Canadian Poultry Review.

DEVOTED TO POULTRY AND PET STOCK.

Vol. 5.

STRATHROY, ONTARIO, MARCH, 1882.

No. 4.

BREEDING PEN OF LIGHT BRAHMAS,

As exhibited by Mr. R. MacKay, Hamilton, Ontario, Canada.

Artificial Rearing of Domestic Fowls.

BY WILLIAM HENRY THICK, 338 Gloucester St.,
Ottawa, Ont.

No. V.

You must multiply the number of the chicken houses of each kind and the weaning boxes if the number of chickens you hatch require it, because making them larger, especially in point of breadth, would not be an equivalent, for the broader these boxes are the more difficult it is to preserve a warm air in them, for they are not exactly in the case of the casks, which are seldom the more difficult to be warmed, for having a larger diameter; they have a free communication with the air without, and are buried much shallower in the dung. Their breadth may, nevertheless, be made something bigger than that I have determined for the chicken houses which serve during the winter, and greater still for those that should be used only in summer time. The summer tuition frees you from using a few other precautions which the winter one requires; when the season is cold you dare not expose to the outward air chickens that have been brought up tenderly. When these are grown big enough to want a larger room than that they have in the weaning boxes, that is when they are grown bigger than blackbirds, I put them into a spacious cage, well furnished with sticks for them to roost upon, in which they are able to use their wings. It is a lodge or cottage.

It is easy to imagine what the little timber work necessary to make the body of that cage, and to support the grate work of it, can consist of, and there will be no need of describing the several pieces of it and their connection; but I must not forget to mention that its bottom is made with a few boards laid upon the dung of the hot bed that serves for the hatching of chickens, and to bring them up in their tenderest age. It may be warmed again by surrounding it with dung, which is hindered from passing through the grate work by means of an inclosure of a board on edge. The cage has at one end a door through which a man may enter. The chickens are fed there like all these which are fed in the other cages, a mother is even become needless to them; they have already taken, or are ready to take a liking to the custom of roosting, which is common to all the large poultry of their kind. The chief difference between the winter and the summer education is, that you are not obliged in summer time to keep the chicks in the place where the hot bed lies till they are grown quite as big as those which come to our tables; they may be let into the open air in fine warm days, and they seemed to me to grow much quicker for it. Those that have lived in the wean-

ing box, and the strongest of the second chicken house may be taken out of them a few hours before the sun rises when it seems to promise a fine day. They must be put one after another into a deep chicken basket and then you will carry them under a cage laid on the grass, and in the most favorable position you can possibly choose, that they may enjoy the sunshine without being too much exposed to the wind. These cages must be prisons to the little chicks only during the few first days at most; the liberty of going out must be granted them when the weather is fair. One might be afraid they should disperse for want of a hen to guide them, for the clucking of the mother and that of the capon call back to the main body of the crew those who happen to go from it, but they are fond of keeping together, and if any one chances to be too remote from the rest his squeaking betrays his uneasiness, and he listens to try whether he cannot hear his companions make an noise that he may find them again. You see them flock together under the cage at night. You then stop all the doors of it, take them back and put them to bed either in the weaning box or in the chicken house, or at least under shelter in a place shut up and under one and the same cage. When they are grown strong and the nights are not cold enough to make it necessary for them to be warmed, then the time comes when they may be put to roost along with the rest of the poultry. They will then roost all night long, and may be let out of the hen house in the morning without concern or uneasiness. An artificial mother or a small roof, contrived in the cage placed in the open air, serves to shelter the chickens from a heavy shower, and it gives you time to take them in again before they are wet. The cover may be made of thin boards or a plain frame furnished with an oil cloth. I sometimes erect upon four pillars a small roof under which the cage is put, then the chickens have nothing to fear from the rain, and being at liberty to go out of the cage they enjoy the sunshine when they please, and they are allowed to go to the places exposed to its beams.

(To be continued)

Fat Poultry at the Paris Show.

The inspection of the exhibition of dead poultry at the show that has recently closed at Paris was quite sufficient to repay the cost and trouble of a journey to the French metropolis. Nothing equal, nothing even approaching to it, was ever seen in this country.

The Grand Prix d'Honneur was taken by the birds of the La Fleche breed. It is difficult to convey to anyone who has not witnessed one of these expositions an idea of the size and quality of

these fowls. In whiteness of skin and fat they are scarcely surpassed by the clean linen on which they are arranged, with their legs and wings tied together under their breasts, and their backs covered with layers of hard, solid, white fat displayed to the spectator. An idea of their merit as table fowl may be gained from a knowledge of the prices not merely asked, but obtained for the best specimens. Several were marked as being sold at 60fr. each, a large number at 40, and only the smallest at 20fr.

There were distinct classes for both cockerels (Chapons) and pullets (Poulardes), but Mme. Aillerot *nee* Lussen, who won a prize in each class, informed me that not one in ten of the cockerels had been caponized.

I have no doubt that it will be regarded as downright heresy to say so, but for almost every requisite that constitutes a good table fowl, I regard the La Fleche as by far the best of the pure breeds. I had a La Fleche pullet from one of the Paris expositions cooked and served on the same dish with a first-class Dorking, and am compelled to say that the foreign far surpassed the English breed. The objection that has been frequently maintained against them in this country is, that they are delicate to rear. I have had no experience hitherto in raising them myself, so cannot answer the objection, but I have resolved to give them a fair trial during the present season.

The Crevecoeurs were very fine, but not quite so heavy as the La Fleche, though equal to them in quality of flesh.

The Houdans were not so high in merit, the first and second prizes being withheld. Nevertheless a French gentleman, whose guest I had the pleasure to be, was unable to obtain a specimen for our consumption, under 18fr.

The La Bresse did not appear to me to figure better as dead poultry than as live birds.

The turkeys were magnificent in quality, though, being young birds, they did not equal in size the two-year-old specimens that appear in the London shops at Christmastide. The price on one of the prize birds was 8 fr.; need I say that I did not secure it, so can say nothing about the flavor, but it looked everything that could be desired.

Geese and ducks were shown under two distinct sets of conditions. Those fattened and killed for subjects (*pour la broche*) were red, and not appetizing to look. They had been killed by strangulation, without loss of blood, under which treatment they are supposed to be of superior excellence for the table. Those which were fattened for the Strasbourg patties (*sujets pour la production des foies gras*) were cut open to show the fat livers, which are, I must confess it, at once a disease and a delicacy.

In the class for dead pigeons the prizes were withheld. Guinea Fowls and rabbits, the latter especially, were very good.

The conclusion that is forced upon anyone comparing the English and French dead poultry is that in France smallness of bone, absence of oil, and quality of skin and flesh, are regarded as of much higher importance than in this country.

I did not see a single feather-legged fowl in the whole show of dead poultry; nor one which was characterized by large bone or coarse skin. Quality was the chief object aimed at, and as it was combined with large size in the La Fleche breed, the birds of that variety secured the highest prizes as well as the highest prices.

W. B. TRIGEMIER, *in Field.*

Our Lefroy Letter.

Editor Review.

Having been either very busy or very indolent this month, it is not till half past the eleventh hour that I sit down to write a few lines to my old friend the Review.

During the last winter I have been more than ever convinced that I. K. Felch is orthodox when he says "A good shed is as necessary for poultry as a good warm roosting place is." I quote from memory.

I am in favor of having half of this shed inclosed tightly enough to keep out the snow of a stormy day, while the other half is open to the south. There are many days in winter in this northern clime that fowls cannot be induced to remain out in an open shed, for unless the shed is very large indeed the snow will drift in; or of a cloudy day, with a cold wind from southward it is a poor place. On all such days the inclosed half of the shed will be used, and by having plenty of straw and chaff upon the floor, and a few handfull of unthrashed grain suspended from the roof or wall, the fowls are kept busy and comfortable.

But, it may be objected: This inclosed shed is nothing but an enlargement of the poultry house, and why not say at once, enlarge your poultry houses to double or treble their present size? But this shed is a very different place, no care need be taken to have it warm, and it can therefore be built at a fraction of the expense which it will take to build a house proper.

It seems to me that it makes little difference what means are adopted to induce fowls to take exercise in winter, but that they have it, is, in my opinion, almost indispensable to continued success. It will be found to be a remedy for feather eating and many other such tricks, and for almost all the ills to which fowls are subject. Of course this is only my opinion, based upon a limited experi-

ence. I have found a good warm breakfast to be a good thing for fowls, but the warmth consequent upon exercise to be better; of course the warm foods produces the warmth while the exercise maintains it.

In conversation, at Yorkville, with Mr. Wright, of Richmond Hill, upon this subject, he said "I am so strongly impressed with the necessity of having sheds in addition to my regular poultry house, that I have decided to tear out the front of every alternate pen, thus converting them into sheds."

Now, Sir, if I were building again this would be just my plan; first a shed, then a pen, and so on. Of course it must be remembered that I deal with one variety only, and write accordingly. I shall build during the summer, in addition to my present supply, two more sheds, one 12 by 25, the other 12 by 14.

I have met the following peculiarity during the winter in the growth of comb in Light Brahmas. I sold some half dozen young cockerels to a neighbor, some four of which he again sold, retaining four for his own use, selecting those with small, neat combs. Since, both of these birds have developed the largest combs I ever saw on a Light Brahma, while those sold by him have small, fine combs. All my own birds have also small combs. Now, what is the cause of this, is the question. I said at once, too much meat, but the answer was, "They got no meat only such as they picked up." Now, as this gentleman can affirm, he came right into my yard and brought two clutches of chicks all but two, which I selected out of the lot, while they were yet small, and so they were just the same as the rest. The argument that they have bred back will not do in this case. The cock used was direct from the yards of P. Williams, Esq., and had a good comb, and I am confident that P. W. has not used a bird with such a comb for the last twenty five years. I must conclude for this time.

I am yours fraternally,

GALLINÆ.

Lefroy, March 2nd, 1881.

Hatching.

The very important work of hatching out the chickens is now in order. We have no doubt but that among our new subscribers of this year, there are many who have not had much experience in management of the setting hen, and will be glad to receive some hints upon the subject

CARE OF THE EGGS.

The eggs should be collected as soon after being laid as possible, especially in cold weather, and placed on end in a box or drawer in which there is sufficient bran to hold them in position. The fresher the eggs are when put in the nest the

more apt they are to hatch strong chickens; they will hatch after being kept a considerable time, but when over two weeks old they should be discarded.

THE NEST.

The nest here illustrated cannot be improved on for hatching purposes. It is simply a cheese-box, with the bottom and cover connected by four laths about eighteen inches long, nailed firmly with clove nails, and covered with coarse sacking. Fill this with moist earth to within four inches of the top of bottom part, hollow out a little in the centre, place a bedding of a couple of inches of soft straw on the earth, and it is ready for use. The sacking should lap over at the opening, and can be fastened with a pin or button. The loose nature of the sacking allows sufficient air for the hen, without draughts, and plenty of light. This nest can be set anywhere, and is so cozy that the hen becomes greatly attached to it. She is never alarmed by anything that may be going on about her. The cost will not exceed 25 cents.

THE HEN.

Nearly all the varieties that hatch will produce good sitters, but there is as much difference in this respect as there is in laying—of two sisters one may be a good sitter and the other a poor one. With proper care it is very seldom that a hen will desert her nest. There are some hens that are unable to hatch eggs, not having sufficient animal heat in their bodies. This is seldom the case when the bird is in good health and condition.

The number of eggs placed under the hen should be regulated according to her size; a common barnyard fowl can cover 9, a medium size hen 11, and an Asiatic 13. In warm weather two more may be added to these numbers.

The hen should never be given the eggs until well settled down to business. Four or five pro-

celain nest eggs will do to serve her apprenticeship on. When sure of her—and also sure that she is free from vermin—give her the eggs in the evening, and close her on the nest. Take her off every day and give a good feed of corn, and fresh water to drink; gravel should be within her reach also. (Corn is put to its best use in the poultry yard when given to the hatching hens.) A good plan is when you go home to dinner to open the nest and throw down the food; when you have eaten dinner she will generally be ready to go on again. Try and have her come off after 21 days setting in as good flesh as when she was first placed on the nest—it will do no harm to try.

It is the hen's business to hatch the eggs, but there are often little things to be done to insure her work being successfully accomplished that she cannot do. Should an egg get broken in the nest and foul the others, you must take them out and clean them, using tepid water; put in clean straw, and return to the nest after having wiped them dry. Keep the nest always clean. Examine the hen frequently to see that she is free from vermin.

After eight or nine days the eggs should be examined and the sterile ones removed. These can be detected by holding them close to the light of a lamp, placing the thumb and fore fin-

ger around the egg to better throw the light through it; the sterile eggs will not have changed, being still clear, but those that are fertile will appear dark. If two hens are set at the same time the removal of the sterile eggs may reduce the number in the nests so that one hen can cover them, and fresh eggs may be given to the other.

We know a young fancier who got mixed a little on this matter. He bought a setting of eggs at a high price, and put them under a hen that did her duty faithfully. On the 17th day he examined them, finding all dark, and, as he expressed it, "about half full," he was very much provoked at his supposed hard luck, and mad at the "fraud" who sold such eggs. In his wrath he threw them out, nest and all. There was some emphatic language used when he discovered that every egg contained a live chick.

After the 17th day sprinkle the eggs daily with tepid water, which will make it less difficult for the chick to make its way out of the shell. If your hen is quiet remove the empty shells as the chicks hatch out; they often get over the end of those chipped and smother the chicks; but if the hen is wild it is better to risk this than excite her as she would be apt to tread the newly hatched chicks to death. Leave hen and chicks in the nest for twenty-four hours after they are hatched. They will not require food for that time.

The Ferret.

The ferret is a useful animal, as well as a pet—there are two kinds, French and English; one being a yellowish white, the other dark brown. They will live and do well on bread and milk, with a little raw meat three times a week. This is the proper feeding when kept for rabbit hunting; but if the ferret is kept for rat-hunting, it should be fed raw meat at night, omitting the bread and milk. They should not have any more food than they will eat clean at the time of feeding. If they become too fat, give them

less milk and more water. They should always be eager for their meals.

Ferrets should be kept in hutches. A hutch $4\frac{1}{2}$ feet long, $2\frac{1}{2}$ feet wide, and $1\frac{1}{2}$ feet high, is about the right kind, the front can be of wood or iron rods, $\frac{1}{4}$ inch iron, and $\frac{3}{4}$ inch from centre to centre, is most suitable. They will stand the coldest weather, if given plenty of good, fine straw for a nest, and kept dry and well ventilated. They are very cleanly animals and will use one corner of their runway for excrements. Clean their quarters three times a week in summer, and less will answer in the winter.

Ferrets should be kept by themselves through the breeding seasons; the rest of the year from two to eight can be kept in one hutch. The male should be kept separate or run with the females until February, when the breeding season arrives.

The habits of the ferret in breeding are nearly like those of the dog tribe. They go with young six weeks, and have from three to eleven at a litter; will have two litters a year. Five to seven is as many as can be raised without extra care. For five days before it is time for the female to litter, give her a nest of clean straw; the amount of straw must be regulated by the weather. The young must not be too closely bedded. It is not safe to disturb her young until two or three weeks old, as she might destroy them. They are born blind, and are a number of days before they can see. They are very playful when the right age, and will get in all kinds of shapes.

Ferrets should be handled from the time they are placed before the feed cup; a short time will teach them to be handled without gloves. Never tease them, as it tends to make them cross and snap at anything that moves before them.

Ferrets will hunt when three or four months old. Give them a mouse or half grown rat at first to kill; after they have killed a few they will handle old rats. A full grown rat at first might bite the ferret, so it would be timid always after, but after they have killed one or two without being bitten they will make an old rat squeal. When a ferret has killed a few rats he is ready for all kinds of hunting.

Small ferrets are best for ridding. Female ferrets, weighing twenty ounces, will follow the rats into their holes and do bitter work than the males, which are larger.

Never muzzle your ferret for rats, but it is best to muzzle for rabbits, for if the rabbit has no way of escape, and the ferret kills it in the hole, it will be some time before it will make its appearance, and hinder those that are waiting for it to come out.

It is a great wonder that there are not more that keep ferrets, for they are sure to drive the rats from their hiding places; and for hunting rabbits they cannot be beaten, besides the sport one can have with them.

H. E. SPENCER.

Centre Village, N. Y., Jan'y 20th, 1882.

The good accomplished with steel pens is incalculable, but the cost of a box of Easterbrook's is only nominal. The stationers have them. The trade supplied by Brown Bros., Toronto.

The Poultry and Dog Exhibition at Simcoe.

Editor Review.

The third annual show was held in the drill-shed here on the 6th, 7th and 8th ult., and was a decided success. Three years ago a few fanciers here, prominent among whom were Messrs Arthur W. Smith, L. D. S., S. Luscombe and T. and O. Fitzgerald, met and organized the Norfolk Poultry Association, and held the first annual show—partaking, of course, more of a local nature, but still was a good show indeed for the first attempt, and many were surprised at the success. As a natural result, quite a number here had a violent attack of "hen fever," purchased eggs or stock, yes, and I'll admit too, that the disease, which had been with me in a low chronic state for a long time, developed into full activity, and we all went to work to improve our yards. The exhibition of '81 showed a large increase of entries, and the quality of stock on exhibition was far superior to that of the first show.

At the annual meeting following the second show, held in March 1881, it was decided to give prizes on dogs at the show for 1882. This step was taken in the interest of the people of the town, who had largely contributed to the support of the previous shows, and who, probably, like the inhabitants of other towns like Simcoe, have, with a few exceptions, no particular fancy for poultry, but have each a dog, no doubt that is to the owner a source of very great pleasure and profit, and whose value may be estimated at from \$5 all the way up to \$3000 or \$4.00. The results of our late exhibition show that the combining of the dogs with poultry was a good thing. The dogs not only paid their way, but were a great attraction. Many came to the show as visitors out of curiosity to see a dog show. The show of poultry was admitted by all to be by far the largest and best ever seen in Simcoe—one of the oldest Towns of Canada. I cannot express my regret that you were not here. I should gladly have yielded you the honors of reporter, critic, &c. The drill-shed proved to be well adapted for the show, being large, comfortable and with plenty of light. The dogs, some 70 entries, were kennelled on the western side, and the poultry, nearly 550 entries, were cooped towards the eastern side. Dr. J. S. Niven, of London, was the judge on dogs, and gave entire satisfaction to the directors and exhibitors, not a dissenting voice being heard. Being entirely ignorant of the qualifications required to be able to judge whether a dog is well bred or not I shall offer no criticism on the judging, but to any ordinary observer the condition and appearance of nearly all the dogs would at once claim attention. They were all so clean, and in this respect were pleasing and at-

tractive to look at, and in most of the classes the competition was keen, particularly so in English Setters, Beagles and Collies. Exhibitors who won in these classes may well feel proud of their specimens. One of the chief attractions of the show was Dr Niven's two dogs, black cocker spaniel, "Blossom" and Irish terrier, "Norah." They were kindly placed on exhibition, not for competition. The judging of the dogs was done in a large ring in the centre of the shed. In poultry the classes were nearly all filled, and the competition keen. A well known fancier remarked that there was scarcely a bad bird on exhibition and that fifty per cent. of the winners would hold their own at the best shows in Canada. Reference to the prize lists will tell the exhibitors' names,—none among them more deserving of mention than those of Messrs Aldous, W. M. Smith, D. T. Rogers and Dan. O'Shea, who came long distances with their magnificent specimens and contributed to the success of the show.

PURE QUILL.

Simcoe, March 8th, 1882.

New Brunswick Poultry, Dog and Pet Stock Association.

The annual show of this association was held in the city of St. John on the 17th, 18th, 19th and 20th January, and was, the secretary informs us, a great success—"the best, by long odds, we have ever held." The fowls were judged by Mr. C. F. Thompson, Wadley's Falls, N. H., and the dogs by Mr. Geo. Walton.

PRIZE LIST.

Brahmas.—Light, Chicks, Wm Hayward, Munc-ton; 2nd, C P Sutton, South Bay. Dark, Fowls, 1st, Henry Keeler, Dartmouth; 2nd, J B Snowball, Chatham. Chicks, 1st, Henry Keeler.

Cochins.—White, 1st, J P Clark, Carleton. Chicks, 1st, same. Black, 1st, Wilson Bros. Chicks, 1st, same. Buff, Chicks, 1st, J B Snowball.

Dorkings.—Colored, 1st, Henry Keeler.

Hamburgs.—Silver Spangle, 1st, C B Thompson. Chicks, 1st, same. Black, Chicks, 1st, Wilson Bros.; 2nd, W B Drake.

Black Spanish.—1st, Walter Starkie; 2nd, H Keeler.

Lugborns.—White, 1st, W A Jack; 2nd, R M Magee; 3rd, O W Wetmore. Chicks, 1st 2nd and 3rd. Brown, 1st, J P Clark; 2nd, T B Thompson; 2nd, Wilson Bros. Chicks, 1st, Walter Starkie; 2nd, Philip Law, Munc-ton; 3rd, O W Wetmore.

Polish.—Golden, Chicks, 1st and 2nd, Wilson Bros. Silver, 2nd, Wilson Bros. Chicks, 2nd, O W Wetmore.

Games.—White, Chicks, 1st, H Campbell. B B Red, Fowls, 1st and 2nd, Col A Blaine; 3rd, Snider Bros. Chicks, 1st 2nd and 3rd Col A Blain. Yellow Duckwings, 1st, Col A Blain. Chicks, 1st, same. Silver Duckwings, 1st, McLaren Bros. Chicks, 1st, same. Red Piles, 1st and 2nd, Snider

Bros; 3rd, Capt McKenzie. Brown Reds, 1st, Capt McKenzie. Chicks, 1st, same.

Game Bantams.—B B Reds, 1st, Col. A Blain; 2nd, Hugh Campbell; 3rd, W B Drake. Silver Duckwings, 1st, McLuan Bros; 2nd, F Hawes, Yellow Duckwings, 1st, Col A Blaine; 2nd, R W Magee. Red Piles, 1st, Snider Bros. Chicks 1st, same; 2nd, W B Drake.

Plymouth Rocks.—Chicks, 1st, O W Wetmore; 2nd, Philp Law; 3rd, J P Clark.

Bronze Turkeys.—1st 2nd and 3rd, E C Woods, Simonds.

Geese.—African, 1st, Wilson Bros. Brown Chinese, 1st, A Lordly.

Ducks.—Aylesbury, 1st, O W Wetmore. White Crested, 1st, O W Wetmore; 2nd, Hugh Campbell. Colored Muscovy, 1st 2nd and 3rd, Hugh Campbell. Rouen, 1st, 2nd, and 3rd, Snider Bros.

Pigeons.—Homing Antwerps.—Silver Dun, 1st, W B Drake, 1st Blue, 1st, F W Kaye; 2nd W B Drake. Blue Chequered, F W Kaye. Red Chequered, 1st, F W Kaye. Black English Carriers, 1st, Wilson Bros. Black Bald Head Tumblers, 1st, W B Drake. Red Pied Pouter, 1st, and 2nd, Wilson Bros. Black Barb, 1st and 2nd, Wilson Bros. White Jacobins, 1st, Wilson Bros. White Fantails, 1st and 2nd, Wilson Bros. Black Fantail, 1st, Wilson Bros. Yellow Fantails, 1st, Wilson Bros; 2nd, W B Duke. Blue Fantails, 1st, Wilson Bros. Mottled Trumpeter, 1st, and 2nd, same. Blue Owls, 1st and 2nd, W B Drake. Black Nuns, 1st, Wilson Bros. Red Swallows, 1st and 2nd, same. Magpies, 1st and 2nd, same. Birmingham Rollers, 1st and 2nd, C P Sutton. Black Trumpeters, 1st, Wilson Bros. Collection of Pigeons, same.

Turtle Doves.—1st, Wilson Bros. Ring-Neck Doves, 1st, same. White Doves, 1st, W Starkie.

Collection of Guinea Pigs, 1st, Wilson Brothers. Collection of other Pets, same.

Collection of Cage Birds, 1st, Wilson Bros.

SPECIALS.

Heaviest pair Asiatics: pair Light Brahmas, W Hayward. Best pair Dark Brahmas, H Keeler. Best pair Light Brahmas, same. Best pair Cochins, any variety, Wilson Bros. Best Cochins hen or pullet, same. Best pair Hamburgs, any variety, same. Best pair Black Spanish, Walter Starkie. Best pair White Leghorns, R M Magee. Best pair Brown Leghorns, W Starkie. Best pair fowls, any variety, Col A Blaine. Best hen, any variety, same. Best hen or pullet, any variety, same. Best cockerel, any variety, same. Best cock or cockerel, any variety, same. Best pullet, any variety, same. Best pair of game fowls or chicks, any variety, same. Best pair of black-breasted red Game, same. Best pair of chicks, any variety, same. Best pair of fowls or chicks, same. Best pair of red pile Game, Snider Bros. Best pair Game Bantams, Col A Blaine. Largest variety of fowls or chicks entered by one person, O W Wetmore. Best pair Turkeys, any variety, E C Woods. Best pair Ducks, any variety, O W Wetmore. Best pair pigeons, any variety, (pair yellow Jacobins) Wilson Bros. Best collection of pigeons, Wilson Bros.

Best Setter dog, Col. Ibbotson.

Montreal Poultry and Pet Stock Association.

The annual meeting of the above Society was held at the Mechanic's Institute last evening, with Mr. Scriver in the chair. The Chairman in opening the proceedings said that although they had held no exhibition last year and were to all appearance in a dormant condition, he considered that 1881 was one of the most satisfactory years they had passed through. Their members, though they had not had an exhibition in Montreal, had exhibited in other parts of the Dominion, and had carried off prizes at Sherbrooke and Brantford. The Treasurer's report showed the receipts were \$316.69 and the expenditure \$299.10 leaving a balance of \$17.59. The reports were adopted. A discussion then ensued as to the advisability of forming a Provincial Association and the Committee reported that the Sherbrooke Society was willing to amalgamate, and had empowered them to take steps to this end.

On motion of Dr. Nichol, Mr. Campbell seconding, it was resolved to strike the word "Dog" from the name of the Society. On motion of Mr. Costen, Mr. St. Jean seconding, the annual subscription fee was raised from \$1 to \$2.

The following officers were then elected:—President, J. F. Scriver; First Vice-President, T. Costen; Second Vice President, T. Hill; Third Vice-President, Dr. Nichol; Secretary and treasurer, Jas. H. Cayford. Executive Committee:—Messrs. E. N. St. Jean, J. C. Philpott, J. Riddle, W. Lavers, J. Price, J. Hooper, J. Ainslie, Dr. Audres, W. Cox, and R. Lavers.

The meeting then adjourned.

Local Judges.

Editor Review,

I notice from the report of the Ontario show that several of the judges were exhibitors, and that some of them were competitors in the class they judged; especially was this the fact, I believe, in the Game class. Furthermore, I believe that all the judges were members of the association, and were, strictly speaking, local men.

Now, Sir, I was not an exhibitor at that show, and am not, therefore, open to the accusation of having a "sore head," or disappointed exhibitor,

but I have the interests of the poultry associations of the Dominion at heart, and wish to see them prosper. I do not, for an instant, doubt that the gentlemen who acted as judges are all men of honor and integrity, and well acquainted with their duties, but the fact of their being local men, and some of them competitors, can't but have a bad affect, especially upon exhibits from a distance.

I think that it is the duty of all associations to obtain the services of qualified judges whose residences are as far removed from the locality of the show as possible. There would then be no chance for disappointed exhibitors to raise the cry of "local influence and partiality."

I think an old established association like that of Ontario should lead the younger associations and set them an example; yet we see this point strongly insisted upon and carried out by the Montreal, Sherbrooke and New Brunswick Associations. So strong was the feeling on this point that at the late exhibition held at Sherbrooke the association thought it advisable to obtain the services, at a great expense, of two of the most eminent American judges, living as far away as Buffalo, N. Y. I allude to J. Y. Bicknell and Abel F. Stevens, of Wellesly, Mass.

I am in favor of Canadian judges, but think they should not be gentlemen locally interested in the exhibition or association, but obtained from a distance.

By inserting this you will much oblige

Yours &c.,

ANTI PARTIALITY.

Sherbrooke, P. Q., March 11th, 1882.

A Good Chicken Coop.

The above little cut of a chicken coop explains itself so well that little need be said about it. Any handy man can make it. The only part that may require any explanation is the front wooden covering. This is made in two parts and hinged, so that one serves as in evening, and the other as a feed board. When closed there should be about an inch space between for ventilation. Set on movable wooden bottom or floor, and it is rat and cat proof.

Canadian Poultry Review.

IS PUBLISHED THE 15th OF EACH MONTH AT
STRATHROY, ONT., CANADA.

Several too late for this month.

The officers of the Yorkville show promised to furnish us with a correct list of awards, but failed; and after waiting two days we were compelled to copy from the local papers. Our attention has been called to the following errors: Mr. Barber, of Toronto, was credited with prizes on Brown Red games; he does not breed that variety. He won 1st and 2nd on Golden duckwing fowls; 1st and 2nd on chicks, and 1st on Silver Duckwing chicks. W & A Wright of Richmond Hill, won 1st on Dark Brahma fowls, and not C. H. Hall, as stated. W. Stahlschmidt is entitled to 1st prize on Brown Leghorn chicks. George Hope, of Yorkville, took 1st prize on Plymouth Rock fowls, not chicks as stated.

The export of eggs from the Dominion of Canada for the year ending 30th June, 1881 amounted to 9,099,135 doz., valued at \$1,984,135. Of this quantity, Ontario made up 5,729,847 doz; Quebec, 1,453,561; Nova Scotia, 299,177; New Brunswick, 912,539; Manitoba, 7,001; Prince Edward Island, 694,318 doz.

A Quebec Fancier writes us: "I had several fowls stolen from my hen house, and I closed my bloodhound in it. Hearing someone outside he went through the window, sash and all. He got some pieces of cloth; I don't know if he got any meat, but I have not lost any chicks since." We can scarcely recommend this mode of protection: as it might occur in other cases, as it did in this, that the night being very cold the frost entered at the broken window and destroyed the combs and wattles of a number of the birds.

Mr. Blyth, of Owen Sound, in his ad. last month, did not intend to imply that Mr. West, of Brampton, bought Light Brahmans from him "to improve his stock at the Toronto show," but bought them at the show, believing the cross would benefit his stock. Mr. Blyth requests us to make this explanation.

Look out for Butterfield and Hanes' ad. in next issue. It will start off this way. "Egg from the best birds in America. They have won more prizes than any other's." No idle boast as our readers know. Mr. Butterfield writes:—Have just received an order from England for six dozen eggs from our Asiatics. The gentleman ordering, while travelling in America, saw our fowls, and considers them better than anything in England. He also takes eggs from Golden Spangled Hamburgs. Your paper seems to be becoming very popular. We received good mention of it from Michigan. Business never was so good with us; have sold nearly all the birds we can spare at present, and we must attribute a great part, or nearly all of it, to your paper, as we advertise in no other.

BREEDERS' ADDRESS CARDS. \$1 per an.

C. A. GBAR, FISHERVILLE, ONT., CAN.

Breeder of the following varieties of first-class fowls: PLYMOUTH ROCKS, Pugsley and Essex stock; BROWN LEGHORNS, Bonney's strain; PEKIN DUCKS Pugsley's stock; TOULOUSE GEESE, D. T. Roger's stock.

Eggs from any of the above varieties, excepting geese, packed in baskets and express charges prepaid to any place in Ontario, \$3 per 13,

\$66 a week in your own town. \$3 Outfit free. No risk. Everything new. Capital not required. We will furnish you everything. Many are making fortunes. Ladies make as much as men, and boys and girls make great pay. Reader, if you want a business at which you can make great pay all the time you work, write for particulars to H. HALLETT, & Co., Portland, Maine.

PATENTS

We continue to act as Solicitors for Patents, Caveats, Trade Marks, Copyrights, etc., for the United States, Canada, Cuba, England, France, Germany, etc. We have had thirty-five years experience.

Patents obtained through us are noticed in the "Scientific American." This large and splendid illustrated weekly paper, \$9.20 a year, shows the Progress of Science, is very interesting, and has an enormous circulation. Address MUNN & CO., Patent Solicitors, Publishers of "Scientific American," 37 Park Row, New York. Hand book about Patents sent free.

BEST business now before the public. You can make money faster at work for us than at anything else. Capital not needed. We will start you. \$12 a day and upwards made at home by the industrious. Men, women, boys and girls wanted everywhere, to work for us. Now is the time. You can work in spare time only or give your whole time to the business. You can live at home and do the work. No other business will pay you nearly as well. No one can fail to make enormous pay by engaging at once. Costly Outfit and terms free. Money made fast, easily, and honorably. Address TRUE & Co., Augusta, Maine.

GOLD Great chance to make money. Those who always take advantage of the good chances for making money that are offered, generally become wealthy, while those who do not improve such chances remain in poverty. We want many men, women, boys and girls to work for us right in their own localities. Any one can do the work properly from the first start. The business will pay more than ten times ordinary wages. Expensive outfit furnished free. No one who engages fails to make money rapidly. You can devote your whole time to the work, or only your spare moments. Full information and all that is needed sent free. Address
STINSON & Co., Portland, Maine.

A CARD.

Sherbrooke, P. Q., March 10th, 1882.

I hereby Certify that I have sold my entire stock of "Croad" Langshans to Mr. W F James, of Sherbrooke, P. Q., and agree not to breed this variety hereafter. The stock purchased by Mr. James includes many noted prize winners (see exhibition records 1881, St. Johnsbury, Vt., Montreal, Sherbrooke, and Sherbrooke 1882). I have taken 1st prizes wherever exhibited, and my stock has never been beaten. I have imported eggs direct from the yards of Major Croad, of England, and can confidently recommend those desirous of breeding this noble fowl to deal with Mr. James, who can supply as good stock as can be obtained on this continent.

F. W. W. BOWEN.

A CARD.

Having this day disposed of my entire stock of Black breasted Red Game fowls, including all my prize winners, to Mr. W. L. Ball, of Richmond, P. Q., I beg to say, with this addition to his own yards, which contain birds of very high merit, that he is in a position to fill orders either for eggs or fowls that must give most satisfactory results, and I would strongly recommend those in want of only first-class Black Reds to give Mr. Ball a trial order.

C. J. ODELL.

Sherbrooke, Que., March 8th, 1882.

A CARD.

THIS IS TO CERTIFY that I have sold to Mr. D. T. Rogers, Cayuga, Ont., my entire stock of Gold-faced Sebright Bantams. I really believe there is not a finer lot in Canada than is now owned by Mr. Rogers, as they have won wherever shown, and he being a reliable breeder, I would recommend all wanting stock of this kind to give him a trial.

C. A. GRAF, Fisherville, Ont.

C. A. KEEFER

Breeder of Superior

PLYMOUTH ROCKS,
Brown Leghorns,
Black-breasted Red Games.

My fowls have won 1st, 2nd and special prizes at all the leading Western shows, of the United States, and in every State and Territory where shows are held, in the hands of customers; also in Canada and England,

A GRAND LOT OF CHICKS,

The finest I have ever offered for sale, both for breeding and exhibition, at reasonable prices.

Illustrated Circular free.

Write me is you desire fine stock.

Go to HEADQUARTERS for the
PUREST! FINEST & BEST!!!

Mount Pleasant Poultry Yards,

BRANTFORD, ONTARIO, CANADA,

G. H. PUGSLEY, - Proprietor.

I have the Largest and Finest collection of

Land & Water Fowls,

PHEASANTS and DOGS,

Owned by any one Man on the Globe!

I follow the business of Stock Breeding entirely, and it has my whole time and study. Birds I have bred and sold have won at all the largest shows in America, thousands of prizes awarded my fowls the past seven years at all the largest shows in America; and I have sold many prize-winners in England, I have also shipped birds to the West Indies, San Francisco, Australia, New Zealand, and to nearly all parts of the globe, with unrivalled success.

At the great International, in Guelph, 1880, I won nearly 50 premiums; at the National, in Brantford, 1881, I won over 50 premiums and 15 specials, and this year at the International I won nearly 70 prizes—a greater number than any other exhibitor.

VARIETIES:

Brahmas, Cochins, single and pea combed; Hamburgs, all varieties; Leghorns, all varieties, single and rose-bombed, Langshans, Black and Mottled Jays, Black Sumatras; W. C. Black, G. and Buff Laced Polish; Plymouth Rocks, B. B. Red, Duckwing, Brown B. Red, Red Pyle, White Georgian and Black Games, Silver-gray Dorkings, Sultans, Malays, all varieties French fowls, Japanese Fur Fowls, Japanese, White and Black Rose-comb, Golden and Silver Sebright, Game, White Polish and Pekin Bantams; Pekin, Rouen, Cayuga, Aylesbury, Call, Wood and Mandarin Ducks; Bronze and Wild Turkeys; Toulouse, Bremen Sebastopol and Wild Geese; Japanese, Golden, Silver and English Pheasants; Pigeons Rabbits and Canaries.

Send for Price-list of Eggs.

Dogs.—St. Bernard, Mastiff, English Bull, Scotch Collies, Beagles, Scotch Terriers, Yorkshire Terriers, and Toy Black-and-tan terriers, 4 to 7 pounds each.

Write for just what you want and address as above. I guarantee satisfaction in all ordinary cases. Visitors welcome.

I am now issuing a large

Illustrated Catalogue

Of Land and Water Fowls, containing nearly 100 Illustrations and description of nearly 150 varieties of Poultry, Dogs and Pheasants, and with this I have combined a Text Book for Poultrymen and Beginners, giving full instructions in Keeping and Management, Breeding, Mating, Management of Setting Hens and Young Chicks, with a treatise on nearly all the Diseases of Poultry, and the best Remedies ever yet known; making it worth hundreds of dollars to the beginner or the fancier. Also full instructions as to breeding of chickens for Poultry and Egg production.

Will be sent, post paid, for 25 cents as soon as out of press.
