# THE CANADIAN POULTRY REVIEW

DEVOTED TO A POULTRY, IN ALL ITS BRANCHES

## Pigeons, Cage Birds, Rabbits and Pets

VOL. XXI.

124 VICTORIA STREET, TORONTO, FEBRUARY 1898.

No. 2

### MONEY IN EGGS AND HOW TO GET THEM.

BY CHARLES BONNICK, TORONTO.

AWARDED EQUAL FIRST PRIZE BY THE POULTRY ASSOCIATION OF ONTARIO, IN THE ESSAY COMPETITION.

**MR. CHARLES BONNICK,**

PRESIDENT TORONTO POULTRY ASSOCIATION,  
DIRECTOR POULTRY ASSOCIATION OF ONTARIO,  
MEMBER OF POULTRY COMMITTEE INDUSTRIAL  
EXHIBITION, TORONTO.

In the first place if we go into poultry keeping for eggs we must look for a variety of fowl that are the best egg producers, and in my judgment they will be found among what we call the American classes, such as Leghorns, Hamburgs, Minorcas, etc. My choice

THE subject I have selected to place before the breeders of poultry and farmers in general is one in which we all ought to be interested—and I intend giving it from the starting point, for although many of our readers will know many of the points given, we must not forget that there are some that do not, and it is to them principally that I will direct my attention.

would be Leghorns. In this breed we have four varieties which are bred pretty general namely, white, black, brown and buff—in the white and brown we have the single comb, and also the rose comb which is closer to the head and there is not so much danger of being frozen. Now, settling on a variety, the first thing is the procuring of the stock. Of course, the Leghorns are not a breed of fowl that you can rely on to hatch, and if an Incubator is not used you must procure other hens to do the hatching. In having the idea in view of keeping hens for production of eggs I first would buy from some good reliable dealer seven or eight pullets and a cockerel, give them a good run, lots of fresh air, and see that they have lots of gravel and grit, such as old mortar, crushed oyster shells, broken china, etc., and then pick out all the best shaped and largest eggs for hatching, say about March 15th or April 1st. If you have an Incubator you will have full directions with it. If you use hens as hatchers see that they have comfortable nests, soft straw or hay, a sod scooped out for the bottom is an excellent plan, or when weather is warm enough set them on the ground. Put some powdered sulphur among the straw and also dust your hen with insect powder to kill any lice that she may have. Many a good nest of eggs has been spoiled on account of having a lousy hen. This done, see that your hens are fed every day. I generally take mine off every morning, give them whole corn and clean water, let them dust themselves in powdered earth, then if they do not go on when I think it is time I put them on and close them up until next morning. If the nests get fouled wash the eggs with warm water and put in fresh straw and all well in three weeks you will be amply repaid for your trouble by a nice nest of downy chicks. Now chicks are out give them nothing to eat for the first

twenty-four hours, then a hard boiled egg chopped up fine, a little bread soaked in milk, and gradually more and more until you will find they will take wheat screenings and soon wheat itself and a little chopped meat once a week. If you have ground bone give a little of that and vary their food as much as possible. Use common sense and do not mind a little trouble and your birds will come on well and develop rapidly. A common mistake that is made by most breeders, and especially farmers, is that when the chicks are young they allow the old hen to drag them all over the yards and fields, and very often at night she will come home with one chicken less, it having to lie down and die, not being able to keep up the same pace as its mother, or perhaps has been dragged through wet grass or marshy places and was not strong enough to stand it. I found the best plan is to put both mother and chicks in a place—say 10 feet square—having a box or something in one corner for shelter, cover the top over with wire or laths to keep the old hen in and cats etc., out, have lots of litter inside for them to scratch round and feed them a little at a time and often and they will do better than in any other way. A great many breeders adopt the same principal as they used in raising Pheasants in the old country—they get a piece of meat flesh of some kind, put it in a pan and place it in some high place so that any smell arising from it may ascend, they then leave it until it becomes fairly alive with maggots, when they bring it down every morning or so and give some of the maggots to the different lots of chicks which they have in their yards and you have no idea how eager they are for them. Now your chicks are doing well the old hen has left them and they are growing finely and paddling their own canoe, see that they are in their house every night and well taken care of. Soon the young cockerels will begin to be precocious and bother the young pullets. If you can so arrange it have two separate runs and keep the cockerels in one place and the pullets in the other. If your cockerels have done well and are hatched early you ought to be able to sell them all off unless you wish to keep one or two over, but it is eggs you have in view, and I would recommend selling off all the cockerels and in the winter pick up a good cock or cockerel from some other strain and keep your young pullets good and vigorous and do not allow any in-

breeding whatever. By doing this as soon as cockerels are all disposed of your pullets can have full range, which is the best thing you can do for them. Now you have got along nicely until say September. Your pullets are doing well, some of them are developing in comb and starting to lay. Don't push them too much by giving them meat and so on. Remember, that eggs are worth more after a while. Your old hens that have not moulted and some of the early pullets will lay in spite of you, which will give you what eggs you want now, but keep them in good health and give them good runs. The nights are beginning to get cool. Chickens are like every thing else, liable to catch cold. See that your house is not drafty. It is October now and it is time anyway to see that your house is both warm enough and large enough. Have it so that each chicken will have eight square feet of room to itself, and it's warm enough without artificial heat, that the coldest night the water in their drinking vessels will not freeze solid. Each breeder has a different mode of constructing his houses. It matters little how they are built as long as they get warmth and light. My house is facing the south with a good sized window in front. I arrange to let each bird have eight square feet, as before stated. I have my roosting place as far from the window as possible. My roost is a long 2x4 scantling with edges made smooth, fitting each end in slots so that I can take this out any time. Below this about twelve or fourteen inches I have some boards about two feet wide to catch the droppings, made of tongued and grooved sheeting perfectly smooth and tight. Every morning I go in with an old tin pan and scrape this off clean. Over this perch about two feet I have a ceiling of same material as drop board, which I use also for a floor of a pen which I use for odd birds at different times. To the ceiling of this roosting pen I have an old carpet tacked along. This is rolled up all day, tied with tape, like we did our window blinds before the spring rollers came into use, and at night when it is cold this is let down and the fowls are all closed in snug and never any danger of frost. Some breeders use rag carpet or something that is not too stiff. They string this up on a wire and they pull it to one end in the daytime, which is very simple. The great mistake many breeders make is that the roosting place for fowls at night is not warm enough. In fact, it is often colder than

when they run about in the daytime. They build their houses with any amount of glass, facing the sun and have the perch at the back or in one corner with no covering. The fowls have the sun during the day and the place is warm, then at night the sun goes down and they have actually a colder place to sleep in than they had when they were stirring about in the daytime.

On the floor of the hen house I have about eight inches of chaff. I used a different kind this year. I cut up some oat straw, the oats were not threshed out and it makes good work for the hens. I have used hay seed, dry leaves and oat hulls, but whatever you do in the winter time when the fowls are confined a great deal, do not give them a plain clean floor. Through the winter let them go outside all the fine days you can, and if the snow comes to bother you get a shovel and clean off a place outside large enough for the fowls to come out and knock around, it will pay you. A good plan for those who keep horses is to put the stable manure every morning in front of the fowl house. When they come out it is splendid for them to scratch about in and also good and warm for their feet.

Now as to feeding. There is a danger of course in some breeds getting too fat to lay well, and you must avoid that in Plymouth Rocks, Brahmas, etc. I find though, that the Leghorns will stand all varieties of food and lots of it, and will give good return back in eggs. I generally feed in winter months as follows: Always see that the fowls have vegetables of some kind, either turnip chopped up fine and placed in a long trough that I have against the wall, or a cabbage suspended from the ceiling in the middle of the hen house just high enough so that fowls can stand on their tip toes or jump to pick at it. I also have oyster shells crushed and grit always on hand as already referred to. Then starting with the morning meal. One morning I give soft feed warm, say some boiled corn meal or crushed oats mixed up in bran or shorts. I never give them more than they can eat up clean and about an hour after I throw a few handfuls of grain among the chaff, mixed up as much as possible so that they have lots of exercise in scratching to find it; sometimes it is oats, especially if I think they are getting too fat, but it is generally wheat. Another morning I will crush up with the bone mill some good

bones and give a good plateful to every twenty hens. Another I mix up with stale bread or biscuit dust which can be got for  $\frac{3}{4}$ c. a pound, and about once a week I boil meat and give it to them, cutting it up fine. Every day I give them the grain after the warm feed and grain again about noon, sufficient of it so by time night has come they will go to roost with their crops good and full. On a cold day I make the afternoon feed whole corn—I find that this is best if not fed too often. Now carry this out, and from fifty hens in December you will get eighteen to twenty dozen of eggs; January still more, and so on for February, March, April, and May. From December to April eggs bring the best price, that is the time we want them; let the people know that you have fresh eggs and there will be no trouble to dispose of them and at good figures. I could sell a dozen for every egg laid and never have to deliver them. One store-keeper alone has offered to come and take them away himself in one and two dozen lots and pay highest price if I will only keep them for him, but not having a great many hens I often have to refuse people (because the eggs are gone) who come after them for sick people and such like and would pay a very high price.

The fowl and eggs of to-day are very much superior to what they were a few years ago and this no doubt is owing somewhat to the interest our Government has taken and support they have given it, and farmers and breeders in general who have not got their fowls down to a paying basis should follow the reports and essays that are sent out by the Government from time to time, and they will very soon feel that poultry is one of the most profitable branches of farm work.

I have tried in my humble way to show how to keep fowls for procuring eggs, but having a very broad subject there may be many points I might have enlarged on only space would not allow. I might say, however, that any farmer, breeder or fancier reading this article who would like to know anything that comes to mind if they write me to Eglington post office, I will be only too happy at any and all times to send back all information possible on the lines of questions asked.

To catch the Spring business, advertise in March, April and May REVIEW.

## POULTRY FOR PROFIT.

BY J. G. BRADLEY, LONDON.

AWARDED EQUAL FIRST PRIZE BY THE POULTRY ASSOCIATION OF ONTARIO, IN THE ESSAY COMPETITION.

HAVING been requested to write an essay on poultry, I herewith submit the following with fear and trembling. Firstly, because of its being the author's first attempt at writing an essay on any subject, secondly, acknowledging that there are many conflicting opinions on this subject, so deeply interesting and instructive to each one engaged therein, that, whilst respecting the opinions of others, the writer does not wish you to understand that the suggestions herein offered shall be accepted without having to differ materially with the views of others, who may have had greater or less experience than the writer.

## RAISING POULTRY AS A BUSINESS FOR PROFIT.

First, it is essential to select the breed or breeds best adapted for your requirements. If for table or market purposes the writer would suggest the larger of the clean, yellow legged varieties.

Buy the best stock you can secure. Do not endeavor to possess the greater number to the detriment of quality (always sacrifice number for quality) for rest assured, you will always have a sufficient number of inferior specimens produced by the best stock available without beginning with inferior stock.

Having secured sufficient stock it is equally as necessary to have a proper poultry house as it is to have good poultry; so built that you have no fear from frost injuring your stock in winter and so ventilated that they will not be uncomfortably warm in summer.

Arrange your houses so that each variety (if you have selected more than one) shall be kept separate and distinct; no intermingling of the different breeds to be allowed on any pretext whatever. See that your stock are not only properly housed but that they have ample yard room; see that, when night overtakes them they are not on the limb of an apple tree instead of on their roosts, for if the sudden storms of the night come on they are not drenched and thus, the first seeds

of disease in your poultry, namely, colds and roup, are prevented; hence, the old adage—"An ounce of prevention is better than a pound of cure."

Having your fowls properly housed it will be found more profitable not to have them too crowded, and particular attention must be paid not to allow too many hens to be housed with one male, as the writer's experience has shown that the fertility of your eggs will be greatly interfered with, also it is the writer's conviction that two cocks in one breeding pen is equally as detrimental to the fertilization of eggs as the system of too many hens with one male, unless the system of alternating the males each or every other day is systematically adhered to, and not more than ten females (eight preferred) to each male.

The feeding of hens for laying should receive more attention than has been generally practiced. The writer's experience (admittedly limited) has been that hens, to lay well, should be fed a variety. The warm, soft feed of the morning should always be given; it being easier of digestion, and your fowls always being hungry in the morning, is more satisfying to them. The writer considers from past experience, that a morning feed, consisting of corn chop, barley chop, wheat shorts, and pea meal, mixed with boiling water and seasoned to their taste, will give the best satisfaction; at noon, feed a few table scraps; during the day a feed of green vegetables should be placed where they can help themselves, chopped turnips, beets or cabbage, are the best to give, at night, whole grain. With the above formula together with grit and ground bone, the writer from eleven Plymouth Rock pullets, (barred) April hatched, gathered 850 eggs, from October 24th to March 20th—or say, an average of six eggs per day, conclusive evidence, I think, that a few hens properly housed, carefully and well fed, will give you better returns than a larger number improperly or carelessly fed and left to roost wheresoever their inclination may lead them.

Having brought your hens to the stage of laying fertile eggs, care should be taken not to allow the eggs to remain in the nest until they become chilled. Many valuable specimens are undoubtedly destroyed annually by the eggs being subjected to such extreme changes of temperature, in some known cases from the time the egg is laid until feeding time at night. (The writer's opinion being that this difficulty may be

in a great measure overcome by gathering the eggs three or four times during the same period).

The hatching season having arrived and having your hens in laying condition, the eggs should be turned half over every second day, thereby preventing the germ and yolk sticking to the shell, which makes the egg of no use, as the germ must be loose and move when tested, or will not hatch a healthy chick.

The nests should be prepared near the ground to enable the eggs to procure sufficient moisture naturally. The hen, when willing to remain on the nest, should be protected from intruders, being shut completely from the intrusion of the other hens; it being an acknowledged fact that the sitting hen's nest is the most inviting nest for other hens to lay their eggs in. If possible, sitting hens should be kept separate, and when convenient, in a building by themselves, where they will be more tractable and much easier handled. The hen should be given as many eggs as she can successfully cover, but with hens of ordinary size thirteen eggs will be found as many as they can cover completely. Do not expect too much from your hens, assist them all you can, therefore do not give them too much to do (too many eggs to cover) her peculiar methods of turning the eggs are not always to be relied upon as being thorough; therefore very liable to leave some unturned when she considers her duty performed. When your hens have been setting on eggs one week, test them, or if not an expert at testing the eggs for fertility allow her to have charge of them, say ten days, when there will be no mistaking the infertile egg for the fertile one.

Remove all infertile or clear eggs from under the hen and put them carefully away where they will not freeze as they will be useful to you later on. If hatching for market only a good plan would be to set them in pairs, carefully dating your settings so that when testing for infertile and doubtful eggs after removing them from both nests you may only have enough fertile eggs remaining for one hen to cover; then have another setting ready to give to the remaining hen to begin anew. This method is, I consider, better than allowing both hens to remain setting on a few eggs and after hatching, then giving the chicks to one hen to hover and raise, from the fact that one of your hens has lost two weeks sitting—again, this matter of testing should not be run over in a hurried manner. The

egg which only shows a small or faint germ may be left in the nest for another week when another test will prove conclusively whether its germ has grown sufficiently to hatch at the end of the following week. If not, remove at once and destroy, for the danger is too great that your hen may move the well developed germs to the outside, thereby possibly chilling and destroying your perfect germs whilst the weak and imperfect germ will not be sufficiently benefitted to cause it to hatch, which only increases your loss.

During the period of hatching, feed your hens regularly when off their nests all they will eat of whole corn; this food having the greatest amount of heat for which the hen must be provided in order that she may be able to transmit a sufficient amount of heat required by the egg germ. Also see that you have a good dust bath for them, also plenty of grit placed where they can help themselves. Do not allow them to come off their nests only at regular hours and as soon as they have eaten and dusted themselves place them back on their nests as gently as possible.

Your chicks having arrived do not be too kind to them by feeding them the first day; about noon of the second day is quite soon enough, as Nature has so provided them by the absorption of the yolk of the egg just previous to the hatching that they do not require any food for the time stated.

Now, take your infertile eggs you tested out from the first week's hatching, boil them as hard as possible, then chop them fine enough for your little chicks and then mix stale bread crumbs with them so that they will be quite crumbly and feed your chicks.

Do not overfeed them; it is better to feed them less and often than to give too much, as you are apt to overtax their digestive organs and bring on bowel trouble. Continue this feed for the first week, giving them a little oat meal as a variety and this along with the brooding of your hen should make them lively and strong, and you will be surprised at their growth. Baked corn bread or coarse Johnny cake made of corn chop (not corn meal) is greatly relished by them and is good for the heat which their bodies require. You may now give them whole wheat, small preferred, also cracked corn, by varying the formula the writer has been fairly successful in raising them without even the aid of the hen. This, of course, requires the assistance of a brooder house, whose heat under the hover should

be 90 degrees, which the heat of their little bodies will increase to 95 degrees, while outside the hover the heat should be about 70 degrees, for them to scratch in, and when they find themselves getting cold they will return to the foster mother for the necessary warmth, when they will dart out again and scratch away for their living, as we human mortals have to do.

Water or fresh milk should be placed where they can help themselves from the first, for they will drink too much if withheld from them too long. The writer has found that soft (or rain) water should be given them rather than hard, as the tendency to clog at the vent is greatly increased by the use of hard water, whilst very few cases can be found where soft water is supplied them.

This water or fresh milk must be given often—it should not be allowed to stand until it becomes stale and polluted by the chick walking in and otherwise soiling it. Do not give them vessels with open tops to drink from, as they are sure to get on the top and will get into the water and drown themselves. The most successful drinking fountain is one with no opening at the top; an ordinary tomato can with a small hole or V. shaped notch cut at the bottom filled with water; a saucer placed on the open end or bottom and then quickly inverted; the saucer will be quickly filled with water to the top of the hole or notch, and if you have too much water cut a little more from the bottom of your can and you will have it all right, as they only require enough space to insert their bill in order to drink. Their feet should not be allowed to soil the water; should the saucer be too large for your tin, a few small pebbles or stones placed in your saucer will overcome the difficulty, for make no mistake, they will find the water down among the pebbles.

Keep your chicks growing; give them green food such as green clover cut fine with your lawn mower, you will never have them troubled with being crop bound, as you are almost sure to have by feeding with long grass.

The easiest way to provide this clover is to attach a canvas catcher which can be procured at any hardware store at a small additional cost to your lawn mower; and lastly, but very essential, is to feed them meat. The writer prefers lean raw beef or liver cut fine, given semi-weekly, being quite sufficient, and at twelve weeks old your chicks should be in good order

and fit for market as broilers when the best prices of the year are obtained.

For your next year's laying stock keep your largest and quickest maturing chicks of April hatching, the earlier the better this month as your pullets are then in full feather and by the first of November settling down to the work of laying winter eggs.

Do not expect late hatched chicks to be good winter layers nor do not expect them to lay well if hatched earlier, as they are apt to moult again in the fall and will not lay until in full feather.

I think I have now covered one year's work with your poultry, arriving at the period at which your hens of the preceding year are about to moult; feed them all they will eat of corn, giving their flesh the requisite yellow color, and kill and market as soon as their condition will warrant, otherwise they will be a bill of expense, as they are in no wise remunerative during the moulting period, reserving those of whose conduct you may feel proud as to their care of your young chicks, as they will become broody early for your spring chicks for the following season.

#### BREEDING FOR EXHIBITION.

Breeding for exhibition can only be done successfully by breeding from superior stock, so mated as to produce the necessary specimens called for by our Standard requirements, and this, in the opinion of the writer, can only be obtained by years of careful and patient dearly bought experience; patience to await the result of his matings until the desired results are obtained or by seeking professional knowledge, in mating.

The former being the most desirable provided the novice entering upon this branch shall possess a bountiful supply of patience and determination to continue in the race until success shall crown his efforts.

If these elements of success are not largely bestowed upon him, and if he does not make a desperate effort to secure the coveted prize, coupled with a love of his poultry, he will ere long be completely distanced in the race in which he so confidently and honestly believed he would win.

The writer has had limited experience in this line but has entered the race and proposes to remain, although success has not as yet been very encouraging. The writer's motto being "May the best bird win," even if I do not own it.

## UTILITY BREEDS.

Along this line the writer would offer the suggestion that Plymouth Rocks and Wyandottes are the ideal utility breeds, being prolific layers, good mothers, and for market purposes the white varieties are the most inviting, having the yellow flesh and the clean yellow legs which are always sought after and fewer noticeable pin feathers than any of the colored varieties.

## FOR SHIPPING PURPOSES.

The writer has had considerable experience in shipping live poultry for table purposes, having shipped several hundred birds from London to Montreal with only one solitary bird dying in transit, and in the language of the receiver, "The quality and condition of your stock is all right and hope to do business with you next year." My method being as soon as my poultry was in condition for table purposes, on the morning of shipment they had no soft food but hard food was substituted instead and plenty of fresh water to drink; at noon another variety of hard food was given, then cooped for their destination, arriving in good condition as above stated. In shipping dead plucked poultry the writer has had no personal experience but capable authority inform us that poultry for shipping should not be fed for twenty-four hours previous to killing as the food previously consumed will, by that time, have been digested and the intestines will be free from food, thereby the cause of fermentation lessened.

They should be killed either by the dislocation of the neck or sticking the knife in the roof of the mouth and brain—the former method preferred, as you have no blood to escape to soil the bodies after packing for shipment.

They should be plucked dry as soon as killed, the feathers being more easily removed than if the fowl is allowed to get cold and stiff; the legs should also receive attention, being made clean to correspond with the appearance of the body.

Allow the body to thoroughly cool before packing, which should be carefully done, also in clean cases, and your poultry should arrive at its destination in such condition as will be acceptable to the consignee, and to the satisfaction of his patrons.

NOTE BY THE JUDGES.—This is a grand essay, full of meat and evidently the experience of the writer. He assumes the novice knows nothing, the correct ground to take,

## TOO MANY SHOWS ON SAME DATES.

IT seems to the writer poor policy for three associations to hold shows the same week. There is plenty of time from December 1st to January 31st for every association to hold a show on different dates from any other. It would give exhibitors a better chance and each show would be more successful. It is, I think, almost impossible to hold three shows in one week in Ontario, and each one be successful, and if one association is strong and centrally located, as Toronto is, it is a poor lookout for the others.

Toronto show killed Sarnia show. We are not going to beat about the bush to say so. We are glad that Toronto Association "bit off more than they could chew," as the editor said. In their eagerness to wipe us off the earth they over did it. They took our dates, canvassed for and secured many exhibits which otherwise would have come to us and made our show a success. Still, there was no hard feeling on our part. We had it in our power to delay Mr. Jarvis so that he would not get to Toronto on time, but instead of any delay we did all in our power to speed him on his journey.

Exhibitors who went to Toronto and did not win have not even a score card to show for their outlay. Had they decided to show with us they would have had score cards even if they won nothing. We are sorry to see Owen Sound, Brantford and Peterboro' all holding a show the same time. They may all make a success of it, but chances are against them. It divides exhibits up too much. Many birds would go to at least two of them if held on different dates, which can only go to one as it is now.

We intend to hold a show in Sarnia next December again, and hope to make it a grand success. One thing sure, it will be held on different dates from any other show. We will also rent a cheaper hall and hope for better weather. The secretary is already laying plans for a banquet and concert. The county and town councils are to be asked for substantial grants. The business men also will contribute liberally, and we hope to be able to guarantee the payment of all prizes, and give the boys a wild time generally.

All we ask is a clear field and the liberal support of every breeder west of Toronto. Don't forget us.

THOS. H. MILLS, Sarnia,

[Our correspondent, we think, must be asked for proof of his assertion that the Toronto show "killed" that in Sarnia. It was most unfortunate as to clashing of dates, but we were under the impression that both shows were publicly announced at the same time. As we are not sure of this point, we are open to correction. Sarnia may count on 'THE REVIEW doing its best to further its shows' interest. Announce your dates early.—ED.]

### THE LATE TORONTO SHOW.

#### EDITOR REVIEW :

**I**N your January issue there appeared in connection with report of the Toronto Poultry Show that there must have been some juggling with the buff Leghorn pullets. I beg to explain that such was not the case. In taking the birds out of the coops to be judged for the cup, in my absence the wrong bird was put into the coop which was ticketed first prize. The winning pullet is a high colored one, even right through with grand wings and undercolor, and she deserves her honor in every respect.

Respectfully yours,

Toronto, Jan. 22nd, 98.

G. BERNER.

### THE EASTERN ONTARIO SHOW AT CORNWALL.

#### A LARGE SHOW. THREE HUNDRED ENTRIES RETURNED.

**T**HE annual exhibition of the Eastern Ontario Poultry Association was held in the Music Hall at Cornwall on the 27th to 31st Dec., 1897, and was a success in every respect, except attendance. This may in a measure be accounted for by other entertainments being held at the same time, one in particular was the opening of the new hospital.

The Music Hall is rather small, and as it was, every space was used in order to accommodate the 700 entries. The Secretary had to refuse over three hundred entries on account of their being mailed after the date specified for the closing of the entries. It does seem strange that exhibitors having the rules of the Association before them, wherein the date is mentioned for the final receiving of the entries, will persist in sending their entries or write and ask if they can send their entries, in some cases two and three days after

the date mentioned, and yet you will find some people advocating the receiving of such entries in order to swell the exhibit. They cannot have the faintest idea of the additional labour which it causes. It involves the re-arranging of the whole exhibition in order to have the birds properly classified and placed for the judging. This to them seems but a little matter, but nothing, in the eyes of the public, looks so bad as an ill assorted lot of fowl at an exhibition.

The absence of Mr. F. H. Gisborne, Sec.-Treasurer of the Association, through serious illness was much regretted. The duties, therefore, fell to the lot of the Assistant Secretary who discharged the duties to the entire satisfaction of all, and Mr. C. J. Devlin filled the position of superintendent, which is a hard place to fill if you want to please all, but a more competent and obliging one could not have been selected.

The exhibit of dressed poultry from the Experimental Farm at Ottawa was a branch that should be an object lesson to the farmer as to the requirements of outside markets, and also our own markets. There can be no doubt that poultry dressed in an attractive manner as the exhibit was will command a readier sale and bring gilt edge prices to the farmer.

A feature at the Exhibition and a step in the way of practical development was the farmers class wherein prizes are awarded for the best fowl as flesh formers and egg layers. It was pleasing to see a number of fine Plymouth Rocks and black Minorcas entered for competition in this class.

Brahmas, light and dark, were as usual a small class. What there was were good, especially the young birds. Buff Cochins a small class, no bird scoring a sufficient number of points to be awarded a first. Partridge Cochins, small class. Black and white Cochins, fair. Langshans a good class. and some really fine birds.

Black and white Javas were a good class, both in numbers and quality; on hen a white Java scored 96, being the highest score in the show. In Dorkings, silver grey and any other variety, the exhibit was good, both in size and quality. This breed is gradually coming to the front and is a good table fowl.

White Plymouth Rocks, as usual, a large class and a fine lot of birds, all scoring over 90. Barred Rocks a much larger class than usual and a grand lot of birds, some of the cockerels weighing ten lbs., several hens weighing 8 lbs and pullets 7½. The grandest lot of

birds in this class was that of Messrs. Devlin and Jacques; the cock bird scored  $94\frac{1}{4}$ , and the lowest of six birds was  $90\frac{3}{4}$ , making an average of over 92 a bird. The first prize hen in this class, I understand, can only be surpassed by one other. Messrs. Devlin & Jacques with this lot won the silver cup given by His Excellency the Governor General. Silver laced Wyandottes not as large an exhibit as formerly, and still there were some fine birds. Several breeders report that their flocks are in bad feather owing to late moulting. White Wyandottes not as large a class as usual, no doubt owing to the late moulting. This class last year at Kingston was one of the largest. The fine pens exhibited then by W. G. Higman and F. H. Gisborne, of Ottawa, were missed this year, owing as already stated to their lateness in moulting and inability to get them in good and proper condition. Golden Wyandottes small in comparison to other years, the same reason being given as in the other two varieties, yet those exhibited were fine birds.

Black Spanish, a fair class, some good birds. Andalusians, a fair class. Breeders in this class also report birds late in moulting. Black Minorcas, a good class, and are gradually coming up in some sections. They are claimed to be equal to the Leghorns as egg producers, as a table fowl much larger. White Minorcas, fair class, only medium birds. S. C. W. Leghorns, an unusually large class and fine birds. The first prize cock is a fine bird, both in plumage and size. Second prize cock also a good bird, but not as large. S. C. brown Leghorn, was the largest class in the exhibition, and extra fine birds, some birds in the different sections scoring 92 and  $91\frac{1}{2}$  were not in it for even a third prize. Those who were not fortunate in being awarded a prize have nothing to be ashamed of, as it had to be more than an ordinarily good bird to win. The other varieties of Leghorns were only a moderate class. The largest was the R. C. white. These were the most numerous, and a few good birds.

The Polands, a small class, what there were, were good. Houdans were good and quality of birds good. I should like to see more of the French varieties exhibited. They are a large and good table fowl, and some of the varieties are good egg producers. Hamburgs black, a rather large class and some fine birds. The spangled and penciled varieties were also good, both in quality and number of birds, and have a great

many admirers. They are an attractive bird. Red Caps only a medium class.

The Games, Game Bantams and Bantams were judged by comparison. Black red Games, what there were, were good. I should like to see other breeders exhibit. It makes the competition of interest, and when there is competition the gaining a prize is more appreciated than when there is no competition. Brown red Game the same may be said of this class, there being only one exhibitor. The birds are fine and good. Duckwing Game only two entries. Red pile, a very small class. The birds in this class are not up to the standard they were a few years ago. Cornish Indian Game made a good class, both in numbers and quality. Two very fine pullets were exhibited by Mr. Oldrieve. It is seldom one sees such fine birds. This variety is becoming more popular. While perhaps not prolific egg producers, they are invaluable as market fowls and for crossing purposes, with a view to weight and superior quality of flesh. Other standard Game or white Indian Game was a small class. Why white Indian Game was not included with the Cornish Indian Game was a mistake, as no such bird is known in India. The following extract, taken from a communication in the April number of the Game Fowl Monthly, will throw some light on this point: "'Aseel.' This is the name by which the breed is known and styled in India, and has been adopted in England for some years in order to distinguish it from that which is designated Indian Game, a breed not known to the natives of India, and originated in England upwards of sixty years since by the late Sir Walter Raleigh Gilbert, when he imported from India some Red Aseel into Cornwall, and there crossed them with the Derby black reds. Sir Walter, then General Gilbert, personally gave me this information in 1846. The word Aseel (Arabic) is an adjective signifying thoroughbred, high caste, pure, original, and has no plural as in the English word Game; thus Aseels and Games are a perversion of grammar and nomenclature." In the Old English or Pit Game there was a large exhibit for the first year of its introduction, this class, if continued, will become popular and increase in number. Some of the birds were fine specimens, both in plumage and station. One of the cocks in this class weighed near eight pounds. He is only eighteen months old, and a pul-

let from this cock weighed over five and one half pounds, she is only seven months old.

In the Game Bantam class, as usual, there was a good exhibit, some really fine specimens being exhibited. They are an attractive feature at all exhibitions, and are greatly admired, especially by the young people.

A trio of golden Sebright Bantams, exhibited by Lady Marjory Gordon, were the first prize winners. rose comb black were good and some fine birds. This class usually fills well. Pekin and Japanese were as usual. The Pekin not quite so numerous as usual. Other varieties about as usual.

The exhibit of turkeys, ducks and geese was really fine. The Toulouse and Embden geese are very large. The same may be said of the Pekin ducks. The whole collection was something the farmers should have seen. Mr. A. Thompson, of Allan's Corners, P.Q., the well-known breeder, was the principal exhibitor in this class. The list of prize winners will be found elsewhere?

E. H. B.

### THE PETERBORO SHOW.

AN ACCOUNT FROM THE JUDGE.

THE Peterboro Poultry and Dog Show was a success financially and also as to number of entries. About 2000 persons visited the show and door receipts were over \$200.00. Great interest was taken in the show both by city folks and the farmers in surrounding neighborhood. Too much cannot be said in praise of officers and members of the Association: they seemed to vie with each other to make the thing go, and in studying the comfort of exhibitors from a distance. A banquet was tendered the three judges and exhibitors at the Morgan Hotel on Wednesday evening, and about sixty sat down and a very pleasant evening was spent by all present.

The quality of exhibit in many classes was extra good. Light Brahmas were especially a grand lot, also barred Rocks and black Minorcas, white Leghorns, Houdans, and golden Wyandottes; also Bronze Turkeys were fine.

The Market Hall that the show was held in is the finest that I have ever seen for holding a poultry show. It is very light, lofty, and lots of room.

Toronto.

C. J. DANIELS.

### POULTRY ASSOCIATION OF ONTARIO.

CANADA'S CRYSTAL PALACE. FULL REPORT OF THE ANNUAL MEETING. THE LARGEST SHOW ON RECORD. EXHIBITORS TREATED LIKE PRINCES.

MR. J. H. SAUNDERS,  
Superintendent Ontario Show, London, 1898.  
Winner in Ballot Competition for Most  
Popular Member of the Association.

THE Twenty-fourth annual meeting of the Ontario Poultry Association was held in the East end Hall, in the City of London, on Thursday afternoon, January the 13th, 1898, at 1 o'clock.

The President, Mr. Allan Bogue, of London, took the chair, and after calling the meeting to order, said:

I may say from experience that

I think this is

the grandest show that the exhibitors and fanciers of Ontario have been privileged to attend. The great improvements that have been made must be apparent, especially to those old exhibitors who have attended the shows of this Association for so many years. These improvements date from the time we received the additional grant from the Government. Previous to that we were just holding our own, but immediately on receipt of that addition the Association went forward by bounds. Perhaps the most important changes were noticed at Port Hope and at Guelph. But this year greater improvements in every department have been made than in the whole history of the Association. It is not necessary for me to name or point them out to you. The Association has earned a most enviable reputation for itself. No exhibitor can possibly expect any success unless his birds are of the first quality. The winning of prizes is becoming harder every year.

The minutes of the last annual meeting and the intervening meeting of the directors were read by Secretary Brown.

On motion of Mr. W. McNeil, seconded by Mr. T. Burn, they were adopted as read.

Secretary Brown in rising to read his report said :

It is not my intention to occupy the time of this meeting with any lengthy report. At the same time I do not purpose allowing this opportunity to pass without expressing first my delight in having the members of our Association meet in London, and trust this visit may be enjoyed by all, and also to thank you all for the interest you have shown at all times in the prosperity and exceeding usefulness of these annual meetings and exhibitions. They are indeed a very important part of the educational branch of the Department of Agriculture for the Province.

In looking over past records I find that the essays are greatly in advance of former years.

As regards the success of this year's exhibition we must thank the gentlemen of the London Poultry and Pet Stock Association for their untiring efforts towards the pleasing result. Everything within their power has been done with this object in view, and I am sure you are all pleased with the way in which they have succeeded. At no time within my recollection has anything so attractive been presented to this Association as the magnificent array of special prizes secured by the London Association.

With regard to the advance of the exhibition I may say that the entries this year total 1809 as compared with 1602 last year. I think the first year that we held the show at Hamilton there were some 1200 entries, so that we have steadily advanced. The local Association made such great efforts this year to have an extra large list that they were somewhat disappointed at finding an increase of only 200 over last year, but I, for one, am not dissatisfied, because we can have as many as can be handled properly at nearly all the places the show may be held, except perhaps London, and Toronto, where they have their fair coops and buildings specially adapted to showing poultry.

Since the opening of the show there have been two or three things brought to my notice which I wish to mention. The first is the meeting which should have been held yesterday. There were only some five or six persons here and consequently we were obliged to

adjourn. I may say the only reason we decided to hold these special meetings, if you will remember, was because some of the essays prepared for the meeting held at Port Hope, were not read, and it was then decided to have a separate meeting to receive and discuss essays, but I have since found out that it is impossible to carry this arrangement out. A great many of the members did not come here until Thursday, and those that were here yesterday could not be induced to attend because they were anxious to see the birds and see the result of the judging. This is the annual meeting and I would suggest that we take this question up and pass a resolution to return to the old method—one day for the annual meeting and essays, business to be taken up first, with a proviso that the Executive have power to call a special meeting during the day if they think it wise, at which the papers that have been prepared can be read and discussed.

With reference to the entry papers, I may say that only one did not arrive here in time, but I have one case in which a great many more birds were sent than were entered. They are being fed at the expense of the Association, but they are not in competition at all. We must adhere to the rules, but in endeavoring to comply with them I receive more or less letters which infer that I am to blame. Please bear in mind that the rules are given to me and I must carry them out. If the Association says to accept up to the last minute, I will do so, but until I get such instructions nothing will be accepted after the date fixed for receiving entries.

I think we should take the matter of securing or appointing the judges' clerks into our own hands. Under the present arrangement this Association makes a grant to each local association which is supposed to cover all expenses, but this amount will not we know, allow of them paying these clerks, and while I have not a word to say against the work done here, the trouble with gratuitous clerking is that they do not feel their responsibility, they do their work, but you never know when you are going to get them and when you do get them, how long they are going to stay, and I think for the little extra cost we ought to pay clerks to do the work and then we can dictate to and control them. It is not pleasant to call on one of the members to assist the judges, nor is it at all times satisfactory.

I will have a tabulated statement ready and inserted in the annual report.

On motion the Secretary's report was adopted,

On motion of Mr. D. C. Trew, seconded by Mr. W. McNeil, the Treasurer's report was accepted as read.

Letters from the following were read regretting their inability to accept the invitation of the Association to attend the Exhibition:—T. S. Hobbs, M. P.P.; Hon. G. W. Ross, Hon. J. Dryden; Hon. Sidney Fisher, and Prof. J. W. Robertson.

A letter was read from the Secretary of the Toronto Poultry Show, asking that the show for 1899 be held in Toronto.

F. W. Hodson, Superintendent of the Farmers' Institutes of Ontario, wrote asking that the Association make a grant for prizes to be offered at the Ontario Provincial Fat Stock and Dairy Show of 1898, and also that two of the officers of the Ontario Poultry Association be appointed representatives to the Board of the Provincial Winter Show.

The President said he thought the matter referred to in Mr. Hodson's letter should be left in the hands of the Board. It could be brought up at their first meeting, and in the meantime they should endeavor to get all the information possible in reference to the question which would enable them to come to a correct decision.

Mr. Donovan said he thought the use to which the money if donated would be put to, was for prizes for dressed poultry. He moved that it be referred to the Board. This was seconded by Mr. Dilworth and carried.

With reference to the question of devoting a separate day for the reading and discussing of essays, the President said he favored the idea of having these taken up on the day of the annual meeting.

Mr. Bonnicks also thought the above the best plan. The second day of the show the members are not all present, and as the judging is not completed the exhibitors who are in the building are loth to leave it. He therefore moved that the essays be read and the Annual meeting held on the same day. Business matters to be taken up first. Mr. Corcoran seconded the motion.

Mr. Oldrieve moved in amendment that no change

be made, that the second day of the show be devoted to the reading and the discussing of the essays, but that the building where the birds are, be closed to all but the judges during the day. Mr. Crowe seconded this.

One member said he feared if the building was closed a great many people would not come until the third day. Mr. Trew said it would be impossible to close the doors of the show to the public on the second day.

Dr. Bell said, from a financial standpoint, it would not do to close the doors, as the local associations would lose a certain amount of income, and it was hard enough now for some of them to come out with a balance on the right side.

Mr. Donovan:—"We have got to have these essays, and the Minister of Agriculture expects them to be discussed, and I move that an evening be taken for the purpose, and a literary and musical programme be arranged and the essays read and discussed at such meeting. Others besides the members will thus be induced to attend, and much good will be accomplished." Mr. Essex seconded this amendment.

The President said the doors must be open to the public as soon as possible in order to get funds to pay expenses. He thought the original motion covered the ground.

Mr. Bonnicks said Mr. Donovan's amendment was simply an extension of the original motion, and he thought it a good idea.

Mr. A. G. Gilbert said the Farmer's Institutes had had the same difficulty to contend with. They have been reading papers at their meetings for a great many years, but latterly they found that the farmers would not come out, and they are now having an afternoon session for business, and at this meeting notice is given that there will be a literary and musical meeting in the evening to which all were invited, and as a result all the members and their wives and daughters attend and have a pleasant time and also receive a certain amount of good instruction from the papers which are read as part of the programme.

On the matter being put to the meeting the original motion carried.

Mr. Trew moved, seconded by Mr. McNeil, that the question of the Association paying the judges' clerks be left in the hands of the Board. Carried.

Mr. Barber moved, seconded by Mr. Corcoran, that the essays be printed in the annual report.

Mr. Crowe and Mr. Dilworth thought they should be referred to a committee and passed on before being printed.

The President said he thought it was the intention of the Government that the essays be read and discussed, in which case the weak points, if any, would be brought out and thus more information given to the farmer.

Mr. Barber charged his motion to read "That the essays be taken as read," which was carried.

On motion of Mr. Essex, seconded by Mr. M. T. Burn, it was unanimously decided to hold the next show in Toronto.

The election of officers was then taken up, and Mr. McNeil moved, seconded by Mr. Essex, that Dr. A. W. Bell, of Toronto, be President. Carried unanimously.

Mr. W. McNeil, of London, was elected first Vice-President, and Mr. M. T. Burn, of Tilsonburg, second Vice-President.

Mr. M. T. Burn moved, seconded by Mr. McNeil, that the following be appointed a committee to select the Directors for the ensuing year:—Messrs. A. Bogue, Dr. A. W. Bell, T. H. Scott, T. J. Senior, and M. T. Burn. Carried.

Mr. Gilbert of the Experimental Farm, Ottawa, was called upon to address the meeting. He congratulated the Association upon the magnificent show in progress. The birds were fit to be prize winners in any part of America, and in certain classes that meant in any part of the world. He also congratulated the breeders on the marked improvement in the size of white and brown Leghorns. This was also evident in the show of the Eastern Ontario Poultry Association recently held in the town of Cornwall. Last year there was evident improvement in the size and weight of Plymouth Rocks and white Wyandottes. This year it was in the size of the Leghorn family. And it was progress in the right direction. Reviewing the past year we find that both Dominion and Local Governments and the fanciers of the country had done their part. The Local Government in giving liberal grants to the two Poultry Associations and in sending out lecturers on poultry development to the Farmers'

Institute meetings. The Dominion Minister of Agriculture had completed a system of cold storage by car and steamboat to the markets of Great Britain and it would no longer be said by the farmers of the country that if they had the poultry and eggs that they could not safely ship them. Efforts were also being made to instruct the farmers in breeding large birds for market fowls and already a great many more new laid eggs were put on the winter market by farmers than heretofore.

#### THE FARMERS MUST REALIZE

that to have the large birds for home market or shipment that they must keep the breeds which make them. The beef animal did not come from the Jersey and the chickens which made ten or twelve pounds the pair could not be got from the "scrubs," usually found in the barn yards of the farmers. He had bought the large Plymouth Rock cockerels, which were exhibited among the dressed poultry from the Experimental Farm, from a farmer—Mr. Alex. McLean of Ramsay, near Carleton Place and he had also bought a number of large Plymouth Rock cockerels from Mr. Joseph Gourlay, another farmer of Huntley, near Ottawa. Now, if you ask both of these farmers they will tell you that they did not know anything about the merits of Plymouth Rocks, or, indeed of any other breeds of poultry until they heard the speaker mention them at Farmers' Institute meetings, three or four years ago, Stilleville, Carp and Carleton Place.

#### AND IT GOES TO SHOW

how rapidly poultry development is taking place and the beneficial results of Farmers Institute and other meetings. He was a firm believer in giving instruction to the farmers on all branches of poultry development. Indeed, he had not been unfrequently taunted with being a "crank" on the subject, and other names, but he did not mind that as long as he could have such practical results—in large market chickens—from such practical farmers as Mr. McLean and Mr. Gourlay. And there were many others. From the foregoing it will be seen that both Dominion and Local Governments have been doing their part in developing the poultry interests; the fanciers and breeders have been doing theirs in improving the size and weight of different breeds; the farmers are getting into line and you naturally ask, "What have you been doing at the

Experimental Farm, Ottawa?" In reply he could say that he had been trying to do practical work that would be of benefit to the farmers of the country. If his department and himself were not of practical value to the farmers, they were useless.

#### BUT HE HAD FOUND

in his many years of experimental work that poultry would pay and pay well, if properly managed. But they must be handled in a business-like way. They must be handled by the farmers, or specialists, in such a way that eggs will be produced in the winter when they were at their highest value and every effort should be made to sell in the best market, at the highest figure to be obtained. And then when eggs were declining in Spring, because everybody's hens were laying, they should be converted into poultry of the very best quality to sell at nine and ten cents per pound. He mentioned the latter prices, because he had visited the leading poultry and game dealers of Montreal and they had told him that they were willing to pay nine and a half and ten cents per pound for a superior quality of poultry, which was much in demand by their customers and which they (the dealers) did not get. And the

#### EARLIER TIME CHICKENS

the better is the price paid for them. The editor of a leading U. S. poultry paper had said that if 35 or 40 per cent. of a poultryman's hens—of the proper kind and age—laid in winter and their product was sold on the Boston market at the highest price to be obtained during that season that his flock would represent a profit of two dollars per annum each. Boston winter prices were high, but not higher than those of Montreal, and he was inclined from his experience to believe the statement to be correct. To have eggs in winter required, no doubt, a certain amount of skill which could only be gotten by experience. The cost of production must be lowered as much as possible, and the product must be sold to the best advantage. After all, that was only business. Mr. Gilbert displayed a chart which showed the following output of eggs from 151 hens and 53 pullets in 1896. Some of the hens were old and only kept for sitters, while some of the pullets were young :

|          |      |
|----------|------|
| January  | 1469 |
| February | 1411 |
| March    | 1569 |

|           |      |
|-----------|------|
| April     | 1934 |
| May       | 1699 |
| June      | 897  |
| July      | 485  |
| August    | 240  |
| September | 82   |
| October   | 73   |
| November  | 568  |
| December  | 1466 |

11,893

Some of the hens, of course, according to this showing, did nothing during the time of high prices, while a number of others were used as sitters (as he did not use incubators) in spring.

In answer to several questions Mr. Gilbert named the breeds he had and made further explanations at length. The showing might not be one of the high percentage, but details which time did not permit to give would show which fowls made the money. It would be noticed that the output decreased in mid-summer months and went as low as 82 in September and 73 in October. It was in these months, by giving the hens a run in fields with clover and grass, and feeding cut bone or cooked meat in judicious quantities, that the hens were got over their moult. It will be noticed that egg laying recommenced in November when eggs, in Ottawa, were 25c per dozen. In December, it will be seen, that 1466 eggs were laid, and prices for that month were 30 and 35 cents per dozen. Care must be taken to have the laying stock go into winter quarters neither too fat nor too lean. Cut bone had been found the best and cheapest egg producer in combination with a mash fed three mornings of the week, alternately, and not overfed. Care must be taken not to gorge the layers at the morning meal. Lawn clippings and clover hay, steamed the night before, were fed in abundance. Vegetables, grit and oyster shells were before the layers all the time. Two rations per day, with green stuff extra, were fed. All grain fed was thrown into the litter on the floor and every effort was made to keep the hens in exercise from morning feed until roosting time. Pure water was in abundance and dust baths. Experience had proved that with proper management poultry could be made to pay well. The effort of the farmer should be

to have eggs in winter and high class market chickens in early summer.

The Committee appointed reported the following gentlemen as having been selected as Directors :

No. 5, D. C. Trew, Lindsay ; No. 6, C. Bonnick, Toronto ; No. 7, T. J. Senior, Hamilton ; No. 8, F. R. Webber, Guelph ; No. 9, T. H. Scott, St. Thomas, No. 10, Chas. Massie, Port Hope ; No. 11, A. Bogue, London ; No. 12, E. Donneley, Sandwich ; No. 13, J. W. Bell, Angus.

It was called to the attention of the meeting that Mr. Chas. Massie was not living in section 10, and it was therefore decided to substitute Mr. T. Brown, of Durham, for that section, and on motion the report of the Committee, as amended, was accepted.

Mr. McNeil moved that Mr. H. B. Donovan be re-appointed auditor. Mr. Barber seconded this and the motion carried.

The President called the attention of the meeting to the fact that Mr. Donovan had audited the books for a number of years, but had never received any remuneration whatever for the same. It was decided that the matter be left to the Board for adjustment.

Mr. J. Dilworth and Mr. W. Barber were appointed delegates to the Industrial Fair, Toronto ; Mr. Geo. McCormick and Mr. J. H. Saunders to the Western Fair, London ; and Mr. John Cole and Mr. J. Dickenson to the Hamilton Fair.

Dr. Bell moved that Mr. Geo. H. Bertram, M. P., for Centre Toronto, be elected Honorary President of the Association. Mr. Barber seconded and the motion carried amid applause.

Mr. R. H. Essex, Toronto, was also nominated for the position, but declined.

Dr. Bell said that at a meeting of the Executive of the Toronto Poultry Association, it was decided that it would be of advantage to the Ontario and also the Toronto Association, to secure for Toronto the next meeting of the American Poultry Association. He understood that Mr. McNeil was going to attend the show at Boston next week, and if agreeable to the members would suggest that he be appointed a delegate for this purpose. Mr. Donovan moved that Mr. McNeil be appointed a delegate to ask that the American Poultry Association meet in Toronto next year at the same time as the Ontario Association. Carried.

Mr. Donovan moved that a hearty vote of thanks be

tendered to the officers and members of the London Poultry and Pet Stock Association for what they had done to make this show such a grand success. This was seconded by Mr. Bonnick and carried amid applause.

The meeting then adjourned.

At a subsequent meeting of the Directors Mr. Thos. A. Browne was reappointed Secretary and Mr. George G. McCormick, treasurer.

It was decided that the Secretary be instructed to forward a formal application to the Executive of the American Poultry Association for their next meeting at Toronto.

#### THE BANQUET—A GRAND TIME—SOME OF THOSE PRESENT AND WHAT THEY SAID.

On Thursday evening, the 13th inst., the London Poultry and Pet Stock Association tendered a complimentary banquet to the members of the Ontario Poultry Association and their friends at the Tecumseh House, at which the tables were spread in really fine style.

Among those present were noticed the following. Sir John Carling, London ; W. T. Crandall, Department of Agriculture, Ottawa. A. G. Gilbert, Superintendent of the Poultry Department of the Experimental Farm, Ottawa ; A. Bogue, Thos. A. Browne, W. McNeil, R. Oke, London ; Dr. A. W. Bell, Toronto ; M. T. Burn, Tilsonburg ; Charles Bonnick, W. Barber, Toronto ; H. B. Donovan, J. Dilworth, R. H. Essex, James Dundas, Toronto ; D. C. Trew, Lindsay ; Dr. J. S. Niven, London ; L. G. Jarvis, Ontario Agricultural College, Guelph ; J. L. Corcoran, Stratford ; T. H. Scott, St. Thomas ; George Bogue, Strathroy ; T. Brown, Durham ; Charles Massie, Port Hope ; T. J. Senior, Hamilton, etc., some one hundred and fifty in all.

After those present had demonstrated most clearly their appreciation of the good things provided, the toast list was taken up.

The chairman, Mr. A. Bogue, stated that Hon. Sidney Fisher, Hon. J. Dryden, Minister of Agriculture, and Prof. Robertson, of the Ottawa Experimental Farm, were expected to have been present, but were unable, owing to official duties.

He said that the London Association felt greatly honored at being able to entertain the Ontario Association, embracing, as it did, fanciers and exhibitors

from every section of the province, and he extended a cordial welcome to all.

Sir John Carling replied to the toast, "The Dominion and Provincial Parliaments," as follows.

I am very much pleased indeed to be with you tonight, and I am glad to see the grand success of the poultry show. As a result of my experience in the Legislature thirty years ago as Minister of Agriculture, and later when I had the honor of being Minister of Agriculture for the Dominion, I feel a great interest in matters of this kind. We all know the agricultural interest of Canada is a great and important interest, and whenever the agriculturist is successful and prosperous, the country in general will prosper. Look at the improvements that have been made during the last thirty or forty years. For instance, we had no railways of any account then, but now there are 17,00 miles in operation, and before the close of 1900 it is expected there will be nearly 20,000, and this is of great benefit to the farmer, as it gives him great facilities for disposing of his products at the best markets.

A great deal has been said with regard to our neighbors across the line. We would like to trade with them, but they do not feel disposed to act fairly. They want to get the best of the bargain every time, and although deputation after deputation has been sent by our Governments to try and arrange the matter, they have all returned unsuccessful. If they will not meet us fairly we will stand on our own rights as Canadians and refuse to give them more than we are receiving. British markets are open to us and we should and are taking advantage, to some extent, of the privilege and send as large an amount as possible of our products there. Our exports in 1896 amounted to \$121,000,000; of this amount \$66,000,000 went to Great Britain and \$44,000,000 to the United States. Our imports were \$118,000,000—\$33,000,000 from Great Britain and \$64,000,000 from the United States, while the latter only took from us \$44,000,000, or \$20,000,000 less than what we bought from them, notwithstanding the fact that they are doing all that they can to prevent us selling in their markets. They are charging five cents per dozen duty on eggs shipped into their country, while we only charge three cents. In fact on nearly everything they have a high protective duty.

With regard to the exporting of eggs, I was told today by a gentleman that his firm had exported during 1897 350,000 dozen eggs from London, and that 7,000,000 dozen had been shipped from Montreal to Great Britain last season. I think that speaks well for the work of this Association, and for those who take such an interest in poultry. Britain can take all the eggs you can produce. One gentleman imported into Great Britain last season 20,000,000 dozen, and the importation of eggs from all countries last year totalled £5,000,000 sterling, so that I think you must all feel encouraged to know that there is such a great demand there, and that you only have to continue to improve the quality and size of your eggs and you will get a good market for them, as you have for butter and cheese.

I feel it a great honor to be called upon to respond to the toast of "Canada." All my interests are here and so long as I was in public life I felt it a pleasure and a duty to advance the interests of this country in every possible way.

I thank you most heartily for the kind hearing you have given me, and wish you every success in your work.

Mr. W. T. Crandall, of the Department of Agriculture, Ottawa, said he had just returned from England, where he had been acting as commercial agent for the Dominion Government. We do not, he said, understand fully the capabilities of that wonderful market. Over \$600,000,000 is spent yearly for food. They require and have the best that can be procured. It is not a matter of choice with us whether we ship the products of this country to that market; it is a necessity. As Sir Jno. Carling very wisely said, we have tried for the United States trade, but by their high protective tariff, they have virtually said that they do not want our business, and as there is now a great desire on the part of England to give her colonies the preference in trade, we should take every advantage possible of that fact and thus build up a profitable trade.

With regard to poultry, the Canadian has a great deal to learn yet as to preparing and shipping this particular article to England. Well dressed fowl, carefully packed, will command a high figure, but as long as it is sent over in a manner similar to two consignments which I inspected just before leaving for home, low prices and an indifferent demand will be the re-

sult. In the cases referred to, I found that although the Department of Agriculture had sent out instructions as to packing for this market, the birds were shipped in dry goods cases, barrels, etc., and put up altogether in a most slovenly way. The birds were sold by advertised auction, and men came from all points of England to secure "snaps," and after the sale the Canadian turkeys could be bought retail for 3d a pound less than the English and Irish birds were sold at, notwithstanding the fact that they were first-class in every particular, but the manner in which they were shipped, and this made it impossible to get any other result.

Mr. A. G. Gilbert spoke very briefly. The farmer, he said, should do as every successful merchant does, take stock each year and find out which branch is paying the highest percentage. If he would do this, he would soon see how important and profitable a feature the keeping of chickens is, and would thus be led to take a greater interest in it. If each farmer would make his hens pay even a small amount, it would, taking the 650,000 farmers into account, represent an enormous sum.

Messrs. A. Bogue, Charles Bonnick and Dr. Bell replied to "Ontario's Great Poultry Show." The latter expressed the hope that next year at Toronto they would have an even more successful exhibition, if it were possible, than the present one. He promised as large a list of specials as they could possibly get.

Messrs. W. Moore and D. McKenzie replied to "The Western Fair."

"Sister Institutions" was replied to by Mr. Dundas and Mr. J. Dilworth, of Toronto. The latter said he had learned from a shipper that a large consignment of poultry had been sent to the old country lately, and it had arrived in first-class condition, and had netted two cents a pound clear. Mr. Donovan replied briefly to "The Press."

The meeting was brought to a close with the National Anthem

#### THE BIRDS.

Mr. Jarvis kindly supplies us with the following notes on his classes:

The Ontario poultry show is over and no doubt ended satisfactorily to all concerned. It was admitted by all present that it was the most successful, both in

quantity and quality of stock, of any yet held under the auspices of the Ontario Poultry Association. The building in which the show was held proved to be rather small for such an immense show, and the middle aisle was a little gloomy on account of having to place an extra tier of coops on the top of the outside tiers on account of extra entries. Several varieties in this aisle had to be carried to the light when judging, making it very tedious and awkward, especially when judging by comparison. The birds on exhibition were in fine condition, clean and free from frosted combs and wattles, as is often seen at shows held at this season of the year.

The superintendent, Mr. Saunders, and his assistants, kept the coops clean and the birds regularly fed, and watered, and in either case not overdone. From this fact the fowls left the exhibition in as good a condition as when they arrived, no sickness being noticeable during the entire week.

A great mistake was made in the classifying or cooping of the birds in not having them placed on the same level instead of being placed one above the other, and in several cases the young and old birds were mixed up, with the result that a few birds were overlooked when awarding the prizes. In two or three varieties I had to rejudge on this account, which makes it very unpleasant after the prize tickets are placed on the coops. I will explain why the allotting of the coops to the different varieties in the manner mentioned came about. The worthy secretary, Mr. Browne, whose motto has always been "Fair play and no favor," thought the fanciers whose birds were placed in the top tier of coops would feel that they were not properly treated, and partiality had been shown. So the birds were cooped one above the other, so that every exhibitor's stock would be treated alike, so far as light and position were concerned.

I must say I am still an advocate of the scoring system of judging if time will permit. Those who have advocated the comparison system at the Ontario show no doubt did it from the fact that it occupied too much time, and the judging was not completed as soon as desired. I never believed it necessary to score all of the birds on exhibition. We find at all shows in every class birds that are, as the saying is, not in it, so far as the prizes are concerned. Now my idea is for the judges, as they do when judging by com-

parison, select those specimens that are found to win and score them, to find out where the cards are to be placed. In this way the judge will get over his work as quickly, or nearly so, as when judging by comparison, and when he is done, know that every defect has been noticed by him, as is not the case at all times when judging by comparison. The exhibitor can then see where his birds are deficient, or where they excel over his competitors.

A few notes on the classes allotted to me to judge :

Dorkings—Great quantity and quality and a decided improvement over last year in all varieties. Silver greys, 1st old cock, a trifle short in leg, but an extra large one, with a grand colored breast and body, and tail, a little neavy in striping in hackle and saddle, an easy winner ; 2nd a good bird, but a little yellow in color of plumage on neck and back. Hens, extra fine, very large and clean in color of plumage. Winning cockerels all good, also pullets. Colored extra fine 1st and 2nd cockerels very close. The second bird lost in shape of tail, all other points being about equal. First pullet, an easy winner, being extra large and fine in marking, others good. In old birds, the winners all extra fine specimens, and several birds not awarded a prize could win in strong company. Whites, very large, not as white in plumage as we would like, and several off in shape of comb.

Houdans made an immense showing, great quality and a marked improvement over last year. I noticed a few specimens with very large crests and beards, yet in color of plumage they were off, the white not distinct enough, having a brown appearance, and the black running into the white.

Javas—First cock, a grand bird, all Java in shape, with a rich, lustrous plumage, the second a little short in back, a little off in shape of tail, hardly as rich in lustre of plumage as first ; 3rd, a good bird, his worst fault is his comb. The winning hens, fair, but the best hen, and one fit to win in almost any company had to be left out on account of wing being cut. I was quite satisfied, it was not done intentionally, as the other wing was free from a speck of white or grey, in fact, as fine in color as I ever saw. In such cases we hate to throw out such specimens, yet we have to do so, if not others would have accidents happen, when it might be disputed. First cockerel, a grand bird all round, and hard to fault : second and third

also good. First pullet, rather small, but neat and good color. The finest pullet in the show, so far as color and size was concerned, had a little raise on back, otherwise would win easily. This defect was quite noticeable, and we had to give the first to a much smaller specimen, yet neat in shape. Whites, only a fair class, several being quite yellow in plumage and very yellow in leg.

Polands were both numerous and good, as we might expect at London, where the veteran fanciers of this class, Messrs. Bogue and McNeil, live. The winners of special in the different varieties were certainly as fine as could be desired, with grand shaped crests and extra fine in color, particularly in color of tails, so hard to get in all laced or spangled varieties of Polands.

The winner of special in the silver bearded, a cockerel, as fine as I ever saw, and was the admiration of all Poland fanciers. I was pleased to see several new exhibitors in the different varieties of Polands with very fine birds indeed. They must not get discouraged if they don't get to the front in a few years' breeding, as it requires experience in not only breeding good specimens, but in preparing them for exhibition, particularly in this class of fowl.

The Rocks, all varieties, well represented. The first and second barred cocks, extra large, with fine, yellow legs and beaks, without a speck of black. The third and fourth, very fair, not so large or as good shape as first and second. First hen, a grand one, a little cochiny in shape, but large and well barred, with nice legs and beak. Second and third, also very fair specimens. First cockerel, very nicely barred, especially in tail and wings. We consider him the best barred bird in the show, but a little deficient in shape of breast and body. Second, third and fourth cockerels, all good, extra large, with nice colored legs and beaks, not as good in tail as first. First pullet, the best I have seen this year, both in color and shape, second, a little heavy in barring, with several dark spots on legs, very large and barred to the skin. Whites, a great improvement so far as size and shape are concerned. Several specimens a little creamy in color of plumage. First cock, an easy winner, good shape and white in plumage. Hens, extra good, winning cockerels especially so ; first, really good, also pul-

lets. First cockerel won the special for the best specimens.

Buff—The finest ever shown at the Ontario, in both old and young extra fine birds were on exhibition. First cockerel, the winner at Toronto for the best bird in show, is a hard bird to beat, a little coarse in comb, and might be a little better in color of tail. Second and third also good. First and second pullets, grand in color and all Rock in shape. The same might be said about the first and second hens.

Water fowl made an immense showing and the competition close. It required considerable time to compare the different specimens in all varieties. Any fancier could feel proud to win a piece in such a competition. I considered it the finest display of water fowl by far ever shown at the Ontario show, both in geese and ducks.

Turkeys were simply grand, both in bronze and white. I also noticed a fine pair of Naragansetts. Time will not permit any further comment.

L. G. JARVIS.

#### SOME NOTES ON THE BIRDS BY THE EDITOR.

Mr. Jarvis has so fully written regarding the general appearance of the show, it is unnecessary for us to do more than heartily endorse all he says. The show was all right and so were the officials who conducted it. The meat in a nutshell.

Light Brahmas opened up well. First cock a big bodied, good colored, low set bird with but a moderate comb. Second not so good in top color, big body. First hen a neat one of good color, nice hackle, well feathered. Second a nice bright one hardly so good in color. First and special cockerel a fine one, beautiful hackle and well spread good colored tail, neat head and comb, a bit yellow in cushion. Second also good, not up to first in shape. Third handicapped by his bad top color. Pullets a nice lot. It is pleasing to see a greatly enlarged entry. Dark Brahma cocks a fair lot, the first wins well, grand solid breast, silvery white on top, a very bad comb spoiling the appearance of the head. First hen none too big but nicely pencilled. Second larger, not so bright in color. Others fair. First cockerel a big good colored bird, on good legs, well feathered, comb rises a bit at the back, a too common fault. Second a good, all round one. Others fair. Winning pullets nicely pencilled.

Partridge Cochins a really decent lot. First cock very bright in color but lacks rounding out in shape. Second more shapely, but duller in color. First hen a good colored one, poorly shown, badly in moult. Second larger, in good feather. First cockerel wins well, a well grown, bright colored bird in fine fit, low down. Second loses to him in color. Third excels in leg and toe feather. First pullet is nicely pencilled and true Cochin shape, in this she beats second. First buff cock very feathery, good even color except in foot feather, which shows some white, grand shape. Second also good, short in back, tail carried rather high, immense feather. Third good, not quite even in breast, good sound tail. First hen very shapely well filled up, grand color. Second very feathery, a bit mealy in color. Third higher color, good shape. First cockerel good even top color, a bit weak in breast both in color and shape; we liked second better, sounder in color with a neat head piece. Third a trifle high up, narrow in tail, which has also considerable black. We made an unnoticed one (Bell) sound color all over, lots of feather, rather straight hock feather and weak comb, a winner somewhere. First pullet very sound even color, feathery. Second a really nice one, but a trifle mealy. Third, close up. Both blacks and whites were grand all through, the special going to Millard, who showed both colors.

Black red Game a good lot. First cock a fine reachy bird, hard as nails and tight in feather, good color. Second and third, good all round. Hens a nice class, as were the cockerels in which the winner was a reachy well cut away bird, good breast and neat tail. Second a bit loose in feather and carries more tail. First and second pullets, pen mates, very tight upstanding birds, hard and good in feather, quite dark enough and long enough in back. Third better color and shorter in back but would not get up. An unnoticed cock (Close), might have been in it but for a sore foot, which sadly handicaps a Game. Bad top color, good breast. First brown red cock deserves a special word, a rangy, good bodied one, excellent in color on top and nicely pencilled breast, well placed limbs on which he stands like a gladiator. Second a good all round one. Hens a nice class. Cockerels good, especially first. Pullets extra nice. We understand all winners bred from the winning cock. Duckwings a bit on the up grade, nice classes. Pyles good all through. First old pair win

well. First cockerel not in his coop when we took our notes. First pullet an 1 ling willow legged one, tight in feather with a very neat tail. Indian Game made grand large classes, good all through. A. O. V. Game went to Malays and Sumatras, the latter excelling in color.

Hamburgs, in this hot bed of the fancy, were splendid classes, the winners fit to go anywhere. The pencils might do with a bit more size Red Caps not many, but typical birds won. Andalusians a very nice lot. We greatly liked first cockerel, a model all over, beautiful clean color. First pullet also grand. Second not in as good condition.

White Minorcas, a fair lot. We liked the first and special pullet in shape and color, but she wants more size; second, larger but not of same type. First cockerel, fair, too yellow in color and lacks depth of body. The blacks did not turn out in their usual large numbers. First cock, an excellent color, decent comb, rough lobes, and might be bigger; second, better body and lobes, not so well shown, good lustrous color. First hen, a good bodied bird, good color and neat lobe, a fair comb; second and third, also good. First cockerel, a fine bodied bird, lustrous in color, typical comb, good lobe, tail carried well back, which is not the case in that of second, otherwise good. Third low set, rough lobe. First and second pullets, both large typical Minorcas, good all round.

Spanish, not large classes, but hot. Cocks, all rough in face. We liked first chicks, good color and size and nice quality of face.

Rose-comb Leghorns—First white cock, a typical bird, with good legs and a comb with plenty of "work" in it, fair lobes; second loses to him in comb and condition. Hens, a very nice class; first, pure in color and neat in comb. First cockerel, good shape, nice comb and lobe and well carried tail; second, a poor one. Pullets, nice, especially first. Browns made large classes. First cock, good in body and color, neat comb, lobes rough; second, better in lobe, larger comb; third, a good one with too much comb. Hens, a nice class all through, as were the chicks. The buff Leghorns did not turn out as well as we expected, but the quality was extra. First cock is typical in shape, good, well set comb, lobes off in color, good even color, a bit light in hackle, one sickle shows a little white, the best of legs and feet; second, not so good in shape, excellent color, poor comb at back,

with lobes of bad color, good legs and feet; third, not so even in color, best lobes in class, good tail, part of comb gone at back. First hen, on the small side, grand even, sound color all over, comb not out, good legs; second, a big, even-colored hen of high quality; third, lighter, even. First cockerel, very typical in shape, neat comb, grand even, nice color, a trifle ashey in secondaries, nice lobe; second, stylish, good even color, fair comb, lobes a bit yellow, sound dark tail; third, not quite so good in comb as first, but still a grand one. First and second pullets a grand even colored pair, good all through, not much to choose between them, grand colored legs and feet, in which their owner's stock shown here excels. Third a good even colored pullet, a trifle ashey in tail and comb almost erect. Any of the pullets shown good enough to win in hot company. Mr. A. G. Brown showed a grand team of blacks, lustrous in color and of good shape, size and type. The first cock (Bonnick's) is a big bird of fine color. Browns were an extra class and little fault can be found with the winners. Rice won the cup with a grand team of these and whites. First cock well up in size, good in color and tail, poor comb, fair lobes, in which he beats second. Hens a nice class and so were the chicks. Whites a banner lot and show increased size, they were good all through. The special for best specimen went to a stylish bird of good clean color, fine comb and lobe, and, when we saw it, well carried tail. We believe there was some difference of opinion on this latter point.

White Wyandottes a big lot and competition keen. The cards went to large birds of good color. Few buffs but they were good, and the same may be said of the blacks. Silver females show some improvement in open centres, lots of room yet. There were not many, an even dozen in all. The golds ahead of them both in numbers and quality. The first pullet may now be said to be as intended, a "laced" Wyandotte. The others well up. Hens good. First cock an immense bird of good color, carries quite enough comb. The French classes (other than Houdans noticed by Mr. Jarvis) were not many but really good.

"Squire" Priddis divided the honors in Orpingtons, a useful breed, with the Toronto exhibitor.

Amongst others were good Sultans, Silkies (extra), etc. etc.

A full report of the Bantams will appear in next issue, we could not squeeze it in here.

STRAY SHOTS FROM THE ONTARIO.

C. J. Daniels bought the first prize black Java cock, a big, grand colored bird.

Dick Oke gets through a lot of work in his quiet, easy way. Every one likes him.

Mr. Bogue makes a model chairman, ready of speech, fair to all and clear in his decisions.

If William McNeil would work as hard for the REVIEW as he did canvassing for votes for Supt. Saunders we would be glad to offer him a permanent job as subscription agent.

Many of the visiting fanciers stayed with Eli Griffiths, one of the old timers, at his neat and exceptionally clean little house, the Grand Pacific. The London "boys" say that this is the old original Eli who was invited to "get there," and that he has got there, with both feet, too.

The good looking fellow, who won the gold watch and whose portrait appears elsewhere, is well known as the C. G. A. of B. N. A., which being interpreted means the champion gastronomic artist of British North America. He in his native modesty, however, disclaims the title, awarding it to ANOTHER who shall be nameless. THE OTHER denies the soft impeachment.

Where were Tom Browne's red jacket and Tam? we missed them.

John Cole put in a lot of hard work for the Hamilton show. It should be a success.

Mr. Smelt judged the Miurcas and judged them well.

The popular Pau-a-ce-a was largely in evidence and Mr. Daniels showed a large number of appliances, one of the best, the fountain, we illustrate below. It is easily cleaned and easily filled. It is guaranteed from injury by freezing. Mr. Daniels had bone mills, grit boxes, etc., on view.

Mr. A. G. Gilbert, from the Experimental Farm, Ottawa, had on hand an attractive exhibit of dressed poultry, and was tireless in his endeavors to impart information to those seeking it, and they were many.

Dr. Niven showed some nice, full-breasted Indian Game—colored Dorking crosses.

The "Silverware" made a nice display in attractive cases, and everyone got a chance to win some of it.

We can assure our readers that there is no truth in the rumor that since Mr. Butterfield's return from "Yurup" he handles the judging stick arrayed in the festive stovepipe hat and kid gloves. We did not see him, but have good evidence in the case.

At the next Ontario, all well, it is proposed to swear in a special constable, to make sure of the services of a certain judge who often "has business elsewhere."

'Rah for London!

'Rah for Toronto!

CORRECTIONS IN TORONTO SHOW LIST.

BLACK WYANDOTTE cockerel, 1, 2 Grimsley; pullet, 1, 2 and 3 Grimsley, 4 Harrigan.

BARRED PLYMOUTH ROCKS, pullet, 1, 2 Bennett, 3 Downs, 4 Richardson; white cock, 1 and 4 Brown, 2 Rice, 3 Peirson; hen, 1 Cook, 2 and 4 Rice, 3 Peirson; cockerel, 1 Brown, 2 Barker and Muir, 3 Peirson, 4 Rice; pullet, 1 Rice, 2 and 4 Peirson. Buff cock, 1 Daniels, 2 Colson, 3 Henderson and Billings, 4 Essex; hen, 1, 2 and 4 Essex, 3 Henderson and Billings; cockerel, 1 Essex, 2 Henderson and Billings, 3 Colson, 4 Parsons; pullet, 1 Bonnick, 2 Parsons, 3 Gilchriese, 4 Essex.

JAVAS, Black cockerel, 3 Daniels, 4 Reid; pullet, 1 and 3 Webber, 2 Daniels, 4 Reid. A.O.C. Java cock, 1 Webber, 2 Daniels; hen, 1 Reid, 2 and 4 Webber, 3 Daniels; cockerel, 1 Daniels, 2 Webber; pullet, 1 Daniels, 2 Webber.

BANTAMS, brown red Game, cock 1, hen 1 and 2, cockerel 1, pullet 1 and 2, all to G. E. Manson.

SELLING CLASS, cockerel, 1 Durston, 2 Richardson, 3 W Blain, 4 J. Colson; pullet, 1 Troth, 2 Richardson, 3 Colson, 4 Wagner Incubator Co.

**SOME THINGS WE DON'T DO.**

We DON'T lend cuts.

We DON'T report winter shows who fail to use our business columns.

We DON'T take renewal subscriptions at less than one dollar each.

We DON'T try to please everybody and

We DON'T care who knows it.

†††

**SOME THINGS WE DO.**

We DO take two new subscriptions for one dollar.

We DO take one old and new subscription when sent together for one dollar.

We DO all we can to help the shows.

We DO try to treat all fairly.

**NOTES AND COMMENTS****PETERBORO AND BRANTFORD SHOWS**

were more than usually successful in all ways. Further notes of the former and the judge's (Mr. Barber's) report of the latter will appear in March REVIEW.

**OUR "FOREIGN" READERS.**

Mr. W. Ramsay Thomas of Kingston, Jamaica, is now another of the REVIEW's regular readers, and we understand has already written breeders here regarding the export of birds to him in Jamaica. We hope for our national honor that if business results from the negotiations that none but the very best value may be sent.

**THE WINNIPEG SCHEDULE,**

a copy of which the Secretary has sent us, is full of good things, liberal money prizes included, and should attract a largely increased entry over that of last year. Mr. Sharp Butterfield is to officiate as judge.

**THE BUFFALO SHOW.**

We had hoped to be able to give a brief account of the recent Buffalo show, but the large amount of space occupied by our own Canadian shows, with which we are more interested, precludes it. Sufficient to say that all Canadian exhibitors did well, as they always do when they go abroad.

**MR. WILLIAM BARBER'S**

grand black-red cock, which he so recently purchased from "Grandpa" Main, unfortunately met with an untimely death at Buffalo. A piece of straw getting crosswise in the throat strangled him.

**WE REGRET TO LEARN**

of the continued illness of Mr. Francis H. Gisborne, the popular Secretary of the Eastern Ontario Poultry Association. From this cause he was unable to attend the late show, the great bulk of the work falling on the ample shoulders of our old friends, Mr. E. H. Benjamin, and his able lieutenant, Mr. C. J. Devlin.

**WE ARE INFORMED**

that the black Poland cockerel, mentioned as having gone astray from the Toronto show, died the day after his arrival there.

**MR. W. E. LEE, HIGHGATE,**

sends us a very pleasing photo of his white Leghorn cock Victory, the winner of many prizes. It shows him up as a typical bird with a nice full tail beautifully carried.

**RECENT SALES.**

Among other sales of winners we notice the following: Mr. A. E. Rankin, Owen Sound, the first prize cockerel and pullet, white Cochin Bantams, from S. M. Clemo. Mr. Thomas Harrigan, Doncaster, has bought the third prize buff Leghorn cock at Toronto. Mr. A. J. Grigg has bought the pyle cock winner of first as cockerel at the Ontario in 1897, also several other winners in Game and Game Bantams. Mr. W. E. Robinson has bought the second cockerel, second pullet and first hen in Indian Game at the Ontario. There are, of course, very many others, but we do not know of them.

**WHAT WE LIKE TO HEAR.**

"I will have a number of subscribers to send in a few days—as soon as I get time to get to see the boys. Have been very busy with show. Business is good with me—cannot begin to fill orders for pullets and hens. Most of my last fall winners have gone to the States at a good price and the REVIEW did it all."

Hope you can get "our" REVIEW circulated in the States as much as possible.

Wishing you every success, I remain,  
Yours truly, J. H. MINSHALL.  
Brantford."

We hope so, too. Mr. George R. Donovan will put a full week's hard work in at the New York show in the interests of our subscription lists, and he generally manages to "get there," as our lists show. The REVIEW is going ahead with leaps and bounds and has more readers in the U. S. than most people think. It begins its twenty-first year as frisky as a colt.

MR. C. C. SHOEMAKER, FREEPORT, ILL.,  
who spent some time in England selecting stock, returned on December 23rd with over two hundred selected cockerels to mate to his breeding stock. This must be a record importation. We hope to illustrate part of Mr. Shoemaker's large plant in the near future.

MR. THOS. W. DUKES, JOHANNESBURG, AFRICA,  
is one of the REVIEW's regular readers. On the same mail that brought Mr. Dukes' order a polite request for a specimen copy was received from Signor A. Sela, Puebla, Mexico. We mention these cases, by no means isolated, to show how far reaching the REVIEW is.

#### HOW THEY DO THINGS IN CHICAGO.

Following is the pleasant text of a letter received some days since from the Frank B. White Company, of Chicago, a firm who devotes its energies to "agricultural advertising":

Our Mr. White is at present treasurer of the National Fanciers' Association, also chairman of the Membership Committee. We desire that every publisher become a member of this organization.

Poultry and poultry supply advertising lines are becoming an important consideration for the newspapers, and there is a great deal to be gained by organized effort. The dues are \$1.00 per year, and a blank is herewith enclosed which we wish you would execute and return at once.

On the evening of January 28th, the night before the show closes, a banquet will be given under the auspices of this poultry association, and our Mr. White is chairman of the committee that has it in

charge. We are authorized to extend a very warm invitation for you to be present on this occasion. Some of the best poultry talent in the country will take part in the programme. Price \$1.00 per plate. Send acceptance by return mail, please.

Yours very truly,

FRANK B. WHITE COMPANY.

"Our Mr. White's" time, we should imagine, might be better occupied than in endeavoring to bulldoze publishers into paying out their good dollars for membership in an association in which they have no earthly interest. The last clause is rich. "A warm welcome," at "\$1.00 per plate. Send acceptance by return mail," is too utterly, too, too. Our London friends might be glad of a pointer of this kind when next they venture to banquet two hundred guests.

#### TORONTO POULTRY, PIGEON AND PET STOCK ASSOCIATION.

THE regular monthly meeting was held in Temperance Hall January 6th, with Mr. C. Bonnick, the President for this year, in the chair.

In his opening remarks he asked all members to assist him in the work this year as they had done in former years. He also thanked the members present for placing him in his present position, as it is the largest local Association in Canada. He also thought the Association deserved great credit for the manner in which the late show, under the circumstances, was so successfully carried on. Three big cheers were given for the President and three for retiring officers. Mr. Muirhead, East Toronto, was elected a member of the Association.

Dr. Bell was unanimously chosen as nominee for the Presidency of the Ontario Poultry Association in case the show came to Toronto for 1899.

The Secretary not being able to report on show, it was decided to report at next meeting.

Mr. Joe Bennet gave some very useful information on buff Rocks. Mr. Essex gave same on buff Rocks and Wyandottes. Mr. J. Dorst gave a short account on showing and breeding Wyandottes.

The three gentlemen received a vote of thanks for their useful information. Rocks, Wyandottes and Javas were on exhibition, which made a good show. The meeting then adjourned.

R. DURSTON, Secretary.

## MONTREAL SHOW.

BY OUR OWN CORRESPONDENT.

THE Executive worked hard to make a success of the annual exhibition, which was held from Tuesday the 18th of January to Saturday the 22nd inst.

The show was held as usual in the Victoria Armory Hall, but it was evident that to secure a large attendance of visitors another place will have to be selected.

The officers of the Society are:—Thos. Costen, Honorary President; A. F. Dawes, President; Jas. Ainslie, 1st Vice-President; A. Smith, 2nd Vice-President; A. M. D. Drummond, 3rd Vice-President; W. C. Hall, Sec.-Treasurer; J. H. Cayford, Hon-Secretary. Executive Committee—A. Roddick, R. W. Hopper, R. S. Kellie, A. Levallee, G. Shetler, W. Cox, Sr.; G. Gravel, G. C. Philpott, E. Therrien, F. X. Gnaedinger.

The judges were—for the poultry, J. Y. Bicknell, Buffalo, N. Y., for the pigeons, C. H. Currier, Montreal; and for canaries and pets, G. C. Philpott, Montreal. Eight hundred birds were on exhibition; not quite so many as the previous year, but the quality was very good. The judging was all over by Thursday, and as far as we could see these gave general satisfaction. From Ontario the entries were—Cornwall, W. H. Craig, W. H. Armstrong and R. J. Gravely; Ottawa, E. F. Murphy and A. P. Mutchmore; from East Angus in this Province, J. F. Wilson and C. Lacy. St. Therese was represented by the Fortier Poultry Yards, and W. B. Nantel showed from St. Jerome. The Montreal exhibitors included Messrs. Gnaedinger, T. Hall, Marshall, W. Cox (who is the successor of T. W. Molson and the possessor of his black Minorcas), Jas. Ainsley, A. McD. Drummond, T. Costen, W. H. Ulley, G. H. Muir, W. Monteith, G. Shetler, T. J. Virtue and others.

The greatest interest centred around the valuable cups and the results were watched with keen interest.

The Association silver cup for the highest scoring male Plymouth Rock was won for the second time by A. Thompson of Allan's Corners, with the white cockerel scoring 94½ points. This equals the score made by Messrs Haycock & Kent in 1894.

The Sir Donald A. Smith perpetual challenge cup

for the highest scoring breeding pen was again won by Mr. E. F. Murphy, of Ottawa, with a pen of black African Bants with a score of 191 5-6, ½ of a point higher than last year. The Smith Bantam cup was also won by Mr. Murphy with the same pen of black Africans. He also captured the Lady Aberdeen Challenge Medal for the highest scoring pair, with a score of 192½ points.

The black Minorca cup for the highest scoring male was by W. Cox won with a cockerel scoring 94.

The Wyandotte Association silver cup for the best breeding pen was again won by M. Mr. A. McD. Drummond with a pen of whites scoring 188 5-6, which is 1½ higher than last year. The highest scoring bird in the show was a rose comb black African, scoring 97 points.

The President, Mr. A. F. Dawes, and the secretary, W. C. Hall, were always on hand, and backed up by the rest of the officers did all in their power to make the show a success. The birds were well looked after and no complaints or protests were made, and it is a pity that the public do not help by their presence to encourage the Society, which is doing so much good in the Province of Quebec to foster and increase the poultry interests. The prize list will speak for itself as regards the high quality of the birds entered, especially when it is remembered that they were handled by J. Y. Bicknell, who does not think every bird in a show worthy to secure over 90 points.

A large number of special prizes were donated by the friends of the Society and distributed among the different varieties. It is expected that either at the annual meeting or shortly afterwards a dinner will be held to celebrate the success of the exhibition.

## THE WOODSTOCK SHOW.

I enclose you herewith a full list (which will be found elsewhere), of the prize winners and scores of our late show. L. G. Jarvis, Esq., judged the poultry and J. H. Baulch the pigeons. The show was a grand success from every standpoint.

Yours very truly,

S. F. BAULCH, Secretary.

## BRANTFORD'S SHOW.

SEVEN HUNDRED ENTRIES—A BIG SUCCESS.

MR. WILLIAM BARBER judged the show and gave good satisfaction. He will give you a report also. I send him report of entries in each section, and he will have it ready for February issue.

We were taken by surprise. We expecting about four hundred entries and had close on to seven hundred birds.

Mr. M. T. Burn, of Tilsonburg, was here with his his sixty strong; Henderson & Billings with about fifty; Mr. John Pletsch with his thirty-five strong; T. A. Cox, forty-four; John McDonel forty; J. W. Potter and J. E. Howitt with a good number. Mr. M. T. Burn, Mr. Billing and Mr. John Pletsch are three jolly good fellows, never a kick and always wore a smile, and when they got prize money, three hours after the judging was done, they said as long as Brantford had a show they would be with us.

It was a great success financially. Paid every cent won in full before the birds were out of the show. The show room was just jammed in the evenings, and almost as bad in the afternoons. Everybody is chicken crazy here just now. So look out for the Ontario in a short time.

The barred Rocks were the banner class with forty entries.

The light Brahmas had thirty and black Minorcas twenty-seven. Mr. Burn won the special for highest scoring bird in the show, a white Leghorn R. C. cockerel, 96½, followed by J. H. Minshall, 1st prize black Minorca pullet at Ontario, score 96.

J. H. MINSHALL, Secretary.

Mr. I. K. Felch, the veteran judge, was elected president of the American Poultry Association at Boston during the annual meeting last week. A full report of the proceedings will appear in next issue.

Mr. McNeil showed at Boston and was most successful, as he generally is.

Mr. Barber, Mr. Oke and Mr. Donovan are exhibitors at New York this week.

## TO KILL THE LICE BY FUMIGATION.

TOBACCO smoke is death to lice. It is also death to the fowls if confined until the smoke is thick enough to kill the lice. A fumigator may be made to exclude the head and in which the lice may be smoked to death. It is made in two compartments. The upper one for the fowl has a hole cut in one side for the fowl's head, and one in the floor to admit the smoke from below. A pan of live coals is placed in the lower compartment, a handful of tobacco leaves or stems placed on them and the door closed. A few holes should be bored in the floor near the bottom to

admit air. A sliding door on the back of box (not shown in the cut) is so constructed that when open for the purpose of inserting or taking out the fowl, it closes the hole which admits the smoke from below, and when closed after putting in another fowl the hole is opened and admits the smoke. This smoker can be used to great advantage when a large number of hens are sitting. Another use to which such a box may be put is for ridding house plants of the green aphid and in that case one side of the box may have a pane of glass inserted, so that the operator can tell when enough smoke has been admitted.

## A USEFUL ROOT CUTTER.

THE cutter illustrated here is one of those useful adjuncts to a large poultry plant that we often wonder how we got along without

them before their arrival. Roots, such as turnips, mangles, onions, etc., may be cut up into little cones, just what the fowls want. Even if the vegetables are fed cooked, it is an advantage to cut or mince them before cooking, and this the machine above will do.

Mr. William McNeil is using one of these cutters, which he purchased while in Kansas City, and it pleases him. Following is what the makers, the Evans Manufacturing Co., of Ypsilanti, Mich., have to say :

We absolutely guarantee our No. 5 Root Cutter to satisfy the most critical purchasers. It is adapted especially for poultrymen and farmers or for suburban residents keeping a couple of cows. It will cut all roots and vegetables into fine chicken feed. Capacity, one bushel in about five minutes. The knives are of the finest steel and with ordinary care will last for years. The castings are made of the best grade of charcoal iron, making repairs from breakage seldom, if ever, necessary. They are run tested, and proven to be in perfect working order before leaving factory. The feeding of cut roots is rapidly

gaining favor among progressive poultry men ; and now that so desirable and successful a machine has been produced, the cutting of roots for poultry feed is sure to grow from year to year. Our cutters solve the problem of green feed in winter and we are positive we will soon revolutionize poultry feeding.

## PUBLISHER'S NOTES

Mr. J. H. Cayford, Box 1,168, Montreal, is our Agent and Correspondent for the Province of Quebec. Any correspondence relating to subscriptions or advertising may be addressed to him.

### SEND A STAMP FOR REPLY.

Inquires not of a business nature must be accompanied by a three cent stamp for reply.

### TWO SUBSCRIPTIONS FOR \$1.00.

If you send us the name of a new subscriber together with \$1.00 we will extend your own subscription for one year as well as send REVIEW to the new name for one year. This makes it but 75 cents each. The only condition we make is that the name of the subscriber be a new one and not a renewal.

This paper is mailed regularly to its subscribers until a definite order to discontinue is received and all arrears are paid in full.

Bargain day at the White Drug Store (J. Dilworth, Manager.) See what a dollar will do.

Eggs from Minshall's black Minorcas should turn out well. Read his new ad.

Dr. A. W. Bell, the Cochon breeder, has surplus Cochins for sale and eggs in season. His birds win.

Mr. N. D. Forbes, the rose-comb Leghorn specialist, has decided to sell eggs from his special matings. See his announcement.

Pan-a-ce-a does the business—so the breeders say.

The Spramoter, Jr., advertised in this issue of REVIEW, is one of the most useful articles a poultry breeder can have. By it whitewashing, disinfecting, etc., can be effectually done and coal oil emulsion driven into all the crevices. Other sizes can of course be procured. If you want to know all about it write the advertisers for a circular.

Johnson & Stokes, whose ad. appears elsewhere, send out one of the neatest catalogues we have seen. The cover is beautifully printed in colors and half tone cuts, reproduced direct from photographs, of their specialties in flowers, vegetables, etc., are really artistic. A copy of this garden and farm manual will be sent free on application.

C. C. Shoemaker, whose large and attractive business announcement appears on the front cover of REVIEW, can supply you with any stock in any quantity you require. His catalogue contains much useful information and is well worth the small sum asked for it.

S. M. Clemons starts the egg season early, and is offering eggs from his pens of black Minorcas and buff Leghorns.

Toronto Incubators are doing good work in the hands of their users. Don't overlook them when about to purchase a machine, and now is the time to do so.

Mr. W. J. Gordan takes advantage of our offer of a yearly "small adv." for \$2.50, to advertise eggs from his various breeds. He also offers Homing pigeons.

Massie's white Wyandotte pens are headed this year by first cock and first cockerel at Toronto and the Ontario. So he says in renewing his yearly adv. His pigeons are away up. Write him.

Mr. A. J. Grigg is another breeder who joins our yearly advertisers. His specialties are Game and Game Bantams, and he has them good.

Mr. R. H. Essex sends us a change of adv. but we regret it was received too late for this issue. As is well known his specialty is the popular buff Rock and he has them of the best. He reduces the price of eggs. See March REVIEW for particulars.

Mr. W. E. Robinson is making a specialty of Indian Games and white

Langshans and the birds in his pens did so well at the Ontario that he is not ashamed to say so. Read his business announcement.

Back and front cover pages a matter of special correspondence.

Breeders' Directory, 1-5 col card, 1 year \$8; half year \$5.

These are our only rates for advertising and will be strictly adhered to. Payments must be made invariable in advance. Yearly advertisements, paid quarterly in advance, changed every three months without extra charge.

All communications and advertisements must be in our hands by the 20th to insure insertion in issue of same month. Address, H. B. DONOVAN

124 Victoria Street, Toronto, Ont

**JOHN HORD & SON, PARKHILL, Ont.,** Breeders of 15 different varieties of Land and Water Fowl, Toulouse Geese, Rouen Ducks. 1228

*Twelve Adv. \$2.50*

All advertisements of 30 words will be inserted EACH MONTH for one year in this column for \$2.50, paid in advance. Advertisements may be changed every month if desired.

This Coupon is good for one advertisement of 30 words in the "For Sale and Exchange" or "Stock Transfers" columns.

Canadian Poultry Review, Toronto.

To meet the wants of advertisers who are continually using this column, and who find it a great trouble to be constantly recutting small amounts, we have adopted the plan of issuing Coupons (as above) good for 30 words each, 4 for \$1. Any one buying these Coupons can use them at any time in lieu of money when sending in an advertisement. Not less than four Coupons sold.

Advertisements of 27 words, including address, received for the above objects, at 25 cents for each and every insertion, and 1 cent for each additional word. Payment strictly in advance. No advertisement will be inserted unless fully prepaid.

**FOR SALE**—One 200 Egg Monitor Incubator, 2 Monitor Brooders, 1 Clover Cutter. All nearly new, only one year in use. Wm. Warren, Oshawa, Ont. 598

*Says he sold \$35.00 worth from a 25c. adv.*

I find the REVIEW a great advertising medium. From a 25c. adv. inserted in the October issue, advertising white Langshans for sale, I sold over \$35 worth of birds, and could have sold in my more had I them to spare. Hardly a week pass but what I get two or three enquiries. It pays to advertise in the REVIEW. Yours truly,

A. T. KNIGHT, Guelph.

Dec. 23, '97.

**DID WELL FROM LAST ADV.**

Hope we are not too late for February issue, as we have a few more birds to sell. We did well from last adv. So you will please insert my adv. in February issue.

W. ELLIOTT & SON, Oshawa.  
Jan. 21st, '98.

**FREEMAN'S CELEBRATED POULTRY FOODS**—Beef scrap, egg producer, granulated bone, crushed oyster shell, mica crystal grit, superior meat meal, deodorized blood meal. Reduction in prices; send for revised price list and description of goods. Address The W. A. Freeman Co., Limited, 57 Ferguson ave., Hamilton, Ont. 398

### Sale or Exchange.

**I BARRED ROCK COCK**—Winner of 5 miles in good company, over standard weight, and an excellent breeder, \$2.50. Will exchange White Cockerel, Rice strain, and first-class barred pullets for Bantams. Chas. Watson, Londshoro, Ont.

**FOR SALE OR EXCHANGE**—Two trios of first-class Buff Wyandottes, also a number of Cockerels, Matison strain, including 1st and 3rd Cockerel and 2nd and 3rd pullet at London last fall; \$5 per trio; Cockerels \$3 each, or will exchange for Bantams, any variety. T. J. Kelley, 146 Oxford street, London, Ont.

**SIX BLACK MINORCA** yearling hens and a good cockerel for \$8, or exchange for Game Bantams, Pyle or Golden Duckwing. R. H. Marshall, Galt, Ont.

**FOR SALE OR EXCHANGE**—One trio B.P. Rocks for \$2.50; one pen Black Minorcas, 5 hens, 1 cock, \$4, if taken at once, or exchange. White or S.L. Wyandotte, hens or pullets. J. B. Woodhall, Thedford, Ont.

**WHITE WYANDOTTES** 2 Cockerels and pullets, bred from Ontario's best stock; will exchange for Bantams. J. T. Dougall, Barrie, Ont.

**FOR SALE OR EXCHANGE**—Chosen-bred Indian Games, cockerels; also few pullets; will sell cheap or exchange for Light Brahmas or R.C. White Leghorns. Coach Lake, seedman, Woodstock, Ont.

**COLLIES**—Four bitch pups for sale cheap; nicely marked, full pedigree, or would exchange for Toulouse geese. D. J. Jeffrey, St. Paul's, Ont.

**FOR SALE**—10 Rose Comb White Leghorn hens, and one cock, bred from the best stock in America, some of them are white as snow, or will exchange for ferrets of Belgian hares. Geo. Downham, Wisbeach.

**FOR SALE OR EXCHANGE**—For White Wyandotte or S.C.W. Leghorn Pullets or hens, 1 pen Black Minorcas cock, 7 hens, also 1 pen black Wyandottes, cock, 5 hens. These are grand breeding pens. Write for particulars. Will Secker, Liverpool Poultry Co., Dunbar, Ont. 298

### Various.

**FOR SALE**—We must have room for our breeding pens, and offer our surplus cheap, including 1 Silver Wyandotte cock, bred at Ontario, with hens and three cockerels, one black cock and 6 pullets; 3 white cockerels and 4 pullets, including cockerel and pullet, scored 94 and 93 1/2 by Jarvis. One Dominique cock, 1 cockerel and females. White Rock cockerels and pullets, Barred Rock cockerel, bred at Ontario, scored 93 1/2, price \$8; also 2 cockerels and 4 cockerel breeding pullets, (same stock), 2 pullet-bred cockerels and 2 pullets; 1st White Leghorn cock, hen and pullet, White Farm stock, and 3 firsts at Sarula; also pair Spanish chicks, cockerel scored 93 1/2; one fine black Cochin and some nice pairs of Cayuga and Rouen ducks. Our birds won 31 prizes at Ontario Show. Address Geo. Bague, Strathroy, Ontario.

**A RECORD—ONLY LOST 3 FIRST OUT OF 40 ENTRIES.**

At the great Southern Fair I won 1st, 2nd cocks, 1st, 2nd hen, 1st, 2nd cockerels, 1st pullet.

At Guelph I won 1st, 2nd cocks, 1st cockerel, 1st pullet.

At the Ontario, London, on 7 entries I won 7 regular and 2 specials, 2nd, 3rd cocks, 2nd hen, 1st and 2nd cockerels, 1st and 2nd pullets, special for best exhibit, special for best Minorca in the show.

At Brantford (American birds competing) I won 1st and 2nd cocks, 1st and 3rd hen, 1st, 2nd and 3rd cockerels, 1st, 2nd and 3rd pullets.

Orders booked now for eggs, \$3 per setting, \$5 for two settings.

All of the hens and pullets, winners above mentioned, are in my breeding pens; also 1st hen at Montreal and 2nd pullet, 1st pullet at New York, 1895.

Pens headed by my imported Abbot cock and Morgan & Snell cock.

J. H. MINSHALL,  
223 James street, Brantford.

**Toronto Incubators**

Highest Awards at Toronto Industrial Exhibition.

SILVER MEDAL 1895.  
SILVER and BRONZE MEDALS '96.  
BETTER THAN THE BEST AMERICAN MACHINES.

Mr. T. A. WILLIAMS, Toronto, Ont.  
STRAITFORD, ONT., May 17, 1897.

Dear Sir,—In reply to yours of the 10th inst. I have to say that I am highly pleased with your incubator. I got a batch of ninety per cent. of the fertile eggs, and this result in the month of March is, I consider, more than satisfactory. As doubtless you are aware I have run some three or four American machines, and with the exception of the Prairie State, found them anything but satisfactory. Your machine is in every respect the equal, and in some particulars I consider the superior of the Prairie State. Congratulating you upon having mastered the science of artificial incubation and wishing you many orders for the "Toronto."

I am yours truly, J. L. CORCORAN.

Send for Circular. Address the Manufacturer, T. A. WILLIAMS, 514 Dundas street, Toronto, Ont.

### Pure-Bred Dairy Shorthorns and Red Polled Cattle The Old-fashioned Bob-Tailed Sheep Dogs.

Prize-winners and first-class specimens always on sale. This is the largest and oldest established Poultry Farm in England. Illustrated Descriptive Catalogue, containing list of Prizes and Testimonials from customers in all parts of the world free on application.

Single-comb Brown Leghorns, White and Buff Wyandottes, Houdans, Rose-comb White and Brown Leghorns, and Buff Plymouth Rocks. The largest stock of the above varieties owned in this country, and the records will substantiate the claim of SUPERIORITY AS TO QUALITY—not records made at the county fairs, but records made in the strongest competition at the greatest American shows—New York, Boston and Washington—where, in the past five years, my stock has been awarded 186 first, 60 gold specials, 18 silver medals, and 6 silver cups. The line of blood I am breeding and exhibiting has produced and is today producing prize-winning specimens in every section of this country and in many parts of Europe. "Like begets like." Send for illustrated circular, giving full prize record of the leading and most popular strains of above varieties. Satisfaction is guaranteed.

GUERNSEY CATTLE. SCOTCH COLLIES AND FOX TERRIERS. JAMES FORSYTH, Riverside Farm, Owego, Tioga County, N. Y. Lock box No. 11.

# ROUP CURE GUARANTEED ROUP

CONKEY'S ROUP CURE is the only remedy that will cure roup in all its forms as long as the fowls can see to drink. For canker, especially in pigeons, this cure excels all others. It is simply put in drinking water, and the fowl takes its own medicine. The lives of two chickens is enough to pay for one tube, which will cure a hundred or more. Directions in every package. If this fails to cure we refund the money. Sent postpaid. Small size, 50 cents, large size \$1. **Petaluma Incubator Co., Petaluma, California.** Pacific Coast Agents. **G. E. CONKEY & CO., Cleveland, Ohio.**

# PIGEONS

## PIGEONS STOLEN.

### EDITOR REVIEW.

I HAD my pigeons returned to me this morning from the Owen Sound show with a pair of blue African Owls missing. I had just recently purchased them from C. W. Buttles, of Columbus. The hen has won first Cincinnatti, beating the Eckert birds; first Philadelphia, against all the eastern cracks; first Columbus and second New York; all colors competing, and Pigeon News said she should have been first; and many other prizes. The cock has won first Cincinnatti, first Newark, first Columbus, second Indianapolis, and consequently they were very valuable. I will give \$5 reward for same. My birds could not get lost in transit, as they were securely caged and canvas tacked tightly on front. They must have been stolen.

Yours truly,

W. M. ANDERSON.

Palmerston, Jan. 22, '98.

## PIGEONS, ETC., AT THE ONTARIO.

BLACK Carrer, Cock, J. H. Baulch 1st; hen, J. H. Baulch. A. O. S. C., hen J. H. Baulch; best collection Carriers, Baulch. White Pouters, cock, 1 and; hen 1 and 2 C. Massie. Blue Pied, cock, J. H. Pair Doves, 1 Price.

Mr. J. Bertie in this issue offers the first of a series of interesting articles on cage birds. Mr. Bertie, we need not say, is fully acquainted with his subject, his knowledge extending to both breeding and judging.

BELGIAN CANARY.

Will every subscriber to REVIEW who is interested in Pigeons, Cage Birds, etc., send us at once his name on a postal card, stating which branch of the fancy he is connected with? This is important to us as on it will depend, in part, our future course with this department.

# CAGE BIRDS

## THE NORWICH PLAINHEAD.

BY J. BERTI, TORONTO.

I HAVE been asked by several bird fanciers to explain through your paper what a plainhead Norwich should be, and for the benefit of the canary fanciers I now take the pleasure of doing so, and at the same time I would like the fancy to understand that this is from practical knowledge, having bred and exhibited this class of bird for over twenty years.

The up-to-date Norwich plainhead canary is as follows: Type of course is the first consideration. This should not be lost sight of, for if you have not the correct type you may as well say you have not the Norwich bird. I have seen hundreds of birds staged that at first sight would be thought to be winners, possessing color, quality of feather, and size, yet lacking the right type. It's a very easy matter to get color and quality of feather, but to breed the true Norwich type is not so easily done, length of bird not to exceed six and one-half inches, body chubby, broad chest and back, the chest showing no signs of a frill. This latter is a great detriment to a Norwich bird. Head and neck by all means must be in proportion to body, or the Norwich type is lost. A bird with thin neck and small head on a stout body looks mean and is not in proportion, and should always take a back seat. Neck should be short and thick, well set into body. Head broad and well arched, with good, wide entrance. I have been asked by fanciers what is the meaning of "a wide entrance." Well, the meaning is this: A bird that is wide at the base of the bill has a wide entrance. If a bird is pinched here, it gives the head a wedge-shaped appearance and is very objectionable. The head should also show no signs of overhanging eyebrows. Bill to be short, thick, and clear, although a ticked bill is not considered a mark. The eye to be large, bright, round and bold. Back to be in a straight line from back of head to tip of tail. The hump-backed bird, of which there are many, as a rule drops its tail;

these are both indications of crest breed. Chest gradually tapering to root of tail, with what is termed among bird fanciers "a clean cut," this is to say, showing no signs of loose feather hanging under root of tail, nor should it show a hollow place. Tail short and narrow; a wide or fan tail is very objectionable in this class of bird, more so than in the crest or crest breeds. Tail to contain twelve feathers. A bird with broken tail or wing feathers, or not containing the required number should certainly stand back, no matter how good the bird may be in other points. Wings fitting close to body and meeting feather for feather to their tips, and lying neatly over root of tail, each wing containing eighteen feathers. Legs medium length and well set back, showing no thigh. Position well over perch, not standing too erect or crouching too low. Feather throughout to be short, tight, and soft; color bright and level throughout. The ground color of a buff should look like a yellow covered with a beautiful meal or frosting. This latter is a great finishing touch to a buff bird. The yellow bird should show no signs of meal or frosting, but should shine like a piece of polished mahogany. Condition clean, spic and span, or, to use the fancier's phrase, "in the pink of condition."

## CAGE BIRDS AT TORONTO POULTRY ASSOCIATION'S SHOW.

A CANARY and cage bird show was held December 16th to 20th in connection with the Toronto Poultry and Pet Stock Show. Entries in this section were not over numerous. However, this was made up by quality, there being some very creditable specimens exhibited. Mr. J. Berti judged, and his awards gave general satisfaction. The awards, with his criticisms, are as follows:

Belgians, any color—First, H. Way; nice buff bird in good condition. Scotch Fancy, clear yellow—First, Way; nice bird, rather small, with fairly good circle and action; second, Jones; poor bird for the show bench. Clear buff—First, W. H. Naylor; only medium bird. Norwich, clear yellow—First, Way; fairly good bird, nice color and feather, rather nice

type, might have been a little stouter in head and neck; second, T. Barnsdale, stouter bird than first, inclined to frill on chest, wings and tail too long; third, W. Turp, nice feather, fairly good body, too stilty, little rough in head feather, and needs a wash; V. H. C., A. Boulthe, poor bird throughout, should have been kept at home. Yellow marked—First, Naylor, smart little bird, good type and position, might have been better color. I see you have caught on to the washing, Mr. N., and very creditable, too; second, J. Mattless, better color, loses in type and feather; third, R. Gore, nice type, color-fed, rather patchy and needs the suds; V. H. C., Barnsdale, nice color, too rough in feather, crosses wings bad. Clear buff—First, Barnsdale, fine, chunky bird, grand type and position, excellent chest and back, nice feather, head might have been better, shows a little brow; second, J. Park, nice little fellow, grand quality and color, shown in fine condition, loses in size and type; third, Way, nice bird, grand quality and color, head and neck not quite in proportion to body; V. H. C., Naylor, grand type, poor color, little too long in feather at rear part. Buff marked—First, Jones, small but good, rather nice type, excellent quality. Get him in the wash-tub, Mr. J., or you'll have to go back a notch; second, Mattless, larger bird, rather soft feather, inclined to frill on chest; third, Gore, color-fed, nice bird but dirty, would probably have won if been clean; V. H. C., Jones, nice quality, but too small. Crest, any variety—First, Gore, nice buff, long weeping banded crest, good back, wee bit weak at side, nice stout body, wins well; second, Boulthee, yellow, shows lots of the Lancashire cross, nice front, but open center, and badly horned; third, Way, loses in shape, length, and quality of crest, nice size, also shows a dip of the Lancashire. Norwich crest bred plain-head—First, Park, fine, stout body, grand head, good entrance, long head-feather, looking better than when shown at the C. C. and C. B. S. show on Thanksgiving Day; second, Boulthee, not looking so well, after having the upper-crust disturbed, although good length of head-feather, but not so wide and good in shape as winner; third, Way, nice body, rather long head, nice, dark cap, loses in size of head to first and second. Crest bred, A. O. V.—First, Gore, useful bird, good quality of feather, good head. Yorkshire, clear yellow—First, Stevens, nice, straight bird, nice color

and quality, good condition; second, Naylor, larger than winner, shown in fine condition, but bends a little, still gives winner a close rub. Clear buff—First, Naylor, too thick, and too soft in feather, nice condition; second, Stevens, bends quite a bit, a bad fault for a Yorkey. Yellow marked—First, Way, nice position, good quality of feather, fine condition, rather short for a good Yorkshire; second, Stevens, not so good in color, quality of feather and position. Buff marked—First, Stevens, nice, clean bird, nice quality of feather, and condition, bends a wee bit; second, Turp, loses in size, color and condition; third, Naylor, open feather, poor color. Golden Lizard clear cap—First, Park, good, ground color, nice, clean cap, nicely spangled, wins well; second, Naylor, loses in size and spangles, nice cap, damaged tail. Silver Lizard clear cap—First, Park, beautifully spangled, grand quality, nice cap, wins well; second, Naylor, larger bird, loses in quality; spangles all intermixed. Lizard broken cap—First, Park, smart little bird, pretty near a clear cap, nicely spangled, fine quality; second, Naylor, loses in spangles, cap and color. Yellow cinnamon—First, Naylor, fine bird, grand quality of feather, good cinnamon color, in nice condition. Buff cinnamon—First, Park, nice quality, close as wax, beautiful neat head, an easy winner; second, Collins, too dark in color, otherwise a nice bird, fine quality; third, Naylor, could not judge this bird, looking pretty sick. Yellow or buff marked cinnamon—First, Naylor, grand quality feather, nice condition and color, rather inclined to be foul-chested; second, Way, Yorkshire type, pale color, nice quality. Goldfinch—Park, nice Joey, shown in good condition, fairly good blaze; second, Naylor, loses in size and blaze. Bullfinch—First, Threlkeld, fine Bully, probably a Russian, very large and tame, nice color and condition; second, Park, another fine bird, English, fine color and feather, tail in bad shape; third, Naylor, loses in color, condition and size. English thrush—First, Park, nice bird in good feather. Any other variety cage bird—First, Park, nice, lightly marked, mule shown, in the pink of condition; second, Boulthee, larger bird than winner, not so nicely marked, ground color not so clear, poor blaze.

**VICTORIA PIGEON LOFTS**

Breeders and Importers of 20 varieties of High Class Fancy Pigeons. Manufacturers of the famous Aluminum Seamless Bands for Pigeons. Prices on Quantities as Required.

Cheaper than any American Rings, Made with initials, year and number from one up. Always bright, never tarnish. Thirty to forty per cent. duty saved by using my Rings, which are up to date. **THE OUTLOOK FOR 1898.**

BY H. S. BABCOCK, PROVIDENCE, R.I.

**G**UESSES at truth are not always accurate, but they are usually of some value. If they do nothing more, they set people to thinking, and that of itself is a result of value.

The writer does not profess to have the power of prophecy or to have better opportunities than others to predict the course of poultry trade during the year which has opened. He can only give what he guesses to be the truth.

And first as to volume. The poultry trade of 1898 bids fair to be large, perhaps larger than for several years past. This prediction is based upon the fact that the past winter has seen very many exhibitions, quite a number of which have been phenomenally large and well attended. Exhibitions, especially if well attended, directly stimulate poultry breeding, by encouraging old fanciers and producing many new fanciers. These, exhibitions, too, have been char-

acterized by having a larger practical character than heretofore, and as practical poultrymen produce more poultry than fanciers, this class has been encouraged and stimulated to renewed effort. For these reasons it seems fair to infer that the volume of the poultry trade will be increased.

And second as to prices. It seems to this writer that the average price of poultry products will be somewhat less than has been the case in the past year. If more is produced and the number of buyers remain practically the same, the law of supply and demand will effect a reduction in price. Yet it does not seem probable that the price will fall very materially, but that there will be a slight falling off in the average prices obtained. This will probably be the result in dressed poultry and eggs, in ordinary breeding stock and in eggs for hatching, especially in the so-called practical varieties. But as the demand is always greater than the supply for the highest class of birds, this class will probably maintain its present prices and perhaps advance somewhat. Exhibition birds, sure winners, will probably be higher than ever, for the prospects are that, despite the depression in some branches of business, leading to painful cut downs in wages, general business will be better in 1898 than in 1897 and there will be more money which can be devoted to the purchase of exhibition birds.

If these predictions are correct, the outlook is on the whole favorable, especially to fanciers, and the moral is, to the fancier, to strive to breed the finest birds within his power, for they are the ones which will pay him best. The practical poultryman should strive to cut down the cost of production and should study the markets so as to know when and where to purchase his supplies at the best advantage and to sell his products for the best prices. By devoting more thought to the business the margin of profit need not be reduced, and 1898 may prove a very profitable year for all classes of poultrymen.

(The above was crowded out of Poultry Department.)
