In reference to the quality and comparative merits of the Douglas Seam Coal with ordinary English and Welsh Coal, I beg to state that in reference to stowage, Welsh has an advantage over it of about 12 per cent.—Newcastle, 2 per cent.; but with most Scotch, the advantage would be in favor of the Douglas Seam of about 2 per cent. In burning, it makes about the same quantity of smoke as Newcastle or Scotch, but about 2 per cent less clinker; and if burnt slowly, that is to say with fires not pressed, very little ash. The quantity of soot left in tubes is rather large. I consider that one ton of it will evaporate as much water as ordinary Newcastle or Scotch. I have had opportunities of burning a great many tons of both Sydney (in Cape Breton) and Pictou (in Nova Scotia) Coal, and I consider it very much superior to either of those Coals in its quality for generating steam. It is not one quarter so destructive to the fire-bars, and makes at least 12 per cent less clinker than either. I consider that it is at least 22 per cent superior to No. 3 Pit."

"In giving my opinion of the qualities of the New Seam Coal (Douglas Pit) for steaming and stowage, I beg to state that I consider them to be 40 per cent better than the former Nainaimo Coal. The consumption is now five cwt. per hour instead of seven cwt., and we can run three times as long without cleaning the fires, and much less clinker. With one or two exceptions, I consider it as equal to any English coal for steaming; and I can stow as many tons in the bunker as of Welsh Coal."

There is a considerable supply of this Coal now on hand, and can shortly be supplied in any quantity. Present price, \$7, at the mines.
