . . . might be the final result of Hood's flanking movement, it had entirely failed to interrupt the Federal communications to a degree that would compel the evacuation of Atlanta. . . . In the light of subsequent events it would now appear that Gen. Sherman, making only a show of following his adversary, deliberately lured him into Northern Alabama, for the purpose of pursuing an uninterrupted march with his own army through the heart of Georgia. The ill-advised plan of Gen. Hood had given him the very opportunity which he desired, and he prepared at once to avail himself of it."—W. J. Tenney, *Military and Naval History in the United States*, ch. 45.

A. D. 1864 (October).—Report on secret disloyal associations in the North.—Knights of the Golden Circle, etc.—“During more than a year past [this report bears date October 8, 1864], it has been generally known to our military authorities that a secret and treasonable organization, affiliated with the Southern Rebellion, and chiefly military in its character, has been rapidly extending itself throughout the West. A variety of agencies . . . have been employed, and successfully, to ascertain its nature and extent, as well as its aims and its results; and, as this investigation has led to the arrest, in several States, of a number of its prominent members, as dangerous public enemies, it has been deemed proper to set forth in full the acts and purposes of this organization. . . . This secret association first developed itself in the West in the year 1862, about the period [August] of the first conscription of troops, which it aimed to obstruct and resist. Originally known in certain localities as the ‘Mutual Protection Society,’ the ‘Circle of Honor,’ or the ‘Circle’ or ‘Knights of the Mighty Host,’ but more widely as the ‘Knights of the Golden Circle,’ it was simply an inspiration of the Rebellion, being little other than an extension, among the disloyal and c affected at

the North, of the association of the latter name, which had existed for some years at the South [see GOLDEN CIRCLE, KNIGHTS OF], and from which it derived all the chief features of its organization. During the Summer and Fall of 1863, the Order, both at the North and South, underwent some modifications as well as a change of name. In consequence of a partial exposure which had been made of the signs and ritual of the Knights of the Golden Circle, Sterling Price had instituted, as its successor in Missouri, a secret political association, which he called the Corps de Belgique, or Southern League, his principal coadjutor being Charles L. Hunt, of St. Louis, then Belgian Consul at that city. . . . Meanwhile, also, there had been instituted, at the North, in the autumn of 1863, by sundry disloyal persons, prominent among whom were Vallandigham and P. C. Wright, of New York, a secret Order intended to be general throughout the country . . . and which was termed, and has since been widely known as the O. A. K., or ‘Order of American Knights.’ . . . The secret signs and character of the Order having become known to our military authorities, further modifications in the ritual and forms were introduced, and its name was finally changed to that of the O. S. L., or ‘Order of the Sons of Liberty,’ or the ‘Knights of the Order of the Sons of Liberty.’ These later changes are represented to have been first instituted . . . in May last [1864], but the new name was at once generally adopted throughout the West, though in some localities the association is still better known as the ‘Order of American Knights.’ Meanwhile, also, the Order has received certain local designations. In parts of Illinois it has been called at times the ‘Peace Organization,’ in Kentucky the ‘Star Organization,’ and in Missouri the ‘American Organization;’ these, however, being apparently names used outside of the lodges of the Order. Its members have also been familiarly designated as ‘Butternuts’ by the country people of Illinois, Indiana, and Ohio. . . . The ‘Temples’ or ‘Lodges’ of the Order are numerous scattered through the States of Indiana, Illinois, Ohio, Missouri, and Kentucky. They are also officially reported as established, to a less extent, in Michigan and the other Western States, as well as in New York, Pennsylvania, New Hampshire, Rhode Island, Connecticut, New Jersey, Maryland, Delaware, and Tennessee. . . . It has been asserted by delegates to the Supreme Council of February last, that the number was there represented to be from 800,000 to 1,000,000; but Vallandigham, in his speech last summer at Dayton, Ohio, placed it at 500,000, which is probably much nearer the true total. . . . Although the Order has, from the outset, partaken of the military character, it was not till the summer or fall of 1863 that it began to be generally organized as an armed body. . . . In March last the entire armed force of the Order capable of being mobilized for effective service was represented to be 340,000 men.”—J. Holt, *Judge Advocate General's Rept. on Secret Associations and Conspiracies against the Government*.

A. D. 1864 (October).—The St. Albans Raid.—"Along the Northern border . . . the rebel agents, sent thither on 'detached service' by the Rebel Government, were active in movements intended to terrify and harass the people. On the 19th of October, a party of them made a raid into St. Albans, Vermont, robbing the banks there, and making their escape across the lines into Canada with their plunder, having killed one of the citizens in their attack. Pursuit was made, and several of the marauders were arrested in Canada. Proceedings were commenced to procure their extradition [which were protracted until after the close of the war]. . . . The Government received information that this affair was but one of a projected series, and that similar attempts would be made all along the frontier. More than this, there were threats, followed by actual attempts, to set fire to the principal Northern cities."—H. J. Raymond, *Life and Public Services of Abraham Lincoln*, p. 611.

A. D. 1864 (October: North Carolina).—The destruction of the ram Albemarle.—The ram Albemarle, which had proved in the spring so dangerous an antagonist to the blockading vessels in the North Carolina Sounds [see above: A. D. 1864 (APRIL—MAY: NORTH CAROLINA)], was still lying at Plymouth, in the Roanoke River, and another attack from her was feared by the fleet. "She was finally destroyed by a brave young lieutenant, William B. Cushing, who blew her up with a torpedo. Though only twenty years old, he was one of the most daring officers in the navy, and he had become noted for his fearlessness in the expeditions in the sounds and rivers of North Carolina. One dark night (Oct. 27) he set out from the fleet in a steam launch—a long open boat used by naval vessels—with a crew of thirteen officers and men. The launch was fitted with a torpedo which could be run out forward on the end of a long boom so as to be thrust under the vessel to be attacked. Cushing got within sixty feet of the Albemarle before his boat was seen. The guards then shouted the alarm, rang the boat's bell, and began firing their muskets at the launch. There was a raft of logs thirty feet wide around the Albemarle to protect her from just such attacks, but Cushing ran the bow of the launch upon the logs, lowered the boom so that the torpedo came right under the side of the vessel, and fired it. At the same moment a shot from one of the great guns of the ram crashed through the launch, and it was overwhelmed by a flood of water thrown up by the explosion of the torpedo. The Confederates called out to Cushing to surrender, but he refused, and ordering his men to save themselves as they best could, he sprang into the water amid a shower of musket balls and swam down the river. He succeeded in reaching the shore, almost exhausted, and hid himself during the next day in a swamp, where he was cared for by some negroes. From them he heard that the Albemarle had been sunk by his torpedo. The next night he found a small boat in a creek, paddled in it down the river, and before midnight was safe on board one of the vessels of the fleet. Only one other

man of the party escaped, all the rest being either drowned or captured. The Albemarle being thus put out of the way, Plymouth was recaptured a few days afterward."—J. D. Champlin, Jr., *Young Folks' Hist. of the War for the Union*, ch. 33.

A. D. 1864 (November: Tennessee).—Hood's advance Northward.—The Battle of Franklin.—When General Sherman started on his march to the sea General Thomas was left to oppose Hood. "The force Thomas had for this purpose was curiously small, considering how formidable Hood's army had been in the Atlanta Campaign, and still was. All Thomas had for immediate field service were the Fourth and Twenty-Third Corps, numbering together about 22,000 infantry, and also about 3,000 cavalry. These troops were sent to Pulaski, Tennessee, in command of General Schofield, Thomas, himself remaining at Nashville. A little after the middle of November, 1864, Hood crossed the Tennessee River and inaugurated his campaign by a flank movement. He made a rapid march upon Columbia, with the view of getting in behind Schofield, who was at Pulaski. But Schofield retired to Columbia in time to frustrate Hood's plans. The two armies remained in close proximity to each other at Columbia until November 28th, when Hood made another skillfully-planned flank movement . . . to Spring Hill, in rear of Schofield. Again Hood was foiled. . . . General Thomas at Nashville wanted the Confederates held back as long as possible, in order that he might have time to receive there his expected reinforcement of A. J. Smith's corps. It was, therefore, Schofield's duty to check Hood's advance as long as he could. . . . He started General Stanley, with a division of 5,000 men, and a great part of his artillery, to Spring Hill (12 miles north of Columbia) early in the morning. He put two other divisions on the road. He held one division in front of Columbia, and prevented the enemy from crossing the river during the entire day, and also that night. Stanley reached Spring Hill in time to prevent Hood from occupying that place. He skirmished and fought with Hood's advance troops at Spring Hill during the afternoon of November 29th. . . . Schofield . . . accomplished exactly what he believed he could accomplish. He held back his enemy at Columbia with one hand and fenced off the blow at Spring Hill with the other. . . . The beneficial result of all this bold management of Schofield, November 29th, was apparent the next day in the battle of Franklin. Hood fought that great battle practically without his artillery. He only had the two batteries which he took with him on his detour to Spring Hill. Those two he used. . . . But his vast supply of artillery had all been detained at Columbia too long to be of any service at the time and place it was most needed. . . . The Federal troops left Spring Hill in the night for Franklin, ten miles distant. Early in the morning of November 30th they began to arrive at Franklin, and were placed in position covering the town. Early the same morning the Confederates moved up from Spring Hill, following hard upon the rearmost of the Federals. . . . General Stanley says, in his

official report: 'From one o'clock until four in the evening, the enemy's entire force was in sight and forming for attack. Yet, in view of the strong position we held, and reasoning from the former course of the rebels during the campaign, nothing appeared so improbable as that they would assault.'" The assault was made, however, with a terrible persistency which proved the ruin of Hood's army, for it failed. "The Confederate loss in this dreadful battle can be estimated from data given. There is good authority for stating the killed at 1,750. The usual proportion of killed and wounded is four or five to one. This would make the killed and wounded not less than 7,000 or 8,000. The attacking force numbered full 20,000. . . . Hood's loss was, indeed, more than one-third of the attacking force. The Federal loss was much smaller, being 1,222 killed and wounded. . . . One of the features of this battle was the enormous expenditure of ammunition [100 wagon loads] in the short time of its duration. . . . The expenditure of so much ammunition produced a dense smoke, which hung over the field, and brought on sudden darkness, like an eclipse. So noticeable was this phenomenon, it is mentioned in all the official reports. . . . In the darkness of the night the battle ended. The Confederates desisted, and the Federal line became quiet. . . . In their front, and so near that the outstretched hand could almost reach them, were thousands of men in the agonies of death. The wail that went up from that field as the thunder of the battle ceased can never be forgotten by those who heard it. . . . The [Federal] troops were quietly withdrawn before midnight. A silent rapid march brought them to Nashville the next morning, and weary with fighting and marching they bivouacked in the blue grass pastures under the guns of Fort Negley."—T. Speed, *The Battle of Franklin (Sketches of War Hist., Ohio Commandery L. L. of the U. S., v. 3)*.

A. D. 1864 (November—December: Georgia).—**Sherman's March to the Sea.**—"It was at Alatoona [see above: (SEPTEMBER—OCTOBER)], probably, that Sherman first realized that, with the forces at his disposal, the keeping open of his line of communications with the North would be impossible if he expected to retain any force with which to operate offensively beyond Atlanta. He proposed, therefore, to destroy the roads back to Chattanooga, when all ready to move, and leave the latter place garrisoned. . . . Sherman thought Hood would follow him, though he proposed to prepare for the contingency of the latter moving the other way while he was moving south, by making Thomas strong enough to hold Tennessee and Kentucky. I myself [writes General Grant] was thoroughly satisfied that Hood would go north, as he did. On the 2d of November I telegraphed Sherman authorizing him definitely to move according to the plan he had proposed: that is, cutting loose from his base, giving up Atlanta and the railroad back to Chattanooga. . . . Atlanta was destroyed so far as to render it worthless for military purposes before starting, Sherman himself remaining over a day to superintend the work and see that it was well done. Sherman's orders for this campaign were perfect. Before

starting, he had sent back all sick, disabled and weak men, retaining nothing but the hardy, well-lured soldiers to accompany him on his long march in prospect. . . . The army was expected to live on the country. . . . Each brigade furnished a company to gather supplies of forage and provisions for the command to which they belonged. . . . The skill of these men, called by themselves and the army 'bummers,' in collecting their loads and getting back to their respective commands, was marvellous."—U. S. Grant, *Personal Memoirs, ch. 59 (v. 2)*.

—All preparations being completed, General Sherman caused the foundries, mills and shops of every kind in Rome to be destroyed on the 10th of November, and "started on the 12th with his full staff from Kingston to Atlanta. . . . As Sherman rode towards Atlanta that night he met railroad trains going to the rear with furious speed. He was profoundly impressed with the strange aspect of affairs: two hostile armies marching in opposite directions, each in the full belief that it was achieving a final and conclusive result in the great war. 'I was strongly inspired,' he writes, 'with a feeling that the movement on our part was a direct attack upon the rebel army and the rebel capital at Richmond, though a full thousand miles of hostile country intervened; and that for better or worse it would end the war.' The result was a magnificent vindication of this soldierly intuition. His army consisted in round numbers of 60,000 men, the most perfect in strength, health, and intelligence that ever went to war. He had thoroughly purged it of all inefficient material, sending to the rear all organizations and even all individuals that he thought would be a drag upon his celerity or strength. His right wing, under Howard, consisted of the Fifteenth Corps, commanded by Osterhaus, in the absence of John A. Logan; and the Seventeenth Corps, commanded by Frank P. Blair, Jr. The left wing, commanded by Slocum, comprised the Fourteenth Corps, under Jeff. C. Davis, and the Twentieth Corps, under A. S. Williams. In his general orders he had not intimated to the army the object of their march. 'It is sufficient for you to know,' he said, 'that it involves a departure from our present base and a long, difficult march to a new one.' His special field orders are a model of clearness and conciseness. The habitual order of march was to be, wherever practicable, by four roads as nearly parallel as possible, and converging at points to be indicated from time to time. There was to be no general train of supplies; behind each regiment should follow one wagon and one ambulance; a due proportion of wagons for ammunition and provision behind each brigade; the separate columns were to start at seven in the morning and make about fifteen miles a day. The army was to subsist liberally on the country; forage parties, under the command of discreet officers, were to gather near the routes traveled whatever was needed by the command, aiming to keep in the wagons a reserve of at least ten days' provisions; soldiers were strictly forbidden to enter dwellings of inhabitants or commit trespasses; the power to destroy mills, houses, cotton gins, etc., was intrusted to corps commanders alone. No destruction of property was to be permitted in districts where the army was unmoored; but relentless devastation was ordered in case of the

manifestation of local hostility by the shooting of soldiers or the burning of bridges. . . . Precisely at seven o'clock on the morning of the 16th of November the great army started on its march. A band struck up the anthem of 'John Brown's body lies a-moldering in the grave'; the soldiers caught up the refrain, and, to the swelling chorus of 'Glory, Hallelujah,' the great march was begun. The month that followed will always remain to those 60,000 men the most romantic and inspiring memory of their lives. The weather was favorable all the way; to veterans the marches were of reasonable length; the work of destroying the Southern railroads was so easy to their experienced hands that it hardly delayed the day's march. With the exception of the affair on the 23d of November, when P. J. Phillips with a division of Smith's Georgia troops attacked C. C. Walcutt's Brigade, which was marching as the rear-guard of the right wing at Grisswoldville, and met with a severe repulse, and a series of cavalry fights between Wheeler and Kilpatrick near Waynesboro', there was no fighting to do between Atlanta and Savannah. A swarm of militia and irregular cavalry hung, it is true, about the front and flank of the marching army, but were hardly a source of more annoyance than so many mosquitoes would have been. The foragers brought in every evening their heterogeneous supplies from the outlying plantations, and although they had to defend themselves every day from scattered forces of the enemy, the casualties which they reported each evening were insignificant. The utmost efforts of Sherman and his officers to induce the negroes to remain quietly at home were not entirely successful. The promise of freedom which was to come to them from the victory of the Union cause was too vague and indefinite to content them. . . . The simple-hearted freedmen gathered in an ever-increasing cloud in rear of the army; and when the campaign was over they peopled the sea-islands of Georgia and furnished, after the war, the principal employment of the Freedmen's Commission. The march produced an extraordinary effervescence throughout the Confederacy. If words could avail anything against heavy battalions, Sherman would have been annihilated in his first day's march. . . . As Sherman drew near to Milledgeville on the 23d of November the Georgia Legislature passed an act to levy the population en masse; but this act of desperate legislation had no effect in checking the march of the 'Yankees,' and the Governor, State officers, and Legislature fled in the utmost confusion as Sherman entered the place. The Union general occupied the Executive Mansion for a day; some of the soldiers went to the State House, organized themselves into a constituent assembly, and after a spirited mock-serious debate, repealed the ordinance of secession. Sherman took the greatest possible pains to prevent any damage to the city and marched out on the 24th on the way to Millen. . . . Finding it impossible to stop him, the Georgia State troops by sharp marching had made their way directly to the vicinity of Savannah, where Sherman himself arrived and invested the city from the Savannah to the little Ogeechee River, on the 10th of December."—J. G. Nicolay and J. Hay, *Abraham Lincoln*, v. 9, ch. 20.—On the 13th, Fort McAlister, which commanded the Ogeechee River, was stormed and taken by Hazen's division, and

communication was opened with Admiral Dahlgren, and with General Foster, the Union commander at Port Royal. On the 17th, General Hardee, the Confederate commander at Savannah, refused a demand for the surrender of the city, but on the night of the 20th he escaped, with his forces, and on the 22d General Sherman telegraphed to President Lincoln: "I beg to present to you as a Christmas gift the city of Savannah, with 150 heavy guns and plenty of ammunition; also about 25,000 bales of cotton."

Sherman, *Memoirs*, ch. 20 (p. 2).—G. W. Nichols, *The Story of the Great March*.—W. B. Hazen, *Narrative of Military Service*, ch. 21-22.

A. D. 1864 (December: Tennessee).—The Battle of Nashville and the destruction of Hood's army.—After the battle of Franklin—see above: (NOVEMBER; TENNESSEE)—Hood went forward to Nashville, with his badly shaken army, and invested that place. Thomas was strongly fortified, and quietly took his time to make ready before striking his audacious antagonist, unmoved by repeated demands for an advance, from the War Office, the President, and General Grant. "With all just confidence in Thomas' ability, the entire North insisted on instant action, and Grant finally ordered Thomas either to move upon Hood at once or else turn over the command to Schofield. Thomas quietly replied that he would cheerfully do the latter, if directed, but would not attack Hood until he was satisfied that the time was ripe. He desired both favorable weather and to increase his force of mounted men. But the enemy was devastating a considerable part of Tennessee and was forcing all the young men into their ranks; and every one was fearful of a repetition of Bragg's march to the Ohio in 1862. Logan was finally ordered to Nashville to supplant Thomas. But before he could reach the ground, Thomas had struck his blow. His preparations had been two weeks before substantially completed. Small detachments were at Murfreesboro', Chattanooga, and along the railroad. This latter had been, however, interrupted by Hood for a number of days. A heavy storm of sleet and ice had made the country almost impassable and would render the operations of the attacking party uncertain. Thomas had made up his mind to wait for clearing weather. Finally came sunshine and with it Thomas' advance. Hood lay in his front, with Stewart on his left, Lee in the centre and Cheatham on the right, while a portion of Forrest's cavalry was operating out upon his left. He had some 44,000 men, but his check and heavy losses at Franklin had seriously impaired the 'morale' of his army as well as thinned his ranks. Hood could, however, not retreat. He was committed to a death-struggle with Thomas. It was his last chance as a soldier. The Union general had placed A. J. Smith on his right, the Fourth corps in the centre, and Schofield on the left. He advanced on Hood, bearing heavily with his right, while sharply demonstrating with his left. The position of the Confederate Army had placed A. J. Smith's corps obliquely to their general line of battle, an advantage not to be neglected. Smith pushed

in, later supported by Schofield, and successively capturing the field-works erected by the enemy's main line and reserves, disastrously crushed Hood's left flank. Meanwhile Wood was making all but equal headway against Hood's right, and the first day closed with remarkable success for the amount of loss sustained. Still this was not victory. The morrow might bring reverse. Hood's fight promised to be with clenched teeth. Hood seriously missed Forrest, whom he had detached on a raiding excursion and without whose cavalry his flanks were naked. Cheatham he moved during the night over from the right to sustain his left, which had proved the weaker wing. On the morning of the next day he lay entrenched upon the hills back of his former line, with either flank somewhat refused. Thomas sent Wilson with his cavalry to work his way unobserved around the extreme left flank thus thrown back. At 4 P. M. a general assault was made all along the line. Upon our left, Wood's advance did not meet with success. On the right, however, A. J. Smith's onset, concentrated at the salient of Hood's left centre, proved heavy enough to break down the Confederate defense. Sharply following up his successes, allowing no breathing time to the exultant troops, Smith pushed well home, and overcoming all resistance, drove the enemy in wild confusion from the field. Meanwhile Wilson's troopers, dismounted, fell upon the Confederate flank and rear and increased the wreck tenfold. This advantage again enabled Wood to make his headway, and with renewed joint effort the rout of the enemy became overwhelming. Almost all organization was lost in Hood's army as it fled across the country towards Franklin. Pursuit was promptly undertaken, but though seriously harassed, Hood saved himself beyond the Tennessee river with the remnants of his army. Thomas' losses were 3,000 men, Hood's were never officially given, but our trophies included 4,500 prisoners and 53 guns. Thomas had settled all adverse speculation upon his slowness in attacking Hood by the next to annihilation he wrought when he actually moved upon him. No army was so completely overthrown during our war."—T. A. Dodge, *Bird's-Eye View of our Civil War*, ch. 58.

Coppée, *General Thomas*, ch. 11-12.

A. D. 1864-1865 (December—January: North Carolina).—The Capture of Fort Fisher.—"In the latter part of 1864 two ports only, Wilmington and Charleston, remained to the Confederates. . . . The northward march of Sherman would cut off Charleston, too, so that the Confederates would have to abandon it. The National government now desired to complete its work by capturing Fort Fisher, and thus finally shutting off the Confederacy from all communication with the foreign world. The accomplishment of this task was in no wise easy. . . . The army and navy co-operated in the attempts to reduce Fort Fisher. There were more than 50 men-of-war tossing on the waves before the lowering sea-front of the work. Six thou-

sand five hundred men were in the military force. They were in command of General B. F. Butler, whom we saw last in New Orleans. The General's active and ingenious mind conceived a plan for destroying the fort without sacrificing a single Federal soldier. He procured an old gunboat, painted it white and otherwise disguised it, so as to look like a blockade-runner, stored 250 tons of gunpowder in its hold with fuses penetrating every part, ran the craft in within 1,500 feet of the works and exploded it. Butler expected that the shock would demolish the seaward face of the fort altogether, and perhaps bury the guns under great masses of sand, but in this he was mistaken, for the heavy bastions were not in the least disturbed by the shock. . . . The navy then took its turn, and for some hours the heavy vessels of Admiral Porter's fleet poured so rapid and well aimed a fire upon the work, that the garrison were driven from their guns, and only the occasional report of a heavy cannon told that the fort was still tenanted. But secure in their heavy bomb-proofs, the garrison minded the storm of shells and solid shot no more than the well-housed farmer heeds a hail-storm. It was very clear that Fort Fisher could not be taken at long range. . . . The original plan had contemplated an assault as soon as the fire of the fleet should have silenced the guns of the fort, and in pursuance of this 700 men had been landed from the army transports. But the weather was too rough to permit of landing more troops that day, and the next morning General Butler concluded that Fort Fisher was impregnable, withdrew his men already landed, and sailed away, greatly to the disgust of the navy. This was on the 25th of December, 1864. The chagrin of the whole North over the failure of the expedition was so great that it was speedily determined to renew the attempt. January 13th saw a new Federal force, this time under command of General A. H. Terry, landing on the shore of the sandy neck of land above the fort. . . . At early dawn of the 15th the attack was begun. The ships arranged in a great semicircle poured their fire upon the fort, dismantling guns, driving the garrison to the bomb-proofs, and mowing down the stockade. A line of sharpshooters, each carrying a shovel in one hand and a gun in the other, spring out from Terry's most advanced lines, rush forward to within 175 yards of the fort and dig pits for their protection before the Confederates can attack them. Then the sharpshooters and the navy occupy the attention of the enemy, while Curtis's brigade dashes forward and digs a trench within 500 yards of the fort. By this time too a party of 2,000 sailors and marines has been landed from the fleet. They are to storm the sea-wall of the fort while the army attacks its landward face. Suddenly the thunder of the naval artillery is stilled. There is a moment of silence, and then the shrill scream of the whistles rises from every steamer in the fleet. It is the signal for the assault. The sailors on the beach spring to their feet and dash forward at a rapid run; they fire no shot, for they carry no guns. Cutlasses and pistols, the blue-jackets' traditional weapons, are their only arms. Toward the other side of the fort came Terry's troops. . . . The fate of the naval column is quickly determined. Upon it is concentrated the fire of the heaviest Confederate batteries, Napoleon guns, Columbiads, and

rifles shotted with grape and cannister. The blue-jackets, unable to reply to this murderous fire, and seeing their companions falling fast around them, waver, halt, and fall back to the beach, throwing themselves upon the ground to escape the enemy's missiles. But though repulsed they have contributed largely to the capture of the fort. While the chief attention of Confederates has been directed toward them, the troops have been carrying all before them on the other front. Colonel Lamb turns from his direction of the defense against the naval column to see three Union flags waving over other portions of the work. . . . The Confederates were determined, even desperate. Long after the fort was virtually in the hands of its captors they stubbornly cling to a bomb-proof. Finally they retreated to Battery Buchanan and there maintained themselves stoutly until late at night when, all hope being at an end, they surrendered themselves, and the National victory was complete."—W. J. Abbot, *Battle-Fields and Victory*, ch. 15.

A. D. 1865 (January).—Congressional adoption of the Thirteenth Amendment.—"On the last day of [January, 1865] . . . one of the grandest events of the century was witnessed in the House of Representatives in the final passage of the Constitutional Amendment [the Thirteenth] forever prohibiting slavery. Numerous propositions on the subject had been submitted, but the honor of drafting the one adopted belongs to Lyman Trumbull, who had introduced it early in the first session of this Congress. It passed the Senate on the 8th of April, 1864, only six members voting against it, . . . but failed in the House on the 15th of June following. It now came up on the motion of Mr. Ashley to reconsider this vote. Congress had abolished slavery in the District of Columbia, and prohibited it in all the Territories. It had repealed the Fugitive Slave law, and declared free all negro soldiers in the Union armies and their families; and the President had played his grand part in the Proclamation of Emancipation. But the question now to be decided completely overshadowed all others. The debate on the subject had been protracted and very spirited. . . . The time for the momentous vote had now come, and no language could describe the solemnity and impressiveness of the spectacle pending the roll-call. The success of the measure had been considered very doubtful, and depended upon certain negotiations, the result of which was not fully assured, and the particulars of which never reached the public. The anxiety and suspense during the balloting produced a deathly stillness, but when it became certain known that the measure had prevailed the cheering in the densely-packed hall and galleries surpassed all precedent and beggared all description. Members joined in the general shouting, which was kept up for several minutes, many embracing each other, and others completely surrendering themselves to their tears of joy. It seemed to me I had been born into a new life."—G. W. Julian, *Political Recollections*, ch. 11.—"The Joint Resolution passed [the House of Representatives, on the 31st of January], 119 to 56, 8 not voting, 10 Democrats voting aye. . . . It was

the greatest day the House had ever seen, nor is it likely ever to see a greater."—O. J. Hollister, *Life of Schuyler Colfax*, p. 245.—The Thirteenth Amendment, which was ratified before the close of the year by three-fourths of the States, and its embodiment in the Constitution of the United States proclaimed by the Secretary of State on the 18th of December, 1865, is as follows: "Section 1. Neither slavery nor involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall exist within the United States, or any place subject to their jurisdiction. Section 2. Congress shall have power to enforce this article by appropriate legislation."

A. D. 1865 (February).—The Hampton Roads Peace Conference.—"Several informal attempts at opening negotiations for the termination of hostilities were made in the course of this Winter—Hon. Francis P. Blair, of Maryland, visiting Richmond twice on the subject, with the consent, though not by the request, of President Lincoln. At length, upon their direct application, Messrs. Alex. H. Stephens, John A. Campbell, and Robert M. T. Hunter, were permitted to pass Gen. Grant's lines before Petersburg, and proceed to Fortress Monroe; where [on board a steamer in Hampton Roads] they were met by Gov. Seward, followed by President Lincoln; and a free, full conference was had."—H. Greeley, *The American Conflict*, v. 2, ch. 30.—Secretary Seward first went to meet the three Confederate Commissioners, with the following letter of instructions from President Lincoln, dated January 31, 1865: "Hon. William H. Seward, Secretary of State: You will proceed to Fortress Monroe, Virginia, there to meet and informally confer with Messrs. Stephens, Hunter, and Campbell, on the basis of my letter to F. P. Blair, Esq., of January 18, 1865, a copy of which you have. You will make known to them that three things are indispensable, to wit: 1. The restoration of the national authority throughout all the States. 2. No receding by the executive of the United States on the slavery question from the position assumed thereon in the late annual message to Congress, and in preceding documents. 3. No cessation of hostilities short of an end of the war and the disbanding of all forces hostile to the government. You will inform them that all propositions of theirs, not inconsistent with the above, will be considered and passed upon in a spirit of sincere liberality. You will hear all they may choose to say, and report it to me. You will not assume to definitely consummate anything. Yours, etc., Abraham Lincoln." Two days later, the President followed him, persuaded by a telegram from General Grant to meet the Commissioners personally. In a subsequent message to the Senate, Mr. Lincoln reported the results of the conference as follows: "On the morning of the 3d, the three gentlemen, Messrs. Stephens, Hunter, and Campbell, came aboard of our steamer, and had an interview with the Secretary of State and myself, of several hours' duration. No question of preliminaries to the meeting was then and there made or mentioned. No other person was present; no papers were exchanged or produced; and it was, in advance, agreed that the conversation was to be informal and verbal merely. On our part the whole substance of the instructions to the Secretary of State, hereinbe-

fore recited, was stated and insisted upon, and nothing was said inconsistent therewith; while, by the other party, it was not said that in any event or on any condition, they ever would consent to reunion; and yet they equally omitted to declare that they never would so consent. They seemed to desire a postponement of that question, and the adoption of some other course first which, as some of them seemed to argue, might or might not lead to reunion; but which course, we thought, would amount to an indefinite postponement. The conference ended without result."—A. Lincoln, *Complete Works*, v. 2, pp. 644-649.

A. D. 1865 (February): South Carolina.—Evacuation of Charleston by the Confederates.—Federal occupation of the City.—While General Hardee, with 14,000 men, waited at Charleston for the expected coming of General Sherman to attack that city, the latter pursued a movement which made Charleston untenable and shook it like a ripened apple into the hands of General Gillmore, who was waiting at the gates. The Confederates evacuated the city in haste and with reckless disorder, and it was occupied by the Federal troops on the morning of the 18th of February. The following is the report of Colonel A. G. Bennett, who was the first to enter the city: "On the morning of February the 18th I received information that led me to believe the defences and lines guarding the city of Charleston had been deserted by the enemy. I immediately proceeded to Cummings Point, from whence I sent a small boat in the direction of Fort Moultrie, which boat, when 40 yards east from Fort Sumter, was met by a boat from Sullivan's Island, containing a full corps of band musicians abandoned by the enemy. These confirmed my belief of an evacuation. I had no troops that could be available under two hours, as, except in a few pontoon boats, there were no means whatever of landing troops near the enemy's works or into the city. I directed Major Hennessy to proceed to Fort Sumter and there replace our flag. The flag was replaced over the southeast angle of Fort Sumter at 9 o'clock A. M. I now pushed for the city, stopping at Fort Ripley and Castle Pinckney, from which works Rebel flags were hauled down and the American flag substituted. . . . I landed at Mill's wharf, Charleston, at 10 o'clock A. M. where I learned that a part of the enemy's troops yet remained in the city, while mounted patrols were out in every direction applying the torch and driving the inhabitants before them. I at once addressed to the Mayor of the city [a communication demanding its surrender]. . . . My whole force consisted of five officers and the armed crews of two small boats, comprising in all 22 men. Both officers and men volunteered to advance from the wharf into the city; but no reinforcements being in sight, I did not deem it expedient to move on. Public buildings, stores, warehouses, private dwellings, shipping, etc., were burning and being fired by armed Rebels, but with the force at my disposal it was impossible to save the cotton and other property. While awaiting the arrival of my troops at Mill's wharf, a number of explosions took place. The Rebel commissary depot was blown up, and with it is estim-

ated that not less than 200 human beings—most of whom were women and children—were blown to atoms. These people were engaged in procuring food for themselves and their families by permission from the Rebel military authorities. . . . Observing a small boat sailing toward the bay under a flag of truce, I put off to it, and received from a member of the common council a letter [from the Mayor, announcing the evacuation of the city by the Confederate military authorities]. . . . The deputation sent to convey the above letter represented to me that the city was in the hands of either the Rebel soldiery or the mob. They entreated of me in the name of humanity to interpose my military authority and save the city from utter destruction. . . . Two companies of the 52d Pennsylvania regiment and about 30 men of the 3d Rhode Island volunteer heavy artillery having landed, I proceeded with them to the citadel. I here established my headquarters, and sent small parties in all directions with instructions to impress negroes wherever found, and to make them work the fire apparatus, until all fires were extinguished."—A. G. Bennett, *Report*, Feb. 24, 1865 (quoted in *Tenney's Military and Naval Hist. of the Rebellion*, ch. 49).—At noon on the 14th of April, 1865, the fourth anniversary of the lowering of the flag of the United States at Fort Sumter, it was formally raised by General Anderson over the ruins of the fort, with impressive ceremonies, in which many visitors from the North took part. An address was delivered on the occasion by the Rev. Henry Ward Beecher.

A. D. 1865 (February—March): The Carolinas.—Sherman's march from Savannah to Goldsboro.—The burning of Columbia.—The Battle of Bentonville.—"By the middle of January, a lodgment had been effected in South Carolina [at Pocotaligo, on the railroad between Savannah and Charleston], and Sherman had his whole army once more in hand as a moving column. He had no idea of wasting time on either Charleston or Augusta, but he determined to play upon the fears of the rebels, and compel them to retain a force to protect those places. . . . Accordingly he gave out with some ostentation that he was moving upon either Charleston or Augusta. Early in January the heavy winter rains set in, rendering the roads almost impassable. . . . This flood delayed the departure of the column for quite two weeks. . . . On the 1st of February, the army designed for the active campaign from Savannah northward was again 60,000 strong; and, as before, was composed of two wings, the right under Howard and the left under Slocum. Kilpatrick was once more chief of cavalry. Sixty-eight guns accompanied the command. The wagons were 2,500 in number, and carried an ample supply of ammunition for one great battle, forage for a week, and provisions for twenty days. For fresh meat Sherman depended on beaves driven on the hoof, and such cattle, hogs, and poultry as might be gathered on the march. . . . Sherman . . . started on his northward march on the 1st of February. On that day his right wing was south of the Salkehatchie river, and his left still struggling in the swamps of the Savannah, at Sister's Ferry. . . . The division generals led their columns through the swamps, the water up to their shoulders, crossed over to the pine land beyond, and then, turning upon the rebels who

had opposed the passage, drove them off in utter disorder. All the roads northward had been held for weeks by Wheeler's cavalry, and details of negro laborers had been compelled to fell trees and burn bridges to impede the national march. Sherman's pioneers, however, removed the trees, and the heads of columns rebuilt the bridges before the rear could close up, and the rebels retreated behind the Edisto river at Branchville. . . . Sherman determined to waste no time on Branchville, which the enemy could no longer hold, and turned his columns directly north upon Columbia, where it was supposed the rebels would concentrate. Attempts were made to delay him at the crossings of the rivers; there were numerous bridge-heads with earth or cotton parapets to carry, and cypress swamps to cross; but nothing stayed his course. On the 13th, he learned that there was no enemy in Columbia except Hampton's cavalry. Hardee, at Charleston, took it for granted that Sherman was moving upon that place, and the rebels in Augusta supposed that they were Sherman's object; so Charleston and Augusta were protected, while Columbia was abandoned to the care of the cavalry." With little or no resistance, Sherman entered the capital of South Carolina on the 17th of February. "Hampton had ordered all cotton, public and private, to be moved into the streets and fired. Bales were piled up everywhere, the rope and bagging cut, and the tufts of cotton blown about by the wind, or lodged in the trees and against the houses, presented the appearance of a snow-storm. Some of these piles of cotton were burning in the heart of the town. Sherman, meanwhile, had given orders to destroy the arsenals and public property not needed by his army, as well as railroad stations and machines, but to spare all dwellings, colleges, schools, asylums, and 'harmless private property'; and the fires lighted by Hampton were partially subdued by the national soldiers. But before the torch had been put to a single building by Sherman's order, the smouldering fires set by Hampton were rekindled by the wind and communicated to the buildings around. About dark the flames began to spread, and were soon beyond the control of the brigade on duty in the town. An entire division was now brought in, but it was found impossible to check the conflagration, which by midnight had become quite unmanageable. It raged till about four A. M. on the 18th, when the wind subsided, and the flames were got under control. . . . Beauregard, meanwhile, and the rebel cavalry, had retreated upon Charlotte, in North Carolina, due north from Columbia; and on the 20th and 21st Sherman followed as far as Winnsboro. . . . At Winnsboro, however, Sherman turned his principal columns northeastward towards Goldsboro, still 200 miles away. Heavy rains again impeded his movements. . . . and it was not till the 3d of March that the army arrived at Cheraw. At this point large quantities of guns and ammunition were captured, brought from Charleston under the supposition that here, at least, they would be secure. Hardee had moved due north from Charleston by his only remaining railroad, through Florence, but only reached Cheraw in time to escape with his troops across the Pedee river, just before Sherman arrived. . . . Having secured the passage of the Pedee. . . . Sherman had but little uneasiness about the future. . . .

On the 11th of March, Fayetteville was reached, and Sherman had traversed the entire extent of South Carolina. On the 12th, he sent a dispatch to Grant, the first since leaving the Savannah. . . . On the 15th of March, the command began its march for Goldsboro." The scattered Confederate forces were now getting together and General Johnston had been put in command of them. "Sherman estimated the entire rebel force at 37,000 infantry and 8,000 cavalry; but only Hardee, with . . . 000 infantry and one division of cavalry, was in the immediate front." On the 15th Hardee was encountered at Averysboro, where he attempted to check Sherman's advance while Johnston concentrated in the rear. Some sharp fighting occurred, in which Sherman lost 77 men killed and 477 wounded. Hardee reported his loss at 500. In the morning he had disappeared. "From Averysboro both wings turned eastward by different roads, and on the night of the 18th of March the army was within 27 miles of Goldsboro, and only five from Bentonsville. The columns were now about ten miles apart." At Bentonsville, on the 19th, Slocum's wing was attacked by Johnston, who had marched his whole command with great rapidity, hoping to "overwhelm Sherman's left flank before it could be relieved by its co-operating column." But Slocum held his ground that day against six distinct assaults, and the next day Sherman brought his whole army into position. He did not push the enemy, however, either on the 20th or on the 21st, being uncertain as to Johnston's strength. During the night of the 21st the latter retreated. "The total national loss was 191 killed, and 1,455 wounded and missing. Johnston states his losses to have been 223 killed, 1,467 wounded, and 653 missing; but Sherman captured 1,621 prisoners. Sherman admits that he committed an error in not overwhelming his enemy. Few soldiers, however, are great enough to accuse themselves of an error, and fewer still but might accuse themselves of greater ones than can ever be laid at Sherman's door. At daybreak on the 22d . . . the army moved to Goldsboro, where Schofield had already arrived [see below: 1865 (FEBRUARY—MARCH: NORTH CAROLINA)]. . . . Thus was concluded one of the longest and most important marches ever made by an organized army in civilized war."—A. Badenau, *Military Hist. of Ulysses S. Grant*, ch. 31 (p. 3).—At Columbia, "I observed, as I passed along the street, that many shops had been gutted, and that paper, rags, a d litter of all kinds lay scattered on the floors, in the open doorways, and on the ground outside. I was told on good authority that this had been done by the Confederate troops before our arrival. It was a windy day, and a great deal of loose cotton had been blown about and caught on the fences and in the branches of the shade trees along the street. It has been said that this had something to do with spreading the fire which afterward took place. I think this very doubtful. . . . I have never doubted that Columbia was deliberately set on fire in more than a hundred places. No one ordered it, and no one could stop it. The officers of high rank would have saved the city if possible; but the army was deeply imbued with the feeling that as South Carolina had begun the war she must suffer a stern retribution."—W. B. Hazen, *Narrative of Military Service*, ch. 23-25.—"I dis-

claim on the part of my army any agency in this fire, but, on the contrary, claim that we saved what of Columbia remains unconsumed."—*Sherman's Official Report (Rebellion Record, v. 11)*.

ALSO IN: S. M. Bowman and R. B. Irwin, *Sherman and his Campaigns, ch. 26-29*.—H. W. Slocum and W. Hampton, *Sherman's March and The Battle of Bentonville's (Battles and Leaders, v. 4)*.

A. D. 1865 (February—March: North Carolina).—Occupation of Wilmington.—Battle of Kinston.—Junction with Sherman at Goldsboro.—On the 9th of February, General Schofield, transferred from the west, arrived at Fort Fisher with Cox's division of the Twenty-third Corps, and took command of the newly created Department of North Carolina. Advancing on Wilmington, the Confederates, under Hoke, retreating before him, he occupied that city on the 22d. This accomplished, General Cox was sent to Newberne to take command of forces ordered there, and to open communication thence by railroad with Goldsboro, preparatory to the arrival of General Sherman at that point. In the prosecution of this undertaking, he fought the battle of Kinston, March 10, repelling a fierce attack by Bragg with the forces which were being collected against Sherman. "After Bragg's retreat, Schofield steadily pressed the work of rebuilding the railway. Kinston was occupied on March 14th." On the 21st Schofield entered Goldsboro, "and there, in a couple of days more, was reassembled the grand army under Sherman, whose march from Savannah had been quite as remarkable as the former one from Atlanta to the sea."—J. D. Cox, *The March to the Sea (Campaigns of the Civil War), ch. 9*.

A. D. 1865 (February—March: Virginia).—Sheridan's destroying march through Central Virginia.—Battle of Waynesborough.—"The last campaign against Lee may be said to have been inaugurated when General Sheridan started with his cavalry from Winchester, Virginia, on the 27th of February, 1865, with a sort of carte blanche of destruction as to the enemy's supply depots and communications. The general's instructions looked to his crossing the James River above Richmond, and his possible junction with the command of General Sherman somewhere in North Carolina; but the swollen condition of the James and the destruction of the bridges prevented his crossing. . . . General Sheridan's command on this expedition consisted of the first cavalry division, under Brevet Major-General Wesley Merritt, and the third cavalry division, under Brevet Major-General Geo. A. Custer, to whose division was added one brigade of the cavalry of the old army of West Virginia, under Colonel Capehart. . . . They left Winchester on a damp, disagreeable morning. . . . But the spirits of the bold dragoons were not dampened, and they felt lively enough to push on to Waynesborough to the camp of General Jubal Early, late of the Confederacy, upon whom the brilliant Custer fell with his division, and soon had his guns, and men, and 'matériel,' and would have had him but that he had sufficient presence of mind to absent his person when he found how things were going. This was General Early's last appearance in public life. . . . Early's command

at Waynesborough being now dispersed or captured, . . . General Sheridan proceeded to occupy Charlottesville. . . . Then on again toward Lynchburg and the James River. . . . When it was found impossible to cross the James River, attention was for a while directed to the demolition of the James River and Kanawha Canal. . . . When the ingenious destruction corps could devise no further damage here, the command turned off to try its hand upon a railroad or two. All the time the rains had descended—the flood-gates of the clouds were up and the water kept pouring through. . . . Although nothing short of a miracle seemed likely to ride out the storm, the cavalry rode on hopefully, and came safely to harbor at the White House, on the Pamunkey, where supplies were furnished them, and where the March winds blew them dry again. . . . Immediately upon his arrival at this depot, General Sheridan reported to General Grant, at City Point, for orders."—*With General Sheridan in Lee's Last Campaign; by a Staff Officer, ch. 2*.

ALSO IN: G. E. Pond, *The Shenandoah Valley in 1864, ch. 14*.—A. Budeau, *Military Hist. of Ulysses S. Grant, ch. 31 (v. 3)*.—P. H. Sheridan, *Personal Memoirs, v. 2, ch. 4*.

A. D. 1865 (March).—Emancipation of the families of colored soldiers.—"The President in his annual message, December, 1863, had estimated the colored soldiers in the service at 'nearly 100,000.' They were mostly from the border States, and the slaves of loyal masters. While they were fighting the battles of the country, their masters, who were generally opposed to their enlistment, could sell into perpetual slavery their wives and children. To deter slaves from enlisting, or to punish them when they did enlist, slave-masters made merchandise of the wives and children of colored soldiers, and often sold them into a harsher bondage. To put an end to a practice so cruel, unjust, injurious, and dishonorable to the country, Mr. Wilson introduced into the Senate on the 6th of January [1864], in his bill to promote enlistments, a provision declaring that when any man or boy of African descent, owing service or labor in any State, under its laws, should be mustered into the military or naval service of the United States, he, and his mother, wife, and children, should be forever free." The bill was warmly debated and its supporters did not succeed in bringing it to a vote during that session of Congress. At the next session, on the 13th of December, 1864, Mr. Wilson introduced a joint resolution "to make free the wives and children of persons who had been, or might be, mustered into the service of the United States." This passed the Senate a few days later, by a vote of 27 to 10; was passed by the House on the 23d of February, 1865, and signed by the President on the 3d of March.—H. Wilson, *Hist. of the Rise and Fall of the Slave Power, v. 3, ch. 30*.

A. D. 1865 (March).—President Lincoln's Second Inaugural Address.—"The days of the Confederacy were evidently numbered. Only the last blow remained to be struck. Then Lincoln's second inauguration came [March 4, 1865], and with it his second inaugural address. Lincoln's famous 'Gettysburg speech' has been much and justly admired. But far greater, as well as far more characteristic, was that inaugural in which

he poured out the whole devotion and tenderness of his great soul. It had all the solemnity of a father's last admonition and blessing to his children before he lay down to die. . . . No American President had ever spoken words like these to the American people. America never had a President who found such words in the depth of his heart."—C. Schurz, *Abraham Lincoln: an Essay*, pp. 103-104.

The following is the text of the Inaugural Address:

"Fellow-countrymen: At this second appearing to take the oath of the presidential office, there is less occasion for an extended address than there was at the first. Then a statement, somewhat in detail, of a course to be pursued, seemed fitting and proper. Now, at the expiration of four years, during which public declarations have been constantly called forth on every point and phase of the great contest which still absorbs the attention and engrosses the energies of the nation, little that is new could be presented. The progress of our arms, upon which all else chiefly depends, is as well known to the public as to myself; and it is, I trust, reasonably satisfactory and encouraging to all. With high hope for the future, no prediction in regard to it is ventured. On the occasion corresponding to this four years ago, all thoughts were anxiously directed to an impending civil war. All dreaded it—all sought to avert it. While the inaugural address was being delivered from this place, devoted altogether to saving the Union without war, insurgent agents were in the city seeking to destroy it without war—seeking to dissolve the Union, and divide effects, by negotiation. Both parties deprecated war; but one of them would make war rather than let the nation survive; and the other would accept war rather than let it perish. And the war came. One-eighth of the whole population were colored slaves, not distributed generally over the Union, but localized in the Southern part of it. These slaves constituted a peculiar and powerful interest. All knew that this interest was, somehow, the cause of the war. To strengthen, perpetuate, and extend this interest was the object for which the insurgents would rend the Union, even by war; while the government claimed no right to do more than to restrict the territorial enlargement of it. Neither party expected for the war the magnitude or the duration which it has already attained. Neither anticipated that the cause of the conflict might cease with, or even before, the conflict itself should cease. Each looked for an easier triumph, and a result less fundamental and astounding. Both read the same Bible, and pray to the same God; and each invokes his aid against the other. It may seem strange that any men should dare to ask a just God's assistance in wringing their bread from the sweat of other men's faces; but let us judge not, that we be not judged. The prayers of both could not be answered—that of neither has been answered fully. The Almighty has his own purposes. 'Woe unto the world because of offenses! for it must needs be that offenses come; but woe to that man by whom the offense cometh.' If we shall suppose that American slavery is one of those offenses which, in the providence of God, must needs come, but which, having continued through his appointed time, he now wills to remove, and that he gives to

both North and South this terrible war, as the woe due to those by whom the offense came, shall we discern therein any departure from those divine attributes which the believers in a living God always ascribe to him? Fondly do we hope—ferently do we pray—that this mighty scourge of war may speedily pass away. Yet, if God wills that it continue until all the wealth piled by the bondman's 230 years of unrequited toil shall be sunk, and until every drop of blood drawn with the lash shall be paid by another drawn with the sword, as was said 3,000 years ago, so still it must be said, 'The judgments of the Lord are true and righteous altogether.' With malice toward none; with charity for all; with firmness in the right, as God gives us to see the right, let us strive on to finish the work we are in; to bind up the nation's wounds; to care for him who shall have borne the battle, and for his widow, and his orphan—to do all which may achieve and cherish a just and lasting peace among ourselves, and with all nations."—A. Lincoln, *Complete Works*, v. 2, pp. 656-657.

A. D. 1865 (March—April: Virginia).—**The Flanking of Lee's lines.—Battle of Five Forks.—Final assault at Petersburg and Confederate retreat.**—"One of the most anxious periods of my experience during the rebellion," wrote General Grant, "was the last few weeks before Petersburg. I felt that the situation of the Confederate army was such that they would try to make an escape at the earliest practicable moment, and I was afraid, every morning, that I would awake from my sleep to hear that Lee had gone, and that nothing was left but a picket line. . . . I was naturally very impatient for the time to come when I could commence the spring campaign, which I thoroughly believed would close the war. . . . Sherman was anxious that I should wait where I was until he could come up, and make a sure thing of it; but I had determined to move as soon as the roads and weather would admit of my doing so. I had been tied down somewhat in the matter of fixing any time at my pleasure for starting, until Sheridan, who was on his way from the Shenandoah Valley to join me, should arrive, as both his presence and that of his cavalry were necessary to the execution of the plans which I had in mind. However, [Sheridan] having arrived at White House on the 19th of March, I was enabled to make my plans. . . . It is now known that early in the month of March Mr. Davis and General Lee had a consultation about the situation of affairs in and about Richmond and Petersburg, and they both agreed that these places were no longer tenable for them, and that they must get away as soon as possible. They, too, were waiting for dry roads, or a condition of the roads which would make it possible to move. General Lee, in aid of his plan of escape, and to secure a wider opening to enable them to reach the Danville road with greater security than he would have in the way the two armies were situated, determined upon an assault upon the right of our lines around Petersburg." The assault was made by General Gordon early in the morning of March 25th, and Fort Stedman, with three contiguous batteries, were taken by surprise. The captured fort and batteries were soon recovered, however, and the Confederate troops who entered them were made prisoners. "This

effort of Lee's cost him about 4,000 men, and resulted in their killing, wounding and capturing about 2,000 of ours. . . . The day that Gordon was making dispositions for this attack (24th of March) I issued my orders for the movement to commence on the 20th. Oril, with three divisions of Infantry and Mackenzie's cavalry, was to move in advance on the night of the 27th, from the north side of the James River, and take his place on our extreme left, 30 miles away. . . . Oril was at his place promptly. Humphreys and Warren were then on our extreme left with the 2d and 5th corps. They were directed on the arrival of Oril, and on his getting into position in their places, to cross Hatcher's Run and extend out west toward Five Forks, the object being to get into a position from which we could strike the South Side Railroad and ultimately the Danville Railroad. There was considerable fighting in taking up these new positions for the 2d and 5th corps, in which the Army of the James had also to participate somewhat, and the losses were quite severe. This was what was known as the battle of White Oak Road. . . . The 29th of March came, and fortunately, there having been a few days free from rain, the surface of the ground was dry, giving indications that the time had come when we could move. On that day I moved out with all the army available after leaving sufficient force to hold the line about Petersburg. It soon set in raining again, however, and in a very short time the roads became practically impassable for teams, and almost so for cavalry. . . . It became necessary . . . to build corduroy roads every foot of the way as we advanced, to move our artillery upon. The army had become so accustomed to this kind of work, and were so well prepared for it, that it was done very rapidly. The next day, March 30th, we had made sufficient progress to the south-west to warrant me in starting Sheridan with his cavalry over by Dinwiddie with instructions to then come up by the road leading north-west to Five Forks, thus menacing the right of Lee's line. . . . The column moving detached from the army still in the trenches was, excluding the cavalry, very small. The forces in the trenches were themselves extending to the left flank. Warren was on the extreme left when the extension began, but Humphreys was marched around later and thrown into line between him and Five Forks. My hope was that Sheridan would be able to carry Five Forks, get on the enemy's right flank and rear, and force them to weaken their centre to protect their right, so that an assault in the centre might be successfully made. General Wright's corps had been designated to make this assault, which I intended to order as soon as information reached me of Sheridan's success. . . . Sheridan moved back to Dinwiddie Court-House on the night of the 30th, and then took a road leading northwest to Five Forks. He had only his cavalry with him. Soon encountering the rebel cavalry he met with a very stout resistance. He gradually drove them back however until in the neighborhood of Five Forks. Here he had to encounter other troops, besides those he had been contending with, and was forced to give way. In this condition of affairs he notified me of what had taken place and stated that he was falling back toward Dinwiddie gradually and slowly, and asked me to send

Wright's corps to his assistance. I replied to him that it was impossible to send Wright's corps . . . and that I would send Warren. Accordingly orders were sent to Warren to move at once that night (the 31st) to Dinwiddie Court-House and put himself in communication with Sheridan as soon as possible, and report to him. He was very slow in moving, some of his troops not starting until after 5 o'clock next morning. . . . Warren reported to Sheridan about 11 o'clock on the 1st, but the whole of his troops were not up so as to be much engaged until late in the afternoon. . . . Sheridan succeeded by the middle of the afternoon or a little later in advancing up to the point from which to make his designed assault upon Five Forks itself. He was very impatient to make the assault and have it all over before night, because the ground he occupied would be untenable for him in bivouac during the night. . . . It was at this juncture of affairs that Sheridan wanted to get Crawford's division in hand, and he also wanted Warren. He sent staff officer after staff officer in search of Warren, directing that general to report to him, but they were unable to find him. At all events Sheridan was unable to get that officer to him. Finally he went himself. He issued an order relieving Warren and assigning Griffin to the command of the 5th corps. The troops were then brought up and the assault successfully made. . . . It was dusk when our troops under Sheridan went over the parapets of the enemy. The two armies were mingled together there for a time in such manner that it was almost a question which one was going to demand the surrender of the other. Soon, however, the enemy broke and ran in every direction; some 6,000 prisoners, besides artillery and small-arms in large quantities, falling into our hands. . . . Pursuit continued until about 9 o'clock at night, when Sheridan halted his troops, and knowing the importance to him of the part of the enemy's line which had been captured, returned. . . . This was the condition which affairs were in on the night of the 1st of April. I then issued orders for an assault by Wright and Parke at 4 o'clock on the morning of the 2d." The assault was successfully made, and the outer works of Petersburg were soon in the hands of the National troops. Early in the morning of the 3d the enemy evacuated Petersburg and Grant and Meade took possession of the city. The following day they were visited there by President Lincoln, who had been at City Point for a week, or more, watching the course of events.—U. S. Grant, *Personal Memoirs*, ch. 63-65 (v. 2).

A. D. 1865 (April 11).—President Lincoln's last public address.—His view of Reconstruction in Louisiana.—On the evening of the 11th of April, a great multitude of people gathered about the White House, to convey their congratulations to the President and to signify their joy at the sure prospect of peace. Mr. Lincoln came out and spoke to them, expressing first his participation in their gladness, and then turning to discuss briefly the criticism which had opened upon his policy of reconstruction, as practically

illustrated in Louisiana. He spoke of his message and proclamation of December, 1863 (quoted above); of the approval given to them by every member of his cabinet; of the entire silence at the time of all who had become critics and objectors since action under the plan had been taken in Louisiana. He then went on as follows: "When the message of 1863, with the plan before mentioned, reached New Orleans, General Banks wrote me that he was confident that the people, with his military cooperation, would reconstruct substantially on that plan. I wrote to him and some of them to try it. They tried it, and the result is known. Such has been my only agency in getting up the Louisiana government. As to sustaining it, my promise is out, as before stated. But as bad promises are better broken than kept, I shall treat this as a bad promise, and break it whenever I shall be convinced that keeping it is adverse to the public interest; but I have not yet been so convinced. I have been shown a letter on this subject, supposed to be an able one, in which the writer expresses regret that my mind has not seemed to be definitely fixed on the question whether the seceded States, so called, are in the Union or out of it. It would perhaps add astonishment to his regret were he to learn that since I have found professed Union men endeavoring to make that question, I have purposely forbore any public expression upon it. As appears to me, that question has not been, nor yet is, a practically material one, and that any discussion of it, while it thus remains practically immaterial, could have no effect other than the mischievous one of dividing our friends. As yet, whatever it may hereafter become, that question is bad as the basis of a controversy, and good for nothing at all—a merely pernicious abstraction. We all agree that the seceded States, so called, are out of their proper practical relation with the Union, and that the sole object of the government, civil and military, in regard to those States is to again get them into that proper practical relation. I believe that it is not only possible, but in fact easier, to do this without deciding or even considering whether these States have ever been out of the Union, than with it. Finding themselves safely at home, it would be utterly immaterial whether they had ever been abroad. Let us all join in doing the acts necessary to restoring the proper practical relations between these States and the Union, and each forever after innocently indulge his own opinion whether in doing the acts he brought the States from without into the Union, or only gave them proper assistance, they never having been out of it. The amount of constituency, so to speak, on which the new Louisiana government rests, would be more satisfactory to all if it contained 50,000, or 30,000, or even 20,000, instead of only about 12,000, as it does. It is also unsatisfactory to some that the elective franchise is not given to the colored man. I would myself prefer that it were now conferred on the very intelligent, and on those who serve our cause as soldiers. Still, the question is not whether the Louisiana government, as it stands, is quite all that is desirable. The question is, will it be wiser to take it as it is and help to improve it, or to reject and disperse it? Can Louisiana be brought into proper practical relation with the Union sooner by sustaining or by discarding her new State

government? Some 12,000 voters in the heretofore slave State of Louisiana have sworn allegiance to the Union, assumed to be the rightful political power of the State, held elections, organized a State government, adopted a free-State constitution, giving the benefit of public schools equally to black and white, and empowering the legislature to confer the elective franchise upon the colored man. Their legislature has already voted to ratify the constitutional amendment recently passed by Congress, abolishing slavery throughout the nation. These 12,000 persons are thus fully committed to the Union and to perpetual freedom in the State—committed to the very things, and nearly all the things, the nation wants—and they ask the nation's recognition and its assistance to make good their commitment. Now, if we reject and spurn them, we do our utmost to disorganize and disperse them. We, in effect, say to the white man: You are worthless or worse; we will neither help you, nor be helped by you. To the blacks we say: This cup of liberty which these, your old masters, hold to your lips we will dash from you, and leave you to the chances of gathering the spilled and scattered contents in some vague and undefined when, where, and how. If this course, discouraging and paralyzing both white and black, has any tendency to bring Louisiana into proper practical relations with the Union, I have so far been unable to perceive it. If, on the contrary, we recognize and sustain the new government of Louisiana, the converse of all this is made true. We encourage the hearts and nerve the arms of the 12,000 to adhere to their work, and argue for it, and proselyte for it, and fight for it, and feed it, and grow it, and ripen it to a complete success. The colored man, too, in seeing all united for him, is inspired with vigilance, and energy, and daring, to the same end. Grant that he desires the elective franchise, will he not attain it sooner by saving the already advanced steps toward it than by running backward over them? Concede that the new government of Louisiana is only to what it should be as the egg is to the fowl, we shall sooner have the fowl by hatching the egg than by smashing it. Again, if we reject Louisiana we also reject one vote in favor of the proposed amendment to the national Constitution. To meet this proposition it has been argued that no more than three-fourths of those States which have not attempted secession are necessary to validly ratify the amendment. I do not commit myself against this further than to say that such a ratification would be questionable, and sure to be persistently questioned, while a ratification by three-fourths of all the States would be unquestioned and unquestionable. I repeat the question: Can Louisiana be brought into proper practical relation with the Union sooner by sustaining or by discarding her new State government? What has been said of Louisiana will apply generally to other States. And yet so great peculiarities pertain to each State, and such important and sudden changes occur in the same State, and withal so new and unprecedented is the whole case that no exclusive and inflexible plan can safely be prescribed as to details and collaterals. Such exclusive and inflexible plan would surely become a new entanglement. Important principles may and must be inflexible. In the present situation, as

the phrase goes, it may be my duty to make some new announcement to the people of the South. I am considering, and shall not fail to act when satisfied that action will be proper."—A. Lincoln, *Complete Works*, v. 2, pp. 673-675.

A. D. 1865 (April: Virginia).—The abandonment of Richmond and retreat of Lee.—**Battle of Sailor's Creek.—Surrender at Appomattox Court House.**—"The success of the Federal army in breaking the lines of Petersburg had rendered the retreat of the Confederate force imperative. An effort to hold Richmond with every line of communication with the South broken or in imminent danger would have been madness. But by abandoning his works and concentrating his army, which still amounted to about 30,000 men, General Lee might retire to some natural stronghold in the interior, where the defensible features of the country would enable him to oppose Grant a formidable host until he could rally strength to strike an effective blow. This course was at once decided upon, and early on the morning of the 2d of April, Lee sent a despatch to the Government authorities at Richmond informing them of the disastrous situation of affairs and of the necessity of his evacuating Petersburg that night. Orders were also sent to the forces north of the James to move at once and join him, while all the preparations necessary for the evacuation of Richmond, both as the seat of government and as a military post, were expeditiously made. There was, indeed, no time to be lost. . . . By midnight the evacuation was completed. . . . As the troops moved noiselessly onward in the darkness that just precedes the dawn, a bright light like a broad flash of lightning illumined the heavens for an instant; then followed a tremendous explosion. 'The magazine at Fort Drewry is blown up,' ran in whispers through the ranks, and again silence reigned. Once more the sky was overspread by a lurid light, but not so fleeting as before. It was now the conflagration of Richmond that lighted the night-march of the soldiers, and many a stout heart was wrung with anguish at the fate of the city and its defenceless inhabitants. The burning of public property of little value had given rise to a destructive fire that laid in ashes nearly one-third of the devoted city. . . . The retreat of Lee's army did not long remain unknown to the Federals. The explosion of the magazine at Fort Drewry and the conflagration of Richmond apprised them of the fact, and they lost no time in taking possession of the abandoned works and entering the defenceless cities. On the morning of the 3d of April the mayor of Richmond surrendered the city to the Federal commander in its vicinity, and General Weitzel took immediate possession. He at once proceeded to enforce order and took measures to arrest the conflagration, while with great humanity he endeavored to relieve the distressed citizens. . . . As soon as Grant became aware of Lee's line of retreat he pushed forward his whole available force, numbering 70,000 or 80,000 men, in order to intercept him on the line of the Richmond and Danville Railroad. Sheridan's cavalry formed the van of the pursuing column, and was closely followed by the artillery and infantry. Lee pressed on as rapidly as possible to Amelia Court-house, where he had ordered supplies to be deposited for the use of his troops on their arrival. . . . The hope of

finding a supply of food at this point, which had done much to buoy up the spirits of the men, was destined to be cruelly dispelled. Through an unfortunate error or misapprehension of orders the provision-train had been taken on to Richmond without unloading its stores at Amelia Court-house. . . . It was a terrible blow alike to the men and to their general. . . . The only chance remaining to the Army of Northern Virginia was to reach the interior country without delay. Yet here it was detained by the error of a railroad official, while the precious minutes and hours moved remorselessly by. . . . Yet no murmur came from the lips of the men to the ear of their commander, and on the evening of that unfortunate day [April 5th] they resumed their weary march in silence and composure. Some small amount of food had been brought in by the foragers, greatly inadequate for the wants of the soldiers, yet aiding them to somewhat alleviate the pangs of hunger. A handful of corn was now a feast to the weary veterans as they trudged onward through the April night. . . . Sheridan's cavalry was already upon the flank of the Confederate army, and the infantry was following with all speed. . . . During the forenoon of [the 6th] the pursuing columns thickened and frequent skirmishes delayed the march. These delays enabled the Federals to accumulate in such force that it became necessary for Lee to halt his advance in order to arrest their attack till his column could close up, and the trains and such artillery as was not needed for action could reach a point of safety. This object was accomplished early in the afternoon. Ewell's, the rearmost corps in the army, closed upon those in front at a position on Sailor's Creek, a small tributary of the Appomattox River. . . . His corps was surrounded by the pursuing columns and captured with but little opposition. About the same time the divisions of Anderson, Pickett, and Bushrod Johnson were almost broken up, about 10,000 men in all being captured. The remainder of the army continued its retreat during the night of the 6th, and reached Farmville early on the morning of the 7th, where the troops obtained two days' rations, the first regular supplies they had received during the retreat. At Farmville a short halt was made to allow the men to rest and cook their provisions. The effective portion of the Army of Northern Virginia did not now exceed 10,000 men. This great reduction had been caused by the disaster of the previous day at Sailor's Creek, by desertions on the retreat, and by an exhaustion which obliged many to leave the ranks. Those who still remained by their colors were veterans whose courage never failed, and who were yet ready to face any odds. The heads of the Federal columns beginning to appear about eleven o'clock, the Confederates resumed their retreat." On the afternoon of the 7th, Lee received a note from Grant calling upon him to surrender, and replied to it, asking what terms would be offered. Further notes were exchanged between the two commanders the following day, while the retreat continued. Lee hoped to reach Appomattox Court House and secure supplies that were there, which might enable him to "push on to the Staunton River and maintain himself behind that stream until a junction could be made with Johnston." But when, in the afternoon of April 8th, he reached the neighborhood of Appomat-

tox Court House, "he was met by the intelligence of the capture of the stores placed for his army at the station two miles beyond. Notwithstanding this overwhelming news, he determined to make one more effort to force himself through the Federal toils that encompassed him." This attempt was made at three o'clock on the morning of the 9th of April, General Gordon leading the attack, which failed. Lee then yielded to his fate, and sent a flag of truce, asking for an interview with Grant to arrange terms of surrender. "Grant had not yet come up, and while waiting for his arrival General Lee seated himself upon some rails which Colonel Talcott of the Engineers had fixed at the foot of an apple tree for his convenience. This tree was half a mile distant from the point where the meeting of Lee and Grant took place, yet wide-spread currency has been given to the story that the surrender took place under its shade, and 'apple-tree' jewelry has been profusely distributed from the orchard in which it grew. About 11 o'clock General Lee, accompanied only by Colonel Marshall of his staff, proceeded to the village to meet General Grant, who had now arrived. The meeting between the two renowned generals took place at the house of a Mr. McLeau at Appomattox Court-house, to which mansion, after exchanging courteous salutations, they repaired to settle the terms on which the surrender of the Army of Northern Virginia should be concluded. . . . The written instrument of surrender covered the following points: Duplicate rolls of all the officers and men were to be made, and the officers to sign paroles for themselves and their men, all agreeing not to bear arms against the United States unless regularly exchanged. The arms, artillery, and public property were to be turned over to an officer appointed to receive them, the officers retaining their side-arms and private horses and baggage. In addition to this, General Grant permitted every man of the Confederate army who claimed to own a horse or mule to retain it for farming purposes, General Lee remarking that this would have a happy effect. . . . After completion of these measures General Lee remarked that his men were badly in need of food, that they had been living for several days on parched corn exclusively, and requested rations and baggage for 25,000 men. These rations were granted out of the car-loads of Confederate provisions which had been stopped by the Federal cavalry. . . . Three days after the surrender the Army of Northern Virginia had dispersed in every direction, and three weeks later the veterans of a hundred battles had changed the musket and the sword for the implements of husbandry. . . . Thousands of soldiers were set adrift on the world without a penny in their pockets to enable them to reach their homes. Yet none of the scenes of riot that often follow the disbanding of armies marked their course."—A. L. Long, *Memoirs of Robert E. Lee*, ch. 21.—"General Grant's behavior at Appomattox was marked by a desire to spare the feelings of his great opponent. There was no theatrical display; his troops were not paraded with bands playing and banners flying, before whose lines the Confederates must march and stack arms. He did not demand Lee's sword, as is customary, but actually apologized to him for not having his own, saying it

had been left behind in the wagon; promptly stopped salutes from being fired to mark the event, and the terms granted were liberal and generous. 'No man could have behaved better than General Grant did under the circumstances,' said Lee to a friend in Richmond. 'He did not touch my sword; the usual custom is for the sword to be received when tendered, and then handed back, but he did not touch mine.' Neither did the Union chief enter the Southern lines to show himself or to parade his victory, or go to Richmond or Petersburg to exult over a fallen people, but mounted his horse and with his staff started for Washington. Washington, at Yorktown, was not as considerate and thoughtful of the feelings of Cornwallis or his men. Charges were now withdrawn from the guns, flags furled, and the Army of the Potomac and the Army of Northern Virginia turned their backs upon each other for the first time in four long, bloody years."—F. Lee, *General Lee*, ch. 15.

A. D. 1865 (April: Virginia).—President Lincoln at Richmond.—The assembling and dispersing of "the gentlemen who have acted as the Legislature of Virginia."—Virtual Proclamations of the end of the war.—"President Lincoln had been at City Point and vicinity for several days before the fall of Richmond, in constant communication with the General-in-chief, at the front, receiving dispatches from him and transmitting them instantly to the Secretary of War, whence they were diffused over the country, by the telegraph. On the day after Richmond was evacuated, he went up to that city in Admiral Porter's flag-ship, the *Malvern*, Captain Ralph Chandler, with the *Sagamon*, several tugs, and 80 small boats, with about 300 men, had already cleared the channel of the river of torpedoes, and made the navigation comparatively safe. When near Rocketts, the President and the Admiral left the *Malvern*, and proceeded to the city in the commander's gig. With its crew, armed with carbines, they landed and walked to Weitzel's quarters, in the late residence of Davis, cheered on the way by the huzzas and grateful ejaculations of a vast concourse of emancipated slaves, who had been told that the tall man was their Liberator. They crowded around him so thickly, in their eagerness to see him, and to grasp his hand, that a file of soldiers were needed to clear the way. After a brief rest at Weitzel's, the President rode rapidly through the principal streets of Richmond, in an open carriage, and, at near sunset, departed for City Point. Two days afterward, the President went to Richmond again, accompanied by his wife, the Vice-President, and several Senators, when he was called upon by leading Confederates, several of them members of the rebel Virginia Legislature, whose chief business was to endeavor to arrange a compromise whereby the equivalent for submission should be the security to the Virginia insurgents, as far as possible, of their political power and worldly possessions. The President was assured by Judge Campbell,

a member of the Confederate 'Government' (who, for two years, had been satisfied, he said, that success was impossible), that the so-called Virginia Legislature, if allowed to reassemble, with the Governor, would work for the reconstruction of the Union, their first step being the withdrawal of the Virginia troops from the field, on condition that the confiscation of property in Virginia should not be allowed. Anxious to end the war without further bloodshed, if possible, and satisfied that the withdrawal of the Virginia troops—in other words, nearly all of Lee's army—would accomplish it, he left with General Weltzel, on his departure from Richmond [April 6], authority to allow 'the gentlemen who have acted as the Legislature of Virginia, in support of the rebellion, to assemble at Richmond and take measures to withdraw the Virginia troops and other support from resistance to the General Government.' A safeguard was given. The fugitives returned, with the Governor, but instead of performing in good faith what had been promised in their name, they began legislating generally, as if they were the legal representatives of the people of Virginia. So soon as notice of this perfidy was given to the President after his return to Washington, he directed Weltzel to revoke the safeguard, and allow 'the gentlemen who had acted as the Legislature of Virginia' to return to private life. The surrender of Lee had, meanwhile, made the contemplated action unnecessary. The President was blamed by the loyal people for allowing these men to assemble with acknowledged powers; and the Confederates abused him for dissolving the assembly. The President returned to Washington City on the day of Lee's surrender, where he was the recipient of a multitude of congratulations because of the dawn of peace. On the 11th he issued proclamations, one declaring the closing, until further notice, of certain ports in the Southern States, whereof the blockade had been raised by their capture, respectively; and the other, demanding, henceforth, for our vessels in foreign ports, on penalty of retaliation, those privileges and immunities which had hitherto been denied them on the plea of according equal belligerent rights to the Republic and its internal enemies. . . . On the following day an order was issued from the War Department, which had been approved by General Grant, putting an end to all drafting and recruiting for the National army, and the purchase of munitions of war and supplies; and declaring that the number of general and staff officers would be speedily reduced, and all military restrictions on trade and commerce be removed forthwith. This virtual proclamation of the end of the war went over the land on the anniversary of the evocation of Fort Sumter [April 14], while General Anderson was replacing the old flag over the ruins of that fortress."—B. J. Lossing, *Field Book of the Civil War*, v. 3, ch. 21.

A. D. 1865 (April 14th).—The Assassination of President Lincoln.—"From the very beginning of his Presidency, Mr. Lincoln had been constantly subject to the threats of his enemies and the warnings of his friends. . . . Although he freely discussed with the officials about him

the possibilities of danger, he always considered them remote, as is the habit of men constitutionally brave, and positively refused to torment himself with precautions for his own safety. He would sum the matter up by saying that both friends and strangers must have daily access to him in all manner of ways and places; his life was therefore in reach of any one, sane or mad, who was ready to murder and be hanged for it; that he could not possibly guard against all danger unless he were to shut himself up in an iron box, in which condition he could scarcely perform the duties of a President; by the hand of a murderer he could die only once; to go continually in fear would be to die over and over. He therefore went in and out before the people, always unarmed, generally unattended. . . . Four years of threats and boastings, of alarms that were unfounded, and of plots that came to nothing thus passed away; but precisely at the time when the triumph of the nation over the long insurrection seemed assured, and a feeling of peace and security was diffused over the country, one of the conspiracies, not seemingly more important than the many abortive ones, ripened in the sudden heat of hatred and despair. A little band of malignant secessionists, consisting of John Wilkes Booth, an actor, of a family of famous players, Lewis Powell, alias Payne, a disbanded rebel soldier from Florida, George Atzerodt, formerly a coachmaker, but more recently a spy and blockade runner of the Potomac, David E. Herold, a young druggist's clerk, Samuel Arnold and Michael O'Laughlin, Maryland secessionists and Confederate soldiers, and John H. Surratt, had their ordinary rendezvous at the house of Mrs. Mary E. Surratt, the widowed mother of the last named, formerly a woman of some property in Maryland, but reduced by reverses to keeping a small boarding-house in Washington. Booth was the leader of the little coterie. He was a young man of twenty-six. . . . He was a fanatical secessionist; had assisted at the capture and execution of John Brown, and had imbibed at Richmond and other Southern cities where he had played, a furious spirit of partisanship against Lincoln and the Union party. After the reflection of Mr. Lincoln, which rang the knell of the insurrection, Booth, like many of the secessionists North and South, was stung to the quick by disappointment. He visited Canada, consorted with the rebel emissaries there, and at last—whether or not at their instigation cannot certainly be said—conceived a scheme to capture the President and take him to Richmond. He spent a great part of the autumn and winter inducing a small number of loose fish of secession sympathies to join him in this fantastic enterprise. . . . There are indications in the evidence given on the trial of the conspirators that they suffered some great disappointment in their schemes in the latter part of March, and a letter from Arnold to Booth, dated March 27, showed that some of them had grown timid of the consequences of their contemplated enterprise and were ready to give it up. He advised Booth, before going further, 'to go and see how it will be taken in R—d.' But timid as they might be by nature, the whole group was so completely under the ascendancy of Booth that they did not dare disobey him when in his presence; and after the surrender of Lee, in an access of malice and rage which was akin

to madness, he called them together and assigned each his part in the new crime, the purpose of which had arisen suddenly in his mind out of the ruins of the abandoned abduction scheme. This plan was as brief and simple as it was horrible. Powell, alias Payne, the stalwart, brutal, simple-minded boy from Florida, was to murder Seward; Atzerodt, the comic villain of the drama, was assigned to remove Andrew Johnson; Booth reserved for himself the most difficult and most conspicuous rôle of the tragedy; it was Herold's duty to attend him as a page and aid in his escape. Minor parts were assigned to stage carpenters and other hangers-on, who probably did not understand what it all meant. Herold, Atzerodt, and Surratt had previously deposited at a tavern at Surrattsville, Maryland, owned by Mrs. Surratt, but kept by a man named Lloyd, a quantity of ropes, carbines, ammunition, and whisky, which were to be used in the abduction scheme. On the 11th of April Mrs. Surratt, being at the tavern, told Lloyd to have the shooting irons in readiness, and on Friday, the 14th, again visited the place and told him they would probably be called for that night. The preparations for the final blow were made with feverish haste; it was only about noon of the 14th that Booth learned the President was to go to Ford's Theater that night. It has always been a matter of surprise in Europe that he should have been at a place of amusement on Good Friday; but the day was not kept sacred in America, except by the members of certain churches. It was not, throughout the country, a day of religious observance. The President was fond of theater; it was one of his few means of recreation. It was natural enough that, on this day, of profound national thanksgiving, he should take advantage of a few hours' relaxation to see a comedy. Besides, the town was thronged with soldiers and officers, all eager to see him; it was represented to him that appearing occasionally in public would gratify many people whom he could not otherwise meet. . . . From the moment Booth ascertained the President's intention to attend the theater in the evening his every action was alert and energetic. He and his confederates, Herold, Surratt and Atzerodt, were seen on horseback in every part of the city. He had a hurried conference with Mrs. Surratt before she started for Lloyd's tavern. . . . Booth was perfectly at home in Ford's Theater, where he was greatly liked by all the employees, without other reason than the sufficient one of his youth and good looks. Either by himself or with the aid of his friends he arranged his whole plan of attack and escape during the afternoon. He counted upon address and audacity to gain access to the small passage behind the President's box; once there, he guarded against interference by an arrangement of a wooden bar to be fastened by a simple mortice in the angle of the wall and the door by which he entered, so that the door could not be opened from without. He even provided for the contingency of not gaining entrance to the box by boring a hole in its door, through which he might either observe the occupants or take aim and shoot. He hired at a livery stable a small, fleet horse, which he showed with pride during the day to burkeepers and loafers among his friends. The moon rose that night at ten o'clock. A few minutes before that hour he called one of

the underlings of the theater to the back door and left him there holding his horse. He then went to a saloon near by, took a drink of brandy, and, entering the theater, passed rapidly through the crowd in rear of the dress circle and made his way to the passage leading to the President's box. He showed a card to a servant in attendance and was allowed to pass in. He entered noiselessly, and, turning, fastened the door with the bar he had previously made ready, without disturbing any of the occupants of the box, between whom and himself there yet remained the slight partition and the door through which he had bored the hole. . . . Holding a pistol in one hand and a knife in the other, he opened the box door, put the pistol to the President's head, and fired; dropping the weapon, he took the knife in his right hand, and when Major Rathbone sprang to seize him he struck savagely at him. Major Rathbone received the blow on his left arm, suffering a wide and deep wound. Booth, rushing forward, then placed his left hand on the railing of the box and vaulted lightly over to the stage. It was a high leap, but nothing to such a trained athlete. . . . He would have got safely away but for his spur catching in the folds of the Union flag with which the front of the box was draped. He fell on the stage, the torn flag trailing on his spur, but instantly rose as if he had received no hurt, though in fact the fall had broken his leg; he turned to the audience, brandishing his dripping knife, and shouting the State motto of Virginia, "Sic Semper Tyrannis," and fled rapidly across the stage and out of sight. Major Rathbone had shouted, "Stop him!" The cry went out, "He has shot the President." From the audience, at first stupid with surprise, and afterwards wild with excitement and horror, two or three men jumped upon the stage in pursuit of the flying assassin; but he ran through the familiar passages, leaped upon his horse, which was in waiting in the alley behind, rewarded with a kick and a curse the call-boy who had held him, and rode rapidly away in the light of the just risen moon. The President scarcely moved; his head drooped forward slightly, his eyes closed. . . . It was afterward ascertained that a large derring bullet had entered the back of the head on the left side, and, passing through the brain, had lodged just behind the left eye. By direction of Rathbone and Crawford, the President was carried to a house across the street and laid upon a bed in a small room at the rear of the hall, on the ground floor. . . . The President had been shot a few minutes past ten. The wound would have brought instant death to most men, but his vital tenacity was extraordinary. . . . At twenty-two minutes after seven he died. Stanton broke the silence by saying, "Now he belongs to the ages." At the same hour in which the President was murdered, an attempt was made by one of Booth's fellow conspirators to kill the Secretary of State. Mr. Seward had been thrown from his carriage a few days before and was prostrated by the serious injuries received. Pretending to bring a prescription from his physician, the assassin, Payne, made his way into the sick-room of the Secretary and stabbed him three times, but not fatally, in the neck and cheek. Two sons, Frederick and Augustus Seward, were seriously wounded in defending their father, and a soldier-nurse who was present struggled bravely with the assassin,

though weaponless, and was stabbed repeatedly. Payne escaped for the time, but was caught a few days later. Booth made his way to Port Tobacco, and thence across the Potomac, into Virginia, assisted and concealed by numerous sympathizers. He eluded his pursuers until the 25th of April, when he was hunted down by a party of soldiers, while sleeping in a barn, below Fredericksburg, and, refusing to surrender, was shot. "The surviving conspirators, with the exception of John H. Surratt, were tried by a military commission sitting in Washington in the months of May and June. . . . Mrs. Surratt, Payne, Herold, and Atzerodt were hanged on the 7th of July; Mudd, Arnold, and O'Laughlin were imprisoned for life at the Tortugas, though the term was afterwards shortened; and Spangler, the scene shifter at the theater, was sentenced to six years in jail. John H. Surratt escaped to Canada," and thence to England. "He wandered over Europe, enlisted in the Papal Zouaves, deserted and fled to Egypt, where he was detected and brought back to Washington in 1867. His trial lasted two months and ended in a disagreement of the jury."—J. G. Nicolay and J. Hay, *Abraham Lincoln*, v. 10, ch. 14-15.

A. D. 1865 (April 15th).—Succession of Andrew Johnson, Vice President, to the Presidency.—"On the day after the assassination, Mr. Johnson, having been apprised of the event, took the oath of office, at his rooms, in the presence of the Cabinet, and of several members of Congress, and was thus quietly inducted into the high position so summarily vacated by the martyred President. In the few remarks made on the occasion, as to 'an indication of any policy which may be pursued,' he said it 'must be left for development as the administration progresses' and his own past course in connection with the Rebellion 'must be regarded as a guaranty for the future.' To several delegations which waited upon him he was, however, more explicit. . . . 'I know it is easy, gentlemen [he said to a delegation from New Hampshire], for any one who is so disposed to acquire a reputation for clemency and mercy. But the public good imperatively requires a just discrimination in the exercise of these qualities. . . . The American people must be taught to know and understand that treason is a crime. . . . It must not be regarded as a mere difference of political opinion. It must not be excused as an unsuccessful rebellion, to be overlooked and forgiven.' . . . It is not surprising, therefore, with utterances like these, in such seeming harmony with his antecedents as a Southern Unionist,—antecedents which had secured his nomination and election to the Vice-Presidency,—that many were disposed to regard his advancement to the Presidency at that particular juncture as but another evidence of Providential favor, if not of Divine interposition, by which the nation was to be saved from what many feared might prove Mr. Lincoln's ill-timed leniency and misplaced confidence. . . . Such congratulations, however, were of short continu-

ance. Whatever the cause or design, the new President soon revealed the change that had taken place and the purpose to adopt and pursue a policy the exact reverse of what, with such prompt and unequivocal words, he had indicated."—H. Wilson, *Rise and Fall of the Slave Power in Am.*, v. 3, ch. 43.—"Johnson was inaugurated at 11 o'clock on the morning of the 15th, and was at once surrounded by radical and conservative politicians, who were alike anxious about the situation. I spent most of the afternoon in a political caucus, held for the purpose of considering the necessity for a new Cabinet and a line of policy less conciliatory than that of Mr. Lincoln; and while everybody was shocked at his murder, the feeling was nearly universal that the accession of Johnson to the Presidency would prove a godsend to the country. Aside from Mr. Lincoln's known policy of tenderness to the Rebels, which now so jarred upon the feelings of the hour, his well-known views on the subject of reconstruction were as distasteful as possible to radical Republicans. . . . On the following day, in pursuance of a previous engagement, the Committee on the Conduct of the War met the President at his quarters in the Treasury Department. He received us with decided cordiality, and Mr. Wade said to him: 'Johnson we have faith in you. By the gods, there will be no trouble now in running the government!'"—G. W. Julian, *Political Recollections*, ch. 11.

A. D. 1865 (April 26th).—General Johnston's surrender.—"On the 11th of April, at Smithfield, North Carolina, General Sherman had news of the surrender of Lee. Entering Raleigh on the 13th, he received, next day, a communication from the Confederate General Johnston proposing a truce "to permit the civil authorities to enter into the needful arrangements to terminate the existing war." In reply he invited a conference with Johnston, which occurred on the 17th—the day on which news of the assassination of President Lincoln was received. "Sherman said frankly that he could not recognize the Confederate civil authority as having any existence, and could neither receive nor transmit to Washington any proposition coming from them. He expressed his ardent desire for an end to devastation, and offered Johnston the same terms offered by Grant to Lee. Johnston replied that he would not be justified in such a capitulation, but suggested that they might arrange the terms of a permanent peace. The suggestion pleased General Sherman; the prospect of ending the war without the shedding of another drop of blood was so tempting to him that he did not sufficiently consider the limits of his authority in the matter." The result was that, on the 18th, Sherman and Johnston signed a memorandum of agreement which provided for the disbanding of all the Confederate armies, the recognition of the State governments of the several States lately forming the rebel Confederacy, the complete restoration of their old status in the Union, and complete amnesty to all concerned in the rebellion. This was forwarded to Washington, and, of course, it was disapproved, but with an unnecessary publication of sharp censure of General Sherman, and with expressions that seemed to imply distrust of the loyalty of his motives. General Grant was ordered to proceed to General Sherman's headquarters and to direct

further operations. He executed this mission with great delicacy, and his presence with Sherman was hardly known. The latter held a second conference with Johnston on the 20th, and there General Johnston made the surrender of his army on the same terms that had been granted to Lee.—J. G. Nicolay and J. Hay, *Abraham Lincoln*, v. 10, ch. 12.

A. D. 1865 (April—May).—The end of the Rebellion.—Fall of Mobile.—Stoneman's Raid.—Wilson's Raid.—Capture of Jefferson Davis.—The final surrenders.—After the surrender of Johnson, "there were still a few expeditions out in the South that could not be communicated with, and had to be left to act according to the judgment of their respective commanders. . . . The three expeditions which I had tried so hard to get off from the commands of Thomas and Canby did finally get off: one under Canby himself, against Mobile, late in March; that under Stoneman from East Tennessee on the 20th; and the one under Wilson, starting from Eastport, Mississippi, on the 22d of March. They were all eminently successful, but without any good result. Indeed much valuable property was destroyed and many lives lost at a time when we would have liked to spare them. . . . Stoneman entered North Carolina and then pushed north to strike the Virginia and Tennessee Railroad. He got upon that road, destroyed its bridges at different places and rendered the road useless to the enemy up to within a few miles of Lynchburg. His approach caused the evacuation of that city about the time we were at Appomattox, and was the cause of a commotion we heard of there. He then pushed south, and was operating in the rear of Johnston's army about the time the negotiations were going on between Sherman and Johnston for the latter's surrender. In this raid Stoneman captured and destroyed a large amount of stores, while 14 guns and nearly 2,000 prisoners were the trophies of his success. Canby appeared before Mobile on the 27th of March. The city of Mobile was protected by two forts, besides other intrenchments—Spanish Fort, on the east side of the bay, and Fort Blakely, north of the city. These forts were invested. On the night of the 8th of April, the National troops having carried the enemy's works at one point, Spanish Fort was evacuated; and on the 9th, the very day of Lee's surrender, Blakely was carried by assault, with a considerable loss to us. On the 11th the city was evacuated. . . . Wilson moved out [from Eastport, Miss.] with full 12,000 men, well equipped and well armed. He was an energetic officer and accomplished his work rapidly. Forrest was in his front, but with neither his old-time army nor his old-time prestige. . . . He had a few thousand regular cavalry left, but not enough to even retard materially the progress of Wilson's cavalry. Selma fell on the 2d of April. . . . Tuscaloosa, Montgomery and West Point fell in quick succession. These were all important points to the enemy by reason of their railroad connections, as depots of supplies, and because of their manufactories of war material. . . . Macon surrendered on the 21st of April. Here news was received of

the negotiations for the surrender of Johnston's army. Wilson belonged to the military division commanded by Sherman, and of course was bound by his terms. This stopped all fighting. General Richard Taylor had now become the senior Confederate officer still at liberty east of the Mississippi River, and on the 4th of May he surrendered everything within the limits of this extensive command. General E. Kirby Smith surrendered the trans-Mississippi department on the 26th of May, leaving no other Confederate army at liberty to continue the war. Wilson's raid resulted in the capture of the fugitive president of the defunct confederacy before he got out of the country. This occurred at Irwinsville, Georgia, on the 11th of May. For myself, and I believe Mr. Lincoln shared the feeling, I would have been very glad to have seen Mr. Davis succeed in escaping, but for one reason: I feared that, if not captured, he might get into the trans-Mississippi region and there set up a more contracted confederacy. . . . Much was said at the time about the garb Mr. Davis was wearing when he was captured. [Mr. Davis, in his own narrative, and Captain G. W. Lawton, of the 4th Michigan Cavalry, which made the capture, agree in stating that the fugitive chief of the Confederacy wore when taken a lady's 'waterproof,' with a shawl over his head and shoulders. Mr. Davis says that he picked up his wife's waterproof in mistake for his own when he ran from the tent in which he was surprised, while camping, and that his wife threw the shawl over him. Captain Lawton asserts that he carried a tin-pail, that he affected to be bent with age, and that when he stepped out Mrs. Davis asked the soldiers at the tent entrance to let her 'old mother' go to the run for water.] I cannot settle this question from personal knowledge of the facts; but I have been under the belief, from information given to me by General Wilson shortly after the event, that when Mr. Davis learned that he was surrounded by our cavalry he was in his tent dressed in a gentleman's dressing gown. Naturally enough, Mr. Davis wanted to escape, and would not reflect much how this should be accomplished provided it might be done successfully. . . . Every one supposed he would be tried for treason if captured, and that he would be executed. Had he succeeded in making his escape in any disguise it would have been adjudged a good thing afterwards by his admirers."—U. S. Grant, *Personal Memoirs*, ch. 69 (v. 2).—"Davis was taken, via Savannah and the ocean, to Fortress Monroe; where he was long closely and rigorously imprisoned, while his family were returned by water to Savannah and there set at liberty. Secretary Reagan—the only person of consequence captured with Davis—was taken to Boston, and confined, with Vice-President Stephens (captured about this time also in Georgia), in Fort Warren; but each was liberated on parole a few months thereafter."—H. Greeley, *The American Conflict*, v. 2, ch. 35.

Lawton, "Running at the Heads" (*Atlantic Monthly*, Sept., 1865).—J. Davis, *Rise and Fall of the Confederate Gov't*, ch. 54 (v. 2).—C. C. Andrews, *Hist. of the Campaign of Mobile*.

A. D. 1865 (May). — Feeling of surrendered Confederate officers. — After the surrender of Johnston, General Jacob D. Cox was put in command of the military district within which the surrender occurred, and had charge of the arrangements made for paroling and disbanding the Confederate forces. In a paper prepared for the Ohio Commandery of the Military Order of the Loyal Legion of the United States, General Cox has given an interesting report of conversations which he had in that connection with General Johnston and General Hardee. Talking with General Hardee of the war, the latter was asked "what had been his own expectation as to the result, and when had he himself recognized the hopelessness of the contest. 'I confess,' said he, laughing, 'that I was one of the hot Southerners who shared the notion that one man of the South could whip three Yankees; but the first year of the war pretty effectually knocked that nonsense out of us, and, to tell the truth, ever since that time we military men have generally seen that it was only a question how long it would take to wear our army out and destroy it. We have seen that there was no real hope of success, except by some extraordinary accident of fortune, and we have also seen that the politicians would never give up till the army was gone. So we have fought with the knowledge that we were to be sacrificed with the result we see to-day, and none of us could tell who would live to see it. We have continued to do our best, however, and have meant to fight as if we were sure of success.' . . . Johnston was very warm in his recognition of the soldierly qualities and the wonderful energy and persistence of our army and the ability of Sherman. Referring to his own plans, he said he had hoped to have had time enough to have collected a larger force to oppose Sherman, and to give it a more complete and efficient organization. 'The Confederate government had reckoned upon the almost impassable character of the rivers and swamps to give a respite till spring—at least they hoped for this. 'Indeed,' said he, with a smile, 'Hardee here,' giving a friendly nod of his head toward his subordinate. 'reported the Salkchatchee Swamps as absolutely impassable; but when I heard that Sherman had not only started, but was marching through those very swamps at the rate of thirteen miles a day, making corduroy road every foot of the way, I made up my mind there had been no such army since the days of Julius Caesar.' Hardee laughingly admitted his mistaken report from Charleston, but justified it by saying that all precedent was against such a march, and that he would still have believed it impossible if he had not seen it done."—J. D. Cox, *The Surrender of Johnston's Army (Sketches of War Hist., Ohio Commandery, Loyal Legion, U. S., v. 2, pp. 249-256)*.

A. D. 1865 (May). — Statistics of the Civil War.—"In a statistical exhibit of deaths in the Union army, compiled (1885), under the direction of Adjutant-General Drum, by Joseph W. Kirkley, the causes of death are given as follows: Killed in action, 4,142 officers, 62,916 men; died of wounds received in action, 2,223 officers, 40,789 men, of which number 99 officers and 1,973 men were prisoners of war; died of disease, 2,795 officers and 221,791 men, of which 83 officers and 24,783 men were prisoners; acci-

dental deaths (except drowned), 142 officers and 3,972 men, of which 2 officers and 5 men were prisoners; drowned, 106 officers and 4,888 men, of which 1 officer and 6 men were prisoners; murdered, 37 officers and 483 men; killed after capture, 14 officers and 90 men; committed suicide, 26 officers and 365 men; executed by United States military authorities, 267 men; executed by the enemy, 4 officers and 60 men; died from sunstroke, 5 officers and 308 men, of which 20 men were prisoners; other known causes, 62 officers and 1,972 men, of which 7 officers and 312 men were prisoners; causes not stated, 28 officers and 12,093 men, of which 9 officers and 2,030 men were prisoners. Total 9,584 officers, and 349,944 men, of which 219 officers and 29,279 men were prisoners. Grand aggregate, 359,528; aggregate deaths among prisoners, 20,498. Since 1885 the Adjutant-General has received evidence of the death in Southern prisons of 694 men not previously accounted for, which increases the number of deaths among prisoners to 30,192, and makes a grand aggregate of 360,222." Total number of men furnished to the United States Army and Navy during the War from the several States and Territories, 2,778,304; of which number, 2,494,592 were white troops, 101,207 were sailors and marines, and 178,975 were colored troops. "The work of mustering out volunteers began April 29th and up to August 7th 640,806 troops had been discharged; on September 14th the number had reached 741,107, and on November 15th 800,963. On November 22d, 1865, the Secretary of War reported that Confederate troops surrendered and were released on parole" to the number of 174,223. Official returns show the whole number of men enrolled (present and absent) in the active armies of the Confederacy, as follows: Jan. 1, 1862, 318,011; Jan. 1, 1863, 463,584; Jan. 1, 1864, 472,781; Jan. 1, 1865, 439,675. "Very few, if any, of the local land forces, and none of the naval, are included in the tabular exhibit. If we take the 472,000 men in service at the beginning of 1864, and add thereto at least 250,000 deaths occurring prior to that date, it gives over 700,000. The discharges for disability and other causes and the desertions would probably increase the number (inclusive of the militia and naval forces) to over 1,000,000. Northern writers have assumed that the Confederate losses equalled the Union losses; no data exist for a reasonably accurate estimate."—*Battles and Leaders of the Civil War, v. 4, pp. 761-768.*—"In the four years of their service the armies of the Union, counting every form of conflict, great and small, had been in 2,265 engagements with the Confederate troops. From the time when active hostilities began until the last gun of the war was fired, a fight of some kind—a raid, a skirmish, or a pitched battle—occurred at some point on our widely extended front nearly eleven times per week upon an average. Counting only those engagements in which the Union loss in killed, wounded, and missing exceeded 100, the total number was 330,—averaging one every four and a half days. From the northernmost point of contact to the southernmost, the distance by any practicable line of communication was more than 2,000 miles. From East to West the extremes were 1,500 miles apart. During the first year of hostilities—one of preparation on both sides—the battles were . . .

35 in number, of which the most serious was the Union defeat at Bull Run. In 1862 the war had greatly increased in magnitude and intensity, as is shown by the 84 engagements between the armies. The net result of the year's operations was highly favorable to the Rebellion. In 1863 the battles were 110 in number—among them some of the most significant and important victories for the Union. In 1864 there were 73 engagements, and in the winter and early spring of 1865 there were 28. In fact, 1864-65 was one continuous campaign. . . . Not only in life but in treasure the cost of the war was enormous. In addition to the large revenues of the Government which had been currently absorbed, the public debt at the close of the struggle was \$2,808,549,437.55. The incidental losses were innumerable in kind, incalculable in amount. Mention is made here only of the actual expenditure of money—estimated by the standard of gold. The outlay was indeed principally made in paper, but the faith of the United States was given for redemption in coin—a faith which has never been tarnished, and which in this instance has been signally vindicated by the steady determination of the people. Never, in the same space of time, has there been a National expenditure so great. . . . For the three years of the rebellion, after the first year, our War Department alone expended \$803,314,411.82, \$690,391,048.66, and \$1,030,690,400 respectively. . . . At the outbreak of hostilities the Government discovered that it had no Navy at command. The Secretary, Mr. Welles, found upon entering his office but a single ship in a Northern port fitted to engage in aggressive operations. . . . By the end of the year 1863 the Government had 600 vessels of war which were increased to 700 before the rebellion was subdued. Of the total number at least 75 were ironclad.”—J. G. Blaine, *Twenty Years of Congress*, v. 2, ch. 2, and v. 1, ch. 25.—“Eleven Confederate cruisers figured in the ‘Alabama claims’ settlement between the United States and Great Britain. They were the Alabama, Shenandoah, Florida, Tallahassee, Georgia, Chickamauga, Nashville, Retribution, Sumter, Sallie and Boston. The actual losses inflicted by the Alabama (\$6,547,609) were only about \$60,000 greater than those charged to the Shenandoah. The sum total of the claims filed against the eleven cruisers for ships and cargoes was \$17,900,633, all but about \$4,000,000 being caused by the Alabama and Shenandoah. . . . In the ‘Case of the United States’ . . . it is stated that while in 1860 two-thirds of the commerce of New York was carried on in American bottoms, in 1863 three-fourths was carried on in foreign bottoms. The transfer of American vessels to the British flag to avoid capture is stated thus: In 1861, vessels 136, tonnage 71,673; in 1862, vessels 135, tonnage 64,578; in 1863, vessels 348, tonnage 252,579; in 1864, vessels 106, tonnage 92,052. . . . The cruisers built or purchased in England for the Confederate navy, were the Florida, Alabama, Shenandoah and Rappabannock. The latter never made a cruise, and the others were procured for the government by James D. Bulloch, naval agent. . . . He also had constructed in France the armored ram Stonewall.”—J. T. Scharf, *Hist. of the Confederate States Navy*, ch. 26.—See ALABAMA CLAIMS.—“The greatest of all the lessons afforded to humanity by the

Titanic struggle in which the American Republic saved its life is the manner in which its armies were levied, and, when the occasion for their employment was over, were dismissed. Though there were periods when recruiting was slow and expensive, yet there were others, when some crying necessity for troops was apparent, that showed almost incredible speed and efficiency in the supply of men. Mr. Stanton, in his report for 1865, says: ‘After the disasters on the Peninsula in 1862, over 80,000 troops were enlisted, organized, armed, equipped, and sent into the field in less than a month. Sixty thousand troops have repeatedly gone to the field within four weeks; and 90,000 infantry were sent to the armies from the five States of Ohio, Indiana, Illinois, Iowa, and Wisconsin within twenty days.’—J. G. Nicolay and J. Hay, *Abraham Lincoln*, v. 10, ch. 17.—See, also, PRISONS AND PRISON-PENS, CONFEDERATE.

A. D. 1865 (May—July).—President Johnson's measures of Reconstruction in the insurrectionary States.—“On the 10th of May the President [Andrew Johnson] issued a proclamation declaring substantially that actual hostilities had ceased, and that ‘armed resistance to the authority of the Government in the insurrectionary States may be regarded at an end.’ This great fact being officially recognized, the President found himself face to face with the momentous duty of bringing the eleven States of the Confederacy into active and harmonious relations with the Government of the Union. . . . An extra session of Congress seemed specially desirable at the time, and had one been summoned by the President, many of the troubles which subsequently resulted might have been averted. . . . Declining to seek the advice of Congress, in the embarrassments of his position, President Johnson necessarily subjected himself to the counsel and influence of his Cabinet,” in which he had made no changes since President Lincoln's death. Among the members of the cabinet, the one who succeeded in obtaining ascendancy was Mr. Seward, who had rapidly recovered from his injuries and resumed the direction of the Department of State. Mr. Seward “was firmly persuaded that the wisest plan of reconstruction was the one which would be speediest; that for the sake of impressing the world with the strength and the marvelous power of self-government, with its Law, its Order, its Peace, we should at the earliest possible moment have every State restored to its normal relations with the Union. He did not believe that guarantee of any kind beyond an oath of renewed loyalty was needful. He was willing to place implicit faith in the coercive power of self-interest operating upon the men lately in rebellion. . . . By his arguments and by his eloquence Mr. Seward completely captivated the President. He effectually persuaded him that a policy of anger and hate and vengeance could lead only to evil results. . . . The President was gradually influenced by Mr. Seward's arguments, though their whole tenor was against his strongest predilections and against his pronounced and public commitments to a policy directly the reverse. . . . Mr. Seward's influence was supplemented and enhanced by the timely and artful interposition of clever men from the South. . . . He [President Johnson] was not especially open to flattery, but it was noticed that words of commendation

from his native section seemed peculiarly pleasing to him. . . . On the 29th of May . . . two decisive steps were taken in the work of reconstruction. Both steps proceeded on the theory that every act needful for the rehabilitation of the seceded States could be accomplished by the Executive Department of the Government. . . . The first of these important acts of reconstruction, upon the expediency of which the President and Mr. Seward had agreed, was the issuing of a Proclamation of Amnesty and Pardon to 'all persons who have directly or indirectly participated in the existing Rebellion,' upon the condition that such persons should take and subscribe an oath—to be registered for permanent preservation—solemnly declaring that henceforth they would 'faithfully support, protect, and defend, the Constitution of the United States and the union of the States thereunder; and that they would also 'abide by and faithfully support all laws and proclamations which have been made during the existing Rebellion, with reference to the emancipation of slaves.' . . . The general declaration of amnesty was somewhat narrowed in its scope by the enumeration, at the end of the proclamation, of certain classes which were excepted from its benefit." Of the thirteen classes thus excepted, the first six were nearly identical with those excepted in President Lincoln's proclamation of December 8, 1863—see above: A. D. 1863-1864 (DECEMBER—JULY). The classes added were: "Seventh, 'All persons who have been, or are, absentees from the United States for the purpose of aiding the Rebellion.' . . . Eighth, 'All officers in the rebel service who had been educated at the United-States Military or Naval Academy.' . . . Ninth, 'All men who held the pretended offices of governors of States in insurrection against the United States.' . . . Tenth, 'All persons who left their homes within the jurisdiction and protection of the United States, and passed beyond the Federal military lines into the pretended Confederate States for the purpose of aiding the Rebellion.' . . . Eleventh, 'All persons who have been engaged in the destruction of the commerce of the United States upon the high seas . . . and upon the lakes and rivers that separate the British Provinces from the United States.' . . . Twelfth, 'All persons who, at the time when they seek to obtain amnesty and pardon, are in military, naval, or civil confinement, as prisoners of war, or persons detained for offenses of any kind either before or after conviction.' . . . Thirteenth, 'All participants in the Rebellion, the estimated value of whose taxable property is over \$20,000.' . . . Full pardon was granted, without further act on their part, to all who had taken the oath prescribed in President Lincoln's proclamation of December 8, 1863, and who had thenceforward kept and maintained the same inviolate. . . . A circular from Mr. Seward accompanied the proclamation, directing that the oath might 'be taken and subscribed before any commissioned officer, civil, military, or naval, in the service of the United States, or before any civil or military officer of a loyal State or Territory, who, by the laws thereof, may be qualified to administer oaths.' Every one who took the oath was entitled to a certified copy of it, . . . and a duplicate, properly vouched, was forwarded to the State Department. . . . With these details complete, a second step of great moment was taken by the Government on

the same day (May 29). A proclamation was issued appointing William W. Holden provisional governor of the State of North Carolina. . . . The proclamation made it the duty of Governor Holden, 'at the earliest practicable period, to prescribe such rules and regulations as may be necessary and proper for assembling a convention—composed of delegates who are loyal to the United States and no others—for the purpose of altering or amending the Constitution thereof, and with authority to exercise, within the limit of said State, all the powers necessary and proper to enable the loyal people of the State of North Carolina to restore said State to its constitutional relations to the Federal Government.' . . . It was specially provided in the proclamation that in 'choosing delegates to any State Convention no person shall be qualified as an elector or eligible as a member unless he shall have previously taken the prescribed oath of allegiance, and unless he shall also possess the qualifications of a voter as defined under the Constitution and Laws of North Carolina as they existed on the 20th of May, 1861, immediately prior to the so-called ordinance of secession.' Mr. Lincoln had in mind, as was shown by his letter to Governor Hahn of Louisiana, to try the experiment of negro suffrage, beginning with those who had served in the Union Army, and who could read and write; but President Johnson's plan confined the suffrage to white men, by prescribing the same qualifications as were required in North Carolina before the war. . . . A fortnight later, on the 13th of June, a proclamation was issued for the reconstruction of the civil government of Mississippi, and William L. Sharkey was appointed provisional governor. Four days later, on the 17th of June, a similar proclamation was issued for Georgia with James Johnson for provisional governor, and for Texas with Andrew J. Hamilton for provisional governor. On the 21st of the same month Lewis E. Parsons was appointed provisional governor of Alabama, and on the 30th Benjamin F. Perry was appointed provisional governor of South Carolina. On the 13th of July the list was completed by the appointment of William Marvin as provisional governor of Florida. The precise text of the North-Carolina proclamation, 'mutatis mutandis,' was repeated in each one of those relating to these six States. . . . For the reconstruction of the other four States of the Confederacy different provisions were made." In Virginia, the so-called "Pierpont government"—see VIRGINIA: A. D. 1861 (JUNE—NOVEMBER)—"the shell of which had been preserved after West Virginia's separate existence had been recognized by the National Government, with its temporary capital at Alexandria, was accepted by President Johnson's Administration as the legitimate Government of Virginia. All its archives, property, and effects, as was afterwards said by Thaddeus Stevens, were taken to Richmond in an ambulance. . . . A course not dissimilar to that adopted in Virginia was followed in Louisiana, Arkansas, and Tennessee. In all of them the so-called 'ten-per-cent' governments established under Mr. Lincoln's authority were now recognized. . . . The whole scheme of reconstruction, as originated by Mr. Seward and adopted by the President, was in operation by the middle of July, three months after the assassination of Mr. Lincoln. Every step taken was watched with the deepest solici-

tude by the loyal people. The rapid and thorough change in the President's position was clearly discerned and fully appreciated. His course of procedure was dividing the Republican party, and already encouraging the hopes of those in the North who had been the steady opponents of Mr. Lincoln's war policy, and of those in the South who had sought for four years to destroy the Great Republic."—J. G. Blaine, *Twenty Years of Congress*, v. 2, ch. 3-4.

A. D. 1865 (July—December).—Reports of Carl Schurz and General Grant on the condition of affairs in the lately rebellious States.—In the summer of 1865 the Hon. Carl Schurz was commissioned by President Johnson to visit the Southern States and investigate the condition of affairs in them. Mr. Schurz, on returning from this mission, made a report of the result of his observations and inquiries, and the conclusions to which they led him, which was transmitted to the Senate, by the President, on the 18th of December. The views thus submitted were summarized at the close of the report, as follows: "I may sum up all I have said in a few words. If nothing were necessary but to restore the machinery of government in the States lately in rebellion in point of form, the movements made to that end by the people of the south might be considered satisfactory. But if it is required that the southern people should also accommodate themselves to the results of the war in point of spirit, those movements fall far short of what must be insisted upon. The loyalty of the masses and most of the leaders of the southern people consists in submission to necessity. There is, except in individual instances, an entire absence of that national spirit which forms the basis of true loyalty and patriotism. The emancipation of the slaves is submitted to only in so far as chattel slavery in the old form could not be kept up. But although the freedman is no longer considered the property of the individual master, he is considered the slave of society, and all independent State legislation will share the tendency to make him such. The ordinances abolishing slavery passed by the conventions under the pressure of circumstances will not be looked upon as barring the establishment of a new form of servitude. Practical attempts on the part of the southern people to deprive the negro of his rights as a freeman may result in bloody collisions, and will certainly plunge southern society into restless fluctuations and anarchical confusion. Such evils can be prevented only by continuing the control of the national government in the States lately in rebellion until free labor is fully developed and firmly established, and the advantages and blessings of the new order of things have disclosed themselves. This desirable result will be hastened by a firm declaration on the part of the government, that national control in the south will not cease until such results are secured. Only in this way can that security be established in the south which will render numerous immigration possible, and such immigration would materially aid a favorable development of things. The solution of the problem would be very much facilitated by enabling all the loyal and free-labor elements in the south to exercise a healthy influence upon legislation. It will hardly be

possible to secure the freedman against oppressive class legislation and private persecution, unless he be endowed with a certain measure of political power. As to the future peace and harmony of the Union, it is of the highest importance that the people lately in rebellion be not permitted to build up another 'peculiar institution' whose spirit is in conflict with the fundamental principles of our political system; for as long as they cherish interests peculiar to them in preference to those they have in common with the rest of the American people, their loyalty to the Union will always be uncertain. I desire not to be understood as saying that there are no well-meaning men among those who were compromised in the rebellion. There are many, but neither their number nor their influence is strong enough to control the manifest tendency of the popular spirit. There are great reasons for hope that a determined policy on the part of the national government will produce innumerable and valuable conversions. This consideration counsels lenity as to persons, such as is demanded by the humane and enlightened spirit of our times, and vigor and firmness in the carrying out of principles, such as is demanded by the national sense of justice and the exigencies of our situation." With the report of Mr. Schurz, the President transmitted to the Senate, at the same time, a letter written by General Grant after making a hurried tour of inspection in some of the Southern States, during the last week of November and early in December. General Grant wrote: "Four years of war, during which law was executed only at the point of the bayonet throughout the States in rebellion, have left the people possibly in a condition not to yield that ready obedience to civil authority the American people have generally been in the habit of yielding. This would render the presence of small garrisons throughout those States necessary until such time as labor returns to its proper channel, and civil authority is fully established. I did not meet any one, either those holding places under the government or citizens of the southern States, who think it practicable to withdraw the military from the south at present. The white and the black mutually require the protection of the general government. There is such universal acquiescence in the authority of the general government throughout the portions of country visited by me, that the mere presence of a military force, without regard to numbers, is sufficient to maintain order. The good of the country, and economy, require that the force kept in the interior, where there are many freedmen, (elsewhere in the southern States than at forts upon the seacoast no force is necessary,) should all be white troops. The reasons for this are obvious without mentioning many of them. The presence of black troops, lately slaves, demoralizes labor, both by their advice and by furnishing in their camps a resort for the freedmen for long distances around. White troops generally excite no opposition, and therefore a small number of them can maintain order in a given district. Colored troops must be kept in bodies sufficient to defend themselves. It is not the thinking men who would use violence towards any class of troops sent among them by the general government, but the ignorant in some places might; and the late slave seems to be imbued with the idea that the property of his

late master should, by right, belong to him, or at least should have no protection from the colored soldier. There is danger of collisions being brought on by such causes. My observations lead me to the conclusion that the citizens of the southern States are anxious to return to self-government, within the Union, as soon as possible; that whilst reconstructing they want and require protection from the government; that they are in earnest in wishing to do what they think is required by the government, not humiliating to them as citizens, and that if such a course were pointed out they would pursue it in good faith. It is to be regretted that there cannot be a greater commingling, at this time, between the citizens of the two sections, and particularly of those intrusted with the lawmaking power. . . . In some instances, I am sorry to say, the freedman's mind does not seem to be disabused of the idea that a freedman has the right to live without care or provision for the future. The effect of the belief in division of lands is idleness and accumulation in camps, towns, and cities. In such cases I think it will be found that vice and disease will tend to the extermination or great reduction of the colored race. It cannot be expected that the opinions held by men at the south for years can be changed in a day, and therefore the freedmen require, for a few years, not only laws to protect them, but the fostering care of those who will give them good counsel, and on whom they rely."—*30th Cong., 1st sess., Senate Ex. Doc. no. 2, pp. 45-46, 106-107.*

A. D. 1865 (December).—The end of Slavery.—Proclamation of the adoption of the Thirteenth Amendment. See above: A. D. 1865 (JANUARY).

A. D. 1865-1866.—The creation of the Freedmen's Bureau.—On the last day of the 38th Congress, March 3, 1865, an Act was passed to establish a bureau for the relief of freedmen and refugees. It was among the last Acts approved by Mr. Lincoln, and was designed as a protection to the freedmen of the South and to the class of white men known as "refugees,"—driven from their homes on account of their loyalty to the Union. The Act provided that the Bureau should have "supervision and management of all abandoned lands, and the control of all subjects relating to refugees and freedmen from rebel States, or from any district of country within the territory embraced in the operations of the army, under such rules and regulations as may be prescribed by the head of the bureau and approved by the President. The said bureau shall be under the management and control of a commissioner, to be appointed by the President, by and with the advice and consent of the Senate. . . . The Secretary of War may direct such issues of provisions, clothing, and fuel as he may deem needful for the immediate and temporary shelter and supply of destitute and suffering refugees and freedmen, and their wives and children, under such rules and regulations as he may direct. . . . The President may, by and with the advice and consent of the Senate, appoint an assistant commissioner for each of the States declared to be in insurrection, not exceeding ten. . . . Any military officer may be detailed and assigned to duty under this act without increase of pay or allowances. . . . The commissioner, under the direction of the

President, shall have authority to set apart for the use of loyal refugees and freedmen such tracts of land, within the insurrectionary States, as shall have been abandoned, or to which the United States shall have acquired title by confiscation, or sale, or otherwise. And to every male citizen, whether refugee or freedman, as aforesaid, there shall be assigned not more than 40 acres of such land, and the person to whom it is so assigned shall be protected in the use and enjoyment of the land for the term of three years, at an annual rent not exceeding 6 per centum upon the value of said land as it was appraised by the State authorities in the year 1860. . . . At the end of said term, or at any time during said term, the occupants of any parcels so assigned may purchase the land and receive such title thereto as the United States can convey. . . . On the 20th of May, 1865, Major-Gen. O. O. Howard was appointed Commissioner of the Freedmen's Bureau. He gave great attention to the subject of education; and after planting schools for the freedmen throughout a great portion of the South, in 1870—five years after the work was begun—he made a report. It was full of interest. In five years there were 4,239 schools established, 9,307 teachers employed, and 247,333 pupils instructed. In 1865 the average attendance was 89,396; but in 1870 it was 91,398, or 79½ per cent. of the total number enrolled. The emancipated people sustained 1,324 schools themselves, and owned 593 school buildings. The Freedmen's Bureau furnished 654 buildings for school purposes."—G. W. Williams, *Hist. of the Negro Race in Am., pt. 8, ch. 21-22 (c. 2)*.—As the original act, "by experience, had proved somewhat inadequate for the ends in view, Congress, in the early part of February, 1866, submitted an act amendatory . . . for executive approval. Its main features consisted in the reservation of three millions of acres of public land in the South from the operation of the homestead and pre-emption laws for occupation by former slaves at a rental to be approved by designated authorities, an extension of the former means of relief in the way of food and clothing, and the punishment, by tribunals composed of the agents and officials of the bureau, of all persons who should violate the rights under this act of its designated beneficiaries. . . . The President, chafing under the non-admission to their representation in Congress of the Southern States which under his policy had been restored, vetoed the bill February 19 on various grounds, among the more important of which, and the only ones of particular import, were that the measure violated constitutional guarantees in that no person by our organic code should be deprived of life, liberty or property without due process of law, and that taxation should never be imposed without representation. . . . February 21st the bill was again put upon its passage, but not obtaining a two-thirds vote in the Senate, consequently failed to become a law. . . . The third Freedmen's Bureau bill, of July, 1866, was another attempt to amend the original law of March 3, 1865, as to juridical measures for the enforcement thereof, and to perfect the distribution of the abandoned and confiscated lands of the South among the blacks. It was much milder in form than the one vetoed in February of the same year, as it did not make violations of the

proposed law a criminal offence. It proposed to give jurisdiction of such violations, however, to military tribunals, made up of the agents and officers of the bureau, until the Southern States had been restored to their representation in Congress. . . . July 16, 1866, the President vetoed the bill as a matter of course. He could have pursued no other action without self-contradiction. Congress, moreover, could not have reasonably expected a different result. It framed the bill not with an eye for executive approval, but with regard to its ability to pass it over the disapproval of that official, which it did on the same day the veto message was received, thereby making it a law of the land."—O. Sklener, *The Issues of Am. Politics*, pt. 2, ch. 2.—"The law made the agents of this Bureau guardians of freedmen, with power to make their contracts, settle their disputes with employers, and care for them generally. The position of Bureau agent was one of power, of responsibility, capable of being used beneficently, and sometimes, no doubt, it was; but these officials were subjected to great temptation. . . . Nearly every one of these agents who remained South after reconstruction was a candidate for office; and many actually became Governors, Judges, Legislators, Congressmen, Postmasters, Revenue officers, etc."—H. A. Herbert, *Why the Solid South?* ch. 1.

A. D. 1865-1866 (December—April).—The Reconstruction question in Congress.—The Joint Committee of Fifteen.—The shaping of the Fourteenth Amendment.—The "independent measures of the Executive for reconstruction were far from giving satisfaction to the Republican party. Within a few days after the meeting of Congress, in December, 1865, Mr. Stevens, of Pennsylvania, asked leave to introduce a joint resolution which provided that a committee of fifteen members should be appointed—nine of whom were to be members of the House and six to be members of the Senate—for the purpose of inquiring into the condition of the states which had formed the so-called Confederate States of America. This committee was to report whether these states or any of them were entitled to be represented in either house of Congress. Leave was given to report at any time, by bill or otherwise, and until such should be made and finally acted upon by Congress, no member was to be received into either house from any of those states. All papers relating to this representation in Congress were to be referred to this committee without debate. This resolution was adopted in the House by a vote of—yeas 133, nays 36." In the Senate it received amendments which made it a concurrent, instead of a joint resolution, and which struck out the clause relating to the non-admittance of members from the States in question pending the committee's report, and also that which required a reference of papers to the committee without debate.—S. S. Cox, *Three Decades of Federal Legislation*, ch. 18.—The Joint Committee on Reconstruction was constituted by the appointment (December 14), on the part of the House, of Thaddeus Stevens, Ellhu B. Washburn, Justin S. Morrill, Henry Grider, John A. Bingham, Roscoe Conkling, George S. Boutwell, Henry T. Blow, and Andrew J. Rogers; and by the appointment (December 21), on the part of the Senate, of William Pitt Fessenden, James

W. Grimes, Ira Harris, Jacob M. Howard, Beverly Johnson, and George H. Williams. The most serious question connected with the problem of reconstruction was that arising from the great increase of representation in Congress, and consequent augmentation of political weight and power, that must necessarily accrue to the lately rebellious States from the emancipation of their slaves. To this question the Committee gave their attention first. By an original provision of the Constitution, representation is based on the whole number of free persons in each State and three-fifths of all other persons. "When all become free, representation for all necessarily follows. As a consequence the inevitable effect of the rebellion would be to increase the political power of the insurrectionary States, whenever they should be allowed to resume their positions as States of the Union. As representation is by the Constitution based upon population, your committee [said their report, when made, on the 8th of June, 1866] did not think it advisable to recommend a change of that basis. . . . It appeared to your committee that the rights of these persons by whom the basis of representation had been thus increased should be recognized by the general government. . . . It did not seem just or proper that all the political advantages derived from their becoming free should be confined to their former masters, who had fought against the Union, and withheld from themselves, who had always been loyal. . . . Doubts were entertained whether Congress had power, even under the amended Constitution, to prescribe the qualifications of voters in a State, or could act directly on the subject. It was doubtful, in the opinion of your committee, whether the States would consent to surrender a power they had always exercised, and to which they were attached. As the best if not the only method of surmounting the difficulty, and as eminently just and proper in itself, your committee came to the conclusion that political power should be possessed in all the States exactly in proportion as the right of suffrage should be granted, without distinction of color or race. This it was thought would leave the whole question with the people of each State, holding out to all the advantage of increased political power as an inducement to allow all to participate in its exercise." To this conclusion the committee arrived as early as the 22d of January, when they made a preliminary report, recommending an amendment to the constitution to the effect that "Representatives and direct taxes shall be apportioned among the several States which may be included within this Union according to their respective numbers, counting the whole number of persons in each State, excluding Indians not taxed: Provided, That whenever the elective franchise shall be denied or abridged in any State on account of race or color, all persons of such race or color shall be excluded from the basis of representation." Grave objections were found to the proposed exclusion of the colored race as a whole from the basis of representation, in case the suffrage should be denied to any part of it. It was shown, moreover, that disfranchisement might be practically accomplished on other grounds than that of race or color and the intended effect of the constitutional provision evaded. Hence the proposition of the Committee

failed in the Senate (March 9, 1866), though adopted by the House (Jan. 31). On the 29th of February, the Committee on Reconstruction reported a concurrent resolution, "That in order to close agitation upon a question which seems likely to disturb the action of the Government, as well as to quiet the uncertainty which is agitating the minds of the people of the eleven States which have been declared to be in insurrection, no Senator or Representative shall be admitted into either branch of Congress from any of said States until Congress shall have declared such State entitled to such representation." The House adopted this important concurrent resolution the same evening. In the Senate it was debated until the 2d of March, when it was passed by a vote of 21 to 18. On the 30th of April the Reconstruction Committee reported a joint resolution embodying a comprehensive amendment to the Constitution, designed to protect the rights of the freedmen of the South, as citizens of the United States, and to fix the basis of representation in Congress, as well as to settle other questions arising out of the Rebellion. As adopted by Congress in June, and subsequently ratified by the legislatures of the necessary number of States this became what appears as the Fourteenth Amendment to the Constitution of the United States—see below: A. D. 1866 (JUNE). "This proposed amendment to the Constitution was accompanied by two bills, one of which provided that when any State lately in insurrection should have ratified the amendment, its Senators and Representatives, if found duly elected and qualified, should be admitted as members of Congress. The other bill declared the high ex-officials of the late Confederacy ineligible to any office under the Government of the United States."—W. H. Barnes, *Hist. of the 39th Cong.*, ch. 3, and 13-19.

A. D. 1866 (April).—The passage of the first Civil Rights Bill over the President's veto.—"Immediately on the reassembling of Congress after the holidays, January 5, 1866, Mr. Trumbull [in the Senate], in pursuance of previous notice, introduced a bill 'to protect all persons in the United States in their civil rights, and furnish the means of their vindication.' This bill, having been read twice, was referred to the Committee on the Judiciary." A few days later the bill was reported back from the Committee, and it came up for discussion on the 29th of January. On the 1st of February it passed the Senate and went to the House. In that body it was reported from the Judiciary Committee on the 1st of March, and debate upon the measure began. It passed the House, with some amendments, March 13th, by a vote of 111 to 38. The amendments of the House were agreed to by the Senate, and it went to the President, who returned it with an elaborate veto message on the 27th of March. In the Senate, on the 6th of April, by 33 yeas to 15 nays, and in the House three days later, by 123 affirmative votes to 41 in the nega-

tive, the bill was passed notwithstanding the veto, and became law. As enacted, the Civil Rights Bill declared "that all persons born in the United States and not subject to any foreign Power, excluding Indians not taxed, are . . . citizens of the United States; and such citizens of every race and color, without regard to any previous condition of slavery or involuntary servitude, except as a punishment for crime, . . . shall have the same right in every State and Territory of the United States to make and enforce contracts, to sue, be parties, and give evidence, to inherit, purchase, lease, sell, hold, and convey real and personal property, and to full and equal benefit of all laws and proceedings for the security of person and property as is enjoyed by white citizens, and shall be subject to like punishment, pains, and penalties, and to none other, any law, statute, ordinance, regulation, or custom to the contrary notwithstanding." Section 2 of the act provided penalties for its violation. The remaining sections gave to the district and circuit courts of the United States cognizance of all crimes and offenses committed against the provisions of the act; extended the jurisdiction of those courts and enlarged and defined the powers and duties of the district attorneys, marshals, deputy marshals and commissioners of the United States, to that end; made it lawful for the President "to employ such part of the land or naval forces of the United States, or of the militia, as shall be necessary to prevent the violation and enforce the due execution of this act;" and, finally, provided that "upon all questions of law arising in any cause under the provisions of this act a final appeal may be taken to the Supreme Court of the United States."—W. H. Barnes, *Hist. of the 39th Cong.*, ch. 9-11.

ALSO IN: H. Wilson, *Hist. of the Rise and Fall of the Slave Power*, v. 3, ch. 48.

A. D. 1866 (June).—Congressional adoption of the Fourteenth Amendment.—The joint resolution, embodying the important amendment to the Federal Constitution which became, when ratified, the Fourteenth Amendment, reported to Congress on the 30th of April, 1866, by the Joint Committee on Reconstruction—see above: A. D. 1865-1866 (DECEMBER-APRIL)—was passed by the House of Representatives on the 10th of May, and by the Senate on the 8th of June, with amendments which the House concurred in on the 13th of June. Having no constitutional power to veto the resolution, President Johnson sent a message to Congress on the 22d expressing his disapproval of it. The proposed constitutional amendment as it passed both Houses of Congress, and as it became part of the constitution of the United States by subsequent ratification of the States, is as follows: "Section 1. All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws. Section 2. Representatives shall be apportioned among the several States according to their respective numbers, counting the whole number of persons in each State, excluding Indians not

taxed. But when the right to vote at any election for the choice of electors for President and Vice President of the United States, Representatives in Congress, the executive and judicial officers of a State, or the members of the Legislature thereof, is denied to any of the male inhabitants of such State, being twenty-one years of age, and citizens of the United States, or in any way abridged, except for participation in rebellion, or other crime, the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens twenty-one years of age in such State. Section 3. No person shall be a Senator or Representative in Congress, or elector of President and Vice President, or hold any office, civil or military, under the United States, or under any State, who, having previously taken an oath, as a member of Congress, or as an officer of the United States, or as a member of any State Legislature, or as an executive or judicial officer of any State, to support the Constitution of the United States, shall have engaged in insurrection or rebellion against the same, or given aid or comfort to the enemies thereof. But Congress may by a vote of two-thirds of each House, remove such disability. Section 4. The validity of the public debt of the United States, authorized by law, including debts incurred for payment of pensions and bounties for services in suppressing insurrection or rebellion, shall not be questioned. But neither the United States nor any State shall assume or pay any debt or obligation incurred in aid of insurrection or rebellion against the United States, or any claim for the loss or emancipation of any slave; but all such debts, obligations and claims shall be held illegal and void. Section 5. The Congress shall have power to enforce, by appropriate legislation, the provisions of this article."—W. H. Barnes, *Hist. of the 39th Cong.*, ch. 17-18.

A. D. 1866-1867 (October—March).—The Reconstruction issue before the people.—Congress sustained by the North.—President Johnson and the South.—Rejection of the Fourteenth Amendment by the Southern States.—In the elections of 1866 the canvass turned upon the issue between Congress and the President concerning Reconstruction, and the popular verdict was overwhelmingly adverse to the Presidential policy, while a new Congress was elected far more Radical in disposition than its predecessor. Every Northern State was swept by the Republicans, with heavily increased majorities. Even those "which had been tenaciously Democratic gave way under the popular pressure. . . . The aggregate majority for the Republicans and against the Administration in the Northern States was about 390,000 votes. In the South the elections were as significant as in the North, but in the opposite direction. Wherever Republican or Union tickets were put forward for State or local offices in the Confederate States, they were

defeated by prodigious majorities. Arkansas gave a Democratic majority of over 9,000, Texas over 40,000, and North Carolina 25,000. The border slave States were divided. Delaware, Maryland and Kentucky gave strong majorities for the Democrats, while West Virginia and Missouri were carried by the Republicans. The unhappy indication of the whole result was that President Johnson's policy had inspired the South with a determination not to submit to the legitimate results of the war, but to make a new fight and, if possible, regain at the ballot-box the power they had lost by war. The result of the whole election was to give to the Republicans 143 representatives in Congress and to the Democrats but 49." But when Congress assembled, in December, the President was found to be inflexibly determined to pursue the line of policy which he had marked out. In his message he reiterated his views "with entire disregard of the popular result which had so significantly condemned him. . . . The President's position . . . excited derision and contempt in the North, but it led to mischievous results in the South. The ten Confederate States which stood knocking at the door of Congress for the right of representation, were fully aware, as was well stated by a leading Republican, that the key to unlock the door had been placed in their own hands. They knew that the political canvass in the North had proceeded upon the basis, and upon the practical assurance (given through the press, and more authoritatively in political platforms), that whenever any other Confederate State should follow the example of Tennessee, it should at once be treated as Tennessee had been treated. Yet, when this position had been confirmed by the elections in all the loyal States, and was, by the special warrant of popular power, made the basis of future admission, these ten States, voting upon the Fourteenth Amendment at different dates through the winter of 1866-67, contemptuously rejected it. In the Virginia Legislature only one vote could be found for the Amendment. In the North-Carolina Legislature only 11 votes out of 148 were in favor of the Amendment. In the South-Carolina Legislature there was only one vote for the Amendment. In Georgia only two votes out of 169 in the Legislature were in the affirmative. Florida unanimously rejected the Amendment. Out of 106 votes in the Alabama Legislature only ten could be found in favor of it. Mississippi and Louisiana both rejected it unanimously. Texas, out of her entire Legislature, gave only five votes for it, and the Arkansas Legislature, which had really taken its action in the preceding October, gave only three votes for the Amendment. . . . It was naturally inferred and was subsequently proved, that the Southern States would not have dared to take this hostile attitude except with the encouragement and the unqualified support of the President."—J. G. Blaine, *Twenty Years of Congress*, v. 2, ch. 10-11.—"No factor in those elections [of 1866] proved more potential than the rejection by Southern Legislatures of the pending Fourteenth Amendment to the Constitution of the United States. The clauses on which its acceptance or rejection turned in these assemblies were: Section II., which apportioned Representatives in Congress upon the basis of the voting population; and Section III., which provided that no person should hold office under

the United States who, having taken an oath as a Federal or state officer to support the Constitution, had subsequently engaged in the war against the Union. It was claimed by the friends of the Amendment to be especially unfair that the South should have representation for its freedmen and not give them the ballot. The right, however, of a state to have representation for all its free inhabitants, whether voters or not, was secured by the Constitution, and that instrument even allowed three-fifths representation for slaves. New York, Ohio, and other states denied the ballot to free negroes; some states excluded by property qualification and others by educational tests, yet all enjoyed representation for all their peoples. The reply to this was that the Constitution ought to be amended because the South would now have, if negroes were denied the ballot, a larger proportion of non-voters than the North. Southern people were slow to see that this was good reason for change in the Constitution, especially as they believed they were already entitled to representation, and conceived that they ought to have a voice in proposing as well as in the ratification of amendments. Five of the restored states had already ratified the Thirteenth Amendment, and such ratification had been counted valid. If they were states, they were certainly entitled to representation. So they claimed. It was perhaps imprudent for Southern people at that time to undertake to chop logic with their conquerors, or indeed to claim any rights at all. . . . The insuperable objection, however, to the ratification of the Fourteenth Amendment was to be found in the clause which required the people of the late Confederate States to disfranchise their own leaders, to brand with dishonor those who had led them in peace and in war."—H. A. Herbert, *Why the Solid South? (Noted Men on the Solid South)* pp. 15-16.—In a letter addressed, November 25, 1866, to General Richard Taylor, lately of the Confederate army, and brother-in-law of Jefferson Davis, General Grant wrote: "I have talked with several members of Congress who are classed with the Radicals; Schenck and Bidwell for instance. They express the most generous views as to what would be done if the Constitutional amendments proposed by Congress were adopted by the Southern States. What was done in the case of Tennessee was an earnest of what would be done in all cases. Even the disqualification to hold office imposed on certain classes by one article of the amendment would, no doubt, be removed at once, except it might be in the cases of the very highest offenders, such, for instance, as those who went abroad to aid in the Rebellion, those who left seats in Congress, etc. All or very nearly all would soon be restored, and so far as security to property and liberty is concerned, all would be restored at once. I would like exceedingly to see one Southern State, excluded State, ratify the amendments to enable us to see the exact course that would be pursued. I believe it would much modify the demands that may be made if there is delay." "But the President's endeavors did not cease. . . . He used all the authority of his office to dissuade the Southerners from accepting the amendment which the entire North had ratified. . . . He converted good feeling and good will on both sides into discord, and precipitated disasters almost equal to those from

which the State had barely escaped. . . . This view of Johnson's conduct was thenceforth steadily maintained by Grant."—A. Hudeau, *Grant in Peace*, ch. 5.

A. D. 1866-1867 (December—March).—The Tenure-of-Office Bill.—"Against the early decision of the founders of the Government, . . . against the repeatedly expressed judgment of ex-President Madison, against the equally emphatic judgment of Chief Justice Marshall, and above all, against the unbroken practice of the Government for 78 years, the Republican leaders now determined to deprive the President of the power of removing Federal officers. Many were induced to join in the movement under the belief that it was important to test the true meaning of the Constitution in the premises, and that this could be most effectively done by directly restraining by law the power which had been so long conceded to the Executive Department. To that end Mr. Williams of Oregon, on the first Monday of December, 1866, introduced a bill 'to regulate the tenure of civil offices.'—J. G. Blaine, *Twenty Years of Congress*, v. 2, p. 270.—"After grave consideration and protracted discussion in both houses of Congress, the [Tenure-of-Office bill] was passed near the close of the session. On the 2d of March [1867] the bill encountered the veto of the President, who saw in the measure serious interference with the ability of the Executive to keep his oath to preserve, protect, and defend the Constitution of the United States. The bill was immediately passed over the veto without debate. The act thus passed provides that officers appointed by and with the advice and consent of the Senate shall hold their offices until their successors are in like manner appointed and qualified. Members of the Cabinet hold their offices during the term of the President by whom they are appointed, and for one month thereafter, subject to removal by consent of the Senate."—W. I. Barnes, *Hist. of the 39th Cong.*, p. 599.—Soon after the inauguration of President Grant, in 1868, the Tenure-of-Office act was so far modified as to practically release the President from the restraint which it put upon his power of removal.—J. G. Blaine, *Twenty Years of Congress*, v. 2, ch. 18, and App. B.

A. D. 1866-1871.—The Ku-Klux Klan of the Southern States and its outrages.—"It would have been contrary to the experience of mankind, and an exception to all the teachings of history, if the social and political revolution which the results of the war had imposed on the states then recently insurgent had gone into operation peacefully, harmoniously, and successfully. It was impossible for such to be the case. The transition was from a state in which the superiority and domination of the white race over the colored race existed unquestioned for centuries. It was to a condition of things in which the most prominent whites were disfranchised and deprived of the right to hold public offices. Their late slaves were enfranchised, and the judicial and other offices were largely filled by dishonest and unfriendly strangers from the North. What was worse still, many of these places were filled by ignorant and brutal negroes. The transition was not only sudden and violent. It was hard to bear. . . . No people, least of all such

a proud and intolerant people as that of the South, could see their local governments transferred from their own hands into the hands of their former slaves without being goaded into violent resistance. This resistance took the form, in most of the Southern States, not of armed opposition to the Federal or the state governments, but of organized intimidation and terrorism. It was directed against the colored people and against their white allies and leaders. It made an objective point of the agents of the Freedmen's Bureau, ministers of the gospel, and school teachers,—all adventurers from the North, or men who had, in quest of fortune, immigrated into these states. All of these classes were regarded as public or private enemies. They were designated by the opprobrious title of 'carpet-buggers.' The history of these outrages fills many volumes of reports made by joint and separate committees of the two houses of Congress. It is from these volumes, from reports of military commanders in the South, and from other official documents, that the following epitome, exhibiting the lawlessness that prevailed in the Southern States during the . . . decade between 1865 and 1875, is made. These documents are so full of the details of crime and violence, and are so voluminous, that it is exceedingly difficult to select from them, or to convey a correct idea of their relations. Very soon after the close of the Civil War, almost as soon as the Reconstruction acts were begun to be put in operation, secret societies were organized in various states of the South. Their object, either secret or avowed, was to prevent the exercise of political rights by the negroes. These societies took various names, such as 'The Brotherhood,' 'The Pale Faces,' 'The Invisible Empire,' 'The Knights of the White Camellia'; but all these were finally merged into, or compounded with, the formidable and dreaded society denominated the 'Ku-Klux Klan.' Their acts of lawlessness and cruelty have passed into local and congressional history as 'Ku-Klux outrages.' The State of Virginia was a remarkable exception to the other states in its exemption from crimes of this character; while the two neighboring States of North Carolina and Tennessee furnished, perhaps, more material for investigation into Ku-Klux outrages than any other portion of the South. This baronous and bloodthirsty organization is said to have originated in 1866. There is no doubt that the Ku-Klux Klan was organized at first only to scare the superstitious blacks. It is true that it arose out of the frivolities of some young Tei-assicans. Horrid tales were told to frighten the negroes from roaming about and pilfering. The testimony before the committee on that subject, of which the writer was a member, showed that they daily visited houses and talked their foolish talk; that they were 'mummicking about,'—whatever that means. . . . There is no doubt that political reasons had their influence after the Ku-Klux were under way. . . . Certain it is, that they soon came to be made use of, in the most arbitrary, cruel, and shocking manner, for the furtherance of political ends, and for the crushing out of Republicanism in the Southern States; to which party the colored people were almost unanimously attached. The crimes and outrages narrated in these pages had their origin, almost exclusively, in political

causes,—in the effort on the part of the whites to set at naught the rights of suffrage guaranteed to the negroes, and to exclude from Federal, state, county, and local offices all persons whose reliance for election to such offices was mainly, if not altogether, on negro votes. General Forrest estimated the strength of the Ku-Klux organization in Tennessee at 40,000. He expressed the belief that it was still stronger in other states. The members were sworn to secrecy, under the penalty of death for breach of fidelity. Their ordinary mode of operation—as gathered from the mass of evidence—was to patrol the country at night. They went well armed and mounted. They wore long white gowns. They masked their faces. Their appearance terrified the timid and superstitious negroes who happened to see them as they rode past, and who then regarded them as ghostly riders. But most frequently they surrounded and broke into the cabins of the negroes; frightened and maltreated the inmates; warned them of future vengeance; and probably carried off some obnoxious negro, or 'carpet-bagger,' whose fate it was to be riddled with murderous bullets, hung to the limb of a tree, or mercilessly whipped and tortured, for some offense, real or imaginary, but generally because he was active in politics or in negro schools or churches. . . . According to the majority report of the Senate select committee of March 10, 1871, the Ku-Klux associations, by whatever name known, were instituted in North Carolina in 1867 or 1869. . . . The report of the Senate committee of the 10th of March, 1871, before referred to, recites a startling number of Ku-Klux outrages. They embrace whipping, mutilation, and murder. These cruelties took place in North Carolina, between December, 1868, and December, 1870. The report gives some of the horriſying details."—S. F. Cox, *Three Decades of Federal Legislation*, ch. 25-26.—"Senator Scott, in a speech in the Senate, gave as the result of the investigation that came to his own knowledge, as follows: In North Carolina, in 14 counties, there were 18 murders and 315 whippings. In South Carolina, 9 counties, 35 murders and 276 other flagrant outrages. In Georgia, 29 counties, 72 murders and 126 whippings. In Alabama, 26 counties, 215 murders and 116 other outrages. In Florida, in one county alone there were 153 cases of homicide. In Mississippi, 20 counties, 23 homicides and 76 other cases of outrage. In 99 counties in different States he found 526 homicides and 2,009 cases of whiplag. But the committee state that in Louisiana alone in the year 1868 there were more than 1,000 murders, and most of them were the result of the operations of the Ku Klux."—H. Wilson, *Hist. of the Rise and Fall of the Slave Power*, v. 3, ch. 45.

A. D. 1867 (January).—**Negro Suffrage in the District of Columbia.**—As early as the 18th of January, 1866, the House of Representatives passed a bill extending the suffrage in the District of Columbia, by striking out the word "white" from all laws and parts of laws prescribing the qualification of electors for any office in the District, and declaring that no person should be disqualified from voting at any election in the District on account of color. As it was known that the President would veto the bill if sent to him,

the Senate held it until the next session. In December, 1866, it was called up in that body by Senator Sumner, and after considerable debate was passed, December 13th. On the 7th of January following it was returned by the President with his veto, but was passed over the veto by the Senate (29 to 10) the same day, and by the House (113 to 38) the day following, thus becoming a law.—W. H. Barnes, *Hist. of the 39th Cong., ch. 1 and 21.*

A. D. 1867 (March).—The Purchase of Alaska. See ALASKA: A. D. 1867.

A. D. 1867 (March).—The Military Reconstruction Acts of Congress.—"Congress had declared amply enough how the rebel States should not be reinstated. Two years after the close of the war, however, the Union was still un-restored, and while claiming, under the Constitution, absolute jurisdiction of the question, Congress had failed to prescribe the terms on which the Union should be restored. . . . Both the country and Congress were at last convinced by the course of events that affirmative Congressional action was indispensable, involving the sweeping away of Mr. Johnson's ex-rebel State governments and the enfranchisement of the emancipated slaves. Mr. Stevens had been of that opinion ever since the emancipation by the Senate of the Fourteenth Amendment, as adopted by the House [which had proposed to exclude from the right to vote for Representatives in Congress and for Presidential electors, 'until the 4th day of July, in the year 1870, all persons who voluntarily adhered to the late insurrection, giving it aid and comfort'], and immediately thereupon proposed a measure containing the germ of the Military Reconstruction Act. Called up from time to time, and pressed upon the attention of the House by Mr. Stevens, it was passed on the 13th day of February, 1867, after a four weeks' debate upon it in Committee of the Whole. By the 20th both Houses had agreed upon it, and passed it. On the 2d day of March the President returned it to the House with his veto, over which it was at once passed by both Houses; and with only two days of the Thirty-ninth Congress to spare, it became law."

—O. J. Hollister, *Life of Schuyler Colfax, ch. 9.*—The Military Reconstruction Act set forth in its preamble that "Whereas, no legal State governments or adequate protection for life or property now exists in the rebel States [enumerating all the late Confederate States except Tennessee]; . . . and whereas it is necessary that peace and good order should be enforced in said States until loyal and republican State governments can be legally established: therefore, Be it enacted, . . . That said rebel States shall be divided into military districts and made subject to the military authority of the United States, as herein-after prescribed; and for that purpose Virginia shall constitute the first district, North Carolina and South Carolina the second district, Georgia, Alabama and Florida the third district, Mississippi and Arkansas the fourth district, and Louisiana and Texas the fifth district." Sections 2, 3 and 4 of the act made it the duty of the President to assign to the command of each of the said districts an officer of the army not below the rank of brigadier-general, and defined the duties and powers of such commander, providing for

the assignment to him of an adequate military force. Section 5 provided "That when the people of any one of said rebel States shall have formed a constitution of government in conformity with the Constitution of the United States in all respects, framed by a convention of delegates elected by the male citizens of said State 21 years old and upward, of whatever race, color, or previous condition, who have been resident in said State for one year previous to the day of such election, except such as may be disfranchised for participation in the rebellion or for felony at common law, and when such constitution shall provide that the elective franchise shall be enjoyed by all such persons as have the qualifications herein stated for electors of delegates, and when such constitution shall be ratified by a majority of the persons voting on the question of ratification who are qualified as electors for delegates, and when such constitution shall have been submitted to Congress for examination and approval, and Congress shall have approved the same, and when said State, by a vote of its Legislature elected under said constitution, shall have adopted the amendment to the Constitution of the United States, proposed by the Thirty-ninth Congress, and known as article fourteen, and when said article shall have become a part of the Constitution of the United States, said State shall be declared entitled to representation in Congress, and Senators and Representatives shall be admitted therefrom on their taking the oath prescribed by law, and then and thereafter the preceding sections of this act shall be inoperative in said State." It was further provided that no person excluded from office by the Fourteenth Amendment should be a member of the convention to frame a constitution for any of said rebel States, and that any civil government which might exist in any of the said States prior to the admission of its representatives to Congress should be deemed provisional only, and subject to the paramount authority of the United States. "The friends of this measure were dissatisfied with it on the ground of its incompleteness in not containing provisions for carrying it into effect in accordance with the purpose of its framers. . . . The Fortieth Congress, meeting on the 4th of March, immediately upon the close of its predecessor, proceeded without delay to perfect and pass over the President's veto [March 23, 1867] a bill supplementary to the act to provide for the more efficient government of the rebel States." By this supplementary act specific instructions were given as to the course of procedure to be followed in making a registration of the voters qualified under the act and in conducting the elections provided for.—W. H. Barnes, *Hist. of the 39th Cong., ch. 22.*

ALSO IN: *Why the Solid South? (Noted Men on the Solid South.)*

A. D. 1868 (March—May).—Impeachment and Trial of President Johnson.—"Until the spring of 1866, a year after Mr. Johnson became President, there was entire harmony between him and his Cabinet. . . . No objection was raised even to that part of the President's first message which treated of the suffrage question, by any member of the Cabinet. It was in fact approved by all, and by none more heartily than by Mr. Stanton. A change took place soon after the Civil Rights bill became a law over the President's veto, and bitter con-

controversy arose between the President and Congress. In this controversy, and at its commencement, Mr. Dennison [Postmaster-general] and Mr. Harlan [Secretary of the Interior] sided with Congress and tendered their resignations, which were very reluctantly accepted. They resigned because they could not heartily sustain the President, but there was no breach of the social relations which had existed between them. Mr. Speed [Attorney-general] soon after followed the example of Dennison and Harlan. Mr. Stanton [Secretary of War] also sided with Congress, but he did not resign. He was advised by prominent political and personal friends to 'stick,' and he did so, contrary to all precedent and in opposition to the judgment of conservative men of his party. . . . He attended the Cabinet meetings, not as an adviser of the President, but as an opponent of the policy to which he had himself been committed, and the President lacked the nerve to dismiss him. . . . In this crisis of his political life, Mr. Johnson exhibited a want of spirit and decision which astonished those who were familiar with his antecedents. He knew when the Tenure-of-Office Bill was before Congress that the object of its leading supporters was to tie his hands, and yet he refrained from using them when they were free. . . . When he did act he acted unwisely. He retained Mr. Stanton in his Cabinet when his right to remove him was unquestionable. He suspended him [August 12, 1867] after the Tenure-of-Office Bill had become a law, and in accordance with its provisions, [directing General Grant to act as Secretary of War ad interim]; and when the Senate refused to approve of the suspension [January 13, 1868], he issued orders for his removal and the appointment of Lorenzo Thomas to be Secretary of War ad interim. If he had tried to give his enemies an advantage over him, to furnish them with weapons for his own discomfiture, he could not have done it more effectually. . . . If he had removed Mr. Stanton instead of suspending him, and justified his action on the ground that his control of the members of his Cabinet was a constitutional right of which he could not be deprived by Congress, it probably would not have been impeached. The gist of the charges against him was that he had violated a law of Congress in removing Mr. Stanton, or issuing an order for his removal, after the Senate had refused to sanction his suspension. In the articles of impeachment there were other charges against the President, the most serious of which were that he had delivered intemperate, inflammatory speeches, which were intended to bring into contempt the Congress of the United States and duly enacted laws. The speeches made by the President in Cleveland, St. Louis, and other places in August and September, 1866—in fact, all his public addresses during his contest with Congress—were in the worst possible taste, derogatory to himself and to his high position; but they . . . did not constitute good ground for his impeachment; and this was the opinion of the House, which in January, 1867, after they were made, refused to impeach him by the decisive vote of 108 to 57. Other causes for his impeachment were subsequently sought for. His bank account was examined. His private conduct in Washington was carefully scrutinized. Men were employed to investigate his public and private character in

Tennessee, but nothing was found to his discredit. . . . Nothing was found to justify his impeachment but the order which he issued for the removal of Mr. Stanton and his appointment of General Thomas to be Secretary of the War Department ad interim after the Senate had refused to sanction Mr. Stanton's suspension." The formal presentment by the House of Representatives of its impeachment against the President, at the bar of the Senate, sitting as a Court of Impeachment, was made on the 5th day of March, 1868. The answer of the President was presented on the 23d; the trial opened on Monday, the 30th of March, and closed on the 26th of May following. "The trial was a very interesting one, not only to the people of the United States, but to the people of other countries. . . . It was the first instance in the history of nations of the trial of the head of a government before one of the branches of the law-making power, sitting as a judicial tribunal, on charges presented by another. The presiding officer was the Chief Justice of the Supreme Court—the senators of the respective States were the jury—the House of Representatives the prosecutor. The managers to conduct the impeachment for the House were John A. Bingham, George S. Boutwell, James F. Wilson, Benjamin F. Butler, Thomas Williams, Thaddeus Stevens and John A. Logan, all members of the House, all lawyers, and some of them distinguished in the profession. The President entered his appearance by Henry Stanbery, Benjamin K. Curtis, Jeremiah S. Black, William M. Everts, and Thomas L. K. Nelson. William S. Groesbeck, in the course of the trial, appeared and took part as counsel for the President in place of Mr. Black." The result of the trial was a failure of the impeachment. The senators who voted "guilty" were 35 in number—being less than two-thirds of the whole—against 19. Of those who voted in the negative, seven were Republicans who had steadily opposed the President's policy; four were Republicans who had adhered to him throughout; eight were Democrats.—J. McCulloch, *Men and Measures of Half a Century*, ch. 24. —In the opinion of Mr. Blaine, "the sober reflection of later years has persuaded many who favored impeachment that it was not justifiable on the charges made," and that "the President was impeached for one series of misdemeanors, and tried for another series."—J. G. Blaine, *Twenty Years of Congress*, v. 2, ch. 14.

A. D. 1868.—The Burlingame Treaty with China. See CHINA: A. D. 1857–1868.

A. D. 1868 (November).—The Twenty-first Presidential Election.—General Ulysses S. Grant, nominated by the Republican party, was elected President in November 1868, by 3,012,833 votes of the people against 2,703,249 votes cast for Horatio Seymour, ex-Governor of New York, the candidate of the Democratic party. The electoral vote returned and counted was 214 for Grant and 80 for Seymour, who carried the States of New York, New Jersey, Delaware, Maryland, Georgia, Louisiana, Kentucky, and Oregon. Schuyler Colfax, of Indiana, was elected Vice President, over General Frank P. Blair.—E. Stanwood, *Hist. of Presidential Elections*, ch. 22.

A. D. 1868-1870. — Reconstruction complete.—Restoration of all the Southern States to representation in Congress.—"On the 22d of June, 1868, an act was passed, with the following preamble and resolution, for the admission of Arkansas:—"Whereas the people of Arkansas, in pursuance of an act entitled, An act for the more efficient government of the Rebel States, passed March 2, 1867, and the acts supplementary thereto, have framed and adopted a constitution of State government, which is republican, and the legislature of said State has duly ratified the amendment of the Constitution of the United States proposed by the XXXIXth Congress, and known as Article XIV.; Therefore, Be it enacted, etc., that the State of Arkansas is entitled and admitted to representation in Congress, as one of the States of the Union, upon the following fundamental condition.' The 'fundamental condition,' as finally agreed upon, was, 'That there shall never be in said State any denial or abridgment of the elective franchise, or of any other right, to any person by reason or on account of race or color, except Indians not taxed.' The bill was vetoed by the President on the 20th, but passed over the veto on the 23d in the House by the vote of 111 to 31, and in the Senate by a vote of 30 to 7. On the 25th of June a similar act was passed admitting the States of North Carolina, South Carolina, Louisiana, Georgia, Alabama, and Florida, in pursuance of a similar preamble, with the conditions that they should ratify the Fourteenth Amendment, that they should not deprive 'any citizen, or class of citizens of the State of the right to vote by the constitution thereof'; and that no person prohibited from holding office by said Amendment should be 'deemed eligible to any office in either of said States unless relieved from disability as provided in said amendment'; the State of Georgia being also required to declare 'null and void' certain provisions of its constitution, and 'in addition give the assent of said State to the fundamental condition hereinbefore imposed on the same.' The bill passed the House, May 14,—yeas 110, nays 35; in the Senate, June 9,—yeas 31, nays 5. It was vetoed by the President on the 25th, and passed, the same day, by both houses, over the Presidential veto. On the 27th of January, 1870, Virginia was admitted into the Union by a vote, in the House, of 136 to 53; and in the Senate by a vote of 47 to 10. The following were the preamble, oaths, and conditions precedent: 'Whereas the people of Virginia have framed and adopted a constitution of State government which is republican; and whereas the legislature of Virginia, elected under said constitution, has ratified the Fourteenth and Fifteenth Amendments of the Constitution of the United States; and whereas the performance of these several acts in good faith is a condition precedent to a representation of the State in Congress, said State should be admitted to a representation in Congress; with the additional conditions precedent, however, that the constitution should never be so amended as to deprive any class of citizens of the right 'to vote,' 'to hold office,' on account of race, color, or previous condition of servitude; neither should there be 'other qualifications' required for such reason; nor should any be deprived of 'school rights or privileges' on such account. On the 3d of February Mississippi was admitted by a

bill resembling the former in every particular, by substantially the same vote. On the 30th of March Texas was readmitted to the Union on a bill very similar, though not identical with the above. . . . By this act of Congress the last of the 'wayward sisters' was brought back and restored to the family of States, and the fractured Union was, outwardly at least, repaired. It was ten years, eight months, and twenty days after South Carolina raised the banner of revolt and led off in 'the dance of death.'—II. Wilson, *Hist. of the Rise and Fall of the Slave Power*, v. 3, ch. 44.

A. D. 1869-1870.—The Fifteenth Constitutional Amendment.—"The great defect of the Fourteenth Amendment, as freely charged during its discussion, was its at least tacit recognition of the right of States to disfranchise the ex-slaves, should they so elect. True, they could not do it without sacrificing so much in the basis of their representation in Congress; but if they were willing to make that sacrifice, there was nothing in the amendment to prevent such discrimination. To remedy that defect . . . it was resolved to incorporate into the organic law a new provision for their protection, and to supplement the amendments of the Constitution already adopted by another. There were accordingly introduced into both houses, almost simultaneously, measures for that purpose. . . . In the House, on the 11th of January, 1869, Mr. Boutwell reported from the Committee on the Judiciary a joint resolution proposing an amendment which provided that the right to vote of no citizen should be abridged by the United States or any State by reason of race, color, or previous condition of slavery." The joint resolution was adopted in the House, 150 affirmative to 42 negative votes, on the 30th of January. Adopted in the Senate with amendments, by 39 to 16 votes, it went to a Committee of Conference, on whose report the joint resolution was finally adopted by both Houses on the 25th of February, and submitted for ratification to the legislatures of the States, in the following form: "Section 1. The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude. Section 2. The Congress shall have power to enforce this article by appropriate legislation." "The amendment received the votes of 29 States, constituting the requisite three-fourths, and thus became a part of the organic law." On the 30th of March, 1870, President Grant communicated the fact to Congress in a special message.—II. Wilson, *Hist. of the Rise and Fall of the Slave Power*, v. 3, ch. 47.

A. D. 1869-1890.—Recovery of the domination of Whites at the South.—Suppression of the Colored vote.—Prosperity of the Southern States.—“Between 1869 and 1876, the whites had in every Southern State except South Carolina, Florida, and Louisiana, regained control of the government, and in 1876 those three States were also recovered. The circumstances were different, according to the character of the population in each State. In some a union of the moderate white Republicans with the Democrats, brought about by the disgust of all property holders at the scandals they saw and at the increase to their burdens as tax-payers, had secured legitimately chosen majorities, and ejected the corrupt officials. In some the same result was attained by paying or otherwise inducing the negroes not to go to the polls, or by driving them away by threats or actual violence. Once possessed again of a voting majority, the whites, all of whom had by 1873 been relieved of their disabilities, took good care, by a variety of devices, legal and extra-legal, to keep that majority safe; and in no State has their control of the government been since shaken. President Hayes withdrew, in 1877, such Federal troops as were still left at the South, and none have ever since been despatched thither. . . . With the disappearance of the carpet-bag and negro governments, the third era in the political history of the South since the war began. The first had been that of exclusively white suffrage; the second, that of predominantly negro suffrage. In the third, universal suffrage and complete legal equality were soon perceived to mean in practice the full supremacy of the whites. To dislodge the coloured man from his rights was impossible, for they were secured by the Federal Constitution which prevails against all State action. The idea of disturbing them was scarcely entertained. Even at the election of 1873 the Southern Democrats no more expected to repeal the Fifteenth Amendment than the English Tories expected at the election of 1874 to repeal the Irish Church Disestablishment Act of 1869. But the more they despaired of getting rid of the amendment, the more resolved were the Southern people to prevent it from taking any effect which could endanger their supremacy. They did not hate the negro, certainly not half so much as they hated his white leaders by whom they had been robbed. ‘We have got,’ they said, ‘to save civilization,’ and if civilization could be saved only by suppressing the coloured vote, they were ready to suppress it. . . . The modes of suppression have not been the same in all districts and at all times. At first there was a good deal of what is called ‘bulldozing,’ i. e. rough treatment and terrorism, applied to frighten the coloured men from coming to or voting at the polls. Afterwards, the methods were less harsh. Registrations were so managed as to exclude negro voters, arrangements for polling were contrived in such wise as to lead the voter to the wrong place so that his vote might be refused; and, if the necessity arose, the Republican candidates were counted out, or the election returns tampered with. ‘I would stuff a ballot-box,’ said a prominent man, ‘in order to have a good, honest government;’ and he said it in good faith, and with no sense of incongruity. Sometimes the local negro preachers were warned or paid to keep their flocks away. . . . Not-

withstanding these impediments, the negro long maintained the struggle, valuing the vote as the symbol of his freedom, and fearing to be re-enslaved if the Republican party should be defeated. Leaders and organizers were found in the Federal office-holders, of course all Republicans. . . . After 1884, however, when the presidency of the United States passed to a Democrat, some of these office-holders were replaced by Democrats and the rest became less zealous. . . . Their friends at the North were exasperated, not without reason, for the gift of suffrage to the negroes had resulted in securing to the South a larger representation in Congress and in presidential elections than it enjoyed before the war, or would have enjoyed had the negroes been left unfranchised. They argued, and truly, that where the law gives a right, the law ought to secure the exercise thereof; and when the Southern men replied that the negroes were ignorant, they rejoined that all over ‘t’ country there were myriads of ignorant voters, mostly recent immigrants, whom no one thought of excluding. Accordingly in 1890, having a majority in both Houses of Congress and a President of their own party, the Republican leaders introduced a bill subjecting the control of Federal elections to officers to be appointed by the President, in the hope of thus calling out a full negro vote, five sixths of which would doubtless have gone to their party. The measure appeared to dispassionate observers quite constitutional, and the mischief it was designed to remedy was palpable. . . . It passed the House, but was dropped in the Senate under the threat of an obstructive resistance by the (then Democratic) minority. Secure, however, as the dominance of the whites seems now to be against either Northern legislation or negro revolt, the Southern people are still uneasy and sensitive on the subject. . . . This horror of negro supremacy is the only point in which the South cherishes its old feelings. Hostility to the Northern people has almost disappeared. . . . Just because they felt that they had fought well, they submitted with little resentment, and it has become a proverb among them that the two classes which still cherish bitterness are the two classes that did not fight,—the women and the clergy. . . . Not, however, till the whites regained control between 1870 and 1876, did the industrial regeneration of the country fairly begin. Two discoveries coincided with that epoch which have had an immense effect in advancing material prosperity, and changing the current of men’s thoughts. The first was the exploration of the mineral wealth of the highland core of the country. . . . The second discovery was that of the possibility of extracting oil from the seeds of the cotton plant, which had formerly been thrown away, or given to hogs to feed on. The production of this oil has swelled to great proportions, making the cultivation of cotton far more profitable. . . . Most of the crop now raised, which averages eight millions of bales, and in 1894 was expected to exceed ten millions (being more than double that which was raised, almost wholly by slave labour, before the war), is now raised by white farmers; while the mills which spin and weave it into marketable goods are daily increasing and building up fresh industrial communities.”—J. Bryce, *The American Commonwealth* (3d ed.), ch. 92 (p. 2).

A. D. 1870.—The Ninth Census.—Total population, 38,558,371 (exceeding that of 1860 by 7,115,049), classed and distributed as follows:

North Atlantic division.		
	White.	Black.

Grand total..... 33,589,377 4,880,009
 In addition the census shows 63,199 Chinese, 55 Japanese, and 25,731 civilized Indians, making

a total of 38,558,371, as stated above. In the decade preceding this census the immigrant arrivals numbered 2,466,752, of which 1,100,970 were from the British Islands, and 1,073,429 from other parts of Europe.

A. D. 1871.—Renewed Negotiations with Great Britain.—The Joint High Commission, the Treaty of Washington and the Geneva Award. See ALABAMA CLAIMS: A. D. 1869-1871; 1871; and 1871-1872.

A. D. 1871.—The first Civil-Service Reform Act. See CIVIL-SERVICE REFORM IN THE UNITED STATES.

A. D. 1871 (April).—The Force Bill.—At the extra session of Congress, which met March 4, 1871 a sweeping Act was passed to enforce the Fourteenth Amendment. "This Act allowed suit in Federal courts by the party injured against any person who should in any way deprive another of the rights of a citizen; it made it a penal offence to conspire to take away from any person the rights of a citizen; it provided that inability, neglect, or refusal by any State to suppress such conspiracy, to protect the rights of its citizens, or to call upon the President for aid, should be 'deemed a denial by such State of the equal protection of the laws' under the XIVth Amendment; it declared such conspiracies, if not suppressed by the authorities, 'a rebellion against the Government of the United States'; it authorized the President, 'when in his judgment the public safety shall require it,' to suspend the privilege of the writ of habeas corpus in any district, and suppress the insurrection by means of the army and navy; and it excluded from the jury-box any person 'who shall, in the judgment of the court, be in complicity with any such combination or conspiracy.' The authority to suspend the privilege of the writ of habeas corpus was to cease 'after the end of the next regular Session of Congress.'—A. Johnston, *Hist. of Am. Politics*, 2d ed., p. 214.

ALSO IN: *Annual Cyclopaedia*, 1871, p. 228.

A. D. 1872.—Decision of the San Juan Water Boundary Question by the Emperor of Germany. See SAN JUAN OR NORTHWESTERN WATER-BOUNDARY QUESTION.

A. D. 1872.—The Twenty-second Presidential Election.—The leading candidates for President in 1872 were General Grant, nominated for re-election by the main body of the Republican Party, and Horace Greeley, of New York, put forward by a revolted section of that party and accepted and supported by the Democratic Party. "In 1870 the Republican party in Missouri had split into two parts. The 'Radical' wing wished to maintain for the present the disqualifications imposed on the late rebels by the State Constitution during the war; the 'Liberal' wing, headed by B. Gratz Brown and Carl Schurz, wished to abolish these disqualifications and substitute 'universal amnesty' and universal enfranchisement.' Supported by the Democrats, the Liberal Republicans carried the State, though opposed by the Federal office-holders and the influence of the Administration. This success stimulated a reaction in the National Republican party, many of whose members believed that the powers of the Federal Government over the local concerns of the States had already been enforced up to or beyond constitutional limits, that the various enforcement Acts were designed rather for the political advance-

ment of President Grant's personal adherents than for the benefit of the country, the freedmen, or even of the Republican party; and that the efforts to police the Southern States by the force of the Federal Government ought to cease. In the spring of 1871 the Liberal Republicans and Democrats of Ohio began to show symptoms of common feeling on these subjects, and during the summer the 'Liberal' movement continued to develop within the Republican party. January 21st, 1872, the Missouri Liberals issued a call for a National Convention at Cincinnati in the following May." At the meeting in Cincinnati the Liberal Republican Convention nominated Horace Greeley for President, and B. Gratz Brown for Vice President. The Democratic National Convention which met at Baltimore, June 9th, adopted these candidates, with the "platform" on which they were nominated. "A few recalcitrant Democrats met at Louisville, Ky., September 3d, and nominated Charles O'Connor, of New York, and John Quincy Adams, of Massachusetts."—A. Johnston, *Hist. of Am. Politics*, 2d ed., ch. 22.—The Prohibitionists put in nomination James Black, of Pennsylvania, for President, and John Russell, of Michigan, for Vice President. The Republican nominee for Vice President, on the ticket with General Grant, was Henry Wilson, of Massachusetts. The popular vote cast was 3,585,444, or 3,507,132, for Grant, and 2,843,563, or 2,834,125 for Greeley (according to the return that may be counted from Louisiana, where two rival returning boards disputed authority with one another); 29,489 for O'Connor and 5,608 for Black. Mr. Greeley died on the 29th of November, 1872, before the electoral colleges cast their vote, the consequence being that the Democratic votes in the colleges were scattered. The following is the electoral vote for President as counted by Congress: Grant, 286; Thomas A. Hendricks, 42; B. Gratz Brown 18; Charles J. Jenkins 2; David Davis, 1. The votes of Louisiana and Arkansas were rejected, as were three votes cast in Georgia for Horace Greeley, deceased.—E. Stanwood, *Hist. of Presidential Elections*, ch. 23.

A. D. 1872-1873.—The Credit Mobilier Scandal. See CREDIT MOBILIER SCANDAL.

A. D. 1873.—The so-called "demonetization of silver."—"We have heard a great deal in later years about the surreptitious demonetization of silver in 1873. There was, however, vastly too much criticism wasted on the act of 1873; for the real demonetization of silver in the United States was accomplished in 1853. It was not the result of accident; it was a carefully considered plan, deliberately carried into legislation in 1852, twenty years before its nominal demonetization by the act of 1873. . . . In 1853 the single standard was gold. This was a situation which no one rebelled against. Indeed, no one seemed to regard it as anything else than good fortune (except so far as the subsidiary coins had disappeared). . . . In the debates it was proposed that, as the cause of the change in the relative values of gold and silver was the increased product of gold, the proper remedy should be to increase the quantity of gold in the gold coins. . . . There was no discussion as to how a readjustment of the ratio between the

two metals might be reached, for it was already decided that only one metal was to be retained. This decision, consequently, carried us to a point where the ratio between the two metals was not of the slightest concern. And so it remained. The United States had no thought about the ratios between gold and silver thereafter until the extraordinary fall in the value of silver in 1876. . . . In the provisions of the act of 1853 nothing whatever was said as to the silver dollar-piece. It had entirely disappeared from circulation years before, and acquiescence in its absence was everywhere found. No attempt whatever was thereafter made to change the legal ratio in order that both metals might again be brought into concurrent circulation. Having enough gold, the country did not care for silver. . . . In 1873 we find a simple legal recognition of that which had been the immediate result of the act of 1853, and which had been an admitted fact in the history of our coinage during the preceding twenty years. In 1853 it had been agreed to accept the situation by which we had come to have gold for large payments, and to relegate silver to a limited service in the subsidiary coins. The act of 1873, however, dropped the dollar piece out of the list of silver coins. In discontinuing the coinage of the silver dollar, the act of 1873 thereby simply recognized a fact which had been obvious to everybody since 1849. It did not introduce anything new, or begin a new policy. Whatever is to be said about the demonetization of silver as a fact must center in the act of 1853. Silver was not driven out of circulation by the act of 1873, which omitted the dollar of 412½ grains, since it had not been in circulation for more than twenty-five years. . . . The act of February 12, 1873, is known as the act which demonetized the silver dollar. Important consequences have been attached to it, and it has even been absurdly charged that the law was the cause of the commercial crisis of September, 1873. As if a law which made no changes in the actual metallic standard in use, and which had been in use thus for more than twenty years, had produced a financial disaster in seven months! To any one who knows of the influence of credit and speculation, or who has followed the course of our foreign trade since the Civil War, such a theory is too absurd to receive more than passing mention. To the year 1873 there had been coined of 412½-grain dollars for purposes of circulation, only \$1,439,457, and these were coined before 1806."—J. L. Laughlin, *Hist. of Bimetallism in the U. S.*, pt. 1, ch. 5 and 7.—See, also, MONEY AND BANKING: A. D. 1848-1893.

A. D. 1873.—The Panic.—"The panic of 1873 differed very materially from the other great panics by which this country has been afflicted. Lack of capital was the main difficulty in 1837 and 1857. Population had increased so rapidly that millions of human beings were out of work, and apprehension spread lest there might not be food enough to go around. In 1873, however, men were well employed. Business of all kinds was in excellent condition, and no one doubted for a moment that there would be plenty for every man to eat. The excellent condition of trade, in fact, was the chief factor in the panic of 1873. Every one was busy, and wanted money with which to carry on his trade. For two years before the crash, money had been

in great demand. Railroads had recently been built to an extent such as this country had never known before. Whereas, in 1861, railroad construction amounted to only 651 miles, in 1871 it reached the then unprecedented figure of 7,779 miles. This new mileage, moreover, was mainly in the West, where the immediate remuneration was but slight. Railroads were being pushed forward into regions which could not be expected to return an income for twenty years. The cost of railroad construction in this country during the five years preceding September, 1873, was estimated by the Comptroller of the Currency at no less than \$1,700,000,000. The money to pay for this extravagant building was obtained, not from the earnings of the old portions of the road, but from enormous issues of railroad bonds, placed to a large extent among the banks of this country, but still more among the capitalists of Europe. In the Northern Pacific Company occurred the most flagrant abuse of railroad credit the world has ever known. . . . One after another of the Western roads defaulted in paying the interest on its bonds. The result was, that, by the summer of 1873, the market for new issues of railroad bonds had practically disappeared. Meantime the banks and bankers of New York were loaded down with railroad paper. The railroads had borrowed money for short periods in the expectation that before their notes fell due they would have raised the money to make payment by the sale of bonds. A temporary relief was felt, in June, 1873, through the customary midsummer ease in money. But this temporary respite only made the difficulty worse. Deluded by the momentary calm, the New York banks added still further to their loans. . . . The year before, money had grown tight early in September, and the more cautious banks began gradually to call their loans, fearing that the experience of 1872 might be renewed. But the rates for money did not noticeably increase, and the only cause for excitement early in the month was the failure, on September 8, of the Mercantile Warehouse and Security Company, owing to advances on bonds of the Missouri, Kansas & Texas Railroad. This was followed, on the 13th, by the failure of Kenyon Cox & Co., of which firm Daniel Drew was a member, caused by loans to the Canada Southern Railroad. By this time the sky was heavily overcast. Money was now advancing rapidly, the New York banks were calling loans on every hand, and new loans on railroad paper were scarcely to be had at all. Suddenly, on the 18th of September, the tempest burst. On the morning of that dark day, Jay Cooke, the agent of the U. S. Government, with some four millions of deposits from all parts of the country, and his fifteen millions of Northern Pacific paper, declared his inability to meet his debts. The report flew down 'the street' with the ferocity of a cyclone. Railroad shares were thrown upon the market by the bushel, in utter disregard of their intrinsic value. . . . Stock brokers continued to announce their failures all day long. Nothing seemed able to withstand the shock, and when, on September 19, the great banking house of Fisk & Hatch went under, terror became universal. A run was started on the Union Trust Co., which was believed to have close intimacy with Vanderbilt's railroads, and on the Fourth National Bank, whose dealings were

largely with Wall street brokers. The panic was by this time so general that the banks began to refuse one another's certified checks, and on the 20th a considerable number of the New York banks suspended payment. On that day the Union Trust Co., the National Trust Co., and the National Bank of the Commonwealth all closed their doors. At 11 o'clock on the 20th, the New York Stock Exchange, for the first time in its history, closed its doors, and the Governing Committee announced that the board would not be opened till further notice. This high-handed measure caused an outcry for the moment, but on calmer judgment it was generally conceded that the measure was a good one. On the evening of that Saturday, September 20, the Clearing House Association met and adopted a plan similar to that adopted in the panic of 1857, and in substance this: Any bank in the Clearing House Association might deposit with a committee of five persons, to be appointed for that purpose, an amount of its bills receivable, or other securities to be approved by the committee, and the committee were then to issue to that bank certificates of deposit, bearing interest at 5 per cent, per annum, to an amount not exceeding 75 per cent. of the securities or bills receivable so deposited. These certificates could be used in settlement of balances at the Clearing House for a period not to extend beyond the 1st of the following November, and they were to be received by creditor banks during that period daily, in the proportion which bore to the aggregate amount of the debtor balances paid at the Clearing House. The amount of certificates should not exceed \$10,000,000. The legal tenders belonging to the associated banks were to be considered and treated as a common fund held for mutual aid and protection, and the committee were given power to equalize the same by assessment or otherwise in their discretion. This scheme, simple as it was, proved of the utmost efficiency in mitigating the evils that must always follow a distrust among banks. The lull occasioned by the intervening Sunday was employed by President Grant and Secretary of the Treasury Richardson in a visit to New York. All day long they gave audience to business men at the Fifth Avenue Hotel. Suggestions of every description were offered as a remedy for the disease. The most feasible proposition, and that which was finally adopted, was the purchase of Government bonds. . . . Shortly after his return from the Fifth Avenue Hotel, Secretary Richardson announced his intention to buy Government bonds, and, in a few days, \$13,000,000 of the U. S. greenbacks were thus absorbed. . . . On Tuesday, September 30, the Stock Exchange was once more opened. It was expected on all hands that this would be the signal for another onslaught. But so general was this expectation that most persons refrained for the moment from offering their stocks. As a result, the market opened a trifle higher than it had closed ten days before. It continued to advance, moreover, till October 7. On that day a new decline set in, and on October 14 came a fearful drop, which carried prices lower than on September 20. From this reaction there was a gradual improvement till October 31, when the failure of Hoyt, Sprague & Co., the great mill owners of Providence and New York, once more shook the

market and brought stocks, on October 31 and November 1, to the lowest prices of the year. With those prices it became manifest that the panic had reached its end. Money had already begun to flow to New York both from Europe and from the West, and the public, tempted by the excessive decline in stocks, began to purchase freely. The result was a steady though gradual improvement through the remainder of the year."—*The Panic of 1873* (*Banker's Mag.*, Nov., 1891).

A. D. 1875.—The second Civil Rights Bill and its declared unconstitutionality.—"Congress, to give full effect to the fourteenth amendment to the federal Constitution, passed an act in 1875, which provided that all persons within the jurisdiction of the United States shall be entitled to the full and equal enjoyment of the accommodations, advantages, facilities, and privileges of inns, public conveyances on land and water, theatres and other places of public amusement, subject only to the conditions and limitations established by law, and applicable alike to citizens of every race and color, regardless of any previous condition of servitude. . . . In 1883 the act was held unconstitutional. The Fourteenth Amendment, says Bradley, J., does not 'invest Congress with power to legislate upon subjects which are within the domain of State legislation, but to provide modes of relief against State legislation or State action of the kinds referred to. It does not authorize Congress to create a code of municipal law for the regulation of private rights; but to provide modes of redress against the operation of State laws and the action of State officers, executive and judicial, when these are subversive of the fundamental rights specified in the amendment.' Civil Rights Cases, 109 U. S. 3."—T. M. Cooley, *Constitutional Limitations which rest upon the Legislative Power of the States*, 6th ed., pp. 733-734 and foot-note.

A. D. 1876.—Admission of Colorado into the Union. See COLORADO: A. D. 1806-1876.

A. D. 1876.—The Sioux War.—Battle of Little Big Horn.—Death of General Custer.—Hostilities with a powerful confederation of Sioux or Dakota tribes of Indians, in the northwest, were brought about, in the spring of 1876, by gold discoveries in the Black Hills and the consequent rush of miners into the Indian reservation. To subdue the hostile Indians, three military expeditions were set in motion,—from Fort Fetterman, under General Crook, from Fort Ellis, in Montana, under General Gibbon, and from Bismarck, in Dakota, under General Terry. These were to converge on the upper waters of the Yellowstone, where Sitting Bull, the able chief of the Sioux, had his camp, in the valley of the small stream commonly known as the Little Big Horn. The Sioux warrior used the advantages of his central position like a Napoleon, striking his assailants in turn, as they came near, with far stronger forces than they knew him to possess. Crook was forced back; Gibbon was brought to a halt. Terry came last on the ground. His command included the famous Seventh Cavalry,—the regiment of General Custer. In ignorance of the surprising number of braves which Sitting Bull had collected, Custer was sent to make a

detour and attack the Indian camp from the rear. Doing so, on the 25th of June, he rode into a death trap. Five companies of the regiment, with its heroic commander at their head, were surrounded so overwhelmingly that not one man escaped. The remaining seven companies were too far from the others to cooperate in the attack. They fortified a bluff and held their ground until the 27th, when Terry and Gibbon came to their relief. The Indians retreated toward the mountains. The campaign was soon resumed, and prosecuted through the fall and winter, until Sitting Bull and some of his followers fled into British America and the remaining hostiles surrendered.—F. Whittaker, *Complete Life of General George A. Custer*, Bk. 8, ch. 4-5.

A. D. 1876.—The Centennial Exhibition at Philadelphia.—In 1871, the Congress of the United States passed an act to provide for the commemoration, in 1876, of the centennial anniversary of the Declaration of Independence, by holding an exhibition, at Philadelphia, "of American and foreign arts, products, and manufactures." The act created a commission, composed of one delegate from each state and territory of the United States, to which commission was committed the "exclusive control" of the contemplated exhibition; though the State of Pennsylvania was required to make provision for the erection of suitable buildings. "To the surprise of those writers who had contended that there would be no exhibits from abroad, there was shown a universal desire on the part of all nations to co-operate liberally in the World's Fair of 1876. These different governments appropriated large sums of money, selected as commissioners men of the highest standing, loaned to the exhibition their most valuable works of art, and in every sense indicated a desire on the part of the Old World to forget the past and to unite itself closely with the future of the New. Singular as it may seem, there was no disposition on the part of Congress to facilitate and aid in carrying out this grand enterprise. The money had to be raised by private subscription, from all sections of the United States, and it was only by a determined and persistent effort with Congress that at last a government loan was secured of \$1,500,000, which loan has been called up by the government and repaid since that time. The City of Philadelphia appropriated \$1,000,000 and the State of Pennsylvania \$1,500,000, and all other states, notably New Jersey, Delaware, Connecticut, New Hampshire, etc., subscribed to the stock issued by the Centennial Board of Finance. In 1873, the location so well known as Fairmount Park was selected for the exposition, and immediate possession given by the City of Philadelphia, free from all expense or charge, and who also liberally contributed to the success of the World's Fair 1876 by the erection of two magnificent bridges over the Schuylkill at a cost of over \$2,500,000, in addition to the various improvements made in Fairmount Park. . . . The total number of exhibitors at the World's Fair 1876 was estimated at 30,864, the United States heading the list with 8,175; Spain and her colonies, 8,322; Great Britain and colonies, 3,584; and Portugal, 2,462 . . .

The exhibition opened on the 10th of May, 1876, and from that time until Nov. 10, 1876, there were admitted a grand total of 9,910,966 persons, of whom 8,004,274 paid admission fees amounting to \$3,813,724.40.—*C. B. Norton, World's Fair, ch. 6.*

A. D. 1876-1877.—The Twenty-third Presidential Election and its disputed result.—The Electoral Commission.—Four candidates for the Presidency were named and voted for by as many different parties in 1876, although the contest of the election was practically between the Republicans and Democrats, as in previous years. The former, after a prolonged struggle of rival factions, put in nomination ex-Governor Rutherford B. Hayes, of Ohio, with William A. Wheeler, of New York, for Vice-President. The candidates of the Democratic party were ex-Governor Samuel J. Tilden, of New York, for President, and Thomas A. Hendricks, of Indiana, for Vice-President. Before these nominations were made, the Prohibition Reform party and the party calling itself the Independent, but popularly known as the "Greenback party," had already brought candidates into the field. The first named put Green Clay Smith, of Kentucky and G. T. Stewart, of Ohio, in nomination; the nominees of the last named were Peter Cooper, of New York, and Samuel F. Cary, of Ohio. "Thirty-eight States participated in the election. Colorado had been admitted to the Union in August, 1876, and, in order to save an additional election, the choice of electors for that occasion was conferred upon the legislature. All the other States appointed them by popular vote. The polls had hardly closed on the day of election, the 7th of November, when the Democrats began to claim the presidency. The returns came in so unfavorably for the Republicans that there was hardly a newspaper organ of the party which did not, on the following morning, concede the election of Mr. Tilden. He was believed to have carried every Southern State, as well as New York, Indiana, New Jersey, and Connecticut. The whole number of electoral votes was 369. If the above estimate were correct, the Democratic candidates would have 203 votes, and the Republican candidates 166 votes. But word was sent out on the same day from Republican headquarters at Washington that Hayes and Wheeler were elected by one majority; that the States of South Carolina, Florida, and Louisiana had chosen Republican electors. Then began the most extraordinary contest that ever took place in the country. The only hope of the Republicans was the perfect defence of their position. The loss of a single vote would be fatal. An adequate history of the four months between the popular election and the inauguration of Mr. Hayes, would fill volumes. Space can be given here for only a bare reference to some of the most important events. Neither party was over-scrupulous, and no doubt the acts of some members of each party were grossly illegal and corrupt. . . . In four States, South Carolina, Florida, Louisiana, and Oregon, there were double returns. In South Carolina there were loud complaints that detachments of the army, stationed near the polls, had prevented a fair and free election. Although the board of State canvassers certified to the choice of the Hayes electors, who were chosen on the face of the returns, the Democratic candidates for

electors met on the day fixed for the meeting of electors and cast ballots for Tilden and Hendricks. In Florida there were allegations of fraud on both sides. The canvassing board and the governor certified to the election of the Hayes electors, but, fortified by a court decision in their favor, the Democratic electors also met and voted. In Louisiana there was anarchy. There were two governors, two returning boards, two sets of returns showing different results, and two electoral colleges. In Oregon the Democratic governor adjudged one of the Republican electors ineligible, and gave a certificate to the highest candidate on the Democratic list. The Republican electors, having no certificate from the governor, met and voted for Hayes and Wheeler. The Democratic elector, whose appointment was certified to by the governor, appointed two others to fill the vacancies, when the two Republican electors would not meet with him, and the three voted for Tilden and Hendricks. All of these cases were very complicated in their incidents, and a brief account which should convey an intelligible idea of what occurred is impossible. . . . Thus, for the first and only time in the history of the country, the election ended in such a way as to leave the result in actual doubt, and in two States the number of legal votes given for the electors was in dispute. . . . As soon as the electoral votes were cast it became a question of the very first importance how they were to be counted. It was evident that the Senate would refuse to be governed by the 22nd joint rule [under which no electoral vote to which any member of either House objected could be counted unless both Houses agreed to the counting of it]—in fact the Senate voted to rescind the rule,—and it was further evident that if the count were to take place in accordance with that rule it would result in throwing out electoral votes on both sides on the most frivolous pretexts. It was asserted by the Republicans that, under the Constitution, the President of the Senate alone had the right to count, in spite of the fact that the joint rule, the work of their party, had assumed the power for the two Houses of Congress. On the other hand, the Democrats, who had always denounced that rule as unconstitutional, now maintained that the right to count was conferred upon Congress. A compromise became necessary, and the moderate men on both sides determined to effect the establishment of a tribunal, as evenly divided politically as might be, which should decide all disputed questions so far as the Constitution gave authority to Congress to decide them. The outcome of these efforts was the Electoral Commission Law of 1877," by which a Commission was created, consisting of fifteen members—the Senate appointing five from its own body, the House five, and four Associate-Justices of the Supreme Court, designated in the bill, appointing a fifth from the same court. The Senators selected were Edmunds, Morton, Frelinghuysen (Republicans), and Thurman and Bayard (Democrats). The Representatives were Payne, Hinton, Abbott (Democrats), and Garfield and Hoar (Republicans). The four Supreme Court Justices designated by the Act were Clifford, Field (Democrats), Strong and Miller (Republicans). They selected for the fifth member of the Commission Justice Bradley, who was a Republican. "The

natural choice of the justices would have been their associate, David Davis; but he had been elected only five days before as senator from Illinois, and it was regarded by him and by others as improper that he should serve. Thus the commission consisted of eight Republicans and seven Democrats. If Judge Davis had been selected, there would have been only seven Republicans, and the result of the operation of the law might have been different. . . . The count had begun on the first day of February, and the final vote upon Wisconsin was not reached until the early morning of March 2. As question after question was decided uniformly in favor of the Republicans, it became evident to the Democrats that their case was lost. They charged gross partisanship upon the Republican members of the Electoral Commission, in determining every point involved in the dual returns for their own party, though as a matter of fact there does not seem to have been much room for choice between the two parties on the score of partisanship. Each member of the commission favored by his vote that view which would result in adding to the electoral vote of his own party. But as the result of the count became more and more certainly a Republican triumph, the anger of the Democrats arose. Some of them were for discontinuing the count; and the symptoms of a disposition to filibuster so that there should be no declaration of the result gave reason for public disquietude. But the conservative members of the party were too patriotic to allow the failure of a law which they had been instrumental in passing to lead to anarchy or revolution, and they sternly discountenanced all attempts to defeat the conclusion of the count. The summing up of the votes [Hayes, 185; Tilden, 184], was read by Mr. Allison of Iowa, one of the tellers on the part of the Senate, at a little after four o'clock, on the morning of the 2d of March, amid great excitement. . . . Mr. Ferry thereupon declared Rutherford B. Hayes elected President, and William A. Wheeler Vice-President, of the United States. The decision was acquiesced in peaceably by the whole country, and by men of every party. But the Democrats have never ceased to denounce the whole affair as a fraud. . . . It is to be hoped that the patriotism of the American people and their love of peace may never again be put to such a severe test as was that of 1876 and 1877." According to the Democratic count, the popular vote stood: Tilden, 4,300,590; Hayes, 4,036,208; Cooper, 81,737; Smith, 9,522. The Republican count gave: Tilden, 4,285,992; Hayes, 4,033,768. —E. Stanwood, *Hist. of Presidential Elections*, ch. 24.

A. D. 1877-1891.—The Farmers' Alliance. —The Farmers' Alliance "is the outcome of a movement which first culminated, shortly after the Civil War had ended, in the formation of the Patrons of Husbandry, or, as they were more commonly called, 'The Grange,' the object of which organization was the mutual protection of farmers against the encroachments of capital. The collapse of the Grange was due to a mistake it had made in not limiting its membership orig-

inally to those whose interests were agricultural. The first 'Alliance' was formed in Texas, to oppose the wholesale buying up of the public lands by private individuals. . . . For about ten years the Alliance remained a Southern organization. In 1887, about ten years after the first local Alliance in Texas was formed, and five after the State Alliance, the 'Farmers' Union' of Louisiana united with it, under the name of the 'Farmers' Alliance and Co-operative Union of America.' Branches were quickly established," in other Southern States. "Later in the same year, the 'Agricultural Wheel,' a similar society operating in the States of Arkansas, Missouri, Kentucky, and Tennessee, was amalgamated with the Alliance, the new organization being called 'The Farmers' and Laborers' Union of America.' The spirit of the movement had simultaneously been embodied in the 'National Farmers' Alliance' of Illinois, which was started in 1877, and quickly extended into Wisconsin, Minnesota, Iowa, Missouri, Kansas, and Dakota. A minor organization, the 'Farmers' Mutual Benefit Association,' was started in 1887, in the southern part of Illinois. Finally, in 1889, at a meeting held in St. Louis, these different bodies were all practically formed into a union for political purposes, aiming at legislation in the interests of farmers and laborers; and the present name of the 'Farmers' Alliance and Industrial Union' was chosen. . . . Its main professed object is the destruction of the money power in public affairs, and the opposition of all forms of monopoly. It demands the substitution of legal tender treasury notes for National bank notes; also an extension of the public currency sufficient for the transaction of all legitimate business, the money to be given to the people on security of their land, at the lowest rates consistent with the cost of making and handling it. It demands government control, not only of money, but of the means of transportation and every other public function."—*Quarterly Register of Current Hist.*, v. 1, p. 132.

A. D. 1878.—The Bland Silver Bill.—The act familiarly known as the Bland Bill was passed by Congress in 1878. "Although the silver dollar of which the coinage was resumed in 1878 dates back as a coin to the earlier days of the Republic, its reissue in that year marks a policy so radically new that the experience of previous years throws practically no light on its working. The act of 1878 provided for the purchase by the government, each month, of not less than two million dollars' worth, and not more than four million dollars' worth, of silver bullion, for coinage into silver dollars at the rate of 412½ grains of standard silver (or 371½ grains of fine silver) for each dollar. The amount of the purchases, within the specified limits, was left to the discretion of the Secretary of the Treasury. As every Secretary of the Treasury, throughout the period in which the act was in force, kept to the minimum amount, the practical result was a monthly purchase of two million dollars' worth of silver bullion. The act is sometimes described as having called for a monthly issue of two million silver dollars; but this was not the exact situation. The amount

of silver obtainable with two million dollars obviously varies according to the price of the metal in terms of the dollars with which the purchases are made. In February, 1878, when the first purchases were made, those dollars were the Inconvertible United States notes, or greenbacks, worth something less than their face in gold. . . . When specie payments were resumed, on the first of January, 1879, and the greenbacks became redeemable in gold, the measure of value in the United States became gold, and the extent of the coinage of silver dollars under the act of 1878 became simply a question of how much silver bullion could be bought with two million dollars of gold. The price of silver in 1878 was, in terms of gold, not far from a dollar for an ounce of standard silver. After 1878 it went down almost steadily. . . . The silver dollar of 412½ grains contains less than an ounce (480 grains) of standard silver. The monthly purchase of two million dollars' worth of silver therefore yielded more than two million silver dollars, the amount being obviously greater as the price of silver went lower. On the average, the monthly yield was not far from two and a half millions of silver dollars. So much each month, therefore, or thirty millions of silver dollars a year, was roughly the addition to the currency of the community from the act of 1878. An important provision of the act of 1878 was that authorizing the issue of silver certificates against the deposit of silver dollars. . . . The dollars and certificates between them constitute what we may call the silver currency of the act of 1878. The passage of that act was due to causes easily described. It was part of the opposition to the contraction of the currency and the resumption of specie payments, which forms the most important episode of our financial history between 1867 and 1879. . . . No doubt some additional force was given to the movement in favor of the use of silver from the desire of the silver-mining States and their representatives, that the price of the metal should be kept up through a larger use of it for coinage. But this element, while sometimes prominent in the agitation, was not then, as it has not been in more recent years, of any great importance by itself. The real strength of the agitation for the wider use of silver as money comes from the conviction of large masses of the people that the community has not enough money."—F. W. Taussig, *The Silver Situation in the U. S.*, pt. 1.—See, also, MONEY AND BANKING: A. D. 1848-1893.

A. D. 1880.—The Twenty-fourth Presidential Election.—For the twenty-fourth Presidential election, in 1880, the Republicans, meeting at Chicago, June 2, named General James A. Garfield, of Ohio, as its candidate for President and Chester A. Arthur, of New York, for Vice President. The so-called Greenback party (which had appeared four years before, in the election of 1876), meeting at Chicago on the 9th of June, put in nomination, for President, James B. Weaver of Iowa, and, for Vice President, B. J. Chambers, of Texas. The main object and principle of the Greenback party was set forth in the following declarations of its platform: "That the right to make and issue money is a sovereign power to be maintained by the people for the common benefit. The delegation of this right to corporations is a surrender of the central attribute of sovereignty. . . . All money, whether

metallic or paper, should be issued and its volume controlled by the government, and not by or through banking corporations, and, when so issued, should be a full legal tender for all debts, public and private. . . . Legal tender currency [the greenback notes of the civil-war period] should be substituted for the notes of the national banks, the national banking system abolished, and the unlimited coinage of silver, as well as gold, established by law." The Prohibitionists (Temperance), in convention at Cleveland, June 17, nominated Neal Dow, of Maine, for President, and A. M. Thompson, of Ohio, for Vice President. On the 23d of June, at Cincinnati, the Democratic party held its convention and nominated General Winfield S. Hancock, of Pennsylvania, for President, and William H. English, of Indiana, for Vice President. At the election, in November, the popular vote cast was 4,454,416 for Garfield, 4,444,953 for Hancock, 308,578 for Weaver, and 10,305 for Dow. The electoral votes were divided between Garfield and Hancock, being 214 for the former and 155 for the latter. Every former slave-state was carried by the Democratic party, together with New Jersey, California and Nevada.—E. McPherson, *Handbook of Politics for 1880 and 1882.*

In addition the census shows 105,465 Chinese, 148 Japanese, and 66,407 civilized Indians, making a total of 50,155,783, as stated above. The immigrants arriving in the country during the preceding ten years numbered 2,944,605, of whom 989,163 were from the British Islands and 1,357,801 from other parts of Europe.

A. D. 1881.—The brief administration of President Garfield.—His assassination.—“President Hayes had left the new administration a heritage of hatred from the Stalwart element of the Republican party. It was President Garfield’s chief wish, politically, to heal up the chasm which the past had opened, and not to recognize one faction more than another. . . . The defeat of the Stalwarts at Chicago [see STALWARTS AND HALF-BREEDS], by Garfield, naturally tended to transfer their hostility from the outgoing to the incoming President. For months before the inauguration, the embarrassment which threatened Garfield was foreseen by the country.” The inevitable outbreak of hostilities occurred the moment that the President made a nomination in New York which was distasteful to the arrogant Senator from that State, Roscoe Conkling, who imperiously led the Stalwart forces. This happened upon the presentation of the name of William H. Robertson, Collector of the Port of New York. In order to force a division in the Republican party upon the quarrel between himself and President Garfield, Senator Conkling resigned his seat in the Senate of the United States and presented himself to the Legislature of New York as a candidate for re-election. He counted, without doubt, upon an easy triumph, expecting to be returned to Washington, bearing the mandate of his party, so to speak, and humbling the President into submissive obedience to his behests. He was disappointed; his re-election was defeated; but the furious contest which went on during some weeks, engendered bitter passions, which had their effect, no doubt, in producing the awful tragedy that soon ensued. By the end of June the clamor of the strife had greatly subsided; the Senate had adjourned, and the weary President made ready

to join Mrs. Garfield at Long Branch, where she was just recovering from a serious illness. “On the morning of the 2d of July . . . the President made ready to put his purpose into execution. Several members of the Cabinet, headed by Secretary Blaine, were to accompany him to Long Branch. A few ladies, personal friends of the President’s family, and one of his sons, were of the company; and as the hour for departure drew near they gathered at the dépôt of the Baltimore and Potomac Railway to await the train. The President and Secretary Blaine were somewhat later than the rest. . . . When the carriage arrived at the station at half-past nine o’clock, the President and Mr. Blaine left it and entered the ladies’ waiting-room, which they passed through arm in arm. A moment afterwards, as they were passing through the door into the main room, two pistol shots suddenly rang out upon the air. Mr. Blaine saw a man running, and started toward him, but turned almost immediately and saw that the President had fallen. It was instantly realized that the shots had been directed with fatal accuracy at the beloved President. Mr. Blaine sprang toward him, as did several others, and raised his head from the floor. . . . A moment after the assassin was discovered. . . . and, in the middle of B Street, just outside of the dépôt, was seized by the policemen and disarmed. A pistol of very heavy caliber was wrenched out of his hand, and it became clear that a large ball had entered the President’s body. The assassin gave his name as Charles Jules Guiteau. . . . [He] was found to be a mixture of fool and fastidiousness, who, in his previous career, had managed to build up, on a basis of total depravity, a considerable degree of scholarship. He was a lawyer by profession, and had made a pretense of practicing in several places—more particularly in Chicago. . . . In the previous spring, about the time of the inauguration, he had gone to Washington to advance a claim to be Consul-General at Paris. . . . Hanging about the Executive Mansion and the Department of State for several weeks, he seemed to have conceived an intense hatred of the President, and to have determined on the commission of the crime.” The wounded President lingered for eighty days, during which long period of suffering there were many alternations of hope and fear in his case. He died on the 19th of September. His assassin was tried and executed for the crime, though much doubt of his sanity exists. The Vice-President, Chester A. Arthur, became President for the remainder of the term.—J. C. Kidpath, *Life and Work of James A. Garfield*, ch. 12-13.

A. D. 1882.—Passage of the Edmunds Bill, to suppress Polygamy in Utah. See UTAH: A. D. 1882-1893.

A. D. 1883.—Passage of the Pendleton Civil Service Reform Bill. See CIVIL-SERVICE REFORM IN THE UNITED STATES.

A. D. 1884.—Financial Disasters.—“The month of May, 1884, concludes the prosperous period which followed the crisis of 1873. During this period the most gigantic speculations in railroads occurred; the zenith of the movement was in 1880, and as early as 1881 a retrograde movement began, only to end in the disasters in question. The decline in prices had been steady for three years; they had sunk little by little under the influence of a ruinous competition, caused by the number of new lines and the

lowering of rates, but above all through the manipulations by the managers on a scale unexampled until now. In connection with the disasters of May, 1884, the names of certain speculators who misused other people's money, such as Ward, of Grant & Ward; Fish, President of the Marine Bank; and John C. Eno, of the Second National Bank, will long be remembered. General Grant, who was a silent partner in Ward's concern, was an innocent sufferer, both in fortune and reputation."—C. Juglar, *Brief Hist. of Panics*, pp. 102-103.

A. D. 1884.—The Twenty-fifth Presidential Election.—Appearance of the Independents or "Mugwumps."—James G. Blaine, of Maine, and General John A. Logan, of Illinois, nominated at Chicago, June 8, were the Republican candidates for President and Vice President, in the election of 1884. The Democratic National Convention, held, likewise, at Chicago, July 9, put forward Governor Grover Cleveland, of New York, as its candidate for President, with Thomas A. Hendricks, of Indiana, for Vice President. General Benjamin F. Butler, of Massachusetts, and General A. M. West, of Mississippi, received double nominations, from the National or Greenback party and an Anti-Monopoly party (so-called) for President and Vice President, respectively; while the Prohibitionists put in nomination John P. St. John, of Kansas, and William Daniel, of Maryland. The election was an exceedingly close one, its result turning upon a plurality of only 1,149 in New York, by which that state was given to Cleveland, with its 36 electoral votes, securing his election. The total popular vote counted as follows: Cleveland, 4,874,986; Blaine, 4,851,981; Butler, 175,870; St. John, 150,369. The electoral vote was divided between Cleveland and Blaine, 219 for the former and 182 for the latter.

—E. McPherson, *Hand-book of Politics*, 1884 and 1886.—*Annual Cyclopaedia*, 1884.—"At the presidential election of 1884 a section of the Republican party, more important by the intelligence and social position of the men who composed it than by its voting power, 'bolted' (to use the technical term) from their party, and refused to support Mr. Blaine. Some simply abstained, some, obeying the impulse to vote which is strong in good citizens in America, voted for Mr. St. John, the Prohibitionist candidate, though well aware that this was practically the same thing as abstention. The majority, however, voted against their party for Mr. Cleveland, the Democratic candidate; and it seems to have been the transference of their vote which turned the balance in New York State, and thereby determined the issue of the whole election in Mr. Cleveland's favour." This group "goes by the name of Mugwumps. . . . The name is said to be formed from an Indian word denoting a chief or aged wise man, and was applied by the 'straight-out' Republicans to their bolting brethren as a term of ridicule. It was then taken up by the latter as a term of compliment; though the description they used formally in 1884 was that of 'Independent Republicans.' . . . The chief doctrine they advocate is . . . the necessity of reforming the civil service by making appointments without reference to party, and a general reform in the methods of politics by selecting men for Federal, State, and municipal offices, with reference rather to personal

fitness than to political affiliations."—J. Bryce, *The American Commonwealth* (3d ed., rev.), ch. 56, with foot-note (v. 2).

A. D. 1885-1888.—Termination of the Fishery Articles of the Treaty of Washington.—Renewed controversies.—The rejected Treaty. See FISHERIES, NORTH AMERICAN: A. D. 1877-1888.

A. D. 1886-1893.—The Bering Sea controversy and arbitration.—"Four serious international controversies have arisen out of the rival claims of Russia, Great Britain, Spain, and the United States to the shores and waters of the northwest coast of the continent of North America. The first of these was in consequence of an attempt of the Spanish Government, in 1790, to prevent the British from trading with the natives of that coast. It was settled by the Nootka Sound Convention of October 28, 1790, by which the subjects of both powers enjoyed equal privileges of trade to all points not already occupied. The second controversy was the result of an attempt of Russia in 1821 to prohibit England and the United States from trading anywhere north of the 51st parallel, or to approach within 100 Italian miles of the coast. Both governments energetically protested and secured treaties in 1824 and 1825, by which they retained the right of fishing and of landing on unoccupied points of that coast. The third controversy was as to the division of the coast between Great Britain and the United States, Spain having by the treaties of 1824 and 1825 accepted the parallel of 54° 40' as her southern boundary. The rival claims of the two remaining powers, after long diplomatic discussion, were settled by the treaty of July 17, 1846, according to which the parallel of 49° was made the dividing line. By the treaty of March 30, 1867, with Russia, all the dominions and claims of that country on the continent of North America and the outlying islands thereof were transferred to the United States. A further, and still pending, controversy arose in 1886 through the seizure by United States vessels of Canadian vessels engaged in the taking of seals in waters not far distant from the Aleutian Islands. The claim of the United States was that it had acquired from Russia exclusive rights in Behring Sea, at least with regard to seal fishing. The British Government representing the Canadians denied that there could be any exclusive rights outside three miles off shore. By an agreement of February 29, 1892, the question has been submitted to arbitration," the arbitrators to give "a distinct decision" upon each of the following five points: "1. What exclusive jurisdiction in the sea now known as the Behring's Sea, and what exclusive rights in the seal fisheries therein, did Russia assert and exercise prior and up to the time of the cession of Alaska to the United States? 2. How far were these claims of jurisdiction as to the seal fisheries recognized and conceded by Great Britain? 3. Was the body of water now known as the Behring's Sea included in the phrase 'Pacific Ocean,' as used in the treaty of 1825 between Great Britain and Russia, and what rights, if any, in the Behring's Sea, were held and exclusively exercised by Russia after said treaty? 4. Did not all the rights of Russia as to the jurisdiction and as to the seal fisheries in Behring's Sea east of the water boundary, in the

treaty between the United States and Russia of the 30th of March, 1867, pass unimpaired to the United States under that treaty? 5. Has the United States any right, and if so, what right, of protection or property in the fur-seals frequenting the islands of the United States in Bering's Sea, when such seals are found outside the ordinary three-mile limit?"—*American History Leaflets*, no. 6.—The arbitrators to whom these points of the question were submitted under the treaty were seven in number, as follows: Justice John M. Harlan, of the Supreme Court of the United States, and Senator John T. Morgan, of Alabama, appointed by the United States; Rt. Hon. Lord Hannan, and Sir John S. D. Thompson, Prime Minister of Canada, appointed by Great Britain; Senator Baron Alphonse de Courcelles, formerly French Ambassador at Berlin, appointed by the French government; Senator Marquis E. Visconti Venosta, appointed by the Italian government; and Judge Mons. Gregers Gram, Minister of State, appointed by the government of Sweden. The Court of Arbitration met at Paris, beginning its sessions on March 23, 1893. The award of the Tribunal, signed on the 15th of August, 1893, decided the five points submitted to it, as follows: (1) That Russia did not, after 1825, assert or exercise any exclusive jurisdiction in Bering Sea, or any exclusive rights in the seal fisheries; (2) that no such claims on the part of Russia were recognized or conceded by England; (3) that the body of water now known as Bering Sea was included in the phrase "Pacific Ocean," as used in the treaty of 1825 between Great Britain and Russia, and that no exclusive rights of jurisdiction in Bering Sea or as to the seal fisheries there were held or exercised by Russia after the treaty of 1825; (4) that all the rights of Russia as to jurisdiction and the seal fisheries in Bering Sea east of the water boundary did pass unimpaired to the United States under the treaty of March 30, 1867; (5) that the United States has not any right of protection or property in the fur seals frequenting the islands of the United States in Bering Sea, when such seals are found outside the ordinary three-mile limit. Mr. Morgan alone dissented from the decision rendered on the first and second points, and on the second division of the third point. Justice Harlan and Mr. Morgan both dissented on the fifth point. On the fourth point, and on the first division of the third, the decision was unanimous. These points of controversy disposed of, the Arbitrators proceeded to prescribe the regulations which the Governments of the United States and Great Britain shall enforce for the preservation of the fur seal. The regulations prescribed prohibit the killing, capture or pursuit of fur seals, at any time or in any manner, within a zone of sixty miles around the Pribilof Islands; prohibit the same from May 1 to July 31 in all the part of the Pacific Ocean, inclusive of Bering Sea, which is north of 85° north latitude and eastward of the 180th degree of longitude from Greenwich till it strikes the water boundary described in Article I. of the Treaty of 1867 between the United States and Russia; and following that line up to Bering Straits; allow only sailing vessels, with licenses, to take part in fur seal fishing operations, and forbid the use of nets, firearms and explosives, except as to shot guns outside of Bering Sea. As

promulgated, the Award bore the signatures of all the Arbitrators.—*The Bering Sea Arbitration: Letters to The Times*.

A. D. 1887-1888.—**Tariff Message of President Cleveland.**—Attempted revision of the **Tariff.**—**Defeat of the Mills Bill.** See **TARIFF LEGISLATION (UNITED STATES): A. D. 1884-1888.**

A. D. 1888.—**The Twenty-sixth Presidential election.**—President Cleveland was nominated for re-election by the Democratic National Convention, held at St. Louis, June 5, with Allen G. Thurman, of Ohio, for Vice President. The Republican Convention, at Chicago, June 19, named Benjamin Harrison, of Indiana, for President, and Levi P. Morton, of New York, for Vice President. At Indianapolis, May 30, the Prohibition party had already put in nomination General Clinton B. Fisk, of New Jersey, and John A. Brooks, of Missouri, for President and Vice President, respectively. The Union Labor Party, convening at Cincinnati, May 15, had nominated Alson J. Streeter, of Illinois, and Charles E. Cunningham, of Arkansas; the United Labor Party, a rival organization, had put forward Robert H. Cowdrey, of Illinois, and William H. T. Wakefield, of Kansas; and still another labor ticket had been brought forward in February, at Washington, where an organization calling itself the Industrial Reform party, put Albert E. Redstone, of California, and John Colvin, of Kansas, in nomination. At Des Moines, Iowa, May 15, the National Equal Rights party had named a woman for the Presidency, in the person of Mrs. Belva Lockwood, of Washington, with Alfred H. Love, of Philadelphia, named for Vice President. Finally, in August, an organization attempting to revive the American Party of former days, convening at Washington, presented James L. Curtis, of New York, for President, and James R. Greer of Tennessee (who declined the honor) for Vice President. In the ensuing election, the popular vote was distributed as follows: Cleveland 5,540,329; Harrison, 5,439,853; Fisk, 249,500; Streeter, 140,935; Cowdrey, 2,818; Curtis, 1,591. Notwithstanding the greater number of votes cast for Cleveland (his plurality being 100,476), Harrison was chosen President by the electoral votes, receiving 233, while 168 were given for Cleveland.—*Appletons' Annual Cyclopaedia*, 1888, pp. 773-782, and 799-828.

A. D. 1889-1890.—**The opening of Oklahoma.**—**The Johnstown Flood.**—**The Pan-American Congress.**—**Admission of seven new States.**—"In the centre of Indian Territory there is a large district called, in the Indian language, Oklahoma, or the 'Beautiful Land.' This tract was finally purchased from the Indians by the United States, early in 1889. On the 22d of April, of that year, some 50,000 persons were waiting impatiently on the borders of Oklahoma for President Harrison's signal, giving them permission to enter and take up lands in the coveted region. At precisely twelve o'clock, noon, of that day, the blast of a bugle announced that Oklahoma was open to settlement. Instantly an avalanche of human beings rushed wildly across the line, each one eager to get the first chance. Towns made of rough board-shanties and of tents sprang up in all directions. The chief of these were Oklahoma City and Guthrie. At the end of four months, the latter had a population of about 5,000, with four daily

papers and six banks; and arrangements, doubtless since completed, were being made to start a line of street cars, and light the city with electricity. A week after the opening of Oklahoma, the centennial anniversary of the inauguration of Washington, and of the beginning of our government under the Constitution, was celebrated in New York City [April 29—May 1]. . . . In a little less than a month from that occasion, the most terrible disaster of the kind ever known in our history occurred (May 31, 1889) in Western Pennsylvania. By the breaking of a dam, a body of water forty feet high and nearly half a mile in width swept down through a deep and narrow valley. In less than fifteen minutes, the flood had traversed a distance of eighteen miles. In that brief time, it dashed seven towns out of existence, and ended by carrying away the greater part of Johnstown. The whole valley at that place was choked with ruins; at least 5,000 persons lost their lives, and property worth ten million dollars was utterly destroyed. In the autumn (October 2, 1889), representatives of the leading governments of Central and of South America, together with the Republic of Mexico, met representatives chosen by the United States in a conference or congress held at Washington. The object of the congress was to bring about a closer union of the Americas, for purposes of trade, and of mutual advantage. The delegates spent six weeks in visiting the principal commercial and manufacturing cities of the United States. They then returned to Washington, and devoted the greater part of the remainder of the year and part of 1890 to the discussion of business. —D. H. Montgomery, *Leading Facts of Am. History*, sect. 390-392. — "An act to provide for the division of Dakota into two States, and to enable the people of North Dakota, South Dakota, Montana, and Washington, to form constitutions and State governments . . . was approved by President Cleveland, February 23, 1889. This act provided that the Territory of Dakota should be divided on the line of the seventh standard parallel. . . . On the 4th of July, 1889, the four conventions assembled—for North Dakota at Bismarck, for South Dakota at Sioux Falls, for Montana at Helena, and for Washington at Olympia."—F. N. Thorpe, *Recent Constitution-making in the U. S. (Annals of the Am. Acad. of Pol. and Soc. Science, Sept., 1891)*.—Acceptable constitutions having been framed and adopted in the several proposed new states, North Dakota and South Dakota were admitted to the Union by proclamation of President Harrison, November 3, 1889, Montana, November 8, and Washington, November 11, in the same year. "Early in the session of the fifty-first Congress, Wyoming presented her claims for Statehood, asking for admission to the Union under the Constitution of September, 1889, which was adopted by the people on Nov. 5 following. The bill for admission passed the House of Representatives on March 27, 1890, passed the Senate on June 27, and received the President's signature on July 10. By its terms Wyoming became a state from and after the date of the President's approval." Idaho had previously been admitted, by a bill which received the President's signature on the 8d of July, 1890.—*Appletons' Annual Cyclopaedia, 1890 and 1889*.

A. D. 1890.—McKinley Tariff Act. See **TARIFF LEGISLATION (UNITED STATES): A. D. 1890.**

A. D. 1890.—The Eleventh Census.—Total population 62,622,250 (exceeding that of 1880 by 12,460,467, classed and distributed as follows:

North Atlantic division.		
	White.	Black.
Maine	659,263	1,190
New Hampshire	375,840	614
Vermont	331,418	987
Massachusetts	2,215,373	22,144
Rhode Island	337,859	7,393
Connecticut	733,438	12,302

Arizona	55,580	1,357
Utah	205,899	558
Nevada	39,084	242
Idaho	82,018	201
Washington	340,513	1,602
Oregon	301,758	1,136
California	1,111,673	11,322
	2,870,257	27,081
Grand total	54,988,890	7,470,040

In addition the census shows 107,475 Chinese, 2,639 Japanese, and 58,806 civilized Indians, making a total of 62,022,250, as stated above.

Immigration in the preceding decade rose to 5,246,613 in the total arrivals, 1,462,839 being from the British Islands and 3,258,743 from other European countries. In the single year ending June 30, 1890, the immigrants arriving from Europe numbered 443,225 (273,104 males, 170,121 females), of whom 57,020 were from England; 53,021 from Ireland; 12,041 from Scotland; 92,427 from Germany; 22,062 from Hungary; 11,073 from Poland; 33,147 from Russia; 51,799 from Italy; 29,632 from Sweden; 11,370 from Norway; 9,366 from Denmark; 6,585 from France.

A. D. 1890-1893.—The Silver Bill and its effect.—Financial Panic.—Extra Session of Congress.—Repeal of the Sherman Act.—“The act of July 14, 1890 [known as the Sherman Act], repealed the silver act of 1878, and so brought to a close the precise experiment tried under that measure. . . . But the new act . . . is even more remarkable than that of 1878. It is unique in monetary history. It provides that the Secretary of the Treasury shall purchase each month at the market price four and a half million ounces of silver bullion. In payment he shall issue Treasury notes of the United States, in denominations of between one dollar and one thousand dollars. These Treasury notes, unlike the old silver certificates, are a direct legal tender for all debts, public or private, unless a different medium is expressly stipulated in the contract. They differ from the silver certificates in another respect; they are redeemable either in gold or silver coin, at the discretion of the Secretary of the Treasury. The indirect process of redemption which, as we have seen, was applied to the silver certificates, is replaced for the new notes by direct redemption. The avowed object is to keep the silver money equal to gold, for it is declared to be ‘the established policy of the United States to maintain the two metals at a parity with each other on the present legal ratio, or such ratio as may be provided by law.’ The act of 1878 is repealed; but the coinage of two million ounces of silver into dollars is to be continued for a year (until July 1, 1891). Thereafter it is directed that only so many silver dollars shall be coined as may be needed for redeeming any Treasury notes presented for redemption. Practically, this means that the coinage shall cease; redemption in silver dollars will not be called for. The coinage of silver dollars accordingly was suspended by the Treasury on July 1, 1891; a change which was the occasion of some vociferous abuse and equally vociferous praise, but which in reality was of no consequence whatever. The monthly issues of the new Treasury notes vary, like those of the old silver certificates, with the price of silver. But the new issues vary directly with the price of silver, while, as we have seen, the old issues varied inversely with the price. The volume of Treasury notes issued is equal to the market price of four and one half million ounces of silver. If silver sells at \$1.20 an ounce, the monthly issue of notes will be \$5,400,000; if at \$1.00 an ounce, \$4,500,000. For a month or two after the passage of the act, the price of silver advanced rapidly, and at its highest, in August, 1890, touched \$1.21. But the rise proved to be

but temporary. After September a steady decline set in, and continued almost without interruption through the rest of 1890, through 1891, and through 1892. The year 1891 opened with silver at a price of about \$1.00 an ounce; by the close of the year the price had fallen to about 95 cents. In 1892 a still further and more marked decline set in, and by the close of the year the price had gone as low as 85 cents.”—F. W. Taussig, *The Silver Situation in the U. S.*, ch. 6. —“On June 5 [1893] President Cleveland publicly declared his purpose to call an extra session of Congress to meet in the first half of September for the consideration of the country’s financial conditions, which seemed critical. On the 26th of June the authorities of India closed the mints in that empire to the free coinage of silver. The signs of a panic immediately multiplied and four days later appeared the president’s proclamation summoning Congress to meet in extra session August 7. The call was based on the ‘perilous condition in business circles,’ which was declared to be largely the result of a ‘financial policy . . . embodied in unwise laws, which must be executed until repealed by Congress.’ The issue of this proclamation was the signal for much excitement among the Populists and in silver-producing circles. Silver conventions were held in Denver, July 11, and in Chicago, August 2, in which addresses were made and resolutions adopted denouncing with much energy any proposition to repeal the Sherman Act without some provision for the free coinage of silver, and claiming that the existing financial crisis was a deliberately devised scheme of British and American bankers, with President Cleveland as their ally, to bring about the exclusion of silver from use as money. The president’s message, presented to the houses August 8, brought the question before Congress. The message embodied an exposition of what Mr. Cleveland considered the evils of the Sherman Act, concluding with an earnest recommendation that its purchase clause be immediately repealed. While still holding that tariff reform was imperatively demanded, the president considered that it should be postponed to action on the silver law. In Congress the silver men, without reference to party lines, took an attitude of energetic resistance to any project for unconditional repeal of the purchase clause.”—*Political Science Quarterly*, December, 1893.—In the House, the resistance was soon overcome by strong pressure of unmistakable public opinion, and the repeal was carried on the 28th of August. In the Senate the Silver faction proved so much stronger that it blocked the bill until the end of October, indifferent to the ruinous effect which this action was having on the business and the industries of the country. In September, while the fate of the bill remained in doubt, the “Banker’s Magazine” reported that the doubt had “aggravated the money stringency, until it absolutely became impossible for the great majority of business men to obtain the necessary funds, or credit to transact their affairs. In this respect, probably, no panic within the memory of the present generation has been so severe; and yet, it has been the least violent for one so universal and protracted. But it is the collapse that follows an acute attack of disease, which leaves its victim prostrated, after the crisis has been passed, and which must precede ultimate recovery, by giving

time to restore exhausted strength. . . . This was different from most panics this country has experienced, inasmuch as it was strictly an artificial one, caused by bad legislation, rather than general financial kite flying, while commercial affairs were seldom, if ever, on a sounder or safer basis, from the fact that they had, for a long time, been more free from speculation, with but few exceptions, than for years. Hence it has been the financial machinery by which commerce is transacted, rather than commerce itself, that has been deranged; and, for this reason, trade will revive much more rapidly when this artificial pressure is removed, than it has revived after former panics, which were either purely financial, or commercial, or both, as the result of wild speculation and general inflation of prices."—H. A. Pierce, *A Review of Finance and Business* (*Banker's Magazine*, Sept., 1893).—The repeal measure was finally carried in the Senate, becoming law by the President's signature November 1, when a slow recovery of business confidence began, much retarded and disturbed, however, by the uncertainty attending expected action of Congress on tariff and currency questions. See, also, MONEY AND BANKING: A. D. 1848-1893.

A. D. 1892.—Chinese Exclusion Act.—A bill "to absolutely prohibit the coming of Chinese persons into the United States," reported by Mr. Geary, of California, was passed by the House, April 4, 1892, yeas 179, nays 43, 107 not voting. In the Senate, a substitute, going little further than to continue the then existing laws for the regulation of Chinese immigration, was reported from the Committee on Foreign Relations and adopted. The two bills were referred to a Conference Committee, with the result that a compromise measure, slightly modified from the House bill, was passed by both branches of Congress, on the 3d and 4th of May, and signed by the President on the 5th. It continues former laws for ten years. It directs "that any Chinese person or person of Chinese descent when convicted and adjudged under any of said laws to be not lawfully entitled to be or remain in the United States," shall be removed to China, or to such other country as he may prove to be a subject or citizen of. It declares that any such person under arrest "shall be adjudged to be unlawfully within the United States, unless such person shall establish, by affirmative proof, . . . his lawful right to remain in the United States"; and that any such person "convicted and adjudged to be not lawfully entitled to be or remain in the United States shall be imprisoned at hard labor for a period of not exceeding one year, and thereafter removed from the United States, as hereinbefore provided." The act denies bail, on an application for a writ of habeas corpus, by a Chinese person seeking to land in the United States. It requires all Chinese laborers who were within the limits of the United States at the time of the passage of the act, and who were entitled to remain, to obtain certificates of residence, from district collectors of internal revenue, and orders the deportation of those who had failed to do so at the expiration of one year. This extraordinary measure of exclusion has been commonly known as the "Geary Act."—E. McPherson, *Hand-book of Politics*, 1892.

A. D. 1892.—Settlement of the Alaskan Boundary.—A convention between the governments of the United States and Great Britain was entered into and ratifications exchanged in August, 1892, providing for a coincident or joint survey, "as may in practice be found most convenient," to determine the boundary line between Alaska and the Canadian provinces.

A. D. 1892.—First commissioning of a Papal Delegate. See PAPACY: A. D. 1892.

A. D. 1892.—The Twenty-seventh Presidential Election.—Five parties presented candidates in the presidential election held November 8, 1892—namely: the Democratic, the Republican, the People's, or Populist, the Prohibitionist, and the Socialistic Labor. The nominees of the Democratic Party were Grover Cleveland, for President, and Adlai E. Stevenson, for Vice President; of the Republican Party, Benjamin Harrison and Whitelaw Reid, for President and Vice President, respectively; of the Populist Party, James B. Weaver and James G. Field; of the Prohibition Party, John Bidwell and James B. Cranfill; of the Socialistic Labor Party, Simon Wing and Charles H. Matchett. The dominant issues in the canvass were the tariff question and the silver question. "The Democrats named no electoral tickets in Colorado, Idaho, Kansas, North Dakota, and Wyoming, but voted for the people's party electors with the object of taking those States away from the Republicans. They put out an electoral ticket in Nevada, but still voted mostly for the Populist electors. In North Dakota also there was a partial fusion between the Democrats and the People's party, and in Minnesota a part of the Weaver electoral ticket was accepted by the Democrats. In Louisiana there was a fusion of the Republicans and the People's party, each nominating half of the 8 electors. In Alabama there was a fusion of some of the Republicans with the People's party. In Texas a Republican ticket called the Lily White was set up, which differed from the regular ticket. In Michigan a new electoral law, which was declared constitutional by the United States Supreme Court on Oct. 17, 1892, provided for the separate election of a Presidential elector in each Congressional district, and in consequence the electoral vote of the State was divided. In Oregon the name of one of the four electors on the People's ticket was also placed on the Democratic ticket. . . . The total popular vote cast was reported as 12,154,542," of which Cleveland received 5,556,553; Harrison, 5,175,577; Weaver, 1,122,045; Bidwell 279,191; Wing, 21,191. The electoral votes of the States were cast as follows: Cleveland, 277; Harrison, 145; Weaver, 23; giving Cleveland a clear majority of 110.—*Appleton's Annual Cyclopaedia*, 1892.—"The most striking feature of the elections was the great losses of the Republicans in the West. Illinois and Wisconsin went Democratic by large majorities, California and Ohio were very close, and Colorado, Idaho, Kansas and Nevada chose Populist electors. The Democrats carried all the Northern states generally regarded as doubtful, viz., Connecticut, New York and Indiana, but they nearly lost Delaware. An unusual incident of the result was the division of the electo-

ral votes in several states, owing to the closeness of the popular vote. Thus in Ohio one Cleveland elector and in Oregon one Weaver elector was chosen, the others being Republican; and in California and North Dakota Mr. Harrison secured single votes in the same way. From the conditions of fusion between the Democrats and Populists in the last-named state, it resulted that one of her three electoral votes was given to each of the three candidates. In Michigan, under the district method of choosing electors recently established, Harrison got nine votes and Cleveland five."—*Political Science Quarterly*, June, 1893.

A. D. 1894-1895.—Provision for the admission of Utah as a State.—On the 17th of July, 1894, the President, by his signature, gave effect to a bill which provides for the admission of Utah to the Union as a State. The admission, however, cannot become a completed fact before the later part of the year 1895, since the bill provides for the holding of a convention in March 1895, to frame a constitution for the proposed new State, and for submitting such constitution to the people at the election in November, 1895.

A. D. 1895.—The status of Civil-service Reform.—Commissioner Roosevelt's review.—“In 1883 the civil service law was established at Washington, and in the larger post-offices and custom-houses throughout the country, taking in a total of some 14,000 employees. The great extensions since have all taken place during the last six years, a period which happens to include my own term of service with the Commission, so that I write of them at first hand. In 1889 the railway mail service was added, in 1893 all the free delivery post-offices, and in 1894 all the smaller custom-houses and the internal revenue service. Other important but smaller extensions have been made, and the larger offices have grown, so that now about 50,000 employees are under the protection of the law. There are, of course, and there always must be in a body so large, individual cases where the law is evaded, or even violated; and as yet we do not touch the question of promotions and reductions. But, speaking broadly, and with due allowance for such comparatively slight exceptions, these 50,000 places are now taken out of the political arena. They can no longer be scrambled for in a struggle as ignoble and brutal as the strife of pirates over plunder; they no longer serve as a vast bribery chest with which to debauch the voters of the country. Those holding them no longer keep their pondal life by the frail tenure of service to the party boss and the party machine; they stand as American citizens, and are allowed the privilege of earning their own bread without molestation so long as they faithfully serve the public. The classified service, the service in which the merit system is applied, has grown fast. It is true that the outside ser-

vice where the spoils theories are still applied in all their original nakedness, has grown only less fast. The number of offices under the government has increased very rapidly during the last twenty years; but the growth of the classified service has been even more rapid, so that a constantly increasing percentage of the whole is withdrawn from the degrading grasp of the spoils system. Now, something like a quarter of all the offices under the federal government in point of numbers, representing nearly a half in point of salaries, has been put upon the basis of decency and merit. This has been done by the action of successive Presidents under the law of 1883, without the necessity of action by Congress. There still remain some things that can be done without further legislation. For instance, the labor force in the navy yards was put on a merit basis, and removed from the domain of politics, under Secretary Tracy. This was done merely by order of the Secretary of the Navy, which order could have been reversed by his successor, Secretary Herbert. Instead of reversing it, however, Secretary Herbert has zealously lived up to its requirements, and has withstood all pressure for the weakening of the system in the interests of the local party machines and bosses. It is unsafe to trust to always having Secretaries of the Navy like Messrs. Tracy and Herbert. The Civil Service Commission should be given supervision over the laborers who come under the direction of Cabinet officers. Indeed, all the laboring force and all the employees of the District of Columbia employed by the federal government should be put under the Commission. When this has been done, and when a few other comparatively slight extensions have been made, all that can be accomplished by the unaided action of the executive will have been accomplished. Congress must then itself act by passing some such bill as that of Senator Lodge in reference to fourth-class postmasters; by passing some bill in reference to the consular service on the outlines of that suggested by Senator Morgan (but giving power to the Civil Service Commission itself in the matter); and then by providing that all postmasters and similar officers shall hold office during good behavior, including as well those nominated by the President and confirmed by the Senate as those appointed by the President alone. Of all the offices under the federal government, not one in a hundred can properly be called political.”—T. Roosevelt, *The Present Status of Civil Service Reform* (Atlantic, Feb., 1895).

A. D. 1895.—President Cleveland's Special Message on the condition of the National Finances.—In a special message to Congress, on the 28th of January, 1895, President Cleveland renewed an earnest appeal which he had made at the opening of the session, for legislation to correct the mischievous working of the existing currency system of the country. The condition of the national finances, produced by unwise laws, was set forth clearly in this message, as follows: “With natural resources unlimited in variety and productive strength, and with a people whose activity and enterprise seek only a fair opportunity to achieve national success and greatness, our progress should not be checked by a false financial policy and a heedless disregard of sound monetary laws, nor should the timidity and fear which they engender stand

in the way of our prosperity. It is hardly disputed that this predicament confronts us to-day. Therefore, no one in any degree responsible for the making and execution of our laws should fail to see a patriotic duty in honestly and sincerely attempting to relieve the situation. . . . The real trouble which confronts us consists in a lack of confidence, widespread and constantly increasing, in the continuing ability or disposition of the Government to pay its obligations in gold. This lack of confidence grows to some extent out of the palpable and apparent embarrassment attending the efforts of the Government under existing laws to procure gold, and to a greater extent out of the impossibility of either keeping it in the Treasury or canceling obligations by its expenditure after it is obtained. The only way left open to the Government for procuring gold is by the issue and sale of its bonds. The only bonds that can be so issued were authorized nearly twenty-five years ago, and are not well calculated to meet our present needs. Among other disadvantages, they are made payable in coin, instead of specifically in gold, which, in existing conditions, detracts largely and in an increasing ratio from their desirability as investments. It is by no means certain that bonds of this description can much longer be disposed of at a price creditable to the financial character of our Government. The most dangerous and irritating feature of the situation, however, remains to be mentioned. It is found in the means by which the Treasury is despoiled of the gold thus obtained without canceling a single Government obligation and solely for the benefit of those who find profit in shipping it abroad or whose fears induce them to hoard it at home. We have outstanding about five hundred millions of currency notes of the Government for which gold may be demanded, and, curiously enough, the law requires that when presented and, in fact, redeemed and paid in gold, they shall be reissued. Thus the same notes may do duty many times in drawing gold from the Treasury; nor can the process be arrested as long as private parties, for profit or otherwise, see an advantage in repeating the operation. More than \$300,000,000 in these notes have already been redeemed in gold, and notwithstanding such redemption they are all still outstanding. Since the 17th day of January, 1894, our bonded interest-bearing debt has been increased \$100,000,000 for the purpose of obtaining gold to replenish our coin reserve. Two issues were made amounting to fifty millions each—one in January and the other in November. As a result of the first issue there was realized something more than \$58,000,000 in gold. Between that issue and the succeeding one in November, comprising a period of about ten months, nearly \$103,000,000 in gold were drawn from the Treasury. This made the second issue necessary, and upon that more than fifty-eight millions in gold was again realized. Between the date of this second issue and the present time, covering a period of only about two months, more than \$69,000,000 in gold have been drawn from the Treasury. These large sums of gold were expended without any cancellation of Government obligations or in any permanent way benefiting our people or improving our pecuniary situation. The financial events of the past year suggest *causes* and condi-

tions which should certainly arrest attention. More than \$172,000,000 in gold have been drawn out of the Treasury during the year for the purpose of shipment abroad or hoarding at home. While nearly one hundred and three millions of this amount was drawn out during the first ten months of the year, a sum aggregating more than two-thirds of that amount, being about sixty-nine millions, was drawn out during the following two months, thus indicating a marked acceleration of the depleting process with the lapse of time. The obligations upon which this gold has been drawn from the Treasury are still outstanding and are available for use in repeating the exhausting operation with shorter intervals as our perplexities accumulate. Conditions are certainly supervening tending to make the bonds which may be issued to replenish our gold less useful for that purpose. . . . It will hardly do to say that a simple increase of revenue will cure our troubles. The apprehension now existing and constantly increasing as to our financial ability does not rest upon a calculation of our revenue. The time has passed when the eyes of investors abroad and our people at home were fixed upon the revenues of the Government. Changed conditions have attracted their attention to the gold of the Government. There need be no fear that we can not pay our current expenses with such money as we have. There is now in the Treasury a comfortable surplus of more than \$63,000,000, but it is not in gold, and therefore does not meet our difficulty. I can not see that differences of opinion concerning the extent to which silver ought to be coined or used in our currency should interfere with the counsels of those whose duty it is to rectify evils now apparent in our financial situation. They have to consider the question of national credit, and the consequences that will follow from its collapse. Whatever ideas may be insisted upon as to silver or bimetallicism, a proper solution of the question now pressing upon us only requires a recognition of gold as well as silver, and a concession of its importance, rightfully or wrongfully acquired, as a basis of national credit, a necessity in the honorable discharge of our obligations payable in gold, and a badge of solvency. . . . While I am not unfriendly to silver, and while I desire to see it recognized to such an extent as is consistent with financial safety and the preservation of national honor and credit, I am not willing to see gold entirely banished from our currency and finances. To avert such a consequence I believe thorough and radical remedial legislation should be promptly passed. I therefore beg the Congress to give the subject immediate attention. In my opinion the Secretary of the Treasury should be authorized to issue bonds of the Government for the purpose of procuring and maintaining a sufficient gold reserve and the redemption and cancellation of the United States legal-tender notes and the Treasury notes issued for the purchase of silver under the law of July 14, 1890. We should be relieved from the humiliating process of issuing bonds to procure gold to be immediately and repeatedly drawn out on these obligations for purposes not related to the benefit of our Government or our people. The principal and interest of these bonds should be payable on their face in gold, because they should be sold only for gold or its representative, and because

there would now probably be difficulty in favorably disposing of bonds not containing this stipulation. . . . The Secretary of the Treasury might well be permitted, at his discretion, to receive on the sale of bonds the legal-tender and Treasury notes to be retired, and, of course, when they are thus retired or redeemed in gold they should be canceled. These bonds under existing laws could be deposited by national banks as security for circulation; and such banks should be allowed to issue circulation up to the face value of these or any other bonds so deposited, except bonds outstanding bearing only 2 per cent interest, and which sell in the market at less than par. National banks should not be allowed to take out circulating notes of a less denomination than \$10, and when such as are now outstanding reach the Treasury, except for redemption and retirement, they should be

canceled and notes of the denomination of \$10 and upward issued in their stead. Silver certificates of the denomination of \$10 and upward should be replaced by certificates of denominations under \$10. As a constant means for the maintenance of a reasonable supply of gold in the Treasury our duties on imports should be paid in gold, allowing all other dues to the Government to be paid in any other form of money. I believe all the provisions I have suggested should be embodied in our laws if we are to enjoy a complete reinstatement of a sound financial condition." The President's recommendations were not acted upon. The silver interest in Congress defeated all measures introduced for the purpose and left the situation unchanged. The Government was forced to a new issue of bonds under the old act, for the replenishing of its gold reserve.

USCOCKS, The.—"During the reign of Ferdinand [Emperor, 1558-1564], several bodies of Christians, quitting the provinces which had been recently conquered by the Turks, obtained from the Austrian sovereigns a refuge at Clissa, in Dalmatia, under the condition of forming themselves into a frontier militia continually in arms against the infidels, and, from their emigration, received the name of Uscocks, which, in the language of the country, signifies wanderers. They fulfilled the purpose of their establishment, and, being at length expelled by the Turks, received a new asylum at Segna, a ruined fortress in Croatia, on the coast of the Adriatic gulph. Here, their numbers increasing by the accession of Italian banditti and other marauders, they were rendered more formidable than before; for they no longer confined their predatory incursions to the land, but became pirates by sea. . . . Their audacity increasing with success and plunder, they pillaged, without distinction, the vessels of all the nations who traded in the Adriatic." They were attacked by the Turks and the Venetians, and the latter, at length, in the early part of the 17th century, forced the Duke of Styria, who had protected the freebooters, to allow their stronghold at Segna to be demolished. "The Uscocks, being transplanted to Caristado, soon lost their name and distinction."—W. Coxe, *Hist. of the House of Austria*, ch. 43 (v. 2).

USIPETES AND TENCATHERI, Cæsar's overthrow of the.—The Usipetes and Tencatheri, two German tribes, whose home was on the lower course of the Rhine, north and south of the Lippe, being hard pressed by the Suevi, crossed the Rhine, B. C. 55, and began to spread themselves along the Valley of the Meuse. Cæsar marched against them with great promptitude, refused to parley with them, accused them of treacherous attempts to gain time, and was himself charged with wicked treachery, in seizing their chiefs who met him with pacific propositions. It is certain, at all events, that he was able to attack them when they were deprived of leaders, and to slaughter them with so little resistance that not one Roman soldier was killed. Those who escaped the sword were driven into the Rhine (probably at its point of junction with the Moselle) and almost the entire mass of 180,000 are said to have perished. The remnant took refuge with the Sicambri or Sigambri, on the farther shore of the Rhine. Cæsar demanded the surrender of them, and, when refused, he caused his engineers to bridge the river in ten days, led his army across it and laid waste the country of the Sigambri. This was the first crossing of the Rhine by the Romans. The Suevi offered battle to the Roman invaders, but Cæsar prudently retruded, and destroyed the bridge.—Cæsar, *Galic Wars*, bk. 4, ch. 1-19.

UTAH: A. D. 1847.—Migration of Mormons from Nauvoo and their settlement on the Great Salt Lake. See MORMONISM: A. D. 1846-1848.

A. D. 1848.—Acquisition from Mexico. See MEXICO: A. D. 1848.

A. D. 1849-1850.—The proposed State of Deseret.—Organization of the Territory of Utah.—Its name.—"Until the year 1849 the Mormons were entirely under the control of their ecclesiastical leaders, regarding the presidency not only as their spiritual head, but as the source of law in temporal matters. . . . There was already in their midst a small percentage of gentle citizens, gathered . . . from nearly all the civilized nations of the earth. . . . Not infrequently litigation arose among the gentiles, or between Mormon and gentile; and though strict justice may have been done by the bishops, it was difficult for the latter to believe that such was the case. . . . Thus it became advisable to establish for the benefit of all some judicial authority that could not be questioned by any, whether members of the church or not, and this authority must be one that, being recognized by the government of the United States, would have the support of its laws and the shield of its protection. Further than this, if the Mormons neglected to establish such government, the incoming gentiles would do so ere long. Early in 1849, therefore, a convention was summoned of 'the inhabitants of that portion of Upper California lying east of the Sierra Nevada Mountains,' and on the 4th of March assembled at Salt Lake City. A committee was appointed to draught a constitution, under which the people might govern themselves until congress should otherwise provide by law. A few days later the constitution was adopted, and a provisional government organized, under the name of the State of Deseret. An immense tract of country was claimed, extending from latitude 33° to the border of Oregon, and from the Rocky Mountains to the Sierra Nevada, together with a section of the territory now included in southern California, and the strip of coast lying between Lower California and 118° 30' of west longitude. The seat of government was to be at Salt Lake City." In July Almon W. Babbitt was elected delegate to Congress, and that body was petitioned to admit the provisionally organized State into the Union. The delegate and his petition met with a cool reception at Washington; but in September, 1850, Congress passed an act organizing the Territory of Utah, and Brigham Young was appointed Governor. "The act to establish a territorial government for Utah placed the southern boundary at the 37th parallel, the section between that limit and the 39d parallel being included in the Territory of New Mexico [organized at the same time], with the exception of the part transferred to California, by which State Utah was to be bounded on the west. On the north, Oregon was to remain as the boundary, and on the east the Rocky Mountains." "The word Utah originated with the people inhabiting that region. Early in the 17th century, when New Mexico was first much talked of by the Spaniards, the principal nations of frequent mention as inhabiting the several sides of the locality about that time occupied were the Navajos, the Yutas, the Apaches, and the Comanches. Of the Utah nation, which belongs to the Shoshone

family, there were many tribes. . . . The early orthography of the word Utah is varied. "Yuta" was a common spelling by the early Spaniards, and might be called the proper one. Later we have 'Youta,' 'Eutaw,' 'Utaw,' and 'Utah.'—II. H. Bancroft, *Hist. of the Pacific States*, v. 21 (*Utah*), ch. 17, and *foot-note*, p. 34.—See, also, AMERICAN ABORIGINES: SHOSHONEAN FAMILY.

A. D. 1857-1859.—The Mormon Rebellion.—"To this would-be 'State of Deseret' President Fillmore had assigned Brigham Young, the spiritual head of the church, as territorial governor; and by 1857, when a Democratic President showed the disposition to apply the usual temporal rule of rotation to the office, Young was rebellious, and the whole Mormon population, refusing allegiance to any one but their consecrated head, began to drill and gird on their armor for resistance. Judges of the territorial courts had to flee for their lives; justice, which had long been tampered with to absolve church members from punishment, was deprived of process. It was charged that the Mormon hierarchy had leagued with Indian tribes to impel them to atrocities against the Gentile inhabitants, while their own Danites, or destroying angels, were secretly set apart and bound by horrid oath to pillage and murder such as made themselves obnoxious to the theocracy. . . . President Buchanan appointed as the new governor of Utah Alfred Cumming, a man combining courage with discretion, and filled the judicial and other vacancies which existed. To protect those new officers and aid them in discharging their functions, he ordered a detachment of regulars to accompany them to the Salt Lake region. The need of this was soon apparent. Early in September, 1857, a part of the troops left Fort Laramie, and on the 15th of the same month Brigham Young, parading audaciously the commission he still held from the United States, forbade all armed forces from entering the territory, and called upon his people to defend themselves against the 'armed mercenary mob' of invaders. His legislature, meeting later, sustained him in his bitter diatribe against the 'profane, drunken, and corrupt officials,' which a Washington administration was trying to force upon Utah territory at the point of the bayonet. A Mormon force had meanwhile advanced to impede the approach of our regulars, capturing and burning three supply trains of wagons laden with tents and provisions, stampeding the horses, and so crippling Fort Bridger, which was distant some twelve days' march from Salt Lake city, as to deprive our army, on its arrival, of a proper winter's shelter after its long and fatiguing march, and compel General Johnston, who commanded this important post, to despatch part of his forces upon a dreary and hazardous expedition to New Mexico for further supplies. Johnston's despatches in October showed the President that unless a large force was quickly sent out, a long conflict would be inevitable. Buchanan and his Secretary of War asked from the present Congress ten new regiments, of which five might be used to bring the Mormons to subjection. But the Le-compton controversy was raging; and the use of Federal troops to put down the free-State movement in Kansas had caused such mistrust and irritation that none but the President's

unshaken supporters felt inclined to place more troops at his disposal. The bill for an army increase was lost, though both Houses passed a measure authorizing the President to accept for the Utah disturbances two regiments of volunteers. The volunteers were not called out; but Buchanan mustered a military force out of the regulars strong enough to overawe and overpower Utah's rebellious inhabitants. Two peace commissioners also bore to Utah a proclamation from the President, dated April 6th, which offered free pardon, except to those who persisted still in disloyal resistances. Governor Cumming, upon his arrival, made a like announcement. These conciliatory efforts, backed by an irresistible show of military strength, brought the Mormons to a speedy acknowledgment of allegiance. They fought not a battle, but manifested a purpose to burn their houses and make a new and peaceable retreat into the wilderness. From this purpose, after some conferences, they were at length dissuaded; and it was agreed in June between the Mormon leaders and our commissioners that the United States soldiery should be kept out of sight as much as possible while Utah remained tranquil. On the last day of the same month the new governor, accompanied by Brigham Young, came back to Salt Lake city to assume functions which were fully recognized. A few days earlier, and before the Mormons had begun to return to their homes, General Johnston and his troops, leaving Fort Bridger, reached the desolate city, marched through its streets, and, crossing its river Jordan, encamped on the opposite bank. While abandoning all further effort at violent resistance, the Mormons still clung to the hope of being left to govern themselves and preserve their institutions against the world's contaminating touch, by gaining the indispensable condition of practical isolation and independence. To this Congress in its next winter's session they renewed the former petitions they had presented for immediate admission to the Union as the 'State of Deseret.' And should this request be denied, they prayed that there organic act of the territory might be so amended as to give the inhabitants the right to choose their own governor, judges, and other officers. All this Congress quietly ignored; and in military circles it was still generally believed that, for all this outward show of loyal acquiescence, the Mormons felt at heart no more affection for the United States than for any foreign nation; that the only rule they really recognized was that of their religion and the will of their hierarchy; and that force must still be used to compel them. Such views were entertained by General Albert Sidney Johnston, the military commander at Utah, destined to later distinction in the art of war. But Cumming, the governor, who had the temporizing instincts of a civilian, thought differently. The two came into collision when Mormons were brought to trial in the courts for a slaughter of emigrants in 1857, known as the Mountain Meadow massacre. [This was the massacre, by Indians and Mormons, of a party of 136 emigrants, from Arkansas and Missouri, who were passing through Utah to California; it occurred in September, 1857, in a valley called the Mountain Meadows, about 300 miles south of Salt Lake city; only 17 young children were saved from the slaughter.] At the request of the

Federal judge, Johnston furnished a military detachment to guard the prisoners; and when Cumming, the governor, interposed because of the angry remonstrance of the people, Johnston would not remove them. Buchanan, being appealed to, sustained the governor's authority."—J. Schouler, *Hist. of the U. S.*, ch. 22 (p. 5).

ALSO IN: H. H. Bancroft, *Hist. of the Pacific States*, v. 21, ch. 18-21.—W. P. Johnston, *Life of Gen. Albert Sidney Johnston*, ch. 13.—"ra. T. B. H. Stenhouse, *Tell it All*, ch. 23.—*Repor. of U. S. Sec. of the Interior, 30th Congress, 1st sess., Senate Ex. Doc., no. 42 (p. 11)*.

A. D. 1882-1893.—The Edmunds Act and its enforcement.—Abandonment of Polygamy by the Mormons.—Proclamation of Amnesty for past offenses against the law.—In March, 1882, an Act of Congress (known as the Edmunds Act) was passed for the purpose of making efficient the law against polygamy in the territories, which had stood among the statutes of the United States for twenty years, without power on the part of the federal courts or officials in Utah to enforce it, as against Mormon juries. Besides repeating the penalties prescribed in the Act of 1862, the Act of 1882 provides, in its eighth section, that "no polygamist, bigamist, or any person cohabiting with more than one woman, and no woman cohabiting with any of the persons described as aforesaid in this section, in any Territory or other place over which the United States have exclusive jurisdiction, shall be entitled to vote at any election held in any such Territory or other place, or be eligible for election or appointment to or be entitled to hold any office or place of public trust, honor, or emolument in, under, or for any such Territory or place, or under the United States." The ninth and last section is as follows: "Sec. 9. That all the registration and election offices of every description in the Territory of Utah are hereby declared vacant, and each and every duty relating to the registration of voters, the conduct of elections, the receiving or rejection of votes, and the canvassing and returning of the same, and the issuing of certificates or other evidence of election, in said Territory, shall, until other provisions be made by the legislative assembly of said Territory, as is hereinafter by this section provided, be performed, under the existing laws of the United States and said Territory, by proper persons, who shall be appointed to execute such offices and perform such duties by a Board of five persons, to be appointed by the President, by and with the advice and consent of the Senate, not more than three of whom shall be members of one political party, and a majority of whom shall be a quorum. The members of said Board so appointed by the President shall each receive a salary at the rate of three thousand dollars per annum, and shall continue in office until the legislative assembly of said Territory shall make provision for filling said offices as herein authorized. The Secretary of the Territory shall be the secretary of said Board and keep a journal of its proceedings, and attest the action of said Board under this section. The canvass and return of all the votes at elections in said Territory for members of the legislative assembly thereof shall also be returned to said Board, which shall canvass all such returns and issue certificates of election for those persons who, being eligible for such election, shall appear to

have been lawfully elected, which certificates shall be the only evidence of the right of such persons to sit in such assembly: Provided, That said Board of five persons shall not exclude any person otherwise eligible to vote from the polls on account of any opinion such person may entertain on the subject of bigamy or polygamy, nor shall they refuse to count any such vote on account of the opinion of the person casting it on the subject of bigamy or polygamy, but each house of such assembly, after its organization, shall have power to decide upon the elections and qualifications of its members. And at or after the first meeting of said legislative assembly whose members shall have been elected and returned according to the provisions of this act, said legislative assembly may make such laws, conformable to the organic act of said Territory, and not inconsistent with other laws of the United States, as it shall deem proper concerning the filling of the offices in said Territory declared vacant by this act."—The following Proclamation, issued by the President of the United States on the 4th day of January, 1893, may be looked upon as the sequel and consequence of the legislation recorded above: "Whereas Congress, by a statute approved March 23, 1882, and by statutes in furtherance and amendment thereof, defined the crimes of bigamy, polygamy, and unlawful cohabitation in the Territories and other places within the exclusive jurisdiction of the United States and prescribed a penalty for such crimes; and Whereas, on or about the 6th day of October, 1890, the Church of the Latter-Day Saints, commonly known as the Mormon Church, through its president, issued a manifesto proclaiming the purpose of said church no longer to sanction the practice of polygamous marriages and calling upon all members and adherents of said church to obey the laws of the United States in reference to said subject-matter; and Whereas it is represented that since the date of said declaration the members and adherents of said church have generally obeyed said laws and have abstained from plural marriages and polygamous cohabitation; and Whereas, by a petition dated December 19, 1891, the officials of said church, pledging the membership thereof to a faithful obedience to the laws against plural marriage and unlawful cohabitation, have applied to me to grant amnesty for past offenses against said laws, which request a very large number of influential non-Mormons, residing in the Territories, have also strongly urged; and Whereas, the Utah Commission, in their report bearing date September 15, 1892, recommended that said petition be granted and said amnesty proclaimed, under proper conditions as to the future observance of the law, with a view to the encouragement of those now disposed to become law abiding citizens; and Whereas, during the past two years such amnesty has been granted to individual applicants in a very large number of cases, conditioned upon the faithful observance of the laws of the United States against unlawful cohabitation; and there are now pending many more such applications: Now therefore, I, Benjamin Harrison, President of the United States, by virtue of the power in me vested, do hereby declare and grant a full amnesty and pardon to all persons liable to the penalties of said act by reason of unlawful cohabitation under the color of polygamous or plural marriage, who have since November 1,

1890, abstained from such unlawful cohabitation; but upon the express condition that they shall in the future faithfully obey the laws of the United States hereinbefore named, and not otherwise. Those who shall fail to avail themselves of the clemency hereby offered will be vigorously prosecuted. In witness whereof I have hereunto set my hand and caused the seal of the United States to be affixed. Done at the city of Washington this 4th day of January, in the year of our Lord 1893, and of the Independence of the United States the 117th. Benjamin Harrison."

UTAHS, UTES, PIUTES, etc See AMERICAN ABORIGINES: SHOSHONEAN FAMILY.

UTICA: Origin.—"The most ancient Phœnician colonies were Utica, nearly on the northernmost point of the coast of Africa, and in the same gulf (now known as the gulf of Tunis) as Carthage, over against Cape Lilybœum in Sicily, — and Gades, or Gadelra, on the south-western coast of Spain; a town which, founded perhaps near one thousand years before the Christian era, has maintained a continuous prosperity, and a name (Cadiz) substantially unaltered, longer than any town in Europe. How well the site of Utica was suited to the circumstances of Phœnician colonists may be inferred from the fact that Carthage was afterwards established in the same gulf and near to the same spot, and that both the two cities reached a high pitch of prosperity."—G. Grote, *Hist. of Greece*, pt. 2, ch. 18.

Relations to Carthage. See CARTHAGE, THE DOMINION OF.

Curio's defeat.—Curio, the legate or lieutenant sent first by Cæsar to Africa (B. C. 49), to attack the Pompeian forces in that quarter, undertook with two legions to reduce the city of Utica, which had become the capital of the Roman Province. Juba, king of Numidia, who was personally hostile to both Curio and Cæsar, came to the assistance of the Pompeians and forced Curio to withdraw from its besieging lines into the neighboring Cornelian camp, which was a famous military entrenchment left by Scipio Africanus. There he might have waited in safety for re-enforcements; but the wily Numidian tempted him out by a feigned retreat and then overwhelmed him. Curio and most of his men were slain.—C. Merivale, *Hist. of the Romans*, ch. 16.

UTRECHT: The Episcopal Principality.—"At the last ford of the Rhine a hamlet had in Roman times been built, possibly a fort also. Nothing is preserved regarding it but the name, which, in the mutations of language, passed from Ultrajectum into Utrecht. Towards the conclusion of the 7th century, Clement Willebrod, an English priest, who had been educated at the monastery of Ripon, coming as a missionary into those parts, succeeded, with the

aid of eleven of his fellow-countrymen, in winning over the Frisian people to the Christian faith. He fixed his abode at Utrecht, of which he was afterwards appointed bishop; and gifts of land, at the time of little worth, were made to his successors by Pepin and Charlemagne. Such was the commencement of the temporal grandeur of the prince-bishops, whose dynasty attained to a power little less than sovereign during the middle ages. . . . With ready access to the sea, and not without an early disposition towards these pursuits which their kinsmen of the Rijnland towns were beginning to follow, the inhabitants of Utrecht soon became good sailors and good weavers, and their city threw apace. Enriched by successive grants of privileges and lands, the bishops of Utrecht gradually became powerful feudal lords."—W. T. McCullagh, *Industrial Hist. of Free Nations*, ch. 8 (v. 2).

A. D. 1456.—The bishopric grasped by the House of Burgundy.—"Utrecht was still a separate state, governed by its sovereign bishop, who was elected by the votes of the chapter, subject to the approval of the Pope. On the vacancy which occurred towards the end of the year 1455, the choice of the canons fell upon Glibert van Brederode, who had previously been archdeacon of the cathedral, and was held in general esteem amongst the people as well as the clergy. The Duke of Burgundy coveted so rich a prize, rather for its political importance, however, . . . than for any direct or immediate gain." The Duke appealed to Rome; Glibert was put back into his archdeaconry, with an annuity for life, and David, a natural son of Duke Philip, was made bishop. "Thus the foundation was laid for the permanent union of Utrecht to the other provinces, although its final accomplishment was destined to be deferred yet many years."—W. T. McCullagh, *Industrial Hist. of Free Nations*, ch. 10 (v. 2).

A. D. 1712-1714.—The Treaties which ended the War of the Spanish Succession, forming the Peace of Utrecht and the Treaty of Rastadt.—The long War of the Spanish Succession was brought to a close (except as between Germany and France) by negotiations at Utrecht, which resulted in the concluding of a number of treaties between the several powers concerned, constituting collectively what is known as the Peace of Utrecht. Negotiations to this end were begun by England and France early in 1711, and preliminaries were settled between them and signed in October of that year. This action of the English compelled the other allies to consent to a general conference, which opened at Utrecht January 29, 1712. The discussion of terms lasted more than a year, while the war went on. Between Germany and France the war still continued and it was at Rastadt (March, 1714), not Utrecht, that the last named powers came to their agreement of peace. The several treaties concluded at Utrecht were most of them signed on the 31st day of March, O. S., or April 11, N. S., in the year 1713, "by the plenipotentiaries of France, England, Portugal, Prussia, Savoy, and the United Provinces; the emperor resolving to continue the war, and the

king of Spain refusing to sign the stipulations until a principality should be provided in the Low Countries for the princess Ursini, the favourite of his queen [a demand which he subsequently withdrew]. The chief articles of this memorable pacification were to the following purport: It was stipulated that . . . Philip, now established on the Spanish throne, should renounce all right to the crown of France; that the dukes of Berry and Orléans, the next heirs to the French monarchy after the infant dauphin, should in like manner renounce all right to the crown of Spain, in the event of their accession to the French throne; that, on the death of Philip, and in default of his male issue, the succession of Spain and the Indies should be secured to the duke of Savoy; that the island of Sicily should be instantly ceded by his Catholic majesty to the same prince, with the title of king; that France should also cede to him the valleys of Pragelas, Oulx, Sezanne, Bardouche, and Château-Dauphin, with the forts of Exilles and Fenestrelles, and restore to him the duchy of Savoy and the county of Nice; and that the full property and sovereignty of both banks and the navigation of the Marañon, or river of Amazons, in South America, should belong to the king of Portugal. It was declared that the king of Prussia should receive Spanish Guelderland, with the sovereignty of Neufchâtel and Valengin, in exchange for the principality of Orange and the lordship of Châlons, and that his regal title should be acknowledged; that the Rhine should form the boundary of the German empire on the side of France; and that all fortifications, beyond that river, claimed by France, or in the possession of his most Christian majesty, should either be relinquished to the emperor or destroyed; that the kingdom of Naples, the duchy of Milan, and the Spanish territories on the Tuscan shore, should be ceded to the house of Austria; that the sovereignty of the Spanish Netherlands should likewise be secured to that family; but that the elector of Bavaria (to whom they had been granted by Philip) should retain such places as were still in his possession, until he should be reinstated in all his German dominions, except the Upper Palatinate, and also be put in possession of the island of Sardinia, with the title of king; that Luxemburg, Namur, and Charleroy should be given to the states-general as a barrier, together with Mons, Menin, Tournay, and other places; and that Lisle, Aire, Bethune, and St. Venant, should be restored to France. It was agreed that the French monarch should acknowledge the title of queen Anne, and the eventual succession of the family of Hanover to the British throne; that the fortifications of Dunkirk (the cause of much jealousy to England, and raised at vast expense to France) should be demolished, and the harbour filled up; that the island of St. Christopher (which had long been possessed jointly by the French and English, but from which the French had been expelled in 1702) should be subject to this country [England]; that Hudson's Bay and Straits (where the French had founded a settlement, but without dispossessing the English, and carried on a rival trade during the war), the town of Placentia, and other districts of the island of Newfoundland (where the French had been suffered to establish themselves, through the negligence of government), and the long-disputed province

of Nova Scotia (into which the French had early intruded, out of which they had been frequently driven, and which had been finally conquered by an army from New England in 1710), should be considered as the dependencies of the British crown; that Minorca and the fortress of Gibraltar (conquered from Spain) should remain in the possession of Great Britain; and that the Assiento, or contract for furnishing the Spanish colonies in South America with negroes, should belong to the subjects of Great Britain for the term of thirty years. That these conditions, especially on the part of Great Britain, were very inadequate to the success and expense of the war, will be allowed by every intelligent man, whose understanding is not warped by political prejudices. . . . The other confederates had greater cause to be satisfied, and the emperor [Charles VI.] as much as any of them; yet was he obstinate in refusing to sign the general pacification, though two months were allowed him to deliberate on the terms. But he had soon reason to repent his rashness in resolving to continue the war alone. . . . The imperial army on the Rhine, commanded by prince Eugene, was not in a condition to face the French under Villars, who successively took Worms, Spire, Keiserlautern, and the important fortress of Landau. He forced the passage of the Rhine . . . and reduced Freyburg, the capital of the Breisgau. Unwilling to prosecute a disastrous war, the emperor began seriously to think of peace; and conferences, which afterward terminated in a pacific treaty, were opened between prince Eugene and Villars, at Ranstadt. The terms of this treaty, concluded on the 6th of March (N. S.) 1714 [but ratified at Baden the next September, and sometimes called the Treaty of Baden], were less favourable to the emperor than those which had been offered at Utrecht. The king of France retained Landau, which he had before proposed to cede, with several fortresses behind the Rhine, which he had agreed to demolish [but restored Freiburg]. He procured the full re-establishment of the electors of Bavaria and Cologne in their dominions and dignities; the former prince consenting to relinquish Sardinia to the emperor, in return for the Upper Palatinate. . . . The principal articles in regard to Italy and the Low Countries were the same with those settled at Utrecht. Relaxing in his obstinacy, the king of Spain also acceded to the general pacification."—W. Russell, *Hist. of Modern Europe*, pt. 2, letter 23 (v. 3).

VANDALS: Origin and early movements.—"Gibbon declares that a striking resemblance, in manners, complexion, religion, and language, indicates that the Goths and Vandals were originally one great people; and he cites the testimony of Pliny and Procopius in support of this belief. According to this theory, therefore, the Vandals are of the Teutonic stock. Other learned men have endeavoured to identify them with the Wendes; and the Wendes, as we have seen, according to the authority of Jornandes and others, were members of the Slavic race. The question has been examined, with great learning and ingenuity, by M. L. Marcus, Professor at the College of Dijon, in a work upon Vandal history. His conclusion, drawn from a comparison of what Tacitus, Pliny, Procopius, and Jornandes have left us upon the subject, is favourable to the hypothesis of Gibbon. Between the Wendes and the Vindili of Pliny, who were undoubtedly Vandals, he considers that no nearer point of union can be found than that of the Asiatic origin common to all nations of Slavic and Teutonic blood. He accounts for the fact that some confusion upon the subject subsists in ancient

writers, by the supposition that the Slaves, after the great migration of Goths and Vandals to the South, occupied the locality they had abandoned on the coast of the Baltic, and became inheritors of the name, as well as of the land, of their predecessors. Hence they were commonly, though incorrectly, called Vindili, or Vandals. . . . The earliest locality of the tribe, so far as authentic history can trace them, seems to have been the district between the Vistula and the Elbe. Here they were found by the Langobardi, in their migration towards the South. . . . In the time of Pliny, we have that writer's testimony to the fact that the Vandals were still to be found between the two rivers. But during the next two centuries their unwarlike habits must have tended to diminish their importance among their fierce and active neighbours, of whom the Goths were the most formidable, and probably; the most aggressive. Tacitus, at any rate, in his tractate upon the Germans [A. D. 100], merely notices them by name. . . . Another half-century finds them in a strong position among the mountains which form the northern frontier of Bohemia. It is certain that they took part in the great Marcomannic war [A. D. 165-180]. . . . In the treaty made by Commodus, the son of Marcus Aurelius, with the Marcomanni [A. D. 180], the Vandals are one of the tribes secured from the hostility of those persevering enemies of the Roman empire. At this time, Ptolemy informs us that the Vandals occupied the districts lying around the sources of the Elbe; and all other investigation confirms the statement." A hundred years later, the Vandals appear to have been planted in a district on the Danube, east of the Theiss; from which they were soon afterwards driven by the Goths. They were then permitted by the emperor Constantine to pass the frontiers of the empire and settle in Pannonia, where they accepted Christianity and exhibited "the greatest aptitude for commerce and the arts of peace." Despite their Christianity, however, and despite their aptitude for the "arts of peace," the Vandals, after seventy years of friendly neighboring with the Romans, joined the savage pack of Alans, Sueves and Burgundians which, on the last day of the year 406, broke into Gaul and shattered the empire and the civilization of Rome beyond the Alps.—J. G. Sheppard, *The Fall of Rome*, lect. 7.

A. D. 428.—Conquests in Spain.—"After the retreat of the Goths [A. D. 418] the authority of Honorius had obtained a precarious establishment in Spain, except only in the province of Galicia, where the Suevi and the Vandals had fortified their camps in mutual discord and hostile independence. The Vandals prevailed, and their adversaries were besieged in the Nervasian hills, between Leon and Oviedo, till the approach of Count Asterius compelled, or rather provoked, the victorious barbarians to remove the scene of war to the plains of Bætica. The rapid progress of the Vandals soon required a more effectual opposition, and the master-general Castinus marched against them with a numerous army of Romans and Goths. Vanquished in battle by an

inferior enemy, Castinus fled with dishonour to Tarragona. . . . Seville and Carthage became the reward, or rather the prey, of the ferocious conquerors."—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 33.—Southern Spain, the ancient Bætica, acquired from the Vandals the name Vandalusia, which became Andalusia.—R. G. Latham, *Ethnology of Europe*, ch. 2.

A. D. 429-439.—Conquests in Africa.—In May, A. D. 429, the Vandals passed from Spain into Africa, invited by Count Boniface, the Roman governor of the African province. The latter had been deceived by an intriguing rival, Count Aetius, who persuaded him that the imperial Court at Ravenna were planning his disgrace and death. Thus incited to rebellion, as an act of self defense, he called the Vandals to his help. The latter had just fallen under the leadership of a new and terrible king—the bold and ruthless Genseric, who was destined to make the name of his people a proverb through all time for ferocity and barbarism. To the Vandals were united the Alans, and Genseric invaded Africa with some 80,000 men. He was joined, moreover, by great numbers of disaffected native Mauritanians, or Moors, and was welcomed by swarms of the fanatical Donatists, whose "vandalism" could quite equal his own. Count Boniface shrank aghast from the terrible invasion he had summoned, and learning, too late, how foully he had been played upon, returned to his allegiance with penitent energy and zeal. He turned his arms against Genseric; but it was in vain. "The victorious barbarians insulted the open country; and Carthage, Cirta, and Hippo Regius were the only cities that appeared to rise above the general foundation. . . . The seven fruitful provinces, from Tangier to Tripoli, were overwhelmed. . . . The Vandals, where they found resistance, seldom gave quarter; and the deaths of their vallant countrymen were expiated by the ruin of the cities under whose walls they had fallen. Careless of the distinctions of age or sex or rank, they employed every species of indignity and torture to force from the captives a discovery of their hidden wealth." Defeated in a battle which he ventured, Boniface retired into Hippo Regius and stood a siege of fourteen months. A second battle, won by the Vandals, decided the fate of the city, but its inhabitants escaped, for the most part, by sea, before the barbarians broke in. The great Bishop of Hippo, the venerable St. Augustine, was in the city when the siege began, but died before it ended, in his seventy-third year. "When the city, some months after his death, was burned by the Vandals, the library was fortunately saved which contained his voluminous writings." Hippo fell in the summer of A. D. 431. It was not until eight years later that Carthage succumbed,—taken treacherously, by surprise, on the 9th of October, 439; being 585 years after the destruction of the ancient city by the younger Scipio. The provinces of Africa were now fully in the possession of the Vandals, and the loss of their corn supply carried famine to Rome and Italy.—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 33.

A. D. 431-533.—Ruin of Africa under their dominion.—"The Vandals were bigoted Arians and their government was peculiarly tyrannical; they always treated the Roman inhabitants of Africa as political enemies, and persecuted them as religious opponents. The Visigoths in Spain had occupied two thirds of the subjugated lands, the Ostrogoths in Italy had been satisfied with one third; and both these people had acknowledged the civil rights of the Romans as citizens and Christians. The Vandals adopted a different policy. Genseric reserved immense domains to himself and to his sons. He divided the densely populated and rich districts of Africa proper among the Vandal warriors, exempting them from taxation and binding them to military service. . . . They seized all the richest lands, and the most valuable estates, and exterminated the higher class of the Romans. Only the poorer proprietors were permitted to preserve the arid and distant parts of the country. Still, the number of the Romans excited the fears of the Vandals, who destroyed the walls of the provincial towns in order to prevent the people from receiving succours from the Eastern Empire. . . . When Genseric conquered Carthage, his whole army amounted only to 50,000 warriors; yet this small horde devoured all the wealth of Africa in the course of a single century, and, from an army of hardy soldiers, it was converted into a caste of luxurious nobles living in splendid villas round Carthage. In order fully to understand the influence of the Vandals on the state of the country which they occupied, it must be observed that their oppressive government had already so far lowered the condition and reduced the numbers of the Roman provincials, that the native Moors began to reoccupy the country from which Roman industry and Roman capital had excluded them. . . . As the property of the province was destroyed, its Roman inhabitants perished."—G. Flinay, *Greece Under the Romans*, ch. 3, sect. 5.

A. D. 455.—The sack of Rome by Genseric. See **ROME**: A. D. 455

A. D. 533-534.—End of the kingdom and nation.—The weakened and disordered state of the Vandal kingdom, concurring with the revival of a military spirit in the eastern Roman empire, which the great soldier Belisarius had brought about, encouraged the Emperor Justinian to attempt, A. D. 533, a reconquest of the lost Roman provinces in Africa. With a fleet of six hundred ships, bearing 37,000 men, Belisarius set sail from Constantinople in the month of June and landed early in September on the African coast, about five days' journey from Carthage, having halted at a port in Sicily on the voyage. A few days later, he defeated the Vandal king, Gelimer, in a battle (Ad Decimus) fought at ten miles distance from his capital, and entered Carthage in triumph (September 15, A. D. 533), received with joy by its Roman and Catholic inhabitants, long persecuted and humiliated by the Arian Vandals. A second and decisive battle was fought some weeks afterwards at Tricamaron, twenty miles away from Carthage, and there and then the Vandal kingdom came to its end. Gelimer fled into the wilds of Numidia, was pursued, and, having surrendered himself in the March following, was sent to Constantinople, and passed the remainder of his days in peace and modest luxury on a comfortable estate in Galatia.

"The fall of the Vandal monarchy was an event full of meaning for the future history of Africa. There can be little doubt that in destroying it Justinian was unconsciously removing the most powerful barrier which might in the next century have arrested the progress of Mohammedanism."—T. Hodgkin, *Italy and Her Invaders*, bk. 4, ch. 15 (v. 3).—"The bravest of the Vandal youth were distributed into five squadrons of cavalry, which adopted the name of their benefactor. . . . But these rare exceptions, the reward of birth or valour, are insufficient to explain the fate of a nation whose numbers, before a short and bloodless war, amounted to more than 600,000 persons. After the exile of their king and nobles, the servile crowd might purchase their safety by abjuring their character, religion, and language; and their degenerate posterity would be insensibly mingled with the common herd of African subjects. Yet even in the present age, and in the heart of the Moorish tribes, a curious traveler has discovered the white complexion and long flaxen hair of a northern race; and it was formerly believed that the boldest of the Vandals fled beyond the power, or even the knowledge, of the Romans, to enjoy their solitary freedom on the shores of the Atlantic ocean."—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 41.

VARANGIAN SEA.—One of the ancient names of the Baltic.—R. G. Latham, *Native Races of Russian Empire*, ch. 16.

VARANGIANS, OR VARINGS.—THE WARING GUARD.—Varangians "was the name of the Byzantine equivalent to the 'soldiers of a free-company' in the 11th and 12th centuries. The soldiers were almost wholly Scandinavians—to a great extent the Swedes of Russia. The reasons against believing Varangian to be the same word as Frank, are: 1. The mention of Frangi along with them, as a separate people. 2. The extent to which the Varangians were Scandinavians, rather than Germans of the Rhine. In favour of it is: The form of the present Oriental name for Europeans—Feringi. This, in my mind, preponderates. Connected by name only with the Franks, the truer ethnological affinities of the Varangians

were with the Scandinavians of Russia."—R. G. Latham, *The Germania of Tacitus, Epitome, sect. 17.*—"Many of the Varings and probably of the English also had taken military service at an early period under the Byzantine emperors. They formed a body-guard for the Emperor, and soon gained for themselves a renown greater than that possessed by the earlier imperial guard of the Immortals. The Byzantine writers usually speak of them as the barbarian guard or as the axe-bearers. Their weapon was the Danish battle-axe, or rather bill, and seems not to have had two blades turning different ways like those of a halberd, but to have had one with a sharp steel spike projecting, so that the weapon could be used either to strike or to thrust. Anna, the daughter of Alexis the First, calls them Warings or Varangians. Nicetas speaks of them as Germans. The Western writers call them usually Danes, or 'English and Danes.' The conquest of England by William the Norman caused many of the English to emigrate to Russia and so to Constantinople, where they joined the Waring guard. . . . Warings and English, while occupants of the Greek palace, still spoke their own language, had their own laws, and chose, with certain exceptions, their own officers. The one in command was called the acolyth, or follower, because his place was immediately behind the Emperor."—E. Pears, *The Fall of Constantinople, ch. 6, sect. 3.*

VATICAN, THE.—THE LEONINE CITY.—"The name Vatican was applied by the writers of the Augustan age to the whole range of hills extending along the western bank of the Tiber, including the Janiculum and the Monte Mario. . . . But the name Vaticanus has now been restricted to the small hill standing behind the Basilica of St. Peter's, upon which the Vatican Museum and the Papal Gardens are situated. This hill is a small projecting portion of the range which includes the Janiculum and Monte Mario, and it is separated from the Janiculum by a depression, along which the street of the Borgo S. Spirito runs. The derivation of the name Vatican is lost. Gellius has preserved a quotation from Varro, in which the word

is said to be derived from a deity Vaticanus, the presiding god of the first rudiments of speech ('vagine, vagitanus'). Paulus Diaconus gives a different explanation, founded on the supposed expulsion of the Etruscans in fulfilment of an oracle ('vatum responso expulsis Etruscis'); and from this Niebuhr and Bunsen, following him, have supposed that an Etruscan city existed here in ancient times. There appears to be no sufficient evidence of such a settlement."—R. Burn, *Rome and the Campagna, ch. 11.*—In the ninth century, at the time of the pontificate of Leo IV., "the nations of the West and North who visited the threshold of the apostles had gradually formed the large and populous suburb of the Vatican, and their various habitations were distinguished, in the language of the times, as the 'schools' of the Greeks and Goths, of the Lombards and Saxons. But this venerable spot was still open to sacrilegious insult: the design of enclosing it with walls and towers exhausted all that authority could command or charity would supply; and the pious labour of four years was animated in every season and at every hour by the presence of the indefatigable pontiff. The love of fame, a generous but worldly passion, may be detected in the name of the Leonine City, which he bestowed on the Vatican; yet the pride of the dedication was tempered with Christian penance and humility."—E. Gibbon, *Decline and Fall of the Roman Empire, ch. 52.*

VECTIGAL, THE.—VECTIGALIA.—"Pascua—Vectigalia—Publicum—are the terms employed to denote generally the Revenues of Rome, from whatever source derived. Pascua, i. e. Pasture lands, signified Revenue; because, in the earliest ages, the public income was derived solely from the rent of pastures belonging to the state. . . . Vectigal is the word used more frequently than any other to denote the Revenue of the state generally. . . . Publicum, in its widest acceptation, comprehended every thing which belonged to the community at large."—W. Ramsay, *Manual of Roman Antiq., ch. 8.*—"Cicero states that there was a difference between Sicily and all the other Roman provinces in the management of the Vectigal, which is the name for the contribution which the provinces made to the Roman State. All the provinces except Sicily paid either a fixed land-tax (vectigal stipendiarium) or tenths [decumæ] or other quota of their produce, and these tenths were let at Rome by the censors to the Publicani, who paid the State a certain sum for the privilege of collecting the tenths and made out of them what profit they could. . . . The tenths of wheat and barley were let in Sicily to the Publicani, but sometimes a community would bid for its tenths and pay them itself."—G. Long, *Decline of the Roman Republic, v. 3, ch. 4.*

VEHMERICHTS.—**VEHMIC COURTS.**—"In times when political, social, and legal life are in process of fermentation, and struggling towards a new order of things, the ordinary tribunals lose their authority, and from the body of the people men spring up to protect the right in a primitive fashion, and to punish the criminal who has escaped the ordinary penalties of the law. Thus, at the close of the Middle Ages, or, more precisely, the first half of the 15th century, the Vehmgerichts (or Vehmlic Courts, also called Free Courts, Franchise Courts, Secret Courts) rose to an authority which extended all over Germany, which knew no respect of persons, and before which many evil-doers in high places, who had bade defiance to the ordinary tribunals, were made to tremble. The name 'Vehme' is derived from the old German 'vervehmen,' which means to ban, or to curse. The Vehmlic courts were peculiar to Westphalia, and even there could only be held on the 'Red Land'—that is, the district between the Rhine and the Weser. They were dependent on the German Emperor alone, and their presidents, the Free-counts, received from the Emperor in person, or from his representative, the Elector of Cologne, the power of life and death. They traced their origin to Charlemagne, who, respecting the legal customs of the old heathen Saxons, introduced county courts among them after they had been converted to Christianity. For, even in the most ancient times, the Saxon freemen used to assemble at an appointed season, after they had held their great sacrifice, and hold a 'Thing' under the presidency of one of their oldest members, called the Grave, or Count, where they inflicted punishment and administered justice. The Vehmlic court consisted of a Free-count and a number of assessors, who were called 'The Initiated,' because they knew the secrets of the holy Vehme. There must be at least fourteen of these assessors, but there were generally twice that number. As it was no secret when a man was an assessor, and as it contributed greatly to the safety of his person, since people took good care not to molest a member of the holy Vehme, it gradually came about that men from every German province obtained admission into the number of assessors. When the Emperor Sigismund was elected into the number of 'The Initiated' at the Franchise Court of Dortmund, the number of assessors is said to have amounted to 100,000, among whom were many princes and nobles. And about a thousand assessors are said to have been present when the ban was issued against Duke Henry of Bavaria in 1420. . . . There was a 'secret court' to which only the initiated had access, and a 'public court' which was held in the morning in the light of day at a known court-house. The presidents' chairs were always set in the open air under a lime, oak, pear, or hawthorn tree, and often near a town, castle, or village. At Dortmund the president's chair was placed close to the town wall under a lime-tree, which, though sadly shattered, is still standing between the rails inside the railway station. Round the stone table were ranged three stous

benches for the assessors; on the table there was carved in relief the German imperial eagle, and on it was placed the sword of justice. . . . The Vehmlic court which was originally, and was found to be, a public one, gradually altered its character, enveloped itself in mysterious darkness, and under the cloak of secrecy lent itself to all sorts of unrighteous objects. In 1461, accordingly, princes and cities leagued together to suppress the irregularities of these courts, and as soon as the orderly administration of justice came into existence with the rise of the new princely authority, they perished from their own impotence."—A. VENETI OF CISALPINE GAUL, The.—One of the tribes or nations of Cisalpine Gaul bore the name of the Veneti. The Veneti occupied the country between the rivers Adige and Plavis and seem to have been considerably civilized when they first appear in history. They became allies of the Romans at an early day and were favorably dealt with when Gallia Cisalpina was added to the dominions of Rome. "No ancient writer distinctly states to what race the Veneti belonged. They are said to have resembled the Illyrians in dress and manners; but the very way in which this statement is made shows that its author did not regard them as Illyrians. . . . I have no doubt that the Veneti belonged to the race of the Liburnians, and that accordingly they were a branch of the widespread Tyrrheno-Pelasgians, in consequence of which they also became so easily Latinized." The capital city of the Veneti was Patavium (modern Padua). "Patavium was a very ancient and large town, and it is strange that it appears as such in Roman history all at once. It is mentioned as early as the fifth century [B. C.], during the expedition of the Spartan Cleonymus; it is also spoken of at the time of Cæsar and of the triumvirs. But Strabo is the first who describes Patavium as a large town, and in such a manner as to make it evident that it was an ancient place. He says that, next to Rome, it was the wealthiest city of Italy. . . . In the time of Augustus it was a large commercial and manufacturing place."—B. G. Niebuhr, *Lects. on Ancient Ethnog. and Geog.*, v. 2, p. 246.

VENETI OF WESTERN GAUL, The.—"The Veneti were one of the Armorican states of the Celts. Their neighbours on the south were the Namnetes or Naunetes (Nantes), on the east the Redones, and on the north the Curiosolitæ, and the Osismi in the north-west part of Bretagne, in the department of Finistère. The chief town of the Veneti was Darioirum, now Vannes, on the bay of Morbihan in the French department of Morbihan, which may correspond nearly to the country of the Veneti. The Veneti were the most powerful of all the maritime peoples who occupied the peninsula of Bretagne. They had many vessels in which they sailed to the island Britannia, to Cornwall and the parts along the south coast of England, as we may assume. They surpassed all their neighbours in skill and experience in naval affairs."—G. Long, *Decline of the Roman Republic*, v. 4, ch. 6.—The Veneti, "together with the Auleri, Rhedones [or Redones], Carnutes, Andri and Turones, occupied the whole space between the lower Seine and the lower Loire, and were apparently closely united among themselves."—C. Merivale, *Hist. of the Romans*, ch. 7.—"The Andes [Andri] are the people whom Tacitus names the Andecavi, and the copyists of Ptolemy have named Ondicavæ. They were west of the Turones, and their position is defined by the

town Juliomagus or Civitas Andecavorum, now Angers on the Mayenne."—G. Long, *Decline of the Roman Republic*, v. 4, ch. 6.—"In my opinion these Veneti were the founders of the Veneti in the Adriatic, for almost all the other Celtic nations in Italy have passed over from the country beyond the Alps, as for instance the Boii and Senones. . . . However, I do not maintain my opinion positively; for in these matters probability is quite sufficient."—Strabo, *Geography*; tr. by Hamilton and Falconer, bk. 4, ch. 4, sect. 1.

Cæsar's campaign.—Cæsar's third campaign in Gaul, B. C. 58, was directed against the Veneti and their Armorican neighbors. These tribes had submitted themselves in the previous year to Cæsar's lieutenant, the younger Crassus; but the heavy exactions of the Romans provoked a general rising, and Cæsar was called to the scene in person. The Veneti were so amphibious a race, and their towns were generally placed so much out of the reach of a land army, that he found it necessary to build a fleet at the mouth of the Loire and bring it up against them. But the Veneti were better sailors than the Romans and their ships were more strongly built, so that the advantage would have still remained to them if Roman inventiveness had not turned the scale. Cæsar armed his men with hooked knives at the end of long poles, with which they cut the rigging of the Venetian ships and brought down their clumsy sails, which were of leather. By this means he overcame and destroyed them, in a great naval fight. When the survivors submitted, he ruthlessly slew the senatorial elders and sold the remnant of the people into slavery.—Cæsar, *Gallie Wars*, bk. 3, ch. 7-10.

VENEZUELA: Aboriginal inhabitants. See AMERICAN ABORIGINES: CARIBS AND THEIR KINDRED, and COAJIRO.

A. D. 1499-1550.—Discovery and naming of the province.—Its first occupation by German adventurers.—"The province contiguous to Santa Martha on the east was first visited by Alonso de Ojeda, in the year 1499 [see AMERICA: A. D. 1499-1500]; and the Spaniards, on their landing there, having observed some huts in an Indian village, built upon piles, in order to raise them above the stagnated water which covered the plain, were led to bestow upon it the name of Venezuela, or little Venice. . . . They made some attempts to settle there, but with little success. The final reduction of the province was accomplished by means very different from those to which Spain was indebted for its other acquisitions in the new world. The ambition of Charles V. often engaged him in operations of such variety and extent that his revenues were not sufficient to defray the expense of carrying them into execution. Among other expedients for supplying the deficiency of his funds, he had borrowed large sums from the Velsers of Augsburg, the most opulent merchants at that time in Europe. By way of retribution for these, or in hopes, perhaps, of obtaining a new loan, he bestowed upon them the province of Venezuela, to be held

as an hereditary fief from the crown of Castile, on condition that within a limited time they should render themselves masters of the country, and establish a colony there. . . . Unfortunately they committed the execution of their plan to some of those soldiers of fortune with which Germany abounded in the 16th century. These adventurers, impatient to amass riches, that they might speedily abandon a station which they soon discovered to be very uncomfortable, instead of planting a colony in order to cultivate and improve the country, wandered from district to district in search of mines, plundering the natives with unfeeling rapacity, or oppressing them by the imposition of intolerable tasks. In the course of a few years, their avarice and exactions, in comparison with which those of the Spaniards were moderate, desolated the province so completely that it could hardly afford them subsistence, and the Velsers relinquished a property from which the inconsiderate conduct of their agents left them no hope of ever deriving any advantage. When the wretched remainder of the Germans deserted Venezuela, the Spaniards again took possession of it."—W. Robertson, *Hist. of America*, bk. 7.

A. D. 1829-1886.—Summary record of revolutions and civil wars.—The strife of the Yellows and the Blues.—“In all countries, under whatever name they may be known, there are two great political parties; the conservatives and the reformers. . . . Venezuela is no exception to the general rule; there is the ‘Oligarquía,’ which desires to let things alone, and the ‘Liberal’ party, which wishes to remould them in accordance with the spirit of the age. The Spanish misgovernment left a legacy of bitterness and anarchy that has been the cause of much misery. Political passion runs very high in the country, and its history for a generation between these two parties has been a continual struggle, always more or less warlike. The existence of Venezuela in an independent capacity is due, in a large measure, to the personal ambition of Paez, by whose influence the great Liberator was exiled from his fatherland, and the republic separated from Colombia. Whatever may have been the real wishes of the people, the death of Bolivar put an end to all thoughts of re-union; and Paez became its first constitutional president. The second president was the learned Dr. José María Vargas, whose election in March 1835 was said to have been irregular, and led to the ‘Revolución de las Reformas.’ He was deposed and expelled in July, but in August recalled to power! General Paez now took the field against the ‘reformistas,’ and a civil war ensued, continuing un-

til March 1836, when they were completely subjugated, and treated with great rigour by order of the Congress, but against the desire of Paez, who entreated to be allowed to deal with them clemently. In 1836, Dr. Vargas resigned the presidency, and after the remainder of his term had been occupied by three vice-presidents, General Paez, in 1839, became again the legitimate head of the nation. Now that the grave had closed over Simon Bolivar, the passions which had prevented the recognition of his greatness died also, and on the 17th of December 1842, the ashes of the immortal Liberator were transferred from Santa María with every mark of public respect and honour and received a magnificent national funeral, in the Temple of San Francisco, in Caracas. The fifth president was General Soublette, and the sixth General José Tadeo Monagas, who was elected in 1847. A great part of the Venezuelan people believe that all the evils that have fallen upon the republic since 1846 have had their origin in the falsification of votes, said to have taken place during the election of Monagas for president. The liberal candidate was Antonio Leocadio Guzman; and it is asserted that he had a majority of votes. . . . Monagas did not have an easy tenure of office, for the opposition of Paez led to two years of civil war. Here it may be noted to the credit of the liberal party that, at a time when many of its opponents were prisoners, it abolished the penalty of death for political offences. To his brother, General José Gregorio Monagas, afterwards president of the republic, was due the emancipation of the slaves. The famous law of March 24th, 1854, conceded liberty and equal rights to all; but by a strange irony of fortune, he who had given the precious boon of freedom to thousands died himself incarcerated in a political prison. . . . At the beginning of 1859 the discontent of the liberals had reached a pitch which led to the outbreak of the War of the Federation. It was in this struggle that the present leader of the liberal party first displayed his military skill.” Antonio Guzman Blanco, born in 1830 and educated for the law, lived some years in the United States, part of the time as Secretary of Legation at Washington. Driven from Venezuela in 1858, “his expatriation soon after brought him in contact, first in St. Thomas and afterwards in Curacao, with General Falcon, then the head of ‘los liberales.’ Falcon landed in Venezuela in July 1859, and proclaimed the Federal Republic. Many rose to support him, and in Caracas, on the 1st of August, the president, Monagas, was arrested; the next day the same troops declared against the Federation, and fired upon the people! So commenced the five years’ War of the Federation, which has left, even to the present day, its black and ruined tracks across the face of the country. On the 30th of September was fought the battle of Sabana de la Cruz, resulting in the fall of Barquisimeto. In this action, so fortunate for the liberals, Guzman Blanco made his acquaintance with war, and showed so much military talent and energy that he was induced to leave his civil duties and take a ‘comandante’s’ commission. The victory of Santa Ines, in December of the same year, followed. . . . The attack on San Carlos followed soon after, and was a disaster for the federals, who lost their general, Zamora, and were forced to retreat. Falcon sought aid in Nueva Gran-

ada." The next year Guzman Blanco won the victory of Quebrada-seca, October 21, 1862. "Other victories followed, and were crowned by the grand and decisive combat of the 16th, 17th, and 18th of April, which gave the province of Caracas to the Federals, and led to a treaty between the two parties. The peace of Coche was arranged by Señor Pedro José Rojas, secretary to the Dictator, as Paez was sometimes called, and Guzman Blanco, as representative of Falcon, the chief of the revolution. Paez, by this treaty, undertook to abdicate 30 days later, when an assembly of 80, nominated in equal parts by the chiefs of each party, was to decide on a programme for the future. The assembly met in Victoria, and nominated Falcon President and Guzman Blanco provisional vice-president of the Federation. Falcon entered Caracas in triumph on July 24, 1863, and Guzman Blanco became Minister of Finance and of Foreign Relations." Guzman Blanco visited Europe in 1864 and 1867 to negotiate loans. "Meanwhile, in Caracas, the 'oligarquia,' which now assumed the name of the Blue party (El Partido Azul), was not idle, and its activity was increased by dissensions in the opposition. A section of the liberal party [or 'los amarillos'—'Yellows'] had become greatly disaffected to Marshal Falcon, who abdicated in favour of two revolutionary chiefs, Bruzual and Urrutia. This led to the treaty of Antimano, by which the 'partido azul' recognized the new government, but directly afterwards proclaimed the presidency of General José Tadeo Monagas. Three days' sanguinary combat, at the end of July 1868, gave it possession of Caracas." Guzman Blanco, returning at this juncture from Europe, was driven to take refuge in the island of Curacao; but in February, 1870, he reappeared in Venezuela; was supported by a general rising; took Caracas by assault, and defeated the Blues in several battles. "The congress of plenipotentiaries of the states met at Valencia, and nominated Guzman Blanco provisional president, and by the end of the year the enemy was nearly everywhere defeated."—J. M. Spence, *The Land of Bolívar*, v. 1, ch. 8.—From the liberation of Venezuela to the present time, "every successive President seems to have been employed, during his short lease of power, in trying to enrich himself and his adherents, without the least consideration for his unfortunate country. On paper all the laws are perfect, and the constitution all that could be desired, but experience has shown that the influence of the executive power is able to subdue and absorb every other power, legislative or judicial. One law which the Congress passed, viz:—that of division of the National property among the defenders of the country, as the only way of rewarding their heroic services, has become a precedent of very bad import. At first, those who had risen and driven out the Spaniards divided the land among themselves, but as successive Generals strove for and gained the Presidency they again forfeited the property of the opposing party, and divided their possessions among their own followers. . . . Paez, Vargas, Paez, Zea, Sonblette, Paez, Gil, Monagas, Falcon, Monagas, Poldor, Fulgar, Blanco, Linares, Blanco, Crespo, and again Blanco, have succeeded each other with marvellous rapidity, the principal occupation of the deposed President being to conspire against his successor. Some of them succeeded

to power more than once, but Don Guzman Blanco alone, since Bolívar, seems to have got a firm hold of the Government, and although, by the letter of the Constitution, he can only hold power for two years at a time, and cannot possibly hold two terms consecutively, yet the intervening Presidents were little more than dummies to keep his seat warm. . . . At present [1886] Don Guzman Blanco is supreme. He is reported to be immensely wealthy, and is a man of great capacity and intelligence."—W. Barry, *Venezuela*, ch. 5.

A. D. 1869-1892.—The constitution.—The rule of General Blanco.—The Revolution of 1889.—"The Venezuelan Constitution is modelled after the American Constitution, with modifications grounded upon the Calhoun doctrine of State rights [see CONSTITUTION OF VENEZUELA]. The confederation consists of eight States, which are supreme and coordinate in their sovereign rights. The National Government represents, not the people, but the States. . . . In 1869 opened an era of peace and progress under the political domination of General Guzman Blanco. For 20 years, whether he was the head of a Provisional Government established by force of arms, or the constitutional Executive, or Minister to France, his will was the supreme force in the State. . . . He suppressed Clericalism and established genuine religious liberty. He built rail-ways, improved the public roads, and adorned the cities. . . . He developed the industries and commerce of the country, and promoted its prosperity by a policy at once strong and pacific. It was a system of political absolutism. . . . A reaction against it was inevitable. . . . The signal for a political revolution was raised by university students in October, 1889. They began operations by flinging stones at a statue of Guzman Blanco in Caracas. . . . It was a singularly effective revolution, wrought without bloodshed or excitement. This political movement was successful because Guzman Blanco was in Paris, and his personal representative in the executive office was not disposed to resent public affronts to his patron. The President, Dr. Rojas Paul, was a wise and discreet man. . . . He reorganized his Cabinet so as to exclude several of the devoted partisans of Guzman Blanco, and brought Dr. Andueza Palacio into the field as a candidate for the Presidency. . . . Andueza's administration, instead of being an era of reform, reproduced all the vices and corruption of the old order, and none of its progressive virtues. After two years it ended in civil war, usurpation, and the enforced resignation of Andueza."—I. N. Ford, *Tropical America*, ch. 12.

A. D. 1892-1893.—Constitutional Government restored.—Andueza Palacio resigned in favor of Vice President Villegas, and the legality of the succession was disputed by the opposition, under ex-President Joaquín Crespo. The civil war continued, and three short-lived dictatorships were set up in succession; but in October, 1893, Crespo entered Caracas and established a constitutional government. In June, 1893, a new constitution was adopted. In October, Crespo was elected President for a term of four years.

VENICE.

A. D. 452.—The origin of the republic.—When Attila the Hun, in the year 452, crossed the Alps and invaded Italy, "the savage destroyer undesignedly laid the foundations of a republic which revived, in the feudal state of Europe, the art and spirit of commercial industry. The celebrated name of Venice, or Venetia, was formerly diffused over a large and fertile province of Italy, from the confines of Pannonia to the river Addua, and from the Po to the Ithetian and Julian Alps. Before the irruption of the barbarians, fifty Venetian cities flourished in peace and prosperity. . . . Many families of Aquileia, Padua, and the adjacent towns, who fled from the sword of the Huns, found a safe though obscure refuge in the neighbouring islands. At the extremity of the Gulf, where the Adriatic feebly imitates the tides of the ocean, near a hundred small islands are separated by shallow water from the continent, and protected from the waves by several long slips of land, which admit the entrance of vessels through some secret and narrow channels. Till the middle of the 5th century these remote and sequestered spots remained without cultivation, with few inhabitants, and almost without a name. But the manners of the Venetian fugitives, their arts and their government, were gradually formed by their new situation; and one of the epistles of Cassiodorus, which describes their condition about seventy years afterwards, may be considered as the primitive monument of the republic. . . . Fish was the common, and almost the universal, food of every rank: their only treasure consisted in the plenty of salt which they extracted from the sea."—E. Gibbon, *Decline and Fall of the Roman Empire*, ch. 35.—"The inhabitants of Aquileia, or at least the feeble remnant that escaped the sword of Attila, took refuge at Grado. Concordia migrated to Caprularia (now Caorle). The inhabitants of Altinum, abandoning their ruined villas, founded their new habitations upon seven islands at the mouth of the Piave, which, according to tradition, they named from the seven gates of their old city. . . . From Padua came the largest stream of emigrants. They left the tomb of their mythical ancestor, Antenor, and built their humble dwellings upon the islands of Rivus Altus and Methamaucus, better known to us as Rialto and Malamocco. This Paduan settlement was one day to be known to the world by the name of Venice. But let us not suppose that the future Queen of the Adriatic sprang into existence at a single bound like Constantinople or Alexandria. For 250 years, that is to say for eight generations, the refugees on the islands of the Adriatic prolonged an obscure and squalid existence,—fishing, salt-manufacturing, damming out the waves with wattled vine-branches, driving piles into the sand-banks; and thus gradually extending the area of their villages. Still these were but fishing villages, loosely confederated together, loosely governed, poor and insignificant. . . . This seems to have been their condition, though perhaps gradually growing in commercial importance, until at the beginning of the 8th century the concentration of political authority in the hands of the first doge, and the recognition of the Rialto cluster of islands as the capital of the confederacy, started the Republic on a career of success and

victory."—T. Hodgkin, *Italy and Her Invaders*, bk. 2, ch. 4 (p. 2).

A. D. 554-800.—A dukedom under the Emperors of Ravenna. See *ROME*: A. D. 554-800.

A. D. 568.—A refuge from the invading Lombards. See *LOMBARDS*: A. D. 568-573.

A. D. 697-810.—The early constitution of government.—Origin of the Doges.—Resistance to Pippin, King of the Lombards.—Removal to the Rialto and founding of the new capital city.—"Each island had at first its own magistrate: the magistrates of the most considerable being called Tribunes Major, the others, Tribunes Minor, and the whole being equally subject to the council-general of the community; which thus constituted a kind of federal republic. This lasted nearly three hundred years, when it was found that the rising nation had fairly outgrown its institutions. Dangerous rivalries arose among the tribunes. . . . At a meeting of the Council-General in A. D. 697, the Patriarch of Grado proposed the concentration of power in the hands of a single chief, under the title of Doge or Duke. The proposition was eagerly accepted, and they proceeded at once to the election of this chief. 'It will be seen (remarks Daru) that the Dogeship saved independence and compromised liberty. It was a veritable revolution, but we are ignorant by what circumstances it was brought about. Many historians assert that the change was not effected till the permission of the Pope and the Emperor was obtained.' The first choice fell on Paolo Luca Anabesto. It was made by twelve electors, the founders of what were thenceforth termed the electoral families. The Doge was appointed for life; he named his own counsellors: took charge of all public business; had the rank of prince, and decided all questions of peace and war. The peculiar title was meant to imply a limited sovereignty, and the Venetians uniformly repudiated, as a disgrace, the bare notion of their having ever submitted to a monarch. But many centuries passed away before any regular or well-defined limits were practically imposed; and the prolonged struggle between the people and the Doges, depending mainly on the personal character of the Doge for the time being, constitutes the most startling and exciting portion of their history." The third Doge, one Urso, alarmed the people by his pretensions to such a degree that they slew him, and suppressed his office for five years, substituting a chief magistrate called "maestro della milizia." "The Dogeship was then [742] restored in the person of Theodal Urso (son of the last Doge), who quitted Ileraclea [then the Venetian capital] for Malamocco, which thus became the capital." In his turn, Theodal Urso lost the favor of the people and was deposed and blinded. "It thenceforth became the received custom in Venice to put out the eyes of deposed Doges." Later in the 8th century the Dogeship was secured by a family which went far towards making it hereditary, and rendering it boldly tyrannical; but the yoke of the would-be despots—Giovanni and Maurice, father and son—was broken in 804, and they were driven to flight. The head of the conspiracy which expelled them, Obelerio, was then proclaimed Doge. "The events of the next five

years are involved in obscurity. One thing is clear. Pepin, King of the Lombards [son of Charlemagne], either under the pretence of a request for aid from the new Doge, or to enforce some real or assumed rights of his own, declared war against the Republic, and waged it with such impetuosity that his fleet and army, after carrying all before them, were only separated from Malamocco, the capital, by a canal. In this emergency, Angelo Partecipazio, one of those men who are produced by great occasions to mark an era, proposed that the entire population should remove to Rialto, which was separated by a broader arm of the sea from the enemy, and there hold out to the last. No sooner proposed than done. They hastily embarked their all; and when Pepin entered Malamocco, he found it deserted. After losing a large part of his fleet in an ill-advised attack on Rialto, he gave up the enterprise, and Angelo Partecipazio was elected Doge in recognition of his services, with two tribunes for counsellors. One of his first acts was to make Rialto the capital, instead of Malamocco or Heraclea, which had each been the seat of Government at intervals. "There were round Rialto some sixty islets, which the Doge connected by bridges. They were soon covered with houses. They were girt with a fortification; and it was then that this population of fugitives gave to this rising city, which they had just founded in the middle of a morass, the name of Venetia, in memory of the fair countries from which their fathers had been forcibly expatriated. The province has lost its name, and become subject to the new Venice."—*The Republic of Venice* (Quarterly Review, Oct., 1874, v. 137), pp. 417-420. In 803 Charlemagne concluded a treaty, at Aix-la-Chapelle, with Nicephorus I. the Byzantine or Eastern Emperor, establishing boundaries between the two empires which disputed the Roman name. "In this treaty, the supremacy of the Eastern Empire over Venice, Istria, the maritime parts of Dalmatia, and the south of Italy, was acknowledged; while the authority of the Western Empire in Rome, the exarchate of Ravenna, and the Pentapolis, was recognised by Nicephorus. The commerce of Venice with the East was already so important, and the Byzantine administration afforded so many guarantees for the security of property, that the Venetians, in spite of the menaces of Charlemagne, remained firm in their allegiance to Nicephorus. . . . Venice, it is true, found itself in the end compelled to purchase peace with the Frank empire, by the payment of an annual tribute of thirty-six pounds of gold, in order to secure its commercial relations from interruption; and it was not released from this tribute until the time of Otho the Great. It was during the reign of Nicephorus that the site of the present city of Venice became the seat of the Venetian government, Rivalto (Rialto) becoming the residence of the duke and the principal inhabitants, who retired from the continent to escape the attacks of Pepin [king of Italy, under his father, Charlemagne]. Heraclea had previously been the capital of the Venetian municipality. In 810 peace was again concluded between Nicephorus and Charlemagne, without making any change in the frontier of the two empires."—G. Finlay, *Byzantine Empire*, 716-1057, bk. 1, ch. 2, sect. 1.

8th Century: Still subject to the Eastern Empire. See *Rome*: A. D. 717-800.

A. D. 810-961.—Spread of commerce and naval prowess.—Destruction of Istrian pirates.—Conquests in Dalmatia.—"During the ninth, and the first sixty years of the tenth centuries,—from the government of Angelo Partecipazio, to the coming into Italy of Otho the Great,—the Venetian affairs, with brief intervals of repose, were wholly occupied with civil commotions and naval wars. The doges of the republic were often murdered; its fleets were sometimes defeated; but, under every adverse circumstance, the commercial activity, the wealth, and the power of the state were still rapidly increasing. In the ninth century the Venetians, in concert with the Greeks, encountered, though with indifferent success, the navies of the Saracens; but the Narentines, and other pirates of Dalmatia, were their constant enemies, and were frequently chastised by the arms of the republic. The Venetian wealth invited attacks from all the freebooters of the seas, and an enterprise undertaken by some of them who had established themselves on the coast of Istria deserves, from its singularity and the vengeance of the republic, to be recorded in this place. According to an ancient custom, the nuptials of the nobles and principal citizens of Venice were always celebrated on the same day of the year and in the same church. . . . The Istrian pirates, acquainted with the existence of this annual festival, had the boldness [A. D. 944] to prepare an ambush for the nuptial train in the city itself. They secretly arrived over night at an uninhabited islet near the church of Ollvolo, and lay hidden behind it with their barks until the procession had entered the church, when darting from their concealment they rushed into the sacred edifice through all its doors, tore the shrieking brides from the arms of their defenceless lovers, possessed themselves of the jewels which had been displayed in the festal pomp, and immediately put to sea with their fair captives and their booty. But a deadly revenge overtook them. The doge, Pietro Candiano III., had been present at the ceremony: he shared in the fury and indignation of the affianced youths: they flew to arms, and throwing themselves under his conduct into their vessels, came up with the spoilers in the lagunes of Caorlo. A frightful massacre ensued: not a life among the pirates was spared, and the victors returned in triumph with their brides to the church of Ollvolo. A procession of the maidens of Venice revived for many centuries the recollection of this deliverance on the eve of the purification. But the doge was not satisfied with the punishment which he had inflicted on the Istriots. He entered vigorously upon the resolution of clearing the Adriatic of all the pirates who infested it: he conquered part of Dalmatia, and he transmitted to his successors, with the ducal crown, the duty of consummating his design."—G. Procter, *Hist. of Italy*, ch. 1, pt. 2.

A. D. 829.—The translation of the body of St. Mark.—The Winged Lion of St. Mark.—"In the second year of the reign of Doge Giustiniano Partecipazio there was brought to Venice from Alexandria the body of the holy evangelist St. Mark. For, as Petrus Damianus says, Mark was brought from Alexandria into Venice, that he who had shone in the East like the morning

star might shed his rays in the regions of the West. For Egypt is held to be the East and Venice the West. There he had held the rule of the Church of Alexandria, and here, being, as it were, born again, he obtained the sovereignty of Aquileia. Now this is how the thing was done. The king of the Saracens wishing to build himself a palace in Babylon, gave command that stones should be taken from the Christian churches and other public places, that they might build him a splendid house. And at that time there came by chance to the Church of St. Mark, Bon, tribune of Malamocco, and Rustico da Torcello, who had been forced by the wind, contrary to the edicts of Venice, to put in to the harbour of Alexandria with ten ships laden with merchandise, and they observing the sadness of the guardians of the church (two Greeks, by name Stauratio, a monk, and Theodoro, a priest), inquired the cause. And they answered that by reason of the impious edict of the king they feared the ruin of the church. Thereupon they prayed them to give them the holy body that they might carry it to Venice, promising them that the Doge of Venice would receive it with great honour. But the keepers of the church were filled with fear at their petition, and answered reproaching them and saying: 'Know ye not how the blessed St. Mark, who wrote the Gospel, St. Peter dictating at his request, preached in these parts and baptised into the faith the men of these regions? If the faithful should become aware, we could not escape the peril of death.' But to that they answered: 'As for his preaching, we are his firstborn sons, for he first preached in the parts of Venetia and Aquileia. And in peril of death it is commanded, "If they persecute you in one city, flee ye to another," which the evangelist himself obeyed when in the persecution at Alexandria he fled to Pentapolis.' But the keepers said: 'There is no such persecution now that we should fear for our persons.' But while they spake, came one and broke down the precious stones of the church, and when they would not suffer it they were sorely beaten. Then the keepers seeing the devastation of the church, and their own great danger, listened to the prayer of the Venetians and appointed them a day when they should receive the holy body. Now the body was wrapped in a robe of silk sealed with many seals from the head to the feet. And they brought the body of St. Claudia, and having cut the robe at the back and taken away the body of St. Mark, they placed in its stead the blessed Claudia, leaving the seals unbroken. But a sweet odour quickly spread into the city, and all were filled with astonishment, and not doubting that the body of the evangelist had been moved, they ran together to the church. But when the shrine was opened and they saw the garment with the seals unbroken, they returned quickly to their homes. And when the body should be borne to the boats, they covered it with herbs and spread over it pork-flesh for the passers-by to see, and went crying, 'Khanzir, khanzir!' which is the Saracens' abomination. And when they reached the ships they covered it with a sail while they passed through the Saracens' ships. And as they sailed to Venice the ship which bore it with many others was saved from peril of shipwreck. For when the ships had been driven in the night

by a tempestuous wind and were not far from Monte, the blessed St. Mark appeared to the Monk Dominic and bade him lower the sails of the ships. Which, when they had done, the dawn appearing, they found themselves close to the island which is called Artalia. And ten of them, having asked and obtained pardon for breaking the edicts of the Doge, they came to the port of Olivola. And the Doge, and the clergy, and the people came to meet them, and brought the body, with songs of thanksgiving, to the Doge's chapel.—"Old Chronicle; translated in *"The City in the Sea,"* by the Author of *"Bell and Spur,"* ch. 3.—"Our fathers did not welcome the arrival of the captured eagles of France, after the field of Waterloo, with greater exultation than the people of Venice the relics of the blessed Evangelist. They abandoned themselves to processions, and prayers, and banquets, and public holidays. . . . The winged 'Lion of St. Mark' was blazoned on the standards, and impressed on the coinage of the Republic. . . . The Lion became the theme of many political symbols. Thus it was represented with wings to show that Venetians could strike with promptitude; sitting, as a sign of their gravity in counsel—for such is the usual attitude of sages; with a book in its paws, to intimate their devotion to commerce; in war time the book was closed, and a naked sword substituted."—W. H. D. Adams, *The Queen of the Adriatic*, pp. 42-43.—See, also, LION OF ST. MARK.

A. D. 1032-1319.—Development of the constitution of the aristocratic Republic.—The Grand Council.—The Council of Ten.—The Golden Book.—"It was by slow and artfully disguised encroachments that the nobility of Venice succeeded in substituting itself for the civic power, and investing itself with the sovereignty of the republic. During the earlier period, the doge was an elective prince, the limit of whose power was vested in assemblies of the people. It was not till 1032 that he was obliged to consult only a council, formed from amongst the most illustrious citizens, whom he designated. Thence came the name given them of 'pregadi' (invited). The grand council was not formed till 1172, 140 years later, and was, from that time, the real sovereign of the republic. It was composed of 480 members, named annually on the last day of September, by 12 tribunes, or grand electors, of whom two were chosen by each of the six sections of the republic. No more than four members from one family could be named. The same counsellors might be re-elected each year. As it is in the spirit of a corporation to tend always towards an aristocracy, the same persons were habitually re-elected; and when they died their children took their places. The grand council, neither assuming to itself nor granting to the doge the judicial power, gave the first example of the creation of a body of judges, numerous, independent, and irremovable; such, nearly, as was afterwards the parliament of Paris. In 1179, it created the criminal 'quarantia'; called, also, the 'vecchia quarantia,' to distinguish it from two other bodies of forty judges, created in 1229. The grand council gave a more complete organization to the government formed from among its members. It was composed of a doge; of six counsellors of the red robe, who remained only eight months in office, and who, with the doge, formed the 'signoria';

and of the council of pregadi, composed of 60 members, renewed each year. . . . In 1249, the sovereign council renounced the election of the doge, and intrusted it to a commission drawn by lot from among the whole council; this commission named another: which, reduced by lot to one fourth, named a third; and by these alternate operations of lot and election, at length formed the last commission of 41 members, who could elect the doge only by a majority of 25 suffrages. It was not till towards the end of the 13th century that the people began to discover that they were no more than a cipher in the republic, and the doge no more than a servant of the grand council,—surrounded, indeed, with pomp, but without any real power. In 1289, the people attempted themselves to elect the doge; but the grand council obliged him whom the popular suffrages had designated to leave Venice, and substituted in his place Pietro Gradenigo, the chief of the aristocratic party. Gradenigo undertook to exclude the people from any part in the election of the grand council, as they were already debarred from any participation in the election of a doge. . . . The decree which he proposed and carried on the 28th of February, 1297, is famous in the history of Venice, under the name of 'serrata del maggior consiglio' (shutting of the grand council). He legally founded that hereditary aristocracy,—so prudent, so jealous, so ambitious,—which Europe regarded with astonishment; immovable in principle, unshaken in power; uniting some of the most odious practices of despotism with the name of liberty; auspicious and perfidious in politics; sanguinary in revenge; indulgent to the subject; sumptuous in the public service, economical in the administration of the finances; equitable and impartial in the administration of justice; knowing well how to give prosperity to the arts, agriculture, and commerce; beloved by the people who obeyed it, whilst it made the nobles who partook its power tremble. The Venetian aristocracy completed its constitution, in 1311, by the creation of the Council of Ten, which, notwithstanding its name, was composed of 16 members and the doge. Ten counsellors of the black robe were annually elected by the great council, in the months of August and September; and of the six counsellors of the red robe, composing a part of the signoria, three entered office every four months. The Council of Ten, charged to guard the security of the state with a power higher than the law, had an special commission to watch over the nobles, and to punish their crimes against the republic. In this they were restrained by no rule: they were, with respect to the nobility, the depositaries of the power of the great council, or rather of a power unlimited, which no people should intrust to any government. Some other decrees completed the system of the 'serrata del maggior consiglio.' It was forbidden to the quarantia to introduce any 'new man' into power. In 1315, a register was opened, called the Golden Book, in which were inscribed the names of all those who had sat in the great council. In 1319, all limitation of number was suppressed; and, from that period, it sufficed to prove that a person was the descendant of a counsellor, and 25 years of age, to be by right a member of the grand council of Venice."—J. C. L. de Sismondi, *Hist. of the Italian Republics*, ch. 5.—"When the Republic was hard pressed for

money, inscriptions in the Golden Book were sold at the current price of 100,000 ducata. . . . Illustrious foreigners were admitted, as they are made free of a corporation amongst us. . . . The honour was not disclaimed even by crowned heads. . . . The original 'Libro d'oro' was publicly burned in 1797, but extracts, registers, and other documents are extant from which its contents might be ascertained."—*The Republic of Venice* (*Quart. Rev.*, v. 137, p. 433).

A. D. 1099-1101.—The first Crusade.—"The movement of the crusades brings Venice to the very forefront of European history. Her previous development had been slowly preparing the way for her emergence. The Council, held at Clermont in 1095, resolved that the armament should leave Europe early in the following year. The Pope and the leaders of the Crusades were obliged to turn their attention to the question of transport for the vast and amorphous mob, which, without discipline, with no distinction of rank, with no discrimination between soldier and monk, between merchant and peasant, between master and man, was now bent on reaching the Holy Land, almost as eager to die there as to achieve the object of their mission, the recovery of the Sepulchre. The three maritime states of Italy—Genoa, Pisa, and Venice—were each ready to offer their services. Each was jealous of the other, and each determined to prevent the other from reaping any signal commercial advantage from the religious enthusiasm of Europe. Venice was not only the most powerful, but also the most eastern, of the three competitors. It was natural that the choice should fall on her. When the Pope's invitation to assist in the Crusade reached the city, however, it seems that the Government did not at once embrace the cause officially in the name of the whole Republic. There was, at first, a tendency to leave the business of transport to private enterprise. But on receipt of the news that Jerusalem had fallen, the Venetian Government began to take active steps in the matter. . . . The Crusade was accepted with enthusiasm. The whole city engaged in preparing a fleet which was worthy of the Republic. Then, after a solemn mass in S. Mark's, at which the standard of the Cross and the standard of the Republic were presented to the leaders, the soldier of the Cross embarked on the fleet which numbered 200 ships, and set sail down the Adriatic, making for Rhodes, where they were to winter. At Rhodes two incidents of great significance in Venetian history took place. The Eastern Emperors had never viewed with favour the incursion of the Crusaders. The creation of the kingdom of Jerusalem was really a usurpation of Imperial territory. Alexius I. now endeavoured to persuade the Venetians to withdraw from the enterprise. In this he failed; Venice remained true to the Cross, and to her commercial interests. It is at this point that we find the beginnings of that divergence between Constantinople and the Republic, which eventually declared itself in open hostility, and led up to the sack of Constantinople in the fourth Cru-

sade. Alexius, finding that the Venetians were not inclined to obey him, resolved to punish them. An instrument was ready to his hand. The Pisans saw with disfavour the advent of their commercial rivals in Eastern waters. They were willing to hoist the Imperial standard as opposed to the crusading cross, and to sail down upon the Venetians at Rhodes. They were defeated. The Venetians released all the prisoners except thirty of the more prominent among them who were detained as hostages. The first fruits of the Crusade, as far as Venice was concerned, were the creation of two powerful enemies, the Emperor and the Pisans.—H. F. Brown, *Venice*, ch. 6.

A. D. 1127-1128.—Beginning of quarrels with the Byzantine Empire.—“Previous to this time [about 1127], the Venetian republic had generally been a firm ally of the Byzantine empire, and, to a certain degree, it was considered as owing homage to the Emperor of Constantinople. That connection was now dissolved, and those disputes commenced which soon occupied a prominent place in the history of Eastern Europe. The establishment of the Crusaders in Palestine had opened a new field for the commercial enterprise of the Venetians, and in a great measure changed the direction of their maritime trade; while the frequent quarrels of the Greeks and Franks compelled the trading republics of Italy to attach themselves to one of the belligerent parties, in order to secure a preference in its ports. For a short time, habit kept the Venetians attached to the empire; but they soon found that their interests were more closely connected with the Syrian trade than with that of Constantinople. They joined the kings of Jerusalem in extending their conquests, and obtained considerable establishments in all the maritime cities of the kingdom. From having been the customers and allies of the Greeks, they became their rivals and enemies. The commercial fleets of the age acted too often like pirates; and it is not improbable that the Emperor John had good reason to complain of the aggressions of the Venetians. Hostilities commenced; the Doge Dominico Michieli, one of the heroes of the republic, conducted a numerous fleet into the Archipelago, and plundered the islands of Rhodes and Chios, where he wintered. Next year he continued his depredations in Samos, Mitylene, Paros, and Andros. . . . Peace was re-established by the emperor reinstating the Venetians in the enjoyment of all the commercial privileges they had enjoyed before the war broke out.”—G. Finlay, *Hist. of the Byzantine and Greek Empires*, bk. 3, ch. 2, sect. 2.

A. D. 1177.—Pretended Papal Grant of the sovereignty of the Adriatic.—Doubtful story of the humiliation of Frederick Barbarossa.—A “notable epoch in early Venetian history is the grant on which she based her claim to the sovereignty of the Adriatic. In the course of the fierce struggle between Alexander III. and Frederick Barbarossa [see ITALY: A. D. 1174-1183], the Pope, when his fortunes were at the lowest, took refuge with the Venetians, who, after a vain effort at reconciliation, made common

cause with him, and in a naval encounter obtained so signal a victory that the Emperor was compelled to sue for peace and submit to the most humiliating terms. The crowning scene of his degradation has been rendered familiar by the pencil, the chisel, and the pen. . . . The Emperor, as soon as he came into the sacred presence, stripped off his mantle and knelt down before the Pope to kiss his feet. Alexander, intoxicated with his triumph and losing all sense of moderation or generosity, placed his foot on the head or neck of his prostrate enemy, exclaiming, in the words of the Psalmist, ‘Super aspidem et basiliscum ambulabis’ &c. (‘Thou shalt tread upon the asp and the basilisk’ . . .). ‘Non tibi, sed Petro’ (‘Not to thee, but Peter’), cried the outraged and indignant Emperor. ‘Et mihi et Petro’ (‘To both me and Peter’), rejoined the Pope, with a fresh pressure of his heel. . . . Sismondi (following a contemporary chronicler) narrates the interview without any circumstance of insult, and describes it as concluding with the kiss of peace. There are writers who contend that Alexander was never at Venice, and that the Venetians obtained no victory on his behalf. But the weight of evidence adduced by Deru strikes us to be quite conclusive in favour of his version. . . . In return for the good offices of Venice on this occasion . . . Alexander presented the reigning Doge, Ziani, with a ring, saying, ‘Receive this ring, and with it, as my donation, the dominion of the sea, which you, and your successors, shall annually assert on an appointed day, so that all posterity may understand that the possession of the sea was yours by right of victory, and that it is subject to the rule of the Venetian Republic, as wife to husband.’ . . . The well-known ceremony of wedding the Adriatic, religiously observed with all its original pomp and splendour during six centuries, was in itself a proclamation and a challenge to the world. It was regularly attended by the papal nuncio and the whole of the diplomatic corps, who, year after year, witnessed the dropping of a sanctified ring into the sea, and heard without a protest the prescriptive accompaniment: ‘Deposamus te, mare, in signum veri perpetuæ domini’ (we espouse thee, sea, in sign of true and perpetual dominion).”—*The Republic of Venice* (*Quart. Rev.*, Oct., 1874, v. 137), pp. 421-423.

A. D. 1201.—Cause of Hostility to Constantinople.—“Of late years the Venetians had had difficulties with the New Rome. . . . These difficulties arose, in great measure, from the fact that the influence of Venice in Constantinople was no longer sufficient to exclude that of the other Italian republics. . . . But the hostility to Constantinople reached its height when the Venetians learned that Alexius had, in May 1201, received an embassy from Genoa, and was negotiating with Ottobono della Chiesa, its leader, for the concession of privileges for trade in Romania which Venice had hitherto regarded as exclusively her own. From this time the Doge appears to have determined to avenge the wrongs of his state on the ruler who had ventured to favour his rivals.”—E. Pears, *The Fall of Constantinople*, ch. 8.

A. D. 1256-1258.—Battles with the Genoese at Acre.—“At the period of the Crusades, it was usual in those cities or towns where the Christians held sway, to assign to each of the mercantile communities which had borne a part in the conquest or recovery of the particular district, a separate quarter where they might have their own mill, their own oven, their own bath, their own weights and measures, their own church, and where they might be governed by their own laws, and protected by their own magistrates. . . . At Saint Jean d’Acre, however, the Church of Saint Sabbas was frequented by the Venetians and the Genoese in common; and it happened that, in course of time, both nations sought to found a right to the exclusive property of the building.” Collisions ensued, in one of which (1256), the Genoese drove the Venetians from their factory at Acre and burned the church of Saint Sabbas. The Venetians retaliated by sending a squadron to Acre which destroyed all the Genoese shipping in the port, burned their factory, and reduced a castle near the town which was held by a Genoese garrison. Early in 1257 the fleets of the two republics met and fought a battle, between Acre and Tyre, in which the Venetians were the victors. On the 24th of June, 1258, a second battle was fought very nearly on the same spot, and again Venice triumphed, taking 2,000 prisoners and 25 galleys. Through the efforts of the Pope, a suspension of hostilities was then brought about; but other causes of war were working in the east, which soon led to fresh encounters in arms between the two jealous commercial rivals.—W. C. Hazlitt, *Hist. of the Venetian Republic*, ch. 11 (v. 1).

14th Century.—Fleets.—Commerce.—Industries.—“In the 14th century Venice had 8,000 merchantmen manned by 25,000 sailors. A tenth part of these were ships exceeding 700 tons burden. There were besides 45 war-galleys manned by 11,000 hands; and 10,000 workmen, as well as 66,000 seamen, were employed in the arsenals. The largest of the war-galleys was called the Bucentaur; it was a state vessel of the most gorgeous description. Every year the Doge of Venice, seated upon a magnificent throne surmounted by a regal canopy, dropped from this vessel a ring into the Adriatic, to symbolise the fact that land and sea were united under the Venetian flag. This ceremony commemorated the victory gained over the fleet of the Emperor Frederick Barbarossa in 1177, when the Venetians obliged him to sue for peace [see above: A. D. 1177]. Ascension Day was selected for its celebration, and the Bucentaur, glorious

with new scarlet and gold, its deck and seats inlaid with costly woods, and rowed with long banks of burnished oars, for many years bore the Doge to plight his troth with the words, ‘We espouse thee, O Sea! in token of true and eternal sovereignty.’ The merchant fleet of Venice was divided into companies sailing together according to their trade. Their routes, and the days for departure and return, their size, armament, crew, and amount of cargo, were all defined. In those times the seas were as much infested with pirates as the deserts with robbers; each squadron therefore hired a convoy of war-galleys for its protection on the voyage. There were six or seven such squadrons in regular employment. The argosies of Cyprus and Egypt, and the vessels engaged in the Barbary and Syrian commerce, concentrated their traffic chiefly at Alexandria and Cairo. The so-called Armenian fleet proceeded to Constantinople and the Euxine, visiting Ksiffa and the Gulf of Alexandretta. A Catalonian fleet traded with Spain and Portugal, and another with France; while the most famous of all, the Flanders galleys, connected the seaports of France, England, and Holland with the great commercial city of Bruges. The internal traffic with Germany and Italy was encouraged with equal care, oriental produce arriving from Constantinople and Egypt, and many other commodities being distributed, at first by way of Carinthia, and afterwards of the Tyrol. Germans, Hungarians, and Bohemians conducted this distribution. In Venice a bonded warehouse (*fondaco del tedeschi*), or custom-house, was accorded to the Germans, where they were allowed to offer their wares for sale, though only to Venetian dealers. Similar privileges were granted to the Armenians, Moors, and Turks, but not to the Greeks, against whom a strong animosity prevailed. . . . The ancient industries of preparing salt and curing fish were never disregarded. The Adriatic sands supplied material adapted for a glass of rare beauty and value, of which mirrors and other articles of Venetian manufacture were made. Venetian goldsmiths’ work was universally famed. Brass and iron foundries prepared the raw material for the armourers, whose weapons, helmets, and bucklers were unsurpassed for strength and beauty. Ship-building, with a people whose principle it was always to have more ships than any other state, was necessarily a very important branch of industry. Not satisfied with penetrating to every part already opened to enterprise, the Venetians travelled into regions before unknown, and gave to the world the record of their daring adventures. Maffeo and Nicolo Polo spent fifteen years visiting Egypt, Persia, India, the Khan of Tartary, and the Gran Khan or Emperor of China. Marco Polo, son of Nicolo, as well as Barthema and Joseph Barbaro, extended the knowledge obtained by their precursors in northern Europe and Asia.”—J. A. D. 1378-1379.—Renewed war with Genoa.—The defeat at Pola.—The treaty of June, 1355, between Venice and Genoa (see CONSTANTINOPLE: A. D. 1348-1355), established a peace which lasted only until April, 1378, when, "a dispute having arisen between the rival States in relation to the island of Tenedos, which the Venetians had taken possession of, the Signory formally declared war against Genoa, which it denounced as false to all its oaths and obligations. On the 20th of this month, Vettore Pisani was invested with the supreme command of the naval forces of the republic. . . . The new commander-in-chief was the son of Nicolo Pisani, and had held a commission in the Navy for 25 years. . . . Of the seamen he was the idol. . . . Pisani sailed from Venice early in May, with 14 galleys; and, on the 30th of the month, while cruising off Antium, came across a Genoese squadron of 10 galleys, commanded by Admiral Fieschi. It was blowing a gale at the time, and five of Pisani's vessels, which had parted company with him, and fallen to leeward, were unable to rejoin him, while one of Fieschi's drifted ashore, and was wrecked. Thus the battle which immediately ensued was between equal forces; but the Genoese admiral was no match for Vettore Pisani," and sustained a disastrous defeat, losing four vessels, with all their officers and crew. "During the summer, Pisani captured great numbers of the enemy's merchantmen; but was unable to find their fleet, which, under Luciano Doria, was actively engaged in cutting up Venetian commerce in the East. In November he asked permission to return to Venice to refit his vessels, which were in a very bad condition, but this was denied him; and, being kept constantly cruising through the winter, at its expiration only six of his vessels were found to be seaworthy. Twelve others, however, were fitted out at their own expense and sent to him by his friends, who perceived that his political enemies were making an effort to ruin him. At the end of February, 1379, Michele Steno and Donato Zeno were appointed by the Government 'provveditori' of the fleet. These officers, like the field deputies of the Dutch republic in later times, were set as spies over the commander-in-chief, whose operations they entirely controlled. On the 1st of May, Pisani left Brindisi, bound to Venice, having a large number of merchantmen in charge, laden with wheat; and, on the 6th instant, as the weather looked squally, put into Pola, with his convoy, for the night. On the following morning, at day-break, it was reported to him that Doria was off the port with 25 vessels; whereupon he determined not to leave his anchorage until Carlo Zeno, whom he was expecting with a reinforcement of 10 galleys, should be seen approaching. But the Provveditori, loudly denouncing such a determination as a reflection upon the valor of his officers and men, ordered him, peremptorily, in the name of the Senate, to engage the enemy without delay." The result was an overwhelming defeat, out of which Pisani brought six galleys, only—"which were all that were saved from this most terrible engagement, wherein 800 Venetians perished and 2,000 were

taken prisoners. . . . Pisani was now violently assailed by his enemies; although they well knew that he had fought the battle of Pola against his own judgment, and agreeably to the wishes of the government, as made known to him by its accredited agents, Michele Steno and Donato Zeno. The Great Council decreed his immediate removal from the supreme command, and he was brought to Venice loaded with chains." Condemned, upon trial before the Senate, he was sentenced to imprisonment for six months.—F. A. Parker, *The Fleets of the World*, pp. 100-105.

A. D. 1379-1381.—The war of Chioggia.—The dire extremity of the Republic and her deliverance.—After the great victory of Pola, which cost the Genoese the life of Luciano D'Oria, they lost no time in pressing their beaten enemy, to make the most of the advantage they had won. "Fresh galleys were forthwith placed under the command of Pietro, another of the noble D'Oria family; and before the eyes of all Genoa, and after the benediction of the archbishop, the fleet sailed from the harbour, and a great cry was raised from roof to roof, and from window to window, and each alley and each street re-echoed it with enthusiasm, 'to Venice! to Venice!' On arriving in the Adriatic, Pietro D'Oria joined the fleet already there, and prepared for his attack on Venice. These were pitiful days for the Queen of the Adriatic, the days of her greatest peril and humiliation. The Lord of Padua joined the Genoese; the King of Hungary sent troops, as did also the Marquis of Friuli, and all seemed lost to her both by sea and land. Everywhere within the city was misery and dismay. . . . To possess himself of Chioggia, which was 25 miles distant from Venice, was D'Oria's first plan. It was the key of the capital, commanded the entrance to the harbour, and cut off any assistance which might come from Lombardy. Chioggia was very strong in itself, defended by bastions on all sides; its weak point lay in being built on two sides of a river, which was spanned by a large wooden bridge. It was the first care of the defenders to block up the mouth of this river. After a few days of gallant defence, and a few days of gallant attack by sea and land, the defenders of Chioggia were reduced to the last extremity. The entrance to the river was broken open, and the bridge, which for some time was a stumbling-block to the besiegers, was destroyed with all the soldiers upon it by the bravery of a Genoese sailor, who took a boat laden with tar and wool and other combustible materials, and set fire to it, escaping by means of swimming. The defenders having thus perished in the flames, and Chioggia being taken [August, 1379], the triumph of the Genoese was at its height. It now seemed as if Pietro D'Oria had but the word of command to give, and Venice would have met with the same fate as Pisa had but a century before. But with this the fortune of the Ligurians began to wane. One small cannon of leather, with a wooden car, brought from Chioggia as a trophy to Genoa, is all that exists to-day to testify to their victory." The Venetians, in consternation at the fall of Chioggia, sent a deputation to D'Oria humbly offering to submit to any terms of peace he might dictate; but the insolent victor ordered them homo with the message that there could be

no peace until he had entered their city to bridle the bronze horses which stand on the Piazza of St. Mark. This roused the indignation and courage of Venice anew, and every nerve was strained in the defense of the port. "Vettor Pisani, who since the defeat at Pola had languished in prison, was brought out by unanimous consent, and before an assembled multitude he quietly and modestly accepted the position of saviour of his country. . . . The one saving point for Venice lay in the arrival of a few ships from Constantinople, which . . . Carlo Zeno had under his command, endeavouring to make a diversion in the favour of the Venetians at the Eastern capital. Pending the return of this fleet, the Venetians made an attack on Chioggia. And an additional gleam of hope raised the spirits of Pisani's men in the disaffection of the King of Hungary from the Genoese cause; and gradually, as if by the magic hand of a fickle fortune, Pietro D'Orta found himself and his troops besieged in Chioggia, instead of going on his way to Venice as he had himself prophesied. But the Genoese position was still too strong, and Pisani found it hopeless to attempt to dislodge them; his troops became restless: they wished to return to Venice, though they had sworn never to go back thither except as conquerors. It was in this moment of dire distress that the ultimate resort was vaguely whispered from the Venetian Council Hall to the Piazza. A solemn decree was passed, 'that if within four days the succour from Carlo Zeno did not arrive, the fleet should be recalled from Chioggia, and then a general council should be held as to whether their country could be saved, or if another more secure might not be found elsewhere.' Then did the law-givers of Venice determine that on the fifth day the lagoons should be abandoned, and that they should proceed en masse to Crete or Negropont to form for themselves a fresh nucleus of power on a foreign soil. It is indeed hard to realize that the fate of Venice, associated with all that is Italian, the offspring of the hardy few who raised the city from the very waves, once hung in such a balance. But so it was, when towards the evening of the fourth day [January 1, 1380] sails were descried on the horizon, and Carlo Zeno arrived to save his country from so great a sacrifice. Meanwhile, at Chioggia the Genoese were day by day becoming more careless; they felt their position so strong, they talked merrily of fixing the day when they should bivouac on the Piazza of St. Mark. Little did they dream of the net of misfortune into which they were being drawn so fast. Besides reinforcements by sea, assistance by land checked in towards Venice. Barnabo Visconti, and his company of the Star, a roving company of Germans, and the celebrated Breton band under Sir John Hawkwood, the Englishman, all hurried to assist the fallen banner of St. Mark. Pietro D'Orta did all he could to maintain discipline amongst his troops; but when he fell one day in an engagement, through being struck by a Venetian arrow, a general demoralization set in, and their only thought was how to save themselves and abandon Chioggia. . . . On the 18th of February, 1380, the Venetians made another gallant attack. Both sides fought with desperation, the Genoese for life, their rivals for their country and their country's fame. Fearful slaughter occurred amongst the Genoese, and they were obliged to

retire within the walls. . . . Driven to extremities, on the 22nd of June in that year, 4,000 Genoese were taken to the public prisons in Venice. . . . Since both parties were tired of war, and weakened with these extreme efforts, it was no difficult matter to establish a peace [August 8, 1381]."—J. T. Bent, *Genoa*, ch. 8.

A. D. 1494-1503.—The rising power and spreading dominion of the republic.—The fears and jealousies excited.—"The disturbances which had taken place in Italy since Charles VIII.'s advent there [see ITALY: A. D. 1494-1496; 1499-1500; 1501-1504], came very opportunely for their [the Venetians'] plans and policy. On every available occasion the Venetians spread their power all round about them. In the struggle between Charles and Ferrandino [or Ferdinand, of Naples] they acquired five fine cities in Apulia, excellently situated for their requirements, which they peopled by the reception of fugitive Jews from Spain. Moreover, in the kingdom of Naples, one party had declared for them. . . . Tarento raised their standard. During the Florentine disorders they were within an ace of becoming masters of Pisa. In the Milanese feuds they acquired Cremona and Ghara d'Adda. Their power was all the more terrible, as they had never been known to lose again anything which they had once gotten. No one doubted that their aim was the complete sovereignty over the whole of Italy. Their historians always talked as if Venice was the ancient Rome once more. . . . The Turkish war,

which had kept them a while employed, now at an end, they next tried their fortune in Romagna, and endeavoured, availing themselves of the quarrels between the returning nobles and Cesar [Borgia, son of Pope Alexander VI.], to become, if not the sole, at all events the most powerful, vassals of the papal chair. . . . The Venetians prepared to espouse the cause of those whom Cesar had suppressed. The cities reflected how genuine and substantial that peace was that the lion of Venice spread over all its dependencies. Having appeared in this country at the end of October, 1503, and having first promised the Malatesti other possessions in their own country, they took Rimini, with the concurrence of the prince and citizens. Without ado they attacked Faenza. . . . They continued their conquests, and, in the territories of Imola, Cesena, and Forlì, took stronghold after stronghold. . . . Then it was that the first minister of France stated his belief that, 'had they only Romagna, they would forthwith attack Florence, on account of a debt of 180,000 guilders owing them.' If they were to make an inroad into Tuscany, Pisa would fall immediately on their arrival. Their object in calling the French into the Milanese territory was, that they considered them more fitted to make a conquest than to keep it; and, in the year 1504, they were negotiating how it were possible to wrest Milan again from them. Could they only succeed in this, nothing in Italy would be able longer to withstand them. 'They wanted,' as Macchiavelli said, 'to make the Pope their chaplain.' But they met with the staunchest resistance in Julius [the Pope, Julius II.], as in him they could discover no weak point to attack. As pointedly as he could express himself, he declared to them, on the 9th November, 1503, that, 'though hitherto their friend, he would now do his utmost against them, and would besides incite all the princes of Christendom against them.'"—L. von Ranke, *Hist. of the Latin and Teutonic Nations*, bk. 2, ch. 3.

15-17th Centuries.—The decline of Venetian commerce and its causes.—"Commerce was for a long time free at Venice; and the republic only began to decline when its government had caused the source of its prosperity to be exhausted by monopoly. At first all the young patricians were subjected to the most severe ordeals of a commercial training. They were often sent as novices on board state-vessels to try fortune with a light venture, so much did it enter into the views of the administration to direct all citizens toward industrial occupations! The only reproach that can be brought against the Venetians, is the effort to exclude foreigners from all competition with them. Although commercial jealousy had not yet erected prohibitions into a system, and the ports of the republic were open to all the merchandise of the world, yet the Venetians only permitted its transportation in their own ships; and they reigned as absolute masters over all the Mediterranean. War had given them security from the Pisans, the Sicilians and the Genoese. Spain, long occupied by the

Moors, gave them little occasion of offence. France disdained commerce; England had not yet begun to think of it; the republic of Holland was not in existence. Under cover of the right of sovereignty on the gulf, which she had arrogated to herself, Venice reserved the almost exclusive right to navigate. Armed flotillas guarded the mouths of all her rivers, and allowed no barque to enter or depart without being vigorously examined. But what profited that jealous solicitude for the interests of her navigation? A day came when the Portuguese discovered the Cape of Good Hope, and all that structure of precautions and mistrust suddenly fell to pieces. Here began the first wars of customs-duties, and political economy receives from history valuable instruction. The Venetians had levelled all obstacles, but for themselves alone, and to the exclusion of other nations. Their legislation was very strict in respect to foreigners, in the matter of commerce. The laws forbade a merchant who was not a subject of the republic to be even received on board a vessel of the state. Foreigners paid customs-duties twice as high as natives. They could neither build nor buy vessels in Venetian ports. The ships, the captains, the owners, must all be Venetian. Every alliance between natives and strangers was interdicted; there was no protection, no privileges and no benefits save for Venetians: the latter, however, all had the same rights. In Venice itself, and there alone, was it permitted to negotiate with the Germans, Bohemians and Hungarians. As national manufactures acquired importance, the government departed from the liberal policy it had hitherto pursued, and the manufacturers obtained an absolute prohibition of such foreign merchandise as they produced. In vain, in the 17th century, did declining commerce urge the reestablishment of former liberties and the freedom of the port: the attempt was made for a brief moment, but the spirit of restriction won the day, and the prohibitory régime early prepared the way for the death of the republic. The people of Italy, however, pardoned the Venetians for their commercial intolerance, because of the moderate price at which they delivered all commodities. The Jews, Armenians, Greeks and Germans flocked to Venice and engaged with safety in speculations, which were always advantageous, because of the security which the credit institutions gave and the recognized probity of the merchants. But soon Venice saw numerous manufactures spring up in Europe rivaling her own, and her commerce encountered most formidable competition in that of the Portuguese, Dutch, Spanish and English. The discovery of the Cape of Good Hope [see PORTUGAL: A. D. 1488-1498] took away from her the monopoly of the spices of the Indies. The taking of Constantinople, by Mahomet II, had already deprived her of the magnificent privileges which her subjects enjoyed in that rich capital of the Orient. But the discovery of America and the vigorous reprisals of Charles V, who, at the commencement of his reign, in 1517, doubled the customs-duties which the Venetians paid in his states, completed the ruin of that fortunate monopoly which had made all Europe tributary. Charles V raised the import and export duties on all Venetian merchandise to twenty per cent; and this tariff, which would to-day appear mod-

erate, sufficed then to prevent the Venetians from entering Spanish ports. Such was the origin of the exclusive system, the fatal involution which the republic of Venice was so cruelly to expiate. So long as she sought fortune only in the free competition of the talent and capital of her own citizens, she increased from age to age and became for a moment the arbiter of Europe; but as soon as she wished to rule the markets by the tyranny of monopoly, she saw a league formed against her commerce, formidable for a very different reason from that of Cambrai."—J. A. Blanqui, *Hist. of Pol. Economy in Europe*, ch. 20. See, also (in Supplement) COMMERCE, MODERN.

A. D. 1501.—Hostile schemes of the Emperor and the King of France. See ITALY: A. D. 1501-1504.

A. D. 1508-1509.—The League of Cambrai.—The republic despoiled of her continental provinces.—"The craving appetite of Louis XII., . . . sharpened by the loss of Naples, sought to indemnify itself by more ample acquisitions in the north. As far back as 1504 [see ITALY: A. D. 1504-1506], he had arranged a plan with the emperor for the partition of the continental possessions of Venice. . . . The scheme is said to have been communicated to Ferdinand [of Aragon] in the royal interview at Savona [1507]. No immediate action followed, and it seems probable that the latter monarch, with his usual circumspection, reserved his decision until he should be more clearly satisfied of the advantages to himself. At length the projected partition was definitely settled by the celebrated treaty of Cambrai, December 10th, 1508, between Louis XII. and the emperor Maximilian, in which the Pope, King Ferdinand, and all princes who had any claims for spoils by the Venetians, were invited to take part. The share of the spoil assigned to the Catholic monarch [Ferdinand] was the five Neapolitan cities, Trani, Brindisi, Gallipoli, Pulignano, and Otranto, pledged to Venice for considerable sums advanced by her during the late war. The Spanish court, and not long after, Julius II., ratified the treaty, although it was in direct contravention of the avowed purpose of the pontiff, to chase the 'barbarians' from Italy. It was his bold policy, however, to make use of the first for the aggrandisement of the church, and then to trust to his augmented strength and more favorable opportunities for eradicating them altogether. Never was there a project more destitute of principle or sound policy. There was not one of the contracting parties who was not at that very time in close alliance with the state, the dismemberment of which he was plotting. As a matter of policy, it went to break down the principal barrier on which each of these powers could rely for keeping in check the overweening ambition of its neighbors, and maintaining the balance of Italy. The alarm of Venice was quieted for a time by assurances from the courts of France and Spain that the league was directed solely against the Turks, accompanied by the most hypocritical professions of good will, and amicable offers to the republic. The preamble of the treaty declares that, it being the intention of the allies to support the pope in a crusade against the infidel, they first proposed to recover from Venice the territories of which she had despoiled the church and other powers, to the

manifest hindrance of these pious designs. . . . The true reasons for the confederacy are to be found in a speech delivered at the German diet, some time after, by the French minister Héllan. 'We,' he remarks, after enumerating various enormities of the republic, 'wear no fine purple; feast from no sumptuous services of plate; have no coffers overflowing with gold. We are barbarians. Surely,' he continues in another place, 'if it is derogatory to princes to act the part of merchants, it is unbecoming in merchants to assume the state of princes.' This, then, was the true key to the conspiracy against Venice; envy of her superior wealth and magnificence, hatred engendered by her too arrogant bearing, and lastly the evil eye with which kings naturally regard the movements of an active, aspiring republic. To secure the co-operation of Florence, the kings of France and Spain agreed to withdraw their protection from Pisa, for a stipulated sum of money [see PISA: A. D. 1494-1509]. There is nothing in the whole history of the merchant princes of Venice so mercenary and base as this bartering away for gold the independence for which this little republic had been so nobly contending for more than 14 years. Early in April, 1509, Louis XII. crossed the Alps at the head of a force which bore down all opposition. City and castle fell before him, and his demeanor to the vanquished, over whom he had no rights beyond the ordinary ones of war, was that of an incensed master taking vengeance on his rebellious vassals. In revenge for his detention before Peschiera, he hung the Venetian governor and his son from the battlements. This was an outrage on the laws of chivalry, which, however hard they bore on the peasant, respected those of high degree. . . . On the 14th of May, 1509, was fought the bloody battle of Agnadell, which broke the power of Venice and at once decided the fate of the war. Ferdinand had contributed nothing to these operations, except by his diversion on the side of Naples, where he possessed himself without difficulty of the cities allotted to his share. They were the cheapest, and, if not the most valuable, were the most permanent acquisitions of the war, being incorporated in the monarchy of Naples. Then followed the memorable decree by which Venice released her continental provinces from their allegiance, authorizing them to provide in any way they could for their safety; a measure which, whether originating in panic or policy, was perfectly consonant with the latter. The confederates, who had remained united during the chase, soon quarrelled over the division of the spoil. Ancient jealousies revived. The republic, with cool and consummate policy, availed herself of this state of feeling. Pope Julius, who had gained all that he had proposed, and was satisfied with the humiliation of Venice, now felt all his former antipathies and distrust of the French return in full force. The rising flame was diligently fanned by the artful emissaries of the republic, who at length effected a reconciliation on her behalf with the haughty pontiff. The latter . . . planned a new coalition for the expulsion of the French, calling on the other allies to take part in it."—W. H. Prescott, *Hist. of the Reign of Ferdinand and Isabella*, pt. 2, ch. 22 (v. 3).

16th Century.—The Art of the Renaissance.—"It was a fact of the greatest importance for the development of the fine arts in Italy that painting in Venice reached maturity later than in Florence. Owing to this circumstance one chief aspect of the Renaissance, its material magnificence and freedom, received consummate treatment at the hands of Titian, Tintoretto, and Veronese. To idealise the sensualities of the external universe, to achieve for colour what the Florentines had done for form, to invest the worldly grandeur of human life at one of its most gorgeous epochs with the dignity of the highest art, was what these great artists were called on to accomplish. Their task could not have been so worthily performed in the fifteenth century as in the sixteenth, if the development of the æsthetic sense had been more premature among the Venetians. Venice was precisely fitted for the part her painters had to play. Free, isolated, wealthy, powerful; famous throughout Europe for the pomp of her state equipage, and for the immorality of her private manners; ruled by a prudent aristocracy, who spent vast wealth on public shows and on the maintenance of a more than imperial civic majesty: Venice with her pavement of liquid chrysope, with her palaces of porphyry and marble, her frescoed façades, her quays and squares aglow with the costumes of the Levant, her lagoons afloat with the galleys of all nations, her churches floored with mosaics, her silvery domes and ceilings glittering with sculpture bathed in molten gold: Venice luxurious in the light and colour of a vaporous atmosphere, where sea-mists rose into the mounded summer clouds; arched over by the broad expanse of sky, bounded only by the horizon of waves and plain and distant mountain ranges, and reflected in all its many hues of sunrise and sunset upon the glassy surface of smooth waters: Venice asleep like a miracle of opal or of pearl upon the bosom of an undulating lake;—here and here only on the face of the whole globe was the unique city wherein the pride of life might com-

bine with the lustre of the physical universe to create and stimulate in the artist a sense of all that was most sumptuous in the pageant of the world of sense. . . . The Venetians had no green fields and trees, no garden borders, no blossoming orchards, to teach them the tender suggestiveness, the quaint poetry of isolated or contrasted tints. Their meadows were the fruitless furrows of the Adriatic, hued like a peacock's neck; they called the pearl-shells of their Lido flowers, *fior di mare*. Nothing distracted their attention from the glories of morning and of evening presented to them by their sea and sky. It was in consequence of this that the Venetians conceived colour heroically, not as a matter of missal-margins or of subordinate decoration, but as a motive worthy in itself of sublime treatment. In like manner, hedged in by no liminary hills, contracted by no city walls, stifled by no narrow streets, but open to the liberal airs of heaven and ocean, the Venetians understood space and imagined pictures almost boundless in their immensity. Light, colour, air, space: those are the elemental conditions of Venetian art; of those the painters weaved their ideal world for beautiful and proud humanity.

. . . In order to understand the destiny of Venice in art, it is not enough to concentrate attention on the peculiarities of her physical environment. Potent as these were in the creation of her style, the political and social conditions of the Republic require also to be taken into account. Among Italian cities Venice was unique. She alone was tranquil in her empire, unimpeded in her constitutional development, independent of Church interference, undisturbed by the cross purposes and intrigues of the despots, inhibited by merchants who were princes, and by a free-born people who had never seen war at their gates. The serenity of undisturbed security, the luxury of wealth amassed abroad and liberally spent at home, gave a physiognomy of ease and proud self-confidence to all her edifices. The grim and anxious struggles of the Middle Ages left no mark on Venice. How different was this town from Florence, every inch of whose domain could tell of civic warfare. . . . It is not an insignificant, though a slight, detail, that the predominant colour of Florence is brown, while the predominant colour of Venice is that of mother-of-pearl, concealing within its general whiteness every tint that can be placed upon the palette of a painter. The conditions of Florence stimulated mental energy and turned the forces of the soul inwards. Those of Venice inclined the individual to accept life as he found it. Instead of exciting him to think, they disposed him to enjoy, or to acquire by industry the means of manifold enjoyment. To represent in art the intellectual strivings of the Renaissance was the task of Florence and her sons; to create a monument of Renaissance magnificence was the task of Venice."—J. A. Symonds, *Renaissance in Italy: The Fine Arts*, ch. 7.

A. D. 1606-1607.—The Republic under the guidance of Fra Paolo Sarpi.—Conflict with the Pope.—The Interdict which had no terrors.—"In the Constitution of the Republic at this time [1606] there were three permanent officials called Counsellors of Law, or State Counsellors, whose duties were to instruct the Doge and Senate on the legal bearings of any question in dispute in which the Republic was involved.

But at the beginning of this year, because of the ecclesiastical element that frequently appeared in these quarrels (for they were mostly between the State and the Pope), the Senate resolved to create a new office, namely, that of 'Teologo-Consultore,' or Theological Counsellor. In looking about for one to fill this office the choice of Doge and Senate unanimously fell upon Fra Paolo Sarpi. . . . I have called Fra Paolo Sarpi the greatest of the Venetians. . . . Venice has produced many great men—Doges, soldiers, sailors, statesmen, writers, poets, painters, travellers—but I agree with Mrs. Oliphant that Fra Paolo is 'a personage more grave and great, a figure unique in the midst of this ever animated, strong, stormy, and restless race'; and with Lord Macaulay, who has said of him that 'what he did, he did better than anybody.' . . . He was supreme as a thinker, as a man of action, and as a transcript and pattern of every Christian principle. . . . Foreigners who came to Venice sought above all things to see him as 'the greatest genius of his age.' . . . On the 28th of January, 1606, he entered upon his public duties." From that time until his death, seventeen years later, he not only held the office of Theological Counsellor, but the duties of the three Counsellors of Law were gradually transferred to him, as those offices were vacated, in succession, by death. "During this time question after question arose for settlement, many of which were of momentous import, the resolution of which bore, not upon the interests of Venice merely, but of Europe; and affected, not the then living generation only, but a remote posterity. In every case Fra Paolo's advice was sought, in every case it was followed, and in every case it was right. The consequence was that the history of the Republic during these seventeen years was one unbroken record of great intellectual and moral victories. . . . Never was there in any land, by any Government, a servant more honoured and more beloved. The solicitude of the Doge, of the dreaded Council of Ten, of the Senate, of the whole people, for the safety and well-being of their Consultore, was like that of a mother for her only child. 'Fate largo a Fra Paolo'—'Make room for Fra Paolo,' was often heard as he passed along the crowded Merceria. Fra Paolo loved Venice with an undying devotion, and Venice loved him with a romantic and tender affection. The Pope, whose quarrels with the Republic were the chief cause of the creation of the office of Theological Counsellor, and of Fra Paolo's election to it, was Paul V. . . . Strained relations . . . [had] existed between Venice and the Vatican during the last years of Clement VIII.'s Pontificate. His seizure of the Duchy of Ferrara, his conduct in the matter of the Patriarch Zane's appointment, his attempt to cripple the book-trade of Venice by means of the Index Expurgatorius, all led to serious disputes, in every one of which he got the worst of it. Pope Paul V., who was then Cardinal Borghese, chafed at what he considered Clement's pusillanimity. Talking of these matters to the Venetian ambassador at Rome, Leonardo Donato, he once said, 'If I were Pope, I would place Venice under an interdict and excommunication; 'And if I were Doge,' was the reply, 'I would trample your interdict and excommunication under foot.' Curiously, enough, both were called upon to fill these offices, and both

proved as good as their words. . . . Paul V. . . . found several excuses for quarrel. The Patriarch, Matteo Zane—he whose appointment had been a matter of dispute with Clement VIII.—died, and the Senate appointed Francesco Vendramin as his successor. Pope Paul claimed the right of presentation, and demanded that he should be sent to Rome for examination and approval. The Senate replied by ordering his investiture, and forbidding him to leave Venice. Again, money had to be raised in Brescia for the restoration of the ramparts, and the Senate imposed a tax on all the citizens—laymen and ecclesiastics alike. Pope Paul V. claimed exemption for the latter, as being his subjects. The Senate refused to listen to him. . . . These differences were causing both the Pope and the Republic to look to their armoury and to try the temper of their weapons, when two more serious matters occurred which brought them into open warfare. The prologue was passed, the drama was about to open. First, two priests in high position were leading flagrantly wicked and criminal lives. . . . The Senate sent its officers, and had the offenders seized and brought to Venice, and locked up from further mischief in the dungeons of the Ducal Palace. Pope Paul V. angrily remonstrated, and peremptorily demanded their instant liberation, on the ground that being priests they were not amenable to the secular arm. . . . Secondly, two ecclesiastical property laws were in force throughout the Republic; by one the Church was prohibited from building any new monasteries, convents, or churches without the consent of the Government under penalty of forfeiture; and by the other it was disqualified from retaining property which it might become possessed of by donation or by inheritance, but was bound to turn it into money. . . . Pope Paul V. . . . demanded the repeal of these property laws. These two demands, regarding the imprisoned ecclesiastics and the property laws, were first put forward in October, 1605. . . . Early in December, the Pope, impatient to bring the quarrel to a head, threatened to place Venice under interdict and excommunication if it did not yield to his demands. . . . It was at this acute stage of the quarrel that the Republic laid hold of Fra Paolo Sarpi, and, as we have already noted, made him its Theological Counsellor, and the struggle henceforth became, to a large extent, a duel between 'Paul the Pope, and Paul the Friar.' On the very day that Fra Paolo accepted this office he informed the Senate that two courses of action were open to them. They could argue the case either *de jure* or *de facto*. First, *de jure*, that is, they could appeal against the judgment of the Pope to a Church Council. . . . Secondly, the Republic could adopt the *de facto* course; that is, it could rely on its own authority and strength. It could set these over against the Pope's, and whilst willing to argue out the matter in a spirit of reason with him, yet meet his force with opposing force. If he turned a deaf ear to right, there was no help for it but to make it a question of might. The *de facto* course was therefore the one Fra Paolo recommended; adding very significantly, 'He who appeals to a Council admits that the righteousness of his cause may be questioned, whereas that of Venice is indisputable.' The Senate hailed the advice thus given, and instructed him

to draw out a reply to the Pope's brief in accordance with it. . . . From the moment this reply was received a bitter controversy was set on foot. Renewed demands came from Rome, and renewed refusals were sent from Venice. . . . Meanwhile the eyes of all the Courts of Europe were directed to the great struggle, and Venice made them more than spectators by laying its case as prepared by their Consultore fairly and fully before them. The time had not arrived for any nation to enter as a party into the contest, but all frankly expressed their opinions, which were, with the exception of that of Spain, unequivocally on the side of Venice. . . . At last the Pope determined to put into execution the threats contained in the briefs, and to place the Republic under interdict and excommunication. On the 17th of April, 1606, the bull of interdict and excommunication was launched; twenty-four days being allowed Venice for repentance, with three more added of the Pope's gracious clemency. The die was thus cast by Pope Paul V., by which he was either to humble the Republic, or discredit himself and his 'spiritual arms' in the sight of Europe. The bull was a sweeping one. . . . No more masses were to be said. Baptism, marriage, and burial services were to cease. The churches were to be locked up, and the priests could withdraw from the devoted land. All social relationships were dissolved. Marriages were declared invalid, and all children born were illegitimate. Husbands could desert their wives, and children disobey their parents. Contracts of all kinds were declared null and void. Allegiance to the Government was at an end."—A. Robertson, *Fra Paolo Sarpi, ch. 5, and preface*.—"It was proposed in the college of Venice to enter a solemn protest, as had been done in earlier times; but this proposal was rejected, on the ground that the sentence of the pope was in itself null and void, and had not even a show of justice. In a short proclamation, occupying only a quarto page, Leonardo Donato made known to the clergy the resolution of the republic to maintain the sovereign authority. 'which acknowledges no other superior in worldly things save God alone.' Her faithful clergy would of themselves perceive the nullity of the 'censures' issued against them, and would continue the discharge of their functions, the cure of souls and the worship of God, without interruption. No alarm was expressed, no menaces were uttered, the proclamation was a mere expression of confidence and security. It is, however, probable that something more may have been done by verbal communication. By these proceedings, the question of claim and right became at once a question of strength and of possession. Commanded by their two superiors—the pope and the republic—to give contradictory proofs of obedience, the Venetian clergy were now called on to decide to which of the two they would render that obedience. They did not hesitate; they obeyed the republic: not a copy of the brief was fixed up. The delay appointed by the pope expired; public worship was everywhere conducted as usual. As the secular clergy had decided, so did also the monastic orders. The only exception to this was presented by the orders newly instituted, and in which the principle of ecclesiastical restoration was more particularly represented; these were the Jesuits, Theatines, and Capu-

chins. The Jesuits, in so far as they were themselves concerned, were not altogether decided; they first took counsel of their Provincial at Ferrara, and afterwards of their General in Rome, who referred the question to the pope himself. Paul V. replied that they must either observe the interdict, or shake the dust from their feet and leave Venice. A hard decision assuredly, since they were distinctly informed that they would never be permitted to return; but the principle of their institution allowed them no choice. Embarking in their boats, they departed from the city, and took shelter in the papal dominions. Their example influenced the other two orders. A middle course was proposed by the Theatines, but the Venetians did not think it advisable; they would suffer no division in their land, and demanded either obedience or departure. The deserted churches were easily provided with other priests, and care was taken that none should perceive a deficiency. . . . It is manifest that the result was a complete schism. The pope was amazed; his exaggerated pretensions were confronted by the realities of things with the most unshrinking boldness. Did any means exist by which these might be overcome? Paul V. thought at times of having recourse to arms. . . . Legates were despatched, and troops fitted out; but in effect they dared not venture to attempt force. There would have been cause to apprehend that Venice would call the Protestants to her aid, and thus throw all Italy, nay the Catholic world at large, into the most perilous commotions. They must again betake themselves, as on former occasions, to political measures, for the adjustment of these questions touching the rights of the Church. . . . I have neither inclination nor means for a detailed account of these negotiations through the whole course of the proceedings. . . . The first difficulty was presented by the pope, who insisted, before all things, that the Venetian laws, which had given him so much offence, should be repealed; and he made the suspension of his ecclesiastical censures to depend on their repeal. But the Venetians, also, on their part, with a certain republican self-complacency, were accustomed to declare their laws sacred and inviolable. When the papal demand was brought under discussion in January, 1607, although the college wavered, yet at last it was decidedly rejected in the senate. The French, who had given their word to the pope, succeeded in bringing the question forward once more in March, when of the four opponents in the college, one at least withdrew his objections. After the arguments on both sides had again been fully stated in the senate, there was still, it is true, no formal or express repeal of the laws, but a decision was adopted to the effect that 'the republic would conduct itself with its accustomed piety.' However obscure these words appear, the ambassador and the pope thought they discovered in them the fulfilment of their wishes. The pope then suspended his censures."—L. Ranke, *Hist. of the Popes, bk. 6, sect. 12 (v. 2)*.—"The moral victory remained with Venice. She did not recall her laws as to taxation of the clergy and the foundation of new churches and monasteries [nor permit the Jesuits to return, until many years later]. . . . The hero of the whole episode, Fra Paolo Sarpi, continued to live quietly in his convent of the Servites at S. Fosca.

The Government received warning from Rome that danger was threatening. In its turn it cautioned Fra Paolo. But he paid little or no heed." On the 25th of October, 1607, towards five o'clock in the evening, as he was returning to his convent, he was attacked by three assassins, who inflicted serious wounds upon him and left him for dead. By great good fortune, however, Fra Paolo's life was saved, and prolonged until 1623. The would-be assassins escaped into the Papal States, where "they found not only shelter but a welcome."—H. F. Brown, *Venice*, ch. 20.

VERDUN, The Treaty of: A. D. 843.—The contest and civil war which arose between the three grandsons of Charlemagne resulted in a treaty of partition, brought about in 843, which forever dissolved the great Frank Empire of Clovis, and of the Pippins and Karls who finished what he began. "A commission of 300 members was appointed to distribute itself over the surface of the empire, and by an exact examination of the wealth of each region, and the wishes of its people, acquire a knowledge of the best means of making an equitable division. The next year the commissioners reported the result of their researches to the three kings, assembled at Verdun, and a treaty of separation was drawn up and executed, which gave Gaul, from the Meuse and Saône as far as the Pyrenees, to Karl; which gave Germany, beyond the Rhine, to Ludwig the Germanic; and which secured to Lothar Italy, with a broad strip on the Rhine, between the dominions of Karl and Ludwig, under the names of Lotharingia or Lorraine. This was the first great treaty of modern Europe; it began a political division which lasted for many centuries; the great empire of Karl was formally dismembered by it, and the pieces of it scattered among his degenerate descendants."—P. Godwin, *Hist. of France: Ancient Gaul*, ch. 18.—"The treaty of Verdun, in

843, abrogated the sovereignty that had been attached to the eldest brother and to the imperial name in former partitions; each held his respective kingdom as an independent right. This is the epoch of a final separation between the French and German members of the empire. Its millenary was celebrated by some of the latter nation in 1843.—II. Hallam, *The Middle Ages*, ch. 1, pt. 1 (v. 1).—See, also, FRANKS: A. D. 814-903.

VERGNAUD AND THE GIRONDISTS. See FRANCE: A. D. 1791 (OCTOBER), to 1793 (SEPTEMBER-DECEMBER).

VERGOBRET, The.—The chief magistrate of the tribe of Gauls known as the *Ædul* was called the vergobret. "Cæsar terms this magistrate vergobretus, which Celtic scholars derive from the words 'ver-go-breth,' ('homme de jugement, O'Brien, Thierry). He was elected by a council of priests and nobles, and had the power of life and death. But his office was only annual." Divitiacus, the *Ædulian* friend of Cæsar and the Romans, had been the vergobret of his tribe.—C. Merivale, *Hist. of the Romans*, ch. 6, foot-note.

VERMANDOIS, House of.—The noble House of Vermandois which played an important part in French history during the Middle Ages, boasted a descent from Charlemagne, through his best loved son, Pippin, king of Italy. "Peronne and the Abbey of Saint-Quintin composed the nucleus of their Principality; but, quietly and without contradiction, they had extended their sway over the heart of the kingdom of Soissons; and that ardent Soissons, and the rock of Laon, and Rheims, the prerogative city of the Gauls, were all within the geographical ambit of their territory. In such enclaves as we have named, Vermandois did not possess direct authority. Laon, for example, had a Count and a bishop, and was a royal domain."—Sir F. Palgrave, *Hist. of Normandy and Eng.*, bk. 1, ch. 5, sect. 6 (v. 1).

VERMONT: A. D. 1749-1774.—Beginning of settlement.—The New Hampshire Grants and the conflict with New York.—Ethan Allen and the Green Mountain Boys.—"Among the causes of the controversies which existed between the colonies in early times, and continued down to the revolution, was the uncertainty of boundary lines as described in the old charters. . . . A difficulty of this kind arose between the colony of New York and those of Connecticut, Massachusetts, and New Hampshire. By the grant of King Charles II. to his brother, the Duke of York, the tract of country called New York was bounded on the east by Connecticut River, thus conflicting with the express letter of the Massachusetts and Connecticut charters, which extended these colonies westward to the South Sea, or Pacific Ocean. After a long controversy, kept up at times with a good deal of heat on both sides, the line of division between these colonies was fixed by mutual agreement at 20 miles east of Hudson's River, run-

ning nearly in a north and south direction. . . . The Massachusetts boundary was decided much later to be a continuation of the Connecticut line to the north, making the western limit of Massachusetts also 20 miles from the same river. . . . Meantime New Hampshire had never been brought into the controversy, because the lands to the westward of that province beyond Connecticut River had been neither settled nor surveyed. There was indeed a small settlement at Fort Dummer on the western margin of the River, which was under the protection of Massachusetts. . . . Such was the state of things when Benning Wentworth became governor of New Hampshire, with authority from the King to issue patents for unimproved lands within the limits of his province. Application was made for grants to the west of Connecticut River, and even beyond the Green Mountains, and in 1749 he gave a patent for a township 6 miles square, near the north west angle of Massachusetts, to be so laid out, that its western limit should be 20 miles from the Hudson, and coincide with the boundary line of Connecticut and Massachusetts continued northward. This township was called Bennington. Although the governor and council of New York remonstrated against this grant, and claimed for that colony the whole territory north of Massachusetts as far eastward as Connecticut River, yet Governor Wentworth was not deterred by this remonstrance from issuing other patents, urging in his justification, that New Hampshire had a right to the same extension westward as Massachusetts and Connecticut." After the British conquest of Canada, 1760, "applications for new patents thronged daily upon Governor Wentworth, and within four years' time the whole number of townships granted by him, to the westward of Connecticut River, was 138. The territory including these townships was known by the name of the New Hampshire Grants, which it retained till the opening of the revolution, when its present name of Vermont began to be adopted."—J. Sparks, *Life of Ethan Allen* (*Library of Am. Biog.*, v. 1).— "Lieutenant Governor Colden, acting chief magistrate of New York in the absence of General Monckton, perceiving the necessity of asserting the claims of that province to the country westward of the Connecticut river, wrote an energetic letter to Governor Wentworth, protesting against his grants. He also sent a proclamation among the people, declaring the Connecticut river to be the boundary between New York and New Hampshire. But protests and proclamations were alike unheeded by the governor and the people until the year 1764, when the matter was laid before the King and council for adjudication. The decision was in favor of New York. Wentworth immediately bowed to supreme authority, and ceased issuing patents for lands westward of the Connecticut. The settlers, considering all questions in dispute to be thus finally disposed of, were contented, and went on hopefully in the improvement of their lands. Among these settlers in the Bennington township were members of the Allen family, in Connecticut, two of whom, Ethan and Ira, were conspicuous in public affairs for many years, as we shall hereafter have occasion to observe. The authorities of New York, not content with the award of territorial jurisdiction over the domain, proceeded, on the decision of able legal authority,

to assert the right of property in the soil of that territory, and declared Wentworth's patents all void. They went further. Orders were issued for the survey and sale of farms in the possession of actual settlers, who had bought and paid for them, and, in many instances, had made great progress in improvements. In this, New York acted not only unjustly, but very unwisely. This oppression, for oppression it was, was a fatal mistake. It was like sowing dragons' teeth to see them produce a crop of full-armed men. The settlers were disposed to be quiet, loyal subjects of New York. They cared not who was their political master, so long as their private rights were respected. But this act of injustice converted them into rebellious foes, determined and defiant. . . . Meanwhile speculators had been purchasing from New York large tracts of these estates in the disputed territory, and were making preparations to take possession. The people of the Grants sent one of their number to England, and laid their cause before the King and council. He came back in August, 1767, armed with an order for the Governor of New York to abstain from issuing any more patents for lands eastward of Lake Champlain. But as the order was not 'ex post facto' in its operations, the New York patentees proceeded to take possession of their purchased lands. This speedily brought on a crisis, and for seven years the New Hampshire Grants formed a theater where all the elements of civil war, except actual carnage, were in active exercise. . . . The hardy yeomanry who first appeared in arms for the defense of their territorial rights, and afterwards as patriots in the common cause when the Revolution broke out, were called Green Mountain Boys."—B. J. Lossing, *Life and Times of Philip Schuyler*, v. 1, ch. 12.

A. D. 1777-1778.—State independence declared and constitution framed.—Admission to the Union denied.—"The settlers in the land which this year [1777] took the name of Vermont refused by a great majority to come under the jurisdiction of New York; on the 15th of January 1777, their convention declared the independence of their state. At Windsor, on the 2d of June, they appointed a committee to prepare a constitution; and they hoped to be received into the American union. But, as New York opposed, congress, by an uncertain majority against a determined minority, disclaimed the intention of recognising Vermont as a separate state. . . . On the 2d of July the convention of Vermont re-assembled at Windsor. The organic law which they adopted, blending the culture of their age with the traditions of Protestantism, assumed that all men are born free and with inalienable rights; that they may emigrate from one state to another, or form a new state in vacant countries; that every sect should observe the Lord's day, and keep up some sort of religious worship; that every man may choose that form of religious worship which shall seem to him most agree-

able to the revealed will of God.' They provided for a school in each town, a grammar-school in each county, and a university in the state. All officers, alike executive and legislative, were to be chosen annually and by ballot; the freemen of every town and all one year's residents were electors. Every member of the house of representatives must declare his 'belief in one God. . . ; in the divine inspiration of the scriptures; and in the Protestant religion.' The legislative power was vested in one general assembly, subject to no veto. . . . Slavery was forbidden and forever; and there could be no imprisonment for debt. . . . After the loss of Ticonderoga, the introduction of the constitution was postponed [until March, 1778], lest the process of change should interfere with the public defence."—G. Bancroft, *Hist. of the U. S. (Author's last revision)*, v. 5, pp. 157, and 161-163.

A. D. 1781.—Negotiations with the British authorities as an independent State.—Vermont had repeatedly applied for admission into the Union; but the opposition of her neighbors, who claimed her territory, and the jealousy of the southern states, who objected to the admission of another northern state, prevented favorable action in Congress. In 1780 a fresh appeal was made with a declaration that if it failed the people of the Green Mountains would propose to the other New England states and to New York, "an alliance and confederation for mutual defense, independent of Congress and of the other states." If neither Congress nor the northern states would listen to them, then, said the memorial, "they are, if necessitated to it, at liberty to offer or accept terms of cessation of hostilities with Great Britain without the approbation of any other man or body of men." "The British generals in America had for some time entertained hopes of turning the disputes in relation to Vermont to their own account, by detaching that district from the American cause and making it a British province. But the first intimation of their views and wishes was communicated in a letter from Colonel Beverly Robinson to Ethan Allen; dated New York, March 8th, 1780. In July, this letter was delivered to Allen in the street in Arlington, by a British soldier in the habit of an American farmer. Allen perused the letter, and then told the bearer that he should consider it, and that he might return. . . . Allen immediately communicated the contents of this letter to Governor Chittenden and some other confidential friends, who agreed in opinion, that no answer should be returned. Robinson, not receiving a reply to his letter and supposing it to have been miscarried, wrote again to Allen on the 2d of February, 1781, enclosing his former letter. In his second letter, after saying he had received new assurances of the inclination of Vermont to join the king's cause, he said that he could then write with more authority; and assured Allen that he and the people of Vermont could obtain the most favorable terms, provided they would take a decisive and active part in favor of Great Britain. He requested an answer; and that the way might be pointed out for continuing the correspondence; and desired to be informed in what manner the

people of Vermont could be most serviceable to the British cause. Allen returned no answer to either of these letters; but, on the 9th of March, 1781, inclosed them in a letter to Congress, informing them of all the circumstances which had thus far attended the business. He then proceeded to justify the conduct of Vermont in asserting her right to independence, and expressed his determinate resolution to do every thing in his power to establish it. . . . 'I am confident,' said he, 'that Congress will not dispute my sincere attachment to the cause of my country, though I do not hesitate to say, I am fully grounded in opinion, that Vermont has an indubitable right to agree on terms of a cessation of hostilities with Great Britain, provided the United States persist in rejecting her application for an union with them.' . . . During the spring of 1780, some of the scouting parties belonging to Vermont had been taken by the British and carried prisoners to Canada. On the application of their friends to Governor Chittenden, he, in the month of July, sent a flag with a letter to the commanding officer in Canada, requesting their release or exchange. In the fall, the British came up Lake Champlain in great force, and a very favorable answer was returned by General Haldimand to Governor Chittenden's letter. A flag was at the same time sent to Ethan Allen, then a brigadier general and commanding officer in Vermont, proposing a cessation of hostilities with Vermont, during negotiations for the exchange of prisoners."—Z. Thompson, *Hist. of the State of Vermont, ch. 4, sect. 6.*—"The immediate results were a truce, which covered not only Vermont but the frontiers of New York to Hudson river; the disbanding of the militia of Vermont; and the retiring of the British troops to winter quarters in Canada. Until the truce became generally known, the results of it occasioned much surprise in New York. It was further agreed, that the commissioners of both parties should meet on the subject of the cartel, and go together to Canada. This was attempted, but failed on account of the difficulty of getting through the ice on Lake Champlain. After contending several days with the elements, the commissioners separated; but 'while their men [wrote Ira Allen] were breaking through the ice, much political conversation and exhibits of papers took place.' Williams [*Hist. of Vermont*] is more definite: 'the British agents availed themselves of this opportunity to explain their views, to make their proposals, and offer as complete an establishment for Vermont, from the royal authority, as should be desired. The commissioners from Vermont treated the proposals with affability and good humor, and though they avoided bringing anything to a decision, the British concluded they were in a fair way to effect their purposes.' The subsequent negotiations at Isle aux Noix, between Ira Allen and the British commissioners, as to matters beyond settling a cartel, were secret, and even the commander of the post had no knowledge of them, although he was associated with the British commissioners on the question of an exchange of prisoners. These facts show that the public had no knowledge except of a truce for a humane and proper attempt to relieve citizens of Vermont, and its officers and soldiers, who were then prisoners in Canada; and this conclusion is that all the suspicion that then existed of the patriot-

ism and fidelity of the great body of the people of the state, and all the obloquy since drawn from the negotiation with Haldimand and cast upon the state, were entirely unjust. If any body was really at fault, the number implicated was very small. Williams asserted that 'eight persons only in Vermont, were in the secret of this correspondence;' and Ira Allen that, in May, 1781, 'only eight persons were in the secret, but more were added as the circumstances required.'—*Vt. Hist. Soc. Coll., v. 2, introd.*—"By the definitive treaty between Great Britain and the United States, Sept. 3, 1783, Vermont was included within the boundaries separating the independent American from British territory, and thus the independence of Vermont was acknowledged first by the mother country. The State had been de facto independent from its organization; and therefore the following record, with the other papers contained in this and the first volume of the Historical Society Collections covers the existence of Vermont as an independent and sovereign state."—*The same, p. 397.*

A. D. 1790-1791.—Renunciation of the claims of New York and admission of the State to the Union.—"The rapid increase of the population of Vermont having destroyed all hope on the part of New York of re-establishing her jurisdiction over that rebellious district, the holders of the New York grants, seeing no better prospect before them, were ready to accept such an indemnity as might be obtained by negotiation. Political considerations had also operated. The vote of Vermont might aid to establish the seat of the federal government at New York. At all events, that state would serve as a counterbalance to Kentucky, the speedy admission of which was foreseen. The Assembly of New York [July, 1789] had appointed commissioners with full powers to acknowledge the independence of Vermont, and to arrange a settlement of all matters in controversy. To this appointment Vermont had responded, and terms had been soon arranged. In consideration of the sum of \$30,000, as an indemnity to the New York grantees, New York renounced all claim of jurisdiction [October 7, 1790], consented to the admission of Vermont into the Union, and agreed to the boundary heretofore claimed—the western line of the westernmost townships granted by New Hampshire and the middle channel of Lake Champlain. This arrangement was immediately ratified by the Legislatures of Vermont. A Convention, which met at the beginning of the year [1791], had voted unanimously to ratify the Federal Constitution, and to ask admission into the Union. Commissioners were soon after appointed by the Assembly to wait upon Congress and to negotiate the admission. No opposition was made to it, and [February 18, 1791] within fourteen days after the passage of the bill for the prospective admission of Kentucky Vermont was received into the Union, from and after the termination of the present session of Congress. The Constitution under which Vermont came into the Union, originally adopted in 1777, had been slightly altered in 1785. Most of its provisions seem to have been copied from the first

Constitution of Pennsylvania. . . . The revision of 1785 struck out the requirement of Protestantism; another revision in 1793, still following the example of Pennsylvania, released the members of Assembly from the necessity of any religious subscription."—R. Hildreth, *Hist. of the U. S.*, v. 4, ch. 3.

VERMONT UNIVERSITY.—"At the time of the organization of the State government, in 1798, the University of Vermont was endowed with lands which proved subsequently to amount to 29,000 acres. In 1791 the university was organized. . . . The early years of the university, planted as it was in the wilderness, were full of struggles and misfortunes. The State was generous in the extreme at the beginning, but failed to support the university it had erected. The land was poor and brought little income, the whole tract bringing but 2,500 dollars at that time. In 1818 the buildings of the university were seized by the Government and used for the storage of United States arms, by which much damage was suffered, and the houseless students all left, most of them to shoulder muskets against the British invaders. The buildings were rented in 1814 for the United States Army. Worse misfortunes occurred in 1824, the buildings being consumed by fire, but were restored by the citizens of Burlington in the following year. For the first ninety-five years of the corporate existence of the university the State never gave anything toward the support of it more than has been set forth in the above statements."—F. W. A. D. 493-525.—Residence of Theodoric the Ostrogoth.—"Pavia and Verona [as well as his ordinary capital city, Ravenna] were also places honoured with the occasional residence of Theodoric. At both he built a palace and public baths. . . . At Verona, the palace, of which there were still some noble remains incorporated into the castle of the Viscontis, was blown up by the French in 1801, and an absolutely modern building stands upon its site. . . . It seems

probable that Theodoric's residence at both these places depended on the state of Transalpine politics. When the tribes of the middle Danube were moving auspiciously to and fro, and the vulnerable point by the Brenner Pass needed to be especially guarded, he fixed his quarters at Verona. When Gaul inouced greater danger, then he removed to Ticinum [Pavia]. It was apparently the fact that Verona was his coign of vantage, from whence he watched the German barbarians, which obtained for him from their minstrels the title of Dietrich of Bern. Thus strangely travestied, he was swept within the wide current of the legends relating to Attila, and hence it is that the really grandest figure in the history of the migration of the peoples appears in the Nibelungen Lied, not as a great king and conqueror on his own account, but only as a faithful squire of the terrible Hunnish king whose empire had in fact crumbled into dust before the birth of Theodoric."—T. Hodgkin, *Italy and her Invaders*, bk. 4, ch. 8 (v. 3).

11-12th Centuries.—Acquisition of Republican Independence. See ITALY: A. D. 1056-1152.

A. D. 1236-1259.—The tyranny of Eccelino di Romano and the crusade against him.—"In the north-eastern corner of Italy the influence of the old Lombard lords, which had been extinguished there as in most other parts of the peninsula, was succeeded by that of a family that had accompanied one of the emperors from Germany.

. . . The eye of a traveller passing from Verona to Padua may still be struck by one or two isolated hills, which seem as if they were designed by nature to be meet residences for the tyrants of the surrounding plains. One of these gave birth to a person destined to become the scourge of the neighbouring country. . . . Eccelino di Romano . . . was descended from a German noble brought into Italy by Otto III. The office of Podesta of Verona had become hereditary in his family. In the wars of the second Frederic [1236-1250], he put himself at the head of the Ghibellines in the surrounding principalities, and became a strenuous supporter of the emperor. Under the protection of so powerful an ally, he soon made himself master of Padua, where he established his headquarters, and built the dungeons, where the most revolting cruelties were inflicted on his victims."—W. P. Urquhart, *Life and Times of Francesco Sforza*, bk. 1, ch. 3 (v. 1).—In 1237, the emperor, Frederick II., "obliged to return to Germany, left under the command of Eccelino a body of German soldiers, and another of Saracens, with which this able captain made himself, the same year, master of Vicenza, which he barbarously pillaged, and the following year . . . Padua. . . . Eccelino judged it necessary to secure obedience, by taking hostages from the richest and most powerful families; he employed his spies to discover the malcontents, whom he punished with torture, and redoubled his cruelty in proportion to the hatred which he excited." Subsequently, the emperor confided "the exclusive government of the Veronese marches [also called the Trevisan marches] to Eccelino. The hatred which this ferocious man excited by his crimes fell on the emperor. Eccelino imprisoned in the most loathsome dungeons those whom he considered his enemies, and frequently put them to death by torture, or suffered them to perish by hunger. . . . In the

single town of Padua there were eight prisons always full, notwithstanding the incessant toil of the executioner to empty them; two of these contained each 300 prisoners. A brother of Eccelino, named Alberic, governed Treviso with less ferocity, but with a power not less absolute." Eccelino maintained the power which he had gathered into his hands for several years after Frederick's death. At length, the pope, "Alexander IV., to destroy the monster that held in terror the Trevisan march, caused a crusade to be preached in that country. He promised those who combated the ferocious Eccelino all the indulgences usually reserved for the deliverers of the Holy Land. The marquis d'Este, the count di San Bonifazio, with the cities of Ferrara, Mantua, and Bologna, assembled their troops under the standard of the church; they were joined by a horde of ignorant fanatics from the lowest class." Headed by the legate Philip, archbishop of Ravenna, the crusaders took Padua, June 18, 1256, and "for seven days the city was inhumanly pillaged by those whom it had received as deliverers. As soon as Eccelino was informed of the loss he had sustained, he hastened to separate and disarm the 11,000 Paduans belonging to his army; he confined them in prisons, where all, with the exception of 200, met a violent or lingering death. During the two following years, the Guelfs experienced nothing but disasters: the legate, whom the pope had placed at their head, proved incompetent to command them; and the crowd of crusaders whom he called to his ranks served only to compromise them, by want of courage and discipline. . . . The following year, this tyrant, unequalled in Italy for bravery and military talent, always an enemy to luxury, and proof against the seductions of women, making the boldest tremble with a look, and preserving in his diminutive person, at the age of 65, all the vigor of a soldier, advanced into the centre of Lombardy, in the hope that the nobles of Milan, with whom he had already opened a correspondence, would surrender this great city." But, by this time, even his old Ghibelline associates had formed alliances with the Guelfs against him, and he was beaten on all sides. "On the 16th of September, 1259, whilst he was preparing to retire, he found himself stopped at the bridge of Cassano. . . . Repulsed, pursued as far as Vimercato, and at last wounded in the foot, he was made prisoner and taken to Soncino: there, he refused to speak; rejected all the aid of medicine; tore off all the bandages from his wounds, and finally expired on the eleventh day of his captivity. His brother with all his family were massacred in the following year."—J. C. L. de Sismondi, *Hist. of the Italian Republics*, ch. 3-4.

A. D. 1260-1338.—Rise of the House of the Scaligeri.—Successes of Can' Grande della Scala.—Wars and Reverses of Mastino.—After the death of Eccelino, Verona, by its own choice came under the government of the first Mastino della Scala, who established the power of a house which became famous in Italian history. Mastino's grandson, Cane, or Can' Grande della Scala, "reigned in that city from 1313 to 1329, with a splendor which no other prince in Italy equalled. . . . Among the Lombard princes he was the first protector of literature and the arts.

The best poets, painters, and sculptors of Italy, Dante, to whom he offered an asylum, as well as Ugucione da Faggiuola, and many other exiles illustrious in war or politics, were assembled at his court. He aspired to subdue the Veronese and Trevisan marches, or what has since been called the Terra Firma of Venice. He took possession of Vicenza; and afterwards maintained a long war against the republic of Padua, the most powerful in the district, and that which had shown the most attachment to the Guelf party and to liberty." In 1328, Padua submitted to him; and "the year following he attacked and took Treviso, which surrendered on the 6th of July, 1329. He possessed himself of Feltre and Clivdale soon after. The whole province seemed subjugated to his power; but the conqueror also was subdued." He died on the 22d of the same month in which Treviso was taken.—J. C. L. de Sismondi, *Hist. of the Italian Republics*, ch. 6.—Can' Grande was succeeded by his nephew, the second Mastino della Scala, who, in the next six years, "extended his states from the north-eastern frontiers of Italy to the confines of Tuscany; and the possession of the strong city of Lucca now gave him a secure footing in this province. He shortly made it appear to what purpose he meant to apply this new advantage. Under the plea of re-establishing the Ghibellin interests, but in reality to forward his own schemes of dominion, he began to fill all Tuscany with his machinations. Florence was neither slow to discover her danger, nor to resent the treachery of her faithless ally,"—which Mastino had recently been. Florence, accordingly, formed an alliance with Venice, which Mastino had rashly offended by restricting the manufacture of salt on the Trevisan coast, and by laying heavy duties on the navigation of the Po. Florence agreed "to resign to Venice the sole possession of such conquests as might be made in that quarter; only reserving for herself the acquisition of Lucca, which she was to obtain by attacking Mastino in Tuscany, entirely with her own resources. Upon these terms an alliance was signed between the two republics, and the lord of Verona had soon abundant reason to repent of the pride and treachery by which he had provoked their formidable union (A. D. 1336). . . . During three campaigns he was unable to oppose the league in the field, and was compelled to witness the successive loss of many of his principal cities (A. D. 1337). His brother Albert was surprised and made prisoner in Padua, by the treachery of the family of Carrara, who acquired the sovereignty of that city; Feltre was captured by the Duke of Carinthia, Brescia revolted, and fell with other places to Azzo Visconti. . . . In this hopeless condition Mastino artfully addressed himself to the Venetians, and, by satisfying all their demands, detached them from the general interests of the coalition (A. D. 1338). By a separate treaty which their republic concluded with him, and which was then only communicated to the Florentines for their acceptance, Mastino ceded to Venice Treviso, with other fortresses and possessions, and the right of free navigation on the Po; he agreed at the same time to yield Bassano and an extension of territory to the new lord of Padua, and to confirm the sovereignty of Brescia to Azzo Visconti; but for the Florentine republic no farther advantage was stipulated than the enjoyment of a

few castles which they had already conquered in Tuscany."—G. Procter, *Hist. of Italy*, ch. 4, pt. 3.

VERONA. The Congress of (after Troppau and Laybach).—"The rapid spread of revolution in Europe inspired serious misgivings among the great powers, and impelled the Holy Alliance [see Holy Alliance] to show its true colours. Austria was especially alarmed by the movement in Naples [see Italy: A. D. 1820-1821], which threatened to overthrow its power in Italy, and Metternich convoked a congress at Troppau, in Upper Silesia (Oct., 1820), at which Austria, Russia, Prussia, France and England were represented. Neapolitan affairs were the chief subject of discussion, and it was soon evident that Austria, Russia and Prussia were agreed as to the necessity of armed intervention. England made a formal protest against such high-handed treatment of a peaceful country; but as the protest was not supported by France, and England was not prepared to go to war for Naples, it was disregarded. The three allied powers decided to transfer the congress to Laybach and to invite Ferdinand I. to attend in person." The result of the conference at Laybach was a movement of 60,000 Austrian troops into Naples and Sicily, in March, 1821, and a restoration of Ferdinand, who made a merciless use of his opportunity for revenge.—R. Lodge, *Hist. of Modern Europe*, ch. 25, sect. 8.—From Laybach, the allied sovereigns issued a circular to their representatives at the various foreign courts, in which portentous document they declared that "useful and necessary changes in legislation and in the administration of states could only emanate from the free will, and from the intelligent and well-weighed convictions, of those whom God has made responsible for power. Penetrated with this eternal truth, the sovereigns have not hesitated to proclaim it with frankness and vigour. They have declared that, in respecting the rights and independence of legitimate power, they regarded as legally null, and disavowed by the principles which constituted the public right of Europe, all pretended reforms operated by revolt and open hostilities." "These principles, stated nakedly and without shame, were too much even for Lord Castlereagh. In a despatch, written early in the year 1821, while admitting the right of a state to interfere in the internal affairs of another state when its own interests were endangered, he protested against the pretension to put down revolutionary movements apart from their immediate bearing on the security of the state so intervening, and denied that merely possible revolutionary movements can properly be made the basis of a hostile alliance. The principles of the Holy Alliance were not intended to remain a dead letter; they were promptly acted upon. Popular movements were suppressed in Naples and

Piedmont; and intervention in Spaitz, where the Cortes had been summoned and the despotic rule of Ferdinand VII. had been overthrown, was in contemplation. Greece imitated the example set in the western peninsula of Europe. The Congress of Verona was summoned, and Lord Castlereagh (now the Marquis of Londonderry) was preparing to join it, when in an access of despondency, the origin of which is variously explained, he took his own life." He was succeeded in the British Ministry by Mr. Canning.—F. II. Hill, *George Canning*, ch. 20.—"The first business which presented itself to Mr. Canning was to devise a system by which the Holy Alliance could be gradually dissolved, and England rescued from the consequences of her undefined relations with its members. The adjourned Congress was on the point of assembling at Verona, and as it was necessary to send a representative in place of Lord Castlereagh, who seems to have been terrified at the prospect that lay before him, the Duke of Wellington was selected, and dispatched without loss of time. . . . The very first blow he [Canning] struck in the Congress of Verona announced to the world the attitude which England was about to take, and her total denial of the rights of the Alliance to interfere with the internal affairs of any independent nation. It appeared that France had collected a large army in the south, and not having legitimate occupation for it, proposed to employ it in the invasion of Spain [see Spain: A. D. 1814-1827]. This monstrous project was submitted to Congress, and ardently approved of by Russia. It was now that England spoke out for the first time in this cabal of despots. . . . After some interchanges of notes and discussions agreed to by the allies, the British plenipotentiary, as he was instructed, refused all participation in these proceedings, and withdrew from the Congress. This was the first step that was taken to show the Alliance that England would not become a party to any act of unjust aggression or unjustifiable interference. A long correspondence ensued between Mr. Canning and M. de Chateaubriand. . . . The French king's speech, on opening the Chambers, revealed the real intentions of the government, which Mr. Canning had penetrated from the beginning. The speech was, in fact, a declaration of war against Spain, qualified by the slightest imaginable hypothesis. But, happily for all interests, there was no possibility of disguising the purpose of this war, which was plainly and avowedly to force upon the people of Spain such a constitution as the king (a Bourbon), in the exercise of his absolute authority, should think fit to give them. . . . Against this principle Mr. Canning entered a dignified protest. . . . Although he could not avert from Spain the calamity of a French invasion, he made it clear to all the world that England objected to that proceeding, and that she was no longer even to be suspected of favoring the designs of the Holy Alliance. The French army made the passage of the Bidassoa. From that moment Mr. Canning interfered no farther. He at once disclosed the system which he had already matured and resolved upon. Having first protested against the principle of the invasion, he determined to maintain the neutrality of England in the war that followed. By this course he achieved the end he had in view, of

severing England from the Holy Alliance without embroiling her in any consequent responsibilities. . . . Mr. Canning's 'system' of foreign policy, as described in his own language, resolved itself into this principle of action, that 'England should hold the balance, not only between contending nations, but between conflicting principles; that, in order to prevent things from going to extremities, she should keep a distinct middle ground, staying the plague both ways.' . . . The development of this principle, as it applied to nations, was illustrated in the strict but watchful neutrality observed between France and Spain; and, as it applied to principles, in the recognition of the independence of the Spanish-American colonies. The latter act may be regarded as the most important for which Mr. Canning was officially responsible, as that which exerted the widest and most distinct influence over the policy of other countries, and which most clearly and emphatically revealed the tendency of his own. It showed that England would recognize institutions raised up by the people, as well as those which were created by kings. It gave the death-blow to the Holy Alliance." The logic and meaning of Mr. Canning's recognition of the Spanish American republics found expression in one famous passage of a brilliant speech which he made in the House of Commons, December 12, 1826, vindicating his foreign policy. "If France," he said, "occupied Spain, was it necessary, in order to avoid the consequences of that occupation, that we should blockade Cadiz? No, I looked another way—I sought materials of compensation in another hemisphere. Contemplating Spain such as our ancestors had known her, I resolved that if France had Spain, it should not be Spain with the Indies. I called the New World into existence to redress the balance of the Old."—R. Bell, *Life of the Rt. Hon. George Canning*, ch. 13.

VERSAILLES.—Louis XIV. "preferred Versailles to his other chateaux, because Fontainebleau, Chambord, Saint-Germain, were existences ready created, which Francois I. and Henri IV. had stamped with the ineffaceable imprint of their glory: at Versailles, everything was to be made, save the modest beginning left by Louis XIII. . . . At Versailles, everything was to be created, we say,—not only the monuments of art, but nature itself. This solitary elevation of ground, although pleasing enough through the woods and hills that surrounded it, was without great views, without sites, without waters, without inhabitants. . . . The sites would be created by creating an immense landscape by the hand of man; the waters would be brought from the whole country by works which appalled the imagination; the inhabitants would be caused, if we may say so, to spring from the earth, by erecting a whole city for the service of the chateau. Louis would thus make a city of his own, a form of his own, of which he alone would be the life. Versailles and the court

would be the body and soul of the one and the same being, both created for the same end, the glorification of the terrestrial God to whom they owed existence. . . . The same idea filled the interior of the palace. Painting deified Louis there under every form, in war and in peace, in the arts and in the administration of the empire; it celebrated his amours as his victories, his passions as his labors. All the heroes of antiquity, all the divinities of classic Olympus, rendered him homage or lent him their attributes in turn. He was Augustus, he was Titus, he was Alexander; he was thundering Jupiter, he was Hercules, the conqueror of monsters; oftener, Apollo, the inspirer of the Muses and the king of enlightenment. Mythology was no longer but a great enigma, to which the name of Louis was the only key; he was all the gods in himself alone. . . . Louis, always served in his desires by the fertility of his age, had found a third artist, Lenotre, to complete Lebrun and Mansart. Thanks to Lenotre, Louis, from the windows of his incomparable gallery of mirrors, saw nought that was not of his own creation. The whole horizon was his work, for his garden was the whole horizon. . . . Whole thickets were brought full-grown from the depths of the finest forests of France, and the arts of animating marble and of moving waters filled them with every prodigy of which the imagination could dream. An innumerable nation of statues peopled the thickets and lawns, was mirrored in the waters, or rose from the bosom of the wave. . . . Louis had done what he wished; he had created about him a little universe, in which he was the only necessary and almost the only real being. But terrestrial gods do not create with a word like the true God. These buildings which stretch across a frontage of twelve hundred yards, the unheard-of luxury of these endless apartments, this incredible multitude of objects of art, these forests transplanted, these waters of heaven gathered from all the slopes of the heights into the windings of immense conduits from Trappes and Palaiseau to Versailles, these waters of the Seine brought from Marly by gigantic machinery through that aqueduct which commands from afar the valley of the river like a superb Roman ruin, and later, an enterprise far more colossal! that river which was turned aside from its bed and which it was undertaken to bring thirty leagues to Versailles over hills and valleys, cost France grievous efforts and inexhaustible sweats, and swallowed up rivers of gold increasing from year to year. . . . Versailles has cost France dearly, very dearly; nevertheless it is important to historic truth to set aside in this respect too long accredited exaggerations. . . . The accounts, or at least the abstracts of the accounts, of the expenditures of Louis XIV. for building, during the greater part of his reign, have been discovered. The costs of the construction, decoration, and furnishing of Versailles, from 1664 to 1690, including the hydraulic works and the gardens, in addition to the appendages, — that is, Clagny, Trianon, Saint-Cyr, and the two churches of the new city of Versailles,—amount to about one hundred and seven millions, to which must be added a million, or a million and a half perhaps, for the expenses of the years 1661-1663, the accounts of which are not known, and three million two hundred and sixty thousand francs

for the sumptuous chapel, which was not built until 1699-1710. The proportion of the mark to the franc having varied under Louis XIV., it is difficult to arrive at an exact reduction to the present currency. . . . The expenses of Versailles would represent to-day more than four hundred millions. This amount is enormous; but it is not monstrous like the twelve hundred millions of which Mirabeau speaks, nor, above all, madly fantastic like the four thousand six hundred millions imagined by Volney.—II. Martin, *Hist. of France: Age of Louis XIV.*, v. 1, ch. 3.

VESTAL VIRGINS.—“The Vestals (‘virgines Vestales,’ ‘virgines Vestæ’) were closely connected with the college of pontifices. They are said to have come from Alba soon after the foundation of Rome: at first there were two Vestals for each of the two tribes, Ramnes and Tities; afterwards two others were added for the Luceres, and the number of six was exceeded at no period. The vestal, on being chosen, was not allowed to be younger than six or older than ten years. . . . She was clad in white garments and devoted to the service of Vesta for thirty

years. . . . After this period she was at liberty either to remain in the service of the goddess (which was generally done) or to return to her family and get married. Her dress was always white; round her forehead she wore a broad band like a diadem (‘infula’), with ribbons (‘vittæ’) attached to it. During the sacrifice, or at processions, she was covered with a white veil. . . . She was carefully guarded against insult or temptation; an offence offered to her was punished with death; . . . in public every one, even the consul, made way to the lictor preceding the maiden. At public games and pontifical banquets she had the seat of honour; and a convicted criminal accidentally meeting her was released. Amongst her priestly functions was the keeping of the eternal fire in the temple of Vesta, each Vestal taking her turn at watching. . . . Breach of chastity on the part of the Vestal was punished with death.”—E. Guil and W. Koner, *Lives of the Greeks and Romans*, sect. 103.

VIA SACRA AT ROME, The.—“The Via Sacra began at the Sacellum Strenie, which was on the part of the Esquiline nearest to the Colosseum; on reaching the Summa Via Sacra . . . it turned a little to the right, descending the Clivus Sacer; at the foot of the slope it passed under the arch of Fabius, by the side of the Regia; thence it ran in a straight line, passing by the Basilica Æmilia, the arch of Janus, the Curia Hostilia, till it reached the foot of the Capitoline Hill, where, turning to the left, it ascended the Clivus Capitolinus, and reached its termination at the temple of Jupiter Capitolinus. The Via Sacra, as Ovid tells us, took its name from the sacred rites which were performed on it. Along this road passed the processions of priests with the sacred animals to be sacrificed at the altar of Jupiter Capitolinus. . . . Along this road also passed the triumphal processions of the victorious Roman generals. The procession entered Rome by the Porta Triumphalis, passed through the Circus Maximus, then, turning to the left, proceeded along the road at the foot of the south-east slope of the Palatine, where it joined the Via Sacra, and again turned to the left and

ascended the Vella; on reaching the Summa Via Sacra it descended the Clivus Sacer, and then passed along the rest of the Via Sacra till it reached its destination at the temple of Jupiter Capitolinus, where the victorious general lay before the god the spoils of his conquests."—H. VIENNA, The Congress of.—"At the end of September [1814] the centre of European interest passed to Vienna. The great council of the Powers, so long delayed, was at length assembled. The Czar of Russia, the Kings of Prussia, Denmark, Bavaria, and Württemberg, and nearly all the statesmen of eminence in Europe, gathered round the Emperor Francis and his Minister, Metterlich, to whom by common consent the presidency of the Congress was offered. Lord Castlereagh represented England, and Talleyrand France. Rasumoffsky and other Russian diplomatists acted under the immediate directions of their master, who on some occasions even entered into personal correspondence with the Ministers of the other Powers. Hardenberg stood in a somewhat freer relation to King Frederick William: Stein was present, but without official place. The subordinate envoys and attachés of the greater Courts, added to a host of petty princes and the representatives who came from the minor Powers, or from communities which had ceased to possess any political existence at all, crowded Vienna. In order to relieve the antagonisms which had already come too clearly into view, Metterlich determined to entertain his visitors in the most magnificent fashion; and although the Austrian State was bankrupt, and in some districts the people were severely suffering, a sum of about £10,000 a day was for some time devoted to this purpose. The splendour and the gaieties of Metterlich were emulated by his guests. . . . The Congress had need of its distractions, for the difficulties which faced it were so great that, even after the arrival of the Sovereigns, it was found necessary to postpone the opening of the regular sittings until November. By the secret articles of the Peace of Paris, the Allies had reserved to themselves the disposal of all vacant territory, although their conclusions required to be formally sanctioned by the Congress at large. The Ministers of Austria, England, Prussia, and Russia accordingly determined at the outset to decide upon all territorial questions among themselves, and only after their decisions were completely formed to submit them to France and the other Powers. Talleyrand, on hearing of this arrangement, protested that France itself was now one of the Allies, and demanded that the whole body of European States should at once meet in open Congress. The four Courts held to their determination, and began their preliminary sittings without Talleyrand. But the French statesman had, under the form of a paradox, really stated the true political situation. The great Powers were so deeply divided in their aims that their old bond of common interest, the interest of union against France, was now less powerful than the impulse that made them seek the support of France against one another. Two men had come to the Congress with a definite aim: Alex-

ander had resolved to gain the Duchy of Warsaw, and to form it, with or without some part of Russian Poland, into a Polish kingdom, attached to his own crown: Talleyrand had determined, either on the question of Poland, or on the question of Saxony, which arose out of it, to break all Europe into halves, and to range France by the side of two of the great Powers against the two others. The course of events favoured for a while the design of the Minister: Talleyrand himself prosecuted his plan with an ability which, but for the untimely return of Napoleon from Elba, would have left France, without a war, the arbiter and the leading Power of Europe. Since the Russian victories of 1812, the Emperor Alexander had made no secret of his intention to restore a Polish Kingdom and a Polish nationality. Like many other designs of this prince, the project combined a keen desire for personal glorification with a real generosity of feeling. Alexander was thoroughly sincere in his wish not only to make the Poles again a people, but to give them a Parliament and a free Constitution. The King of Poland, however, was to be no independent prince, but Alexander himself: although the Duchy of Warsaw, the chief if not the sole component of the proposed new kingdom, had belonged to Austria and Prussia after the last partition of Poland, and extended into the heart of the Prussian monarchy. Alexander insisted on his anxiety to atone for the crime of Catherine in dismembering Poland: the atonement, however, was to be made at the sole cost of those whom Catherine had allowed to share the booty. Among the other Governments, the Ministry of Great Britain would gladly have seen a Polish State established in a really independent form; failing this, it desired that the Duchy of Warsaw should be divided, as formerly, between Austria and Prussia. Metternich was anxious that the fortress of Cracow at any rate should not fall into the hands of the Czar. Stein and Hardenberg, and even Alexander's own Russian counsellors, earnestly opposed the Czar's project, not only on account of the claims of Prussia on Warsaw, but from dread of the agitation likely to be produced by a Polish Parliament among all Poles outside the new State. King Frederick William, however, was unaccustomed to dispute the wishes of his ally; and the Czar's offer of Saxony in substitution for Warsaw gave to the Prussian Ministers, who were more in earnest than their master, at least the prospect of receiving a valuable equivalent for what they might surrender. By the treaty of Kalisch, made when Prussia united its arms with those of Russia against Napoleon (Feb. 27th, 1813), the Czar had undertaken to restore the Prussian monarchy to an extent equal to that which it had possessed in 1805. It was known before the opening of the Congress that the Czar proposed to do this by handing over to King Frederick William the whole of Saxony, whose Sovereign, unlike his colleagues in the Rhenish Confederacy, had supported Napoleon up to his final overthrow at Leipzig. Since that time the King of Saxony had been held a prisoner, and his dominions had been occupied by the Allies. The Saxon question had thus already gained the attention of all the European Governments. . . . Talleyrand alone made the defence of the King of Saxony the very centre of his policy, and subordinated all other aims to

this. His instructions, like those of Castlereagh, gave priority to the Polish question; but Talleyrand saw that Saxony, not Poland, was the lever by which he could throw half of Europe on to the side of France; and before the four Allied Courts had come to any single conclusion, the French statesman had succeeded, on what at first passed for a subordinate point, in breaking up their concert. For a while the Ministers of Austria, Prussia, and England appeared to be acting in harmony; and throughout the month of October all three endeavoured to shake the purpose of Alexander regarding Warsaw. Talleyrand, however, foresaw that the efforts of Prussia in this direction would not last very long, and he wrote to Louis XVIII. asking for his permission to make a definite offer of armed assistance to Austria in case of need. Events took the turn which Talleyrand expected. . . . He had isolated Russia and Prussia, and had drawn to his own side not only England and Austria but the whole body of the minor German States. . . . On the 3rd of January, 1815, after a rash threat of war uttered by Hardenberg, a secret treaty was signed by the representatives of France, England, and Austria, pledging these Powers to take the field, if necessary, against Russia and Prussia in defence of the principles of the Peace of Paris. The plan of the campaign was drawn up, the number of the forces fixed. Bavaria had already armed; Piedmont, Hanover, and even the Ottoman Porte, were named as future members of the alliance. It would perhaps be unfair to the French Minister to believe that he actually desired to kindle a war on this gigantic scale. Talleyrand had not, like Napoleon, a love for war for its own sake. His object was rather to raise France from its position as a conquered and isolated Power; to surround it with allies. . . . The conclusion of the secret treaty of January 3rd marked the definite success of his plans. France was forthwith admitted into the council hitherto known as that of the Four Courts, and from this time its influence visibly affected the action of Russia and Prussia, reports of the secret treaty having reached the Czar immediately after its signature. The spirit of compromise now began to animate the Congress. Alexander had already won a virtual decision in his favour on the Polish question, but he abated something of his claims, and while gaining the lion's share of the Duchy of Warsaw, he ultimately consented that Cracow, which threatened the Austrian frontier, should be formed into an independent Republic, and that Prussia should receive the fortresses of Dantzle and Thorn on the Vistula, with the district lying between Thorn and the border of Silesia. This was little for Alexander to abandon; on the Saxon question the allies of Talleyrand gained most that they demanded. The King of Saxony was restored to his throne, and permitted to retain Dresden and about half of his dominions. Prussia received the remainder. In lieu of a further expansion in Saxony, Prussia was awarded territory on the left bank of the Rhine, which, with its recovered Westphalian provinces, restored the monarchy to an area and population equal to that which it had possessed in 1805. But the dominion given to Prussia beyond the Rhine, though considered at the time to be a poor equivalent for the second half of Saxony, was in reality a gift of far greater

value. It made Prussia, in defence of its own soil, the guardian and bulwark of Germany against France. . . . It gave to Prussia something more in common with Bavaria and the South, and qualified it, as it had not been qualified before, for its future task of uniting Germany under its own leadership. The Polish and Saxon difficulties, which had threatened the peace of Europe, were virtually settled before the end of the month of January."—C. A. Fyffe, *Hist. of Modern Europe*, v. 2, ch. 1.—"Prussia obtained Posen with the town of Thorn in the east, and in the west all that had been lost by the treaty of Tilsit, the duchies of Jülich and Berg, the old electoral territories of Cologne and Trier with the city of Aachen, and parts of Luxemburg and Limburg. Russia received the whole of the grand-duchy of Warsaw except Posen and Thorn, and Alexander fulfilled his promises to the Poles by granting them a liberal constitution. . . . Swedish Pomerania had been ceded by the treaty of Kiel to Denmark, but had long been coveted by Prussia. The Danish claims were bought off with two million thalers and the duchy of Lauenburg, but Hanover had to be compensated for the latter by the cession of the devotedly loyal province of East Friesland, one of the acquisitions of Frederick the Great. Hanover, which now assumed the rank of a kingdom without opposition, was also aggrandised by the acquisition of Hildesheim, Goslar, and other small districts. Austria was naturally one of the great gainers by the Congress. Eastern Galicia was restored by Russia, and the Tyrol, Salzburg, and the Inn district by Bavaria. As compensation for the Netherlands, Venetia and Lombardy became Austrian provinces. Bavaria, in return for its losses in the east, received Würzburg, Aschaffenburg, and its former possessions in the Palatinate. Long discussions took place about the constitution to be given to Germany, and here the hopes of the national party were doomed to bitter disappointment. . . . Finally a Confederation was formed [see GERMANY: A. D. 1814-1820] which secured the semblance of unity, but gave almost complete independence to the separate states. The members numbered thirty-eight, and included the four remaining free cities, Frankfort, Hamburg, Lübeck, and Bremen, and the kings of Denmark and the Netherlands. . . . In Italy the same process of restoration and subdivision was carried out. Victor Emmanuel I. recovered his kingdom of Sardinia, with the addition of Genoa as compensation for the portion of Savoy which France retained. Modena was given to a Hapsburg prince, Francis IV., son of the archduke Ferdinand, and Beatrice the heiress of the house of Este. Tuscany was restored to Ferdinand III., a brother of the Austrian Emperor. Charles Louis, son of the Bourbon king of Etruria, was compensated with Lucca and a promise of the succession in the duchy of Parma, which was for the time given to Napoleon's wife, Maria Louisa. Pius VII. had already returned to Rome, and the Papal states now recovered their old extent. But Pius refused at first to accept these terms because he was deprived of Avignon and the Venaisian, and because Austrian garrisons were in occupation of Ferrara and Comacchio. Naples was left for a time in the hands of Joachim Murat, as a reward for his desertion of Napoleon after the battle of Leipzig. Switzerland was

declared independent and neutral, but its feudal unity was loosened by a new constitution (Aug., 1815). The number of cantons were raised to twenty-two by the addition of Geneva, Wallis (Valais), and Neuchâtel, the last under Prussian suzerainty. The position of capital was to be enjoyed in rotation by Berne, Zurich, and Lucerne. The kingdom of the Netherlands was formed for the house of Orange by the union of Holland and Belgium and the addition of Luxemburg, which made the king a member of the German Confederation. The professed object of this artificial union of Catholics and Protestants was the erection of a strong bulwark against French aggressions."—R. Lodge, *Hist. of Modern Europe*, ch. 24, sect. 52.

A. D. 1606-1607.—The Virginia Company of London and its charter.—The colony planted at Jamestown.—"The colonization of the North American coast had now become part of the avowed policy of the British government. In 1606 a great joint-stock company was formed for the establishment of two colonies in America. The branch which was to take charge of the proposed southern colony had its headquarters in London; the management of the northern branch was at Plymouth in Devonshire. Hence the two branches are commonly spoken of as the London and Plymouth Companies. The former was also called the Virginia Company, and the latter the North Virginia Company, as the name of Virginia was then loosely applied to the entire Atlantic coast north of Florida. The London Company had jurisdiction from 34° to 38° north latitude; the Plymouth Company had jurisdiction from 45° down to 41°; the Intervening territory, between 38° and 41° was to go to whichever company should first plant a self-supporting colony."—J. Fiske, *The Beginnings of New Eng.*, ch. 2.—"The charter for colonizing the great central territory of the North American continent, which was to be the chosen abode of liberty, gave to the mercantile corporation nothing but a wilderness, with the right of peopling and defending it. By an extension of the prerogative, which was in itself illegal, the monarch assumed absolute legislative as well as executive powers. . . . The general superintendence was confided to a council in England; the local administration of each colony to a resident council. The members of the superior council in England were appointed exclusively by the king, and were to hold office at his good pleasure. Their authority extended to both colonies, which jointly took the name of Virginia. Each of the two was to have its own resident council, of which the members were from time to time to

be ordained and removed according to the instructions of the king. To the king, moreover, was reserved supreme legislative authority over the several colonies, extending to their general condition and the most minute regulation of their affairs. . . . The summer was spent in preparations for planting the first colony, for which the king found a grateful occupation in framing a code of laws. The superior council in England was permitted to name the colonial council, which was independent of the emigrants, and had power to elect or remove its president, to remove any of its members, and to supply its own vacancies. Not an element of popular liberty or control was introduced. Religion was established according to the doctrine and rites of the church within the realm. . . . Then, on the 19th day of December, in the year of our Lord 1606, one hundred and nine years after the discovery of the American continent by Cabot, forty-one years from the settlement of Florida, the squadron of three vessels, the largest not exceeding 100 tons' burden, with the favor of all England, stretched their sails for 'the dear strand of Virginia, earth's only paradise.' . . . The enterprise was ill concerted. Of the 105 on the list of emigrants, there were but 12 laborers and few mechanics. They were going to a wilderness, in which, as yet, not a house was standing; and there were 48 gentlemen to 4 carpenters. Neither were there any men with families. Newport, who commanded the ships, was acquainted with the old passage, and sailed by way of the Canaries and the West India Islands. As he turned to the north, a severe storm, in April, 1607, carried his fleet beyond the settlement of Raleigh, into the magnificent bay of the Chesapeake. The headlands received and retain the names of Cape Henry and Cape Charles, from the sons of King James; the deep water for anchorage, 'putting the emigrants in good comfort,' gave a name to the northern point; and within the capes a country opened which appeared to 'claim the prerogative over the most pleasant places in the world.' . . . A noble river was soon entered, which was named from the monarch; and, after a stretch of seventeen days, . . . on the 13th of

May they reached a peninsula about 50 miles above the mouth of the stream, where the water near the shore was so very deep that the ships were moored to trees. Here the council, except Smith, who for no reason unless it were jealousy of his superior energy was for nearly a month kept out of his seat, took the oath of office, and the majority elected Edward Maria Wingfield president for the coming year. Contrary to the earnest and persistent advice of Bartholomew Gosnold, the peninsula was selected for the site of the colony, and took the name of Jamestown.—G. Bancroft, *Hist. of the U. S.*, pt. 1, ch. 6 (n. 1).

A. D. 1607-1610.—The settlement at Jamestown and the services of Captain John Smith.

—“Among the leaders of the expedition were Gosnold, the voyager and discoverer, and a prime mover in the affair; Wingfield, one of the first-named patentees, John Smith, Ratcliffe, Martin, Kendall, and Percy. Of these men John Smith has become famous. He has taken place among the founders of states, and a romantic interest has attached itself to his name. For centuries his character and deeds have been applauded, while in late years they have become a theme for censure and detraction. Modern investigation has relentlessly swept away the romance, and torn in pieces many of the long accepted narratives in which Smith recorded his own achievements. Yet it was not wholly by a false and fluent pen that Smith obtained and held his reputation. He was something more than a plausible writer of fiction. He was the strongest and most representative man among the Virginian colonists. . . . With this hopeful company Newport left the Downs on the 1st of January, 1607. The worthy Richard Hakluyt sent them a paper containing much good advice and some ingenious geographical speculations, and Drayton celebrated their departure in clumsy verses filled with high-flown compliments. The advice of the priest and the praise of the poet were alike wasted. By an arrangement ingeniously contrived to promote discord, devised probably by royal sagacity, the box containing the names of the council was not to be opened until the voyagers reached their destination. Dissension broke out almost immediately. Whatever the merits of the differences, this much is certain, that Smith was the object of the concentrated jealousy and hatred of his companions. . . . On the 13th of May, 1607, the settlers landed at Jamestown, sent out exploring parties, and began fortifications. A fortnight later, under the command of Wingfield, they repulsed an attack by the Indians; and on the 22d of June Newport sailed for England, and left them to their own resources. The prospect must have been a dreary one: nothing answered to their expectations. Instead of valuable mines, the adventurers found only a most fertile soil; instead of timid, trusting South American Indians, they encountered wild tribes of hardy, crafty, and hostile savages; instead of rich, defenceless, and barbarian cities, an easy and splendid spoil, they found a wilderness, and the necessity of hard

work. From the miserable character of the settlers, dangerous factions prevailed from the first, until Smith obtained control, and maintained some sort of order—despotically, perhaps, but still effectually. No one would work, and famine and the Indians preyed upon them mercilessly. A small fort and a few wretched huts, built after much quarrelling, represented for many months all that was accomplished. The only relief from this dark picture of incompetent men perishing, without achievement, and by their own folly, on the threshold of a great undertaking, is to be found in the conduct of Smith. Despite almost insurmountable obstacles, Smith kept the colony together for two years. He drilled the soldiers, compelled labor, repaired the fort, traded with the Indians, outwitted them and kept their friendship, and made long and daring voyages of discovery. He failed to send home a lump of gold, but he did send an excellent map of the Company's territory. He did not discover the passage to the South Sea, but he explored the great bays and rivers of Virginia. He did not find Raleigh's lost colonists, but he managed to keep his own from total destruction. The great result of all Smith's efforts was the character of permanency he gave to the settlement. Because he succeeded in maintaining an English colony for two consecutive years in America, the London Company had courage to proceed; and this is what constitutes Smith's strongest claim to the admiration and gratitude of posterity. To suppose that he had the qualities of a founder of a state is a mistake, although in some measure he did the work of one. . . . His veracity as a historian in the later years of his life has been well-nigh destroyed. But little faith can be placed in the 'General Historie,' and modern investigation has conclusively relegated to the region of legend and of fiction the dramatic story of Smith's rescue by Pocahontas. The shadow of doubt rests upon all his unsupported statements; but nothing can obscure his great services, to which the world owes the foundation of the first English colony in America. Yet, after all his struggles, Smith was severely blamed by the Company, apparently because Virginia was not Peru. In a manly letter he sets forth the defects of the colony, the need of good men with families, industrious tradesmen and farmers, not 'poor gentlemen and libertines.' Before, however, the actual orders came to supersede him, Smith resigned, or was forced out of the government, and returned to England. The feeble life of the colony wasted fast after his departure and during the sickness of Percy, who succeeded to the command.”—H. C. Lodge, *Short Hist. of the Eng. Colonies in Am.*, ch. 1.

A. D. 1609-1616.—The new Charter.—The colony taking root.—Introduction of Tobacco culture.—“The prospects of the colony were so discouraging at the beginning of the year 1609, that, in the hope of improving them, the Company applied for a new charter with enlarged privileges. This was granted to them, on the 23d of May, under the corporate name of 'The Treasurer and Company of Adventurers and

Planters of the City of London for the first Colony in Virginia.' The new Association, which embraced representatives of every rank, trade, and profession, included twenty-one peers, and its list of names presents an imposing array of wealth and influence. By this charter Virginia was greatly enlarged, and made to comprise the coast-line and all islands within 100 miles of it,—200 miles north and 200 south of Point Comfort,—with all the territory within parallel lines thus distant and extending to the Pacific boundary; the Company was empowered to choose the Supreme Council in England, and, under the instructions and regulations of the last, the Governor was invested with absolute civil and military authority. . . . Thomas West (Lord Delaware), the descendant of a long line of noble ancestry, received the appointment of Governor and Captain-General of Virginia. The first expedition under the second charter, which was on a grander scale than any preceding it, and which consisted of nine vessels, sailed from Plymouth on the 1st of June, 1609. Newport, the commander of the fleet, Sir Thomas Gates, Lieutenant-General, and Sir George Somers, Admiral of Virginia, were severally authorized, whichever of them might first arrive at Jamestown, to supersede the existing administration there until the arrival of Lord Delaware, who was to embark some months later; but not being able to settle the point of precedency among themselves, they embarked together in the same vessel, which carried also the wife and daughters of Gates. . . . On the 23d of July the fleet was caught in a hurricane; a small vessel was lost, others damaged, and the 'Sea Venture,' which carried Gates, Somers, and Newport, with about 150 settlers, was cast ashore on the Bermudas. . . . Early in August the 'Blessing,' Captain Archer, and three other vessels of the delayed fleet sailed up James River, and soon after the 'Diamond,' Captain Ratcliffe, appeared, without her mainmast, and she was followed in a few days by the 'Swallow,' in like condition. The Council being all dead save Smith, he, obtaining the sympathy of the sailors, refused to surrender the government of the colony; and the newly arrived settlers elected Francis West, the brother of Lord Delaware, as temporary president. The term of Smith expiring soon after, George Percy—one of the original settlers, a brother of the Earl of Northumberland, and a brave and honorable man—was elected president. . . . Smith, about Michaelmas (September 20), departed for England, or, as all contemporary accounts other than his own state, was sent thither 'to answer some misdemeanors.' These were doubtless of a venial character; but the important services of Smith in the sustenance of the colony appear not to have been as highly esteemed by the Company as by Smith himself. He complains that his several petitions for reward were disregarded, and he never returned to Virginia. . . . At the time of his departure for England he left at Jamestown three ships, seven boats, a good stock of provisions, nearly 500 settlers, 20 pieces of cannon, 300 guns, with fishing-nets, working-tools, horses, cattle, swine, etc. Jamestown was strongly fortified with palisades, and contained between fifty and sixty houses. . . . No effort by tillage being made to replenish their provisions, the stock was soon consumed, and the horrors of famine were added to other calamities.

The intense sufferings of the colonists were long remembered, and this period is referred to as 'the starving time.' In six months their number was reduced to 60, and such was the extremity of these that they must soon have perished but for speedy succor. The passengers of the wrecked 'Sea Venture,' though mourned for as lost, had effected a safe landing at the Bermudas where, favored by the tropical productions of the islands, they, under the direction of Gates and Somers, constructed for their deliverance two vessels from the materials of the wreck and cedar-wood, the largest of the vessels being of 80 tons burden. . . . Six of the company, including the wife of Sir Thomas Gates, died on the island. The company of 140 men and women embarked on the completed vessels—which were appropriately named the 'Patience' and the 'Deliverance'—on the 10th of May, 1610, and on the 23d they landed at Jamestown. . . . So forlorn was the condition of the settlement that Gates reluctantly resolved to abandon it." The whole colony was accordingly embarked and was under sail down the river, when it met a fleet of three vessels, bringing supplies and new settlers from England, with Lord Delaware, who had resolved to come out in person, as Governor and Captain-General of Virginia. Gates and his disheartened companions turned back with these new comers, and all were set vigorously at work to restore the settlement. "The administration of Delaware, though ludicrously ostentatious for so insignificant a dominion, was yet highly wholesome, and under his judicious discipline the settlement was restored to order and contentment." His health failing, Lord Delaware returned to England the following spring, whither Sir Thomas Gates had gone. Sir Thomas Dale had already been sent out with the appointment of high marshal, bearing a code of extraordinary laws which practically placed the colony under martial rule. Gates returned in June, 1611, with 800 additional settlers and a considerable stock of cows and other cattle. During that year and the next several new settlements were founded, at Dutch Gap, Henrico, and Bermuda Hundred, individual grants of property began to be made, and many signs of prosperity appeared. The year 1613 "was a marked one, in the inauguration by John Rolfe [who married Pocahontas two years later, having lost his first wife] of the systematic culture of tobacco,—a staple destined to exert a controlling influence in the future welfare and progress of the colony, and soon, by the paramount profit yielded by its culture, to subordinate all other interests, agricultural as well as manufacturing." In the spring of 1613, Sir Thomas Gates left the colony, finally, returning to England, and the government fell to the hands of Dale, who remained at the head until 1616.—R. A. Brock, *Virginia, 1606-1689 (Narrative and Critical Hist. of Am., v. 3, ch. 5)*.
ALSO IN: W. Stith, *Hist. of Va., bk. 3.*—J. H. Lefroy, *Memorials of the Discovery and Early Settlement of the Bermudas, v. 1, ch. 1.*—J. E. Cooke, *Virginia, ch. 13-16.*—H. W. Preston, *Doc's Illustrative of Am. Hist., p. 14.*
A. D. 1613.—The French settlements in Acadia destroyed by Argall and the Dutch at New York forced to promise tribute. See CANADA: A. D. 1610-1613; and NEW YORK: A. D. 1610-1614.

A. D. 1617-1619.—The evil days of Argall, and the better administration that followed. —Meeting of the first provincial Assembly.—“A party of greedy and unprincipled adventurers headed by Lord Rich, soon after the Earl of Warwick, acquired sufficient influence in the Company to nominate a creature of their own as Deputy-Governor. Their choice of Argall [Samuel Argall] would in itself have tainted their policy with suspicion. Whether dealing with the Indians, the French, or the Dutch, he had shown himself [see CANADA: A. D. 1610-1613; and NEW YORK: A. D. 1610-1614] able, resolute, and unscrupulous. To do him justice, he seems at least to have understood the principle of Tiberius, that a shepherd should shear his sheep, not flay them. His first measure was to provide a sufficient supply of corn for the maintenance of the colony. With that he appeared to think that his duty to the settlers was at end. . . . An event soon occurred which released Argall from the fear of a superior, and probably emboldened him in his evil courses. Lord Delaware, who had sailed in a large vessel with 200 emigrants,” died on the voyage. “Argall now began to show that his care for the well-being of the colony was no better than the charity of the cannibal who feeds up his prisoner before making a meal on him. Trade with the Indians was withheld from individuals, but, instead of being turned to the benefit of the Company, it was appropriated by Argall. The planters were treated as a slave-gang working for the Deputy’s own private profit. The Company’s cattle were sold, and the proceeds never accounted for. During this time a great change had come over the Company at home. An energetic and public-spirited party had been formed, opposed alike to Sir Thomas Smith and to Lord Rich. Their leader was Sir Edwin Sandys, a member of that country party which was just beginning to take its stand against the corruptions of the court policy. Side by side with him stood one whose name has gained a wider though not a more honourable repute, the follower of Essex, the idol of Shakespeare, the brilliant, versatile Southampton. . . . The . . . year 1619 was remarkable in the annals of the colony. It is hardly an exaggeration to say that it witnessed the creation of Virginia as an independent community. From the beginning of that year we may date the definite ascendancy of Sandys and his party, an ascendancy which was maintained till the dissolution of the Company, and during which the affairs of Virginia were administered with a degree of energy, unselfishness, and statesmanlike wisdom, perhaps unparalleled in the history of corporations. One of the first measures was to send out Yeardley to supersede Argall. . . . When Yeardley arrived he found that Argall had escaped. No further attempt seems to have been made to bring him to justice. In the next year he was commanding a ship against the Algerines.” Soon afterwards, Sir Edwin Sandys was placed officially at the head of the Company, by his election to be Treasurer, in the place of Sir Thomas Smith. “About the same time that these things were doing in England, a step of the greatest importance was being taken in Virginia. Yeardley, in obedience to instructions from the Company, summoned an Assembly of Burgesses from the various hundreds and plantations. At one step Virginia,

from being little better than a penal settlement, ruled by martial law, became invested with important, though not full, rights of self-government. Though we have no direct evidence of the fact, there is every probability that during the administrations of Yeardley and Argall the number of independent planters possessing estates of their own, with labourers employed in the service of their masters, not of the Company, had increased. Unless such an influence had been at work, it is scarcely possible that the experiment of constitutional government should have succeeded, or even have been tried. On the 30th of July, 1619, the first Assembly met in the little church at Jamestown. . . . In England the Company under its new government set to work with an energy before unknown to it, to improve the condition of the colony. . . . To check the over-production of tobacco a clause was inserted in all fresh patents of land binding the holder to cultivate a certain quantity of other commodities. Everything was done to encourage permanent settlers rather than mere traders. Apprentices, unmarried women, and neat cattle were sent out. New forms of industry, too, were set on foot, such as timber yards, silk manufactures, iron foundries, and vineyards. . . . In the year 1619 alone over 1,200 persons were sent out, half as private settlers or servants, half at the expense of the Company.” —J. A. Doyle, *The English in Am.: Virginia, &c., ch. 6.*

A. D. 1619.—Introduction of Negro Slavery. —“In the month of August, 1619, five years after the commons of France had petitioned for the emancipation of every serf in every fief, a Dutch man-of-war entered James River and landed 20 negroes for sale. This is the sad epoch of the introduction of negro slavery; but the traffic would have been checked in its infancy had it remained with the Dutch. Thirty years after this first importation of Africans, Virginia to one black contained fifty whites; and, after seventy years of its colonial existence, the number of its negro slaves was proportionably much less than in several of the northern states at the time of the war of independence.” —G. Bancroft, *Hist. of the U. S. (Author’s last rev.)*, pt. 1, ch. 8 (v. 1).

A. D. 1622-1624.—Plot and Massacre by the Indians.—Arbitrary dissolution of the Virginia Company by King James.—“On the 22nd of March, 1622, a memorable massacre occurred in the Colony. . . . On the evening before, and on that morning, the savages as usual came unarmed into the houses of the planters, with fruits, fish, turkeys and venison to sell. In some places they actually sat down to breakfast with the English. At about the hour of noon, the savages rising suddenly and everywhere at the same time, butchered the colonists with their own implements, sparing neither age, sex, nor condition. Three hundred and forty-seven men, women and children fell in a few hours. . . . The destruction might have been universal but for the disclosure of a converted Indian, named Chanco, who, during the night before the massacre, revealed the plot to one Richard Pace, with whom he lived. Pace . . . repaired before day to Jamestown and gave the alarm to Sir

Francis Wyatt, the Governor. His vigilance saved a large part of the Colony. . . . The court of James I., jealous of the growing power of the Virginia Company and of its too republican spirit, seized upon the occasion of the massacre to attribute all the calamities of the Colony to its mismanagement and neglect, and thus to frame a pretext for dissolving the charter." The Company, supported by the colonists, resisted the high-handed proceedings of the King and his officers, but vainly. In November, 1624, "James I. dissolved the Virginia Company by a writ of Quo Warranto, which was determined only upon a technicality in the pleadings. The company had been obnoxious to the ill will of the King on several grounds. The corporation had become a theatre for rearing leaders of the opposition, many of its members being also members of parliament. . . . Charles I. succeeding [1625] to the crown and principles of his father, took the government of Virginia into his own hands. The company thus extinguished had expended £150,000 in establishing the Colony, and transported 9,000 settlers without the aid of government. The number of stockholders, or adventurers, as they were styled, was about 1,000, and the annual value of exports from Virginia was, at the period of the dissolution of the charter, only £30,000. The company embraced much of the rank, wealth, and talent of the kingdom. . . . As the act provided no compensation for the enormous expenditure incurred, it can be looked upon as little better than confiscation effected by chicanery and tyranny. Nevertheless the result was undoubtedly favorable to the Colony."—C. Campbell, *Introduct. to the Hist. of the Colony and Ancient Dominion of Va.*, ch. 15-16.

A. D. 1639-1652.—Loyalty to King Charles.—The Refuge of the Cavaliers.—"Under Charles I. little worthy of notice occurred in the political history of Virginia. . . . Attempts were made to raise a revenue on tobacco, and subsequently to establish a royal monopoly of the tobacco trade. The attempts were averted, and the king contented himself with the pre-emption of the Virginian tobacco, and with enacting that no foreign vessel should be allowed to trade with Virginia, or to carry Virginian goods. In 1639 an attempt was made to re-establish the authority of the company, but was strenuously and successfully opposed by the assembly. That the royal government sat lightly on Virginia may be inferred from the loyal tone which had thus early become a characteristic of the colony. After the establishment of the commonwealth, 'Virginia was whole for monarchy and the last country belonging to England that submitted to obedience to the commonwealth of England,' and under Berkeley's government the plantation was a safe refuge for the defeated cavaliers. . . . But as soon as two or three parliamentary ships appeared [1652] all thoughts of resistance were laid aside. Yet, whether from lenity or caution, the parliament was satisfied

with moderate terms. The submission of the colonists was accepted as free and voluntary."—J. A. Doyle, *The American Colonies*, ch. 2.

A. D. 1644.—Fresh Indian outbreak and massacre of whites.—"After a peace of five or six years, the Indians, provoked by continued encroachments on their lands, and incited, it is said, by the aged chief Opechancanough, formed a new scheme for the extermination of the colonists. They were encouraged by signs of discord among the English, having seen a fight in James River between a London ship for the Parliament and a Bristol ship for the king. Five hundred persons perished in the first surprise, which took place, according to Winthrop, the day before Good Friday, appointed by the governor, 'a courtier, and very malignant toward the way of our churches,' to be observed as a fast for the good success of the king. For defense, the planters were concentrated in a few settlements; . . . forts were built at the points most exposed; and a ship was sent to Boston for powder, which, however, the General Court declined to furnish. This occasion was taken by 'divers godly-disposed persons' of Virginia to remove to New England. . . . The Indians were presently driven from their fastnesses. Opechancanough, deceitful and incapable of moving without assistance, . . . was taken prisoner and carried to Jamestown, where he was shot in the back by a vindictive soldier appointed to guard him. The Indian towns were broken up, and their 'clear lands possessed by the English to sow wheat in.' Opechancanough's successor submitted; and a peace was made by act of Assembly, the Indians ceding all the lands between James and York Rivers. No Indian was to come south of York River under pain of death. The Powhatan confederacy was dissolved. The Indians of lower Virginia sunk into servile dependence, and dwindled away, or, migrating to the south and west, were mingled and confounded with other tribes."—R. Hildreth, *Hist. of the U. S.*, ch. 11 (v. 1).

A. D. 1650-1660.—Under the Commonwealth and Cromwell, and the Stuart Restoration.—Two sides of the story.—Origin of the name of "The Old Dominion."—"After this, Sir William Berkeley [governor] made a new peace with the Indians, which continued for a long time unviolated. . . . But he himself did not long enjoy the benefit of this profound peace; for the unhappy troubles of king Charles the first increasing in England, proved a great disturbance to him and to all the people. They, to prevent the infection from reaching that country, made severe laws against the Puritans, though there were as yet none among them. But all correspondence with England was interrupted, supplies lessened, and trade obstructed. . . . At last the king was traitorously beheaded in England, and Oliver installed Protector. However, his authority was not acknowledged in Virginia for several years after, till they were forced to it by the last necessity. For in the year 1651, by Cromwell's command, Captain Dennis, with a squadron of men of war, arrived there from the Carribbee Islands, where they had been subduing Baradoes. The country at first held out vigorously against him, and Sir William Berkeley, by the assistance of such Dutch vessels as were then there, made

a brave resistance. But at last Dennis contrived a stratagem which betrayed the country. He had got a considerable parcel of goods aboard, which belonged to two of the Council, and found a method of informing them of it. By this means they were reduced to the dilemma, either of submitting or losing their goods. This occasioned factions among them; so that at last, after the surrender of all the other English plantations, Sir Wm. was forced to submit to the usurper on the terms of a general pardon. However, it ought to be remembered, to his praise, and to the immortal honor of that colony, that it was the last of all the king's dominions that submitted to the usurpation; and afterwards the first that cast it off, and he never took any post or office under the usurper. Oliver had no sooner subdued the plantations, but he began to contrive how to keep them under, that so they might never be able for the time to come to give him farther trouble. To this end, he thought it necessary to break off their correspondence with all other nations, thereby to prevent their being furnished with arms, ammunition, and other warlike provisions. According to this design, he contrived a severe act of Parliament [1651], whereby he prohibited the plantations from receiving or exporting any European commodities but what should be carried to them by Englishmen, and in English built ships [see NAVIGATION ACT, ENGLAND]. . . . Notwithstanding this act of navigation, the Protector never thought the plantations enough secured, but frequently changed their governors, to prevent their intriguing with the people. So that, during the time of the usurpation, they had no less than three governors there, namely, Diggs, Bennet and Mathews. The strange arbitrary curbs he put upon the plantations exceedingly afflicted the people . . . and inspired them with a desire to use the last remedy, to relieve themselves from this lawless usurpation. In a short time afterwards a fair opportunity happened; for Governor Mathews died, and no person was substituted to succeed him in the government. Whereupon the people applied themselves to Sir William Berkeley (who had continued all this time upon his own plantation in a private capacity) and unanimously chose him their governor again [March, 1660]. Sir William . . . told the people . . . that if he accepted the government it should be upon their solemn promise, after his example, to venture their lives and fortunes for the king, who was then in France. This was no great obstacle to them, and therefore with an unanimous voice they told him they were ready to hazard all for the king. . . . Sir William Berkeley embraced their choice, and forthwith proclaimed Charles II. king of England, Scotland, France, Ireland and Virginia, and caused all process to be issued in his name. Thus his majesty was actually king in Virginia before he was so in England. But it pleased God to restore him soon after to the throne of his ancestors."—R. Beverley, *Hist. of Va.*, bk. 1, ch. 4.

—"The government of Virginia, under the Commonwealth of England, was mild and just. While Cromwell's sceptre commanded the respect of the world, he exhibited generous and politic leniency towards the infant and loyal colony. She enjoyed during this interval free trade, legislative independence and internal peace. The governors were men who by their

virtues and moderation won the confidence and affections of the people. No extravagance, rapacity, or extortion, could be alleged against the administration. Intolerance and persecution were unknown, with the single exception of a rigorous act banishing the quakers. But rapine, extravagance, extortion, intolerance and persecution were all soon to be revived under the auspices of the Stuarts. . . . Richard Cromwell resigned the protectorate in March, 1660. Mathews, governor-elect, had died in the January previous. England was without a monarch; Virginia without a governor. Here was a two fold interregnum. The assembly, convening on the 13th of March, 1660, declared by their first act that, as there was then in England 'noe resident absolute and general confessed power,' therefore the supreme government of the colony should rest in the assembly. By the second act, Sir William Berkeley was appointed governor, and it was ordered that all writs should issue in the name of the assembly. . . . No fact in our history has been more misunderstood and misrepresented than this reappointment of Sir William Berkeley, before the restoration of Charles II. . . . Sir William was elected, not by a tumultuary assemblage of the people, but by the assembly; the royal standard was not raised upon the occasion, nor was the king proclaimed. Sir William, however, made no secret of his loyalty. . . . Sir William was elected on the 21st of the same month, about two months before the restoration of Charles II. Yet the word king, or majesty, occurs no where in the legislative records, from the commencement of the Commonwealth in England until the 11th of October, 1660—more than four months after the restoration. Virginia was indeed loyal, but she was too feeble to express her loyalty."—C. Campbell, *Introd. to the Hist. of the Colony and Ancient Dominion of Va.*, ch. 21-22.

—"There is no doubt whatever that if the Virginians could have restored the King earlier they would have done so; and Berkeley, who is known to have been in close communication and consultation with the leading Cavaliers, had sent word to Charles . . . in Holland, toward the end of the Commonwealth, that he would raise his flag in Virginia if there was a prospect of success. This incident has been called in question. It is testified to by William Lee, Sheriff of London, and a cousin of Richard Lee, Berkeley's emissary, as a fact within his knowledge. Charles declined the offer, but was always grateful to the Virginians. The country is said to have derived from the incident the name of the 'Old Dominion,' where the King was King, or might have been, before he was King in England."—J. E. Cooke, *Virginia*, pt. 2, ch. 10.

A. D. 1660-1677.—The Restoration and its rewards to Virginia loyalty.—Oppression, discontent, and Bacon's Rebellion.—At the time of the restoration of the English monarchy, in the person of Charles II., the colony of Virginia "numbered not far from 50,000 souls, a large proportion of whom, especially, we may suppose, those of middle life and most active habits, were natives of the soil, bound to it by the strongest ties of interest and affection, and by their hopes of what it was destined to become in the opening

future. Here was a state of things, comprising, in the apprehensions of the people, many of the elements of the highest happiness and prosperity. . . . But all this was totally and suddenly changed, and universal distress brought upon the land, by the new restrictive clauses added to the original Navigation Act, by the first Parliament of Charles. By the act of the Long Parliament it had been simply provided that foreign vessels should import into England no other products than such as were grown or manufactured in their own country; a shaft aimed principally at the Dutch. . . . By Charles's Commons this first hint was . . . expanded into a voluminous code of monopolizing enactments, by which the trade of the world was regulated on the principle of grasping for England every possible commercial advantage, and inflicting upon all other nations the greatest possible commercial injury. . . . Upon the colonies, one and all, this cruel policy bore with a weight which almost crushed them. . . . From 1660, when this monopolizing policy took its beginning, the discontent of the people increased day by day, as each new prohibition was proclaimed. Commerce lay dead. Tobacco would no longer pay for its cultivation, much less enrich the laborious planter; manufactures, as that of silk, after being attempted, failed to bring the hoped-for relief, and there seemed no prospect but starvation and ruin. What wonder that mischief lay brewing in the hearts of a people who, for their almost slavish loyalty, met only these thankless returns of injury and injustice; for the Virginians of that day were monarchists in the full meaning of the term. . . . Other causes conspired with these purely political ones to bring the public mind of Virginia into such a state of deep exasperation as to find its relief only in insurrection. Of these, one was particularly a source of irritation; namely, the grants of vast tracts of territory, made by the wasteful and profligate King to his needy and profligate favorites, made wholly irrespective of present owners and occupiers, who were transferred, like serfs of the soil, to any great patentee to whom the caprice of Charles chose to consign them." The discontent culminated in 1676, under the influence of an excitement growing out of trouble with the Indians. After more than thirty years of quiet, the natives became hostile and threatening. "Various outrages were first committed by the Indians, on whom the whites, as usual, retaliated; murder answered to murder, burning to burning, till, throughout the whole border country, were kindled the flames of an exterminating Indian war, accompanied by all its peculiar horrors. In the excited state of the public mind, these new calamities were laid at the door of the government." Governor Berkeley was accused of having an interest in the profits of trade with the Indians which restrained him from making war on them. Whether the charge was true or false, he gave color to it by his conduct. He took no steps to protect the colony. Nor would he authorize any self-defensive measures on the part of the people themselves. They "went so far as to engage that, if the Governor would only commission a general, whomsoever he would, they would follow him at their own charge." Still they were not heard. Under such circumstances of neglect and excessive irri-

tation, they took the case into their own hands." They chose for their leader Nathaniel Bacon, a young Englishman of education, energy and talent, who had been in the colony about three years, and who had already attained a seat in the Governor's Council. Bacon accepted the responsibility, "commission or no commission," and, in the spring of 1676, put himself at the head of 500 men, with whom he marched against the Indians. The governor, after formally proclaiming him a rebel, raised another army and marched, not against the Indians, but against Bacon. He was hardly out of Jamestown, however, before the people of that neighborhood rose and took possession of the capital. On learning of this fresh revolt, he turned back, and found himself helpless to do anything but submit. The result was the summoning of a new Assembly, to which Bacon was elected from his county, and the making of some progress, apparently, towards a curing of abuses and the removing of causes of discontent. But something occurred—exactly what has never been made clear—which led to a sudden flight on Bacon's part from Jamestown, and the gathering of his forces once more around him. Re-entering the capital at their head, he extorted from Governor Berkeley a commission which legalized his military office, and armed with this authority he proceeded once more against the Indians. "But as soon as he was sufficiently distant to relieve the Governor and his friends from their fears, a proclamation was issued, again denouncing Bacon as a rebel, setting a price upon his head, and commanding his followers to disperse." Again, Bacon and his army retraced their steps and took possession of Jamestown, the governor flying to Accomac. A convention of the inhabitants of the colony was then called together, which adopted a Declaration, or Oath, in which they fully identified themselves with Bacon in his course, and swore to uphold him. The latter then moved once more against the Indians; Berkeley once more got possession of the seat of government, and, once more, Bacon (who had fought the Indians meantime at Bloody Run and beaten them) came back and drove him out. "The whole country . . . was with Bacon, and merely a crowd of cowardly adventurers about the Governor. Nothing would seem, at this moment, to have stood between Bacon and the undisputed, absolute control of the colony, had no unforeseen event interposed, as it did, to change the whole aspect of affairs." This unforeseen event was the sudden death of Bacon, which occurred in January, 1677, at the house of a friend. "Some mystery attaches to the manner of it," and there were, of course, sinister whispers of foul play. "But, however and wherever Bacon died, it could never be discovered where he was buried, nor what disposition had been made of his body. . . . The death of Bacon was, in effect, the restoration of Sir William Berkeley to his lost authority, and the termination of the war; there being not an individual, among either his counsellors or officers, of capacity sufficient to make good his place. . . . Berkeley, gradually subduing all opposition, and making prisoners of many of the prime movers of the revolt, in a short time saw the authority of his government completely reestablished. . . . The historians of the period inform us that no less than 25 per-

sons were executed during the closing period of the rebellion and the few next succeeding months."—W. Ware, *Memoir of Nathaniel Bacon* (*Library of Am. Biog.*, series 2, v. 3).

A. D. 1710-1716.—Crossing the Blue Ridge.—The Knights of the Golden Horseshoe.—Possession taken of the Shenandoah Valley.—"Lord Orkney is made Governor, but as usual sends his deputy, and in the year 1710 appears the stalwart soldier and ruler, Sir Alexander Spotswood. Alexander Spotswood, or Spottswoode, as his family were called in Scotland, rises like a landmark above the first years of the century. When he came to Virginia he was only 34 and in the bloom of his manhood. But he had already fought hard, and his faculties as a soldier and ruler were fully developed. . . . The Virginians received Spotswood with open arms. He was a man after their own heart, and brought with him when he came (June 1710) the great writ of habeas corpus. The Virginia people had long claimed that this right was guaranteed to them by Magna Charta, since they were equally free Englishmen with the people of England. Now it was conceded, and the great writ came.—Spotswood's letter of introduction. It was plain that he was not a new Berkeley looking to the King's good pleasure as his law, or a new Nicholson ready to imprison people or put halters around their necks; but a respecter of human freedom and defender of the right. . . . In . . . 1710, Governor Alexander Spotswood set out on an expedition which much delighted the Virginians. There was a very great longing to visit the country beyond the Blue Ridge. That beautiful unknown land held out arms of welcome, and the Governor, who had in his character much of the spirit of the hunter and adventurer, resolved to go and explore it. Having assembled a party of good companions, he set out in the month of August, and the gay company began their march toward the Blue Ridge Mountains. The chronicler of the expedition describes the picturesque cavalcade followed by the pack-horses and servants,—rangers, pioneers, and Indians; how they stopped to hunt game; bivouacked 'under the canopy'; laughed, jested, and regaled themselves with 'Virginia wine, white and red, Irish usquebaugh, brandy, shrub, two kinds of rum, champagne, canary, cherry-punch, and cider.' In due time they reached the Blue Ridge, probably near the present Swift Run Gap, and saw, beyond, the wild valley of the Shenandoah. On the summit of the mountain they drank the health of the King, and named two neighboring peaks

'Mt. George' and 'Mt. Alexander,' after his Majesty and the Governor; after which they descended into the valley and gave the Shenandoah the name of the 'Euphrates.' Here a bottle was buried—there were, no doubt, a number of empty ones—containing a paper to testify that the valley of the Euphrates was taken possession of in the name of his Majesty, George I. Then the adventurers reascended the mountain, crossed to the lowland, and returned to Williamsburg. This picturesque incident of the time gave rise to the order of the 'Knights of the Golden Horseshoe.' The horses had been shod with iron, which was unusual, as a protection against the mountain roads; and Spotswood sent to London and had made for his companions small golden horseshoes set with garnets and other jewels, and inscribed 'Sic juvat transcendere montes.'—J. E. Cooke, *Virginia*, pt. 2, ch. 21-22.

A. D. 1744.—Treaty with the Six Nations and purchase of the Shenandoah Valley.—"The Six Nations still retained the right to traverse the great valley west of the Blue Ridge. Just at this inopportune moment [1743], some of their parties came into bloody collision with the backwoodsmen of Virginia, who had penetrated into that valley. Hostilities with the Six Nations, now that war was threatened with France, might prove very dangerous, and Clinton [governor of New York] hastened to secure the friendship of these ancient allies by liberal presents; for which purpose, in conjunction with commissioners from New England, he held a treaty at Albany. . . . The difficulties between Virginia and the Six Nations were soon after [1744] settled in a treaty held at Lancaster, to which Pennsylvania and Maryland were also parties, and in which, in consideration of £400, the Six Nations relinquished all their title to the valley between the Blue Ridge and the central chain of the Alleghany Mountains."—R. Hildreth, *Hist. of the U. S.*, ch. 25 (v. 2).

A. D. 1763.—The Parsons' Cause and Patrick Henry.—"In Virginia as well as in Pennsylvania, a vigorous opposition to vested rights foreshadowed what was to come. A short crop of tobacco having suddenly enhanced the price of that staple, or, what is quite as likely, the issue of paper money in Virginia, first made that same year [1753], having depreciated the currency, the Assembly had passed a temporary act, authorizing the payment of all tobacco debts in money at twopence per pound—the old rate, long established by usage. Three years

after, under pretence of an expected failure of the crop, this tender act was renewed. Francis Fauquier, who had just succeeded Dinwiddie as lieutenant governor, a man of more complying temper than his predecessor, readily consented to it. The salaries of the parish ministers, some sixty-five in number, were payable in tobacco. They were likely to be considerable losers by this tender law; and, not content with attacking it in pamphlets, they sent an agent to England, and by the aid of Sherlock, bishop of London, procured an order in council pronouncing the law void. Suits were presently brought to recover the difference between twopence per pound in the depreciated currency and the tobacco to which by law the ministers were entitled. In defending one of these suits [1768], the remarkable popular eloquence of Patrick Henry displayed itself for the first time. Henry was a young lawyer, unconnected with the ruling aristocracy of the province, and as yet without reputation or practice. The law was plainly against him, and his case seemed to be hopeless. He had, however, a strong support in the prevailing prejudice in favor of the tender law, and in the dissatisfaction generally felt at the king's veto upon it. Addressing the jury in a torrent of eloquence as brilliant as it was unexpected, he prevailed upon them to give him a verdict. The Assembly voted money to defend all suits which the parsons might bring; and, notwithstanding their clear legal right in the matter, they thought it best to submit without further struggle.—R. Hildreth, *Hist. of the U. S.*, ch. 27 (v. 2).

A. D. 1775.—The end of Royal Government.

—Lord Dunmore's flight.—Not long after the excited demonstrations which followed Governor Dunmore's removal of powder from the public magazine at Williamsburg, the governor received Lord North's "conciliatory proposition," and "he convened the House of Burgesses, on the 1st of June, to take it into consideration. This withdrew Peyton Randolph from Congress, as had been anticipated, and Mr. Jefferson succeeded to the vacancy. But the latter was not permitted to leave the Burgesses before an answer to the ministerial proposition was framed.

. . . How much the answer was 'enfeebled' by the doubts and scruples of the moderate members, we cannot say, but it rings true revolutionary metal, and it was a noble lead off for the Assemblies of the other Colonies. . . . The House, after the customary expression of a desire for reconciliation, declare that they have examined it (the Ministerial proposition) minutely, viewed it in every light in which they are able, and that, 'with pain and disappointment, they must ultimately declare that it only changed the form of oppression without lightening its burden.' . . . In the meantime events had transpired which soon afterwards terminated the official career of the Earl of Dunmore, and with it the royal government in Virginia. On the 5th of June, three men who entered the public magazine were wounded by a spring gun placed there by the orders of the Governor, and on the 7th, a committee of the House, appointed to inspect the magazine, found the locks removed from the serviceable muskets, and they also discovered the powder which had been placed in mine. These things highly exasperated the multitude, and on a rumor getting abroad that the same officer who had before carried off the powder was again advancing towards the city with an armed force, they rose in arms. The Governor's assurance that the rumor was unfounded restored tranquillity. He, however, left the city in the night with his family and went on board the *Fowey*, lying at York, twelve miles distant. He left a message declaring that he had taken this step for his safety, and that thenceforth he should reside and transact business on board of the man of war! An interchange of messages, acrid and criminy on his part, firm and spirited on the part of the House, was kept up until the 24th of June; when, on his final refusal to receive bills for signature except under the guns of an armed vessel, the House declared it a high breach of privilege, and adjourned to the 12th of October. But a quorum never afterwards attended. . . . We soon find the Earl of Dunmore carrying on a petty but barbarous predatory warfare against the people he had so lately governed.—H. S. Randall, *Life of Jefferson*, v. 1, ch. 3.

A. D. 1775-1776.—Lord Dunmore's warfare.—Norfolk destroyed.—"Having drawn together a considerable force, Dunmore ascended Elizabeth River to the Great Bridge, the only pass by which Norfolk can be approached from the land side; dispersed some North Carolina militia collected there; made several prisoners; and then, descending the river [November 1775], took possession of Norfolk. The rise of that town had been very rapid. Within a short time past it had become the principal shipping port of Virginia. Its population amounted to several

thousands, among whom were many Scotch traders not well disposed to the American cause. Fugitive slaves and others began now to flock to Dunmore's standard. A movement was made in his favor on the east shore of Maryland, which it required a thousand militia to suppress. The Convention of Virginia, not a little alarmed, voted four additional regiments, afterward increased to seven, all of which were presently taken into continental pay. . . . Woodford, with the second Virginia regiment, took possession of the causeway leading to the Great Bridge, which was still held by Dunmore's troops. An attempt to dislodge the Virginians having failed, with loss, Dunmore abandoned the bridge and the town, and again embarked. Norfolk was immediately occupied by Woodford, who was promptly joined by Howe's regiment from North Carolina. After a descent on the eastern shore of Virginia [January, 1776], to whose aid marched two companies of Maryland minute men, being re-enforced by the arrival of a British frigate, Dunmore bombarded Norfolk. A party landed and set it on fire. . . . The part which escaped was presently burned by the provincials, to prevent it from becoming a shelter to the enemy. Thus perished, a prey to civil war, the largest and richest of the rising towns of Virginia. Dunmore continued, during the whole summer, a predatory warfare along the rivers, of which his naval superiority gave him the command, burning houses and plundering plantations, from which he carried off upward of 1,000 slaves. He was constantly changing his place to elude attack; but watched, pursued, and harassed, he finally found it necessary to retire to St. Augustine with his adherents and his plunder."—R. Hildreth, *Hist. of the U. S.*, ch. 32 (p. 3).

A. D. 1775-1784.—The exercise of sovereignty over Kentucky. See KENTUCKY: A. D. 1775-1784.

A. D. 1776.—Independence declared and a Constitution adopted.—Declaration of Rights.—"There was a sudden change in public sentiment; and the idea of independence, said to be alarming to Virginians in March [1776] was welcome to them in April. One writes on the 2d: 'Independence is now the talk here. . . . It will be very soon, if not already, a favorite child.' Another, on the 12th, writes: 'I think almost every man, except the treasurer, is willing to declare for independence.'" On the 23d, the Charlotte County Committee charged its delegates in convention to use their best endeavors "that the delegates which are sent to the General Congress be instructed immediately to cast off the British yoke." On the next day, a majority of the freeholders of James City took similar action. "In May, the avowals for independence were numerous. In this spirit and with such aims, a new convention was chosen, and on the 6th of May met in Williamsburg. It contained illustrious men,—among them, James Madison, in the twenty-ninth year of his age; George Mason, in the maturity of his great powers; Richard Bland, Edmund Pendleton, and Patrick Henry, rich in Revolutionary fame. . . . On the 14th of May the convention went into a committee of the whole on the state of the colony, with Archibald Carey in the chair; when Colonel Nelson submitted a preamble and resolutions on

Independence, prepared by Pendleton. These were discussed in two sittings of the committee, and then reported to the House. They were opposed chiefly by delegates from the Eastern District, but were advocated by Patrick Henry, and passed unanimously when 112 members were present,—about 20 absenting themselves. This paper enumerated the wrongs done to the colonies. . . . and instructed the delegates appointed to represent the colony in the General Congress 'to propose to that respectable body to declare the United Colonies free and independent States,' and to 'give the assent of the colony to measures to form foreign alliances and a confederation,—provided the power of forming government for the internal regulations of each colony be left to the colonial legislatures.' The same paper also provided for a committee to form a plan of government for Virginia. This action was transmitted by the President to the other assemblies, accompanied by a brief circular. . . . It was hailed by the patriots in other colonies with enthusiasm. . . . The convention agreed (June 12) upon the famous Declaration of Rights declaring all men equally free and independent, all power vested in and derived from the people, and that government ought to be for the common benefit; also that all men are equally entitled to the free exercise of religion according to the dictates of conscience. It also complied with the recommendation of Congress, by forming a constitution and electing a governor and other officers."—R. Frothingham, *The Rise of the Republic*, ch. 11.

ALSO IN: H. B. Grigsby, *The Virginia Conv. of 1776*.—W. C. Rives, *Life and Times of Madison*, v. 1, ch. 5.—K. M. Rowland, *Life of Geo. Mason*, v. 1, ch. 7.—See, also, UNITED STATES OF AM.: A. D. 1776-1779.

The following is the text of the Declaration of Rights:

"A Declaration of Rights, made by the Representatives of the good People of Virginia, assembled in full and free Convention, which rights do pertain to them and their posterity as the basis and foundation of government. I. That all men are by nature equally free and independent, and have certain inherent rights, of which, when they enter into a state of society, they cannot by any compact, deprive or divest their posterity; namely, the enjoyment of life and liberty, with the means of acquiring and possessing property, and pursuing and obtaining happiness and safety. II. That all power is vested in, and consequently derived from, the people; that magistrates are their trustees and servants, and at all times amenable to them. III. That government is, or ought to be, instituted for the common benefit, protection and security of the people, nation or community; of all the various modes and forms of government, that is best which is capable of producing the greatest degree of happiness and safety, and is most effectually secured against the danger of maladministration; and that, when a government shall be found inadequate or contrary to these purposes, a majority of the community hath an indubitable, unalienable and indefeasible right to reform, alter or abolish it, in such manner as shall be judged most conducive to the public weal. IV. That no man, or set of men, are entitled to exclusive or separate emoluments or privileges from the community but in con-

sideration of public services, which not being descendible, neither ought the offices of magistrate, legislator or judge to be hereditary. V. That the legislative, executive and judicial powers should be separate and distinct; and that the members thereof may be restrained from oppression, by feeling and participating the burthens of the people, they should, at fixed periods, be reduced to a private station, return into that body from which they were originally taken, and the vacancies be supplied by frequent, certain and regular elections, in which all, or any part of the former members to be again eligible or ineligible, as the laws shall direct. VI. That all elections ought to be free, and that all men having sufficient evidence of permanent common interest with, and attachment to the community, have the right of suffrage, and cannot be taxed, or deprived of their property for public uses, without their own consent, or that of their representatives so elected, nor bound by any law to which they have not in like manner assented, for the public good. VII. That all power of suspending laws, or the execution of laws, by any authority, without consent of the representatives of the people, is injurious to their rights, and ought not to be exercised. VIII. That in all capital or criminal prosecutions, a man hath a right to demand the cause and nature of his accusation, to be confronted with the accusers and witnesses, to call for evidence in his favor, and to a speedy trial by an impartial jury of twelve men of his vicinage, without whose unanimous consent he cannot be found guilty; nor can he be compelled to give evidence against himself; that no man be deprived of his liberty, except by the law of the land or the judgment of his peers. IX. That excessive bail ought not to be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted. X. That general warrants, whereby an officer or messenger may be commanded to search suspected places without evidence of a fact committed, or to seize any person or persons not named, or whose offence is not particularly described and supported by evidence, are grievous and oppressive, and ought not to be granted. XI. That in controversies respecting property, and in suits between man and man, the ancient trial by jury of twelve men is preferable to any other, and ought to be held sacred. XII. That the freedom of the press is one of the great bulwarks of liberty, and can never be restrained but by despotic governments. XIII. That a well regulated militia, composed of the body of the people, trained to arms, is the proper, natural and safe defence of a free State; that standing armies in time of peace, should be avoided as dangerous to liberty; and that in all cases the military should be under strict subordination to, and governed by, the civil power. XIV. That the people have a right to uniform government; and therefore, that no government separate from or independent of the government of Virginia, ought to be erected or established within the limits thereof. XV. That no free government, or the blessing of liberty, can be preserved to any people, but by a firm adherence to justice, moderation, temperance, frugality and virtue, and by a frequent recurrence to fundamental principles. XVI. That religion, or the duty which we owe to our Creator, and the manner of

discharging it, can be directed only by reason and conviction, not by force or violence; and therefore all men are equally entitled to the free exercise of religion, according to the dictates of conscience; and that it is the duty of all to practice Christian forbearance, love and charity towards each other.

A. D. 1779-1786.—Settlement of boundaries with Pennsylvania.—The Pan-handle.—“In 1779 commissioners appointed by the two States met at Baltimore to agree upon the common boundaries of Pennsylvania and Virginia. . . . On both sides there was an evident desire to end the dispute. Various lines were proposed and rejected. On August 31 the commissioners signed this agreement: ‘To extend Mason and Dixon’s line due west five degrees of longitude, to be computed from the River Delaware, for the southern boundary of Pennsylvania, and that a meridian line drawn from the western extremity thereof to the northern limit of the said State be the western boundary of Pennsylvania forever.’ This contract was duly ratified by the legislatures of the two States. In 1785 Mason and Dixon’s line was extended, and the southwestern corner of Pennsylvania established. The ‘Pan-handle’ is what was left of Virginia east of the Ohio River and north of Mason and Dixon’s line, after the boundary was run from this point to Lake Erie in 1786. . . . It received its name in legislative debate from Hon. John McMillan, delegate from Brooke County, to match the Accomac projection, which he dubbed the Spoon-handle.”—B. A. A. D. 1861 (January—June).—Attempted peace-making.—The State carried into rebellion.—Separation of West Virginia, which adheres to the Union.—“Early in January, 1861, the Virginia Assembly met at Richmond to determine the action of the Commonwealth in the approaching struggle. It was plain that war was coming unless the authorities of the United States and of the seceding States would listen to reason; and the first proceedings of the Assembly looked to peace and the restoration of fraternal union. Virginia recommended to all the States to appoint deputies to a Peace Convention [see UNITED STATES OF AM.: A. D. 1861 (FEBRUARY) THE PEACE CONVENTION]. . . . Thus ended in failure the first attempt of Virginia to preserve the national peace; and the crisis demanded that she should promptly decide upon her course. On February 13 (1861) a Convention assembled at Richmond, and a Committee was appointed on Federal Relations. On March 10 (1861), this Committee reported fourteen resolutions protesting against all interference with slavery; declaring secession to be a right; and defining the grounds on which the Commonwealth would feel herself to be justified in exercising that right, namely: the failure to obtain guarantees; the adoption of a warlike policy by the Government of the United States; or the attempt to exact the payment of duties from the seceded States, or to reinforce or recapture the Southern forts. These resolves clearly define the attitude of Virginia at this critical moment. After prolonged discussion, all but the last had passed the Convention when intelligence came that war had begun. The thunder of cannon from Charleston harbor broke up the political discussion. . . . Mr. Lincoln had expressed himself in his inaugural with perfect plainness. Secession was unlawful, and the Union remained unbroken; it was his duty to execute the laws, and he should perform it. To execute the laws it was necessary to have an army; and (April 15, 1861) President Lincoln issued his proclamation calling for 75,000 troops from the States remaining in the Union. The direct issue was thus presented, and Virginia was called upon to decide the momentous question whether she would fight against the South or against the North. . . . As late as the first week in April the Convention had refused to secede by a vote of 89 to 45. Virginia was conscientiously following her old traditions and would not move. Now the time had come at last. . . . On the 17th of April, two days after the Federal proclamation, the Convention passed an ordinance of secession and adhesion to the Southern Confederacy, by a vote of 88 to 55, which was ratified by the people by a majority of 96,750 votes, out of a total of 161,018. West Virginia refused to be bound by the action of the Convention, and became a separate State, but the Virginia of the Tidewater and Valley went with the South.”—J. E. Cooke, *Virginia*,

pt. 3, ch. 22.—“Of the 46 delegates from the territory now comprising West Virginia, 29 voted against [the ordinance of secession], 9 for it, 7 were absent and one excused. Those who voted against it hastened to leave the city,” and, on reaching their homes, became generally the leaders of a movement to separate their section of the State from the Old Dominion. On the 18th of May a convention of delegates from the counties of Northwestern Virginia was held at Wheeling, by the action of which a more general convention was called and held at the same place on the 11th day of June. The latter convention assumed the power to reorganize the government of the State of Virginia.—V. A. Lewis, *Hist. of West Virginia*, ch. 21-23.

A. D. 1861 (June—November).—The loyal State government organized in West Virginia.—Steps taken toward separation from the old State.—A Convention held on the 11th of June in West Virginia declared the State offices of Virginia vacant by reason of the treason of those who had been elected to hold them, and proceeded to form a regular State organization, with Francis H. Pierpont for the executive head. Maintaining that the loyal people were entitled to speak for the whole State they declared that their government was the government of Virginia. They subsequently admitted delegates from Alexandria and Fairfax Counties in Middle Virginia and from Accomac and Northampton Counties on the eastern shore. Thus organized, the government was acknowledged by Congress as the government of Virginia and senators and representatives were admitted to seats. The Pierpont Government, as it was called, then adopted an ordinance on the 20th of August, 1861, providing “for the formation of a new State out of a portion of the territory of this State.” The ordinance was approved by a vote of the people, and on the 26th of November the Convention assembled in Wheeling to frame a constitution for the new government.—J. G. Blaine, *Twenty Years of Congress*, v. 1, ch. 21.

A. D. 1861 (July).—Richmond made the capital of the Southern Confederacy.—“The Conspiracy had no intention originally of establishing its seat of government at Richmond. That was a part of the price exacted by Virginia for her secession, and it was not paid without reluctance. It is to be remembered that at that time every thing seemed to turn on what the Border States would do. . . . By establishing the seat of government at Richmond, it became certain that the most powerful of the Southern armies would always be present in Virginia. If Virginia had been abandoned, all the Border States would have gone with the North. . . . The Confederates having determined on the transfer of their seat of government to Richmond, the necessary preparations were completed, and their Congress opened its first session in that city on the 20th of July, 1861.”—J. W. Draper, *Hist. of the Am. Civil War*, ch. 39 (v. 2).

VIRGINIA, University of.—"In 1816 the Legislature of Virginia authorized the president and directors of the Literary Fund to report a plan for a university at the next session of the Assembly. The committee made a full report as requested, but nothing was accomplished beyond bringing the subject of education prominently before the people. At the legislative session of 1817-18 that part of the bill relating to a university and the education of the poor was passed. . . . In the bill authorizing the establishment of the university, it was provided that the sum of \$45,000 per annum should be given for the education of the poor, and \$15,000 to the university. The commissioners having reported in favor of Central College as the most convenient place in Albemarle County, the Legislature decided, after much discussion, to locate the university at Charlottesville, and to assume the property and site of Central College. The commissioners embodied in their report an exhaustive plan for a university, chiefly from the pen of Thomas Jefferson."—F. W. Blackmar, *Hist. of Federal and State Aid to Higher Education in the U. S. (Bureau of Ed., Circ. of Information, 1890, no. 1)*, pp. 174-175.

VIZIR, OR VIZIER.—"Like the Sassanian emperor, the Caliph was not only the divinely appointed ruler, but the embodiment of the government itself. His word was literally law, and his caprice might at any moment overturn the most careful calculations of the ministers, or deprive them of life, power, or liberty, during the performance of their most active duties, or at a most critical juncture. It was very seldom, however, that this awful personage condescended to trouble himself about the actual details of the executive government. The Vizier, as the word implies [Vizir, in Arabic Wazir, means "One who bears a burden,"—Foot-note], was the one who bore the real burden of the State, and it was both his interest and that of the people at large to keep the Caliph himself as inactive as possible, and to reduce him, in fact, to the position of a mere puppet."—E. H. Palmer, *Haroun Atrachid, Caliph of Bagdad, ch. 1*.—See, also, **SUBLIME PORTE**.

WAGER OF BATTLE.—TRIAL BY COMBAT.—JUDICIAL COMBAT.—"Trial by combat does not seem to have established itself completely in France till ordeals went into disuse, which Charlemagne rather encouraged, and which, in his age, the clergy for the most part approved. The former species of decision may, however, be met with under the first Merovingian kings (Greg. Turon, l. vii. c. 19, l. x. c. 10), and seems to have prevailed in Burgundy. It is established by the laws of the Alemanni or Suabians. Baluz. t. i. p. 80. It was always popular in Lombardy. . . . Otho II. established it in all disputes concerning real property. . . . God, as they deemed, was the judge. The nobleman fought on horseback, with all his arms of attack and defence; the plebeian on foot, with his club and target. The same were the weapons of the champions to whom women and ecclesiastics were permitted to intrust their rights. If the combat was intended to ascertain a civil right, the vanquished party, of course, forfeited his claim and paid a fine. If he fought by proxy, the champion was liable to have his hand struck off; a regulation necessary, perhaps, to obviate the corruption of these hired defenders. In criminal cases the appellant suffered, in the event of defeat, the same punishment which the law awarded to the offence of which he accused his adversary. Even where the cause was more peaceably tried, and brought to a regular adjudication by the court, an appeal for false judgment might indeed be made to the suzerain, but it could only be tried by battle. And in this, the appellant, if he would impeach the concurrent judgment of the court below, was compelled to meet in combat every one of its members; unless he should vanquish them all within the day, his life, if he escaped from so many hazards, was forfeited to the law. If fortune or miracle should make him conqueror in every contest, the judges were equally subject to death, and their court forfeited their jurisdiction for ever. . . . Such was the judicial system of France when St. Louis [A. D. 1236-1270] enacted that great code which bears the name of his Establishments. The rules of civil and criminal procedure, as well as the principles of legal decisions, are there laid down with much detail. But that incomparable prince, unable to overthrow the judicial combat, confined himself to discourage it by the example of a wiser jurisprudence. It was abolished throughout the royal domains." Trial by combat "was never abolished by any positive law, either in France

[at large] or England. But instances of its occurrence are not frequent even in the fourteenth century."—H. Hallam, *The Middle Ages*, ch. 2, pt. 2 (p. 1).—"Nor was the wager of battle confined to races of Celtic or Teutonic origin. The Slavonic tribes, as they successively emerge into the light of history, show the same tendency to refer doubtful points of civil and criminal law to the arbitration of the sword. The earliest records of Hungary, Bohemia, Poland, Servia, Silesia, Moravia, Pomerania, Lithuania, and Russia, present evidences of the prevalence of the system." The last recorded instance of the wager of battle in France was in 1549. "In England, the resolute conservatism, which resists innovation to the last, prolonged the existence of the wager of battle until a period unknown in other civilized nations. . . . It was not until the time of Elizabeth that it was even abolished in civil cases. . . . Even in the 17th century, instances of the battle ordeal between persons of high station are on record." As late as 1818 the right was claimed and conceded by the judges, in a criminal case which caused much excitement. "The next year the act 59 Geo. III. chap. 46, at length put an end for ever to this last remnant of the age of chivalry."—H. C. Lea, *Superstition and Force*, ch. 2.—See, also, LAW, CRIMINAL: A. D. 1818.

WAGER OF LAW.—"This was the remarkable custom which was subsequently known as canonical compurgation, and which long remained a part of English jurisprudence, under the name of the Wager of Law. The defendant, when denying the allegation under oath, appeared surrounded by a number of companions—'juratores,' 'conjuratores,' 'sacramentales,' 'collaudantes,' 'compurgatores,' as they were variously termed—who swore, not to their knowledge of the facts, but as sharers and partakers in the oath of denial. This curious form of procedure derives importance from the fact that it is an expression of the character, not of an isolated sept, but of nearly all the races that have moulded the destinies of Europe. The Ostrogoths in Italy, and the Wisigoths of the South of France and Spain were the only nations in whose codes it occupies no place, and they, . . . at an early period, yielded themselves completely to the influence of the Roman civilization. . . . The church, with the tact which distinguished her dealings with her new converts, was not long in adopting a system which was admirably suited for her defence in an age of brute force."—H. C. Lea, *Superstition and Force*, ch. 1.—On the abolition of the Wager of Law, see LAW, COMMON: A. D. 1833.

WAHABEES, The. "The Wahabees derive their name from Abdul Wahab, the father of Sheikh Muhammad, their founder, who arose about the beginning of the last century, in the province of Najd, in Arabia. The object of the Wahabee movement was to sweep away all later innovations, and to return to the original purity of Islam, as based upon the exact teaching of the Koran and the example of Mahomet. The principles of the sect rapidly spread among the Arab tribes, and were adopted by the sovereign princes of Darayah, 'a Najd. Impelled by religious zeal and political ambition, and allured by the prospect of plunder, the Wahabees soon acquired nearly the whole of Arabia, and menaced the neighbouring Pashaliks of Turkey and Egypt. Mecca and Medina soon fell into their hands, the shrine was despoiled of its rich ornaments, and the pilgrim route to the Kaaba closed for some years. Early in this century (1811), Muhammad Ali, the Pasha of Egypt, at the bidding of the Sultan, set himself to check the progress of this aggressive sect; and his son Ibrahim Pasha completed the work (1818). . . . The following particulars of the Wahabee reform need only be added. They reject the decisions of the 'four orthodox doctors,' and the intercessions of saints; they condemn the excessive reverence paid to Mahomet, and deny his mediation, until the last day. They also disapprove of the ornamenting of tombs, &c."—J. W. H. Stobart, *Islam and its Founder*, ch. 10, with foot-note.

WALDEMAR. See VALDEMAR.

WALDENSES, OR VAUDOIS, The.—"Let me at the outset express my conviction that the whole attempt to ascribe to the Waldenses an earlier date than the latter half of the 12th century, to throw back their origin some two hundred years, or sometimes much more than this, even to the times of Claudius of Turin (d. 839), is one which will not stand the test of historical criticism; while the endeavour to vindicate for them this remote antiquity has introduced infinite confusion into their whole history. The date of Waldo, who, as I cannot doubt, is rightly recognized as their founder, we certainly know. When it is sought to get rid of their relation to him as embodied in the very name which they bear, and to change this name into Vallenses, the Men of the Valleys or the Dalesmen, it is a transformation which has no likelihood, philological or historic, to recommend it. . . . Peter Waldo,—for we will not withhold from him this Christian name, although there is no authority for it anterior to the beginning of the 15th century,—was a rich citizen and merchant of Lyons [in the later half of the 12th century]. Not satisfied with those scanty portions of Scripture doled out to the laity in divine services, and yearning above all for a larger knowledge of the Gospels, he obtained from two friends among the priesthood a copy of these last and of some other portions of Scripture translated into the Romance language; a collection also of sayings from the Fathers. The whole movement remained to the end true to this its first motive—the desire namely for a fuller acquaintance with the Word of God. That Word he now resolved to make the rule of his life. . . . He . . . , as a first step, sells all that he has, and bestows it upon the poor. In the name which he adopts for himself and for the companions which he presently associates with him, the same fact of a voluntary poverty, as that which above all they should embody in their lives, speaks out. On this side of the Alps they are Poor Men of Lyons; on the Italian, Poor Men of Lombardy. . . . And now he and his began to preach in the streets of Lyons, to find their way into houses, to itinerate the country round. Waldo had no intention herein of putting himself in opposition to the Church, of being a Reformer in any other sense than St. Francis or St. Bernard was a Reformer, a quickener, that is, and reviver of the Church's spiritual life. His protest was against practical mischiefs, against negligences and omissions on the part of those who should have taught the people, and did not. Doctrinal protest at this time there was none. But for Rome all forms of religious earnestness were suspicious which did not spring directly from herself. . . . In 1178 the Archbishop of Lyons forbade their preaching or expounding any more. Such as did not submit had no choice but to quit Lyons, and betake themselves elsewhere. And thus it came to pass that not the city, already so illustrious in ecclesiastical story, where Irenæus taught and Blandina suffered, . . . but the Alpine mountains must shelter these outcasts, and in turn be made famous by their presence." In 1200, Pope Innocent III. made an attempt to absorb Waldo's society in an "Order of Poor Catholics," which he instituted. "Filling this, he repeated, a few years later, at the Fourth Lateran Council (1215), the Church's sentence against the Waldenses, including them under a common ban with the

Cathari and the whole rabble rout of Manichæans and others with whom they have so often since been confounded. . . . Enemies have sought to confound, that so there might be imputed to the Waldenses any evil which had been brought home to the Albigenes. . . . Friends have sought to identify them out of the wish to recruit the scanty number of witnesses for Scriptural and Apostolical truth in the dark ages of the Church; as certainly it would prove no small numerical addition if the Albigenes might be counted among these." It seems to be certain that the Waldenses were not spared by the crusaders who exterminated the Albigenes of southern France between 1209 and 1229. They fled before that storm into the recesses of the Alps. "But they were numerous in North Italy as well; and far more widely scattered over the whole of central Europe than their present dwelling place and numbers would at all suggest. They had congregations in Florence, in Genoa, in Venice, above all in Milan; there were Waldensian communities as far south as Calabria; they were not unknown in Arragon; still less in Switzerland; at a later day they found their way to Bohemia, and joined hands with the Hussites there."—R. C. Trench, *Lect's on Mediæval Church Hist.*, lect 17.—"The valleys which the Vaudois have raised into celebrity lie to the west of Piemont, between the province of Pignerol and Briançon, and adjoining on the other side to the ancient Marquisate of Susa, and that of the Saluces. The capital, La Tour, being about 86 miles from Turin, and 14 from Pignerol. The extent of the valleys is about 12 Italian miles, making a square of about 24 French leagues. The valleys are three in number, Luzern, Perouse, and St. Martin. The former (in which the chief town is now Catholic) is the most beautiful and extensive."—J. Bresse, *Hist. of the Vaudois*, pt. 1, ch. 1.—The Waldenses are sometimes confused, mistakenly, with the Albigenes, who belonged to an earlier time.—See ALBIGENES.

A. D. 1655.—The second Persecution and Massacre.—Cromwell's intervention.—"They [the Vaudois, or Waldenses] had experienced persecutions through their whole history, and especially after the Reformation; but, on the whole, the two last Dukes of Savoy, and also Christine, daughter of Henry IV. of France, and Duchess-Regent through the minority of her son, the present Duke, had protected them in their privileges, even while extirpating Protestantism in the rest of the Piedmontese dominions. Lately, however, there had been a passion at Turin and at Rome for their conversion to the Catholic faith, and priests had been traversing their valleys for the purpose. The murder of one such priest, and some open insults to the Catholic worship, about Christmas 1654, are said to have occasioned what followed. On the 25th of January, 1654-5, an edict was issued, under the authority of the Duke of Savoy, 'commanding and enjoining every head of a family, with

its members, of the pretended Reformed Religion, of what rank, degree, or condition soever, none excepted, inhabiting and possessing estates in the places of Luserna . . . &c, within three days, to withdraw and depart, and be, with their families, withdrawn out of the said places, and transported into the places, and limits marked out for toleration by his Royal Highness during his good pleasure,' . . . unless they gave evidence within 20 days of having become Catholics. Furthermore it was commanded that in every one even of the tolerated places there should be regular celebration of the Holy Mass, and that there should be no interference therewith, nor any dissuasion of any one from turning a Catholic, also on pain of death. All the places named are in the Valley of Luserna, and the object was a wholesale shifting of the Protestants of that valley out of nine of its communes and their concentration into five higher up. In vain were there remonstrances at Turin from those immediately concerned. On the 17th of April, 1655, the Marquis di Pianezza, entered the doomed region with a body of troops mainly Piedmontese, but with French and Irish among them. There was resistance, fighting, burning, pillaging, flight to the mountains, and chasing and murdering for eight days, Saturday, April 24, being the climax. The names of about 300 of those murdered individually are on record, with the ways of the deaths of many of them. Women were ripped open, or carried about impaled on spikes; men, women, and children, were flung from precipices, hacked, tortured, roasted alive; the heads of some of the dead were boiled and the brains eaten; there are forty printed pages, and twenty-six ghastly engravings, by way of Protestant tradition of the ascertained variety of the devilry. The massacre was chiefly in the Valley of Luserna, but extended also into the other two valleys. The fugitives were huddled in crowds high among the mountains, moaning and starving; and not a few, women and infants especially, perished amid the snows. . . . There was a shudder of abhorrence through Protestant Europe, but no one was so much roused as Cromwell. . . . On Thursday the 17th of May, and for many days more, the business of the Savoy Protestants was the chief occupation of the Council. Letters, all in Milton's Latin, but signed by the Lord Protector in his own name, were despatched (May 25) to the Duke of Savoy himself, to the French King, to the States General of the United Provinces, to the Protestant Swiss Cantons, to the King of Sweden, to the King of Denmark, and to Ragotski, Prince of Transylvania. A day of humiliation was appointed for the Cities of London and Westminster, and another for all England." A collection of money for the sufferers was made, which amounted, in England and Wales, to £38,000—equal to about £137,000 now. Cromwell's personal contribution was £2,000—equivalent to £7,500 in money of the present day. The Protector despatched a special envoy to the court of Turin, who addressed very plain and bold words to the Duke. Meanwhile Blake with his fleet was in the Mediterranean, and there were inquiries made as to the best place for landing troops to invade the Duke's dominions. "All which being known to Mazarin, that wily statesman saw that no time was to be lost. While Mr. Downing [second

commissioner sent by Cromwell] was still only on his way to Geneva through France, Mazarin had instructed M. Servin, the French minister at Turin, to insist, in the French King's name, on an immediate settlement of the Vaudois business. The result was a 'Patente di Gratia o Perdono,' or 'Patent of Grace and Pardon,' granted by Charles Emanuel to the Vaudois Protestants, Aug. 10, in terms of a Treaty at Pignerol, in which the French Minister appeared as the real mediating party and certain Envoy's from the Swiss Cantons as more or less assenting. As the Patent substantially retracted the Persecuting Edict and restored the Vaudois to all their former privileges, nothing more was to be done." These events in Piedmont drew from Milton his immortal sonnet, beginning: "Avenge, O Lord, thy slaughtered saints."—D. Masson, *Life of John Milton*, v. 5, bk. 1, ch. 1, sect. 2.

A. D. 1691.—Toleration obtained by William of Orange.—"In the spring of 1691, the Waldensian shepherds, long and cruelly persecuted, and weary of their lives, were surprised by glad tidings. Those who had been in prison for heresy returned to their homes. Children, who had been taken from their parents to be educated by priests, were sent back. Congregations, which had hitherto met only by stealth and with extreme peril, now worshipped God without molestation in the face of day. Those simple mountaineers probably never knew that their fate had been a subject of discussion at the Hague, and that they owed the happiness of their firesides and the security of their humble temples to the ascendancy which William [of Orange] exercised over the Duke of Savoy," who had lately joined the Grand Alliance against Louis XIV. of France.—Lord Macaulay, *Hist. of Eng.*, ch. 17.

A. D. 1282-1284.—The final conquest.—"All the other races had combined on the soil of Britain, the Welsh would not. The demands of feudal homage made by the kings of England were evaded or repudiated; the intermarriages by which Henry II. and John had tried to help on a national agreement had in every case failed. In every internal difficulty of English politics the Welsh princes had done their best to embarrass the action of the kings; they had intrigued with every aspirant for power, had been in league with every rebel. . . . The necessity of guarding the Welsh border had caused the English kings to found on the March a number of feudal lordships, which were privileged to exercise almost sovereign jurisdictions, and exempted from the common operation of the English law. The Mortimers at Chirk and Wigmore, the Bohuns at Hereford and Brecon, the Marshalls at Pembroke, and the Clares in Glamor-

gan, were out of the reach of the King, and often turned against one another the arms which had been given them to overawe the Welsh. . . . So long as the Welsh were left free to rebel the Marchers must be left free to fight. . . . Llewelyn, the prince of North Wales, had, by the assistance given to Simon de Montfort, earned as his reward a recognition of his independence, subject only to the ancient feudal obligations. All the advantages won during the early years of Henry III. had been thus surrendered. When the tide turned Llewelyn had done homage to Henry; but when he was invited, in 1273, to perform the usual service to the new king, he refused; and again, in 1274 and 1275, he evaded the royal summons. In 1276, under the joint pressure of excommunication and a great army which Edward brought against him, he made a formal submission; performed the homage, and received, as a pledge of amity, the hand of Eleanor de Montfort in marriage. But Eleanor, although she was Edward's cousin, was Earl Simon's daughter, and scarcely qualified to be a peacemaker. Another adviser of rebellion was found in Llewelyn's brother David, who had hitherto taken part with the English, and had received special favours and promotion from Edward himself. . . . The peace made in 1277 lasted about four years. In 1282 the brothers rose, seized the border castles of Howarden, Flint, and Rhuddlan, and captured the Justiciar of Wales, Roger Clifford. Edward saw then that his time was come. He marched into North Wales, carrying with him the courts of law and the exchequer, and transferring the seat of government for the time to Shrewsbury. He left nothing undone that might give the expedition the character of a national effort. He collected forces on all sides; he assembled the estates of the realm, clergy, lords, and commons, and prevailed on them to furnish liberal supplies; he obtained sentence of excommunication from the Archbishop of Canterbury. The Welsh made a brave defence, and had it not been for the almost accidental capture and murder of Llewelyn in December, England might have found the task too hard for her. The death of Llewelyn, however, and the capture of David in the following June, deprived the Welsh of their leaders, and they submitted. Edward began forthwith his work of consolidation. . . . In 1284 he published at Rhuddlan a statute, called the Statute of Wales, which was intended to introduce the laws and customs of England, and to reform the administration of that country altogether on the English system. The process was a slow one; the Welsh retained their ancient common law and their national spirit; the administrative powers were weak and not far-reaching; the sway of the lords Marchers was suffered to continue; and, although assimilated, Wales was not incorporated with England. It was not until the reign of Henry VIII. that the principality was represented in the English Parliament, and the sovereignty, which from 1300 onwards was generally although not invariably bestowed on the king's eldest son, conferred under the most favourable circumstances little more than a high-sounding title and some slight and ideal claim to the affection of a portion of the Welsh people. The task, however, which the energies of his predecessors had failed to accomplish was achieved by Edward. All Britain south

of the Tweed recognised his direct and supreme authority, and the power of the Welsh nationality was so far broken that it could never more thwart the determined and united action of England."—W. Stubbs, *The Early Plantagenets*, ch. 10.

ALSO IN: D. Hume, *Hist. of Eng.*, ch. 13.—J. Lingard, *Hist. of Eng.*, v. 3, ch. 3.—C. Knight, *Popular Hist. of Eng.*, ch. 25.—C. H. Pearson, *Hist. of Eng. during the Early and Middle Ages*.

A. D. 1402-1413.—**Owen Glendower's Rebellion.**—"Since the day when it was conquered by Edward I. Wales had given the kings of England very little trouble. The Welsh remained loyal to the son and grandson of their conqueror, and were the most devoted friends of Richard II., even when he had lost the hearts of his English subjects. But on the usurpation of Henry [IV.] their allegiance seems to have been shaken: and Owen Glendower, who was descended from Llewelyn, the last native prince of Wales, laid claim to the sovereignty of the country [A. D. 1402]. He ravaged the territory of Lord Grey of Ruthin, and took him prisoner near Snowdon; then, turning southwards, overran Herefordshire and defeated and took prisoner Sir Edmund Mortimer, uncle to that young Earl of March, who should have been heir to the crown after Richard according to the true order of descent. In this battle upwards of a thousand Englishmen were slain, and such was the fierce barbarity of the victors that even the women of Wales mutilated the dead bodies in a manner too gross to be described, and left them unburied upon the field till heavy sums were paid for their interment. It was necessary to put down this revolt of Glendower, and the King collected an army and went against him in person. It was the beginning of September; but owing, as the people thought, to magical arts and enchantments practised by the Welshman, the army suffered dreadfully from tempests of wind, rain, snow, and hail before it could reach the enemy. In one night the King's tent was blown down, and he himself would have been killed if he had not retired to rest with his armour on. Finally the enterprise had to be abandoned. . . . Glendower continued as troublesome as ever, and the King was unable from various causes to make much progress against him. At one time money could not easily be raised for the expedition. At another time, when he actually marched into the borders of Wales [A. D. 1405], his advance was again impeded by the elements. The rivers swelled to an unusual extent, and the army lost a great part of its baggage by the suddenness of the inundation. The French, too, sent assistance to Glendower, and took Carmarthen Castle. Some time afterwards [A. D. 1407] the King's son, Henry Prince of Wales, succeeded in taking the castle of Aberystwith; but very soon after Owen Glendower recovered it by stealth. In short, the Welsh succeeded in maintaining their independence of England during this whole reign, and Owen Glendower ultimately got leave to die in peace." On the accession of Henry V. (A. D. 1413), "the Welsh, who had been so troublesome to his father, admired his valour and claimed him as a true prince of Wales, remembering that he had been born at Monmouth, which place was at that time within the principality. They discovered that there was an ancient prophecy that

a prince would be born among themselves who should rule the whole realm of England; and they saw its fulfilment in King Henry V."—J. Gairdner, *The Houses of Lancaster and York*, ch. 4, sect. 3; and ch. 5, sect. 1.

ALSO IN: J. H. Wylie, *Hist. of Eng. under Henry IV.*, v. 1, ch. 14.

WALES, Prince of.—"When Edward I. subdued Wales, he is said to have promised the people of that country a native prince who could not speak English, and taking advantage of the fact that his queen, Eleanor, was delivered of a child at Carnarvon Castle, in North Wales, he conferred the principality upon his infant son Edward, who was yet unable to speak. By the death of his eldest brother Alphonso, Edward became heir to the throne, to which he afterwards succeeded as Edward II.; but from this time forward, the principality has been appropriated solely to the eldest sons of the kings of England, who previous to this period had only borne the title of 'Lord Prince.' In 1841, for the first time, the dukedom of Saxony was introduced among the reputed titles of the Prince of Wales. This dignity his Royal Highness derives merely in right of his own paternal descent. . . . Without any new creation, and previous to his acquiring the title of Prince of Wales, the heir-apparent of the sovereign is Duke of Cornwall, the most ancient title of its degree in England. Edward the Black Prince . . . was created the first Duke of Cornwall in 1337. . . . The dukedom merges in the Crown when there is no heir apparent, and is immediately inherited by the prince on his birth, or by the accession of his father to the throne, as the case may be. . . . The earldom of Chester is one of the titles conferred by patent, but it was formerly a principality, into which it had been erected by the 21st of Richard II. In the reign of Henry IV., however, the act of parliament by which it had been constituted was repealed, and it has ever since been granted in the same patent which confers the title of Prince of Wales. As the eldest sons of the kings of Scotland have enjoyed the titles of Duke of Rothsay, Earl of Carrick, Baron Renfrew, and Hereditary Great Steward of Scotland, those dignities are also invariably attributed to the Prince of Wales."—C. R. Dodd, *Manual of Dignities*, pt. 2.

WALI.—An Arabian title, given to certain governors of extensive provinces under the caliphate. It seems to have had a viceregal significance, marking the bearer of it as an immediate representative of the caliph.—T. P. Hughes, *Dict. of Islam*.

WALLINGFORD, Treaty of.—A treaty concluded, A. D. 1153, between King Stephen and Matilda, who claimed the English crown as the heir of her father, Henry I. By the treaty Stephen was recognized as king and Matilda's son Henry (who became Henry II.) was made his heir.

WALLOONS, The.—"In Namur, Liege, and Luxembourg, the speech is what is called Walloon, the same word as Welsh, and derived from the German root 'wealth,' a foreigner. By this designation the Germans of the Flemish tongue denoted the Romano-Belgic population whose language was akin to the French, and whom a hilly and impracticable country (the forest districts of the Ardennes) had more or less protected from their own arms. Now the Walloon is a form of the Romano-Keltic so peculiar and independent that it must be of great antiquity, i. e., as old as the oldest dialect of the French, and no extension of the dialects of Lorraine, or Champagne, from which it differs materially. It is also a language which must have been formed on a Keltic basis. . . . The Walloons, then, are Romano-Keltic; whereas the Flemings are Germans, in speech and in blood."—R. G. WAMPUM.—"Wampum, or wompam, according to Trumbull was the name of the white beads made from stems or inner whorls of the *Pyrula Carica* or *Canallulata* periwinkle shells so common on all the south coast of New England. When strung they were called wampum or wampom—peage or peake or peg, equivalent to 'strings of white beads,' for peage means 'strung beads.' Color was the basis of the nomenclature, as well as of the difference in value. 'Wompi' was white; 'Sackl' was black; 'Suckaubock' was the black beads made from the dark part of the *poquaubock*, the common quahog, *Venus mercenaria* or round clam shell. The value of the black was generally twice that of the white. . . . The word generally used among the Dutch who led in introducing the bead currency of the Indians, Sewan or Zeewand, was more general in its application than wampum. But whatever the difficult Indian linguistic process may have been, the New England men soon settled on wampum and peage as the working names for

this currency. The shell cylinders, black or white, were about one-eighth of an inch in diameter and one-quarter long. There were shorter beads used for ornaments, but there is hardly any trace of them in the currency. . . . The Indians strung the beads on fibres of hemp or tendons taken from the flesh of their forest meat. . . . The strings of peage were embroidered on strips of deer-skin, making the 'Michequoce,' a girdle or belt 'of five inches thickness,' or more, and to the value of ten pounds sterling or more, which was worn about the waist or thrown over the shoulders like a scarf. More than 10,000 beads were wrought into a single belt four inches wide. These belts were in common use like the gold and jewelry of our day. They also played the same symbolic part which survives in the crown jewels and other regalia of civilized nations. . . . When the Indians made an important statement in their frequent negotiations, they presented a belt to prove it, to give force to their words. . . . It gave to the words the weight of hard physical facts and made the expression an emblem of great force and significance. The philologists call this literary office, this symbolic function of wampum, an elementary mnemonic record. The same was fulfilled by the quippus, knotted strings or quipu of the ancient Peruvians. . . . 'This belt preserves my words' was a common remark of the Iroquois Chief in council. . . . The Iroquois were a mighty nation, almost an incipient state. Their only records were in these mnemonic beads. . . . Tradition gives to the Narragansetta the honor of inventing these valued articles, valuable both for use and exchange. . . . The Long Island Indians manufactured the beads in large quantities and then were forced to pay them away in tribute to the Mohawks and the fiercer tribes of the Interior. Furs were readily exchanged for these trinkets, which carried a permanent value, through the constancy of the Indian desire for them. . . . After the use of wampum was established in colonial life, contracts were made payable at will in wampum, beaver, or silver. . . . The use began in New England in 1627. It was a legal tender until 1661, and for more than three quarters of a century the wampum was current in small transactions."—W. E. Weeden, *Indian Money as a Factor in New Eng. Civilization*. WASHINGTON (City): A. D. 1791.—The founding of the Federal Capital.—“One important duty which engaged the President's [Washington's] attention during part of the recess [of Congress] related to the purchase and survey of the new Federal city. The site chosen on the Potomac by himself and the commissioners, in conformity with law [see UNITED STATES OF AM.: A. D. 1789-1792], lay a few miles to the north of Mount Vernon on the Maryland side of the river, at the confluence of the Eastern Branch, and just below Georgetown. The tradition goes that, while a young surveyor scouring the neighboring country, Washington had marked the advantages of this spot for a great city. . . . The entire soil belonged in large parcels to a few plain, easy, Maryland farmers, who rode over to Georgetown for their flour and bacon. One of these only, David Burns, was obstinate about making terms; and the subsequent rise of land in the western quarter of the city, which his farmhouse now occupied, rendered his little daughter in time the heiress of Washington, and confirmed his claims to historical consideration as the most conspicuous grantor of the National Capital. For procuring this choice spot on behalf of his countrymen, the President conducted the negotiations in person, and the purchase of the Federal city was concluded upon just and even generous terms. Each owner surrendered his real estate to the United States with no restriction except that of retaining every alternate lot for himself. The government was permitted to reserve all tracts specially desired at \$25 an acre, while the land for avenues, streets, and alleys should cost nothing. Thus the Federal Capital came to the United States as substantially a free conveyance of half the fee of the soil in consideration of the enhanced value expected for the other half. . . . Major l'Enfant, a French architect, was selected to plan and lay out the new city. The highways were mapped and bounded substantially as they exist at this day, being so spacious and so numerous in comparison with building lots as to have admitted of no later change, in the course of a century, except in the prudent direction of parking, enlarging sidewalks, and leaving little plats in front of houses to be privately cared for. Streets running due north and south from the northern boundary to the Potomac were intersected at right angles by others which extended east and west. To mar the simplicity of this plan, however, which so far resembled that of Philadelphia, great avenues, 160

feet wide, were run diagonally, radiating like spokes, from such main centres as Capitol Hill and the President's house. . . . This new Capital, by the President modestly styled 'the Federal City,' but to which the commissioners, by general acclamation, proceeded in September to affix his illustrious name, was America's first grand essay at a metropolis in advance of inhabitants. . . . The founder himself entered with unwonted ardor into the plans projected for developing this the new Capital. Not only did he picture the city which bore his name as an instructor of the coming youth in lessons of lofty patriotism, but he prophesied for it national greatness apart from its growth as the repository of the nation. He believed it would become a prosperous commercial city, its wharves studded with sails, enjoying all the advantages of Western traffic by means of a canal linking the Potomac and Ohio rivers, so as to bring Western produce to the seaboard. The ten-mile square which comprised the territorial District of Columbia, inclusive of the Capital, stretched across the Potomac, taking Georgetown from the Maryland jurisdiction, and Alexandria from Virginia. . . . The first corner-stone of this new Federal district was publicly laid with Masonic ceremonies, and though the auction sale of city lots in autumn proved disappointing, the idea prevailed that the government would gain from individual purchasers in Washington city a fund ample enough for erecting there all the public buildings at present needed."—J. Schouler, *Hist. of the U. S.*, ch. 2, sect. 2 (p. 1).

WATLING STREET.—The Milky Way was known to our early English ancestors as Watling Street, signifying the road "by which the hero-sons of Wæta marched across" the heavens. When they settled in England they transferred the name Watling Street to the great Roman road which they found traversing the island, from London to Chester. Portions of the road, in London and elsewhere, still bear the name. Even in Chaucer's time the Milky Way appears to have been sometimes called Watling Street.—J. R. Green, *The Making of England*, p. 166.

WEIMAR.—For an account of the origin of the Duchy of Saxe-Weimar, see SAXONY: A. D. 1180-1553.—"Small indeed is the space occupied on the map by the Duchy of Saxe-Weimar; yet the historian of the German Courts declares, and truly, that after Berlin there is no Court of which the nation is so proud. . . . 'Small among German princes is mine, poor and narrow his kingdom, limited his power of doing good.' Thus sings Goethe in that poem, so honourable to both, wherein he acknowledges his debt to Karl August. . . . Weimar is an ancient city on the Ilm, a small stream rising in the Thuringian forests, and losing itself in the Saal, at Jena; this stream on which the sole navigation seems to be that of ducks, meanders peacefully through pleasant valleys, except during the rainy season, when mountain-torrents swell its current and overflow its banks. The Trent, between Trenthan and Stafford—"the smug and silver Trent" as Shakespeare calls it—will give an idea of this stream. The town is charmingly placed in the Ilm valley, and stands some eight hundred feet above the level of the sea. 'Weimar,' says the old topographer, Mathew Merian, 'is Weimar, because it was the wine market for Jena and its environs. Others say it was because some one here in ancient days began to plant the vine, who was hence called Weinmayer. But of this each reader may believe just what he pleases.' On a first acquaintance, Weimar seems more like a village bordering a park, than a capital with a Court, having all courtly environments. . . . Saxe-Weimar has no trade, no manufactures, no animation of commercial, political, or even theological activity. This part of Saxony, he it remembered, was the home and shelter of Protestantism in its birth. Only a few miles from Weimar stands the Wartburg, where Luther, in the disguise of Squire George, lived in safety, translating the Bible, and hurling his inkstand at the head of Satan, like a rough-handed disputant as he was. In the marketplace of Weimar stand, to this day, two houses from the windows of which Tetzel advertised his indulgences, and Luther afterwards in fiery indignation fulminated against them. These records of religious struggle still remain, but are no longer suggestions for the continuance of the strife. . . . The theologic fire has long burnt itself out in Thuringia. In Weimar, where Luther preached, another preacher came, whom

we know as Goethe. In the old church there is one portrait of Luther, painted by his friend Lucas Kranach, greatly prized, as well it may be; but for this one portrait of Luther, there are a hundred of Goethe. It is not Luther, but Goethe, they think of here; poetry, not theology, is the glory of Weimar. And, corresponding with this, we find the dominant characteristic of the place to be no magnificent church, no picturesque ancient buildings, no visible lineage of the earlier ages, but the sweet serenity of a lovely park. The park fills the foreground of the picture, and always rises first in the memory. . . . Within its limits Saxe-Weimar displayed all that an imperial court displays in larger proportions: it had its ministers, its army, its chamberlains, pages, and sycophants. Court favour, and disgrace, elevated and depressed, as if they had been imperial smiles, or autocratic frowns. A standing army of six hundred men, with cavalry of fifty hussars, had its War Department, with war minister, secretary, and clerk. As the nobles formed the predominating element of Weimar, we see at once how, in spite of the influence of Karl August, and the remarkable men he assembled round him, no real public for Art could be found there. Some of the courtiers played more or less with Art, some had real feeling for it; but the majority set decided faces against all the beaux esprits. . . . Not without profound significance is this fact that in Weimar the poet found a Circle, but no Public. To welcome his productions there were friends and admirers; there was no Nation. Germany had no public."—G. H. Lewes, *The Life and Works of Goethe*, bk. 1, ch. 1.

WERGILD.—"The principle that every injury to either person or property might be compensated by a money payment was common to all the northern nations. It was introduced into Gaul by the conquering Franks, and into Britain by the English invaders. Every man's life had a fixed money value, called the 'wergild.' In the case of a freeman, this compensation for murder was payable to his kindred; in that of a slave, to his master. The amount of the wergild varied, according to a graduated scale, with the rank of the person slain."—T. P. Taswell-Langmead, *Eng. Const. Hist.*, p. 41.

WEST INDIES, The.—"The name West Indies recalls the fact that the discovery of the new world originated in an attempt to find a western route to the eastern seas, and that, when Columbus crossed the Atlantic and sighted land on the otherside [see AMERICA: A. D. 1484-1492, and 1493], he fancied he had reached the further coasts of the Indies. 'In consequence of this mistake of Columbus,' says Adam Smith, 'the name of the Indies has stuck to those unfortunate countries ever since.' The islands, or some of them, have long borne the name of Antilles. Antilla or Antiglia was a mythical island [see ANTILLES] which found a place on mediæval maps, and the name was applied by geographers to Hispaniola and Cuba upon their first discovery. In modern times Cuba, Hispaniola or Hayti, Jamaica, and Porto Rico have usually been known as the Greater Antilles; and the ring of smaller islands, including the Windward and the Leeward Islands, as the Lesser Antilles. The terms Windward and Leeward themselves demand some notice. The prevailing wind in the West Indies being the north-east trade wind, the islands which were most exposed to it were known as the Windward islands, and those which were less exposed were known as the Leeward. Accordingly, the Spaniards

regarded the whole ring of Caribbean islands as Windward islands, and identified the Leeward islands with the four large islands which constitute the Greater Antilles as given above. The English sailors contracted the area of Windward and Leeward, subdividing the Caribbean islands into a northern section of Leeward islands and a southern section of Windward islands, which project further into the Atlantic. In 1671 this division was made a political one, and the English Caribbean islands, which had before constituted one government, were separated into two groups, under two Governors-in-chief; the islands to the north of the French colony of Guadeloupe forming the government of the Leeward islands, the islands to the south of Guadeloupe forming the government of the Windward islands. Latterly the signification has been again slightly modified; and, for administrative purposes under the Colonial Office, the Leeward islands group now includes the more northerly section of the Caribbean islands belonging to Great Britain, from the Virgin islands to Dominica [embracing Antigua, St. Christopher or St. Kitts, Nevis, Montserrat, the Virgin Islands, Dominica, Barbuda, Redonda, and Anguilla]; while the Windward islands are artificially restricted to St. Lucia, St. Vincent, the Grenadines, and Grenada, the two most windward of all, Barbados and Tobago, being separated from the group." Barbados is a distinct crown colony, and Tobago is joined with Trinidad to form another.—C. P. Lucas, *Hist. Geog. of the British Colonies*, v. 2, sect. 2, ch. 1, and 4-7.

WEST POINT.—"The importance of fortifying the Hudson River at its narrow passes among the Highlands was suggested to the Continental Congress by the Provincial Assembly of New York at an early period of the war [of Independence]. On the 6th of October, 1775, the former directed the latter to proceed to make such fortifications as they should deem best. On the 18th of November, Congress resolved to appoint a commander for the fortress, with the rank of colonel, and recommended the New York Assembly, or Convention, to empower him to raise a body of 200 militia from the counties of Dutchess, Orange, and Ulster, and a company of artillery from New York city, to garrison them." As the result of these proceedings a fort named "Constitution" was constructed on Martelaer's Rock (now Constitution Island) opposite West Point, under the direction of an English engineer, Bernard Romans. "After the capture of Forts Clinton and Montgomery, near the lower entrance to the Highlands, in 1777, and the abandonment of Fort Constitution by the Americans a few days afterward, public attention was directed to the importance of other and stronger fortifications in that vicinity. . . . Washington requested General Putnam to bestow his most serious attention upon that important subject. He also wrote to Governor Clinton, at the same time, desiring him to take the immediate supervision of the work; but his legislative duties, then many and pressing, made it difficult for him to comply. Clinton . . . made many valuable suggestions respecting the proposed fortifications. He mentioned West Point as the most eligible site for a strong fort."

In the spring of 1778, "a committee of the New York Legislature, after surveying several sites, unanimously recommended West Point as the most eligible. Works were accordingly commenced there under the direction of Kosciuszko. . . . Kosciuszko arrived on the 20th of March, and the works were pushed toward completion with much spirit. The principal redoubt, constructed chiefly of logs and earth, was completed before May, and named Fort Clinton. . . . At the close of 1779, West Point was the strongest military post in America. In addition to the batteries that stood menacingly upon the hills-tops, the river was obstructed by an enormous iron chain. . . . West Point was considered the keystone of the country during the Revolution, and there a large quantity of powder, and other munitions of war and military stores, were collected. These considerations combined made its possession a matter of great importance to the enemy, and hence it was selected by Arnold as the prize which his treason would give as a bribe [see UNITED STATES OF AM.: A. D. 1780 (AUGUST—SEPTEMBER)]. When peace returned, it was regarded as one of the most important military posts in the country, and the plateau upon the point was purchased by the United States Government. . . . The Military Academy at West Point was established by an act of Congress which became a law on the 16th of March, 1802. Such an institution, at that place, was proposed by Washington to Congress in 1793; and earlier than this, even before the war of the Revolution had closed, he suggested the establishment of a military school there. But little progress was made in the matter until 1812."—B. J. Lossing, *Field-book of the Revolution*, v. 1, pp. 702-706.

A. D. 1862 (April—December).—The completed separation from Old Virginia.—Admission to the Union.—The work of the convention at Wheeling which framed a constitution for the new State of West Virginia was satisfactorily performed, and "on the first Thursday of April, 1862, the people approved the constitution by a vote of 18,862 in favor of it with only 514 against it. The work of the representatives of the projected new State being thus ratified, the Governor called the Legislature of Virginia together on the 6th day of May, and on the 13th of the same month that body gave its consent, with due regularity, to the formation of a new State within the jurisdiction of the said

State of Virginia.' A fortnight later, on the 28th of May, Senator Willey introduced the subject in Congress by presenting a memorial from the Legislature of Virginia, together with a certified copy of the proceedings of the Constitutional Convention and the vote of the people. The constitution was referred to the Committee on Territories and a bill favorable to admission was promptly reported by Senator Wade of Ohio. The measure was discussed at different periods, largely with reference to the effect it would have upon the institution of slavery, and Congress insisted upon inserting a provision that "the children of slaves, born in the State after the 4th day of July, 1863, shall be free; all slaves within the said State who shall at that time be under the age of ten years shall be free when they arrive at the age of twenty-one years; all slaves over ten and under twenty-one shall be free at the age of twenty-five years; and no slave shall be permitted to come into the State for permanent residence therein." This condition was to be ratified by the convention which framed the constitution, and by the people at an election held for the purpose; and, upon due certification of the approval of the condition to the President of the United States, he was authorized to issue his proclamation declaring West Virginia to be a State of the Union. . . . On the 14th of July, three days before Congress adjourned, the bill passed the Senate by a vote of 23 to 17. Mr. Rice of Minnesota was the only Democrat who favored the admission of the new State. . . .

"Mr. Chandler and Mr. Howard of Michigan voted in the negative because the State had voluntarily done nothing towards providing for the emancipation of slaves; Mr. Sumner and Mr. Wilson, because the Senate had rejected the anti-slavery amendment [proposed by Mr. Sumner, declaring immediate emancipation in the new State]; Mr. Trumbull and Mr. Cowan, because of the irregularity of the whole proceeding. The bill was not considered in the House until the next session. It was taken up on the 9th of December," and was warmly debated. "On the passage of the bill the ayes were 96 and the noes were 55. The ayes were wholly from the Republican party, though several prominent Republicans opposed the measure. Almost the entire Massachusetts delegation voted in the negative, as did also Mr. Roscoe Conkling, Mr. Conway of Kansas and Mr. Francis Thomas of Maryland. The wide difference of opinion concerning this act was not unnatural. But the cause of the Union was aided by the addition of another loyal commonwealth, and substantial justice was done to the brave people of the new State. . . . To the old State of Virginia the blow was a heavy one. In the years following the war it added seriously to her financial embarrassment, and it has in many ways obstructed her prosperity."—J. G. Blaine, *Twenty Years of Congress*, v. 1, ch. 21.—In the legislative Ordinance of 1861 the proposed new State was called Kanawha; but in the Constitutional Convention this name was changed to West Virginia.

WESTMINSTER PALACE.—"Westminster was from the days of Edward the Confessor the recognised home of the great council of the nation as well as of the king. How this came about, history does not record; it is possible that the mere accident of the existence of the royal palace on the bank of the Thames led to the foundation of the abbey, or that the proximity of the abbey led to the choice of the place for a palace; equal obscurity covers the origin of both. . . . At Westminster Henry I held his councils, and Stephen is said to have founded the chapel of his patron saint within the palace. . . . From the very first introduction of representative members the national council had its regular home at Westminster. There, with a few casual exceptions, . . . all the properly constituted parliaments of England have been held. The ancient Palace of Westminster, of which the most important parts, having survived until the fire of 1834 and the construction of the New Houses of Parliament, were destroyed in 1852, must have presented a very apt illustration of the history of the Constitution which had grown up from its early simplicity to its full strength within those venerable walls. It was a curious congeries of towers, halls, churches, and chambers. As the administrative system of the country had been developed largely from the household economy of the king, the national palace had for its kernel the king's court, hall, chapel, and chamber. . . . As time went on, every apartment changed its destination: the chamber became a council room, the banquet hall a court of justice, the chapel a hall of deliberation. . . . The King's Chamber, or Parliament Chamber, was the House of Lords from very early times until the union with Ireland, when the peers removed into the lesser or White Hall, where they continued until the fire. The house of commons met occasionally in the Painted Chamber, but generally sat in the Chapter House or in the Refectory of the abbey, until the reign of Edward VI, when it was fixed in St. Stephen's chapel. . . . After the fire of 1834, during the building of the new houses, the house of lords sat in the Painted Chamber, and the house of commons in the White Hall or Court of Requests. It was a curious coincidence, certainly, that the destruction of the ancient fabric should follow so im-

mediately upon the great constitutional change wrought by the reform act, and scarcely less curious that the fire should have originated in the burning of the ancient Exchequer tallies, one of the most permanent relics of the primitive simplicity of administration."—W. Stubbs, *Const. Hist. of Eng.*, ch. 20, sect. 735-736 (v. 3).

WHIG PARTY OF THE UNITED STATES. See UNITED STATES OF AM.: A. D. 1834.

WHIGS (WHIGGAMORS): Origin of the name and the English Party.—"The southwest counties of Scotland have seldom corn enough to serve them round the year: and the northern parts producing more than they need, those in the west come in summer to buy at Leith the stores that come from the north: and from a word 'whiggam,' used in driving their horses, all that drove were called the 'whiggamors,' and shorter the 'whiggs.' Now in that year [1648], after the news came down of Duke Hamilton's defeat [at the battle of Preston—see ENGLAND: A. D. 1648 (APRIL—AUGUST)], the ministers animated their people to rise and march to Edinburgh; and they came up marching on [at] the head of their parishes, with an unheeded fury, praying and preaching all the way as they came. The marquis of Argyle and his party came and headed them, they being about 6,000. This was called the 'whiggamors' inroad; and ever after that all that opposed the court came in contempt to be called 'whiggs': and from Scotland the word was brought into England, where it is now one of our unhappy terms of distinction."—G. Burnet, *Hist. of My Own Time*, bk. 1 (Summary), sect. 43 (v. 1).—"We find John Nicoll, the diarist, in 1666, speaking of the west-country Presbyterians as 'commonly called the Whigs,' implying that the term was new. The sliding of the appellation from these obscure people to the party of the opposition in London a few years later, is indicated by Daniel Defoe as occurring immediately after the affair of Bothwell Bridge in 1679. The Duke of Monmouth then returning from his command in Scotland, instead of thanks for his good service, found himself under blame for using the insurgents too mercifully. 'And Lauderdale told Charles, with an oath, that the Duke had been so civil to the Whigs because he was himself a Whig in his heart. This made it a court-word; and in a little while all the friends and followers of the Duke began to be called Whigs.'—R.

Chambers, *Domestic Annals of Scotland*, v. 2, p. 172.

WHIPS, Party.—The "party whips," in English politics, are "an extremely useful and hard-working body of officials. Being charged with the duty of keeping the respective sides in readiness for all emergencies, they are generally to be found in the lobby, where they make themselves acquainted with the incomings and outgoing of members, and learn a good deal as to their prospective movements. The whips are the gentlemen who issue those strongly underlined circulars by which legislators are summoned on important nights; and who, by their watchfulness and attention, can generally convey reliable intelligence to the party chiefs. If the Ministers, for example, are engaged in any controversy, and their whips are not absolutely certain of a majority, they would make arrangements for a succession of men to keep on talking till the laggards could be brought to their places." The whips also arrange "pairs," by which members of opposite parties, or on opposite sides of a given question, agree in couples, not to vote for a certain fixed period of time, thereby securing freedom to be absent without causing any loss of relative strength to their respective parties. This arrangement is common in most legislative bodies. "In addition to these duties, the whips of the opposing forces have to move for the issue of new writs in the place of deceased members—a task never undertaken till they have a candidate ready for the fray."—*Popular Account of Parliamentary Procedure*, p. 18.

WHITE HOODS OF FRANCE.—"The Caputiati, or Capuchious, or White Hoods, [was] a sect originating with a wood-cutter of Auvergne, by name Durand, about the year 1182. Their primary object was the maintenance of peace, and the extermination of the disbanded soldiery, whom the English kings had spread over the south of France, and [who] were now ravaging the country under the name of Routiers or Cotereaux. The members of this religious association were bound by no vow, and made no profession of any particular faith; they were only distinguished by the white head-gear that gave them their name, and wore a little leaden image of the Virgin on their breast. They found favour at first with the bishops, especially in Burgundy and the Berri, and were even, from the best political causes, countenanced by Philip Augustus. They thus rose to such a degree of power that on the 20th of July, 1188, they surrounded a body of 7,000 of the marauding party, and suffered not one man to escape. They were, however, soon intoxicated with success, and threw out some hints about restoring the primeval liberty of mortals and universal equality; thereby incurring the displeasure of Hugo Bishop of Auxerre, who took arms against them, and put an end to the sect by the might of the sword in 1188."—L. Mariotti, *Frà Dolcino and his times*, ch. 1.

WHITE PENITENTS, OR WHITE COMPANIES.—"The end of the 14th century witnessed a profound outburst of popular devotion. The miserable condition of the Church, distracted by schism, and the disturbed state of every country in Europe, awoke a spirit of penitence and contrition at the prospect of another great Jubilee, and the opening of a new century. Bands of penitents wandered from place to place, clad in white garments; their faces, except

the eyes, were covered with hoods, and on their backs they wore a red cross. They walked two and two, in solemn procession, old and young, men and women together, singing hymns of penitence, amongst which the sad strains of the 'Stabat Mater' held the chief place. At times they paused and flung themselves on the ground, exclaiming 'Mercy,' or 'Peace,' and continued in silent prayer. All was done with order and decorum; the processions generally lasted for nine days, and the penitents during this time fasted rigorously. The movement seems to have originated in Provence, but rapidly spread through Italy. Enemies were reconciled, restitution was made for wrongs, the churches were crowded wherever; the penitents, or 'Blanchi' ['White Penitents,' 'White Companies,' 'Whitemen' are various English forms of the name] as they were called from their dress, made their appearance. The inhabitants of one city made a pilgrimage to another and stirred up their devotion. The people of Modena went to Bologna; the Bolognese suspended all business for nine days, and walked to Imola, whence the contagion rapidly spread southwards. For the last three months of 1399 this enthusiasm lasted, and wrought marked results upon morals and religion for a time. Yet enthusiasm tended to create imposture."—M. Creighton, *Hist. of the Papacy during the Period of the Reformation*, v. 1, pp. 145-146.

WHITE SHIP, The sinking of the.—William, the only legitimate son of Henry I. of England, accompanied his father on a visit to Normandy (A. D. 1120). "When they were about to return by the port of Barleux, a Norman captain, Thomas Fitz-Stephen, appeared and claimed the right of taking them in his ship, on the ground that his father had been captain of the 'Mora,' in which the Conqueror crossed to invade England. The king did not care to alter his own arrangements, but agreed that his son should sail in the 'Blanche Nef' [the White Ship] with Fitz-Stephen. William Ætheling, as the English called him, was accompanied by a large train of unruly courtiers, who amused themselves by making the sailors drink hard before they started, and dismissed the priests who came to bless the voyage with a chorus of scoffing laughter. It was evening before they left the shore, and there was no moon; a few of the more prudent quitted the ship, but there remained nearly 800—a dangerous freight for a small vessel. However, fifty rowers flushed with wine made good way in the waters; but the helmsman was less fit for his work, and the vessel struck suddenly on a sunk rock, the Raz de Cateville. The water rushed in, but there was time to lower a boat, which put off with the prince. When in safety, he heard the cries of his sister, the countess of Perche, and returned to save her. A crowd of desperate men leaped into the boat; it was swamped, and all perished."—C. H. Pearson, *Hist. of Eng. during the Early and Middle Ages*, v. 1, p. 445.

WILDCAT BANKS.—"During Jackson's struggle with the Bank of the United States [see UNITED STATES OF AM.: A. D. 1833-1836, and 1835-1837] many new banks had been formed in various States, generally with little or no capital to pay the notes which they issued. They bought large quantities of cheaply printed bills. As these bills had cost them very little, they could afford to offer a higher price in paper money for lands in distant States and Territories than others could afford to offer in gold and silver. Having bought the lands for this worthless money, the wildcat bankers sold them for good money, hoping that their own bills would not soon find their way back for payment. If they were disappointed in this hope, the bank 'failed,' and the managers started a new one."—A. Johnston, *Hist. of the U. S. for Schools*, sect. 496.—See, also: MONEY AND BANKING: A. WINCEBY FIGHT (1643).—The sharp encounter known as Winceby Fight, in the English civil war, was one of Cromwell's successes, which drove the royalist forces out of the Lincolnshire country, and compelled the Marquis of Newcastle, who was besieging Hull, to abandon the siege. "Cromwell himself was nearer death in this action than ever in any other; the victory,

too, made its due figure, and 'appeared in the world.' Winceby, a small upland hamlet, in the Wolds, not among the Fens, of Lincolnshire, is some five miles west of Horncastle. The confused memory of this Fight is still fresh there." The Fight occurred Oct. 10, 1643.—T. Carlyle, *Oliver Cromwell's Letters and Speeches*, letter 18 (v. 1).—See HULL.

WINCHESTER, General: Defeat at the Raisin. See UNITED STATES OF AM.: A. D. 1812-1813 HARRISON'S NORTHWESTERN CAMPAIGN.

WINCHESTER, England: Origin of.—"There can be little doubt that a town, of greater or less importance, has existed since the earliest dawn of English history on the same place where stands the Winchester of to-day. . . . If the first founders of the ancient city were Celtic Britons, covering with their rude dwellings the summit and sides of S. Catherine's Hill they were certainly conquered by the Belge, also probably of Celtic origin, who, crossing over from Gaul, established themselves in a large district of southern England. But whether in their time Winchester was called Caer Gwent is doubtful; very probably it was simply Gwin or Gwent, the white place. . . . But as there is no question of the Roman occupation of Britain, first by Julius Caesar, later on by Claudius and Vespasian, so we know that the settlement on the Itchen was turned into Venta Belgarum, and S. Catherine's Hill converted into a Roman camp. . . . Venta, as well as many other towns, was completely Romanised. . . . But the time arrived when Rome could no longer defend herself at home, and was thus forced to leave Britain to contend with the wild Northmen who had already begun their incursions. The Britons implored their former masters to come back and help them, but in vain. . . . We know how Vortigern, chief among the southern British kings, invited the Saxon adventurers to help him against the Picts and Scots, who encroached more and more in Britain. . . . In 495 (as we learn from the Brito-Welsh Chronicle), there 'came two caldormen to Britain, Cerdic and Cymric,' who landed at Hamble Creek, and eventually, after many battles much extolled in the Saxon Chronicle, became kings of the West Saxons. Cerdic is said to have been crowned in Ven'a, to have slaughtered most of the inhabitants and all the priests, and to have converted the cathedral into a heathen temple. . . . The name Venta now becomes Wintana, with the affix of 'ceaster,' Saxon for fortified place."—A. R. R. Bramston and A. C. Leroy, *Historic Winchester*, ch. 1.—See, also, VENTA.

A. D. 1805-1848.—Territorial vicissitudes.—Admission into the Union as a State.—From 1805 to 1809, Wisconsin formed a part of Indiana Territory. From 1809 to 1818 her territory was embraced in the Territory of Illinois, excepting a small projection at the northeast which was left out of the described boundaries and belonged nowhere. When Illinois became a State, in 1818, and her present boundaries were established, all the country north of them was joined to Michigan Territory. In 1834 that huge Territory was still further enlarged by the temporary addition to it of a great area west of the Mississippi, embracing the present states of Iowa, Minnesota and part of Dakota. It was an unwieldy and impracticable territorial organization, and movements to divide it, which had been on foot long

before this last enlargement, soon attained success. In 1830, the year before Michigan became a State, with her present limits, the remaining Territory was organized under the name of Wisconsin. Two years later, "by act of June 12, 1838, congress still further contracted the limits of Wisconsin by creating from its trans-Mississippi tract the Territory of Iowa. This, however, was in accordance with the original design when the country beyond the Mississippi was attached to Michigan Territory for purposes of temporary government, so no objection was entertained to this arrangement on the part of Wisconsin. The establishment of Iowa had reduced Wisconsin to her present limits, except that she still held, as her western boundary, the Mississippi river to its source, and a line drawn due north therefrom to the international boundary. In this condition Wisconsin remained until the act of congress approved August 6, 1846, enabling her people to form a state constitution. . . . Wisconsin was admitted into the Union, by act approved May 29, 1848, with her present limits."—R. G. T'wittes, *The Boundaries of Wisconsin* (*Wis. State Hist. Soc. Coll's*, v. 11, pp. 455-468).

WISCONSIN, University of.—"In 1838, two years after organization as a Territory, Wisconsin petitioned Congress for aid to establish a university. The request was granted, the usual seventy-two sections of land were set aside for this object, and the Territorial Legislature at once passed a law establishing the University of the Territory of Wisconsin. The organization of a board of trustees was, however, the only other action which took place previous to the adoption of the State Constitution in 1848; this provided for the establishment of a State university 'at or near the seat of government,' and stated, emphatically, that the lands granted for a university should constitute a perpetual fund, the income of which should be devoted to the support of this institution. This declaration was apparently to little purpose, as the State has treated these domains as granted absolutely, and not as held in trust. There is probably no worse example of mismanaged public educational funds on record than is to be found in connection with this institution. . . . The entire sum realized from the 40,080 acres was only 'about \$150,000.' The University of Wisconsin was established in 1850 on the basis of the funds thus secured, but even while passing laws for the sale of the university lands the Legislature realized that the income would be insufficient to support the institution, and they therefore petitioned Congress for seventy-two additional sections in lieu of the saline lands granted to the State in 1848 but never located. Congress granted this petition in 1854. . . . An opportunity to atone for past errors was now afforded the Legislature. It began to be realized, after it was too late to enact suitable laws to remedy the evil, that the best lands had been sold at a disadvantage. It was felt that, whereas the policy pursued had benefited

the State at large, it was not faithful to the increase of the seminary fund. . . . After fully examining the claims of the regents and the condition of the university in 1873 for four years, this body granted \$10,000 annually, to atone for the injustice done by the State in selecting for an endowment unproductive lands."—F. W. Blackmar, *Hist. of Federal and State Aid to Higher Education in the U. S. (Bureau of Ed., Circ. of Information, 1890, no. 1), pp. 250-251.*

WITENAGEMOT, The.—"The Witenagemot or assembly of the wise. This [in old English history] is the supreme council of the nation, whether the nation be Kent or Mercia as in the earlier, or the whole gens Anglorum et Saxonum, as in the later history. The character of the national council testifies to its history as a later development than the lower courts, and as a consequence of the institution of royalty. The folk-moot or popular assembly of the shire is a representative body to a certain extent: it is attended by the representatives of the hundreds and townships, and has a representative body of witnesses to give validity to the acts that are executed in it. . . . The council of the aggregated state is not a folk-moot but a witenagemot. . . . On great occasions . . . we must understand the witenagemot to have been attended by a concourse of people whose voices could be raised in applause or in resistance to the proposals of the chiefs. But that such gatherings shared in any way the constitutional powers of the witan, that they were organized in any way corresponding to the machinery of the folk-moot, that they had any representative character in the modern sense, as having full powers to act on behalf of constituents, that they shared the judicial work, or except by applause and hooting influenced in any way the decision of the chiefs, there is no evidence whatever. . . . The members of the assembly were the wise men, the sapientes, witan; the king, sometimes accompanied by his wife and sons; the bishops of the kingdom, the ealdormen of the shires or provinces, and a number of the king's friends and dependents. . . . The number of the witan was thus never very large."—W. Stubbs, *Const. Hist. of Eng., ch. 6, sect. 51-53 (v. 1)*.—The constitution and powers of the witenagemot are very fully discussed by Mr. Kemble, who gives also a list of the recorded witenagemots, with comments on the business transacted in them.—J. M. Kemble, *The Saxons in Eng., bk. 2, ch. 6 (v. 2)*.

WOMAN'S RIGHTS.—WOMAN SUFFRAGE: A. D. 1790-1840.—"The pioneer advocates."—In 1790, Mary Wollstonecraft's 'Vindication of the Rights of Women,' published in London, attracted much attention from liberal minds. She examined the position of woman in the light of existing civilizations, and demanded for her the widest opportunities of education, industry, political knowledge, and the right of representation. . . . Following her, came Jane Marcet, Eliza Lynn, and Harriet Martineau—each of whom in the early part of the 19th century exerted a decided influence upon the political thought of England. . . . Frances Wright, a person of extraordinary powers of mind, born in Dundee, Scotland, in 1797, was the first woman who gave lectures on political subjects in America. When sixteen years of age she heard of the existence of a country in which freedom for the people had been proclaimed; she was filled with joy and a determination to visit the American Republic where the foundations of justice, liberty, and equality had been so securely laid. In 1820 she came here, traveling extensively North and South. She was at that time but twenty-two years of age. . . . Upon her second visit she made this country her home for several years. Her radical ideas on theology, slavery, and the social degradation of woman, now generally accepted by the best minds of the age, were then denounced by both press and pulpit, and maintained by her at the risk of her life. . . . In 1832, Lydia Maria Child published her 'History of Woman,' which was the first American storehouse of information upon the whole question, and undoubtedly increased the agitation. In 1836, Ernestine L. Rose, a Polish lady—banished from her native country by the Austrian tyrant, Francis Joseph, for her love of liberty—came to America, lecturing in the large cities North and South upon the 'Science of Government.' She advocated the enfranchisement of woman. Her beauty, wit, and eloquence drew crowded houses. About this period Judge Hurlbut, of New York, a leading member of the Bar, wrote a vigorous work on

'Human Rights,' in which he advocated political equality for women. This work attracted the attention of many legal minds throughout that State. In the winter of 1836, a bill was introduced into the New York Legislature by Judge Hertell, to secure to married women their rights of property. This bill was drawn up under the direction of Hon. John Savage, Chief-Justice of the Supreme Court, and Hon. John C. Spencer, one of the revisers of the statutes of New York. It was in furtherance of this bill that Ernestine L. Rose and Paulina Wright at that early day circulated petitions. The very few names they secured show the hopeless apathy and ignorance of the women as to their own rights. As similar bills were pending in New York until finally passed in 1848, a great educational work was accomplished in the constant discussion of the topics involved. During the winters of 1844-5-6, Elizabeth Cady Stanton, living in Albany, made the acquaintance of Judge Huribut and a large circle of lawyers and legislators, and, while exerting herself to strengthen their convictions in favor of the pending bill, she resolved at no distant day to call a convention for a full and free discussion of woman's rights and wrongs. . . . In 1840, Margaret Fuller published an essay in the Dial, entitled 'The Great Lawsuit, or Man vs. Woman: Woman vs. Man.' In this essay she demanded perfect equality for woman, in education, industry, and politics. It attracted great attention and was afterward expanded into a work entitled 'Woman in the Nineteenth Century.' . . . In the State of New York, in 1845, Rev. Samuel J. May preached a sermon at Syracuse, upon 'The Rights and Conditions of Women,' in which he sustained their right to take part in political life, saying women need not expect 'to have their wrongs fully redressed, until they themselves have a voice and a hand in the enactment and administration of the laws.' . . . In 1849, Lucretia Mott published a discourse on woman, delivered in the Assembly Building, Philadelphia, in answer to a Lyceum lecture which Richard H. Dana, of Boston, was giving in many of the chief cities, ridiculing the idea of political equality for woman. . . . It was her early labors in the temperance cause that first roused Susan B. Anthony to a realizing sense of woman's social, civil, and political degradation, and thus secured her life-long labors for the enfranchisement of woman. In 1847 she made her first speech at a public meeting of the Daughters of Temperance in Canajoharie, N. Y. The same year Antoinette L. Brown, then a student at Oberlin College, Ohio, the first institution that made the experiment of co-education, delivered her first speech on temperance in several places in Ohio, and on Woman's Rights, in the Baptist church at Henrietta, N. Y. Lucy Stone, a graduate of Oberlin, made her first speech on Woman's Rights the same year in her brother's church at Brookfield, Mass. Nor were the women of Europe inactive."—E. C. Stanton, S. B. Anthony, and M. J. Gage, eds., *Hist. of Woman Suffrage*, ch. 1.

A. D. 1840-1890.—The organized agitation. —"In 1840 a 'World's Antislavery Convention' was held in London, and all Antislavery organizations throughout the world were invited to join in it, through their delegates. Several American societies accepted the invitation, and elected delegates, six or eight of whom were women, Lucretia Mott and Mrs. Wendell Phillips among them. The excitement caused by their presence in London was intense, for the English Abolitionists were very conservative, and never dreamed of inviting women to sit in their Convention. And these women who had come among them had rent the American Antislavery Societies in twain, had been denounced from the pulpit, anathematized by the press, and mobbed by the riffraff of the streets. . . . A long and acrimonious debate followed on the admission of the women. . . . When the vote was taken, the women delegates were excluded by a large majority. William Lloyd Garrison did not arrive in London until after the rejection of the women. When he was informed of the decision of the Convention he refused to take his seat with the delegates. And throughout the ten days' sessions he maintained absolute silence, remaining in the gallery as a spectator. . . . The London Convention marked the beginning of a new era in the woman's cause. Hitherto, the agitation of the question of woman's equal rights had been incidental to the prosecution of other work. Now the time had come when a movement was needed to present the claims of woman in a direct and forcible manner, and to take issue with the legal and social order which denied her the rights of human beings, and held her in everlasting subjection. At the close of the exasperating and insulting debates of the 'World's Antislavery Convention,' Lucretia Mott and Mrs. Elizabeth Cady Stanton agreed to hold a Woman's Rights Convention on their return to America, and to begin in earnest the education of the people on the question of woman's enfranchisement. Mrs. Stanton had attended the Convention as a bride, her husband having been chosen a delegate. Accordingly the first Woman's Rights Convention of the world was called at Seneca Falls, New York, on the 19th and 20th of July, 1848. It was attended by crowds of men and women, and the deepest interest was manifested in the proceedings. 'Demand the uttermost,' said Daniel O'Connell, 'and you will get something.' The leaders in the new movement, Lucretia Mott and Mrs. Stanton, with their husbands, and Frederick Douglass, acted on this advice. They demanded in unambiguous terms all that the most radical friends of women have ever claimed. . . . The Convention adjourned to meet in Rochester, New York, August 2, 1848. . . . A third Convention was held at Salem, Ohio, in 1850; a fourth in Akron, Ohio, in 1851; a fifth in Massillon, Ohio, in 1852; another at Ravenna, Ohio, in 1853, and others rapidly followed. The advocates of woman suffrage increased in number and ability. Superior women, whose names have become historic, espoused the cause.—Frances D. Gage, Hannah Tracy Cutler, Jane G. Swisshelm, Caroline M. Severance, Celia C. Burr, who later became Mrs. C. C. Burleigh, Josephine S. Griffing, Antoinette L. Brown, Lucy Stone, Susan B. Anthony, Paulina W. Davis, Caroline H. Dall, Elizabeth Oakes Smith, Ernestine L. Rose, Mrs.

C. H. Nichols, Dr. Harriet K. Hunt; the roll-call was a brilliant one, representing an unusual versatility of culture and ability. The First National Woman Suffrage Convention was held in Worcester, Massachusetts, October 23 and 24, 1850. It was more carefully planned than any that had yet been held. Nine States were represented. The arrangements were perfect—the addresses and papers were of the highest character—the audiences were at a white heat of enthusiasm. The number of cultivated people who espoused the new gospel for women was increased by the names of Ralph Waldo Emerson, Theodore Parker, Bronson and Abby May Alcott, Thomas W. Higginson, William I. Bowditch, Samuel E. and Harriet W. Sewall, Henry Ward Beecher, Henry B. Blackwell, Ednah D. Cheney, Hon. John Neal, Rev. William H. Channing, and Wendell Phillips. . . . A dozen years were spent in severe pioneer work and then came the four years Civil War. All reformatory work was temporarily suspended, for the nation then passed through a crucial experience, and the issue of the fratricidal conflict was national life or national death. The transition of the country from peace to the tumult and waste of war was appalling and swift, but the regeneration of its women kept pace with it. . . . The development of those years, and the impetus they gave to women, which has not yet spent itself, has been wonderfully manifested since that time. . . . It has been since the war, and as the result of the great quickening of women which it occasioned, that women have organized missionary, philanthropic, temperance, educational, and political organizations, on a scale of great magnitude. . . . In 1860, two great National organizations were formed. One styled itself 'The National Woman Suffrage Association,' and the other was christened 'The American Woman Suffrage Association.' The first established its headquarters in New York, and published a weekly paper, 'The Revolution,' which was ably edited by Mrs. Stanton and Miss Anthony. 'The American' made its home in Boston, and founded 'The Woman's Journal,' which was edited by Mrs. Mary A. Livermore, Mrs. Julia Ward Howe, Mrs. Lucy Stone, William Lloyd Garrison and Thomas W. Higginson. . . . After twenty years of separate activities, a union of the two national organizations was effected in 1890, under the composite title of 'The National-American Woman Suffrage Association.'"—M. A. Livermore, *Woman in the State (Woman's Work in America, ch. 10)*.

A. D. 1842-1892.—Women in the Medical profession.—"The first advocate for women medical students, Miss Elizabeth Blackwell, after many years of struggle obtained entrance into the medical faculty of Geneva in 1842; in 1847 she received her doctor's degree, and went to England, Germany, and finally to Paris, to complete her studies. Her example fired others. In that same year a medical college for women was founded in Boston, in 1850 a similar one in Philadelphia, one in New York in 1868, and in Chicago in 1870. Soon after, the greater number of universities in America were thrown open to women, and by this their studies were largely extended. The difficulties proved far greater in Europe. The universities of Zürich in 1864, and of Berne in 1872, were the first to receive lady students for the study of medicine.

In 1868 the Medical Faculty of Paris, chiefly through the intervention of the Empress Eugénie, first admitted lady students to follow the medical course. In Italy, in 1876, they obtained equal success; in Russia, an ukase of the Czar Alexander II., of November 2nd, 1872, conferred upon ladies the right to attend the medical courses in the Medico-Chirurgical Academy of St. Petersburg, but this permission was subsequently withdrawn on political grounds, on the accession of a new government. In 1874 the first school of medicine for women was started in London; in 1876 they were admitted to the study of medicine in Dublin. In Germany and Austro-Hungary women are not allowed to enter the universities, although ladies' associations have obtained thousands of signatures to petition both parliaments on the subject. From statistical sources, we learn that there are seventy lady doctors in practice in London, five in Edinburgh, and two in Dublin. Seven hundred lady doctors practise in Russia, of whom fifty-four are the heads of clinical schools and laboratories. In Italy, at the same time, there were only six. Spain has but two qualified lady doctors. Roumania, also, has two. Sweden, Norway, and Belgium have likewise comparatively few. In Berlin there are Dr. Franziska Tiburtius and Dr. Lehms (who founded a poly-clinical school which is increasing year by year), Dr. Margaret Mengarin-Traube and Fraulein Kuhnow. In Austria, Dr. Rosa Kerschbaumer is the sole possessor of Government authority to practise her profession. In India, where native religion forbids their women calling in men doctors, there has been a strong movement in favour of ladies, and they have now one hundred lady doctors, three of whom are at the head of the three most important hospitals. The largest number of women practising medicine is in America."—A. Crepez, *The Emancipation of Women, pp. 99-103.*—"The medical faculty of the University of Paris opened its doors to women in 1868, but at first only a very few availed themselves of the privileges thus offered. In 1878 the number in attendance was 32; during the next ten years (1878-'88) it increased to 114, and is at present 183, of whom the great majority (167) are Russians. The remainder are Poles, Rumanians, Servians, Greeks, and Scotch, and only one German."—*The Nation, Feb. 14, 1895.*

A. D. 1865-1883.—The higher Education of Women in England. See EDUCATION, MODERN: REFORMS &c.: A. D. 1865-1883.

A. D. 1869-1894.—Progress in Europe and America.—"A certain number of the English cities "occupy a privileged position, under the title of 'municipal boroughs.' These alone are municipal corporations, enjoying a considerable degree of autonomy by virtue of charters of incorporation granted in the pleasure of the crown. . . . The other cities have as such no legal existence: they are simply geographical units. In past times the privilege of incorporation was often granted to wretched little hamlets. But whether they were once of consequence or not, the municipal corporations degenerated everywhere into corrupt oligarchies. The municipal reform of 1895 destroyed these hereditary cliques and extended the municipal franchise to all the inhabitants who paid the poor tax as occupants of realty. But in doing this . . . it was

expressly provided in the Municipal Corporations Act of 1835 that the electoral franchise in the municipal boroughs should belong to male persons only. Before long the unmorgantized condition of the larger towns that were not municipal boroughs received the attention of Parliament. It did not grant them communal autonomy,—there could be no question of that,—but conceded special powers to establish sanitary systems and to undertake works of public utility such as lighting, paving, sewerage, etc. The special acts passed for these purposes from time to time, as the necessity for them arose, were consolidated and made general in two statutes: the Public Health Act of 1848, for a class of towns designated as 'local government districts,' and the Commissioners' Clauses Act of 1847, for the cities described as 'improvement commissions districts.' These acts gave to these urban agglomerations an incipient municipal organization, by establishing boards of health in some, and in others commissions to direct the public works. In both these classes of 'nascent, half-developed municipalities,' which had scarcely emerged from the parochial phase of local self-government, the authorities—i. e. the members of the boards of health and the commissioners—were elected, as in the parishes, by the ratepayers without distinction of sex. As these cities enlarged and developed, they were admitted to the honor of municipal incorporation. But since the Municipal Corporations Act limited the franchise to men, it resulted that while the city which was promoted to the rank of municipal borough saw its rights increased, a part of its inhabitants—the women—saw theirs suppressed. This anomaly gave the advocates of woman suffrage a chance to demand that the ballot be granted to women in the municipal boroughs. In 1869 Mr. Jacob Bright introduced such a measure in the House of Commons, and it was adopted almost without discussion. . . . But when the English legislator placed the administration of the 'nascent, half-developed municipalities'—which were only temporarily such and which might become cities of the first rank—on the same plane, as far as the suffrage of women was concerned, with the government of the parishes, he substituted a fluctuating for a permanent test, and as a result wiped out his own line of demarcation. When this fact was brought out, Parliament could not but recognize and bow to it. This recognition was decisive: it resulted in the overthrow of the electoral barriers against women in the entire domain of local self-government. The clause which, upon the proposal of Mr. Jacob Bright, was inserted in section 9 of the municipal act of 1869, found its way into the revised municipal act of 1882. Section 63 of this latter act reads: 'For all purposes connected with and having reference to the right to vote at municipal elections, words importing in this act the masculine gender include women.' This clause gave women the ballot in the municipal boroughs, but did not make them eligible to office. And as the general qualification for municipal suffrage is the occupancy by the elector in his own name of a house subject to the poor tax, the law includes independent women only, not married women. . . . When in 1881 the municipal suffrage was extended to women in Scotland, the question whether the separated woman could vote was decided in her favor. But

of course this does not change the position of married women in England. A year after the introduction of the municipal suffrage of women they obtained (in 1870) the school vote also, in connection with the establishment of the existing system of primary instruction. . . . It still remained for women to make their way into the local government of the county; but county government, although representative, was not elective. In 1888 county councils were established, chosen by the ratepayers. The analogy of the municipal councils demanded that women should be included among the electors of the new local assemblies. Accordingly the Local Government Act of 1888 admits women to the electorate in England, and the act of 1889 gives them the same right in Scotland. . . . In Sweden local self-government is exercised in first instance, in the city and country communes, by the taxpayers in general assembly, or town meeting, where their votes are reckoned in proportion to the taxes paid, according to a graded scale, just as in the English vestries. In the cities with a population above 3,000 the taxpayers elect a communal council. . . . In the full assemblies of the communes that have no councils, and in the elections at which councillors are chosen, unmarried women have the same right of participation as men. . . . The next higher instance of local self-government consists of provincial councils (landstings). All the municipal electors, women not excepted, vote for the members of these councils. . . . In Norway women have no share in local government, except in the school administration. . . . In Denmark women are entirely excluded from local government; but they have been admitted to it in one Danish dependency—Iceland. . . . Finland, which was attached to Sweden for centuries before it fell under the sway of Russia, is still influenced by the movement of legislation in the former mother-country. . . . The law of February 6, 1865, concerning the rural communes, admitted women to communal rights under almost the same conditions as in Sweden. . . . The law of April 14, 1856, concerning the organization of the rural communes in the six eastern provinces of the kingdom of Prussia (section 6), as well as the analogous law of March 19, 1856, for the province of Westphalia (section 15), provide that persons of female sex who possess real property carrying with it the right to vote shall be represented—the married women by their husbands, the single women by electors of the male sex. A similar provision was adopted for the province of Schleswig-Holstein, after its annexation by Prussia (law of September 22, 1867, section 11). But in the P^{ro}vine province, where the administrative and the private law still show deep traces of the French influence, women are expressly excluded from the communal franchise. . . . In Saxony women are admitted to the communal vote in the country districts on the same terms as men. . . . Eligibility to communal office is denied to women in all the countries enumerated above. In Austria, as one consequence of the revolutionary movement of 1848, the legislator endeavored to infuse fresh life into the localities by giving a liberal organization to the rural communes. The law of 1849 granted communal rights to all persons paying taxes on realty and industrial enterprises, and also to various classes of 'capacities'—ministers of religion, university

graduates, school principals and teachers of the higher grades, etc. Among the electors of the first and most important group, based wholly upon property, were included women, minors, soldiers in active service and some other classes of persons who, as a rule, were excluded from suffrage, on condition that their votes be cast through representatives. . . . The Russian village community, the mir, which has come down across the centuries into our own time with very few changes in its primitive organization, is a typical example of rudimentary local self-government, where all who have an interest, not excepting the women, have a right to be heard in the common assemblies. . . . In the Dominion of Canada local suffrage has only recently been granted to women. The first law regulating this matter was passed in the province of Ontario (Upper Canada) in 1884. This law has served as an example, and in part also as a model, for the other provinces. The electoral rights granted to women by the legislation of the province of Ontario may be grouped under four heads: (a) participation in municipal elections, (b) participation in municipal referenda, (c) participation in school-board elections, and (d) eligibility to office. All unmarried women and widows twenty-one years of age, subjects of her Majesty and paying municipal taxes on real property or income, may vote in municipal elections. . . . Finally, all taxpayers resident in the school district are recognized by the laws of 1885 and 1887 as eligible to the office of school trustee. . . . Female suffrage does not exist in the great French-speaking province of Quebec (Lower Canada), in New Brunswick or in Prince Edward Island. . . . In almost all the continental [Australasian] colonies the municipal suffrage rests upon the same basis as does the parish franchise of the mother-country, i. e. the possession or occupation of real property. . . . [In the United States] several States have granted to women simply the right of being elected to school offices, provided always that they possess the qualifications prescribed for men. The question is thus decided in California, Illinois, Indiana, Iowa, Louisiana, Maine, Pennsylvania and Rhode Island. . . . At the present time the system of granting to women both rights—eligibility and suffrage—in school matters has been adopted in the following states besides Massachusetts: Colorado, North and South Dakota, Idaho, Michigan, Minnesota, Montana, New Hampshire, New Jersey, New York, Oregon, Vermont, Washington and Wisconsin and the territory of Arizona. Of course to this list must be added Wyoming, where women vote at all elections, and Kansas, where they possess complete local suffrage. Finally, Kentucky and Nebraska admit women only to the school franchise, and that only under special conditions.”—M. Ostrogorski, *Local Woman Suffrage* (*Pol. Science Quarterly*, Dec., 1891).—“In three Territories . . . the right of voting at legislative elections was given by the legislature of the Territory, and in one of these, Wyoming, it was retained when the Territory received Statehood in 1890. In Utah it was abolished by a Federal statute, because thought to be exercised by the Mormon wives at the bidding of their polygamous husbands, and thus to strengthen the polygamic party. In Washington Territory the law which conferred it in 1883 was declared invalid by the courts in 1887, be-

cause its nature had not been properly described in the title, was re-enacted immediately afterwards, and was in 1888 again declared invalid by the U. S. Territorial Court, on the ground that the Act of Congress organizing the Territorial legislature did not empower it to extend the suffrage to women. In enacting their State Constitution (1889) the people of Washington pronounced against female suffrage by a majority of two to one; and a good authority declared to me that most of the women were well pleased to lose the privilege. In 1893 the legislature of Colorado submitted to the voters (in virtue of a provision in the Constitution) a law extending full franchise for all purposes to women, and it was carried by a majority of 6,847. . . . In Michigan in 1893, women received the suffrage in all municipal elections. In Michigan, however, the law has since been declared unconstitutional. . . . In Connecticut, the latest State which has extended school suffrage to women (1894), it would appear that the women have not, so far, shown much eagerness to be registered. However, while the advanced women leaders and Prohibitionists started a campaign among the women voters, the husbands and brothers of conservative proclivities urged their wives and sisters to register, and not without success. In Wyoming (while it was still a Territory) women served as jurors for some months till the judges discovered that they were not entitled by law to do so, and in Washington (while a Territory) they served from 1884 to 1887, when the legislature, in regranting the right of voting, omitted to grant the duty or privilege of jury service. . . . As respects the suffrage in Wyoming, the evidence I have collected privately is conflicting. . . . No opposition was offered in the Convention of 1889, which drafted the present Constitution, to the enactment of woman suffrage for all purposes. The opinion of the people at large was not duly ascertained, because the question was not separately submitted to them at the polls, but there can be little doubt that it would have been favourable. . . . The whole proceedings of the Convention of 1889 leave the impression that the equal suffrage in force since 1869 had worked favorably, and the summing up of the case by a thoughtful and dispassionate British observer (Mr. H. Plunkett) is to the same effect.”—J. Bryce, *The American Commonwealth* (3d ed.), ch. 96 (p. 2).—“No complete and reliable statistics have ever been obtained of the number of women who register and vote on school questions. This varies greatly in different localities, and in the same localities in different years. With women, as with men, the questions connected with the schools do not suffice to bring out many voters as a rule. Those few who have voted hitherto have been of more than average character and ability, and influenced wholly by public spirit. But comparatively few, even of suffragists, have as yet availed themselves of the privilege. To secure any general participation of women in elections, a wider range of subjects must be thrown open to them. Wherever, as in Kansas, party issues and moral questions are involved, the women show a greater interest. In several States, as in Kansas, Iowa, and Rhode Island, prohibition amendments are said to have been carried by the efforts of women-workers at the polls, although not themselves voters.”—*The Nation*, Apr. 28, 1887, p. 802.

WRANGLERS, Senior.—At Oxford and Cambridge Universities, "by a strange relic of the logical and disputatory studies of the Middle Ages, the candidates for University honors maintained in public some mathematical thesis, about which they disputed in Latin, never, as it may be supposed, of the best. To keep up the illusion of the monkish time, and the seven liberal arts, a little metaphysics and a good deal of theology were thrown in at the time of the examination; but the real business of the 'schools' at Cambridge was mathematics. The disputing,

however, was so important a part of the performances that the first division of those to whom were awarded honors were called by distinction, 'the wranglers'; and the head man—the proud recipient of all the glory which at the end of a four years' course the ancient University showered on the son she possessed most distinguished in her favorite studies—was called the senior wrangler. In process of time, the disputations and Latin were all done away with. An examination from printed papers was made the test. Yet, still, every year, at the end of the arduous eight days' trial, the undergraduate who takes his bachelor's degree in virtue of passing the best examination in mathematics, is called the senior wrangler; and attains the proudest position that Cambridge has to bestow."—W. Everett, *On the Cam*, lect. 2.

Y.

YAKOUB BEG, The Dominion of.—The Chinese obtained possession of Kashgar or Chinese Turkestan (see TURKESTAN) about 1760, and held it for a century, overcoming much revolt during the last forty years of that period. In 1862, the revolt assumed a more formidable character than it had borne before. Its beginning was among a neighboring people called, variously, the Tungani, Dungan, or Dungans. These were "a Mahomedan people settled in the north-west province of Kansuh and in a portion of Shensi. Many of them had migrated westward at the time of the wars of Keen Lung, and had colonized various parts of the Chinese conquests. During a century this movement westward had continued, and in 1862 the Tungani represented the majority of the population, not only in parts of Kansuh, but also in the country to the west, as far as Hl and the city of Turfan. Although Mahomedans, they had acted as the soldiers of the Chinese. They had won their battles, laid down their roads, and held the Tartar population in check. From the Tungani the Chinese never for an instant expected danger. They were certainly heretics; but then they were part and parcel of themselves in every other respect. They hated the Khokandians and the people of Kashgar with a hatred that was more bitter than that they bore to the Khitay or Buddhist Chinese. In all essentials the Tungani were treated exactly like the most favoured children of the empire. . . . The only cause that it is possible to assign for their rebellion is that vague one of the religious revival which was then manifesting itself among the Mahomedans all over the world. But whatever the cause, the consequences were clear enough. In 1862 a riot occurred at a village in Kansuh. Order was restored with some small loss of life; and the momentary alarm which had been caused by it passed away. The alarm was, however, only too well founded. A few weeks afterwards a more serious riot took place at the town of Hou-

chow or Salara. This was the signal for the rising of the Tungani in all directions. The unanimity shown by the various Tungani settlements proved that there had been a preconcerted arrangement amongst them; but the Chinese had known nothing of it. . . . The few Imperial troops remaining in the province of Kansuh were unable to withstand the desperate and unanimous assault of the Mahomedans. They were swept out of existence, and with them the larger portion of the Khitay population as well. The Mahomedan priests took the lead in this revolt, and the atrocities which they and their followers enacted were of the most horrible and blood-thirsty character. The butchery of tens of thousands of their Buddhist subjects in Kansuh appealed loudly to the Chinese Government for revenge; and it was not long before their troops restored Kansuh to its allegiance. Those of the Tungani who were captured were given over to the executioner. But a large number escaped, fleeing westward to those cities beyond the desert, where other Mussulmans had limited, with like success, the deeds of their kinsmen in Kansuh. . . . No sooner then did the tidings of the events in Kansuh reach Hamil and Barkul, Turfan and Manas, than risings at once took place against the Khitay. In all cases the movement was successful. The Manchus were deposed; the 'mollahs' were set up in their stead. After a short interval the other cities of Karashar, Kucha, and Aksu, followed the example, with an identical result. The Tungani revolt proper had then reached its limit. . . . The communications between Pekin and Jungaria were cut, and a hostile territory of nearly 2,000 miles intervened. To restore those communications, to reduce that hostile country, would demand a war of several campaigns; and China was not in a condition to make the slightest effort. All that her statesmen could hope for was, that she would not go irrevocably to pieces. The Tungani flourished on the misfor-

tunes of the empire. . . . During some months after the first successes of the Tungani, the people of Kuldja and Kashgaria remained quiet, for the prestige of China's power was still great. But when it became evident to all, that communication was hopelessly cut off between the Chinese garrisons and the base of their strength in China, both the Tungani element and the native population began to see that their masters were ill able to hold their own against a popular rising. This opinion gained ground daily, and at last the whole population rose against the Chinese and massacred them. . . . But no sooner had the Chinese been overthrown, than the victors, the Tungani and the Tarantchis, began to quarrel with each other. Up to the month of January, 1865, the rising had been carried out in a very irregular and indefinite manner. . . . It was essentially a blind and reckless rising, urged on by religious antipathy; and, successful as it was, it owed all its triumphs to the embarrassments of China. The misfortunes of the Chinese attracted the attention of all those who felt an interest in the progress of events in Kashgaria. Prominent among these was a brother of Wali Khan, Buzurg Khan [her of the former rulers, the exiled Khojas], who resolved to avail himself of the opportunity afforded by the civil war for making a bold attempt to regain the place of his ancestors. Among his followers was Mahomed Yakoob, a Khokandian soldier of fortune, already known to fame in the desultory wars and feuds of which Central Asia had been the arena. His previous career had marked him out pre-eminently as a leader of men, and he had sought Eastern Turkestan that sphere of which Russia's conquests had deprived him in its Western region. There is little to surprise us in the fact of his having won his battles, Yakoob deposed and imprisoned his master Buzurg. In several campaigns between 1867 and 1873 he beat back the Tungani from his confines, and established an independent government in the west region from the Pamir to beyond Turfan, and from Khoten and the Karakoram to the Tian Shan. He treated on terms of dignity with the Czar, and also with the Government of India. He received English envoys and Russian ambassadors, and his palace was filled with presents from London and St. Petersburg. . . . Urged on by some vague ambition, he made war upon the Tungani, when every dictate of prudence pointed to an alliance with them. He destroyed his only possible allies, and in destroying them he weakened himself both directly and indirectly. In the autumn of 1876 Yakoob Beg had indeed pushed forward so far to the east that he fancied he held Barkul and Hamil in his grasp; and the next spring would probably have witnessed a further advance upon these cities had not fate willed it otherwise. With the capture of the small village of Chig-tam, in 92° E. longitude, Yakoob's triumphs closed. Thus far his career had been successful; it may then be said to have reached its limit. In the autumn of 1876, the arrival of a Chinese army on his eastern frontier changed the current of his thoughts. . . . From November, 1876, until March, 1877, the Chinese generals were engaged in massing their troops on the northern side of the Tian Shan range. . . . Yakoob's principal object was to defend the Devan pass against the Chinese; but, while they attacked it

in front, another army under General Chang Yao was approaching from Hamil. Thus outflanked, Yakoob's army retreated precipitately upon Turfan, where he was defeated, and again a second time at Toksoun, west of that town. The Chinese then halted. They had, practically speaking, destroyed Yakoob's powers of defence. That prince retreated to the town of Korla, where he was either assassinated or poisoned early in the month of May. . . . Korla was occupied on the 9th of October without resistance; and towards the end of the same month, Kucha, once an important city, surrendered. The later stages of the war were marked by the capture of the towns of Aksu, Ush Turfan, and Kashgar. With the fall of the capital, on the 17th of December, 1877, the fighting ceased. The Chinese authority was promptly established in the country as far south as Yarkand, and after a brief interval in Khoten."—D. C. Boulger, *Central Asian Questions*, ch. 12.

YANACONAS.—**MAMACONAS.**—"The Yanaconas were a class existing [in Peru] in the time of the Incas, who were in an exceptional position. They were domiciled in the houses of their masters, who found them in food and clothing, paid their tribute, and gave them a piece of land to cultivate in exchange for their services. But to prevent this from degenerating into slavery, a decree of 1601 ordered that they should be free to leave their masters and take service elsewhere on the same conditions." The Mamaconas of Peru were a class of domestic servants.—C. R. Markham, *Colonial Hist. of S. Am. (Narrative and Critical Hist. of Am., v. 8, p. 296).*

YANAN FAMILY, The. See AMERICAN ABORIGINES: YANAN FAMILY.

YANKEE: Origin of the term.—"The first name given by the Indians to the Europeans who landed in Virginia was 'Wapsid' (white people); when, however, afterwards, they began to commit murders on the red men, whom they pierced with swords, they gave to the Virginians the name 'Mechanichican' (long knives), to distinguish them from others of the same colour. In New England they at first endeavoured to imitate the sound of the national name of the English, which they pronounced 'Yengees.'" After about the middle of the Revolutionary War the Indians applied the name "Yengees" exclusively to the people of New England, "who, indeed, appeared to have adopted it, and were, as they still are, generally through the country called 'Yankees,' which is evidently the same name with a trifling alteration. They say they know the 'Yengees,' and can distinguish them by their dress and personal appearance, and that they were considered as less cruel than the Virginians or 'long knives.' The proper English they [for 'they' read 'the Chippeways and some other nations,'—*Editor's foot-note*] call 'Saggenash.'"—J. Heckewelder, *Hist., Manners, and Customs of the Indian Nations (Penn. Hist. Soc. Memoirs, v. 12) pp. 142-143.*—"The origin of this term [Yankees],

so frequently employed by way of reproach to the New England people, is said to be as follows. A farmer, by name Jonathan Hastings, of Cambridge, about the year 1713, used it as a cant, favorite word, to express excellency when applied to any thing; as a Yankee good horse, Yankee elder, &c., meaning an excellent horse and excellent cider. The students at college, having frequent intercourse with Mr. Hastings, and hearing him employ the term on all occasions, adopted it themselves, and gave him the name of Yankee Jonathan; this soon became a cant word among the collegians to express a weak, simple, awkward person, and from college it was carried and circulated through the country, till, from its currency in New England, it was at length taken up and unjustly applied to the New Englanders in common, as a term of reproach. It was in consequence of this that a particular song, called 'Yankee doodle,' was composed in derision of those scornfully called Yankees."—J. Thatcher, *Military Journal during the Revolutionary War*, p. 19.—"Dr. William Gordon, in his *Hist. of the American War*, ed. 1789, vol. I., pp. 324, 325, says it was a favourite cant word in Cambridge, Mass., as early as 1713, and that it meant 'excellent.' . . . Cf. Lowland Sc. 'yankie,' a sharp, clever, forward woman; 'yanker,' an agile girl, an incessant speaker; 'yanker,' a smart stroke, a great falsehood; 'yank,' a sudden and severe blow, a sharp stroke; 'yanking,' active, pushing (Jamieson). . . . If Dr. Gordon's view be right, the word 'yankee' may be identified with the Sc. 'yankie,' as above; and all the Scotch words appear to be of Scand. origin, due, ultimately Icel. 'juga,' to move about. . . . The fundamental idea is that of 'quick motion'; see 'yacht.' But the word cannot be said to be solved."—W. W. Skeat, *Etymolog. Dict.*—"The best authorities on the subject now agree upon the derivation of this term from the imperfect effort made by the Northern Indians to pronounce the word 'English.'"—M. Schele de Vere, *Americanisms*, p. 23.

YEOMEN.—"A 'yeoman' is defined by Sir Tho. Smith (Rep. Anglor. lib. 1. c. 24) as he whom our law calls 'legalem hominem,' a free-

born man that may dispense of his own free land in yearly reveales to the sum of forty shillings. But it had also a more general application, denoting like 'valet' a higher kind of service, which still survives in the current phrase to do 'yeoman's service.' In the household of the mediæval knight or baron the younger sons of yeomen would form a large proportion of the servitors, and share with the younger sons of knight or squire the common name of 'valetti.' The yeomen too who lived on their own land, but wore the 'livery of company' of some baron or lesser territorial magnate, would also be his 'valets.' The mediæval 'yeoman' was the tenant of land in free socage. The extent of his holding might be large or small."—T. P. Taswell-Langmead, *Eng. Const. Hist.*, p. 343, foot-note.—"At the period when the higher gentry began to absorb what remained of the feudal nobility, and established themselves definitely as an upper class, the small landowners—freeholders holding estates of inheritance or for life—long leaseholders and the larger copyholders made corresponding progress, and the yeomen (the common term applied to all of them) began in their turn to fill the position and take the rank of an agricultural middle class. The reign of Henry VI. had marked the zenith of their influence; they had by that time fully realized the fact of their existence as a body. The inferior limit of their class was approximately determined by the electoral qualification of the forty-shilling freeholder (under the Act of 1430), or by the £4 qualification for the office of juror. The superior limit was marked from a legal point of view by the property qualification of a magistrate, but socially there was not on this side any definite boundary line. In 1440 it was considered necessary to forbid the county electors to return 'valetti,' that is yeomen, to the House of Commons, a proof that custom and opinion left to themselves did not look upon the higher section of their class as unworthy of a seat in Parliament, an honour originally confined to the knights. Fortescue testifies almost with triumph to the fact that in no country of Europe were yeomen so numerous as in England."—E. Boutmy, *The English Constitution*, pt. 2, ch. 4.—In later English use the word "yeoman" has signified "a man of small estate in land, not ranking among the gentry."

YEOMEN OF THE GUARD.—"This corps was instituted by Henry VII. in 1485. It now consists of 100 men, six of whom are called Yeomen Hangers, and two Yeomen Bedgoers; the first attending to the hangings and tapestries of the royal apartments, and the second taking charge of all beds during any royal removals. The yeomen of the guard carry up the royal dinner, and are popularly designated as 'buck-eaters,' respecting the origin of which name some differences of opinion exist, for many maintain that they never had any duties connected with the royal banquet. A yeoman usher and a party of yeomen attend in the great chamber of the palace on drawing-room and levee days, to keep the passage clear."—C. R. Dodd, *Manual of Dignities*, pt. 2, sect. 1.

ZEMSTVO, The.—“The Zemstvo [in Russia] is a kind of local administration which supplements the action of the rural communes [see MIR], and takes cognizance of those lighter public wants which individual communes cannot

possibly satisfy. Its principal duties are to keep the roads and bridges in proper repair, to provide means of conveyance for the rural police and other officials, to elect the justices of peace, to look after primary education and sanitary affairs, to watch the state of the crops and take measures against approaching famine, and in short to undertake, within certain clearly-defined limits, whatever seems likely to increase the material and moral well-being of the population. In form the institution is parliamentary—thus, in so far as it consists of an assembly of deputies which meets at least once a year, and of a permanent executive bureau elected by the assembly from among its members. . . . Once every three years the deputies are elected in certain fixed proportions by the landed proprietors, the rural communes, and the municipal corporations. Every province (*guberniya*) and each of the districts (*uyezdi*) into which the province is subdivided has such an assembly and such a bureau.”—D. M. Wallace, *Russia*, ch. 14.

ZOAN.—**TANIS**.—**SAN**.—These are the names which, at different periods, have been given to an ancient city near the northeastern borders of Egypt, the ruins of which have been identified and are being explored, on the east bank of the canal that was formerly the Tanitic branch of the Nile. Both in Egyptian history and Biblical history Zoan was an important place. “The whole period of the Hebrew sojourn is closely interwoven with the history of Zoan. Here ruled the king in whose name Egypt was governed by the Hebrew, who was no less than regent; here ruled those who still favoured the people of Israel. Under the great Oppression, Zoan was a royal residence.”—R. S. Poole, *Cities of Egypt*, ch. 5.

ZOROASTRIANS.—**MAGIANS**.—**PARSEES**.—“The Iranians were in ancient times the dominant race throughout the entire tract lying between the Sullivan mountains and the Pamir steppe on the one hand, and the great Mesopotamian valley on the other. . . . At a time which it is difficult to date, but which those best skilled in Iranian antiquities are inclined to place before the birth of Moses, they grew up, in the region whereof we are speaking, a form of religion marked by very special and unusual features. . . . Ancient tradition associates this religion with the name of Zoroaster. Zoroaster, or Zarathustra, according to the native spelling, was, by one account, a Median king who conquered Babylon about B. C. 2458. By another, which is more probable, and which rests, moreover, on better authority, he was a Bactrian, who, at a date not quite so remote, came forward in the broad plain of the middle Oxus to instil into the minds of his countrymen the doctrines and precepts of a new religion. . . . His religion gradually spread from ‘happy Bactra,’ ‘Bactra of the lofty banner,’ first to the neighbouring countries, and then to all the numerous tribes of the Iranians, until at last it became the established religion of the mighty empire of Persia, which, in the middle of the 6th century before our era, established itself on the ruins of the Assyrian and Babylonian kingdoms, and shortly afterwards overran and subdued the ancient monarchy of the Pharaohs. In Persia it maintained its ground, despite the shocks of Grecian and Parthian conquest, until Mohammedan intolerance drove it out at the point of the sword, and forced it to seek a refuge further east, in the peninsula of Hindustan. Here it still continues, in Guzerat and in Bombay, the creed of that ingenious and intelligent people known to Anglo-Indians—and may we not say to Englishmen generally?—as Parsees [see PARSEES]. The religion of the Parsees is contained in a volume of some size, which has received the name of ‘the Zendavesta.’ . . . Anquetil Duperron introduced the sacred book of the Parsees to the knowledge of Europeans under this name; and the word thus introduced can scarcely be now displaced. Otherwise, ‘Avesta-

Zend' might be recommended as the more proper title. 'Avesta' means 'text,' and Zend means 'comment.' 'Avesta u Zend,' or 'Text and Comment,' is the proper title, which is then contracted into 'Avesta-Zend.' . . . Subjected for the last fifty years to the searching analysis of first-rate orientalists—Burnouf, Westergaard, Brockhaus, Spiegel, Haug, Windischmann, Hübschmann,—this work has been found to belong in its various parts to very different dates, and to admit of being so dissected as to reveal to us, not only what are the tenets of the modern Parsees, but what was the earliest form of that religion wherof theirs is the remote and degenerate descendant. . . Signs of a great antiquity are found to attach to the language of certain rhythmical compositions called Gâthâs or hymns; and the religious ideas contained in these are found to be at once harmonious, and also of a simple and more primitive character than those contained in the rest of the volume. From the Gâthâs chiefly, but also to some extent from other, apparently very ancient, portions of the Zendavesta, the characteristics of the early Iranian religion have been drawn out by various scholars, particularly by Dr. Martin Haug. . . The most striking feature of the religion, and that which is generally allowed to be its leading characteristic, is the assertion of Dualism. By Dualism we mean the belief in two original uncreated principles, a principle of good and a principle of evil. . . Both principles were real persons, possessed of will, intelligence, power, consciousness, and other personal qualities. To the one they gave the name of Ahura-Mazda, to the other that of Angro-Mainyus. . . The names themselves sufficiently indicated to those who first used them the nature of the two beings. Ahura-Mazda was the 'all-bountiful, all-wise, living being' or 'spirit,' who stood at the head of all that was good and lovely, beautiful and delightful. Angro-Mainyus was the 'dark and gloomy intelligence' that had from the first been Ahura-Mazda's enemy, and was bent on thwarting and vexing him. And with these fundamental notions agreed all that the sacred books taught concerning either being. . . The two great beings who thus divided between them the empire of the universe were neither of them content to be solitary. Each had called into existence a number of inferior spirits, who acknowledged their sovereignty, fought on their side, and sought to execute their behests. At the head of the good spirits subject to Ahura-Mazda stood a band of six dignified with the title of Amesha-Spentas, or 'Immortal Holy Ones.' . . In direct antithesis to these stood the band, likewise one of six, which formed the council and chief support of Angro-Mainyus. . . Besides these leading spirits there was marshalled on either side an innumerable host of lesser and subordinate ones, called respectively 'ahuras' and 'devas,' who constituted the armies or attendants of the two great powers, and were employed by them to work out their purposes. The leader of the angelic hosts, or 'ahuras' was a glorious being, called Sraosha or Serosh—'the good, tall, fair Serosh,' who stood in the Zoroastrian system where Michael the Archangel stands in the Christian. . . Neither Ahura-Mazda nor the Amesha-Spentas were represented by the early Iranians under any material forms. The Zoroastrian sys-

tem was markedly anti-idolatrous; and the utmost that was allowed the worshipper was an emblematic representation of the Supreme Being by means of a winged circle, with which was occasionally combined an incomplete human figure, robed and wearing a tiara. . . The position of man in the cosmic scheme was determined by the fact that he was among the creations of Ahura-Mazda. Formed and placed on earth by the Good Being, he was bound to render him implicit obedience, and to oppose to the utmost Angro-Mainyus and his creatures. His duties might be summed up under the four heads of piety, purity, industry, and veracity. Piety was to be shown by an acknowledgment of Ahura-Mazda as the One True God, by a reverential regard for the Amesha-Spentas and the Izeds, or lower angels, by the frequent offering of prayers, praises, and thanksgivings, the recitation of hymns, the occasional sacrifice of animals, and the performance from time to time of a curious ceremony known as that of the Haoma or Hoма [see SOMA.—HAOMA]. . . The purity required of the Iranians was inward as well as outward. . . The duty of veracity was inculcated perhaps more strenuously than any other. . . If it be asked what opinions were entertained by the Zoroastrians concerning man's ultimate destiny, the answer would seem to be, that they were devout and earnest believers in the immortality of the soul, and a conscious future existence. . . The religion of the early Iranians became corrupted after a time by an admixture of foreign superstitions. The followers of Zoroaster, as they spread themselves from their original seat upon the Oxus over the regions lying south and south-west of the Caspian Sea, were brought into contact with a form of faith considerably different from that to which they had previously been attached, yet well adapted for blending with it. This was Magism, or the worship of the elements [see MAGIANS]. The early inhabitants of Armenia, Cappadocia, and the Zagros mountain-range, had, under circumstances that are unknown to us, developed this form of religion, and had associated with its tenets a priest-caste. . . The four elements, fire, air, earth, and water, were recognised as the only proper objects of human reverence. . . When the Zoroastrians came into contact with Magism, it impressed them favourably. . . The result was that, without giving up any part of their previous creed, the Iranians adopted and added on to it all the principal points of the Magian belief, and all the more remarkable of the Magian religious usages. This religious fusion seems first to have taken place in Media. The Magi became a Median tribe, and were adopted as the priest-caste of the Median nation." This "produced an amalgam that has shown a surprising vitality, having lasted above 2,000 years—from the time of Xerxes, the son of Darius Hyastaspis (B. C. 485-465) to the present day."—G. Rawlinson, *Religions of the Ancient World*, ch. 3.—"As the doctrines of Zoroaster bear in several points such a striking resemblance to those of Christianity, it is a question of grave importance to ascertain the age in which he lived. . . Since there can be no doubt that . . . we must assign to Zarathustra Spitama a date prior to the Median conquest of Babylon by a Zoroastrian priest king, the only question remaining to be solved

is, whether he lived only a short time, or long, before that event. I am inclined to believe that he lived only about 100 or 200 years before that time, and that the conquest of Babylon was one of the last consequences of the great religious enthusiasm kindled by him. He preached, like Moses, war and destruction to all idolaters and wicked men. . . . According to this investigation we cannot assign to Zarathustra Spitama a later date than about 2300 B. C. Thus he lived not only before Moses, but even, perhaps, before Abraham. . . . He was the first prophet of truth who appeared in the world, and kindled a fire which thousands of years could not entirely extinguish."—M. Haug, *Lect. on an Original Speech of Zoroaster* (*Yasna* 45), pp. 17, 26.—The same, *Essays on the Sacred Language, Writings and Religion of the Parsees*.—"Prof. Darmesteter has published a new translation [of the Zend Avesta] with a most ably written introduction, in which he maintains the thesis that not a line of our Avesta text is older than the time of Alexander's conquest, while the greater part belongs to a much later date. We may briefly remind our readers that, according to the traditional view, the old Zoroastrian books, which belong to the times of the Achemenide, were destroyed at the Macedonian conquest, but that portions were preserved by the people, who retained the old faith, during the long period of the Arsacidan rule, though the Court favoured Greek civilization. . . . According to this view, we still possess the genuine remains of the old pre-Alexandrine literature, mutilated and corrupted during the period of Arsacidan indifference, but yet, so far as they go, a faithful representative of the sacred text of the Achemenian time. . . . Prof. Darmesteter, on the contrary, maintains that all our texts are post-Alexandrine in form and in substance. Some may belong to the 1st century B. C. or A. D., and some, as the legislative parts of the Vendidad, may be founded on older texts now lost; but a large portion was composed by the priests of Ardashir's Court in the 3d century. The Gāthās, which till now have been generally considered as the ancient nucleus of the whole system and ascribed to Zoroaster himself, are, in the Professor's opinion, certainly modern, and are relegated to the 1st century of our era."—*The Athenæum*, June 30, 1894.

ZOUAVES, The.—During the wars of the French in Algeria, there arose a body of soldiers "who, both in the campaign in Algeria and in the contest in the Crimea, have acquired the very

highest renown. The name of the Zouaves will never be forgotten as long as the story of the siege of Sebastopol endures. . . . They were originally intended to be regiments composed of Frenchmen who had settled in Algeria, or their descendants; but the intermixture of foreigners in their ranks ere long became so considerable, that when they were transported to the shores of the Crimea, though the majority were French, they were rather an aggregate of the 'Dare-devils' of all nations. In their ranks at Sebastopol were some that held Oxford degrees, many those of Göttingen and Paris, crowds who had been ruined at the gaming-table, not a few who had fled from justice, or sought escape from the consequences of an amorous adventure. Yet had this motley crowd, composed of the most daring and reckless of all nations, become, in the rude school of the wars in Algeria, an incomparable body of soldiers, second to none in the world in every military duty, perhaps superior to any in the vehemence and rush of an assault."—Sir A. Alison, *Hist. of Europe*, 1815-1852, ch. 45.

SUPPLEMENT.

THIS Supplement contains: 1. Some passages translated from German and French writings, touching matters less competently treated in the body of the work, where the compilation is restricted to "the literature of history in the English language," either originally or in published translations. 2. Some postscripts on recent events, and some excerpts from recent books. 3. Treatment of some topics that were omitted from their places in the body of the work, either intentionally or by accident, and which it seems best to include. 4. Some cross-references needed to complete the subject-indexing of the work throughout. 5. A complete series of chronological tables, by centuries. 6. A series of dynastic genealogies, in a form different from the usual plan of their construction, and which, it is hoped, may be found more easily intelligible. 7. Select bibliographies, partly annotated, of several of the more important fields of history. 8. A full list of the works quoted from in this compilation of "History for Ready Reference and Topical Reading," with the names of the publishers.

The selections and translations from the German, excepting Bismarck's speeches, have been made by Ernest F. Henderson, A. M., Ph. D., author of "A History of Germany in the Middle Ages." Mr. Henderson has also prepared and annotated the bibliography of German and French writings.

ABHORRERS.—Charles II. and his court, in England, were troubled about 1680 with numerous petitions for the calling of parliament. "As the king found no law by which he could punish those importunate, and, as he deemed them, undutiful solicitations, he was obliged to encounter them by popular applications of a contrary tendency. Wherever the church and court party prevailed, addresses were framed, containing expressions of the highest regard to his majesty, the most entire acquiescence in his wisdom, the most dutiful submission to his prerogative, and the deepest abhorrence of those who endeavoured to encroach upon it, by prescribing to him any time for assembling the parliament. Thus the nation came to be distinguished into 'petitioners' and 'abhorers.'"—D. Hume, *Hist. of England*, ch. 68.

AFRICA.—A chronological record of European Exploration, Missionary Settlement, Colonization and Occupation.

1415.—Conquest of Ceuta by the Portuguese.

1434-1461.—Portuguese explorations down the western coast, from Cape Bojador to Cape Mesurado, in Liberia, under the direction of Prince Henry, called the Navigator.

1442.—First African slaves brought into Europe by one of the ships of the Portuguese Prince Henry.

1471-1482.—Portuguese explorations carried beyond the Guinea Coast, and to the Gold Coast, where the first settlement was established, at El Mina.

1482.—Discovery of the mouth of the Zaire or Congo by the Portuguese explorer, Diogo Cao, or Diego Cam.

1485-1596.—Establishment of Roman Catholic missions on the western coast, and creation, by Pope Clement VIII., of the diocese of Mbazi (San Salvador), embracing Congo, Angola and Benguela.

1486.—Unconscious rounding of the Cape of Good Hope by Bartholomew Diaz.

1490-1527.—Visit to Abyssinia of Pedro da Covilhão, or Covillam, the Portuguese explorer.

1497.—Voyage of Vasco da Gama round the Cape of Good Hope to India.

1505-1508.—Portuguese settlements and fortified stations established on the eastern coast, from Sofala to Zanzibar.

1506.—Discovery of Madagascar by the Portuguese.

1520-1527.—Portuguese embassy to Abyssinia, narrated by Father Alvarez.

1552-1553.—Beginning of English voyages to the Guinea and Gold Coasts.

1560.—French trading to the Senegal and Gambia begun.

1562.—First slave-trading voyage of Sir John Hawkins to the Guinea Coast.

1569.—Expedition of Barreto up the Zambesi from its mouth to Sena and beyond.

1578.—Founding of St. Paul de Loando, the capital of the Portuguese possessions on the west coast.

1582 (about).—Founding of the French post, St. Louis, at the mouth of the Senegal.

1588.—First (English) African Company chartered by Queen Elizabeth.

1595.—Opening of trade on the western coast by the Dutch.

1618-1621.—Exploration of the River Gambia by George Thompson and Captain Richard Jobson, for the Royal Niger Company of England.

1625.—Jesuit mission of Father Lobo and his companions to Abyssinia.

1637.—Visit of Claude Jannequin, Sieur de Rochfort, to the River Senegal.

1644.—Fort Dauphin founded by the French in the island of Madagascar.

1652.—Dutch settlement at the Cape of Good Hope.

1662.—British African Company chartered by Charles II. and fort built on the Gambia.

1664-1684.—Wars of France with the Algerines.

1681-1683.—Brandenburg African Company formed by "the Great Elector"; settlements established and trade opened on the western coast.

1694-1724.—Explorations of the River Senegal and interior by André Bruce, the French governor, for the Royal Senegal Company.

1698.—Arauc conquests from the Portuguese on the eastern coast, breaking their ascendancy.

1702-1717.—Captivity of Robert Drury in Madagascar.

1723.—Exploration of the Gambia by Captain Bartholomew Stibbs, for the English Royal African Company.

1736.—Moravian Mission planted on the Gold Coast.

1737.—Moravian Mission planted by George Schmidt among the Hottentots; suppressed by the Dutch government in 1744, and revived in 1792.

1754.—Substantial beginning of the domination in Madagascar of the Hovas, a people of Malay origin.

1758.—British conquest of the French establishments on the Senegal.

1761-1762.—Dutch expedition from Cape Colony beyond the Orange River into Namaqualand.

1758-1763.—Journey of James Bruce to the fountains of the Blue Nile in Abyssinia.

1774.—Founding of a French colony in Madagascar by Count Benyowsky.

1775-1776.—Explorations of Andrew Sparrman from Cape Town to Great Fish River.

1778.—Cession by Portugal to Spain of the island of Fernando Po.

1779.—Recovery of Senegal from the English by the French.

1781-1785.—Travels of M. Le Vaillant from the Cape of Good Hope into the interior of South Africa, among the Hottentots and Kafirs.

1787.—Founding of the English settlement for freed slaves at Sierra Leone.

1788.—Formation of the African Association in England, under the presidency of Sir Joseph Banks, for systematic exploration in the interest of geographical science.

1789-1794.—Fruitless attempts by agents of the African Association to reach the Niger and Timbuctoo from the west coast and from the Nile.

1795.—The Cape Colony taken from the Dutch by the English.

1795-1797.—The first exploring journey of Mungo Park, in the service of the African Association, from the Gambia, penetrating to the Niger, at Sego.

1798.—Mission of Dr. John Vanderkemp to the Kafirs, with the support of the London Missionary Society.

1798.—Journey of the Portuguese Dr. La Cerda from the Lower Zambesi to the kingdom of Cazembe, on Lake Moero.

1800.—Unsuccessful attempts of the Dutch Missionary Society in Cape Town among the Bechuanas.

1801-1805.—War of the United States with the pirates of Tripoli.

1802-1806.—Restoration of Cape Colony to the Dutch and its reconquest by the English.

1802-1811.—Journey of the Pombeiros, Baptista and José (negroes) across the continent from Angola to Tete, on the Zambesi River.

1804.—Founding of the Church of England Mission in Sierra Leone.

1805.—Second expedition of Mungo Park from the Gambia to the Niger, from which he never returned.

1805.—Travels of Dr. Lichtenstein in Bechuanaland.

1806.—Missionary journey of Christian and William Albrecht beyond the Orange River.

1809.—Second conquest of Senegal by the English.

1810.—Missions in Great Namaqualand and Damaraland begun by the London Missionary Society.

1812.—Exploration of the Orange River and the headwaters of the Limpopo by Campbell, the missionary.

1812-1815.—Journey of Burckhardt under the auspices of the African Association, up the Nile, through Nubia, to Berbera, Shendi, and Suakin; thence through Jidda to Mecca, in the character of a Mussulman.

1815.—Senegal restored to France by the Treaty of Paris.

1815.—War of the United States with the practical Algerines.

1815.—Shipwreck and enslavement of Captain James Riley in Morocco.

1816.—Bombardment of Algiers by a British fleet under Lord Exmouth.

1816-1818.—Fatal and fruitless attempts of Tuckey, Peddie, Campbell, Gray and Dochard to explore the lower course and determine the outlet of the Niger.

1818.—Mission in Madagascar undertaken by the London Missionary Society.

1818.—Beginning, on the Orange River, of the missionary labors of Robert Moffat in South Africa.

1818.—Exploration of the sources of the Gambia by Gaspard Moillon, from Fort St. Louis, at the mouth of the Senegal.

1818-1820.—Exploration of Fezzan to its southern limit, from Tripoli, by Captain Lyon.

1820.—First Wesleyan Mission founded in Kaffrland.

1820.—Treaty abolishing the slave-trade in Madagascar.

1821.—Mission-work in Kaffraria undertaken by the Glasgow Missionary Society.

1822.—Founding of the republic of Liberia by the American Colonization Society.

1822.—Official journey of Lieutenant Lalng from Sierra Leone in the "Timannee, Kooranko and Soollma" countries.

1822-1825.—Expedition of Captain Clapper-ton, Dr. Oudney, and Colonel Denham, from Tripoli to Lake Tchad and beyond.

1825-1826.—Expedition of Major Lalng, in the service of the British Government, from Tripoli, through the desert, to Timbuctoo, which he reached, and where he remained for a month. Two days after leaving the city he was murdered.

1825-1827.—Expedition of Captain Clapper-ton from the Bight of Benin to Sokoto.

1827.—Moravian Mission settled in the Tambookie territory, South Africa.

1827.—Journey of Linnat de Bellefonds, for the African Association, up the White Nile to 13° 0' north latitude.

1827-1828.—Journey of Caillé from a point on the west coast, between Sierra Leone and the Gambia, to Jenné and Timbuctoo; thence to Fez and Tangier.

1828.—Undertakings of the Basle Missionary Society on the Gold Coast.

1830-1831.—Exploration of the Niger to the sea by Richard and John Lander, solving the question as to its mouth.

1830-1846.—French conquest and subjugation of Algiers.

1831.—Portuguese mission of Major Montelro and Captain Gamitto to the court of Muata Cazembe.

1831.—Absorption of the African Association by the Royal Geographical Society of London.

1832-1834.—First commercial exploration of the lower Niger, from its mouth, by Macgregor Laird, with two steamers.

1833.—Mission in Basutoland established by the Evangelical Missionary Society of Paris.

1834.—Beginning of missionary labors under the American Board of Missions in South Africa.

1834.—Mission founded at the Palmus on the western coast, by the American Board for Foreign Missions.

1834.—The Great Trek of the Dutch Boers from Cape Colony and their founding of the republic of Natal.

1835.—Mission among the Zulus established by the American Board of Foreign Missions.

1835-1849.—Persecution of Christians in Madagascar.

1836-1837.—Explorations of Captain Sir James E. Alexander in the countries of the Great Namaquas, the Bushmen and the Hill Damaras.

1839-1841.—Egyptian expeditions sent by Mehemet Ali up the White Nile to latitude 6° 35' N.; accompanied and narrated in part by Ferdinand Verne.

1839-1843.—Missionary residence of Dr. Krapf in the kingdom of Shoa, in the Ethiopian highlands.

1840.—Arrival of Dr. Livingstone in South Africa as a missionary.

1841.—Expedition of Captain Trotter and Allen, sent by the British Government to treat with tribes on the Niger for the opening of commerce and the suppression of the slave trade.

1842.—Travels of Dr. Charles Johnston in Southern Abyssinia.

1842.—Gaboon Mission, on the western coast near the equator, founded by the American Board of Foreign Missions.

1842.—The Rhenish Mission established by German missionaries at Bethanien in Namaqualand.

1842.—Wesleyan and Norwegian Missions opened in Natal.

1842-1862.—French occupation of territory on the Gaboon and the Ogowé.

1843.—British annexation of Natal, and migration of the Boers to found the Orange Free State.

1843.—Exploration of the Senegal and the Falmé by Huard-Bessières and Raffeneil.

1843-1845.—Travels and residence of Mr. Parkyn in Abyssinia.

1843-1848.—Hunting journeys of Gordon Cumming in South Africa.

1844.—Mission founded by Dr. Krapf at Mombassa, on the Zanzibar coast.

1845.—Duncan's journey for the Royal Geographical Society from Whydah, via Abome, to Adoufoula.

1845.—Mission to the Cameroons established by the Baptist Missionary Society of England.

1846.—Unsuccessful attempt of Raffeneil to cross Africa from Senegal to the Nile, through the Sudan.

1846.—Mission of Samuel Crowther (afterwards Bishop of the Niger), a native and a liberated slave, to the Yoruba country.

1846.—Mission on the Calabar River founded by the United Presbyterian Church in Jamaica.

1847-1849.—Interior explorations of the German missionaries Dr. Krapf and Mr. Rebmann, from Mombassa on the Zanzibar coast.

1848.—Founding of the Transvaal Republic by the Boers.

1849.—Missionary journey of David Livingstone northward from the country of the Bechuanaas, and his discovery of Lake Ngami.

1849-1851.—Journey of Ladislaus Magyar from Benguela to the kingdoms of Bihe and Moluwa on the interior table-land, and across the upper end of the Zambesi valley.

1850.—Sale of Danish forts at Quetta, Adda, and Fingo, on the western coast, to Great Britain.

1850-1851.—Travels of Andersson and Galton from Walilish Bay to Ovampo-land and Lake Ngami.

1850-1855.—Travels of Dr. Barth from Tripoli to Lake Tchad, Sokoto and the Upper Niger to Timbuctoo, where he was detained for nine months.

1851.—Discovery of the Zambesi by Dr. Livingstone.

1852-1863.—Hunting and trading journeys of Mr. Chapman in South Africa, between Natal and Walflsh Bay and to Lake Ngami and the Zambesi.

1853.—Founding of the Diocese of Natal by the English Church and appointment of Dr. Colenso to be its bishop.

1853-1856.—Journey of Dr. Livingstone from Linyanti, the Makololo capital, up the Zambesi and across to the western coast, at St. Paul de Loando, thence returning entirely across the continent, down the Zambesi to Quillimane at its mouth, discovering the Victoria Falls on his way.

1853-1858.—Ivory-seeking expeditions of John Petherick, up the Bahr-el-Ghazel.

1853-1859.—Roman Catholic mission established at Gondokoro, on the Upper Nile.

1854.—Exploration of the Somali country—the "eastern horn of Africa"—by Captains Burton and Speke.

1855.—Beginning of attempts by the French governor of Senegal, General Faidherbe, to carry the flag of France into the Western Sudan.

1856-1859.—Journeys of Du Chailu in the western equatorial regions, on the Gaboon and the Ogobal.

1857-1858.—Expedition of Captains Burton and Speke, from Zanzibar, through Uzaramo, Usagara, Ugogo, and Unyamwezi, to Ujiji, on Lake Tanganyika—making the first European discovery of the lake; returning to Kazé, and thence continued by Speke alone, during Burton's illness, to the discovery of Lake Victoria Nyanza.

1858.—Journey of Andersson from Walflsh Bay to the Okavango River.

1858.—English mission station founded at Victoria on the Cameroons coast.

1858-1863.—Expedition of Dr. Livingstone, in the service of the British Government, exploring the Shiré and the Rovuma, and discovering and exploring Lake Nyassa—said, however, to have been known previously to the Portuguese.

1860-1861.—Journey of Baron von Decken from: Mombassa on the Zanzibar coast, to Kilimanjaro mountain.

1860-1862.—Return of Speke, with Captain Grant, from Zanzibar to Lake Victoria Nyanza, visiting Karangwe, and Uganda, and reaching the outlet of the Nile; thence through Unyoro to Gondokoro, and homeward by the Nile.

1861.—Establishment of the Universities Mission by Bishop Mackenzie on the Upper Shiré.

1861-1862.—English acquisition of the town and kingdom of Lagos on the Bight of Benin by cession from the native ruler.

1861-1862.—Sir Samuel Baker's exploration of the Abyssinian tributaries of the Nile.

1861-1862.—Journey of Captain Burton from Lagos, on the western coast, to Abeokuta, the capital of the Akus, in Yoruba, and to the Cameroons Mountains.

1861-1862.—Journey of Mr. Baines from Walflsh Bay to Lake Ngami and Victoria Falls.

1862.—Resumption of the Christian Mission in Madagascar, long suppressed.

1862-1867.—Travels of Dr. Rohlfs in Morocco, Algeria and Tunis, and exploring journey from the Gulf of the Syrtes to the Gulf of Guinea.

1863.—Travels of Winwood Reade on the western coast.

1863.—Incorporation of a large part of Kaffraria with Cape Colony.

1863.—Second visit of Du Chailu to the western equatorial region and journey to Ashangoland.

1863-1864.—Official mission of Captain Burton to the King of Dahomey.

1863-1864.—Exploration of the Bahr-el-Ghazel from Khartoum by the wealthy Dutch heiress, Miss Tinné, and her party.

1863-1865.—Expedition by Sir Samuel Baker and his wife up the White Nile from Khartoum, resulting in the discovery of Lake Albert Nyanza, as one of its sources.

1864.—Mission of Lieutenant Mage and Dr. Quilatin, sent by General Faidherbe from Senegal to the king of Segou, in the Sudan.

1866.—Founding of a Norwegian mission in Madagascar.

1866-1873.—Last journey of Dr. Livingstone, from the Rovuma River, on the eastern coast, to Lake Nyassa; thence to Lake Tanganyika, Lake Moero, Lake Bangweolo, and the Lualaba River, which he suspected of flowing into the Albert Nyanza, and being the ultimate fountain head of the Nile. In November, 1871, Livingstone was found at Ujiji, on Lake Tanganyika, by Henry M. Stanley, leader of an expedition sent in search of him. Declining to quit the country with Stanley, and pursuing his exploration of the Lualaba, Livingstone died May 1, 1873, on Lake Bangweolo.

1867.—Mission founded in Madagascar by the Society of Friends.

1867-1868.—British expedition to Abyssinia for the rescue of captives; overthrow and death of King Theodore.

1868.—British annexation of Basutoland in South Africa.

1869.—Christianity established as the state religion in Madagascar.

1869.—Fatal expedition of Miss Tinné from Tripoli into the desert, where she was murdered by her own escort.

1869-1871.—Explorations of Dr. Schweinfurth between the Bahr-el-Ghazel and the Upper Congo, discovering the Wellé River.

1869-1873.—Expedition of Dr. Nachtigal from Tripoli through Kuka, Tibesti, Borku, Wadai, Darfur, and Kordofan, to the Nile.

1870-1873.—Official expedition of Sir Samuel Baker, in the service of the Khedive of Egypt, as Pasha, to annex Gondokoro, then named Ismailia, and to suppress the slave-trade in the Egyptian Sudan, or Equatoria.

1871.—Transfer of the rights of Holland on the Gold Coast to Great Britain.

1871.—Annexation of Griqualand West to Cape Colony.

1871.—Scientific tour of Sir Joseph D. Hooker and Mr. Ball in Morocco and the Great Atlas.

1871.—Missionary journey of Mr. Charles New in the Masai country and ascent of Mount Kilimanjaro.

1871-1880.—Hunting journeys of Mr. Selous in South Africa, beyond the Zambesi.

1872-1875.—Travels of the naturalist, Reinhold Buchholz, on the Guinea coast.

1872-1879.—Travels of Dr. Holub between the South African Diamond fields and the Zambesi.

1873-1875.—Expedition of Captain V. L. Cameron, from Zanzibar to Lake Tanganyika,

and exploration of the Lake; thence to Nyanzwe on the Lunaiaba, and thence across the continent, through Ulunda, to the Portuguese settlement at Benguela, on the Atlantic coast.

1873-1875.—Travels of the naturalist, Frank Oates, from Cape Colony to the Victoria Falls.

1873-1876.—Explorations of Gnasfeldt, Falkenstein and Pechuel-Loesche, under the auspices of the German African Association, from the Loango coast, north of the Congo.

1874.—British expedition against the Ashantees, destroying their principal town Coomassie.

1874.—Mission of Colonel Challié-Long from General Gordon, at Gondokoro, on the Nile, to M'tesé, king of Uganda, discovering Lake Ibrahim on his return, and completing the work of Speke and Baker, in the continuous tracing of the course of the Nile from the Victoria Nyanza.

1874-1875.—Expedition of Colonel C. Challié-Long to Lake Victoria Nyanza and the Makraka Niam-Niam country, in the Egyptian service.

1874-1876.—First administration of General Gordon, commissioned by the Khedive as Governor of Equatoria.

1874-1876.—Occupation and exploration of Darfur and Kordofan by the Egyptians, under Colonels Purdy, Mason, Prout and Colston.

1874-1877.—Expedition of Henry M. Stanley, fitted out by the proprietors of the New York Herald and the London Daily Telegraph, which crossed the continent from Zanzibar to the mouth of the Congo River; making a prolonged stay in the empire of Uganda and acquiring much knowledge of it; circumnavigating Lakes Victoria and Tanganyika, and exploring the then mysterious great Congo River throughout its length.

1874-1877.—Explorations of Dr. Junker in Upper Nubia and in the basin of the Bahr-el-Ghazel.

1875.—Expedition of Dr. Pogge, for the German African Association, from the west coast, south of the Congo, in the Congo basin, penetrating to Kawende, beyond the Ruru or Lulua River, capital of the Muata Yanvo, who rules a kingdom as large as Germany.

1875.—Expedition of Colonel Challié-Long into the country of the Makraka Niam-Niams.

1875.—Founding by Scottish subscribers of the mission station called Livingstonia, at Cape Maclear, on the southern shores of Lake Nyassa; headquarters of the mission removed in 1881 to Bandawé, on the same lake.

1875.—Mission founded at Bantyre, in the highlands above the Shiré, by the Established Church of Scotland.

1875-1876.—Seizure of Berbera and the region of the Juba River, on the Somali Coast, by Colonel Challié-Long, for the Khedive of Egypt, and their speedy evacuation, on the remonstrance of England.

1876.—Conference at Brussels and formation of the International African Association, under the presidency of the king of the Belgians, for the exploration and civilization of Africa.

1876.—Voyage of Romolo Gessi around Lake Albert Nyanza.

1876.—Mission in Uganda established by the Church Missionary Society of England.

1876-1878.—Scientific explorations of Dr. Schweinfurth in the Arabian Desert between the Nile and the Red Sea.

1876-1880.—Explorations and French annexations by Svorgnan de Brazza between the Ogowe and the Congo.

1877.—The Livingstone Inland Mission, for Christian work in the Congo valley, established by the East London Institute for Home and Foreign Missions.

1877-1879.—Second administration of General Gordon, as Governor-General of the Sudan, Darfur and the Equatorial Provinces.

1877-1879.—War of the British in South Africa with the Zulus, and practical subjugation of that nation.

1877-1879.—Journey of Serpa Pinto across the continent from Benguela via the Zambesi.

1877-1880.—Explorations of the Portuguese officers, Capello and Ivens, in western and central Africa, from Benguela to the territory of Yacca, for the survey of the river Cunango in its relations to the hydrographic basins of the Congo and the Zambesi.

1878.—Founding in Glasgow of the African Lakes Company, or "The Livingstone Central Africa Company," for trade on Lakes Nyassa and Tanganyika; by which company the "Stevenson Road" was subsequently built between the two lakes above named.

1878.—Wallish Bay and fifteen miles around it (on the western coast, in Namaqualand) declared British territory.

1878.—Journey of Paul Soleillet from Saint-Louis to Segou.

1878-1880.—Royal Geographical Society's East Central African expedition, under Joseph Thomson, to the Central African lakes, Tanganyika, Nyassa and Leopold, from Zanzibar.

1879.—Establishment, by the Belgian International Society, of a station at Karema, on the eastern shore of Lake Tanganyika.

1879.—Formation of the International Congo Association and the engagement of Mr. Stanley in its service.

1879.—Missionary expeditions to the Upper Congo region by the Livingstone Inland Mission and the Baptist Missionary Society.

1879.—Journey of Mr. Stewart, of the Livingstonia Mission, on Lake Nyassa, from that lake to Lake Tanganyika.

1879.—Discovery of the sources of the Niger, in the hills about 200 miles east of Freetown, the capital of Sierra Leone, by the French explorers, Zweifel and Moustier.

1879-1880.—Journey of Dr. Oskar Lenz, under the auspices of the German African Society, from Morocco to Timbuctoo, and thence to the Atlantic coast in Senegambia. The fact that the Sahara is generally above the sea-level, and cannot therefore be flooded, was determined by Dr. Lenz.

1879-1881.—Expedition of Dr. Buchner from Loanda to Kawende and the kingdom of the Muata Yanvo, where six months were spent in vain efforts to procure permission to proceed further into the interior.

1880.—Mission established by the American Board of Foreign Missions in "the region of Bilé and the Coanza," or Quanza, south of the Congo.

1880-1881.—War of the British with the Boers of the Transvaal.

1880-1881.—Official mission of the German explorer, Gerhardt Röllig, accompanied by Dr. Stecker, to Abyssinia.

1880-1884.—Campaigns of Colonel Borgnis-Desbordes in Upper Senegal, capturing Bamakou and extending French supremacy to the Niger.

1880-1884.—German East African Expedition, under Kaiser, Böhm, and Reichard, to explore, in the Congo Basin, the region between the Luapula and the Luapula.

1880-1886.—Explorations of Dr. Junker in the country of the Niam-Niam, seeking to determine the course and the outlet of the great river Wellé, and his journey from the Equatorial Province held by Emin Pasha against the Mahdi, through Unyoro and Uganda, to Zanzibar.

1880-1889.—Journey of Captain Casati, as correspondent of the Italian geographical review, "L'Esploratore," from Suakin, on the Red Sea, into the district of the Mombutu, west of Lake Albert, and the country of the Niam-Niam; in which travels he was arrested by the revolt of the Mahdi and forced to remain with Emin Pasha until rescued with the latter by Stanley, in 1889.

1881.—French Protectorate extended over Tunis.

1881.—Portuguese expedition of Captain Andrade from Senna on the Zambezi River to the old gold mines of Manica.

1881.—Journey of F. L. and W. D. James from Suakin, on the Red Sea, through the Basé country, in the Egyptian Sudan.

1881.—Founding of a mission on the Congo, at Stanley Pool, by the Baptist Missionary Society of England.

1881-1884.—Expedition of Dr. Pogge and Lieutenant Wissmann to Nyangwe on the Luapula, from which point Lieutenant Wissmann pursued the journey to Zanzibar, crossing the continent, while Dr. Pogge, returning, died soon after his arrival at St. Paul de Loanda.

1881-1885.—Revolt of the Mahdi in the Sudan; the mission of General Gordon to Khartoum to effect the evacuation of the country; his beleaguering there by the Mahdists; the unsuccessful expedition from England to rescue him; the fall of the city and his death.

1881-1887.—French protectorate established over territory on the Upper Niger and Upper Senegal.

1882.—Italian occupation of Abyssinian territory on the Bay of Assab.

1882.—Formation in England of the National African Company for the development of trade in the region of the Niger.

1882.—Missionary visit to the Masai people by Mr. J. T. East.

1882-1883.—German scientific expedition, under Dr. Böhm and Herr Reichard, to Lakes Tanganyika and Moero.

1882-1883.—Journey of Mr. H. H. Johnston on the Congo.

1882-1885.—Mr. Stutfield's travels through Morocco.

1883.—German acquisition of territory on Angra Pequena Bay, in Great Namaqualand.

1883.—Exploration of Masailand by Dr. Fischer, under the auspices of the Hamburg Geographical Society.

1883.—Explorations of Lieutenant Giraud in East Central Africa, descending for some distance the Luapula, which flows out of Lake Bangweolo, but driven back by hostile natives.

1883.—Geological and botanical investigation of the basins of Lakes Nyassa and Tanganyika,

by Mr. Henry Drummond, for the African Lakes Company.

1883.—Journey of Mr. O'Neill to Lake Shirwa and the sources of the Lujenda.

1883.—Journey of M. Révoil in the South Somali country to the Upper Jub.

1883-1884.—Explorations of Mr. Joseph Thomson from Mombassa, through Masailand, to the northeast corner of the Victoria Nyanza, under the auspices of the Royal Geographical Society.

1883-1885.—War of the French with the Hovas of Madagascar, resulting in the establishment of a French Protectorate over the island.

1883-1885.—Exploration of Lieutenant Giraud in the lake region—Lake Nyassa to Lake Bangweolo, Lake Moero and Lake Tanganyika.

1883-1886.—Austrian expedition, under Dr. Holub, from Cape Colony, through the Boer states, Bechuanaland and Matabeleland to the Zambesi, and beyond, to the borders of the Mashukulumbé territory, where the party was attacked, plundered, and driven back.

1884.—Annexation by Germany of the whole western coast (except Walifia Bay) between the Portuguese Possessions and those of the British in South Africa.

1884.—German occupation of territory on the Cameroons River, under treaties with the native chiefs. English treaties securing contiguous territory to and including the delta of the Niger.

1884.—German Protectorate over Togoland on the Gold Coast declared.

1884.—Expedition of Dr. Peters, representing the Society of German Colonization, to the coast region of Zanzibar, and his negotiation of treaties with ten native chiefs, ceding the sovereignty of their dominions.

1884.—Crown colony of British Bechuanaland acquired by convention with the South African Republic.

1884.—Portuguese Government expedition, under Major Carvalho, from Loanda to the Central African potentate called the Muata Yanvo.

1884.—Exploration of the Benué and the whole region of the Adamawa, by Herr Flegel, for the German African Society.

1884.—Scientific expedition of Mr. H. H. Johnston to Kilimanjaro mountain, sent by the British Association for the Advancement of Science and the Royal Society.

1884.—Discovery of the M'bangi or Ubangi River (afterwards identified with the Wellé—see below, 1887), by Captain Hansens and Lieutenant Van Gèle.

1884.—Exploration of Reichard in the southeastern part of the Congo State.

1884-1885.—The Berlin Conference of Powers, held to determine the limits of territory conceded to the International Congo Association; to establish freedom of trade within that territory, and to formulate rules for regulating in future the acquisition of African territory.

1884-1885.—Journey of Mr. Walter M. Kerr from Cape Colony, across the Zambesi, to Lake Nyassa, and down the Shiré River to the coast.

1884-1885.—Travels of Mr. F. L. James and party in the Somali country.

1884-1887.—Exploration by Dr. Schinz of the newly acquired German territories in southwest Africa.

1885.—Transfer of the rights of the Society of German Colonization to the German East Africa Company, and extension of imperial

protection to the territories claimed by the Company. German acquisition of Witu, north of Zanzibar.

1885.—Agreement between Germany and France, defining their respective spheres of influence on the Bight of Biafra, on the slave coast and in Senegambia.

1885.—Transformation of the Congo Association into the Independent State of the Congo, with King Leopold of Belgium as its sovereign.

1885.—British Protectorate extended to the Zambesi, over the country west of the Portuguese province of Sofala, to the 20th degree of east longitude.

1885.—British Protectorate extended over the remainder of Bechuanaland.

1885.—Italian occupation of Massowa, on the Red Sea.

1885.—Mission of Mr. Joseph Thomson, for the National African Company, up the Niger, to Sokoto and Gando, securing treaties with the sultans under which the company acquired paramount rights.

1885-1888.—Mission of M. Borelli to the kingdom of Shoa (Southern Ethiopia) and south of it.

1885-1889.—When, after the fall of Khartoum and the death of General Gordon, in 1885, the Sudan was abandoned to the Mahdi and the fanatical Mohammedans of the interior, Dr. Edward Schnitzer, better known as Emin Pasha, who had been in command, under Gordon, of the province of the Equator, extending up to Lake Albert, was cut off for six years from communication with the civilized world. In 1887 an expedition to rescue him and his command was sent out under Henry M. Stanley. It entered the continent from the west, made its way up the Congo and the Aruwimi to Yambuya; thence through the unexplored region to Lake Albert Nyanza and into communication with Emin Pasha; then returning to Yambuya for the rearguard which had been left there; again traversing the savage land to Lake Albert, and passing from there, with Emin and his companions, by way of Lake Albert Edward Nyanza (then ascertained to be the ultimate reservoir of the Nile system) around the southern extremity of the Victoria Nyanza, to Zanzibar, which was reached at the end of 1889.

1886.—Settlement between Great Britain and Germany of the coast territory to be left under the sovereignty of the Sultan of Zanzibar, and of the "spheres of influence" to be appropriated respectively by themselves, between the lakes and the eastern coast, north of the Portuguese possessions.

1886.—Agreement between France and Portugal defining limits of territory in Senegambia and at the mouth of the Congo.

1886.—Transformation of the National African Company into the British Royal Niger Company, with a charter giving powers of administration over a large domain on the River Niger.

1886.—Mission station founded by Mr. Arnot at Bunkaya, in the southeastern part of the Congo State.

1886-1887.—Journey of Lieutenant Wissmann across the continent, from Lufuaburg, a station of the Congo Association, in the dominion of Muta Yauvo, to Nyangwe, on the Juba, and thence to Zanzibar.

1886-1889.—Expeditions of Dr. Zintgraff in the Cameroons interior and to the Benue, for the bringing of the country under German influence.

1887.—Annexation of Zululand, partly to the Transvaal, or South African Republic, and the remainder to the British possessions.

1887.—French gunboats launched on the Upper Niger, making a reconnaissance nearly to Timbuctoo.

1887.—Identity of the Wellé River with the M'bangi or Ubangi established by Captain Van Gèle and Lieutenant Liénart.

1887.—First ascent of Kilimanjaro by Dr. Hans Meyer.

1887-1889.—Exploration by Captain Binger of the region between the great bend of the Niger and the countries of the Gold Coast.

1887-1890.—Expedition of Count Teleki through Masailand, having for its most important result the discovery of the Basso-Narok, or Black Lake, to which the discoverer gave the name of Lake Rudolf, and Lake Stefanie.

1888.—Chartering of the Imperial British East Africa Company, under concessions granted by the sultan of Zanzibar and by native chiefs, with powers of administration over a region defined ultimately as extending from the river Umba northward to the river Jub, and inland to and across Lake Victoria near its middle to the eastern boundary of the Congo Free State.

1888.—British supremacy over Matabeleland secured by treaty with its King Lobengula.

1888.—British Protectorate extended over Amantongaland.

1888.—Ascent of Mt. Kilimanjaro by Mr. Ehlers and Dr. Abbott; also by Dr. Hans Meyer.

1888.—Travels of Joseph Thomson in the Atlas and southern Morocco.

1889.—Royal charter granted to the British South Africa Company, with rights and powers in the region called Zambezia north of British Bechuanaland and the South African Republic, and between the Portuguese territory on the east and the German territory on the west.

1889.—Will of King Leopold, making Belgium heir to the sovereign rights of the Congo Free State.

1889.—Protectorate of Italy over Abyssinia acknowledged by the Negus.

1889.—Portuguese Roman Catholic Mission established on the south shore of Lake Nyassa. Portuguese exploration under Serpa Pinto in the Lake Nyassa region, with designs of occupancy frustrated by the British.

1889.—Journey of M. Crampel from the Ogové to the Likuala tributary of the Congo, and return directly westward to the coast.

1889.—Dr. Wolf's exploration of the southeast Niger basin, where he met his death.

1889.—Major Macdonald's exploration of the Benue, sometimes called the Tchadda (a branch of the Niger), and of its tributary the Kebbi.

1889.—Journey of Mr. H. H. Johnston north of Lake Nyassa and to Lake Leopold.

1889.—Journey of Mr. Sharpe through the country lying between the Shiré and Loangwa Rivers.

1889.—Mr. Pigott's journey to the Upper Tana, in the service of the Imperial British East Africa Company.

1889-1890.—British Protectorate declared over Nyassaland and the Shiré Highlands.

1889-1890.—Italian Protectorate established over territory on the eastern (oceanic) Somali coast, from the Gulf of Aden to the Jub River.

1889-1890.—Imperial British East Africa Company's expedition, under Jackson and Gedge, for the exploring of a new road to the Victoria Nyanza and Uganda.

1889-1890.—Captain Lugard's exploration of the river Sabakhi for the Imperial British East Africa Company.

1889-1890.—Journey of Lieutenant Morgen from the Cameroons, on the western coast to the Benue.

1889-1890.—French explorations in Madagascar by Dr. Catat and MM. Malsire and Foucart.

1890.—Anglo-German Convention, defining boundaries of the territories and "spheres of influence" respectively claimed by the two powers; Germany withdrawing from Vitu, and from all the eastern mainland coast north of the river Tana, and conceding a British Protectorate over Zanzibar, in exchange for the island of Heligoland in the North Sea.

1890.—French "sphere of influence" extending over the Sahara and the Sudan, from Algeria to Lake Tchad and to Say on the Niger, recognized by Great Britain.

1890.—Exploration of the river Sangha, an important northern tributary of the Congo, by M. Cholet.

1890.—Exploring journey of M. Hodister, agent of the Upper Congo Company, up the Lomami river and across country to the Luabala, at Nyangwe.

1890.—Journey of Mr. Garrett in the interior of Sierra Leone to the upper waters of the Niger.

1890.—Journey of Dr. Fleck from the western coast across the Kalihari to Lake Ngami.

1890-1891.—Italian possessions in the Red Sea united in the colony of Eritrea.

1890-1891.—Mission of Captain Lugard to Uganda and signature of a treaty by its king acknowledging the supremacy of the British East Africa Company.

1890-1891.—Exploration by M. Paul Crampel of the central region between the French territories on the Congo and Lake Tchad, ending in the murder of M. Crampel and several of his companions.

1890-1891.—Journey of Mr. Sharpe from Mandala, in the Shiré Highlands, to Garenganze, the empire founded by an African adventurer, Mshidi, in the Katanga copper country, between Lake Moero and the Luapula river on the east, and the Luabala on the west.

1890-1891.—Journey of Lieutenant Mizon from the Niger to the Congo.

1890-1891.—Journey of Captain Becker from Yambuys, on the Aruwimi, north-northwest to the Wellé.

1890-1892.—Italian explorations in the Somali countries by Signor Robecchi, Lieutenant Baudi di Vesme, Prince Ruspoli, and Captains Bottego and Grixoni.

1890-1893.—Expedition of Dr. Stuhlmann, with Emin Pasha, from Bagamoyo, via the Victoria Nyanza and the Albert Edward, to the plateau west of the Albert Nyanza. From this point Dr. Stuhlmann returned, while Emin pursued his way, intending it is said, to reach Kibonge, on the right bank of the Congo, south

of Stanley Falls. He was murdered at Kinena, 150 miles northeast of Kibonge, by the order of an Arab chief.

1891.—Extension of the British Protectorate of Lagos over the neighboring districts of Addo, Igbessa, and Ilaro, which form the western boundary of Yoruba.

1891.—Treaty between Great Britain and Portugal defining their possessions; conceding to the former an interior extension of her South African dominion up to the southern boundary of the Congo Free State, and securing to the latter defined territories on the Lower Zambesi, the Lower Shiré, and the Nyassa, as well as the large block of her possessions on the western coast.

1891.—Convention between Portugal and the Congo Free State for the division of the disputed district of Lunda.

1891.—Convention of the Congo Free State with the Katanga Company, an international syndicate, giving the Company preferential rights over reputed mines in Katanga and Urua, with a third of the public domain, provided it established an effective occupation within three years.

1891.—French annexation of the Gold Coast between Liberia and the Grand Bassam.

1891.—Opening of the Royal Trans-African Railway, in West Africa, from Loanda to Ambaca, 140 miles.

1891.—Survey of a railway route from the eastern coast to Victoria Lake by the Imperial British East Africa Company.

1891.—Exploration of the Jub River, in the Somali country, by Commander Dundas.

1891.—Exploration by Captain Dundas, from the eastern coast, up the river Tana to Mount Funa.

1891.—Mr. Bent's exploration of the ruined cities of Mashonaland.

1891.—Journey of M. Malsire from the Congo to the Shari.

1891.—Journeys of Captain Galloway in the Benin country, West Africa.

1891.—Mission established by the Berlin Missionary Society in the Konde country, at the northern end of Lake Nyassa.

1891-1892.—Incorporation of the African Lakes Company with the British South Africa Company. Organization of the administration of Northern Zambesia and Nyassaland.

1891-1892.—Expedition of the Katanga Company, under Captain Stairs, from Bagamoyo to Lake Tanganyika, thence through the country at the head of the most southern affluents of the Congo, the Luabala and the Luapula.

1891-1892.—Belgian expeditions under Captain Bia and others to explore the southeastern portion of the Congo Basin, on behalf of the Katanga Company, resulting in the determination of the fact that the Lukuga River is an outlet of Lake Tanganyika.

1891-1892.—Journey of Dr. James Johnston across the continent, from Benguela to the mouth of the Zambesi, through Blhe, Ganguela, Barotse, the Kalihari Desert, Mashonaland, Manica, Gorongoza, Nyassa, and the Shiré Highlands.

1891-1892.—Expedition of Mr. Joseph Thomson, for the British South Africa Company, from Killimane or Quillimane on the eastern coast to Lake Bangweolo.

1891-1892.—Journey of Captain Montell from the Niger to Lake Tchad and across the Sahara to Tripoli.

1891-1892.—Exploration by Lieutenant Chaltin of the river Lulu, and the country between the Aruwimi and the Welle Makua rivers, in the Congo State.

1891-1893.—Journey of Dr. Oscar Baumann from Tanga, a port on the eastern coast, in the northern part of the German Protectorate; passing to the south of Kilimanjaro, discovering two lakes between that mountain and the Victoria Nyanza; exploring the southeastern shores of the Victoria, traversing the Shashi countries lying east of the lake, and the Urundi country between the Victoria and Tanganyika.

1891-1894.—Expedition under the command of Captain Van Kerckhoven and M. de la Kéthulle de Ryhove, fitted out by the Congo Free State, for the subjugation of the Arabs, the suppression of the slave trade and the exploration of the country, throughout the region of the Wellé or Ubangi Uellé and to the Nile.

1892.—Decision of the Imperial British East Africa Company to withdraw from Uganda.

1892.—Practical conquest of Dahomey by the French, General Dodds taking possession of the capital November 10.

1892.—Journey of M. Méry in the Sahara to the south of Wargla, resulting in a report favorable to the construction of a railway to tap the Central Sudan.

1892.—French expedition under Captain Binger to explore the southern Sudan and to act conjointly with British officials in determining the boundary between French and English possessions.

1892.—Journey of Mr. Sharpe from the Shiré River to Lake Moero or Mweru and the Upper Lunpula.

1892-1893.—Construction of a line of 'elegraph,' by the British South African Company, from Cape Colony, through Mashonaland, to Fort Salisbury, with projected extension across the Zambesi and by the side of Lakes Nyassa and Tanganyika to Uganda,—and ultimately down the valley of the Nile.

1892-1893.—French scientific mission, under M. Décle, from Cape Town to the sources of the Nile.

1892-1893.—Italian explorations, under Captain Böttego and Prince Ruspoli, in the upper basin of the River Jub.

1893.—Brussels Antislavery Conference, ratified in its action by the Powers.

1893.—Official mission of Sir Gerald Porter to Uganda, sent by the British Government to report as to the expediency of the withdrawal of British authority from that country.

1893.—Scientific expedition of Mr. Scott-Elliott to Uganda.

1893.—Scientific expedition of Dr. Gregory, of the British Museum, from Mombassa, on the eastern coast, through Masailand to Mount Kenia.

1893.—Journey of Mr. Bent to Aksum, in Abyssinia, the ancient capital and sacred city of the Ethiopians.

1893.—Journey of M. Fourcau in the Sahara, crossing the plateau of Tademaït from north to south.

1893-1894.—German scientific survey of Mount Kilimanjaro, under Drs. Lent and Volken.

1893-1894.—Expedition of Mr. Astor Chanler and Lieutenant von Höhncl from Witu, on the eastern coast, to the Jombini Range and among the Rendile.

1893-1894.—Explorations of Baron von Uechtritz and Dr. Passarge on the Benue.

1893-1894.—Journey of Baron von Schele from the eastern coast to Lake Nyassa, and thence by a direct route to Kilisa.

1893-1894.—Journey of Count von Götzen across the continent, from Dar-es-Salaam, on the eastern coast, to the Lower Congo.

1894.—Treaty between Great Britain and the Congo Free State, securing to the former a strip of land on the west side of the Nile between the Albert Nyanza and 10° north latitude, and to the latter the large Bahr-el-Ghazel region, westward. This convention gave offense to France, and that country immediately exacted from the Congo Free State a treaty stipulating that the latter shall not occupy or exercise political influence in a region which covers most of the territory assigned to it by the treaty with Great Britain.

1894.—Franco-German Treaty, determining the boundary line of the Cameroons, or Kamerun.

1894.—Treaty concluded by Captain Lugard, November 10, at Nik I, in Borgu, confirming the rights claimed by the Royal Niger Company over Borgu, and placing that country under British protection.

1894.—Agreement between the British South African Company and the Government of Great Britain, signed November 24, 1894, transferring to the direct administration of the Company the Protectorate of Nyassaland, thereby extending its domain to the south end of Lake Tanganyika.

1894.—Renewed war of France with the Hovas of Madagascar.

1894.—Expedition of Dr. Donaldson Smith from the Somali coast, aiming to reach Lakes Rudolf and Stefanie, but stopped and turned back by the Abyssinians, in December.

1894.—Visit of Mr. Cecil Rhodes to England to arrange financially for the extension of the Cape railway system northwards from Mafeking into Matabeleland.

1894.—Completed conquest of Dahomey by the French; capture of the deposed king, January 25, and his deportation to exile in Martinique. Decree of the French Government, June 22, directing the administrative organization of the "colony of Dahomey and Dependencies"; with a ministerial order of the same date which divides the new conquest into "Territoires annexés; Territoires protégés; Territoires d'action politique."

1894.—Occupation of Timbuctoo by a French force.

1894.—Journey of Count von Götzen across the continent, from the eastern coast, through Ruanda and the Great Forest to and along the Lows, an eastern tributary of the Congo, reaching the Lower Congo in December.

1894.—Exploration of the Upper Congo and the Lukuga by Mr. R. Dorsey Mohun, American Agent on the Congo, and Dr. Hiade.

1894.—Scientific expedition of Mr. Coryndon from the Cape to the Zambesi and Lake Tanganyika.

1894-1895.—War of the Italians in their colony of Eritrea with both the Abyssinians and

the Mahdists. Italian occupation of Kassala as a base of operations against the Mahdists.

1895.—Franco-British agreement, signed January 21, 1895, respecting the "Hinterland" of Sierra Leone, which secures to France the Upper Niger basin.

1895.—Convention between Belgium and France signed February 5, recognizing a right of pre-emption on the part of the latter, with regard to the Congo State, in case Belgium should at any time renounce the sovereignty which King Leopold desires to transfer to it.

1895.—Russian scientific expedition to Abyssinia, under Lieutenant Leontieff.

AMERICA: The discoverers of the Northern Continent.—Mr. Harrisse's conclusions.—"The main points attained in this elaborate survey of all the facts and documents known can be recapitulated as follows,—perhaps with less assurance than a desire to be succinct may undesignedly impart to our expressions: 1.—The discovery of the continent of North America, and the first landing on its east coast were accomplished not by Sebastian Cabot, but by his father John, in 1497, under the auspices of King Henry VII. 2.—The first landfall was not Cape Breton Island, as is stated in the planisphere made by Sebastian Cabot in 1544, but eight or ten degrees further north, on the coast of Labrador; which was then ranged by John Cabot, probably as far as Cape Chudley. 3.—This fact was tacitly acknowledged by all pilots and cosmographers throughout the first half of the 16th century; and the knowledge of it originated with Sebastian Cabot himself, whatever may have been afterwards his contrary statements in that respect. 4.—The voyage of 1498, also accomplished under the British flag, was likewise carried out by John Cabot personally. The landfall on that occasion must be placed south of the first; and the exploration embraced the north-east coast of the present United States, as far as Florida. 5.—In the vicinity of the Floridian east coast, John Cabot, or one of his lieutenants, was detected by some Spanish vessel, in 1498 or 1499. 6.—The English continued in 1501, 1502, 1504, and afterwards, to send ships to Newfoundland, chiefly for the purpose of fisheries. . . . 7.—The Portuguese mariners who lived in the Azores were the first who probed the Atlantic in search of oceanic islands and continents. Their objective, after the discovery achieved by Christopher Columbus, was the north-east coast of the New World. 8.—The earliest authentic records of Lusitanian transatlantic expeditions begin only with Gaspar Corte-Real, who made three, and not two voyages only; all to the same regions, as follows: The first voyage of that navigator was undertaken previous to May, 1500, in the direction of Greenland and Newfoundland,

and proved an absolute failure. The second voyage lasted from the early part of the summer of 1500 until the autumn of that year, and embraced the east coast of Newfoundland, from its northernmost point down to Cape Race. The third expedition set out from Lisbon early in the spring of 1501. It was composed of three vessels. One of these returned to port on the 8th or 9th of October, the second on the 11th following. As to the third, which was under the immediate command of Gaspar Corte-Real, it was ice-bound or shipwrecked, we do not know when nor where, but probably in Hudson Bay, during the winter of 1501-1502. The country visited during the first part of the expedition seems to have been the northern extremity of Newfoundland and the coast of Labrador. 9.—The expedition of Miguel Corte-Real in search of his brother, sailed May 10, 1502 and was also lost. . . . 10.—Portugal continued to send ships to the fishing banks; and the region south of Newfoundland was explored, particularly by João Alvares Fagundes before 1521. . . . 11.—The assertion that already in the time of Christopher Columbus navigators and geographers believed in the existence of a continent interposed between the West Indies and Asia, and which was not Cathay, stands uncontroverted either by contemporary authorities, or by the early Spanish charts. Nay, it is corroborated by that class of proofs. 12.—The absolute insularity of Cuba was an acknowledged fact years before the periphrasis made by Sebastian de Ocampo, in 1508. 13.—The mainland of the New World was believed to be a continent distinct from Cathay and from India the moment navigators commenced to search after a strait leading from the Atlantic Ocean to the Asiatic seas. 14.—The idea that America was a mere prolongation of Asia ceased therefore to be entertained almost immediately after the discovery of its east coast; by John Cabot in 1497; by Americus Vesputius, before 1501; by Gaspar Corte-Real, before 1502. 15.—Christopher Columbus himself soon ceased to think that he had discovered Cathay, or the Asiatic coast. 16.—So early as October, 1501, the notion prevailed in Europe that from *Circulus arcticus* to *Pollus Antarticus*, the newly discovered land formed a single coast line belonging to a separate continent."—H. Harrisse, *Discovery of North Am.*, pt. 1, bk. 8, ch. 5.

The alleged first voyage of Vesputius.—In the first volume of this work (page 52) the argument in support of the disputed claim for Amerigo Vesputius, or Vesputius, that he made a voyage in 1497-8 during which he coasted the American continent from Honduras to Cape Hatteras, is given in an excerpt from Dr. Fiske's "Discovery of America." The following, from a paper by Mr. Clements R. Markham, read before the Royal Geographical Society in June, 1892, presents, in part, the counter argument: "Vesputius's account of his alleged first voyage is briefly as follows. He says that he went to Spain to engage in mercantile pursuits, but that after some years he resolved to see the world and its marvels. King Ferdinand having ordered four ships to go forth and make discoveries to the westward, Vesputius was chosen by His Highness to go in the fleet, to assist in the work of discovery. They sailed from Cadiz on May 10th, 1497, and reached Grand Canary, which, he says, is in 27° 30' N., and 280 leagues

from Lisbon. There they remained eight days, and then sailed for thirty-seven (twenty-seven, Latin version) days on a W. S. W. course ('Ponente pigliando una quarta di libeccio'), reaching land when they were nearly 1,000 leagues from Grand Canary. For they found, by their instruments, that they were in 16° N. lat. and 75° W. long. Vespucci then gives a long account of the natives. After some days they came to a village built over the water, like Venice, about forty-four houses resting on very thick poles. Sailing along the land for 80 leagues, they came to another people, speaking a different language, where Vespucci saw an iguana being roasted, which he describes. He made an excursion inland for 18 leagues, and found the country very populous. This place was on the Tropic of Cancer, where the latitude is 23° N. The province is called 'Parías' (Latin version), 'Lariab' (Italian version). Thence they sailed, always in sight of the land, on a N. W. course ('verso el maestrale') for 870 leagues, having intercourse with many tribes, and finding some gold. When they had been absent thirteen months the ships began to leak, and required caulking, so they entered the best harbour in the world, where there were many friendly people. Here they refitted, and remained for thirty-seven days. They then sailed eastward for seven days, and came to some islands 100 leagues off the mainland, inhabited by fierce people called 'Iti.' They had encounters with the natives, when one of their men was killed and twenty-two were wounded. They then sailed for Spain with 222 slaves, arriving at Cadiz on October 15th, 1498, where they sold their slaves, and were well received. This is the story of Vespucci. It has been considered to be a fabrication from that time to this, for the following reasons. Vespucci was at Seville or San Lucar, as a provision merchant, from the middle of April, 1497, to the end of May, 1498, as is shown by the official records, examined by Muñoz, of expenses incurred in fitting out the ships for western expeditions. Moreover, no expedition for discovery was despatched by order of King Ferdinand in 1497; and there is no allusion to any such expedition in any contemporary record. The internal evidence against the truth of the story is even stronger. Vespucci says that he sailed W. S. W. for nearly 1,000 leagues from Grand Canary. This would have taken him to the Gulf of Paria, which is rather more than 900 leagues W. S. W. from Grand Canary. It would never have taken him near the land at 16° N. Even with a course direct for that point, instead of a W. S. W. course, and disregarding intervening land, the distance he gives would leave him 930 miles short of the alleged position. No actual navigator would have made such a blunder. He evidently quoted the dead reckoning from Ojeda's voyage, and invented the latitude at random. It is useless for the defenders of Vespucci to refer to the faulty reckonings of those days, and to pilots thinking they were near the Canaries when they were off the Azores. This is a different matter. It is the case of a man alleging that he has fixed his position by observations, and giving a dead reckoning nearly a thousand miles out, in the belief that it would bring him to the same point. It is fudging, but the fudging of a man ignorant of a pilot's business. His statement that he went N. W. for 870

leagues (2,610 miles) from a position in latitude 23° N., is still more preposterous. Such a course and distance would have taken him right across the continent to somewhere in British Columbia. The chief incidents in the voyage are those of the Ojeda voyage in 1499. There is the village built on piles called Little Venice. There is the best harbour in the world, which was the Gulf of Cariaco, where Ojeda refitted. There was the encounter with natives, in which one Spaniard was killed and 22 were wounded. These numbers are convincing evidence. . . . Vespucci does not mention the commanders of the expedition, nor any Spanish name whatever, and only gives two names of places, namely, 'Parías' or 'Lariab,' and 'Iti,' both imaginary. Humboldt was aware of the proofs that Vespucci could not have been absent from Spain in 1497-98, and that the incidents of his alleged first voyage belonged to that of Ojeda; but he was reluctant to believe in actual fraud. He therefore suggested that there were misprints with regard to the dates; that the first voyage of Vespucci was that of Ojeda; and that the Florentine merchant returned home from Española in time to join the voyage of Pinzon in 1500, which was the second voyage. But no one was allowed to land from Ojeda's ships at Española, and the dates are too detailed, and occur too clearly in both versions, to admit of the wholesale alterations demanded by this theory. The Baron Varnhagen, in his defence of Vespucci, published in 1865 at Lima, and in 1869 at Vienna, takes a bolder course. He adopts the whole of the statements of Vespucci as perfectly true, including the dates; but his defence does not amount to much. He was evidently unaware of the extent of the error in Vespucci's reckoning, and did not realise the inevitable inference. He got over the Little Venice difficulty by suggesting that there were many other villages built on piles, and that there might have been one on the coast of Tabasco. That is true. There was also the old Quebec hotel in Portsmouth Harbour; but this is not the point, and he failed to see where the difficulty lies. The Little Venice was a discovery in Ojeda's voyage when Vespucci was present. Its recurrence here, and its omission in the version of Ojeda's voyage by Vespucci, are the suspicious points which Varnhagen fails to explain away. Of the words 'Paria,' and 'Lariab' in the two versions, Varnhagen prefers the latter. It is quite impossible to tell which form, or whether either, was in the original manuscript. Although there is no such place as 'Lariab,' yet a Mexican author, named Orozco, said that some of the names of places near Tampico, where the Huasteca language is spoken, ended in 'ab.' This is a point, so far as it goes — which is not very far. Even the voyage of 870 leagues N. W. from lat. 28°, does not daunt the Baron. He ignores Vespucci's course, and takes him a marvellous voyage round the shores of the Gulf of Mexico and the peninsula of Florida, to Cape Hatteras, where he certainly does not find the best harbour in the world. Thence Vespucci is taken to Bermuda, identified as 'Iti,' and so home. It is well known that Bermuda was uninhabited before its settlement by Europeans, and that there were no signs of previous inhabitants; while the 'Iti' of Vespucci was densely peopled with fierce savages. But this is ignored by Varnhagen. It would

certainly have been a most extraordinary voyage, and it is still more extraordinary, that though the secret must have been known to many people at the time, it should have been involubly kept without any object in such secrecy, and that the discoveries should have appeared on no map and in no narrative. Yet Vespucci's story, though a bold flight, bears no comparison with the grandeur of Varnhagen's conception of it."—C. R. Markham, *Columbus, and the Fourth Century of his Discovery*, note 2 (*Royal Geog. Soc., Proceedings*, 1892, Sept.).

ANDORRA.—"The pastoral and picturesque valley of Andorra, a jumble of hills, enclosed on all sides by the Pyrenean spurs, extends about 7 L. long by 6 broad, and is bounded by the French and Spanish ridges, by Puigcerdá to the S. and E., by the Comté de Foix (départ. de l'Ariège) to the N., and by the Corregimiento of Talaru to the W. Watered by the Balira [or Vallira], Ordino, and Os, it is one of the wildest districts of the Spanish Pyrenees, abounding in timber, which is floated down the Balira and Segre to Tortosa. The name Andorra is derived from the Arabic Aldarra, 'a place thick with trees,' among which is found the *Cabra Montaraz*, with bears, hoars, and wolves."—R. Ford, *Handbook for Travellers in Spain*, pt. 1, sect. 6.—"The republic of Andorra is said to owe its existence to a defeat of the Saracens by Charlemagne or Louis le Débonnaire, but in reality up to the French Revolution the valley enjoyed no sovereign rights whatever. It was a barony of the Counts of Urgel and of Aragon. In 1278 it was decided that Andorra should be held jointly by the Bishops of Urgel and the Counts of Foix. In 1793 the French republic declined to receive the customary tribute, and in 1810 the Spanish Cortes abolished the feudal régime. Andorra thus became an independent state. The inhabitants, however, continue to govern themselves in accordance with old feudal customs, which are not at all reconcilable with the principles of modern republics. The land belongs to a few families. There is a law of entail, and younger brothers become the servants of the head of the family, whose hospitality they enjoy only on condition of their

working for him. The tithes were only abolished in 1842. The 'liberty' of these mountaineers consists merely in exemption from the Spanish conscription and impunity in smuggling; and, to increase their revenues, they have recently established a gambling-table. Their legitimate business consists in cattle-breeding, and there are a few forges and a woollen factory. The republic of Andorra recognises two suzerains, viz. the Bishop of Urgel, who receives an annual tribute of £25, and the French Government, to whom double that sum is paid. Spain and France are represented by two provosts, the commandant of Séo de Urgel exercising the functions of viceroy. The provosts command the militia and appoint the bailiffs, or judges. They, together with a judge of appeal, alternately appointed by France and Spain, and two 'rahoadores,' or defenders of Andorran privileges, form the Cortes. Each parish is governed by a consul, a vice-consul, and twelve councillors elected by the heads of families. A General Council, of which the consuls and delegates of the parishes are members, meets at the village of Andorra. But in spite of these fections Andorra is an integral part of Spain, and the carabineers never hesitate to cross the frontiers of this sham republic. By language, manners, and customs the Andorrans are Catalans. Exemption from war has enabled them to grow comparatively rich."—E. Reclus, *The Earth and its Inhabitants: Europe, Spain*, sect. 6.

ARCTIC EXPLORATION.—A Chronological Record.

1500-1502.—Discovery and exploration of the coast of Labrador and the entrance of Hudson Strait by the Cortereals.

1553.—Voyage of Willoughby and Chancellor from London, in search of a northeast passage to India. Chancellor reached Archangel on the White Sea, and opened trade with Russia, while Willoughby perished with all his crew.

1556.—Exploring voyage of Stephen Burroughs to the northeast, approaching Nova Zembla.

1576-1578.—Voyages of Frobisher to the coast of Labrador and the entrance to Davis Strait, discovering the bay which bears his name, and which he supposed to be a strait leading to Cathay; afterwards entering Hudson Strait.

1580.—Northeastern voyage of Pet and Jackman, passing Nova Zembla.

1585-1587.—Three voyages of John Davis from Dartmouth, in search of a northwestern

passage to India, entering the strait between Greenland and Baffinland which bears his name and exploring it to the 72nd degree north latitude.

1594-1595.—Dutch expeditions (the first and second under Barentz) to the northeast, passing to the north of Nova Zembla, or Novaya Zemlya, but making no progress beyond it.

1596-1597.—Third voyage of Barentz, when he discovered and coasted Spitzbergen, wintered in Nova Zembla with his crew, lost his ship in the ice, and perished, with one third of his men, in undertaking to reach the coast of Lapland in open boats.

1602.—Exploration for a northwest passage by Captain George Weymouth, for the Muscovy Company and the Levant Company, resulting in nothing but a visitation of the entrance to Hudson Strait.

1607.—Polar voyage of Henry Hudson, for the Muscovy Company of London, attaining the northern coast of Spitzbergen.

1608.—Voyage of Henry Hudson to Nova Zembla for the Muscovy Company.

1610.—Voyage of Henry Hudson, in English employ, to seek the northwest passage, being the voyage in which he passed through the Strait and entered the great Bay to which his name has been given, and in which he perished at the hands of a mutinous crew.

1612-1614.—Exploration of Hudson Bay by Captains Button, Bylot, and Baffin, practically discovering its true character and shaking the previous theory of its connection with the Pacific Ocean.

1614.—Exploring expedition of the Muscovy Company to the Greenland coast, under Robert Fotherby, with William Baffin for pilot, making its way to latitude 80°.

1616.—Voyage into the northwest made by Captain Baffin with Captain Bylot, which resulted in the discovery of Baffin Bay, Smith Sound, Jones Sound, and Lancaster Sound.

1619-1620.—Voyage of Jens Munk, sent by the King of Denmark to seek the northwest passage; wintering in Hudson Bay, and losing there all but two of his crew, with whom he succeeded in making the voyage home.

1632.—Voyages of Captains Fox and James into Hudson Bay.

1670.—Grant and charter to the Hudson Bay Company, by King Charles II. of England, conferring on the Company possession and government of the whole watershed of the Bay, and naming the country Prince Rupert Land.

1676.—Voyage of Captain John Wood to Nova Zembla, seeking the northeastern passage.

1728.—Exploration of the northern coasts of Kamtschatka by the Russian Captain Vitus Behring, and discovery of the Strait which bears his name.

1741.—Exploration of northern channels of Hudson Bay by Captain Middleton.

1743.—Offer of £20,000 by the British Parliament for the discovery of a northwest passage to the Pacific.

1746.—Further exploration of northern channels of Hudson Bay by Captains Moor and Smith.

1753-1754.—Attempted exploration of Hudson Bay by the colonial Captain Swaine, sent out from Philadelphia, chiefly through the exertions of Dr. Franklin.

1765.—Russian expedition of Captain Tchitschakoff, attempting to reach the Pacific from Archangel.

1768-1769.—Exploration of Nova Zembla by a Russian officer, Lieutenant Roamyssloff.

1769-1770.—Exploring journey of Samuel Hearne, for the Hudson Bay Company, from Churchill, its most northern post, to Coppermine River and down the river to the Polar Sea.

1773.—Voyage of Captain Phipps, afterwards Lord Mulgrave, toward the North Pole, reaching the northeastern extremity of Spitzbergen.

1779.—Exploration of the Arctic coast, east and west of Behring Strait, by Captain Cook, in his last voyage.

1789.—Exploring journey of Alexander MacKenzie, for the Northwest Company, and discovery of the great river flowing into the Polar Sea, which bears his name.

1806.—Whaling voyage of Captain Scoresby to latitude 81° 30' and longitude 19° east.

1818.—Unsatisfactory voyage of Commander John Ross to Baffin Bay and into Lancaster Sound.

1818.—Voyage of Captain Buchan towards the North Pole, reaching the northern part of Spitzbergen.

1819-1820.—First voyage of Lieutenant Parry, exploring for a northwest passage, through Davis Strait, Baffin Bay, Lancaster Sound, and Barrow Strait, to Melville Island.

1819-1822.—Journey of Captain (afterwards Sir John) Franklin, Dr. Richardson, and Captain (afterwards Sir George) Back, from Fort York, on the western coast of Hudson Bay, by the way of Lake Athabasca, Great Slave Lake, and Coppermine River, to Coronation Gulf, opening into the Arctic Ocean.

1819-1824.—Russian expeditions for the survey of Nova Zembla.

1820-1824.—Russian surveys of the Siberian Polar region by Wrangel and Anjou.

1821-1823.—Second voyage of Captain Parry, exploring for a northwest passage to the Pacific Ocean, through Hudson Strait and Fox Channel, discovering the Fury-and-Heccla Strait, the northern outlet of the Bay.

1821-1824.—Russian surveying expedition to Nova Zembla, under Lieutenant Lutke.

1822.—Whaling voyage of Captain Scoresby to the eastern coast of Greenland, which was considerably traced and mapped by him.

1822-1823.—Scientific expedition of Captain Sabine, with Commander Clavering, to Spitzbergen and the eastern coast of Greenland.

1824-1825.—Third voyage of Captain Parry, exploring for a northwest passage, by way of Davis Strait, Baffin Bay, and Lancaster Sound, to Prince Regent Inlet, where one of his ships was wrecked.

1825-1827.—Second journey of Franklin, Richardson, and Back, from Canada to the Arctic Ocean; Franklin and Back by the Mackenzie River and westward along the coast to longitude 149° 37'; Richardson by the Mackenzie River and the Arctic coast eastward to Coppermine River.

1826.—Voyage of Captain Beechey through Behring Strait and eastward along the Arctic coast as far as Point Barrow.

1827.—Fourth voyage of Captain Parry, attempting to reach the North Pole, by ship to Spitzbergen and by boats to 82° 45' north latitude.

1829-1833.—Expedition under Captain Ross, fitted out by Mr. Felix Booth, to seek a northwest passage, resulting in the discovery of the position of the north magnetic pole, southwest of Boothia, not far from which Ross' ship was ice-bound for three years. Abandoning the vessel at last, the explorers made their way to Baffin Bay and were rescued by a whale-ship.

1833-1835.—Journey of Captain Back from Canada, via Great Slave Lake, to the river which he discovered and which bears his name, flowing to the Polar Sea.

1836-1837.—Voyage of Captain Back for surveying the straits and channels in the northern extremity of Hudson Bay.

1837-1839.—Expeditions of Dease and Simpson, in the service of the Hudson Bay Company, determining the Arctic coast line as far east as Boothia.

1845.—Departure from England of the government expedition under Sir John Franklin, in two bomb-vessels, the Erebus and the Terror, which entered Baffin Bay in July and were never seen afterward.

1848.—Expedition of Sir John Richardson and Mr. John Rae down the Mackenzie River, searching for traces of Sir John Franklin and his crews.

1848-1849.—Expedition under Sir James Clarke Ross to Baffin Bay and westward as far as Leopold Island, searching for Sir John Franklin.

1848-1851.—Searching expedition of the Herald and the Plover, under Captain Kellett and Commander Moore, through Behring Strait and westward to Coppermine River, learning nothing of the fate of the Franklin party.

1850.—Searching expedition sent out by Lady Franklin, under Captain Forsyth, for the examination of Prince Regent Inlet.

1850-1851.—United States Grinnell Expedition, sent to assist the search for Sir John Franklin and his crew, consisting of two ships, the Advance and the Rescue, furnished by Mr. Henry Grinnell and officered and manned by the U. S. Government, Lieutenant De Haven commanding and Dr. Kane surgeon. Frozen into the ice in Wellington Channel, in September, 1850, the vessels drifted helplessly northward until Grinnell Land was seen and named, then southward and westward until the next June, when they escaped in Baffin Bay.

1850-1851.—Franklin search expedition, sent out by the British Government, under Captain Penny, who explored Wellington Channel and Cornwallis Island by sledge journeys.

1850-1851.—Discovery of traces of Franklin and his men at Cape Riley and Beechey Island, by Captain Ommaney and Captain Austin.

1850-1852.—Franklin search expedition under Captain Collinson, through Behring Strait and eastward into Prince of Wales Strait, sending sledge parties to Melville Island.

1850-1854.—Franklin search expedition under Captain McClure, through Behring Strait and westward, between Banks Land and Prince Albert Land, attaining a point within 25 miles of Melville Sound, already reached from the East; thus demonstrating the existence of a northwest passage, though not accomplishing the navigation of it. McClure received knighthood, and a reward of £10,000 was distributed to the officers and crew of the expedition.

1851.—Expedition of Dr. Rae, sent by the British Government to descend the Coppermine River and search the southern coast of Wollaston Land, which he did, exploring farther along the coast of the continent eastward to a point opposite King William's Land.

1851-1852.—Franklin search expedition sent out by Lady Franklin under Captain Kennedy, for a further examination of Prince Regent Inlet and the surrounding region.

1852-1854.—Franklin search expedition of five ships sent out by the British Government under Sir Edward Belcher, with Captains McClintock, Kellett, and Sherard Osborn under his command. Belcher and Osborn, going up Wellington Channel to Northumberland Sound, were frozen fast; McClintock and Kellett experienced the same misfortune near Melville Island, where they had received Captain McClure and his crew, escaping from their abandoned ship. Finally all the ships of Belcher's fleet except one were abandoned. One, the Resolute, drifted out into Davis Strait in 1855, was rescued, bought by the United States Government and presented to Queen Victoria.

1853-1854.—Hudson Bay Company expedition by Dr. Rae, to Repulse Bay and Pelly Bay, on the Gulf of Boothia, where Dr. Rae found Eskimos in possession of articles which had belonged to Sir John Franklin, and his men, and was told that in the winter of 1850 they saw white men near King William's Land, travelling southward, dragging sledges and a boat, and, afterwards saw dead bodies and graves on the mainland.

1853-1855.—Grinnell expedition, under Dr. Kane, proceeding straight northward through Baffin Bay, Smith Sound and Kennedy Channel, nearly to the 79th degree of latitude, where the vessel was locked in ice and remained fast until abandoned in the spring of 1855, the party escaping to Greenland and being rescued by an expedition under Lieutenant Hartstein which the American Government had sent to their relief.

1855.—Cruise of the U. S. ship Vincennes, Lieutenant John Rodgers commanding, in the Arctic Sea, via Behring Strait to Wrangel Land.

1855.—Expedition of Mr. Anderson, of the Hudson Bay Company, down the Great Fish River to Point Ogle at its mouth, seeking traces of the party of Sir John Franklin.

1857-1859.—Search expedition sent out by Lady Franklin, under Captain McClintock, which became ice-bound in Melville Bay, August, 1857, and drifted helplessly for eight months, over 1,200 miles; escaped from the ice in April, 1858; refitted in Greenland and returned into Prince Regent Inlet, whence Captain McClintock searched the neighboring regions by sledge journeys, discovering, at last, in King William's Land, not only remains but records of the lost explorers, learning that they were caught in the ice somewhere in or about Peel Sound, September, 1846; that Sir John Franklin died on the 11th of the following June; that the ships were deserted on the 22d of April, 1848, on the northwest coast of King William's Land, and that the survivors, 105 in number, set out for Back or Great Fish River. They perished probably one by one on the way.

1860-1861.—Expedition of Dr. Hayes to Smith Sound; wintering on the Greenland side at lat-

tude $78^{\circ} 17'$; crossing the Sound with sledges and tracing Grinnell Land to about $82^{\circ} 45'$.

1860-1862.—Expedition of Captain Hall on the whaling ship *George Henry*, and discovery of relics of Froisher.

1864-1869.—Residence of Captain Hall among the Eskimos on the north side of Hudson Strait and search for further relics of the Franklin expedition.

1867.—Tracing of the southern coast of Wrangel Land by Captains Long and Raynor, of the whaling ships *Nile* and *Reindeer*.

1867.—Transfer of the territory, privileges and rights of the Hudson Bay Company to the Dominion of Canada.

1868.—Swedish Polar expedition, directed by Professor Nordenskiöld, attaining latitude $81^{\circ} 42'$, on the 18th meridian of east longitude.

1869.—Yacht voyage of Dr. Hayes to the Greenland coasts.

1869-1870.—German Polar expedition, under Captain Koldewey, one vessel of which was crushed, the crew escaping to an ice floe and drifting 1,100 miles, reaching finally a Danish settlement on the Greenland coast, while the other explored the east coast of Greenland to latitude 77° .

1871-1872.—Voyage of the steamer *Polaris*, fitted out by the U. S. Government, under Captain Hall; passing from Baffin Bay, through Smith Sound and Kennedy Channel, into what Kane and Hayes had supposed to be open sea, but which proved to be the widening of a strait, called Robeson Strait by Captain Hall, thus going beyond the most northerly point that had previously been reached in Arctic exploration. Wintering in latitude $81^{\circ} 88'$ (where Captain Hall died), the *Polaris* was turned homeward the following August. During a storm, when the ship was threatened with destruction by the ice, seventeen of her crew and party were left helplessly on a floe, which drifted with them for 1,500 miles, until they were rescued by a passing vessel. Those on the *Polaris* fared little better. Forced to run their sinking ship ashore, they wintered in huts and made their way south in the spring, until they met whale-ships which took them on board.

1872-1874.—Austro-Hungarian expedition, under Captain Weyprecht and Lieutenant Payer, seeking the northeast passage, with the result of discovering and naming Franz Josef Land, Crown Prince Rudolf Land and Petermann Land, the latter (seen, not visited) estimated to be beyond latitude 83° . The explorers were obliged to abandon their ice-locked steamer, and make their way by sledges and boats to Nova Zembla, where they were picked up.

1875.—Voyage of Captain Young, attempting to navigate the northwest passage through Lancaster Sound, Barrow Strait and Peel Strait, but being turned back by ice in the latter.

1875-1876.—English expedition under Captain Nares, in the *Alert*, and the *Discovery*, attaining by ship the high latitude of $82^{\circ} 27'$, in Smith Sound, and advancing by sledges to $83^{\circ} 20' 26''$, while exploring the northern shore of Grinnell Land and the northwest coast of Greenland.

1876-1878.—Norwegian North-Atlantic expedition, for a scientific exploration of the sea between Norway, the Faroe Islands, Iceland, Jan Mayen, and Spitzbergen.

1878.—Discovery of the island named "Einsamkelt," in latitude $77^{\circ} 40' N$, and longitude $86^{\circ} E$, by Captain Johannsen, of the Norwegian schooner *Nordland*.

1878-1879.—Final achievement of the long-sought, often attempted northeast passage, from the Atlantic to the Pacific ocean, by the Swedish geographer and explorer, Baron Nordenskiöld, on the steamer *Vega*, which made the voyage from Gothenburg to Yokohama, Japan, through the Arctic Sea, coasting the Russian and Siberian shores.

1878-1883.—Six annual expeditions to the Arctic Seas of the ship *Willem Barentz*, sent out by the Dutch Arctic Committee.

1879.—Cruise of Sir Henry Gore-Booth and Captain Markham, R. N., in the cutter *Isbjorn* to Nova Zembla and in Barentz Sea and the Kara Sea.

1879-1880.—Journey of Lieutenant Schwatka from Hudson Bay to King William Island, and exploration of the western and southern shores of the latter, searching for the journals and logs of the Franklin expedition.

1879-1882.—Polar voyage of the *Jeannette*, fitted out by the proprietor of the *New York Herald* and commanded by Commander De Long, U. S. N. The course taken by the *Jeannette* was through Behring Strait towards Wrangel Land, and then northerly, until she became ice-bound when she drifted helplessly for nearly two years, only to be crushed at last. The officers and crew escaped in three boats, one of which was lost in a storm; the occupants of the other two boats reached different mouths of the river Lena. One of these two boats, commanded by Engineer Melville, was fortunate enough to find a settlement and obtain speedy relief. The other, which contained commander De Long, landed in a region of desolation, and all but two of its occupants perished of starvation and cold.

1880-1882.—First and second cruises of the United States Revenue Steamer *Corwin* in the Arctic Ocean, via Behring Strait, to Wrangel Land seeking information concerning the *Jeannette* and searching for two missing whaling ships.

1880-1882.—Two voyages of Mr. Leigh Smith to Franz Josef Land, in his yacht *Eira*, in the first of which a considerable exploration of the southern coast was made, while the second resulted in the loss of the ship and a perilous escape of the party in boats to Nova Zembla, where they were rescued.

1881.—Expedition of the steamer *Rodgers* to search for the missing explorers of the *Jeannette*; entering the Arctic Sea through Behring Strait, but abruptly stopped by the burning of the *Rodgers*, on the 30th of November, in St. Lawrence Bay.

1881.—Cruise of the U. S. *Albatross*, Commander Wadleigh, via Spitzbergen, to $79^{\circ} 3' 36''$ north latitude, searching for the *Jeannette*.

1881-1884.—International undertaking of expeditions to establish Arctic stations for simultaneous meteorological and magnetic observations: by the United States at Smith Sound and Point Barrow; by Great Britain at Fort Rae; by Russia at the mouth of the Lena and in Nova Zembla; by Denmark at Godthaab, in Greenland; by Holland at Dickson's Haven, near the mouth of the Yenisei; by Germany in Cumberland Sound, Davis Strait; by Austro-Hungary on

Jan Mayen Island; by Sweden at Mussel Bay in Spitzbergen. The United States expedition to Smith Sound, under Lieutenant Greeley, established its station on Discovej Ilay. Exploring parties sent out attained the highest latitude ever reached, namely 88° 24'. After remaining two winters and failing to receive expected supplies, which had been intercepted by the ice, Greeley and his men, twenty-five in number, started southward, and all but seven perished on the way. The survivors were rescued, in the last stages of starvation, by a vessel sent to their relief under Captain Schley, U. S. N.

1882-1883.—Danish Arctic expedition of the *Dijmphna*, under Lieutenant Hovgaard; finding the Varna of the Dutch Meteorological Expedition beset in the ice at 60° 43' N. latitude and 64° 45' E. longitude; both vessels becoming frozen in together and drifting for nearly twelve months, being carried to 71° N.; the *Dijmphna* taking the crew of the Varna, which succumbed to the ice pressure and went down; the Danish ship finally being liberated, August 1, 1883, and regaining Vardo, Norway, in October of that year.

1883.—Expedition of Lieutenant Ray, U. S. N., from Point Barrow, on the Arctic Ocean, to Meade River.

1883.—Expedition of Baron Nordenskiöld to Greenland, making important explorations in the interior, but failing to find the temperate central valleys which the Baron's theoretical studies had led him to expect.

1883-1885.—East Greenland expedition of Captain Holm and Lieutenant Garde, surveying and mapping the coast from 60° 49' to 68° 45' N. latitude, and studying its geology, meteorology and natural history.

1884.—Second cruise of the U. S. Revenue Marine Steamer *Corwin* in the Arctic Ocean.

1886.—Reconnaissance of the Greenland inland ice by Civil Engineer R. E. Peary, U. S. N., "to gain a practical knowledge of the obstacles and ice conditions of the interior," and "to put to the test of actual use certain methods and details of equipment."

1888.—Journey of Dr. Nansen across South Greenland, from the icebound eastern coasts to the Danish settlements on the western.

1890.—Swedish expedition to Spitzbergen, under G. Nordenskiöld and Baron Klinkowström.

1890.—Danish scientific explorations in North and South Greenland.

1890.—Russian exploration of the Malo-Zemelskaya, or Timanskaya tundra, in the far north of European Russia, on the Arctic Ocean.

1891-1892.—Expedition of Lieutenant Peary, U. S. N., with a party of seven persons, including Mrs. Peary, establishing headquarters on McCormick Bay, on the north side of Murchison Sound, northwest Greenland; thence making sledge journeys to the northeastern coast of Greenland, at Independence Bay and northward from it to latitude 82°, and following the coast southward to Cape Bismarck. The surveys of Lieutenant Peary have gone far toward proving Greenland to be an island.

1891-1892.—Danish East Greenland expedition of Lieutenant Ryder, wintering on Denmark Island in Scoresby's Sound, from which boat journeys were made and the interior ramifications of the Sound surveyed and mapped.

1891-1893.—Expeditions of Dr. Drygalski to Greenland for the study of the movement of the great glaciers.

1892.—Swedish expedition of Björling and Kallstenius, the last records of which were found on one of the Cary Islands, in Baffin Bay, in the autumn of 1892.

1892.—French expedition under M. Ribot to explore the islands of Spitzbergen Jan Mayen.

1893.—Expedition of Dr. Nansen, who sailed June 24, in the *Fram* from Christiania, for the New Siberian Islands, thence aiming to enter a current which flows, in Dr. Nansen's belief, across the Arctic region to Greenland, touching the North Pole, or nearly, in its course.

1893.—Russian expedition, under Baron Toll, to the New Siberian Islands and the Siberian Arctic coasts.

1893.—Danish expedition to Greenland, under Lieutenant Garde, for a geographical survey of the coast and study of the inland ice.

1893-1894.—Expedition of Lieutenant Peary and party (Mrs. Peary again of the number), landing in Bowdoin Bay, Ingfield Gulf, north of McCormick Harbor, in August, 1893; attempting in the following March a sledge journey with dogs to Independence Bay, but compelled to turn back when no more than a quarter of the distance had been traversed. An auxiliary expedition brought back most of the party to Philadelphia in September, 1894; but Lieutenant Peary with two men remained in Greenland to continue explorations.

1893-1894.—Scientific journey of Mr. Frank Russell, under the auspices of the State University of Iowa, from Lake Winnipeg to the mouth of Mackenzie River and to Herschel Island.

1894.—Expedition of Mr. Walter Wellman, an American journalist, purposing to reach Spitzbergen via Norway, and to advance thence towards the Pole, with aluminum boats, weighing only 400 pounds each, and provided with runners for use on the ice. The party left Tromsø May 1, but were arrested before the end of the month by the crushing of their vessel in the ice at Walden. They were picked up and brought back to Norway.

1894.—Departure of what is known as the Jackson-Harmsworth North Polar Expedition, which sailed from Greenwich, in England, July 11, under the command of Mr. F. G. Jackson, Mr. Harmsworth equipping the expedition at his personal cost. His plan is to make Franz Josef Land a base of operations from which to advance carefully and persistently towards the Pole.

1895.—Preparations of Herr Julius von Payer, the explorer of Franz Josef Land, for an artistic and scientific expedition to the east coast of Greenland, in which he will be accompanied by landscape and animal painters, photographers, and savants.

ATTAINER.—BILL OF ATTAINDER.

—"An attainder ('attinctura') is a degradation or public dishonouring, which draws after it corruption of blood. It is the consequence of any condemnation to death, and induces the dishonour of the heirs of the condemned person, which can only be removed by means of parliament. A bill of attainder, or of pains and penalties, inflicts the consequences of a penal sentence on any state criminal. . . . By the instrumentality of such bill the penalties of high treason are generally imposed. Penalties may, however, be imposed at pleasure, either in accordance with, or in contravention of, the common law. No other court of law can protect a person condemned in such manner. The first bill of the kind occurred under Edward IV., when the commons had to confirm the statute condemning Clarence to death. This convenient method of getting rid of disagreeable opponents was in high favour during the reign of Henry VIII. The bills of pains and penalties were hurried through the parliament, and the parties accused were not even put upon their trial. Thus were the illustrious Sir Thomas More and Bishop Fisher, for misprision of treason, without regular trial, without examination of witnesses, or hearing the accused in their self-defence, legally consigned to the scaffold. Anne Boleyn was formally tried for high treason by the house of peers; but the head of Catharine Howard was disposed of by a simple bill of attainder. This was the first case in which the offence charged was created by the very bill against which the pretended criminal was held to have offended. Under Philip and Mary the benefit of clergy was, by means of a bill, withheld from a certain Rufford. What had been an instrument of kingly despotism, under Tudor sway, was converted, under the Stuarts, into a parliamentary engine against the crown. The points of indictment against Strafford were so weak that the lords were for acquitting him. Thereupon, Sir Arthur Hasleirg introduced a bill of attainder in the commons. The staunch friends of freedom, such as Pym and Hampden, did not support this measure; but yet it passed through the commons with only 59 dissentient voices. After the 35 peers opposed to the trial of Strafford had withdrawn, the terror-stricken lords accepted the bill by 26 against 19 votes. . . . This parliamentary administration of justice has by no

means been relinquished. A bill of attainder may refer simply to a concrete case, and contrive penalties for acts which are not specially punishable by statute, whereas an impeachment applies to some violation of recognized legal principles, and is a solemn indictment preferred by the commons to the house of lords."—E. Fischei, *The Eng. Constitution*, bk. 7, ch. 9.—"By the 33 & 34 Vict. c. 23, forfeiture and attainder for treason or felony have been abolished."—T. P. Taswell-Langmead, *Eng. Const. Hist.*, ch. 10 (2d ed., p. 393), foot-note.

AUSTRIA: A. D. 1273-1349.—The House of Hapsburgh in the earlier period of its fortunes.—"It was just now [1273] that the German monarchy received once more a real king [in the person of Rudolph of Hapsburgh]. It is evident that Ottocar's remarkable rise into power was due essentially to the previous excessive weakness of German kingship. He had acquired Austria and Styria by doubtful right according to German notions, Carintia and Carniola without any acquiescence at all on the part of the empire. . . . In the election of Rudolph he was not willing to take part and afterwards he refused him recognition. No wonder that from the very beginning the German princes felt the necessity of driving him from his usurped position. . . . For the German cause it was the greatest gain that through Ottocar's fall (1278) room was won on the Middle Danube for a national rule: the House of Austria was enabled there to found that power which played so great a part in the world's history. The victory on the marchfeld was a victory of the renewed imperial might over a recalcitrant vassal whose power had extended the due measure of that of a prince of the realm. Looked at in this light the fall of Ottocar reminds one of the fall of Henry the Lion a hundred years before; the gain for Rudolph, however, was still greater and more essential than it had been at that former time for Frederick I. His position was for the first time now actually assured; for if the battle had resulted unfavorably it is doubtful if he could have continued to command obedience. Besides this the possibility presented itself now of using the position of ruler, conferred on him personally, to the lasting advantage of his house; at the same time he could only go to work in the matter very slowly and cautiously. . . . At his departure from these parts in 1281 he conferred the regency in Austria proper and in the other lands to his own son Albrecht. The latter appears already as a matured man with a certain talent for ruling. He overthrew all those who opposed them but, having done this, he bore no malice and cherished no hostility. No one could be in doubt but that for Albrecht, and for his house altogether, the king thought to found there a separate territorial principality. To begin with, the fiefs which the dukes of Austria had held of the neighboring bishoprics, especially the Bavarian ones, were conferred by Rudolph on his sons, other privileges in compensation being granted to the bishoprics. The consent of the electors, according to the new order of things, was necessary in such a case, and the king next sought to gain them over. . . . On December 27, 1283, he invested his sons Albrecht and Rudolph in common with Austria, Styria, Carniola and the

Windischmark. . . . At the request of the Estates of those lands, who wished neither a joint rule nor a separation from each other, Rudolph in 1283 invested his son Albrecht alone with those four provinces. To the younger Rudolph the promise of another appanage or at least of a compensation was held out—a fatal matter! For the son of this Rudolph was John the Parricide. It was an event of the greatest import that in these south-eastern marks of the empire the Babenbergers were replaced by the Hapsburgs. The latter now, in consequence of their all-decisive victory, turned their attention at the same time to Bohemia and Hungary. Although neither in the one land nor the other did they now actually attain their goal, yet their efforts in this direction deserve our close attention as being the first tokens of a policy that was most strongly to affect the world's history. . . . One sees, even in these unsuccessful attempts, the bold dynastic ambition of King Rudolph; the kingdom of Arles, also, he had had in view for one of his sons. The acquisition of Austria alone, indeed, marks an epoch in itself; all the more so as only through this did he gain the prestige which he needed to enable him to do justice to his task as king of Germany. If this task be regarded as having consisted chiefly in restoring and maintaining the public peace after thirty years of utter confusion, then, indeed, he showed himself completely equal to it. . . . In short, through valor and steadfastness he strongly, in internal matters, upheld the power of the empire. Rebellions, indeed, were not wanting; now the archbishop of Cologne, now the duke of Savoy revolted; now Bern or Colmar, now the counts in Suabia and Burgundy. He overcame and humbled them all. . . . He was a very tall, thin man, pale of countenance and with very little hair on his small head; in all things moderate and of a genial nature as was shown by his offering to become the guest of artisans and by his darning his own doublet. . . . When giving Austria to his son Albrecht who was to try and establish here a dynastic power (Hausmacht), Rudolph had really intended to give the German crown to his younger son, Rudolph, and he might have put this through had not this son died before himself. In May 1291 the king then held a diet at Frankfort for the purpose of inducing the electors now to give their vote to his son Albrecht. This he was unable to bring about and with his hopes unrealized he died on the 15th of July 1291. . . . After long preliminary negotiations between the separate electors . . . the election took place on May 5th, 1292. Albrecht had not yet abandoned hope and had appeared in the vicinity. . . . The electors laid down the principle that it was not right for the son to directly follow the father on the throne of the empire. . . . They chose again a simple count, Adolphus of Nassau. . . . The less Adolphus fulfilled the expectations of his electors . . . the more did he lose his authority. . . . In short it appears that Adolphus's whole attitude, his league with England, his conception of the rights of the empire, the way he insulted ecclesiastical and secular princes, his policy with regard to the majority of the cities, caused a general ferment. . . . It was at a great assembly of princes in Prague, where Mainz, Bohemia, Brandenburg and Saxony met together that

Albrecht's influence began to gain the upper hand. Albrecht promised, in case he should become king, to give to King Wenzel the conquests made by Adolphus in Meissen. Albrecht and all his friends then girded themselves up to conquer the empire. In April 1298 we find him in Alsace opposing Adolphus who, however, still had the upper hand. The archbishop of Mainz then summoned the electors to Mainz for June 15 to consult about the disturbances in the empire. . . . They determined now to depose the king whom they had elected. This was done in the Thiergarten near Mainz on June 23, 1298. . . . The battle for the possession of the empire took place on July 2nd at Göllheim, where a stone cross still marks the spot. . . . The kings wore the same coat-of-arms—yellow with a black eagle—and bore the same banner. According to one account, for which Albert of Strassburg is voucher, they came into hand to hand conflict with each other. Adolphus cried out: 'Here you will relinquish the Empire!' Albrecht answered 'The decision lies in the hand of God.' The one-eyed Albrecht struck the surer blow, hitting his antagonist directly over the eye. The blood ran down Adolphus's face; he fell and died. Albrecht would never acknowledge that he had been the slayer of the Lord's anointed. Be that as it may he won the crown for himself on the battle-field. . . . Albrecht is altogether a striking figure in German history. Everywhere, in the lowest plains of Switzerland or in the highest mountains of Switzerland he is busy in founding his dynastic power. Under him the House of Austria made a vigorous beginning in the matter of establishing a great and extensive authority in all parts of the empire. . . . It was fatal for him that the harsh want of consideration which forms the chief feature of his sway as a statesman should have raised up a murderer against him in his own immediate vicinity—in the person of his own nephew."—L. Kanke, *Weltgeschichte (trans. from the German)*, v. 8, pp. 506-601.—See, also, AUSTRIA (pages 199-201).

A. D. 1648-1715.—Relations with Germany and France. See in this Supplement GERMANY; A. D. 1648-1715.

A. D. 1780-1790.—Joseph II., the enthroned Philosopher.—"The prince who best sums up the spirit of the century, is not Frederic [the Great, of Prussia], it is Joseph II. [the emperor]. Frederic was born a master, Joseph II. a disciple, and it is by disciples that we judge schools. The king of Prussia dammed up the waters, directed their flow, made use of the current; the emperor cast himself upon them and permitted himself to be carried. With Frederic the statesman always dominates, it is he who proposes and finally decides; the philosopher is subordinate; he furnishes to the results brought about by policy their abstract cause for existence and their theoretical justification. With Joseph II. rational conception precedes political calculation and governs it. He had breadth of mind, but his mind was superficial; ideas slipped from it. He had a taste for generosity, a passion for grandeur; but there was nothing profound in him but ambition, and it was all counter-stroke and reflection. He wished to surpass Frederic; his entire conduct was but an awkward, imprudent and ill-advised imitation of this prince whom he had made his

hero, whom history made his rival and whom he copied while detesting him. The political genius of Frederic was born of good sense and moderation: there was nothing in Joseph II. but the immoderate. He was a man of systems: he had only great velleities. His education was mediocre, and, as to methods, entirely jesuitical. Into this contracted mould he cast confusedly notions hastily borrowed from the philosophers of France, from the economists especially. He thus formed a very vague ideal of political aspirations and an exaggerated sense of the power at his disposition to realize them. 'Since I ascended the throne and have worn the first crown of the world,' wrote he in 1781, 'I have made Philosophy the lawmaker of my empire. Her logical applications are going to transform Austria.' He undertakes reforms in every direction at once. History is null for him, traditions do not count, nor do facts acquired. There is no race, nor period, nor surrounding circumstances: there is the State which is everything and can do everything. He writes in 1782, to the bishop of Strasbourg: 'In a kingdom governed conformably to my principles, prejudice, fanaticism, bondage of mind must disappear, and each of my subjects must be reinstated in the possession of his natural rights.' He must have unity, and, as a first condition, the rejection of all previous ideas. Chance makes him operate on a soil the most heterogeneous, the most incoherent, the most cut up, parceled out and traversed by barriers, that there is in Europe. Nothing in common among his subjects, neither language, nor traditions, nor interests. It is from this, according to him, that the defect of monarchy arises. 'The German language is the universal language of my empire. I am the emperor of Germany, the states which I possess are provinces which form but one body with the State of which I am the head. If the kingdom of Hungary were the most important of my possessions, I should not hesitate to impose its tongue on the other countries.' So he imposes the German language

BÂB, The.—The word Bâb, "meaning, in Arabic, 'a gate,' is the title of a hero of our own days, the founder, if not of a new religion, at least of a new phase of religious belief. His history, with that of his first followers, as told by M. le Comte de Gobineau in his 'Religions et Philosophies dans l'Asie Centrale,' presents a picture of steadfast adherence to truth (as they held it), of self-denial, of joyful constancy in the face of bitterest suffering, torture and death, as vivid and touching as any that are found in the records of the heroic days of old. . . . Among the crowd of pilgrims who flocked to Mecca in the summer of 1843 was a youth who had then hardly completed his nineteenth year. He had come from the far distant city of Shiraz, where his family held an honourable position, claiming, indeed, to trace their descent from the great Prophet himself. Thoughtful and devout from his childhood, Mirza Ali Mohammed had zealously and regularly practised all religious duties considered binding on an orthodox Musliman. He had received a liberal education, and while still a mere boy had eagerly examined

on the Hungarians, the Croats, the Tchêques, the Poles, on all the Slavs. He suppresses the ancient territorial divisions; they recall the successive agglomerations, the irregular alluvions which had formed the monarchy; he establishes thirteen governments and divides them into circles. The diets disappear; the government passes into the hands of intendants according to the French formula. In the cities the burgo-master appointed by the government becomes a functionary. The nobles lose the part, already much curtailed, that they still had, here and there, in the government. He taxes them, he taxes the ecclesiastics; he meditates establishing a tax proportional to incomes and reaching all classes. He protects the peasants, alleviates serfdom, diminishes the corvées, builds hospitals, schools above all, in which the state will form pupils to obey her. His ideal would be the equality of his subjects under the uniform sway of his government. He unifies the laws; he institutes courts of appeal with a supreme court for the entire empire. He makes regulations for manufactures, binds commerce to the most rigorous protective system. Finally he puts a high hand on the church and decrees tolerance. . . . This immense revolution was accomplished by means of decrees, in less than five years. If we compare the state of cohesion which the Bourbon government had brought about in France in 1789, with the incoherence of the Austrian monarchy on the death of Maria Theresa in 1780, it will be seen that the revolution which caused the Constituent Assembly was a small matter compared with that which Joseph II. intended to effect." —A. Sorel, *L'Europe et la Révolution française* (trans. from the French), pt. 1, pp. 119-122.

B.

and weighed every new set of ideas with which he came in contact. Christians, Jews, Fire-worshippers—he conversed with them all, and studied their books. . . . Up to the time of his visiting the shrine of the Prophet there had been no indication of any departure from the faith of his fathers. But this pilgrimage, instead of confirming his faith in Islam, had a quite contrary effect. While still in the holy city, and still more on the return journey, he had begun to confide to a select few views which attracted and delighted them, not more, perhaps, by their breadth and freedom than by the vague mystery in which they were still wrapped. His decisive breach with the old faith was not far distant. . . . Arrived at Shiraz, his first overt act was to present to his friends his earliest written works. These were two: a journal of his pilgrimage and a commentary on a part of the Korân. In the latter the readers were amazed and charmed to find meanings and teachings of which they had never dreamed before. From this time he began to teach more publicly; and day by day larger crowds flocked around him. In public he still

spoke with reverence of the Prophet and his laws; while in more private conferences he imparted to his disciples those new ideas which were, perhaps, not yet very clearly defined in his own mind. Very soon he had gathered round him a little band of devoted followers, ardently attached to himself, and ready to sacrifice wealth, life, all, in the cause of truth. And throughout the great empire men began everywhere to hear of the fame of Mirza Ali Mohammed. There was much in the young teacher himself, apart from the subject of his teaching, to account for this rapid success. Of blameless life; simple in his habits; strict and regular in all pious observances, he had already a weight of character to which his extreme youth added a tenfold interest. But in addition to these things, he was gifted with striking beauty of person, and with that subtle, winning sweetness of manner so often possessed by leaders of men, and to which, more than to the most weighty arguments, they have often owed their power. . . . Ere long, Mirza assumed the title by which he has since been known throughout Persia—the Bāb—that is, the Door, the only one through which men can reach the knowledge of God. It may be well to give here an outline of what the Bāb did teach. He believed in one God, eternal, unchangeable, Creator of all things, and into whom all shall finally be reabsorbed. He taught that God reveals His will to men by a series of messengers, who, while truly men, are not mere men, but also divine; that each of these messengers—Moses, Jesus, Mohammed—is the medium of some new truth, higher than that brought by the one who preceded him; that he himself, the Bāb, though claiming divine honours while he lived, was but the forerunner of one greater than he, the great Revealer—‘He whom God shall manifest,’ who should complete the revelation of all truth, and preside at the final judgment, at which all the good shall be made one with God, and all evil annihilated. One of the most marked and singular characteristics of his system is the prominence given in it to that mysterious and fanciful theory of numbers which had always had so great a charm for him. Taking various forms of the name of God—‘ahyy,’ meaning ‘the giver of life’; ‘wahed,’ ‘the only One’; or that which is a most sacred formula, ‘Bismillah elemana elegdous,’ ‘in the name of God, highest and holiest’—he shows that the letters composing each of those names, taken by their numerical value, make up the number 19. This he therefore concludes is the number which lies at the foundation of all things in heaven and earth, the harmony of the universe, the number which must rule in all earthly arrangements. The year should have 19 months, the month 19 days, the day 19 hours. . . . There are three points in particular in which the reforms proposed by the Bāb cannot fail, so far as they gain ground, to have a mighty effect on society. In the first place, he abolished polygamy; that is, he so strongly discountenanced it that his followers universally regard it as a prohibition. In close connection—almost as a necessary accompaniment of this—he forbade divorce; that festering sore which corrupts the mass of Persian society to its very heart, and makes pure family life almost impossible. His third revolutionary step was in the same direction. He abolished the veiling of the women.

. . . While the fame and popularity of the young preacher were daily increasing, his bold exposure of the vices of the clergy aroused against him their bitterest enmity.” This hostility soon became influential enough to prevail on the king and his ministers to silence the Bāb. Mirza was placed under confinement in his own house; but a chosen band of apostles went forth to do missionary work throughout the empire, and their success was great. Ere long, they began to combine political with religious aims, and one of them, Moulla Houssein, organized a movement which assumed a revolutionary character and spread to formidable proportions. The government became greatly alarmed, and an energetic minister took measures to suppress the Bābys, which was done with merciless vigor. The Bāb, himself, though he had taken no part in the political doings of his disciples, and had remained a quiet prisoner on parole at Shiraz, was put to death, after being brutally exposed for several hours to the insults of a mob. This was in 1851. The following year witnessed the martyrdom of a large number of the surviving Bābys of prominence, all of whom died for their faith without shrinking—as exalted in spirit, it would seem, as the early Christian martyrs. But Bābism was not extinguished. It is said to have spread secretly and continually throughout Persia, and to be of unknown extent at the present day.”—M. F. Wilson, *The Story of the Bāb* (*Contemporary Rev.*, Dec., 1885).

BALOCHISTAN, OR BALUCHISTAN.

—“Balochistan, in the modern acceptation of the term, may be said, in a general sense, to include all that tract of country which has for its northern and north-eastern boundary the large kingdom of Afghanistan, its eastern frontier being limited by the British province of Sindh, and its western by the Persian State, while the Arabian Sea washes its southern base for a distance of nearly six hundred miles. . . . In area Balochistan had long been supposed to cover in its entirety quite 160,000 square miles, but the latest estimates do not raise it higher than 140,000 square miles., of which 60,000 are said to belong to what is termed Persian Balochistan, and the remaining 80,000 to Kalāti Balochistan, or that portion which is more or less directly under the rule of the Brāhūi Khān of Kalāt. . . . Balochistan may be said to be inhabited chiefly by

the Baloch tribe, the most numerous in the country, and this name was given to the tract they occupy by the great Persian monarch, Nādir Shāh, who, as St. John remarks, after driving the Afghān invaders from Persia, made himself master in his turn of the whole country west of the Indus, and placed a native chief over the new province, formed out of the districts bounded on the north and south by the Halmand valley and the sea and stretching from Kermān on the west to Sindh on the east. This newly-formed province he called Balochistan, or, the country of the Baloch, from the name of the most widely spread and numerous, though not the dominant, tribe. According to Masson, who, it must be admitted, had more ample opportunities of obtaining correct information on this subject than any other European, the Balochs are divided into three great classes, viz., (1) the Brahuis; (2) the Rinds; and (3) the Lumris (or Numris); but this must be taken more in the sense of inhabitants of Balochistan than as divisions of a tribe, since the Brahuis are of a different race and language and call the true Balochs 'Nharuis,' in contradistinction to themselves as 'Brahuis.' . . . The origin of the word 'Baloch' is evidently involved in some obscurity, and has given rise to many different interpretations. Professor Rawlinson supposes it to be derived from Belus, king of Babylon, the Nimrod of Holy Writ, and that from 'Kush,' the father of Nimrod, comes the name of the Kalāti eastern district, 'Kachh.' Pottinger believes the Balochs to be of Turkoman lineage, and this from a similarity in their institutions, habits, religion—in short, in everything but their language, for which latter anomaly, however, he has an explanation to offer. But be this as it may, the very tribe themselves ascribe their origin to the earliest Muhammadan invaders of Persia, and are extremely desirous of being supposed to be of Arab extraction. They reject with scorn all idea of being of the same stock as the Afghān. They may possibly be of Iranian descent, and the affinity of their language, the Balochki, to the Persian, bears out this supposition; but the proper derivation of the word 'Baloch' still remains an open question. . . . The Brahuis, who, as a race, are very numerous in Balochistan, Pottinger considers to be a nation of Tartar mountaineers, who settled at a very early period in the southern parts of Asia, where they led an ambulatory life in Kbelis, or societies, headed and governed by their own chiefs and laws for many centuries, till at length they became incorporated and attained their present footing at Kalāt and throughout Balochistan generally. Masson supposes that the word 'Brahui' is a corruption of Ba-roh-i, meaning, literally, of the waste; and that that race entered Balochistan originally from the west. . . . The country may be considered as divided into two portions—the one, Kalāti Balochistan, or that either really or nominally under the rule of the Khān of Kalāt; and the other as Persian Balochistan, or that part which is more or less directly under the domination of the Shāh of Persia. Of the government of this latter territory, it will suffice to say that it is at present administered by the Governor of Bam-Narmashir, a deputy of the Kermān Governor; but the only district that is directly under Persian rule is that of Banpur—the rest of the country, says St. John, is left in

charge of the native chiefs, who, in their turn, interfere but little with the heads of villages and tribes. . . . It would . . . appear that the supremacy of the Shāh over a very large portion of the immense area (60,000 square miles) known as Persian Balochistan is more nominal than real, and that the greater number of the chiefs only pay revenue to their suzerain when compelled to do so. As regards Kalāti Balochistan, the government is, so to speak, vested hereditarily in the Brahui Khān of Kalāt, but his sovereignty in the remote portions of his extensive territory (80,000 square miles), though even in former times more nominal than real, is at the present moment still more so, owing to the almost constant altercations and quarrels which take place between the reigning Khān and his Gardārs, or chiefs. . . . In . . . the modern history of Kalāti Balochistan under the present dynasty, extending from about the commencement of the 18th century, when Abdula Khān was ruler, down to the present time, a period of, say, nearly 180 years, there is not much to call for remark. Undoubtedly the Augustan age of Balochistan was the reign of the first Nasir Khān [1755-1795], the Great Nasir, as he is to this day called by the Balochs. Of his predecessors little seems to be known; they were indeed simply successful robbers on a large scale, with but few traces of any enlightened policy to glide over a long succession of deeds of lawlessness, rapine, and bloodshed. . . . Had his successors been of the same stamp and metal as himself, the Kalāti kingdom of to-day would not perhaps show that anarchy and confusion which are now its most striking characteristics."—A. W. Hughes, *The Country of Balochistan*, pp. 2-48, and 235.

BAPTIST CHURCH, The first in Rhode Island. See RHODE ISLAND: A. D. 1639 (page 2641).

BAPTISTS.—"The name 'Baptist' was not a self-chosen one. In the early Reformation time those who withdrew from the dominant churches because of the failure of these churches to discriminate between the church and the world, between the regenerate and the unregenerate, and who sought to organize churches of believers only, laid much stress on the lack of Scriptural warrant for the baptism of infants and on the incompatibility of infant baptism with regenerate membership. Following what they believed to be apostolic precept and example, they made baptism on a profession of faith a condition of church-fellowship. This rejection of infant baptism and this insistence on believers' baptism were so distinctive of these Christians that they were stigmatized as 'Anabaptists,' 'Catabaptists,' and sometimes as simply 'Baptists'; that is to say, they were declared to be 'rebaptizers,' 'perverters of baptism,' or, as unduly magnifying baptism and making it the occasion of schism, simply 'baptizers.' These party names they earnestly repudiated, preferring to call themselves Brethren, Christians, Disciples of Christ, Believers, etc. . . . Baptists have, for the most part, been at one with the Roman Catholic, the Greek Cath-

olic, and most Protestant communions in accepting for substance the so-called Apostles', Nicene, and Athanasian creeds, not, however, because they are venerable or because of the decisions of ecclesiastical councils, but because, and only in so far as, they have appeared to them to be in accord with Scripture. . . . As regards the set of doctrines on which Augustin differed from his theological predecessors, and modern Calvinists from Arminians, Baptists have always been divided. . . . The great majority of the Baptists of today hold to what may be called moderate Calvinism, or Calvinism tempered with the evangelical anti-Augustinianism which came through the Moravian Brethren to Wesley and by him was brought powerfully to bear on all bodies of evangelical Christians. Baptists are at one with the great Congregational body and with most of the minor denominations as regards church government."—A. H. Newman, *A History of the Baptist Churches in the U. S.*, introd.—"Baptist principles are discoverable in New England from the very earliest colonial settlements. The Puritans of Plymouth had mingled with the Dutch Baptists during the ten years of their sojourn in Holland, and some of them seem to have brought over Baptist tendencies even in the Mayflower. Dutch Baptists had emigrated to England and extended their principles there; and from time to time a persecuted Baptist in England sought refuge in America, and, planted here, brought forth fruit after his kind. But as every offshoot of these principles here was so speedily and vigorously beaten down by persecution, and especially as, after the banishment of Roger Williams, there was an asylum a few miles distant, just over Narragansett Bay, where every persecuted man could find liberty of conscience, Baptist principles made little progress in the New England colonies, except Rhode Island, for the first hundred and twenty years. A little church of Welsh Baptists was founded in Rehoboth, near the Rhode Island line, in 1663, and shortly afterwards was compelled by civil force to remove to Swansea, where, as it was distant from the centres of settlement, it was suffered to live without very much molestation. It still exists, the oldest Baptist church in the State. In 1665, the first Baptist Church in Boston was organized, and, alone, for almost a century, withstood the fire of persecution,—ever in the flames, yet never quite consumed. In 1693, a second church was constituted in Swansea, not as a Regular, but as a Six-Principle, Baptist Church. In 1705, a Baptist church was formed in Groton, Connecticut. These four churches, three Regular and one Six-Principle, having in the aggregate probably less than two hundred members, were all the Baptist churches in New England outside of Rhode Island previous to the Great Awakening."—D. Weston, *Early Baptists in Mass. (The Baptists and the National Centenary)*, pp. 12-13.—"The representative Baptists of London and vicinity, who in 1689 put forth the Confession of Faith which was afterward adopted by the Philadelphia Association, and is therefore known in this country as the Philadelphia Confession, copied the Westminster Confession word for word, wherever their convictions would permit, and declared that they would thus show wherein they were at one with their brethren, and what convictions of truth made impossible a com-

plete union. And wherever Baptists appeared however or by whomsoever they were opposed, the ground of complaint against them was their principles. Some of these principles were sharply antagonistic to those of existing churches, and also to those on which the civil governments were administered. They were widely disseminated, especially in Holland, England, and Wales, and there were separate churches formed. From purely doctrinal causes also came divisions among 'the Baptized churches' themselves. The most notable one was that in England between the General or Arminian Baptists, and the Particular or Calvinistic Baptists. With the latter division do the Regular Baptists of America hold lineal connection. . . . The churches of Philadelphia and vicinity kept the closest connection with the mother country, and were most affected by it. In New England, in 'the Great Reformation' under the lead of Jonathan Edwards, there was made from within the Congregational churches a most vigorous assault against their own 'half-way Covenant' in the interest of a pure church. Along his lines of thought he started multitudes who could not stop where he himself remained and would fain have detained them. They separated from the Congregational churches, and were hence called Separates. A large proportion of them became Baptists, and formed themselves into Baptist churches. Through the labors of earnest men who went from them to Carolina and Virginia, their principles were widely disseminated in those and the neighboring colonies, and, in consequence, many churches came into existence."—G. D. B. Pepper, *Doctrinal Hist. and Position (The same)*, pp. 51-52.

BLUE LAWS OF CONNECTICUT, The.—"Just when or by whom the acts and proceedings of New Haven colony were first stigmatized as Blue Laws, cannot now be ascertained. The presumption, however, is strong that the name had its origin in New York, and that it gained currency in Connecticut, among episcopalian and other dissenters from the established church, between 1720 and 1750. . . . In the colony of New Haven, before the union with Connecticut, the privileges of voting and of holding civil office were, by the 'fundamental agreement,' restricted to church-members. This peculiarity of her constitution was enough to give color to the assertion that her legislation was, pre-eminently, blue. That her old record-book contained a code of 'blue laws' which were discreditables to puritanism and which testified to the danger of schism—became, among certain classes, an assured belief. To this imaginary code wit and malice made large additions, sometimes by pure invention, sometimes by borrowing absurd or arbitrary laws from the records of other colonies. And so the myth grew—till the last vestige of truth was lost in fable. The earliest mention of the 'New Haven Blue Laws' that I remember to have seen in print, is in a satirical pamphlet published in 1762, entitled: 'The Real Advantages which Ministers and People may enjoy, especially in the Colonies, by conforming to the Church of England,' etc. . . . From the manner in which this allusion is introduced it is evident that reproach of New Haven for her 'blue laws' was already a familiar weapon of religious controversy. A few years later—in 1767—William Smith, Chief-Justice of New York, had the curiosity to inspect 'the first records of the colony of New Haven, vulgarly called the Blue Laws.' In the continuation of his history of New York, he gives (p. 93) the result of his examination: 'A note ought not to be suppressed concerning these records, to correct a voice of misplaced ridicule. Few there are, who speak of the Blue Laws, . . . who do not imagine they form a code of rules for future conduct, drawn up by an enthusiastic, precise set of religionists; and if the inventions of wits, humorists, and buffoons were to be credited, they must consist

of many volumes. The author had the curiosity to resort to them, when the Commissaries met at New Haven, for adjusting a partition line between New York and the Massachusetts in 1767; and a parchment-covered book of demi-royal paper was handed to him for the laws asked for, as the only volume in the office passing under this odd title. . . . It contains the memorials of the first establishment of the colony, which consisted of persons who had wandered beyond the limits of the old charter of the Massachusetts Bay, and who, as yet unauthorized by the crown to set up any civil government in due form of law, resolved to conduct themselves by the Bible. As a necessary consequence, the judges they chose took up an authority similar to that which every religious man exercises over his own children and domestics. Hence their attention to the morals of the people, in instances with which the civil magistrate can never intermeddle under a regular well-policed institution; because, to preserve liberty, they are cognizable only by parental authority. . . . So far is the common idea of the blue laws being a collection of rules from being true, that they are only records of convictions, consonant, in the judgment of the magistrates, to the word of God, and dictates of reason.' . . . Occasional allusions to the 'Blue Laws' are found in newspapers and pamphlets printed before the Revolution, but no specimens of the laws so stigmatized seem to have been published before 1781, when 'a sketch of some of them' was given to the world by the Rev. Samuel Peters, in 'A General History of Connecticut, from its First Settlement under George Fenwick, Esq., etc.:' 'By a Gentleman of the Province' printed in London, 'for the Author.' . . . As the sole authority for the only 'New Haven Blue Laws' that are now popularly known by the name, he and his book are entitled here to a larger notice. The late Professor J. L. Kingsley, in the notes to his Historical Discourse at New Haven (1838), was at the pains of pointing out 'a few errors'—as he charitably named them—of 'the work which, more than any other, has given currency to various misrepresentations respecting the New Haven colony:' and in this connection he quoted a remark made by the Rev. Dr. Trumbull, the historian, who was a townsman of Peters and had known him from childhood,—that, 'of all men with whom he had ever been acquainted, Dr. Peters, he had thought, from his first knowledge of him, the least to be depended upon as to any matter of fact, especially in story-telling.' The best excuse that can be made for him is, that he was a victim of pseudomania; that his abhorrence of truth was in fact a disease, and that he was not morally responsible for its outbreaks. He could not keep even his name clear of falsification. It passes into history with doubtful initials and fictitious titles. . . . In 1774, his obstinate and aggressive torism rendered him very obnoxious to his neighbors and finally provoked the resentment of the Sons of Liberty. A party of two or three hundred men paid him a visit, threatened him (so he averred) with tar and feathers, handled him somewhat roughly when they detected him in falsehood, and drew from him a promise that he would not agsin meddle in public affairs. . . . He found his only comfort in the anticipation that, if his plans of vengeance should succeed, Connecticut

might be blotted out: 'the bounds of New York may directly extend to Connecticut river, Boston meet them, New Hampshire take the Province of Maine, and Rhode Island be swallowed up as Dathan.' In October, 1774, he sailed for England, where he remained until 1805. He obtained a small pension from the crown, and some compensation for the property he professed to have lost in Connecticut: and it was perhaps in the hope of eking out a livelihood, as well as of gratifying his resentment, that he employed his pen in abuse of the colony which gave him birth, and the religion of his fathers. He did not, says Mr. Duykneck, 'carry his point of dismembering Connecticut, but he punished the natives almost as effectually by writing a book—his *History of the State*.'—J. H. Trumbull, *Introd. to "The True-Blue Laves of Conn. and New Haven*."—"In this *History* were collected all the extravagant stories that had been set afloat during the previous fifty years to gratify the stupidity of those among the lower classes in New York who were descended from the Dutch, or the hatred of the most bitter of the British royalists. This *History* is the first and the only 'authority' for the 'Blue Laws' which were attributed to the early New Haven colonists. . . . No person in America who knew anything about the history of his country ever seriously quoted Dr. Peters's *History* as an authority on any subject whatever. The 'Comic History of England,' or the 'Travels of Baron Munchausen,' would be as little likely to be quoted in England for any serious purpose. And yet this falsehood about the 'Blue Laws,' which was thus first concocted for a purpose, has a vitality which, in some of its aspects, is amusing."—W. L. Kingsley, *Blackwood's Magazine on the "Blue Laws"* (*New Englander*, Apr., 1871), pp. 296-299.

BOWDOIN COLLEGE.—"An act of the Legislature of the province of Maine, approved in 1794, incorporated the above-named institution. The management of the college was placed under a board of trustees, with full powers of control. . . . That the institution might not want for proper support, it was further enacted, 'That the clear rents, issues, and profits of all the estate, real and personal, of which the said corporation shall be seized or possessed, shall be appropriated to the endowment of the said college, in such manner as will most effectually promote virtue, piety, and the knowledge of such of the languages and the

useful and liberal arts and sciences as shall hereafter be directed from time to time by said corporation.' Five townships of land, each six miles square, were granted to the college for its endowment and vested in the trustees, provided that fifteen families be settled in each of the said townships within a period of twelve years, and provided further that three lots containing 320 acres each be reserved, one for the first settled minister, one for the use of the ministry, and one for the support of schools within the township where it is located. These townships were to be laid out and assigned from any of the unappropriated lands belonging to the commonwealth of the district of Maine. The first money endowment was instituted by a general law of Massachusetts, approved February 24, 1814, which reads as follows: 'Be it enacted by the Senate and House of Representatives in General Court now assembled, That the tax which the president, directors and company of the Massachusetts Bank are and shall be liable to pay to the commonwealth, shall be and hereby is granted to and appropriated as follows, viz: ten-sixteenths parts thereof to the president and fellows of Harvard College; and three-sixteenths parts thereof to the president and trustees of Williams College; and three-sixteenths thereof to the president and trustees of Bowdoin College.'—F. W. Blackmar, *Hist. of Federal and State Aid to Higher Education in the U. S. (Bureau of Ed., Circ. of Information, 1890, no. 1)*, pp. 123-124.—The college was named in honor of Governor James Bowdoin, of Massachusetts, whose son made valuable gifts to it.

A. D. 1893-1894.—Triumph of the Peixoto government.—"The civil war in Brazil resulted in the complete triumph of the Peixoto government in the spring. During November [1893] the insurgents held their own in the harbor of Rio Janeiro, and in the following month occupied a number of islands in the bay. On December 1 Admiral Mello, their leader, with two of his ships, ran past the government batteries and out to sea, leaving in command in the harbor Admiral da Gama, who up to that time had remained neutral. The latter shortly after issued a manifesto pointing to a restoration of the monarchy as the ultimate purpose of the rebels. This seems to have tended rather to weaken the insurgent cause, and a month later da Gama tried in another proclamation to explain away the interpretation that had been put upon the first. The government, meanwhile, confined itself to strengthening its positions in the city and along the shore so as to make any attempt to land unsuccessful. Desultory hostilities continued throughout December and January, incidentally to which the American commander on one occasion enforced respect for merchant vessels bearing his flag by firing on an insurgent vessel. On February 12 da Gama made his most elaborate attempt to gain a foothold on the main land at

Armacao, but was repulsed with severe losses. By this time the insurgent cause was clearly on the decline. On the first of March a presidential election was held, which resulted in the choice of Prudente Moraes, a civilian. This removed the leading grievance of the rebels, that Plexoto was perpetuating a régime of pure militarism. On the 11th of March the fleet which the government had been fitting out in the United States and Europe appeared at the entrance to the harbor of Rio, and Pelxoto gave notice of an active movement against the rebels. Da Gama promptly offered to surrender on certain conditions, which being refused, he and his officers sought asylum on first a French and later a Portuguese war vessel. Thus deserted, the crews of the insurgent vessels surrendered without resistance when the government batteries opened fire on the 13th. Admiral Mello, meanwhile, had been operating with some success in connection with the insurgents on land in the southern states of Brazil. In the first part of April, however, the government forces totally defeated the rebels at Rio Grande do Sul, and Mello, about the middle of the month, surrendered himself and his command to the Uruguayan authorities, by whom they were disarmed.^h—*Political Science Quarterly*, June, 1894.

BROWN UNIVERSITY.—“Brown University, the oldest and best endowed institution of learning connected with the Baptist denomination, dates back for its origin to a period anterior to the American Revolution, when in all the thirteen colonies there were less than 70 Baptist churches, with perhaps 4,000 communicants. It is not surprising that, at the memorable meeting of the Philadelphia Association, held on the 12th of October, 1762, when the members were finally led to regard it, in the words of Backus, as ‘practicable and expedient to erect a College in the Colony of Rhode Island, under the chief direction of the Baptists, in which education might be promoted and superior learning obtained, free from any sectarian tests,’ the mover in the matter should at first have been laughed at, the thing being looked upon as, under the circumstances, an utter impossibility. But leaders at that time, like Morgan Edwards and Isaac Eaton, Samuel Jones, Abel Morgan, Benjamin Griffith, John Sutton and John Gano, were men of faith. . . . At the time of which I speak, there was graduated from Princeton, with the second honors of his class, a man of wonderful mental and phys-

ical endowments, an early pupil of Isaac Eaton at Hopewell, James Manning, of Elizabethtown, New Jersey. To him the enterprise of the college was by common consent intrusted. . . . The first commencement of the college, which was held in the then new Baptist meeting-house of the town of Warren, on the 7th of September, 1769, has already been regarded as a Red Letter Day in its history. Five years previous, the General Assembly, begun and held by adjournment at East Greenwich, on the last Monday in February, 1764; after various difficulties and delays, in consequence of the determined opposition of those who were unfriendly to the movement, had granted a charter for a ‘College or University in the English Colony of Rhode Island and Providence Plantations, in New England in America.’ Such is the language of the act of incorporation. But though Rhode Island had been selected for its home by the original projectors of the institution, and a liberal and ample charter had thus been secured, the college itself was still in embryo. Without funds, without students, and with no present prospect of support, a beginning must be made where the president could be the pastor of a church, and thus obtain an adequate compensation for his services. Warren, then as now, a delightful and flourishing inland town, situated 10 miles from Providence, seemed to meet the requisite requirements and thither, accordingly, Manning removed with his family in the spring of 1764. He at once commenced a Latin School, as the first step preparatory to the work of college instruction. Before the close of the year a church was organized, over which he was duly installed as pastor. The following year, at the second annual meeting of the corporation, held in Newport, Wednesday, September 3d, he was formally elected, in the language of the records, ‘President of the College, Professor of Languages and other branches of learning, with full power to act in these capacities at Warren or elsewhere.’ On that same day, as appears from a paper now on file in the archives of the Library, the president matriculated his first student, William Rogers, a lad of fourteen, the son of Captain William Rogers, of Newport. Not only was this lad the first student of the college, but he was also the first freshman class. Indeed, for a period of nine months and seventeen days, as appears from the paper already referred to, he constituted the entire body of students. From such feeble beginnings has the university sprung.”—R. A. Guild, *The First Commencement of Rhode Island College* (R. I. Hist. Soc. Coll’s, v. 7), pp. 269-271. —Six years after the founding of the University it was removed from Warren to Providence, and its name changed from Rhode Island College to Brown University, in honor of John Brown, of Providence, who was its most liberal benefactor. —G. W. Greene, *Short Hist. of Rhode Island*, p. 196. —Although founded by the Baptist Church, the charter of the University “expressly forbids the use of religious tests. The corporation is divided into two Boards—the Trustees, 36 in number, of whom 22 must be Baptists, 5 Quakers, 5 Episcopalians, and 4 Congregationalists, and the Fellows, 12 in number, of whom 8, including the President, must be Baptists, and the remainder of other denominations. Twelve Trustees and 5 Fellows form a quorum. The college estate, the students, and the members of the

faculty, with their families, are exempt from taxation and from serving as jurors."—S. G. Arnold, *Hist. of the State of R. I.*, ch. 18 (n. 2).

CAUCASUS, The Races of the.—"One of the most remarkable characteristics of the Caucasus is that, while it has acted as a barrier between the north and the south, stopping and turning aside the movements of population, it has also preserved within its sheltered recesses fragments of the different peoples who from time to time have passed by it, or who have been driven by conquest into it from the lower country. Thus it is a kind of ethnological museum, where specimens may be found of countless races and languages, some of which probably belong to the early ages of the world; races that seem to have little affinity with their present neighbours, and of whose history we know nothing except what comparative philology can reveal. Even before the Christian era

it was famous for the variety of its peoples. . . . No more inappropriate ethnological name was ever propounded than that of Caucasian for a fancied division of the human family, the cream of mankind, from which the civilized peoples of Europe are supposed to have sprung. For the Caucasus is to-day as it was in Strabo's time, full of races differing in religion, language, aspect, manners, character."—J. Bryce, *Transcaucasia and Ararat*, ch. 2.

CELESTINES, OR CELESTINIANS.—A religious order founded by the hermit, Peter of Morone, who afterwards, in 1204, became Pope, and took the name Celestine V. The rules of the order were austere. It became widespread throughout Europe, but was suppressed in France in 1706.

CHILE.—The account of Chilean affairs given in volume 1 (pages 411-415) ends with the overthrow and suicide of the dictatorial usurper, Balmaceda (September 20, 1891), the triumph of the Congress party, and the election to the Presidency of Admiral Jorge Montt. During the civil war which had this termination, the representative of the United States, Minister Egan, showed marked favor to Balmaceda and his party, which irritated the Chileans and produced among them a hostile feeling towards Americans and the American government. This was increased by the action of Mr. Egan, after the defeat of the Balmacedists, in sheltering a large

number of refugees of that party within the walls of the American legation. The same was done by other foreign representatives, but to no such extent, except in the case of the Spanish legation. A telegram sent by Mr. Egan on the 8th of October to the State Department at Washington stated: "80 persons sought refuge in his legation after the overthrow of the Balmaceda government; about the same number in the Spanish legation, 8 in the Brazilian, 5 in the French, several in the Uruguayan, 2 in the German and 1 in the English. Balmaceda sought refuge in the Argentine. All these have gone out except 15 in his own legation, 1 in the German and 5 in the Spanish." Not venturing to violate the privileges of the American Minister's residence, the Chilean authorities placed it under police surveillance, and arrested a number of persons entering the premises. The Minister complained, and was supported in his complaints at Washington, causing further irritation in Chile. This was again greatly increased by his claiming the right, not only to shelter the refugees in his residence, but to protect them in their departure from the country. In that, too, he was sustained by his government, and the refugees were safely set away. Meantime a more serious cause of quarrel between the two countries had risen. A party of sailors on shore at Valparaiso, from the United States ship *Baltimore*, had been assailed by a mob, October 10, and two were killed, while eighteen were wounded. The United States demanded satisfaction, and much angry correspondence ensued, made particularly offensive on the Chilean side by an insulting circular which Señor Matta, the Chilean Foreign Minister, issued December 13, and which he caused to be published in the Chilean newspapers. But Señor Matta disappeared from the Foreign Department soon after and his successor made apologies. "On January 16th the Chilean authorities notified Mr. Egan that they would withdraw any offensive passages in the Matta circular, and had instructed their Minister in Washington to express regret. The apology, thus expressed both in Washington and Santiago, was stiff and ungraceful, perhaps inadequate; but it was made in good faith. On January 20th, evidently feeling that all was now serene, the Chileans ventured, acting on a hint of Mr. Blaine's, to ask for Egan's withdrawal as a 'persona non grata.' What, therefore, must have been the dismay of the Chileans on January 23d, to receive an official notice, which the newspapers dubbed an 'ultimatum,' containing the statement that the United States Government was not satisfied with the result of the judicial investigation at Valparaiso and still asked 'for a suitable apology;' that for the Matta note there must be still another 'suitable apology,' without which the United States would terminate diplomatic relations; and that the request for Mr. Egan's withdrawal could not at that time be considered. It was a bitter draught for any government; but threats of war were resounding through the United States; American naval vessels were hurriedly being made ready; coal and supplies were going into the Pacific. There was power behind the note, and Chile prepared to bend to the storm. The 'ultimatum' appears to have reached the Chileans on Saturday, January 23d. On Monday, January

25th, they sent an answer which could not possibly be read as anything but a complete and abject apology on all the three points." But on the same day on which this answer was being forwarded, the President of the United States sent a warlike message to Congress. "It rehearsed the whole controversy at great length, submitted copious correspondence, and ended with the significant phrase: 'In my opinion I ought not to delay longer to bring these matters to the attention of Congress for such action as may be deemed appropriate.' . . . It is an unprofitable controversy as to whether the authorities in Washington knew that an answer was on its way; if they had read the correspondence they knew that an answer must come, and that the Chilean Ministry must send a peaceful answer. It is therefore difficult to understand the purpose of the President's message. . . . The effect . . . was to inflict an unnecessary humiliation on Chile. Spanish-Americans have good memories. Mexico still cherishes resentment for the war begun against her forty-five years ago; and forty-five years hence the Chileans are likely to remember the Balmaceda affair as Americans remembered the Impression of American seamen by Great Britain. We have the apology, but with it we have the ill-will."—A. B. Hart, *Practical Essays on American Government, essay 5.*

COMMERCE.

Ancient.

The Earliest Records of Trade.—Probably the oldest commercial record that exists was found sculptured on the rocks in the valley of Hammatat, east from Koptos on the Nile. It relates to an expedition which was sent out by the Pharaoh Sankh-ka-ra, to trade in the "land of Punt." Dr. Brugsch fixes the reign of Sankh-ka-ra at about 2500 B. C., which is five or six centuries before the time when Abraham is supposed to have lived. The "land of Punt" he considers to have been the Somali coast of Africa, south of the extremity of the Red Sea, on the Gulf of Aden. Other writers maintain that it was southern Arabia. It was the "Holy Land" of the Egyptians, from which their gods were supposed to have anciently come. The trading expedition of Sankh-ka-ra was commanded by one Hannu (a name which has a Phœnician sound) and it is he who tells the story of it in the inscription at Hammatat. "I was sent," he says, "to conduct ships to the country of Punt, to bring back odoriferous gums." He then describes the army of 3,000 men which accompanied him, and narrates their march from Koptos to the Red Sea, through the desert, at several stations in which they dug reservoirs for water. "I arrived," he continues, "at the port Seba [believed to be the harbor now called Kossel or Quossel] and I made transport vessels to bring back all kinds of products. I made a great offering of oxen, cows and goats. When I returned from Seba I executed the order of his Majesty; I brought him back all kinds of products which I met with in the ports of the Holy Land. I came back by Uak and Rohan. I brought back precious stones for the statues of the temples. Never was a like thing done since there were kings." It would seem from this that Hannu's expedition opened the first direct trade of the Egyptians with the land of Punt. But it is evident that they already had knowledge of the country and of its products, and it is probable they had formerly been receiving its gums and precious stones through the traders of some other country. Some seven or eight centuries after Hannu's voyage to Punt was made, we obtain in the Bible a most interesting glimpse of the trade then going on between Egypt and surrounding countries. It is found in the story of Joseph. When Joseph's brethren threw him into a pit, intending that he should be left there to die, their plans were changed by seeing a "Company of Ishmaelites from Gilead with their camels bearing spicery and balm and myrrh, going to carry it down to Egypt." Then Judah said, "let us sell him to the Ishmaelites," and when these "Midianites, merchantmen," as they are called in the next verse, came near, the heartless brothers of Joseph drew him out of the pit and sold him, to be taken as a slave into Egypt. Now this story is found to agree well with other facts that have been learned, and which go to show that some, at least, among the ancient tribes in northern Arabia—the Ishmaelites of the Bible—were great traders between the richer countries that surrounded them. The Midianites and Edomites, who occupied the region near the head of the Red Sea, were especially the masters of that trade. Their poor land, which gave them little to subsist upon, had one

gift for its people that went far toward making up for its barren poverty. It gave them the camel—that strange and homely beast, which is better fitted than any other for bearing burdens and for making long journeys without food or drink. At a later day they acquired the horse, from Media or from Mesopotamia, and bred that noble animal to such perfection that Arabia was long supposed to be its native home. But in Joseph's time the horse can hardly have been in use among the Arabs, since it seems to have been unknown in Egypt, which they constantly visited, until a considerably later day. However that may be, the camel was always the Arab's most useful servant—his carrier, his patient burden-bearer, his "ship of the desert," as Eastern poets have fitly named it. By the poverty of their country, by their wandering disposition, by their possession of the camel, and by their geographical situation, intermediate between several of the richest regions of antiquity, these Arabs of the olden time must have naturally been made a trading people, as early as it became possible for trade to exist. To the west of them was Egypt, with its fertile basin of the Nile and its remarkable people, probably first among all races that we know to rise out of barbarism and acquire order and industrial arts. To the east, in the valley of the Euphrates and Tigris, were the fertile plains of Mesopotamia, where the second oldest civilization that is known was growing up. To the north were Canaan and Gilead, the Scripture "land of promise," full of vineyards, of pastures and of harvest fields, with wide Syria beyond, and with Phœnician merchant cities just rising along the coast of the sea. To the south, in their own peninsula, was Arabia Felix, or Arabia the Blest, a famous land of pleasantness and plenty in ancient days. With their caravans of camels they traveled back and forth, very busily, no doubt, through the desert, which needed no building of bridges or making of roads. In one direction they carried the barley, wheat, millet, flax and woven goods of Egypt; in another, the honey, wine, wax, wool, skins, gums, resins and asphalt of Canaan and Syria; in still another the more costly freight of gold ornaments, precious stones, pearls, ivory, ebony, spices and fragrant gums from the south. In all directions, it is probable, they dragged poor unfortunates like Joseph, whom they bought or kidnapped from home and friends, to sell as slaves.

Babylonia.—"The industry of the Babylonians quickly attained great skill and wide development. They were famous for their weaving in wool and linen. The nations of the West agree in acknowledging the excellence of the cloths and coloured stuffs of Babylonia. Their pottery was excellent and the manufacture active; the preparation of glass was not unknown; the ointments prepared in Babylon were famous and much sought after, and the stones cut there were highly valued. The products of Babylonian skill and industry were first brought to their kinsmen in Syria, who could offer oil and wine in exchange. In the Hebrew scriptures we find Babylonian cloaks in use in Syria before the immigration of the Hebrews into Canaan. . . . The rough material required by Babylonian industry was supplied in the first

place by the Arabs, who exchanged their animals, skins, and wool for corn and weapons. Wine, and more especially wood, of which there was none in Babylonia, were brought by the Armenians from their valleys in the north down the Euphrates to Babylon. Before 1500 B. C. the commerce of the Arabs brought the products of South Arabia, the spices of Yemen, and even the products and manufactures of India, especially their silks, which reached the coasts of Southern Arabia, to Babylon. The Babylonians required the perfumes of Arabia and India to prepare their ointments. . . . When the cities of Phenicia became great centres of trade which carried the wares of Babylonia by sea to the West in order to obtain copper in exchange, the trade between Babylonia and Syria must have become more lively still. It was the ships of the Phenicians which brought the cubic measure, and the weights, and the cubit of Babylonia to the shores of Greece, and caused them to be adopted there."—M. Duncker, *Hist. of Antiquity*, bk. 2, ch. 3 (v. 1).—See, also, MONEY AND BANKING (page 2199).

Egypt.—"In ancient Egypt agriculture counted for more than manufactures, and manufactures were of more importance than commerce. The trade which existed was brisk enough as far as it went, but it aimed at little more than the satisfaction of local wants by the more or less direct exchange of commodities between producers. The limited development of internal traffic was due to two principal causes: the natural products of different parts of the country were too much alike for much intercourse to be necessary for purposes of exchange, and the conformation of the country, in itself scarcely larger than Belgium, was such as to give the longest possible distance from north to south. . . . The Nile was the only known highway, so much so that the language scarcely possessed a general word for travelling; going southward was called 'going up stream,' and a journey to the north, even by land into the desert, was described by a term meaning to sail with the current. . . . While internal traffic was thus brought to a minimum by natural causes, foreign commerce can scarcely be said to have existed, before the establishment of peaceable intercourse with Syria under the new empire. The importation of merchandise from foreign countries was a political rather than a commercial affair. Such foreign wares as entered the country came as tribute, as the spoil of war, or as memorials of peaceful embassies. . . . The list of the spoil taken by Thothmes III. gives a tolerably exhaustive account of the treasures of the time. It includes, of course, bulls, cows, kids, white goats, mares, foals, oxen, geese, and corn; then follow strange birds, negroes, men and maid-servants, noble prisoners and the children of defeated kings, chariots of copper, plated with gold and silver, iron armour, bows, swords and other accoutrements, leather collars ornamented with brass, gold and silver rings, cups, dishes and other utensils, vessels of iron and copper, statues with heads of gold, ell-measures with heads of ivory, ebony, and cedar inlaid with gold, chairs, tables and footstools of cedar wood and ivory, a plough inlaid with gold, blocks of bluestone, greenstone and lead, 'a golden storm-cap inlaid with bluestone,' jars of balsam, oil, wine and honey, various kinds

of precious woods, incense, alabaster, precious stones and colours, iron columns for a tent with precious stones in them, bricks of pure brass, elephants' tusks, natron, and, finally, by way of curiosity, from the land of the kings of Ruten, three battle-axes of flint."—E. J. Slucox, *Primitive Civilisations*, bk. 1, ch. 3, sect. 1 (v. 1).—See, also, MONEY AND BANKING (page 2199).

India.—"It is said in the Rig-Veda that 'merchants desirous of gain crowd the great waters with their ships.' And the activity in trade, thus early noted, has continued ever since to be characteristic of the country. Professor Lassen considers it remarkable that Hindus themselves discovered the rich, luxurious character of India's products. Many of the same beasts, birds, and fragrant oils are produced in other countries, but remain unnoticed until sought for by foreigners; whereas the most ancient of the Hindus had a keen enjoyment in articles of taste or luxury. Rajas and other rich people delighted in sagacious elephants, swift horses, splendid peacocks, golden decorations, exquisite perfumes, pungent peppers, ivory, pearls, gems, &c.; and, consequently, caravans were in constant requisition to carry these, and innumerable other matters, between the north and the south, and the east and the west, of their vast and varied country. These caravans, it is conjectured, were met at border stations, and at out-ports, by western caravans or ships bound to or from Tyre and Egypt, or to or from the Persian Gulf and the Red Sea. To the appearance of India goods in Greece, Professor Lassen attributes the Greek invasion of India. . . . The indirect evidence afforded by the presence of India's products in other ancient countries, coincides with the direct testimony of Sanskrit literature, to establish the fact that ancient Hindus were a commercial people. The code of Manu requires the king to determine the prices of commodities, and also the trustworthiness of the weights and measures used. And that the transactions contemplated were not restricted to local products is evident from reference to the charges for freight for articles in river boats, and the undetermined and larger charges to which sea-borne goods were liable. The account of King Yudhishtira's coronation in the Mahabharata affords an instance of precious articles from distant lands brought into India. So also in the Ramayana, we read that when Rama and his brothers were married, the brides were clad in silk from China. . . . Merchants are constantly being introduced into Sanskrit fiction, and equally often into Buddhist legend. They seem to have been always at hand to give variety and movement to the monotony of daily life."—Mrs Manning, *Ancient and Medieval India*, ch. 40 (v. 2).

Phenicians and Carthagians.—"The Phenicians for some centuries confined their navigation within the limits of the Mediterranean, the Propontis, and the Euxine, land-locked seas, which are tideless and far less rough than the open ocean. But before the time of Solomon they had passed the pillars of Hercules, and affronted the dangers of the Atlantic. Their frail and small vessels, scarcely bigger than modern fishing-smacks, proceeded southwards along the West African coast, as far as the tract watered by the Gambia and Senegal, while northwards they coasted along Spain, braved the heavy seas of the Bay of Biscay, and passing Cape Finis-

terre, ventured across the mouth of the English Channel to the Casiterides. Similarly, from the West African shore, they boldly steered for the Fortunata Islands (the Canaries), visible from certain elevated points of the coast, though at 170 miles distance. Whether they proceeded further, in the south to the Azores, Madeira, and the Cape de Verde Islands, in the north to the coast of Holland, and across the German Ocean to the Baltic, we regard as uncertain. It is possible that from time to time some of the more adventurous of their traders may have reached thus far; but their regular, settled and established navigation did not, we believe, extend beyond the Scilly Islands and coast of Cornwall to the north-west, and to the south-west Cape Non and the Canaries. The commerce of the Phœniciana was carried on, to a large extent, by land, though principally by sea. It appears from the famous chapter [xxvii] of Ezekiel which describes the riches and greatness of Tyre in the 6th century B. C., that almost the whole of Western Asia was penetrated by the Phœnician caravans, and laid under contribution to increase the wealth of the Phœnician traders. . . . Translating this glorious burst of poetry into prose, we find the following countries mentioned as carrying on an active trade with the Phœnician metropolis:—Northern Syria, Syria of Damascus, Judah and the land of Israel, Egypt, Arabia, Babylonia, Assyria, Upper Mesopotamia, Armenia, Central Asia Minor, Ionia, Cyprus, Hellas or Greece, and Spain.—G. Rawlinson, *Hist. of Phœnicia*, ch. 9.—“Though the invincible industry and enterprise of the Phœnicians maintained them as a people of importance down to the period of the Roman empire, yet the period of their widest range and greatest efficiency is to be sought much earlier— anterior to 700 B. C. In these remote times they and their colonists [the Carthaginians especially] were the exclusive navigators of the Mediterranean: the rise of the Greek maritime settlements banished their commerce to a great degree from the Ægean Sea, and embarrassed it even in the more westerly waters. Their colonial establishments were formed in Africa, Sicily, Sardinia, the Balearic Isles, and Spain. The greatness as well as the antiquity of Carthage, Utica, and Gades, attest the long-sighted plans of Phœnician traders, even in days anterior to the first Olympiad. We trace the wealth and industry of Tyre, and the distant navigation of her vessels through the Red Sea and along the coast of Arabia, back to the days of David and Solomon. And as neither Egyptians, Assyrians, Persians, or Indians, addressed themselves to a sea-faring life, so it seems that both the importation and the distribution of the products of India and Arabia into Western Asia and Europe were performed by the Idumean Arabs between Petra and the Red Sea— by the Arabs of Gerrha on the Persian Gulf, joined as they were in later times by a body of Chaldean exiles from Babylonia—and by the more enterprising Phœnicians of Tyre and Sidon in these two seas as well as in the Mediterranean.”—G. Grote, *Hist. of Greece*, pt. 2, ch. 18.—“The Commerce of Carthage may be conveniently considered under its two great branches—the trade with Africa, and the trade with Europe. The trade with Africa . . . was carried on with the barbarous tribes of the inland country that could be reached by caravans, and of the sea-coast.

Of both we hear something from Herodotus, the writer who furnishes us with most of our knowledge about these parts of the ancient world. . . . The goods with which the Carthaginian merchants traded with the African tribes were doubtless such as those which civilized nations have always used in their dealings with savages. Cheap finery, gaudily coloured cloths, and arms of inferior quality, would probably be their staple. Salt, too, would be an important article. . . . The articles which they would receive in exchange for their goods are easily enumerated. In the first place comes . . . gold. Carthage seems to have had always at hand an abundant supply of the precious metal for use, whether as money or as plate. Next to gold would come slaves. . . . Ivory must have been another article of Carthaginian trade, though we hear little about it. The Greeks used it extensively in art. . . . Precious stones seem to have been another article which the savages gave in exchange for the goods they coveted. . . . Perhaps we may add dates to the list of articles obtained from the interior. The European trade dealt, of course, partly with the things already mentioned, and partly with other articles for which the Carthaginian merchants acted as carriers, so to speak, from one part of the Mediterranean to another. Lipara, and the other volcanic islands near the southern extremity of Italy, produced resin; Agrigentum, and possibly other cities of Sicily, traded in sulphur brought down from the region of Etna; wine was produced in many of the Mediterranean countries. Wax and honey were the staple goods of Corsica. Corsican slaves, too, were highly valued. The iron of Elba, the fruit and the cattle of the Balearic Islands, and, to go further, the tin and copper of Britain, and even amber from the Baltic, were articles of Carthaginian commerce. Trade was carried on not only with the dwellers on the coast, but with inland tribes. Thus goods were transported across Spain to the interior of Gaul, the jealousy of Massilia (Marseilles) not permitting the Carthaginians to have any trading stations on the southern coast of that country.”—A. J. Church and A. Gilman, *The Story of Carthage*, pt. 3, ch. 3.—A high authority on questions of intercourse in ancient times throws doubt on the supposed African caravan trade of the Carthaginians—as follows: “There seems no doubt that the existing system of caravan trade dates only from the introduction of Islamism into Africa. It was the Arabs who first introduced the camel into Northern Africa, and with it camels any extensive intercourse with the interior was impossible. The Negro races have never shown any disposition to avail themselves of this mode of transport, and at the present day the commerce of the interior is carried on almost entirely by Moorish, that is, by Mohammedan, traders. The spread of Islamism has doubtless led to increased communication from another cause, the necessity for the Mohammedan inhabitants of the outlying and detached regions of the continent to make the pilgrimage to Mecca. Even in the most flourishing times of the Carthaginians they do not appear to have made any use of camels; and as late as the days of Strabo the communications with the tribes of Western Africa who dwelt beyond the Sahara were scanty and irregular. In the time of Herodotus there is certainly no indication that either the Carthaginians or the Greeks

of the Cyrenæa had any commercial intercourse with the regions beyond the Great Desert."—E. H. Bunbury, *Hist. of Ancient Geog.*, ch. 8, note 1 (v. 1).—See, also, PHœNICIANS (pages 2530–2534); and CARTHAGE (pages 392–395).

Jews.—Beginning early in his reign, Solomon made great and enlightened efforts to promote the commerce and industries of the people of Israel. "To increase the land traffic, he had small cities built in advantageous localities, in which goods of all sorts in large quantities were kept in suitable storehouses; a practice similar to that which had from ancient times prevailed in Egypt. . . . They were established chiefly in the most northern districts of Israel, towards the Phœnician boundaries, as well as in the territories of the kingdom of Hamath, which was first conquered by Solomon himself.—The main road for the land traffic between Egypt and the interior of Asia must have been the great highway leading past Gaza and further west of Jerusalem to the Northern Jordan and Damascus. Here it was joined by the road from the Phœnician cities, and continued as far as Thapsacus, on the Euphrates. This was entirely in the dominions of the king; and here, under the peaceful banner of a great and powerful monarchy, commerce could flourish as it had never flourished before. It was clearly for the improvement of this route, which had to traverse the Syrian desert on the north, that Solomon built, in a happily chosen oasis of this wilderness, the city of Thammor, or Tadmor, of which the Greek version is Palmyra. There is not a single indication that this city was of importance before Solomon's time, but from that era it flourished for more than a thousand years. . . . For any distant navigation, however, Solomon was obliged to rely on the aid of the Phœnicians, inasmuch as they were in that age the only nation which possessed the necessary ability and inclination for it. It is true that the idea of competing with the Phœnicians upon the Mediterranean could hardly have occurred to him, since they had long before that time attracted all the commerce upon it to themselves, and would scarcely have desired or even tolerated such a rival. . . . But the Red Sea, which had been thrown open to the kings of Israel by the conquest of the Idumeans, offered the finest opportunity for the most distant and lucrative undertakings, the profit of which might perfectly satisfy a nation in the position of Israel at the dawn of maritime activity; and on their part, the Phœnicians could not fail to be most willing helpers in the promotion of undertakings which it lay in the hands of the powerful king of Israel entirely to cut off from them, or at any rate to encumber with great difficulties. In this way the mutual desires and needs of two nations coincided without any injury to the one or the other. . . . Phœnician sailors were at first, it is true, the teachers of the Israelite. It was they who aided them in constructing and manning the tall ships, which, destined to distant voyages upon uncertain seas, needed to be strongly built; but yet how many new ideas and what varied knowledge the nation would in this way acquire! The ships were built in Ezion-geber, the harbour of the town of Elath (or Eloth), probably on the very spot where Akaba now stands. The cargo brought back each time from the three years' voyage consisted of 420 talents of gold, besides silver, ivory, red sandal-wood, apes, and peacocks, probably also hard and aloe."—H. Ewald, *Hist. of Israel*, v. 3, pp. 261–264.

Greeks.—When the Greeks had established themselves, not only on the peninsula, but also on the islands and on the east coast of the Ægean Sea, their navigation greatly extended. That this, even in the first half of the 8th century, was profitable in its results, we see from the instance of Dius of Cyme, the father of Hesiod, who maintained himself in this manner. The works of art in which Lydia and Caria excelled, together with the products and manufactures of the east, which reached the western coasts of Asia, the products of these coasts, and wine and oil from Lesbos and Samos—all these could be shipped from the Greek maritime cities of Asia Minor, and carried to the peninsula. It was through this commerce . . . that Chalcis and Eretria laid the foundation of their greatness. To what proportions it had attained, even in the course of the 8th century, we find from the mint marks of Phœcia and Cyme, the standards of Chalcis and Eretria, the coins and weights and measures of Phidon of Argos. . . . From the middle of the 8th century, the Greeks no longer merely practised navigation; they became, in an eminent sense, a maritime nation. At the time when Sinope and Trapezus were founded in the east, Naxos, Catania, and Syracuse in Sicily, and Cyme in Campania, a nautical discovery had already been made, by means of which the Greeks surpassed the Phœnicians, the ancient voyagers of Syria; this was the building of triremes. To what an extent and proficiency must seamanship have attained, what importance naval battles must have assumed, to give rise to the attempt to replace the ancient war vessels by others of a far more powerful kind! When the first triremes were built at Corinth and Samos, about the year 700 B. C., Greek cities already existed on the southern shore of the Black Sea, on the coasts of Thrace, in Corcyra and Sicily; the southern coast of Italy had also been colonised. The products of Greek industry, pottery, implements, and weapons, were advantageously bartered on the coasts of the Thracians, Scythians, Illyrians, Sicilians, and Oscans, for the fruits of the soil, and for the cattle of those regions. The need of the means of exchange must have given great encouragement and impetus to manufactures in the Greek cities of the peninsula, on the coasts of Asia, and in the newly-founded Asiatic settlements themselves. . . . Navigation and commerce must have become permanent occupations. And the great increase of manufactures must also have given employment to numbers of the country people. Thus there grew up under the very rule of the aristocracy a powerful rival to itself; a nautical, artisan, commercial class, side by side with the land population. If the protecting walls of the chief place of the canton had previously been sought only in time of need, in case of surprises or hostile landings, the new industrial classes were now settled together in the harbours and centres of trade. Handicrafts, navigation, and commerce, could not exist without one another. In the maritime cantons on the east of the peninsula, and in the cantons on the coasts of the Peloponnesus, there sprang up simultaneously with the burgher class a town population."—M. Dœcker, *Hist. of Greece*, bk. 4, ch. 2 (v. 2).—"Between 700 B. C. and 580 B. C.,

we observe . . . an immense extension of Grecian maritime activity and commerce—but we at the same time notice the decline of Tyre and Sidon, both in power and traffic. The arms of Nebuchadnezzar reduced the Phenician cities to the same state of dependence as that which the Ionian cities underwent half a century later from Cræsus and Cyrus; while the ships of Miletus, Phœnæa and Samos gradually spread over all those waters of the Levant which had once been exclusively Phenician. In the year 704 B. C., the Samians did not yet possess a single trireme: down to the year 630 B. C. not a single Greek vessel had yet visited Libya. But when we reach 550 B. C. we find the Ionic ships predominant in the Ægean, and those of Corinth and Korkyra in force to the west of Peloponnesus—we see the flourishing cities of Kyrene and Barka already rooted in Libya, and the port of Naukratis a busy emporium of Grecian commerce with Egypt. The trade by land—which is all that Egypt had enjoyed prior to Psammetichus, and which was exclusively conducted by Phenicians—is exchanged for a trade by sea, of which the Phenicians have only a share, and seemingly a smaller share than the Greeks. Moreover the conquest by Amasis of the island of Cyprus, half-filled with Phenician settlements and once the tributary dependency of Tyre—affords an additional mark of the comparative decline of that great city. In her commerce with the Red Sea and the Persian Gulf she still remained without a competitor, the schemes of the Egyptian king Nekos having proved abortive. Even in the time of Herodotus, the spices and frankincense of Arabia were still brought and distributed only by the Phenician merchant. But on the whole, both political and industrial development of Tyre are now cramped by impediments, and kept down by rivals, not before in operation. . . . The 6th century B. C., though a period of decline for Tyre and Sidon, was a period of growth for their African colony Carthage, which appears during this century in considerable traffic with the Tyrrhenian towns on the southern coast of Italy, and as thrusting out the Phœnæan settlers from Alalâ in Corsica.”—G. Grote, *Hist. of Greece*, pt. 2, ch. 21.—“It is a remarkable fact in the history of Greek colonies that the exploration of the extreme west of the Mediterranean was not undertaken either by the adventurers who settled at Cyme, or by the powerful cities of Sicily. A century or more elapsed from the foundation of Syracuse before any Greek vessel was seen on the coast of Spain or Liguria, and when the new beginning was made, it was not made by any of the colonies, Chalcidian, Dorian, or Rhodian, which had taken part in the discovery of the West. It was the Phœnicians of Ionia, Herodotus tells us, who first made the Greeks acquainted with the Adriatic, with Tyrrhenia, Iberia (Spain), and Tartessus (the region round Cadiz). The first impulse to these distant voyages arose from a mere accident. At the time of the foundation of Cyrene, about the year 630 B. C., a Greek of Samos, by name Colaenus, when on his way to Egypt, was carried by contrary winds beyond the pillars of Heracles to Tartessus. There he found a virgin market, from which he returned to realise a profit of 60 talents (£12,000), an amount only surpassed by the gains of Sostratus of Aegina, who was the pre-

mier of Greek merchants. But this was the beginning and the end of Samian trade to the West; why they left it to the Phœnicians to enter into the riches which they had discovered, we cannot say, but within thirty years of this date, the enterprising Ionian town sent out a colony to Massilla near the mouth of the Rhone, in the district known as Liguria. . . . The mouth of the Rhone was the point where all the routes met which traversed France from the English Channel to the Gulf of Genoa. Of these Strabo specifies three. Merchandise was carried by boats up the Rhone and Saône, from which it was transferred to the Seine, and so passed down the river; or it was taken by land from Marseilles (or Narbo) to the Loire; or again carried up the Aude and transported thence to the Garonne. By one or other of these routes, the wares collected by the Gaulish merchants—more especially the tin, which they imported from Britain—was brought into the Greek market, if indeed it was not carried on pack-horses straight across the narrowest part of the country. The importance of these lines of transit at a time when the western Mediterranean was held by the Carthaginians, and the northern Adriatic by the Tyrrhenians, can hardly be over-estimated. The colonists extended their borders by degrees, though not without severe contests with the Ligurians and Tyrrhenians by sea and land. New cities were founded to serve as outposts against the enemy: Agatha in the direction of the barbarians of the Rhone; Olbia, Antipolis, and Nicaea in the direction of the Salyans and Ligurians of the Alps. They also spread themselves down the coast of Spain.”—E. Abbott, *Hist. of Greece*, pt. 2, ch. 13.

Rome.—“Rome, placed like a mightier Mexico in the centre of her mighty lake, was furnished with every luxury and with many of her chief necessities from beyond the waters; and cities on every coast, nearly similar in latitude and climate, vied in intense rivalry with each other in ministering to her appetite. First in the ranks of commerce was the traffic in corn, which was conducted by large fleets of galleys, sailing from certain havens once a year at stated periods, and pouring their stores into her granaries in their appointed order. Gaul and Spain, Sardinia and Sicily, Africa and Egypt were all wheat-growing countries, and all contributed of their produce, partly as a tax, partly also as an article of commerce, to the sustentation of Rome and Italy. The convoy from Alexandria was looked for with the greatest anxiety, both as the heaviest laden, and as from the length of the voyage the most liable to disaster or detention. The vessels which bore the corn of Egypt were required to hoist their topsails on sighting the promontory of Sunrentum, both to distinguish them from others, and to expedite their arrival. These vessels moreover, according to the institution of Augustus, were of more than ordinary size, and they were attended by an escort of war galleys. The importance attached to this convoy was marked by the phrases, ‘auspicious’ and ‘sacred,’ applied to it. . . . A deputation of senators from Rome was directed to await its arrival at the port where it was about to cast anchor, which, from the bad condition of the haven at Ostia, was generally at this period Puteoli in Campania. As soon as the well-known topsails were seen above the horizon a general

holiday was proclaimed, and the population of the country, far and near, streamed with joyous acclamations to the pier, and gazed upon the rich flotilla expanding gaily before them. The vessels engaged in this trade, however numerous, were after all of small burden. The corn-fleets did not indeed form the chief maritime venture of the Alexandrians. The products of India, which had formerly reached Egypt from Arabia, and were supposed indeed in Europe to have come only from the shores of the Erythrean Sea, were now conveyed direct to Cleopatra or Berenice from the mouths of the Indus and the coast of Malabar, and employed an increasing number of vessels, which took advantage of the periodical trade winds both in going and returning. The articles of which they went in quest were for the most part objects of luxury; such as ivory and tortoiseshell, fabrics of cotton and silk, both then rare and costly, pearls and diamonds, and more especially gums and spices. The consumption of these latter substances in dress, in cookery, in the service of the temples, and above all at funerals, advanced with the progress of wealth and refinement. The consignments which reached Alexandria from the East were directed to every port on the Mediterranean; but there was no corresponding demand for the produce of the West in India, and these precious freights were for the most part exchanged for gold and silver, of which the drain from Europe to Asia was uninterrupted. The amount of the precious metals thus abstracted from the currency or bullion of the empire, was estimated at 100,000,000 sesterces, or about £800,000 yearly. The reed called papyrus, the growth of which seems to have been almost confined to the banks of the Nile, was in general use as the cheapest and most convenient writing material, and the consumption of it throughout the world, though it never entirely superseded the use of parchment and waxen tablets, must have been immense. It was converted into paper in Egypt, and thence exported in its manufactured state; but this practice was not universal, for we read of a house at Rome which improved on the native process, and produced what Pliny calls an imperial or noble out of a mere plebeian texture. With respect to other articles of general use, it may be remarked that the most important, such as corn, wine, oil, and wool, were the common produce of all the coasts of the Mediterranean, and there was accordingly much less interchange of these staple commodities among the nations of antiquity than with ourselves, whose relations extend through so many zones of temperature. Hence, probably, we hear of none of their great cities becoming the workshops or emporiums of the world for any special article of commerce. The woollens indeed of Miletus and Laodicea, together with other places of Asia Minor, were renowned for their excellence, and may have been transported as articles of luxury to distant parts; but Africa and Spain, Italy and parts of Greece, were also breeders of sheep, and none of these countries depended for this prime necessary on the industry or cupidty of foreigners. The finest qualities of Greek and Asiatic wines were bespoke at Rome, and at every other great seat of luxury. The Chian and Lesbian vinegars were among the most celebrated. . . . Again, while the clothing of the mass of the population was

made perhaps mainly from the skins of animals, leather of course could be obtained abundantly in almost every locality. When we remember that the ancients had neither tea, coffee, tobacco, sugar, nor for the most part spirits; that they made little use of glass, and at this period had hardly acquired a taste for fabrics of silk, cotton, or even flax, we shall perceive at a glance how large a portion of the chief articles of our commerce was entirely wanting to theirs. Against this deficiency, however, many objects of great importance are to be set. Though the ruder classes were content with wooden cups and platters fashioned at their own doors, the transport of earthenware of the finer and more precious kinds, and from certain localities, was very considerable. Though the Greeks and Romans generally were without some of our commonest implements of gold and silver, such for instance as watches and forks, it is probable that they indulged even more than we do in personal decoration with rings, seals, and trinkets of a thousand descriptions. . . . The conveyance of wild animals, chiefly from Africa, for the sports of the amphitheatres of some hundreds of cities throughout the empire, must alone have given occupation to a large fleet of ships and many thousand mariners. Nor were the convoys smaller which were employed to transport marble from the choicest quarries of Greece and Asia to many flourishing cities besides the metropolis. . . . After due deduction for the more contracted sphere of ancient commerce, and the lesser number of articles, for the extent also to which the necessaries and conveniences of life were manufactured at home in the establishments of wealthy slaveowners, we shall still readily believe that the inter-communication of the cities of the Mediterranean, such as Coriuth, Rhodes, Ephesus, Cyzicus, Antioch, Tyrus, Alexandria, Cyrene, Athens, Carthage, Tarraco, Narbo and Massilia, Neapolis and Tarentum, Syracuse and Agrigentum, and of all with Rome, must have been a potent instrument in fusing into one family the manifold nations of the empire. . . . In the eyes of the Orientals and the Greeks, the mistress of lands and continents, the leader of armies, and the builder of roads was regarded as the greatest of all maritime emporiums, and represented in their figurative style as a woman sitting enthroned upon the waves of the Mediterranean. The maritime aspect thus assumed by Rome in the eyes of her subjects beyond the sea, is the more remarkable when we consider how directly her ancient policy and habits were opposed to commercial development. . . . The landowners of Rome, in the highday of her insolent adolescence, had denounced both commerce and the arts as the business of slaves or freedmen. So late as the year 535 a law had been passed which forbade a senator to possess a vessel of burden, and the traffic which was prohibited to the higher class was degraded in the eyes of the lower. . . . It was . . . by following the natural train of circumstances, and by no settled policy of her own, that Rome secured her march across the sea, and joined coast to coast with the indissoluble chain of her dominion. On land, on the contrary, she constructed her military causeways with a fixed and definite purpose. . . . The population of Gaul crept, we know, slowly up the channel of the rivers, and the native tracks which conveyed

their traffic from station to station were guided by these main arteries of their vital system. But the conquerors struck out at once a complete system of communication for their own purposes, by means of roads cut or built as occasion required, with a settled policy rigidly pursued. These high roads, as we may well call them, for they were raised above the level of the plains and the banks of the rivers, and climbed the loftiest hills, were driven in direct lines from point to point, and were stopped by neither forest nor marsh nor mountain."—C. Merivale, *Hist. of the Romans*, ch. 39.

Gaul under the Romans and after the fall of the Empire.—"In the second century of our era, in the time of Trajan and the Antonines, Gaul with its fertile fields, its beautiful meadows, its magnificent forests, was one of the best cultivated countries of the Roman world. It exported into Italy grain from Aquitaine, Celtique and from the country of the Allobroges (Dauphiné), flax from Cadurques (Quercy) and Bituriges (Berry), hemp from Auvergne and the valley of the Rhône, spikenard from Provence (valeriana celtica according to M. Littré) renowned in the Roman pharmacopœia, oak and pine from the immense forests which still covered the Pyrenees, the Cévennes, the Alps, the Jura, the Vosges and nearly all the north of Gaul (forest of Ardennes), horses from Belgium, wool from the Narbonnaise, cheese from the Alps and from Nîmes, hams and salt provisions from Séquanais (Franche-Comté), and the Pyrenees. The wines of the Narbonnaise and the valley of the Rhône, often adulterated and little relished by the Italians, were notwithstanding one of the principal objects of commerce in the interior of Gaul, in Great Britain and Germany. The oysters of the Mediterranean and even those of the Atlantic and the Channel which the ancients had perhaps found means of keeping in fresh water, figured upon the tables of the gourmets of Rome. We know that long before the conquest, the Gauls took gold from the sands of their rivers and that in certain regions (Upper Pyrenees), territory of the Tarbellies, and Val d'Aoste, territory of the Salasses, they extracted gold from the auriferous rocks by processes quite analogous to those which are now employed by the great Californian companies. These mines which were yet in existence under Augustus were not long in being exhausted, but the iron of Berry, Sénonais, Périgord, Rouergue, the valley of the Rhône and of the Saône, the copper of the Pyrenees (Saint-Etienne-de-Balgorry), of the Alps (country of the Centrons, now Upper Savoy), of the Cévennes (Cabrières in Hérault and Chesny in Rhône), the tin of Limousin, the argentiferous lead of the territory of the Rutènes (Rouergue), of the Gabales (Gévaudan), of the Centrons, etc., were mined and wrought with a skill which placed the metallurgy of Gaul in the first rank of the industries of the empire. These mining operations, superintended by the State, although they belonged to the proprietors of the soil, were often directed by companies which combined the working of the metal with its extraction from the ore. One which had its seat at Lyons is known to us by many inscriptions. Textile industries were not less flourishing than metallurgy; the manufacture of sail-cloth was carried on all over Gaul; the bleached linens of Cahors, the carpets of the Narbonnaise, the saguans of

mingled bright colors were renowned even in Italy. The progress of commerce had followed that of agriculture and manufacture. The network of Roman roads planned by Agrippa was completed and four roads accessible to carriages or beasts of burden, crossed the Alps by the passes of the Little (Gratus Mons) and of the Great Saint-Bernard (Summus Penninus), of Mount Genève (Mons Matroua) and of the Argentière; the Corniche road stretched along the Mediterranean from Genoa to Marseilles; those of the pass of Pertus (Summo Pyrenœco), of the valley of Aran, of the Somport, of Roncevaux, and from Lapurdum (Bayonne) to Pampeluna connected Gaul to Spain. . . . Notwithstanding the competition of new roads, river navigation had retained all its activity. . . . We know from inscriptions of a certain number of associations for water transportation which appear to have played a great rôle in the interior commerce of Gaul from the first century of our era. The boatmen of the Rhône, the Saône, the Durance, the Seine, the Loire, the Aar, an affluent of the Rhine, formed corporations recognized by the State, organized on the model of cities, having their regulations, property, elective chiefs, and patronized by great personages who charged themselves with defending their interests against the Roman authorities. The most celebrated, if not the most important of these associations, is that of the Nautæ Parisiaci, the memory of which has been preserved to us by the remains of an altar raised, under Tiberius, at the point of the Isle of the City (the ancient Lutetia) and found in 1711 under the choir of Notre-Dame. . . . The two great commercial ports of the Mediterranean were Narbonne and Arles, after Marseilles had lost her maritime preponderance and was only a city of science, luxury and pleasure. . . . Immense labor upon embankments and canalization which had thrown within Narbonne the mass of the river and deepened the maritime channel made of the metropolises of the Narbonnaise one of the safest ports upon the coast of Gaul. It communicated with the Rhône by the navigation of the lakes (étangs) which at that time extended without interruption to the western mouth of the river, with the ocean by the course of the Garonne, navigable from Toulouse (Tolosa). The port of the Garonne was then as now Bordeaux (Burdigala) which already had intercourse with Great Britain and Spain. Arles, connected with the sea by the canal of Marius and perhaps also by the small arm of the Rhône and the navigation of the lakes (étangs), was a maritime port and at the same time the outlet for the navigation of the Rhône which was prolonged by the Saône as far as Chalon (Cabilonum). Upon the banks of the river rose the wealthy cities of Tarascon, Avignon (Avenio), Orange (Arausio), Vienne. Lyons is the commercial and also the political metropolis of Gaul, the seat of the most powerful manufacturing and commercial companies; the boatmen of the Saône and the Rhône, the wine merchants, the mining and smelting companies of the valley of the Rhône. Above Lyons, four great commercial routes start from the valley of the Saône. The first ascends the Doubs as far as Besançon (Vesuntio) and terminates at the Rhine near Augst (Augusta Rauracorum), where the river is already navigable. The second follows the valley of the Saône and

descends by the Moselle, navigable above Trèves (Augusta Trevirorum), and by the *Mœsæ*, toward the middle and lower valley of the Rhine. . . . The third route, that from the Saône to the Loire, set out from Chalon, crossed Autun (Augustodunum), and reached the Loire above Orléans (Genabum, later Aurelianum). Goods embarked upon the river arrived, after a voyage of 370 kilometers (2,000 stades), at Nantea (Portus Namnetum) which appears to have been substituted, about the beginning of the first century, for the ancient port of Corbilo and which was also in intercourse with Great Britain. The fourth route, that from the Saône to the Seine, crossed Autun, was there divided into two branches which went by way of Avallon and Alise to meet at Sens (Agedincum) on the Yonne, and descended the Seine to its mouth by Melun (Melodunum), Paris (Lutetia) and Rouen (Rotomagus). This was the shortest route between the new province of Britain and the Mediterranean; but the ancients, notwithstanding the progress in navigation, always distrusted long passages by sea; so the principal emporium of commerce with Britain was not Caracotinum (Harfleur), the port of the Seine, but Gesoriacum, later Bononia (Boulogne), which is distant only 50 kilometers from the English coast. It was there that Caligula erected that gigantic pharos known to the middle-ages under the name of the tower of Odré and which existed until 1645. . . . When one thinks of Gaul in the second half of the 5th century, after those great streams of invasion which swept it for fifty years, one easily fancies that the flood has carried everything away, that the Roman institutions have disappeared, that private fortunes are swallowed up in a frightful catastrophe, that the barbarians have enslaved the Gallo-Romans, that social life is suspended, manufactures ruined, commerce interrupted. This picture which responds to the idea we form of a barbarian conquest, is necessarily exaggerated, because the Germanic invasion was not a conquest. The Germans who established themselves upon the Roman territory, those even who had employed force to make a place for themselves within it, did not consider themselves conquerors, but subjects and soldiers of the Empire: they dreamed so little of destroying it that they aspired to serve it whether it would or no. . . . Notwithstanding the decadence of manufactures and the inevitable disorders which weakness of the central power brings in its train, commerce appears to have preserved a certain amount of activity. In the 7th century, post stages still existed. Upon the Roman roads, maintained and repaired by the Mérovingians, heavy wagons which served for the transportation of goods and travelers circulated with their teams of oxen or horses. Royal decrees commanded the preservation of towing-paths along navigable rivers; the rivers had remained the high-ways of interior commerce, and the boatmen's companies of Roman Gaul had perhaps survived the fall of the imperial domination. The ports of the Atlantic, Bordeaux and Nantes, those of the Channel, Alet (between Saint-Malo and Saint-Servan), Rouen, Quantovic (Étaples or Saint-Josse-sur-Mer) on the bay of the Cuche, Boulogne, were in relations with the Visigoths and the Suevi of Spain, the Irish, the Frisians, and received in exchange for the wines, honey, madder, grains

and linens of Gaul, oils and lead from Spain, metals and slaves from Great Britain, coarse cloths from Ireland and finer fabrics which they were beginning to make in Frisia. Marseilles, Arles, Narbonne, the great ports of the Mediterranean, were always the depots for the trade of the Orient, where their vessels went for spices, silks, papyrus from Alexandria, cloths and carpets from Antioch and Laodicea, which their merchants exchanged in part for money, in part for metals, honey, saffron, almonds and linens from southern Gaul, coral brought from Italy, and amber brought overland from the borders of the Baltic. The conquests of the Franks, masters of central and southern Germany, had opened to commerce two new roads; one, by the Danube, stretched away to the frontiers of the Eastern Empire and to Constantinople through the countries occupied by the fierce tribes of the Avars and the Bulgarians; the other arrived by Thuringia in the regions where the Slav tribes, Sorbs (Mecklenburg, Brandenburg, Pomerania) and Wends (Bohemia, Moravia, Austria, Carinthia) dominated. In these uncultivated countries, covered with forests and marshes, in the midst of these warlike peoples, the merchants could risk themselves only in large caravans, sword at the side and lance in hand. These distant and perilous expeditions were attractive to the adventurous spirit of the Frank race. . . . Faith, as well as ambition, found its account in these journeys to the countries of the pagan. On the way, they distributed religious images to the heathen, they tried to convert them while profiting by them. . . . This mingling of commerce and religion is one of the characteristic traits of the middle ages, as it is of antiquity. The most ancient fairs of Gaul, that of Troyes which was in existence as early as the 5th century, that of Saint-Germain-des-Prés, that of Saint-Denis, which goes back to the time of Dagobert (629), were at the same time pilgrimages. This latter the most celebrated of all, under the Mérovingians, was held outside the walls of Paris, between the churches of Saint-Martin and Saint-Laurent, upon the lands watered by the brook Ménilmontant; it was opened on the festival of Saint-Denis and continued four weeks, in order to permit, says its charter, merchants from Spain, Provence and Lombardy and even those from beyond the sea, to take part in it. . . . The fair of Saint-Denis was the rendezvous of merchants from all parts of Gaul and Europe. Beside the wines and oils of the South might be seen the honey and wax of Armorica, the linens and madder of Neustria, the metals of Spain and England, the furs of the North, the products of the royal manufactures; but the choicest goods were the spices, pepper, tissues of silk and of cotton, jewels, enamels, goldsmiths' work, which came from the Orient by the Mediterranean ports, more rarely by way of the Danube, and whose guardians were the Syrians or Jews destined to hold so great a place in the commerce of the middle ages. The Syrians, — and under this name the Franks comprehended, without doubt, all merchants native to Egypt or Roman Asia, — formed powerful communities at Marseilles, Narbonne, Bordeaux; at Paris they had sufficient influence to enable one of them, Eusebius, to succeed in purchasing the episcopate, in 591. . . . As to the Jews, a great number were already established in Gaul before

the fall of the Roman Empire, but their prosperity dates only from the epoch of disorganization which followed the barbarian invasion."—H. Pigeonneau, *Histoire du Commerce de la France (trans. from the French), tome 1, livre 1.*

Mediæval.

Early trade with China.—"During the Tang Dynasty the intercourse between China and other considerable powers was not only closer but conducted on more nearly equal terms than at any other time. . . . The neighbouring kingdom of Tibet is first mentioned in the annals for 631 A. D. as sending ambassadors with tribute and being able to raise a large and formidable army. . . . Appeals from Persia and India for help against the Saracens were addressed to China more than once in the 7th and 8th centuries; and the heir apparent to the Persian throne resided for a time as hostage at the court of China. . . . But for the physical structure of the continent, which isolates India and China, while freezing Tibet and nomadizing Tartary, the spread of Arab conquest round or across the desert would have reached a point near enough to bring about a collision with China. As it was, a general impetus was given to foreign travel and foreign commerce; and . . . colonies of traders established themselves in the southern ports, as well as along the continental trade routes. . . . About the year 700 A. D. a market for strangers was opened at Canton, and an imperial commission appointed to levy duties. In 714 A. D. we hear of a petition of foreign merchants, arriving by way of the southern sea, which is forwarded from the coast in quite modern fashion for the emperor's consideration. It set forth all the precious things which the merchants could bring from the countries of the West, and represented them as only desirous of collecting medicinal drugs and simples. Unfortunately for the traders, they arrived at the beginning of a new reign, when a vigorous attempt had been made to put down the luxury of the court. . . . It was concluded to take no further notice of the petition. Foreign trade continued to exist on sufferance, but so far as the Chinese were concerned, it was limited by the attitude of the Government to a moderate exportation of staple commodities, paid for in foreign coin or precious metals. What China had to sell was much more important to the Western nations than anything she or her rulers could be prevailed upon to buy; and so long as the trade dealt with surplus manufactures, like silk, or natural products, like musk or rhubarb, and did not endanger the local food supply, it was not interfered with. In 794 A. D. complaints were made that trade was leaving Canton for Cochin China, but the traders' schemes for recovering or pursuing it were discouraged by the Government, which opined that there must have been intolerable extortions used to drive it away, or a want of natural inducements to bring it, and quoted the Shoo: 'Do not prize strange commodities too much, and persons will come from remote parts.' Arab geographers and travellers of the 9th century show what a development had been reached by foreign commerce under this modified freedom. The Jewish merchants described by Ibn Khordadbeh as speaking Persian, Latin, Greek, Arab, Spanish, Slavonic, and Lingua franca, and trading by sea

and land to the remotest regions, had their representatives at Canton; and the four trade routes, enumerated by Sir Henry Yule, enabled all the great commercial communities to try their hand at the China trade. The first of these routes led from the Mediterranean over the Isthmus of Suez, and onwards by sea; another reached the Indian sea via Antioch, Bagdad and Bussora and the Persian Gulf; a third followed the coast of Africa by land from Tangiers to Egypt and thence by Damascus to Bagdad, while the fourth led south of the Caspian Sea and north of the central Asian desert to the gates of the Great Wall. The Chinese traders either met the Western merchants at Ceylon, or themselves came as far as the mouth of the Euphrates."—E. J. Simcox, *Primitive Civilizations, bk. 4, ch. 12, sect. 2 (v. 2).*

The Arabs.—The earliest date to which any positive statement of intercourse between the Arabs and the Chinese "appears to refer is the first half of the 5th century of our era. At this time, according to Hamza of Isfahan and Masudi, the Euphrates was navigable as high as Hira, a city lying south-west of ancient Babylon, near Kufa, (now at a long distance from the actual channel of the river), and the ships of India and China were constantly to be seen moored before the houses of the town. Hira was then abounding in wealth, and the country round, now a howling wilderness, was full of that life and prosperity which water bestows in such a climate. A gradual recession took place in the position of the headquarters of Indian and Chinese trade. From Hira it descended to Obolla, the ancient Apologos, from Obolla it was transferred to the neighbouring city of Basra, built by the Khalif Omar on the first conquest of Irak (636), from Basra to Siraf on the northern shore of the gulf, and from Siraf successively to Kish and Hormuz. Chinese Annals of the Tang dynasty of the 7th and 8th centuries, describe the course followed by their junks in voyaging to the Euphrates from Kwangcheu (Canton). . . . The ships of China, according to some authorities, used to visit Aden as well as the mouths of Indus and Euphrates. I do not think that either Polo or any traveller of his age speaks of them as going further than Malabar, the ports of which appear to have become the entrepôts for commercial exchange between China and the west, nor does it appear what led to this change. Some time in the 15th century again they seem to have ceased to come to Malabar. . . . The Arabs at an early date of Islam, if not before, had established a factory at Canton, and their numbers at that port were so great by the middle of the 8th century that in 758 they were strong enough to attack and pillage the city, to which they set fire and then fled to their ships. Nor were they confined to this port. . . . In the 8th century also the Arabs began to know the Chinese not only as Sina, but as Seres, i. e. by the northern land route. . . . Besides . . . communication by land and sea with Arabia, and with the various states of India, . . . there existed from an old date other and obscurer streams of intercourse between China and Western Asia, of which we have but fragmentary notices, but which seem to indicate a somewhat fuller mutual knowledge and freer communication than most persons probably have been prepared to recognise. Thus, China

appears to have been well known from an early period to the Armenians."—H. Yule, *Cathay and the Way thither, prelim. essay* (v. I), pp. lxxvii—lxxviii. —After the Arabs began their career as a conquering people, under Mahomet and his successors, and took possession of the great ancient fields of Asiatic and African commerce, with its highways and its capital seats, from Ispahan to Palmyra, Damascus, Baalbec, Tyre, Alexandria, and the old Carthaginian ports, they quickly caught the large ideas of trade that were then opened up to them. They improved the early caravan routes and established new ones in many directions. They dug wells, made cisterns and built caravansaries, or public places of shelter for travelers and traders, along the important desert roads. The pilgrimages which their religion encouraged had a lively traffic connected with them, and by spreading one language and one set of customs and laws over the wide region which they ruled, they helped commerce as the Romans had done. From Bagdad, the new capital city which they built on the Tigris, nearly opposite the deserted ruins of Babylon, on the other side of the Chaldean plain, they carried on direct trade with India, through Afghanistan; with China by three routes through Bokhara, or Tartary; with Siberia and with Russia, to the very center of it, through the agency of the Turkish and Tartar races. This city of Bagdad became a marvel of magnificence under the early Arabian caliphs. Other cities of Asia that acquired importance in manufactures or trade, or both, during the period of Arabian power, were Ispahan, in Persia, the woollens and linens from which were equally noted for their fineness; Damascus, in Syria, which produced cutlery of steel, and especially sword blades, that have never been surpassed, and which gave the name of "damasks" to certain raised patterns in linen that are well known by that term to this day; Herat, in Afghanistan, which was famous for its carpet looms and for its cultivation of saffron and assafetida; Balkh and Khotan, in Bokhara, the former of which, on the banks of the Oxus, was a populous seat of trade between China, India and the West. From its great antiquity, Balkh was called "the mother of cities." In their native country, the Arabs, during this brilliant period of their history, increased the ancient trade which they had carried on by sea, with India, on one hand, and with the eastern coasts of Africa, on the other. They extended the latter far south of the limits of ancient Ethiopia, and even to the island of Madagascar. There are few settlements now existing on the east African coast, below the straits of Babel-Mandeb, which were not of Arabian origin. The pilgrimages to Mecca, their holy city, where the remains of Mahomet were interred, made that a great market and both industry and commerce were enlivened throughout the Arabian peninsula. As masters of Egypt, the Arabians reorganized with fresh vigor the ancient caravan traffic with central Africa and with the countries on the Upper Nile. Alexandria, it is true, lost much of its former importance. This was owing, in part, to the bitter hostility that existed between the Mahometans and the European Christians, which broke up, for a long period, nearly all open commerce between the two. But Alexandria was also hurt by the rise of new Arabian cities, in Egypt and on the Barbary coast, which

drew away some of the trade that had centered almost wholly at Alexandria before. Cairo, the modern capital of Egypt, stood first among these and became a wealthy seat of many manufactures and of much commercial exchange. The interior caravan traffic of Egypt centered principally at Syene, while Temnis and Damietta were busy productive towns. Within the old Carthaginian dominions, west of Egypt, on the Mediterranean, the Arab conquerors revived a traffic quite as extensive, perhaps, as the greatest that ancient Carthage had controlled. Not far from the site of that ancient emporium, and twelve miles from the modern city of Tunis, they built the now forgotten city of Kirwan, which was one of the largest and most magnificent of its time. It was a point from which numerous caravan routes led southward into the heart of the African continent, even beyond the great desert, as well as eastward to Egypt and westward to the Atlantic coasts and Spain. Many flourishing towns surrounded this African metropolis and were the centers of many different activities, such as the cultivation of grain, the making of salt, the rearing of silk-worms and the production of silk. In Mauritania, which embraced the modern empire of Morocco and part of Algiers, the Arabs introduced the same spirit of enterprise. In their hands, the barren country — which has since become almost a desert again — was made fertile, through wide regions, by extensive irrigation, and produced wheat, olives, grapes, dates and other fruits in great abundance, besides feeding flocks and herds of sheep, goats, horses, asses and camels in rich pastures. The people became skillful in several manufactures, including weaving and dyeing, the making of silk and gold thread, the mining and smelting of copper and iron, the preparation of soap and the tanning of leather. From the Atlantic coast of their Mauritania dominion, the Arabs pushed their traffic far down the western shores of the continent, while they opened caravan routes to the interior quite as widely, perhaps, as they did from Kirwan and from Egypt. The chief city that they founded in Mauritania was Fez, which still bears witness to its former glory in a lingering university, or collection of Mahometan schools; in the remains of many mosques, and in a vast number of caravansaries. The native inhabitants whom the Arabs found in Mauritania derived from their country the name of Moors. They embraced the Mahometan religion and joined their Saracen conquerors in invading Spain, A. D. 712. This led, in Europe, to the applying of the name "Moors" to the whole of the mixed races which took possession of southern Spain, and finally gave that name to all the Mahometans on the western Mediterranean coasts. But the Moors and the Arabs were distinct races of people. The conquest of southern Spain gave the Arabs the finest field in which their energy and genius were shown. They made the most of its mineral treasures, its delightful climate and its fertile soil. On the remains of Roman civilization, which Vandals and Visigoths had not wholly destroyed, they built up, with wonderful quickness, a new culture — of industry, of manners and of taste, of art, of literature, of government and of social life — that was splendidly in contrast with the rude state of Europe at large. The trade of the Spanish Moors was considerably extended among

the Christians of Europe, notwithstanding the religious enmities that opposed it. The products of their skillful workmanship were so eagerly desired, and they controlled so many of the coveted luxuries found in Africa and the East that their Christian neighbors could not be restrained, by war nor by the commands of the church nor by the hatred which both stirred up, from dealings with them. With other parts of the Mahometan dominion, and with the countries in commercial connection with it, the trade of Moorish Spain was active and large. In exchange for the varied products which they received, they gave the fine fabrics of their looms; exquisite work of their goldsmiths and silversmiths; famous leather; iron, quicksilver and silver from the old Spanish mines, which they worked with new knowledge and skill; sugar, the production of which they had learned and introduced from India; olive oil, raw silk, dye-stuffs, sulphur and many commodities of less worth. The career of the Arabs, in the large region of the world which they conquered, was brilliant but not lasting. The energy which carried them for a time far ahead of their slower neighbors in Europe showed signs of decay before two centuries of their career had been run.

Byzantine Trade.—"The commerce of Europe centred at Constantinople in the 8th and 9th centuries more completely than it has ever since done in any one city. The principles of the government, which reprobated monopoly, and the moderation of its duties, which repudiated privileges, were favourable to the extension of trade. While Charlemagne ruined the internal trade of his dominions by fixing a maximum of prices, and destroyed foreign commerce under the persuasion that, by discouraging luxury, he could enable his subjects to accumulate treasures which he might afterwards extort of flesh into his own treasury, Theophilus prohibited the persons about his court from engaging in mercantile speculations, lest by so doing they should injure the regular channels of commercial intercourse, by diminishing the profits of the individual dealer. . . . During this period the western nations of Europe drew their supplies of Indian commodities from Constantinople, and the Byzantine empire supplied them with all the gold coin in circulation for several centuries. The Greek navy, both mercantile and warlike, was the most numerous then in existence. Against the merchant-ships of the Greeks, the piratical enterprises of the Egyptian, African, and Spanish Arabs were principally directed. Unfortunately we possess no authentic details of the commercial state of the Byzantine empire, nor of the Greek population during the Iconoclast period, yet we may safely transfer to this time the records that exist proving the extent of Greek commerce under the Basilian dynasty. Indeed, we must remember that, as the ignorance and poverty of western Europe was much greater in the 11th and 12th centuries than in the 8th and 9th, we may conclude that Byzantine commerce was also greater during the earlier period. The influence of the trade of the Arabians with the East Indies on the supply of the markets of western Europe has been overrated, and that of the Greeks generally lost sight of. . . . The Byzantine markets drew their supplies of Indian and Chinese productions from Central Asia, the trade passing

north of the caliph's dominions through the territory of the Khazars to the Black Sea. This route was long frequented by the Christians, to avoid the countries in the possession of the Mohammedans, and was the highway of European commerce for several centuries. Though it appears at present a far more difficult and expensive route than that by the Red Sea and the Indian Ocean, it was really safer, more rapid, and more economical, in the 8th, 9th, and 10th centuries. This requires no proof to those who are acquainted with caravan life in the East, and who reflect on the imperfections of ancient navigation, and the dangers and delays to which sailing vessels of any burden are exposed in the Red Sea. When the Venetians and Genoese began to surpass the Greeks in commercial enterprise, they endeavoured to occupy this route; and we have some account of the line it followed, and the manner in which it was carried on, after the East had been thrown into confusion by the conquests of the Crusaders and Tartars, in the travels of Marco Polo. For several centuries the numerous cities of the Byzantine empire supplied the majority of the European consumers with Indian wares, and it was in them alone that the necessary security of property existed to preserve large stores of merchandise. Constantinople was as much superior to every city in the civilised world, in wealth and commerce, as London now is to the other European capitals. And it must also be borne in mind, that the countries of central Asia were not then in the rude and barbarous condition into which they have now sunk, since nomadic nations have subdued them. On many parts of the road traversed by the caravans, the merchants found a numerous and wealthy population ready to traffic in many articles sought after both in the East and West; and the single commodity of furs supplied the traders with the means of adding greatly to their profits. Several circumstances contributed to turn the great highway of trade from the dominions of the caliphs to Constantinople. The Mohammedan law, which prohibited all loans at interest, and the arbitrary nature of the administration of justice, rendered all property, and particularly commercial property, insecure. Again, the commercial route of the Eastern trade, by the way of Egypt and the Red Sea, was suddenly rendered both difficult and expensive, about the year 767, by the Caliph Al Mansur, who closed the canal connecting the Nile with the Red Sea. The harvests of Egypt, which had previously filled the coast of Arabia with plenty, could no longer be transported in quantity to the ports of the Red Sea; living became expensive; the population of Arabia declined; and the carrying trade was ruined by the additional expenditure required. The caliph certainly by this measure impoverished and depopulated the rebellious cities of Medina and Mecca to such a degree as to render their military and political power less dangerous to the central authority at Bagdat, but at the same time he ruined the commerce of Egypt with India and the eastern coast of Southern Africa. Since that period, this most important line of communication has never been restored, and the coarser articles of food, of which Egypt can produce inexhaustible stores, are deprived of their natural market in the arid regions of Arabia. The hostile relations be-

tween the caliphs of Bagdat and Spain likewise induced a considerable portion of the Mohammedan population on the shores of the Mediterranean to maintain close commercial relations with Constantinople. A remarkable proof of the great wealth of society at this period is to be found in the immense amount of specie in circulation. . . . The poverty of Europe at a later period, when the isolation caused by the feudal system had annihilated commerce and prevented the circulation of the precious metals, cannot be used as an argument against the probability of this wealth having existed at the earlier period of which we are treating."—G. Finlay, *Hist. of the Byzantine Empire*, 716-1057, bk. 1, ch. 4, sect. 1.

Venice and Genoa.—In the slow revival of commerce which took place in Christian Europe, during the later half of the middle ages, no one city or people can be said to have taken a lead from the beginning. At various points, north and south, on the Mediterranean and the Adriatic, on the Baltic, on the Rhine and other rivers which flow into the North Sea, and on the Danube, the Dnieper and the Don, centers of trade were growing up in a gradual way, out of which it would be hard to name one that ranked much above the rest for many generations. But the 11th century brought a great commercial leader to the front. This was Venice. The circumstances of the founding of Venice, in the 5th century, and the history of the rise of the singular republic, are given elsewhere—see **VENICE** (page 3002). The condition of the unfortunate refugees, who sought shelter from invading savages on a few small mud banks, barely separated from the shore of their Adriatic coast, did not seem to be a promising one. Nor was it so. While the neighboring parts of Italy were being overrun by Huns, Goths and Lombards in succession, and while the settlement of the barbarous new races was going on over all Southern Europe, in the midst of great disorder and constant war, these islanders and their descendants, for generations, were protected as much by their poverty as by the shallow waters that surrounded them. They had nothing to tempt either plunder or conquest. They lived by salt-making, fishing and fish-salting. They began trade in a small way by exchanging their salt and salted fish for other articles. It grew in their hands from year to year, for they were enterprising, industrious and courageous. Procuring timber on the opposite Dalmatian coast of the Adriatic, they became expert ship builders and sailors. The safety of their situation caused increasing numbers of their Italian fellow countrymen to join them. The islands of the Venetian lagoon were, in time, all occupied, and bridges between several of them were built. From the selling of salt and fish to their neighbors, the Venetians went on to more extensive commercial business. By slow degrees, they took the occupation of general merchants, buying goods here and there to sell again. They became friendly with the Greeks on the eastern side of the Adriatic, in Dalmatia and Albania, and this led them into important relations, both commercial and political, with the Byzantine Empire and its capital city, Constantinople. By the time they had gained wealth and consequence enough to attract the notice of their rough neighbors and invite attack, they had also gained

strength enough to defend themselves. They took part then in the wars of the Byzantines, rendering valuable services in Italy and elsewhere, and they joined the Greeks in destroying the pirates who infested the Adriatic Sea. The early important trade of the Venetians was with Constantinople, where they enjoyed, for a long period, the peculiar favor of the Byzantine rulers. After the Saracens had mastered Syria and Persia, and taken possession of Alexandria (A. D. 640), Constantinople became the emporium of Eastern trade, adding it to a great traffic which the Byzantine capital had always carried on with the Tartar and Russian territories in Asia and Europe. When the Venetians gained a footing there, as political friends and favored merchants, their fortunes were made. While the Greeks were busy in desperate wars with their Mahometan neighbors, these enterprising Italians took into their own hands more and more of the profitable trade which the Greeks had opened to them. They soon had the handling of Byzantine commerce in western Europe almost wholly. From partners they became rivals, and especially in the Russian traffic, which they drew away from Constantinople, to a large extent, by opening direct dealings with the Russian traders, at a market place established on the Dnieper. From the beginning of the Crusades, in the 11th century, the rise of Venetian commerce and Venetian power was very rapid. The Venetians were prepared, as no other people were, at the time, to furnish fleets, both for transportation and for naval war. They enlisted in the crusading enterprises with a zeal which was not, perhaps, purely pious. Their carrying ships were busy conveying men and supplies; their war galleys were in the front of some sea fighting with the Moslems, and more with Christian rivals; their shrewd politicians were alert, at all points and among all parties, looking after the interests of the republic; their merchants were everywhere ready to improve the new opportunities of trade which these times of excitement opened up. In all directions, and throughout the whole of Europe, new activities were awakened, and especially such as led to a busier trade. The crusaders who lived to return, into France, Flanders, Italy, Germany, and England, brought home with them many ideas which they had picked up in the East, and much new knowledge of oriental products and arts, all of which became widely diffused and produced great effects. The result was to stimulate and improve the industries and to increase the commerce which the Europeans carried on among themselves, as well as to greatly enlarge their demand for the products of the Asiatic world. A new era in European commerce was opened, therefore, by the Crusades, and the Venetians, by their enterprise, their energy and their early experience, took the lead in its activities. They organized the traffic between the East and the West, the North and the South, upon a great scale, and centered the larger part of it in their island city. By sea and by land they managed it with equal vigor. Their merchant fleets were under the protection of the state and made voyages, at regular and appointed times, under the convoy of vessels of war. On the landward side, they arranged an extensive trade with the interior of Germany, Hungary and Bohemia, through the Tyrol and Carinthia. As the first bitterness of

hatred between Christians and Mahometans wore away, they grew willing to trade with one another, though the Popes still forbade it. The Venetians were among the first in such willingness. Having many quarrels with the Byzantine Greeks, they were eager to reopen the old eastern market at Alexandria, and did so at the earliest opportunity. From that beginning they spread their trade with Arabs, Moors and Turks, along the whole Mahometan line, in Asia and Africa. But, though Venice took the lead in the reviving commerce of the middle ages and held it substantially to the end of that period of history, she had powerful rivals to contend with, and the strongest were among her near neighbors in Italy. The same commercial spirit was alive in several other Italian cities, which had grown up in the midst of those disorderly times and had contrived to acquire more or less of independence and more or less of power to defend themselves. Amalfi, Genoa and Pisa were the earliest of these in growing to importance, and Florence at a somewhat later day rose to high rank. Florence, which did not become a free city until near the end of the 12th century, gained its subsequent wealth more by manufactures and by banking than by trade. Its chief products were woolens, silk and jewelry, and its money-lenders were everywhere in Europe. See FLORENCE (pages 1130-1143). The commercial career of Amalfi was cut short in the 12th century by events connected with the Norman conquest of Southern Italy. Pisa, an ancient city, whose history goes back to Etruscan times, was a considerable seat of trade while Venice was little known; but she fell behind both Venice and Genoa, soon after those vigorous republics were fairly entered in the race. The Pisans prospered highly for some time, by going into partnership or alliance with the Venetians, first, and afterwards with the Genoese; but they quarreled with the latter and were ruined in the wars that ensued. After the thirteenth century Pisa had no commercial importance. See PISA (pages 2537-2539). The great rival of Venice was Genoa, a city which claims to be, like Pisa, of more than Roman antiquity. In the trade of the Levant—that is, the eastern ports of the Mediterranean Sea—the Genoese pushed themselves into competition with the Venetians at an early day, and they seemed for some time to hold an equal chance of controlling the prize. During the later part of the 12th century, such unfriendly feelings had grown up between the Venetians and the Byzantine court that the latter transferred its commercial favors to the merchants of Genoa, Pisa and Amalfi, and gave them many privileges at Constantinople. The Venetians were thus placed at a disadvantage in the Bosphorus and the Black Sea; but they did not long submit. In 1204 they persuaded one of the crusading expeditions to join them in attacking Constantinople, which was taken, and the dominions of the ancient Empire of the East were divided among the captors, Venice receiving a goodly share. See CRUSADES (page 631). This was a golden era for Venice and she improved it to the utmost. For almost sixty years she triumphed over her rivals completely. But in 1261 her merchants were again expelled from Constantinople and the Black Sea. The Greeks had continued to hold a large part of the ancient domain of the Byzantine Empire

in Asia Minor, and now, with the help of the Genoese, they succeeded in retaking their old capital city. The Frank Empire, or Latin Empire as it was differently called, which the Crusaders and the Venetians had set up, was extinguished and the Genoese again took the place of the Venetians as masters of the Byzantine trade, including that of the Black Sea and the Asiatic traffic which was carried on from its ports. But by this time the better disposition to deal commercially with one another had grown up between the Christians and the Mahometans. So the Venetians, when they lost their footing at Constantinople, very promptly went over to Alexandria and made excellent arrangements with the Saracens there, for supplying Europe once more with the commodities of the East, by those easier and shorter ancient routes which Christian commerce had not used for several hundred years. This opening of trade with the Mahometan races, at Alexandria, and elsewhere soon afterwards, may easily have repaid the Venetians for what they lost in the Byzantine direction; but they did not give up the latter. A long series of desperate wars between the competitors ensued, with such shiftings of victory that Venice seemed sometimes to be almost in a hopeless strait; but, in the end, she broke the power of her rival completely. The final peace, which was concluded in 1381, left her quite undisputedly, for a time, the mistress of the Mediterranean and its trade. See GENOA: A. D. 1261-1299 (page 1410); and VENICE: A. D. 1378-1379, and 1379-1381 (page 508). Both the northward and the southward lines of traffic between Asia and Europe, through Alexandria and through Constantinople, were now chiefly in the hands of the Venetians. Between those great courses were important minor currents of commerce, along caravan routes through Asia Minor and Syria, which they mainly controlled. The trade of the rich islands of the Levant and of Moorish Africa was under their management for the most part, and they found on the northern shores of the Black Sea a commerce with the Russian region which the Genoese had increased while they ruled in those waters. For three quarters of a century the Venetians enjoyed this large extent of commerce with the East. Then the Turks came, besieged and captured Constantinople (A. D. 1453) and spread over the country which they now occupy. For the next two centuries the Venetians were at war with the Turks—defending Christendom in the Mediterranean with little help. At the same time they had to encounter an almost fatal attack from Christian princes who had become jealous of their formidable wealth and power and who united against the republic in the League of Cambrai—see VENICE: A. D. 1508-1509 (page 3611). They might have recovered from this attack, for they still held the Mediterranean trade; but a great event had occurred, just ten years before the League of Cambrai, which was more fatal than war, not to Venice alone, but to most of her rivals in trade as well. This was the discovery, by Vasco da Gama, of the ocean passage to the Eastern world around the Cape of Good Hope. The toiling traffic of desert caravans, to Alexandria, to Constantinople, to Tyre, Antioch, Ephesus and Erzeroum, was soon reduced to insignificance. The rich trade of the Indies and of all the farther East—the trade of the silk countries and the

cotton countries, of the spice islands, of the pearl fisheries, of the lands of ivory, of ebony, of gold, of precious stones, of fragrant gums, of curious things and curious arts—was quickly swept into a different course—into broader seas than the Mediterranean and into new lands.

Northern Europe. The Baltic Cities.—The Hansa.—The earliest commercial seaports of northwestern Europe had their rise, not on the North Sea, but on the Baltic and the straits which enter it. The Northmen of that region were not alone in the traffic which grew up there, for the Wends (a Slavonic people), who occupied most of the southern shores of the Baltic, east of the Elbe, appear to have stoutly rivalled them from the first. Bjorko, on an island in Lake Maelar, Sweden (the inlet upon which Stockholm is situated), was one of the first of the seats of commerce at the North. It is supposed to have been destroyed about 1008. But the most famous was the city of Wisby, or Vineta, on the island of Usedom, at the mouth of the river Oder. It may not have been quite as rich and magnificent a town as some would infer from accounts given in early chronicles; but no doubt it was remarkable for the age, in that part of the world, and carried on a large trade. The Swedes and Danes were the destroyers of Vineta, before the middle of the 9th century, and the former people are said to have carried away from it great quantities of marble, brass and iron work, with which they gave splendor to their own newer city of Wisby, then just rising on the island of Gothland. The career of Wisby lasted several centuries and it was prominent in commerce throughout the Middle Ages. All that can be said of that most ancient commerce in northern Europe is gathered from sources which are uncertain and obscure. It is not until the 12th century that much of the real history of trade in the Baltic region opens. In 1140 the modern city of Lubeck was founded, on the site of a more ancient town, known as Old Lubeck, which is supposed to have been a thriving port of trade in its day but which had been utterly destroyed by its rivals or enemies. The new Lubeck established close relations with the Genoese and soon took the lead in the commerce of the north, among a large number of enterprising towns which, about that time, came into prominence on the northern coast and on the rivers which run to it. The city of Hamburg, on the Elbe, lying inland and not very distant from Lubeck, was one of the earliest of these. Like Lubeck, it had suffered destruction, in the constant warfare of the earlier time, and had made a new beginning of existence about 1013. Hamburg had access to the North Sea by the Elbe and Lubeck to the Baltic by the Trave. Trading in different directions, therefore, by sea, they carried on an active traffic with one another, across the narrow stretch of land which divides them,—as they still do to this day. But this inland commerce was greatly disturbed by robbers who infested the country, until the two cities, Lubeck and Hamburg, in 1241, agreed to establish and support in common a body of soldiers for the protection of their merchants. That agreement is believed to have been the beginning of a wide-spread union which afterwards took shape among the commercial cities of northern Europe, and which became powerful and famous in the later

history of the Middle Ages, under the name of the Hanseatic League.—See HANSA TOWNS: (pages 1024-1026), and (in this Supplement) GERMANY, 13-15th, and 15-17th CENTURIES.

Frisians and Flemings.—The early Netherlanders.—The two peoples who inhabit the region called the Netherlands—a purely Germanic stock in the north (modern Holland) and a mixed but largely Celtic population in the south (modern Belgium)—have had a history so much in common that it cannot well be divided, though they have differed in experiences as widely as in character. The struggle with nature for a foothold in the lowland itself was harder in the north than in the south, and no doubt that is why the Teutonic Frisians led the way in industrial training. It was among them that the arts of weaving and dyeing were cultivated first to a notable excellence. As early as the age of Charlemagne (8-9th centuries), Frisian robes, of white and purple woolen stuffs, are mentioned among the choice gifts which the Emperor sometimes sent to foreign princes, and even to the great caliph, Haroun al Raschid. In the 9th century, Frisian weavers are said to have been persuaded by an enterprising count of Flanders to settle in his dominions, at Ghent, and introduce there a better knowledge of their art. But if the Flemish people borrowed from the Frisians in this matter, they soon outran their teachers and made the loom their own peculiar property. The shuttle, ere long, was in the hands of a very large part of the whole south Netherland or Belgian population, and they became almost a nation of weavers. The same Count Baldwin of Flanders who brought the Frisian weavers into Ghent established annual markets, or fairs, in various towns, which drew merchants from abroad, promoted trade and stimulated manufacturing industries throughout the country. Woolen, linen, and finally silk looms multiplied to a prodigious extent, and the weavers in all these branches acquired remarkable skill. The working of metals was also learned with great aptness, and Flemish cutlery, weapons and armor became very nearly as renowned as those of Milan and Damascus. Tanning was another valuable art which the Flemings and their Netherland neighbors cultivated, and the tilling of the soil was so industriously pursued that flax, hemp, grain and other farm products were raised quite abundantly for sale abroad. In the north Netherlands—the Hollow-land of the sturdy "Free Frisians" and Batavians, who were afterwards called the Dutch—the hard working energy of the people had been pushed in some different directions. The old trade of weaving was still vigorously carried on, in nearly every important town, and Dutch woolens, damask lins, carpets, velvets, etc., were largely produced and widely sought after; but this industry was never so prominent as it became in the Belgian provinces. The fortunes of the Hollanders were founded to a large extent upon their fisheries, and especially the herring fishery, which assumed great importance in their hands after the middle of the 12th century. Before that time, they appear to have been obliged to seek the herring in other waters than their own—along the shores of England, Scotland and Norway. But some change in the movements of those curiously swarming fish, about the time above mentioned, brought great shoals

of them to the Dutch coast, and the herring harvest thereafter was a rich source of gain to the Hollanders. They discovered some secrets of salting or curing the fish which were very much valued, and the Dutch herring were eagerly bought for all parts of Europe. The making of pottery was another industry to which the Dutch applied themselves with success, and particularly at the town of Delft, which gave its name for many centuries to the common earthenware used in western Europe. In dairy farming and skilful horticulture, or gardening, the Hollanders were superior to all other people at an early time. Wherever sea-fisheries are extensive, sailors and ship builders are trained and ocean navigation and commerce are sure, in time, to be prosperously pursued. It was so with the Dutch. Their Frisian ancestors had suffered so much on their coasts from the harassing raids of the Norse pirates, or Vikings, that they did not figure very early in seafaring enterprise. But they fought the freebooters in their stubborn and stout-hearted way and were able at last to make the harbors of their coast tolerably safe. From that time the seaport towns of Holland grew rapidly, and Dutch merchants and merchant ships, trading with the cities of the Baltic, with England and with Flanders and France increased in number. The Hollanders had an advantage in this matter over their Flemish neighbors of the South Netherlands. They were provided with better harbors and they held the outlets of the great rivers in their hands. This latter was the cause of incessant quarrels between the two peoples. The 15th century found the whole Netherlands, both north and south, in a thriving state, so far as industry and trade were concerned, notwithstanding bad government and disorderly times. The people were counted among the richest in Europe. Many great and wealthy cities had grown up, containing large populations and very busy ones. In the north, there were Dordrecht or Dort, Hoorn, Zierikzee, Haarlem, Delft, Leyden, Deventer, Enkhulzen, Middelburg, Nimeguen, Utrecht, Rotterdam, and Amsterdam, which last named city eclipsed them all in the end, though it was one of the latest to rise. In the south there was Ghent, with forty thousand weavers inside its strong walls, who were always as ready to string the bow as to throw the shuttle, and whose hot-tempered revolts against tyranny and wrong are among the most exciting incidents of history. There was Bruges, which became for a time the great emporium of the commerce of northern and southern Europe, but which lost its importance before the 15th century closed. There was Antwerp, which succeeded to the trade of Bruges and rose to unrivalled rank; and there were Lille, Mechlin (or Malines), Courtrai, Ypres, Louvain, and other towns, all centers of flourishing manufactures, chiefly those of the loom.

Trade Routes, west and north from the Mediterranean.—"The connection between the two great divisions of European commerce, the northern including the Hansa and the Flemish towns, and the southern the Italian republics and Mediterranean ports, was effected by two chief routes. One was by sea from the Mediterranean through the Straits of Gibraltar, up the coasts of Spain and France to Flanders. This route was used more by the southern, and especially

by Venetian, merchants than by the northern traders, for . . . Venice sent every year a large fleet to Flanders and the English Channel, which fleet would meet at Bruges, the great Hansa depot, the most important merchants of North Europe and the Hansa traders. Bruges was indeed for a long time the central mart in the north for the commercial world, till 1482, when the canal connecting it with the port of Sluys was blocked up. But at Bruges also the maritime trade just mentioned met the overland trade through central Europe, a trade that was very important, and which enriched many a city upon the Rhine and farther south, from Augsburg to Cologne. We must consider this overland route more carefully. The great centre from which it started, or to which it tended, was Venice, where as we know were collected most of the products of the East, coming both via Egypt and via the lands round the Black Sea. . . . Starting . . . from Venice, the merchants used to cross the Alps by the Brenner or Julier Passes, and then would make for the Upper Danube or one of its tributaries, and thence get on to the stream of the Rhine. Their object was generally to utilise a natural waterway wherever possible, rather in contrast to the old Roman traders, who preferred the roads. But the roads of the Middle Ages were far inferior to the old Roman highways. One of the first great cities which the mediæval trader passed on this route, coming from Venice, was Augsburg. . . . Thence he might go down the stream to Regensburg (Ratisbon) and Vienna; or he might go up to Ulm and then make a short land journey till he reached the Rhine, and so right away down that convenient stream. This was perhaps the main route from north to south. But many others converged from central Europe to Italy, and many important cities owed their wealth to the stream of trade. In Karl the Great's time the cities on the great waterway to the East along the Danube became very flourishing; Regensburg, Passau, and Vienna being the most important. From Regensburg there ran north and west two great commercial highways into the interior of Germany, one by way of Nürnberg and Erfurt and the other past Nürnberg to the Rhine. Another route from Regensburg, by river, to Trentschin on the river Waag took its merchants through Galicia into Russia, whither they went as far as Kief, the centre of Russian trade. Along this great waterway of the Danube and its tributaries came the products of the East from Constantinople and the Black Sea. . . . Another important route was that from the cities of the Rhine, such as Coblenz and Basle, up that river and on to Chur and then by the Julier Pass and the Engadine and the Etschthal to Venice; or again, after passing Chur, through the Septimer Pass and the Bergeller Thal to Genoa. These Rhine cities were very flourishing, from Basle to Cologne. . . . Like most trading towns in the Middle Ages, the Rhine cities were compelled to form themselves into a confederacy to resist the robbery and extortions of feudal nobles, whose only idea of trade seems to have been that it providentially existed as a source of plunder to themselves. But besides this Confederacy of the Rhine there was another great Confederacy of the Swabian cities, arising from the same causes. . . . That of the Rhine included ninety cities, and existed

in a fully organised form in 1255. The Swabian Confederacy was formed a little later, about 1300 or 1350, under the leadership of Augsburg, Ulm, and Nürnberg, and was in close political and commercial relations both with Venice and Genoa. . . . If now we turn from trade routes in Europe itself to those which led to Europe from the East, we find that at the time of which we are now speaking there were three main streams of commerce. In the 12th century the caravan trade in Central Asia had passed along several different paths; but after the Crusades, and the decline of the Eastern empire by the capture of Constantinople (1204), the various tribes of Central Asia, rendered more fanatical and warlike than ever by these military and religious events, caused caravan trading to become very unsafe. The first of the three routes which now remained in the 13th century was from India and the western coasts of Asia, past Hasra on the Persian Gulf to Bagdad by water. From Bagdad merchants went, still by water, along the Tigris to the point on that river nearest to Seleucia and Antioch, and so to Orontes, and then to the coast of the Levant. The second route followed the same course as the first till the point of leaving the Tigris, and then proceeded over the Highlands of Asia Minor and Armenia to the port of Trebizond on the Black Sea, where Venetian vessels used to meet Asiatic traders. For both these routes Bagdad formed a very important centre. . . . The third route from the far East was from India by sea to Aden, then by land across the desert to Chus on the Nile, which took nine days, and then again by water down the Nile to Cairo, a journey of thirteen days. From Cairo there was a canal, 200 miles long, to Alexandria, where again Venetian and Genoese merchants were ready to receive the rich spices, sugar, perfumes, precious stones, gunn, oil, cotton, and silk brought from the East."—H. de B. Gibbins, *History of Commerce in Europe*, bk. 2, ch. 5.

The English.—"Whilst the Italians were vigorously pursuing their trade in India and Europe, and Spain was renowned for her manufactures; whilst the Hanse merchants were extending their factories, and Portuguese navigators were bent upon maritime discoveries; whilst the Dutch were struggling for independence, and France was planting the seeds of her industries; England was only known as possessing a few articles of commerce of great value. Her wools and her metals were eagerly sought by foreign traders, but she had no ships of her own to carry them abroad. She had many raw materials, but she produced no manufactures for exportation. Nor was her policy respecting foreign trade the most wise. The chief concern of the legislature in those days seemed to be to prevent foreign nations doing with English produce what, after all, the English could not do themselves. Again and again the export of wool was prohibited, or was hindered by prohibitory duties. . . . The people regarded the introduction of foreigners with the utmost jealousy. They resented their competition, they grudged their profits and their advantages. The guilds would not admit them as members, and it was hard for the poor strangers to establish a footing in England, even although Magna Charta had long before declared that all merchants shall have safety in coming to or going

out of England, and in remaining and travelling through it, by land or water, for buying or selling, free from any grievous imposition. Anyhow, whatever the opposition of cities and corporations, the nation was benefited by the foreign merchants. Thankful, indeed, might England have been for the Lombards, who brought hither money and merchandise, banking and insurance; for the Flemings, who, driven by intestine dissension, found refuge on British soil, and became the founders of the woollen manufacture; and for the Huguenots, who brought with them the silk manufacture. . . . But a new era advanced. The discovery of the American continent by Columbus, and of a maritime route to India by Vasco da Gama, altered the course and character of commerce. Till then trade was essentially inland, thenceforth its most conspicuous triumphs were to be on the ocean. Till then, the Mediterranean was the centre of international trading. From thenceforth the tendency of trade was towards the countries bordering on the Atlantic. . . . It was not long . . . before England followed the lead of Spain and Portugal. John Cabot and his sons went in quest of land to North America; Drake went to circumnavigate the globe; Chancellor sailed up the White Sea to Russia; Willoughby went on his ill-fated voyage in search of a north-eastern passage to India; Sir Walter Raleigh explored Virginia; the Merchant Adventurers pushed their adventures to Spain and Portugal; and English ships began to be seen in the Levant. Meanwhile, English trade enlarged its sphere, English bravery at sea became most conspicuous, and English industry advanced apace."—L. Levi, *Hist. of British Commerce*, 2d ed., introd.—"In the 14th century the whole of the external, and much of the internal, trade of the country had been in the hands of foreigners; in the 15th our merchants began to push their way from point to point in the Mediterranean and the Baltic; in the 16th they followed slowly in the wake of other adventurers, or tried to establish themselves in unkindly regions which had attracted no one else. When Elizabeth ascended the throne England appears to have been behind other nations of Western Europe in the very industrial arts and commercial enterprise on which her present reputation is chiefly based."—W. Cunningham, *Growth of Eng. Industry and Commerce*, v. 2, p. 2.

Trade and Piracy.—"It would be wrong to infer from the prevalence of piracy at this period [the 15th century] that commerce must have declined. On the contrary, it was probably the increase of commerce, unaccompanied by the growth of adequate means for its defence, which made the pirate's calling so profitable. Nor was the evil confined to the professional pirate class, if we may use the expression. Even recognised associations of merchants frequently indulged in practices which can only be characterised as piracy. Commerce, in fact, was deeply imbued with the spirit of lawlessness, and in these circumstances it is probable that the depredations of pirates did not excite the same alarm nor discourage trade in the same degree as would be the case in more law-abiding times. In the 15th century the profession of Christianity and extreme respectability were not incompatible with a life of violence and outrage, and it is to be feared that in some cases the Govern-

ments which should have repressed pirates by the severest measures, encouraged their depredations. Certainly they have never enjoyed such immunity from the strong arm of the law as in the 15th century. Outrage and robbery went on unchecked along the coasts and in the track of merchant vessels. No trader was safe even in the rivers and ports of his own country. The pirates burnt and sacked towns as important as Sandwich and Southampton; they carried off not only the goods they could lay their hands on, but men and women, and even children, whom they held for ransom. Unable to look to the Government for protection of life and property while they were engaged in trade, the merchants were thrown upon their own resources to provide security. The best method of grappling with the pirates, and that which was most frequently adopted, was for merchant vessels to sail together in such numbers that they could repel attack; and these voluntary efforts were sometimes aided by the Government. In 1406 Henry IV. granted the merchants 3s. on every cask of wine imported, and certain payments on Staple exports for purposes of defence. Two Admirals were appointed, one for the north and the other for the south, with full jurisdiction in maritime affairs and power to organise naval forces. But this scheme was unsuccessful. A similar expedient was tried in 1453, but abandoned two years afterwards. The only satisfactory remedy would have been a strong navy, but the conditions necessary for this had not yet been realised. The country could not have supported the charge of maintaining a strong naval force. . . . That merchants were beginning to realise the importance of the subject, and were becoming wealthy enough to build vessels of a considerable size, is evident from the operations of John Taverner, of Kingston-upon-Hull, and the famous William Cunnynge of Bristol; the latter of whom is said to have possessed 2,470 tons of shipping and some vessels of 900 tons burthen." —W. A. S. Hewins, *Industry and Commerce (in "Social England," ed. by H. D. Traill, ch. 7, v. 2).*

The Portuguese, and the finding of the Ocean Way to the Indies.—It was not by accident that the Portuguese rose all at once, in the closing years of the 15th century and the early years of the 16th, to a position in which they controlled and directed the main current of trade between Europe and the Eastern world. The discovery by Vasco da Gama of an ocean route to the Indies, and all the results (hereafter described), which it yielded to his countrymen for the time, were a reward of enterprise which the Portuguese had fully earned. They had worked for it, patiently and resolutely, through almost a hundred years. The undertaking was begun, at about the commencement of the 15th century, by a Portuguese prince who ought to enjoy greater fame than if he had conquered an empire; because his ambition was nobler and the fruits were of higher worth to the world. He was known as "Prince Henry the Navigator," and he was the third son of the Portuguese King John I. who was called the Great, on account of his success in wars with the Castilians and the Moors. But this young son, Prince Henry, was much the greater man of the two. He could not endure the ignorance of his time with regard

to the mysterious ocean that stretched westward and southward from the shores of the little country which his father ruled. He was bent on knowing more about it; and he was specially bent on having the Portuguese sailors make their way down the shores of the African continent, to learn where it ended and what track to the farther side might be found. Beyond Cape Nun, at the southern extremity of the modern empire of Morocco, nothing was known of the western coast of Africa when Prince Henry began his work. The Phœniciana and Carthaginians, two thousand years earlier, had probably known more about it; but their knowledge was lost. Prince Henry studied everything that could give him light and became well convinced that round the continent of Africa there was a way to the Indies for bold sailors to find. Then he applied himself, with a zeal which never flagged, to the working out of that achievement. He was a young man when he began, and during more than forty years of his life he devoted his time and his means almost wholly to the fitting out and directing of exploring ships and he fixed his residence upon the most southerly promontory of Portugal, to watch their going and coming. But the art of navigation was so little understood and the navigators were so timid, that slow progress was made. Each explorer only ventured a little farther than the one before him; and so they went feeling their way, league by league, down the African coast. The forty-three years of Prince Henry's endeavors were consumed in reaching what is now the settlement of Sierra Leone, near the head of the gulf of Guinea. But even this added more than a thousand miles of the western coast of Africa to the maps of the 15th century and was a greater advance in geographical knowledge than had been made since Carthage fell. Before he died (A. D. 1460), Prince Henry secured from the Pope (who was supposed to have the giving of all heathen countries) a grant to Portugal of all these discoveries, both island and mainland, and of all which the Portuguese explorers might make in the future, between Europe and India. So he died well content, let us hope, with the work which he had done for his country and for mankind. The enthusiasm for exploration which Prince Henry had awakened in Portugal did not die with him, though his efforts had met with unending opposition and excited very much discontent. Repeated expeditions were still sent down the African coast, and they crept farther and farther toward the goal of desire. At last, in 1486, Bartholomew Diaz, with three ships, actually rounded the Cape of Good Hope without knowing it, and only learned the fact when he turned backward from his voyage, discouraged by storms. Eleven years later, Vasco da Gama set out, fired with fresh determination, by the great discovery of a new world which Columbus had so lately made for Spain, and this time there was no failure. He passed the Cape, sailed up the eastern shores of the African continent to Melinda, in Zanguabar, and thence across the Indian Ocean to Calicut in Hindostan. The ocean route to India was now fully proved; the new era was opened and its grand prize plucked by the Portuguese—thanks to Prince Henry the Navigator. —See, also, PORTUGAL: A. D. 1415-1460 and 1463-1498 (pages 2571-2573).

Modern.

New Routes and New Marts.—There is nothing at all imaginary in the line which is drawn in history across the later years of the 15th and the early years of the 16th century, to mark the beginning of a new era in human affairs. It is a line very real and very distinct, dividing one state of things, known as the mediæval, from another state of things, known as the modern. It was fixed by the occurrence of a series of extraordinary events, which came quickly, one after the other, and which brought about, either singly or together, the most tremendous changes, in many ways, that ever happened to the world in the same space of time. The first of these was the invention of printing, which dates as a practical art from about 1454. The second was the discovery of the new world by Columbus, A. D. 1493. The third was the passage around the Cape of Good Hope by the Portuguese navigator, Vasco da Gama, A. D. 1497. The fourth was the religious reformation set in motion by Martin Luther, at Wittenberg, A. D. 1517. The combined effect of these great events was to make really a new starting point in almost every particular of human history, and to do so very quickly. The commercial changes which resulted are among the most remarkable. No sooner had the route by sea to southern and eastern Asia and the islands of the Indian ocean been found, than almost the whole traffic of Europe with that rich eastern world abandoned its ancient channels and ran into the new one. There were several strong reasons for this. In the first place, it cost less to bring goods by ship from India, Ceylon or China direct to European ports, than to carry them over long distances by land to the eastern shores of the Mediterranean and there ship them to the West. In the second place, by taking its new route, this commerce escaped the Moorish pirates in the Mediterranean, who had long been very troublesome. And, lastly, but not least in importance, the European merchants gained a great advantage in becoming able to deal directly with the East Indians and the Chinese, instead of trading at second hand with them, through Arabs and Mahometan Turks, who controlled the Asiatic and African routes. So the commerce of the Indies, as it was generally called, fled suddenly away from the Mediterranean to the Atlantic; fled away from the Venetians, the Genoese, the Marseillaise, and the Barcelonians; from Constantinople, lately conquered by the Turks; from Antioch and Alexandria; and from many cities of the Hansa League in the north, which had learned the old ways of traffic and were slow to learn anything new. Soon many of the great marts which had been busiest, grew silent and deserted and fell into slow decay. The most enriching commerce of the world was passing to different hands and bringing younger races into the front of history.

The Portuguese in the lead.—Having found the way to India by sea, the Portuguese were prompt in taking measures to make themselves strong in that part of the world and to control the trade with it. They were helped in this effort by the grant of imagined rights which Prince Henry had obtained from the Pope, long before. But they strengthened the rights which the Pope gave them, by the older fashioned

methods of conquest and possession. They began at once to plant themselves firmly at important points in the eastern seas and on the Indian coast. They sent out one of their ablest military men, Francesco d'Almeida, with a strong force of ships and volunteers, and appointed him Viceroy of India. He took possession of several parts of the Malabar coast (the western coast of the southern extremity of Hindostan) and built forts in which garrisons were placed. He similarly established the Portuguese power in Ceylon, took possession of the Maldivé Islands and founded trading settlements in Sumatra. The Venetians, who saw that their ancient trade with the East was doomed unless this new rivalry could be crushed, now joined their Mahometan allies of Egypt in a great effort to drive the Portuguese back. A formidable fleet was fitted out on the Red Sea and sent against Almeida. He was unfortunate in his first encounter with these allied enemies and lost the squadron that opposed them. But the resolute viceroy was undaunted. Recalled from his command, he refused to give it up until he had equipped and led another fleet against the navy of the Egyptians and completely destroyed it. The successor of Almeida, as viceroy of India, was a remarkable personage who is known in the annals of his time as "the great Afonso D'Albuquerque." The chronicle of his exploits in Africa and India, compiled by his son from his own letters and records, and entitled "The commentaries of the great Afonso D'Albuquerque," has been translated into English and published by the Hakluyt Society. He was a remarkably energetic commander, and very honest in his way, according to the notions of his time; but he did the work of subjugation and conquest which he was sent to do in a cruel and rapacious style. He was not rapacious on his own account; but he saw no wrong in anything done for the profit of his country. In the course of seven years he spread the Portuguese power so widely and fixed it so firmly on the East Indian coasts and in the neighboring seas that there was hardly an attempt for many years to disturb it. None but Portuguese ships dared enter the Indian ocean without special permits, and the few which received admission were forbidden to trade in spices—the most precious merchandise of the region. From the Indies the Portuguese made their way to the coasts of China and put themselves on friendly terms with its people. They were permitted to occupy the port of Macao and have possessed it ever since. Some years later they discovered the islands of Japan and opened the earliest European commerce with that singular country. So they held for a time the complete mastery of eastern trade and enlarged it to greater bounds than it had ever reached before. But they were satisfied with keeping the sources of the supply of eastern goods to Europe in their own hands. The first handling of the commodities was all that they tried to control. They brought to Lisbon the spices, silks, cotton, pearls, ivory, sugar, aromatic drugs and the like, which their ships and merchants gathered up, and there sold them to other traders, Dutch, English and German for the most part, who found the final markets for them and who enjoyed a good half of the profits of the trade. These latter derived great advantages from the arrangements—much more than they had gained in their trading with

Genoa and Venice — and the commerce of Holland and England grew rapidly as the result. But the glory and prosperity of the Portuguese, as masters of the rich traffic of the eastern world, were not of long duration. Before the 16th century closed, they had lost the footholds of their power and were slipping into the background very fast. By misfortunes and by folly combined, all the fruits of the patient wisdom of Prince Henry, the persevering courage of Vasco da Gama, the bold energy of Almeida, and the restless enterprise of Albuquerque, were torn out of their hands. Almost from the first, a greedy and jealous court had done all that could be done to destroy the grand opportunities in trade which the country had gained. Private enterprise was discouraged; the crown claimed exclusive rights over large parts of the commerce opened up, and these rights were sold, given to favorites and dealt with in many ways that are ruinous to successful trade. Royal jealousy sent three viceroys to divide among them the government of the Portuguese possessions in the East, when there should have been but one, and the same jealousy kept these viceroalties ever changing. Of course, there was nowhere good government nor thrifty management of trade. In the midst of this bad state of things, the royal family of Portugal died out, in 1580, and Philip II. of Spain set up claims to the crown which he was strong enough to make good. Portugal thus became joined to Spain, for the next sixty years, and was dragged into Philip's wicked war with the Netherlands. Her Spanish masters did what they could to draw her trade away from Lisbon to Cadiz and Seville. The Dutch and English, her former customers and friends, made enemies now by Philip of Spain, pushed their way into the eastern seas, defying the mandates of the Pope, and broke down her supremacy there. When the Portuguese, in 1640, threw off the Spanish yoke and asserted their independence again, calling a prince of the house of Braganza to the throne, there was not much left of their former power or their former trade. They still held Goa, on the western coast of Hindostan, and the Chinese port of Macao — as they do to the present day; and they retained, as they still do, considerable possessions in Africa. But their brief importance in navigation, in colonization and trade, was quite gone and they dropped back to a humble position in the history of the world. Even the management of their home trade with other countries fell mostly, after a time, into the hands of the English, who became their special allies and friends.

The Spaniards.—While the Portuguese were pursuing glory and gain in the track of Vasco da Gama, which led them south and east, the Spaniards were doing the same in the wake of the three little ships which Columbus, with a bolder hand, had steered westward, to strange shores which he never dreamed of finding. These newly opened regions of the globe, in the Atlantic and on both sides of it, were divided between the two nations by the Pope, and it was a bold matter in those days to dispute his right. He gave to the Spaniards all islands and countries found west of a meridian line drawn 27½° west of the island of Ferro, in the Canary group. This nearly corresponds with the meridian 45½° west of Greenwich. To the Portuguese

he assigned all discoveries east of it. So they both went on their appointed ways, with pious hearts and untroubled consciences, busily hunting for heathen lands to seize and despoil. But the eastern field, in which the Portuguese did most of their work, was one where commerce was old and where something of Europe and its people was already known. They were forced to look upon trade as the chief object of their pursuit. With the Spaniards the case was different. They found their way to a quarter of the world which Europe had never heard of and came upon people who never saw the faces of white men until then. These strange races of the new world were some of them quite as civilized, in certain respects, as the Spaniards who invaded them, and even more so, it would seem, in their notions of truth and in the refinement of their manners and modes of life. But they were simple and unsuspecting; they were not warlike in disposition and they were rudely and poorly armed. So the mail-clad cavaliers of Spain crushed them into helpless slavery with perfect ease. From the islands of the West Indies, which they discovered and occupied first, the Spaniards had soon made their way to the shores of the two continents of America, North and South. They found cities and nations which astonished them by their splendor and wealth and set them wild with greedy desires. Europe looked poor in comparison with the shining wealth of Mexico and Peru. The Spaniards went mad with the lust of gold. They lost human feeling and common sense in their greediness to grasp the metal treasures of the new world. They were indifferent to the more precious and abounding products that it offered, and neglected to build up the great commerce which might have filled their hands with lasting riches. They made the old fable of the goose which laid golden eggs a piece of real history. They killed the goose; they destroyed their source of wealth in Peru and Mexico by their eager extortions. Of true commerce between the old world and the new there was little while the Spaniard's controlled it. They did, in the course of time, ship considerable quantities of sugar, tobacco, hides, logwood, indigo, cochineal, cocoa, cinchona, or Peruvian bark (from which quinine is extracted) and other American products, from their various colonies; but to no such extent as a wise and enterprising people would have done, having the same opportunities. Once a year, or once in two years, a fleet of ships was sent from Seville, at first, and afterwards from Cadiz, to Vera Cruz, for freights from Mexico, and another to Porto Bello, on the Isthmus of Panama, for the South American freights. The ships which made the latter voyage were distinguished from the Mexican fleet by being called the galleons. For a long time, twelve galleons in the one squadron and fifteen ships in the other, making their voyage once a year, and sometimes only every other year, conveyed all the trade that passed between Spain and America; which shows how little the Spaniards drew from their great possessions, except the enormous treasure of silver and gold which a few ships could transport. This glittering treasure formed, in fact, the main cargo of the Peruvian galleons and the Mexican fleet. Before the close of the reign of Philip II. the number of galleons was increased to about forty and that of the fleet to

fifty or sixty. It is quite certain that no country had ever before received such a quantity of gold and silver as came into Spain during the 16th century. Instead of enriching, it ruined the nation. Neither rulers nor people had sense enough to see what a treacherous and delusive kind of wealth it formed, if trusted to alone. They vainly fancied that, with such a store of precious metals to draw upon, they could afford to despise the homely labors by which other people lived. With such mad notions as these, the honest industries of Spain were treated with neglect or worse. Her trade with neighboring countries was looked upon as a business too insignificant for Spaniards to care for or trouble themselves about. It was mostly given over to the Dutch and Flemings, while they remained under Spanish rule, and it was afterwards kept up in great part by smugglers, Dutch and English. Agriculture decayed, and its destruction was helped by the formation of a great aristocratic company of sheep-farmers, called the *Mesta*, to which such tyrannical rights and privileges were given by the crown that the most fertile parts of Spain were finally turned into sheep-pasture, under its control. The best artisans and the most enterprising merchants of the kingdom were driven out, because they were Moors and Jews, or they were burned for Christian beliefs which the Church did not approve. The Inquisition was so busy, with its racks and its fires, that no other business could thrive. Every kind of production dwindled, and for the supplying of all descriptions of wants the Spaniards were soon driven to look to other countries. The few who laid hands upon the riches coming in from the plunder of America spent it recklessly, in extravagant ways, while costly foreign wars which had no success, and plots in France and England which came to nothing, drained the coffers of the king. And thus the great stream of gold and silver which flowed into Spain from the new world ran out of it quite as fast, until nearly every other country in Europe held more of it than Spain herself. The strong hand with which the Spaniards were able at first, and for some time, to hold the vast domain of sea and land which the Pope had given them and which their own sailors and soldiers had explored and seized, grew weak before the end of a hundred years after the memorable voyage of Columbus was made. The hardy Dutch, driven to revolt and emity by tyrannical government and by cruel religious persecutions, attacked them everywhere, in the eastern and western world. The English, just beginning to grow ambitious and bold on the ocean, and constantly threatened by the armadas of Spain, did the same. But these were not the only enemies who harassed the Spanish colonies and fleets. In a general way, the whole world went to war with the insolent nation which claimed the lordship of the earth. There came into existence, in the 17th century, a powerful organization of pirates or freebooters, made up of daring men of all nations, who carried on for many years a villainous warfare of their own against the Spaniards at sea and against their American settlements. These Buccaneers, as they were called, gained strongholds in several islands of the West Indies, from which the Spaniards were not able to dislodge them. Under the attacks of all these enemies, combined with her own misgovernment

and her contempt and abuse of thrifty industries and fair trade—which no people can neglect without ruin—Spain steadily and rapidly sank.

The Flemings and the Dutch.—In the first half of the 16th century, the people of the Netherlands were the tolerably contented subjects of that famous monarch, the Emperor Charles V., who ruled in Spain, in Naples, in Germany (the old Empire), and in Burgundy, as well as in the Lowland principalities, Flanders, Holland, and the rest. They were already very prosperous, working hard at many callings, trading shrewdly and busily with the rest of the world, and diligently picking up all kinds of knowledge everywhere. In the southern provinces (which we may call the Belgians, because they are mostly now embraced in the modern kingdom of Belgium) the chief industries were those of the loom, in all branches of weaving; and in skillful workmanship of every kind the people were tasteful and apt. These provinces were the seat of a much greater and more general activity in manufactures than appeared in the states to the north of them (which we will call the Dutch states, without distinction, because they are now included in the kingdom of Holland). The latter were more extensively employed in fisheries, in navigation and in ship-building, although most kinds of industry, manufacturing and agricultural, were thrifflily and successfully carried on. At the time when Charles V. ruined the Netherlands, the city of Antwerp, in the Belgian circle of provinces, was the great metropolis of Netherland trade. It was much more than that. It was the foremost commercial capital of the world. The traffic which slipped away from Venice and Genoa, had fixed its central seat in this younger town on the Scheldt. It was sure to plant its new emporium somewhere in the Netherlands, because there was nowhere else in Europe so much energy, so much enterprise, so much industry, so much commercial wisdom, so much activity of domestic trade. Spain and Portugal held the wealth of the Indies and the Americas in their hands, but we have seen how incapable they were of using the commercial advantage it gave them. Lisbon, Cadiz and Seville were only depots for the transfer of merchandise; it was impossible to make them real capitals of trade, because they could not and would not furnish either the spirit, or the genius, or the organized agencies that it demands. The Netherlands, with their long schooling in commerce upon a smaller scale, were ready to meet every requirement when the new era opened and gave them their greater chance. There was no other mercantile organization so well prepared. The league of the *Hansa Towns* was breaking and falling; the English were just beginning to show their aptitude for manufactures and trade. Some one of the Netherland cities was sure to win the sovereignty in commercial affairs which Venice gave up, and Antwerp proved the winner, for a time. During most of the 16th century, it was the business center of Europe. It was the gathering-place of the merchants and the seat of the money-changers and bankers. Two and three thousand ships were often crowded in its harbor, at one time. It distributed the merchandise of the East and West Indies, which it took from Portugal and Spain, and the manifold

wares of the many manufacturing towns of Flanders, Brabant, southern Germany, to a great extent, and northern France. At the same time, its own looms, anvils, tanne-les, glass-works, dyeing-vats and mechanic shops of various kinds were numerous and busy. Its thriving population was rapidly increased, for it welcomed all who came with skill or knowledge or money or strong hands to take part in its work. Such was Antwerp during the reign of Charles V., and at the time (A. D. 1555-1556) when that weary monarch gave up his many crowns to his evil son, Philip II. of Spain, and went away to a Spanish monastery to seek for rest. The government of Charles in the Netherlands had been hard and heavy, but the people were left free enough to prosper and to grow intelligent and strong. Under Philip the prospect changed. The story of his malignant persecutions and oppressions, of the revolt to which they drove the Netherland provinces, of the long, merciless war in which he strove to ruin or subdue them, of the independence which the Dutch provinces achieved and the prosperous career on which they entered, is told in another place — see *NETHERLANDS* (page 2256, and after). Antwerp, the great capital of trade, stood foremost in the struggle, as became its greatness, and it suffered correspondingly. The death-blow to its fortunes was given in 1585, when, after a siege that is almost unexampled, it was taken by the Spaniards under Alexander Farnese, Duke of Parma, and given up to pillage and slaughter. Its surviving inhabitants fled in large numbers, the greater part of them to Holland, some to England, and some to other countries. Commerce abandoned the port. The chief merchants who had made it the center of their undertakings chose Amsterdam for their future seat of business, and that city rose at once to the commercial rank of which Antwerp had been stripped by the stupid malice of its Spanish sovereign. While the Belgian Netherlands fell hopelessly under the fatal despotism of Spain, the Dutch Netherlands fought their way slowly to independence, which Spain was forced to acknowledge in 1648. But long before that time the Dutch Republic had become a power in Europe — much greater in every way than Spain. Its foundations had been laid by the union of the seven provinces of Holland, Zealand, Friesland, Utrecht, Groningen, Overysseel and Gelderland. It had grown firmer and stronger year by year, and the people, after a time, had not only found themselves able to thrive generally in the midst of their desperate war with Spain, but the war itself opened their way to wealth and power. They learned, early, as we have seen, that they could attack their enemy to the best advantage at sea. In pursuing this ocean warfare they were led on to the East and West Indies, and soon broke, in both regions, the exclusive power which the Spanish and Portuguese had held. When Portugal was dragged into a fatal union with Spain, under Philip II., it had to suffer the consequences of Philip's wars, and it bore more than its share of the suffering. The Dutch and the English forced their way pretty nearly together into the eastern seas, and, between them, the Portuguese were mostly driven out. They divided the rich commerce of that great Asiatic and Oceanic region, and, for a time, the most lucrative part of it was gained by the Dutch.

While the English got their footing on the coasts of Hindostan and were laying the foundations of their future empire in India, the Dutch gained control of the spice-growing islands, which, in that day, were the richer commercial prize. The first Dutch fleet that rounded the Cape of Good Hope and made its way into East Indian waters, sailed under the command of one Cornelius Houtmann, who had been in the service of the Portuguese and learned the route. He started in 1595 with four ships and returned, after a voyage of eighteen months, with only two. He had lost more than half his men, and he brought back very little cargo to pay for the adventurous undertaking. But the Dutch were well satisfied with the experiment; they knew that more experience would lead to better success. Another fleet of eight ships was sent out in 1598 and when four of them returned the next year with a precious cargo of spices and other merchandise from Java, which they had procured very cheaply in exchange for the cloths, the metal wares and the trinkets that they took out, the delight of the nation can hardly be described. Part of the fleet had remained in the East to hold and strengthen the position they had gained, and other ships were sent speedily to join them. Very soon the armed merchantmen of the Dutch were thickly swarming in that part of the world, ready for fight or for trade, as the case might be. So many companies of merchants became engaged in the business that too lively competition between them occurred and they threatened to ruin one another. But that danger was overcome in 1602 by joining the rival interests together in one strong association, to which the government gave exclusive rights of trade in the East. Thus the Dutch East India Company was formed, in which the merchants of Amsterdam, Rotterdam, Delft and other cities of the republic put their capital together. By its charter, this great company held powers of war as well as of commerce and it used them both with prodigious energy. At first, the chief trading stations of the Dutch in the East were at Bantam, in Java, and Amboyna, one of the group of the Moluccas or Spice Islands; but the city of Batavia, which they founded in Java in 1619, became afterwards their principal seat of trade and the capital of their surrounding possessions. The chief aim of the Dutch was to gather into their hands the profitable commerce of the island world of the Eastern Archipelago, but they did not fail to pursue their Spanish and Portuguese enemies in other quarters, where the chances of traffic looked inviting. They seized positions on the Guinea coast of western Africa and took their full share of the trade with its savage natives, who gave gold dust, ivory, ebony, gums, wax, ginger, pepper, palm oil, various choice kinds of wood, and slaves (for the West Indies and America, when the plantations there began to want labor), in exchange for trinkets and cheap goods. They also occupied and colonized the Cape of Good Hope, which the Portuguese had neglected, and made it, in time, a very prosperous and valuable possession. That they should carry their war with Spain into the West Indies and to the American coasts, was a matter of course. In 1623 a Dutch West India Company was chartered, to organize these operations in the western world, as the East India Company had organized undertakings in

the East. But the West India Company was much less commercial and much more warlike in its aims than the corporation of the orient. Its first object was to take spoils from the enemy, and it found the prizes of war so rich that not much else was thought of. On the North American continent, a most important lodgment was made, as early as 1614, at the mouth of the Hudson River, where the colony of New Netherland was founded. In this quarter, as everywhere, the Dutch and English were rivals, and before many years they came to open war. In the series of wars which followed (1652, 1665, 1673), and in the long contest with Louis XIV. of France which they shared with England, the Dutch expended more of their energies than they could afford. The English, with their well protected island, rich in soil and in minerals, had heavy advantages on their side, when once they had acquired the knowledge of commerce and the ability in labor which enabled them to compete with the Dutch. To the latter nature had always been wholly unfriendly. They had fought against circumstances at every step in their history, and had won their wealth, their knowledge, their high importance and influence in the world, by sheer hard work, tireless patience and indomitable will. But the natural advantages against which they struggled were sure to overcome them in the end. It must be said, too, that they did not grow in character as their fortunes rose. It is not difficult, therefore, to account for the fact that the Dutch nation slowly slipped back, during the 18th century, from the high and leading position in civilization to which it had climbed, and lost by degrees its commercial supremacy, while the English nation came to the front.

The English; 16-17th Centuries.—Commercial progress.—The East India Company.—As English commerce slowly freed itself from foreign hands, it fell under the control of monopolies at home. The merchants of the Middle Ages, in England and elsewhere, had formed themselves into societies, or guilds, just as the artisans and mechanics in different trades had done. Such associations had originally grown out of the disorderly state of the times, when government and law were weak, and when men who had common interests were forced to unite to protect themselves, and to establish customs and rules for regulating their business affairs. But the guilds almost always became, in time, oppressive monopolies, each acquiring, in its own department of business, such exclusive rights and privileges as practically shut out from that business all persons not admitted to its membership. This occurred among the merchants, as it did elsewhere, and English commerce grew up under the control of various societies of "Merchant Adventurers," as they were called—see **MERCHANT ADVENTURERS** (page 2153). The disputes and contests of these companies, at home and abroad, and their suppression of individual enterprise, appear to have hindered the growth of English commerce for a long period. But it did grow steadily, notwithstanding, and through the reigns of Henry VIII. and Elizabeth, the number of English ships set afloat and of English merchants trading abroad, was rapidly multiplied. Meantime the English people gained skill in weaving, dyeing and other arts, and were fast extending the manufacture at

home of their own famous wool. This, in turn, made the sheep farming more profitable, and so much land was taken for that purpose that other products were diminished and most articles of food rose in price. That occurrence caused grave anxiety, and the meddling statesmen of the time, who thought that nothing could go well if their wisdom did not regulate it by law (as too many meddling statesmen think yet) began to frame acts of Parliament which directed how farming lands should be managed and how many sheep a single farmer should be permitted to own. The same kind of statesmanship took alarm at the spread of weaving, in a small way, among industrious villagers and country people, who set up looms and made and sold cloth, outside of the guilds of the town weavers. So the complaints of the latter were listened to, and Parliament forbade weaving to be done outside of certain towns, except for home use in the family of the weaver. There was much of that sort of legislation during Tudor times, and the industry and enterprise of the country had to struggle long and hard for freedom to fairly exercise themselves. But in spite of meddling statesmen and tyrannical monopolies, the people went on from year to year, learning more, doing more, producing more, wanting more, buying and selling more, and living in a better way. After about 1511, there appears to have been a considerable direct trade growing up between England and the countries of the eastern Mediterranean (the Levant), and consuls, to look after the rights and interests of English merchants, began to be appointed, at Candia, and elsewhere, as early as 1530. The voyage from London to the Levant and return then occupied from eleven months to a year. About 1535 the English made their appearance as traders on the Guinea coast of West Africa, disputing the exclusive rights which the Portuguese claimed there, and in 1537 they opened trade with the Moors of the Barbary coast, in northern Africa. In 1553 a chartered company of London merchants was formed with the object of exploring for a northeastern passage to China, around Europe, through the Arctic seas, as a means of dividing the trade of the East with the Portuguese, who controlled the southern route, around Africa. This is believed to have been the first joint stock corporation of shareholders that was organized in England. Sebastian Cabot, then "Grand Pilot of England," was at the head of it. The northwestern passage was not found, but the company opened a trade with Russia which proved to be exceedingly valuable. Accepting this, in lieu of the China trade which it could not reach, it became, as the Russia Company, a rich and powerful corporation. The success of the Russia Company stimulated the adventurous disposition of the English people and set other enterprises in motion. But still more energy was roused by the hostility of national feeling toward Spain. The destruction of the Armada broke the Spanish naval power and made the English bold. They began to navigate the sea from that time with intent to become its masters, though the Dutch were still superior to them in maritime strength and experience. During the reign of Elizabeth there rose a new race of vikings, very much like the old Norse heroes of the sea, and pursuing a very similar career. The most daring and most famous among them, such as Grenville, Drake and Hawkins, were

more than half pirates, and their voyages were chiefly expeditions for plunder, directed against the Spaniards and Portuguese. The trade which they first gave attention to was the trade in negro slaves. But those piratical adventurers of the 16th century made England the "mistress of the seas." They trained for her a body of sailors who were able in time to more than cope with the Dutch, and they opened the newly known regions of the world for her merchants and colonists to spread over them. Before the end of the 17th century, the English had become the foremost power in the western world and were making the most of its opportunities for production and trade. Meantime they were pushing their way with equal energy in the East. On the last day of the year 1600 the "Company of Merchants of London trading into the East Indies," which became afterwards so great and famous as the "East India Company" of England, was chartered by the Queen. The Company sent out its first fleet of five vessels in 1601. The expedition returned, after an absence of two years and seven months, richly laden, in part with pepper from Sumatra and in part with the spoils of a Portuguese ship which it had captured in the straits of Malacca. It had settled a trading agency, or factory, at Bantam—and that was the beginning of the vast empire which England now rules in the East.—See INDIA: A. D. 1600-1702 (page 1700).

The English: 17-18th Centuries.—The Colonial or Sole Market Commercial System.—"The doctrine that the commercial prosperity of a country depends on the creation, maintenance, and extension of a sole market for its products and for its supplies, was prevalent from the discovery of the New World and the Cape Passage down to the war of American Independence. This was the principal object of Borgia's Bulls. This was what animated the Dutch, in their successful, in the end too successful, struggle, after a monopoly of the Spice Islands. This was the motive which led to the charters of the Russian Company, the Levant Company, the East India Company, the Turkey Company, the Hudson's Bay Company, in England. The theory was organized in the colonial system, which Adam Smith examined, attacked, and as far as argument could go, demolished in his great work. But the dream of a sole market is still possessing the Germans and the French. . . . The early wars of Europe were wars of conquest. . . . After them came the wars of religion, from the outbreak of the Insurrection in the Low Countries, and the civil wars in France, down to the Peace of Westphalia in the middle of the 17th century. From that day to our own, European wars have been waged on behalf of the balance of power, the principal mischief-maker in the contest being France. The English, the French, and the Dutch were the competitors in the wars for a sole market. But Holland was practically ruined at the peace of Aix-la-Chapelle, and France was stripped . . . of her colonies at the peace of Paris, and England became not only the principal maritime, but the principal manufacturing and mercantile country in the world. As regards English trade, however, though India was an outlet to some extent for English goods, its trade was in the hands of a chartered company, whom the Seven Years' War had left

in serious straits. The most important sole market which Great Britain had acquired by her wars was the sea-board of North America. To support the finances of the chartered company, the British Parliament determined on taxing the inhabitants of her sole market, and the result as you know was the war of American Independence. . . . The colonial or sole-market system was based on a strict reciprocity. The English Government admitted colonial produce into the English markets at differential duties, or prohibited the produce of foreign nations and foreign colonies altogether. The Colonies were not only the customers of English manufacturers only, to the absolute exclusion of foreign manufactures, but were prohibited from undertaking those manufactures themselves. The English Government adopted with their colonies the policy which they adopted with Irish manufactures, which they also prohibited, but with this difference, that they disabled the Irish from having any trade whatever with England, with the Colonies, and with foreign countries. They wished to extinguish, with one exception, every Irish product, and to constitute themselves the sole manufacturers and shopkeepers for the Irish. They allowed only the linen manufacture of Ulster. The Irish were to be, with this exception, agriculturists only, but they were to be disabled from selling their agricultural produce in England, or elsewhere. They were practically denied the right of trade. . . . It was the doctrine of the sole market in its most exaggerated form. . . . The colonial system, under which advantages were secured to the colonial producer by giving him a preferred market in Great Britain, while the colonist was debarred from engaging in manufactures, was a selfish one on the part of the English merchants and manufacturers. It gave the colonist a sole market, it is true. But it does not follow that a sole market is a high market. On the contrary, it is probable that the offer of a sole market is intended to secure a low market. The Virginian planter sent the whole of his tobacco to England. The English trader re-exported it to other countries, say Holland or Germany. It may be presumed that he made a profit on the original consignment, and on the re-exportation, or he would not have undertaken the business. . . . The colonial system did not preclude the plantations from sending, under the strict conditions of the Navigation Act, certain kinds of produce to other countries than England. These were called non-enumerated commodities, the principal being corn, timber, salted provisions, fish, sugar, and rum. There was a reason for this, which was to be found in the fiscal system of England. We did not want colonial corn, for there were duties on corn, levied in the interest of the landlords, nor colonial timber, salted meat and salted fish, for the home produce of these articles were similarly assisted. Sugar and rum were allowed to be exported to the owners of the plantations in the Leeward Islands, were chiefly absentee English proprietors, and had already a monopoly of English supply, and were powerful enough in Parliament to get an extended market elsewhere. But in 1760, just before the troubles broke out with the American plantations, an Act was passed, disabling the colonists from sending even the non-enumerated commodities to any country north of Cape Finisterre,

in Northern Spain. . . . The enumerated goods, and there was a long list of them, could be exported to Great Britain only. They consisted, as Adam Smith says, of what could not be produced in this country, and what could be produced in great quantity in the Colonies."—J. E. T. Rogers, *The Economic Interpretation of Hist.*, lect. 15.

The Americans: Colonial Trade.—"We are a nation of land-traffickers, but our ancestors in the colonies traded and traveled almost entirely by water. There were but twelve miles of land-carriage in all the province of New York; beyond Albany the Indian trade was carried on by 'three-' or 'four-handed batteaus,' sharp at both ends, like the Adirondack boat of to-day. Yachts, with bottoms of black oak and sides of red cedar, brought wheat in bulk and peltries down the Hudson; other craft carried on the domestic trade of New York town with the shores of Long Island, Staten Island, and the little ports beyond the Kill von Kull. . . . The first regular wagon-carriage from the Connecticut River to Boston did not begin until 1697; Massachusetts had then been settled seventy years. The flat-bottomed boat, which has since played so important a part in the trade of the Ohio and the Mississippi, and whose form was probably suggested by that of the 'west country barges' of England, appears to have been used for floating produce down the Delaware before 1685. In the Chesapeake colonies, until late in the provincial period, there were almost no roads but the numerous bays and water-courses, and almost no vehicles but canoes, row-boats, pinnaces and barks. Places of resort for worship or business were usually near the water-side. . . . But of all means of travel or trade the Indian canoe was the chief. . . . Roads in the colonies were hardly ever laid out, but were left where Indian trail or chance cart-track in the woods had marked them. . . . From England, along with bad roads, the colonists brought the pack-horse which, in Devon and Cornwall, at the close of the last century, still did the carrying, even of building-stones and cord-wood. Most of the inland traffic of the colonial period was done by packing. . . . The Germans, whose ancestors had four-wheeled vehicles in the days of Julius Caesar, made good roads wherever they planted themselves. While their English neighbors were content to travel on horseback and to ford and swim streams, the Salzburgers in Georgia began by opening a wagon-road twelve miles long, with seven bridges, 'which surprised the English mightily.' Pennsylvania, the home of the Germans, alone of the colonies built good straight roads; and the facility which these afforded to ten thousand freight-wagons was the main advantage that gave Philadelphia the final preëminence among the colonial sea-ports, and made Lancaster the only considerable inland mart in North America. . . . Proximity to the wampum-making savages at one end of Hudson River navigation and to the beaver-catchers at the other made New York the chief seat of the fur trade. Wagon-roads, soil, climate and an industrious people made Philadelphia the principal center of the traffic in bread and meat. The never-ending line of convenient shore that bordered the peninsulas of Maryland and Virginia, and gave a good landing-place at every man's door, with a tobacco currency, rendered it

difficult to build towns or develop trade among the easy-going planters of the Chesapeake and Albemarle regions. A different coast-line, and rivers less convenient, made Charleston the rich and urbane commercial and social center of southern Carolina. Until about 1750 Boston was the leading sea-port, and its long wharf, 2,000 feet in length with warehouses on one side of it, was the New World wonder of travelers. Five or six hundred vessels annually cleared out of Boston in the middle of the 18th century for the foreign trade alone, and the city contained between twenty and thirty thousand people at the outbreak of the Revolution. But Newport, with its thirty distilleries to make rum of the molasses brought from the islands, and its seventeen sperm-oil and candle factories to work up the results of the whaling industry, had nearly half as many ships in foreign trade as Boston, and three or four hundred craft of all sorts in the coast-wise carrying trade. He was thought a bold prophet who said then that 'New York might one day equal Newport'; for about 1750 New York sent forth fewer ships than Newport, and not half so many as Boston. . . . But Philadelphia—planted late in the 17th century—outstripped all rivals, and for the last twenty years of the colonial period was the chief port of North America. . . . The imports and exports of the two tobacco colonies together were far larger than those of Philadelphia, but their profits were far less."—E. Eggleston, *Commerce in the Colonies (Century, June, 1884)*.

The English: 18-19th Centuries.—**Rising prosperity and commercial supremacy.**—**Successful War, Free Trade and Steam Power.**—"If we look at the state of the European powers after the conclusion of the Seven Years' War in 1763, we shall see how favourable our position then was. In the first place, England had seriously crippled her commercial rival, France, both in her Indian and American possessions, and thereby had gained extensive colonial territories which afforded a ready market for British goods. Spain, which had been allied with France, had lost at the same time her position as the commercial rival of England in trade with the New World. Germany had for some time ceased to be a formidable competitor, and was now being ravaged by internal conflicts between the reigning houses of Austria and Prussia. Holland, which had once been England's most serious rival—especially in foreign commerce—was at this time in a similar condition, and had greatly declined from the prosperity of the 16th and 17th centuries. Hence England alone had the chance of 'the universal empire of the sole market.' The supply of this market was in the hands of English manufacturers and English workmen, so that the great inventions which came into operation after 1763 were thus at once called into active employment, and our mills and mines were able to produce wealth as fast as they could work, without fear of foreign competition. It is not surprising, therefore, to find that in the ten years, from 1782 to 1792, our entire foreign trade was nearly doubled, the exact figures being:—1782, imports £10,341,628, exports £13,009,458; 1792, imports £19,650,858, exports £24,905,200. And this remarkable progress was still kept up even during the great continental wars which were caused by the French Revolution, and which lasted for almost

a quarter of a century. . . . In spite of the almost entire loss of our trade in some directions, English commerce improved in others; and, in fact, any loss was more than counterbalanced by an increase in regard to the (now independent) United States, Russia, Venice, Germany, and Northern Europe, as well as with the West and East Indian colonies, both British and foreign. In fact, many of the countries whom France had compelled to become our enemies found themselves unable to do without British manufactures, especially as their own industries were suffering from the warfare that was going on on the Continent, and therefore had to find means to procure our goods. . . . The close of the 25 years of continental war (1815) is sometimes taken as being the date when the modern system of commerce may be said to have had its beginning. Up to that time, although great changes and advances had been made, the spirit of monopoly and the general restrictive policy which characterised previous centuries, were still, to some extent, in force. But not very long after the peace that was won by the battle of Waterloo, a remarkable change was made in the commercial policy of England. . . . We now come to the beginnings of freedom of trade."—H. de B. Gibbins, *British Commerce and Colonies*, pp. 91-102.—"When the wars of the French Revolution began, the foundations of a great empire had already been broadly laid; and when it ended, England stood out as a power which had grown greater in the struggle. . . . Dutchman, Dane, and Spaniard, Frenchman and Venetian, all ancient competitors of England, fell before her; and, when the sword was sheathed in 1815, it was no exaggerated boast to call her mistress of the seas. These facts should never be lost sight of in any consideration of the causes which have led us to where we now are. Without these preparatory steps, both in domestic industries and in foreign wars and conquests, England would not, with all her material advantages, have been so entirely the gainer by the progress of the last fifty years as she has so far proved to be. . . . There is the more need to remember this because the time immediately following the war was one of severe domestic suffering, and of much retrograde legislation, conceived with a view to, if possible, lessen that suffering. . . . The worst of all the laws which then restricted trade were those relating to the exports and imports of corn, which the younger men of to-day have well-nigh forgotten. . . . It was not till after long years of agitation by John Bright, Richard Cobden, and other leaders of the Anti-Corn Law League, that the landed party gave way suddenly, and assented, amid the most gloomy predictions of impending ruin, to the repeal of the sliding scale altogether, and the virtual abolition of all corn laws by the substitution of a fixed duty of 1 s. per quarter. Thus recently was one of the most oppressive pieces of fiscal legislation that man could have conceived withdrawn; and not until 1849, when that law came into force, could the industries of the country be said to be anything like unfettered. Yet twenty years more passed before this shilling duty—the last rag of protection—was itself flung aside, and the import of corn became perfectly free. . . . But many other changes had in the meantime taken place, all tending more and more to throw off the shackles

of trade. . . . As late as 1840 our customs tariff was described in the report of a committee of the House of Commons as 'presenting neither congruity nor unity of purpose; as 'often aiming at incompatible ends,' seeking both to produce revenue and to protect interests in ways incompatible with each other. There were no fewer than 1,150 different rates of duty chargeable on imported articles, . . . and the committee gave a list of 862 of such articles which were subject to duty, seventeen of which then produced 94 per cent. of a revenue amounting to £23,000,000. . . . The present customs tariff contains less than two dozen articles all told, and including those on which duty is imposed to countervail the excise charges on internal products. The ordinary import articles on which duty is charged number only seven. . . . But there is yet another hindrance the removal of which has to be noticed, and which, till removed, cramped England very seriously, viz. the navigation laws and the great trade monopoly of the East India Company. . . . It took longer time . . . to accomplish the complete deliverance of our mercantile marine from the baneful influence of 'protective' jealousy than to accomplish any other great free-trade reform. A tentative effort to lessen the consequences of confining the carrying trade of England to English ships was made in 1825 by Mr. Huskisson; but it was not till 1854 that complete free trade on the sea was granted by the abolition of any restriction as to the nationality of vessels engaged in the coasting trade of the kingdom. . . . Here, then, we have noted briefly the various steps and leading characteristics of the commercial reforms which, in this country, either paved the way for or secured the benefit of the great outburst of enterprise and influx of wealth which began in the second quarter of the present century. These various reforms constitute, so to say, the negative side of the modern commercial prosperity which this country built upon the foundations of her world-wide empire; and, in order to get a complete outline of the position which we at present occupy, we must now revert briefly to the positive side of the subject; we must find out where the great modern wealth has come from, and on what it has been based. Freedom of trade no doubt did much to call wealth and enterprise into being; but in what did this wealth consist? Happily the leading features are not difficult to trace. Although the foundations of the great manufacturing industries of this country lie far back in the past, their development, like the growth of free-trade principles, is quite modern, and dates in reality from the day when George Stephenson won the competition at Liverpool with his locomotive 'the Rocket,' settling thereby the question of railroad travelling by steam beyond dispute. The mere stimulus to all kinds of mining and manufacturing industries which this victory and the subsequent railway operations gave, was itself enough to cause the trade of this country to press forward by 'leaps and bounds.' Since November 1830, it may be said to have done so; and the mere fact that England was the originator of the railway systems of the world, and that she contained within herself almost boundless materials wherewith to supply those systems, would itself suffice to explain the pre-eminence which from that day to this has

been unquestionably hers. The great natural resources of the country were first employed in supplying the materials for home development, and then gradually the wealth thus acquired by digging in the bowels of the earth was utilised in tempting or leading other nations into a career of 'progress' similar to our own. In spite of the many losses which individuals suffered in the early days of this progress, the nation grew steadily richer and its stores of realised wealth increased with every new enterprise almost that it took up. . . . Each year the realised wealth of the one before told, as it were, in swelling the working power of the nation, and in enlarging the business capacities and scope of its credit. . . . Side by side with the increased produce of the country, the increased manufactures, and the increasing wealth, there were growing up facilities for intercommunication with all parts of the world, and with that an increasing tendency to emigration. The home hives were constantly throwing off young swarms, which, settling now in America, now in Australia, now in Africa, became so many new centres of demand, so many links in the trade chain that we had bound round the world."—A. J. Wilson, *British Trade* (*Fraser's Mag.*, Sept., 1876), pp. 271-277. — "The almost unlimited expansion which becomes marked about 1850 and culminates in 1873, has been pointed to by many different people as proof of the great effect of different measures or inventions; as a matter of fact, it was due to no one cause, but was rather the result of multitudinous discoveries and events, acting and reacting on each other. Perhaps the following list of dates shows this most clearly:—Opening of first English railway, 1825; Wheatstone's telegraph, 1837; first ocean steamer, 1838; settlement in New Zealand, 1840; reduction of duties on raw materials, 1842; repeal of Corn Laws, 1846; commercial treaty with France, 1860. Here are seven events of widely different natures, each of which must have had its effect in the period under consideration, and it would be useless, even if it were possible, to weigh the separate result of each. We cannot estimate, we can obtain no criterion of the vast effects of the adoption of Free Trade. Three things, however, are clear:—First, that till the suffocating restrictions were removed, trade could not expand; when exports were prohibited, imports could not be plentiful; when imports were taxed, the demand at enhanced prices could not be great. Secondly, if every restriction was removed from every branch of trade, there would be no increase without natural causes of manufacture and demand, no increased demand without a cheapening or improvement of supply; that, in fact, Free Trade is the method, not the source, of commerce, and that the claim of this increase as the direct result of freedom and a proof of its expediency is an inaccurate exaggeration. Thirdly, that the date of the marked commencement of the expansion coincides exactly with the reductions and abolitions of duties, pointing to the fact, borne out by all concurrent events, that the adoption of Free Trade was the opening of the valve which allowed the forces of commerce full play. . . . It was in the trades of comparatively recent establishment, in England especially, that there were immense outputs (of cotton goods and machinery, for instance), in great excess of the

home demand; and this could only pay if the foreign demand grew in proportion to the growing efficiency; that is to say, our newer industries became the most important, and were marked as our division of international labour. The foreign demand, indeed, for our manufactures and our machines was extraordinary. Now, every country is trying to rival our goods, and each to produce for herself the manufactures she requires; then, rivalry was out of the question. . . . On every side new markets were opened; old trades were increased, now developed. The railways built with our materials opened up districts hitherto inaccessible; this acted as a fresh stimulus to our manufacturers—more capital was forthcoming, and more railways were built. Not only were countries, with which we had already established some trade, brought nearer and in closer relation, but new countries were discovered. Australia and New Zealand were ready to take our surplus population, and were not behindhand in the new system of development. Our older colonies also increased. With each emigration the number of our customers abroad was multiplied. In 1850 and 1852 this process was accelerated by the news of the gold discoveries in California and Australia. So great was the emigration and the consequent demand for ships that all freights were increased, and, with a short lull, this continued till 1856. . . . The last great impetus was given by the Suez Canal, by which the journey to India and the East was quickened by one-half, and, at the same time, rendered more secure."—A. L. Bowley, *England's Foreign Trade in the Nineteenth Century*, ch. 4.—See, also, TARIFF LEGISLATION (pages 3073-3077).

The Americans: A. D. 1856-1895.—Decay of American shipping interests.—"Down to the year 1856, the United States had rapidly advanced in commercial greatness, and had overcome all the obstacles which had clustered about their path. At that time we were close upon the heels of England, and everything pointed to our speedily passing her in the race for commercial supremacy. Since then our commerce has steadily declined,—a misfortune usually attributed to the civil war, and subsequently to the competition of more profitable forms of investment. These circumstances no doubt hastened the loss of our commerce; but, as Lieutenant Kelley points out, they are not the true causes of its decline, inasmuch as that began before the civil war. The origin of our difficulties lay in the abandonment of our old policy, which, from the beginning of the century, consisted in surpassing all the world in the quality and speed of our ships and in our naval architecture. With the substitution of iron for wood we began to drop behind, until, with a population of 55,000,000, we have a tonnage but little greater than we had when half as numerous. Moreover, our percentage of wrecks is larger than that of any other seafaring people, and our ships and steamers are shorter-lived."—*The Question of Ships* (*Atlantic Monthly*, June, 1884, pp. 859-861).—"The first symptoms of the decadence appeared in 1856, in the falling-off in the sales of American tonnage to foreigners; the reduction being from 65,000 in 1855 to 42,000 in 1856, to 26,000 in 1858, and to 17,000 in 1860. During the war, however, the transfers of

American tonnage to foreign flags again increased very largely, and, for the years 1862 to 1865 inclusive, amounted to the large aggregate of 824,652 tons, or to more than one-fourth of all the registered tonnage (the tonnage engaged in foreign trade) of the United States in 1860. But these transfers, it is well understood, were not in the nature of ordinary business, but for the sake of obtaining a more complete immunity from destruction upon the high seas than the United States at that time was able to afford. The year 1856 also marks the time when the growth of our foreign steam-shipping was arrested, and a retrograde movement inaugurated; so that . . . our aggregate tonnage in this department was 1,000 tons less in 1862 than it was in 1855. The total tonnage of every description built in the United States also declined from 583,450 tons in 1855 (the largest amount ever built in any one year) to 469,393 in 1856, 378,804 in 1857, and 212,892 in 1860, a reduction of 68 per cent in five years. During the year 1855, American vessels carried 75.6 per cent of the value of the exports and imports of the United States. After 1855 this proportion steadily declined to 75.2 per cent in 1856, 70.5 in 1857, 66.9 in 1859, and 65.2 in 1861, the year of the outbreak of the war. . . . Of the enormous increase in the foreign commerce of the United States since 1860, as above noted, every maritime nation of any note, with the exception of the United States, has taken a share. American tonnage alone exhibits a decrease. Thus, comparing 1880 with 1856, the foreign tonnage entering the seaports of the United States increased nearly 11,000,000 of tons; whereas the American tonnage entered during the same period exhibits a decrease of over 65,000 tons. British tonnage increased its proportion from 935,000 tons in 1856 to 7,903,000 in 1880; Germany, during the same time, from 106,000 to 1,089,000; and Sweden and Norway from 20,662 to 1,234,006. Austria, limited to almost a single seaport, jumped up from 1,477 tons in 1856 to 200,000 tons in 1880, and had, in 1870, 179 large-class sailing-vessels engaged in the American trade. Sleepy Portugal increased during the same period from 4,727 tons to 24,440 tons. . . . How is it, that the United States, formerly a maritime power of the first class, has now no ships or steamers that can profitably compete for the carrying of even its own exports; not merely with the ships of our great commercial rival, England, but also with those of Italy, Sweden, Norway, Germany, Holland, Austria, and Portugal? . . . The facts already presented fully demonstrate that the war was not the cause, and did not mark the commencement, of the decadence of American shipping; although the contrary is often and perhaps generally assumed by those who have undertaken to discuss this subject. The war simply hastened a decay which had already commenced. . . . The primary cause was what may be termed a natural one, the result of the progress of the age and a higher degree of civilization; namely, the substitution of steam in place of wind as an agent for ship-propulsion, and the substitution of iron in the place of wood as a material for ship-construction. . . . The means and appliances for the construction of iron vessels did not then [in 1855] exist in the United States; while Great Britain, commencing even as far back as 1837 (when John

Laird constructed his first iron steamers of any magnitude for steam navigation), and with eighteen years of experience, had become thoroughly equipped in 1855 for the prosecution of this great industry. The facilities for the construction of steam machinery adapted to the most economical propulsion of ocean vessels, furthermore, were also inferior in the United States to those existing in Great Britain; and, by reason of statute provisions, citizens of the United States interested in ocean commerce were absolutely prevented and forbidden from availing themselves of the results of British skill and superiority in the construction of vessels when such a recourse was the only policy which could have enabled them at the time to hold their position in the ocean carrying trade in competition with their foreign rivals. . . . The inability of the ships of the United States to do the work which trade and commerce required that they should do as well and cheaply as the ships of other nations having been demonstrated by experience, the decadence of American shipping commenced and was inevitable from the very hour when this fact was first recognized, which was about the year 1856. Here, then, we have the primary cause of the decay of the business of ship-building in the United States and of our commercial marine. . . . The question which next naturally presents itself in the order of this inquiry and discussion is, Why is it that the people of the United States have not been permitted to enjoy the privileges accorded to other maritime nations, of adjusting their shipping interests to the spirit and wants of the age? Why have they alone been debarred from using the best tools in an important department of commerce, when the using meant business retained, labor employed, and capital rewarded, and the non-using equally meant decay, paralysis, and impoverishment? The answer is, Because of our so-called navigation laws."—D. A. Wells, *Our Merchant Marine*, ch. 2-3. — "Somewhat curtailed, the navigation laws may be summarized as follows: No American is allowed to import a foreign-built vessel in the sense of purchasing, acquiring a registry, or using her as his property; the only other imports, equally and forcibly prohibited, being counterfeit money and obscene goods. An American vessel ceases to be such if owned in the smallest degree by a naturalized citizen, who may, after acquiring the purchase, reside for more than one year in his native country, or for more than two years in any other foreign state. An American ship owned in part or in full by an American citizen who, without the expectation of relinquishing his citizenship, resides in any foreign country except as United States Consul, or as agent or partner in an exclusively American mercantile house, loses its register and its right to protection. A citizen obtaining a register for an American vessel must make oath that no foreigner is directly or indirectly interested in the profits thereof, whether as commander, officer, or owner. Foreign capital may build our railroads, work our mines, insure our property, and buy our bonds, but a single dollar invested in American ships so taints as to render it unworthy of the benefit of our laws. No foreign-built vessel can, under penalty of confiscation, enter our ports and then sail to another domestic port with any new cargo, or with

any part of an original cargo, which has once been unladen previously, without touching at some port of some foreign country. This law is construed to include all direct traffic between the Atlantic and Pacific ports of the United States via Cape Horn, the Cape of Good Hope, or the Isthmus of Panama; and being a coasting trade, foreigners cannot compete. An American vessel once sold or transferred to a foreigner, can never again become American property, even if the transaction has been the result of capture and condemnation by a foreign power in time of war. Vessels under 30 tons cannot be used to import anything at any seaboard town. Cargoes from the eastward of the Cape of Good Hope are subject to a duty of 10 per cent. In addition to the direct importation duties, American vessels repaired in foreign ports must pay a duty on the repairs equal to one-half the cost of the foreign work or material, or pay 50 per cent. ad valorem, the master or owner making entry of such repairs as imports. This liberal provision, which dates from 1806, is made to include boats obtained at sea, from a passing foreign vessel, in order to assure the safety of our own seamen.

. . . All other nations have the power of buying ships for foreign trade in the cheapest market, and the effort to protect our shipbuilders by the denial of this right forbids the return of commercial prosperity."—J. D. J. Kelley, *The Question of Ships*, ch. 4-5.

The recent revolution in Commerce.—"All economists who have specially studied this matter are substantially agreed that, within the period named [1860-1885], man in general has attained to such a greater control over the forces of Nature, and has so compassed their use, that he has been able to do far more work in a given time, produce far more product, measured by quantity in ratio to a given amount of labor, and reduce the effort necessary to insure a comfortable subsistence in a far greater measure than it was possible for him to accomplish 20 or 30 years anterior to the time of the present writing (1889). In the absence of sufficiently complete data, it is not easy, and perhaps not possible, to estimate accurately, and specifically state the average saving in time and labor in the world's work of production and distribution that has been thus achieved. In a few departments of industrial effort the saving in both of these factors has certainly amounted to 70 or 80 per cent; in not a few to more than 50 per cent. . . . Out of such results as are definitely known and accepted have come tremendous industrial and social disturbances, the extent and effect of which—and more especially of the disturbances which have culminated, as it were, in later years—it is not easy to appreciate without the presentation and consideration of certain typical and specific examples. . . . Let us go back, in the first instance, to the year 1869, when an event occurred which was probably productive of more immediate and serious economic changes—industrial, commercial, and financial—than any other event of this century, a period of extensive war excepted. That was the opening of the Suez Canal. . . . The old transportation had been performed by ships, mainly sailing-vessels, fitted to go round the Cape, and as such ships were not adapted to the Suez Canal, an amount of tonnage, estimated by some authorities as high as two million tons, and representing an immense

amount of wealth, was virtually destroyed. The voyage, in place of occupying from six to eight months, has been so greatly reduced that steamers adapted to the canal now make the voyage from London to Calcutta, or vice versa, in less than 30 days. The notable destruction or great impairment in the value of ships consequent upon the construction of the canal did not, furthermore, terminate with its immediate opening and use; for improvements in marine engines, diminishing the consumption of coal, and so enabling vessels to be not only sailed at less cost, but to carry also more cargo, were, in consequence of demand for quick and cheap service so rapidly effected, that the numerous and expensive steamer constructions of 1870-'73, being unable to compete with the constructions of the next two years, were nearly all displaced in 1875-'76, and sold for half, or less than half, of their original cost. And within another decade these same improved steamers of 1875-'76 have, in turn, been discarded and sold at small prices. . . . Again, with telegraphic communication between India and China, and the markets of the Western world, permitting the dealers and consumers of the latter to adjust to a nicety their supplies of commodities to varying demands, and with the reduction of the time of the voyage to 30 days or less, there was no longer any necessity of laying up great stores of Eastern commodities in Europe; and with the termination of this necessity, the India warehouse and distribution system of England, with all the labor and all the capital and banking incident to it, substantially passed away. Europe, and to some extent the United States, ceased to go to England for its supplies. . . . Importations of East Indian produce are also no longer confined in England and other countries to a special class of merchants; and so generally has this former large and special department of trade been broken up and dispersed, that extensive retail grocers in the larger cities of Europe and the United States are now reported as drawing their supplies direct from native dealers in both China and India. . . . In short, the construction of the Suez Canal completely revolutionized one of the greatest departments of the world's commerce and business; absolutely destroying an immense amount of what had previously been wealth, and displacing or changing the employment of millions of capital and thousands of men. . . . The deductions from the most recent tonnage statistics of Great Britain come properly next in order for consideration. During the ten years from 1870 to 1880, inclusive, the British mercantile marine increased its movement, in the matter of foreign entries and clearances alone, to the extent of 22,000,000 tons; or, to put it more simply, the British mercantile marine exclusively engaged in foreign trade did so much more work within the period named; and yet the number of men who were employed in effecting this great movement had decreased in 1880, as compared with 1870, to the extent of about 3,000 (3,990 exactly). What did it? The introduction of steam hoisting-machines and grain-elevators upon the wharves and docks, and the employment of steam-power upon the vessels for steering, raising the sails and anchors, pumping, and discharging the cargo; or, in other words, the ability, through the increased use of steam and improved machinery, to carry larger

cargoes in a shorter time, with no increase—or, rather, an actual decrease—of the number of men employed in sailing or managing the vessels. . . . Prior to about the year 1875 ocean-steamships had not been formidable as freight-carriers. The marine engine was too heavy, occupied too much space, consumed too much coal. . . . The result of the construction and use of compound engines in economizing coal has been illustrated by Sir Lyon Playfair, by the statement that 'a small cake of coal, which would pass through a ring the size of a shilling, when burned in the compound engine of a modern steamboat would drive a ton of food and its proportion of the ship two miles on its way from a foreign port.' . . . Is it, therefore, to be wondered at, that the sailing-vessel is fast disappearing from the ocean? . . . Great, however, as has been the revolution in respect to economy and efficiency in the carrying-trade upon the ocean, the revolution in the carrying-trade upon land during the same period has been even greater and more remarkable. Taking the American railroads in general as representative of the railroad system of the world, the average charge for moving one ton of freight per mile has been reduced from about 2.5 cents in 1869 to 1.06 in 1887; or, taking the results on one of the standard roads of the United States (the New York Central), from 1.95 in 1869 to 0.68 in 1885. . . . One marked effect of the present railroad and steamship system of transportation has been to compel a uniformity of prices for all commodities that are essential to life. . . . For grain henceforth, therefore, the railroad and the steamship have decided that there shall be but one market—the world."—D. A. Wells, *Recent Economic Changes*, pp. 27-47.—A recent English writer says: "Formerly we [the English] were the great manufacturers of the world; the great distributors and the great warehousemen of the world. Our country was the point on which the great passenger traffic impinged from America and from our Colonies, and from which passengers distributed themselves over the continent of Europe. The products of the world as a general rule came to English ports, and from English ports were distributed to their various markets. All this has much changed. Probably the alteration is more marked in our distributing trade than in that of our manufacturing trade or in any other direction. About twenty years ago all the silk that was manufactured or consumed in Europe was brought to England from the East, mostly in a raw state, and was thence distributed to continental mills. Notwithstanding the increased consumption in Europe, silk now coming to England for distribution is only about one-eighth of the quantity that came here some twelve years ago. This is one single example of an Oriental product. The same diversion of our distributing trade can be traced in almost every other commodity. Many people believe that the opening of the Suez Canal has caused this diminution of our distributing trade, and it cannot be denied that the Suez Canal has done much to divert Oriental trade from this country, and to send goods direct through the Canal to the continental ports, where they are consumed, or where they can be placed on railways and be forwarded without break of bulk to their destinations. But whatever the Suez Canal may have

done to divert trade in Oriental goods such as tea or silk, it cannot account for the diversion of the trade coming from America. Yet we find the same diversion of American products which formerly came to England for distribution. With cotton the same result is found, and with coffee from the Brazil. Nor does the diversion of these articles merely demonstrate that our distributing trade is being lost to us: it also shows that the manufacturers of England now permit the raw material of their industries to be sent straight to the factories of their competitors on the Continent. It shows that the great manufactures of the world are being transferred from England to Belgium, France, Germany, and even to Portugal and Spain. In the train of these manufactures are rapidly following all the complex and complicated businesses which are the hand-maidens of commerce. For instance, the financial business which used to centre in London is being transferred to Paris, Antwerp, and Germany, mainly because the goods to which this business relates are now consigned to continental countries instead of as formerly being brought to England to be distributed therefrom. . . . The loss of our distributing trade is to my mind in a great measure due to the fact that goods consigned to continental ports can be there put upon railways and sent straight to their destination; while goods sent to English ports must be put upon a railway, taken to our coast, there taken out of the railway, put on board a vessel, taken across to the Continent, there unloaded, then put on the railway and sent off to their ultimate destination. These transshipments from railway to vessel and from vessel to railway are always costly, always involve time, and in the case of some perishable articles render the transaction almost prohibitive. To get over this difficulty and to retain our distributing trade, there appears to me to be only one course open, and that is in some way to obtain direct railway-communication from Liverpool, from London, from Bristol, from Hull, from Glasgow, and from Dundee, to the continental markets where the goods landed at those ports are consumed."—H. M. Hoizer, *England's Real Peril* (*Macmillan's Mag.*, July, 1888).

Waterways and Railways in modern inland commerce.—There are three great epochs in the modern history of canal navigation, each marked by characteristics peculiar to itself, and sufficiently unlike those of either of the others to enable it to be readily differentiated. They may be thus described:—1. The era of waterways, designed at once to facilitate the transport of heavy traffic from inland centres to the seaboard, and to supersede the then existing systems of locomotion—the wagon and the pack-horse. This era commenced with the construction of the Bridgewater Canal between 1766 and 1770, and terminated with the installation of the railway system in 1830. 2. The era of interoceanic canals, which was inaugurated by the completion of the Suez Canal in 1869, and is still in progress. 3. The era of ship-canal intended to afford to cities and towns remote from the sea, all the advantages of a seaboard, and especially that of removing and dispatching merchandise without the necessity of breaking bulk. The second great stage in the development of canal transport is of comparatively recent origin. It may, in fact, be

said to date only from the time when the construction of a canal across the Isthmus of Suez was proved to be not only practicable as an engineering project, but likewise highly successful as a commercial enterprise. Not that this was by any means the first canal of its kind. On the contrary, . . . the ancients had many schemes of a similar kind in view across the same isthmus. The canal of Languedoc, constructed in the reign of Louis XIV., was for that day as considerable an undertaking. It was designed for the purpose of affording a safe and speedy means of communication between the Mediterranean and the Atlantic Ocean; it has a total length of 148 miles, is in its highest part 600 ft. above the level of the sea, and has in all 114 locks and sluices. In Russia, canals had been constructed in the time of Peter the Great, for the purpose of affording a means of communication between the different inland seas that are characteristic of that country. The junction of the North and Caspian Seas, of the Baltic and the Caspian, and the union of the Black and the Caspian Seas, had all been assisted by the construction of a series of canals which were perhaps without parallel for their completeness a century ago. In Prussia a vast system of inland navigation had been completed during the last century, whereby Hamburg was connected with Dantzic, and the products of the country could be exported either by the Black Sea or by the Baltic. In Scotland the Forth and Clyde Canal, and the Caledonian Canal, were notable examples of artificial navigation designed to connect two seas, or two bays that had all the characteristics of independent oceans; and the Erie Canal, in the United States, completed a chain of communication between inland seas of much the same order. But, although a great deal had been done in the direction of facilitating navigation between different waters by getting rid of the 'hyphen' by which they were separated anterior to the date of the Suez Canal, this grand enterprise undoubtedly marked a notable advance in the progress of the world from this point of view. The work was at once more original and more gigantic than any that had preceded it. . . . The Suez Canal once completed and successful, other ship canal schemes came 'thick as autumnal leaves in Vallombrosa.' Several of these were eminently practical, as well as practicable. The Hellenic Parliament determined on cutting through the tongue of land which is situated between the Gulfs of Athens and Lepantus, known as the Isthmus of Corinth. This isthmus divides the Adriatic and the Archipelago, and compels all vessels passing from the one sea to the other to round Cape Matapan, thus materially lengthening the voyages of vessels bound from the western parts of Europe to the Levant, Asia Minor and Smyrna. The canal is now an accomplished fact. Another proposal was that of cutting a canal from Bordeaux to Marseilles, across the South of France, a distance of some 120 miles, whereby these two great ports would be brought 1,678 miles nearer to each other, and a further reduction, estimated at 800 miles, effected in the distance between England and India. The Panama Canal (projected in 1871, and actually commenced in 1880) is, however, the greatest enterprise of all, and in many respects the most gigantic and

difficult undertaking of which there is any record. The proposed national canal from sea to sea, proposed by Mr. Samuel Lloyd and others for Great Britain, the proposed She^{ph}erds Ship Canal, the proposed Irish Sea and Lirkenhead Ship Canal, and the proposed ship canal to connect the Forth and the Clyde, are but a few of many notable examples of the restlessness of our times in this direction. . . . There are not a few people who regard the canal system almost as they might regard the Dodo and the Megatherium. It is to them an effete relic of a time when civilisation was as yet but imperfectly developed. . . . Canals do, indeed, belong to the past. . . . That canals also belong to the present, Egypt, the American Isthmus, Manchester, Corinth, and other places, fully prove; and, unless we greatly err, they are no less the heritage of the future.—J. S. Jeans, *Waterways and Water Transport*, sect. 1, ch. 1.—'The sea girt British Isles have upwards of 2,500 miles of canals, in addition to the Manchester Ship Canal, which is thirty-five and one-half miles, and is said to be one of the most remarkable undertakings of modern times'. . . . In 1878, Germany had in operation 1,289 miles of canals, and had ordered the construction of 1,045 miles of new canals. Belgium has forty-five canals. Italy, Hungary, Sweden, Holland and Russia have their respective systems of canals. France has expended a larger amount of money than any other European nation, to provide for canal navigation, and in 1887 the total length of its canals was 2,998 miles. About forty-eight per cent of the tonnage of that Republic was transported on its waterways. The average capacity of boats used therefor was 300 tons. The total length of the canals in operation in the United States in 1890 was upwards of 2,926 miles.—H. W. Hill, *Speech on Canals in N. Y. Const. Conv. of 1894*.—"In most of the leading countries of the world, a time arrived when the canal system and the railway system came into strong competition, and when it seemed doubtful on which side the victory would lie. This contest was necessarily more marked in England than in any other country. England had not, indeed, been the first in the field with canals, as she had been with railways. . . . But England having once started on a career of canal development, followed it up with greater energy and on a more comprehensive scale than any other country. For more than half a century canals had had it all their own way. . . . But the railway system, first put forward as a tentative experiment, and without the slightest knowledge on the part of its promoters of the results that were before long to be realised, was making encroachments, and proving its capabilities. This was a slow process, as the way had to be felt. The first railway Acts did not contemplate the use of locomotives, nor the transport of passenger traffic. The Stockton and Darlington Railway, constructed in 1825, was the first on which locomotives were employed [see Steam Locomotion (page 3029)]. Even at this date, there were many who doubted the expediency of having a railroad instead of a canal, and in the county of Durham . . . there was a fierce fight, carried on for more than twenty years. In the United States, the supremacy of waterways was maintained until a much later date. . . . A keen and embittered struggle was kept up between

the canal and the railroad companies until 1857; and even in the latter year the Legislature of the State of New York, finding that railway competition was making serious inroads upon their canal traffic, were considering whether they should not either entirely prohibit the railways from carrying freight, or impose such tolls upon railway tonnage as would cripple the companies in their competition with canals. . . . The agitation, however, came to nothing. It had no solid bottom. It was an agitation similar in kind to that which had disturbed Europe when Arkwright's spinning machine and Compton's mule were taking the place of hand labour. The clamour suddenly collapsed, and was never heard of afterwards. Meanwhile the railway system proceeded apace. The cords of human progress contain no more remarkable chapter than that which tells of the growth of American railroads. . . . In the annals of transportation, there is no more interesting chapter than that which deals with the contest that has been carried on for nearly half a century between the railways and the lakes and canals for the grain traffic between Chicago and New York. This contest is interesting, not only to Americans, as the people who are engaged in it, and whom it more directly concerns; but also to the people of Europe, and of Great Britain in particular, the cost of whose food supplies is affected thereby. . . . The circumstances of the Erie Canal are, however, exceptional. Seldom, indeed, do railway freights run so low as they do on the 950 miles of railway that separate Chicago from New York. Over this distance, the great trunk lines have recently been carrying freight at the rate of 15 cents, or 7½ d. per 100 lbs. This is equivalent to about 14 s. per ton, or exactly 0.174 d. per ton per mile. There is probably no such low rates for railway transport in the world. But this low rate is due entirely to the competition of the lakes, rivers, and canals."—J. S. Jeans, *Waterways and Water Transport*, ch. 26-27.—"The early railroad engineers overestimated the speed which could be readily attained. Fifty years ago it was generally expected that passenger trains would soon run at rates of from seventy-five to one hundred miles an hour—a prediction which has as yet remained unfulfilled. On the other hand, they underestimated the railroad's capacity for doing work cheaply. It was not supposed that railroads would ever be able to compete with water-routes in the carriage of freight, except where speedy delivery was of the first importance. Nor was it at that time desired that they should do so. The first English railroad charter contained provisions expressly intended to prevent such competition. A generation later, in the State of New York itself, there was a loud popular cry that the New York Central must be prohibited from carrying freight in competition with the Erie Canal. The main field of usefulness of railroads, and the means by which that field was to be developed, were not merely ignored, they were positively shunned. This period of railroad infancy ended about the year 1850. The crisis of 1847 marked its close in

England. The Revolution of 1848-51 was the dividing line on the continent of Europe. The land grants of 1850, and the formation of three trunk lines from the seaboard to the interior may be taken as the beginning of the new era in the United States. It began to be seen and felt that a steam railroad was something more than an exaggerated turnpike or horse railroad, and that it had functions and laws of its own. The changes were: first, the consolidation of old roads; second, the construction of new ones in a great variety of conditions; third, and most important, the development of traffic by cheap rates and new methods. . . . Under all these influences the railroad mileage of the world increased from 20,000 in 1850 to 60,000 in 1860, 137,000 in 1870, 225,000 in 1880, and [400,410 in 1893.—'Archiv für Eisenbahnenwesen'] . . . Rapid as has been the growth of the railroad mileage, traffic has kept pace with it. It is estimated that the total number of tons moved in 1875 was about 800,000,000. At present [1885] it is about 1,200,000,000 annually, while the passenger movement has increased from 1,400,000,000 to 2,400,000,000. If we could take distance as well as quantity into account, the change (for freight at any rate) would be still greater. To a certain extent this increased intensity of use of railroads is due to improvements in engineering; to a much greater extent it is the result of improved business methods. . . . Between 1850 and 1880 rates were reduced on an average to about one half their former figures, in spite of the advance in price of labor and of many articles of consumption. A variety of means were made to contribute to this result. The inventions of Bessemer and others, by which it became possible to substitute steel rails for iron, made it profitable for the railroads to carry larger loads at a reduction in rates. Improvements in management increased the effective use of the rolling stock, while the consumption of fuel and the cost of handling were diminished. By other changes in railroad economy it became possible to compete for business of every kind, with the best canals or with natural water-courses. The railroad rates of to-day are but a small fraction of the canal charges of two generations ago; while in volume of business, speed, and variety of use there is an inestimable advance."—A. T. Hadley, *Railroad Transportation*, ch. 1.—"The railway mileage in the United States on June 30, 1893, was 176,461.07 miles. This shows an increase during the year of 4,897.55 miles, being an increase of 2.80 per cent. The previous report showed an increase during the year ending June 30, 1892, of 3,100.78, being an increase of 1.88 per cent over the mileage of the year 1891. The rate of increase from 1886 to 1887 was 9.08 per cent; from 1887 to 1888, 6.05 per cent; from 1888 to 1889, 3.22 per cent; from 1889 to 1890, 4.78 per cent; and from 1890 to 1891, 2.94 per cent. . . . The total number [of men] in the service of railways in the United States on June 30, 1893, was 873,602, being an increase of 52,187 over the number employed the previous year."—Interstate Commerce Comm'n, *Statistics of Railways*, 1893, pp. 11 and 31.

CONSTITUTION OF BELGIUM.

On page 2804 of this work, under NETHERLANDS (BELGIUM): A. D. 1892-1893, there is given some account of the revision of the constitution of the kingdom, in 1893, and the peculiar new features introduced in its provisions, relative to the elective franchise. The following is a translation of the text of the revised constitution:

Title I.

Of the Territory and of its Divisions.

Article 1. Belgium is divided into provinces, these provinces are: Antwerp, Brabant, Western Flanders, Eastern Flanders, Hainaut, Liège, Limburg, Luxembourg, Namur. It is the prerogative of law, if there is any reason, to divide the territory into a larger number of provinces. Colonies, possessions beyond the seas or protectorates which Belgium may acquire, are governed by particular laws. The Belgian forces appointed for their defense can only be recruited by voluntary enlistment.

Article 2. The subdivisions of the provinces can be established only by law.

Article 3. The boundaries of the State, of the provinces and of the communes can be changed or rectified only by a law.

Title II.

Of the Belgians and their Rights.

Article 4. The title Belgian is acquired, preserved and lost according to the regulations determined by civil law. The present Constitution, and other laws relating to political rights, determine what are, in addition to such title, the conditions necessary for the exercise of these rights.

Article 5. Naturalization is granted by the legislative power. The great naturalization, alone, assimilates the foreigner to the Belgian for the exercise of political rights.

Article 6. There is no distinction of orders in the State. Belgians are equal before the law; they alone are admissible to civil and military offices, with such exceptions as may be established by law in particular cases.

Article 7. Individual liberty is guaranteed. No person can be prosecuted except in the cases provided for by law and in the form which the law prescribes. Except in the case of flagrant misdemeanor, no person can be arrested without the order of a judge, which must be served at the time of the arrest, or, at the latest, within twenty-four hours.

Article 8. No person can be deprived, against his will, of the judge assigned to him by law.

Article 9. No punishment can be established or applied except by provision of law.

Article 10. The domicile is inviolable; no domiciliary visit can be made otherwise than in the cases provided for by law and in the form which it prescribes.

Article 11. No person can be deprived of his property except for public use, in the cases and in the manner established by law, and with prior indemnity.

Article 12. The penalty of confiscation of goods cannot be imposed.

Article 13. Civil death is abolished; it cannot be revived.

Article 14. Religious liberty, public worship, and freedom of expressed opinion in all matters are guaranteed, with a reserve for the repression of offenses committed in the exercise of these liberties.

Article 15. No person can be compelled to join, in any manner whatsoever, in the acts and ceremonies of any worship, nor to observe its days of rest.

Article 16. The State has no right to interfere in the appointment nor in the installation of the ministers of any religion, nor to forbid them to correspond with their superiors and to publish their acts under the ordinary responsibility of publication. Civil marriage shall always precede the nuptial benediction, with the exceptions to be prescribed by law in case of need.

Article 17. Teaching is free; all preventive measures are forbidden; the repression of offenses is regulated only by law. Public instruction given at the expense of the State is also regulated by law.

Article 18. The press is free; censorship can never be re-established; caution-money from writers, editors or printers cannot be required. When the author is known and is a resident of Belgium, the editor, the printer or the contributor cannot be prosecuted.

Article 19. Belgians have the right to meet peaceably and without arms, in conformity with such laws as may regulate the use of their right but without the requirement of a previous authorization. This stipulation does not apply to open air meetings, which remain entirely subject to police regulations.

Article 20. Belgians have the right of association; this right cannot be subject to any preventive measure.

Article 21. It is the right of every person to address to the public authorities petitions signed by one or several. The constituted authorities alone have the right to address petitions in a collective name.

Article 22. The secrecy of correspondence is inviolable. The law determines who are the agents responsible for violation of the secrecy of letters confided to the post.

Article 23. The use of the languages spoken in Belgium is optional; it can be prescribed only by law, and only for acts of public authority and for judicial transactions.

Article 24. No previous authorization is necessary for the undertaking of proceedings against public officials, on account of acts in their administration, except that which is enacted concerning ministers.

Title III.

Of Powers.

Article 25. All powers are derived from the nation. They are exercised in the manner prescribed by the Constitution.

Article 26. Legislative power is exercised collectively by the King, the Chamber of Representatives and the Senate.

Article 27. The initiative belongs to each one of the three branches of the legislative power. Nevertheless, all laws relating to the revenue or to the expenditures of the State, or to the contingent of the army must be voted first by the Chamber of Representatives.

Article 28. The interpretation of laws by authority belongs only to the legislative power.

Article 29. The executive power, as regulated by the Constitution, belongs to the King.

Article 30. The judicial power is exercised by the courts and tribunals. Decrees and judgments are executed in the name of the King.

Article 31. Interests exclusively communal or provincial, are regulated by the communal or provincial councils, according to the principles established by the Constitution.

Chapter First.—Of The Chambers.

Article 32. Members of both Chambers represent the nation, and not merely the province or the subdivision of province which has elected them.

Article 33. The sittings of the Chambers are public. Nevertheless, each Chamber forms itself into a secret committee on the demand of its president or of ten members. It then decides by absolute majority whether the sitting on the same subject shall be resumed publicly.

Article 34. Each Chamber verifies the powers of its members and decides all contests on the subject that may arise.

Article 35. No person can be at the same time a member of both Chambers.

Article 36. A member of one of the two Chambers who is appointed by the government to any salaried office, except that of minister, and who accepts the same, ceases immediately to sit, and resumes his functions only by virtue of a new election.

Article 37. At every session, each Chamber elects its president and its vice-presidents and forms its bureau.

Article 38. Every resolution is adopted by the absolute majority of the votes, excepting as may be directed by the rules of the Chambers in regard to elections and presentations. In case of an equal division of votes, the proposition brought under deliberation is rejected. Neither of the two Chambers can adopt a resolution unless the majority of its members is present.

Article 39. Votes are given by the voice or by sitting and rising; on "l'ensemble des lois" the vote is always taken by the call of the roll of names. Elections and presentations of candidates are made by ballot.

Article 40. Each Chamber has the right of inquiry [or investigation].

Article 41. A bill can be passed by one of the Chambers only after having been voted article by article.

Article 42. The Chambers have the right to amend and to divide the articles and the amendments proposed.

Article 43. The presenting of petitions in person to the Chambers is forbidden. Each Chamber has the right to refer to ministers the petitions that are addressed to it. Ministers are required to give explanations whenever the Chamber requires them.

Article 44. No member of either Chamber can be prosecuted or called to account for opinions expressed or votes given by him in the performance of his duties.

Article 45. No member of either Chamber can be prosecuted or arrested in affairs of repression, during the session, without the authorization of the Chamber of which he is a member, except the case be "de flagrant delit." No bodily constraint can be exercised against a member of either Chamber during the session, except with the same authorization. The detention or the prosecution of a member of either Chamber is suspended during the whole session if the Chamber so requires.

Article 46. Each Chamber determines by its rules the mode in which it will exercise its powers.

Section I.—Of the Chamber of Representatives.

Article 47. Deputies to the Chamber of Representatives are elected directly under the following conditions: A vote is conferred on citizens who have completed their 25th year, who have resided for at least one year in the same commune, and who are not within one of the cases of exclusion provided for by law. A supplementary vote is conferred on each citizen who fulfills one of the following conditions: 1. To have completed 35 years of age, to be married, or to be a widower having legitimate offspring, and to pay to the State a tax of not less than 5 francs on account of dwelling-houses or buildings occupied, unless exempted by reason of his profession. 2. To have completed the age of 25 years and to be owner: Either of real property, valued at not less than 2,000 francs to be rated on the basis of the "revenu cadastral," or of a "revenu cadastral" proportioned to that value; Or of an inscription in the great book of the public debt, or of a "carnet de rente Belge" at the savings bank of at least 100 francs of "rente." The inscriptions and bank books must have belonged to the incumbent for at least two years and a half. The property of the wife is assigned to the husband; that of children under age, to the father. Two supplementary votes are assigned to citizens fully 25 years of age who are included in one of the following cases: A. To be the holder of a diploma of higher instruction or of a similar certificate of attendance on a complete course of medium instruction of the higher degree, without distinction between public and private establishments. B. To fill or to have filled a public office, to occupy or to have occupied a position, to practise or to have practised a private profession, which implies the supposition that the titular has at least an average education of the higher degree. The law determines these functions, positions and professions, as well as, in given cases, the time during which they shall have been occupied or practised. No person can accumulate more than three votes.

Article 48. The constitution of the electoral colleges is regulated by law for each province. The vote is obligatory and takes place in the commune with exceptions to be determined by law.

Article 49. The electoral law fixes the number of deputies according to the population; this number cannot exceed the proportion of a

deputy for 40,000 inhabitants. It determines also the qualifications of an elector and the mode of the electoral operations.

Article 50. To be eligible, it is necessary: 1. To be a Belgian by birth or to have received the "grand naturalization"; 2. To enjoy civil and political rights; 3. To have completed 25 years of age; 4. To reside in Belgium. No other condition of eligibility can be required.

Article 51. The members of the Chamber of Representatives are elected for four years. Half of them are changed every two years, according to the order of the series determined by the electoral law. In case of dissolution, the Chamber is entirely renewed.

Article 52. Each member of the Chamber of Representatives receives a yearly indemnity of 4,000 francs. He is, besides, entitled to free travel on the State railways and on the "conceded" railways, from his residence to the city where the session is held.

Section II.—Of the Senate.

Article 53. The Senate is composed: 1. Of members elected in proportion to the population of each province, conformably to Art. 47; though the law may require that the electors shall be 20 years of age, the provisions of Art. 48 are applicable to the election of these senators. 2. Of members elected by the provincial councils, to the number of two from each province having less than 500,000 inhabitants, of three from each province having from 500,000 to 1,000,000 of inhabitants, and of four from each province having more than one million of inhabitants.

Article 54. The number of senators elected directly by the electoral body is equal to half the number of the members of the Chamber of Representatives.

Article 55. Senators are elected for eight years; half of them are changed every four years, according to the order of the series determined by the electoral law. In case of dissolution, the Senate is entirely renewed.

Article 56. To be eligible for election and to remain a senator, it is necessary: 1. To be a Belgian by birth or to have received the "grande naturalization"; 2. To enjoy civil and political rights; 3. To reside in Belgium; 4. To be at least 40 years of age; 5. To pay into the treasury of the State at least 1,200 francs of direct taxes, patents included; Or to be either proprietor or usufructuary of real property situated in Belgium, the cadastral revenue from which is at least 12,000 francs. In the provinces where the number of those eligible does not attain the proportion of one in 5,000 inhabitants, the list is completed by adding the heaviest tax-payers of the province to the extent of that proportion. Citizens whose names are inscribed on the complementary list are eligible only in the province where they reside.

Article 56 bis. Senators elected by the provincial councils are exempted from all conditions of census; they cannot belong to the assembly which elects them, nor can they have been a member of it during the year of the election, nor during the two previous years.

Article 57. Senators receive neither salary nor indemnity.

Article 58. The King's sons, or in their absence the Belgian Princes of the branch of the Royal family called to reign, are by right sena-

tors at 18 years of age. They have a deliberative voice only at 25 years of age.

Article 59. Any assembly of the Senate which may be held outside the time of the session of the Chamber of Representatives is null and void.

Chapter II.—Of the King and his Ministers.
Section II.—Of the King.

Article 60. The constitutional powers of the King are hereditary in the direct, natural and legitimate descent from His Majesty Leopold-George-Christian-Frederick of Saxe-Coburg, from male to male, by order of primogeniture, and to the perpetual exclusion of the females of their line. The prince who marries without the consent of the King or of those who, in his absence, exercise his powers, in the cases provided for by the Constitution, shall forfeit his rights. Nevertheless he can be restored to his rights by the King or by those who, in his absence, exercise his authority in the cases provided for by the Constitution, with the consent of both Chambers.

Article 61. In default of male descendants of his Majesty Leopold-George-Christian-Frederick of Saxe-Coburg, the King can name his successor, with the assent of the Chambers, expressed in the manner prescribed by the following article. If no nomination has been made according to the proceeding here stated, the throne will be vacant.

Article 62. The King cannot be, at the same time, the chief of another State, without the consent of both Chambers. Neither of the two Chambers can deliberate on this subject if two-thirds at least of the members who compose it are not present, and the resolution is adopted only if it receives two-thirds at least of the votes cast.

Article 63. The person of the King is inviolable; his ministers are responsible.

Article 64. No act of the King can have effect if it is not countersigned by a minister, who, thereby, makes himself responsible.

Article 65. The King appoints and dismisses his ministers.

Article 66. He confers the grades in the army. He appoints to the offices of general administration and of foreign relations, with the exceptions determined by law. He appoints to other offices only by virtue of express provisions of a law.

Article 67. He makes the regulations and decrees necessary to the execution of the laws, without power to suspend the laws themselves, nor to exempt from their execution.

Article 68. The King commands the land and naval forces, declares war, makes treaties of peace, of alliance, and of commerce. He announces them to the Chambers as soon as the interest and the safety of the State admit of it, adding to them appropriate communications. Treaties of commerce and those which might burden the State or bind Belgians individually become effective only after having received the approval of the Chambers. No cession, nor exchange, nor addition of territory can take place without authority of a law. In no case can the secret articles of a treaty be destructive to the open articles.

Article 69. The King sanctions and promulgates the laws.

Article 70. The Chambers meet by right every year, on the 2d Tuesday in November, unless

previously summoned by the King. The Chambers must remain in session at least 40 days in each year. The King declares the closing of the session. The King has the right to call extra sessions of the Chambers.

Article 71. The King has the right to dissolve the Chambers, either simultaneously or separately; the act of dissolution to contain a convocation of the electors within forty days and of the Chambers within two months.

Article 72. The King may adjourn the Chambers. The adjournment, however, cannot exceed the term of one month, nor be renewed in the same session, without the consent of the Chambers.

Article 73. He has the right to remit or to reduce penalties pronounced by the judges, except those which are enacted concerning the ministers.

Article 74. He has the right to coin money, in execution of the law.

Article 75. He has the right to confer titles of nobility, without power to attach any privilege to them.

Article 76. He confers the military orders, observing in that regard what the law prescribes.

Article 77. The law fixes the civil list for the duration of each reign.

Article 78. The King has no other powers than those formally conferred on him by the Constitution, and by laws enacted pursuant to the Constitution.

Article 79. On the death of the King, the Chambers meet without convocation, not later than the tenth day after that of his decease. If the Chambers had been previously dissolved, and if the convocation had been fixed in the act of dissolution for a later date than the tenth day, the old Chambers resume their functions until the meeting of those which are to take their place. If one Chamber only had been dissolved, the same rule is followed with regard to that Chamber. From the death of the King and until his successor on the throne or the regent has taken the oath, the constitutional powers of the King are exercised, in the name of the Belgian nation, by the ministers assembled in council and under their responsibility.

Article 80. The King is of age when he has completed his 18th year. He takes possession of the throne only after having solemnly taken, in the midst of the Chambers assembled together, the following oath: "I swear to observe the Constitution and the laws of the Belgian people, to maintain the national independence and to preserve the integrity of the territory."

Article 81. If, on the death of the King, his successor is a minor, both Chambers meet in one body for the purpose of providing for the regency and the guardianship.

Article 82. If it is impossible for the King to reign, the ministers, after having caused that inability to be established, convolve the Chambers immediately. Guardianship and regency are to be provided for by the Chambers convened.

Article 83. The regency can be conferred on one person only. The regent enters upon his duties only after he has taken the oath prescribed by Article 80.

Article 84. No change can be made in the Constitution during a regency.

Article 85. In case of a vacancy on the throne, the Chambers deliberate together, arrange provisionally for the regency until the meeting of new Chambers, that meeting to take place within two months, at the latest. The new Chambers deliberating together provide definitely for the vacancy.

Section II.—Of the Ministers.

Article 86. No person can be a minister who is not a Belgian by birth, or who has not received the "grande naturalization."

Article 87. No member of the royal family can be a minister.

Article 88. Ministers have a deliberative voice in either Chamber only when they are members of it. They have free admission into each Chamber and must have a hearing when they ask for it. The Chambers may require the presence of ministers.

Article 89. In no case, can the order of the King, verbal or written, relieve a minister of responsibility.

Article 90. The Chamber of Representatives has the right to accuse ministers and to arraign them before the Court of Cassation [Appeal], which alone has the right to judge them, the united Chambers reserving what may be enacted by law concerning civil action by a party wronged, and as to crimes and misdemeanors which ministers may have committed outside of the performance of their duties. A law shall determine the cases of responsibility, the penalties to be inflicted on the ministers, and the manner of proceeding against them, either upon the accusation admitted by the Chamber of Representatives, or upon prosecution by parties wronged.

Article 91. The King may pardon a minister sentenced by the Court of Cassation only upon the request of one of the two Chambers.

Chapter III.—Of the Judiciary Power.

Article 92. Contests concerning civil rights are exclusively within the jurisdiction of the tribunals.

Article 93. Contests concerning political rights are within the jurisdiction of the tribunals, with exceptions determined by law.

Article 94. No tribunal can be established otherwise than by law. Neither commissions nor extraordinary tribunals, under any denomination whatever, can be created.

Article 95. There is for the whole of Belgium one Court of Cassation. This Court does not consider the ground of causes, except in the judgment of ministers.

Article 96. Sittings of the tribunals are public, unless such publicity be dangerous to order or morals, and in that case the tribunal declares it by a judgment. In the matter of political or press offenses, the exclusion of the public must be voted unanimously.

Article 97. The ground of every judgment is to be stated. It is pronounced in public sitting.

Article 98. The jury is established in all criminal cases, and for political and press offenses.

Article 99. The judges of the peace and judges of the tribunals are appointed directly by the King. Councillors of the Courts of appeal and presidents and vice-presidents of the courts of original jurisdiction are appointed by the King, from two double lists, presented, one by those courts and the other by the provincial

Councils. Councillors of the Court of Cassation are appointed by the King from two double lists, one presented by the Senate and the other by the Court of Cassation. In these two cases the candidates whose names are on one list may also be inscribed on the other. All presentations are made public at least fifteen days before the appointment. The courts choose their presidents and vice-presidents from among their members.

Article 100. Judges are appointed for life. No judge can be deprived of his position or suspended, except by a judgment. The displacement of a judge can take place only through a new appointment and with his consent.

Article 101. The King appoints and dismisses the public prosecutors to the courts and tribunals.

Article 102. The salaries of the members of the judicial order are fixed by law.

Article 103. No judge may accept salaried offices from the government unless he exercises them gratuitously, and excluding the cases of incompatibility defined by law.

Article 104. There are three courts of appeal in Belgium. The law determines their jurisdiction and the places in which they shall be established.

Article 105. Special enactments regulate the organization of military courts, their powers, the rights and obligations of the members of such courts, and the duration of their functions. There are tribunals of commerce in the places determined by law, which regulate their organization, their powers, the mode of appointment of their members and the term of the latter's duties.

Article 106. Conflicts of jurisdiction are settled by the Court of Cassation, according to proceedings regulated by law.

Article 107. Courts and tribunals shall apply general, provincial and local decisions and regulations only so far as they are conformable to the laws.

Chapter IV.—Of Provincial and Communal Institutions.

Article 108. Provincial and communal institutions are regulated by the laws. These laws sanction the application of the following principles: 1. Direct election, with the exceptions which the law may establish in regard to the chiefs of communal administration and the government commissioners to the provincial councils; 2. The assigning to provincial and communal councils of all which is of provincial and communal interest without prejudice to the approval of their acts in the cases and according to the proceedings which law determines; 3. The publicity of the sittings of the provincial and communal councils within the limits established by law; 4. The publicity of budgets and accounts; 5. The intervention of the King or of the legislative power to prevent the provincial and communal councils from going beyond their powers and injuring the general welfare.

Article 109. The drawing up of certificates of birth, marriage and death, and the keeping of the registers, are the exclusive prerogatives of communal authorities.

Title IV.

Of the Finances.

Article 110. No tax for the profit of the State can be imposed otherwise than by a law. No

charge or provincial assessment can be imposed without the consent of the provincial council. No charge or communal assessment can be imposed, without the consent of the communal council. The law must determine those exceptions of which experience will show the necessity in the matter of provincial and communal impositions.

Article 111. Taxes for the profit of the State are voted annually. The laws which impose them are valid for one year only, unless renewed.

Article 112. There can be no creation of privilege in the matter of taxes. No exemption from nor diminution of taxes can be established otherwise than by a law.

Article 113. Beyond the cases expressly excepted by law, no payment can be exacted from citizens, otherwise than in taxes levied for the profit of the State, of the province, or of the commune. No innovation is made on the actually existing system of the polders and the wateringen, which remain subject to the ordinary legislation.

Article 114. No pension, nor gratuity at the expense of the public treasury can be granted without authority of law.

Article 115. Each year, the Chambers determine the law of accounts and vote the budget. All the receipts and expenditures of the State must be entered in the budget and in the accounts.

Article 116. The members of the court of accounts are appointed by the Chamber of Representatives and for the term fixed by law. That court is intrusted with the examination and the settlement of the accounts of the general administration and of all the accountants for the public treasury. It sees that no article of the expenses of the budget has been exceeded and that no transfer has taken place. It determines the accounts of the different administrations of the State and is required for that purpose to gather all information, and all documents that may be necessary. The general account of the State is submitted to the Chambers with the observations of the court of accounts. This court is organized by law.

Article 117. The salaries and pensions of the ministers of religion are paid by the State; the sums required to meet these expenses are entered annually in the budget.

Title V.

Of the Army.

Article 118. The mode of recruiting the army is determined by law. The law also regulates promotions, and the rights and obligations of the military.

Article 119. The contingent of the army is voted annually. The law that fixes it is of force for one year only, unless renewed.

Article 120. The organization and the powers of the gendarmerie are the subject of a law.

Article 121. No foreign troops can be admitted to the service of the State, nor to occupy or pass through its territory, except by provision of law.

Article 122. There is a civic guard; its organization is regulated by law. The officers of all ranks, up to that of captain at least, are appointed by the guards with exceptions judged necessary for the accountants.

Article 123. The mobilization of the civic guard can occur only by direction of law.

Article 124. Military men can be deprived of their grades, honors, and pensions only in the manner determined by law.

Title VI.

General Provisions.

Article 125. The Belgian nation adopts the colors red, yellow and black, and for the arms of the kingdom the Belgic lion with the motto: "L'Union fait la Force" ["Union is Strength"].

Article 126. The city of Brussels is the capital of Belgium and the seat of its government.

Article 127. No oath can be imposed except by law. The law also determines its formula.

Article 128. Any foreigner who is within the territory of Belgium enjoys the protection accorded to persons and goods, with the exceptions defined by law.

Article 129. No law, decree, or administrative regulation, general, provincial, or communal, is obligatory until it has been published in the form prescribed by law.

Article 130. The Constitution cannot be suspended, either wholly or in part.

Title VII.

Of the Revision of the Constitution.

Article 131. The legislative power has the right to declare that there is occasion for revising such constitutional provision as it designates. After such declaration, the two Chambers are dissolved. Two new Chambers shall then be convoked, in conformity with Article 71. These Chambers act, in concurrence with the King, on the points submitted for revision. In such case, the Chambers cannot deliberate unless two-thirds at least of the members composing each one of them are present, and no change which does not receive at least two-thirds of the votes in its favor shall be adopted.

Title VIII.

Temporary Provisions.

Article 132. For the first choice of the chief of the State, the first stipulation of Article 80 may be departed from.

Article 133. Foreigners who settled in Belgium before the 1st of January 1814, and who have continued to reside in the country, are considered as Belgians by birth, on condition that they declare their intention to enjoy the benefit of this provision. The declaration must be made within six months, dating from the day

when the present Constitution becomes obligatory, if they are of age, and in the year following their majority if they are under age. The declaration must be made before the provincial authority within whose jurisdiction they reside. It must be made in person or through a representative bearing a special and authentic power of attorney.

Article 134. Until otherwise provided for by a law, the Chamber of Representatives shall have a discretionary power to accuse a minister, and the Court of Cassation to judge him, characterizing the offense and determining the penalty. Nevertheless the penalty cannot exceed that of imprisonment, without prejudice to the cases expressly provided for by penal laws.

Article 135. The staff of courts and tribunals is maintained as it actually exists, until it shall have been provided for by law. Such law shall be enacted during the first legislative session.

Article 136. A law enacted in the same session shall determine the mode of the first appointment of members of the Court of Cassation.

Article 137. The fundamental law of the 24th of August 1815, is hereby repealed, as well as the provincial and local statutes; but the provincial and local authorities will exercise their powers until the law shall have otherwise provided.

Article 138. From the day on which this Constitution goes into effect, all laws, decrees, decisions, regulations, and other acts that are in conflict with it are abrogated.

Supplementary Provisions.

Article 139. The National Congress declares that it is necessary to provide by separate laws and with the least possible delay for the following objects: 1. The Press; 2. The organization of the jury; 3. The finances; 4. Provincial and communal organization; 5. The responsibility of ministers and other agents of authority; 6. The organization of the judiciary; 7. The revision of the pension list; 8. Proper measures for preventing the abuse of plurality of offices; 9. Revision of the laws of bankruptcy and suspension; 10. The organization of the army, the rights of promotion and retirement, and the military penal code; 11. Revision of the codes. The executive power is charged with the execution of the present decree.

CONSTITUTION OF ITALY.

The kingdom of Italy is still governed under the constitution which was granted in 1848, by Charles Albert, to his Sardinian subjects. It remains unchanged in form, but in practice has been modified by legislation. The following translation of the instrument, made by S. M. Lindsay, Ph. D., and L. S. Rowe, Ph. D., University of Pennsylvania, is borrowed, under permission, from the "Annals of the American Academy of Political and Social Science," November, 1894, Supplement. In their historical introduction to the instrument, the translators say: "The extension of this constitution to the various parts of the present Kingdom of Italy was effected by a series of Plebiscites: Lom-

bardy, December 7, 1859; Emilia by decree of March 18, 1860, and law of April 15, 1860; Neapolitan Provinces, December 17, 1860; Tuscany, decree March 22, and law April 15, 1860; Sicily, Marches and Umbria, December 17, 1860; Province of Venice, decree July 28, 1866; Roman Provinces, decree October 9 and law December 31, 1870. . . . Although no provision is to be found in this constitution for amendment, most Italian constitutional jurists have held that Parliament, with the approval of the King, has the power to make laws amending the constitution, for an immutable constitution is sure in time to hamper the development of a progressive people. It is hardly necessary to add that such

an instrument is contrary to the true conception of an organic law. As a matter of fact several provisions have been either abrogated or rendered null and void through change of conditions. Thus the second clause of Article 28, requiring the previous consent of the bishop for the printing of Bibles, prayer books and catechisms, has been rendered of no effect through subsequent laws regulating the relations of Church and State. Article 76, which provides for the establishment of a communal militia, has been abrogated by the military law of June 14, 1874. The fact that no French-speaking provinces now form part of the kingdom has made Article 63 a dead-letter. So also Articles 53 and 55 are no longer strictly adhered to. At all events their observance has been suspended for the time being."

The translated text of the Constitution is as follows:

(Charles Albert, by the Grace of God, King of Sardinia, Cyprus and Jerusalem, Duke of Savoy, Genoa, Monferrato, Aosta, of the Chiabasse, Genovese and of Piacenza; Prince of Piedmont and Oneglia; Marquis of Italy, Saluzzo, Ivrea, Susa, Ceva, of the Maro, of Oristano, of Cesana and Savona; Count of Moriana, Geneva, Nice, Tenda, Romonte, Asti, Alexandria, Goceano, Novara, Tortona, Vigevano and of Bobbio; Baron of Yaud and Faucigny; Lord of Vercelli, Pinerolo, Tarantasia, of the Lomellina and of the Valley of Sesia, etc., etc., etc.) With the fidelity of a king and the affection of a father, we are about to-day to fulfill all that we promised our most beloved subjects in our proclamation of the eighth of last February, whereby we desired to show, in the midst of the extraordinary events then transpiring throughout the country, how much our confidence in our subjects increased with the gravity of the situation, and how, consulting only the impulse of our heart, we had fully determined to make their condition conform to the spirit of the times and to the interests and dignity of the nation. We, believing that the broad and permanent representative institutions established by this fundamental statute are the surest means of cementing the bonds of indissoluble affection that bind to our crown a people that has so often given us ample proof of their faithfulness, obedience and love, have determined to sanction and promulgate this statute. We believe, further, that God will bless our good intentions, and that this free, strong and happy nation will ever show itself more deserving of its ancient fame and thus merit a glorious future. Therefore, we, with our full knowledge and royal authority and with the advice of our Council, have ordained and do hereby ordain and declare in force the fundamental perpetual and irrevocable statute and law of the monarchy as follows:

Article 1. The Catholic, Apostolic and Roman religion is the only religion of the State [see Law of the Papal Guarantees, under PAPACY: A. D. 1870 (page 2478)]. Other cults now existing are tolerated conformably to the law.

Article 2. The State is governed by a representative monarchical government, and the throne is hereditary according to the Salic law.

Article 3. The legislative power shall be exercised collectively by the King and the two Chambers, the Senate and the Chamber of Deputies.

Article 4. The person of the King is sacred and inviolable.

Article 5. To the King alone belongs the executive power. He is the supreme head of the State; commands all land and naval forces; declares war; makes treaties of peace, alliance, commerce and other treaties, communicating them to the Chambers as soon as the interest and security of the State permits, accompanying such notice with opportune explanations; provided that treaties involving financial obligations or change of State territory shall not take effect until they have received the consent of the Chambers.

Article 6. The King appoints to all the offices of the State and makes the necessary decrees and regulations for the execution of the laws, provided that such decrees do not suspend or modify their observance.

Article 7. The King alone sanctions and promulgates the laws.

Article 8. The King may grant pardons and commute sentences.

Article 9. The King convokes the two Chambers each year. He may prorogue their sessions and dissolve the Chamber of Deputies, in which case he shall convoke a new Chamber within a period of four months.

Article 10. The initiative in legislation belongs both to the King and the two Houses. All bills, however, imposing taxes or relating to the budget shall first be presented to the Chamber of Deputies.

Article 11. The King shall attain his majority upon completion of his eighteenth year.

Article 12. During the King's minority, the Prince who is his nearest relative in the order of succession to the throne, shall be regent of the realm, provided he be twenty-one years of age.

Article 13. Should the Prince upon whom the regency devolves be still in his minority and this duty pass to a more distant relative, the regent who actually takes office shall continue in the same until the King becomes of age.

Article 14. In the absence of male relatives, the regency devolves upon the Queen-Mother.

Article 15. In the event of the prior decease of the Queen-Mother, the regent shall be elected by the legislative Chambers, convoked within ten days by the Ministers of the Crown.

Article 16. The preceding provisions in reference to the regency are also applicable in case the King has attained his majority, but is physically incapable of reigning. Under such circumstances, if the heir presumptive to the throne be eighteen years of age, he shall be regent of full right.

Article 17. The Queen-Mother has charge of the education of the King until he has completed his seventh year; from this time on his guardianship passes into the hands of the regent.

Article 18. All rights pertaining to the civil power in matters of ecclesiastical benefices and in the execution of all regulations whatsoever coming from foreign countries shall be exercised by the King.

Article 19. The civil list of the Crown shall remain, during the present reign, at an amount equal to the average of the same for the past ten years. The King shall continue to have the use of the royal palaces, villas, gardens and their appurtenances, and also of all castles intended for the use of the Crown, of which a

speedy inventory shall be made by a responsible ministerial department. In the future the prescribed dotation of the Crown shall be fixed for the duration of each reign by the first Legislature subsequent to the King's accession to the throne.

Article 20. The property that the King possesses in his own right, shall form his private patrimony, together with that to which he may acquire title either for a consideration or gratuitously in the course of his reign. The King may dispose of his private patrimony either by deed or will exempt from the provisions of the civil law as to the amount thus disposable. In all other cases, the King's patrimony is subject to the laws that govern other property.

Article 21. The law shall provide an annual civil list for the heir apparent to the throne when he has attained his majority, and also earlier on occasion of his marriage; for the allowances of the Princes of the royal family and royal blood within the specified conditions; for the dowries of the Princesses and for the dowries of the Queens.

Article 22. Upon ascending the throne, the King shall take an oath in the presence of the two Chambers to observe faithfully the present constitution.

Article 23. The regent, before entering on the duties of that office, shall swear fidelity to the King and faithful observance of this constitution and of the laws of the State.

Article 24. All the inhabitants of the Kingdom, whatever their rank or title, shall enjoy equality before the law. All shall equally enjoy civil and political rights and be eligible to civil and military office, except as otherwise provided by law.

Article 25. All shall contribute without discrimination to the burdens of the State, in proportion to their possessions.

Article 26. Individual liberty is guaranteed. No one shall be arrested or brought to trial except in cases provided for and according to the forms prescribed by law.

Article 27. The domicile shall be inviolable. No house search shall take place except in the enforcement of law and in the manner prescribed by law.

Article 28. The press shall be free, but the law may suppress abuses of this freedom. Nevertheless, Bibles, catechisms, liturgical and prayer books shall not be printed without the previous consent of the bishop.

Article 29. Property of all kinds whatsoever shall be inviolable. In all cases, however, where the public welfare, legally ascertained, demands it, property may be condemned and transferred in whole or in part after a just indemnity has been paid according to law.

Article 30. No tax shall be levied or collected without the consent of the Chambers and the sanction of the King.

Article 31. The public debt is guaranteed. All obligations between the State and its creditors shall be inviolable.

Article 32. The right to peaceful assembly, without arms, is recognized, subject, however, to the laws that may regulate the exercise of this privilege in the interest of the public welfare. This privilege is not applicable, however, to meetings in public places or places open to the public, which shall remain entirely subject to police law and regulation.

Article 33. The Senate shall be composed of members, having attained the age of forty years, appointed for life by the King, without limit of numbers. They shall be selected from the following categories of citizens: 1. Archbishops and Bishops of the State. 2. The President of the Chamber of Deputies. 3. Deputies after having served in three Legislatures, or after six years of membership in the Chamber of Deputies. 4. Ministers of State. 5. Secretaries to Ministers of State. 6. Ambassadors. 7. Envoys Extraordinary after three years of such service. 8. The First Presidents of the Courts of Cassation and of the Chamber of Accounts. 9. The First Presidents of the Courts of Appeal. 10. The Attorney-General of the Courts of Cassation and the Prosecutor-General, after five years of service. 11. The Presidents of the Chambers of the Courts of Appeal after three years of service. 12. The Councillors of the Courts of Cassation and of the Chamber of Accounts after five years of service. 13. The Advocates-General and Fiscals-General of the Courts of Appeal after five years of service. 14. All military officers of the land and naval forces with title of general. Major-generals and rear-admirals after five years of active service in this capacity. 15. The Councillors of State after five years of service. 16. The members of the Councils of Division after three elections to their presidency. 17. The Provincial Governors (Intendant generally) after seven years of service. 18. Members of the Royal Academy of Science of seven years standing. 19. Ordinary members of the Superior Council of Public Instruction after seven years of service. 20. Those who by their services or eminent merit have done honor to their country. 21. Persons who, for at least three years, have paid direct property or occupation taxes to the amount of 3,000 lire.

Article 34. The Princes of the Royal Family shall be members of the Senate. They shall take rank immediately after the President. They shall enter the Senate at the age of twenty-one and have a vote at twenty-five.

Article 35. The President and Vice-Presidents of the Senate shall be appointed by the King, but the Senate chooses from among its own members its secretaries.

Article 36. The Senate may be constituted a High Court of Justice by decree of the King for judging crimes of high treason and attempts upon the safety of the State, also for trying Ministers placed in accusation by the Chamber of Deputies. When acting in this capacity, the Senate is not a political body. It shall not then occupy itself with any other judicial matters than those for which it was convened; any other action is null and void.

Article 37. No Senator shall be arrested except by virtue of an order of the Senate, unless in cases of flagrant commission of crime. The Senate shall be the sole judge of the imputed misdemeanors of its members.

Article 38. Legal documents as to births, marriages and deaths in the Royal Family shall be presented to the Senate and deposited by that body among its archives.

Article 39. The elective Chamber is composed of deputies chosen by the electoral colleges as provided by law. [The election law long in force was that of December 17, 1860, which was subsequently modified in July, 1875, and in

May, 1877. In January, 1882, a comprehensive electoral reform was inaugurated by which the electoral age qualification was reduced from twenty-five to twenty-one years, and the tax qualification to an annual payment of nineteen lire eighty centesimi as a minimum of direct taxes. This law introduced a new provision requiring of electors a knowledge of reading and writing. It is an elaborate law of 107 articles. The provisions relating to the elections by general ticket were further revised by law of May, and decree of June, 1882, and the text of the whole law was co-ordinated with the preceding laws by Royal Decree of September 24, 1882. It was again modified May 5th, 1891, by the abolition of elections on general tickets and the creation of a Commission for the territorial division of the country into electoral colleges. The number of electoral colleges is at present fixed at 508, each electing one Deputy. Twelve articles of this law of 1882, as thus amended, have been again amended by a law dated June 28, 1892, prescribing further reforms in the control and supervision of elections, and by law of July 11, 1894, on the revision of electoral and registration lists."—Foot-note.]

Article 40. No person shall be a member of the Chamber who is not a subject of the King, thirty years of age, possessing all civil and political rights and the other qualifications required by law.

Article 41. Deputies shall represent the nation at large and not the several Provinces from which they are chosen. No binding instructions may therefore be given by the electors.

Article 42. Deputies shall be elected for a term of five years; their power ceases ipso jure at the expiration of this period.

Article 43. The President, Vice-presidents and Secretaries of the Chamber of Deputies shall be chosen from among its own members at the beginning of each session for the entire session.

Article 44. If a Deputy ceases for any reason whatsoever to perform his duties, the electoral college that chose him shall be convened at once to proceed with a new election.

Article 45. Deputies shall be privileged from arrest during the sessions, except in cases of flagrant commission of crime; but no Deputy may be brought to trial in criminal matters without the previous consent of the Chamber.

Article 46. No warrant of arrest for debts may be executed against a Deputy during the sessions of the Chamber, nor within a period of three weeks preceding or following the same. ["This article has been practically abolished by the Mancini law of December 6, 1877, doing away with personal arrest for debts."—Foot-note.]

Article 47. The Chamber of Deputies shall have power to impeach Ministers of the Crown and to bring them to trial before the High Court of Justice.

Article 48: The sessions of the Senate and Chamber of Deputies shall begin and end at the same time, and every meeting of one Chamber, at a time when the other, is not in session, is illegal and its acts wholly null and void.

Article 49. Senators and Deputies before entering upon the duties of their office shall take an oath of fidelity to the King and swear to observe faithfully the Constitution and laws of the State and to perform their duties with the joint

welfare of King and country as the sole end in view.

Article 50. The office of Senator or Deputy does not entitle to any compensation or remuneration.

Article 51. Senators and Deputies shall not be held responsible in any other place for opinions expressed or votes given in the Chambers.

Article 52. The sessions of the Chambers shall be public. Upon the written request of ten members secret sessions may be held.

Article 53. No session or vote of either Chamber shall be legal or valid unless an absolute majority of its members is present. [This article is not observed in actual parliamentary practice.—Foot-note.]

Article 54. The action of either Chamber on any question shall be determined by a majority of the votes cast.

Article 55. All bills shall be submitted to committees elected by each House for preliminary examination. Any proposition discussed and approved by one Chamber shall be transmitted to the other for its consideration and approval; after passing both Chambers it shall be presented to the King for his sanction. Bills shall be discussed article by article.

Article 56. Any bill rejected by one of the three legislative powers cannot again be introduced during the same session.

Article 57. Every person who shall have attained his majority has the right to send petitions to the Chambers, which in turn must order them to be examined by a committee; on report of the committee each House shall decide whether they are to be taken into consideration, and if voted in the affirmative, they shall be referred to the competent Minister or shall be deposited with a Government Department for proper action.

Article 58. No petition may be presented in person to either Chamber. No persons except the constituted authorities shall have the right to submit petitions in their collective capacity.

Article 59. The Chambers shall not receive any deputation, nor give hearing to other than their own members and the Ministers and Commissioners of the Government.

Article 60. Each Chamber shall be sole judge of the qualifications and elections of its own members.

Article 61. The Senate as well as the Chamber of Deputies shall make its own rules and regulations respecting its methods of procedure in the performance of its respective duties.

Article 62. Italian shall be the official language of the Chambers. The use of French shall, however, be permitted to those members coming from French-speaking districts and to other members in replying to the same.

Article 63. Votes shall be taken by rising, by division, and by secret ballot. The latter method, however, shall always be employed for the final vote on a law and in all cases of a personal nature.

Article 64. No one shall hold the office of Senator and Deputy at the same time.

Article 65. The King appoints and dismisses his ministers.

Article 66. The Ministers shall have no vote in either Chamber unless they are members thereof. They shall have entrance to both Chambers and must be heard upon request.

Article 67. The Ministers shall be responsible. Laws and decrees of the government shall not

take effect until they shall have received the signature of a Minister.

Article 68. Justice emanates from the King and shall be administered in his name by the judges he appoints.

Article 69. Judges appointed by the King, except Cantonal or District judges (di mandamento), shall not be removed after three years of service.

Article 70. Courts, tribunals and judges are retained as at present existing. No modification shall be introduced except by law.

Article 71. No one shall be taken from his ordinary legal jurisdiction. It is therefore not lawful to create extraordinary tribunals or commissions.

Article 72. The proceedings of tribunals in civil cases and the hearings in criminal cases shall be public as provided by law.

Article 73. The interpretation of the laws, in the form obligatory upon all citizens, belongs exclusively to the legislative power.

Article 74. Communal and provincial institutions and the boundaries of the communes and provinces shall be regulated by law.

Article 75. The military conscriptions shall be regulated by law.

Article 76. A communal militia shall be established on a basis fixed by law.

Article 77. The State retains its flag, and the blue cockade is the only national one.

Article 78. The knightly orders now in existence shall be maintained with their endowments, which shall not be used for other purposes than those specified in the acts by which they were

established. The King may create other orders and prescribe their constitutions.

Article 79. Titles of the nobility are guaranteed to those who have a right to them. The King may confer new titles.

Article 80. No one may receive orders, titles or pensions from a foreign power without the King's consent.

Article 81. All laws contrary to the provisions of the present constitution are hereby abrogated.

Given at Turin on the fourth day of March, in the year of Our Lord, one thousand eight hundred and forty-eight, and of Our Reign the eighteenth.

Transitory Provisions.

Article 82. This statute shall go into effect on the day of the first meeting of the Chambers, which shall take place immediately after the elections. Until that time urgent public service shall be provided for by royal ordinances according to the mode and form now in vogue, excepting, however, the ratifications and registrations in the courts which are from now on abolished.

Article 83. In the execution of this statute the King reserves to himself the right to make the laws for the press, elections, communal militia and organization of the Council of State. Until the publication of the laws for the press, the regulations now in force on this subject remain valid.

Article 84. The Ministers are entrusted with, and are responsible for the execution and full observance of these transitory provisions.

COREA.—The war between Japan and China.—"The peninsula which projects between the Japanese and Yellow Seas southwards in the direction of the southern islands of Nippon is completely limited landwards. Like Italy, with which it may be compared in extent, and even to some degree in its orographic configuration, it is separated from the mainland by the Alps of Taipelsan or 'Great White Mountains,' of Manchuria. It has also its Apennines stretching north and south, and forming the backbone of the peninsula. . . . Like most regions of the extreme East, Korea is known to foreigners by a name which has little currency in the country itself. This term, belonging formerly to the petty state of Korié, has been extended by the Chinese and Japanese to the whole peninsula, under the forms of Kaokullil, Korai, Kaoli. When all the principalities were fused in one

monarchy, towards the close of the 14th century, the country, at that time subject to China, took the official title of Chaosien (Tsoosen)—that is, 'Serenity of the Morning'—in allusion to its geographical position east of the empire. Thus it is now designated by a poetical expression which exactly indicates its position between China and Japan. While for the people of the continent Japan is the land of the Rising Sun, Korea is the 'Serene' land, illumined by the morning rays. Although washed by two much-frequented seas, and yearly slighted by thousands of seafarers, Korea is one of the least known Asiatic regions. . . . From its very position between China and Japan, Korea could not fail to have been a subject of contention for its powerful neighbours. Before its fusion in one state it comprised several distinct principalities, whose limits were subject to frequent changes. These were, in the north, Kaokullil (Kaoli), or Korea proper; in the centre, Chaosien and the 78 so-called 'kingdoms' of Chinese foundation, usually known as the San Kan (San Han), or 'Three Han'; in the south, Petai, or Hiaksai (Kudara), the Sinlo of the Chinese, or Siragi of the Japanese; beside the petty state of Kara, Zinna, or Mimans, in the south-east, round about the Bay of Tsoosan. The northern regions naturally gravitated towards China, whose rulers repeatedly interfered in the internal affairs of the country. But the inhabitants of the south, known in history by the Japanese name of Kmaso, or 'Herd of Bears,' were long subject to Japan, while at other times they made frequent incursions into Kiu-siu and Hondo, and even formed settlements on those islands. The first conquest of the country was made by the forces

of the Queen Regent Zingu in the 3d century. Towards the end of the 16th the celebrated Japanese dictator and usurper Tarkosama, having conceived the project of conquering China, began with that of Korea, under the pretext of old Japanese rights over the country of the Kinaso. After wasting the land he compelled the King to become his tributary, and left a permanent garrison in the peninsula. A fresh expedition, although interrupted by the death of Tarkosama, was equally successful. Tsushima remained in the hands of the Japanese, and from that time till the middle of the present century Korea continued in a state of vassalage, sending every year presents and tribute to Nippon. . . . Thanks to the aid sent by the Ming dynasty to Korea, in its victorious struggle with the other petty states of the peninsula, and in its resistance to Japan, its relations with China continued to be of the most friendly character. Admirers of Chinese culture, the native rulers felt honoured by the investiture granted them by the 'Son of Heaven.' But after the Manchu conquest of the Middle Kingdom, Korea remaining faithful to the cause of the Mings, the new masters of the empire invaded the peninsula, and in 1637 dictated a treaty, imposing on the Koreans a yearly tribute. . . . But although since that time the native ruler takes the title of 'Subject,' China exercises no real sovereign rights in Korea."—E. Reclus, *The Earth and its Inhabitants: Asia*, v. 2, ch. 6.—"Since the conclusion of that treaty [of 1637], Corea has been at peace with both her neighbours and able, till within the last twenty years, to maintain the seclusion she so much desired. Until the beginning of the present century—when the doctrine preached by Roman missionaries in China began to filter across the frontier, and to provoke a fitful and uncertain intercourse between them and the few Coreans who had been attracted by the new religion—the only fresh glimpse we obtain of the interior of the country and its inhabitants is afforded by the well-known story of Henry Hamel, who was wrecked off the Korean coast in 1653, and detained there twelve years as a prisoner at large. . . . We come now to events nearer our own time, in which the propaganda of Rome and the proceedings of its emissaries begin to play a prominent and interesting part. In the year 1784 a young Corean named Le, who had come to Peking in the suite of the tribute-bearing embassy, applied to the Roman Catholic Mission for books and instruction in the science of mathematics, of which he was naturally fond. The missionaries profited by the occasion to lend him books on religion, which awakened his interest and led to his eventual conversion. As usual in such cases, the neophyte set himself, directly on his return, to propagate the new creed he had learned, among his relations and friends; and with so much success that, in less than five years, he had, according to Mgr. Govén, gained 4,000 adherents. As may be imagined, however, the doctrine acquired from a convert who had had only a few months' instruction, and disseminated again at second-hand by men who had caught the crude idea from his conversation, was of a somewhat obscure description. . . . Neither letter nor news was received from the Corean Christians for more than two years; but two converts made their way to Peking, at the close of 1793, with news of a severe perse-

cution which had occurred in the interval. . . . No sooner had the persecution . . . subsided, than a priest was successfully introduced across the frontier, to instruct and impart new life to the converts. Nor, it is affirmed, has the flock ever since been left unguarded. Persecution has followed persecution; but from Jacques Velloz, the first missionary to cross the frontier, who suffered martyrdom in 1800, to Mgr. Ridel, who has returned to Europe with health shattered by the anxieties and hardships undergone during the latest outbreak, there have always been some priests alternately tolerated or hiding in the country, and the spark lighted by the young Corean attaché has never been quite extinguished. . . . On July 7th, 1866, a Roman Catholic missionary arrived in a Corean boat at Chefoo, with a tale of dire persecution. Two bishops, nine priests, and a number of Christians of both sexes had been massacred, many of them after judicial tortures of atrocious cruelty. Three members of the mission only survived, and M. Ridel had been chosen to carry the news to China, and endeavour to procure assistance. It was to the French authorities, naturally, that he addressed himself; and both Admiral Roze, the Commandant of the French fleet in Chinese waters, and M. de Bellonet, then chargé-d'affaires at Peking, lent a sympathetic ear to his protest. . . . An expedition was accordingly resolved on. . . . Admiral Roze started from Chefoo with the expeditionary force on October 11th, arrived off Kang-hwa on the 14th, and occupied it, after a merely nominal resistance, two days later. The Coreans were apparently taken by surprise, having perhaps thought that the danger had passed. . . . The forts along the banks of the river were found ungarrisoned, and Kang-hwa itself, a considerable fortress containing large stores of munitions of war, was practically undefended. A letter was received, a few days later, inviting Admiral Roze to come or send delegates to Söul, to talk over matters in a friendly spirit; but he replied that, if the Corean authorities wished to treat, they had better come to Kang-hwa. This attitude was meant, no doubt, to be impressive, but the event proved it to be slightly premature. So far all had gone well; but the expedition was about to collapse with a suddenness contrasting remarkably with the expectations raised by M. de Bellonet's denunciations and Admiral Roze's hauteur. . . . The disastrous termination of . . . two movements appears to have persuaded Admiral Roze that the force at his disposal was insufficient to prosecute the enterprise to a successful issue, in face of Corean hostility. It was no longer a question whether he should go to Söul or the Coreans come to him: the expedition was at a deadlock. He had rejected the first overtures, and was not strong enough to impose terms. A retreat was accordingly decided on. The city of Kang-hwa was burned, with its public offices and royal palace."—R. S. Gundry, *China and her Neighbours*, ch. 9.—In 1866, when the French threatened Corea, the latter sought help from Japan and received none. Two years later, after the Japanese revolution which restored the Mikado to his full sovereignty, the Coreans declined to acknowledge his suzerainty, and bitterly hostile feelings grew up between the two peoples. The Japanese were restrained from war with difficulty by their more conservative

statesmen. Without war, they obtained from Corea, in 1876, an important treaty, which contained in the first article "the remarkable statement that 'Chosen, being an independent State, enjoys the same sovereign rights as does Japan'—an admission which was foolishly winked at by China from the mistaken notion that, by disavowing her connection with Korea, she should escape the unpleasantness of being called to account for the delinquencies of her vassal. This preliminary advantage was more than doubled in value to Japan when, after the revolution in Seoul in 1884, by which her diplomatic representative was compelled to flee for the second time from the Korean capital, she sent troops to avenge the insult and declined to remove them until China had made a similar concession with regard to the Chinese garrison, which had been maintained since the previous outbreak in 1882 in that city. By the Convention of Tientsin, which was negotiated in 1885 by Count Ito with the Viceroy Li Hung Chang, both parties agreed to withdraw their troops and not to send an armed force to Korea at any future date to suppress rebellion or disturbance without giving previous intimation to the other. This document was a second diplomatic triumph for Japan. . . . It is, in my judgment, greatly to be regretted that in the present summer [1894] her Government, anxious to escape from domestic tangles by a restricted foreign policy, has abandoned this statesmanlike attitude, and has embarked upon a headlong course of aggression in Korea, for which there appears to have been no sufficient provocation, and the ulterior consequences of which it is impossible to forecast. . . . Taking advantage of recent disturbances in the peninsula, which demonstrated with renewed clearness the impotence of the native Government to provide either a decent administration for its own subjects, or adequate protection to the interests of foreigners, and ingeniously profiting by the loophole left for future interference in the Tientsin Agreement of 1885, Japan . . . (in July 1894) landed a large military force, estimated at 10,000 men, in Korea, and is in armed occupation of the capital. Li Hung Chang . . . responded by the despatch of the Chinese fleet and of an expeditionary force, marching overland into the northern provinces."—G. N. Curzon, *Problems of the Far East*, ch. 7.

—"The ostensible starting-point of the trouble that resulted in hostilities was a local insurrection which broke out in May in one of the southern provinces of Corea. The cause of the insurrection was primarily the misrule of the authorities, with possibly some influence by the quarrelling court factions at the capital. The Korean king applied at once to China as his suzerain for assistance in subduing the insurgents, and a Chinese force was sent. Japan, thereupon, claiming that Corea was an independent state and that China had no exclusive right to interfere, promptly began to pour large forces into Corea, to protect Japanese interests. By the middle of June a whole Japanese army corps was at Seoul, the Korean capital, and the Japanese minister soon formulated a radical scheme of administrative reforms which he demanded as indispensable to the permanent maintenance of order in the country. This scheme was rejected by the conservative faction which was in power at court, whereupon, on July 23, the Japanese

forces attacked the palace, captured the king and held him as hostage for the carrying out of the reforms. The Chinese were meanwhile putting forth great efforts to make up for the advantage that their rivals had gained in the race for control of Corea, and to strengthen their forces in that kingdom. On the 25th a Chinese fleet carrying troops to Corea became engaged in hostilities with some Japanese war vessels, and one of the transports was sunk. On August 1 the Emperor of Japan made a formal declaration of war on China, basing his action on the false claim of the latter to suzerainty over Corea, and on the course of China in opposing and thwarting the plan of reforms which were necessary to the progress of Corea and to the security of Japanese interests there. The counter-proclamation of the Chinese Emperor denounced the Japanese as wanton invaders of China's tributary state, and as aiming at the enslaving of Corea. On August 26 a treaty of offensive and defensive alliance against China was made between Japan and Corea. . . . A severe engagement at Ping-Yang, September 16, resulted in the rout of the Chinese and the loss of their last stronghold in Corea. A few days later the hostile fleets had a pitched battle off the mouth of the Yalu River, with the result that the Japanese were left in full control of the adjacent waters. On the 26th of October the Japanese land forces brushed aside with slight resistance the Chinese on the Yalu, which is the boundary between Corea and China, and began their advance through the Chinese province of Manchuria, apparently aiming at Peking."—*Political Science Quarterly*, December, 1894.—On the 3d of November, Port Arthur being then invested by the Japanese land and naval forces, while Marshal Yamagata, the Japanese commander, continued his victorious advance through Manchuria, Prince Kung made a formal appeal to the representatives of all the Powers for their intervention, acknowledging the inability of China to cope with the Japanese. On the 21st of November, Port Arthur, called the strongest fortress in China, was taken, after hard fighting from noon of the previous day. In retaliation for the murder and mutilation of some prisoners by the Chinese, the Japanese gave no quarter, and are accused of great atrocities. To the advance of the Japanese armies in the field, the Chinese opposed comparatively slight resistance, in several engagements of a minor character, until the 19th of December, when a battle of decided obstinacy was fought at Kungwasal, near Hal-tcheng. The Japanese were again the victors. Overtures for peace made by the Chinese government proved unavailing; the Japanese authorities declined to receive the envoys sent, for the reason that they were not commissioned with adequate powers. Nothing came of an earlier proffer of the good offices of the Government of the United States. Obstinate fighting occurred at Kal-phing, which was captured by the Japanese on the 10th of January, 1895. On the 26th of January the Japanese began, both by land and sea, an attack on the stronghold of Wei-hai-wai, which was surrendered, with the Chinese fleet in its harbor on the 12th of February. Shortly afterwards, China made another effort to obtain peace, commissioning her able Statesman, Li-Hung-Chang, as a special envoy to Japan, with full power to negotiate

terms. At the time of this writing, the result has not appeared.

CRUSADES: The initial movements.—“The pious legend according to which Peter the Hermit is supposed to have been miraculously chosen by God Himself to call Christendom to arms for the purpose of freeing the Holy Sepulchre has long since been proved unhistorical by scientific investigators. That account of the matter may have given suitable expression to the religious enthusiasm which the crusades called forth in those circles that were especially strongly influenced by the church; but it is entirely without any actual foundation in fact, nay, more; the religious element altogether did not play nearly so important a part in the origin of the crusades as it would seem to have done to judge by the later character of the great movement. For if in those days church influences and the religious impulses on which they were based made a mighty impression and in many ways produced an almost overwhelming effect; nevertheless the reason for all this lay essentially herein that the whole age, more than any other, was in a condition, through crying agricultural, social and political needs, to give itself up without reserve to the influence of similarly impelling forces, and that just for this reason it took up with such enthusiasm the impulse furnished by the church. In its most general form the thought which lies at the base of the crusades springs from the idea of the calling of Christendom to have and to hold the rule of the world. The desire to practically carry out this idea was especially active whenever the Christian ideal of world-rule, incorporated as it was in a double form in the empire and in the papacy, seemed near to realization; then it was that its inherent magic unfolded most irresistibly its animating and at the same time ensnaring power. Thus did Otto II, already, plan a great undertaking for the protection of Christendom against the Arabs. Thus did the fantastic mind of his immature son busy itself with plans for a great crusade. Neither one nor the other carried out his intention. But, little more than two generations later, the commanding position which the empire had at that time held, passed into the holding of the hierarchical papacy. The creator of this hierarchical papacy, who was beyond a
