REPORT ON TAXING COSTS LEEDS ELECTION TRIAL.

Pursuant to the warrant of the Honorable the Speaker of the Commons House of Assembly bearing date the sixteenth day of February last, and directing the Clerk of the House of Assembly and the Clerk of the Crown in Chancery to tax the costs incurred by the petitioners in the Leeds controverted election, in conformity with the provincial statute of the 3rd Wm. IV. chap. 11, the said Clerk of the House of Assembly and the Clerk of the Crown in Chancery beg leave to report to the Honorable the Speaker:

That, in compliance with the aforesaid warrant and during the sitting of Parliament, the said Clerks met for the purpose of making the said taxation, but the agent

for the petitioners not being prepared with proper evidence, they adjourned.

That, on the 29th of April. they received from James E. Small, Esq. " a bill of costs and certain affidavits" which he stated "were handed to him by Mr. Wells for the purpose of being taxed," but which affidavits were not such as had been previously required by the Clerks from Mr. Buell, the agent for the petitioners. That a written notice was next day sent to Mr. Small for the petitioners, and to Messrs. Jameson and Gowan, appointing Monday, the 25th instant, at ten, A. M. at the office of the Clerk of the House of Assembly to take the matter into consideration; and in that notice the description of affidavits required in support of the claims of the petition-Copies of these notices are transmitted herewith, marked No. 1 and 2; as also a copy of a memorandum delivered to Mr. Buell previous to his return home, and copy of a letter addressed to him on the 20th February, marked 3 and 4.

On Monday, the 25th instant, at the hour appointed, the Clerk of the Assembly and the Clerk of the Crown in Chancery met at the aforesaid office. Mr. Jameson, on behalf of himself and Mr. Gowan, delivered a written protest against the legality

of proceeding in the matter after the termination of the Session.

A copy of the protest is transmitted herewith, marked 5. Neither the petitioners nor any one on their behalf appeared, and the meeting was adjourned until the following morning at ten, A. M.

TUESDAY, 26th MAY, 1835.

Met pursuant to adjournment. Neither the petitioners nor their agent were in attendance, and the meeting was again adjourned until Wednesday morning at ten o'clock.

WEDNESDAY, 27th MAY, 1835.

Met pursuant to adjournment.

None of the parties being in attendance, the Clerk of Assembly and the Clerk of the Crown in Chancery proceeded to take into consideration the protest of Mr. Jameson, and resolved that the taxation of these costs being a duty imposed upon them by an Act of Parliament, they do not feel that the objection taken by Mr. Jameson is such as to justify them in refusing to proceed in the matter.

The Clerks then proceeded to the examination of the affidavits transmitted by James E. Small, Esq. and having determined to be guided in their duty by the established practice of the court of King's Bench, of which the petitioners had been by letter, through their counsel and agent, already apprised, they now beg leave respectfully to report to the Speaker of the Honorable the Commons House of Assembly:

1st. That the affidavits transmitted are taken before Justices of the Peace and Commissioners of the Court of King's Bench, persons not legally authorised to ad-

minister an oath in like matters.

2nd. That the affidavits merely state the amount of miles travelled by the said witnesses from their respective residences to the House of Assembly, and the number of days they each were absent from their homes; and

3rdly. That no evidence of money being actually disbursed by the said petitioners to the aforesaid persons or witnesses for their attendance has been submitted, and therefore it being the practice in all courts of Justice to require of the parties claiming remuneration for attendance as witnesses affidavits of the sums actually disbursed to such witnesses, the Clerk of the Assembly and the Clerk of the Crown in Chancery forbear proceeding further in the premises until such evidence shall be produced. And they the more particularly adhere to this determination as they had formerly notified the petitioners through their agent that such evidence would be required.

All which is respectfully submitted,

JAMES FITZGIBBON, Clerk of Assembly. SAML. P. JARVIS, Clk. Cr. Chy.

LETTER TO JAMES E. SMALL, ESQ.

Toronto, 30th April, 1835.

We beg leave to acknowledge the receipt of your letter of yesterday's date, accompanied by a bill of actual expenses incurred by the witnesses in the case of the late Leeds contested election, exclusive of the time of each individual, and sundry affidavits to prove the number of days each witness was detained before the committee, and the number of miles travelled by each in repairing to Toronto, and in returning to their respective homes.

On reference to the statute on this subject, not finding a scale of fees to guide us in taxing the costs claimed by the petitioners, we determined to be regulated by the

rules and practice of the court of King's Bench.

Mr. Buell, soon after the committee made their report in this case was apprised by letter that we would require affidavits of the actual sums disbursed to the witnesses &c. but amongst the papers accompanying your letter no such affidavits appear-the omission is perhaps accidental.

In order to afford ample time to both parties we have named Monday the 25th of May next, at ten o'clock A. M. for the performance of this duty.-You will therefore be pleased to communicate the contents of this letter to your clients, in order that they may govern themselves accordingly.

We have the honor to be Sir, To JAMES E. SMALL, Esq. Your most Ob't. humble Servants, &c. (Signed)

JAMES FITZGIBBON,

Note-Monday the 24th was in- (Signed) serted in the original, by mistake, instead of 25th.

SAML. P. JARVIS,

C. C. in Chancery.

LETTER TO MESSRS. JAMESON AND GOWAN.

(COPY)

Toronto, 30th April, 1835.

GENTLEMEN,

We have been called upon by James E. Small, Esq. Barrister at law, and agent of the petitioners against your return for the county of Leeds, by letter, dated yesterday, to tax the costs incurred by the petitioners in contesting that

In order to afford full time to both parties interested in the matter, we have named Monday the twentyfifth of May next, at ten A. M. to perform the duty. And we have further signified to the Agent of the petitioners, that as the statute which

gives us the authority has not provided a scale or table of costs we have come to the decision of being governed by the rules and practice of the court of Kings Bench.

(Signed)

We have the honor to be, &c.

To Messrs. Robert S. Jameson, and Ogle R. Gowan, Esquires. &c. JAMES FITZGIBBON, Clerk of Assembly.

Note-Monday the 24th was inserted in the original, by mistake, instead of 25th.

SAML. P. JARVIS. (Signed)

Clk. of the Crown in Chan'y.

MEMORANDUM TO MR. BUELL

Information wanted by the Clerk of the House, and the Clerk of the Crown in Chancery to enable them to tax the costs in the Leeds contoverted election.

1. A list of witnesses subpœnaed, and who attended. 2. The number of days necessarily absent from home.

3. The distance from the Parliament House in Toronto, to the place of residence of each witness.

4. By whom the witnesses were subpænaed.

5. The number of miles the person or persons travelled to serve the subpœnaes

reckoning from Brockville court House.

6. Whether the witnesses subpænaed reside on the same road, or whether the person or persons serving the said subpænaes diverged from the high road, and the distance.

LETTER TO MR. BUELL.

(COPY)

Toronto, 20th February, 1835.

DEAR SIR, We are not clear, whether in the memorandum given you of the information it was probable would be required to enable us to tax the costs in the Leeds controverted election, we mentioned that an affidavit of the sums claimed by the petitioners had actually been disbursed by the petitioners, would be necessary. If we should decide upon taking the practice of the court of King's Bench in this case as our guide, such an affidavit will be required, and we recommend you to be We are, &c. prepared with it.

JAMES FITZGIBBON, Clerk of Assembly. (Signed.) SAM'L P. JARVIS, Cik. Cr'n in Chancery.

To Wm. Buell, Esq. &c. &c. Brockville.

(COPY)

JAMES FITZGIBBON, ESQ, &c. &c. &c. To

SAMUEL PETERS JARVIS, ESQUIRE, Clerk of the Crown in Chancery, &c. &c. &c.

GENTLEMEN, I respectfully protest against the legality of your proceeding to tax the alleged costs of the petitioners in the case of the controverted election for the county of Leeds, decided in the past session of Parliament, when the defence of the sitting members was declared by a committee to be frivolous and vexatious. If ever such costs could have been legally demanded upon so unjust a decision, it could only have been done provided the taxation had been completed, and the warrant of the Speaker' thereupon signed during the session in which such decision was made: but the whole matter has determined with the session, and you have now no jurisdiction therein.

(Signed) Toronto, 25th May, 1835. ROBERT S. JAMESON.

Welland Canal Office, St Catharines, 31st Dec. 1835. JOHN CLARK, Secretary. W. C. C.

LETTER TO SPEAKER FROM WELLAND CANAL DIRECTORS.

To the Honourable the Speaker,

SIR.

We respectfully request you to place before the House of Assembly the Reports which are herewith enclosed.

We have the honor to be Sir, Your most Ob't. humble Servants,

CHARLES DUNCOMBE, DAVID THORBURN, W. L. McKENZIE.

House of Assembly, 19th January, 1836.

A REPORT OF THE DIRECTORS ON THE PART OF THE PROVINCE.

To the Honourable the House of Assembly.

The Select Committee on the affairs of the Welland Canal Company having recommended towards the close of their report of last Session, that an Engineer should be employed specially to examine and report concerning the Canal, its condition, and the repairs or other more extensive alterations and improvements that might be required for its completion, the Directors appointed by Your Honourable House have endeavoured to give effect to the recommendation of the Committee by engaging the services of Francis Hall, Esq., a Civil Engineer of acknowledged abilities and great experience in his profession, to examine the Canal; they placed in his hands a series of questions, copy of which, with Mr. Hall's report, they ask leave to submit to the House. His report has especial reference to the dimensions of the Canal, the quality of the materials of which it is made, the condition of the Locks, bridges, Grand River dam, Culverts. Harbors, Basins, Hydraulic works, Mills and machinery, the Canal Banks, the practicability of a new route from Centreville to Port Dalhousie, the proposition for washing out the deep cut and the expense which it might be necessary to incur in the prosecution of the various measures included in his estimates.—The report is accompanied by several maps and plans to which it has reference.

Mr. Hall was the Engineer for the Burlington Canal in 1825, he drew the design and superintended the erection of Brocks column on Queenston heights in 1824, he was principal Engineer on the Shubenacadie Canal in Nova Scotia, and is thus spoken of by Mr. Telford, the celebrated British Engineer, in his report respecting the Bay of Verte Canal.

"Having perused the very full and distinct instructions given by Sir Howard Douglas to the Engineer Mr. Francis Hall; and Having for several years, previous to his leaving Britain, employed Mr. Hall very extensively, I have a perfect confidencethat Sir Howard's instructions have been faithfully attended to, and that a judi-

cious secction of the line has been made, surveyed and reported upon."

Mr I Hall shewed us a letter addressed to him from Mr. R. Fairbanks member of the Legislature of Nova Scotia, and a Commissioner of the Shubenacadie Canal, from which we took an extract as follows:—"London, August Srd, 1829. My "dear Sir,—Soon after my arrival I called on Mr. Telford with your letter, but learned "he was absent. I repeated my visit, and was gratified to meet a very pleasant old "gentleman who appeared to feel much interest in your welfare and spoke of you in "very friendly terms—you may be sure the confirmation of my own opinions by one "so competent to judge, as well as the high terms in which he expressed himself of "your Engineering, calculations, reports, &c. could not but greatly please me, and I "feel it but justice to yourself to repeat his words."

We submit, with Mr. Hall's report, copy of letters by Messrs. Wright, Donaldson and Barrett, relative to the local situation of the Canal; a list of the Stockholders, on the 1st of January 1835; a schedule of the lands said to be occupied by the Canal Company; tabular statements of the property passing on the canal in May, June, July, August and September last; lists of the votes at the onnual elections for Directors, 1829 and 1835; a letter to Mr. Keefer when he was President of the Canal by several Stockholders of New York, with advice as to the size, &c. of the Canal; letters and papers concerning the Grand River dam and western terminations of the works; various documents relative to the incumbrances which affect the Canal and the negociations for buying and selling the Lands and Hydraulic privileges; with a letter from Mr. Dunn, and another from Colonel Givens about the Grand River claims.

On these documents, we refrain for the present, from offering any observations. Our second Report having reference principally to Canal management, and the course to be pursued in the work is not yet ready, but will be soon.

We were ready to submit these observations to the House when Mr. Hall's supplementary report reached us, dated Thursday last, from Saint Catharines. It contains late and accurate detailed information, shewing the actual state of the feeder, locks, berm bank, and some other important parts of the work. We respectfully suggest that it might be expedient to print and place these reports and the accompanying documents as early as possible in the hands of the Members of the Legislature.

CHARLES DUNCOMBE, DAVID THORBURN, W. L. MACKENZIE.

Toronto, 16th January, 1836.

To the President and Directors of the Welland Canal Company.

I have this year by your permission made an experiment on washing out the Deep Cut, the result has satisfied me fully of its practicability, if you consider making Niagara River your feeder and reduce the level or summit at Deep Cut an object, I will undertake to accomplish it for the sum of six thousand pounds and use of the waters for three Winters, without interfering with the navigation of the canal.

The plan I propose is first to carry a level from below Basis's Basin, where the valley is, six or eight feet below canal bottom, there commence and bring up a level as far as I may find it necessary.

Then I propose putting a flood-gate at the lower end of the Deep Cut, after reducing the first distance to bottom level, then put in another and keep putting in those kind of gates, until I get the whole reduced to bottom level or below it. This method gives me the command of from 20 to 30 feet head of water to be let off or stopped at pleasure.

If you accept my proposal I wish the contract entered into as early as convenient, for to give me time to make my arrangements this season to commence immediately on the close of the navigation.

Your most Ob't Servant,

JOHN DONALDSON.

For one thousand pounds more, I will take out one foot more, making in all nine feet water, from Davis's Basin to the Chippewa through the Deep Cut.

JOHN DONALDSON.

(OFFICE COPY)

New-York, September 2nd, 1833.

DEAR SIR, I have your kind letter of the 15th ult. together with the pamphlets, for which I tender you many thanks. I should have replied sooner, but a sore hand

has prevented, and I write now with some inconvenience.

I have received Mr. Barrett's estimate of the branch to Niugara, but it does not give me the items. As Mr. Keefer's name is to the Report, may I ask whether he cannot give me the value of excavation, embankment, &c., by the yard? also how much Mr. B. estimated Stone Locks for Sloop Canal to cost?

In the plan of the Locks as Mr. Keefer prepared it for me, he has set down 100 feet between the gates. Mr. Randal in his report says they are 120. I have taken

my memorandum at 110 fect: which is correct?

Again, in the plan of foundations the cross or bottom sills are represented as 5 feet from centre to centre, and the position of the streak sills is laid down one at the ends of the cross planking. Now the question is whether I can rely on all the locks being made uniformly on this plan, and whether there are not cases where the bed sills are 6 or 7 feet apart, and the streak sills placed different from the plan? I am contriving how to alter the plan, and renew the Locks by making them 24 feet wide, and save the foundations-if I can effect this, it will be repairing and making the Locks better size at a cheap cost.

Tell me if you please how the streak sills are let on to the mud sills, or bed sills, are they halved on or how? and the size of bed sills and streak sills and the kind of

timber?

The more I think of this project of connecting these great Lakes, the more grand and important it appears to me, and that Montreal and Quebec are more interested in the success of this work than any other places in Canada. I set it down as an incontrovertible position that unless you have the Welland Canal these cities will have little or none of the trade of the Upper Lakes. If there is to be a Transshipment, it will be at Buffalo, and when once at Buffalo, it will take the Erie Canal.

I spent a day at Buffalo after I left you and heard many remarks from Gentlemen there—they are very jealous of the Welland Canal and look at its success with suspicious eyes, and will say and do every thing to depreciate its worth. It is only by the free use of it that the public mind can be satisfied of its importance, and if it is once put in good order and fully carried out to its original plan, except a little widening of the Canal and Locks; if we make the Locks 24 feet wide, we ought to have the bottom of our Canal 34, this would only be altering the slopes to 11 to 1 instead of 2 to 1, their present plan, and this where the canal is not now width may be done very easily when the other work is doing.

I am not settled in my opinion on the question of the great Steam Boat Canal between the Lakes-the great amount of Lockage is a serious objection and therefrom the two disasters of the David Brown, Steamer, which runs between this and Charlestown, I am doubtful whether property will ever be transported thro' these

great Lakes as safe and cheap in steam boats as by sails.

Your project of a connexion with the Mississippi and New Orleans by way of Maumee and Illinois is one that ought to have been pursued-but they are now making a little Canal to connect the Wabash and Maumee and they are discouraged about water between Chicago and Illinois, and are now projecting a rail-road.

If you have reflected on the best plan of renewing the Locks cheap and at the same time strong, please favor me with it. I can project for new work, but I have some

fears as to old-lest timbers should not be found where I want them.

If I can speak in language strong enough to rouse your people of Canada to the immense importance of the Welland Canal to the prosperity of both Canadas, I shall do so, because I feel this clearly in myself. It is one of the greatest projects which was ever presented to the mind of man, to connect those Lakes-and 20 years will not pass away before there is 10 millions people who will be desirous to use this work I tell the people of Buffalo that 20 years will require 2 or 3 fresh Canals and the Eric Canal to do all the business that the population require at that time.

I am, very truly, Your Friend,

B. WRIGHT.

W. H. MERRITT, Esq.

(OFFICE COPY)

~***

To The Hon. J. H. Dunn, President of the W. C. C., &c. &c.

Sir,

I am instructed thro' W. H. Merritt, Esq., that I am to give my opinion of the best route of a Sloop Canal from the Deep Cut into Lake Eric, together with my reasons for preferring the same.

I am of opinion that the best route is the one terminating in Gravelly Bay,—my reasons for recommending this route are, that it is the shortest and most direct

route across the peninsula.

It is the cheapest route that we have been enabled to discover.

It can be completed for \$60,000 less than the Grand River route, and is 11 miles shorter, and by adopting this route you combine the advantages of the earliest and

the shortest navigation.

You will be better able to compete with opposition in the transportation of property by adopting the Gravelly Bay route. In proportion to the less amount of capital required in its completion the less distance you have to tow vessels besides saving the time in passing from Lake to Lake. One further reason for preferring the Gravelly Bay route, is that the whole work may be done without interrupting the navigation in the mean time, whereas, on the other you either lose the use of the Canal the best part of the two seasons or very much delay the completion of the Canal.

I am, Sir, your ob't. servant,

ALFRED BARRETT,

Chippewa, May 15th, 1831.

Engineer.

[OFFICE COPY.]

New-York, Dec. 22d, 1824.

GEORGE KEEFER, Esq.

President of the Welland Canal Company,

St. Catherines, U. C.

Sir:

Your letter dated 16 hult, addressed to the Stockholders of "The Welland Canal Company" in New York, has been laid before us, and having met for the purpose of taking the same into consideration, we beg to state the result of our sentiments, in all of which we have been unanimous.

We have requested Mr. Thomas Proctor to act as Agent, and beg to recommend him as a fit and proper person to attend to the concerns of the company in this

City.

We highly approve of your so soon getting your contracts made and commencing operations. It will be greatly to the advantage of the Stockholders to get the whole finished as soon as practicable.

We approve of encreasing the Tunnel 15 feet wide (15 feet is the clear of the Eric Canal in this State) as we ought to keep in view sloop, as well as beat naviga-

tion, in order to render the stock valuable. We beg leave to recommend to the consideration of the directors, how far it is practicable (now) to make the Canal large enough for sloop navigation over the ridge from the Chippewa River to the descent towards Lake Ontario, which we understand is not more than three miles.—Should this not be deemed prudent at present, but keeping it in view, we think it would be advisable to have an open cut instead of a Tunnel. We submit that if this part of the Canal should be cut for sloop navigation the other parts hereafter could be done without any material inconvenience and would greatly increase the supply for Hydraulic purposes.

In case of the enlargement of the dimensions of the Canal it might become necessary to apply to the Legislature for an extension of privileges and an increase of

capital.

In the above remarks, you will please to observe we merely offer our sentiments as to what we deem desirable to be accomplished, for unless the work contemplated is rendered truly efficient for the purposes of an extensive trade, the Stockholders cannot look with confi lence to realize these advantages which may be fairly anticipated, if carried through upon a liberal plan and free from all local interests.

We have agreed to make the payment of the first instalment, 5 per cent, and

shall pay it to the agent on the first day of January next.

We have the honor to be,

Sir,

Your most ob't servants,

WILLIAM MACLEOD, DAVID R. LAMBERT, JAS. BUCHANAN, J. B. YATES, CHARLES MOWATT, JNO. S. BARTLETT, JAS. BRYAR, W. J. CALDWELL.

CERTIFIC CO.

OFFICE COPY.)

To the President and Directors of the Welland Canal Company.

GENTLEMEN:

I send you herewith a detailed statement of removing the Dam five miles in the interior as well as the cost for enlarging the Canal to its proper dimensions:—

My reasons for selecting the lower situation in the first instance was-

1st—It gave a large and commodious harbor of 36 chains from the end of the Piers to the Dam, averaging at least 5 chains in width, capable of containing any number of vessels that may navigate those waters for ages to come, even had there been no lock in the dam to pass through at pleasure—which it is our intention to construct.

2nd—It was the first and best position below Broad Creek; above which I never contemplated building a dam from the difficulty which presents itself in crossing this stream, and the distance it would prolong the end of the Canal before entering the Grand River.

3rd -Since our being compelled to relinquish this situation and to select another above Broad Creek, the first and best is five miles from the month where the dam

is now constructing.

The difficulties of this situation however are not inconsiderable,—in the first place it prolongs the Canal near five miles, which will compel the Company to raise

the dam near six inches higher than below to maintain the head heretofore calculated

upon.

It removes the most desirable commercial and manufacturing situations five miles from the direct line of Canal, consequently must take every vessel which goes to that place for loading ten miles out of the way, and in no way increases or improves the navigation in the interior for that distance.

I therefore conceive the additional expense incurred by the Company a total loss to them without any corresponding benefit whatever, besides retarding the completion of the Canal at least two months, and the expense of keeping up two or three

miles of embankment besides weirs, waste gates, guard gates, &c.

I am,

Gentlemen,

Your obedient Servant,

A. BARRETT,

Pr. Engineer, W. C. C.

WELLAND CANAL OFFICE, St Catharines, 30th June, 1829.

[OFFICE COPY.]

Whereas, apprehensions are entertained by Commodore Barrie of the Royal Navy, that a dam thrown across the Grand River at the place contemplated by the Welland Canal company may, in the event of a war between the United States and Great Britain prove a serious inconvenience to the naval and military

operations.

In order to obviate any objections that may be made in the present state of the work, the safety of the company, and the individual Stockholders requiring that the navigation should be opened within the shortest possible time, the President and Directors of the Welland Canal company hereby stipulate that they will hereafter entirely remove any obstruction which shall have been placed by them in the river, whenever the removal thereof shall be required by the Government, or if the erection of a dam with a lock to pass vessels of the requisite dimensions shall be made and the same shall at any future time be required to be enlarged or altered for the accommodation of His Majesty's navy, the said President and Directors hereby stipulate, that they will on reasonable notice from the Governor of the Province make such alteration; and the President and Directors also stipulate that they will compensate for what individual damage may be sustained according to law, and will also indemnify against any public losses and legal proceedings.

[Signed.]

WM. HAMILTON MERRITT, Agent W. C. Company.

CEATED.

[OFFICE COPY.]

R. E. OFFICE, Fort George, 18th April, 1829.

WM. H. MERRITT, Esq. St. Catharines.

DEAR SIR:

I will thank you to forward the enclosed to Lient. Tweed as soon as

von conveniently can.

I suppose you are aware that Sir John Colborne has decided "that no dam can be permitted to be thrown across the Grand River nearer than five miles from its mouth" by which you must of course be governed in your operations.

Yours very truly,

GEORGE PHILPOTTS.

[OFFICE COPY.]

York, 27th April, 1829.

W. H. MERRITT, Esq. St. Catharines.

MY DEAR SIR:

Sir John Colborne is quite willing to permit us to dam the Grand River any where we please, but Captain Barrie has protested in such a way, as to induce the Governor not to sanction the dam so close to the entrance.—this his mind is fully made up to. He says, however, any distance within two miles of that place, where the dam was contemplated, he will sanction without hesitation, and will take all the results of Barrie's protests, &c. I do not know if the Governor will accompany us. I will get him if I can, altho' I have no hope that he will alter. Capt. Barrie says that by the coming post he expects orders to make a harbor at the mouth. however it is all a fudge.

> Yours obed'y, JOHN H. DUNN.

[OFFICE COPY.]

Royal Engineer's Office, Quebec, 21st April, 1829,

SIR:

In forwarding for the information of His Excellency the Commander of the Forces, a copy of a letter from Lieut. Col. Wright, Royal Engineers, dated 15th inst. together with copies of reports made by Capt. Phillpotts, Royal Engineers, by order of His Excellency Sir John Colborne, under dates the 27th and 30th ult. and 2nd inst. upon the subject of the proceedings of the Agent of the Welland Canal company, I think it my duty particularly to draw the attention of His Excellency to the latter documents, detailing the unwarrantable encroachment of the Agent upon the Military Reserve at the Chippewa river, and strongly to recommend that the proceeding be immediately ordered to be suspended, and the line of Canal carried outside the Military boundary as stated by Capt. Phillpotts to be practicable without materially affecting the interest of the Welland Canal company.

I have the honor to be,

(Signed.)

&c. &c. E. W. DURNFORD, Col. Com'g R'l Engr. Canada.

Lieut. Col. Coopen, Military Secretary.

[OFFICE COPY.]

York, 8th April, 1829.

SIR:

The Hon. J. H. Dunn, late President of the Welland Canal company proposed that for the satisfaction of the Government it should be submitted to the first meeting of the President and Directors legally convened, that an Instrument duly executed on behalf of the company in the enclosed form should be deposited with His Excellency the Lieut. Governor, and in the present emergency and to avoid delay the Directors now present express their approbation of the measure suggested, and that they will carry the same legally into effect at their first regular meeting.

(Signed.)

J. B. ROBINSON, Directors approximately the Stockholders of the Welland Canal

Z. Mudge, Esq. &c. &c. &c.

ANNO NONO.

GEORGE II, 4—REGIS.

Сплр. 41.

" An Acr to authorize the advance of a certain sum out of the Consolidated Fund for the completion of the Welland Canal Navigation in Upper Canada."

[25th July, 1828.]

WHEREAS the Welland Canal Navigation, for connecting the waters

of Lakes Eric and Ontario in Upper Canada, is a work which when completed, will be of great public utility: Be it therefore enacted by the King's most Excellent Majesty, by and with the advice and consent of the Lords spiritual and temporal, and Commons, in this present

Canal Co.

The Treasury Parliament assembled, and by the authority of the same, that from out the Welland and after the passing of this Act it shall and may be lawful for the Commissioners of His Majesty's Treasury of the United Kingdom of Great Britain and Ireland, or any three of them, to order and direct that any sum of money, not exceeding the sum of fifty thousand pounds in the whole, shall be lent and advanced and paid, out of the consolidated Fund of the said United Kingdom, to the President and Directors of the Company for making the said Canal, to be applied by the said President and Directors towards defraying the expenses of completing the said Canal; and such sum of money shall be so lent and Payment of which advanced at such times and in such proportions as the said Commisto be secured by sioners of the Treasury shall think fit and proper; and the re-payment Tolls.

sons, in sheh manner, and under such conditions and regulations as

the said Commissioners of the Treasury shall order and direct.

—:095J33333371: -

(COPY.)

YORK STREET, Toronto, 17th August, 1835.

To Lieutenant Colonel WM. ROWAN. Government House.

Sir:

The Legislature of Lower Canada granted an aid of £25,000 to the Welland Canal in the spring of 1827, in the shape of a subscription for stock, without however, requiring any vote or influence in the subsequent direction of the work. Since then the House of Assembly of that Colony have invariably rejected applications for further aid. On the 15th of May last a resolution passed the Board of Directors of which copy is annexed, to lay a Memorial before the Legislature of the Lower Provincee asking a vote of money or other assistance, and requesting that I would go to Quebec and adopt such measures respecting it as might appear expedient .-Boing satisfied that a large grant of money is essential to the very existence of the Canal, it became my duty before proceeding to Quebec to endeavor to inform myself of the actual condition of the work, the repairs required, the manner in which the previous expenditures had been regulated, and whether any bonds, mortgages, or other incumbrances which would affect the incorporation remained in force.

With this object in view, and pursuing at the same time the course suggested by the committee of the House of Assembly of this Province in their report of last winter, I carefully examined the correspondence and minutes of the Board since its

formation, and noticed,-

1st-A memorandum of an intended agreement on the part of the Directors to execute a Bond to Government relative to the obstructions caused by the Grand River dam.

2nd-Mr. Merritt's correspondence, shewing that he had mortgaged the Canal to the British Government, when in London, for a loan of £50,000 Sterling.

3rd-Mr. Dunn's letter threatening to take possession of the Canal in virtue of

some other agreement.

4th-A memorandum of the Law under which certain persons became personally bound for the due expenditure of certain loans on the work. And,

5th-Some references made by the Government of Upper Canada to a mortgage

on the Hydraulic privileges created by the Canal. I am desirous of ascertaining from you or the other proper officer the full extent and nature of these or any other incumbrances known to Government; if it be troublesome and tedious to copy the instruments themselves, I wish to be enabled to examine them, and to receive such additional correct information as may enable me to give a clear and candid evidence on the subject, should the Legislature about to meet at Quebec think fit to submit the memorial of the Directors to a special commeet at mittee, and that committee proceed to call for my testimony on the subject. I am,

Sir, &c.

W. L. MACKENZIE.

(COPY.)

GOVERNMENT House, Toronto, 21st August, 1835.

With reference to a communication from Mr. Mackenzie, one of the Direc-SIR: tors of the Welland Canal Company, in which he requests that he may be informed of the extent of the pledges or incumbrances of the Welland Canal Company, I am desired by the Lieutenant Governor to transmit to you for the information of the Board of Directors the accompanying copies of documents, all of which it it presumed are to be found in the office of the Company.

1st-The correspondence relative to the relinquishment of all claims on the

part of the Government to the Hydraulic privileges.

2nd-A letter signed by four Directors, transmitting an agreement respecting the dam at the mouth of the Grand River.

A copy of the agreement entered into by the Lords of the Treasury.

I am also to state in reference to the 3rd and 4th articles mentioned in the letter of Mr. Mackenzie, that the other liabilities of the Canal Company are explained in the several Acts of the Provincial Parliament relating to the Welland Canal.

I have,

&c. WM. ROWAN.

The President of the Welland Canal Company. St. Catharines.

19808487511

(OFFICIAL COPY.) 14583.

SIR: I am commanded by the Lords Commissioners of His Majesty's Treasury to transmit herewith copy of an agreement which has been entered into by their Lordships with Mr. Merritt as Attorney for the Welland Canal Company in Upper Canada, for the repayment of a loan of £50,000 to be secured on the said Canal, and my Lords desire you will instruct His Majesty's law officers in Upper Canada to prepare and cause the mortgage to be completed as required by the laws of the Province and to obtain an Act of the Colonial Legislature confirming the same, and stating tha

if the Canal is not completed within the term of five years the Company will loose the privileges conferred by the Act. My Lords also desire you will nominate fit persons resident in Canada to be Trustees for this Mortgage.

I am, &c

J. STEWART.

To the Governor,
Upper Canada.
Treasury Chambers, August 25, 1828.

(OFFICE COPY.)

This Indenture made the eighteenth day of August, in the year of our Lord one thousand eight hundred and twenty eight, between William Hamilton Merritt of St. Catherines in the Province of Upper Canada, now residing in London, of the one part, and the Right Honourable the Lords commissioners of Him Majesty's Treasury of the other part; Whereas, by virtue of An Act made and passed in the Legislative Council and Assembly of the Province of Upper Canada in the fourth year of the Reign of His present Majesty entitled "An Act to incorporate certain persons therein mentioned under the style and title of "The Welland Canal Company," it is enacted, that the persons therein named, together with all such other persons as should become Stockholders of the company thereinafter mentioned should be constituted a body corporate by the name of the "Welland Canal Company"-and by that name they and their successors should have continued succession and by such name should be capable of contracting and being contracted with, of sueing and being sued, of pleading and being impleaded. answering and being answered unto in all courts and places whatsoever, in all manner of actions, suits, complaints, matters and causes whatsoever, and that they and their successors might have a common seal and also that they and their successors by the same name of the "Welland Canal Company" should be in Law capable of purchasing, having and holding to them and their successors any estate, real, personal, or mixed to and for the use of the said company, and of letting, conveying, or otherwise departing therewith for the benefit and on account of the said company from time to time as they should deem necessary or expedient. And Whereas, by an Act made and passed in the ninth year of the Reign of His present Majesty, entitled "An Act to authorise the advance of a certain sum out of the consolidated fund for the completion of the Welland Canal navigation in Upper Canada, It is enacted, that from and after the passing thereof it should be lawful for the commissioners of His Majesty's Treasury of the United Kingdom of Great Britain and Ircland, or any three of them to order and direct that any sum of money, not exceeding the sum of fifty thousand pounds in the whole, should be lent and paid out of the consolidated fund of the said United Kingdom to the President & Directors of the Company for making the said Canal, to be applied by the said President and Directors towards defraying the expenses of completing the said Canal, and such sum of money should be so lent and advanced at such times and in such proportions as the said commissioners of the Treasury should think fit, and the repayment of all sums of money so advanced with interest, within the term of ten years from the passing of the now reciting Act should be secured by an assignment of the Tolls and profits of the said Canal to such person in such manner and under such conditions and regulations as the said commissioners of the Treasury should order and direct:-And Whereas, the said Welland Canal Company by a writing under their common seal bearing date on or about the first day of Morch one thousand eight hundred and twenty eight, appointed the said William Hamilton Merritt their Attorney for them and in their name to negociate and contract either with the Lords commissioners of His Majesty's Treasury or with others as in the said writing or warrant of Attorney now in recital mentioned for the loan to the said company of any sum or sums of money not exceeding fifty thousand pounds sterling money of Great Britain, to be charged or chargeable on the Public Funds and pro-

perty of the said company and for the well and sufficiently securing the repayment of the said Loan and interest the said company did authorise and empower the said William Hamilton Merritt for them and in their name and as their act and deed to sign scal and deliver all and every such deeds, conveyances and assurances, and certificates of transfer in the Law for the well and sufficiently conveying and assuring the whole or any part of the said Canal and all the lands, tenements, goods, chattels and other effects of the said Welland Canal Company to such person or persons as might advance such money as he might deem expedient for the securing the repayment thereof and interest, they the said company ratifying and confirming all and whatsoever their said Atterney should do in the premises .- And Whereas in pursuance of the power contained in the said last in part recited Act of Parliament in that behalf the said Lords commissioners of His Majesty's Treasury agreed with the said William Mamilton Merritt on the behalf of the said company to advance and pay the sum of fifty thousandpounds to the said company on having the repayment thereof with interest for the same in the meantime secured in the manner hereinafter mentioned. Now therefore, this Indenture Witnesseth, that the said William Hamilton Merritt doth hereby for and on the behalf of the said Welland Conal Company covenant and agree with and to the said Lords Commissioners of His Majesty's Treasury that the said Welland Canal company and all other necessary parties shall & will forthwith at the costs of the said company well and effectually convey transfer and assign the said Canal and the Tolls and profits thereof and all other the public Funds of the said company unto such person or persons as the said commissioners of His Mijesty's Treasury, or the Governor or Lieutenant Governor for the time being of the Province of Upper Canada by the direction of the said commissioners shall direct his or their heirs, executors, administrators and assigns, subject nevertheless to a proviso or condition in the said conveyance to be contained for making the same void on payment by the said company or their successors to His Majesty His Heirs or successors at the Treasury chambers Whithehall in the city of Westminister of all and every sum and sums of money which may be advanced and paid by the said Lords commissioners of His Majesty's Treasury to or on the behalf of the said Welland Canal Company not exceeding in the whole the sum of fifty thousand pounds at any time within the said space of ten years from the twe tyfifth day of July last being the day of passing of the said last in part recited act, & upon payment unto His said Majesty his heirs and successors of interest, of such sum or sums as may be so advanced as aforesaid after the rate of four per cent per annum in the meantime and until such repayment such interest to be paid yearly and without any deduction whatsoever, and to be paid at the Treasury chambers aforesaid, the interest on all and every such advances to commence from the day of making such advances, and a proportioned part of such interest to be paid up to the day of payment of the aforesaid principal monies. hereby agreed and declared between the said parties hereto, that in such mortgage so to be made as aforesaid shall be contained a power, that in case the said monies to be thereby secured or any part thereof shall be unpaid at the expiration of ten years from the passing of the aforesaid last recited act, or in case any one yearly payment of interest or any part thereof shall be in arrear for the space of six months after the same shall be due, that then it shall be lawful for the said Trustees or Trustee of the said mortgage security by the direction of the Lords of His Majesty's Treasury or of the Governor or Lieutenant Governor for the time being of the Province of Upper Canada to enter into the receipt of the Tolls, duties, rates, and profits of the said Canal and premises, and to apply the same in satisfaction and discharge of the said principal, monies and interest, or so much thereof respectively as shall from time to time remain due and also a power of the said trustees or trustee, either with or without the concurrence of the said company by demising, mortgaging or absolutely selling the whole or any part of the said Canal, profits and other the premises to be comprised in the said mortgage, security or any part thereof, to levy and raise such a sum or sums of money as may be sufficient or as the said trustees or trustee may think proper for the satisfying and discharging as well any monies which may be

charged on the security of the said Canal and premises, having priority to the said monies so to be secured by such mortgage security as the said principal monies and interest which may remain due on the said security together with all costs and expenses relating to the execution of the said trusts, and that in the said mortgage sesurity shall be contained a power to the said trustees or trustee for the time being from time to time and at all times so long as any money shall be due on such security by the directions of the Lords Commissioners of His Majesty's Treasury or of the said Governor or Lieut. Governor for the time being, by all or any of the ways and means aforesaid or by such other ways and means as the said trustees or trustee shall think fit to levy and raise, any sum or sums of money as the Lords Commissioners of His Majesty's Treasury may think necessary for the carrying on and completing the said Canal and the works and machinery thereof, and to apply the said monies so to be raised accordingly .- And also it is hereby declared that in the said mortgage security there shall be contained a power to the trustees or trustee for the time being thereof to give effectual receipts for all monies payable to them under or by virtue of the said security and which shall be effectual discharge to the person paying the And also a power to the Lords Commissioners of His Majesty's Treasury to nominate any person or persons to be a trustee or trustees in the place of the trustees or trustee for the time being of the said mortgage security on the death, resignation or incapacity of any such trustees or trustee, and also that in the said security shall be contained on the part of the said company full and complete authority to the trustees or trustee of the said security to take possession of the said canal and effects and to enter into the receipt of the tolls, duties and profits thereof for all or any of the purposes aforesaid, and also such other powers and provisoes for the rendering the said security and the powers hereby agreed to be inserted in such security complete and effectual and as the Lords Commissioners of His Majesty's Treasury or His Majesty's Attorney General for the said Province of Upper Cannada may order and direct. In witness whereof the said parties to these presents have hereunto set their hands and seals the day and year first above written.

Treasury Chambers, 31st August, 1828. (OFFICE COPY.)

York, July 10th, 1329.

Sir:

I beg to report for the information of His Excellency the Lieutenant Governor, that an Act having been passed in the last Session of the Provincial Legislature authorising the Welland Canal Company to give the securities required by the Lords Commissioners of His Majesty's Treasury for the repayment of £50,000 advanced by His Majesty's Government, a mortgage has been executed by the Company in fulfilment of the agreement entered into with Mr. Merritt in England.

The trustees are those whom Your Excellency nominated, viz :-the Hon. James Baby, Inspector General, the Hon. George H. Markland, a member of the Council,

and Grant Powell, Esquire, clerk of the Legislative Council.

I have also taken a bond from the Company to His Majesty for the repayment of the loan, which bond I now transmit to you. The mortgage can either remain in the office of the Lientenant Governor or with the trustees as His Excellency may desire. The agreement executed in England and Mr. Stewart's letter are herewith returned.

I have, &c. JOHN B. ROBINSON, Attorney General.

[OFFICE COPY.]

GOVERNMENT HOUSE, York, 17th December, 1832.

Sir: I am directed by the Lieutenant Governor to forward to you the accompanying copy of a minute in Council respecting the application of the Directors of the Welland Canal Company, that the claim on behalf of His Majesty to the purchase money to be paid to the Welland Canal Company for the Hydraulic privileges may be relinquished; and to state that His Excellency will consent to the relinquishment of this claim provided that the sum of £25,000 which is proposed to be borrowed, shall be expended in perfecting the Feeder of the Canal and the new cut to Lake Erie. I have the honor to be,

> Your most obedient and Humble Servant, WM. ROWAN.

The Hon.

J. H. DUNN, President of the Board of Directors, Welland Canal Company.

(OFFICE COPY.)

Copy of a Minute in Council approved by His Excellency the Lieutenant Governor.

In Council, 15th December, 1832.

MAY IT PLEASE YOUR EXCELLENCY:

With reference to the application of the President and Directors of the Welland Canal Company relative to relieving the Hydraulic works from the incumbrance of the Mortgage, it appears to the Council that Your Excellency may relieve the Company from that part of the agreement which interferes with their privilege to dispose of the Hydraulic works on the Welland Canal.

But that a pledge must be given by the Directors that the £25,000 proposed to be paid by the Hydraulic Company, shall be expended immediately in rendering the Feeder fit for navigation and in completing the canal, and also that no part of the £25,000 or of the sum borrowed upon that security, shall be appropriated in any other manner.

JOHN BEIKIE,

Acting Clerk Ex. Council.

[OFFICE COPY.]

To His Excellency SIR JOHN COLBORNE, K. C. B.,

&c. &c. &c.

The Memorial of the Welland Canal Company, most respectfully represents,
That a Minute of Council has been made, authorising the relinquishment of
the Mortgage on the Hydraulic situations on condition the Company will give a pledge
to expend the same on the canal and feeder, but does not express the payment of
debts already incurred in completing the works which amounts to about £11,000,

Your Memorialists therefore pray Your Excellency will be pleased to direct His Majesty's Attorney General to draw out the necessary release on the security held by His Majesty's Government on those works—that this money shall be applied in payment of debts now due by the Com any, and the residue in completing the canal, on receiving the necessary pledge from the Company.

And your Memorialists as in duty bound will ever pray.

A. MACDONELL,

Vice-President W. C. C.

York, 13th February, 1833.

In Council,

21st February, 1833.

Recommended as prayed for,

JOHN STRACHAN, P. C.

York, 16th February, 1833.

Col. Rowan,

&c. &c. &c.

My Dear Sir:

I beg leave to represent for the information of His Excellency, the true

situation in which the Welland Canal Company are now placed.

After ascertaining the House would neither lend as £25,000 on the security of the Hydraulic works, nor relinquish any part of the Stock held by Government, I made an arrangement with certain individuals to take this security from the Welland Canal Company and become personally responsible to the Bank for the amount required to pay off the debts £12,000 which the Bank assented to—the Legislature assuming the repairs of the canal—and granting £7.500 for that purpose, I considered the work was placed on a footing which would insure its completion—and the Company would be enabled to meet their engagements, with credit to themselves as well as to the undertaking. It appears however since the Act has passed, I misunderstood the extent of the security, some of those gentlemen intended to go, in consequence of which the negotiation has failed.

This places the Directors of the Walland Canal Company, and myself in partic-

ular, in one of the most embarrassing and critical situations imaginable.

In the first place, the contractors and labourers prosecuted the work with the greatest diligence, expecting payment as a matter of course when done. The Directors as well as myself knew we could not pay them unless we obtained a further loan

—still we urged them on at all hazard to get the canal open the present season—to effect which, we have incurred debts to the amount of £11,000, but £4,000 would relieve the necessities of those absolutely suffering, and would give us time to negotiate a loan in New York to pay off the remainder. I have offered to mortgage my own personal property to the Bank, in addition to the personal security of three or four individuals for the loan of £4,000—if obtained we may still sustain the character and credit of the Company, if not, I deem it due to my own character His Excellency should know the cause.

My presence is necessary on the canal immediately—Alex. Macdonell, Esquire, Vice-President of the Company, will remain until the relinquishment is executed,—

after which we will set about raising the money if possible.

I am,

My Dear Sir, Very truly yours

WM. H. MERRITT,

Agent W. C. C.

INDORSEMENT ON THE ABOVE BY HIS EXCELLENCY.

The Lieutenant Governor sees no objection to the proposal of the Directors being complied with, viz:—that the Company may be relieved from the agreement which prevents their disposing of the Hydraulic privileges, provided that they discharge the debt of £11,000 stated to be due to contractors, &c. and that the sum of £14,000 be expended on completing the feeder and the canal.

J. C.

11909999999

[OFFICE COPY.]

Government House, York, 23rd February, 1833.

SIR:

I am directed by the Lieutenant Governor to acquaint you, that His Excellency requests that an Instrument may be prepared for the purpose of relieving the Welland Canal Company from that part of the right which His Majesty's Government has on the Hydraulic privileges created by the canal, and to enable the Company to dispose of these privileges for £25,000, on condition that £11,000 of this amount is to be expended in discharging the debts contracted on account of the works now carrying on, in repairing the canal, and completing the new cut, and that the remaining sum, viz: £14,000 shall be expended in perfecting the navigation to Lake Erie by the new cut.

I transmit the accompanying order in Council for your guidance, and request

that it may be returned to me at your convenience.

I have the honor to be,

Sir,

Your most humble Servant,

The Attorney General.

WM. ROWAN.

11118899999

(OFFICE COPY.)

GOVERNMENT HOUSE, 18th Morch, 1833.

GENTLEMEN:

With reference to the correspondence which has taken place with the Directors of the Welland Canal Company respecting the sale of the Hydraulic privileges on the canal for £25,000, and to the conditional release which the Executive Government has consented shall be given to the company; I am directed to acquaint

you by the Lieutenant Governor that at the time it was decided that by the Instructions from the Treasury he could sanction the arrangement proposed by the Welland Canal Company, he had no doubt, that the Directors were able to dispose of the Hydraulic privileges for the sum of £25,000, and that the amount of these proceeds of the sale could be applied immediately to the discharging of a debt of eleven thousand pounds and to the completion of the feeder and the cut to Lake Erie, but as he is now informed by the Atty. General, that this sum has not yet been obtained, and that it cannot be immediately raised nor made applicable to the purposes above stated; His Excellency does not think himself authorised by his Instructions to sign the release without further explanation on this subject.

I have, &c.

The President and Directors W. C. C.

WM. ROWAN.

-: 05888888881:-

[OFFICE COPY.]

WILLAND CANAL OFFICE, St Catharines, 23d March, 1833.

SIR:

I have the honor to acknowledge the receipt of your favour of the 18th instanderessed to the President and by him forwarded to the Agent of the Welland canal

Company.

In that communication you state "That His Excellency had no doubt, that "the Directors were able to dispose of the Hydraulic property for the sum of £25,"000, and that the amount of those proceeds could be applied immediately to the "discharge of the debt of £11,000 and the completion of the feeder, and the cut to "Lake Erie; but that he is informed by the Attorney General this sum has not yet been obtained nor made applicable to the above purpose, His Excellency does not "feel himself authorised to sign the release without further explanation on this "subject."

I have the honor to inform you for the information of His Excellency, that the Legislature has provided for the deepening the feeder, and repairs on the canal by a grant of £7,500, which they preferred making by taking stock—leaving the company, as they supposed the Hydraulic property on which to raise money to pay the debts due. To this arrangement His Excellency assented, and the Board has nominated Mr. Macdonell and Captain Creighton to proceed to New York to obtain a loan on this Mortgage as soon as the relinquishment was made, for which they have been looking with much anxiety for the last mouth. This property is already sold for £25,000, and a Mortgage taken by the Welland Canal Company, on which, after the relinquishment, the Directors hoped to obtain money to pay their debts—and if any over to apply it to finishing the canal as required.

The Atty. General in stating that our money negociations had failed, assumes a fact, which circumstances did not warrant. Had he said that our anticipated negociations with the bank of Upper Canada had failed he would have been correct. That Institution refused £500 on the personal security of all the Directors except the President. We mention this merely to show the impossibility of obtaining a loan in this Province.

It is unnecessary for us to add that notwithstanding the relinquishment deprives us of any means of raising money, a number of individuals are already subject to great misery for the want of it, although they are as yet waiting with a promise of payment, which we expect from this source only.

Notwithstanding the great delay in commencing repairs the work is getting on

well, and the canal will be in order by the first of May.

I have, &c.

A. MACDONELL,

Vice-President,
Welland Canal Company.

Lieut. Col. Rowan, &c. &c. &c.

Extract of letter, W. H. Merritt, Esquire, to the Honorable J. H. Dunn, President, dated St; Catharines, 23rd March, 1833.

"I have the honor to acknowledge the receipt of your favors of the 18th and 19th instant, the contents of which are somewhat unexpected. If it is His Excellential intention to withhold the relinquishment of the Mortgage, any attempts on our

part to obtain money will be useless.

"The Board had made arrangements for Messrs. Macdonell and Creighton to go to the United States to negotiate a loan the moment this Mortgage was relinquished. If any further sum could be obtained over paying the debts, the interest on the £50,000 was to be paid or returned to you, but the debts were the primary consideration.

The Commissioners appointed by the Legislature have charge of the canal at present, therefore I think any further proceeding at this time wholly unnecessary

and uncalled for.

"However I consider it a matter of no consequence whether the canal is in your possession or that of the Directors—if necessary to fulfil the law it can be put quietly in your possession, without resorting to legal measures or without creating any difficulty with the Stockholders."

[OFFICE COPY.]

GOVERNMENT House, 27th March, 1833.

SiR:

I am directed by the Licutent Governor to transmit to you the accompanying communication from the Vice-President of the Welland Canal Company, and to re-

quest your opinion thereon.

It appears to His Excellency that the question so far as the Government is concerned, is whether any sum can be raised on the Hydraulic privileges which will enable the Welland Canal Company to prosecute the works on the canal.

I have, &c. Wm. ROWAN.

The Attorney General.

(OFFICE COPY.)

ATTORNEY GENERAL'S OFFICE, 28th March, 1833.

SIR:

With reference to your letter of the 27th inst., transmitting to me by direction of the Lieutenant Governor, the accompanying communication from the Vice-President of the Welland Canal Company, and requesting my opinion thereon—I have the honor to acquaint you for the information of the Lieutenant Governor, that I have perused the communication of the Vice-President of the Welland Canal company, and having particularly noticed that part of your letter wherein you state that "it apppears to His Excellency that the question, so far as the Government is concerned, is whether any sum can be raised on the Hydraulic privileges which will enable the Welland canal company to prosecute the works on the canal,"—I feel constrained to say that I entertain very strong doubts whether the company will be enabled to raise upon the security of the Mortgage of the Hydraulic privileges more perhaps than will be sufficient to discharge their present debts. If therefore, His Excellency does not feel warranted in relinquishing the lien, which His Majesty's Government now have upon the Hydraulic privileges for the purpose of enabling the company to

borrow money on the security thereof, I cannot recommend His Excellency at present to release the property in question from the incumbrance with which they are at present charged. The question, however, being a matter of policy, and not of legal investigation. I shall state for His Excellency's information all the facts of the case,

so far as I have any knowledge of them.

In August 1831, by an indenture of bargain and sale, the Welland Canal Company conveyed to A. Macdonell, Esq. as a trustee for Mr. Yates, who is a foreigner and cannot hold real estate in Canada, about 15,000 acres of land, previously granted to them by the Government and bordering on the canal fer several miles, together with some small parcels of which the company had purchased immediately upon its banks-some constituting the sites of intended villages or convenient situations for mills and store houses, and also the surplus water which might without injury to the navigation be applied to the purposes of Machinery. Mr. Yates was to give £ 25000 for this property payable of the expiration of ten years, for securing which sum to the company with interest, Mr. Macdonell executed as I have understood a mortgage to the company, but it has by some means been mislaid. Mr. Macdonell however has placed the deed from the company to him in my hands to draw a fresh Mortgage to the company for securing this money and I have accordingly prepared one, and sent it to him for execution. When this Mortgage is executed it is proposed that the Government shall relinquish their lien on the water privileges as well as on the land to the company to enable them to raise the money. Unless, however, they can raise the whole sum due, namely, twenty-five thousand pounds and interest since August 1831, none having yet been paid, I think it would be improvident to place it in the power of persons in the United States to acquire this very valuable property for less than the sum due on the mortgage; because I am satisfied that if the property were unincumbered, it would readily fetch the money and probably much more. In Mr. Macdonell's communication he seems to be under an impression that I had stated to His Excellency, that the company had failed in negotiating their loan-this is incorrect.-In conversation with His Excellency I stated that no part of the £25,000 had yet been paid by the Hydraulic company.—If His Excellency does not feel disposed to relinquish the property until this moncy be obtained, an assurance might be given that the Government would concur in any sale of the mortgage for the full sum due upon it; and would upon payment of the money release the property in question from any lien on behalf of the Government. I have, &c.

H. J. BOULTON,
Attorney General.

Lieut. Col. Rowan, Secretary, &c. &c. &c.

(OFFICE COPY.)

Government House, 9th May, 1833.

I am directed by the Lieutenant Governor to acquaint you, that he will consent on the part of His Majesty's Government, that a deed of release shall be granted to the Welland Canal Company, ending the rights which the Government may have in the Hydraulic privileges referred to in your letter of this day's date, so soon as a sum of money may be raised sufficient to pay off the debts contracted by the company for work performed on the canal.

I have, &c.

WM. ROWAN.

(OFFICE COPY.)

York, 9th May, 1833.

Sir:

The Welland Canal Company have uniformly abstained from creating difficulties or making any unnecessary complaints-but their present situation is such, that it is necessary His Excellency should be fully apprised of the consequences which must arise from withholding the relinquishment of the mortgage held by the Govern-

ment on the Hydraulic Property.

Early in 1832 the Directors being aware the grant of £59,000 would not complete the Canal for ships into Lake Eric, made application to the Home Government through His Excellency to relinquish the mortgage with a view of combling them to borrow money on that property to enable them to pay the debts they were then contracting to complete the work.

As they anticipated, the application was concurred in by His Majesty's Government, or rather it was referred very properly to the decision of His Excellency who promptly accorded to the request-it was concurred in by the Council and referred to the

Attorney General to draw out the relinquishment.

The Attorney General states as an objection that the Company have not borrowed the money, and infers that it would lessen the security if the debts only were paid.

If the question of security is pending, the Company conceive the expenditure of £345,000 is quite ample for the repayment of £55,000, but they conceive a misapprehension exists on this subject.

His Excellency is willing to grant the relinquishment if £25,000 is raised and

expended on the Canal, or if the Directors will guarantee it shall be done.

The property is now sold for that sum £25,000—they only require £11,000 to pay the debts, and find a relinquishment first necessary to raise that sum-or even a small part of it-they will then have the residue coming from the sale now made, which they will guarantee shall be laid out on the Canal if required, thereby giving

all the security ever contemplated.

By the Act of 1829 unless the interest on £50,000 is paid the Canal is lost to the Stockholders, and placed in the hands of the Provincial Government—the Stockholders must feel that this measure will operate most injuriously and unjustly to them after their outlay, anxiety and trouble-and they will ever think His Majesty's Government could have averted it without lessening their security or creating any additional responsibility.

In behalf of the Welland Canal Company I again beg leave to call the serious attention of His Excellency to the subject, trusting that the evil I foresco must ine-

vitably arise by the present measure may be averted.

I have &c.

Rc. dc. Col. Rowan,

WM. HAMILTON MERRITT.

(OFFICE COPY.)

York, 9th May.

Hon. J. H. Dunn,

MY DEAR SIR:

I have seen His Excellency who appears to feel a responsibility in making the relinquishment after the Attorney Gen. having given so vague and doubtful an opinion on the subject.

The Chief thinks the security better now than before and that there is no risk

or difficulty.

It appears the Att'y has recommended indirectly not to make the relinquishment unless the £25,000 is borrowed which is to be layed out in payment of debts and residue on the Canal, for which the Company were to give a guarantee—it is certainly as well if we only borrow to pay the debts, and the Company will give any guarantee that the money borrowed shall be expended on the Canal if any after paying the debts; F.2

if you could see His Excellency on the subject he would, I am sensible, grant the relinquishment—without it the security is not valid, and we will get the work in needless confusion with it I can borrow the money and pay of all demands.

Truly Yours,

W. H. MERRITT.

Official Extracts from the minutes of the Board of Directors of the Welland Caral Company at a meeting held in the Canal office St. Catherines on Thursday 8th May 1884.

W. H. MERRITT, Esq., President.
ALEX. MACDONELL, Esq., Vice-President.
GEO. KEEFER,
OGDEN CREIGHTON, Esquires.
CHAS. DUNCOMBE,

Ordered—That a meeting of the Board be held on the first Monday in June next, when the subject of the Hydraulies will be taken into consideration, and that the Government Directors be particularly requested to attend on that day.

Official Extracts from the minutes of a meeting of the Board of Directors of the Welland Canal Company held in the Canal Office at St. Catherines on the 7th day of June 1834.

W. H. MERRITT, Esq., President.
ALEX. MACDONELL, Esq., Vice-President.
OGDEN CREIGHTON,
WHLLIAM ELLIOTT,
THOS. BUTLER,
CHAS. DUNCOMBE,
and
WM. CHISHOLM.

From the strong feeling which appeared to prevail in the last Session of the Legislature to have the Welland Canal Company repossess the Hydraulic power and property which they consider to be increasing in value by the outlay of the public money—to remove all doubts respecting the sum to be paid to the Hydraulic Company for the water which hereafter may be required for the branch Canal to the Niagara River—and to remove any impediment to the purchase of the private Stockholders that the entire Canal may be placed under the control of the public—the Directors deemed it advisable to take the subject into consideration at the first meeting of the Board and appointed a Committee, consisting of the Directors appointed by Government to regociate with the proprietors in the Hydraulic Company for the purchase of the same. The subject was discussed at the several meetings and the following Report submitted.

The Committee appointed by the Board of Directors of the Welland Canal Company to examine and report upon the propriety of repurchasing now the Hydraulic Company the surplus water and privileges together with the land heretofore sold by the Welland Canal Company.

Report, That by the charter of the Welland Caual Company the power to use the surplus water of the Canal or dispose thereof for its benefit, is vested in said: Company.

That certain Tracts of Land belonging to Government lying along, and in the vicinity of said Canal were, previous to the construction of the same, so wet and marshy as to be entirely useless and worthless. That in consideration of the probability that these lands would be reclaimed by the Canal passing through the tract, and the facility with which they might be thoroughly drained, a tract thereof was made by Government to the said Campany—the two tracts thus granted amounting to about sixteen thousand acres.

In the latter part of the year 1830, on examining the situation of the property of the Company not necessary for the navigation of the Canal, and its uses as a public work, the Directors thought it advisable to offer the whole for sale, including such parcels of land as had been necessarily purchased from individuals except what were required for the use of the Canal. The Board appear to the Committee to have acted in the prosecution of this plan, with proper caution, and to have done every act requisite to give publicity to the sale and procure proposals. The Committee have examined the minutes of the Board and find the following proceedings:—

"Oct. 25th 1830. At a meeting of the Board of Directors held this day at St. Catherines.

A. MACDONELL, ROBERT RANDAL, H. J. BOULTON, and W. H. MERRITT.

"It is the opinion of the Board that if an immediate sale of the lands of the company, together with the Hydraulic privileges could be effected, it would promote the interests of the company by the increased tell which must be brought on the canal for the supply of the various machinery which will be created, besides the indirect trade which must arise from the business thus created. The Board feel every disposition to promote this object. But as the amount of capital necessary to invest in Machinery, &c. must exceed £25,000 to obtain an income of £1500 per

annum—a sum beyond what the company can command:

"Resolved—That J. B. Yates, Esquire, be empowered to effect a sale of all the lands and Hydraulic privileges now on, or to be on, the entire line of the canal, including the new route to be hereafter made to Lake Eric, reserving the entire management and regulation of the waters to the said company to preserve the levels throughout, and make from time to time such alterations as they may deem necessary for improving the navigation of, or on the canal, for the sum of £25,000, payable in ten years, with interest payable yearly, from the 1st day of January next, and that the said John B. Yates may have the refusal thereof for one year. The title to be given on payment of the principal or any part thereof, and that a contract be entered into with him to that effect, provided the Directors unanimously approve of the measure.

"November 3rd, 1830.—At a meeting of the Board of Directors held at the house of the hon. J. H. Dunn, York.

Hon. J. II. DUNN, President. H. J. BOUTON, WM. ALLAN, and W. H. MERRITT.

"All the resolutions made at the last meeting were confirmed, except the proposition of J. B. Yates, Esq. which having been taken into consideration, the Directors conceived they would assume too great a responsibility to close with his proposal without having more information respecting the value of the property to be disposed of—and conceiving they would be rendering the stockholders all the advantages the sale would possibly afford by giving it the most extensive publicity.

" Resolved-That the Agent be directed to advertise the sale thereof, stating all its advantages, in the Newspapers of New York, Boston, and clsewhere in the States, and Montreal, &c. in the Canadas, for which proposals will be received on or before the first day of March next ensning."

In pursuance of these resolutions, the following advertisement was published for the full time in Newspapers in New York, Boston, Montreal and other places in the

country, put up in hand bills and distributed throughout the country.

"EXTENSIVE SALE ON THE WELLAND CANAL."

"Sealed proposals will be received for the purchase of the Land and Hydraulic situations on the entire line of the Welland Canal, to be delivered at the Welland Canal office on or before the first day of March next, at 12 o'clock, m. will specify the highest sum the purchasers are disposed to give. The principal payable in ten years with an annual interest of six per cent. from the 1st of January 1831, or the principal to be paid down.

" The Landed Property consists

" First-Of 4 acres of land at Dunnville (Grand River Dam) on which a Grist-Mill, Carding Machine, and three Saw-Mills are now creeted on lease. This place is situated five miles from Lake Eric. It commands an extent of country of many miles-no stream leads into the Lake for 20 or 30 miles on either side of it—the river is level for 16 miles, and navigable for rafts, &c. for 100 miles above, in the Spring and Fall, and the banks abound with valuable timber and Gypsum of the best

"Second-15,000 neres adjoining the canal in Wainfleet and Humberstone .--This land is situated on either side of the canal, and is the richest soil in this part of the country. A village is already laid out in the centre of the tract called Marsh-

ville, where there is a mill privilege of 14 feet fall of water.

" Third-5 acres at and below the Aqueduct over the River Welland.

" Fourth-75 acres at Robinson on which a town plot is laid out and some lots It is a commanding situation, at the junction of the canal with the Welland, having that river navigable for 30 miles above, and 94 below where it intersects the Niagara. It is pleasantly situated, and will have a daily line of packets the ensuing

season, passing to and from Buffalo and the Grand River Dam.

" Fifth -70 acres at Allamburgh (foot of the Deep Cut) on which a Saw-Mill is now This will also be a communiting situation from the Hydraulic power it possesses, it being the first Fall where the water can be used for the purposes of Machinery, and afterwards brought into a lower level of the canal. A Village is already laid out at this place, and from its being surrounded by a rich and populous Country, there is every reason to anticipate a rapid growth.

" Sixth-100 acres at the reservoir at the Village of Thorold. There is a Grist Mill, containing four run of stone at this place (the only Mill privilege on the canal

actually disposed of) and two Saw Mills are building.

"There are also in operation a Saw Mill with two Saws near Centreville, a Grist Mill and Saw Mill, Pail Pactory and Turning Lathe and Furnace at, and near St. Catharines and a Saw Mill at Port Dalhousie.

"A Dry Dock for repairing vessels is also erecting at the second lock from the

- " As this is unquestionably the most important and extensive sale ever offered of a similar description in the Western part of America, no individual or company will propose to purchase without a personal examination. It is therefore only necessary to give a brief outline of the advantages which it possesses. "HYDRAULIC SITUATIONS.
- " The Niagara Peninsula which separates Lakes Eric and Ontario is composed of two table lands, the first extending from Lake Eric to the Mountain ridge, running in a line from Niagara Falls as far up as Paterson's creek, (Long Point) a distance

of 90 miles, including the Townships of Bertie, Willoughby, Crowland, Humberstone, Wainfleet, Moulton, Canborough, Walpole, Rainham and part of Woodhouse. And on the opposite side Welland River, Stamford, Thorold, Pelham, Caistor, Gainsborough and Binbrooke. The second table land below the mountain ridge continues from Niagara to Dundas Creek at the head of Burlington Bay, a distance of about 60 miles, comprising the townships of Niagara, Grantham, Louth, Clinton, Grimsby, Saltfleet, and part of Barton.

- "The river Welland being almost a dead level and running parallel with Lake Erie, through nearly the centre of this Peninsula, there is not a stream affording a continual or steady supply of water for an extensive flouring establishment within the territory above described except the Grand river. It is bounded by the Niagara River on the one side, and by Paterson's Creek, which empties into Lake Erie and Dandas Creek, a tributary of Burlington Bay, on the other, both of which are durable streams of considerable power.
- "The Western country above this to a great distance, and the American side opposite, are likewise destitute of water privileges to any extent, and this is the nearest and most convenient point to which their merchants and traders can resort for manufacturing purposes on a scale commensurate with their wants.
- "It is not necessary however to take so extended a view of the advantages and importance of the Hydraulic power on the line of the canal. A similar instance in the State of New York will suffice for an example. The small stream leading from crooked or Seneca lake, in the county of Yates, only six miles in length has already flouring mills erected on its banks, within sight of each other, the whole distance, and no one contains less than three run of stones. Here the country generally is in a good state of cultivation, and the soil and climate is peculiarly adapted to the growing of wheat, consequently an immediate and increasing demand exists for the crection of mills and machinery of every description.
- "The extent of water power is unlimited—the principal situations on the first level are, at the Grand River dam (the point where the ship canal will hereafter enter Lake Erie)—at Marshville, at Robinson and at Allanburgh, where the first descent takes place. The next are at Thorold, where the water is brought around four locks. From thence it passes half way down the mountain in rear of the locks—it crosses the canal and is taken to St. Catharines on the other side in a distinct raceway or ditch. Thus in the whole descent of 346 feet the water may be used for machinery on each level successively wholly independent of the canal, so that the works will not be liable to any interruption even if the water should be drawn off the main levels for the purpose of making repairs.
- "To make this purchase profitable, it will be necessary to expend a large amount of capital immediately. Therefore no application will be received unless the parties show to the satisfaction of the Board, that they can command the means to effect the desired object.
 - " By order of the Board of Directors.

(Signed)

WM. HAMILTON MERRITT,

Agent.

" Welland Canal Office,
"St. Catharines, 8th Dec'r, 1830."

After the expiration of this time, and giving a full opportunity for proposals by waiting some time longer on the 2nd May 1831,

"At a meeting of the Board of Directors.

PRESENT,
Hon. J. H. DUNN, President
A. MACDONELL,
ROBERT RANDALL
WM. ALLAN,
H. J. BOULTON,
and
W. H. MERRITT.

"Whereas public notice having been given that proposals would be received for the purchase of all the real Estate and Hydraulic Privileges belonging to the Welland Canal Company, and no proposals having been received so advantageous as the one made by Mr. Yates, it is therefore resolved. That the proposition of Mr. Yates be accepted, and that a contract be executed pursuant to the terms thereof.—The Interest on which is to commence on the first day of January 1832, with the principal payable in ten years.

"2nd June, 1831.—At a meeting of the Board of Directors held at the Welland Canal Office,

PRESENT
Hon. J. H. DUNN,
A. MACDONELL,
THOMAS BUTLER,
Hon. W. ALLAN,
ROBERT RANDALL
and
JOHN WARREN.

"Resolved,—That a Surveyor be employed to designate and establish the boundary of the Canal throughout, under the direction of Mr. MacDonell, who will submit the plans of the same for the sanction of the Board as soon as completed.

"Resolved,—That a Deed of the above land be made out to Alex. MacDonell Esq, at the request of J. B. Yates Esq., he not being authorised to hold real estate in this Province, and that a Bond and Mortgage be made out and executed by Mr. MacDonell for the payment of the consideration and interest, and that Mr. Yates execute the Bond with him."

On the 20th June a Resolution was passed appointing Mr. Geo. Keefer Junr. to

make the survey, pursuant to the Resolution of the 2nd of June.

The whole transaction appears thus to have been conducted with due deliberation and the most proper exertion to procure as large an offer as could be obtained. From the Resolution passed on the 2nd May 1831, the committee inferred that the Board of Directors did not consider the former offer of Mr. Yates to purchase, properly under their consideration. On enquiry it has been represented to the committee that it was so far beyond any other offer that had been received, that the Board desired a renewal of it, if he was still willing to purchase.—It appeared also that the sum named at the first meeting was considered more as an expression of his own confidence in the actual value of the property, than a desire to become a purchaser—being a sum far beyond the then estimation of any other person except Mr. Merritt by whom the committee had been informed that he had not the least doubt, with the expenditure of a capital upon it, in the hands of active and enterprising men, the property would be very valuable.—He was desirous to sell, because he thought the country and company would derive more benefit from it, than if it remained in the

hands of the company. In order to enable Mr. Yates to induce other men of capital to unite with him, he gave his opinion of the prospective value of the property.

Owing to various causes which have at different times been stated in public documents, the navigation of the canal and the improvements on it, have been procrastinated, and although a large sum of money had been expended by the purchasers, yet the discouragements have hitherto prevented the advantages that otherwise would have been received from the outlay. The canal being now completed the actual value of the purchase is fully preceptible, and the prospect is good that the Hyraulic company (as the purchasers with Mr. Yates have called themselves) will be amply paid for their outlay, enterprise and attention.

During the last year an unexpected inconvenience has been experienced from the use of the water in many places; and inasmuch as some sacrifices on the part of the hydraulic company of a portion of the water power where they have expended large sums in improvements must necessarily be made, to sustain an advantageous head of water in the canal,—and serious differences of opinion may exist in relation to the manner of regulating the use of the water at such places, it has been deemed expedient by the committee to open a negotiation for the repurchase thereof

by the Welland canal company.

Much of the expenditure of the Hydraulic company has been in an endeavor to drain and improve the value of the large tract of land in Wainfleet and Humberstone, in which they have been so far successful as to make it evident that the whole tract must become very valuable. The Hydraulic Company have offered to reconvey all the property with their expenditure upon the whole in improvements, in consideration of a discharge of the bond and mortgage, and that the Welland Canal Company give their bonds for £25,000 payable in 1874 with six per cent per annum interest, one half semi-annually.

Although the committee are of opinion that the whole property is now worth vastly more than this sum, yet considering the relative situation of the parties, they thought the hydraulic company should not look for a full compensation for the actual value of the property, but be contented with a liberal compensation for their atten-

tion and hazard, and an ample return for their outlay and profit upon it.

In this view the committee did inform them that they would recommend, on the reconveyance aforesaid, the issue of the obligations of the Welland canal company on the terms named for £17,500, in answer to which the committee was informed that this offer would be taken, with the exception of the small portion of the property at Allanburgh, and the water at the locks there, and the lot lately granted at Port Colborne—for which the Hydraulic Company agree to pay to the Welland Canal Company semi-annually, a sum, which, together with the annual rents, and the interest on sales of the aforesaid property to be by them reconveyed, shall be equal to the interest on the aforesaid sum of £17,500 due on the bonds given for the repurchase of the same.

In this view which the committee have taken of the actual value of the whole o this property, and with the conviction they have, that the Welland canal company should repossess it, and at the same time do ample justice to those gentlemen who have made the utmost efforts in their power to improve it.—Your committee recom-

mend to the Board of Directors the acceptance of the latter offer.

All of which is most respectfully submitted.

(Signed)

CHA'S. DUNCOMBE, WM. ELLIOTT, WM. CHISHOLM.

Welland Canal Office, St. Catharines, June 7, 1834.

The Board fully concur in the sentiments of the above report. However as the greatest inducement on the part of Mr. Yates, who is the principal proprietor, to dispose of this property, is to meet the views of the public, so frequently expressed in the

House of Assembly, he suggests the propriety of recording a reservation, to enable the Legislature to replace the property in its present position, if by them deemed advisable at the next Session—And he has executed an Instrument to return the obligations of the Welland canal company on placing the property in its present position and reconveying it to him.

A true copy,

JOHN CLARK,

SECRETARY,

W. C. C.

[OFFICE COPY.]

Articles of agreement made this ninth day of June in the year one thousand eight hundred and thirty-four, between the President and Directors of the Welland Canal Company and Alexander Macdonell, John B. Yates, and Ogden Creighton of

the second part:

Whereas the Welland Canal Company have heretofore sold to John B. Yates the real estate and hydraulic power belonging to said company for twenty-five thousand pounds as the same is more particularly described in a deed from the Welland canal company to Alexander Macdonell who holds the same for the party of the second part-& whereas the said Alex'r Macdonell executed a mortgage for the said consideration money & accompanied by a bond as collateral security for the same amount payable in ten years from the first day of January eighteen hundred and thirty-two, with the interest theron payable yearly on the first day of January-and whereas further it has been thought advisable on the part of said company to repossess the greater part of said property so as to enable the company more fully to control the opertions on said canal.—It is therefore agreed by and between the parties aforesaid, in consideration of the sum of seventeen thousand five hundred pounds, the said Alexander Macdonell shall reconvey to the said Welland Canal Company all the aforesaid Hydraulic power and real estate except the part lying on the mountain near the cast end of the summit level at a place called Allanburgh and the lot and property at Gravelly Bay, -and also that the said Alexander Macdonell execute to the said company a conveyance of such property as may have been purchased by him near the Village of St. Catharines from Oliver Phelps together with an assignment of all obligations yet due and unpaid, and all leases for property or water power sold or leased, or all other portions of said property except that reserved at Allanburgh, as aforesaid. The said conveyances to be executed when required by said company after the following conditions shall have been complied with. The said company on its part agrees to execute in due form of law a discharge of the bond and mortgage aforesaid and issue also when required the notes or obligations of the company for seventeen thousand five hundred pounds, in sums of two hundred and fifty pounds each, payable in the year eighteen hundred and seventy four, on the first day of January, bearing an interest of six per cent per annum, payable half yearly on the first days of July and January, at the office of the Welland Canal Company, to commmence running on first day of January last. The said obligations shall be drawn payable to the order of Alexander Macdonell and endorsed by him the seal of said Company being first impressed thereon and signed by the President of said Company and countersigned by the Secretary, and that the same be then transferable by the holder thereof as shares of the capital stock in said company are now transferable, except that an indorsement by the holder thereof shall be a sufficient evidence of transfer instead of a regular power of Attorney. That a separate book shall be provided for the entry of such transfer.

is further agreed that if in consequence of any Legislative alteration of opinion neretofore expressed in relation to such an arrangement. The Legislature shall at their next session by resolution express an opinion that such repurchase is not necessary, the said Welland Canal company shall be desirous to rescind this agreement now

made and shall within three months thereafter give due notice thereof to the party—the said party of the second part stipulate in case the property shall be placed in the state in which it now is they will consent to such a measure and will return to the Welland Canal company all the Bonds or obligations which shall have been issued and received as aforesaid.

And Whereas, the income from the property thus reconveyed and sold to the Welland Canal company may not equal for a short time the semi-annual interest on the obligations the said party of the second part agree that if the amount of reserved Rent money received or sales and proceeds of sales of timber or any product of the Land shall not equal the semi-annual interest on the obligations aforesaid, they will pay an amount sufficient to pay such deficiency to the Treasurer of the company by way of rent for the property and water at Allanburgh, and the lot at Gravelly Bay.

In witness whereof the said Welland Canal company have caused the Seal of the said company to be affixed to this agreement, and signed by the President and the said Party of the second part have set their hands and Seals at the Canal Office in St. Catherines, on the day and year aforesaid.

Signed Sealed and delivered } in presence of

JOHN CLARK.

CANAL OFFICE, St. Catherines, September 24th, 1834.

ALEX. MACDONELL, Esq. St. Catherin

St. Catherines,

SIR,

I should be glad to receive at your earliest convenience,-

Ist. An account of the monies received by the late Hydraulic Company for water power and privileges during the time it had the control of these matters, stating also by whom the payments were made.

2nd. Any information you can give relative to the obligation the Canal company, or yourself, are under to compensate Mr. Davidson for the loss of the lot 27, 1st concession Gravely Bay. I received from Mr. Street yesterday a copy of your Bond to him on that subject, and as the matter has been referred to the Provincial Directors for a long time past, I hope you will afford them the means of reporting, so far as it is in your power.

3rd. I am desirous to know whether you have given any titles, or agreed to give any titles for part of the Lot at Gravelly Bay. I mention this because there is the greatest probability that a decidedly unfavorable report will be made to the Legislature touching the proceedings relative to the Water Power and alienation of Lands.

I am Sir,

Your respectful & Ob't Ser't.

W. L. MACKENZIE-

^{*} To this letter Mr. MacKenzie received no answer.

Indian Office, York, 5th December, 1832.

Sin:

With reference to several petitions from the Indians of the Six Nations, respecting the destruction of their property on the Grand River in consequence of the construction of a Dam by the Welland Canal Company, I am directed by His Excellency the Lieutenant Governor to ascertain from you whether any arrangements have been made for indemnifying the Cayugas and other tribes who may have lost their crops, and have been driven from their pasture land by the overflowing of the Grand River, and if those claims are to be settled, at what period they may expect to receive the amount due to them.

I have the honor to be,

Sir,

Your most ob't humble servant, J. GIVE

J. GIVENS, C. S. I. A.

To the President and Directors of the Welland Canal Company.

[OFFICE COPY.]

St. Catharines, 12th June, 1829.

J. B. Robinson, Esq. Sir:

By the accompanying copy of the act you will see that any three of the Commissioners of His Majesty's Treasury were authorised to grant the money, the security of which was to have been secured by an assignment of the tells or profit

of the canal only.

In addition to this the Right Hon. Henry Goulbourn, Chancellor then of the Exchequer, executed the agreement which I signed. I remonstrated against this additional security, particularly the land, and stated we would require this in case the stock was not sold for the purpose of raising more money—he wrote to the Solicitor of the Treasury on the subject, who gave a written opinion on my statement that the security without the land would be better than with it, inasmuch as it would be a further means of insuring the completion of the canal, without which no security would be of any use.

On presenting this letter to the Chancellor, which I took myself, he at once

relinquished the security on the land.

I am, &c. &c. &c.

W. H. MERRITT.

(OFFICE COPY.)

York, 13th December, 1831.

Sir:

The Directors of the Welland Canal Company have requested me to apply to the Bank of Upper Canada for a loan of about £1000 to 1500 for the space of about twelve months for the purpose of enabling the Company to make arrangements in settling damages done to various individuals on the Grand River. The claims made before the arbitration appointed by the legislature amount to a considerable sum, on which the arbitrators have not as yet made any decision. In the meantime the Directors have appointed an Agent to make a compromise with as many of the claim-

ants as are willing to accept of certain terms in consequence of which, claims to the amount of £1500 have been agreed upon for about £300 under the promise that the money shall be paid forthwith. The Welland Canal Company hold a very considerable sum granted by the Legislature at its last session. The Directors feel unwilling to appropriate any part of this to the purpose above mentioned.

The Directors will feel obliged by granting them this request, which will enable

them to effect so desirable an object.

I have the honor to be,

Sir,

Your most obd't servant, JOHN H. DUNN,

Pres't Welland Canal Co.y.

The Honorable

WILLIAM ALLAN,

Pres't Bank of U. C.

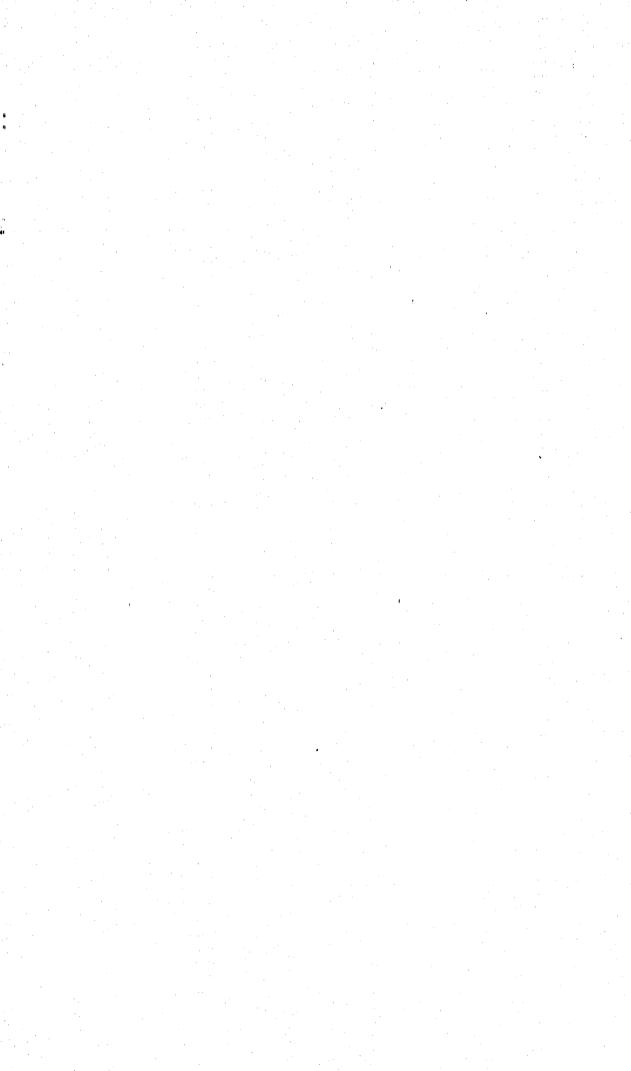

At a Meeting held at St. Catharines, 15th May, 1835.

PRESENT:

W. H. MERRITT, Esq. President.
'ALEX'R MACDONELL, Esq. Vice-President.
THOMAS BUTLER, Esq.
DAVID THORBURN, Esq.
W. L. MACKENZIE, Esq.

It was,

Resolved—That it be an instruction to the Secretary and Engineer of the Board to shew to the Directors on the part of this Province, or any one of them, if required, all such papers or documents as such Director or Directors may consider necessary to a full understanding of the state of the Company's affairs, and the receipts and expenditure of monies in the present and in past years, and to furnish such detailed information on these subjects as may be desired.

REPORT

Of the Engineer appointed to examine the Works upon the Welland Canal.

No. 3.

To David Thorburn, William Lyon Mackenzie, and Charles Duncombe, Esquires, the Directors appointed Engineer's Reportunder the authority of an Act of the Provincial Parliament of Upper Canada, passed in the Fourth year of the Reign of His Majesty King Wm. 4th Chap. 39th, Sec. 8. (March 6th, 1834.)

GENTLEMEN.

In compliance with your very distinct instruction, dated the 2nd Have examined all day of July last, I have proceeded to examine all the Works upon the the works on the line Canal line, or connected with the Welland Canal Navigation.

The route, now so well known, between Lakes Ontario and Erie, Commencement and commences in the former Lake at Port Dalhousie, and proceeds through end of route. the valley of the Twelve Mile Creek, by—

Total length of Feeder, 20 miles 75 chains.

From Dunnville to mouth of Grand River, . . 4 miles 60 chains.

Length of Canal and Feeder, 48 miles and 990 yards.

Length of Canal and feeder.

Lockage.

The first three ascending Locks from Port Dalhousie are 130 feet within the chamber, and 32 feet wide. Port Colborne Lock, descending, Lockage is 125 feet by 24 feet wide; the residue are 110 by 22 feet within the chamber.

Lock No. 1.—Beginning at Port Dalhousie, constructed of timber, is at Construction, state, present in good general repair; timber framing in the and probable dura-ordinary process of decay; new gairs have fately been suspended. This lock may probably continue serviceable for three years, as the workmanship is good.

orkmanship is good.

ilt with timber; is in good

age in side walls; timber

"No. 2.—Same dimensions as above; built with timber; is in good ordinary repair, except leakage in side walls; timber well united, and workmanship good; probable duration three years.

Lock No. 3.—Same dimensions; constructed of timber; in ordinary working repair; workmanship good; probable duration

three years.

No. 4.—Constructed of timber; 110 within the chamber, and 22 feet wide; timbers decayed upon upper return head; side walls bulged, and considerable leakage; probable duration two years.

No. 5.—Timber; same dimensions; in fair working order; pro-

bable duration three years.

No. 6.—Timber; same dimensions; bulge upon side walls and coping; timber in ordinary decay; probable duration two years.

Construction, state, and probable duration of locks.

No. 7.—Saw-mill lock; same dimensions; originally built of timber; very frequent repair has been made upon this lock during a succession of years; lower piers re-built with rubble masonry, 24 feet apart; also lower recess, and 46 feet of side walls; part of the chamber composed of timber remains as originally built; also upper recess, piers and wings; the foundation of all the masonry is insecure; extensive repair ordered.

No. 8.—Constructed of timber; workmanship deficient; considerable bulge upon side walls and recesses; duration un-

certain.

No. 9.—Built of timber; workmanship defective; otherwise in tolerable repair; lower gates require to be replanked; duration uncertain.

No. 10.—Wooden lock; lower hollow quoins and angles of piers much decayed; bulge upon side walls; timbers weak about upper recess; workmanship defective; duration uncertain.

No. 11.—Wooden lock; south side much bulged; timber in the ordinary state of decay; gate posts and framing good; workmanship of lock defective; duration uncertain.

- No. 12.—Originally built with wood; now stone and wood; north side 30 feet from upper hollow quoin, built of rubble masonry; stands well, but considerable leakage between stone and wood work near head; opposite side wall much bulged; gates in fair working order; duration of old timber work uncertain.
- No. 13.—Wood; in ordinary repair; side walls much bulged; workmanship defective; no treenails or fastenings apparent; gates good, except swing-bars; duration uncertain.
- No. 14.—Wood; several timbers displaced in lower wing walls; deficient in treenails; side walls much out of perpendicular; timber of lock in ordinary decay; gates good; duration uncertain.
- No. 15.—Originally composed of timber, now consists of cut stone, rubble masonry and timber; lower piers and 9 feet of recess built of cut stone; good workmanship; all the rubble masonry and bad wood work very defective.
- No. 16.—Originally built with timber; south side composed of rubble masonry and timber framing—bad foundation for masonry; walls much shaken; timber work upon the opposite side in bad repair; this lock is the narrowest upon the line, being 20 feet 4 inches in width within chamber and at lower gates; immediate repair ordered.

Lock No. 17.—Wooden lock; lower return heads open at joints; few treenails or fixtures; side walls greatly bulged; timber in ordinary decay; workmanship very defective; gates good; duration uncertain.

No. 18.—Wooden lock; timber in ordinary state of decay; workmanship defective; may probably remain as it is at present for one year, without much extra repair; width

only 20 feet 6 inches within the chamber.

No. 19.—Originally of wood; rebuilt with a stone pier upon the south side; part of side wall is of rubble work, but built upon improper foundations; north lower pier of timber, much decayed and considerable leakage; duration un-

No. 20.—Formerly wood, now composed of wood and rubble masonry, all in very bad repair; one side requires renewal from upper hollow quoin downward; also 45 feet Construction, state, of opposite wall; foundation timbers and planking re- and probable duraquired to be replaced; this work to be done immediately. tion of locks.

No. 21.—Originally timber, now wood and stone; planking of chamber requires renewal; upper check course displaced; several principal bottom timbers decayed; sheeting piles and plank required; gates good; duration uncer-

No. 22.—Wooden lock; workmanship defective; otherwise the foundations and timbers are in ordinary condition; dura-

tion not more than one year.

No. 23.—Wooden lock; timbers in ordinary state of decay; sides much bulged and leaky; upper head timbers displaced; workmanship and framing very deficient; duration uncertain.

No. 24.—Wooden lock; timbers decayed; side walls bulged and

very open at lower pillars; duration uncertain.

No. 25.—Originally wood, now wood and stone; south side composed of timber and rubble walls; north side of timber defective, and will require speedy repairs.

No. 26.—Wooden lock; timbers much decayed; bulged upon both sides; defective workmanship; duration uncertain.

No. 27.—Wooden lock; timber decayed; open at lower piers; treenail and fastenings defective; will require speedy repair.

No. 28.-Wooden lock; timbers in ordinary decay; open at all the outside joints and angles; deficiency of workmanship.

No. 29.—Wooden lock; timber much decayed; gates good; bad workmanship; duration uncertain.

No. 30.—Wooden lock; timber in ordinary decay; leakage in side walls; corners of piers very open; duration uncertain.

" No. 31.—Wooden lock; summit of mountain; timber in ordinary decay; duration uncertain; workmanship defective.-Thorold summit contains locks 32, 33, 34, and 35—all in good working condition; very little repair has hitherto been required upon these locks, and with the exception of new gates and sheeting plank for upper piers of No. 35, none may be anticipated during the present season; workmanship good; probable duration three years.

Nos. 36 & 37.—Allanburgh locks, northern extremity of the Deep Cut; built of timber, which is comparatively sound; workmanship good; probable duration three years; new

gates required, and under contract.

Construction, state, and probable duration of locks.

Nos. 38 & 39.—Descending Locks to Chippawa; workmanship good; timbers in the ordinary decay; back ties and braces very much decayed; duration two years; new gates required, and under contract.

No. 40.—Entrance lock from Lake Erie, at Port Colborne; built with rubble masonry upon prepared timber foundations; appears to be in good condition; is of good workmanship, and may remain permanent for ten or fifteen years.

A waste wear connected with each lock, and will require

A waste wear composed of timber framing is connected with each of the above locks; their progress of decay and duration nearly corresponds same repair as locks, with what has been stated respecting the locks, and will all require simultaneous repair or re-construction. It may be here remarked that locks Nos. 16 and 18 are the narrowest upon the Canal line: the first being 20 feet 4 inches in width within the chamber—the second is 20 feet 6 inches at its narrowest part; the residue vary in width, from 20 feet 6 Previous to opening of spring navigation for 1836, inches to $21\frac{1}{2}$ feet. it is intended to repair the most defective, and widen the narrowest locks upon the Canal line, and in succession to re-construct all to the width of 24 feet. Having conversed with many of the ship masters, at present employed in navigating the Lakes by the way of the Canal, I find two classes of vessels designated upon the line, namely, the old and new.

Intended to re-construct all the locks 24 feet wide.

Dimensions of vessels passing through the lock i.

The former class comprises a number of vessels, such as the Ohio and Detroit, of moderate length for the lockage, but rather too broad to pass the narrowest locks with ease.

Dimensions of vessels the Canal.

The dimensions of the largest of this class is 73 feet length of keel, best suited to anvigate 20 feet 4 inches breadth of beam, with a draft of 7 feet 2 inches of A vessel of these dimensions will carry 4,000 bushels of wheat. The most approved vessels for Canal transit, in connection with lake navigation, are of the new class, having 20 feet beam or extreme width; 75 feet length of keel, and 80 feet over all, between stem and stern; floor timbers 15 feet, with 16 inches dead work; slip keel 4 inches projection; draft one-fourth of an inch to a foot, or 7 feet 4 inches in all Four tier of flour or salt barrels is considered for a cargo of 120 tons. to be the best dimensions for storage, or four barrels by the head and five by the stern. Vessels have no difficulty in passing the Canal, between lake and lake, in 24 hours. There are 103 vessels at present employed as regular traders through the Canal line,—aggregate burden 7,294 tons.

Common Bridge; without draw; injured by Steamer Caroline; No. 20. now passable.

Horizontal Bridge at Dunnville; new; requires paint. No. 21.

There are also upon the line of the Canal and Feeder three setts of Stop gates. stop gates, in good working condition.

McAdams' Mineral Composition has been recommended as well adapted for coating timber or wood work subject to alternate wet or to be painted with The Canal Board have authorised the immediate purchase of a McAdam's mineral sufficient quantity of that composition to paint all the works of importance composition. upon the Canal route.

Works of importance

Dam at Dunnville, Grand River.

This work is 594 feet in length, 18 feet in width at base, and 7 feet Dimensions and conin height, surmounted by a public road bridge, and strengthened at its dition of dam at western extremity by a retaining wall and strong extra embankment; this embankment is 484 yards in extent. Considerable leakage was observed during the lowest state of the river, in August last, near the centre of the dam, which is now secured, and a sufficient quantity of gravel and stuff deposited to guard against its recurrence.

There are seven separate waste wears in connexion with the great Separate waste wears dam, generally 66 feet in width, and all at present in good repair.

in good repair.

Culverts.

There are only four culverts required upon the whole extent of the Number and state Canal and Feeder, they are composed of timber, and are in good repair. of culverts. Two new main lett offs are at present required, and will be built of masonry, before the winter sets in, according to a particular design.

Canal Banks and Back Drains.

Canal banks and out line in good general repair.

Throughout the whole line of Canal and Feeder, the work under this back drains through. head, although by no means perfect, is in very good general repair; no situation has been observed where immediate injury to any extent may be anticipated, as has been sufficiently tested by the unprecedented freshets of 20th October.

11,821 cubic yards of contract work still . unexecuted.

From Dunnville to the junction the banks and back drains, upon the path side, require some extra raising and clearing. The embankment upon the Berm side is raised, in many places, above the water surface, but several vacancies occur to unite and raise the work to its proper height. The amount of contract work still unexecuted is 11,821 cubic yards.

improvements required from junc-

From the junction to Port Colborne, it does not appear that any imrequired from junc-tion to Port Colborne, mediate improvement is required, beyond the proper formation of back drains and waste wears, near bridge at Port Colborne, and the removal of 620 cubic yards of rock, at present under contract.

Ditto from junction to Port Robinson.

From the junction to Port Robinson the canal path is narrow in many, places, running at intervals from the Aqueduct northward, through Shotwell Farm to Shotwell Bridge; 320 lineal yards of this extent will require to be strengthened, while widening the canal surface, at present under contract. The back drains and paths are in good repair to Port Robin-

Ditto from Port Robinson to northern extremity.

From Port Robinson to the northern extremity of the Deep Cut, a line of top back drain will be required, to check surface water from the cut, before setting in of the winter: several places are commenced with, but no uniformity of design has been observed. The present tracking path and bridges have lately undergone a general repair.

State of Canal, and repairs required from the summit to Thorold.

From the summit to Thorold the banks are broad and generally good; several weak places here have been observed, and are under repair. Between No. 8 bridge and Thorold about 800 yards of new track path is in the course of formation, upon a higher level than the former. Here the Canal banks are very soft, and frequently slide so as to interrupt the present path.

Ditto from Thorold to lock No. 3.

From Thorold to No. 3 lock at St. Catherines the banks and back drains are all in ordinary repair; near to lock No. 3, some widening and raising will be required by the ensuing spring.

Ditto from lock 3 to

From No. 3 to No. 2 lock hend, considerable repair is required: facing and embanking inside canal slopes at the water surface. slides are here also in progress; to arrest these, it may be necessary to have recourse to the mode proposed by plan No. 7, hereafter explained.

Ditto from lock 2 to Port Dalhousie.

From lock No. 2 to Port Dalhousie the banks have lately been placed in good repair, with the exception of 628 lineal yards, that require to be The most effectual mode of doing this is reprewidened and raised. sented by drawing No. 2; the estimated expense, where only one side is required, is £9 17s. per hundred lineal feet. The principal item of expense here is for timber-in many cases the back anchor timbers may be dispensed with.

Harbours.

Formation and state of harbour at Port Dalhousie.

Port Dalhousie, situated upon Lake Ontario, at the northern termination of the Canal, is formed by two piers, each 1026 feet in length, running nearly in a north and south direction, separated about 60 feet from each other upon the land side, thence diverging to 134 feet at their termination in the Lake.

The accompanying plan No. 9, shews the exact position of the piers. and the depth of water in the channel, obtained in the month of July last, when the Lake waters were considered at their medium height.

The greatest depth of water is found at the extremity of the piers, being 111 feet, varying inland from 10 to 9, and 8 feet 2 inches, the least depth observed.

During the present season 270 feet of new piers have been constructed, and all the work executed according to the contemplated original plan, with the exception of decking the entire superficial extent of the piers not yet contracted for. To render Port Dalhousie a safe and com- Work nucessary to be modious harbour for steamers and other large Lake craft, it will be neces done to render Port sary to extend both piers 458 yards to the point marked B.B. upon the Commodious. plan, to 18 feet water. - This point at bottom being below the under current, and beyond all the bars, a clear and deep entrance will be preserved at all sensons; after the formation of interior basins according to design No. 9, this work, as an artificial Harbour, will be complete in all its parts, and then may afford shelter and accommodation to all the vessels at present navigating the Lakes.

Port Colborne, or Gravelly Bay:

Situated on Lake Erie, at the Southern extremity of the Canal, is formed by a main Pier 2,300 feet lineal, and 16 feet wide, extending into dition of harbour at 12 feet water in the Lake, enclosing an interior basin 400 feet square, as Port Collingue or represented by the plan No. 4. All the work contemplated for the season. Gravelly Bay. represented by the plan No. 4. All the work contemplated for the season, and under contract, is executed, decked, and upon final inspection presents every appearance of solidity; a Light-house is built upon this Pier Head, which requires temporary repair.

The depth of water, parallel with the main pier, varies from 12 to 11, 10, and 9 feet at lock entrance; here the depth is subject to considerable diminution after gales from the South and South East, that causes an almost constant use of the dredge. To obviate that expense, and protect the entrance, it will be necessary, as soon as practicable, to place a Pier 1,260 feet in length, in the direction marked A.B. upon the plan; this proposed Pier will effectually guard against the inconvenience adverted to, and render Port Colborne equal in accommodation, for exit and ingress, with any Harbour upon Lake Erie.

Grand River Harbour:

Is situated at the confluence of the River with Lake Erie; is com-Situation and state of posed of one single line of main pier 707 feet in length, terminating in the harhour at the 8½ feet water; the depths varying inward from 8½ to 9, 11, 14, 12, 12, Grand River. and 14 feet, as represented upon the plan No. 5.

This Pier suffered severely during the great gale of October last; about 280 feet lineal of the main pier was carried away by the storm, and the residue much injured.

These Piers were originally placed in the most unfavourable position to preserve access and egress between the Lake and River, running precisely at right angles with the direct train of the stream, as will be observed by the plan No. 5. The line A.B. shews the direction of the current opposite the old Naval Depot. This current impinging against the River bank is deflected from thence to the direction of B. to C., producing a depth of 12 feet water upon the pier face at C.; from thence the current is propelled in the direction of C. D. E. consequently the greatest depth of water is found near C., and here the piers are undermined to the greatest extent. The greatest depth of water in the main channel, as may be expected, is upon the line C. D., and considerably removed from the Pier Head where only 81 feet water is found; in order, therefore, to make as much use of the present piers as practicable, seeing that the best direction cannot now be obtained, I have recommended the

construction of a short jetty, to be composed of timber and stone, abou 100 feet in length by 14 feet in width, to be placed in the position marked upon the plan by H.H. Upon an insertion of this pier the River will receive a new train in the direction H.D., which will remove the sand bar at K.K., cover the weak parts of the present pier between C. and D., and produce deep water in the required channel opposite the Pier Head.

Design for repair of pier submitted.

A particular design for repair of the delapidated piers, in connection with this jetty, has been submitted to the Board of Directors, approved, and is now in progres of execution, and nearly completed.

To complete harbour a new pier must be erected.

Before this Harbour can be considered perfect another pier 730 feet in length must be placed in the direction marked L.M. upon the plan.—This additional work in connection with the contemplated Ship Lock at Dunnville, will render the Grand River Harbour a position of the greatest importance upon Lake Erie.

Having enumerated all the works of importance upon the Canal and feeder, excepting the aqueduct across Chippawa River, which is built of timber, and in excellent repair, I will next endeavour to explain the situation of the hydraulic works, mills, and machinery upon the Welland Canal from Port Dalhousic upwards.

No. 1.—Port Dalhousie:

State of hydraulic works, mills, and machinery at Port Dalhousie. Captain Christie's saw mill, one saw, in rear of entrance embank-bankment. This water privilege does not affect the Canal navigation, as all the surplus of lockage, waste wears, and mill water, situated upon higher levels, must necessarily pass through this level, either by lockage, waste wears, or for the purposes of machinery. This mill site is valuable, from its length of summit level and permanent supply, and produces a revenue to the Canal Company of 100 dollars per annum, upon a ten years lease.

No. 2.—At No. 2 Lock:

At No. 2 lock.

A saw mill is in progress of building by Mr. William May. The water supply for this mill will be equally permanent with the former. In all cases the mill flues should be regulated to draw waste water only from the Canal, by an overflow of certain fixed dimensions, unless during floods or very wet seasons, when sluice gates may be opened. The revenue of this mill will be 100 dollars per annum, ten years lease.

No. 3.—Butler & Company:

At lock No. 3

Saw and grist mills, upon the lower level of lock No. 3. Water is taken from the upper level and returned to the lower; a careless miller may, in a few hours, drain the upper pond, where the intermediate ponds are short; regulation of surface flues here required; revenue 400 dollars per annum, ten years lease.

No. 4.—St. Catharines Water Company:

Works in possession of St. Catherines Water Company.

Occupy all the waste water upon levels Nos. 4, 5 and 6, with a fall of 22 feet 6 inches; also, all the waste water from the Canal at lock No. 24, near the mountain summit, 179 feet fall. The water is conducted to the first series of mills by an open cut 2½ miles in length; expense to the Canal Company about 6000 dollars, exclusive of land; revenue 500 dollars per annum, upon a lease of ten years.

The Water Company have constructed at their own expense, three separate races, in connection with the Company's race and with each other, and have placed thereon the following mills and machinery:—

1st. Upon the higher level an extensive grist mill, owned by Mr.

wery and tannery, O. Phelps.

2nd. Surplus water upon a lower level moves machinery for a pail

Grist mill, pail factory, carding mill, brewery and tannery, and saw mill. factory, a carding mill, brewery, and tannery; also a saw mill in progress

of building.

3rd. All the surplus water from these mills and levels is then carried upon the lower level to Mr. Merritt's establishment, now building, to consist of saw and grist mills, besides other machinery that the increasing wants of the country may demand. These valuable and extensive privileges are possessed by the Water Company at a very moderate

No. 5.—Saw Mill:

Owned by Mr. O. Phelps, at the upper level of lock No. 7; returns Phelps' saw mill. water to the level below; a regulating flue is here necessary, to prevent the night miller from interfering with the lock gate arrangements, and the mill owner to be held accountable for any delay that may occur in passing the locks.

No. 6.—Thorold Mills:

Upon Thorold summit there is an aperture or flue inserted into the Thorold summit. Canal Bank, 12 feet long, 3 inches deep, and 12 inches under the Canal This flue passes water to a grist mill, the property of Keefer's mills. water surface. George Keefer, Esquire, with four run of stones; this privilege being a premium by the Canal Company for the first grist mill upon the mountain summit, no revenue is derived therefrom. Same water moves a saw mill belonging to Mr. Squires; also a grist and carding mill, same owner, before its return to the level below; revenue 160 dollars, ten years lease. Upon opposite side of the canal, water is taken by a flue 8 feet in length, 21 inches in width, and 10 feet below the Canal surface, to a saw mill Keefer's saw mill. owned by George Keefer, Esquire, with three run of saws; revenue 300 dollars per annum, ten years lease. This water is returned to the level below.

There is likewise a lath mill at the adjoining waste wear, belong- Nicoll's lath mill. ing to Nicolls, only in occasional use; may be worth 25 dollars per annum.

Upon the middle level water is taken for two saw mills, the property of Messrs. Keefer and Emery, with three saws; water returned to the mills. lower level; revenue 300 dollars per annum, lease ten years.

No. 7.—Allanburgh Mills:

Situated at lock No. 37, northern extremity of summit level; com-Alianburgh mills. prehends a grist mill, with two run of stones, two saws, saw for lath, shingle saw, carding machinery, and fulling mill; water is taken from the summit, and returned to the level below. The Canal revenue from this establishment is uncertain—increasing or decreasing, in proportion to the value of the privileges let by the St. Catharines Water Company, by special agreement with the Canal Company.

This is one of the most valuable situations for mills and machinery upon the line hitherto described, having the command of all the summit level, the mills may work nearly all the season without injury to the

Canal.

No. 8.—Port Robinson:

Port Robinson.

Gypsum mills and works for the preparation of hydraulic cement, Mr. Donaldson's Mr. Donaldson's property; water is taken from the Canal, near stop sypsum mills. gates; is not returned to the Canal.; requires regulation during the summer months; revenue 100 dollars per annum, ten years lease.

No. 9 .- Gravelly Bay Water Company:

Gravelly Bay Water

Are at-present constructing, at the lower level of entrance lock, saw saw and grist mills and grist mills, in a favourable situation for Canal waste water; steam erecting by the

C

machinery is in contemplation, when the Canal supply is deficient; sup-

posed revenue 200 dollars.

Under strict regulation, and in ordinary seasons, all the before-mentioned mills may be used during most of the summer months, being now under the control of the Welland Canal Company.

No. 10.—Feeder.

Marshville saw and grist mills.

Marshville saw and grist mills, Grey & Greybiel; water taken from the feeder and lost, being conveyed by a back drain to the Chippawa River; these mills should be stopped during at least three summer months, from their tendency to retard the flow of water in the feeder; revenue 120 dollars.

Dunnville.

No. 11.—Dunnville.

Situated at the entrance of the feeder, near Dunnville Bridge, owned by-

Kempt's saw mill, Thompson's saw and fulling mill, Davis' saw and grist mill,

Mr. Kemp, a mill with two saws,.....Revenue 200 dollars.

" Thompson, one saw and fulling mill,. do. 150 do.

" Davis, two saws and grist mill,..... do. 250 do.

Although these mills are under the control of the Company, and subject to the same regulations as those upon the line below, the position of so much machinery is unfavorable to the free discharge of water in the feeder: in ordinary seasons these mills should be shut during the months of August and September.

Total revenue from mills, &c. \$3,855.

Evils arising to the canal from mills.

Total revenue for mills and machinery, say 3355 dollars per annum. The question of mills and machinery upon the Welland Canal resolves itself simply into this:—If the mills now established upon the canal line retard the navigation in ordinary seasons, with a limited trade, the effect by a double or quadruple trade would obviously be, either to stop the mills or the navigation. The present system of placing mills at adjoining locks, connected by short levels, is very injudicious, the greatest care of the Lock-keepers being insufficient at times to prevent a reduction of the level, but more particularly by night, when it frequently occurs that one or more hours is necessary to raise the water to the navigating height. Under all these circumstances, extended waste wears of solid cut stone, inserted into the canal bank, is the only preventative; then waste water only will be used.

Management of the Welland Canal.

The Welland Canal is at present under the following superintendence:—

Division.

At Gravelly Bay, James Black, Esq. Superintendent, &c.

1st.—Gravelly Bay Harbour and Works is under the charge of James Black, Esquire, Collector of Tolls, his jurisdiction extends to the first culvert north of the Harbour. A. B. Ostrom, is overseer of labourers and lock tender.

Dunnville, Andrew Thomson, Esq. 2nd.—Andrew Thompson, Esquire, is Collector of Tolls at Dunnville, and is placed in charge of the works at Grand River dam, and waste wears; also upon the line of feeder to Broad Creek, with the regulation of Dunnville mills.

Feeder, - Aitkins.

3rd.—Aitkins has the superintendence from Broad Creek upon the line of the feeder to its junction with the main Canal; he has also the control of Marshville mills.

Main Canal, John Toyne. 4th.—John Toyne has charge upon the main Canal, from near Gravelly Bay to Port Robinson; generally employs three men, with repairs.

Port Robinson, John Calaghan.

5th.—Port Robinson to Allanburgh, in charge of John Calaghan, is Collector of Tolls, and tender for descending locks to Chippawa River.

Allanburgh, Richard 6th.—Allanburgh to Culvert is in charge of Richard Campbell, who is also tender for two locks.

7th.—Thorold; Higgins has charge of this part of the line, from Hall Thorold, - Higgins. Davis' culvert to No. 31 Lock; generally employs two men. Richard Campbell is lock tender upon this division, with control of Thorold mills.

8th.—Seven Locks below Thorold Summit are let to Chalmers, who tend Seven locks under

the same, and keeps the embankments in repair.

9th.—Upon this division, extending to Port Dalhousie, there are seven lock tenders, who keep the embankments in repair at a fixed rate per annum, and have the control of all the mills adjoining their respective locks. George Smith, Esq. has charge of the works at Port Dalhousic, Port Dalhousie, is also Collector of Tolls at that place.

George Smith, Esq.

John Vandeburgh is general superintendent upon the canal line, for John Vandeburgh, repairs, procuring workmen and materials; the lock tenders and passing general superintenvessels are under his directions. The annual expense of these departments are detailed in the Canal Company's balance sheet, to accompany this report.

The working system of the canal, as at present established, is well arranged, as to efficiency, although, as in all similar cases, much of its Usefulness of the Caeconomy and usefulness depends upon the vigilence of the superintention of the superintendents, and strict attention of overseers in the discharge of their respective dents, &c. duties.

Washing out the Deep Cut.

I have investigated the proposition to increase the depth of water Flooding the Deep by flooding through the summit cutting, and so far as I can understand Cut. the subject, the following results in execution may be anticipated:-

From experiments already made there can be no doubt of the prac- consequences of, ticability of the measure. The intervening strata between the Chippawa anticipated. and the Northern face of Allanburgh summit being stiff clay, superimposed upon quick sand, it is self-evident that after a current of water is carried from Chippawa to the mountain face, with either a fixed or regulated head, the intervening strata, clay and sand, must be displaced in proportion to the head applied.

Forty feet of head may be obtained from the Chippawa, and once let loose, without regulation, would open a passage through the deep cut many hundred yards in width; its effects upon the valley below could not be easily calculated.

But the plan proposed for executing this work is, by drawing water Plan proposed for from the Grand River Feeder, situated 16 feet above the surface of Chip-doing so. pawa; to form a dam across the present cut near Allanburgh; and after passing through and washing out the Canal bottom the current is to be diverted into a branch of the twelve mile Creek, and not to interfere with the present navigation until the water arrives at St. Catharines.

From trials that have been correctly made, it appears that at the Experiments tried bottom of streams a velocity of three inches per second will begin to act upon clay of a consistency similar to that in the deep cut

Six inches per second will remove sand of a quality corresponding to that in the bottom of the cut.

From this data it will be observed that a greater velocity is required Argument on the to move fine sand than ordinary clay, therefore at any given velocity a greater proportion of clay will be displaced.

But as water from the feeder passing through this cut will not immediately act above its level, the Canal banks, after some resistance, will assume the form shewn in diagram No. 6, marked a.a.; the portion marked a being undermined and carried away by the current, the superincumbent part a. will soon fall into the channel of the cut and there be decomposed; in succession other portions of the banks, b. b. will be un-

dermined and disintegrated until the intended depth is acquired.

The washing process being stopped, we then find two parallel and nearly perpendicular walls of clay, each 30, 40, 50, or 60 feet in height at c, resting upon a base partially undermined, and composed of quick

sand, as at D. To give these walls a proper slope by the ordinary process of excavation, as regards time, quantity and expense, is out of the question; we may, however, fill the Canal to its original height with water, now 24 feet in depth; this water will partially sustain the banks to that height, then permit the banks to form their own slope by decomposition and slides; at this stage of proceedings any ordinary slide would be of less consequence from the great depth of water in the cut and its encreased width, but owing to the peculiar situation of the banks we cannot calculate upon a moderate slide only, as, independent of their natural height, we have from the encreased width a vast accumulation of superincumbent spoil bank to contend with, that must ultimately fall or slide, and so impede, or probably obstruct the navigation in such a manner, that the washing process must again be resorted to at whatever period these slides may occur.

The next inquiry will be, how is the flood water, with its suspended clay, to be disposed of?

Flood water: How to be disposed

The only practicable off-let, without passing through the Canal line and locks, is by one of the branches of the twelve mile creek, distance, taken from a map of the District, seven miles before reaching the Canal line at St. Catharines; in this distance there is a fall of 290 feet, consequently the flood water will have lost none of its velocity, and nearly all the clay remaining in solution will be deposited somewhere between St. Catharines and the extremity of the piers in Lake Ontario, thereby tending to produce dredging and deepening to an unknown extent upon a distance of nearly six miles.

Offers made for its Currency.

Offers to execute this work to the required depth have been made execution for £15,000. by responsible persons for the sum of £6000 currency, but although the sum proposed is moderate, compared with the magnitude of the undertaking, and the advantages that may be derived from a direct communication with the Chippawa are great, I would, nevertheless, hesitate to General objections to propose its execution from the probability of obstructions to the navigation, uncertainty as to time required for its final completion, and from its probable effect upon the navigation adjoining Lake Ontario.

this method.

Extra Width through the Deep Cut.

Deep Cut will soon require additional

The average width through the Cut, 2 miles and 1200 yards, being only 24 feet at bottom, the encreasing transit will immediately demand an extension of this width, to at least 36 feet, for the free passage of schooners 20 feet beam. To effect that object excavation to the extent of 24,400 cubic yards will be immediately required; a proportion of this excavation may be done in the usual manner by cutting and drop scows; the residue may be accomplished by dredging either with horse or steam power.

Securing Canal Banks.

Securing Canal

In several places upon the canal route, particularly between locks 2, 5 & 4, also at several points upon the Deep Cut, the banks are subject to slips or slides, generally found where they are very high and of a wet or spungy consistency, without great care and expense it is very difficult to remedy this defect. The plan that I have hitherto found most permanent and ultimately the least expensive, upon works of a similar nature, is that exhibited by drawing No. 7, composed upon either the path or berm side, or upon both, first, with a back drain of brick work, 18 inches

Best mode of doing

square, inside, securely laid in water cement, the top nearly level with the back slope of the path or berm, covered at intervals with a close iron grate, to the lower part of this duct of brick work; an iron pipe six inches in diameter is correctly fitted, united therewith, and made to pass through and under the path to the surface water of the canal; one of these ducts, and a pipe, is placed in every 60 or 80 yards lineal of the canal, having back drains of brick, with a slight inclination in connection therewith; then a retaining wall is crected, of the dimensions and form shewn at A. A. of stepped masonry, the wall terminating at 2 feet width at top; from the face of this wall a second back slope is formed, connected with a second range of drains and ducts; the drains inclined upon each side, so that they unite with the main ducts and drains below; then a second retaining wall may be formed of similar dimensions and description of masonry, as already explained.

If necessary, a third or fourth series of back drains, ducts and stepped retaining walls, may be constructed, all with regular ascents and descents, until the point of difficulty is passed, where the embankment and slopes are formed in the usual manner.

Improvement of Locks.

The great disideratum upon the Welland Canal, at present, is the Lockage and waste lockage and waste wears, more particularly those from No. 5, upwards, to No. 31, near Thorold summit.

Timber framing in the body of several of the locks is comparatively workmanship all

sound, but the workmanship in all is defective.

Locks Nos. 7, 12, 15, 16, 19, 20, 21, 25, & 31, repaired partially with stone, have generally been built upon improper foundations, and day back- improper foundations. ing inserted, while subject to frost; this first deficiency has produced that dislocation which is so apparent; the second has pressed the side walls beyond their perpendicular, and rendered all the numbers from 6th to 31

Upon a particular examination of the ground between these defective locks, it appears that a new position may be obtained, in a connected locks may be obtained. chain, from lock No. 31, downwards, to lock No. 18, opposite to Centreville. See plans No. 8 & 9. Nearly all these new locks may be inserted New locks may be into rock foundations; a sufficient quantity of stone will be obtained from inserted into rock foundations. the excavation of lock pits and intermediate ponds to execute the rubble masonry, hearting and backing of all the locks upon the line that may re- Work may be done quire renewal or repair: and what is equally important, this division of without stopping work can be done in the best part of the season, without stopping the navigation. navigation.

Should it be deemed expedient to adhere to the present line of navigation from Centreville to Port Dalhousie, several situations occur where locks may be advantageously inserted, adjoining and parallel to their present position, and executed in the proper season, without impediment to canal transit.

Plan No. 9. shews the practicability of a new route between Centre- Saving by new route ville and Port Dalhousie, all upon flat table land, and in a direct course, between these points, by which a saving of 3 miles 1,121 yards will be effected. The new cut may be converted into a nine feet navigation. The locks, waste wears and excavation, can be done upon dry land, without annoyance from water. The foundations laid dry and all the masonry executed in the most favourable seasons, and under the most favourable circumstances.

This line in connexion with improvements upon Port Dalhousie Harbour, will render the Welland Canal navigation as direct and perfect as the nature of the country will admit.

Plan No. 10, is a design for a lock, upon which all the subsequent calculations are founded.

Manner proposed for construction of locks where rock does not occur.

It is proposed to have framed timber for its foundations. The side walls, recesses and wings, to be constructed upon these prepared foundations, where rock does not occur. The superstructure to be solid rubble masonry, lipped and pointed with water cement; all those parts that remain permanently under water to be faced with sheet plank, and socurely battened upon each joint, as also the lock flooring, recesses and platforms. The centre of pressure line at fore bay wall to be secured after a particular design. The side walls to batter considerably upon their face, and to receive support from counterforts, varying in dimensions according to position, nature of foundations, and quality of embank-The fore bay wall to be raised to the level of the upper platform, as shewn upon the transverse section A. B.—by this design considerable pressure is removed from these parts that require the greatest solidity; whereas in the present locks the upper gates and piers resist a head of water equal with the lower, which tends materially to promote leakage and to diminish their permanence.

Land tunnels of cut stone with face plates of wrought iron, and machinery, are also contemplated. The following estimate will shew the expanse of a lock of 10 feet rise, 110 feet within the chamber, and 24 feet wide.

Timber work foundations, lower end:

8 Mud Sills, 46 feet each, . . 364 feet. 2 face and 2 pieces rear,...116 2 pieces back of counterfort, 60 2 do. lower end of wall, ... 36 10 do. for counterfort and ties, 152 Recess $2 \times 19 \times 12 \times 12$ inches, 38 768 feet. 			Section 1

By adhering to the new route works may be made permanent,

Saving of distance 3 miles and 1121 yards. Distance by present Canal between Port Dalhousie and No. 31 lock, mountain summit, is 9 miles and 1121 yards. By adhering to the new route all the locks and works can be made permanent—removed from the valley of the Twelve Mile Creek, the surface of the ground is well adapted for Canal operations, being composed of stiff clay, and having a uniformly smooth surface, with a gentle distance for lockage; the present Canal will facilitate the conveyance of nearly all the building materials to be required; the actual expense, with proper management, ought not to exceed the sum above estimated.

Assuming the new route from Port Dalhousie to Centreville to be the most eligible by which the general navigation may be improved, the following is an abstract estimate of the expense required upon the whole

line of Canal and Feeder, to render the same permanent:

ESTIMATE,

Estimate of Canal improvement.
Port Dalhousie.

To render Port Dulhousic a capacious and secure Harbour for large steamers, an extension of 1,374 feet of piers must be made upon each side to obtain 18 feet water; this expense according to detailed estimate, calculated at the present rate of doing such work

	Ten per cent upon this, is,	10,107	18	0
Total expense	Total expense of Canal improvement, £	11,1,186	18	0

Total expense £111,186, 18s.

By adhering to the present line the sum of £102,081 14s. 7d. will be required to effect an improvement of less magnitude and permanence, with an increased length of 3 miles and 1121 yards.

Expense by the present line, £102,081, 14s, 7d.

Cost of cut stone locks will be £117,471. 8s. 74d.

To construct locks and waste wears of cut stone of the dimensions above proposed. The estimate by the present route for thirty-nine locks, including inverts for foundations, where necessary; land tunnels of cut stone or iron, with proper geering for sluices and gates, embankments, &c. &c. perfect in all their parts, will be, exclusive of tenper cent, £117,471 8 61

By proposed route cost would be £113,471, 8s. 6½d.

Distance from Lake to Lake reduced from 27 miles and 1100 yards to 24 miles; being the shortest practicable route between the Lakes. Any line of Canal to Queenston, as the route of the Welland is now esta-

blished, and may be improved, will increase the length 13 miles; any line to Niagara will increase the distance 4 miles and 1000 yards.

I have not entered upon all the details of the actual expense of those lines to Queenston and Niagara, but from authentic data, and from a knowledge of the country, the following approximation will be nearly correct:—

Expense from lock No. 31, Thorold summit, to Queenston, upon a distance of 7\(\frac{1}{4}\) miles; excavation at £2500 per mile, £19,375 0 0 Lockage, corresponding dimensions with the Welland, . . 28,350 12 0

Expense from lock No. 31, Thorold summit, to Niagara, upon a distance of 10 miles and 1000 yards; excavation at £2500 per mile,£29,204 10 0 Lockage commensurate with the Welland,28,350 12 0

Upon a comparative review of all the lines estimated above, it appears to the Reporter that the new route proposed in connection between Port Dalhousie and Thorold summit, although not the least expensive, possesses advantages, beyond all the others, by its direct course for the necessary purposes of navigation, and by its commanding position for the general benefit of the Province.

Estimate of the works upon the Canal line at present under contract, and those required to sustain the present navigation during the ensuing season:—

Widening and improving feeder, by Mr. T. Merritt's contract, remains to be done 16,504 cubic yards,	618	s. 3	d. 4	Estimate of works at present under contract.
Work upon feeder, undone by Mr. Donaldson's con-				contract,
tract, and upon Canal line between junction and

Contract for immediate repair of locks Nos. 7, 8, 16, 18,				
20, 25 and 27, required to preserve the navigation			'	and the second
during the ensuing season, timber and workman-				
ship,	883	15	83	
Stone, 1384 cord,	692	0	บ	•
Building walls,	1047	12	0	
New lock gates, sluices, and repair of waste wears,				
estimated at	871	8	2	
m 1	~~~			CE120 C- 011
Total estimate of works at present required, \dots £	2130	8	8;	£5130 8s. 84d.

That part of the foregoing estimate is work at present under contract, and under penalty for due fulfilment, all to be executed during the present water or before spring navigation opens. This work will render the feeder as perfect as its present depth will permit.

By a due regulation of mill sluices, and machinery upon the feeder, and proper management of the great dam, with its waste sluices, a sufficient volume of water will be obtained from the Grand River, by this increased width, to supply the ordinary demand of navigation for at least six or seven years; so soon as a probable return of revenue will authorize an increased expenditure upon the feeder, the whole extent may be

E

enlarged in width and depth, commensurate with the main Canal; a new route may then be formed in continuation of the present direct course, from Broad Creek to Grand River, near the harbour.

Plan No. 3.

By plan No. 3, it is shown that upon making a cut of $1\frac{\pi}{4}$ miles from Broad Creck to the River, a saving of 9 miles distance may be effected between those points.

A new dam and entrance lock may be constructed, of a permanent character, near the harbour, when decay of the present timber dam will

justify that measure.

Estimated expense £62,250.

Estimated expense of effecting that improvement, and increasing the width and depth of feeder, corresponding with the ship Canal, will be £62,250.

Materials for repairs before close of navigation.

The second part of the foregoing estimate is for repair of those locks Materials for repairs at present in a state of insecurity. Timber and all material for the execution of the work will be placed upon the site of the respective locks at a diminished expense, before the close of the navigation.

Temporary delays will be best obviated by efficient improvements.

Temporary delays that have occurred upon the Canal line during the present and former seasons, point out the necessity of adopting speedy and efficient measures to place all the works upon the Canal line beyond the risk of casualties.

The increased trade will always keep pace with the capacity of the Canal.

This all-important object once accomplished, the navigation will continue to be occupied by an accelerating trade equal to its capacity of transit.

GENTLEMEN.

I have the honor to remain Your very obedient Servant,

FRANCIS HALL,

Engineer.

Welland Canal Office, St. Catherines, 24th October, 1835.

Engineer's Supplementary Report to Commissioners.

To DAVID THORBURN, WILLIAM LYON MACKENZIE, and CHARLES DUNCOMBE, Esquires, Commissioners appointed, &c. &c. &c. 1

GENTLEMEN,

Mr. Hall's Supplementary Report to the Commissioners.

Since I had the honor to submit a general Report respective the Canal Line and Works, I have had an opportunity to examine the Locks, Waste Wears and Embankments, and beg leave respectfully to submit the following supplementary Report.

My Reports to the Board of Directors, of the 19th November, accompanying this, and number 1 and 4, will explain the nature and extent of the works at present in progress, to which I refer.

Harbour at Port Dalhousic. Lock No. 7. Lock No.2. Locks Nos. 3 and 6.

Commencing this examination at Port Dalhousie, I find the works at that harbour, and the Locks to No. 7, in the same state as formerly reported. At lock No. 2, some partial leakage has been observed in the waste wear, which was promptly repaired. At locks Nos. 3 and 6, new waste wears will require construction, as soon as stone and other materials can be placed upon the ground.

Repair of lock No. 7, proceeds with as much expedition as practica-Most of the stone is upon the ground—excavation of the side walls Repair of Lock No. 7. and foundations of this lock by the Company under Fluellan, and twelve men, is so far advanced that the Carpenters and Masons are expected to begin by the first day of February next. Robert Craig has contracted for building this lock.

The repair of lock No. 8, will only be partial, and extend to widen- Lock No. 8 to No. 15. Repair upon the ascending locks to No. 15, will be ing the side walls. done in the same manner as No. 8, by widening and replacing decayed and disjointed timbers, where practicable.

Upon lock No. 16, Fletcher and Company have the contract for ex- Lock No. 16. cavation; at present they employ twelve hands, which is as many as the nature of the work will admit. The rebuilding of this lock is contracted for by Gilliland & Co.

Lock No. 20, requires to be generally repaired, from the upper hol-Lock No. 20. low quoins downward. The excavation is under contract to John Shore and Company; they at present employ twelve hands. The building is under contract to John Kerr. The carpenter work of all these locks is under contract to R. Collier. Repair of particular parts of locks from No. Locks No 20 to 31. 20 to 31, will be executed by Collier and Moore, who have contracted to do all the carpenter work that may be required to render the Canal navigable by the first day of April next, at a fixed rate per hundred feet of timber.

Upon the locks above 31, no repair of any importance is auticipated No further repair on during the winter.

Eighteen new sets of gates will be required upon the whole line of New lock gates the Canal before the end of the present year; and thirteen leaves, or half required. gates, before the opening of the navigation. The six and a half pair of gates are under contract by Collier and Moore, and timber for the residue should be placed under contract, to be cut and prepared while the sap is down; this timber may all be procured from the Company's lands near the junction.

Foundations of the wooden locks are generally in a better state of Foundations of the preservation than might have been expected from the distorted appear-locks in a better state than expected. ance of their respective side walls.

The only point of difficulty in the repair of these locks in winter is Difficulties to be the foundations, choosing a favourable and open time for that work is all surmounted in important, when frost is severe the softest and least secure foundation repairing locks. assumes an appearance of the greatest consistency; I may here add, although success with these walls cannot altogether be calculated upon, precautions are being taken that will insure their completion in as perfect a manner as the material and season will permit.

Mr. John Vanderburgh, a person in whom I have great confidence for his attention, will superintend the constructors and workmen, and endeavour to carry my designs into effect.

The work at present under contract to Mr. Burger, and Mr. John Burgess and Donald-Donaldson, is in operation. The northern part of Mr. Donoldson's work, son's contrac, going near Buyer's Bridge, will effect a double purpose, that of widening the on well. Canal and strengthening a very high and weak embankment; most of his excavation will be applied to a like purpose. Dams are in construction, and preparations making to take out the rock excavation near Gravelly

A new pair of stop gates near Gravelly Bay are in progress by Moore. New stop gates at The works and harbour at Gravelly Bay are restored to their solidity and Gravelly Bay. appearance previous to the great gale of November last.

Bridges, &c

A new bridge at Shotwells' is also in progress and nearly completed; this with the repair upon the aqueduct, aqueduct bridge, and bridge at Port Robinson, will comprehend all the bridge work for the winter.

Remarks upon present state of the feeder.

By observations upon the line of the Feeder since the water was withdrawn, it appears that an inclination occurs from the bottom of the Canal at the junction, to an apex near the bridge west of Marshville; this inclination is regulated by stepping the bottom of the cut at intervals; why this particular method should have been adopted I have not been able to discover. Near, and westward of this bridge, the Feeder at bottom descends to Dunnville stop gates, about ten miles distant, where water eight feet deep obtains. The accompanying diagram will more clearly explain this subject.

It is evident that unless the feeder is three times its present width near Marshville, or continued at its present width with a uniform depth, a supply of water for the Canal, corresponding with its head, cannot be expected, therefore deepening at this apex should be attended to with as little delay as possible.

The work at the Berm bank has not been generally recommenced; during my last examination the frost was so deep as to prevent a trial of its composition by probing or digging; but it is only necessary to pass along the line to observe that logs have been, in more places than one, substituted for earth; these logs ought all to be removed, and the banks re-formed at the expense of the Contractor. Upon this part of the work I would also recommend a vigilent Inspector to be constantly stationed to see the work faithfully performed.

The estimated expense of all the above works is, per detailed state-Expense of improving feeder 25,382 dollars ment, \$25,382 71 cts.

power on Canal.

I have made a table for the uniform regulation of water for all the Calculation of water mills and machinery upon the Canal line, shewing the area of an aperture in inches that is required to propel one or more saws; one or more run of flouring stones; and the quantity of water required for perfect machinery under any head from 0 to 10 feet.

> By the adoption of this system upon the line a great saving of water will be effected; the Canal levels retained at their proper standard; and those mills that are deficient in proper machinery must either remodel the same or suspend operations.

> > GENTLEMEN,

I have the honor to be, Your very obedient Servant,

FRANCIS HALL.

Welland Canal Office, St. Catharines, 14th January, 1836.

No. 1.

Presented 19th November, 1835.

COPY.

Report to the Board made 19th Nov. 1835. To the President and Board of Directors of the Welland Canal.

GENTLEMEN,

I beg leave to submit the following statement respecting the Canal works :--

1st.—Work to be finished, now under contract.

It appears necessary during the close of the navigation to proceed Works first required.

with the contract under Thomas Merritt, for raising the Berm bank from Broad to Cranberry Creeks on the feeder, or so soon as the water can

be taken off for that purpose.

Also, that the contract entered into by John Donaldson for widening and deepening the lower end of the feeder, removing rock in the cut to Gravelly Bay, and widening Canal below junction, should be finished during the close of the navigation.

Also, a contract entered into with Thomas Moore to erect a set of guard gates, with all their apparatus, near the rock cutting at Gravelly

Bay, the same to be completed during the close of the navigation.

2nd .- Work necessary to be placed under contract to have the same finished at the opening of the navigation.

1st. Widening and deepening Canal from head of basin, Gravelly Widening and deep-Bay, to first guard gate, 400 yards lineal by 9 feet in height, will require basin Gravelly

about 5000 cubic yards at 15 cents, \$750.

2d. The towing path from Dunnville to Broad Creek requires raising on an average 1 foot or 18 inches on all low places, to be hereafter estimated and laid out. The time to finish this is when the water is removed from the feeder and stuff taken from its bottom and off side; estimate 7000 cubic yards at 15 cents, \$1050.

3d .- There are four new lock gates required at Port Robinson, two New lock gates at Thorold, and four more may be required upon other parts of the line. Those at Port Robinson are contracted for by James Moore, and Collier

has offered for the others. 4th.—There requires a renewal of locks Nos. 7, 16, 18, 20 and 25,

also repairs of Nos. 8 and 27. Estimate of Lock No. 7, \$2,131 50 cents.

FRANCIS HALL	
St. Catherines, 23rd September, 1835. Engine	

Whether the Canal can be kept full all winter to supply mills?

Water is seldom found frozen within locks, under Canal bridges, or in stone or wooden sluices, but spray from the top of gates, or upper sluices, is speedily converted into icicles, that adhere to the back of gates and face of side walls, and renders it difficult to open them after any continued frost.

1st. If the Canal is filled with water as it is during the summer months, having the lower gates open, the upper gates shut, and the lower sluices only open, or regulated partly open, water will pass in sufficient abundance for the supply of all machinery upon the line; the Canal banks will be protected from frost, and only subject to injury from an expansion of surface ice, which may be prevented in the usual way, by reducing the surface one or more feet, after ice of a few inches in thickness has been formed.

The only objection to this plan is the probability of not having the gates under proper command in case any unforeseen accident occur about the locks or elsewhere.

The 2nd plan is by reducing the present surface to the ordinary current with open lock gates from Grand River dam through the feeder, regulated by the stop gates at Dunnville, 24 feet in width, and will produce a permanent supply at Marshville of 21½ feet wide, by 3 feet in depth; velocity about 800 yards per hour. This current will pass through the residue of the feeder, by the deep cut to Allanburgh locks, with a diminished head and velocity, but probably sufficient to keep most of the mills upon the Canal line in motion.

In this case all the lock gates are supposed to be open-repair could speedily be effected, but the inside Canal slopes would be exposed to alternate frost and thaws, which are very injurious to the banks.

On the whole I think the first plan is preferable; it may be tried for a few weeks, by way of experiment—during its continuance, some further improvements may be observed.

FRANCIS HALL,

ENGINEER.

Grand River, 19th September, 1835.

Election Law Amendment Bill.

No. 4.

WHEREAS it would add greatly to the comfort and convenience of the Freeholders of the larger Counties and Ridings of this Province, as well as of those other Counties in which the roads are the most indifferent, if in the election of any Member to serve in the House of Assembly, in which a poll shall be demanded, the votes of the Electors were taken at two, three, or more different places or stations, the most central and suitable for them to assemble at, and the poll kept open by the Returning Officer at each of those places for a period sufficient to enable them to have their suffrages recorded, unless the election should be sooner otherwise determined: And whereas it is expedient that the places at which elections shall be held for the other Counties and Ridings should be fixed and determined by law: And whereas there are many faithful subjects of His Majesty residing out of His Dominions, many of whom are so resident with the approbation and consent of His Majesty: And whereas any of the said subjects coming to reside in this Province would be deprived of the privilege of being a candidate at any election of a Member to represent any City, Town, County or Riding in this Province, although he possessed the necessary freehold qualification for that purpose, until after a residence in this Province of seven years next preceding such election; and it is expedient to remove this disability: And whereas it is by law required that every Member of the House of Assembly should possess an unincumbered freehold estate, of the assessed value of Eighty Pounds and upwards, by means of which regulation the qualified Electors are greatly circumscribed in the exercise of their right to make a free choice of their Representatives, and many wealthy, intelligent and respectable Freeholders, and other inhabitants, prevented from being candidates for seats in the House of Assembly, although otherwise well qualified: And whereas the regulations now in force concerning the elections of Members of the House of Assembly are not sufficiently explicit in all cases, thereby occasioning defective returns, protracted election contests, and litigation, which might be avoided by the adoption of more plain rules for the guidance of all concerned: And whereas His Majesty has been graciously pleased, through the Despatch of the Right Honorable Lord Viscount Goderich, His Majesty's Principal Secretary of State for the Colonies, of date the 8th November, 1832, to direct the attention of the Legislature to the alterations contained in the petitions of the people concerning the state of the laws regulating elections, the freehold qualification of candidates, the influence of the Officers of the Government at elections, and regarding bribery and corruption, and the expense of elections, and has enjoined on His Representative in this Province not to allow any undue interference with the right of His subjects to the free and unbiassed choice of Members of the House of Assembly.—Be it therefore enacted, &c. That the second, third, fourth, sixth, seventh, tenth, and fourteenth sections of an Act passed on the 19th day of January, 1824, entitled "An Act to repeal the several statutes of this Province respecting the election of Members of the House of Assembly, and the qualification of voters and candidates at such elections, and to reduce the provisions thereof, with some amendments, into one Act, and also to provide against fraud in obtaining qualifications to vote at elections," and any other laws of this Province relating to the election of Members of the House of Assembly and manner of conducting elections, in so far as their provisions are at variance from this Act, shall be and they are hereby repealed.

2. And be it further enacted, &c. That the Elections in the respective Counties and Ridings in this Province shall be held in the places following, that is to say:—

The Election for the County of Glengarry, at Williamstown and Alexandria.

The Election for the County of Stormont, at Cornwall and

Osnabruck Village.

The Election for the County of Prescott, at Chesserville and L'Orignal.

The Election for the County of Russell, at New Edinborough.

The Election for the County of Carleton, at Richmond and at Dorning's, in the 3rd concession of Huntley.

The Election for the County of Lanark, at Perth and Carle-

ton Place.

The Election for the County of Grenville, at Merrickville, Kemptville and Prescott.

The Election for the County of Leeds, at Coleman's Corners.

Gananoque, Smith's Falls, and Beverly.

The Election for the County of Frontenac, at Waterloo, William Ashes' in the 1st concession of Loborough, and Eurricfield.

The Election for the Incorporated Counties of Lenox and Addington, at and

The Election for the County of Hastings, at Belleville and

John McKay's, in Huntingdon.

The Election for the County of Prince Edward, at Hallowell, and

The Election for the County of Northumberland, at Peterboro', Cobourg, and Brighton.

The Election for the County of Durham, at Port Hope, Dar-

lington, and Cottingham's Mills.

The Election for the first Riding of the County of York, at Richmond Hill and Farr's Mills.

The Election for the second Riding of the County of York, at Cooksville, and at the place where the dividing line between Chinguacousey and Caledon intersects Hurontario Street.

The Election for the third Riding of the County of York, at

Recsorville, and near Post's Tavern, in Pickering.

The Election for the fourth Riding of the County of York, at Hope, and in the most suitable place within the Township of Brock.

The Election for the County of Simcoc, at Beverley, Barrie and the Narrows of Lake Simcoc.

The Election for the County of Halton, at Nelson, Preston in Waterloo, and Dundas.

The Election for the County of Wentworth, at Stoney Creek

and Ancaster.

The Election for the first Riding of the County of Lincoln, at Smithsville.

The Election for the second Riding of the County of Lincoln,

at St. Catharines.

The Election for the third Riding of the County of Lincoln, at Matthew Scaburne's Inn, Thorold.

The Election for the fourth Riding of the County of Lincoln, at Cook's Mills in Crowland.

The Election for the County of Haldimand, at Dunnville and Stoney Creek.

The Election for the County of Norfolk, at Vittoria.

The Election for the County of Oxford, at Martin's Inn at Burford and at Horner's Creek on Dundas Street.

The Election for the County of Middlesex, at London, St. Thomas', Delaware and Gardner's Mills.

The Election for the County of Kent, at Chatham and in the Township of Moore.

The Election for the County of Essex, at Sandwich and Capt. Fox's, Gosfield.

And the Election for the County of Huron, at Goderich and at the place where the big Thames River crosses the Huron Road.

- 3. And be it, Sc. That the Returning Officer shall, in all cases, be a resident Elector within the County, City, Town or Riding, for which he is appointed; and before proceeding to the discharge of his duty, at any election, shall take and subscribe the following oath:
- "I, A. B. do solemnly swear, that I have not directly or indirectly received any sum or sums of money, office, place or employment, gratuity or reward, or any bond, bill or note, or any provise or gratuity whatsoever, either by myself or any other person, to my use or benefit, or advantage, for making any false or incorrect statement or return in the Poll Book, at this election; and that I will conduct myself impartially and without favor or affection to any party concerned in the present election for the County, City, Town or Riding, (as the case may be.)" And a similar oath shall be administered to the Poll Clerk; which several oaths may be administered by any Justice of the Peace of the District in which the election is held, or by any Commissioner in the Court of King's Bench, and certificates of the same shall be annexed to the Poll Book, and returned with it to the Crown Office.
- 4. And be it, &c. That the Returning Officer for any election in a City, Town, County or Riding, shall cause a copy of the notice of such election to be published in all the public Newspapers printed within the County in which it is to be held, and also cause printed notices to be posted in a conspicuous manner in the most public places within the City, County, Town or Riding, for which he is acting, at least eight days before the day on which the election is to be held.
- 5. And be it, &c. That all polls shall be held in the open air, or in some building, not a Tavern, to which free access can be had by every Elector—and no woman shall be allowed to vote.
- 6. And be it, &c. That the poll may be continued three days at each polling place, when more than one are authorised within the same County or Riding, and six days in Counties or Ridings where only one polling place is authorised; it shall be kept open at least eight hours each day, between the hours of eight in the morning and five in the afternoon, but may be finally closed at any time with consent of all the Candidates, or their representatives, and any one is at liberty to declare himself the representative of an absent Candidate; or it may be closed at any one polling place

for the purpose of being removed to another, if there be more than one and that place be not last in rotation, after two hours notice, if no vote shall be given within those two hours; or it may be finally closed sooner than the time prescribed by this Act by virtue of any previous unanimous agreement signed by all the Candidates.

- 7. And he it, Sec. That where two or more polls are authorised to be held within the same County or Riding the election shall commence at each of the said places alternately, and the election shall be closed at the first place, unless the Returning Officer be required to transfer it to the second place by any three Electors, or a Candidate, or a person declaring himself the representative of a Candidate: it is to be opened at the second place after an interval of not less than one or more than three days, and it may be closed at the second, or continued to the third or fourth place, as the case may be, under the like rules.
- 8. And be it, &c. That Sunday, Good Friday and Christmas day, shall not be accounted as days for the purposes of this Act.
- 9. And be it, &c. That at the opening of the poll of any election, proclamation thereof shall be made, and proclamation shall also be made of each adjournment, and of the opening and closing of the poll on each day of the election.
- 10. And be it, &c. That no Returning Officer shall vote at the election for which he is acting, unless at the time of finally closing the poll, when he is authorised to give a casting vote in case the votes be equal; but he may be a Candidate at the election for any other county, town or place.
- 11. And be it, &c. That in case the Returning Officer shall die during the continuance of any election, the Poll Clerk is hereby authorized and required to act in his room and stead.
- 12. And be it, Sec. That all elections shall be free; and no person by force of arms, menacing, malice or otherwise, shall presume to hinder, disturb or molest, any Elector in the free exercise of the right of choosing his Representative in the Legislature; and during an election no civil process shall be served in any City, Town, County or Riding, on any Elector entitled to vote therein.
- 13. And be it, &c. That every person before voting at any election shall, if required, take the following oath against bribery and corruption, which may be administered to him by the Returning Officer:
- "I, A. B. do swear that I have not received, or had by myself, or by any other person whomsoever in trust for me, or for my own use and benefit, directly or indirectly, any sum or sums of money, office, employment, gift or reward, or any promise or security for any sum or sums of money, office, employment, gift or reward, in order to give my vote at this Election."
- 14. And be it, Sec. That no fee or reward shall be taken for administering any oath required by law to be administered to any voter or candidate, or for making, receiving or filing, any certificate thereof.
- 15. And be it, Sec. That every person who shall at any election wear any distinguishing mark of any candidate, or in any way use violence or menace to impede or disturb the election, or prevent, or endeavour to prevent, any Elector from freely giving his

vote, shall incur a penalty of Ten Pounds for every offence; and all persons present are bound to obey and assist the Returning Officer in keeping order; and any person committing any violence, or being armed with offensive weapons, or carrying flags or distinctive marks of any Candidate, or disturbing, or threatening to disturb the election, or preventing the Electors from coming to vote, may be committed to prison, on view, by an order in writing of the Returning Officer, for a period not exceeding one week; and each disobedience on the part of any Officer of Militia, Peace Officer or Gaoler, to such order of the Returning Officer, shall be punishable by a fine of Ten Pounds; and every person (not being a Candidate, his Counsel, Clerk or Agent) who shall refuse to be sworn in as a Special Constable, or who shall neglect his duty as such without a legal excuse, or threatens or uses violence to any Elector who may have voted, on account of any vote he may have given, shall be deemed to be guilty of a high misdemeanor, and be subject to fine and imprisonment, in the discretion of the Court or Justices before whom the conviction shall be had.

- 16. And be it &c. That the Returning Officer for every County, City, Town or Riding, from the time they are respectively appointed Returning Officers, until the Election shall finally be declared, shall be and are hereby declared to be conservators of the Peace, and severally vested with the same powers for the preservation of the Peace and apprehension and committal for trial or holding to bail within the District in which they shall be appointed to act, all violators of the law as are vested in Justices of the Peace in this Province; and that each of the said Returning Officers is hereby required to appoint and swear in such and so many Special Constables as he may deem necessary for the preservation of peace and good order at and during any election for which he may be appointed, and for such time thereafter as may be deemed expedient and necessary.
- 17. And be it, &c. That every Justice of the Peace who, upon being required by the Returning Officer or any Candidate at any Election, or any three Freeholders within the District for which he acts as such Justice, shall unreasonably refuse or neglect to use his exertions for the preservation of the peace at such election, or shall encourage or willingly permit any violence or disorders thereat, shall be deemed guilty of a high misdemeanor, and upon conviction thereof, shall, besides the punishment inflicted by the Court before which conviction is had, forfeit his office, and be forever after incapable of being appointed a Justice of the Peace in this Province.
- 18. And he it, Sec. That any person who shall, either by himself or any other person whomsoever on his behalf or account, promise or engage to give any sum or sums of money, or other valuable consideration, with the intent of aiding or procuring any person or persons to be elected or returned, or shall corrupt or procure any person or persons to give or forbear to give his vote, by any gift or reward, or promise, agreement or security thereof, whether as a compensation for loss of time or for expenses in going to vote, for soliciting votes, or any other pretence whatsoever, shall be punished by fine, not to exceed twenty-five pounds, or by imprisonment, not to exceed six months, for every offence, on conviction in a Court of Justice; and any Candidate so convicted shall be disqualified from sitting and voting in the same

Parliament; and all fines imposed by the authority of this Act shall form part of the ordinary funds of the District in which the offence is committed.

- 19. And be it, S.c. That if any Candidate at an election shall employ any means of corruption, by himself, or others in his interest and favour, before or during any election, to obtain votes, or to keep back votes by using threats of losing any salary or advantages, or make any promise of any gift, advantage or reward; or shall by himself, or by means of others in his interest and favor, directly or indirectly, at any time within one month before or during the election, make present of or allow to any Elector any money, or promise of money or reward, or shall by himself or by means of others, directly or indirectly, within the same time, at his cost or charge, open or support, or cause to be opened or supported, any house of public entertainment, within the County, City, Town or Riding, in which an election is held, he shall for any of these offences, on the facts being proved to the satisfaction of the House of Assembly, be punished by disqualification to sit and vote in the House, and shall not be capable of being re-elected during the continuance of the same Parliament.
- 20. And be it, &c. That if any person shall vote more than once at the same election, either at the same or a different polling place, he shall, upon conviction, be adjudged guilty of a misdementary
- 21. And be it. Sec. That all conveyances made for the purpose of qualifying any person to vote at any election shall be held to be good, notwithstanding any condition or agreement to defeat or re-convey the same; and the property shall be vested in the person to whom it may have been thus conveyed.
- 22. And be it, &c. That no Sheriff or Deputy Sheriff shall be capable of representing any Town, County, Riding or place, within the District for which he holds the appointment of Sheriff or Deputy Sheriff.
- 23. And be it &c. That the acceptance of any office or place of profit or emolument in the gift of the Crown, or of a pension under the Crown by any Member of the House of Assembly shall be held to be a vacation of his seat in the House, of such Member; and no Collector of Excise, Revenue or Customs Duties, shall be qualified to sit and vote in the House of Assembly during his continuance in any such office.
- 24. And be it, Sec. That no man of color shall be hindred from voting, if otherwise qualified.
- 25. And whereas the laws now in force for giving the representation in the House of Assembly to certain District Towns are neither based on property nor population, nor on these principles combined, but are calculated to impair the right of the freeholders to an equal share of the representation; Be it, &c. That so much of the second section of the second chapter of an Act passed on the seventh day of March, 1820, entitled, "An Act for increasing the representation of the Commons of this Province in the House of Assembly," as enacts, "that in each and every Town in which "the Quarter Sessions for the District are or may by law be holden, "and in which there shall be one thousand souls, shall be repre-

"presented by one Member," shall be and the same is hereby repealed, excepting so far as its provisions apply to the City of Toronto, and the Towns of Niagara, Kingston, Brockville and Cornwall; the representation of which in the House of Assembly shall contine undiminished the same as it was before the passage of this Act.

- 26. And be it, &c. That if any person or persons shall be guilty of false swearing in any oath required by this Act, he shall, on conviction thereof, suffer the like pains and penalties to which any other person convicted of wilful and corrupt perjury is liable by the laws and Statutes of this Province.
- 27. And be it, &c. That any of the Provisions of this Act may be amended, varied or repealed, by any other Act to be passed in the present Session of Parliament.

Election Law amendment Bill.

Printed by order of the Commons House of Assembly.

R. STANTON, Phinter.

WHEREAS it is expedient that the general powers, privileges, and liabilities of corporations having Banking powers, or having the power of making loans upon pledges or deposits, or authorised by law to make insurances, should be ascertained and declared, and that regulations should be made to prevent their insolvency, to secure the rights of their creditors and stockholders, and concerning the election of their officers and directors. Be it there. fore, &c.-That it shall not be lawful for the directors of any incorporated banking or insurance company,—
1st. To make dividends except from the surplus profits arising from the

business of the corporation.

2nd. To divide, withdraw, or in any manner to pay to the stockholders, or any of them, any part of the capital stock of the corporation, or to reduce such capital stock without the consent of the Legislature.

3rd. To discount or receive any note, or other evidence of debt, in payment of any instalment actually called in and required to be paid, or with the

intent of providing the means of making such payment.

4th. To receive or discount any note or other evidence of debt with the intent of enabling any stockholder to withdraw any part of the money paid in by him on his stock.

5th. To apply any portion of the funds of their corporation, except surplus

profits, directly or indirectly to the purchase of shares of its own stock.

6th. To receive any such shares in payment or satisfaction of any debt due

to their corporation, except as hereinafter provided.

7th. To receive from any other corporation, in exchange for the shares, notes, bonds, or other evidences of debt of their own company, shares of the capital stock of such other corporation, or notes, bonds, or other evidences of debt issued by such other corporation.

Sth. To make any loans or discounts, if the corporation have banking powers, by which the whole amount of the loans and discounts of the company shall be made to exceed three times its capital stock then paid in and

actually possessed.

9th. To make any loans or discounts to the directors of such corporation, or upon paper upon which such directors or any of them shall be responsible, to an amount exceeding in the aggregate one-third of the capital stock of such corporation actually paid in and possessed; but no securities taken for any such loans or discount shall be held invalid.

II. And be it, &c. That, in the calculation of the profits of any incorporated banking or insurance company, previous to a dividend, interest then unpaid, although due, or accrued on debts owing to the company, shall not be

included.

III. And be it, &c. That, in order to ascertain the surplus profits from which alone a dividend can be made, there shall be charged in the account of profit and loss, and deducted from the actual profits:-

1st. All the expenses paid or incurred, both ordinary and extraordinary, attending the management of the affairs and the transactions of the business

of the company.

2nd. The interest paid or then due or accrued on debts owing by the

3rd. All losses sustained by the company; and, in the computation of such losses, all debts owing to the company shall be included which shall have remained due without prosecution and no interest having been paid thereon for more than one year, or on which judgments shall have been recovered that shall have remained for more than two years unsatisfied, and on which no interest shall have been paid during that period.

IV. And be it, &c. That, when any losses shall be sustained by any such corporation that shall exceed its undivided profits then realized and possessed, they shall be charged as a reduction of the capital stock of the company, and no dividends shall thereafter be made on the shares of such stock until the deficit of capital so created shall be made good, either by the recovery of the moneys charged as lost, or from the subsequently accruing profits

of the company.

V. And be it, &c. That if, from the occurrence of losses charged or proper to be charged as a reduction of its capital stock, the whole amount of the loans and discounts made by any corporation having banking powers, shall exceed three times the amount to which its capital paid in is, or ought to be reduced, it shall be the duty of the directors of such corporation to call in, and cause to be paid without delay, such a portion of such loan as shall re-

duce their whole amount within the limits before prescribed.

VI. And be it, &c. That, if any shares of its own capital stock shall be hypotheticated or pledged to any other incorporated banking or insurance company, and the debt which they shall be intended to secure shall not be paid when due, it shall be the duty of the directors of the company, within sixty days thereafter, to cause such shares to be sold; and if, within that period, such shares shall not be sold and the debt shall remain unsatisfied, the shares shall be charged at the amount actually paid thereon as a reduction of the capital stock of the company, and no dividends shall thereafter be made until the deficit so created be made good from the subsequently accruing profits of the company.

VII. And be it, &c. That no conveyance, assignment, or transfer of any effects for the use, benefit, or security of any such corporation, shall be valid in law unless it be made to the corporation directly and by name; but the provisions of this section shall not be construed to apply to a conveyance or assignment for the benefit of creditors in which such corporation shall be included or to a conveyance or assignment of the effects of a debtor, under the

laws of this province or of any other province or country.

VIII. And be it, &c. That no conveyance, assignment, or transfer, not authorised by a previous resolution of its board of directors, shall be made by any such corporation of any of its real estate, or of any of its effects, exceeding the value of £250. But this section shall not apply to the issuing of promissory notes or other evidences of debt by the officers of the company in the transaction of its ordinary business, nor to payments in specie or other current money, or in bank bills made by such officers; nor shall it be construed to render void any conveyance, assignment, or transfer in the hands of a purchaser, for a valuable consideration and without notice.

IX. And be it, &c. That no such conveyance, assignment, or transfer, nor any payment made, judgment suffered, lien created, or security given by any such corporation when insolvent or in contemplation of insolvency, with the intent of giving a preference to any particular creditor over other creditors of the company, shall be valid in law; and every person receiving, by means of any such conveyance, assignment, transfer, lien, security, or payment, any of the effects of the corporation, shall be bound to account therefor to its creditors or stockholders, or their trustees, as the case shall require.

X. And be it, &c. That every director who shall violate or be concerned in violating any provision in the preceding section of this act contained, shall be liable personally to the creditors and stockholders respectively of the corporation of which he shall be a director, to the full extent of any loss they

may respectively sustain from such violation.

XI. And be it, &c. That any director guilty of such violation, whether a loss shall or shall not result, shall be deemed guilty of a misdemeanour, punishable by fine and imprisonment, or both, in the discretion of the court by

which he shall be tried.

XII. And be it, &c. That every director shall be deemed to possess such a knowledge of the affairs of his corporation as to enable him to determine whether any act, proceeding, or omission of its directors is a violation of the foregoing provisions of this act; and every director who shall be present at a meeting of the directors where such a violation shall happen, shall be deemed to have concurred therein, unless he shall, at the same time, cause, or in writing require, his dissent therefrom to be entered at large in the minutes of the directors, and also give immediate notice, in writing, to one of the

bank commissioners to be appointed by authority of this act.

XIII. And be it, &c. That every director, not present at a meeting when such a violation shall happen, shall nevertheless be deemed to have concurred therein, if the facts constituting such violation appear on the books of the company, and he remain a director of the same company for three months thereafter, and do not within that time-namely, at the then next ensuing meeting at which he shall be present—cause, or in writing require, his dissent from such illegal proceeding to be entered at large in the minutes of the directors,

and also give immediate notice, in writing, to one of the bank commissioners

appointed by authority of this act.

XIV. Aud be it, &c. That every insolvency of an incorporated banking or insurance company shall be deemed fraudulent unless its affairs shall appear upon investigation to have been fairly and legally administered, and, generally, with the same care and diligence that agents receiving a compensation for their services are bound by law to observe; and it shall be incumbent on the directors and stockholders of every such insolvent corporation to repel, by proof, the presumption of fraud.

XV. And be it, &c., That in every case of a fraudulent insolvency, the directors of the insolvent company by whose acts or omissions the insolvency was wholly or in part occasioned, and, whether then in office or not, shall each be liable to the stockholders and creditors of the company for his proportional share of their respective losses; the proportion to be ascertained by dividing the whole loss amongst the whole number of directors liable for its re-imbursement; but this section shall not be construed to diminish the liability of directors as before declared, who shall have violated or have been con-

cerned in violating the foregoing provisions of this act.

XVI. And be it, &c., That if the monies remaining due to the creditors of a corporation whose insolvency shall be adjudged fraudulent after the distribution of its effects shall not be collected in whole or in part from the directors liable for their reimbursement, the deficiency shall be made good by the contribution of the stockholders of the company—the whole amount of the deficiency shall be assessed on the whole number of shares of the capital stock, and the sum necessary to be paid on each share shall be then ascertained, and each stockholder shall be liable for the sum assessed on the number of shares held by him, not exceeding the nominal amount of such shares, in addition to the sums paid or which he may be liable to pay on account of

XVII. And be it, &c., That if the amount assessed on the shares of any stockholder under the provisions of the last section, shall not be collected from such stockholder by reason of his insolvency or his absence from this province, the sum remaining due on such assessment shall be recoverable against the person from whom the delinquent stockholder at any time within six months previous to the insolvency of the company shall have received a transfer of the shares or any portion of the shares then held by him; and every person having made such transfer, shall be liable in the same manner and for the same proportion that he would have been liable had he continued

to hold the shares so transferred.

XVIII. And be it, &c., That the term "Stockholders" as used in the preceding sections of this act, from the 14th section inclusive, shall extend to every equitable holder of stock appearing upon the books of an insolvent company in the name of another person, and to every person who shall have advanced the instalments or purchase money of any shares of stock standing in the name of any of his children under the age of 21 years; but no person holding stock as an executor or administrator, or as a guardian or trustee appointed by a last will or testament, or by a court of competent authority, and no legal or equitable owner of stock under the age of 21 years, shall be individually responsible on account of the shares so held.

XIX. And be it, &c., That it shall be the duty of every incorporated banking or insurance company on the first day of January after its incorporation, and annually on the same day thereafter, to make out and transmit to the Receiver General in the form prescribed by him, a full statement of its affairs, verified by the oaths of its President and Cashier, or Treasurer and

Secretary.

XX. And be it, &c., That each statement so transmitted shall contain, 1st. The amount of the capital stock of the corporation paid in or invested according to the provisions of its charter, and the amount of such stock as

2nd. The value of the real estate of the corporation, specifying what portion thereof is occupied by the company as necessary to the transaction of its

business.

3rd. The shares of the stock held by such corporation whether absolutely or as collateral security; specifying each kind and description of stock, and

the number and value of the shares of each.

4th. The debts owing to the corporation, specifying such as are owing from other incorporated bunking or insurance companies, the names of such corporations, and the amount due from each; and also specifying the amount secured by bond and mortgage, or judgment, the amount which according to

the provisions of this act ought to be included in the computation of losses,

and the total amount of such debts then collectable.

5th. The amount of debts owing by the corporation, specifying such as are payable on demand, and such as are due to other incorporated banking or insurance companies; the names of such corporations, and the amount due

6th. The amount of the claims against the corporation not acknowledged

by it as debts.

7th. The amount for which the corporation is bound as surety, or for which it may become liable on the happening of contingent events, whether upon policies of assurance or otherwise; and

8th. If the statement be from a corporation having banking powers, the amount of its notes or bills then in circulation, of its loans and discounts, and

of specie on hand.

XXI. And be it, &c., That each statement subsequent to the first so trans-

mitted, shall also contain,

1st. The amount of the losses of the corporation charged, specifying whether charged on its capital or profits, since its last preceding statement, and of its dividends declared and made during the same period.

2nd. The average amount for each month during the preceding year, of

the debts due to and from the corporation.

3rd. If the statement be from a corporation having banking powers, the amount on the 1st day of July of the same year, of its notes or bills in circulation, of its loans and discounts, and of its specie on hand; and,

4th. A list of the stockholders, with the number of shares held by them

respectively.

XXII. And be it, &c., That every corporation that shall neglect to make out and transmit the statement required for one month beyond the period when by law it ought to be made, may be proceeded against and dissolved as an insolvent corporation.

XXIII. And be it, &c., That it shall be the duty of the Receiver General to enter every such statement received by him in a book to be provided by him for that purpose, and which shall at all times during office hours be open

to public inspection.

XXIV. And be it, &c., That if it shall appear to the Receiver General from any statements received by him, that the provisions of its charter or of this act have been violated by any corporation, or that there is reason to apprehend that any corporation is or will become insolvent, it shall be his duty to report the facts, together with his opinion thereon, without delay to the person administering the government.

XXV. And be it, &c., That it shall be the duty of the Receiver General to prepare forms of the statements above prescribed, and to transmit a copy thereof, together with such instructions as he may deem necessary, to every corporation which is or shall be bound to furnish such statements under the

provisions of this act.

XXVI. And be it, &c., That it shall and may be lawful for the Lieutenant Governor to appoint a fit and discreet person, holding no stock in any banking corporation, a commissioner, whose duty it shall be to visit every banking corporation, at least, once every six months, to examine thoroughly all its books, papers, notes, bonds, and other evidences of debt; to compare its funds and property with the statements made or to be made by it, as provided in this act; to ascertain the quantity of specie on hand, and generally to make such other enquiries as may be necessary to ascertain its actual condition and ability to fulfil all its engagements: that the said commissioner shall have power to examine upon oath all the officers, servants, or agents of banking corporations, or any other person in relation to the affairs and condition of such corporations, which oath the said commissioner is personally authorised to administer.

XXVII. And be it, &c., That it shall be the duty of every commissioner appointed as aforesaid to report to the Lieutenant Governor, or administrator of the government, for the information of the Legislature, immediately upon concluding his examination and inquiry into the condition of any incorporated banking company, such facts and statements concerning such company, as such commissioner may deem useful. But such commissioner shall not disclose the names of the debtors of any corporation examined by him, or any information obtained in the course of such examination, unless required in a Court of Justice or in the course of some proceeding authorised by this act.

XXVIII. And be it, &c., That if any incorporated banking company shall have suspended the payment of their bills in specie for ninety days, or shall refuse to allow their officers to be examined upon oath by such commissioner in relation to the affairs and condition of such corporation, such corporation

shall be proceeded against and dissolved in manner following:

It shall be lawful for the Lieutenant Governor or administrator of the Government to direct a scire facias to be sued out of the Court of King's Bench, which shall be executed upon the president or other presiding officer of such banking company for the time being, at least fifteen days before the term of the said court, calling on the said corporation to show cause why their charter should not be declared forfeited; and it shall be lawful for the said court upon the return of the said scire facias to examine into the truth of the alleged violation, and if such violation be made appear, then to pronounce and adjudge that the said charter is forfeited and annulled.

Provided, however, that every issue of fact which may be joined between His Majesty and the corporation aforesaid shall be tried by jury, who may be a special jury if either party require it; and it shall be lawful for the court aforesaid to require such of the books of the corporation as it may deem necessary for the ascertainment of the controverted facts, and the final judg-

ment of the court aforesaid shall be examinable in the

and may be there reversed or affirmed according to the usages of law.

XXIX. And be it, &c., That if at any time the president, directors and company of any incorporated banking company shall neglect or refuse for ten days after demand at their banking house, during the regular hours of business, to redeem in specie any evidence of debt issued by the said company, the said president, directors and company shall discontinue and close until they resume payments as aforesaid, all their operations and business except the securing and collecting all debts due to, or to become due to the said company, unless they shall be permitted to proceed in their ordinary

banking operations under the section next following: XXX. And be it, &c., That the said banking company may, after the payment of their debts shall have been refused, apply to the Court of King's Bench by petition accompanied by a full disclosure of the state and affairs of the said company for leave to proceed in their business, and if the said court, after due examination, shall find that the proceedings of the said company have been fair and without fraud, and that such company are in a con-

dition to resume their operations, they, the said court, may by an order to be entered in their minutes, permit the said company so to do.

XXXI. And be it, &c., That the said banking company shall be liable to the holders of every evidence of debt made by it, the payment of which shall have been demanded and refused, damages for non-payment thereof, in lieu of interest, at and after the rate of 15 per cent. per annum from the time of such refusal until the payment of such evidence of debt and the damages

XXXII. And be it, &c., That no corporation having banking powers shall issue for circulation any bill or promissory note of a less denomination than

XXXIII. And be it, &c., That no corporation having banking powers shall issue any note of the said corporation unless the same shall be made payable

on demand, and without interest.

XXXIV. And be it, &c., That all bills, notes, or other instruments which shall be issued by any incorporated banking company, purporting to be receivable in payment of debts due to such company, shall be deemed and taken to be promissory notes for the payment on demand of the sum or value expressed in such instrument; and such sum shall be recoverable by the holder or bearer of such instrument in like manner as if the same were a promissory note

XXXV. And be it, &c., That no person shall give, pay, or receive in payment, or in any way circulate, or attempt to circulate, any bank bill or any promissory note, bill, check, draft, or other evidence of debt issued by any incorporated banking company, which shall be made payable otherwise than in lawful money of this Province, or of the United Kingdom of Great

Britain and Ireland.

XXXVI. And be it, &c., That no corporation having banking powers, and none of its directors, officers, agents or servants shall directly or indirectly purchase or be interested in the purchase of any promissory note or other evidence of debt, issued by such corporation, for a less sum than shall appear on the face thereof to be then due; and every person violating the provisions of this section shall forfeit three times the nominal amount of the note or other evidence of debt so purchased.

XXXVII. And be it, &c., That no president, director, cashier, clerk, or agent of any corporation having banking powers, and no person in any way interested or concerned in the management of the affairs of any such corporation, shall discount, or directly or indirectly make any loan upon any note or other evidence of debt which he shall know to have been offered for discount to the directors or any officer of such corporation, and to have been refused, and every person violating the provisions of this section, shall for each offence forfeit twice the amount of the loan which he shall have made.

XXXVIII. And be it, &c. That no incorporated banking company, to which a charter shall heroafter be granted, shall commence the business for which it shall be incorporated, until its president and cashier, or treasurer or secretary, or its two principal officers, by whatever name they may be described, shall have made and subscribed an affidavit stating that the capital stock of such corporation, or such portion thereof as, by its charter, shall be required to be paid, or secured before the commencement of its operations, has been actually paid, or secured to be paid, according to the provisions of its charter.

XXXIX. And be it, &c. That every such affidavit shall be made before one of His Majesty's Justices of the Court of King's Bench, or before one of the Judges of the District Court, and shall be recorded in the Register-Office

of the county or district in which the corporation shall be situated.

XL. And be it, &c. That the charter of every such corporation shall be void if the affidavit above required shall not be duly made and filed within one

year from the time such charter shall be granted.

XLI. And be it, &c. That, at every election for directors in any incorporated banking or insurance company, three persons shall be chosen by the persons entitled to vote for inspectors at the next succeeding election, whose duty it shall be to act as such, and any two of whom shall be competent to act. Each acting inspector shall be entitled to a reasonable compensation for his services, to be paid by the corporation for which he is chosen.

XLII. And be it, &c. That the directors of the corporation shall supply any vacancy that may occur by the death or removal, from the town or county where the corporation shall be situated, of any such inspector, or by his re-

fusal to serve or neglect to attend on the day of election.

XLIII. And be it, &c. That no person shall be chosen or appointed an inspector of an election of directors in a corporation of which he shall be a

director or officer.

XLIV. And be it, &c. That every such inspector, before he shall enter on the duties of his office, shall take and subscribe the following oath before any officer authorised by law to administer oaths:—" I do solemnly swear that I will execute the duties of an inspector of the election, now to be held, with strict impartiality and according to the best of my ability."

XLV. And be it, &c. That, at every election of directors, the transfer books of the corporation shall be produced to test the qualifications of the voters, and no persons shall be admitted to vote directly, or by proxy, except those in whose names the shares of the stock of the corporation shall stand on such books and shall have so stood for at least 30 days previous to the election

XLVI. And be it, &c. That no person shall be admitted to vote on any shares of stock belonging or hypotheticated to the corporation in which the election is held, nor shall any person be admitted to vote on any shares of stock which shall be then hypotheticated or pledged as a collateral security

to any other person or company.

XLVII. And be it, &c. That no person shall be admitted to vote on any shares which shall have been transferred to him for the sole purpose of enabling him to vote thereon at the election then to be held; nor upon any shares which he shall have previously contracted to sell or transfer after the election, upon any condition, agreement, or understanding, in relation to his

manner of voting at such election.

XLVIII. And be it, &c. That every person offering to vote may be challenged by any other person authorised to vote at the same election; and to every person, so challenged, one of the inspectors shall administer the following oath: -- "You do swear (or affirm, as the case may be,) that the shares on which you now offer to vote, do not belong, and are not hypotheticated to the—(naming the corporation for which the election is held,)—and that they are not hypotheticated or pledged to any other corporation or person whatever; that such shares have not been transferred to you for the purpose of enabling you to vote thereon at this election, and that you have not contracted to sell or transfer them upon any condition, agreement, or understanding, in relation to your manner of voting at this election.

No. 5.

XLIX. And be it, &c. That no person shall be permitted to vote upon the proxy of a stockholder unless he shall produce, annexed to his proxy, an affidavit of such stockholder, stating the same facts to which the oath of such stockholder might have been required upon a challenge, had he offered to

vote in person on the shares mentioned in the proxy.

L. And be it, &c. That if any person, offering to vote upon a proxy, shall be challenged by an elector, he shall be required to take the following oath, to be administered to him by one of the inspectors:—"You do swear (or affirm, as the case may be,) that the facts stated in the affidavit annexed to the proxy upon which you now offer to vote, are true according to your belief, and that you have made no contract or agreement whatever for the purchase or transfer of the shares, or any portion of the shares, mentioned in such proxy.

LI. And be it, &c. That if any person, duly challenged, shall refuse to take the proper oath, his vote shall be rejected, and shall not be afterwards received at the same election; if he shall take the oath, his vote shall be

received.

LII. And be it, &c. That, if an election for directors in any such corporation shall not be held on the day appointed by law, it shall be the duty of the directors to notify, and cause such election to be held within sixty days after the day so appointed; and, on the day so notified, no persons shall be admitted to vote except those who would have been entitled had the election

taken place on the day when by law it ought to have been held.

LIII. And be it, &c. That no by-law of any such corporation regulating the election of its directors, shall be valid, unless it shall be made at least sixty days before the day appointed by law for the election to be held, and shall have been published for at least four weeks in succession immediately following its enactment, in two newspapers in the town or county where the corporation is situated, or, if there are no newspapers published in the town or county, then the said by-law shall be published in the Upper Canada Gazette.

LIV. And be it, &c. That every such corporation shall keep a book in which the transfer of shares of its stock shall be registered, and another book containing the names of its stockholders; which books shall at all times during the usual hours of transacting business, for thirty days previous to an election of directors, be open to the examination of the stock-

holders.

LV. And be it, &c. That if any officer, having charge of such books, shall, upon the demand of a stockholder, refuse or neglect to exhibit and submit them to examination, he shall for each offence forfeit the sum of

fifty pounds.

LVI. And be it, &c. That no transfer of any stock in any such corporation shall be valid until such transfer shall have been registered in the book kept for that purpose by the directors; which books shall, at all reasonable times during the hours of transacting business, be kept open to the examination of any person having in his possession any note, bill, or other evidence of debt issued by such corporation, the payment of which shall have been refused.

LVII. And be it, &c. That, if any person shall conceive himself aggrieved by an election or any proceeding concerning an election of directors or officers in any such corporation, he may apply to the Court of King's Bench for redress, giving a reasonable notice of his intended application to

the party to be affected thereby.

LVIII. And be it, &c. That it shall be the duty of the Court of King's Bench, upon such application, to proceed forthwith, in a summary way, to hear the proofs and allegations of the parties, or otherwise to inquire into the causes of complaint, and thereupon to make such order and grant such relief as the circumstances and justice of the case shall seem to require. If the election complained of shall be set aside, the Court of King's Bench may order a new election, at such time and place as they shall appoint.

may order a new election, at such time and place as they shall appoint.

LIX. And be it, &c. That the Court of King's Bench, if they cannot otherwise arrive at a satisfactory result, may order an issue between the parties, to be made up in such manner and form, and to be tried in such court as they shall select, or may permit or direct the Attorney-General to file an information in the nature of a quo warranto, if the case be one in which that proceeding would be competent and effectual.

LX. And be it, &c. That, if any such issue shall be ordered, or information permitted or directed to be filed, it shall be the duty of the Court of King's Beach to make such further orders in relation to the time and mode

of pleading, the examination of witnesses or the parties, the production of books and papers, and the time and place of trial, or hearing, as shall in their judgment be effectual for expediting the proceedings, saving expense to the parties, and causing a final determination to be had with as little delay as the nature of the controversy will permit.

LXI. And be it, &c. That the term "Directors," as used in this act, shall be construed to embrace all persons having by law the direction or management of the affairs of any such corporation, by whatever name they

may be described in its charter or known in law.

LXII. And be it, &c. That the term "effects," as used in this act, shall be construed to embrace every species of property, real and personal, inclu-

ding things in action.

LXIII. And be it, &c. That the term, "evidence of debt," as so used, shall be construed to embrace every written instrument or security for the payment of money importing on its face the existence of a debt, and whether under seal or otherwise.

LXIV. And be it, &c. That every corporation, as such, shall have

1st. To have succession, by its corporate name, for the period limited in its charter; and, when no period is limited, for thirty-three years.

2nd. To sue and be sued, complain and defend, in any court of law or equity.

3rd. To make and use a common seal, and alter the same at pleasure.

4th. To hold, purchase, and convey such real and personal estate as the purposes of the corporation shall require, not exceeding the amount limited in its charter.

5th. To appoint such subordinate officers and agents as the business of the corporation shall require, and to allow them a suitable compensation.

6th. To make by laws, not inconsistent with any existing law, for the management of its property, the regulation of its affairs, and for the transfer

LXV. And be it, &c. That the powers enumerated in the preceding section shall vest in every corporation that shall hereafter be created, although they may not be specified in its charter, or in the act under which it shall be incorporated.

LXVI. And be it, &c. That, in addition to the powers enumerated in this act, and to those expressly given in its charter, or in the act under which it is or shall be incorporated, no corporation shall possess or exercise any corporate powers, except such as shall be necessary to the exercise of the

powers so enumerated and given.

LXVII. And be it, &c. That no corporation created, or to be created, and not expressly incorporated for banking purposes, shall, by any implication or construction, be deemed to possess the power of discounting bills, notes, or other evidences of debt, of receiving deposites, of buying gold and silver, bullion or foreign coins, of buying and selling bills of exchange, or of issuing bills, notes, or other evidences of debt upon loan, or for circulation as

LXVIII. And be it, &c. That, where the whole capital of a corporation shall not have been paid in, and the capital paid shall be insufficient to satisfy the claims of its creditors, each stockholder shall be bound to pay, on each share held by him, the sum necessary to complete the amount of such

share, as fixed by the charter of the company, or such proportion of that sum as shall be required to satisfy the debts of the company.

LXIX. And be it, &c. That, when the corporate powers of any corporation are directed by its charter to be exercised by any particular body or number of persons, a majority of such body or persons, if it be not otherwise provided in the charter, shall be a sufficient number to form a board for the transaction of business; and every decision of a majority of the persons assembled as a board shall be valid as a corporate act.

LXX. And be it, &c. That if any corporation, hereafter created by the Legislature, shall not organize and commence the transaction of its business within one year from the date of its incorporation, its corporate powers shall

cease

LXXI. And be it, &c. That the charter of every corporation that shall hereaster be granted by the Legislature shall be subject to alteration, suspension, and repeal, in the discretion of the Legislature.

LXXII. And be it, &c. That, upon the dissolution of any corporation

created, or to be created, and unless other persons shall be appointed by the Legislature, or by some court of competent authority, the directors or managers of the affairs of such corporation, at the time of its dissolution, by whatever name they may be known in law, shall be the trustees of the creditors and stockholders of the corporation dissolved, and shall have full power to settle the affairs of the corporation, collect and pay the outstanding debts, and divide among the stockholders the moneys and other property that shall remain, after the payment of debts and necessary expenses.

remain, after the payment of debts and necessary expenses.

LXXIII. And be it, &c. That the persons so constituted trustees shall have authority to sue for and recover the debts and property of the dissolved corporation by the name of the trustees of such corporation, describing it by its corporate name, and shall be jointly and severally responsible to the creditors and stockholders of such corporation, to the extent of its property and

effects that shall come into their hands.

LXXIV. And be it, &c. That all such by laws and regulations as the directors of any corporation shall hereafter make, shall be submitted to a general meeting of the stockholders;—provided always, that a month's public notice shall be previously given of the intention of the directors to submit

such by laws and regulations for revision.

LXXV. And be it, &c. That it shall be lawful for any number of stock-holders in any banking corporation, not less than twenty, who together shall be proprietors of 250 shares of the capital stock of the said bank, to have power at any time, either by themselves or their proxies, to call a general meeting of the stockholders for purposes relating to the affairs of the corporation, giving at least six months' notice thereof in the public newspapers, and specifying in such notice the object of such meeting, and the time and place thereof.

LXXVI. And be it, &c. That it shall not be lawful for any person, from and after the first day of July next, to pass, circulate, or receive in payment, within this Province, any bank-note, bill, or promissory note for the payment of money, under or of a less denomination than one pound five shillings current money of this Province, unless such bill or note shall be made payable within this Province, by the person or persons, partner or partners, company

or corporation issuing the same.

LXXVII. And be it, &c. That any person offending against any of the provisions of the preceding section, shall forfeit the nominal amount of such bank-note, bill, or promissory note, with costs of suit, to be recovered in the name and for the use of any person who shall sue for the same, and prosecute such suit to judgment in any court having competent jurisdiction within

this Province.

LXXVIII. And be it, &c. That the provisions of this act shall apply to every incorporated banking and insurance company which may or shall be erected during the present session of the Legislature, or whose charter may or shall be renewed or extended during the present or during any future session of the Legislature; unless such corporation shall be expressly exempted from the provisions of this act, in the act creating, renewing, or extending such corporation, and the provisions of this act shall not be construed to apply to the incorporated Bank of Upper Canada unless its charter should be renewed or extended.

LXXIX. And be it, &c. That it shall not be lawful for any corporation to charge or receive the premium of exchange on any draft made by them which shall be applied to the payment of any bill, note, or other evidence of debt due to such corporation; or to be interested in the fees of any notary, who is hereby prohibited from receiving of an officer of the bank more than for a protest or notice upon any note or bill payable at

such bank.

LXXX. And be it, &c. That it shall be the duty of the bank commissioners to be appointed under the authority of this act to examine, under oath, the officers of all incorporated banks, touching the practice of exacting a premium on drafts as connected with the business of discounting; and to report to the Legislature on this or any other such practice.

BILL

GENERAL REGULATION FOR THE

BANKING

IN THE

Province of Upper Canada.

BY OBDER OF THE HOUSE OF ASSEMBLY.

FEBRUARY, 1836.

No. 6. A DESPATCH

FROM THE

RIGHT HONORABLE LORD GLENELG, HIS MAJESTY'S SECRETARY OF STATE FOR THE COLONIES,

TO HIS EXCELLENCY

Sir Francis Bond Read,

Lieutenant Governor of Upper Canada;

Containing His Majesty's answer to the separate Addresses and representations which proceeded from the Legislative Council and House of Assembly, during the first Session of the present Parlialiament; and His instructions to the Lieutenant Governor.

F. B. HEAD. The Lieutenant Governor transmits to the House of Assembly, the communication alluded to in His Speech to the two Houses of the Legislature, on the 27th instant.

The Lieutenant Governor was commanded by His Majesty, to communicate "the substance" of his Instructions, to both Houses of the Provincial Parliament; but considering it would be more satisfactory to them to receive the whole, he accordingly transmits it herewith.

Government House, 30th January, 1836.

(COPY.)

DOWNING-STREET, December 15th, 1835.

SIR: I have the honor herewith to transmit to you, a Commission under His Ma-Canada.

You have been selected for this office at an era of more difficulty and importance The expression of confiwhich I could convey to you.

rences, the correct understanding of which, cussions, indeed, occasionally arose, and

is essential to the discharge of the duties to which you are called, but which it is unnecessary for me to recapitulate. As, however, a more exact acquaintance with Canadian affairs is indispensable for your guidance in the administration of the Government of Upper Canada, I think it right to refer you to those sources of information on which you will be able most safely to rely. Amongst these, the first place is due to the Journals of the Legislative Council, and of the House of General Assembly. The Appendices subjoined to the annual summary of the proceedings of the two Houses, contain a fund of information on almost every topic connected with the statistics and political interest of the Province; and to those reports you will be able to resort with far greater confidence than to any other source of similar intelligence. The report of the committee of the House of Commons of the year 1828, with the evidence, oral and documentary, to which it refers, will also throw much light on the progress and the actual state of the questions agitated in the Upper Province. The correspondence of my predecessors and myself, with the officers who have successively administered the Provincial Government, will of course engage your careful attention.

In Upper Canada, as in all other countries which enjoy the blessing of a free Constitution, and of a Legislature composed in part of the representatives of the people, the discussion of public gricvances, whether real or supposed, has always been conducted with an earnestness and freedom of enquiry of which, even when occasionally carried to exaggeration, no reasonable complaint can be made. presentatives of the Canadian people, if tenant Governor of the Province of Upper departing at times from the measured st.ylc and exact terms in which the investigation of truth may perhaps be most successfully conducted, have yet, even in the agitation than any which has hitherto occurred in of questions the most deeply affecting the the History of that part of His Majesty's interests of their constituents, exhibited a dence in your discretion and ability which rity of their Sovereign, and a zealous atthe choice itself implies, would only be tachment to the principles of their balanweakened by any more formal assurance ced constitution. Until the last session of the Provincial Parliament, the remon-In the following instructions I shall pre- strances of the House were chiefly consuppose your knowledge of many occur- fined to insulated topics of complaint; disdiscontent was occasionally manifested; ter part of the grievances detailed by the

The cession by His Majesty of the revenues raised under the statute 14 Geo. Srd, cap. 88, to the appropriation of the House of Assembly, was a gratuitous and unsolicited act, and was accepted by that body in a spirit of grateful cordiality.

I will not pause to recapitulate the events which immediately preceded, if they did not produce the interruption of this mutual good understanding. It is sufficient for my present object to observe that the relations which had formerly subsisted between the Executive Government and the Representatives of the people underwent an entire change, immediately after the elections which took place in the autumn of 1334. The supporters of the local government now for the first time found themselves in a constant minority on every question controverted between them and their political antagonists. A committee of grievances was appointed, by which a report was made impugning the administration of affairs in every department of the public service, and calling for remedial measures of such magnitude and variety as apparently to embrace every conceivable topic of complaint. Having adopted his report, and having directed its publication, in an unusual form, the House transmitted through the Lieutenant Governor to the King, an address, in which some of the more considerable of the claims of the committee were urged in terms of no common emphasis. It will be your first duty, on the assumption of the Government to convey to the House the answer which His Majesty has been advised to return to these representations.

I cannot proceed to explain the terms of that answer without the preliminary remark with a view to which the preceding statement has been chiefly made. Whatever may be the justness of the complaints now preferred respecting the general principles on which the public affairs of the Province have been conducted, the representatives of the people of Upper Canada " an indication of the opinion of the counare at least not entitled to impute to the "try concerning the character of the gov-

but it may be affirmed that, generally, there committee and the House, are now for the subsisted a spirit of amicable co-operation first time brought by them under His Mabetween the Executive Government and jesty's notice. My predecessor, the Earl of Ripon, in his desputch of the 3th of November, 1832. to Sir John Colborne, was commanded by the King to state that "there was no class of the Canadian peo-" ple, nor any individual amongst them, to "whose petitions His Majesty did not re-" quire that the most exact and respectful "attention should be given." His Majesty has never ceased to be actuated by the spirit which dictated those instructions, and of course will not deny to the House of General Assembly that careful investigation of the grounds of their complaints which he graciously pledged himself to bestow on the representation of any individual petitioner. I feel myself, therefore entitled on behalf of His Majesty's Government, to object to any resort on the part of the House to that ulterior measure to which they allude but which they will feel with me is to be justified only by an extreme emergency.

I now proceed to the consideration of the various topics embraced in the seventh report of the Committee of Grievances, and in the addresses of the two Houses to His Majesty. And I shall advert to them in the order in which they are pur-

sued in the report itself.

In the following pages if any subject should appear to be passed over without due regard, you will understand that I have, at least, been guilty of no intentional omission, but have, in obedience to His Majesty's commands, made it my endeavour to meet every question which the Committee and the House have thought it necessary and proper to raise.

1st. It is stated that "the almost un-"limited extent of the patronage of the "Crown, or rather of the Colonial Minis-"ter for the time being, and his advisers "here, together with the abuse of that "patronage, are the chief sources of Co-"lonial discontent. Such (it is added) is " the patronage of the colonial office, that "the granting or withholding of supplies is of no political importance unless as confidential advisers of the King, any dis- "ernment, which is conducted on a sysregard of their remonstrances. The grea- "tem that admits its officers to take and

"apply the funds of the colonists without | "any legislative vote whatever." The committee then proceed to an enumeration of the various public offices, and the different departments and branches of the public service, over which this patronage is said to extend; & by bringing the whole into one view, they suggest what must be the amount of the authority and influence accruing to the Executive Government from these sources.

The statement is substantially this-that the number of public offices in the colony is too great; and that the patronage, instend of being vested, as at present, in the crown, and the local representative of the the crown, should be transferred to other

hands.

In the long enumeration of places at the disposal of the Executive Government of Upper Canada the committee have not adverted to one consideration to which I think that great prominence might justly be assigned. It is perfectly true, as it is quite inevitable, that in Upper Canada, as in other new countries, the number of public employments is, and will be, far larger in proportion than in older and more densely peopled states. The general machinery of government must be the same in a scanty as in a large and redundant population-corresponding departments of the public service, whether legislative, judicial, or administrative, must exist in both. And in a new country, besides, there will be some establishments for which in the settled states of Europe, no counterpart can be found. Such, for example, are all which relate to the allocation, surveying, and granting of wild Nor is it to be forgotten, that in the early stages of such a society, many duties devolve upon the government, which, at a more advanced period, are undertaken by the better educated and wealthier classes, as an honorable occupation Thus in the Canaof their leisure time. das, although the mere text of the law would there as in England, authorise any man to prefer and prosecute an indictment in substance the prosecution of all offences is confided to the government or its These causes have inevitably nage of the provincial government, with- delegated prerogatives of the crown.

out supposing any peculiar avidity on their part for the exercise of such power.

With respect to the patronage of the requisite officers, His Majesty's Government are not solicitous to retain more in their own hands, or in those of the Governor. than is necessary for the general welfare of the people and the right conduct of public affairs. I confess myself, however unable to perceive to whom the choice amongst candidates for public employment could with equal safety be confided. It requires but little foresight or experience to discover that such patronage if exercised in any form of popular election, or if committed to any popular body, would be liable to be employed for purposes far less defensible, and in a manner less conducive to the general good: chosen by irresponsible patrons, the public officers would themselves be virtually exempt from responsibility, and all, the discipline and subordination which should connect together in one unbroken chain the King and His Representative in the Province down to the lowest functionary to whom any portion of the powers of the State may be confided, would be immediately broken.

I conclude, therefore, that as in such a country as Canada, there must exist a number of public officers, large in proportion to the present number and wealth of the inhabitants, so the selection of them must for the most part be entrusted to the

head of the local government.

I disclaim, however, on the part of the Ministers of the Crown every wish to urge these general principles beyond their just and necessary limits. There are cases in which I think according to the analogy of similar cases in this country, the patronage now said to be exercised by the Lieutenant Governor might with perfect safety and propriety, be transferred to others .-On this subject, however, it will be more convenient to state the general principle than to attempt the specific and detailed application of it at this distance from the scene of action.

That principle is to maintain entire, by in His Majesty's name, yet virtually and the nomination and removal of public officers, that system of subordination which should connect the head of the government with every person through whose instrutended to swell the amount of the patro- mentality he is to exercise the various.

What is necessary for this end must be retained .- Whatever patronage is unnecessary for the maintenance of this principle should be frankly and at once abandoned.

It is noticed in the report as an aggravation of the evils of the government patronage that almost every public officer holds his place at the pleasure of the I cannot disguise my opinion, that the public good would be little advanced report to me, any occasion occur for the if the subordinate functionaries held their places upon a more certain tenure. practice indeed, though subject to certain exceptions to be hereafter noticed, no public officer is in danger of losing his employment except for misconduct or incompetency. But there are many kinds of misconduct and incompetency which could never be made a subject of judicial investigation but which yet would be destructive of the usefulness of a public officer, and ought therefore to be followed by a dismissal from the public service. it necessary to insist at any length on the evils, which would arise in the transaction of business if the subordinate officers were aware, that they were entirely independent of the good opinion of their superiors for continuance in their employments.

It is not difficult to shew in reference to any conceivable arrangement on the subject of patronage, that there will be dangers against which it is impossible to take an absolute and perfect security. I know not, however, that any less exceptionable scheme could be devised than that which at present prevails, of giving to the head of the local government the choice of the subordinate officers, and of making their places dependent on His Majesty's plea-To prevent, however, as far as may be possible, the continuance of any well founded ground of complaint on this head, His Msjesty disclaiming for himself and for his Representative in the Province all desire to exercise, with the view merely to patronage, the power of appointing public officers, is pleased to prescribe for your guidance, the following rules:

First—You will at the earliest opportunity enter into a diligent review of the to subject you to any such restriction. offices in the appointment of the Crown and of the local government, as detailed vacant, which is not to be suppressed, and

appendix, with a view to ascertain to what extent they may, without impairing the efficiency of the public service, be reduced immediately and prospectively. You will report to me the result of your investigation, with such particular information as will enable His Majesty's government to decide in each case on the expediency of adopting your recommendation.

Secondly-if during the reference of that reduction of offices either by abolition or by consolidation, you will exercise your own discretion as to waiting for fresh instructions, or proceeding at once to the reduction. Any appointment, however, made under such circumstances, will be merely provisional. In case of the immediate abolition of any office not required for the efficient discharge of the public service, you will stipulate for such a compensation to the present holders, as the disappointment of their reasonable expec-Nor is tations may entitle them to receive.

Thirdly—In the prescribed revision of these offices you will make it one of your objects to form a judgment what share of the patronage of the Crown or the local government may safely and wisely be transferred to other hands. You will report to me on this subject, but refrain from taking any steps regarding it without further instructions from me.

Fourthly.-In the selection of persons to execute public trusts you will be guided exclusively by the comparison of the claims which the different candidates may derive from past services or from personal qualifications.

Fifthly.-In general you will not select for any public employment in Upper Canada any person who is not either a native or a settled inhabitant of the Province.-To this general rule occasional exceptions may be admitted; as in cases where some peculiar art or science is demanded, which no provincial candidate may be found to possess in the requisite degree. ception must also be made in reference to those officers, who are immediately attached to your own person; in the choice of whom His Majesty does not think it right

Sixthly.—As often as any office shall be in the report of the committee, and the of which the annual emolument shall exthe appointment provisional only, and with the intercourse by Post with all places bethe distinct intimation to the party elected, youd the limits of the Province itself. that his confirmation will depend entirely on the estimate which His Majesty may and practicable scheme which the House form of his pretensions; and you will on may incorporate in any bill tendered for every such occasion signify to me, for His your acceptance; regarding as of no Majesty's information, the grounds on weight whatever, when opposed to the which you have proceeded, and the motives which have directed your choice. His Majesty should be pleased to issue derivable from this source. under his sign manual a warrant authorising you to make a grant of the office under the public seal of the Province, then and not till then, the appointment must be considered as finally ratified.

I trust, that in these regulations, the House of Assembly will perceive a sufficient proof of His Majesty's settled purpose to exercise this Branch of His Prerogative for no other end, than the general good of his Canadian subjects, and to prevent its being converted into an instrument of promoting any narrow, exclusive,

or party designs.

2nd. Pursuing the order observed by the services of particular persons. committee, I pass on to the subject of the Provincial Post office. measures which have already been taken jesty's various officers, and with the effifor the redress of the grievances which have been alleged to exist in the conduct of this department, the committee observe, that "the form of a law such as the Govern-" ment would approve is before the Houses, "but its provisions (they add) are so in-ferent classes would require information applicable and absurd, that no benefit "could be derived from their enactment."

On the measure thus characterized I am not called to give an opinion. It is, however, but fair to those by whom it was recommended to the adoption of the local legislature, to observe that it had previously undergone a most careful investigation by the Post Master General. His Majesty's government cannot have the I do not feel myself entitled to assume the slightest wish to urge the adoption of any cient objections may exist; they are content that the bill in question should be unexpected difficulties.

ceed two hundred pounds, you will make will be the case, especially in reference to You will, however, assent to any judicious general convenience of the public, any If considerations of patronage or of revenue

3rd. Under the head of salaries and fees the committee have entered into very copious statements to shew that the emoluments of the public officers in Upper Canada are excessive, and out of all just proportion to the value of the services ren-It is unnecessary for me to enterinto these details, because as to the genoral principles on which it will be your duty to act on questions of this nature, there can be no room for controversy; indeed those principles will, I think, be most conveniently considered when divested of topics connected with the interests and the

There is no measure of retrenchment Adverting to the compatible with the just claims of His Macient discharge of the public service and duty, to which the King is not disposed to give a prompt and cheerful assent. To determine what ought to be the scale of remuneration to public functionaries of diftoo minute and exact to be obtained beyoud the limits of the Province itself .-This would appear a very fit subject for a special enquiry, in which it might be proper to employ commissioners, to be appointed under the authority of an act of the Assembly. I have reason to suppose that the subject has never yet undergone a full and fair investigation, and therefore non-existence of those abuses which so measure to which well-founded and suffi- readily grow up under a system which is not subjected to a careful scrutiny, conducted upon permanent and enlightened withdrawn to make way for any other views of public economy. Even if the which the Assembly may be disposed to result of the examination should be only substitute for it. Perhaps, however, on to shew that there is no evil of this nature approaching the question more closely, to be remedied, the labour would be amply the Assembly may find it encumbered with repaid, by placing so important a fact be-I fear that this youd the reach of all reasonable suspicion.

In dealing with existing interests the from the King the means of rewarding guidance of their discretion in similar ca-The saving of public money which could arise from the unexpected reduction of official incomes would not only subject lives. numerous families to extreme distress, but, by impairing general confidence in the public credit, would weaken the foundations on which all proprietary right must ultimately repose.

The King confidently relies in his faithful subjects of Upper Canada, that they will not reduce His Majesty to the distressing alternative of either abandoning the just interests of any of his servants, or opposing himself to measures having for their object the reduction of public expenditure.

4th. Next in the order of complaints is that which relates to the amount of the Pension List. On this, as on the subject which I have last noticed, I conceive that I shall better discharge my duty by attempting to provide against any future abuse than by engaging in a minute retrospect of any which may have already occurred .-I will not even pause on the comparison, not perhaps very accurately or necessarily instituted, between the conduct of the central government of the United States of America, and that which has been pursued in one of the Provinces of the British Empire, respecting the remuneration of officers for past service. - Such pensions as have already been charged upon the revenues which were at the disposal of the crown, constitute a debt to the payment of which His Majesty's honor is pledged, nor need I state that there is no consideration so powerful as to induce the King to assent to the violation of any engagement lawfully and advisedly entered into by himself or by any of his royal predecessors.

On the other hand, His Majesty is content that the most effectual security sho'd be taken against any improvident increase of the pension list by any future grants, and is willing that a limit should be fixed by law to any charge which may hereafter be imposed upon the Provincial revenues ceiver General, to be disposed of under on this account.

of Upper Canada would wish to withhold other purpose whatever.

local legislature will, I doubt not, be well faithful and zealous public services, or disposed to adopt the rules which have would think it desirable that no provision been uniformly taken by Parliament for the should ever be made by His Majesty to solace the declining years of those who have consumed in laborious public duties in the Colony the larger portion of their

You will therefore assent to any law which may be tendered for your acceptance of which the object shall be to regulate, on a just and reasonable scale, the amount of the future pension list of Upper Canada, and to prescribe the principles upon which any pensions shall be granted.

5th. I proceed to the subject of the provision made for ecclesiastical establishments and for the maintenance of the teachers of religion of various denomina-

On this head the House of Assembly maintain opinions from which in their address to His Majesty of the 13th April, the Legislative Council have recorded their most entire and carnest dissent. The report states that "the House of Assembly in several successive Parliaments has " expressed its entire disapprobation of " the government in attempting to uphold particular Religious Sects by money grants, and in the 10th and 11th Parliaments has declared that it recognizes no particular denomination as established in Upper Canada, with exclusive claims, " powers, or privileges."

It appears that the four religious communities whose funds are aided by grants from the hereditary and territorial revenue are, those of the churches of England, and Scotland, and Rome, and of the Wesleyan Methodist Society; the last being in two divisions, which respectively take the distinct appellation of the "Canadian" and " the British."

In the last session of the Provincial Parliament a bill was passed by the Assembly, the object of which was to enable certain commissioners to sell the lands which, under the constitutional act of 1791, had been appropriated in Upper Canada to the maintenance of a protestant clergy, and to pay over the proceeds to the Rethe future direction of the legislature, for I do not anticipate that the Assembly the promotion of education, and for no

This bill was rejected by the Legislative Council on the grounds noticed in the address from that body to His Majesty, and in a report from a select committee appointed by them to take the bill into consideration, which report is inclosed in Sir John Colborne's despatch of the 20th May, No. 20.

Your predecessor and the Council agree in the opinion, that it is vain to expect the concurrence of the two branches of the local legislature in any adjustment of this question, and they therefore invoke the interposition of Parliament; which interposition the Assembly on the other hand,

deprecate with equal carnestness.

The chief practical question then, which at present demands consideration, is whether His Majesty should be advised to recommend to Parliament the assumption to itself of the office of deciding on the future appropriation of these lands. There are two distinct reasons, both of which appear to me conclusively to forbid that course of proceeding.

First.—Parliamentary legislation on any subject of exclusively internal concern, in any British Colony possessing a Representative Assembly, is, as a general rule, un-

constitutional.

It is a right of which the exercise is reserved for extreme cases, in which necessity at once creates and justisfies the ex-But, important as is the question of the Clergy Reserves in Upper Canada, yet I cannot find in the actual state of the question any such exigency as would vindicate the Imperial legislature in transferring to themselves the settlement of this controversy. The conflict of opinion between the two Houses upon this subject, much as it is to be lamented, yet involves no urgent danger to the peace of society, and presents no insuperable impediment to the ordinary administration of public affairs; although a great evil, it is not such as to exclude every hope of mitigation by the natural progress of discussion, and by the influence of that spirit which, in public affairs, not seldom suggests to parties, alike solicitous for the general good, some mutual surrender of extreme views and some compromise on either side of difference, which at first sight might have appeared irreconcilable.

dispute within the Province itself shall have been distinctly exhausted, the time for the interposition of Parliament will not have arrived, unless indeed, both Houses shall concur in soliciting that interposition; in which event, there would of course, be an end to the constitutional objections already noticed.

The second ground on which I think myself bound to abstain from advising his Majesty from referring this question immediately to Parliament, is that the authors of the Constitutional Act, have declared this to be one of those subjects, in regard to which the initiative is expressly reserved and recognized as falling within the peculiar province and the special cognizance of the local Legislature, although its ultimate completion is no less distinctly made to depend, in addition to the ordinary submission to his Majesty, on the acquiescence

of the Imperial Parliament.

It is not difficult to perceive the reasons which induced Parliament in 1791, to connect with a reservation of land for ecclesiastical purposes the special delegation to the Council and Assembly of the right to vary that provision by any bill, which being reserved for the signification of His Majesty's pleasure, should be communicated to both houses of parliament for six weeks before that decision was pronounced. Remembering, it should seem, how fertile a source of controversy ecclesiastical endowments had supplied throughout a large part of the christian world, and how impossible it was to foretell with precision what might be the prevailing opinions and feelings of the Canadians on this subject at a future period, parliament at once secured the means of making a systematic provision. for a protestant clergy and took full precaution against the eventual inaptitude of that system to the more advanced stages of a society then in its infant state, and of which no human foresight could divine the more mature and settled judgment.

In the controversy, therefore, respecting ecclesiastical endowments which, at present divides the Canadian Legislature, I find no unexpected element of agitation, the discovery of which demands a departure from the fixed principles of the constitution, but merely the fulfilment of the anticipations of parliament in 1791 in the Until every prospect of adjusting this exhibition of that conflict of opinion for

which the statute of that year may be said to have made a deliberate preparation. In referring the subject to the future Canadian legislature, the authors of the constitutional act must be supposed to have contemplated the crisis at which we have now arrived—the era of warm & ptotracted debate, which in a free government may be said to be a necessary precursor to the settlement of any great principle of We must not have renational policy, course to an extreme remedy merely to avoid the embarrassment, which is the present, though temporary result of our own deliberate legislation.

I think therefore, that to withdraw from the Canadian to the Imperial Legislature the question respecting the Clergy Reserves would be an infringement on that cardinal principle of colonial government which forbids parliamentary interference. except in submission to an evident and

well established necessity.

Without expressing any further opinion at present on the general objects of the bill of last session, I think the effect of that bill would, as it appears have been to constitute the Assembly not merely the arbiters respecting the disposal of the funds to be raised by the sale of these lands, but the active and independent agents in effecting those sales, and thus to invest them with the appropriate functions of the Executive Government.

6th. The Report of the Committee next proceeds to the subject of the Land Gran-

ting Department.

Admitting that Lord Ripon's Despatch shows that the grievances under this head have been in part removed, it is observed that the extent of that relief is not very clearly shewn by the documents before the Committee.

It is difficult, or rather impossible for me to advance further in meeting the views of the Assembly thus briefly expressed, than by stating, that if any ambiguity can be pointed out in Lord Ripon's instructions respecting the grant of Lands, it shall be immediately removed, and that if His Majesty's officers in the province can be shewn to have disregarded those instructions, it will be your duty to enforce the most prompt and exact obedience to them, to the full extent of their spirit and intention; a charter could be most conveniently pre-

doubt, whether the grievances at which they aimed have or have not been comple-

tely removed.

7th. Respecting the Collegiate Institutions of the Province, the Assembly express their opinion, that the Upper Canada College " is upheld at great public ex-" pense, with high salaries to its principal " Masters, but that the Province, in gen-" eral, derives very little advantage from it, "and that it might be dispensed with."

His Majesty's government can have no wish to retain any charge for this establishment which may be more than adequate to provide for the effective performance of the duties of the Teachers. Any wise retrenchment of that nature may, subject to the principles already mentioned, be immediately introduced. That the Province derives little benefit from this College is a fact of which the explanation is to be found, not in the principle of the Institution itself, but in some error of management, susceptible, as it should seem, of an easy remedy. It is impossible to believe, that in Upper Canada, as in other countries, advantages the most important, would not result from a well ordered school, for the education in the elementary branches of Philosophy, Science and Literature of young men, who aspire to fill the highest offices in society. Nor can I suppose it a light benefit thus to connect together the preparatory and the final studies of youth in one systematic plan, which by rendering the initiatory school a careful preparation for the University may give to their entire education a character of solidity and consistency scarcely attainable by any other method.

I shall therefore deeply lament the abolition of a College, of which the defects would appear so remediable, and of which it does not seem easy to exaggerate the

benefits.

On the subject of King's College an unfortunate difference of opinion exists between the Council and the Assembly, which each of those bodies concurs in pronouncing incurable.

His Majesty commands me to tender through you his mediation on this subject. With the previous assent of both Houses, the King will cheerfully resume the consideration of the question, in what manner insomuch that there shall in future be no pared, so as to promote the interests of Science and Literature, and the study of deliberations of the Legislature, I trans-Theology and Moral Philosophy, with a mit to you various documents explanatory due regard to the opinions which seem to of the constitution and proceedings of the prevail in the Province, respecting the commission for auditing the public acproper constitution and objects of an Uni-counts of this Kingdom. 14th. A very considerable part of the report is devoted to the statement and il- to Parliament is second to none, which lustration of the fact, that the Executive Government of Upper Canada is virtually irresponsible; and the conclusion drawn from this statement is, that under the present system there can be no prospect of a good and faithful administration of public the principle of effective responsibility affairs.

Without entering on the one hand unnecessarily into a discussion of those general principles, to which my attention is thus invited, or digressing on the other hand into personal topics, it is enough for me to observe on the present occasion, that experience would seem to prove that the administration of public affairs in Canada is by no means exempt from the control of a sufficient practical responsibility. His Majesty and to Parliament the Governor of Upper Canada is at all times most fully responsible for his official acts.

That this responsibility is not merely nominal, but that His Majesty feels the most lively interest in the welfare of his Canadian subjects, and is ever anxious to devote a patient and laborious attention to dress to him, either through their representatives or as individuals, is proved not only by the whole tenor of the correspondence of my predecessors in this office but by the despatch which I am now addressing to you.

suggestions, as may still continue unful- posed to receive with inattention the representations of their Canadian fellow sub-13th. The selection of Justices of the jects is attested by the labours of the com-

To Sir Francis Head, K. C. H. &c. &c. &c.

APPENDIX.

Extract from Despatch to the Commissioners for Lower Canada, dated

DOWNING STREET, 17th July, 1835.

" Amongst the most pressing of these, is the financial question which has given rise to so protracted a controversy.

"After the several gradations through which this question has passed, it has at length assumed the following shape:—As representatives of the people of Lower Canada, the House of Assembly claim the right of appropriating to the public service, according to their own discretion, the whole of the revenues of the Crown accruing within the Province. The claim extends to the proceeds of all parliamentary and provincial statutes, whatever may have been the original conditions of these grants;—to the funds drawn from the sale of timber and of the waste lands of the crown; -to all fines and forfeitures; -and to the income derived from the Seigneurial rights inherited by the King from his royal predecessors. fine, the authority of the local Legislature over the income and expenditure of the Province is declared to be so extensive, as to embrace every part of that receipt and outlay; and so inalienable as to supersede even the concessions deliberately made in preceding times by the former representatives of the Canadian people.

"Without pausing to discuss the great constitu-tional questions which these claims involve, I content myself with referring to the undoubted fact, that the Kings of England have at all times been, in right of not be divested, except by their own correct

liament over this revenue in these Kingdoms, has been established on the accession of each Sovereign to the throne, by a solemn compact made between the Crown and the House of Lords and Commons.— If therefore, the King were disposed to insist upon positive law, ancient practice, or constitutional analogy, His Majesty might readily vindicate his right to dispose of the territorial, hereditary, and casual revenue of the crown, arising in Lower Canada, towards the maintenance of the civil government in that part of his dominions. But, anxious to render his reign a blessing to his Canadian subjects, His Majesty is prepared to decline taking this ground, and to refer the decision of the question to the single test of the advantage or disadvantage to the Province, with which the proposed cession would be attended. It would be difficult to imagine any pecuniary sacrifice which would not be wisely incurred in purchasing a peaceful settlement of the dissensions of the last fif-

"If pecuniary interests alone were at stake, the King would not hesitate to make this cession permanently and without conditions. They must ill indeed have understood the character and policy of the British government, who may have supposed, that the peace and well-being of this great empire has been put to hazard in a prolonged contest with the most valuable of its foreign dependencies, for the sake of a sum of money so insignificant, as to be scarcely perceptible in the financial operations of Great Britain, and of no considerable amount even in these of

Lower Canada.

"During the progress of this controversy, there have been expended by parliament for objects altogether Canadian, sums, compared with which, the utmost demand that has been made on the liberality of the House of Assembly, for the support of the Executive government of the Province, is altogether trivial. The real importance of connecting the surrender of the hereditary and territorial revenue with some reservation or conditions for the support of the civil government, and for the administration of justice, rests upon grounds far higher than any which could be brought to a pecuniary measurement. There are objects, essential, as it would seem, to the welfare of His Majesty's Canadian subjects, which could not probably be secured if that surrender were made unconditionally. In this view of the question, His Majesty is bound not to relinquish the appropriation of funds which the law and the constitution have placed at his disposal, without making a stipulation suggested exclusively by his care for the common benefit of his people.

"Amongst the foremost of the objects which His Majesty is thus bound to rescue from a precarious support, are, the independence of the Judges and the pure administration of the law. From the commencement of his reign, it has been the constant and persevering effort of His Majesty to render the Judges of the Superior Courts in Lower Canada, independent alike of the crown, for the tenure of ther offices, and of the representatives of the people for their. annual emoluments. In the various documents already noticed, you will find the history of those attempts, and a full explanation of the causes to which their crown, in possession of certain sources of re-venue peculiarly their own, and of which they could Journals of the Assembly, will I think, convince you, In that between that House and His Majesty's govern

ment, no real, or at least no irreconcileable, differ- people; although the common welfare of society evience of opinion exists on this subject-on the contrary, you will find, that respecting the general principles on which we must proceed, a perfect unanimity has prevailed. It is fully admitted that the Judges ought to hold their offices, not at the pleasure of the King, but during good behaviour, and that their official incomes should be paid, not at the pleasure of the popular branch of the Legislature, but from adequate funds, to be irrevocably pledged for that purpose.-With respect to the crection of a tribunal for the trial of impeachments preferred against the Judges, no plan has been suggested, nor consistently with the principles of the constitution of the Province, could any scheme be devised, excepting that of bringing such Judges to trial before the Legislative Council, or before His Majesty, acting on the advice of the judicial committee of the Privy Council in this kingdom. Impartiality, with a perfect exemption from all local influences, is the first and essential attribute of any court which may be invested with such powers, and as the King cannot indulge any reasonable hope of finding those qualities combined in any tribunal within the Province itself (unless perhaps in the Legislative Council) His Majesty is not prepared to assent to any scheme divesting himself, acting upon the constitu-tional advice of His Privy Council, of the authority which has ever been exercised by the Kings of this realm, on occasions of the same nature, and since the earliest settlement of the colonial portion of the British dominions.

This then will be one of the subjects of your earliest enquiry, and you will endeavour to suggest the planof a law, in which there may be good ground to anticipate the concurrence of the House of Assembly, for the security of judicial independence. If this can be effected, one of the chief difficulties which might otherwise obstruct the cession of the revenues will be

The regard which it is his Majesty's duty to maintain for the welfare of the people of Lower Canada appears to forbid a surrender of the revenues of the Crown in that Province to the appropriation of the Legislature, unless some condition be further made for the support of the Executive Government by an adequate civil list.

I pass over without any direct notice the grounds on which the contending parties in the Province have, on the one hand, urged the necessity of such a stipulation, and on the other hand, denied that it could be safely or constitutionally admitted. You will readily learn from various public documents which will be pressed upon your attention in the Province itself, what are the arguments to which I refer. I cannot, however, abstain from recording in this place the princinal considerations which appear to make it necesary i that the concession about to be made to the Provincial Legislature should be qualified by the demand of a proper civil list.

A constant altereation between the House of Assembly and the Executive Government, on the subject of the official emoluments of the chief officers of the Crown, would be derogatory to the character of those officers, and especially of the Governor, representing the person clothed with the delegated prerogatives of The tendency of such controversies would unavoidably be to introduce a disesteem for those functionaries by exhibiting them in the light of pensioners on the reluctant bounty of the representatives of the

dently requires that they should rather be respected as the Ministers of the King; exercising under a just responsibility indeed; -but yet with freedom and independence, the powers confided to them for the

public good.

The continued agitation of a subject so capable of being placed in an invidious light, could scarcely be compatible with the tranquil and steady progress of those most important branches of the public business with which the higher functionaries of the government are charged. It would also be directly injurious to them, and therefore to the Society at the head of which they are placed, thus to give an habitual and offensive prominence to the remuneration they were receiving, and in the same degree to divert public attention from the services by which that pecuniary reward was earned.

The security which the Governor and his principal officers would derive from the grant of a Civil List, would strengthen the connexion subsisting between Canada and the other members of the British Empire. It would be a distinct recognition of the principle that the administration of the affairs of the Province by a Governor and officers appointed by the King, is a substantial and essential part of the Provincial Constitution. To debate from year to year whether grants shall or shall not be made for the support of such functionaries, might almost seem to involve a tacit assumption that the existence of such offices was itself a question open to annual revision.

In so remote a part of his Majesty's dominions it is especially necessary that the Royal Authority as represented by his Majesty's officers should be most distinctly admitted as one of the component and inse-

parable principles of the social system.

Nor are the motives, by which the independence of the Judges has been recommended by the King and admitted by the Assembly inapplicable to the case of the principal officers of the local government. They have frequently unpopular duties to perform; they are not seldom called to oppose the passions and emotions of the day; and for the permanent well-being of society, to brave the displeasure of popular leaders.—They should, therefore, be raised above all influence, and suspicion of influence of unworthy fear or favour. The interests of freedom and of good government require that those upon whose firmness and constancy the maintenance of order and the authority of the laws mainly depend, should not be looking for their subsistence to the favour of a body which necessarily reflects most of the fluctuating movements of the public Such are the principal motives which induce me to conclude, that the King could not consistently with the interests of his Canadian subjects relinquish, except in return for an adequate Civil List, the control which his Majesty at present exercises over the Hereditary and Territorial Revenue.

It will be for you to consider and report what ought to be the precise terms of this stipulation. A temporary cession of the revenue in return for a provision for the chief public officers of the Province for a corresponding period, would be the most satisfactory arrangement. In the rapid progress of settlement in the Canadian Provinces a few years will probably be productive of changes, demanding a corresponding alteration in the terms of any adjustment concluded at the present period; and a decennial revision of the coma ct now to be made would seem best calculated to secure those public benefits and avert those public evils by the hope or lear of which the compact itself

If however a temporary settlement to be renewed from time to time, should prove impracticable, or upon a closer consideration of the subject should seem to you inexpedient, you will then consider in what manner the inconveniences inseparable from the permanent adjustment of such a question can be most effec-

tually mitigated or avoided.

The opponents of the claims preferred by the House of the Assembly to the control of the Teritorial Revenue insist with peculiar emphasis that the necessary effect of yielding to this claim would be to transfer from the Executive Government to the Popular Branch of the Legislature the management of the uncleared territory asserting that the assumption of this duty by the House of Assembly would be most injurious to the agricultural and financial interests of Lower Canada.

Were the right of appropriating the Revenue arising from the Crown Lands and the charge of their real or supposed grievances. His Majesty especially management indissolubly connected, I should admit recognizes this right in those who are themselves called this reasoning to be correct. The objections to the to the high office of representing a large and most imcombination in the same hands of a large share of the legislative power with so important a branch of the executive authority, are too obvious to escape your notice; and I therefore may, without inconvenience, abstain from a particular explanation of them. It may be sufficient to say, that His Majesty's confidential advisers regard as conclusive, and unanswerable, the objections which are made to confiding the management of the uncleared territory of Lower Canada, to either or both of the Houses of General Assembly, or to persons appointed by them and subject to their control. In the distribution of the different powers of the state the office of settling and alienating the uncleared territory properly belongs to the Executive because His Majesty is not prepared to deny that a Government.

It is competent to the Legislature upon this, as upon other subjects, to lay down general rules for the guidance of the Executive authorities, or either branch of the Legislature may separately offer its advice to the Crown as to the policy and system of management, which it thinks should be pursued; but the practical application of such general rules and the charge of carrying into effect the system of management which may be approved are functions so strictly of an executive and administrative character, that they can only be properly discharged by those, in whose hands all similar powers are lodged by the Constitution. Nor am I aware of any ground on which a surrender of that trust could be properly required from His Majesty, or which would justify the resignation of it by the King.

Extract of Despatch to the Canada Commissioners, dated 17th July, 1835.

"In the 92 resolutions of the Session of 1834, in the address to His Majesty of that year, and in the address adopted in the Session which closed abruptly in the commencement of the present year, the constitution of the Legislative Council was insisted upon as the chief and prominent grievance in the whole systhe most decided language, have declared that all re- the proposal made by that body to refer the considera-

medial measures will be futile and unsatisfactory which should stop short of rendering the seats in the Legislative Council dependent on a popular election.

The petitioners of Quebec and Montreal, on the other hand, deprecate with equal earnestness any departure from the principle on which the appointment of the Members of the Legislative Council is regulated by the Act of 1791, and denounce any such change

as pregnant with the most formidable evils.

'The King is most unwilling to admit, as open to debate, the question whether one of the vital principles of the Provincial Government shall undergo al-The solemn pledges so repeatedly given for the maintenance of that system, and every just prepossession derived from Constitutional usage and analogy, are alike opposed to such innovations, and might almost seem to preclude the discussion of them.

But His Majesty cannot forget that it is the admited right of all His subjects to prefer to him, as the King of these realms, their petitions for the redress of any real or supposed grievances. His Majesty especially

portant class of his people.

The acknowledgment of this right appears to the King, to imply on his own part, the corresponding duty of investigating the foundations of every such complaint. His Majesty therefore will not absolutely close the avenue to inquiry, even on a question respecting which, he is bound to declare, that he can for the present perceive no reasonable ground of doubt. Majesty will not refuse to those who advocate such extensive alterations, an opportunity of proving the existence of the grievances to which so much prominency has been given.

The King is the rather induced to adopt this course,. statute which has been in effective operation for something less than forty three years, may be capable of improvement, or that the plan upon which the Legislative Council is constituted may, possibly in some particulars, be usefully modified, or that in the course of those years some practical errors may have been committed by the Council, against the repetition of which adequate security ought to be taken. Yet if these suppositions should be completely verified, it would yet remain to be shewn, by the most conclusive and circumstantial proof, that it is necessary to advance to a change so vital as that which is demanded

by the House of Assembly.

It must be recollected that the form of provincial constitution in question is no modern experiment nor plan of government in favor of which nothing better than doubtful theory can be urged. A council, nomi-. nated by the King, and possessing a co-ordinate right of legislation with the representatives of the people, is an invariable part of the British Colonial Constitution in all the transatlantic possessions of the crown, with the exception of those which still remain liable to the legislative authority of the King in Council .-In some of the Colonies it has existed for nearly two centuries. Before the recognition of the United States as an independent nation, it prevailed over every part of the British possessions in the North American continent, not comprised within the limits of colonies founded by charters of incorporation. The considertem of Provincial Government. To the discussion ation ought indeed to be weighty which should induce of this subject, nearly half of those resolutions and a departure from a system recommended by so loag of those addresses are devoted; and the Assembly in and successful a course of historical precedent. To

tion of this question to public conventions, or as they are termed, primary meetings, to be holden by the people at large, in every part of the Province, His Majesty commands me to oppose his direct negative. Such appeals are utterly foreign to the principles and habits of the British Constitution, as existing either in this kingdom or in any of the foreign dependencies of the Crown.

You will therefore apply yourself to the investigation of this part of the general subject, and endeavoring to ascertain how far the Legislative Council has really answered the original objects of its institution, and considering of what amendments it may be susceptible. It is His Majesty's most carnest hope and trust, that in the practical working of the constitution of the Province, there will be found to exist no de-

tion of this question to public conventions, or as they are termed, primary meetings, to be holden by the cise of those powers which belong to the Crown, or people at large, in every part of the Province, His which Parliament has committed to the Provincial Majorty commands me to oppose his direct negative.

When your report shall have been received, His Majesty will take into his most serious consideration, the question whether there are any amendments in the law on this subject, which it would be fit to propose for the consideration of the Imperial Legislature; and which being founded on the principles and conceived in the spirit of the Act of 1791, may be calculated to render the practical operation of the statute more conformable to the wishes and intentions of its framers."

J. JOSEPH.

MESSAGE from His Exceltency, with Communications from Receiver General, on the subject of a Loan in England.

F. B. HEAD.

The Lieutenaut Governor transmits, for the information of the House of Assembly, a communication from the Receiver General of the Province, with the accompanying papers, on the subject of the Loan negotiated by him in England the past year, for the public service of Upper Canada.

GOVERNMENT HOUSE, 8th February, 1836.

> RECEIVER GENERAL'S OFFICE, Toronto, 18th January, 1836.

Sin,

Having found it necessary, as soon as possible after the Bill, entitled, "An Act to authorise a Loan to be raised in the manner therein mentioned," became a law, to ascertain how far I might depend upon the resources of this Province in horrowing money here, I addressed a letter to the Bank of Upper Canada, and in reply was informed, that it could only engage to advance £30,000, upon the condition that the Debentures should remain with that institution, for a period not shorter than three years, at interest at the rate of 6 per cent. per annum. I addressed a letter to you, dated the 25th April last, representing that as the improvement of the St. Lawrence would require a larger expenditure than could be depended upon within the Province, and the terms required by the Bank such as I could not accede to, I suggested the expediency of my proceeding at once to London.

In the meantime, I wrote to us many of the most influential Houses in England (copy of my letter is herewith enclosed) [1.] as I thought likely to take the loan, and as the delay might cause embarrassment before their answers could be received, and in order that the Province might reap all the benefit of my personal exertions, I immediately proceeded to London, leaving directions, as the object for which this loan was designed night require money, that Drafts should be drawn on me in London and leaving full instructions as to the mode of drawing these drafts, so as to give the Pro-

vince all the advantages of the highest rate of exchange.

I accordingly sailed from New York on the 1st day of June, and on the 1st of July I addressed a letter, copy of which [2] is also enclosed, to all those Houses I had previously communicated

with. From a few I received replies, and from others none at all.

I made investi personally acquainted in every quarter where I might likely meet with success, and afforded every information I possessed in respect to and for the benefit of Upper Canada; but I found considerable reluctance amongst the monied Houses to have any thing to do with the loan, from the very great excitement which had been produced from the rumours and reports in circulation relating to the state of the Canadas; and it is a well known fact, that those rumours affected all Canadian stocks: that of the Canada Company, which had maintained a premium of 55 per cent., fell, in consequence of these rumours, to 33 per cent., and the Upper Canada Debentures, from a premium, had fallen to about par. I thought it best, therefore, to negociate the whole down in the manner which I deemed the most advantageous, and I hope it will appear as favourable, under all con. siderations, as could be obtained.

There had been, previous to my arrival in England, a considerable loss sustained in some of the foreign stocks, and the market was also influenced by Government intimating on intention of raising twenty millions to liquidate the emancipation of slaves, as well as a general depression of

Foreign Funds, and a scarcity of money.

From all these circumstances, and from the information collected from every quarter I could rely on, I have much reason to be satisfied with the result of my negociation; considering, also, that no allowance for agency was contemplated by the Act for transacting and paying the half-yearly interest for twenty years.

I employed myself most assidnously for the interests of Upper Canada; and without having gone to England, I think I should not have been enabled to carry the intentions of the Legislature

I feel justified in having made the arrangement with Messrs. Barings and Messrs. Thomas Wilson & Co. ; my communication to them, and the original letters to those gentlemen. [Nos. 3 to 9 inclusive] together with their respective receipts for the Debentures lodged with them, £100,000 to each House, are also enclosed.

I had taken my departure from London before any of the drafts drawn upon me had made their appearance, but I left full and sufficient authority to my private Agent [No 10] to cudorse the drafts over to those Houses in equal sums as they should be presented; and also the enclosed letter [No. 11] to Messrs, Baring Brothers & Co. and Messrs. Tomas Wilson & Co.

I have the honour to be,

Your Most Obedient Humble Servant, JOHN H. DUNN, H.M. R.G.

> RECEIVER GENERAL'S OFFICE, TORONTO, U. C. 4TH MAY, 1835.

Gentlemen,

As Receiver General of Upper Canada, I beg leave to address you and to transmit a copy of an act of the Legislature of the Province for your information, and to solicit your attention to it, as well as to a few observations which may be deemed necessary to establish the basis of the credit upon which the loan is offered to you.

Our present debt is £180,000 currency in Upper Canada, and £200,000 sterling in London. The whole of these sums have been expended in public improvements, Canals, Harbours, Roads,

&c. most of which are productive and will ultimately redeem their cost.

The present loan is to improve the river St. Lawrence, and to construct a Canal so as to admit Vessels from the Ocean to Lakes Ontario, Eric, &c. It is the general opinion that the revenue from the canal when finished will soon pay the interest and principal. The revenue on which the loan is secured, as well as the other two, is quite ample to meet the interest and all other demands The Province is increasing in population and wealth, and the revenue, though not so favourable as in 1833, yet there is no apprehension that the cause which produced the falling off, will have any permanent effect. This revenue is entirely derived from duties levied at the Port of Quebec, being about 21 per cent. sterling, ad valorem, upon all wares and merchandize, and about 6d. sterling per gallon upon wines, spirits and other liquors, and a small amount in Upper Canada from commerce with the United States of America, and on licences for the sale of wines, spirits, &c. No duties whatever on exports. There is no direct tax upon the inhabitants of this Province saving for local and special purposes.

The law fixes the value of £1 on cultivated, and on uncultivated lands 4s. per acre, and all other property is rated equally low, and assessed at one penny in the pound, no part of which is paid

into the public treasury.

I shall be happy to hear from you by the 1st September, on which day I will decide upon the offer you may make for the loan, and shall accept the highest premium. I shall require the money not sooner, nor in sums greater than about 25 to £30,000 per month. To meet my drafts, you shall have previous possession of the amount of Debentures, which Debentures shall bear interest at the rate of 5 per centum from the time the money is actually paid by you. They shall be prepared in the mode adopted on a former occasion, by coupons, or any other you may please to point out, and in such amounts as you may desire.

I have the honour to be, Gentlemen, de. de. de.

Eastthorpe & Co.

GENTLEMEN,

I addressed a communication to you from Upper Canada on the subject of a loan, and transmitted at the same time an Act of the Legislature of that Province, which authorises me as Receiver General to negotiate in this city the sum of four hundred thousand pounds, bearing an

interest of 5 per cent. per unnum, payable here half-yearly, as well as the principal in 20 years,

and secured on the public revenues of that Colony.

I beg leave to refer you to my letter as well as to the act, and for any further information you may require, I shall be happy to wait on you with such public and official documents as will satisfy you that no better security can be offered, and equal invalue to any stock in the market. I have therefore to request that you will be pleased, if you feel disposed to treat for the same, to address your tender to me, stating the rate of premium you will give for this loan of £400,000, or any part thereof, on or before Wednesday the Sth instant,

I have the honour to be, Gentlemen.

Your Most Obedient Servant,

(Signed)

[No. 3.] Messrs. Baring Brothers & Co's. letter to the Receiver General,—dated

London, Bishopgate Street, 8th July, 1835.

Sir,

We have the honor of acknowledging your letter of the 1st inst. referring to a previous communication you made to us under date of the 4th May, on the subject of a Lean for Four hundred thousand pounds, which as Receiver General for Upper Canada, you are authorized by an act of the Legislature of that Province to negociate in this country, such loan to bear interest at the rate of 5 per cent per annum, payable here half yearly, and the principal also to be repaid here at the expiration of twenty years.

You express a request that should we be disposed to treat for this Loan, we could address to you a Tender, stating the rate of premium we should be prepared to offer. In consequence of this request, we beg now to state that under existing circumstances, the highest offer we can make is One hundred pounds and ten shillings for each Debenture of £100, such sum to be placed to your credit in our books, at the time of our receiving the Debentures, and to be drawn for hereafter

in such manner as you may think fit.

Should the above terms meet with your approval we shall be glad to receive notice from you of their acceptance, and we need hardly add that in their fulfilment, it will be our study to consult in all respects the convenience of yourself, and the government of which you are the representative in this negociation.

We have the honor to be,

Sir,
Your very obedient servants,
BARING BROTHERS & Co.

[No. 4.] Letter from Messrs. Thomas Wilson & Co. to the Receiver General,—dated Warnford Court, 8th July, 1835.

Sir.

With reference to your letter of the 4th May last, and to the law passed by the Legislature of Upper Canada, of which a copy is annexed to your said letter; we beg to state, that we will take the Four hundred thousand pounds Debentures, (400,000) with the sale of which you have been charged, at the rate of One hundred pounds ten shillings (£100 10) money, for every hundred pounds (£100) stock.

We have the honor to be,
Very respectfully sir,
Your faithful obedient servants,

THO'S. WILSON & Co.

J. H. DUNN, H. M. Rec. Gen'l. for Upper Canade.

[No. 5.] Letter from Messrs. Thomas Wilson & Co. to the Receiver General,-dated

WARNFORD COURT, 8TH JULY, 1835

DEAR SIR,

We beg to state, that we consider your arrival in this country a most fortunate event, in respect to the negotiation for a loan, with which you have been charged by the Government of Upper Canada, there having been so much exaggeration and misrepresentation on the subject of the

Canadas. It would be impossible, perhaps, to remove from the public mind the prejudice and alarm which prevail, not only respecting the Lower, but the Upper Province. We trust, however, that the statements you have made will enable us to dispel the uneasiness of the capitalists with whom we are associated, and restore in some degree to the Debentures of Upper Canada the currency and value we had succeeded in giving them last year. A loval, intelligent, and industrious population, such as you describe the Upper Canadians; in a country, possessing great natural resources, with the fostering care of the Government, cannot fail to give to that Government, at no very distant period, a high degree of public credit. Under these impressions, and actuated by a sincere desire to promote your views, we have been induced to offer, for the £400,000 on Canada Debentures, 1001. But we must own to you, that we should have been much better pleased-if the negociation of them could have been deferred till the result of the Canada Commission had been ascertained, and some idea could be formed what turn affairs will take in the Lower Province.

Having agreed, under these circumstances, to take the whole of the Debentures, at a rate which we have had it in our power to show was very liberal, considering the present price here of the old Debentures, we trust that through your representations a proper allowance will be made to us for the trouble and responsibility attending the payment of the Dividends during so long a period as 20 years. We have forborne making this a point of negotiation at present, apprehensive we

might thereby occasion inconvenience to you and embarrassment to the Public services.

We have the honour to be, Dear Sir,

Your faithful obcd't. Servants.

THOS. WILSON & Co.

J. H. Dunn, Esq. &c. &c. &c.

Copy of the Receiver General's letter to Messrs. Baring Brothers & Co. and Messrs. 2No. 6.1 Thomas Wilson & Co .- dated LONDON, 9TH JULY, 1835.

Having received a tender from another quarter for the whole sum, at the same rate you offer to me in your letter of yesterday's date, viz. half per cent premium, and feeling most desirous to act with strict impartiality between you and the parties to whom I have reference, and also with a due regard to the interest of the Province which I am acting for, in having so respectable a House connected with its interest and prosperity, I am induced under these circumstances to acquaint you, that I divide the sum into two equal parts, £200,000 each. I shall therefore, if you agree to that I divide the sum into two equal parts, somethis proposition, lodge with you £100,000 in Upper Canada Debentures, prepared and made out agreeably to the act of the Legislature, which I shall draw upon you for, from time to time as the wants for which this Loan was designed may require. These Debentures are not to bear as the wants for which this Loan was designed may require. interest against the Province until the money is absolutely paid by you; I shall take care that Debentures are lodged with you to meet all my drafts.

I have the honor to be,

Gentlemen,

(Signed,)

Your most obedient servant, JOHN H. DUNN, R. G.

True Copy. J. H. Dunn.

Messre. Thomas Wilson & Co. Receipt for £100,000 sterling, in Government Deben-[No. 7.] tures,-dated LONDON, 14TH JULY, 1835.

Received from the Honorable John Henry Dunn, His Majesty's Receiver General for Upper Ca. nuda, the undermentioned Debentures, issued under the authority of an act passed in the last session of the Legislature, amounting to One hundred thousand pounds sterling, bearing interest at the rate of five per cent per annum, payable half-yearly in the city of London, at the Counting House of Messrs. Thomas Wilson & Co., and also the Capital in Twenty years from the date of the said Debentures, viz. from the First day of July one thousand eight hundred and thirty-five. The proceeds of which at the rate of one hundred pounds and ten shillings, for every Hundred pound Debenture, we the undersigned shall hold, and pay to the Receiver General for the time being, or his order. The interest on the said Debentures, shall be computed and charged against Upper-Canada, on and from the day the money shall be actually paid by us. ...£20,000

THOS. WILSON, & CO.

Messrs. Baring Brothers & Co's. Receipt for £100,000 sterling, in Government [No. 8.] Debentures,-dated

LONDON, 14 JULY, 1835.

Received from the Honourable John Henry Dunn, His Majesty's Receiver General for Upper Canada, the undermentioned Debentures, issued under authority of an Act passed in the last Session of the Legislature, amounting to one hundred thousand pounds sterling, bearing interest at the rate of 5 per cent. per annum, payable half-yearly in the city of London, at the Counting House of Messrs. Baring Brothers & Co., and also the capital in 20 years, from the date of the said Debentures, viz. from the first day of July one thousand eight hundred and thirty-five,-the proceeds of which, at the rate of one hundred pounds and ten shillings for every hundred pound Debenture, we, the undersigned, shall hold, and pay to the Receiver General for the time being, or his order.

The interest on the said Debentures shall be computed and charged against Upper Canada on

and from the day the money shall be actually paid by ns. 200 debentures at £100 cach, Nos. 701 to 900,.......................£20,000 A 320,..... 30,000 B 500 261 do 60 50,000 C 150,..... 1000 50 ďο £100,000

London, 14th July, 1835.

BARING BROTHERS, & Co.

Letter from Messes. Baring Brothers & Co. to the Receiver General, -dated [No. 9.] LONDON, 15 JULY, 1835.

We have already delivered to you a written receipt for 200 Debentures of Upper Canada a £100 ca. do a 1000 ea. 50 da

making together £100,000 capital, the proceeds of which, at a rate of 1002 per cent. we hold at the disposal of the Receiver General of Upper Canada for the time being, and consequently reserve all honour to his drafts at 30 days sight for that amount. It is understood, that nithough these debentures have dividend warrants bearing interest from 1st July last, interest at 5 per cent. per an num shall only commence to the charge of the Government of Upper Canada on these Debentures from the day on which the proceeds shall be paid by us. It would have been more convenient for us if we could have credited the amount of the Province for the proceeds immediately: but as you do not feel at liberty to authorise us to take such steps, you will, we trust, state to the Government of the Province our readiness to pay at once the whole amount, and induce it at once to fix the period when the whole shall be paid, or the periods when it shall be paid in instalments. The remaining Debentures for £100,000 you will transmit us as soon as possible, in Debentures of not more than £100 each, and we shall in a similar manner hold the proceeds at the same rate, at the disposal of We likewise take the liberty of begging you to transmit to us a copy of the the Receiver General. Act of the Province, authorising the creation and negotiation of these Dehentures, duly certified and legalized by the qualified authorities, as a proof to the public of the regularity of the whole transaction. It is perfectly understood that the funds necessary for the payment of the dividends shall be in our possession before the maturity of the dividend warrants; but we beg you to bring before the consideration of the Government, the propriety in this case of allowing a commission for the payment of the interest, and the necessity, in case any future loan is made, of giving such a commission, which is granted as a matter of course by all Governments, as a compensation for the trouble and responsibility of undertaking such payments.

It only remains for us now to express our satisfaction at thus entering into connection with the Province of Upper Canada, and to bear our feeble testimony to the honourable zeal with which you have conducted the operation confided to you, whilst we add, that we shall always be happy to devote

our services to the interest of the Province.

We have the honour to be,

Sir,

Your most obedient servants, BARING BROTHERS & Co.

Hon. J. H. Dunn, &c. &c. &c. London.

[No. 10.] Copy of the Receiver General's letter to Daniel Stoddart, Esq. -dated LONDON, 16TH JULY, 1835.

I directed the gentleman who I deputed to carry on my official duties in Upper Canada, during my absence, to draw as occasion may require on me, for all monies for the use of the Government Upper Canada.

These drafts will be presented at your Counting-house in Charles Street, drawn by Bernard Turquand, and I think will be witnessed or countersigned by Walter Rose. I have negociated a Loan of £400,000, between the Houses of Messrs Baring Brothers & Co., and Messrs. Thomas Wilson & Co. in equal parts, viz. £200,000 each, I have therefore to request that, as I shall be absent when these drafts are presented, you will have the goodness to accept them in my name, and refer the same to the above Houses for payment, in equal parts as explained to the parties.

I shall execute a legal instrument to enable you to do this service on my behalf.

I have the honor to remain,

Your most obedient servant, (Signed)

JOHN H. DUNN.

True Copy,
John H. Dunn.
To Daniel Stoddart, Esq.
17 Charles's Street, St. James's.

[No. 11.] Copy of the Receiver General's letter to Messrs. Baring Brothers & Co.—dated London, 17th July, 1835.

Gentlemen,

In order that the Government of Upper Canada might not sustain inconvenience for want of funds to prosecute the improvement of the river St. Lawrence, I directed the gentleman who I appointed to carry on the duties of my office during my absence, to draw Bills of Exchange on me here, in anticipation of that Loan, a part of which, viz. £200,000, you have purchased. As I am anxious to return to Upper Canada to resume my official duties without delay, I propose to leave this country by the American packet ship which sails on the 27th inst. I have, in consequence, executed an Instrument, which will enable my agent, Mr. Stoddart, of No. 17 Charles's Street, St. James's Square, (to which place the draft will be addressed) to accept and refer these drafts to your House and Messrs. Thomas Wilson & Co. in as equal sums as possible. I have, therefore, to request you will be pleased to honour such of the said drafts as may be presented to you, drawn by Bernard Turquand and, I think, will be countersigned or witnessed by Walter Rose, dated in Upper Canada, and made payable at your House, by Daniel Stoddard, Esq. You will have the goodness to charge the Provincial Debentures held by you with all payments made on behalf of the Government of Upper Canada by this authority.

I have the bonour to be,
Gentlemen,
Your Most Obed't Servant,
(Signed)

JOHN H. DUNN, H.M. Rec. Gen. for U.C.

[No. 9.]

REPORT OF COMMISSIONERS APPOINTED TO SUPERINTEND THE ERECTION OF A BRIDGE ACROSS THE GRAND RIVER AT DUNNVILLE.

K. C. B., Lieutenant Governor of the Province of Upper Canada, &c.

&c. &c. The report of William Mylne and Alpheus S. St. John, Commissioners appointed by Act of Parliament to expend the moneys granted for erecting a Bridge across the Grand River, at Dunnville, and for further purposes in said Act contained,

HUMBLY SHEWETH:

That by reference to our report for 1834, Your Excellency will see with whom we contracted for the erection of said bridge, and also the contract price: the contract now being completed, we have further to report a statement of our accounts up to this period; which statement will be found annexed at the close of this report, by which Your Excellency will perceive that we are now in advance the sum of £82 4 62.

That we have further to report, that in furtherance of the power invested in us by said Act of Parliament, we have fixed upon the rates of toll and took for our criterion the rates fixed upon at Brantford, but in consequence of the bad state of the roads which lead to this bridge, we considered the expense incurred by employing a man to collect the tolls would be greater than the amount received, therefore we have only now put up a gate and commenced receiving

To His Excellency Sin John Colborne, | tolls; a copy of our rates we herewith enclose.

There are still various pieces of work to be done to finish said bridge, not forescen at the time the contract was entered into, to defray the expenses of which, we shall humbly take the liberty of petitioning Parliament for at its next Session.

WILLIAM MYLNE, ALPHEUS S. St. JOHN.

[No. 10.]

REPORT OF THE BURLINGTON BAY CANAL COMMISSIONERS FOR 1835.

To His Excellency SIR JOHN COLHORNE, K. C. B., Lieutenant Governor of the Province of Upper Canada, Major General Commanding His Majesty's Forces therein, &c. &c. &c.

MAY IT PLEASE YOUR EXCELLENCY

That since the undersigned, Commissioners for the Burlington Bay Canal, had the honor of reporting to your Excellency in December last, upon the state of the work entrusted to their care, they have received numerous communications from the proprietors and masters of steamboats and schooners, as well as from the commercial community upon the insecure situation of this work.

They were induced to address your Excellency, on the 18th of May last, upon the subject of the Canal-considering its importance to the District of Gore, and the interests of those concerned in steamboats and schooners on Lake

Ontario. The Commissioners deemed it their duty to communicate to your Excellency, the fears and lector of Tolls for a sum sufficient to repair the

apprehensions of all concerned, upon which communication your Excellency was pleased to refer the subject of the Canal to the consideration of the Honourable the Executive Council, who were of opinion, that a sum sufficient to secure the work should be expended from the receipt of the canal tolls, under the superintendence of the Commissioners, to be by them accounted for to the Legislature; upon which recommendation your Excellency was pleased to order, that a sum sufficient to secure this work should be taken from the tolls collected here, and upon which order the Collector of Tolls has paid to the Commissioners the sum of seven hundred and twenty-five pounds, currency, being £125 more than had been estimated for; but in consequence of the swing bridge across the canal having been broken, (some time after the repairs estimated for had been commenced,) by allowing large droves of fat cattle to cross the bridge at a time, instead of dividing them, the Commissioners thought it advisable to call upon the Colbridge, as the highway was destroyed, which occasioned much inconvenience to the public; the bridge across the canal is now much stronger

than it was before.

The Commissioners are given to understand that the receipts of the Burlington BayCanal will be much greater this year than upon any former occasion; and the repairs made this season by the Superintendent remain secure and effective, although severely tested in several heavy easterly gales this fall.

The Commissioners have directed the Secretary to transmit an account of the expenditures

in securing the Burlington Bay Canal this year; and they carnestly recommend that a further appropriation be made by the Legislature, for the better protecting and securing this important work, as well from the heavy easterly storms on Lake Ontario, as the shoving of the ice in Burlington Bay.

All which is most respectfully submitted, W. CHISHOLM, WM. APPLEGARTH.

Burlington Bay Canal, December 7th, 1835.

An Account of Expenditures in Repairing the South Pier of the Burlington Bay Canal, on the Lake Ontario side, say 600 feet in extent; also Repairing the North Pier in Burlington Bay, 60 feet, and filling with Stone, including repairs to the Bridge across the Canal, and making new Lamps, &c. &c.

To His Excellency SIR FRANCIS B. HEAD, Knight, Lieutenant Governor of the Province of Upper Canada, &c. &c. &c.

THE Commissioners for the Improvement of the Navigation of the River St. Lawrence,

RESPECTFULLY REPORT:

That although the difficulty of procuring workmen during the past season has very much retarded the progress of the works carrying on under their superintendance, for the improvement of the navigation of the River St. Lawrence, they are enabled to state, that the whole line presents a favourable appearance, and promises an efficiency and

durability equal to the importance of the undertaking.

At the period when the contracts were entered into, in July 1834, and throughout the whole of that season, labourers were abundant, and the rates of wages, and prices of provisions were comparatively moderate. Since the opening of the navigation last spring, a very material advance in the rates of wages has taken place, attended with a difficulty in procuring labourers, even at rates beyond what the prices at which the contracts have been taken would justify; and this difficulty has been further increased by the competition which the public works carrying on in the United States present. The force on the line throughout the season has consequently been much smaller than was intended, and the facility of procuring employment elsewhere, induced a feeling of independence in the workmen very injurious to the interest of their employers.

The frequent indications of an insubordinate spirit amongst the labourers in the early part of the season, attended with some acts of violence, induced the Board, and the Magistrates of the Eastern District to make application to His Excellency, Sir John Colborne, for the protection of a military force on the line; to which he had acceded, but with which he afterwards considered it inexpedient to comply. The Board would now respectfully submit to Your Excellency, that having prepared commodious barracks at Cornwall, it is much to be desired that a military detachment should be stationed there in the ensuing spring, when, from the measures that have been taken, it is probable that a large number of labourers will be employed

on the works.

In the course of the season alterations have been made, and additional works have been projected which were not provided for in the original estimate, amongst which it may be proper to mention the construction of a retaining wall on Section No. 11, which although contemplated as a possible contingency, it was hoped might ultimately prove unnecessary. The description of soil however which composes the bank, in that particular portion of the line, is so unsafe, that a retaining wall has been found indispensable. Considerable expense has also been incurred in the construction and repairs of roads and bridges, where the original communication has been interfered with, and in altering the location, and consequent lift of some of the locks. In the present stage of the work, an exact estimate of the cost attendant upon these contingencies is impracticable—they will however unavoidably increase the expenditure contemplated.

REPORT ON THE IMPROVEMENT OF THE

The attention of the Board has been unceasingly directed to that part of the Canal immediately along the line of the Long Sault Rapid, and various alterations have been suggested with a view to greater economy, security, and expedition. As was stated in the report of last year, the indications of the soil, which induced the original plans, have not been realized in the course of excavation; and the quantity of bank formed in the river, from the earth thrown in, has hitherto been comparatively trifling. The work however has now been carried sufficiently into the bank to afford a confident assurance to the Engineer of the description of soil to be excavated, and he is enabled to calculate upon more certain data the influence which the current of the river may exert upon the earth and stone yet to be supplied, and to fix with a reasonable degree of certainty the exact prism of the Canal at this point. From these circumstances he looks forward with confidence to the completion of the work on this section at an expense below the estimate of 1834, when it was contemplated to remove the works entirely within the bank of the river; but at an increase upon the cost originally estimated.

The tow-path which it was found expedient to construct on the American or south shore of the Long Sault, for the accommodation of the trade, has been in use throughout the season, and has yielded a nett revenue of £343 7s. 6d., which is placed at the credit of the

Province.

By the terms of the contracts a discretionary power is possessed by the Board to retain at each monthly payment twenty-five per cent from the estimate of the work done, as security for the completion of It has been found however that the strict enforcement of this right seriously cramped the resources of the contractors, and would ultimately be productive of much injury not only to them, but to the public interest. The Board has deemed it expedient therefore to require from the contractors personal security for the completion of their work, where it could be given, and the full amount has in such instances been paid on the work estimated to have been performed. Since the report of last year some further claims for damages have been submitted and adjusted, the amount of which will be found in

the appended account of disbursements.

In the construction of public works, it is the duty of those persons under whose superintendence they are carried on, to avoid, as far as possible, injury to private interest, and with strict justice to remunerate where it has been unavoidably inflicted. The Board, in the adjustment of the claims which have come before it, has acted with a scrupulous attention to this principle; but whilst it willingly allows the utmost reasonable limit to the view taken by claimants for remuneration, it cannot lose sight of its duty to the public, and has in many instances submitted to the imputation of injustice rather than comply with requisitions which it considered inadmissible. In consequence of the obstruction which the Canal will cause to the established access to Mile Roches, a culvert is being built which (with the use of scows on the Canal) will, in the opinion of the Board and Engineer, materially remove the inconvenience complained of: and the Board has felt the necessity of resisting repeated applications from the inhabitants of that village for further means of access, and for alleged injuries to their property by the construction of the Canal.

The Board has been still more seriously, and it is compelled to state, with less reason, importuned by the inhabitants of the Town of Cornwall, on the subject of claims which it could not with any

To obviate as much as possible any inconvenipropriety entertain. ence that might accrue to the inhabitants of that town, the Board has sanctioned the construction of a suitable culvert, a commodious basin, and a common sewer, notwithstanding which, application has been made for one or more bridges across the Canal, and in consequence of the refusal of the Board to comply with the request, a rule has been obtained from the Court of King's Bench, calling upon the Commissioners to shew cause why a mandamus should not issue, directing them to construct a bridge or bridges for the passing of carriages between the several parts of such highways in the Town of Cornwall as have been cut, in order to construct the Canal through the same. The reports of the consulting and acting Engineer, and of the Agent, (copies of which were furnished to the inhabitants of Cornwall) very strongly deprecate the construction of bridges across the Canal, as tending materially to obstruct its navigation, and to interfere with the purposes for which the great expenditure has been undertaken, and by no means essential in facilitating access to the river, which is amply provided for otherwise. very large proportion of the contingencies which were not originally estimated, has arisen from the Canal's being carried through Cornwall, and the possibility of such a demand from its inhabitants was not contemplated when the Board determined on carrying the works through that town. Should the Court decide that the inhabitants of Cornwall are legally entitled to the privilege they demand, it will be imperative on the Board to construct bridges across the Canal, not only in the Town of Cornwall, but wherever the established access to the river is interfered with along the whole line of Canal, which occurs in at least twelve places.

The Board has upon a late occasion addressed Sir John Colborne upon the importance of a co-operation on the part of Lower Canada with this Province in the improvement of the St. Lawrence; and it entertains a hope that a recommendation which he was pleased to transmit to the Governor-in-Chief will have the effect of inducing the Legislature of Lower Canada to take up the measure this Session.

With this Report, the Board submit for the information of the Legislature a copy of the Minutes of its proceedings during the past year, an abstract of receipts and disbursements, with the proper vouchers, and an estimate of the work done and yet to be performed on the Canal, of all which documents they solicit a thorough examination.

JONAS JONES,

President of the Board.

Office of the Commissioners for the Improvement of the Navigation of the River St. Lawrence, BROCKVILLE, 25th January, 1836.

JAMES HUME, Secretary.

Office of the Commissioners for the Improvement of the Navigation of the River St. Lawrence, January 1st, 1836.

Ar a meeting of the Commissioners, held at Moulinette, on Wednesday, 14th January, 1835-

PRESENT.

JONAS JONES, Esquire, President.
JOHN MACAULAY,
PHILIP VANKOUGHNET,
GEORGE LONGLEY.

The minutes of the preceding meeting were read.

The monthly estimate of work done on the Canal was submitted.

The Report of Henry Sherwood, Esq., (Solicitor to the Board,) was submitted and read as follows:

Brockville, 26th December, 1834.

SIR:

In pursuance of a resolution of the Board of Commissioners for the improvement of the St. Lawrence, I have investigated, as thoroughly as I could, the

case of Thomas McCartin, and beg leave to report thereon:

It appears from the evidence taken before the Magistrates, under the 6th Geo. 3, chap. 48, that McCartin and his servants, about the 24th ult., cut down and carried away from the land of one Hector Manson, a number of timber trees, for the purpose of creeting a dwelling house, and for fire wood. I have been informed, and can also collect from the evidence, that upon part of Manson's land, and near to where the trespass complained of was committed, Messrs. Reid and Shepherd, Contractors upon the St. Lawrence Canal, were raising stone for the purpose of carrying into effect their contract; and I have also learned that McCartin was employed by them to board and lodge the men engaged in their quarry. There were a number of witnesses examined before the Magistrates, as well upon the part of the complainants as upon that of the defendant; and if the testimony was taken down correctly, (which I have no reason to doubt,) McCartin had not, in my opinion, any right to justify his conduct under the St. Lawrence Canal Act. As to the correctness of the decision of the Magistrates under the British Statutes, upon the evidence adduced before them, I do not feel myself called upon to decide. Had it been proved before them that Messrs. Reid & Shepherd were procuring stone, under the directions and with the sanction of the Commissioners, and that McCartin was acting under them as Contractors, in

APPENDIX TO REPORT ON IMPROVEMENT OF ST. LAWRENCE.

getting timber, only to erect buildings necessary to enable them to proceed in executing their contract, I am of opinion that the Magistrates would have exceeded their duty in interfering in the matter. I mentioned in a communication to Mr. Berford, Agent to the Commissioners, that I would in the Report state fully how far in my opinion Contractors upon the Canal are justified in taking stone and timber for the purposes of the work; but as I stated to him, in the communication referred to, my opinion in general terms, and as the law is now so well understood, I shall defer doing so, until my attention is particularly called to the subject.

I am, Sir,

Your obedient Servant,

HENRY SHERWOOD,

Sol'r. to the Commiss'rs.

To,

Jonas Jones, Esq., President, &c.

The Report of the Solicitor being satisfactory, the prayer of the Petition cannot

be granted.

In pursuance of the resolution at the last meeting, relative to the setting out of lands required for quarrying stone, the Acting Engineer and Agent reported verbally, that the lands have been set out, and that the Contractors have been notified, as directed.

The statement of Guy C. Wood, Esquire, relative to the outrage committed at Cutler's Quarry, as submitted to His Excellency the Lieutenant Governor, accompany-

ing the memorial of the Contractors for a Military force, was read as follows:

CORNWALL, 18th December, 1834.

SIR:

HAVING understood that an application is immediately to be made by the Commissioners to His. Excellency Sir John Colborne, stating the necessity of having one or two companies of soldiers stationed on the line of the Canal, between this and the Longue Sault, both for the safety and the protection of the contractors, and those immediately in the prosecution of the work, as well as for the protection of property and lives of the inhabitants of the country,—I consider it my duty as an inhabitant of this place, and more particularly so as a magistrate, before whom the examination of the two murderers by the name of Richard and William Quinn was taken, to state the particulars of that atrocious offence against both the laws of God

and our country.

In the morning of the 13th, the deceased Ewen Stewart, deputy-sheriff, with Henry Thain a bailiff, and George McDonell, Esq., went out to the Quarry to arrest a person who had aided and assisted in the rescue of a prisoner in the morning of that day. The Bailiff Henry Thain pointed out the man, William Quinn, to the Deputy Sheriff Stewart. Quinn then made at the Bailiff Thain with an iron bar, and was in the act of striking a blow at Thain, when Stewart the Deputy-Sheriff put his hand to his bosom and drew out a pistol, and desired Quinn to stand off. Quinn then turned round, and called to his brother Richard Quinn and others, and said, pointing to the Deputy-Sheriff, "That's the man." Richard Quinn then came behind said Stewart, and struck him on the head with an iron crowbar, or drill, five or six feet in length, which brought him to the ground;—he then struck the second blow on the head after Stewart was down, which beat in the skull: When Stewart fell the pistol dropt from his hand. William Quinn then picked it up, and pointed it at Mr. Geo. McDonell and snapped it. Mr. McDonell was distant from Quinn at that time about five or six feet. Stewart was then brought down to Cornwall and received every attention and medical aid that could be rendered, but to no purpose. He died yesterday afternoon under extreme suffering. Both Richard and William Quinn have been arrested, and now stand committed for trial at our next Assizes. I most sincerely hope that His Ex. cellency will promptly comply with the request now about being made on the part of the Commissioners; and, should it be considered necessary that an application should come from the Magistrates, it will immediately be complied with.

I further beg leave to suggest the necessity of furnishing arms to one or two regiments of Militia that are in the vicinity of the work:—If this could be done, it would be most desirable. I am told they are at Kingston, and could be got down in

sleighs at very little expense.

I am, Sir,

Your obedient Servant, GUY C. WOOD.

W. R. F. BERFORD, Esq.

Agent St. Lawrence Canal.

APPENDIX TO REPORT ON IMPROVEMENT OF St. LAWRENCE.

The answer from His Excellency the Lieutenant Governor to the application for a Military force on the line of the Canal was read as follows: .

GOVERNMENT House, Toronto, 24th December, 1834.

SIR,

WITH reference to your communication of the 20th inst., and to the representation which accompanied it from the Contractors for the construction of the Locks, &c. of the St. Lawrence Canal, I am to acquaint you, that it is with great regret the Lieutenant Governor learns from your report, that the labourers employed by the Contractors on the works of the St. Lawrence Canal have given cause for the apprehensions communicated in your statement of the occurrence in which the Deputy Sheriff lost his life. His Excellency, however, thinks it incumbent on him to desire me to inform you, that he is persuaded the exertions of the Civil power to preserve order will be effectual, if the offender who is now in custody should be convicted and punished. His Excellency thinks that the Contractors should be required to discharge immediately all those who have shown any turbulent disposition on the late occasion, or who joined the riot. I am also to observe, that although it is greatly to be regretted, that your public works cannot with safety be undertaken by engaging the labourers that have most need of employment, other descriptions of workmen than these at present on the Canal should be procured by the Contractors, if they cannot be trusted. His Excellency hopes, that by the continued exertion and influence of the Magistrates, the works on the St. Lawrence will be able to be carried on without the presence or intervention of Soldiers. He has strong objections to their being employed on such occasions. On the Welland Canal, and on the Rideau and Grenville Canals, there were occasional disturbances among the labourers while these works were in progress; but he knows of no instance of a Military force having been called out or applied for. Should the Magistrates consider that the means at their disposal for checking any violent proceedings of the labourers employed by the Contractors are insufficient, three or four companies of Militia might be selected, and so organized, that they would be prepared to support the Civil authority when their assistance might be required. The Companies selected might be supplied with Arms from Kingston, on their being reported prepared to receive them. You will have the goodness to communicate the contents of this letter to Mr. Wood, and the other Magistrates of the District.

I have the honour to be,

SIR.

Your most obedient humble servant,

WILLIAM ROWAN.

Jonas Jones, Esquire.

The Resident Engineer, having represented the propriety and advantage of ultering the line of the Canal near Colonel Anderson's, so as to occupy the ground on which his dwelling house and offices are erected, Mr. Longley was appointed to compromise with Colonel Anderson for the damages to be sustained by such alteration; and in case no compromise can be made, to act as Arbitrator on behalf of the Board, to ascertain the same.

The Resident Engineer having submitted a plan for the mile stones, pursuant to resolution of the Board, it was approved, and the Agent was directed to advertise for tenders for the same.

The Engineer submitted a Report upon the claim of S. and W. M. Frazer, which was read as follows:

To Jonas Jones, Esquire, &c.

SIR,

CONCERNING the claim made by Messrs. Frazer, on the 10th ult :- That part of the same concerning the removing of a bridge, I have arranged, by allowing them an extra price on the excavation necessary, which is accordingly entered in the estimate. That part of the claim relating to the "Cholera patients" was disposed of at the last meeting. The Messrs. Frazers certainly were incommoded in the prosecution of their work by the King's highway laying through their section. From their account, which I think is about right, they were interfered with about one month; in which time they had twenty scrapers at work. Upon the value of this amount of labour, I propose that ten per cent be allowed-20 scrapers, 26 days, at 7s. 6d. £19 10 0.

I am, Sir, respectfully, &c.

J. B. MILLS.

Ordered,-That the sum of nineteen pounds ten shillings, as recommended in the foregoing Report, be paid to Messrs. Frazer.

APPENDIX TO REPORT ON IMPROVEMENT OF St. LAWRENCE.

Ar a meeting of the Commissioners, held at Moulinette, on Wednesday, 11th February, 1835-

PRESENT.

JONAS JONES, Esquiro, President.
JOHN MACAULAY,
PHILIP VANKOUGHNET,
GEORGE LONGLEY.

The Secretary being ill, the minutes of the preceding meeting were not read.

The monthly estimate of work done on the Canal was submitted.

Nicholas N. Ault submitted a claim for £41, for extra work performed on the Tow-Path on south side of the Longue Sault, upon which the agent reported as follows:—

GENTLEMEN,

Upon the account of N. N. Ault, referred to me by you, I would remark, that, as a matter of course, his tender was the lowest, otherwise he would not have got the contract; but, although the lowest, I am convinced he would have made considerably by the job had he attended to

it properly himself, and put on sufficient force to have completed it in the time specified.

The first item in his account is 60 days' work at Pepper-Mill Point. Those 60 days he would have saved had he fulfilled his contract; but not having done so, and having left this point for the last of his work at a time when the water was falling rapidly, caused the extra labour to make a cut sufficient to pass a Durham boat as per contract;—but, had he finished at the time specified, those 60 days' work would have been required afterwards: therefore I think he should be paid, though not the amount claimed. It then follows that the second item should be admitted. The extra work at Cartin's I always thought should be allowed, for certainly I laid out the road upon the beach—and contrary to my positive instructions, and at his own risk, he went to the top of the bank, and made the road. I did not think it would answer, so Mr. Mills was called upon to decide:—he was satisfied, and it was accordingly accepted. Afterwards, when Mr. S. Jones and some other of the forwarders examined it, they thought their trace-lines would wear out very fust by rubbing against the bank, and ordered it to be made upon the beach, which caused the labour Mr. Ault now claims to be paid for.

Below I submit the account, as I think it should be admitted; and am,

Yours respectfully,

W. R. F. BERFORD,

Agent.

COMMISSIONERS ST. LAWRENCE CANAL,

To N. N. AULT.

•	Nov.	20,	60 days' work at Pepper-Mill Point, in the water, at 4s	3 15	0
				£27 15	

Ordered, That the sum of twenty-seven pounds fifteen shillings, as recommended in the foregoing Report, be paid to N. N. Ault in satisfaction of his claim.

The claim of Robert Armour, amounting to £450, for 18 acres of land with the timber thereon, and to £3,334 for the removal and destruction of a private canal, was submitted—

Resolved, That the first item in this claim is unreasonable, and the latter one extravagant, and wholly inadmissible.

The claim of Jeremiah Hawley and S. Cutler to be remunerated for loose stone taken for the use of the Canal, was referred to the Agent.

The Report of the Resident Engineer on the claim of R. and W. Hervey, for compensation for damage sustained by their sub-contractor Henry Roebuck in having a number of teams suddenly discharged, was read as follows:—

To Jonas Jones, Esq., &c. SIR:

THE communication from Messrs. R. & W. Hervey of the 10th December, concerning some losses which had been sustained by Mr. H. Roebuck, has received my attentive consideration. Accompanying said communication is one from Mr. Roebuck to the Messrs. Herveys, stating and specifying said losses. It was distinctly understood, at the time the tenders were received for delivering stone upon Section No. 1, that the work might be stopped at 10,000 yards, or extended to any quantity that might be found within half-a-mile of the line of the Canal on said section. Near 8000 yards have been delivered, and probably there are 4 or 5 thousand yards more to be delivered on said contract. Subsequent to the making the contract for delivering said stone, in conversation

with Mr. Roebuck who took the hauling of the stone, I said I wished he would put on 150 teams, (one-horse teams.) He increased the number to about 70 horses. About the time he had this number of horses, and was increasing daily, I advised the Messrs. Herveys to request Mr. Roebuck to discharge all the hired teams he had engaged, but to go on with his own teams only—(the Board of Commissioners are informed of the reasons for this countermand.) Now, the claim which Mr. Roebuck has upon the Messrs. Herveys must be based upon the expenses consequent upon procuring and making arrangements for this extra number of teams which were turned about when on the road to the work. Here I will introduce Mr. Roebuck's bill of losses:—

671 10 0. 1 off. J	EI 50	6	8		
Building erected, £71 10 0, 1 off, 30 10 0, do.	20	G	8		
61 carts, at 10s.	s. 50	0	0		
Estimated loss on horses, and other property, to the amount of	100	o o			
Estimated loss in being thrown out of work for the winter, and losing the drawing of 4000 tons of iron ore for Ogden & Co., of Waddington,	125	0	0 345	13	4
, and a street	tha	third	itom	and	add

I propose to allow the first item; also, to put the carts at 5s.—to allow the third item, and add an item for extra expenses: viz.

an item for extra e	ext	en	ses	: 7	vzz.															F A	•	6			
me 15 51							•	•	•	•	•	٠	.•	• ,	٠	•	•	•	- 5	15	5	0	٠.		14
Loss on Buildings 61 Carts, at 5s.			•	•	•	•	•	•	•	•	•	٠	•	•	•	•		•		50	0	0			
61 Carts, at 5s. Loss on teams,	•	٠.	•	•	•	•	•	•	•	٠	•	•	•	•		•	•			10	ŏ	ŏ			. 2
Loss on teams, Extra expenses,	•	٠	٠	•	•	٠	•	•	•	•	•	•	•	•	•	•	•	•	. 1				125	11	8
																							•	1	

Making £125 11 8; which I propose to pay to the Messrs. Herveys on account of said losses. I do not consider that the last two items of Mr. Roebuck's bill can be allowed. He has not been thrown out of business; but is now engaged in business with an increased (as I am informed) number of teams on the works of the St. Lawrence Canal.

I am. Sir, very respectfully, &c.

J. B. MILLS.

Canal Office, 4th February, 1835.

Ordered, That the sum of one hundred and twenty-five pounds eleven shillings and eightpence, as recommended in the above Report, be paid to Messrs. R. & W. Hervey in satisfaction of their claim.

The claim of Messrs. Richards & Buell to be reimbursed the cost of a bridge, amounting to £4, 8s. 2d., incurred by direction of the Resident Engineer, for the purpose of sustaining the public road at Mille Roches, was allowed.

The claim of Messrs. Richards & Buell to be compensated for cutting a drain from the culvertpit at Mille Roches, was read, and referred to the Resident Engineer.

Thomas Roger's account for expenses from Kingston to Cornwall, to estimate the value of property, by directions of the Solicitor, amounting to £7, 15s., was submitted, and ordered to be paid.

The Agent submitted a Report of the Progress of the work on the Canal, as follows :-

" Progress of the Work on the St. Lawrence Canal." -Moulinette, A large quantity of good stone, some bad, and very little cut CULVERTS .delivered here. Mille Roches, . . . A large quantity of rough stone, some of which is very bad, and a little cut stone delivered here: the drain to carry off the Do. water is cut, and a little excavation in the culvert-pit made. Robinson's Creek,.. Here there is about 70 or 100 cord of good rough stone delivered; this culvert is sub-let to Messrs. Truax & Co. Do. Wood's Creek, . . . A few cut stone delivered here. Do. Cornwall, At this point there is delivered about five hundred pieces of cut stone, a small quantity of rough of which a part is bad: Considering the extent of work to be performed, I do not Do. think those contractors have much done. No. 1, Have got a large quantity of good stone delivered, and appear Locks. to have made good progress. Nos. 2 & 3, . . . Doing very well. No. 4, Appear to be going on well; have got a large quantity of good Do. Do. stone delivered.

Do. Nos. 5 & 6, Going on well—some of his backing not very good.

RETAINING WALL on Sect. No. 11, . A large quantity of stones delivered, of which I think one-half should be rejected as unfit for that work.

9

The Contractors for the Locks and Retaining Wall appear to be making the best use of the winter for getting in their stone and other heavy materials from a distance;—and, if all the stone that have been brought to the Canal were good, we might consider that the works have so far pro-

gressed well.

There is a small force working upon Sections Nos. 26, 19, and 13; upon No. 17 there are 74 men and 14 horses and carts at work; upon No. 12 there are 100 men and 17 horses and carts. Their embankment appears to go on better during the frost than in soft weather, as the ground is dry and pleasant for the men and horses to work upon, and the ice saves the expense of a bridge and makes a better road. Upon No. 8 there is a small force working to apparent advantage. Upon No. 4 there are 60 men at work. Upon No. 3 187 labourers and 89 horses and drivers; they are going on well with the embakment in Brownell's Bay. Upon Section No. 1 there are 226 labourers, and 41 men otherwise employed.

Respectfully submitted by

W. R. F. BERFORD,
Agent.

Ar a Meeting of the Commissioners, held at Moulinette, on Friday, 1st May, 1835, pursuant to notice—

PRESENT.

Jonas Jones, Esquire, President. PHILIP VANKOUGHNET, GEORGE LONGLEY, PETER SHAVER.

The minutes of the two preceding meetings were read.

The President submitted the Estimate for March and April, with an accompanying Letter, which was read as follows:—

BROCKVILLE, 30th June, 1835.

GENTLEMEN,

THE Members of the Board not having assembled in March, pursuant to adjournment, and no meeting having been called on the day of monthly payment in April,—I directed the Secretary to pay to the Contractors the amounts estimated by the Engineer pursuant to their several contracts. Accompanying are copies of the Estimates for March and April.

I have the honour to be,

Your most obedient servant,

JONAS JONES,"

To the

President.

COMMISSIONERS for the Improvement of the ST. LAWRENCE.

The President read an extract from a letter addressed to him by Mr. Macaulay, dated Kingston, 28th March, 1835, as follows:—

"Herein is a letter from Mr. Mathews, whom I have recommended to the Board as a trusty overseer of mason work. He is anxious to know what prospect he has of employment this season, before he looks out for any building contract near this. My opinion, you know, is, that he will prove a valuable servant to the Board, and that we can nowhere find a better. Shall we not want several overseers of mason work, and that almost immediately? I hope you will take the opinion of the Board on this subject at the ensuing Meeting."

The Secretary was directed to write to Mr. Mathews to state the terms upon which he would undertake the duties of overseer of mason-work.

The claim of S. & W. M. Frazer to be reimbursed the judgment and costs incurred in defending the suit of Glamy vs. Frazers, amounting to £18, 0s. 7d., was submitted.

Ordered, That the sum of eighteen pounds and sevenpence be paid to S. & W. M. Frazer in satisfaction of the above claim.

The President submitted two letters received by him from the Resident Engineer relative to the work on Section No. 1, which were read as follows:—

CANAL OFFICE, 31st March, 1835.

Jonas Jones, Esquire.

SIR.

Concerning the projected alteration of the line of the Canal on Section No. 1, and the prices for the performance of the work, I have considered the matter, and have come to the conclusion, that for the part of the section the line of which is to be changed, it is best to substi-

APPENDIX TO REPORT ON IMPROVEMENT OF ST. LAWRENCE.

10 tute a new section throughout. I propose to terminate the contract at our Station No. 56, which is a few feet above Burns' Old Storehouse,—thence to the lower end of the section to make a new 8d. per yard. contract-

For the ordinary excavation of this part of the section I propose 1s. 3d. Loose stone reserved as per original contract, 1s. 6d.

Loose stone requiring blasting, Excavation below top bank, or 14 feet above bottom of Canal, 9}d.

For the increased grubbing, £75, 0s. 0d. As the line will be moved far into the bank of the river, and quite away from any danger of water, there is no necessity for a price of excavation below level of the river, and the facilities are good for getting rid of the water from springs that may be in the course of the work. In prosecuting this work I propose to enter the bank of the river on the level of top bank of Canal, and the earth which is to form the bank of the Canal is not to be moved.

I am, Sir,

J. B. MILLS.

JONAS JONES, Esq.,

SIR.

The proposition to the Messrs. Herveys for the projected alterations of their work seems not successful. In making said proposal, I intended to be full up to a fair price, and I believed they would agree to it. I have thought much of the matter since, and am not disposed to advance. I have come to the conclusion to adopt the alternative of which I informed you at our vance, which is to go on with the work to the extent of the original contract. Then, if the Messrs. Herveys do not choose to go on with the work at the price that may then be agreed on, the work caused by said alterations can be let under a new contract. This will cause no delay nor much inconvenience. Presuming that the Messrs. Herveys would accede to the proposition made, I directed them to change the plan of their work—upon which change some work has been done. This will not all tell in work done, some of which will be lost to the Province; but, in view of the whole case, it will not be loss.

I am, Sir, &c.

J. B. MILLS.

Canal Office, 29th April, 1835.

The Report of Benjamin Wright, Esq., (Consulting Engineer,) relative to the progress of the works on the Canal, was submitted, and read as follows :-

The President and Board of Commissioners of the St. Lawrence Canal.

I have visited and passed several days in looking at and examining the work GENTLEMEN, done and going on upon the Canal at the Longue Sault under Mr. Mills as Acting Engineer. As far as I can see, every thing is progressing well as to the work generally. The winter has been extremely favourable for the contractors for the locks and culverts to get their materials on the ground tremely favourable and they have improved it well, and secured the delivery of a large portion of their ready for use, and they have improved it well, and secured the delivery of a large portion of their stone and timber; and a considerable part of their stone are cut, ready for use. These materials are very generally of an excellent quality, and will make good work if well executed in the mechanical

I see as much progress in the excavation of the sections as I expected, except on No. 1.-This section was supposed originally to contain about 943,977 cubic yards of earth excavation; and, by the alteration of the line by carrying the Canal further into the bank, about 538,218 yards have been added, making 1,482,295 yards,—and it is not improbable we may be under the necessity of carrying some other parts of the line of this section further into the bank than we now propose. This depends on the appearance of stability in the bank carried into the river, as it shall appear in three or four months' more labour done with a thousand or more men stendily at work. Supposing that each man averages five yards per day, it will require 296,459 days' work to execute the common excavation part of the job, and to this must be added the necessary labour for the other parts of the contract about the stone, (and we have a great amount of labour to be performed on this section)—and from this data we can see that all the other sections can and will be completed before No. 1.

As to the stability and permanency of the work on No. 1, I see nothing that gives me the least apprehension for the work. It may be requisite and proper, should we find our quantity of stone much less than we now expect, to push a little further into the bank: I, however, do not think that this will be required, and I have advised Mr. Mills, where the earth is now dug away down to the surface of the water in the Canal, (and below that in many places toward the lower part of the section;) to let it remain without any determined or fixed line on the ground for the line of towpath bank, until several months' work more is done, to see the effect of the water of the river upon the

earth carried out,-and then make up a decision how far to cut into the bank to be perfectly safe and secure at all times hereafter. This plan is the economical one, and is proper and right, as to the

contractors.

The contractor for the culverts should push his work as speedily as he can, both on his own The contractor for the culverts should push his work as speedily as he can, both on his own account to get the masons before the lock-builders will be wanting them, and also to enable the contractors for the sections to go on with their embankments over the culverts, otherwise his work will interfere with theirs, and delay it. I am told there is preparation made by the lock contractors for their water cement; I hope it will be of good quality. I fear there is difficulty in procuring good clear sharp sand,—this is as important as good cement. I am told there is good sand at the head of Barnhart's Island. No reasonable pains or exertions ought to be spared to obtain good sand, and great caution used to learn what proportion of sand and lime will best answer. In the face of the lock; for one foot, I should use water-lime without any sand, in the same manner as Roman cement is used. is used.

I have examined Mr. Wilkinson's model of a gate for a lock, together with all the apparatus for opening, &c. It is easy to see, from this specimen of his mechanical skill, that Mr. W. has a perfect knowledge of what he has to execute according to his contract, and I think we may say that this is a case where the importance of having a contractor possess in his own brain the views and plans of the engineer as they have been communicated to him, is fully exemplified; and I will add, that there is no security for mechanical work of this kind being well done without the contractor

has this skill within himself.

I have, Gentlemen, given you my views of all that is important in relation to the work now going on at Longue Sault; and I cannot but add that the prospect of this noble and great work is, that it will be executed for about the sum originally estimated, adding thereto the damages for land, and some little alterations of the plan rendered necessary by local causes not understood in 1833.

I have the honour to be, very respectfully,

Your obedient Servant,

BENJAMIN WRIGHT, Consulting Engineer.

Longue Sault, 27th April, 1835.

Resolved,-That the works on Section No. 1 do proceed for the present upon the terms of the original contract.

The Report of the Agent, upon the effect of the Ice on the works of the Canal during the past winter, was submitted, and read as follows :-

To

The COMMISSIONERS for the Improvement of the Navigation of the RIVER ST. LAWRENCE.

GENTLEMEN,

In accordance with a wish expressed by the Board last autumn, I have watched with much care and attention the effect produced by the ice this winter upon the various points where it would be likely to come in contact with the works of the Canal.

Although the winter has been unusually long, with much severe weather, from my observations I am induced to believe that the ice has not accumulated, or shoved, as it has done other years, and nothing has occurred to cause alarm to those persons living within the space subjected in former years to the destructive influence of inundations and floating ice turned from the natural channel of the river by ice.dams. It is impossible for me, or any other person who has not had an opportunity of viewing the frozen river in its wildest mood, to say what may be its effect upon our works;—the old inhabitants express much doubt as to the safety of the water lock, (No. 6,) which advances far into the river—they say, the high banks, the largest trees, and even rocks, offer no apparent resistance, but all are alike hurled and borne down the stream by the terrific power of descending ice. How, then, can that work stand that is placed within its immediate swoop?

In a conversation with Mr. Mills on the subject, he informs me there is no danger to be apprehended, as he intends placing ice-breakers, &c., which will completely secure the locks and other works from damage. I have seen nothing this winter but what may be easily guarded against :

And am now,

GENTLEMEN,

Your obedient Servant,

W. R. F. BERFORD,

STATE OF THE PARTY

Agent.

APPENDIX TO REPORT ON IMPROVEMENT OF ST. LAWRENCE.

A Letter from Benjamin Wright, Esq., relative to the termination of his engagement as Consulting Engineer, was submitted, and read as follows :-

BROCKVILLE, April 29th, 1835.

GENTLEMEN,

12

As my engagement with your Board will end on the 1st May, (or day after to-morrow,) I am desirous to know, before I make further engagement on other public works, whe-

ther you are desirous to have my services any further on your great and important works.

As I now report the state of the works, it appears to me that every thing is moving on very well, and my presence will not be required but a small portion of the time, and of course the compensation should be diminished in proportion to the time required. Viewing the state of the work, and the probable projects which will be made, I do not think I could render you valuable service until about the month of August, when the foundation of the locks about Cornwall will be ready and until about the month of August, when the foundation of the locks about Cornwall will be ready and begin. The Section No. 1 would then show what course ought to be adopted, and some very important questions will come up for consideration and counsel. If you should then require my presence, I would so arrange other duties as to be with you if health permit ; - and in meantime I shall give Mr. Mills advice, in writing, on every point he may ask, as far as I am able to do so. My duties and engagements will call me to Cuba, in Spanish West Indies, in October and November; and, previous to August, I shall be in Virginia, and on New-York and Eric Rail-Road, if it goes forward, probably. I have made no positive engagement on these two latter works, but I have been urged to take the principal charge of them and devote a certain portion of my time to them,—and that portion I should so regulate as to meet your wishes as far as I now think I can be useful.

I cannot deny but I feel some pride in being associated in the greatest work on this continent, and shall feel all the responsibility (which is not a little) which an engineer must assume on such a

work.

It would give me great pleasure to hear from you, as soon as your convenience will permit, on the subject of a further engagement, as I shall be pressed to engage on the other works as soon as I return, probably.-Wishing, Gentlemen, every success to your great and noble work,

I have the honour to be, very respectfully,

Your obedient Servant,

BENJ'N. WRIGHT.

To JONAS JONES, Esq., President, and the Commissionens.

Resolved-That the Board highly appreciate the services of Benjamin Wright, Esq. as Consulting Engineer during the past year, and are desirous of securing the advantage of his advice from time to time during the progress of the work; and that when his personal attendance may be required on the Canal, he shall be allowed the sum of one hundred pounds for each visit.

The foregoing Resolution was read by the President to Mr. Wright, to the terms of which he

expressed his assent.

Ordered-That the Memorial of R. & W. Hervey, for assistance towards the erection of an Hospital on Section No. 1, be referred to the Board at its next meeting.

At a Meeting of the Commissioners held at Moulinette, on Wednesday the 13th May, 1835-

PRESENT:

Jonas Jones, Esquire, President. Hon. JOHN HAMILTON, JOHN MACAULAY, PHILIP VANKOUGHNET, PETER SHAVER.

The Minutes of the preceding Meeting were read.

The Monthly Estimate of work done on the Canal was submitted.

The application of R. & W. Hervey, for assistance towards erecting an Hospital on Section No. 1, as submitted at last Meeting, was considered.

Resolved-That the Board cannot at present hold out any inducement towards the erection of

hospitals on the line of the Canal.

APPENDIX TO REPORT ON IMPROVEMENT OF St. LAWRENCE.

The Report of the Resident Engineer, relative to the construction of a Dock at Cornwall, was submitted, and read as follows: submitted, and read as follows:-

Jonas Jones, Esq., President, &c.

My remarks of the 3d ultimo, upon the proposed Basin at Cornwall, were based upon a location and plun as proposed by some of the inhabitants of that town. If the Board conclude to construct a basin for the town of Cornwall, I beg leave to suggest another plan, to wit: Opposite the country of the town, and on the front of two blocks from Augusta to Sidney Street, distance about 1100 feet, L propose to excavate the north slope of the Canal, then build it up nearly perpendicular with timber, in the form of a dock. This will give about 26 feet greater width to the navigable Canal, and enable a steam-boat to lay alongside of said dock without any interruption to the navigation. This plan will preserve the same appearance to the Canal,-will also not interfere with the street on the bank of the Canal, nor with the town-plot, and will require no expense for basin ground, and I am confident will answer every purpose with satisfaction to the town of Cornwall. Lanve made an estimate of the expense of this work, and find it will cost about £900.

As requested, Sir, I hereby present you with the result of an estimate of the expense of a dry dock at Cornwall. I propose to construct it upon the north side, and parallel with our lock, No. 4,

which is a little below the town plot. My estimate of this work amounts to £3000.

It will be necessary to construct a sewer along the north side of the Canal, in front of the town of Cornwall, which will be 4000 feet long. I have made an estimate of the expense of it, amounting to £2;050. The sewer and the basin must be advertised for contract immediately; also a contract is to be made for delivery of stone on Section No. 1. Commencing the additional culvert at Cornwall, I refer you to my letter of 3rd ult.

I am, Sir, very respectfully,

Your obedient Servant,

J. B. MILLS.

· 1 元 日本報告領域

Canal Office, 7th May, 1835.

Resolved—That the Engineer be directed to proceed with the construction of the Basin and Common Sewer at Cornwall, as recommended in his Report of 7th inst.,—and that the proposal for constructing a Dry Dock be left for the consideration of the Legislature.

An application from the inhabitants of Mille Roches, requesting that Bridges may be constructed in that village, "so as to establish the usual communication," and, in the event of that not being practicable, "that their respective properties be purchased by the Commissioners at a fair valuation, or to be otherwise remunerated for the damage sustained by the construction of the Canal," was submitted and read.

Resolved-That the Board having sanctioned the construction of a culvert at Mille Roches for the convenience of the inhabitants, cannot comply with the prayer of the Petition, and recommend an application to the Legislature for such damages as they conceive themselves entitled to.

A communication from the Resident Engineer, on the subject of the employment of Master Masons, was submitted, and read as follows :-

To THURSHIE HAR IS

Jonas Jones, Esq., President, &c.

The first of the second of the On the subject of the employment of a master mason, upon which the Board expressed an opinion at the Meeting on the 1st instant, I beg leave to remark briefly—It is a measure of which I approve on certain conditions, and it is one which I had in contemplation, for I had some correspondence concerning it early in the past winter. The employment of such a person in think ought to originate solely in your engineer, and be determined by his views of its necessity: From your engineer couly he ought to receive instructions, and to him only be accountable :: He? must hold his station at the discretion of your engineer, who must also be the only judge of his fit-ness and qualifications.

The superintendence of the masonry is a peculiar part of the duties of the engineer; and must be perfectly under his control and discretion, as much so as any other department of this duties & As to the qualifications of the person in question, they are comprised mainly in the following particulars. —He must be a good mason, and be experienced in the peculiar department of masonry for which he is wanted here. He must be a man of strict integrity. He must be a perfectly sober, and an industrious man. These, Sir, are in short my views of the matter, and the conditions upon which I can

consent only to the employment of a master mason.

APPENDIX TO REPORT ON IMPROVEMENT OF ST. LAWRENCE. 14

Should these views obtain with the Board, the Board will be pleased to authorise me to act independently, and, in pursuance of the same, in the employment of a master mason.

I have the honour to be, Sir,

Your obedient Servant,

J. B. MILLS.

Canal Office, 11th May, 1835.

Resolved unanimously—That the Board reserve to themselves the right of appointing and dismissing from employment any persons required upon the Canal, and that they will themselves judge of the fitness and qualifications of every person so employed. That they will not authorise Mr. Mills to employ a master mason, or any other person, independently of the Board, although they admit such persons to be under his control and directions, and subject to dismissal by him on good and sufficient grounds.

The Secretary was directed to hand Mr. Mills a copy of the foregoing Resolution, to which the following reply was submitted :-

Jonas Jones, Esq., &c.

I HAVE considered the Resolution of the Board of Commissioners passed this day in relation to the employment of persons upon the line of Canal, -and while I agree to the principles it contains, in general terms, still, in relation to a specific duty, as in the superintendence of work, I still think the principles contained in my letter of the 11th inst. quite proper; and this opinion originates in a great amount of experience, of which my own forms an inconsiderable part.

As the Board agree that the master masons appointed on the line of the Canal shall be under the control and direction of their engineer, and subject to his dismissal, I am content to proceed.

I have the honour to be,

SIR.

Your very obedient Servant,

J. B. MILLS.

A communication from Mr. Berford, on the subject of his being continued in the situation of Agent, was submitted, and read as follows :-

The COMMISSIONERS for the Improvement of the Navigation of the RIVER ST. LAWRENCE.

GENTLEMEN,

1-5 77 ... 15

I HAD the honour to address you individually some time since upon the subject

of my appointment as your Agent, and the discontinuance of the office.

The diappointment I shall experience from an adherence to your determination it is unnecessary to repeat, but would observe, that if my services are required in the conduct of the work, I shall be most happy to afford them in any manner the Board may think proper-

I am, Gentlemen,

Your most obedient servant,

W. R. F. BERFORD.

graph of the specific property of the specific

The state of the s

Moulinette, 11th May, 1835.

Resolved-That as the services of an efficient Agent will be important in a general superinten. dence of the work, in watching its progress from time to time, with the materials used; in reporting officially to the Board, and confidentially to the President, monthly, and oftener if necessary; to settle claims, the same being first approved by the Board or President; and to receive such claims, petitions, memorials, or complaints as may from time to time require to be laid before the Board,—the Resolution of the 10th December, 1834, to-wit, "That it is inexpedient to employ an Agent for the next year, there being no sufficient services required to warrant his employment,"—be rescinded.

Resolved-That the Agent be directed to keep a Journal, to be laid before the Board at its monthly meetings, and oftener if required, in which he shall enter fully all his proceedings, and note

such circumstances, from day to day, as he may think important for the information of the Board.

Resolved—That the continuance of Mr. Berford's engagement as Agent be limited to another year, unless, at a full meeting of the Board, it should be otherwise determined. Which was carried. Nays-Shaver. Yeas-Messrs. MACAULAY,

HAMILTON, VANKOUGHNET,

Jones.

A communication from David Taylor, Esq., relative to the Survey of the St. Lawrence from head of Longue Sault to Prescott, was submitted; and read as follows:—

COMMERCIAL HOTEL, KINGSTON, 25th April, 1825.

AGREEABLY to your request of the 2d ult. I beg leave to inform you that I have considered the subject of the survey of that part of the St. Lawrence between the town of Prescott and Cornwall; and, as far as I am acquainted with that part of the river, it is my opinion, owing to the many shoals and rapids that exist, thut, in order to lay down a chart of the soundings and velocity of the currents in a correct way,—provided a map or outline of the coasts, with determined trigonometrical points laid down thereon, be finished,—could be effected in a period of between four and six months; but, if the map of the coast alluded to above could not be provided, delay would be occasioned to construct one. The additional time would be about one month, and I feel assured would be likely to give more satisfaction. The remuneration for my services would be one guinea

I am, Sir,

Your obedient Servant,

DAVID TAYLOR.

JOHN MACAULAY, Esq., Kingston.

Resolved-That Mr. Macaulay be authorised to employ Mr. Taylor to ascertain the soundings of the river between the head of the Longue Sault and Prescott, and also the velocity of the current within the same points.

A Memorial from the Lock Contractors, praying, that, as the value put upon the materials de-livered by them, in the monthly estimates, is considerably below their actual cost, the deduction of 25 per cent: from the amount of estimate may not be retained.

Ordered-That five per cent, be retained from the estimated value of work, &c. on the lock contracts.

Resolved-That the Board will advance contractors the full amount of the sum conditioned to be reserved, to wit, twenty-five per cent. on the estimated amount of work done, on their furnishing personal security to such an extent as may be required by the Board,—taking into consideration the probable amount of the receipts under their respective contracts.

Ar a Meeting of the Commissioners, held at Moulinette, on Tuesday the 16th June, 1835-

PRESENT.

Jonas Jones, Esquire, President, JOHN MACAULAY, PHILIP VANKOUGHNET, HIRAM NORTON.

The Minutes of the preceding Meeting were read.

The Monthly Estimate of work done on the Canal was submitted.

Memorials, Nos. 1, 2, 3, and 4, from different persons resident in Mille Roches, were submitted and read.—Referred to the Agent.

The Report of the Resident Engineer, relative to the construction of an Embankment at Potash Point, and Stone Piers at Section No. 1, was read as follows:-The complete the second

Jonas Jones, Esq., President, &c.

-SIR, Ar the Meeting of the Board on the 18th ult. I verbally proposed the construction of several break-water piers on the outside of the bank on the upper part of Section No. 1. The direction of the bank of the river along some part of said work is such that the water acts with considerable force upon this shore; and, at these points, the water being very deep, the lighter part of the material which, we are carrying out to form the bank is carried away. We have probably a sufficiency of heavier material to enable us to form the bank at these points, but it is desirable to retain more of 16

the lighter earth, as combining the materials will form a better bank. The object of these jetting piers is to break the current of the stream and throw the water from this shore; which will enable us to secure all the material, and they will also serve for purposes of ultimate security. Said piers are intended to be well connected with the bank, and to run out about 100 feet beyond it, at an angle of about 45° with the course of the stream. I have made an estimate of the cost of one of these piers, and find it amount to about £700 currency. It is desirable to put up two or three of these

piers, and mad it amount to about Error currency. It is desirable to put up two or three of these piers immediately, and I propose the reception of tenders for the same forthwith.

At the same meeting, and in the same manner, I proposed the formation of a guard bank on Potash Point, extending from the south bank of the Canal to the bank of the river. The object of this bank is to keep the water in great floods from carrying away the south bank of the Canal. This bank can be made the most economically in connexion with the work on Section No. 27, and it will probably require near 6000 words of embankment.

it will probably require near 6000 yards of embankment.

I have the honour to be,

SIR.

Your very obedient Servant,

J. B. MILLS.

Ganal Office, 6th June, 1835.

Resolved-That the Acting Engineer, in conjunction with the Agent, be authorised to make the necessary contract for constructing the embankment at the mouth of the Canal, - and that the construction of the piers be postponed for the present.

A Letter from Captain Cole, R. E., in reply to an application from the Commissioners for permission to quarry Cement Stone at Point Henry, was submitted and read.

A Memorial from J. L. Wilkinson, (lock-gate contractor,) praying the assistance of the Board, in an application to the Lieutenant-Governor, to remit the duty on the screws and hinges required for the lock-gates, was submitted.

Resolved-That the Board are not aware of any law authorising the Executive Government to remit duties, and cannot therefore recommend the proposed application.

An Application from H. Pierce & Co., (contractors for constructing the retaining wall on Section No. 11,) to be remunerated for the erection of Coffer Dams, and for Quarry Pumping in consequence of the water of the St. Lawrence being higher than at the time their contract was tuken, was sub.

Resolved-That the claim of H. Pierce & Co. is inadmissible.

The recommendation, by Messrs. Chas. Kerr & Co., of Lewis Barnett as a Superintendant of Masonry on the Locks of the Canal, was submitted and read.

Referred to the Resident Engineer.

A Communication from David Taylor, Esq., relative to the Survey of the River St. Lawrence from Head of Longue Sault to Prescott, with an estimate of the expense, was submitted, and read as follows:-

Erristown, June 5th, 1835.

DEAR SIR,

Annexus I send you a statement of the probable expenses required in surveying the currents and soundings of that part of the St. Lawrence named in yours of the 32d ult From the information I have obtained I am of opinion that the soundings in the very rapid parts will be almost impracticable, the crossing of the stream being a thing not known. Should such be the case, and the soundings in such hazardous places not required, one fourth of the expenses might be deducted with certainty. Most of the materials used of course will bear a value when done with. Respecting the boat, I have not been able to see one that would be fit; therefore it would be best to order one. A boat built with the lightest materials would be best, and sufficiently wide to stand up in for the purpose of dropping anchor, as it will often have to be thrown off the side. I will wait on The second of the second second you after the 10th. I am, Sir,
Your obedient Servant,

Your obedient Servant,
DAVID TAYLOR.

Resolved—That Mr. Taylor be directed to proceed with the soundings, &c. of the river, from Prescott to Longue Sault, under the direction of Mr. Norton.

The Secretary was directed to furnish the contractors with a copy of the Resolution of the Board relative to the payment of the full amount of the Estimates, upon their furnishing satisfactory security for the fulfilment of their respective contracts.

AT a Meeting of the Commissioners, held at Moulinette, on the 14th and 15th August, 1835—PRESENT.

Jonas Jones, Esquire, President, PHILIP VANKOUGHNET, HIRAM NORTON, GEORGE LONGLEY, PETER SHAVER.

The Minutes of the preceding Meeting were read.

The Monthly Estimate of work done on the Canal was submitted.

The Memorial of Hiram Dayton, to be remunerated for the loss of a Cow, drowned in a pit excavated by order of the Engineer, was submitted.

Resolved-That the claim of Hiram Dayton is inadmissible.

The Memorial of Thomas Moss, to be remunerated for the loss of his Garden, was read.

Ordered—That Memorialist be paid £30 in satisfaction of his claim.

The Claim of James McGilles, to be remunerated the damage sustained by him in consequence of the Alteration of the Highway, was submitted.

Referred to the Agent.

Secretary States

A Communication from J. Harper, Esq., Cashier of the Commercial Bank, addressed to Hiram Norton, Esq. on the subject of the circulation of the paper of that Bank on the works of the Canal, was read.

The Correspondence on the subject of the foregoing communication, between the President and the Receiver General's Department, was read and approved.

The Resident Engineer submitted a Tender from Wm. Johnston, for constructing the Sewer at Cornwall, with his approval.

Ordered—That a contract be prepared.

The Resident Engineer submitted a Tender from George Crawford, for the construction of the Guard Gates, with his approval.

Ordered-That a contract be prepared.

APPENDIX TO REPORT ON IMPROVEMENT OF ST. LAWRENCE.

Ordered-That the Construction of the New Road at the Longue Sault be suspended; and that the Tenders received for the erection of Piers at the Longue Sault, the construction of a Bridge at Brownell's Creek, and the providing Mile-Stones, be not acted upon.

An Application from Wm. Johnston, for permission to quarry Stone for the Cornwall Sewer, on the premises of Jacob Barnhart, was submitted. Also, an Application from A. N. Buell, to be reimbursed the amount of Stone purchased from Jacob Barnhart for the use of the Culverts, was submitted.

Resolved-That the Commissioners will not at present authorise the payment of any further sum

of money for Stone on Barnhart's Island.

A Deputation from the Inhabitants of Cornwall presented the Minutes of a Meeting held there on

the 1st July, which were read.

18.

Resolved-That the Representations of the Committee on behalf of the inhabitants of Cornwall be referred to the Agent, the Consulting, and the Acting Engineer, to report severally thereon.

An Application from Messrs. Simpson & Mittleberger, to be paid in full for the work done on Section No. 10, in consequence of the interruption of the work on that section by the construction of the culvert, was submitted.

Ordered—That, when the banks are finished on that part of Section No. 10, which is now otherwise completed, the full amount of work, as estimated, be paid for.

An Application from Chas. Kerr & Co., to be compensated for damage sustained by the timber on Section No. 22 having been cut down, was submitted.

Referred to the Resident Engineer.

A Claim was submitted by Adam Dixson for £100 in addition to the sum already paid to him for damages sustained by the construction of the Canal; which, upon inquiry into the circumstances of the case, was not entertained.

A Communication from Benjamin Wright, Esq. Consulting Engineer, was submitted, and read as follows :-

The BOARD of COMMISSIONERS ST. LAWRENCE CANAL.

At your request I have visited the Canal now making at the Longue Sault Rapids. I have passed over the whole line, and examined the work in detail. I find the excavation on all the sections, with the exception of No. 1, and two or three others, going on very well. It is true that I am disappointed in the quantity of work done, which is much less than I had expected to have seenthere is, however, no difficulty in believing that all the sections, except No. 1, can be completed in July, 1836. The locks are going on pretty well, and may be finished by September, 1836, without difficulty, if the contractors choose to exert themselves, which I have no doubt they will do. The culverts go on slowly, and, as no cement-mortar ought to be laid in the arches after the early part of October, I fear these will delay the contractors for the embankment, much to their injury. Care ought to be taken to cover the arches with earth as soon as they are turned, so as to secure the setling of the cement. Section No. 1 has gone on very slowly; and, comparing the quantity taken out with what is to be done, it it only moves forward in the same progression, it will take five years to complete this section. This is a question of great moment—what is to be done to forward this section? I was last winter opposed to narrowing the Canal against the Sault. I have now changed my mind, and think that it ought to be only sixty feet at bottom, if what is now told be true that nine or ten feet water can be carried through the channel at Longue Sault Island. I am opposed to Mr Mills' plan of sinking piers, because I think the attempt will fail, unless at a very great expense, and, I fear even almost any plan will fail in a current of five or six miles per hour and thirty feet water;—neither can I view the project as important, when done, as Mr. Mills does, in its advantages. And if a part of it is to be raised again, it is still worse; because it will be more expensive to remove these timbers than to put them down, if they can be put down at all. After viewing this Section No. 1, and reflecting upon it, I have made up my opinion that there is no better way than to keep excavating and throwing into the river; and I firmly believe, that, when the excavation is carried back so as to have the centre line of from an average from six to ten feet farther into the bank than the original plan of last year, and then have sixty feet bottom, we shall secure a good and safe bank, and have stone enough to protect it perfectly safe—I mean the part against the Sault only, and extending down to where we have six or seven feet water as the outside of the slope upon the old plan. From this point, down to Kerr's Works, there will be no difficulty in the bank remaining at the extreme line which has been ever projected, if desired. The upper part of the section may also require to be carried a little farther inco the bank; but this cannot now be determined, neither would I determine and fix any centre line until I had worked and

taken out three or four hundred thousand yards of earth more than has yet been done, and then some definitive centre line may perhaps be determined. It will be seen, by examination, that the lightest part of the excavation has been taken out, and, if we had more of the bottom heavy stuff carried in, we should see more effect produced in working into the river. I see no cause of doubt of success in this work if we can get a proper force upon the section, and take out 100 thousand yards per month instead of 25 or 30 thousand, and then we should soon be convinced of the propriety of the project of going along the river instead of an inland route, as some persons now suggest. I say, without hesitation, that I have perfect confidence of succeeding at a reasonable expense on this section. In working I would insist on the contractors working more of the bottom stuff and more of the work on the lower end of the section, or give up a piece at the lower end, and let it be placed in other hands. A very heavy job might be given from the lower end to some efficient contractors who would push it forward and be entirely out of Mr. Hervey's way. If I am not in error, a distance of 600 to 1000 feet may be taken off here without injury to the prosecution of the other work, and I see no difficulty in taking another piece at the upper end and letting it out to be excavated to within one foot of the surface of the water. If some amicable arrangement can be entered into with the present contractors which would permit this course, it would serve to bring more

energy to obtain men, in proportion of more contractors.

am now, Gentlemen, about to make some remarks upon the relation in which I stand as your Consulting Engineer, and which has long been upon my mind—and justice to myself requires, as I think, it should not be longer deferred. It is in the recollection of all the members of the Board, of the time and manner I had the honour of serving them in 1833 and 1834, and the part I took in 1834, in the plans of the works; of cost for the locks; which plans were those on which the contracts were based for the construction. These plans were left in charge of the Superintending Engineer, Mr. Mills. After the contracts were all made, Mr. Mills deviated very considerably from my plan, and gave out the plans to the contractors with this deviation, without even consulting me; neither did I know it till December last, when the stone were so far commenced as to make it improper to make objections. Although I do not think Mr. Mills' plan as good as mine, still it will make a very good lock if well executed. I think, however, the relation between Mr. Mills and myself did not justify his altering important plans without consulting me. The alteration of the wood-work, in the chumber of the lock, is much more objectionable and improper for the safety of the lock than the change in the masonry: still, careful attention to secure those timbers may make them. safe. The plan of the culverts was made by Mr. Mills, and shown to me. I made remark that there was an unnecessary and useless quantity of masonry in them, and pointed out how they ought to be altered. It was part of my plan to have piles driven to secure the foundation under the gates and recesses; and Mr. Mills and myself had conversed freely as to a substitute in case piles could not be driven, which was by truss work inverted. As it is found that piles cannot well be driven at Lock No: 2,-and, from appearances, Locks Nos. 4, 5, and 6 will prove equally hard,-it will be proper to provide a substitute by truss work for four of the locks. Mr. Mills has made a plan of this truss work, and given it out to several of the contractors, as I hear, without any consultation with me. I make no other objection to Mr. Mills' plan but the unnecessary, and I think useless expense in the plan; whereby he will add a considerable sum to the cost of the locks, as I fear;

When it was so perfectly easy for Mr. Mills to have sent me per mail a sketch of his plan, and asked for observations upon it, I feel that it has, in all these several transactions, the appearance of not wishing my advice-because it was so easy to get it, if asked; but was never desired. In justice to myself, therefore, I present these remarks to the Board, with a design to exonerate myself from all blame for expenditures which I do not fully approve, and over which I have had no control nor direction. I am under the necessity of stating facts for my own justification. Mr. Mills may have reasons, satisfactory to the Board, for the course he has taken. Should this be the case, and should I have an incorrect view of the matter, as there has always existed between the Board and myself perfect confidence and harmony, and as it has been a source of pride in me to have my name connected with the greatest work on this continent, I think a frank and full explanation is due to them and myself; and I beg leave to add, that, while the Superintending Engineer considers my counsel and advice of no value, it is proper for me to say, that I can be of no service to the work.

I have the honour to be,

GENTLEMEN,

Very respectfully,

Your obedient Servant, BENJ'N. WRIGHT,

Consulting Engineer.

Moulinette, 14th Aug. 1835.

AND SECTION OF THE PROPERTY OF

Address of the state of

A Soft time of the A Control of the Control

Resolved-That the foregoing Communication from Benjamin Wright, Esq. be communicated to Mr. Mills, in order that he may make such reply in explanation as he may think proper.

Mr. Mills submitted a Letter on the subject of the foregoing communication, which was read as follows:

20 To

Jonas Jones, Esq., President, &c.

In pursuance of the Resolution of the Board of the 14th August, 1835, consequent upon the communication made to the same by Benjamin Wright, Esq., Consulting Engineer, of the

same date, I beg to remark, touching said communication-

The first clause in order, calling my attention, is, concerning the width of the Canal at the Longue Sault. Upon this point my mind is unchanged, and for reasons given in January last; and here I add another-Mr. Wright proposes to go down the American channel, if there is water sufficient. On this plan your navigation is dependent upon the Government of the United States, which I think is contrary to the design of your Legislature, in the Act authorising the Improvement of the River Saint Lawrence.

Secondly, In relation to the proposed piers on Section No. 1. From the first, and throughout the whole course of my duties in the service of your Board, economy, permanency, and despatch, so far as they are relatively consistent, have been grand objects to which my attention has been directed; and in any proposition relative to construction, wherein plans are projected or changed, the above considerations have been in view,—and they were in full view when I proposed said piers on Section No. 1. The following is simply the circumstance in which the suggestion originated:— In prosecuting the work along a section of the upper part of this contract, I observed that an important portion of the earth thrown into the river was taken away by the current, which is made serious by a shoal putting out from the opposite shore, which has formed the channel bold on the north shore for about 2000 feet. It became an object with me to counteract this current, and throw it from the shore, by which I would not only save all the material carried out by forming a permanent protection against the abrasion and action of the river, but would be enabled to carry the bank farther into the river even than the original plan contemplated,-thereby reducing the amount of excavation to an extent that the cost of the piers even at double my estimate would be much more than compensated, and the work finally be more secure: That this would be the result I have no doubt. In the execution of this plan difficulty occurs only in the sinking of the piers in their place; and in relation to this, surely, I must say, I never sunk a pier in 30 feet water, but I must say also, that I conceive of no difficulty or expense which the case does not warrant. We have tenders for the performance of this work at less than my estimate. Mr. Wright has objected to the piers, and has proposed no plan for the further prosecution of the work but one of a very indefinite character, with which I am not satisfied. In relation to the fixing of the centre of the Canal, it is a matter of contract, and is well understood that it is not fixed; but if it is practicable to reduce the excavation, at the same time reducing the expense of the Canal, I consider it of consequence to do so,-which governed me in my recommendation of the piers, concerning the propriety of which I have not seen reason to change my views.

Concorning the work opposite the Longue Sault, I have given my reasons for not reducing the width; but I have some views concerning this work which I shall present distinctly in future. Mr. Wright's further remarks, concerning the work on Section No. 1, need not particular notice from me at present. I certainly approve of, and have encouraged sub-contracting to efficient men: this has been done to a moderate extent, and there is good reason to extend it upon a larger scale.

In relation to the alteration of the plan of the locks-The original plan of the locks, upon which the Report of 1833 was based, was furnished by Mr. Wright. This plan was presented to the Board of Commissioners at the time Mr. Wright's Report was presented, and is now in the Canal Office. In 1834 alterations of said plan were made by Mr. Wright and myself, but the precise changes to which Mr. Wright refers as being objectionable are not specified in his communication, therefore I cannot reply to the strictures directly; but I am ready to give my reasons and views for all the changes which I have made, my attention being called thereto particularly. I am informed this day, I think for the first time, of Mr. Wright's views of the plan of the culverts, and know not to which part he refers particularly. Upon the plan of this work I am ready to give explanation, and my reasons for I have yet to learn that the changes which I have caused in the plan of the locks will not cause a reduction rather than an increase in the expenditures on account of the locks, as implied by Mr. Wright's communication of this date; and I must acknowledge myself surprised at the manner in which Mr. Wright has treated this subject, believing, as I do, that it was uncalled for and disinge-The relation in which I stand to Mr. Wright, is, I think, quite consistent with the altering of plans without consulting him, when the change is of an obvious character, or about which questions of difficult settlement do not arise; and the remark will, I think, apply to all the works of the Canal. If I have not consulted Mr. Wright upon all the changes which have been made, or the plans which have been adopted, it certainly did not originate in any design on my part, or in my not considering his counsel and advice valuable; and I am totally at a loss, in reference to my conduct, to find cause for so severe reflection.

I have the honour to be,

Sir.

Your very obedient Servant,

J. B. MILLS.

Ordered—That the Acting Engineer be required to report monthly to the Board the progress of the work, and all circumstances connected with the Canal which shall be necessary for the information of the Board; and that the Secretary communicate such report, with the proceedings of the Board, to the Consulting Engineer.

Moved by Mr. Vankoughnet—That, in the opinion of the Board, no alteration should be made in the route of the Canal, or the plans of the construction thereof, or the locks or other works thereon, by the Acting Engineer, without the approval of the Consulting Engineer, nor until the proposed alteration shall have been submitted to the Board, except in such cases as will not safely admit of any teration shall be his duty to submit the same to the President for his approval—such alteration to be specifically reported to the Board at its next meeting.—Which was carried.

Yeas—Messis. Vankoughnet, Norton, Shaver, Longley. Nay-Mr. Jones.

At a Meeting of the Commissioners held at Moulinette, on Tuesday the 8th September, 1835-

PRESENT:

Jonas Jones, Esquire, President. Hon. John Hamilton, Philip Vankoughnet, Hiram Norton, George Longley, Peter Shaver.

The minutes of the preceding meeting were read.

The Monthly Estimate of work done on the Canal was submitted.

The Monthly Report of the Acting Engineer was submitted, and read as follows :-

Jonas Jones, Esq., &c.

THE following is agreeable to the Resolution of the Board on the 14th ult., requiring the Acting Engineer to make a Monthly Report. For the amount of work done I beg leave to refer the Board to the monthly estimate in detail. The contractors are all proceeding with their work, and most of them with forces much below what the amount of their work requires. There are now about 1300 men on the line of the Canal, and 300 single-horse carts, equal to a force of 1600 men. This number is some less than at the August estimate. The force is now rather increasing. An arrangement has been made by Messrs. R. & W. Hervey with Messrs. Chas. Kerr & Co. for the prosecution of about 1200 feet of the lower part of Section No. 1.

The mason-work of the locks and two culverts is just now stopped in consequence of the cement on hand not proving good. Measures have been taken to get good cement, and it is expected to be on the ground in all this month.

on the ground in all this month.

A quantity of elm timber is to be procured for lock foundations, (as referred to in my Letter to the Board this day.) I propose to widen the Canal Bank along the Bay of Cornwall, so that teams can pass from the culvert to the land in connexion with Maligne Point.

In the Engineer Department I have at present 2 assistants at 5s. per day,

1 do. at 6s. 3d.—1 at 5s. 7 sappers at £5 per month,

1 overseer of trenching & puddling at 5s. per day,

2 master masons at

One or two overseers of trenching and puddling may be wanted soon; also one or two master

masons.

There is an old agreement with the Messrs. Herveys for hauling stone from within half-a-mile of the Canal, along Section No. 1, for purposes of protection. This stone will be wanted. Shall the work proceed?

I am, Sir, very respectfully,

Canal Office, 8th September, 1835.

APPENDIX TO REPORT ON IMPROVEMENT OF St. LAWRENCE.

The Report of the Engineer, relative to the Timber required for Lock Foundations, was submitted, and read as follows :-

22

Jonas Jones, Esq., &c.

SIR,

Some dissatisfaction was expressed by the Board at the last meeting on account of an arrangement which I made for some timber which was wanted for Lock foundations. On this subject allow me to ask your attention further: It was presumed that all materials for our Locks were provided for last winter; but it is impossible to determine what changes may be required in foundations previous to the excavation of the pits, or their being so far excavated as to leave no question. Our Lock pits being very large, and the digging rather hard, it was late before I could positively determine whether the plan as given to the Contractors should be prosecuted or otherwise. It was a little after the meeting of the Board in June I determined to abandon piling on Lock No. 2. So soon as I fixed upon a substitute, (which was an inverted truss foundation,) I gave Messrs. Reid and Shepherd, Contractors for said Lock, a bill of the timber for said work, and desired them to look about immediately, and get the timber, and also to get it on the best terms possible—this referred to only one of their locks. Soon after, the excavation of Lock No. 6 was so far advanced that I determined to make the same change there. I then gave Mr. Crawford the same bill for one of his Locks, with the same directions. Subsequently the same bill was given to Messrs. R. and P. Mackay, with the same directions. This timber for the several works was wanted immediately. There was no time to advertise and receive Tenders for it; therefore, I did as I have done. This timber was very slow in being delivered, and it cost from £20 to £25 per thousand cubic feet. Certainly this is a great price even in these circumstances. From this circumstance (if I mistake not) some members of the Board are inclined to the opinion that I am not sufficiently aware of the importance of economy: This in me certainly would be a very great oversight. My character is concerned in the prosecution of this work, and it is concerned in it in all respects. If I am at all competent to estimate my own views, I am justified in saying that my salary is positively insignificant when considered in this relation. There is to be procured the same kind of timber for two locks more, for which the Board will please take such measures as they think proper. Also, from some remark made at the last meeting of the Board, I received the impression that the Board thought me inclined to keep matters concerning the work to myself,—that I am not sufficiently communicative. Certainly I am ignorant of the circumstances which have rendered such an inference justifiable. I am not aware of ever declining giving information or explanation when applied to. Should a member of the Board call at the Office, and make inquiries relating to the Canal, I should be pleased to attend to them. Should be not make inquiries, I certainly should not volunteer my services in that way, unless something particularly interesting or important was an fact. for I might undertake to tall him about the canal and the canal are the canal and the canal are the ca thing particularly interesting or important was on foot; for I might undertake to tell him about mat-At all times I am pleased to see the members of the Board ters of which he did not care to hear. upon the work, and, could I be previously informed, I could probably make arrangements to attend them, or to have them attended.

I am, Sir,

Very respectfully,

J. B. MILLS.

Canal Office, 7th September, 1835.

Ordered-That the Acting Engineer do furnish the Agent with an estimate of the quantity and a specification of the description of timber required for the foundation of the locks, and that the Agent do forthwith advertise for tenders, and contract for the delivery thereof,-the tender to be accepted by the Agent and Engineer.

A Communication from the Acting Engineer, in reference to the nature and duties of his office, was submitted, and read as follows:-

To

Jonas Jones, Esq., &c.

I HOPE I shall not be considered as obtruding myself unnecessarily upon your time and patience while I make some further remarks upon the relation in which I stand with the Board as Acting Engineer, in view of the communication of Benjn. Wright, Esq., presented to the Board on the 14th ult., together with the consequent Resolution of the Board of the 15th touching the discretionary power of the Acting Engineer. You will recollect that my propositions of service, in the spring of 1834, contemplated the employment of a consulting engineer, and you will recollect my views of the employment of Mr. Wright in that capacity. The Board thought proper to accept my proposition to serve them as acting engineer; and, a short time subsequently, they concluded to employ Mr. Wright as consulting engineer. In the letter of Mr. Wright of the 14th ult. he complains that I have acted inconsistently with my relation to him, in making sundry alterations of plans. In

view of this complaint, I am disposed to inquire, what are our duties, relatively? I will reply to this by referring to a clause in my letter to the Board of 15th ult., to wit:—" The relation in which I stand to Mr. Wright, is, I think, quite consistent with the altering of plans, without consulting him, when the changes are of an obvious character or about which questions of difficult settlement do not arise; and the same remark, I think, will apply to all the works of the Canal." It is not the practice, -and I think cannot be expected in the many and necessary alterations and changes of plans which circumstances suggest in the course of prosecuting the construction of similar works,—that the acting engineer shall advise with the consulting engineer, particularly if he is not upon the ground. In cases of important and contemplated alterations, when doubt exists, and when the propriety of plans proposed is fairly questionable, and where large expenditures are involved, counsel and advice are necessary. If the consulting engineer was at hand to act without delay, it would be the duty of the acting engineer always to advise with him. The consulting engineer stands not in the relation of a principal engineer. He is not expected to direct, neither is it expected of him that he should; unasked, propose plans for work; but if the consulting engineer finds the acting engineer persisting in plans to which he cannot give his assent, it is then his duty to report promptly to the directing power. We hear of the complaint of Mr. Wright, or of his dissent from these alterations, for the first time, at least six months subsequent to their being made and acted upon, and with his knowledge. To this circumstance I beg leave particularly to call the attention of the Board. With respect to the changes noticed, I only remark, that I believe them to be for the best, both in regard to plan and to expense, which I am satisfied is much reduced. I certainly should be pleased to submit them to disinterested judges. Changes were made in the plan of the locks both by Mr. Wright and myself. I have also made alterations in the location of the Canal. All the changes in the line of the Canal are not improvements, they being made to reduce the expense of the Canal, which reduction is in some cases; at the expense of the symmetry of the same.

I feel much hurt that Mr. Wright has thought fit to remark in the manner he has done, and sincerely regret that there is any cause of difference between him and myself; but, so long as the letter from Mr. Wright stands recorded on your journals, together with the consequent Resolution of the Board, it is due to me that a particular and explicit inquiry should be made respecting my conduct as acting engineer. Either the remarks of Mr. Wright are just and true, and his judgment concerning the alterations of plans sound and correct,—or they are not. In this affair my character as an engineer is called in question, as well as my character generalty for propriety of conduct. The Roard will readily perceive, that, on this subject, I cannot be uninterested and without feeling. Be assured I shall never screen my proceedings from investigation and inquiry while in your service, nor myself from the responsibility which I may have assumed; but, on the contrary, I invite and desire it. The Resolution of the Board is such as to indicate a loss of confidence in me as acting engineer, and that it is necessary to take from me all discretionary power. If the Board have thus lost the confidence they may hitherto have reposed in me, or if it is at all impaired, it is my tearnest desire to understand it fully; for I have no inclination to serve, nor will I continue in the employment of persons who distrust my ability or doubt the correctness of my conduct; and I will at once make way for some one who may better discharge the duties of an acting eugineer.

I have the honour to be, Sir,

Your most obedient servant,

J. B. MILLS.

Canal Office, 7th September, 1835.

Moved by Mr. Jones-That the last resolution passed at the meeting held on the 14th ult. be rescinded, and the following adopted: "That the Board has frequently observed that alterations have been made in the proposed works by the Resident Engineer without reference to them or to the Consulting Engineer, upon which, by resolution and otherwise, they have heretofore expressed an opinion,—that the Resident Engineer having made various alterations from the original plans, without consulting Benj. Wright, Esq., of which he has complained to the Board,—the Board- are of opinion, that alterations involving an increased expense and making important variations in the original plans, approved of hy the Consulting Engineer, should not be made without his approval or that of the Board—that the Board have notwithstanding great confidence in the judgment and ability of Mr. Mills, and will on all occasions give due weight to his opinion and representations."—Which was carried.

Yeas-Messrs. Jones, HAMILTON, Nonton, LONGLEY, SHAVER.

Nay-Mr. VANKOUGHNET.

The Report of the Agent relative to the completion and cost of the Barrack at Cornwall, was submitted and read as follows :-

THE accompanying letter from Lieut. Col. Foster having been received by the GENTLEMEN, Clerk of the Peace in reply to the joint application of your Board, and the Magistrates of the Eastern District, to His Excellency Sir John Colborne, for a body of troops to be stationed somewhere upon the line of the Canal, a general meeting of the Magistrates took place and the following resolutions: were passed:

1st. That the Commissioners for the Jail and Court House be authorized to proceed immediately in enclosing the building erected in the vicinity of the Jail in such a manner as may serve to accommodate troops in the event of the Canal Commissioners completing the interior for that purpose.

2nd. That the Magistrates do not feel justified in incurring any expense from the District funds for the accommodation of troops, except what may be necessary to enclose the building referred to in

the foregoing resolution.

It then became necessary that your Board should complete the interior of the building, or give upthe prospect of having the protection of a military force upon your works. In a conversation with Mr. Vankoughnet, he agreed with me that the St. Lawrence Commissioners would have it done, as at their previous meeting, when the matter was discussed, the only three Commissioners present were in favour of preparing a Barrack if required. However I went to Brockville, and had your President's

and Mr. Norton's opinions; and by their advice commenced the work as follows:

First supposing that 60 feet of the frame would be sufficient, I advertised for tenders to finish that part, and from several, selected that made by John Lane and Nichls. N. Ault as being the lowest. The work was completed, and reported to His Excellency as ready for the reception of troops. Upon the 23rd July, Major Fitzgerald arrived in Cornwall with orders to see that the Barrack was sufficient; according to his instructions it was not, and therefore directed that it should be enlarged and other improvements made. I therefore received tenders for finishing the remaining 46 feet of the upper story, and 18 feet of the lower, and from them selected Aaron Walsh's as the lowest. It has been completed, and I herewith beg leave to submit the account of expenses for your information.

I have the honour to be,

GENTLEMEN,

Your obedient Servant,

W. R. F. BERFORD,

Agent.

Cornwall, 7th September.

Copy of a Letter from Colonel Foster, referred to in the foregoing Report:—

Asst. Adjt. General's Office, Toronto, 15th May, 1835.

Your letter of 7th instant addressed to Lieut. Col. Rowan, with its enclosed resolution of the Magistrates of the Eastern District in General Quarter Sessions assembled, having been handed to me, I have received the commands of His Excellency Major General Sir John Colborne to acquaint you, that when the Magistrates or the Commissioners of the St. Lawrence Canal shall have reported to me for His Excellency's information, that suitable accommodation has been provided by them at Cornwall for the troops proposed to be sent to that place,—His Excellency will order a Company consisting of a Captain, and perhaps two Subalterns, and about 70 non-commissioned Officers, rank and file, to proceed thither as early as possible. I presume it is unnecessary to point out the propriety of all the men being lodged in the same building, and the Officers being accommodated as near as possible to the men.

I have the honour to be,

SIR,

Your most obedient Servant,

L. FOSTER,

Lieut. Col., c.

ARCHIBALD McLEAN, Esq., Clerk of the Peace, Cornwall.

The Report of the Agent upon the Application of the Inhabitants of Cornwall for Bridges across the Canal in that town, was submitted, and read as follows:—

To

The COMMISSIONERS for the Improvement of the St. LAWRENCE.

GENTLEMEN,

In compliance with your instructions conveyed in a resolution passed at your last meeting, "that the representations of the Committee on behalf of the inhabitants of Cornwall be referred to the Agent, the Consulting and the Acting Engineer, to report thereon, severally," I beg leave to state that, having been for some time aware that the inhabitants of Cornwall had in contemplation the request which was submitted to your Board at the last meeting, I have directed my attention to the subject, and have been enabled, from my residence in the Town, to form (I conceive) a correct opinion as to the necessity for affording access to the river by means of a Bridge across the Canal, viewing the population and trade of Cornwall in their most extended prospect. The difficulties and

No. 11.

APPENDIX TO REPORT ON IMPROVEMENT OF St. LAWRENCE.

disadvantages which present themselves in contemplating the construction of a bridge across a Canal, of the width of the St. Lawrence Canal, can only be over-balanced by the most paramount necessity; and I cannot see that the interest of the inhabitants of Cornwall are so deeply involved in the issue of their application, as to warrant a very heavy expenditure, entailing much obstruction to the general business of the Province, liable to frequent derangement and cost for repairs, and affording to the people of Cornwall little advantage beyond the gratification of having an ornamental piece of

architecture erected there.

By order of your Board, a culvert is now being constructed, which will open a communication with that part of the River best adapted to the purposes of the Town, and possessing advantages which must ensure to it the concentration of business, even if the access sought by means of a bridge were afforded. It has invariably been selected as the landing-place for rafts, and I have no doubt would have been preferred for all the merchandize imported, had it possessed the facility of wharfage which the Steam-boat landing affords—inasmuch as it would have saved the delay and expense of opposing a strong current in reaching the present landing-place, and from its depth and stillness of water have afforded a much safer anchorage. Among other disadvantages which present themselves in view of the construction of a bridge across the Canal at Augusta Street, I am of opinion that the height of the bank (about 23 feet) would render it almost nugatory in its application to the purposes which are assigned as the basis of the request; and with these views I would not consider myself justified in recommending to your Board the application of any part of the funds appropriated for the Improvement of the St. Lawrence, to the construction of a Bridge as requested by the inhabitants of Cornwall.

I have the honour to be,

GENTLEMEN.

Your obedient Servant,

W. R. F. BERFORD.

Agent.

Cornwall, 7th September, 1835.

The Report of the Consulting Engineer, on the Application of the Inhabitants of Cornwall, was submitted, and read as follows :--

The President and Board of Commissioners of the St. Lawrence Canal.

GENTLEMEN. A resolution of your Board at their meeting of the 14th and 15th August, 1835, in reference to a Bridge across the Canal at Cornwall, on the petition of the inhabitants of that Town, has been referred by the Board to me, as well as to the Acting Engineer and Agent; and I now beg leave to report, that a bridge across the Canal on the Street near the Court House and Jail, or any other Street, will very much interfere with the navigation of the Canal, and injure its usefulness by the interruption of the boats passing along it. As far as I can judge of the state of things as they will be after the Canal is done, the passage to the River from the Town will be but very little used, as no doubt all timber or lumber intended for use in Cornwall or its neighbourhood will be brought from above through the Canal, or should it come from below, it would come in vessels, and of course brought into the Canal. The widening of the Canal against the Town is of course intended to give facilities to landing every thing on the wharf to be built there. A Bridge at this place would be very ex_1 ensive, and may be set down at £2,500 a £3,000 as the least expense to be incurred; and this is not the worst view of the case—it would require a man to attend opening it, and taking care of it at all times; and his expense could not be estimated at less than £25 per annum, which is the interest on £417, at 6 per cent. A bridge 55 feet wide will be found to be very troublesome to manage in opening and shutting, and there will be great danger of injury to the bridge and to the boats in passing it. If c is found, after the Canal is in operation, that very great inconvenience arises from being cut off from the River to the inhabitants of the growing Town of Cornwall, and that the culvert road way, together with a ferry, does not give all that is required, a bridge can be crected afterwards, without much, if any, additional expense, by founding it on piles and a flooring just under water in the Canal. Taking all these views of the subject, I am of opinion that the prayer of the people of Cornwall ought not to be granted. Respectfully submitted by

BENJ'N. WRIGHT,

Consulting Engineer.

The Report of the Acting Engineer on the application of the Inhabitants of Cornwall, was submitted, and read as follows :-

Jonas Jones, Esq., President, &c.

In accordance with the resolution of the Board of Commissioners of the 14th ultimo, concerning the Address of the inhabitants of the Town of Cornwall, relating to the erection of a

Bridge over the Canal in the Town of Cornwall, I beg leave to submit the following remarks: The Address, does, not definitely locate, the bridge which is desired, hut being acquainted with the views at least of some of the inhabitants, I will suppose it located on Augusta Street; leading to the present Steam, Boat landing. On reference to the report of the meeting of said, inhabitants, it will, be seen that their third resolution contains mainly the representation upon which their complaint and prayer is based. That resolution contemplates, that in view of the present plan, said inhabitants, will experience great expense and inconvenience by being compelled at all times, when importing any goods, lumber, or building materials into the Town, to take a circuitous route, &c. Goods, meaning merchandize, mainly come from below, and they will be on the boat which will pass very directly by the route of the Canal (being much less "circuitous" than by the River) to the Canal dock, made expressly for the convenience of the inhabitants, at an expense of about £1,000, where goods willibe landed with the greatest facility; and being very nearly upon a level with the business part of the Town. the access will be pleasant and perfect. As to the time taken-suppose a boat coming up consigned to Cornwall, and suppose she is, in consequence of the three locks below, twenty minutes longer, (I see no reason for her being more) in arriving at the Canal dock than she would have been in arriving at the present Steam Boat landing, this twenty minutes will be quite compensated by the greater facilities in getting goods from a boat lying at the Canal dock to any given warehouse, than from a boat at the Steam Boat dock, at the foot of said Street. Of the truth of this there can be no question. Goods occasionally come from up the River bound to Cornwall. Suppose a dock built on the River opposite the culvert, at a point where Steam and other hoats can lie conveniently, and goods to be discharged there, the distance from this place to the centre of the business part of the Town of Cornwall is only 800 feet (less than one-seventh of a mile) greater than from the present River dock. Can this difference in the small quantity of goods comparatively be considered a serious matter?—As to the Lumber or Building materials which mainly come from up the River, they cannot be landed at the present dock, and it happens that it is usually landed directly opposite the culvert. Those materials which come from below, the quantity being comparatively small, may stop in the lower part of the bay—one object of the bridge I understand to be, the procuring of water from the River for domestic use and for the watering of cattle; and also to answer an unqualified dislike, undefined, to being cut off from the River St. Lawrence.

The probability is, that the water of this Canal will not be so much riled as the water of ordinary Canals: therefore it will be suitable for purposes of domestic use. A facility for getting water and the watering of cattle may be had on the north bank of the Canal. From the first we have ever had in view the keeping the improvement of the navigation of the St. Lawrence clear of bridges; none have been contemplated either in this or the Lower Province, and most certainly none ought to be crected except in cases of obvious and absolute necessity, which admit of no alteration. I see not that such a case is now presented. Said bridges would occasion about as much interruption to the navigation of the Canal, and be as great a nuisance as would be occasioned by an unnecessary lock, and require the same subsequent attendance. It will cost about £3,000 currency.

The above are the principal considerations affecting the project, and it remains for the Board of Commissioners to determine, whether the navigation of the Canal shall be encumbered by a structure of like extent, and of so questionable importance.

I have the honour to be, Sir,

Your obedient Servant,

J. B. MILLS.

Canal, 7th September, 1835.

Resolved-That, for the reasons assigned in the Reports of the Agent, the Consulting, and the Acting Engineer, the Board cannot comply with the request of the inhabitants of Cornwall to have a bridge erected across the Canal in that town, and that the Secretary be directed to furnish the Chairman of the Committee with a copy of the Reports.

The Report of the Acting Engineer on the claim of Charles Kerr & Co. for Damages in consequence of the timber on Section No. 22 having been cut down, was submitted and read :-

Jonas Jones Esq., &c.

To

To the letter of Messrs. Kerr & Co., which was referred to me, claiming damages in consequence of the timber being cut down on Section No. 22, I hereby reply accordingly. In the former part of the winter of 1834, Mr. Wood, the owner of the land on which is Section No. 22, desired me to have the width of the Canal marked out, as he wished to cut off the timber on the ground to be occupied by the Canal. I particularly desired him not to do it, as it would be a damage in view of the grubbing to be done. Subsequently, in the arrangement for the damages done to his property by the Canal, it was understood that he was to take away his timber, and he got leave to do it immediately. It was accordingly done. The amount of damage done to Messrs. Kerr & Co., in view of their contract, I should think fairly estimated at 25 per cent. upon the cost of grubbing. Had

othe timbers been deavy; the damage would have been increased; and the damages in similar cases depend upon the circumstances in which they occur. I think the above amount fair for the case in band.

I have the honour to be,

Sín,

Your most obedient Servant,

J. B. MILLS.

Cormoull, 7th September, 1835.

Ordered -That 25 per cent. upon the amount contracted to be paid for grubbing Section No. 22 be allowed to Messrs. Kerr & Co. in satisfaction of their claim.

The Claim of Messrs. Simpson & Mittleberger, to be remunerated for extra labour in consedurince of alterations in the original plan of Section No. 10, was read.

Referred to the Resident Engineer.

The Report of the Agent on the work done (and cost shereof) on the New Road at Longue Sault was submitted, and read as follows :-

To

The Commissioners for Improving the St. LAWRENCE.

GENTLEMEN.

In compliance with an order of your Board last month, I have suspended all road operations and paid off the hands, and now beg leave to submit a statement of the work performed and what has been the expenditure. The new roads made hast year have all undergone thorough repair, been made much wider, and the ditches very carefully cleared, so as to drain off the water. A new road has been laid out at the Longue Sault, as the one now made use of will be removed in making the Canal on Section No. 1. There have been 843½ rods of good road made and repaired, which cost the sum of £126, 12s. 8d., making an average of 3s. per rod; 75; rods of this is the new part at the Longue Sault, which has been made through a very rough piece of stony ground, having a spring in it, over which it was expedient to place a bridge—this cost about 22s. 6d. per rod. The whole has been performed by men hired at 3s per day, who were superintended by a foreman engaged at 5s. per day. I have given it much personal attention, and as I came upon the road at hours when I could not possibly be expected, and never having found the men otherwise than faithfully attending to their duty, I trust the expense incurred will not be considered more than necessary, and that the road will give satisfaction.

I have the honour to be, Gentlemen,

Your most obedient servant,

W. R. F. BERFORD,

Agent.

Cornwall, 7th September, 1835.

Ordered,—That the Agent do forthwith advertise for tenders for the completion of the new Road at the Longue Sault, and contract for the same.

Moved by Mr. Norton, That in consequence of the difficulty that presents itself in the formation of an artificial bank on section No. 1, and to obviate the necessity of having the south embankment of the Canal extend so far into the River, the dimensions of the Canal on the line of Section No. 1 be diminished to sixty feet at bottom. - Which was lost.

> Yeas-Messrs. Norton, LONGLEY, SHAVER.

Nays—Messrs. Hamilton, Jones, Vankoughnet.

Moved by Mr. Hamilton,—That the Engineer be directed to estimate the saving of expense which might be effected by reducing the bottom width of the Canal on Section No. 1; to sixty leet at bottom, and also to ascertain the depth of the water in the south channel of the Longue Sault, in order that the same may be reported to the Legislature at its next session:—Which was carried.

中国大学的大学的 医二种 Yeas-Messrs. Hamilton, Service Control of the Control JONES, Nortok; Vankoughnet, Shaver.

Nays-Mr. Longley.

APPENDIX TO REPORT ON IMPROVEMENT OF ST. LAWRENCE.

Moved by Mr. Hamilton,—That the sum of two hundred and fifty pounds be allowed to the Secretary for his services during the present year :—Which was carried.

Yeas—Messis. Hamilton, Jones, Norton, Vancoughnet.

SHAVER.

Nay-Mr. Longley.

At a Meeting of the Commissioners, held at Moulinette, on Wednesday the 11th November,

PRESENT.

JONAS JONES, Esquire, President,
JOHN MACAULAY,
PHILIP VANKOUGHNET,
HIRAM NORTON,
GEORGE LONGLEY,
PETER SHAVER.

The Minutes of the preceding Meeting were read.

The Monthly Estimate of Work done on the Canal for October and November was submitted.

The Monthly Report of the Acting Engineer was submitted, and read as follows:-

To

28

Jonas Jones, Esq., President, &c.

SIR,

In relation to the prosecution of the work on the Canal since my Report in September, also concerning the present state of the business, I remark briefly:—

1st. For the October and November Estimates, see Estimates in detail.

2nd. Since September, our force has been considerably reduced. We have now 900 men, and 243 carts equalling a force of 1,143 men.

3rd. The Engineer department remains the same as at the September return, except we have an

additional overseer of work.

4th. All the work is proceeding steadily, but slowly, as usual, the latter owing to our small force.

5th. Apart from special reports and letters which will be presented on this occasion, I have no occasion for further particular remark.

The attention of the Board on this occasion, will be called to the following particulars:

1st. The resolution of the Board requiring the Engineer to furnish the Agent with a certain bill of timber. This has been postponed, as the timber is not wanted immediately, that we may take the advantage of procuring it through the winter.

2nd. A report concerning the claim of Messrs. Simpson & Mittleberger, Sections 9 & 10.

3rd. Reducing the Canal at Longue Sault.
4th. Report South Channel examinations.

5th. Report claim of Crawford & Simpson, Section No. 27.

6th. Change of sewer at Cornwall.

7th. Concerning loose stones.

8th. Settlement of the contract for retaining wall, Section No. 11.

9th. Mile Stones.

10th. Bridge at Brownell's Creek.

I have the honour to be, Sir, &c.

J. B. MILLS.

The second of the second

Canal Office, 9th November, 1835.

The Report of the Acting Engineer on the Claim of Simpson & Mittleberger, Sections 9 and 10, was submitted, and read as follows:—

Jonas Jones, Esq., President, &c.

In accordance with the Resolution of the Board of Commissioners on the 8th ultimo, referring to a communication from Messrs. Simpson & Mittleberger, claiming compensation on account of extra work done on Section No. 10, and in consequence of hindrances experienced at Sections 9 and 10, I reply briefly—and first to No. I. of said communication: This charge is founded in mistake, as the level upon which the work of both sections has thus far advanced is precisely the same that was upon the "original" stakes at the time the contracts were made. At the time the line was staked out, and prepared for work, about 5 or 600 feet of it happened to be prepared upon a level 2 seventy-one-hundredth feet too high, which occurred by taking a wrong level from our Field Books. This however was soon discovered before much work was done, and the staking corrected according to the "original" and the present level.

No. II.—The charge made in No. 2 certainly cannot be made in seriousness, as the work at this time was in a rough state, being prosecuted with ploughs and scrapers, and the "breaking ground an

extra width" consisted only in extending the ploughing.

No. III .- The charge embraced under this head I will consider in detail by three particulars: 1st: For damages sustained in consequence of the location of the culvert at Mille Roches; 2d. For damages sustained in consequence of keeping the roads open communicating with Mille Roches; 3rd. For damages sustained in not being permitted to complete Section No. 10 in 1834, when labour and provisions were cheaper than in 1835, and the season more favourable.

1st. I am not aware that the location of the culvert at Mille Roches has up to this time been any positive damage to Messrs. Simpson & Mittleberger. No part of the appropriate work of said sections adjoining the culvert is yet performed. They have not yet performed work at a disadvantage on this account, neither have they been at expense for work yet to be performed on this account; but they have been prevented from completing their work and accomplishing more work with a given The importance of this latter circumstance I conceive is modified, if not wholly done away by another—that the Board of Commissioners have paid them in full for work done, and have consented that they might break up their establishment, and subjet the remainder of their work, which they have done, or are about doing, at an advantage. Under this particular may be noticed the drains referred to, one of which would have been necessary in any event, and the other it is intended to measure and allow with the excavation.

2ndly. There has been no increased hindrance or interruption to their operations in consequence

of the roads being kept open. All the hindrance is chargeable to the location of the culvert.

3rdly. Had the culvert not been located on either of these sections, there is no doubt more of the line would have been commenced in 1834; but it is certainly difficult for me to say, whether Section No. 10 would have been completed or otherwise. I think not. All the work they have done with their own force this year up to the 1st September, has been on Section No. 10.

In existing circumstances, I do not think they are entitled to compensation. I know of no interruption or difficulty, in this case, which is extraordinary, or to which all contracts of the kind are not

liable.

I have the honour to be,

SIR.

Your most obedient Servant,

J. B. MILLS.

Canal Office, 13th October, 1835.

The Report of the Engineer on an accompanying claim from Messrs. Crawford & Simpson, to be remunerated for extra work in consequence of changes on Section No. 27, and Lock-pit No. 6, was submitted, and read as follows:-

Jonas Jones, Esq., &c.

REFERRING to the communication received from Messrs. Crawford & Simpson of the 28th ultimo, I beg leave to submit the following remarks:

They claim compensation for extra and increased work in consequence of changes made on Section No. 27; and this claim is set forth in two divisions. According to the first, "this change has increased the length of the line, the depth of the cutting, and thrown the work into much harder excavation.

As to the first of these particulars—I have not ascertained exactly the increased length of the

line, but it must be much less than 100 feet.

2ndly. The change has not increased the depth of the cutting, as the levels on our present line, compared with the levels of the former one, give less excavation to the present line; and this is true of the section generally.

3rdly. I am well satisfied that the change has not thrown them into harder excavation, or more of it on the whole. The excavation throughout the section has proved as favourable as I expected,

and I think as much so as might have been expected from the original shafts.

The strata of the earth at Lock No. 6 appears to dip in the direction from which the line was moved. Suppose that, for the length of this lock-pit, say 300 feet, there is equal to 3 feet (which I think is more than the truth) more of the harder excavation than there would have been in the former line, this would give 2,833 yards, which is greatly over-balanced by 200 feet of line in ten feet cutting, and of the same material, as will appear from the reply to the second division of the claim, and which amounts to 6,298 yards. Independently, so long as the character of the work and the circumstances in which it must be performed are not changed, the work is provided for in the contracts, and the question of quantity is not pertinent.

The second division of the claim is also made up of several particulars:

1st. The change in the lift of the locks—to which I reply, that at the time the maps of the plan; and location of the line of the Canal, were exhibited for tenders in July and August, 1834, it was particularly attended to by myself and my assistants to let it be distinctly understood that the line of the Canal must not be considered as absolutely fixed, but that it would in many instances be changed; and concerning the lift of the three lower locks which were marked on the original profiles, and two 7, and one 10 feet lift, people examining were constantly informed, that they would be changed to

2ndly. The changing of the location of Lock No. 6, "removing it up the line." This lock is three 8 feet lifts. about 200 feet further down the line, as at present located, than it was at the time the contracts were Immediately preceding the commencement of the excavation by Messrs. Crawford & Simpson, this lock was moved, and staked out 370 feet further down the line than it was originally, and it remained there till early last spring, when it was moved up the line 170 feet, where it now is leaving it still 200 feet farther down the line than it was originally; by which it may readily be perceived that the deep and hard excavation was much reduced rather than being increased by the

3rdly. Extra grubbing. Much less grubbing was required on the present line than would have been on the former one, as the latter would have cut considerably upon the Pine Grove which is to

the right of the line.

With much respect,

SIR. &c. &c.

J. B. MILLS.

Canal Office, October, 1835.

Ordered-That the Secretary furnish the Claimants with a copy of the foregoing Report.

The Report of the Engineer relative to proposed alterations in the plan of the Cornwall Sewer was submitted, and read as follows:

To Jonas Jones, Esquire.

SIR,

THE plan for the Cornwall Sewer as heretofore presented, and upon which tenders were made, provided an opening or water passage two feet square. A sewer, which is to serve for draining a town, sometimes becomes stopped and impure: That any such difficulty may be readily corrected, I have concluded to recommend an enlargement of said sewer. Let the passage be 21 feet wide, and 4 feet in height in the clear. The tenders are now made on the place of laying half the wall in cement: I propose to omit the cement and lay the whole dry, which changes the value of the work per cubic yard. The price of the mason work for the sewer, according to the accepted tender, is 11s. 3d. per cubic yard, including cement for half the wall. Suppose the sewer to be 4000 feet long, the original plan would give 1629 yards of masonry, at 11s. 3d. £916 6 3 Enlarging it as proposed, and making the price 8s. 9d. per cubic yard, (which I think fair,) we have 2,814 yards, at 8s. 9d.

Which makes the change cost more than the original plan, . . .

It is desirable to determine this question immediately.

I have the honour to be,

SIR.

Your obedient Servant,

Cornwall, October 29th, 1835.

Ordered-That the Cornwall Sewer be constructed agreeably with the plan recommended in the foregoing Report.

The Report of the Engineer on the question of allowing for loose stone in addition to the excavation, was submitted and read as follows:

To Jonas Jones, Esquire, &c.

SIR.

A QUESTION of some importance has recently received considerable discussion from the Contractors, which is concerning the propriety of deducting the amount of loose stone from the amount of excavation as determined by our levels. The case is as follows:—Suppose one of our stations gives, according to the levels, 1000 yards of excavation; in performing this work we find 100 yards of loose stone. Now, shall we allow the full amount of excavation, and also the amount of the stone? or shall we deduct the stone and allow 900 yards of excavation? Our contracts do not determine this question, and I find that deducting the stone is a new idea; to some at least, of the Contractors, and they are not satisfied with it, having never known it practised. On all works upon which I have been engaged, it has been the practice to reduce the excavation by the amount of the stone, but on those works the price for one cubic yard of loose stone will fully equal the average price upon the St. Lawrence Canal of one cubic yard of loose stone, plus one cubic yard of excavation, which reduces it to the same expense in both cases. Therefore I have come to the conclusion to recommend the allowance of the full amount of excavation, and also the amount of the loose stone at their respective prices.

I have the honour to be, Sir,

Your obedient Servant.

J. B. MILLS:

Cornwall, October 28th, 1835.

Ordered-That the recommendation contained in the foregoing Report be acted upon.

The claim of H. Pierce & Co., Contractors for the retaining wall on Section No. 11, was submitted and read.

Referred to the Resident Engineer.

The Report of the Resident Engineer upon the examination of the South Channel of the Long Sault, was submitted, and read as follows:-

To

Jonas Jones Esq., &c.

SIR.

In accordance with the resolution of the Board in September, I have made an examination of the South Channel of the Long Sault. I did not go prepared to take such soundings as to enable me to lay down a regular chart of the channel, (which would require much time and expense, as the channel is very crooked;) but I was enabled to make such an examination as satisfied me, and also Mr. Berford who accompanied me, that this channel or branch of the St. Lawrence would be decidedly unsafe for vessels drawing even six feet water. The shallow points are in the vicinity of rapids, and at three points. The first and most serious one is at the rapid opposite the head of Longue Sault Island, which of itself, I think, forms an insuperable objection to the project of the Board using this channel in connexion with the improvements of the St. Lawrence. The examination was made on the 25th September. Subsequently, understanding from Mr. Caleb Truax, who has navigated the St. Lawrence during fourteen years, that, in his opinion, a channel could be found of eight feet water, I desired him to accompany me in a repetition of the soundings. He did, accordingly, on the 16th October; but the result was a complete confirmation of the examination made on the 25th September. Carrier of the Carrier of the Control of the Contro

I am, &c.

J. B. MILLS.

Cornwall, Nov. 6, 1835.

The Report of the Agent upon the Damages consequent upon the construction of the New Road at the Longue Sault, was submitted, and read as follows:-

To

The COMMISSIONERS for Improving the Sr. LAWRENCE.

GENTLEMEN:

I HAVE carefully estimated the damage sustained by individuals through whose gardens it was necessary to run the new road at the Longue Sault, and think that they should re-ceive respectively the following amounts:—

Edward McDonell,		• **				£0 :	15	0 :
James Cowley,				•		. 9	0	0
Dudley Hanley, .				 •		2	10	0
Chas. Claffy,	•		•			. 2	0.	0
T. Torsney,						1	5	O
John McGuin.					•	3	0	0

Making in all £12s. 10s., which, with permission of the Board, I will pay immediately. I have also examined some shanties upon Section No. 1, which it is necessary to have moved forthwith, to admit of the work proceeding; and value them respectively-

1		C2 10	0
		2 10	0
		2 10	0
		2 10	O
		3 0	0
	7 (**)	2 10	0
		3 5	0
			£2 10 2 10 2 10 2 10 3 0 2 10 3 5

Making the sum of £18, 15s., which I think should not be paid till the houses are moved.

Respectfully submitted by, &c.

W. R. F. BERFORD,

Agent.

Cornwall, 6th November, 1835.

The Report of the Agent upon the claim of James McGilles was submitted, and read as follows :-

The Commissioners for Improving the St. LAWRENCE.

GENTLEMEN,

Concerving that Mr. McGilles took a lease of his present tenement at the Longue Sault, and commenced a business which he expected to be wholly supported by the works now in progress, and not as a stand that had any other advantage,—and being satisfied that his business is not in the least injured as respects Canal customers,—I do not think his claim for damages should be admitted. It is an undeniable fact, that, if it were not for the Canal works, it would not be a situation for his business; therefore, according to Section 21 of the St. Lawrence Canal Act, the claim cannot be maintained.

Respectfully submitted by

w. r. f. berford,

Agent.

Cornwall, 6th November, 1835.

The following Claims were submitted, and were referred to the Engineer:-Claim of Charles Kerr & Co. for extra work on Section No. 3.

Locks Nos. 2 & 3. Reid & Shepherd, Section No. 6. S. & W. M. Frazer

John Cameron for Quarry Privilege.

Hugh Cameron,

The Claim of Joseph E. Moss for damage to his Garden was renewed, and was referred to the Agent.

A Letter addressed to His Excellency the Lieutenant-Governor on the subject of co-operation. on the part of Lower Canada with this Province, in the improvement of the navigation of the Saint Lawrence, was submitted for the approval of the Board, and was read as follows:--

Office of the Commissioners for the Improvement of the Navigation of the River St. Lawrence, Cornwall—November, 1835.

SIR, A RECENT personal inspection of the works now carrying on for the improvement of the navigation of the River St. Lawrence, has afforded to Your Excellency satisfactory evidence of their importance to the welfare of the Canadas; and the expression of your approval gives us confident assurance that in this, (as in every instance where the interest of the Province is concerned,) your influence will be afforded to its furtherance and completion. No pains have been spared, consistent with the necessary solidity of the work, to hasten its application to the useful purposes for which it is intended. Obstacles, however, have presented themselves which have in some measure retarded its progress. A comparatively small emigration last spring prevented the contractors availing themselves of a very favourable season as they otherwise would have done? The spirit of public improvement that pervades the United States of America, and the vast number of works which have been in operation this year, have further tended to increase the difficulty of procuring labourers, as the terms upon which our contracts have been let out will not admit of competition with the rate of wages generally given in the States, and consequently the tide of emigration has flowed in a great measure towards the public works in the States of New York and Pennsylvania.

A considerable portion of the excavation and embankment is in a state of forwardness approaching nearly to completion; and, with the exception of the mason work of the locks and culverts, and the deep cutting at the rapid part of the Longue Sault, which must necessarily occupy a longer time, the Board confidently expect that the ensuing season will exhibit the works, generally, in a finished state. The sum expended to this date is about £100,000; which includes £112,500 remuner. ation for damage to property, the salaries of officers, incidental expenses, and the cost of labour

performed on the Canal.

All-important to the interests of the Provinces of Upper and Lower Canada as is the work in question, a very great portion of its usefulness must be lost should the Legislature of the Lower Province withhold its co-operation, and that the parts of the St. Lawrence, from the boundary of this Province, which require improvement, be permitted to remain in their present state. This consideration induces the Board just now, when the Legislature of Lower Canada has been convened, respectfully to call the attention of Your Excellency to the subject, and to solicit the aid of your influence with the Government of that Province in the promotion of an object which embraces the interests of both Upper and Lower Canada.

When the question was agitated two years since in the House of Assembly at Quebec; no differ. ence of opinion appeared to exist as to the utility of the measure; and what might be construed into a pleage was afforded, that the example of this Province would be speedily followed, and that an improvement similar in scale, as it would be equal in its usefulness, would be undertaken and prose-

cuted.

Our confidence in the accomplishment of this desirable object is not a little strengthened by the expression of your approval of the works now constricting under the direction of the Board; and we have no doubt that the representations, which from Your Excellency's personal knowledge you are enabled to make, will carry with them their due weight in influencing the decision of the Governor and other branches of the Legislature of Lower Canada.

I have the honour to be,

SIR,

Your Excellency's most obedient humble Servant,

Jonas Jones,

A TO THE PROPERTY OF THE PROPE

President of the Board of Commissioners
St. Lawrence Canal.

To His Excellency Sir John Colbonne, K.C.B.,

resident of the second

de. de. de.

At a Meeting of the Commissioners held at Cornwall, on the 8th and 9th December, 1835

PRESENT:

JONAS JONES, President, JOHN MACAULAY. PHILIP VANKOUGHNET, HIRAM NORTON. GEORGE LONGLEY. PETER SHAVER.

The minutes of the preceding meeting were read.

The Monthly Estimate of work done on the Canal was submitted.

The Monthly Report of the Resident Engineer was submitted, and read as follows:--

The state and the partition granding

Jonas Jones, Esq.

SIR, 78% 4-Removed Marie many at ask in the foreign and the contract of the co For the amount of work done during the last month I beg leave to refer to the estimate in detail. During the month the force upon the Canal has been much reduce in consequence of the sudden and extreme cold weather causing much irregularity in the operations of the line. It

tidania ir irkininga inprinciplika ir irkidalisi

is difficult to say exactly how many men are now engaged, but I think our force equal to about 850 men. All works at the locks and culverts are suspended, except the preparation of materials. Some days since, in consequence of the rapid progress of the frost, I determined to suspend the progress of the important embankments, and gave notice to the contractors that they should be stopped at this The Engineer Department remains the same, except that the master masons and overseers have

The business for the consideration of the Board on this occasion will be presented in distinct been discharged. Reports and Letters; but the following are the important items :-

1st Report, Messrs. Reid & Shepherd. Frazers. 2nd Kerr & Co. Sundry Claims for Quarries. 4th Section No. 27. 5th No. 1. 6th Nos. 7 & 8. 7th No. 12. Sth Retaining Wall. Engineer Department Accounts. Uth 10th

J. B. MILLS.

Cornwall, 7th December, 1835.

The Report of the Engineer on the Claim of Reid and Shepherd was submitted, and read as follows :-

To

Jonas Jones, Esq.

THE communication from Messrs. Reid & Shepherd contains a calculation upon which they found a claim for further advances on account of their lock contracts. Said calculation is well enough in itself, except they have given the lock-walls too great an average thickness-also there are one or two slight errors in the calculation; and they have not allowed enough, by about two-fifths, for the item in the computation which is to furnish the materials and fixtures for laying the stone. But, apart from this, I object to the principle of the calculation as quite improper and hazardous. It is not safe, in the present state of the work, to pay in advance of a fair compensation of expenses, whatever be the contract price of the lock walls. There is at present an unknown expense (which must include a liberal allowance of expenses of a contingent character) concerned in the furnishing the fixtures for moving and handling the stone, and the insterials for laying them according to contract. Neither is it safe to lose sight of the possibility (however great the improbability) of the necessity of the contracts' changing hands.

I have considered the subject carefully, and have come to the conclusion as follows-To allow 3s. per foot face on all stone, without distinction, cut and delivered at the lock sites; 5s. per cubic yard for backing stone delivered; 2s. 3d. per foot face for cut stone at the quarries; -all other prices for stone at the quarries, &c. to remain as previously allowed, and still retain 5 per cent. I received also a letter from Mr. Crawford on the same subject, but much more moderate in its claims; and, as the above are my views of the subject, I shall consider this letter as my reply to that also.

I am, Sir,

Your obedient Servant,

J. B. MILLS.

The Report of the Resident Engineer on the Claim of S. & W. M. Frazer was submitted, and read as follows :-

To

Jonas Jones Esq., &c.

SIR.

In reply to the 2d and 4th articles of the communication from Messrs. S. & W. M. Frazer, I have nothing to say, except that they touch upon matters, in view of the existing contract, beyond the powers of the Board. Concerning the 3rd article, I remark briefly, that at one point of the section there has been some very moderate slipping of the bank;—this, owing to the springs of the natural bank of the river, was thought might occur to some extent. However, up to this time, no embankment of consequence has run out of the proper limits: what little may have done so, is very readily computed. No new circumstances have arisen to make any change in the plan of the work, or the manner of proceeding, necessary. All that is wanting is to go on with the work and to perform the excavation of the Canal. But, for the satisfaction of Messrs. Frazer, (though I do not conform the excavation of the Canal. ceive it necessary,) I informed them that I would have an additional check upon the computation of

APPENDIX TO REPORT ON IMPROVEMENT OF St. LAWRENCE.

the embankment, by measuring the excavation which is made in procuring embankment. Also, I have informed them that they will not be required to get their materials from harder excavation or from a greater distance than was originally contemplated—Also, that, should the embankment slip much, so as to require more than was expected, I would not require it to be performed by them.

I have the honour to be, Sir,

Your obedient Servant,

J. B. MILLS.

The Report of the Resident Engineer on the Claim of Charles Kerr & Co. was submitted, and read as follows:—

Tc

Jonas Jones, Esquire, &c.

SIR

REFERENCE to the communication received by the Board from Messrs. Chas. Kerr

& Co. at the November Meeting, I remark-

1st. That their statement in relation to the alteration of the line on Section No. 3, is correct,—which was originally determined upon, and upon which circumstance was founded the disposition of the contract, as otherwise other tenders would have taken preference. The alteration increased the amount of surplus excavation to about 19,000 yards, instead of 25,000 as stated by Messrs. Kerr & Co.—(25,000 yards was formerly given to them as the probable amount of surplus excavation, but it was before the calculation was perfected.) Therefore, upon that amount only can they pretend to claim extra compensation. Independently, had the line not been changed, the very excavation which has been made in regular course, would have been made in procuring embankment, and the price which is paid for this excavation now, to wit, 6d. for excavation + 3½d. for taking it into emberisment = 9½d., is a fair price for the work, supposing it to have been without the Canal and taken only as embankment,—this earth being as convenient and near at hand, and nearer than much of the embankment obtained by them for this purpose without the Canal. In this opinion I am supported by four good and responsible original tenders, none of which have put the embankment on this section over 9½d. per cubic yard; but, upon so much of the excavation which is of a character not provided for in the contract and which occurs in consequence of the change, I had previously informed Messrs. Kerr & Co. that I should make an advance in the price.

2ndly. Some time previous to the application of Messrs. Kerr & Co. the question arose, Whether our levels through Brownell's Bay gav sufficient depth to the embankment?—consequently a careful examination was made, and an addition of two feet was added. Subsequently to said application, in company with Messrs. Kerr & Co. the examination was repeated;—but it was not discovered that further addition should be made to the levels. The amount of embankment consequent upon the addition of two feet was mainly returned at this December payment. A new bank of the height of the one at Brownell's Bay, say from 30 to 40 feet high, would settle from 5 to 6 feet. Some part of this

settling is likely to have been mistaken for the changing of the base of the bank.

I have the honour to be,

SIR.

Your obedient Servant.

J. B. MILLS.

The Report of the Resident Engineer on the Claims of Messrs. Cameron and H. McLeod was submitted, and read as follows:—

To Jonas Jones, Esquire.

SIR.

As to the charge made by Mr. John Cameron, early last summer, (I forget the date exactly,)—in company with Mr. Berford, an arrangement was made with Mr. Cameron to have a communication from the public road across his lot to Mr. McTavish's Quarry, where Mr. Crawford and the Messrs. McKays are procuring stone, by paying for the fences necessary to secure the crops, &c. Mr. Cameron appeared satisfied with the offer, and asserted that that should pay him for said communication. The fences are not yet made; therefore he ought not to ask pay for damages, as the intercourse; thus far, has been mainly through an old lane. Had this fence been made, and his other fences in good order, he certainly must have suffered very little on account of the quarrying ou Mr. McTavish's land.—When said fence is made, his claim may be about £15.

2nd. In pursuance of the understanding with Mr. Hugh Cameron, and according to the quantity

of stone already raised and taken away, he is now entitled to about £10.

3rd. On the charge made by Mr. McLeod the sum of £20 may now be paid.

Ordered That the amounts stated in the foregoing Report be paid to the respective claimants.

APPENDIX TO REPORT ON IMPROVEMENT OF St. LAWRENCE.

The Reports of the Resident Engineer and Agent on the claim of Messrs. Crawford & Simpson, were submitted, and read as follows:-

36

Jonas Jones, Esq., &c.

SIR.

Concerning the claim made by Messrs. Crawford & Simpson on account of the change of line on Section No. 27, I have nothing to append to my report of the 10th ult., except that the opening of the old shaft upon the bank of the river has proved that the position taken in said report is correct—that there was exhibited originally a fair sample of the excavation and the identical stratum of earth, with no variation beyond what occurs, and what may be expected to occur, in all strata of earth. It is very clear to me that no allowance can be made on said claims, unless the Board conclude to depurt from the contract, which would open the door to great and endless difficulties.

I am, StR, &c.

J. B. MILLS.

To the COMMISSIONERS for Improving the St. LAWRENCE.

My attention having been called by you to investigate the claim of Messrs. GENTLEMEN, Crawford & Simpson for damages sustained by an alteration in the original line of Canal at its debouche, by which the lock-pit is said to have been thrown into a more difficult excavation, I have given it my most careful consideration, and watched with much attention the clearing out and recutting of the old shaft upon the river bank, being that by which the tenders for the excavation in this neighbourhood were made. The result of my observation is, that it exhibits cutting of exactly the same material as most of the lock-pit, though by no means so inderrated as many parts of it. Distinctly from my notes upon Lock pit No. 6 as the excavation advanced, and also from the appearance of a new shaft sunk by Mr. Simpson, it seems that the change in the line was to the disadvantage of the contractors. Upon the line examined by persons tendering for contracts, Lock-pit No. 6 was located about 270 feet up the Canal, which 270 feet, according to the plan, had to be excavated 10 feet below the surface of the river. This would have increased the complained of excavation by the distance which the locks have been removed towards the river. It may also be remarked that this would have been inundated with springs, as has been shewn by the shaft sunk by Mr. Simpson. The machinery to raise this water, and the working of it, would not have been a very small item of expense, which has been saved by changing the location of the lock. Lock No. 5 was located about where Lock No. 4 now is. Upon that place the level between Locks 5 and 6 must have been carried where Lock No. 4 now is. up, so that the excavation of the whole distance (rather more than 200 feet) would have been 8 feet deeper, and the expense increased by 2½ feet, the average increased elevation in that distance.

The excavation in the bottom of Lock No. 4, as well as that of the section towards Lock No. 6, is hard; and I believe had it been sunk 8 feet deeper for that distance, which would have been necessary, the whole of it would have been the same as Lock-pit No. 6: so the alteration of the section must have been an immense saving to the contractors. Now Mr. Simpson says, he does not object to any thing in the section; that he met with no hard pan. I say the alteration saved him from going down to it. He only finds fault with Lock-pit No. 6. Mr. Crawford is contractor for the lock-pit; therefore the claim on account of it must come from him. Messrs. Crawford & Simpson are contractors for Section No. 27. As the two contracts are in fact held by the same individuals, if the Board should decide that they have sustained a damage in the lock-pit, it does not appear to me that there would be any injustice in setting off the advantage of the section against the disadvantage of the lock-pit.

Respectfully submitted by

W. R. F. BERFORD,

The Report of the Resident Engineer, relative to the work on Section No. 1, was read as follows :-

To Jonas Jones, Esq.

In accordance with the verbal communication made by me to the Board at the November meeting, relating to Section No. 1-also in view of the necessity of determining now upona definite plan of working this section, I beg to submit the following: From Station 56 (which is near the site where stood the lower stone-house belonging to Mr. Burns) to near the head of the section, I propose to move the line of the Canal from 40 to 50 feet (generally not more than 42). further into the bank of the river, than the line upon which our cross sections were first made. From Station 56 to near the lower end of the section, I propose to move the line from 35 to 40 feet (generally not more than 35 feet) further into the bank of the river than it, has been placed heretofore. I propose to set up this line immediately as a fixed line, and proceed in forming the prism of the Canal accordingly. You are aware that up to this time no line has been located on this section, which also is in accordance with the contract. But as the tenders for this work were based upon an assumed line, it will be proper to consider the disadvantage to the contractors by the above proposed fixed line. Therefore, the question is, what shall be allowed for the excavation beyond the original assumed line? In estimating the value of this work, I consider the character of the excavation to remain the same, and the change affecting the work only in respect to the distance to remove the earth. This change causes an increase of distance in the delivery of the earth excavated beyond the original assumed cross sections of the canal,—the mean of which is only about 20 feet. A half-penny would be a fair allowance for this increased distance; but I am disposed to say three farthings, making the price for the excavation caused by the change, 8d. per cubic yard. I propose this three farthings to apply to all the work caused by the change throughout the section. Should this proposition not be acceded to by the Messrs. Hervey, I have another communication to the Board on this subject.

I am, Sir. &c.

J. B. MILLS.

The Report of the Resident Engineer on the claim of Beeby & Shearer, Sections No. 7 and 8, was read as follows:—

To

Jonas Jones, Esq..

SIR.

Referring to the communication from Messrs. Beeby & Shearer, I remark briefly:

1st. That no assurances were, nor could be given, consistently, concerning the character of the excavation; and it is current among Contractors on public works, that the variations in the kind of

earth are at the risk of the person tendering.

As to the first article of said communication, we have a right by contract to require all stone to be removed entirely outside the Canal banks; and in this case they were wanted for other purposes. I had previously determined to allow 2d. per cubic yard for the increased quantity of embankment necessary on this account, which I think a liberal allowance. This amount will be 4050 yards, at 2d.—£33 15 0.

The 2nd item is a misrepresentation of the case.

On the 3rd item it will be proper to allow 9d. per yard on 373 yards.

On the 4th item no allowance can be made; therefore, on No. 7 will be allowed £33 15 0 +

13 19 9 = £47 14 9.

On the 5th item (Section 8) for the amount of stone piled, allow 2d. per yard; also on the amount of embankment necessarily made in substitution of the quantity of stone, allow as in Section No. 7, 2d. per yard.

No allowance can be made for the subsiding of the embankment; as in all cases, when work of this kind is taken from the hands of the Contractors, the embankment is in fact incomplete to a

much greater amount than occurs in the part of the work alluded to in said communication.

Respectfully, &c.

J. B. MILLS.

A communication from Messrs. Pierce & Co., renewing their claim, was read.

The Report of the Resident Engineer on the claim of H. Pierce & Co., was read as follows:-

To

Jonas Jones, Esq., &c.

SIR

I HAVE carefully considered the subject of the communication from Messrs. Pierce & Co., and the following is my view of the matter, which is expressed briefly, as I know not that it would serve any important purpose to remark particularly upon the items which form the ground of

their complaint.

The difficulties under which they have laboured are of a contingent character, and all of them of a kind to which contracts for work of a similar nature are liable. The extra expense at the quarry is of a little different nature, as it was one against which they had to contend throughout the whole course of their work. The result, however, to which I have come does not originate wholly on the ground that they have a positive claim; at the same time I think it not wholly unreasonable: therefore recommend, on view of the whole case, to divide the extra expense, to wit, £375, and pay them £187 10s.

Resolved—From the statement of the Resident Engineer, that in his opinion the difficulties complained of would in a great measure have occurred whether the foundation had been completed or not; and having heard the contractors are of opinion that the extra allowance made by the Engineer is fair and reasonable, and a sufficient indemnification for the delay in the prosecution of the foundation, as complained of in their memorial.

APPENDIX TO REPORT ON IMPROVEMENT OF St. LAWRENCE. 38

A communication from Messrs. Simpson & Co., renewing their claim for damage in consequence of alterations in the line of Canal, and of the location of Lock No. 6, accompanied with sundry certificates and affidavits in support of their claim, was submitted and read.

Ordered-That Messrs. Simpson & Co. be requested to submit to the Board, during its present session, a specific claim for the damage complained of.

The claim of Messrs. Beeby & Shearer, and the Resident Engineer's report thereon, were considered.

Moved by Mr. Vankoughnet,—That the sum of Two Hundred and Fifty Pounds be advanced to Messrs. Beeby & Co. on account of their contracts:—Which was carried.

Yeas-Messrs. Nonton, SHAVER, VANKOUGHNET. LONGLEY.

Nays-Messrs. MACAULAY, JONES.

An application from S. Pettibone & Co., the contractors on Section No. 4, for permission to carry on the work on that section during the winter, was submitted and read.

Resolved-That from the Report of the Engineer that the work on that section cannot safely be proceeded upon, the application cannot be complied with.

An application from Messrs. Kerr & Co., to be allowed the per centage retained on Section No. 3, it being nearly completed, and the work now suspended by order of the Engineer, was submitted and read.

Ordered-That Messrs Kerr & Co. be paid the amount retained upon the estimated work performed on Section No. 3.

A communication from Messrs. R. & W. Hervey, relative to the work on Section No. 1, accompanied with sundry documents in reference thereto, was submitted and read.

The following communication from Messrs. Simpson & Co., in compliance with the instructions of the Board, was submitted.

CORNWALL, 9th September, 1835.

GENTLEMEN,

In compliance with your request of last evening, the following is a statement of the advance we claim as damages for the alteration of the line of Canal on Section No. 27:

29,000 yards of Lock-pit No. 6-1s. per C. yard advance. 8,000 yards on section above Lock No. 6-6d. per do. do.

We would observe that although this sum will neither pay our expenses, nor be a sufficient compensation in our opinion for the difference between the present and the original line, still we are willing to take it; and if you will not fully decide on it at present, we hope you will advance us such a sum as you may judge proper, as we are in great difficulty at present for want of means to relieve us from our present embarrassment in this place.

We are, Gentlemen,

Your obedient Servants,

JAMES SIMPSON & CO.

Moved by Mr. Norton,-That the sum of Five Hundred Pounds be advanced to Messrs. James Simpson & Co., on account of their contracts for Section No. 27 and Lock-pit No. 6.

> Yeas-Messrs. Norron, SHAVER, LONGLEY, VANKOUGHNET, MACAULAY.

Nay-Mr. JONES.

APPENDIX TO REPORT ON IMPROVEMENT OF St. LAWRENCE.

At a Meeting of the Commissioners, held at Cornwall, on Tuesday, 22d December, 1835-

PRESENT.

JONAS JONES, President,
JOHN MACAULAY,
PHILIP VANKOUGHNET,
HIRAM NORTON,
GEORGE LONGLEY,
PETER SHAVER.

The minutes of the preceding Meeting were read.

The Report of the Engineer relative to the alteration of the line of Canal and the location of Lock-pit No. 6, was submitted, and read as follows:—

To Jonas Jones, Esquire.

SIR,

In consequence of some discrepancy between my recollection, plans, and field. notes, relating to the exact position of Lock Stakes Nos. 5 and six, upon the original line, at the time the line was examined for tenders, I shall not insist upon the view taken in this respect in my letter to you at the November Meeting, though my recollection and the ground-plan bear me out in that view of the matter, as will be seen on reference to the ground-plan. It was my intention to have sufficient distance between the tail bay of the lock and the bank of the river for a bont of the largest class to lie. In this connexion I beg leave to say, that it is not my wish or inclination to maintain an opinion because I have previously expressed that opinion, or because a former estimate is concerned in the supporting of such opinion. I endeavour to hold myself open to conviction; and whenever I find myself in error in judgment or opinion, I shall not hesitate to acknowledge it.—(I will here remark, that Mr. Berford's views of the relative position of the locks on Section No. 27, as communicated at the last meeting, could have been founded only upon representations from myself or my assistants; therefore he cannot be responsible for misapprehension in this respect.) I shall now consider locks Nos. 5 and 6 on the original line to be, in reference to the bank of the river, in the same circumstances and at the same distance relatively, as they are on the present line; -so say our field-notes. Now, Mr. Simpson admits that he has no hard pan, or claim for excavation, above Lock-Pit No. 6. If he has no claim for excavation above Lock-Pit No. 6, he can have no claim for that part of Lock-Pit 6 which is upon the same level with the work above it,—it being of precisely the same character. But, independent of Mr. Simpson's admission, we have proved by a recent shaft that the excavation upon the original line above Lockpit 6 is the same as upon the new line; therefore his claim in this respect cannot be sustained. Mr. Simpson's claim is reduced, consequently, to the excavation of that part of Lockpit No. 6 which is below the level of the Canal adjoining and above this Lockpit. This excavation amonnts to 12,646 cubic yards. As to the propriety of the claim upon this part of the work, my opinion remains the same, in view of the contract, that no allowance can be made upon However, if the Board please, in considering this item, I will withdraw from the situation in which I have been put by the hand and seal of all parties concerned, as the sole umpire, and consent, in this instance, by way of compromise—that they allow Mr. Simpson what they may think proper per cubic yard, extra. I wish it distinctly understood that I intend not to repeat this so long as I hold my present situation.

Of the above amount of excavation, 3000 cubic yards yet remain not excavated, it being below Lock 6. Therefore the number of yards now to be considered is 9,646; and, when the remainder is

excavated, it must be paid for at the same rate.

I am, Sir,

Your obedient Servant,

J. B. MILLS.

Cornwall, December 21st, 1835.

Ordered-That Messes. Simpson & Co. be furnished with a copy of the above Report.

The Report of the Agent upon a re-consideration of the claim of Crawford & Simpson was submitted, and read as follows:

To The COMMISSIONERS for Improving the ST. LAWRENCE.

GENTLEMEN,

In considering the merits of Messrs. Crawford & Simpson's claim for further remuneration for the excavation of Lock No. 6, I was led to believe that the advantages to Section No. 27, growing out of the alteration of the line, very much overbalanced the disadvantages to the lock-pit. As the stakes, marking out the old line and site of Lock, had all been displaced or removed the opinion submitted to you in my report of the 7th ult., was based upon information obtained from

40

the Engineer Department. Since then I have been again upon the ground, and have seen the original line re-traced, and the different station stakes set up; by which it appears the location of Lock No. 6, upon that line, was not, as I supposed, 270 feet up from the river, but about the same distance that it is at present. This of course does away with that part of my opinion where I say the change must have been of immense advantage to the Contractors.

Very respectfully,

Your obedient servant,

W. R. F. BERFORD.

The following communication from Mr. Mills, the Acting Engineer, relative to the powers vested in him by the terms of the Contracts, and his determination with respect to future operations, was submitted and read:

To

Jonas Jones, Esq., 9.c.

SIR.

The relation in which I stand to the Board of Commissioners, also the position I hold by the hand and seal of all parties concerned in the contracts which have been executed for the

construction of this Canal, I hope will render the following remarks not impertinent.

In all cases in which I have been acquainted or concerned, both upon Canals and Rail Roads, and I believe upon all works of the kind, both in Europe and America, the Engineer of such works is the sole umpire in contracts; he only settles differences and makes allowances. In cases where the differences are not thus settled, then, in works of the Government, they become matters of Legislative enactment; and in private works the laws of the country decide the case. A Board of Commissioners for a public work, and a Board of Directors for a private one, do not make allowances, except when recommended by their Engineer. In the prosecution of the Canal, we have arrived at a stage when many difficulties and differences are occurring; for the correction of which, the article and principle alluded to was provided and laid down in the contracts. It happens that I am at present the Engineer, and consequently the umpire (however unworthy) on this Canul, and you have agreed by your contracts that I shall be so, and that my decision shall be final in any differences; so have the contractors agreed. My view of the case is, that the Board must maintain and support me in the performance of my duties in my official capacity, being an officer of their own choice and appointment. Respect for myself, and the profession in which I am engaged, prompt me to speak out, and to ask support and countenance of the Board of Commissioners. I had supposed that I might look with confidence to them for their aid and their support in every department of my duty, so long as I have the honour of serving them, and so long as my conduct is consistent with the service. Farther I ask not, neither could I expect, your support; but if the Board of Commissioners think that they have improperly reposed confidence in me, and that I am not duly qualified for the exact place which I now hold, I now inform them that I will relieve them from embarrassment on this account, and instantly give place. But so long as they choose to employ me in my present place, I most respect. fully beg that there may be no interference in my duties, or in powers which are committed to me exclusively.

I have given this subject much consideration, and regret that these remarks are necessary; but I must be allowed to particularize. At the last meeting an allowance was made on two contracts-Locks Nos. 5 and 6, and Sections Nos. 7 and 8: upon the former, before the question was fully investigated and understood; upon the latter, in direct violation of contract; und in both instances contrary to my opinion. This, I think, is treating your own officer and his opinions with contempt; at the same time assuming a power which is not sustained by contract or practice. Complaint has been manifest that the ultimate amount of contingencies would be swollen to a great extent. If the precedent established at the last meeting is to be followed up, surely they may! Extra considerations which may be thought proper over and above the estimate and opinion of the Engineer, and the terms of the contract, ought to be held in reserve until the completion of the Canal. This is common, and

has been practised both in New York and Pennsylvania.

Much more might with propriety be said upon this subject, but perhaps I have said enough for the present.

I am, Sir,

With much respect,

Your obedient Servant,

J. B. MILLS.

1. 20 . Oct

Resolved unanimously—That the Resident Engineer is the umpire between the Board and Contractors upon any claims for damages or allowance for extra work made by such contractors; but that the Board nevertheless will assume the right of dissenting from the decision of the Engineer by making allowances beyond those admitted by him when they shall think it right and expedient to do so.

Ordered-That a copy of the foregoing resolution be handed to Mr. Mills.

The Report of the Resident Engineer upon the estimate for Lock-pit No. 6, was submitted, and read as follows:—

 T_0

Jonas Jones, Esquire.

SIR.

As it is common that the excavations of lock-pits are calculated from the original surface of the ground, and all performed at one price, Mr. Simpson has, through inadvertence, been paid the full lock-pit price (1s. per yard) for excavation from the surface of the ground to the bottom of the pit. According to contract, the price for the lock-pit excavation applies only to the excavation which is below the level of the bottom of the Canal adjoining and above the lock-pit. The excavation which is above this level is at the price of the section upon which the lock-pit is located, which upon Section No. 27 is 9d. per yard, making 3d. difference. The same with Lock-pit No. 5. The number of yards upon which by mistake he has been paid this 3d. is 27,566=£344 11s 6d. This calculation, in view of circumstances, I should be willing to allow, as it is unusual to make this distinction; but independent of this, whatever the Commissioners see fit to allow as extra, should be reduced by this £344 11s 6d.

I am,

Sir,

Your obedient Servant, -

J. B. MILLS.

Cornwall, 31st October, 1835.

48 2 178

An application from Isaac Hardy, (one of the contractors for Lock No. 1,) to be allowed for Cement delivered on the works in June last, was submitted and read.

Referred to the Resident Engineer.

An application from R. & W. Hervey, relative to a contract for drawing Stone on Section No. 1, was submitted and read.

Referred to the Resident Engineer.

The following communication from Mr. Mills on the subject of the Resolution, a copy of which was this day handed to him, was read:—

To

Jonas Jones, Esquire.

SIR.

Ar present I think it unnecessary to say any thing in reply to the resolution of the Board just now passed, touching the Resident Engineer, but choose to reserve my views until future experience dictates to me the course to be pursued.

I am.

Sin,

With much respect,

Your obedient Servant,

J. B. MILLS.

Cornwall, 22d December, 1835.

Moved by Mr. Macaulay,—That Messrs. Norton and Longley do form a Committee to examine the accounts of the Secretary, and ascertain the accuracy of the statements prepared for the Legislature.

BEFORT

COMMISSIONERS

ON THE

Improvement

OF THE

RIVER SAINT LAWRENCE.

BY ORDER OF THE HOUSE OF ASSENBLY.

February, 1836.

REPORT

On the most eligible route for a Canal between Lake Simcoe and the Rice Lake, and on the practicability and expense of connecting these waters-by order of His Excellency Sir John Colborne, K.C.B. &c. &c. &c.

By N. H. BAIRD, Civil Engineer, M. I. C. E. L.

DECEMBER, 1835.

REPORT.

To His Excellency SIR JOHN COLBORNE, K. C. B. Lieutenant Governor of the Province of Upper Canada, and Major Report of N. H. Baird General commanding His Majesty's Forces, &c. &c. on the practicability on the most eligible route for a Canal between Lake and probable expense of connecting Simcoe and the Rice Lake, and on the practicability Lake Simcoe and Rice Lake by canal. and probable expense of connecting these Lakes.

By N. H. BAIRD,

CIVIL ENGINEER,

& M. I. C. E. L.

MAY IT PLEASE YOUR EXCELLENCY,

THAT in accordance with your Excellency's commands, conveyed to me in Lieutenant Colonel Rowan's communications of the 29th May and 16th June last, and in the spirit of the particular instructions conveyed in the latter, in conformity with the Address of the House of Assembly of date 16th April last, viz:—"To examine the most eligible route for a "Canal between Lake Simcoe and the Rice Lake, by a series of running Preparations for "levels, and to report to your Excellency, for the information of the House Survey." " at its next Session, respecting the practicability and expense of connect-" ing these Lakes."

I have, in consequence, the honor to state for your Excellency's information, that upon the 18th day of June last, having completed my preliminary arrangements, in providing proper assistance and canoes, in which I found more difficulty than I anticipated, and having engaged the Mr. F. P. Rubidge services of Mr. F. P. Rubidge, Deputy Provincial Surveyor, for the sur-engaged as Deputy veying department, I proceeded to the inspection and examination of the Surveyor. country between Rice Lake and Lake Simcoe, conceiving it more in order to follow up the route from the Bay of Quinte, as detailed in my former Survey proceeds up report to your Excellency on the proposed improvements on the River towards Lake Simcoe. Trent, in 1833, than to reverse, and commence from Lake Simcoe—the result of which inspection, levels, survey, &c. I shall endeavour, with as much perspicuity and brevity as the nature of the important subject will admit to lay before your Excellency, assuming, although not expressed in my instructions, or in the Address from the House, the same scale of navigation as that reported on for the improvement of the Trent, viz. for locks 134 x 33 x 5 feet water as the data upon which to proceed; accordingly commencing from Rice Lake, into which the navigation must be understood as made available by the requisite operations formerly on the Trent, 134 x 33 x 5 m. The proceed and estimated, and for perspicuity and reference sake shall divide Route divided into the whole route into five sections, commencing from the Rice Lake, thus: five sections.

2 No. 12. Section 1st. From Rice Lake to Peterborough, 2144 2nd. Peterborough to outlet of Clear Lake, ... 1434 3rd. Outlet of Clear Lake to Bobcaygean lock and rapids, 3148 4th. Bobcaygean to Balsam Lake Portage, ... Balsam Lake to Lake Simcoe, 1640 si Total distance from Rice Lake to Lake Making in all, Simcoe. With reference to section No. 1, the first obstacle presenting itself Section 1st. is the bar at the outlet of the Otanabee River, over which, in some seasons, at lowest summer water, there is not more than eighteen inches; from this point of difficulty to within half a mile of Peterboro', or at Whitlaw's Rapids, a distance of 21 miles, the river presents a fine available stream for moderate sized steamers, with the exception of three Obstacles to improvetrifling obstructions, as shewn in the accompanying plan and section, viz-Danger Field, Robinson's Island, and Yankee Bonnet Shoals, over which, at lowest summer water, 18 inches will be the utmost, and would not even have reached that but for the exertions made last summer, or summer before, in removing the round bolders from the channel, and placing them in heaps or piles, out of the fair way, by a grant (I understand) from the Provincial Parliament, laid out under Commissioners appointed for the purpose, and which in so far as such partial improvements go, appears Whitlaw's Rapids, to have been a benefit to the navigation. The next obstruction, in rota-2 ft. 9 in fall. tion, is the Whitlaw's Rapids, a pitch of about 2 feet 9 inches (2-9:) at this point considerable expense has been incurred, in clearing the bottom from bolders and in forming buttresses therewith to contract and deepen the bed of the river, and which seems to have so far succeeded; but, at the same time, the benefit seems to have been counteracted on the other hand by the increase of current, which, as a matter of course, the This Rapid overcome contracting the channel has had the effect of creating, although not so great by Steamer Northumberland, as to prevent the steamer Northumberland, a twin boat of particular construction, and drawing very little water (say 2-6,) laid on that route by individual enterprise, to surmount at a moderate pitch of water, when she readily gains the extent of the navigation of the Otanabee River in its present state, in the basin immediately below the town, and at the foot of the 9 mile rapids, having surmounted with ease a small ripple of a few inches difference of level, at the narrows between the Little Lake and upper bay. Thus terminating the first section of difficulties on the route, Difference of level viz. the bar at the mouth of the river, Danger Field, Robinson's, and between Rice Lake and Peterboro,' 4 ft. Yankee Bonnet Shoals, with Whitlaw's rapid, and small rapid above, making in all, from Rice Lake to Peterboro, a difference of level of 4 feet 6 inches.

2nd Section.

Difficulties to he encountered not triffing.

Rise of water, 147 ft. 6 in.

Hall's Mills.

Read and fall 12 ft. 7 eight-tenths feet.

The next and more serious obstruction to the navigation of the Otanabee River, presents itself prominently in a series of uninterrupted rapids and chutes from Peterboro' Bay to above Herriot's mill, in Douro, and into the now dead water of Katchiwannoe Lake, a distance of 91 miles, and rising no less than 147-6 feet odds, on which portion of section 2nd are situated, above Peterboro' bridge, Hall's mills, built for the use of the settlement by Government some years ago, taking the water from the river above the mill by a very long aqueduct, and by the construction of a dam across the river, as shewn upon the accompanying detailed plans, having a head and fall af 12-7% feet. This dam has the effect of sending the water as far back as point A on the plan-from thence to the tails water of Stevenson's saw mill, the river preserves its general character of rapids and swift water, and generally deep, say from 3 to 4 feet; above Stevenson's Saw Mill. this point is situated Mr. Stevenson's mill dam, of rude construction, but it is presumed sufficient for all the purposes required, making a head and

fall of 2-7 feet, and throwing the water as far back as point B on the 2-7 feet. plan-from which to the next artificial obstruction to the river, the same characteristic of rapid and chute prevails, until reaching Lee's mill-dam Lee's Mill Dam &c. and works, at which place a dam, on somewhat more substantial form, and principle of construction, affords a command of 13-170 feet of head Well constructed. and fall, and backs the water, with the exception of a slight current, as I two-tenths feet. far as point C, at the foot of Mr. Reid's clearance; from the mill pond, it of head and face. is worthy of remark, that the water has been conducted scientifically by the late Mr. Lees along an expensive and well constructed canal to his Mr. Lee's improvemill, as shewn on the plan, and being somewhat through rock, must have ment scientifically cost a considerable amount—this work will be more particularly referred to when treating of the improvement.

From point C. on the plan, or from the head of Lee's mill pond, the river presents one continued series of rapids and chutes until reaching the way, but affords dead water of Katchiwannoe Lake. The general character of the banks, good materials for high and rocky, and well bedded, affording excellent materials for lock-Good lime stone age, &c. being of a good compact limestone.

From the detailed plansaccompanying, from actual survey, a more Best idea of the river correct idea may be formed of the general character of the river than any may be gathered attempt at description could convey, while at the same time the longitu-, from the accompanydinal section shews the continued rise, with the general depths of water, as found at the time of inspection.

From the foot of Herriot's rapids (on which an excellent saw mill is Herriot's rapids. in operation, and a grist mill in progress of being erected) 8 feet-10-3 Rise 8 feetof rise carries into the mill pond dead water, upheld at that level, say 3-5 above Peterboro Bay, by a short substantial dam, as shewn 142 feet 3on the plan and section, and backing the water over the former rapids Peterboro' Bay into Katchiuwannoe Lake, at the lower extremity of which a shoal presents itself, an obstruction to the requisite navigable qualities, but of short duration. Next in order, and the only obstruction to the navigation on the 2nd section, is the rapids at and opposite Young's house and mill, Mr. Young's mill. and the artificial obstruction of a dam thrown roughly across the river by Mr. Young, for the use of a very complete common principled grist mill, made to drive two runs of stones, with a total head and fall of only 3 feet. Total head and fall and during the particular period of my inspection, had only 24 inches, At present, only 24 and affords an instance of what *properly* applied power may produce, inches, with a due regard to economy of water. By the accompanying plan it will be seen the enterprising proprietor has spared no pains in the construction of an aqueduct, &c. through a stony stratum to gain his end; as to the expediency or propriety of his throwing a dam across the river at the particular spot he has, will afterwards be considered in this report, although it would appear to have materially benefited the navigation into the outlet of Clear Lake, by drowning the rapids thereon and giving sufficiency of water over them, thus terminating the second general section of the route. increase in the contract of th

The next portion (forming the 3rd section) extends from Young's 3rd section. rapids to Bobcaygean, a distance of 314 miles, rising 38-4 feet, and Rise, 33 feet taking in its course Clear and Stoney Lakes, Peninsula Falls, Deer Bay, and Burleigh Chutes; and Buckhorn's rapids or Hall's mill; with the navigation of Buckhorn and Pigeon Lakes, with their shallows, &c

Then to resume at Young's milk rapid, the navigation, inconsequence Young's mill rapid. of the dam already constructed is complete; with the exception of shing place of 5 feet water contine outlet of Clean Lake until reaching the Peninsula Balls, through the rather increate inavigation of Clear Lake, among its rocky islands and sunken rocks, and along the splendid navigation of Stoney Lake until sreaching the headothereof, in the spacious

Serious difficulty.

Granite in abundance, of good quality for working.

Rise, 2 feet-2, and 6-10ths.

Rise, 8 feet-2, and 6-10ths.

4th Section. 26 f miles. Rise 34 feet.

Rise at Bobcaygean Rapids, 5 ft. 5 in. 4 pts.

From this to the outlet of Sturgeon Lake the money expended is altogether useless, owing to some unaccountable oversight.

Falls, 25 feet-8, and basin into which the Falls disgorge themselves with boisterous rapidity from the several ragged and iron-bound outlets. To surmount the obstacle at this point (rise 25-810) seemed at first, and even on mature reflection and inspection, to be a work of somewhat of a serious nature, from the particular quality of the obstructions in the several openings and outlets and ravines of which the mass of adament obstruction is composed, when after much search, a small channel, emitting the least quantity of water of the whole, afforded an opportunity of carrying the navigation over an ascent of 25-8-3, and into the water connecting with Deer Bay, and at which point the dreaded iron-bound nature of the rock turned out to be the finest workable granite—the only instance of the real granite, in any quantity, which has come within my observation in either of the Provinces, with the exception of Buckhorn rapids, where it also exists; by the general plan the position of the lockage can be seenconceiving it unnecessary, so long as I had a correct section of the ravine, to have a detailed plan of the whole, particularly as such could not be properly done till winter, from the very intricate and insulated nature of the several islands, bluff points, &c. Having gained the waters of the bay above, the next obstruction occurs at the outlet of Deer Bay, as shewn on the plan, where a rise of 2-2,6 presents itself in a smart wicked chute or jump, in a short distance, but affords an excellent opportunity for improvement in the well-protected bay below, and advantageous ravine Having overcome this obstacle, a small chute and low ground adjoining. again interrupts the navigation, of 18 inches, as shewn on the longitudinal sections of the route, until reaching Buckhorn rapids, on which are situated Hall's mills, (and which point forms a particular feature in the line of communication, as commanding and regulating the whole surfaces of Buckhorn, Chemong, and Pigeon Lakes, up to Bobcaygean, 151 miles,) at which place a difference of level occurs of 8-215, to be overcome, as afterwards described—and carry the navigation to Bobcagean rapids and locks, thus terminating the 3rd sectional division of the route, from which to Balsam Lake Portage, a distance of 261 miles, and rising 34 feet, the 4th section extends, comprehending the rapids and works at Bobcaygean, the shallows from thence to Sturgeon Lake, the works at Cameron's Falls and Balsam Rapids, and which present the following obstructions, namely—at Bobcaygean a rise of 5 ft. 5 in. 4 pts. and a continuation of rapid of considerable extent, together with shallows, until reaching the outlet of Sturgeon Lake, and which has been attempted to be surmounted by the construction of a lock and a dam at considerable expense, by a Provincial grant, but which has not as yet been available, by some unaccountable oversight in three circumstances, from the level of the lower sill being equal to that of the lowest water in Pigeon Lake, in place of being the requisite Canal water depth below the same, say 3 feet for these purposes—from the dams above not being sufficient to retain a sufficient head of water over the shallows above, and lastly, from the loose and open nature of the cut from the above to the lock, not retaining the water for want of proper means being used in the construction, allowing the water to escape in the many crevices and open chasms which the nature of the ground presents, thereby rendering the works at this place entirely uselss, without an adequate outlay to remedy the evil.

Ubstruction at Cameron's Falls.

24 ft. 10 2-10ths.

Two Locks and guard Lock necessary here.

The next and most serious obstruction to the navigation on this section occurs at Cameron's Falls, up to which point, after overcoming the difficulties at and above Bobcaygean, a most excellent line of navigation, in deep waters of Sturgeon Lake presents itself, when a rise of 24-10-2 occurs, from the waters of the deep navigable inlet from Sturgeon Lake to the foot of Cameron's Falls, into the still water of Cameron's Lake, rendering the adoption of two locks and guard lock at a most convenient

site, as shewn on the plan, necessary. None who have ever witnessed the scenery of Niagara Falls but must at once have the impression forced miniature) to the on their minds of a resemblance in miniature, in Cameron's Falls—the Falls of Niegara. approach from Sturgeon Lake, between the high rocky banks, in their perpendicular grandeur, until instantaneously the Fall presents itself in the same horse-shoe form, with a curtain similarly arranged, affording behind it, from one shore to the other, a promenade. A commencement has been made by the enterprising proprietor, on an extensive scale, indicative of the rise and progress of a place of importance, and which, doubtless, its central situation must insure; in addition to a saw-mill, preparations are making for the erection of a grist and other mills. An inn of by the proprietor. unusual extent and accommodation for a new country, has just been completed, together with the proprietor's own and several other houses, store, &c. forms quite a village in a wilderness.

Leaving Cameron's Falls, the route continues somewhat shallow up the river, (until reaching Cameron's Lake, which is in general very deep,) but which, by the operations at Cameron's Falls, will readily be overcome, and thus carry the navigation over the shallows, foot of the Balsam Rapids, opposite the head of the Fork Island, and at which place the Risc, 2 feet 8 inches rapids may be said to commence, and although rising only 2 ft. 8 in. into Balsam Lake. into Balsam Lake, present a very protracted and serious interruption, (compared to what the first impression did import,) as shewn in the Bulsam Lake 227 detailed plan and section accompanying, and this accomplished, carries and 2.10ths feet above Rice Lake. the navigation into Balsam Lake, 227,2 ft. above the Rice Lake, and the summit level of the communication from the Bay of Quinte to Lakes 592 feet above the Simcoe and Huron, 592 ft. above the Bay of Quinte, and 118 ft.. 6 in. Bay of Quinte. above Lake Simcoe. The surface of Balsam Lake I purpose holding lis feet-6 above permanently near high water mark, for the purpose of giving sufficient water over the bar at the outlet of the Lake, head of Balsam rapids, as also to afford better access to the shore at the Portage, or the point where the cut of junction with the Talbot is intended to leave, besides saving 5th Section. many thousand pounds in excavation—thus terminating the 4th section. Balsam Lake to and commencing the 5th and last to Lake Simcoe—descending 118 ft. Lake Simcoe, 5 in in a total distance to the Lake of 16 miles, or to the point of the Total Distance, junction with the Talbot, discharging itself into Lake Simcoe, 13 miles.

In attempting a description of the obstructions on the section, I may commence by remarking generally that they are two-fold :- in the Talbot River, on the one hand, in its course holding out one line for consideration, in contra-distinction to carrying a continuous navigation over a most Line of 13 1 miles favourable country of 13 miles, until intersecting the Talbot River in very favorable. its more developed character for navigation, within 23 miles of Lake Simcoe, and in either affording sufficient scope for the duties of the Engineer.

The Talbot River in its southern branch, taking its rise in a swamp Talbot River. to the west of Balsam Lake, continues winding in a very narrow and serpentine course for about 3 miles, until reaching the Forks or junction with the north branch, at which point the river assumes a respect-able navigable appearance for batteaux, and continues so, but in a very serpentine course, until reaching the Long Portage and head River loses itself here of the Lost Channel, and continuation of Dry-bedded River, where the water finds its way under ground, and makes out "to day" again at about a mile below, from which the river continues as formerly described until reaching the Crooked or Wicked Rapids, of about half a mile in extent, along which we had great difficulty to float the cances, with the baggage and provisions out, which brings the river into what may be called the commencement of the navigable portion, having at this point, Descent to this point by three successive rapids; descended about 55 ft. From this point to about 56 feet.

the first out Board and individual sum established and an establish discount

Summer portage

Navigation here might easily be made good. the Summer Portage, on the plains, or near the head of the next rapids and flood wood interruptions, the river preserves a navigable character, being from 70 to 100 ft. in width, and from 4 to 5 ft. in depth, with the exception of a small interruption, about 4½ miles from the Portage, of rocks and gravel in form of a shoul and rapid, which might easily be overcome.

Improvement of Talbot River really available here, altho' at first sight doubtful.

From this point (the Summer Portage) the rapids commence, and continue, interspersed with short stretches of still water and jambs of flood wood, until reaching the termination of any thing like serious interruption at point T. on the plan, from which, downwards, may be reckoned the really available portion of the Talbot River for improvement, and which, from the detailed plan accompanying, made out from actual survey, at much inconvenience to the party, will appear to be of a nature somewhat doubtful in its present state—the radii of the survey being such as to render the ready navigation by the description of craft intended to be used on this inland communication at least difficult, although the elbows may be materially relieved of their acuteness, from which point until reaching Lake Simcoe no material difficulty occurs, with the exception of flood wood, but what lockage will easily overcome.

Difficulties may be easily overcome.

Mouths of the River.

Having reached the mouths of the river along 8, 10, 18, and 20 ft, water for the last 3 or 4 miles, as shewn in the plan, the progress into the lake is impeded by the existence of a gravelly and sandy bar of considerable extent into the lake, as per plan and section, affording at low water not more than 2 ft. 6 in. in the fair way, but which can be removed and permanently secured against filling up by the construction of piers properly thrown out.

Capabilities of the Talbot River. Of the capabilities of the Talbot, from its confluence with Lake Simcoe to the commencement of the rapids, there can be but one opinion, although that is in some degree shackled from the very circuitous nature of its course, making, for instance, a distance by following the river, of 30 miles to Balsam Lake, whereas by a direct line from the present Indian Landing, or rather from a more convenient basin one-eighth of a mile above, the distance would be reduced to $16\frac{1}{2}$ miles, thereby not only avoiding many inconvenient turns, as shown in the plan, but shortening the distance greatly, say $3\frac{1}{2}$ miles.

The difficulties having been mentioned, the Engineer enters into a detail of the measures necessary to overcome them.

Having thus endeavoured to lay before your Excellency the difficulties and obstructions to be overcome, in order to render what I conceive, after mature deliberation, the most eligible route for a water communication available to connect Lake Simcoe with Rice Lake; I shall, in order as they occur, suggest such operations as I consider will be required to accomplish the end in view.

Chemong or Mud Lake,

very shallow.

Course pursued.

But prior to entering into the details of the route proposed for adoption, it may not be out of place to remark, that in gaining the extremity of the 1st or lower section, viz. Peterborough Bay, the attention was naturally called to look around for an outlet-appearances indicating that the navigable qualities at that point ceased. When my attention was naturally drawn towards the ultimate object of my search—the direction of the head waters—Chemong or Mud Lake naturally attracted attention however forbidding its appearance in the present state at low water, through which a canoe can be paddled but with difficulty, and the general report as to its inadequacy to any thing like navigable purposes, nevertheless, I resolved on trial, and steering my course in that direction, following a natural ravine and apparently low ground, leaving the bay at the convenient basin, as shewn on the plan, and passing through chiefly, the unlocated town lots of Peterboro'-crossing the communication road at Mr. Dixon's gate, and thence bending northward in easy curvature through convenient ground, until reaching by easy ascent the height of

land between Peterboro' and Chemong Lake, in the shortest feasible route between the two waters which afterwards, contrary to my expectation, on applying the level, I found not to exceed 50 feet above Chemong Lake, thereby offering a probability of the internal or cross-the-country line, being worthy of attention; still as the Otanabee, in its circuit, had to form the criterion of competition, I resolved not to abandon it without an' examination, particularly as the land route did not hold out any very flattering inducements to at once adopt it; however, when on the ground, and as the country afforded an excellent opportunity of ascertaining the gross difference of level, and at the same time afforded data for a sectional view of the country for whatever purposes its capabilities afterwards might Chemong Lake to be deemed susceptible, I instituted a set of levels across from Chemong Peterbore' Bay. or Mud Lake to Peterboro' Bay, and found I had the quantity of 189 ft. 189 feet difference. of difference of level or lockage to contend with, and of course to be encountered, in the several obstructions in the Otanabee, in its elbow Difference much course, a difference of level, which somewhat staggered my confidence, viously supposed. being led to believe that the difference (of level) was inconsiderable, as stated in my report on the Trent; but having soon thereafter an opportunity of proving those levels by a series from Chemong Lake, down through Buckhorn and Peninsula Falls, and down the long rapids of the Otanabee to Peterboro', putting the matter beyond all doubt, which led to the idea (taking into account the probability of a proportionate increase on the several remaining sections of the route from the original conjectures on the subject) of addressing the Interim Report, which I had the honor of handing your Excellency personally, and thereon receiving your Excellency's further instructions, which the importance and consideration of the subject required.

I would further remark, that in consequence of the tenor of my the supposed eligi-instructions, and from circumstances occurring since the issuing of the route from these address, and in obedience to your Excellency's commands, originat-waters to the load ing from such circumstances, viz.—"The reputed eligibility of a route Canal, on the Crow the existing to connect these waters by way of Stoney Lake with Belmont. "existing to connect these waters by way of Stoney Lake, with Belmont, directed his attention "Ball, and Crow Lakes, and thence with the Rideau Canal head waters thereto. " on the Crow River,"-

In consequence of

In consequence, and with the view of leaving no room to doubt as to: the most eligible, I inspected the reputed route, in a most arduous and unsatisfactory exploration of that country, in its iron bound coasts and No practicable route islands, continued rapids and vexatious portages, over hill and dale-could be found. occupying myself and part of my hands nine days, serving only fully to establish the impossibility of finding a practicable route in that direction for a canal communication.

rateli kuriki 1966 ng palangrési al langan mitangga katabba pancisa di

From Crow Lake, which I reached by the several continuous rapids and blind portages described by way of Belmont and Ball Lakes, and finding no prospect of reaching the head waters of the Rideau from either of those points, although from the cursory knowledge. I have of the direction of the Ridean's head waters, I had all along been convinced of the probability of finding a choice of communication from thence to the upper country in every lakes, although at much sacrifice of lockage, but not in the direction direction, the reported to your Excellency; I reached the Marmora Iron Works, and to be the best, if not from thence descended the Crow River, and from thence by Heely's Falls, the only practicable on the Trent—fixing beyond doubt, that the Otanabee was the most proble, and in all likelihood, the only practicable route for the object in view.

Having thus described the endeavors to establish the most eligible daying been shown route, I now come to lay before Your Excellency the operations required ceeds to the operaon the different sections to render them available for navigation, com- tions necessary to mencing in rotation, as formerly, from Rice Lake; and under section 1; effect

Dam at Asphodel Bridge to be raised.

Difference of level from Rice Lake to Whitlaw's, about 2 feet 9 inches.

By raising the waters of Rice Lake, the healthiness of the country will be improved.

Asphodel Bridge to Peterbore' 40 miles. Expense £4,246 19s.

From Peterboro' to Clear Lake, 144 miles. 147 feet rise.

Principal obstruction on the route.

Plan recommended by the Engineer. occur, the Bar at the mouth of the River, the Shallows of Dangersfield, Robinson's Island, and Yankee Bonnet, and which I would propose surmounting by such additional height to the dam at Asphodel bridge, (proposed as necessary for the improvement of that portion of the Trent) as will maintain Rice Lake permanently at or near high water mark, and which from the slight difference of level from Rice Lake to Whitlaw's Rapids, (about 2 ft. 9 in.) can easily be done; at the same time, I would recommend the closing up the centre channel of the mouth of the Otanabee, with the view of assisting either of the others, in having a clear passage, and preventing the formation of an additional bar, which would be apt to form, if not artificially prevented, and which the formation of piers will ensure.

In raising the waters of Rice Lake a decided general advantage will arise to the surrounding country, in rendering the whole comparatively healthy, and insure, at a trifling expenditure, an available navigation to Peterboro, at all times, by the simple adoption of a dam and lock at Whitlaw's Rapids, which is the next obstruction on this section, thereby throwing back water over the Little Lake, sufficient to drown the ripple at the Narrows between the lake and bay, and throw sufficient water into No. 1 lock of the collateral cut from Entrance Bay; thus carrying the navigation from Asphodel Bridge to Peterboro, 40 miles, at an expense of, per estimate, £4,246. 19s. a very inconsiderable amount indeed, when compared to the advantages to be derived, the enumeration of the whole of which I do not consider comes within the immediate sphere of this report.

Section 2nd.—From Peterboro' to Clear Lake, 14½ miles, and rising 147 feet, with a continuation of rapid for 9 miles, until reaching Herriot's mill pond in Katchiuwannoe Lake, and thereafter the rapids at Young's mill, of short duration.

To overcome these, (the most serious obstruction on the whole route) there can be but one opinion, pointed out in the extreme facilities the river affords in its universally high and well defined banks, and the convenience afforded for the construction of dams at suitable distances, to render the intermediate spaces available, the practicability of which system has been so amply tested on the Rideau communication, that leaves not a doubt as to the applicability in the present instance, while the existence of tolerably sized dams at present, proves the facility with which such can be constructed where required. But although I should recommend the system as generally applicable to the nine mile rapids, yet, as will be seen by the accompaning detailed and minute plans, I propose leaving the river. at the Little Bay, immediately continuous to the store-house, and making part of the present marsh and Bay, a receiving basin, and carrying the navigation inland through the town of Peterboro', as nearly parallel with the streets as now laid out as possible, along favourable low ground, and well suited to lockage—bounded by the natural mound or bank on the western side—bending its course round to the plain lots, until reaching the natural ravine at R, to which point the levels naturally lead, as shewn on the accompanying plan and section, until reaching the river at S, and into the dead water from Hall's mill-dam, or from the termination of the mound referred to, to carry on a continued navigation to the summit line of Lee's mill-pond, for which the ground is favourable; and as this would appear in the mean time to be more eligible, it may be deemed sufficient to estimate on this line, leaving the adoption as a matter of expediency. hereafter, when the works may go into operation.

I would, therefore, propose for the present, the continuation of the cut to Lee's mill-pond, by which all the mill operations will be left undisturbed, and the wicked chain of rapids avoided.

Having gained the mill-pond by a collateral cut of 21 miles, with 5 locks, making 56 ft; lift, and the necessary bridges, &c., for the accom-, Plan recommended. modation of the public, the dam and lock system will come into good play, until reaching the foot of Herriot's rapids by the several locks, dams and excavations, as shewn on the plan and section, from which a collateral cut of one eighth of, a mile will be necessary to carry, the line past: the mill and rapids, and avoid interfering with the operations thereof; which are, likely to become extensive, and secure a more convenient and ready, mode of passing this particular spot of difficulty, than by following the river and then by raising and strengthening the present dam, a sufficiency of water can be backed up, with no inconvenience to the adjoining lands, to the foot of Young's rapids—covering the small rapids at the outlet of Katchewannoe Lake, and throwing sufficient water into the lock of 3.ft. lift at Young's, as shewn on the plan and section—from which to From Peterboro' to the waters of Clear Lake, a short cut of 70 yards in length, averaging 6 ft. Clear Lake 141 deep, through a gravelly section, will carry the navigation (and complet-miles. ing section 2nd) from Peterboro' to Clear Lake, 142 miles, and rising Estimated at 146-10 + 3-2 = 150 ft. and at an estimated expense of £66,524 14s. Id. £66,524 14s. Id.

Section 3rd - From, Young's to Bobcaygean, including in its course, Section 3rd. through Clear and Stoney Lakes, the Peninsula Falls, Burleigh Chutes, From Young's to Deer Bay, Buckhorn Rapids, and the navigation of Buckhorn and Pigeon Lakes, which has handly in the only described as

Having gained the waters of Clear Lake, the only operation required to complete the navigation to Peninsula Falls will be a properly constructed dam, to raise the waters of Clear and Stoney Lakes 2 ft. above their present heights, so as to give sufficiency over the outlet of the lakes at lowest summer water, which cannot in any way interfere with adjoining lands, the general character of Clear and Stoney Lakes being rocky and barren rise 25-8 three shores, and in general very abrupt: The Beninsula Falls, gross rise of tenths. 25-8-3, 1 propose surmounting by 3 locks and extended wing walls, 3 locks and wing with the requisite guardilock at the head or summit to regulate the spring walls required. floods: From this point the navigation continues through Deer Bay, until reaching Burleigh Rapids, as pitch of 2 ft. 2 in at which places Burleigh Rapids, most favourable opportunity presents to surmount, what otherwise, would 2 ft 2 in. have been attended with trouble and expense, in the placing of a lock in the neck of a Peninsula, as shewn upon the general plan, with the necessary excavation, &c., which will carry the navigation, by the construction of a dam at this place over the little chute to Buckhorn rapids of Hall's mill; at which important point considerable work will be necessary in the construction of a lock of 9 ft. 6 in lift, and excavation across the point of 250 yards in length, by 6 ft. in depth (average) in a mixture of large bolders and cartle excavation, and towards the Buckhorn Lake extremity, of rock excavation; as also in the raising of the present or the construction of an additional dam, sufficient to deaden the rapids and swift water above, and throw sufficient additional head in Buckhorn, Chemong and l'igeon Lakes, so as to retain those waters at high water mark, and thereby insure Section 3, distance a constant, safe navigation to Bobcaygoan Rapids, where terminates sec- 11, miles, ascent tion 3rd, in a distance of 311 miles, ascending 38 ft. 4 in. at an expense cost £21,102 2s 5d. of £21,102 2s: 5d. ning relations of the bully armine parti-

Section 4th-From Bobcaygean to Balsam Pontage (to Lake Sim, Section 4th. coe,) 261 miles,—

Will require the re-construction of the lock at Bobcaygean, the From Bohcaygean to lower sill being placed, as already stated, at least 3ft-too-high, besides Lake Simcoe) 264 the dimensions of the lock chamber being too contracted for the present miles. contemplated scale, being only 28 ft. in the clear; the cut from the lock Lock at Bobcaygean head to the bay above will require considerable enlargement and deepen-structed The interest of Commission because the most expensive and the contract of the

An excellent navigation may be ensured here by proper means.

Cameron's Fulls.

Difference of level 24-10 two-tenths.

2 locks required.

Scugog Lake and River, great advantages to be derived from the waters of, under proper management.

Windsor harbour.

Expense £2500.

Cameron's Lake.

Dam, an excellent piece of workmanship. ing, so as to admit of being properly secured by lining, &c. to prevent the escape of the water through the open fissures of the loose rock, as provided for in detailed estimate; the re-constructions and increased height to the present dam, with the addition of a smaller one, between the upper island and main land, as shewn upon the plan, with the view of giving a sufficiency of wall over the long continued shallows in the river above to Sturgeon Lake—which gained, gives a splendid navigation for any sized craft to Cameron's Falls, and to the very foot thereof, where a most favourable opportunity occurs for lockage into Cameron's Lake, or rather the river leading to said lake, as shewn on detailed plan and section of that place, surmounting the difference of level of 24 10-2, by two locks advantageously located on the brink of the rocky bank, with the addition of a guard lock and excavation into the river or mill-pond above—in a distance of only 265 yards, and averaging 6 ft. cutting, passing between the hotel and saw-mill.

Before leaving the extended and fine navigable water of Sturgeon Lake, it may not be out of place to refer your Excellency simply to the fact of the existence of one of the most favourable opportunities ever presented to open up the same extent of country, by so very little assistance from art, as the waters of Scugog River and Lake afford, passing in their course from Sturgeon Lake, from the south-west angle of Fenelon, through the whole of Ops (40 miles in extent, interrupted only by the rapids at Purdy's mill,) touching on Manvers, watering the whole of Cartwright, and part of Reach, at the upper extremity of the lake, and even extending its ramificated contributory branches, rendered partially available (and which little local enterprise would make perfectly so,) into Mariposa, Brock, and Whitby, and as a matter of course not confining its spreading influence to these alone, but enabling an available communication being opened up from the safe and convenient Bay of Windsor (where it is now in contemplation to construct a harbour) by a rail road; or a good macadamized road, for the present, from which point the head of the extended navigation seems to be distant only 18 miles, and which; as already shewn on the particular reportion that subject, can be rendered available by the simple operation of one dam and lock below the present site of Purdy's mill, and at an expense not exceeding £2500, (under proper management)—thereby affording an immediate relief to those rapidly settling Districts—at a trifling outlay, until the thorough main channel of communication should be opened up, and then affording a permanent local benefit to the Townships immediately bordering on the Scugog River and Lake, as also on the contributaries, the Non-can and Cross Creeks. at a second of the man decorate in the control of the control o

To resume my sectional description of the main line: Having gained by the operations stated, the summit of Cameron's Lake, as the river above the dam, particularly at the outlet into Cameron's Lake, at low water, does not exceed 18 inches, it will be necessary that the dam now existing, and which is one of the most substantial and creditable pieces of workmanship I have seen in the Province, should be raised from 2 to 3 ft; to assist in giving sufficiency of water over the bar at the mouth of the river, where some rock excavation will also be necessary; but if the banks will bear it, and I have no doubt but they will, even a greater increase would be advantageous, not only in the saving of rock excavations at this point (under water) but in materially assisting operations at the foot of Balsam Rapids, which point the navigation reaches easily through the deep Cameron's Lake, and up either of the channels of the river, communicating with Balsam Rapids and Lake, where operations of considerable magnitude, compared to the trifling difference of level, will be requisite to connect with Balsam Lake, in the construction of a lock of 3 ft. lift—and a continuous excavation, chiefly through rock, for 450 yards

to the river above, at point B, where a dam will also be required to throw sufficient water over the bar and into Portage Bay-on the summit level of the chain of communications, from the Bay of Quinte to Lakes Simcoe Section 4th. and Huron, making a distance of section 4th of 264 miles, and rising Distance 264 miles. 34 ft. at an expenditure of £25,546 16s. 2d. Currency, being 32 total cost £25,546 16s. 2d. difference of level above Rice Lake, with the increased head on Balsam, Level above the Bay Lake of 227 ft.; above the Bay of Quinte, = 592 ft.—assuming Balsam 118—6 above Lake to be 3 ft. above July mark, and 148—6 ditto above Lake Simcoe, Simcoe, and assuming Lake Huron, as shewn on the map, 594 ft. above the sea Detween Lakes Huron would seem to leave a difference of level between Lakes Simcoe and and Simcoe 110 ft. 6 in.

in his binings

Next comes the last sectional division of the route No. 5, and one, section 5. as already stated, upon which there is sufficient scope for the Engineer's duties not in point of any very untoward difficulties to be surmounted, but in the proper selection of the most eligible route from Balsam Lake to Lake Simcoe, between which there is a difference of level of 118-5-3 Difference of level in the present state of the waters, an amount far beyond what was antiin the present state of the waters, an amount far beyond what was anticipated, and which, consequently, suggested the strictest investigation into the merits of the two probable routes already spoken of viz to follow, as much as may be available, the course of the Talbot River from its source downwards—or to adopt an eligible line for a more continuous Eligible line for navigation from Balsam to Lake Simcoe, and for which latter the face of navigation, the country affords (with the exception of a trifling rise near Balsam Lake) an opportunity equalled only in one instance in the course of my obser- Unequalled, except vation in either Province, and in that for a more limited distance (viz. on by one, within the vation in either Province, and in that for a more limited distance (viz. on by one, within the vation in either Province, and in that for a more limited distance (viz. on by one, within the vation in either Province, and in that for a more limited distance (viz. on by one, within the vation in either Province, and in that for a more limited distance (viz. on by one, within the vation in either Province, and in that for a more limited distance (viz. on by one, within the vation in either Province, and in that for a more limited distance (viz. on by one, within the vation in either Province, and in that for a more limited distance (viz. on by one, within the vation in either Province, and in that for a more limited distance (viz. on by one, within the vation in either Province, and in that for a more limited distance (viz. on by one, within the vation in either Province). the line for a continuous Canal from Lake St. Francis to Lake St. Louis, Engineer. which runs through the Seigniory of Beauharnois, and which I estimated last year for the Honourable Edward Ellice, in contra-distinction to the other side of the river-the expense being much less.) Still, howmuch-soever I might be disposed to avail of such facility for continuous. navigation by a cut to Lake Simcoe direct, yet there are circumstances sufficiently urgent to give the preference to a medium between the two, and which, I have no doubt, will present the most eligible for adoption, as in tracing the Talbot River from its commencement in the great swamp near Balsam Lake to Lake Simcoe, in all its freaks of serpentine curvature, which I did in the month of June, when the water was very low, as well as in the months of October and November-I fully came to the opinion that to follow the Talbot higher up (as for the sake of description continued. I would beg leave to reverse the order and commence from Lake Simcoe,) thus the commencement of the rapids, at McQuaig's rapids or house, as marked Q on the accompanying detailed plan, made from actual survey, with the view of ascertaining the real nature of the river, would not only be exposing the works to much tardiness of execution from the limited period in which operations could be carried on among a continuation of rapids, but at the same time, when done would add much to the length of the communication—the direct line with the point of junction with Balsam Lake being only 132 miles in extent—and although I should certainly look forward ultimately to carry the navigation to this point, for into the Simcoe Portage reach—yet, in the mean time, I would suggest the propriety of leaving the Talbot either at the convenient and commodious basin, as shewn on the plan at D, 1; miles above the mouth, &c. or above the termination of the lately constructed road from Balsam Lakeand from the said basin, or point T, to carry an inland cut to Balsam Lake, as per line delineated red on the plan, with the necessary 12 locks

of, in all 1116 feet lift, as thereon shewn, or as may afterwards be found more convenient to locate; for which, as already stated, the section of the country is most favourable, with the exception of considerable rock excavation in bedded limestone on leaving Balsam Lake, which, how-ever, will meet well the purposes of lock building, of which there will

un a territari kun ne

Having now, for your Excellency's information, submitted the result Continuation of of my labours, and of a more protracted survey than I liad anticipated, Report from the arising from circumstances which oftentimes give rise to, and create more difficulties in the progress of the Engineer's operations than the real difficulties presented, namely, the different supposed routes which offer themselves to consideration, as imagined eligible, through the different sections of country in which they occur, and pressed upon the attention as the best, or as in many instances, the only practicable route thereby diverting the attention and occupying that time which would have been more advantageously directed to the natural course of the communication, but which, from the circumstance of a doubt existing or possibility thereof, leaves no alternative but to follow out such, if in any way feasible, and under such impression. I was labeled to the in any way feasible; and under such impression, I was led to make the tour of the back line of Lakes, Rapids and Portages, from Stoney to Crow Lake, which, as already stated, serves but to confirm the prior opi-

Remarks of Engineer respecting the preference of routes.

nion of improbability, as also in examining the lay of the country, through the different Townships of Eldon and Fenelon, as directed in your Excellency's detailed instructions, per Lieutenant Colonel Rowan's communication of date 16th June last, particularly the portions bordering on, and in the proximity rather of Lake Simcoe and Sturgeon Lake; but soon ascertaining that such a route must entail with it, not only a very material increase in distance, but at the same time an increase in lockage, and without any certain supply of water from a summit level, the country rising gradully towards that course from the Talbot valley (certainly the lowest ground in that section of country) until again falling into the Scugog-and having followed that fine river and more expanded lake navigation to its head, and ascertaining, geographically speaking, that that route, although apparently feasible towards Lake Simcoe, would be entirely too circuitous.

Continuation of Report.

After due consideration of the matter in all its bearings, and weighing the merits of the junction with Lake Simcoe, through the Scugog route, which must have been down the valley of the Little Talbot to Beavertown, a stream by no means bearing comparison with its greater rival of the same name, independent of the want of accommodation for shipping, except at a very great outlay of money, and by the Scugog Lake route, following either the North-Cross-Creek route, 7 miles above Purdy's mill, into the centre of Mariposa, where the height of land occursor continuing up the Lake, take the Non-can River or Creek at the northwest angle of Cartwright, and crossing the south-west angle of Mariposa, gain the height of land in Brock, and from thence descend into Lake Simcoe, down the Black River Valley, which holds out no particular inducement or accommodation for lake craft, which at times will be hard enough pressed to find shelter, all independent of the geographical objection in point of distance—not only in a local view, from Sturgeon Lake to Lake Simcoe, but in following up the ulterior object of continuing the chain of communication with Lake Huron-all of which will be avoided, and the grand object of the most direct and least, expensive mode of connecting these waters obtained by the Balsam Lake route; and the Talbot River, as now estimated, besides having the double advantage of bearing out the general character of the whole line as an internal communication, opening up a widely extended and valuable country, and one which proinferior to any in the mises, ere long, to be second to no proportionate space of inland country in the Province, in point of capabilities of improvement, productions and opportunities for enterprise.

When improved this tract will not be country.

The line now surveyed is not only the most direct, but the best in every point of view.

For the general line of communication and its connection with the adjacent and surrounding country, and shewing that the line as now surveyed and estimated is not only the most direct that can be found, but the one most calculated to develope the resources of the fertile and valuable country through which it passes, I would beg to refer your Excellency to the accompanying general plan which I have had compiled (by Mr. F. P. Rubige, D. P. S.) to shew the whole line at one view, with the different works proposed to render the whole navigable, by which it will be seen, that from the Bay of Quinte to Lake Huron, the general direction of the communication maintains a pretty straight course—that assuming the section from Lake Simcoe to Huron as practicable, and which Lextremely regret was not in my power, on account of the advanced state of the season, to have examined, as stated by your Excellency as desirable, when I last had the honour of an interview, and with which intention I did proceed to the Narrows of Lake Simcoe, from the Talbot River, when the difficulty of procuring a proper canne and crew, and accommodation proper for the excursion, (having left my canoe, &c. at the Talbot, to complete some measurements, under an assistant,) added to the apprehension, which afterwards turned out to be well founded, of being frozen up in

some of my operations below, resolved me (then the 5th of November,) to abandon the task; but still I had the satisfaction of gleaning a considerable deal of information from the kindness of an individual in Orilla, who is much interested in the furtherance of the grand object and in the perusal of a Report, drawn up by an Officer of Engineers, on the Report continued. state of the Severn River, and which, from the general description therein given, would appear to be not more sectionally objectionable for improvement, than what has been met with on the lower sections of the routethe difference of level, as already stated, being about 110 ft.

I would also state that I had, at the same time, an opportunity of gaining information as to the projected route (by a Mr. Boyde,) from Shingle Bay, but which from the general principle, as I understood the description, nearly double the lockage would have to be encountered, than by a gradual descent; besides, judging from past observation and experience, and studying the course of nature in her multiplied arrangements, it ever appears that the lowest pass between any two sections of country is generally, if not always indicated by the greatest discharge of water—although, as a matter of course, and one in all cases not to be avoided, the route may be somewhat circuitous. I would, therefore, be disposed to hazard the opinion, that either by the Severn or Nottawasaga Rivers must be the line of communication, unless the latter be intercepted from Lake Simcoe by a considerable height of land, which I have not liad an opportunity of examining; in support of which hypothesis, and which I consider by no means problematical, I would refer; as an example, to the country lying between Peterboro' and Chemong Lake, around which the River Otanabee, the main outlet from these waters down the Trent, &c. makes such a circuitous bend of no less than 23 miles—that having traversed the country between these points in all directions, for the purpose of endeavouring to find a practicable over-land route, and actually running levels of the most probable. I found the lowest ridge of Lowest land over land for a purpose of the most probable, I found the lowest ridge of the armined for a purpose of the most probable. actually running levels of the most probable. Lakes and Pigeon Lakes land route was land to be 49 ft. 4 above the waters of Chemong and Pigeon Lakes land route was diminishing proportionately, on approaching the outlet, and vice versa. 49 ft. 4-8 above the waters of Chemong waters of Chemong lakes. I might quote many other instances, which have, come within my obser- and Pigeon Lakes. vation, to strengthen the hypothesis, that the country between Lakes Simcoe and Huron may have a similar sectional character—unless some convulsion of nature may have interfered in the general arrangement.

Having thus attempted to lay before your Excellency the result of a Remarks of the very minute and detailed examination of the country lying between Rice Engineer on the Lake and Lake Simcoe, with the lakes and waters thereon, and of a series likely to arise from of running and detached levels, as insterms of your Excellency's instruct the prosecution of tions, and in pointing out what I conceive to be the most eligible line for this work. connecting those lakes, I should now proceed to point out the prospective benefits likely to arise from the adoption and execution of such a measure, but for which task I really do feel an inadequacy to do the subject the justice its importance demands, whether considered in a political or commercial point of view: but as such is generally expected from, or to wind up, an Engineer's Report—particularly if such should refer to operations proposed through any new (and scientifically unknown) country as the route I have just had the honour to examine—I shall use my best as the route i nave just had made a condeavours to comply with the task.

As the great object of Internal Improvement through any country, is to afford the means of cheap and expeditious transport for the resources thereof, and to afford the opportunity of connecting the most distant points of fertility; and scenes of industry, and enterprise with their respective marts, it follows that the shortest and most available route for such an object must be the sine-quo-non-data upon which to start-and which, with a due regard to the local interests at the same time through which such line of communication may pass, for the development of the

Remarks, &c.

resources of wealth and enterprise, in which every section abounds, have been the regulating principles in the selections made, and which I flatter myself will be found unequalled in any other, in a geographical point of view, viz. the affording a thorough communication for the produce of the Western countries bordering on Lakes Simcoe, Huron and Michiganparticularly Illinois, Indiana, Michigan and Huron Territories, and partially Ohio-all rising rapidly into the first scale of commercial importance, in their rich productions, now pouring down the rapids of Detroit and St. Clair, from and across those immense inland seas into Lakes Erie and Ontario, and by the famed speculation of the Erie Canal, which was at first, and for long, considered to be so chimerical an undertaking; but now demanding, from the consequent developement of those fertile regions, increased dimensions-still, however, subject to the inconvenience of such very hazardous circumnavigation, as a single glance at the map of the Province and adjoining States will demonstrate, and which every season affords fresh instances of the melaucholy occurrences, in the many shipwrecks and loss of life and property in consequence, must point out as an ulterior object to be gained, that the tide of the Western trade, at least a great proportion thereof, would naturally find its way by the safer, more expeditious and certain route, the Georgian Bay, and from thence down through the now proposed line of communication, by Lake Simcoe, the waters of the Newcastle District, and the Bay of Quinte, thereby saving, as already observed, not only the very perilous circumnavigation of Lakes Huron, Erie and Ontario, but absolutely shortening the route the inconceivable distance of 261 miles.

Remarks of the Engineer in conclusion, &c.

> Having reached the Bay of Quinte at the conflux of the splendid, River Trent, so very susceptible of improvement, as shewn by the detailed Report I had the honour to address to your Excellency in 1833, the transit from thence to our own mart becomes a matter of ease and safety, either by the St. Lawrence or by the present available and certain navigation of the Rideau and Ottawa Canals, now in active operation, and, for our neighbours, affording an opportunity of transit and communication with New York market through the Upper Gap to Oswego-at which point the Erie Canal touches in its course—but as the St. Lawrence and Rideau must be allowed to be the natural outlet for Upper Canada, the proposed improvements, as a matter of course, should be contemplated in connection with these outlets, particularly the most practicable and available for general purposes of commerce, although when the gigantic improvements on the St. Lawrence are completed, she must stand unrivalled in the annals of internal navigation in point of magnitude of construction—and which, of course, is intended to draw the Western trade in that channel, which the intended improvements from the Bay of Quinte to Lake Huron must insure.

To the local advantages which, from the extent of country traversed, may with propriety be called national, it would almost be presumptuous to set limits, and in which I conceive I am borne out in the retrospective glance of the rapid strides now making towards settlement and developement—I may say, from the Bay of Quinte to Lake Huron, under the most untoward and inconvenient circumstances a young country could expect to progress—land-locked with the worst of roads, where such exist, and equally so, with the present state of the river and lakes in their several insurmountable rapids, to any description of craft but the fragile bark canoe, and that only in descending—the improvement of which latter would unquestionably unfold the resources in a ratio I should be at a loss to name, was such an outlet afforded.

To agriculture, the great stand-by of any country, I would add the immense increase in the article of lumber, of all descriptions, now car-

ried on to a very limited extent (by a few of those enterprising, hardy speculators, with which the country so copiously abounds,) particularly in the article of staves, for which abundance of the finest oak exists, untouched and unvisited but by the Indian-affording, with an outlet, unlimited scope for individual enterprise throughout the whole line of Remarks of the communication, to say nothing of the vast importance in point of settle-sion, &c. ment of those fine Districts, bordering on and adjacent to the several. extensive lakes, and which have of late drawn the attention of wealth and enterprise to their shores.

Of the benefit to be derived from the opening of the Trent above, it may be conceived superfluous to again refer, having been discussed in my former report on that river and its contributaries—and would but briefly again refer to the importance of having an outlet for the wares of the Marmora Iron Works, so much required in a new country, and which may be viewed in a political or national, as well as commercial light.

To sum up these cursory observations I would merely call your Excellency's attention to the different Townships through which the communication is intended to pass in its course through the Home and Midland Districts, in number no less than nineteen, immediately bordering on the waters of the communication, besides bringing into play as many more, with all their agricultural and commercial resources, with their res Communication to pective already populous settlements, as sufficient guarantee, independent Townships of the great through communication object, which, as a matter of course, must positively insure an ample return to the Province of the outlay required—really of secondary consideration to the object to be gained and to the Home Government, in the ready settlement of those vast tracts of fine lands throughout the Province, now inaccessible, an ample return for any interest which the Mother Country might be induced to take in such a national undertaking-were it only with the limited view of Would enhance the enhancing the value of Crown Lands, but particularly, I should say, in Lands. rendering fully available the great outlays on the Ottawa and Rideau Canals, of which the contemplated communication may now be said to be a continuation.

I would further remark—and perhaps it may be presumptous in me so doing, but I feel as if I owed it as a duty to the land of my adoption, as well as within the sphere of my instructions—that if we intend to maintain our commercial importance in the scale of nations, and preserve for ourselves an independent port of entry for the Canadas, something must. be done, and that immediately, to secure such; and nothing, it is believed, will tend so much towards such a desirable object, as an early commencement of this internal work, which not only does more immediately interest all Upper Canada in promoting, by any means, and at all hazards, but not less interested is Lower Canada—which should consider the cause as intimately and more immediately connected with her existence, as the outlet not only for all our exports, but as a natural reciprocating consequence, the imports into these Provinces. On this subject our enterprising neighbours on the other, side are wide awake, and who make no hesi-awake. tation in their different reports and remarks on their further proposed communications, which have of late engaged their attention—and about some of which they seem in good earnest to make frequent allusion to the contemporary rival to all their projected lines to market "The back " waters of the Newcastle District and the River Trent." Shewing distinctly the importance they attach to such a direct line from the far westas likely to anticipate, if put in execution, their best exertions; but unless we be more active in the cause than we have hitherto shown any disposition to be, I fear we shall be anticipated by their well known prompt E la carecture de seus parteurs la companient que con la carectura de seus como la companient de la companient

Unless we are more active, our carrying trade will pass into

and energetic measures, and that those natural facilities of communication may lay dormant, and the surrounding country and resources with it—and that the year now ensuing will go far to decide the question, I the hands of a foreign believe, is generally admitted on all hands, "whether we give up the " cream of our resources, the Carrying Trade, to a foreign power, thereby " rendering all our immense expenditure, as well as the bonus of the " Mother Country, more an injury than a benefit to the Province."

I would further remark, for your Excellency's information, that whilst on the importance of the most prompt and energetic measures being used to open up the grand internal communication, so nearly and

Much will depend upon an early commencement.

intimately connected with the vital interests of these Provinces, that as much of the intrinsic importance in the opening up such a communication, having so many rival competitors, however-so-much in embryo, will depend upon an early commencement (as an earnest of the intentions of the Provincial Government) and expeditious execution, for the reasons I have endeavored to assign, and which might be multiplied beyond the

limits of this report the expediency of adopting such measures and system in execution, as would as early as possible secure the results contemplated, and on which subject I would beg to refer your Excellency to the interum report I had the honor of submitting some months ago, (30th September) suggesting the expediency, for reasons therein assigned, of, in the first place, constructing with all expedition such works along the whole line of communication, as might at the smallest expense, (as per estimate of respective sections which I have all along purposely kept detached) open up the greatest extent of navigation, or in other words, the least expensive sections along the line, such as on the River Trentthe dam only at Widow Harris'—the operations at Chisholm's rapids—the

dam above Heeley's falls, and works at Asphodel Bridge or Crooks'

rapids—thereby opening up the navigation from Widow Harris' (9 miles above the Bay of Quinte) to Percy Landing, 21 miles, and again from Heeley's Falls to Peterboro', by the construction of the small dam and

Certain parts recommended to be first improved.

> lock of 3 feet lift at Whitlaw's rapids, half a mile below Peterboro', and again on the present section from Peterboro' to Lake Simcoe, or more properly from Rice Lake to Lake Simcoe, by the construction of the dam at Buckhorn rapids, sufficient to maintain Chemong Lake at or about high water mark-by the water at Bobcaygean, Cameron's Falls, and Balsam Rapids to Balsam Portage, with the proposed works on and at the mouth of the Talbot River-leaving the intermediate more expensive, but short sections, from the month of the Trent to Widow Harris, 9 miles; from Percy Landing to head of Heeley's Falls, 11 miles; again from Peterboro' to Chemong Lake, 8 miles, in place of 30 miles, as per river and lakes as stated; and lastly, from Balsam Lake Portage to the basin on the Talbot River-to be railwayed in the mean time, for which it is rather remarkable, the whole of the ground of these intermediate sections affords the most favorable opportunity for construction that can be imagined or wished for, any descent that is being in the proper direction, and easy of formation.

More expensive parts to be railwayed in the mean time.

> As an expedient only do I venture to suggest to your Excellency's consideration, the adoption; at the same time I am perfectly convinced that the plan will meet with some local opposition, in the apprehension of its practical utility, superseding probably the necessity of (for some years) carrying the through water communication into operation, which would better suit for the transport of heavy lumber; but which objection I should be desirous of removing, by the construction at the most difficult falls, of slides, which cost comparatively little, and much better suit the purpose for heavy lumber, than lockage; the intermediate rail-road system (without transhipment) serving every purpose of the transport of staves down-and the requisite outfittings for lumber establishments

Slides recommended for heavy timber.

upwards-and for a general carrying trade, equally answering every purpose, until its increase should be such as to warrant the putting the whole in full operation.

By this mode of adoption, the communication would be three years earlier opened up than in waiting for the completion of the whole—an immense saving in the interest of expenditure effected, such as would go far towards the formation of such expedients; and when the trade and traffic of the country should require, or when it might be found necessary to carry the grand scheme into effect, I am satisfied, from the experience I have had in conducting such heavy works in the interior of a new country, that the facilities which such means of transport of materials &c. would afford, would compensate for the execution, taking credit for the raw material, and when it might be deemed necessary (if ever) to remove them, particularly applicable to the inland sections; in consequence, this latter argument would not bear so strong upon the 9 mile section to the Trent. The was a second and a constitution of the second relations between

With the view of doing away with the only, at least the chief objection to the expedient system—the idea of frequent transhipment, I Means of doing away would propose that long and substantial steamers, of particular construc- with frequent trantion, should regularly ply to and from, on the intermediate extensive water shipment communication, viz. from Widow Harris' to Percy Landing, 21 miles.

From Heeley's Falls to Peterboro', about.......... 55 From Chemong Lake to Balsam Lake Portage, 40 From Talbot River to the Narrows, or Kempenfeldt Bay,

And so arranged as to admit of the train of cars being transported at Cars to be admitted once, with their loadings, direct either from Lake Huron or Lake Sim- on board the coe, as the case may be, and which I am satisfied can be done in such a way as to be practically useful, and serve well the present, and until such time as it may be deemed proper to put the lockage system in execution, the prospective wants of the country; and for the purpose of enabling your Excellency to form an opinion on the merits of the plan, I annex an approximate estimate of the opening up the whole route from the Bay of Quinte to Lake Simcoe and Lake Huron, on the combined system, by which it would appear the whole may be accomplished for whole may be acthe sum of £195,565 6s. 6d. currency, somewhat more than I formerly complished for £195,566 6s. 6d. hazarded to your Excellency in my interum report, and may be completed in two and a half years from date of commencement.

Having endeavoured to set before your Excellency the advantages likely to arise to these Provinces and the Mother Country from the early opening up of the communications now under review, in a commercial and political point of view, in so far as consistent with the limits of this The improvement Report, I should consider the task but half performed, did I not in some a military point of degree refer to the incalculable facilities which, in a military point of view, view. would, as a natural consequence, follow the completion of such a work as connecting the Bay of Quinte with Lake Huron, or in reality, the Atlantic with the far West-completing the chain of communication (so generously commenced and so far completed and practically useful to the country) from the Atlantic to Michigan and Sault St. Marie, by the works of the Carrillon, Chute au Blondeau, and Grenville Canals on the Ottawa River, and thence by the Rideau to Lake Ontario, an internal navigation Internal navigation of immense extent, say 1214 miles—but by the present circumnavigation formed of 1,214 already referred to, 1475—difference 261 miles, in rounding the Upper distance 261 miles. Canada Peninsula by the River and Lake St. Clair, and by a lockage of apparently only 33 ft. at Sault St. Marie, carry the navigation into Lake Superior and regions beyond, at little additional expense—thus admitting of the transport of stores to the most distant portions of the Province, with

Passage from Bay of Quinte to Penetan. guishine may be accomplished in 30 hours.

the greatest ease, certainty, and expedition, and in which point of view I would particularly call your Excellency's attention to the combined system in point of despatch-having not the smallest doubt but the passage, from the Bay of Quinte to Penetanguishine could be accomplished, on the combined system, in 30 hours, or even less.

Having thus completed the result of the examination, levels, &c. of the country between Rice Lake and Lake Simcoe, as in terms of your Excellency's instructions, and in accordance with the spirit of the Address of the House of Assembly, of the important undertaking with which I have had the honour to be ontrusted,-1 beg leave to submit the whole for your Excellency's information, trusting that I have fully complied with your Excellency's intentions, and that if in any instance I may have, exceeded my limits, that such has been dictated from a sense of the particular predicament in which our common interest seems placed; demanding that some active measures be adopted to save our best interests from passing into other hands, and diverting the Trade of the far West from its natural outlet, and which a cursory view of the general map will amply demonstrate. I have the honour to remain,

The whole submitted to His Excellency's consideration.

With much respect,

INTERIM REPORT

Combined system of communication re-

To His Excellency SIR JOHN COLBORNE, K. C. B. &c., suggesting the expediency of a combined system of Communication from the Bay of Quinte to Lake Huron,

BY N. H. BAIRD, CIVIL ENGINEER.

30th Sept. 1835.

Cobourg, 30th Sept. 1835.

To COLONEL ROWAN, CIVIL SECRETARY:

Sir,

At this stage of the survey of the water communication from Rice Lake to Lake Simcoe, in connexion with the River Trent improvements, and looking forward to the ultimate end in view, viz.—a communication between the Bay of Quinte and Lake Huron, I feel myself called upon to lay before you, for His Excellency's information, the result of my labours up to this time, in a condensed form, in case the result thereof might lead to other arrangements which might be more conveniently carried on now than at a future period.

Difference of level greater than was anticipated.

Result of the Inbours of the Engineer laid

before His Excellency

On running the levels from the Otanabee River at Peterboro' to the head waters in Chemong and Pigeon Lakes, I found the difference to be much greater than was anticipated in my Report on the Trent improvements, as also the difference of level to Lake Simcoe, equally so, and which, for perspicuity, I shall now enumerate in order, viz.:

Enumeration of difference of levels.

From Bay of Quinte to Rice Lake,. ... 365 ft. 0 in. 0 pts. Rice Lake to Peterboro, 4 ft. 6 in. 0 pts.] Otanabee River to head water Chemong Lake,.....189 6 0 8 0 Balsam Rapids, 4 7 To Lake Simcoe, (descending)....118 3

Total of Lockage, 823 ft. 3 in. 7 pts.

Total lockage from the Bay of Quinte to Lake Huron, 823 ft. 3 in. 7 pts.

Conceiving, from the very great extent of lockage, the sum unavoidably necessary to accomplish such, (on the most economical principle) and regarding the improvements now in progress and in agriction every where, to command the commerce of the Western Territory, and divert it from the natural outlet, (the Trent) it has occurred to me, and I am strongly impressed with the conviction, that a species of communication might be adopted, with advantage, between the Bay of Quinte and Lake Huron, to answer every purpose required, in the mean time, with the advantage of increase of speed to a considerable extent, and would propose for the expensive sections of the Trent, and along the line of communication to Lake Simcoc, to substitute Rail Roads, viz.:—

Rail Roads recommended as substitutes

			, C ₇ 11,82. v(1)//(6	. 1949 - 1949 - 1949 - 1949 - 1949 - 1949 - 1949 - 1949 - 1949 - 1949 - 1949 - 1949 - 1949 - 1949 - 1949 - 194	Contract in the contract of th

Making in all, from the Bay of Quinte to Lake Sim- ? 41 miles of coe, only...... Rail Road.

The communication to Lake Huron, from Kempenfeldt Bay, I am not in possession of sufficient data to say what proportion may be rail wayed, but from the lockage being so heavy, I am disposed to think the combined principle may be equally applicable on that section.

The whole expense of opening up a direct communication from the tion from Bay of Quinte to Lake Sim-Bay of Quinte to Lake Simcoe, on the combined system, will not exceed cocon the combined the sum of £195,565. 6s. 6d. and may be completed in three years.

By continuous lockage, £495,515. 3s. 31d.

In the one case the passage of goods from the Bay of Quinte to In one case transport Lake Simcoe may be accomplished with ease in twenty-four hours, whilst accomplished in 24 hours, the other 3

From the manner in which the arrangements can be effected, the Wagons will pass directly, with their loads, from Lake Simcoe to the Bay Simcoe to Bay of of Quinte, and vice versa undisturbed, by steamers constructed for the Quinte. purpose, to ply on the intermediate waters.

Having laid this cursory view of the subject before you, for His Excellency's consideration, feeling it a duty I owe to the Country, as well as in accordance with the spirit of the instructions I have in command from His Excellency, I shall be glad to be informed whether His Excellency would approve of the estimate of such a communication being made out, to lay before the House, in addition to the lockage estimate, or whether the latter should not be dispensed with in the mean time.

I must beg to be understood in recommending the combined system, Combined system will it cannot in any manner interfere with that it cannot in any manner interfere with the through water communi- continuous lockage. cation, in any other than to materially lessen the estimate, when it might be carried into effect, in the construction of which a saving nearly equal to the expense of such intermediate rail roads would be effected.

Awaiting His Excellency's commands-

I have the honor to be, Sir,

Your most obedient Servant.

N. H. BAIRD. Civil Engineer.

41 miles of Rail Road.

system, will not ex-ceed £195,565 6s. 6d. Continuous lockage,

REPORT,

BI N. H. BARD, CIVIL ENGINEER, M.I.C.B.L.

On the most eligible route for a Canal between Lake Simcoe and the Rice Lake.

By order of the Commons House of Assembly. R. STANTON, PRINTER.

ESTIMATE OF THE PROBABLE EXPENSE of completing the continuous Navigation of the Upper Lakes, in the Newcastle District, from Rice Lake to Lake Locks 134 × 33 Simcoe, in connection with proposed improvements already estimated and 5 feet water. Sand reported upon for rendering the River Trent navigable from the Bay of Quinte to Rice Lake. By order of His Excellency Sir John Colborne, K. C. B. Lieutenant Governor, &c. &c.

Civil Engineer, M I C F I

No. 13.

 $\mathbf{REP0R1}$ On the overflowing of the Scugog River and Lake, and on the effect the removal of the Dam at Purdy's Mills would have upon the navigation of the Scugog River and Lake—by order of His Excellency Sir John Colborne, K. C. B. &c. &c. &c. N. H. BAIRD,

Civil Engineer,

December, 1835.

REPORT.

REPORT.

REPORT. To His Excellency SIR JOHN COLBORNE, K. C. B. Lieutenant Governor of the Province of Upper Canada, and Major General Commanding His Mujesty's Forces therein, &c. &c. &c.—on the overflowings occasioned by the Dam at Purdy's Mill, in the Township of Ops, and the probable effect the removal of the Dam would have upon the Navigation of the Scugog River and Lake.

By N. H. BAIRD, CIVIL ENGINEER.

M. I. C. E. L. MAY IT PLEASE YOUR EXCELLENCY:

That in obedience to Your Excellency's commands, conveyed to me in Lieut. Colonel Rowans? communication of date 16th June, and in accordance with an address. of the House of Assembly, dated 15th of April last, to the following effect, viz .-- to inspect and survey the extent of overflowings on the Scugog River and Lake, in consequence of the erection of the dament Purdy's Mill; (and in a subsequent clause of said, address)-"to inspect and survey the extent of such overflowings, and the probable effect "the removing of the dam would have upon the navigation of the Scugog River and Lake," I have the honor to state, for your Excellency's information, that in the month of October last, and between the 10th and 18th of said month, I proceeded to the inspection ordered, having chosen as the best possible period for such inspection that at which the overflowings could be witnessed at their greatest extent, with the exception of the Spring freshets, in comparison with which the then height was a near approximation, there being 9, (say nine inches) on the top of Purdy's Mill dam; the result of which inspection, with reference to the several points in view, I shall endeavour to submit for your Excellency's information; and,

 $\it First,$ As respects generally the extent of overflowing caused by the raising of Purdy's dam, (which appellation it has now generally assumed,) it is upon a much more extended and destructive scale than, I may venture to say, a precedent can be found from the construction of similar dimensions of dam, at all events in these Provinces.

In my inspection of the Scugog River, with the views intended, I considered it necessary to commence the same from the foot of what is rapid in summer, and swift water in spring and fall, or at the foot of the "Portage," about \$\frac{1}{2}\$ of a mile below the dam, as shewn on the accompanying plan marked A.—having, as a matter of course, had an opportunity on my passage up and down the River, to and from Purdy's Mill sof making myself acquainted with the general character of the River on that section which is in all a splendid stream; carrying with it for 91 miles up to a point to featmile below the commencement of my sectional work sufficient depth and width for the largest class steamers. although in several places the course is very circuitous, as is in general the case with such sluggish streams; meandearing through a low flat country; but the turns are all of such radii as to be perfectly capable of circumnavigation; by steamers particularly—at point A, the River contracts from double the width into the dimensions as shown on the

plan, carrying about the same width with it until reaching the dam, as shewn upon the accompanying plan from actual survey, at which point ceased any opportunity of knowing personally the original state of the river, a point on which much hinges, and one which I intend to approach with necessary caution, but from all the information I could collect, alike gleaned from the parties pro and con, the removal of the dam, it would appear (and on which point I feel perfectly satisfied, from the satisfactory evidence adduced in course of the investigation,) that the River was, prior to the dam being erected, "navigable for small craft," inasmuch as several of the original Settlers, as will afterwards be shewn, were in the practice of transporting their commodities to and from market by way of the River with ease at high water, but in low water, (to use their own language) "had to coax the boat along," wading themselves in the water, that is at particular places, such as the Priests' Landing, Stoney Bottom, &c. contracting however in capacity until reaching the outlet of Scugog Lake, but apparently on an average of not less than 40 ft. in width, in which I am glad in being borne out by more than hypothesis, from a plan of one property, taken in apparently a very correct manner by the propietor thereof, at his own expense, (a Surveyor by profession) to which document I shall probably hereafter have to refer, therefore need not call your Excellency's attention to extraneous matter: in the mean time suffice it to say, that it appears evident that the Scugog River was, prior to the erection of Pardy's dam, navigable for steamers from Sturgeon Lake to a short distance below the dam, say & of a mile for 95 miles, and from thence to Scugog Lake for small craft at ordinary high water.

As to the character of the space now occupied by the Lake, the accounts were somewhat corroborative of its being any thing but a clear navigable sheet of water, as it is now rendered, extending its arms into every creek and bay in the Townships of Cartwight, Reach, Brock, and Mariposa, and from all I could pick up on the subject, must have been very much assimilated to what the Cranberry Lake and Marshes were on the line of the Rideau Canal, previous to the waters being raised thereon, namely—at the two extremities a parrow bed of a serpentine creek, through which, with difficulty, a bark canoe could be shoved at low water, while paddling raised so much effluxia that left nor room to doubt the existence of the cause of ague and lake fever, and in which conclusion I am supported by the evidence of several respectable individuals, who were intimately acquainted with the route prior to the raising of the waters, and who were at the interested in the state of the navigation, in the first settlements there, and on whose minds the impression as to the then state of the waters has a chance of being more vivid.

Having briefly submitted, for Your Excellency's information, a description of the original state of the Scugog River and Lake, in the course of the former, from the outlet of the Scugog River and Marsh to its confluence with Sturgeon Lake, as regards navigable qualifications, I shall now proceed to the immediate object of the examination, and in the performance of which, from the nature of my instructions and the natural bearing of the subject, shall class the matter under two distinct heads.

The extent of overflowing, occasioned by the raising the dam at Purdy's Mill, and the effect the removal thereof would have upon the navigation of the Scugog River and Lake, and in laying before Your Excellency the result of my inspection, I would beg to remark, that in considering the wording of the address, as well as Your Excellency's subsequent instructions, I could discern that there was more intended to be arrived at than mere description, viz.—a remedy for the evils complained of, though not expressed—under such impression I commenced the work.

The first question arising out of the subject would seem to be, has the dam been placed in the best possible situation for the general benefit of the Townships contiguous—or has a due regard been paid to the public interest in the selection of the present sites for the dam—or did the machinery required to be erected, by arrangement with Mr. Purdy, justify the placing the dam in the present site—and lastly, could the dam have been placed on any other site on Mr. Purdy's own property, to have secured to him and the public similar advantages as now enjoyed, without the concomitant evils complained of—and lastly, whether a less height of dam, and differently located, would not have insaned the same or greater facilities, within the bounds of Mr. Purdy's own property?

As regards the proper location of the dam affecting the quantity of land overflowed, I would briefly remark, that from the statement by Mr. Purdy and others, corroborating, the site upon which the dam now rests was considered to be the only mill privilege on the lot, from the circumstance of the greatest rapid existing there, and consequently led to placing the dam at that point, although the section, as now taken by me, of the river, would seem to be at variance with such a statement: although I am disposed to give Mr. Purdy credit for having located the dam more to his own than the public advantage, yet it would appear from conclusive evidence, that there was no intention of overflowing so much or almost any land by the erection of the dam, it being the general opinion of the country around, who assisted Mr. Purdy in his arduous undertaking in a back county, that "if he raised it as high as a house he would do no damage," and it was not until the dam was completed, for the first time, and the water in consequence rising over the flats and drowning the inhabitants out of their "shanties," that Mr. Purdy, or any one else, had the most distant idea of the ultimate result. But before entering more fully into the merits of placing the dam in its present situation, I feel I would be better connecting the subject to first report on the extent of land overflowed.

On examination of the river, from the dam to its outlet from the Scugog Lake, a distance of nine miles, and keeping the lead constantly going, on my progress upwards, I found in the mill pond from 14 to 15 feet of water on the original bed of the river, and at the tail of the dam slope, and found this depth keep good, and in several instances exceeded, as far up as the Priest's Landing or Ford, marked upon the accompanying general plan, at which point I found from 12 to 13-6 in the bed of the river, on the former fording place, and in general 9 feet water on the former banks or low ground adjoining the original bed of the river, and maintaining, with few exceptions, the same depth, until reaching the outlet of Scugog Lake, to which point from the dam below, presents one continued scene of drowned lands and decayed timber, with, at intervals, the former residences of the settlers, shewing part of the roofs out of water, from which the immates had to make their escape, and found the waters covering the former hay meadows and such portions as industry had cleared, and in crop, to the general depth of nine feet, until reaching the Lake, in which the overflowing assumes a very different appearance and character. But before leaving the river, I would beg to refer Your Excellency to the accompanying statement, in which form I conceived it better to arrange the quantities held and overflowed, attaching each individuals name, number of lot, &c., commencing from the Scugog Lake downwards, from which it appears that no less than 1,050 acres have been rendered worse than useless, and depriving the settlers of many advantages which the former (even imperfect) state of the river afforded.

In commencing to take accurate measurement of the lands overflowed, I found it likely to occupy myself and several Surveyors (if at all practicable at that season of the year) far beyond what could be anticipated by, or intended in the spirit of the address; and besides, winter being the only season in which an actual survey of the whole could be made, owing to the very wet and soft nature of the shores, rendered so by the raising of the water, I satisfied myself (until further instructions, if such should be deemed necessary, for an actual survey of the whole of the drowned lands, from Purdy's Mill to the head of the River and around the Lake shores, an undertaking, the expense of which would go far beyond what I should have considered myself justified in incurring, in the spirit of my instructions) with a particular examination of the several portions drowned, as detailed in the accompanying statement, and I have every reason to believe is a very near approximation to the truth—as in course of the several inspections on the spot the land marks were pretty distinct, from which it would appear, as already stated, there are 1,050 acres overflowed, in the river alone. But in the event of any thing like a compensatory arrangement being made with the individuals along the river, who have had land drowned, and otherwise sustained; each in their sphere, severe loss, I would suggest, for Your Excellency's consideration, the practice adopting as to the lands overflowed along the line of the Rideau Canal, by which means a regular extended and expensive survey would be avoided, and the quantity ascertained on each lot overflowed or drowned, by a division of labor, as a regular survey of the whole would be attended with a lieavy expenditure; compared to the other equally, if not more efficient modes

4 (No. 13.) Report on overflowings of Scugog Lake.

Of the real quantity of overflowed or drowned lands along the shores of the lake, the same argument applies, as that cannot possibly be done but in winter, when the ice is good, and to arrive at the delineation of the original boundary of the lake and marshes, will, at best, be a difficult and uncertain work; at all events, without the not desirable alternative of running the whole of the water off, which of itself would take from three to four months, should such an expedient be resolved on; nor do I conceive that the lands bordering on the lake can have sustained a loss in any degree to be compared with those along the river's edge, seeing that before the waters were raised to their present certainly unwarrantable and unnecessary height, the most of those lands must have been completely land-locked from all market or even local intercourse, and I therefore consider, before the real extent of overflowing on Scugog Lake and Marshes be ascertained, the question as to the proper height the waters should be kept for the navigation of the river and lake should be ascertained (as afterwards to be treated of) and from the regulating data, as it is evident if the waters can be lowered, say one half, that a very great proportion of now overflowed lands will be reclaimed, and the purposes of navigation equally served.

In passing along the lake there is not so much the appearance of devastation as I was led to believe, the banks being in general boldish, until passing Point Claire, when a very deep bay, leading into the township of Mariposa, and north-east angle of Cartwright, presents a scene of overflowing in the index of dead standing timber, studded

about; and again, after doubling the point of what was a peninsula, of 8 or 9 miles in length, now rendered a distinct large island by the overflowing of the extensive Tamarac and Cedar Swamp at the neck of the Peninsula, (also in Cartwright) a considerable quantity of drowned land also appears in rounding the island, as well as all along the shores thereof, particularly opposite the mouth c? the Non-Con River or large Creek-about which place many extensive floating islands, raised from their marshy beds, cover the fair way-along the western side of the island there appears a great deal of drowned land, but chiefly tamarac and cedar of stinted growth; but on reaching the head of the lake, above the present landing place for Whitby and surrounding country, the scene of drowned land referred to presents itself, cutting off the peninsula from the main land by an expanse of water of considerable width, having over it from 6 to 8 feet of water to ascertain the correct extent of which the survey must be done in winter.

Before taking leave of the subject of overflowed lands along the Scugog River, I would submit to your Excellency's notice, the several privations which appear to have been sustained by the inhabitants whose lands have been overflowed to the extent reported in the accompanying statement.

On their first settlement along the banks of the Scugog, the land immediately adjoining the river naturally called for their first attention, and thereon planted their log shanties, cleared land, and put in their little crops, the river affording them in its natural state, abundance of the finest fish, which were readily caught when required—the loss of which, in consequence of the dam, seems matter of great regret (and loss:) Their road of communication has also been entirely cut off, and now many feet under water, depending entirely on the alternative of canoeing in getting to and from their houses to mill, market and church, and which at certain seasons is impracticable, if not dangerous; entailing with it many inconveniences to the farmer, who must needs have his horses, if not cattle, as a matter of course, and no road to employ them to advantage in the transport of his grain or commodities.

While on the subject of overflowed lands, it may not be out of place to mention the overflowings on the two Cross Creeks, so called from their entering the Scugog nearly opposite each other and at nearly right angles, at 7 miles above Purdy's dam, upon which there are several Settlers, as per statement, and on the North Creek particularly a good Mill privilege has been drowned on the property of Mr. Robert Miller, upon which that individual says he wishes to erect a mill.

Having discussed the merits of the overflowed land question, I trust in conformity with the spirit of the address, as well as in accordance with your Excellency's instructions, in so far as the same can at presest be done witout an actual survey on the ice; I come now to lay before your Excellency the result of my examination, levels and survey, as to the effect of the removal of the dam upon the navigation of the Scugog River and Lake, and under what the remaining heads of the subject come more immediately to be discussed.

In viewing this matter, as I am convinced it is intended it should be, upon a liberal footing as regards equally Mr. Purdy's and the public interest, and accommodation to the country at large, I have, of course, been under the necessity of assuming some data upon which to form the ground work of my opinion, viz .- the proper dimensions of navigation. In deciding this point it at once strikes the conviction that, one continuous scale of construction through any country must be the best and most convenient, where practicable; accordingly I have decided on the scale of dimensions as now estimating for the internal communication from the Bay of Quinte to Lake Simcoe, and it is presumed ultimately to Lake Huron, viz .- five feet draft of water as the most eligible.

In considering the subject, many regulating points present themselves, and among these the most prominent is the subject of levels; the all-deciding data in internal navigation. Accordingly, as no correct conclusion could be come to, in the abscence of such as to the effect the removal of the dam would have upon the navigation of the River and Lake, further than the simple conclusion that it would thereby be reduced to its original state, I immediately ran a set of levels from the back water of Sturgeon Lake, or from point A, already referred to, to the summit level of Scugog Lake, making a total diffe-

rence of level at present to be overcome of 13 feet 7 10 in. as per section accompanying, including nine inches running over the dam.

In the projected scale of improvement of the Lakes and Rivers below, it will be necessary that Sturgeon Lake be raised 2 to 3 feet, for reasons assigned in the Report, &c. on the subject, and which, as a matter of course, must proportionately back the water in the Scugog River, and comparing the present relative medium height with the intended increase, the water must be backed by the dam at Bobcaygean to about point B. on the plan, or to the government bridge, and to within a few yards, or up to, the lowerboundary of Mr. Purdy's property, crossing the Scugog, on 1-6-9 above the then height of water at said bridge, as per bench mark left on abutment on the western side, there being that difference from the assumed level of Sturgeon Lake, and which point may be considered the prominent low water mark, should the improvements in contemplation go on, and independent of such, to render the operations at Bobcaygean available in any shape, such an increase on Sturgeon Lake (and which can be productive of no injury) muct be had recourse to, and assuming such as the lower level to start from, leaves at low water, deducting the overplus now running over Purdy's dam, (nine inches) a lockage to be overcome of 11-3-9, supposing the waters of the Scugog River and Lake to be maintained at their present pitch, to overcome which, and render the rivernavigable, under present circumstances, two different modes suggest themselves, both of them equally expensive and inconvenient, viz .- either by a collateral cut from Purdy's mill pond, continuous to the river below the rapids, or to point B,-or by the construction of an additional dam at the Government Bridge, to back the water 4 feet on the tail water of the mill, and by the construction of a lock at each dam. On the other hand, assuming five feet as the requisite draft of water, to which the surface of the river and lake could easily be reduced, by lowering the whole 6, 7, or 8 feet, as might be deemed advisable, but say 7 feet, with the view of allowing a sufficiency of water over the Priest's Shallows and stoney bottom, say 5 feet, the object can be obtained by the construction of one dam and one lock, and at one-fourth part of the expense, by the removal of the present, and substituting another dam at or near the point where the dead water backed up from Sturgeon Lake ceases to give 5 feet, which, as per soundings and longitudinal section, on plan accompanying, would seem to be somewhere between the two bridges, thereby avoiding a very expensive collateral cut, and the saving of a dam and lock, besides affording an opportunity of securing a sufficiency of head and fall for the mill, which on either of the other plans would seem somewhat doubtful.

It would therefore follow, from the foregoing statement, founded on unquestionable data, that the effect of removing the present dam would be a decided advantage to the navigation of the river and lake, in the substitution of one further down stream, at or near the lower or Government bridge, keeping always in view the raising of Sturgeon Lake for the reasons assigned as the standing data, inasmuch as 5 feet water is a sufficient depth to provide for the Scurgog River and Lake, and that the same can be preserved by lowering the summit level from 5 to 8 feet.

It may probably be argued, and I am aware it has been asserted by Mr. Purdy "that the mill will not work up with a less head of water;"—in reply to which it will only be necessary to remark, that the mills, as now in operation, particularly the grist mill, is upon the rudest possible principle, constructed without any regard to economy of water, using as much and wasting more than would drive six manufacturing runs, and I have no hesitation in saying that a mill, upon proper common principles, and with every regard to economy in construction, can be made to do as much work, if not more than that mill can possibly do, with one-third the head and quantity of water she at present has, viz. 11—0—5 head and fall, and at the same time afford a more ample return than the present rude construction can make to the proprietor.—(In point of quality of construction I mean to be understood as referring particularly to the prima mobile, the description of water-wheel used, and the manner of connecting the stones therewith, and not the arrangement of the other parts of the mill which are tolerably good.)

To gain even the head which Mr. Purdy now considers as absolutely necessary to insure the effective operation of the mill he has had recourse to raising the surface of the mill pond, even above the natural surface of his own land, by the construction of the

(No. 13.) Report on overflowings of Scugog Lake.

wing dams d. d. d. in height about 18 inches above the surface, and I understand, at low water, has a wash-board which attaches to the top of the dam.

I would, therefore, in reviewing the matter, beg leave to sum up, for your Excel-

lency's consideration, my opinion in the following terms :-

That the total removal (if such was meant) of the dam at Purdy's mill must ruin the navigation of the Scugog River and Lake, inasmuch as reducing it to its original state as described, merely passable for boats, and that at high water, lay the marshes in the lake entirely dry, which, by exposure to the sun's rays, must, as a matter of course, emit ague and lake fever miasma to such a degree as would render the country most unhealthy; but that the total removal of the present, and substitution of another of less dimensions as to height, so as to afford 5 (say five) feet water in place of 12; as at present over the shallows in the river and outlet of the lake, would materially benefit the navigation, inasmuch as one dam and lock at point C. on the plan, would carry the navigation from Sturgeon Lake into Scugog by a lift of only 5—0—9, in place of 12—0—9—that the said lift of 5—0—9 would be perfectly sufficient, with a mill on proper principles, such as for instance has just been erected on the upper rapids of the Otanabee River, at the outlet of Clear Lake, of only 3 feet of head and fall to serve all and every purpose required—although I think 6 feet of clear head and fall may be obtained, in which case the purposes of the saw mill will be equally served.

On the subject of lowering the water above the present dam I would remark, that if the same is done at the proper season, late in the fall, that little apprehension need be entertained for the *miasma* from hard wood land, such as will be reclaimed in consequence thereof.

That by lowering the present dam to 5 feet water over the shallows, which would reduce the dam 7 feet, the same object may be attained, but must incur the adoption of another dam at lock C, or by the collateral cut from the mill pond to point C, which latter plan might probably interfere less with Mr. Purdy's arrangements, although his mill would in that case be as much subject to back waters, and have less head and fall, than if removed to a lower site, a transverse section of which is hereunto annexed to shew the capabilities of the banks for such.

In conclusion, I would remark, that by the removal of the present and construction of another dam at point C, with one lock of 5 feet lift, will perfectly and better serve all the purposes of the navigation.

Of the advantages likely to accrue in rendering the Scugog River navigable by improvements on the rapids at Purdy's mills, I would briefly remark, that from the extent of country overflowed, about 30 miles in extent, by a dam of only 14 feet in height, and from the circumstance of navigation being created for the largest sized steamers—where such never could have been contemplated—and viewing the whole as a branch of the grand contemplated scale of improvement for the waters of the Newcastle District, from the Bay of Quinte to Lakes Simcoe and Huron, and which may be rendered available by embracing, perhaps, one of the most favourable opportunities ever presented, to open up the same extent of country by so little assistance of art, as the waters of the Scugog River and Lake afford, passing in their course from Sturgeon Luke, from the south-west angle of Fencion, through the whole of Ops, (an extent of upwards of 40 miles, interrupted only by the triffing rapids at Purdy's mill,) also touching on Manvers, watering the whole of Cartwright, and part of Reach, at the upper extremity of the lake, and even extending its ramificated contributory branches into Mariposa, Brock, and Whitby, now rendered partially available, and which very little local enterprise would render perfectly so-and of course not confining its spreading influence to those above, but susceptible of enabling an available communication being opened up from the safe and convenient bay of Windsor, (where it is in contemplation to construct a harbour) by a rail road, or good macadamized road for the present, from which point the head of the extended navigation seems to be distant only 18 miles, and which, as already shewn, can be rendered available by the simple operation of one dam and lock below the present site of Purdy's Dam. and at an expense not exceeding £2500 under proper management—thereby affording an immediate relief to those rapidly settling Districts, at a trifling outlay-until the through main channel of communication should be opened up; and thus affording a

8 (No. 13.) Report on overflowings of Scugog Lake.

permanent local benefit to the townships immediately bordering on the Scugog River and Lake, and for which the contributaries of the Non-Con and Cross Creeks afford facilities.

Those would seem to be a few of the prominent reasons for preserving the navigation of the Scugog River and Lake, not in their present extended, but in an available state, as I have endeavoured to point out, and when viewed in connexion with the grand scale of internal improvement proposed, calls loudly for protection, together with the general argument, that where either nature or art, by accident, may have contributed so much as in the case of the Scugog River and Lake, that no opportunity should be let slip of improving the advantages so offered, and which I do believe in this case stand unrivalled, as an instance of what may be accomplished at little expense.

Having thus endeavoured to lay before Your Excellency the result of the investigation with which I have had the honor to be entrusted, I trust that such has been done with a due regard to the spirit of my instructions, and where I may have come short of, or overstepped such, I shall feel much satisfaction in affording any requisite explanation.

I have the honor to be, With much Respect,

Your Excellency's

Most obedient humble Servant,

N. H. BAIRD,

Civil Engineer, M. 1. C. E. L.

31st December, 1835.

By order of the Commons House of Assembly,

R, STANTON, PRINTER,

On Overflowings of Scugog River and Lake, by the erection of Purdy's Mill-Dam in Ops.

MESSAGE

FROM HIS EXCELLENCY,

TRANSMITTING

D O C U M E N T S

RELATINGTO

KING'S COLLEGE: AND UPPER CANADA COLLEGE.

F. B. HEAD.

The Lieutenant Governor transmit to the House of Assembly, with reference to its address of the 3rd of April last, presented to his predecessor, two communications from the Bursar of King's College, and the accompanying documents, relative to Upper Canada College and King's College.

Government House, 3th February, 1836.

King's College,

Toronto, 11th April, 1836. Sin.

the same of the sa

In obedience to the direction of His Excellency Lieutenant Governor, communicated in your, letter of the 7th of last month, addressed to the President and Council of King's College, that the statements asked for by the House of Assembly in an address of the 3rd (of which you transmitted a copy) should be prepared with as little delay as possible, I have now the honor to transmit various abstracts concerning the department of which I have the management; with an accompanying explanatory list of them; but I respectfully beg leave to explain that the minute details called for by the said address cannot possibly be furnished during the present Session.

I commenced an attempt to obey the call to itsfull extent immediately upon my return to the office after a two months confinement to my house by a serious accident, but I found that the references it required would take up imore time to investigate than the Session was likely to continue. I therefore deemed it more advisable to confine myself in the first instance to the differential of furnishing abstracts of the different to the stance to the ferent receipts and spayments of the three funds of King's College, Uppers Canada College, and the General Board of Education, from the period to which abstracts had been already furnished, so as to show the several balances, pro and con. of the three

funds as they stood with me at the close of the last year.

man and the second second second second second second second second second second second second second second

The minute details called for in the address of the House of Assembly of particulars of general items in the former abstracts, as recorded in their Journals; will be prepared before the next meeting of the Legislature, and shall be timely transmitted to His Excellency—but I hope I may be allowed respectfully to remark, that it does seem a hardship upon a public functionary, when he has submitted certain accounts, which have been printed on the Journals, some of them five years back, and others three, without its ever having been notified to him that they were unsatisfactory, until late in the present Session, that he should at this distant period be required to search into old vouchers, which have been long considered as wholly done with. l have the honor to be,

Sir.

Your most Obedient Humble Servant, JOS. WELLS,

Bursar of King's College.

Lt. Col. ROWAN, &c. &c. &c.

> KING'S COLLEGE OFFICE, Toronto, 16th Jan'y, 1836.

In answer to your enquiry by the direction of His Excellency the Lieutenant Governor, whether the remainder of the documents called for by the Commons House of Assembly in the last Session of the Legislature, relative to King's College and Up-per Canada College are ready for delivery in order that they may accompany those which were received too late in the Session to be then sent down to the House. I have the honor in reply to acquaint you, for the information of His Excellence, that they will be sent in few days with a further detail of the receipts and expenditures for the year 1835. If any further explanation respecting them should be required, it will be my duty, as it is my inclination to give it either verbally or in writing to the committee of the House appointed to investigate the same.,...

I have the honor to be,

Your most Obd't. Humble Servant, JOS. WELLS

Busar of King's College

RETURN

FUNDS OF KING'S COLLEGE,

UPPER CANADA COLLEGE

UNA

GENERAL BOARD OF EDUCATION.

COMMUNICATED MARCH 28, 1836.

REPORT

Of the Inspectors of the Provincial Penitentiary, 1835.

To His Excellency SIR JOHN COLBORNE, Knight Commander of the Most Honorable Military Order of the Bath, Lieutenant Governor of the Province of Upper Canada, and Major General commanding His Majesty's Forces therein, Sec. Sec. Sec.

THE Inspectors appointed under the authority of an Act passed on the 6th day of March, 1834, entitled, "An Act to provide for the main-"tenance and government of the Provincial Penitentiary erected near "Kingston, in the Midland District," in pursuance of the said Act, have the honour

MOST RESPECTFULLY TO REPORT,

That they met at Kingston on the second day of August, 1834, Board organized. and after reading the instrument dated the 28th day of the previous month, by which they had been appointed, they proceeded to organize John Macaulay, Eaq. their Board, by the selection of John Macaulay, Esquire, as its President, chosen President. and of Mr. Francis Bickerton, recently in the employment of the Comappointed Clerk. missioners, as its Clerk.

Finding that no funds had been assigned by the Legislature, in the No funds assigned, Session of 1834, for the maintenance of the Penitentiary, and that none and on that account could be obtained for that purpose from the Executive Government, the Board necessarily remained inactive until the month of April last, when £3,000. granted in the sum of three thousand pounds was granted for the "completion of April 1835. the Kingston Penitentiary," the maintenance of convicts, and the compensation of the Warden and other officers and persons employed in the government and police of the Prison.

Thus supplied with means, the Board authorized the Warden to Preparations made make all the requisite preparations for the reception of such convicts as for the reception of His Majesty's Judges might, in the administration of the criminal law prisoners. during the ensuing summer, sentence to hard labour under the discipline established in the Penitentiary.

Mr. William Powers, recently employed by the Commissioners in Mr. W. Powers, superintending the construction of the Prison, was on the recommendation of the Board, appointed Deputy Warden.

Three of the most competent candidates for the office of Keeper, Subordinate Officers were engaged by the Warden, with the approbation of the Board; and appointed; Guard &c. the names of six Watchmen were reported by the Inspectors, conformably to the eighth section of the Statute of 1834, which authorizes your Excellency "to procure a guard."

These Watchmen were placed under the orders of a Captain or Police Officer, who was also required to perform the duty of Keeper.

The compensation allowed the Keepers was fixed at eighty pounds, Pay of Keepers and

and that of the Watchmen at sixty pounds per annum.

The construction of the wooden fence, intended by the recent Temporary wall Statute, as a temporary substitute for a substantial boundary to be hereafter put up, was contracted for, and soon completed under the eye of

Seven stands of arms were borrowed from His Majesty's ordnance Watchmen receive stores, until suitable equipments for the Watchmen could be imported arms. from England.

Rations established.

Contracts for Clothing, Bedding, &c.

The quality and daily quantity of food to be allowed for the sustenance of convicts was considered and established nearly in conformity to the scale of allowances observed at the Auburn Prison, in the State of New York; and contracts were concluded for the supply of clothing, bedding, furniture, cooking utensils, and sundry other indispensable articles.

Five Convicts from the Flome District reported.

Confined in District Gaol till Warden was prepared to take charge of them.

On the 27th day of May, the Warden reported to the Board the arrival of five convicts from the Home District, under sentence to confinement in the Penitentiary, whom it was found necessary to secure in the common gaol of the Midland District, guarded by two of the Watchmen, until the 1st day of June, when the Warden was enabled to take them into his own charge at the Prison, and set them at hard labour, under the rules and regulations adopted, and ordered by the Board to be strictly enforced.

Fifty Convicts received between 1st June and 30th September. Making in all fiftytive, including three females.

Between the 1st day of June and the 30th day of September. (when the fiscal year, so far as relates to the Prison, terminates,) fifty other convicts were received into his charge by the Warden, making in all fifty-five. Of these

the description and cost of the clothing, with other details of his proceedings and management. The statement marked B. is an estimate framed by the Warden of

the value of the labour performed by the convicts, under various heads, as therein specified, amounting to £234 13s.

This labour may be considered as directly productive to the Province, since it has been principally applied to the fitting up of the Prison, and is thus equivalent to an express appropriation of the same sum of money towards that object from the public funds.

The statement marked C. exhibits the several descriptions of labour on which the convicts were engaged on the first day of October;

By the accounts of the Warden for the year, ending on the 30th Sep. £ 1830. 15s. 64d. September,—a copy of which has been transmitted to your Excellency by that Officer, in due conformity to the statute, it will be seen that the sum disbursed was £1830 15 61 including the payment of various accounts for services performed under the late Commissioners, whose

duties have been transferred to this Board; and that the sum remaining unexpended on the first day of October, including the balance received oct. £1220, 3s. 9d. from the Commissioners, money found upon the persons of convicts, barely sufficient to certay expenses till rebruary next. fray the current expenses of the Prison until the month of February next.

The number of convicts sentenced during the present year is twice Number of Convicts as was anticipated by the Board, and the current dishurse months greater than anticipated by the Board, and the current dishurse months as great as was anticipated by the Board, and the current disbursements pated, of the Warden are of course correspondingly augmented beyond the estimate.

In consequence of this sudden concentration within the boundaries of consequence of the Prison of so large a number of criminals, many of them during and desperate, and all unsubdued in temper, and strangers to the restraints of discipline, the Board felt the importance of impressing on necessary. their minds the hopelessness of attempting to escape, by adopting every means at their disposal for preventing all conspiracies for mutual aid and co-operation in their insurrectionary schemes. This point was the more urgent, since the yard was surrounded merely by a plank fence, and the prisoners might think it practicable to break through it, if they did not see that they were at all times watched by a sufficient force.

The Warden was accordingly authorized to engage two more Keep- Precautions adopted ers and six more Watchmen.

The present amount of monthly disbursements by the Warden, for Amount of monthly disbursements. salaries, wages, rations, &c. will appear by the following statement:-

This left for the consideration of the Legislature.

Scale of rations at the Auburn Prison adopted.

Cost of daily ration five pence sevententlis.

Will probably be reduced.

Estimated average cost of rations in the United States.

Physician. Salary for do.

No Chaplain appointed.

Prayers read by the state of the

Prayers read by the Warden.

Want of a Chaplain much felt.

Qualities required in a Chaplain.

Greater exertions made in England to impress the minds of prisoners with a sense of religion.

was 25, and of Watchmen 25; at Auburn, where 683 convicts were in prison on the 1st of January, 1833, the Keepers are 20 in number, and the Guards 18; at Charleston, near Boston, where in the same year 250 convicts were imprisoned, there were 9 Overseers and 10 Watchmen. In the vicinity of all these prisons an adequate Militia force is ever in readiness to quell whatever disturbance may arise among the inmates.

The Inspectors are fully sensible how much the success of a Penitentiary institution depends on the economical and judicious application of its funds, nor did they lose sight of this consideration while they were engaged in determining the number of assistants to be allowed the Warden. They, however, (at the outset particularly,) esteemed the safe keeping of the convicts a primary object, and they further believe that until a high boundary wall can be erected around the yard, it would not be prudent to reduce the strength of the guard below its present establishment; unless in the meantime a detachment of His Majesty's Forces were quartered, according to the earnest desire of the Board, in the immediate neighbourhood of the Prison, to afford ready support when needed by the Warden.

It is for the Legislature to approve or reject the views and determi-

nations of the Inspectors on this part of their duty.

With respect to the rations of the convicts, the Board beg leave to remark, that they, as already stated, have been in a great measure regulated by the Auburn standard, yet they are not considered definatively established, but are liable to be altered from time to time, according to the state of health in the Prison, or other circumstances.

The cost of a daily ration at first amounted to $7\frac{1}{7}d$. per diem, and is now estimated by the Warden at $5\frac{7}{7}d$. As the number of the convicts increase, and the culinary arrangements of the Prison become improved,

the cost of sustenance may be expected to diminish.

The French Commissioners who visited America, furnish the following return respecting the cost of a convict, on an average per day, as follows:—

The Physician has been in regular attendance since his services were required, and his salary has been recommended, for commencement on first October instant, at the rate of one hundred pounds per annum.

The appointment of a Chaplain has not yet been made; Prayers are in the mean time read by the Warden, as stated in his report, at the close of each day when the convicts are in their cells. The want of a Chaplain is nevertheless sensibly felt; his labours are most important to the due effect on the convicts heart of the system of discipline enforced in the prison, and would necessarily be unremitting. To this duty not every individual in holy orders is competent.

The Inspectors feel most anxious that the Chaplain appointed to the Penitentiary should not only possess a full share of learning and talents but also the zeal and devotion to the cause he is engaged in, without which little that is really beneficial can be looked for at his hands.

It appears by the lucid and comprehensive Report of William Crawford, Esquire, the British Commissioner recently employed to examine the American Gaols, that far greater efforts are made in England than in the United States of America, to impress on the minds of the unhappy

and depraved inmates of prisons, a suitable sense of religion and virtue. Mr. Crawford's observations on this matter appear to the Board so just and forcible, that no apology can be required for submitting them to the particular notice of the Provincial Parliament. In adverting to the religious instructions of persons confined in prisons, he says:

"As personal reformation, to be permanent, must be founded on Extract from Report "Christian principles, so no system of prison discipline can be effectual of Mr. Crawford, Commissioner to

"in which religious instruction does not form a prominent part

"The Prisons of this country, (England,) have great advantages state of the American " over those of the United States, in the means afforded by the Legisla-" ture, for imparting religious instruction; but notwithstanding the libe-" ral remuneration authorized by law, there are too many instances in " which Chaplains, having other professional engagements, do not devote "thomselves exclusively to the duties of the Prison. On the importance " of this subject it is impossible too earnestly to dwell.

"The vice and depravity to be found in every gaol has led to an " impression, by far too general, that most criminals are beyond the reach " of reformation. Whatever may be the fact, I feel assured that the trial " has in few prisons been fairly made. There can be no limits to the influence of religious " sacred influence of religious impressions upon the hearts of even the impressions upon " most guilty, and I cannot doubt that by the employment of measures the heart. " adequate to the occasion, minds, however hardened, may be raised from

" degradation and reclaimed by the power of the Gospel." When the number of the prisoners is considerable, the whole time Chaplain's attention When the number of the prisoners is considerable, the whole time Chaplain's attention when the number of the prisoners is considerable, the whole time Chaplain's attention when the number of the prisoners is considerable, the whole time Chaplain's attention when the number of the prisoners is considerable, the whole time Chaplain's attention when the number of the prisoners is considerable, the whole time Chaplain's attention when the number of the prisoners is considerable, the whole time Chaplain's attention when the number of the prisoners is considerable, the whole time Chaplain's attention when the number of the prisoners is considerable, the whole time chaptain's attention when the number of the prisoners is considerable, the whole time chaptain's attention when the number of the prisoners is considerable. " and undivided attention of a Chaplain should be devoted to his duties.

Whatever necessity prevails in the world at large for moral and " religious education, is immeasurably increased in a Prison by the cha-" racter and habits of its inmates, and by the disadvantages under which

"that instruction can ordinarily be conveyed.

"The situation of a young criminal, on his first entrance into a gaol, " might be rendered eminently favourable to good impressions; nor can "any human being, however hardened, be so debased by guilt as to jus-"tify the withdrawal of the means which are necessary to his moral res-Valuable, however, as are the public services of religion, "their effects on prisoners are in general but partial and unsatisfactory.

"The labours of the Chaplain should not, therefore, be confined to "the performance of social worship; to this must be added private and

" individual instruction in the retirement of the cell.

" In his efforts to convince the misguided and reclaim the impenitent, " sound judgment and knowledge of character are not less essential than ardent piety and persevering benevolence.

"Against the numerous arts which prevail in prisons the Chaplain " must habitually guard. A convict should not be allowed to hope for "any temporal advantage, during confinement, from religious profes-" sions; nor ought a Chaplain to be exposed to deception, by having it "in his power to procure for a prisoner any species of indulgence or " reward."

The Inspectors duly appreciate the services which a Chaplain might Chaplain should be render the convicts individually, and accordingly have it in view to assign, allowed every opportunities of private convicts individually, and accordingly have it in view to assign, allowed every opportunities of private that officer, when appointed, as many opportunities of private communi-communication cation with each convict, as the general arrangements of discipline will admit of. Convicts should on no account be left without instruction or admonition.

In many of the American Penitentiaries ample room presents itself Room for imprefor improvement in this part of their system.

It appears that even at Auburn, where a Chaplain has charge who is surpassed by no other in worth or zeal, he cannot, under the existing a worth, saids arrangements, obtain a private interview with every prisoner under a teacher period of three months.

Board hope to introduce a superior system of religious instruction

Chaplain should be convicts: and should receive a aufficient salary to enable him to give his whole time to the duties of his office.

Board is engaged in framing a code of Prison Regulations, which will be presented to the Legislature.

Provision should be made for the expenses of the ensuing year;

and also for the completion of the north

The Board trust they will be enabled to introduce into the Provincial Penitentiary, regulations for the religious instruction of the convicts superior to those of Auburn, and even to emulate the good examples presented in England.

To effect this object it may become advisable that the Chaplains allowed every oppor- should not only be authorised, as at the Massachusetts State Prison, to interview with take an individual aside at his discretion, and confer with him in private take an individual aside at his discretion, and confer with him in private at any time during the usual hours for labour, as well as at the door of his cell, but also that he should be allowed a salary liberal enough for the support of himself and his family, and for ensuring the undivided application of his mental energies to the moral improvement of the criminals committed to his spiritual care.

The Board of Inspectors are engaged in framing a code of Regulations for the guidance of the Warden and other officers, a copy of which shall be submitted for the information of the Legislature.

This code is founded on the regulations which are now in force in some of the American Penitentiaries, and will be subject to such modifications as experience may shew to be requisite and proper.

Before they conclude their Report, the Inspectors beg leave to represent the expediency of making such legislative provision for the ensuing year as may not only enable the Warden to defray the ordinary current expenses of the Prison, but also to proceed expeditiously with the conwing of the building, struction of the north wing, in which the kitchen, mess-room, chapel, hospital, and offices are intended to be placed.

Great inconvenience is already occasioned by the necessity of using one part of the building designed solely for dormitories, as hospital, kitchen, and mess-room; and in the course of the ensuing year, if the number of convictions should in any degree approach to an equality with that of the present, the due enforcement of discipline will, from that cause, be materially obstructed.

No progress made in north wing this year.

Convicts how to be

Estimates of appro-

printions necessary to be made by the

Legislatura.

As the Legislature at its last session struck from the estimate a large proportion of the sum asked for the commencement of the north wing, no progress has yet been made with it.

The convicts will be employed during the winter in the preparation

employed this winter. of stone for that wing, and perhaps also for the boundary wall.

They will, however, be hardly qualified to proceed alone with the building of the north wing, and the Board conceive that the Warden should be authorized to engage mechanics to assist in that work.

Estimates marked D. E. and F. framed by the Warden, are herewith submitted as a ground for calculating the amount of the appropriations which the Legislature may, perhaps, see fit to make for this institution.

The Board confine themselves to the mere exhibition of estimates, as the Legislature are already satisfied of the necessity of providing suit able means for its completion, as well as for maintaining it during the next

fiscal year and until the next succeeding session of Parliament.

It is to be observed that the sentencing of females to the Penitentiary causes some inconvenience. They must be kept closely confined in the small temporary apartment formed over the present mess table of the male convicts, and occupying part of the area on a level with the fourth range of cells; and though their labour as seamstresses can always be turned to good account, they cannot be effectually subjected to the peculiar discipline of the prison until the separate place of confinement suggested for them by the plans and reports of the recent Commissioners shall have been prepared for their reception.

Sentencing females to the Penitentiary attended with inconvenience, until more suitable apartments are prepared for their reception.

> JOHN MACAULAY, PRESIDENT.

Penitentiary, near Kingston, 2nd November, 1835.

REPORT

OF

THE WARDEN OF THE PROVINCIAL PENITENTIARY.

TO

THE INSPECTORS.

OCTOBER 1, 1835.

TO THE INSPECTORS OF THE PROVINCIAL PENITENTIARY.

GENTLEMEN:-

I beg to Report that this Establishment commenced its operations by the reception of Six Convicts on the first day of June last. Owing to the small number of prisoners then received it was found difficult to employ them with much advantage to the Province, but after a few days work as labourers four of them were placed under the direction of one of the Keepers to learn the business of Stone cutting, and with a few weeks instruction became sufficiently expert to commence the cutting of Stone to flag the avenues of the South Wing.

This work for a time was suspended in order that an additional accommodation might be prepared for such convicts as were expected to be sentenced to the Penitentiary during the recent Assizes, and the prisoners were therefore employed in plastering and flagging Cells on the third range of the Eastern side of the Prison.

An additional number of prisoners having arrived in the months of July and August they were employed in covering the arches of the upper ranges of Cells and the ceiling over the avenues with Stone and composition, in order to prevent further acceident to the Prison, should the roof at any time unfortunately catch fire; they were also employed in making the grated doors required for the completion of the additional number of Cells.

The number of prisoners now under confinement in this Establishment is fifty five as will appear by the Return marked A, giving a statement of the Districts from which they were sent, the crimes committed by them, the dates of their sentences and the terms for which they are sentenced to be imprisoned.

The amount gained by the Province by the labour of the convicts will appear by Return marked B, and I beg to observe that in estimating their earnings they have been calculated at the lowest possible rate.

By the 4th Willm. 4. chap. 37. sec. 14. the Warden is directed to make contracts for the supply of rations for the prisoners, in obedience to which, as well as by direction of the Inspectors, I caused advertisements to be inserted in two of the Newspapers printed in the District, but no persons having tendered to furnish them, I was obliged to enter into contracts for the supply of the several articles of provisions with separate persons, and I have reason to believe that this method is more advantageous to the Province than if the terms of the Statute could have been complied with. The average expense of a day's rations for each prisoner, during the time there were but six convicts in the Penitentiary was $7\frac{1}{8}$ pence, but at present, owing to the rations are similar, in order that it may be understood in what manner the convicts are fed, I beg leave to observe that the provisions allowed to each are as follows, viz:—

10 Report of the Warden of the Provincial Penitentiary.(19)

Sunday	1 lb. Fresh Beef.
Monday	1 lb. Salt Beef.
Tuesday	a lb. Salt Pork.
Wednesday,	1b. Salt Beef, made with vegetables into Soup.
	3 lb. Salt Pork.
•	lb. Salt Beef, made with vegetables into Soup.

Every convict on each of these days is supplied with one pound of Bread and as many Potatoes as he can eat, together with Pepper, Salt and Vinegar. For Breakfast he is furnished with Pease-Coffee, sweetened with Molasses, and for Supper an allowance of Meal Porridge, sweetened in like manner. Part of the above daily quantity of Meat and Bread is apportioned for the convicts Breakfast.

The conduct of the prisoners has been generally good, and but little punishment (and that in a very slight degree) has been inflicted. This is in a great measure attributable to the certainty of punishment immediately following any deviation from the rules laid down for the good government of the Establishment, and the constant surveillance exercised over them by day and night.

Very little sickness has been experienced by the convicts, and in but few instances has it been of such a nature as to require a temporary cessation from labour.

The clothing of the convicts during the Summer season has been of light materials adapted to the weather, and consists of a Jacket, Waistcoat, Trowsers and Cap, each of two different colours, so as to ensure their speedy apprehension in case of escape. The cost of a Dress of this description is 16s. 9½d. Each of the prisoners is also furnished with a coarse Shirt, Socks and Shoes, a Pocket Handkerchief, a Bible and two Combs, and habits of cleanliness in their Cells and persons are enforced. The severity of the Winter requiring the use of warmer Clothing, I have entered into a contract for a supply of Cloth, made in the Province, which is found to be much more durable than that which is imported. The Dresses made from these materials will also be party coloured. The cost of a suit of Clothing of this description will be 33s. 9½d. The Bedding provided for the prisoners consists of a Straw Mattrass and Pillow, a pair of Sheets and a pair of Blankets, the expense of which is 23s. 9d. for each Cell. No Chaplain having yet been appointed to the Penitentiary I have made it my duty every evening to read Prayers to the convicts and on Sunday to read morning and evening Prayers and a Sermon. Owing to the unexpected arrival of Female convicts I have been under the necessity of appropriating the temporary Hospital for their reception, until another apartment and Cells on the West side of the Prison could be fitted up for their use.

This temporary but unavoidable arrangement has caused some inconvenience in regard to the sick, who were necessarily confined to their Cells, by which, had their illness been of a serious character, their recovery would have been much retarded.

As it is highly desirable in order to preserve the health of the convicts that the Hospital should be at the greatest possible distance from the Wings appropriated more immediately to Prison purposes, I need not state how absolutely necessary it is that the front or North Wing should be completed with as little delay as possible.

By Return marked C it will be seen in what manner the convicts are now employed, and with regard to their future operations during the present year, much of their time will be engaged in quarrying and dressing Stone for the North Wing. A statement of the receipts and expenditures on account of the Penitentiary, from its commencement to the present date, accompanies this Report.

All which is respectfully submitted.

H. SMITH.

Warden.

PROVINCIAL PENITENTIARY, 1st October, 1835.

H. SMITH, Warden.

PROVINCIAL PENITENTIARY, 2nd November, 1835.

Letter and Memorial of HENRY SMITH, Esq. Warden of the Provincial Penitentiary, praying for an increase of Salary.

PROVINCIAL PENITENTIARY,

January I5, 1836.

Sir,

I beg to enclose a Petition to the Lieutenant Governor for an augmentation of my pay as Warden of the Provincial Penitentiary, which I request you will be pleased to lay before His Excellency.

I have taken this step by the advice of the Inspectors, who consider my services to be inadequately paid, and as it is not in their power to grant the prayer of my petition, they have recommended me to apply to the Legislature.

I have the honor to be, Sir.

Your obedient humble servant,

H. SMITH.

Lieut. Colonel Rowan,

&c. &c. &c.

To His Excellency Sir John Colborne, Knight Commander of the most Honorable Military Order of the Bath, Lieutenant Governor of the Province of Upper Canada, and Major General Commanding His Majesty's Forces in Upper and Lower Canada, &c. &c. &c.

The Petition of Henry Smith, Warden of the Provincial Penitentiary,

HUMBLY SHEWETH,

That your Petitioner was appointed by your Excellency to the office of Warden of the Provincial Penitentiary on the 28th day of July, in the year 1834.

That by the Statute 4th William 4th, chap. 37, the Salary apportioned for the payment of the Warden's services is two hundred pounds per annum.

That the said salary of two hundred pounds is insufficient to support your Petitioner in that degree of comfort and respectability which is necessary for the maintenance of the senior officer of the Provincial Penitentiary.

That although your Petitioner was actively engaged in entering into agreements with Contractors and attending to other duties, in making provision for the maintenance of Convicts at a period long prior to the first day of June last, yet your Petitioner did not receive any portion of his makery until from and after the said first day of June last, as will appear by the Accounts already transmitted to your Excellency from the Office of the said Provincial Penitentiary.

That the Salaries exclusive of other emoluments received by the principal Officers of the Penitentiaries at Richmond, Sing Sing, Boston, Auburn, and Wethersfield in the United States of America, are respectively £500, £437 10 0, £375, £312 10 0 and £300, making an average rate of pay those Officers, of £360 per annum.

Your Petitioner therefore prays that your Excellency will be pleased to grant unto him such increase of pay for his services as Warden of the Provincial Penitentiary as to your Excellency may seem just and proper.

And as in duty bound, your Petitioner will ever pray.

H. SMITH.

Kingston, 15th January 1836.

PROVINCIAL PENITENTIARY, 28th October, 1835.

Sir.

I beg leave to transmit herewith for the information of His Excellency the Lieutenant Governor, the undermentioned Papers and Documents relative to this Establishment vir.

- "Guneral Statement of Receipts and Disbursements from the 30th April to the 30th September, 1835."
- "Abstract of Disbursements from the 30th April to the 30th September 1835, with accompanying Vouchers."
- "Return of Prisoners received from the 1st June to the 1st October, both days inclusive."
- "A Return shewing the manner in which the Convicts under confinement are employed at the present date, 1st October 1835."
- "A Return shewing the earnings of the Convicts under confinement from the 1st day of June last, to the present date, 1st October 1835."
- "Inventory of the property of the Province of Upper Canada, in the hands of the Warden of the Provincial Penitentiary, 1st October, 1835."

I have the honor to be,

Sir,

Your most obedieut servant. H. SMITH, Warden.

Lieut. Colonel Rowan,

Sec. Sec. Sec.

DISTRIBUTION

OF

GOVERNMENT APPROPRIATION

TO, ' '

ROMAN CATHOLIC CLERGY, &c.

THE RIGHT REV. ALEX. MACDONELL,

IN

ACCOUNT CURRENT

WITH THE

CATHOLIC CLERGY AND TEACHERS,

OF

UPPER CANADA.

The first issue of the Government appropriation to Catholic Clergymen and Teachers to the amount of Seven Hundred and Fifty Pounds sterling, was made in the month of November, 1827, as may be seen by the Honorable James Baby's letter, (No. 1,) of the 25th of that month.

Four Hundred Pounds of this sum went to refund an equal sum which Bishop Macdonell borrowed from the Receiver General upon his own responsibility to relieve the wants of his Clergy in the former part of that year, as shewn by the same letter of Mr. Baby.

Mr. Baby was so obliging as to take the trouble of receiving and distributing the Government appropriation among the Catholic Clergy and Teachers of Upper Canada from that period 'till the first of January, 1829, when Mr. O'Grady got the management of it—as proved by his letters of the first and eleventh of July, 1829, Nos. 3, 5.—He continued in the management of it till the first of July, 1831. Bishop Macdonell then took it in hand himself.

The Honorable Mr. Baby's papers will shew Vouchers for the disbursements made by him, and Mr. O'Grady will have to account for the money distributed by himself.

The following are the distributions made by Bishop Macdonell during the time he has had the management of it.

DISTRIBUTION of the Government appropriation to the Catholic Clergymen and Teachers of Upper Canada for the half year ending 31st Dec., 1831.

--	-------------------------	---	------------	--------------	-------------

The circumstances under which the above monies were obtained and the cause of the loss to Bishop Macdonell were as follow-

In the year 1816, Earl Bathurst then Secretary of State for the Colonies, was so well pleased with the conduct of the Catholics of Upper Canada, in defence of the Province during the war between Great Britain and the United States of America, and the important services they rendered in repelling the invasion of the enemy, that, on Bishop Macdonell's representing to his Lordship in conthe inability of those loyal and meritorious subjects of His Majesty, to support Clergymen or School Masters, his Lordship in conthe inability of those loyal and meritorious subjects of His Majesty's Council, authorised Bishop Macdonell to engage three Clergy-currence with Viscount Sidmouth, then President of His Majesty's Council, authorised Bishop Macdonell to engage three Clergymen and four School Masters, at a hundred pound sterling each, per annum, with a promise that they should be paid by the Provincial Government of Upper Canada.

Bishop Macdonell accordingly engaged John Murdock, Angus Macdonald James Macpherson, and John Hammond, Teachers, and promised the Rev. Angus Macdonell, the Rev. William Fraser, and the Rev. John Macdonald, that they should receive their share of this expected bounty of Government. Upon the faith of this promise of the Colonial Minister. Bishop Macdonell placed those Clergymen and Teachers in the different parts of the Province where they were most wanted, but when the time of payment came, and he applied to the Provincial Government for the payment of the Salaries of the above mentioned individuals he was informed that there were no funds from whence such salaries could be paid, and was in consequence compelled to apply to the informed that there were no funds from whence such salaries could be paid, and was in consequence compelled to apply to the Home Government for redruss, and it was not till after the lapse of seven years, and going himself to England with a Petition, and those for remaining the salaries of those Clergymen and Teachers—but having deposited the money in the House of Garden, Auldjo, and Maitland, in London, for the purpose of remitting it to Canada, that House failed before the money could be drawn, and the individuals for whom the money was intended, considered Bishop Macdonell responsible for it, and he accordingly felt himself bound in honor to pay it, which he at length done by Instalments, as above stated.

DOCUMENTS

RELATING TO

TALBOT'S SETTLEMENT ~0·2·0~

F. B. HEAD,

The Lieutenant Governor transmits to the House of Assembly in compliance with its address dated 3rd instant and with reference to two addresses of the House, presented to his predecessor during the last session, copies of several documents, containing, he hopes, all the information required on the subject of the Talbot-settlement, and acquaints the House of Assembly that Patents to the settlers located under the superintendence of Col. Talbot are issued to them individually under the regulation of the year 1804, and the fee chargeable thereon, paid into the hands of the Receiver General, to the credit of the Territorial Revenue of the Crown, subject to the disposition of His Majesty's Government for uses within the Province.

Government House, 8th February, 1836.

In Council,

7th May 1803.

Read the following letter from James Green, Esq. Private Secretary to the Lieutenant Governor :-

> Lt. Governors Office, York, 4th May, 1803.

SIR.

I am directed by the Lieutenaut Governor to request that you will lay before the Executive Council the enclosed extract of a letter from the Right Honorable Lord Hobart, one of His Majesty's principal Secretaries of State, dated Downing street, 15th Feb'y., 1803.

> (Signed) JAMES GREEN.

> > Secretary.

John Smill, Esq.

A true copy JOHN BEIKIE, Clerk Executive Council.

Extract of a letter from the Right Honorable Lord Hobart, one of His Mujesty's the Right Honorable Lord Hobart's letter

principal Secretaries of State, Downing street, 15th February 1803:

"Mr. Talbot has applied for a grant of land in the distant Township of Yar-" mouth in the county of Norfolk on Lake " Erie, as being from the nature of the soil " favourable to his design of raising Hemp " for exportation, and also affording scope " for the establishment of such a number " of families as may be induced to follow

" him into the Province." In consequence of the assurances which have been received that Mr. Talbot is in every respect qualified to prosecute the undertaking: I am commanded by his Majesty to authorise you to take the proper steps for passing without delay according to the usual form and subject to the custumary reservations, a Tract of Five Thousand acres in his favour in the Township above mentioned, or if the same should have been already appropriated, in any other which he may select;—You are at the same time to give directions that a proportion of such townships immediately contiguous to Mr. Talbots Grant may for the present be reserved for the purpose of hereafter appropriating to him according to circumstances a further quantity at the rate of Two hundred acres for every family he may induce to settle there,, either from the continent of Europe or America, -provided he shall have surrendered Fifty acres of his original grant to each family for which he may claim, and that such family shall at the time be established in the actual possession of the said Fifty

acres." "I enclose a copy of Lt. General Simcoe's letter to me forwarding Mr. Talbot's application, and from the high terms in which he is therein mentioned, I am induced to recommend him to your protection and good offices, he will have the honor of delivering this letter to you."

Truly extracted

JAMES GREEN, (Signed)

Secretary. Ordered to stand over for future consideration.

> A true copy JOHN BEIKIE, C'lk. Ex. Council.

In Council, 4th May 1804. The committee revised the extract from

relative to Mr. Talbot's application for can be well recommended might not be land in Yarmouth which was read in Council the 7th May, 1803, and ordered to stand over for future consideration.

2

Recommend that in obedience to His Majesty's command, as contained in Lord Hobart's letter, a grant of five thousand acres of Land in Yarmouth, or any other township not appropriated, do issue to Mr. Talbot, subject to the terms comprised in the Order of the thirtieth of December, 1802.

The Board is aware that Mr. Talbot has already received twelve hundred acres of land, but is of opinion that the royal command as expressed in Lord Hobart's letter, is differently penned from the orders which were transmitted respecting lands to be granted to the members of the Executive Council and the late Attorney General, in which latter cases the Board observes the orders were express, that six thousand acres of land should be granted including what had been before granted, but no such expression appears in Lord Hobart's letter in favor of Mr. Talbot, and Mr. Talbot states to the Board that Lord Hobart knew that he had before received twelve hundred acres, and that the five thousand were intended in addition.

A true copy,

JOHN BEIRIE, Cl'k Ex. Cl.

In Council,

26th March, 1820.

Read the following letter from Colonel Talbot and the report on the subject of an additional grant of one hundred acres to active settlers under the superintendence of Col. Talbot.

York, January 24, 1820.

SIR,

I have the honor to inform Your Excollency, that I have completed the location of the lands especially put under my direction by virtue of orders from His Majesty's government in England, by placing a settler upon fifty acres for every two hundred.

As there are a great number of the above settlers active farmers with ample means of improvement, I beg leave to sub- Sir, mit to Your Excellency whether such as

indulged with a grant of one hundred acres additional from the Crown, upon paying the present fees-I am induced to make this ap. plication from understanding that several persons who have already been granted two hundred acres have been favored with an additional hundred under the new regulations.

REPORT OF THE COUNCIL ON THE ABOVE.

May it please Your Excellency:

On a letter addressed to Your Excellency by Colonel Talbot, dated 24th instant, referred to the Council by letter from Major Hillier of the 25th instant.-The Council considering that Col. Talbot receives two hundred acres from the crown for each settler to whom he has made a gratuitous conveyance of fifty acres, cannot recommend the proposition to grant to such settlers one hundred acres, but upon the recently adopted principle of creating a finance by the increased charge on the Patent, and upon such principle concur, if Your Excellency should think proper in such grant of an additional hundred acres on payment of the fee paid for the third hundred acres at this time, by such as have previously received grants for two hundred

All which is humbly submitted. By order,

Somerset street Portman Square, 11th February, 1803.

&c.

My Lord,

In consequence of Mr. thousand acres in his favor in the town- Talbot having acquainted me that Mr. Sulship above mentioned, or if the same livan on his presenting a request for a grant should have been already appropriated, in of land in the Province of Upper Canada any other which he may select.—You are had intimated it would be proper I should at the same time to give directions that a inform your Lordship of Mr. Talbots es-

pecial services, I took the earliest oppor- fide, should become a settler therein, it had the honor to hold with you yesterday, I obey your Lordships commands in deof his claims to the protection of Ris Ma-

jesty's government.

Upon my arrival in Canada to carry the constitution which had been granted to that colony into effect, Mr. Talbot accompanied me as my private and confidential Secretary into Upper Canada. He remained in my family four years, when he was called home as Major of the 35th Regiment, then ordered to Flanders, during that period he not only conducted many details and important duties incidental to the original establishment of a colony in matters of internal regulation, to my entire satisfaction, but was employed in the most confidential measures necessary to preserve that country in peace without violating on the one hand, the relations of amity with the United States; and on the other, alienating the affection of the Indian Nations, at that period in open war with them.

In this very critical situation, I principally made use of Mr. Talbot for the most confidential intercourse with the several Indian Tribes; and occasionally with His Majesty's Minister at Philadelphia; -these duties without any salary or emolument he executed to my perfect satisfaction.

I consider these circumstances my Lord, as authorising me in general terms to recommend Mr. Talbot to your consideration and protection. Mr. Talbot's specific application, which I beg leave to support to the utmost of my power, consists of two points. The first is for the grant of five thousand acres of land as a field officer actually and bona fide, meaning to reside in the Province for the purpose of establishing himself therein. The King's bounty having been extended to the field officers who had served during the American War the idea with which I undertook the adin grants to a similar extent (exclusive of ministration of that government, under an allotment of land for every individual my Lord Grenville's auspicies of elevating which their families might consist of) it this valuable part of His Majesty's dominwas judged expedient by myself, Mr. Chief ions from the degrading situation of a pet-Justice Osgoode, and other confidential ty factory, to be a powerful support and Officers of the Crown in that colony, to extend the provision of five thousand acres instances, such a plan in the infancy of the

tunity of waiting upon your Lordship, and being obvious that it was for His Majesty's in consequence of the interview which I interest that a loyal set of European gentlemen should, as speedily as possible, be obtained to take the lead in the several tailing Mr. Talbots views, and the nature Districts. This principle, my Lord, was acted upon at the time of my departure from the country; and should I to this moment have remained in the government thereof, I could have seen no reason whatsoever for departing from it. quence had Mr. Talbot been totally unknown to me except by his character and the high rank he had borne in the King's service, I should have thought him a most eligible acquisition to this Province, and on this public ground, without hesitation, have granted him 5000 acres on the same principles that had been laid down and acted upon,—this is the first part of Mr. Talbot's request. The second request of Mr. Talbot is, that these 5000 acres may be granted in the township of Yarmouth, in the county of Norfolk, on Lake Erie, and that the remainder of that township may be reserved for such a period as may appear advisable to government, for the purpose of his settling it, on the following specific plan, namely that 200 acres shall be allotted to him for every family that he shall establish thereon, 50 acres thereof to be granted to each family in perpetuity, and the remaining 150 acres of each lot to become his property, for the expense and trouble of collecting and locating them.

Mr. Sullivan in a conversation, had suggested to Mr. Talbot the possibility of procuring settlers in this country; but many reasons oppose themselves to that idea, in which I have the honor of perfectly agreeing with your Lordship; but should it be practicable to turn the tide of emigration which government cannot prevent from taking place to the United States ultimately to rest in this Province-I beg to consider it as an object of the greatest national importance, and that will speedily fulfil protection to the British Empire; in some to any Field officer of character, who, bona government had great success, as I had the

honor of pointing out to your Lordship, evolence that Mr. Talbot may have the and Mr. Talbot from habit, observation and honor of being the bearer of your desnature, in my judgement, is perfectly well patches on this subject, as he has for some

suited to give it a wider extent.

a large body of Welch and Scotch families, who arrived at New York in the summer of 1801, and who have temporarily fixed themselves in the interior of that state -many of whom are already disgusted with the dissolute principles of the people there and feel strong inclination to return under the government of England, but do not possess the means of purchasing land or paying the fees demanded by the Province on grants. It remains only for me to add that Mr. Talbot having been very successful in the cultivation of Hemp, on perhaps than any other settler in the Province, is induced to prefer the distant township of Yarmouth as being from soil well adapted to the growth of this valuable commodity. It is his object to extend this cultivation through the whole township, and by precept and example to enforce principles of loyalty. obedience and private industry, amongst those with whom cision of the Executive council. he will be surrounded. I have had the honor of receiving proper principles, and to a greater extent your Despatch of the 18 November, in which you transmit to me various reports of the Executive Council of the Province on the subject of the extent of land which Colonel Talbot is authorised to claim under Lord Holbart's letter of the 15th February 1803, and communicate to me the intention of Colonel Talbot to appeal to His Majesty's government against the de-

I have since the receipt of your desthat your Lordship will be struck with the patch received a Memorial on the same subject from Colonel Talbot himself and from the consideration which I have in consequence given to the subject, I cannot but entirely concur in the opinion expressed by the council that the utmost grant ployment which he has undertaken, and authorised by Lord Hobarts letter does not exceed 20,000 acres, and altho' I have On had reason to believe that Col. Talbot had previous to his departure from England been induced to entertain expectations of a larger grant, yet if Col. Talbot had no other claims to urge but what are founded upon that Despatch, I should have only per Canada, that the prayer of his petition had to confirm the decision to which the council have come. But the successful " 5000 acres be granted to Lt. Colonel exertions which Colonel Talbot has made " Talbot for his services, in the township for the improvement of the lands under his charge and for the settlement of the town-"Lake Erie, and that the remainder of ships with which he has been connected entitle him to the most liberal consideration of government, and I have therefore " cction, giving each famliy 50 acres of to signify to you the pleasure of His Royal "land in perpetuity, and the remaining Highness the Prince Regent, that you "150 acres of each lot to be granted to should for the next five years and no "Mr. Talbot."-And I further entreat longer, reserve at Col. Talbot's disposal,

bart's despatch of February 1803, such nel Talbot's settlements, the entire approfurther proportions of the townships of bation of His Royal Highness the Prince Aldborough and Dunwich as were vacant Regent of the minutes of the Executive at the time of Col. Talbot's commencing Council of the Province, of the 10th Aug't his settlement.

As it appears by Governor Gore's minthe of June the 1st, 1817, that all locations are to be suspended in those townships until the decision of His Majesty's government upon Colonel Talbot's claims should be known, I cannot suppose that any measures taken by you can interfere with the arrangement which you are now Mr. President Smith, instructed to make.—Should however any locations have been made in them during Col. Talbot's absence, you will consider yourself hereby directed to revoke them without delay.

Col. Talbot having further represented to me that doubts have been entertained as to the class of settlers which he might be at liberty to receive, I deem it necessary to inform you that the complete settlement of the townships under Colonel Talbot's charge being the main object which His Majesty's government have in view, it does not appear advisable to impose upon Col. Talbot's selection of settlers any other restrictions than those imposed by the several acts of parliament which have reference to settlement in North America, and to which all settlers in Canada are equally subjected, still less does it appear necessary to require from the settlers a previous examination at York before they can receive the locations assigned to them by Col. Talbot. I deem it necessary also on the present occasion to call your attention to the practice which has hitherto prevailed in the Province requiring the payment of fees immediately on the not making out the deeds until some time after the settlement duties have been com-The practice in either case appears to me to be fraught with the greatest inconvenience, and I have therefore to desire that the demand for the usual fees on grants of land be not made until the settlement duties have been completed, and that immediately upon their completion, the deeds be delivered to the settler without any further difficulty or delay, and without any restriction.

1816, and to instruct you to conform in every respect to the arrangement therein submitted for the approval of His Royal Highness.

I have the honor to be, &c. (Signed)

COPY.

DOWNING-STREET. 28th Feb'v, 1818.

BATHURST.

Sir.

I have the honor to transmit to you the copy of a letter which has been addressed to my under Secretary by Col. Talbot, upon certain points connected with the settlements carried on under his superintendence in Upper Canada.

With respect to that part of his communication in which he states the grounds upon which the Colonial government refused the repayment of the sums adverted to in my Despatch of the 3d October, 1816, I am very far from acquiescing in the reasons assigned for this refusal or from considering Col. Talbot the less entitled to relief because in consequence of his knowledge of that despatch he repaid to the settlers the several sums originally advanced by them, and I have therefore only to desire an immediate compliance with the terms of my former despatch.

With respect to the lands in the townlocations of land being made out and of ship of Harwich, I am decidedly of opinion that the Colonial government is in justice bound to secure the settlers in that township from any loss which they have sustained from the error of a public officer, the Surveyor General, in representing lands as vacant which were afterwards found to belong to previous occupants, I have therefore no difficulty in recommending that the lands upon which they are settled should be purchased at the expense of the Colony and assigned to the persons actually settled on them without any fur-I have only in conclusion to express to ther charge; or if this be found impractiyou with reference to the subject of Colo- cable, that the settlers should be paid for

being sufficiently acquainted with the circumstances, I can only say that the case tion.

I should also mention that he has shown me an extract of a letter which he addressed to your private Secretary Major Hillier, on the 6th October 1820, in consequence of his having been requested by the colonial gonernment to furnish regular and constant returns of the individuals whom he had been employed to locate without any sort of benefit to himself. To the proposition which he makes viz. that he should be allowed a clerk at the public expense, there may be general grounds of expediency of recommending a dispensation of all returns from an individual under the peculiar circumstances in which colonel Talbot stands, which are not essentially necessary for ascertaining whether the conditions upon which the grants have been made are duly complied with; or if the public service requires that they should be furnished, that the task ought not to be imposed without some adequate consideration of this nature.

Col. Talbot has in conversation adverted to townships reserved for the future endowment of a college which as yet remain in a state of wilderness. He suggests that for the purpose of condensing the population of that District, that these lands should be publicly sold and the proamount to thirty or forty thousand pounds eral Simcoe, the first Lieutenant Goverif sold at the present time. I am well a- nor. ware of the personal interest Col. Talbot

vor and encouragement, I am desirous that making an advantageous sale; but at the his application should be complied with, same time it appears to me that great pounless it should establish a precedent, litical advantage may be obtained by con-which in your judgement would seriously densing the population &c.—that great affect the interests of your government. I am disposed to approve the plan adoptif made out merits your favorable attended by colonel Talbot for the location of grants immediately abutting upon the public roads, by which the sevenths reserved for the Crown and Clergy, are placed immediately in the rear of the road lots, the settlers upon which covenant to clear one half of the road immediately before them. It must certainly have the effect of more expeditiously completing the necessary communications by public roads, and I should be much inclined to recommend it to your consideration for general adoption if I were assured that such a plan would not be essentially injurious to the Crown objection, but I am sure you will see the and clergy reserves. The principle of making the title to the grant dependent upon the performance of the preliminary duties imposed upon the actual settlers, appears unobjectionable.

I have the honor to be &c. (Signed)

BATHURST

Major General

Sir P. Maitand, K. C. B. &c. &c. &c.

To the Right Honorable the Szcretary of State for the Colonics.

The Memorial of Thomas Talbot Esq.

Respectfully sheweth:-

That your Memorialist retired from the Army in which he held the rank of Lt. Colonel at the peace of Amiens, with a coeds of such sale should be set aside for view of settling in Upper Canada, having accumulation for the same ultimate object, become much attached to that Province. and it is stated that they would probably during his residence in the family of Gen-

That in 1803 your memorialist repaired may have in making this proposition and to Upper Canada with the most encouragentertain some doubt how far under the ing assurances from Lord Hobart and improbable depression in the price of land mediately commenced his settlement at in consequence of Agricultural distress, Port Talbot on the Banks of Lake Eric this would be precisely the moment for upon an expensive scale.

That he had at the outset to contend with very uncommon difficulties arising principally from the want of communication with other settlements, he having selected for his residence a spot, then at least 100 miles from any inhabited part

of Upper Canada.

That he remained in this insulated position upwards of 8 years, during which period a considerable population had grown up around him, and so highly did the then Provincial Government approve of the system adopted by your memorialist that the greater part of the London and Western Districts were placed under his direction for settlement, in 1811.

That this additional charge was attended with a vast increase of expense to your memorialist without any other remuneration than the prospect of beholding the surrounding wilderness transformed into a fruitful country filled with inhabitants.

That by his exertions in opening and settling roads for the purpose of connecting his settlement with those of the Eastward and Westward, as well as with that lately formed under his superintendence, along the river Thames, your memorialist's prospect was fully realized; and accordingly the whole of what is at present called the Talbot Settlement comprising the Townships of Middleton, Houghton, Bayham, Malahide, Yarmouth, Southwold, Dunwich, Aldborough, Orford, Howard, Harwich, Raleigh, Tilbury, East and West, Romney, Mersea, Gosfield, Maidstone, Sandwich, Westminster, Dorchester and London, has now become the most compact and flourishing settlement in Upper Canada, containing as it does, a population of at least 12,000 souls, and establishing an uninterrupted communication between the Eastern and Western extremities of Lake Erie, and the settlements to the northward.

That the present Colonial administration has been so thoroughly impressed with the superiority of your memorialist's mode of settlement over that heretofore practised, that it has endeavoured to introduce the system employed by your memorialist generally throughout the Province.

That so early as the breaking out of the principal difficulties which obstruct the assistance granted as may enable him to

growth of New settlements; and as the produce of Land then sold at a fair price. your memorialist had a reasonable prospect of being rewarded for his long and vigorous executions and an expense of upwards of £15,000.

That from the character of the Talbot settlement and the principles of loyalty inculcated amongst its inhabitants it became peculiarly obnoxious to the enemy, and the more so, as your memorialist during the war commanded the Militia of the London and Western Districts and infused into them the spirit of his own settlers; two expeditions were therefore sent against Port Talbot, by which the settlement was nearly ruined.

That your memorialist returning to Port Talbot on the restoration of peace, found a large farm which he had cleared and brought into cultivation, completely laid waste by the enemy: his grist and sawmills, erected by him at a very heavy expense for the accommodation of the surrounding settlers, burnt to the ground-all his effects carried off or destroyed, and his people reduced to the utmost distress and poverty. Nevertheless he did not despair but diligently set himself to repair the damages he had sustained in the best manner he was able.

That your memorialist continued to struggle against the difficulties of his situation for six years, hoping still for better times; but the vast emigration which has flocked into his neighbourhood since the general peace, (the majority of whom were of the poorest description and had been taught to rely upon the hospitality of your memorialist in the beginning of their labours,) together with the low price of produce, have completely exhausted the remainder of your memorialists capital. and reduced him to great straits; for his house has ever been open to settlers, till they could get their land into a sufficient condition to supply their wants. The result is, that your memorialist now finds himself after 19 years labor, and settling so great an extent of territory (without any charge to government whatever,) unable to continue his usual aid to settlers. late war with the United States of Amer-therefore prays that his services and losses ica, your memorialist had conquered the may be taken into consideration, and such support the rank and influence which he ernment. Might I venture to hope that an has hitherto maintained.

And your memorialist will ever pray.

COPY.

125 Mount street, 3rd April, 1822,

All I have to observe on the subject of the fees which I was compelled to pay by the Colonial Government of Upper Canada, before I could receive my patent, is this:-

When, in the year 1803, I first obtained

the order for a grant of land from his late Majesty, under the administration of Lord Hobart, His Lordship verbally assured me May it Please Your Excellency :that I should not be required to pay more than what was considered the most favorable fees, viz: £5 11 0 on every 1,000 acres. Notwithstanding which, I have been charged at the rate of £31 odd for the same-I may also remark, that in my Lord Bathurst's despatch of Feb., 1818, which I carried out, it was particularly re-

ry respect in the most liberal manner. I therefore humbly hope that these circumstances may be taken into consideration and that instructions will accordingly be sent out directing the Colonial Govern-

commended that I should be treated in eve-

ment to repay me the overcharge beyond the £5 11 0 on all such grants of land as

have been made to me.

- :: I have the honor to be, &c. THOMAS TALBOT.

R. WILMOT, Esq. &c. &c. &c.

Dangerson of the con-PRIVATE.

22nd March, 1822.

· Marchael Karley DEAR SIR,

There is a subject which I have hitherto omitted to mention to you, of some consequence to me. A large body of Highlanders having emigrated at the same time for the express purpose of settling under me, all of whom were connected by Clauship, and spoke no other language than the Gælic, it was impossible for me

order will be inserted in your instructions to Sir P. Maitland, for my being allowed land in the same proportion for these 50 as for my other settlers.

In Council, 5th June, 1817....

To His Excellency Francis Gore, Esquire, Lieutenant Governor of Upper Canada, &c. &c. &c.

The Council took into consideration Your Excellency's verbal reference at the last council, as to the extent of reserve to be made for location by Colonel Talbot under the authority of Lord Hobart's letter of the 15th Feb., 1803.

It appears from the report of the Sur-

veyor General, that Colonel Talbot has already received grants to the extent of seventeen thousand acres, being 15,800 under the order from the Secretary of State, and the Council is of one opinion that a further reserve of four thousand two hundred acres is all that can be claimed by Colonel Talbot under the most liberal con-

struction of the order in his favour. It cannot be doubted that the order was predicated upon a project to benefit the colony by the culture of Hemp, and it was submitted to a reasonable trial.

The reserve of land in the Townships adjacent to his grant of five thousand acres was temporary, and to be limited by the discretion of the Provincial Government; but as to quantity by the order itself, viz: 200 acres for each settler who should be settled by Colonel Talbot on the cession of 50 acres of his original grant of 5,000. which plainly limits the future grants to 15,000 acres.

By the indulgence of the Provincial Government, the order for the original 5,000 acres was decided not to include 1,200 previously granted to him, and the to separate them-I was therefore obliged location of 50 acres to settlers has been

to place 50 of these persons on my own admitted without proof of their being of lands above the number required by gov- the description in the order, or that the

be enabled with 17,000 acres, to claim all further settlement of individuals withwhich the Council cannot conceive to have the Council as in the case of other setbeen in contemplation of His Majesty's tlers: government.

Therefore without any invidious retrospect to the manner in which Mr. Talbot may have complied with the spirit of Lord Hobart's letter, the Council respectfully submit that 4,200 acres of land be selected by Col. Talbot in the reserved townships of Dunwich and Aldborough to fulfil his compensation for location of one hundred settlers, the number of farms of fifty acres to be carved out of five thousand.

The Council further submits that as the class of settlers from the continent of America can no longer be admitted under His Majesty's late instructions, the grant of 4,200 acres be made at once, and all further introduction of settlers by Col. Talbot be prohibited from the communication of your Excellency's pleasure.

All which is humbly submitted.

By order,

W. D. POWELL, Chairman.

In Councilians

The Memorial of Thomas Talbot, Esq. of Port Talbot.

SHEWETH:

That your Memorialist has received the report of Council dated 5th June, 1817, giving interpretation of my Lord Hobart's letter so entirely different from what your memorialist conceives it to mean, and what he is assured His Majesty's Ministers intended to convey, that he has determined on immediately proceeding for England for the purpose of ascertaining His Majesty's pleasure on the subject.—That as your memorialist intends being absent only a few months he requests that, your Honor in Council, will be pleased to direct that no locations be made in the land placed under your memorialist's superintendence.

And your memorialist as in duty bound,

Will ever pray.

THOMAS TALBOT.

York, 6th Nov'r, 1317.

COPY.

To His Honor Samuel Smith, Esquire, Administrator of the Government of the Province of Upper Canada,

The Executive Council has de-

liberately considered the Memorial of Col. Talbot (6th Nov. 1817) requesting the suspension of all location in certain townships heretofore placed under his superintendence during a projected voyage to England.

It appears by his memorial that the object of his voyage is to procure the sense of His Majesty's government on the extent of Lord Hobart's order (15th Feb. 1803) in his favor for lands in the townships of Dunwich and Aldborough, being dissatisfied with the construction of the Provincial government.

The Council esteem the occasion favorable to offer its sentiments upon the whole bearing of Col. Talbot's memorial, to explain what may require explanation in the last report on this subject, to His Excellency Lieut. Governor Gore (5th June, 1817), and to lay before your Honor for the information of His-Majesty's government, the importance of a change at this period, in the course heretofore tolerated in respect of settling the waste lands in this Province without the immediate and direct participation of the Council and Surveyor General, the regular organs of the first location.

Upon a representation by Col. Talbot in 1803, that parts of this Province were favorable for the cultivation of Hemp, and to checourage experiment, His Majesty was pleased to authorise a grant to that gentleman of five thousand acres of land, at his selection, and a reserve of a competent portion of land in the adjacent townships to compensate him with 200 acres additional, for each 50 acres of his original grant which he might convey to an actual settler from the continents of Europe on America, for the purpose of raising Hemp.

The competent portion to be reserved for that purpose was strictly 15,000 acres, but the Provincial government left at his selection half of two townships equal of 61,000 acres.

The progress in this establishment has been slow; in fourteen years, compensation has been required for little more than fifty settlers, whilst many thousand acres of surveyed land remain unappropriated, and the ingress of settlers from the United Kingdom calls for freshlaurveys.

To remove this obstacle to settlement, with as much tendency as possible for Mr. Talbot, the Council, assured that the culture of Hemp was no longer contemplated, and finding the continent of America excluded from producing settlers for Mr. Talbot, recommended that the full benefit of Lord Hobart's order, might at once be conferred on him by making up his grant 20,000, and throwing open the remainder of the land of the townships to ordinary location. This recommendation was founded on circumstances which could not have been foreseen.

His Majesty's government had prohibited the inundation of settlers from the United States, and had authorized the Consult of New York to grant certificates; to emigrants from the United Kingdom, for one hundred acres of land in Upper Ganadate: When these people discovered that, the soil and climate near to Col. Talbot's settlement were favorable, many flocked. there without even presenting themselves) to the government, and there found either, a location of 50 acres as Colonel: Talbot's settler, for which he in return claimed a grant of 200 acres; or they found a location of one hundred acres in certain lands; submitted to the superintendence of that, gentleman, as will be presently explained, and in either case the interests of the Colonial government are implicated When the emigrant possessing an author; rity to receive one, hundred acres of land, finds himself limited to the possession of fifty, and that the government actually. bestows: on a stranger 200 acres on that: account, no reasoning can remove the impression of something worse than mere, absurdity. នាក្រុង មានស្ថិត្ត បានក្នុងប្រ

The townships of Dunwich and Aldborough selected by Col. Tulbot for his set tlement, were isolated flow other population by a large tract of forest, the more likely to continue unsettled, as several townships through which the road of communication must pass, were dedicated for the support of schools and future Seminal ries of learning. Upon the representation of Mr. Tulbot, acroad was laid out from the Long Point settlement to his the Reserves for the Grown and Clergy were removed from the road and lots were granted to certain adjuiduals, actual settlement on conditions, the great object of

with the greatest expedition.

The interest Mr. Talbot had in this road fide to him the superintendence of this actual settlement, and gradually he retained the nomination and location of the settlers as well as the supervision of their labours and the fulfilment of their engagements.

The settlers should each have received an order in council for his land, and the location of it should have been made by the Surveyor General, the see for the sur-

vey and patent being first paid.

By relaxation in this orderly process with respect to all settlement the government remained ignorant of the quality of the settler, the Surveyor General ignorant of his location, and the Receiver General was unpaid. By these means a partiality was operated amongst the new emigrants which could not fail to produce an injurious effect. The emigrant applying to the Governor in Council received, it is true, an order for one hundred acres of land, but he could not take possession until the survey money, if not the patent fee, was paid, when if he passed by the Talbot school township road, &c., found 100 acres to enter upon without advance. Such as did not receive that advantage, felt the distinction and that it was an injury. At the moment when fresh surveys were called for to accommodate emigrants, and the want of money withheld the order for them it appeared that large tracts of surveyed land on the road and adjacent Townships of Bayham and Malahide, which Lieutenant Governor Gore had also subjected to the exclusive location by Colonel Talbot, were left apart, and that a large arrear of survey money and fees had accommulated to the amount of upwards of £4,000.

His Excellency Lieut. Gov. Gore, called upon Mr. Talbot for the deposit of fees and survey money on all locations made by him, not only in the Talbot school Township road, but in the townships of Bayham and Malahide, and restored those (Signed,) townships to the ordinary course of location, which it is the object of Colonel Talbot's memorial to continue to withhold.

The council, therefore, cannot advise yor honor to accede to his prayer, but humbly recommend that the actual locations in bly recommend that the actual locations in Bayham and Malahide as well as on the

which was to render the road practicable road, be ascertained, the state of the improvement &of the road, as also who have: paid and who is in arrearfor survey money. induced Lieutenant Governor Gore to con- & patent fee, in order that after six months: from such report, the lots for which payment has not been made or on which the settlement duty has not been in progress may be opened for general location by the surveyor.

That in the mean time until such report be had, that all location on the road and in Bayham and Malahide be suspended to obviate the difficulties which might as heretofore accrue from double locations by distinct and several authorities.

All which is humbly submitted.

By Order, WM. DUMMER POWELL.

York. March 16, 1825.

Sir,

I begleave to represent to you for the information of His Excellency the Lieuteuant Governor, that in consequence of the tract between the long wood road and the river Thames being reserved from location, and of the Northern parts of the townships Eckfrid, Mosa, Carradoc & Lobo, being thefly swampy, or what is not of that nature being principally located to Militia: men, who are not actually resident thereon. all hopes of forming a compact settlement in that direction, which is most important to the eventual improvement of the principal road will be defeated, unless His Excellency shall be pleased to throw open for: location the broken lots under 100 acres in the parts of those townships lying to the north of the long wood road lots.

I have the honor to be,

Sir,

Your most obedient Humble servant, and the THOMAS TALBOT.

To Major Hillier, Secretary, and water

Colonel Talbot has only been furnished

with the numbers of such lots for location north of the long wood road in the townships of Eckfrid, Mosa and Carradoc, as contain 100 and 200 acres, but not with the numbers and quantities contained in the several broken parts of lots, where the contents of each parcel, are less than 100 acres, such broken lots and parcels (where-of there are many) being reserved under Your Excellency's special order of the 27th December, 1820.

THOMAS RIDOUT, Sur. Gen.

York, 16th March, 1825.

In Council, 17th March, 1825.

On the subject of Colonel Talbot's letter of the 16th inst., to Major Hillier, referred by command together with the Surveyor General's report thereon, the committee respectfully submit the great importance of that road from the long woods to the Thames, and that it is so desirable that no impediment should remain which can be removed, that if practicable, His Excellency would throw open for location the broken lots referred to by Colonel Talbot.

Upper Canada, York,
3d April, 1836.

My Lord,

I lately received the enclosed memorial accompanied by a request that I would transmit it to your Lordship. Respecting its contents I have the honor to observe, that Col. Talbot has certainly spent a large portion of the most active part of his life, and I believe expended a very considerable private fortune in promoting the settlement of the district in which he resides. His remuneration for this service consists of a large tract of land neither capable of producing any annual income, not being disposable by sale at the present moment. He feels himself therefore reduced to the necessity of imploring some assistance from His Majesty's Government, and it would give me great plea-

sistance of indigent emigrants, and who is the founder of the extensive settlement which bears his name and affords testimo. himself harrassed by the pressure of cir-cumstances at a period of life when he cannot look to personal exertion for relief.-Desirous however as I am that Col. Talbot should be in some manner assisted, I am compelled to confess that I am wholly at a loss to point out any Provincial Revenue. from which in the present state of our funds. more especially that assistance could properly be dispensed. Perhaps something might be given him out of the proceeds of the unleased Crown Reserves when sold, and in such measure as your Lordship, if disposed to look with indulgence on his case, might deem it proper to direct.

I have the honor to be, &c.

(Signed)

P. MAITLAND.

To the Earl Bathurst, K. G., His Majesty's Principal Secretary of State for the Colonies, &c. &c. &c.

My LORD,

About four years ago I had the honor of presenting a memorial for your Lordship's consideration, stating my exertions in forwarding the settlement of this Colony.

After twenty three years entirely devoted to the improvement of the Western Districts of this Province and establishing on their lands about 20,000 souls without any expense for superintendence to the government or the persons immediately benefited, but on the contrary at a sacrifice of twenty thousand pounds in rendering them comfortable, I find myself entirely straitened and now wholly without caupital.

income, not being disposable by sale at the present moment. He feels himself therefore reduced to the necessity of imploring some assistance from His Majesty's Government, and it would give me great plea-

My services during the greater part of my life in improving this flourishing colony, are not, I believe, unknown to your Lordship.

I therefore request that your Lordship will take these services into consideration and allow me from the Crown revenue or other source, such annual remuneration, as to your Lordship may seem meet.

I have the honor to be,

Yours, &c.

PORT TALBOT, July 29th, 1831.

Sirt,

I lose no time in doing myself the had, before leaving the United Kingdom, honor of acknowledging the receipt of Your Excellency's note of the 23rd inst., enclosing a copy of Lord Goderich's despatch dated the 5th February last.—The statements contained therein have not a little surprised me, being entirely at a loss how to account for the channel through which Mr. Richards obtained the information he has thought proper to give to His Lordship, as to upwards of 5,000 deeds, that that gentleman reports not to have been taken out by my settlers, for notwithstanding, that I have had the constant man-

agement of the Talbot settlement for upwards of 23 years, I am not aware of the number of Patents that may have issued. and it occurs to me that Lord Goderich is under the impression that I give the deeds to the persons to whom I locate land. All that I do, is, when a settler has complied with the conditions I require, of his performing the settlement duties, and that he is an actual resident on the lot I have located him for, makes an application for my certificate to that effect so as to enable him to procure his patent from the Crown, I give him the necessary document, but it is out of my power, to compel him to proceed pay the Patent fee required on the grant; however I shall send a circular notifying to my settlers that it is absolutely required that all of them who may have completed their settlement duties, and fulfilled the conditions I impose on their locations, toapply for a certificate from me, and be prepared to take out their Patents, with as little delay as possible, as also to such persons as have already received certificates It is certainly true that until the last two or three years, there existed much difficulty in obtaining the amount of the fee, in money, as all payments for the produce of their farms was made in barter, but a great improvement has of late taken place, by grain and other articles of produce, commanding money payments, which removes the objections heretofore made by the set-And, Sir, you must know, that a great majority of the emigrants from Europe, do not possess the means of paying the fee required on grants of land, they generally having expended all, or nearly the whole of the money they might have had, before leaving the United Kingdom, in paying for their passage to America, and for the inland journey to this part of the Province, 700 miles from Quebec-so that should any of them have any sum remaining, it is required to purchase provisary, for at least 13 months or two years, when what little ground they are able to

I was the first person who exacted the performance of settlement duties, and actual residence on the land located, which at that time was considered as most arbitrary on my part, but the consequence now is, that the settlers that I forced to comply with my system are most grateful and sensible of the advantage they could not otherwise have for a length of time derived by the accomplishment of good roads, and I have not any hesitation in stating that there is not another settle. ment in North America, which can for its age and extent exhibit so compact and profitably settled a portion of the new world, as the Talbot settlement. such a view I cannot imagine where the "inconvenience and confusion" are to be My population amounts to nearly 40,000 souls, and should your Excellency cause a search of the Executive Council and Provincial Secretary's offices to be made, I am of opinion that grants would be found, and patents executed, between 30 and 40 years ago, that the fees have not yet been paid on, and of course, the deeds not taken out, far exceeding in number what Mr. Richards reports mine to be.-Lord Bathurst, in his despatch to Mr. President Smith, of the 26th Feb., 1818, an extract from which I now enclose to you tificates which have been presented and

PORT TALBOT, April, 11, 1835,

In answer to your letter of the 2nd inst., written by desire of His Excellency the Lieut. Governor, I have the honor to state that it is not in my power to report the number of acres settled under my superintendance, as all depends upon the performance of the settlement duties, until which duties are done I do not consider the location final.

That I have not received any fees or perquisites from settlers, and therefore can make no detailed return of the kind mentioned.

That I have sold no lands to settlers.

That I have nothing to do with preparing or procuring deeds for the settlers, and know nothing of the charge of obtaining them, or of the number of deeds that have issued.

My system has been to consider no settler as finally located, till he has performed the duties required of him; when those have been complied with, he obtains his certificate from me, and all information of what is done afterwards upon such certificates rests with the Government, who of course can state the number of such cerand I have uniformly acted with the strict- the patents which have issued upon them.

I have known many instances of settlers keeping their certificates for years without making use of them.

Upon sale of school and college lands, I have from time to time received moneys all

of which has been accounted for and paid over to the proper officers.

I have the honor to be,

Your most ob't. Hymble servant,

Schedule of the Townships in the London and Western Districts that at present compose the Talbot Settlement.—See next page.

68,200 Acres.

Schedule of the Townships in the London and Western Districts, that at present composes the Talbot Settlement.

TOWNSHIPS.	REMARKS.
Middleton	mainder of the townships being Crown, Clergy and School Reserves.
Houghton	All located except the Crown and Clergy Reserves.
Malahide Yarmouth	
Southwold	
Dunwich Aldborough	The Southern parts of these townships, excepting the Crown and Clergy Reserves.
Oxford	mainder of this township being Crown, Clergy, and Moravian Indian Reserves:
Howard	located, the Northern part next the Thames deeded long since.
Harwich	non-residents with the exception of a few actual settlers on the River Thames.
Raleigh 14,400	The Talliet and middle roads all located, and there appears on the plan of this township to be only 14,400 acres grantable, but chiefly of a low wet description of land.
East Tilbury	Talbot road all located. The middle road not yet located. Besides there appears by the plan of that township to be 15,300 acres grantable.
West Tilbury	this township to be 15.400 acres grantable.
Ro mne	Talbot road located excepting two blocks of land long since deeded to non-residents, the one of two and a half miles, the other of four and a half miles in extent. The plan of this township does not describe the vacant lands.
10,100 Mersea	pactes of grantable land.
Gosfield Colchester Maidstone	Taibot roud all located, cannot state the vacant land.
6,000	There appears on the plan of this township to be 6,000 acres grantable—the remainder has been decided to non-residents.
Rochester 5,800	the plan of this township to be 5,800 acres of grantable land.—The remainder has been long since granted to non-residents.
1,200 Sandwich	i grantanie.
Zonc	part located with the exception of some lots.
Mosa Ekfrul Carradoc Lobo	plans were furnished to Col. Taibot with the exception of a few actual settlers in Lobo; that a very few desirable lots for settlement remain in them for location. The Southern
London Westminster	and the Thames are preserved for sale by the government. All located excepting the Crown and Clergy Reserves.

Apper=Canada.

DOCUMENTS

ACCOMPANYING MESSAGE,

FROM

LIEUTENANT GOVERNOR

OF THE

15th FEBRUARY, 1836.

Copy.

No. 118.

Downing Street, 6th March, 1833.

Sir,

By the accounts I have lately received of the proceedings of the Legislature of Upper Canada, I have learnt that the Attorney and Solicitor General of that Province, have in their places in the Assembly taken a part directly opposed to the avowed policy of His Majesty's Government.

As members of the Provincial Parliament Mr. Boulton and Mr. Hagerman, are of course bound to act upon their own view of what is most for the interest of their constituents and of the colony at large, but if upon questions of great political importance they unfortunately differ in opinion from His Majesty's government, it is obvious that they cannot continue to hold confidential situations in His Majesty's service without either betraying their duty as members of the Legislature, or bringing the sincerity of the government into queston by their opposition to the policy which His Majesty has been advised to pursue.

His Majesty can have no wish that Mr. Boulton and Mr. Hagerman should adopt the first of these alternatives, but on the other hand, he cannot allow the measures of His Government to be impeded by the opposition of the law officers of the Crown.

In order, therefore, that these gentlemen may be at full liberty, as members of the Legislature, to follow the dictates of their own judgment, I have received his Majesty's commands to inform you that

he regrets that he can no longer avail himself of their services, and that from the time of your receiving this despatch they are to be relieved from the duties imposed upon them in their respective offices.

You will transmit copies of this despatch to Mr.

Boulton and Mr. Hagerman.

I have the honor to be,

Sir, &c.

(Signed)

GODERICH.

Cory.

No. 121.

Downing Street, 20th March, 1833.

SIR

In reference to my despatch No. 118 of the 6th January last, I have the honour to acquaint you that His Majesty has been pleased to appoint Mr. Jameson to be Attorney General of Upper Canada. Mr. Jameson has been for some time Chief Justice of Dominica, and I have every reason to think that you will find his ability and discretion of great advantage to you in the administration of your government. He will take the earliest opportunity of proceeding to assume his duties.

With respect to the office of Solicitor General it is considered desirable that you should enjoy the assistance in that capacity of a gentleman possessed of local experience and already conversant with the public business of the Province. I have therefore received His Majesty's commands to desire that you will furnish me with the name of some gentleman belonging to the bar of Upper Canada, who may be submitted to His Majesty as a fit person to receive the appointment of Solicitor General. You will of course lose no time in making to me the necessary communication on this subject, and in the meanwhile you will probably deem it advisable to confer an appointment to act as Solicitor General on the same individual whom you may recommend to fill that office permanently.

I have the honor to be, Sir, &c.

(Signed)

GODERICH.

M. GEN. SIR JOHN COLBORNE, K. C. B. &c. &c. &c.

No. 1.

(Copy.)

UPPER CANADA, YORK, 31st January, 1832.

My Lord :

In forwarding this address to the King from the House of Assembly expressing their attachment to His Majesty, and their gratitude for the happiness which is enjoyed by this Colony, I think it necessary to inform your Lordship that this address has probably been called forth in consequence of the conduct of Mr. Mackenzie the editor of the Colonial Advocate.

His Majesty's Ministers, were, I believe made acquainted with the character of this man, and with the mischievous tendency of his publications, before my appointment to this Government. He has not ceased for the last three years to publish and circulate statements evidently with an intention of keeping up excitement in this Province, and encouraging disaffection.

During the last summer and autumn after calling meetings in the Townships in the County of York, he proceeded to the Gore and Niagara Districts, and to some of the Eastern Districts, for the purpose of calling together the farmers and such persons as he might be able to collect at a short notice, with the assistance of his agents, and inducing them to adopt certain resolutions which he had prepared for their inspection.

These meetings were sufficiently numerous for the objects he had in view, to circulate hisstatements widely through the Province, and to enable him to bring his petitions before the Provincial Parliament and to forward copies of them to your Lordship.

Soon after the opening of the Session, he was expelled from the House of Assembly for a libel on the House; and on the day of his expulsion, he circulated handbills inviting the people to proceed in a body

to the Government House, and to request the Lieut. Governor to dissolve the Parliament; and the following day about 200 persons presented an address to me, a copy of which is enclosed (A); the intention of Mr. Mackenzie in following this course, and in conveying a petition to me, which he knew could not be complied with, was evidently to raise a clamour against the Executive Government, and encourage a belief that his expulsion had been effected through my interference.

He was re-elected on 2nd January, received a gold medal from some of his supporters in York, and took his seat the next day; but on again inserting the libel in his paper, for which he had been expelled, and sending the number of the Colonial Advocate containing it to all the members of the House, he was expelled and declared incapable of sitting in the House of Assembly during the present Parliament—Mr. Mackenzie then sent forth the atrocious address (B) to the people, and to the soldiers of the 79th regiment in Garrison at York, to which I beg leave to call the attention of your Lordship, as well as the Colonial Advocate, marked C.

Few of the farmers on whose support he counted, attended the meeting called by him. About three hundred persons however, were attracted by his notices to listen to his harrangue; the resolutions were adopted, and the petition to the King approved of, which he had prepared. He also proposed that a subscription should be immediately raised for the purpose of providing him with means to proceed to England with the petition.

This formidable demagogue has certainly contrived by his perseverance, cunning and falsehood, to cause and keep up a spirit of discontent among many ignorant farmers, particularly in the Home and Johnstown Districts; but the good feeling which generally prevails through the Province, at present, will be found quite sufficient to counteract the effect of his publications.

I have the honor to be, &c.

J. COLBORNE.

To The Right Honorable
Viscount Goderich,
&c. &c. &c.

No. 33.

Copy,

Upper Canada, York, 18th June, 1832.

My Lord,

I have had the honor to receive Your Lordship's despatch of the 2nd of April marked "confidential," relating to the expulsion of Mr. Mackenzie, from the House of Assembly, and beg leave to state, that it was with great regret that I observed the course which the Assembly pursued at the commencement of the session with reference to his conduct; being persuaded that by drawing the attention of the House to his calumnies, he would be probably placed in the very situation in which he wished to exhibit himself.—But most of the members who insisted on his expulsion are altogether unconnected with the Executive Government, and, so far from being influenced by its opinion or supposed views, they appear desirous of making a display

of their independence. The usual practice of Mr. Mackenzie has been to assert that he is persecuted by the Magistrates, and that the measures adopted to expose him have been projected and secretly encouraged by persons under the influence or control of the Executive Government. It is, however, evident, that a man who has edited such a paper as the "Colonial Advocate" for eight years must have raised up against him enemies in every part of the province. The object, apparently, of Mr. Mackenzie last session was to ascertain the extent to which he could carry his insults to the House. The members generally averse to sanction any summary proceeding, would, I believe, have readily received him after his first expulsion, had he not forced them to proceed against him by his repeating a libel with an audacity and defiance that rendered it very dificult for them to adopt any course calculated to counteract the effects of his efforts to keep alive excitement in the Province. A prosecution on the part of the Crown even recommended by the House, would have pro-longed the excitement, and have embarrassed the local government in a greater degree than any other mode of proceeding, for there are few individuals in the Province who have any doubt of the seditious character of his publications, or of his intention to encourage disaffection. The annexed copy of a letter which he forwarded to me in the year 1829, will shew that he has long wished to establish it as a fact that he is persecuted by government, and calumniated by a certain number of papers under its control; but while he was writing this plausible statement, demanding my interferance to prevent the editors of papers from attacking his conduct, he knew that the only paper in the Province connected with the government (the Loyalist) had been discontinued at my recommendation. The injudicious acts of his opponents, at some public meetings at which he attended, offer, he imagines, another proof of the persecuting system supported by the local government.

Mr. William Kerr, a Magistrate of the Gore district, it is said, either sanctioned by his presence or encouraged the ill treatment which Mr. Mackenzie received from some young men of the town of Hamilton. In regard to this charge it may be necessary to remark, that the account of the transaction has only reached me through the public Journals. There are many magistrates, I have no doubt, unfit for their situation, in a Province located as this has been; but it is unreasonable to expect that a magistrate should be removed from the commission of the peace on an exparte statement.

The annexed communication in answer to a complaint against a magistrate, will explain the course generally followed in cases in which the conduct of the magistrates has been impugned.

I must request also the permission of your Lordship to offer some remarks on the address presented to me by Mr. Egerton Ryerson, two days before the opening of the last session of the Provincial Parliament, and framed obviously with the intention of inserting it in his Journal, & renewing at the commencement of the session an excitement on certain questions which were under the consideration of His Majesty's Government.

Having understood that the document attached to the address was written by a cousin of Mr. Ryerson a Baptist Minister, and that the Episcopal Methodist Chapel at Brockville, had been used a few weeks previously to the presentation of this address, by Mr. Mackenzie on his visit to the Johnstown district for his political meetings, and with the annexed report from the Indian Department before me, I could not consistently forward the address of Mr. Ryerson without directing the attention of the conference to proceedings calculated both to injure the Episcopal Methodists as a religious body, and the interests of the Province, and expressing my disapprobation, although it could not fail to give a temporary advantage to factious individuals.

With respect to the remarks on the institution which has been raised up instead of a neglected Grammar School, it was my intention to impress on the conference that it was well adapted to the present views of the Colony; and therefore ought not to be condemned or depreciated by the Episcopal Methodist Ministers, who had formed their opinions without having had opportunities of judging of the utility of the liberal establishment endowed by His Majesty; and that the classical masters were elected in the first instance, at my request, from Oxford and Cambridge, solely on account of their acquirements and qualifications; and that no regulation existed as to future election of masters.

Mr. Mackenzie has now laboured for more than seven years, I believe, with activity and perseverance, to create discontent and disaffection in the Province. He possesses in a peculiar degree that cunning and effrontery which it is probable will generally attract the attention of some part of the population, and ensures the partial success of any demagogue. He has had recourse to every species of calumny, falsehood and deception, which would promote his views, and get his Journal and almanacks into circulation in the townships in which his misrepresentations are likely to make any impression; and by addressing his statements particularly to the natives of the United States, settled in Upper Canada, and inviting them to petition that their own magistrates, officers of militin, and Legislative Council, may be elected by the people; and by taking advantage of every temporary excitement, and of the injudicious acts of several of his opponents, he has enjoyed a popularity in this district for a longer period than persons of this description and character usually retain their mischievous influence. His efforts have, however, contributed more to injure the Province, at home, by turning from it a respectable class of emigrants, than to realize any of his projects; and he now finds himself checked by most of the respectable and intelligent classes of society, and firmly opposed by the exertions of a large number of inhabitants in each district entirely unconnected with the government.

The colony is affectionately attached to the mother country; and I shall be exceedingly disappointed if it do not long remain happy and contented, and proof against the selfish intrigues of the turbulent person who is the principal subject of this communication.

I have honor to be, &c.

J. COLBORNE.

To the Right Hon'ble
VISCOUNT GODERICH,
&c. &c. &c.

(Inclosure in the above.)

York, August 11th, 1829.

SIR.

An opinion has gone forth, that the Government of the Province secretly approve of the grossest personal abuse when applied to persons, who like myself are at variance with the principles upon which your Excelleney has stated you would be guided in the administration of the affairs of the Province. This opinion is no doubt held by those persons up and down the country who laud your measures and seldom or ever see any thing to blame in your management-for the torrents of personal calumny which come from those persons, week after week, in an unwearied stream seems, as it were to increase of late rather than diminish. By such exhibitions of the weakness and wickedness of human nature, the provincial press is degraded, the morals of the people tainted, and your Excellency's Government, if it be a good one, lowered in the estimation of foreigners, on-lookers of these shameful squabbles. Ireland long tried the experiment of encouraging a cordon of super loyal presses at the public cost, as it is well known some of these are kept up in part, of which I complain-the result is before the world.

I shall not trouble your Excellency with a bundle of newspapers, owned and conducted by Magistrates, Government Schoolmasters, Adjutants, Judges, Post masters, and others, whose official station adds weight to their improper statements, but shall select one particular number of the "Niagara Herald," of which John Crooks, Esquire, one of His Majesty's Justices of the Peace for the Niagara District, and Post-master for the town of that name is the known and publicly avowed proprietor, to lay before your Excellency, as rather a worse than usual specimen of demi-official vituperation. A perusal of its contents will afford your Excellency an opportunity of checking an evil, which if left unnoticed by you, may, (as experience tells me) not be productive of the consequences which the admirers of such papers anticipate. Such language may hurt my feelings and give me pain and uneasiness, and no doubt does so; it may render unhappy for a time some of the members of my family, and the respectable persons composing the central committee may regret to see themselves (by name) bandied about as traitors, similar to those executed last war at Burlington heights -and all this without a shadow of truth, although stated on the authority of a British Magistrate-but in the end those who encourage such calumnies, will, I fear, have a day of counting and reckoning of a nature they do not now anticipate. As an in dividual held up to scorn by Mr. Crooks, I seek no damages, and I shall not harras myself by entering upon a tedious legal process in the courts (with one new trial after another for years,) on the condition of which I forbear to remark; it would afford me no pleasure to see Mr. Crooks degraded from the Magistracy, or turned out of the Post Office. All I ask is that he may be required to bring before the public the authority on which he has undertaken to assert that the committee on religious freedom are traitors, plotting against the government, and to substantiate the charges he has made against me, as an individual member of society, and of that committee, I know he cannot do this, and therefore shall,

secondly, ask that he be required to give as public a contradiction to his calumnies as may be in his power. If this is done, it will not only cause him to act with more caution in future, remembering the station he bears as a British Magistrate, but will aid in rendering more decent those presses which at present seem but to exist for the purpose of applauding your Excellency, and spreading defamation and calumny against the House of Assembly and its members, the central committee, and those persons who, like myself, think fit to express an opinion that your Excel-

lency's mode of government is unconstitutional, opposed to free government, and forgetful of the best interests of the people of Canada. I once more ask your Excellency, as a man, and as a Magistrate, high in authority, to manifest your willingness to put an end to calumny, to read the paper herewith sent, and then to follow the golden rule in your proceedings thereon.

I have the honor, &c.

WM. L. MACKENZIE

STATEMENT of the Names and dates of Appointments of the present Members of the Executive Council, and of the Law Officers of the Crown, and when sworn into office respectively.

NAMES.		DATE OF APPOINTMENTS.	WHEN SWORN IN.
Peter Robinson,	Executive Councillor,	5th July,1827,	6th Feb'y,1828.
George Herchmer Markland,	Executive Councillor,	6th July,1827,	6th Feb'y,1828.
Joseph Wells,	Executive Councillor,	13th Sept'r,1830,	7th April,1831.
Christopher A Hagerman,	Solicitor General,		19th Oct'r1829
Robert S. Jameson,	Atorney General,	1829. 26th March,1833.	22d June,1833.

JOHN BEIKIE,

Clerk Executive Council.

EXECUTIVE COUNCIL OFFICE, Toronto, 12th February, 1836.

Certain Gentlemen recommended by Sir John Colborne to be summoned to the Legislative Council.

Copy.

No. 70.

Toronto, Upper Canada,

18th November, 1834.

SIR,

I have the honor to state that in consequence of the decease of several of the members of the Legislative Council since the year 1830, the period at which the last appointments to the Council were made, I beg leave to suggest that:

Mr. Archibald McLean, of Cornwall,

*Mr. William Morriss, of Perth.

Mr. John Macaulay, of Kingston,

Mr. Geo. Hamilton, of Hawkesbury, &

Mr. Philip Vankoughnet, of Cornwall,

may be recommended to His Majesty to be called to the Legislative Council.

The qualifications of each of these gentlemen, which induce me to recommend them for this promotion, are contained in the annexed return.

I have the honor to be.

Sir, &c.

(Signed)

J. COLBORNE.

The Right Hon'ble,

E. G. STANLEY.

&c. &c. &c.

MR. ARCHIBALD McLean—A native of the Province, son of the late Neil McLean, a member of the Legislative Council—is an extensive proprietor of land, represented the county of Stormont in several Parliaments, and was Speaker of the last Assembly.

MR. WILLIAM MORRIS—A native of Scotland, and an opulent' Merchant—entered the Province before the late war, has represented the county of Lanark in five successive parliaments.

^{*} Note of these gentlemen—Mr. Morris alone, has taken the eath and assumed his seat in the Legislative Council, up to the present date, viz: the 15th February, 1836.

Mr. John Macaulay—An opulent Merchant, of Kingston, and a large proprietor of land—a native of the Province, and a son of a U. E. Loyalist; and from his character, intelligence, and acquirements, possesses great influence.

Mr. George Hamilton—A native of Ireland, and an intelligent Merchant, engaged in the Lumber Trade on the Ottawa—he has resided in the Province since the year 1818 or 1819, but he has been connected with it for a longer period.

Mr. Philip Vankoughner—A native of the Province, a son of a U. E. Loyalist, and during several Parliaments represented the county of Stormont.

J. JOSEPH.

Copy of a Despatch oppointing sundry persons Legislative Councillors.

Copy.

No. 94.

DOWNING STREET.

26th Feernary, 1835.

SIR,

I have the honor to acknowledge the receipt of your Despatch No. 70, of the 18th November last, recommending the undermentioned gentlemenfor the appointment of Legislative Councillors of Upper Canada, viz:

Mr. Archibald McLean,

Mr. William Morris.

Mr. John Macaulay,

Mr. George Hamilton,

Mr. Philip Vankoughnet.

Having submitted the names of these gentlemen to the King in Council, His Majesty has been pleased to approve of your recommendation, and I enclose herewith the necessary documents for summoning them to the Council accordingly.

I take this opportunity of transmitting to you, for your information and guidance the copy of a despatch which appears to have been addressed by Lord Goderich to the Governor of Lower Canada, and which I consider may equally apply to the Province under your government; and I have to request that in accordance with the arrangement therein proposed, you will require the usual Fee of £9 15s 6d, from each of the new Councillors for his respective Mandamus, and transmit the same to Mr. Wilder of this department.

I have the honor to be,

Sir. &c.

(Signed)

ABERDEEN.

Major General

SIR JOHN COLBORNE,

K. C. B. &c. &c. &c.

A true copy.

J. JOSEPH.

Extract of Despatch from the Right Honorable, the Lord Glenelg, His Majesty's Principal Secretary of State for the Colonies, to Lieutenant Governor, Sir John Colborne, Cated Downing Street, 2d July, 1835.

"I have the honor to acknowledge the receipt of three despatches from yourself, the first dated the 23rd of March, and marked "confidential;" the others dated on the 15th and 20th of May. Nos. 15 and 21."

Truly extracted.

J. JOSEPH.

Note.—The above mentioned despatches Nos.15& 21, transmitted the address of the House of Assembly to the King, complaining of the Legislative Council in rejecting certain measures adopted by the Assembly, and the resolutions of the Assembly claiming the right to control and appropriate the Crown Revenue.

No. 55.

Copy.)

Mis:

My Long:

Tononto, 12th Sept. 1835.

I have the honor to acknowledge the receipt of your despatch of the 2d July, and to acquaint your Lordship that in a few days I shall be able to enter fully into the subjects to which it refers, and to offer my observations and opinions to your Lordship on the questions which I consider as requiring the most serious attention of His Majesty's Government.

I have to forward the accompanying book containing the Report from the Select Committee of the House of Assembly on Grievances, and the documents to which it refers—by the annexed notes from the Clerk of the Assembly your Lordship will perceive the manner in which the Report was introduced, and the subsequent proceedings of the House relative to its reception.

I have, &c.

(Signed)

J. COLBORNE.

The Right Honorable

THE LORD GLENELG,

NOTE -The Parliament was prorogued on the following day, the 16th of April.

Extract.

Mr. Perry from the select committee to which were referred the matters of the tenure on which the Executive Council in this Province hold their offices, and the composition of the Legislative Council, presented a Report, and the draft of an address which were received.

The Report was read.

For Report see Appendix.

The address was read twice.

On the question for concurrence being put

Mr. Solicitor General, seconded by Mr. Robinson, moved, in amendment, that the address be referred to a committee of the whole House this day.

Which was carried.

The House was put into Committee of the whole on the address.

Mr. Taylor in the Chair.

The House resumed.

Mr. Taylor reported that the Committee had amended the Address, and submitted the same for the adoption of the House.

On the question for receiving the Report the House divided—Yeas, 26—Nays, 16

The Address was ordered to be engressed and read a third time this day.

Pursuant to the order of the day, the Address to His Majesty on the subject of the Legislative Council was read the third time.

On the question for passing the same;

Mr. Robinson, seconded by Mr. Morris, moves, in amendment that the following be added to the address:

"And in order that your Majesty may be enabled "more clearly to understand the nature of the representations contained in this Address, we herewith
transmit copies of the several Bills referred to
therein, with the votes of the House of Assembly
upon the same."

On which the House divided—Yeas, 22—Nays, 19.

On the question for passing the Address to His Majesty on the subject of the Legislative Council, as amended,

Mr. Mackenzie, seconded by Mr. Wells, moved in amendment to the original motion, that the last paragraph in the Address be expanged, which was carried—Yeas 26, Nays 15.

The Address was then passed—Yeas 26, Nays 15.

Truly extracted.

(Signed)

JAMES FITZGIBBON.

Clerk of Assembly.

Copy.

Memorandum shewing the purport of each of the six reports made to the House of Assembly by the Committee on Grievances previous to the seventh and principal report presented on the 10th of April, 1835,

1st report desires information from the Blue Book, on the subject of the Jury Laws and referring to Lord Howick's letter on the same, accompanied by an address requesting information on the appointments of Commissioners of the Peace, and it desires to ascertain the amount of balances of monies paid by the Canada Company in the hands of the several public accountants, banks, &c.

2nd Report—relative to the Post Office Department, with an address to His Excellency for information (inserted in the last and principal report.)

3rd Report—accompanied by a resolution for the adoption of the vote by ballot—a bill to prevent vexatious lawsuits, &c.—a bill to amend the law of libel; a bill to diminish the expense of advertising sheriff's sales, and a bill to provide for the distribution of the Statutes, and that they be printed by contract.

4th Report—reports a resolution on the petition of Thomas Appleton, teacher, Toronto, that £85 4s. be paid to him as teacher of a common school in the years 1822, 1823, 1824, 1825, 1826 and 1827, (contained also in the principal report.)

5th Report—on petitition of William Forsyth, late of the Niagara Falls, (contained in principal report.)

6th Report—on petition of John McCarroll complaining of misapplication of £50 road money by Report Keevan, a Commissioner.

7th Report—the last and principal one, printed in one volume.

Copy.

Mr. Mackenzie, seconded by Mr. McIntosh, moves, that the entry on the Journals of the House of the second of November, 1832, of the Resolution,

"That William Lyon Mackenzie, Esq., returned to serve in this Assembly as Knight Representative of the County of York, is the same William Lyon Mackenzie mentioned in the said entries and twice expelled this House, and declared unworthy and unfit to hold a scat therein, during the present Parliament, and by reason thereof the said William Lyon Mackenzie cannot sit and vote in this House as a member thereof"—may be read.

Which was carried, and the Journals were read accordingly.

Mr. Mackenzie, seconded by Mr. McIntosh, moves, that the said resolution be expunged from the Journals of this House, as being subversive of the rights of the whole body of Electors of this Province.

On which the yeas and nays being taken, were as follows:

Yeas—Messrs. Alway, Bruce, Chisholm, Cook, Duncombe, of Oxford. Duncombe, Norfolk, Gibson, Hopkins, Lount, McDonell of Glengarry, McIntosh, McKay, Mackenzie, McMicking, Macnab, Moore, Morrison, Norton, Parke, Perry, Richardson, Rykert, Rymal, Shaver, Shibly, Small, Smith, Strange, Thorburn, Waters, Wells, Wilson, Woolverton—33.

Nays—Messrs. Caldwell, Lewis, McLean, Malloch, Morris, Robinson, Solicitor General, Tayler, Wilkinson—9.

The question was carried in the affirmative by a majority of 24, and the resolution was expunged accordingly.

Mr. Mackenzie, seconded by Mr. McIntosh, moves, that it be resolved that all the declarations, orders, and resolutions of this House respecting the

several elections of William Lyon Mackenzie, Esq. into Parliament for the County of York as void elections, and the incapacity of William Lyon Mackenzie, Esquire, to serve in the said Parliament, and for his expulsions therefrom, and disqualification by the mere force of a former vote or votes of expulsion, as also all orders, declarations and resolutions denying that the elections of William Lyon Mackenzie, Esquire, were good, true and valid, or affirming that the House having expelled and declared him unfit and unworthy to take a seat therein during the said Parliament, and that being convinced of the propriety of such expulsion and declaration, would not allow him to sit and vote, be expunged from the Journals of this House, as being subversive of the rights of the whole body of electors of this Province.

Which was caried-28 to 7.

Note.—The records of the two first expulsions each having been for a distinct and separate offence, remain untouched upon the Journals.

Copy.

FRIDAY, 10th April, 1835.

The House met.

Mr. Mackenzie from the Select Committee on Grievances presented a Report which was re-

Mr. Mackenzie seconded by Mr. McIntosh moved, that besides the usual copies of the Journals, 2,000 copies of the Report on Grievances this day presented to the House, together with the evidence, and the report, and evidence in the case of William Forsyth, with the address and answer, be printed in pamphlet form for the use of members, and that the Clerk be directed to address them to the members with the Bills on Trade, &c. formerly ordered to be printed during the recess.

Which was ordered.

The House then adjourned.

Tuesday, 14th April, 1835.

The House met.

Mr. Mackenzie, seconded by Mr. Yager, moved, that the Clerk be ordered to prepare, at the close of the present session, lists of the Titles of all Bills which, having originated in this House during the last or present session of the Legislature, were rejected or declined to be acted on by the Legislative Council, or which having been sent up were altered by the Legislative Council so as to cause their subsequent rejection in this House, or which having originated in, and been passed by, the Legislative Council, were afterwards rejected by this House; stating also the Titles of any Bills which being passed in the Legislative Council and Assembly are refused the Royal assent, or reserved for the consideration of His Majesty; and that such list of bills be annexed to, and printed with the last Report of the Committee on Grievances, as ordered by the House to be printed in pamphlet form, as also the Leed's Ballot Bill, with the votes at its passage; the bill to amend King's College Charter, with the votes, and the general Education Bill from the select Committee on Education, with the votes.

In amendment, Mr. Robinson, seconded by Mr. Morris, moved, that all after the word moves in the original motion be expunged, and the following be inserted,

That the order for printing 2,000 copies of the last Report on Grievances be rescinded, and that the said Report be not entered on the Journals of this House-lost.

A true copy.

Extract of Despatch from Sir John Colborne to the Lord Glenelg, His Majesty's Secretary of State for the Colonies, dated

Toronto, 16th Sept., 1835.

"With these explanations if your Lordship should think it expedient to lay the names of Dr. William " Warren Baldwin and his son Mr. Robert Bald-" win before His Majesty, I have to request that " Mr. Isaac Fraser, an intelligent and influential settler, a son of a U. E. Loyalist, residing near Bath in the Bay of Quinte, in the Midland Dis-

" trict, may be also recommended for the Legisla-

" tive Council.

[Truly Extracted.]

MATTERS RELATING TO LATE COL-LECTOR AT KINGSTON.

Copy.

LIEUT. GOVERNOR'S OFFICE. York, 26th July, 1816.

SIR.

Mr. Crooks and the Master of an American vessel, seized, as contravening the laws, in carrying freight from Port to Port in this Province, under regular clearance from the several Custom Houses, have made a representation to his honor the Administrator, which has been laid before the Executive council, on whose opinion and advice His Honor is pleased to direct, that the vessel and cargo be released to the owners, on the personal security of either to the amount of their respective value, on a fair estimate, to answer such judgment as may follow upon the information filed against the vessel and cargo, in the Court of King's Bench.

I have the honor to be,

SAMUEL P. JARVIS,

Secretary.

To C. A. HAGERMAN, Esq. Collector of Customs, Kingston.

Copy.

GOVERMENT HOUSE, 21st December, 1835.

Sir,

I am directed by the Lieutenant Governor. to acquaint you, with reference to the Report of the Finance Committee appointed by the House of Assembly last Session, that he requests you will report how many years the sum of two hundred and eighty four pounds, fifteen shillings and five-pence, stated

to be outstanding in the hands of Mr. Hagerman, late Collector at Kingston, has been returned as due to the public, and that you will call on the account. ant, if you have not already done so, for a full statement of the case, and on what authority he detained, in his hands, on closing his accounts with the late Inspector General, the amount alluded to by the Finance Committee.

His Excellency requests information also, as to the opinions of the different Committees on Finance, since the year 1827, by whom this disputed claim appears to have been investigated, and under what circumstances it was not mentioued in the accounts submitted to the House of Assembly last Session.

If the accountant on closing his accounts in 1828, retained the sum in question as a debt due by the King's Government, on account of a seizure made by him, and which he could not legally permit to be given up, all the circumstances respecting the case should have been reported for the information of His Majesty's government, by the Inspector General, and the balance claimed, should have appeared m the accounts of the funds under the controul of the Lords Commissioners of His Majesty's Treasury.

I have the honor to be, Sir, &c. WM. ROWAN. (Signed)

The Hon. G. H. MARKLAND, Inspector General.

GOVERNMENT HOUSE, 30th December, 1835.

In returning to you the accompanying statement respecting a balance still appearing in the public accounts as due by Mr. Hagerman, I am directed by the Lieutenant Governor to acquaint you that if the claim in question was permitted by the late Inspector General to remain unsettled for eleven years before Mr. Hagerman closed his accounts in 1828; and that he then entered his name among the balances due by Collectors as a public defaulter, the accountant has certainly reason to complain.

This claim has frequently been laid before committees of the House of Assembly, without the accountant being able to obtain his discharge; His Excellency therefore requests that the circumstances of this case may be again brought before the Committee of Finance that may be appointed in the next session, in order that the claim may be allowed or referred for the decision of His Majesty's Govern-

ment.

I have the honor to be, Sir, WM. ROWAN. (Signed) The Hon. G. H MARKLAND, Inspector General.

Sir John Colborne, Knight Commander of the most Honowrable Military order of the Bath, Lieut. Governor of the Province of Upper Canada, Major General commanding His Majesty's Forces therein, 4c. 4c. 4c.

No. 490.

To the Honorable JOHN HENRY DUNN. Receiver General of the said Province.

You are hereby directed and required, out of such monies as are in or shall come to your hands for de-fraying the civil expenditure of this Province to pay or cause to be paid unto Christopher A. Hagerman,

£211 5 114 Or to his assigns, the sum of two surface at 4s 6d. Sterling, equal to £234 15 6 Canada Currency, being the amount of a claim on the Crown fund conditionally admitted, per the annexed order in Coun-

He having been in the actual discharge of his duty during that period.

And for your so doing this, with the acquittance of the said C. A. Hagerman or his assigns, shall be your sufficient warrant and discharge.

Given under my hand at Toronto, this twentieth day of January, 1836.

> (Signed) J. COLBORNE.

By His Excellency's command,

(Signed) WM. ROWAN.

Examined.

G. H. MARKLAND, Inspector General.

Toronto, 22d Dec'r, 1835.

SIR,

In compliance with the request contained in your note of this day's date, that I should furnish for the information of His Excellency the Lieutenant Governor a detailed statement of the facts and grounds upon which I claim a discharge from all future responsibility as a public accountant, I have the honor to submit the following remarks, and at the same time beg to express my sincere gratification at the prospect of a decision upon a subject which I have long desired to bring to a conclusion.

Some time previous to the opening of the navigation, in 1817, the masters and owners of several British vessels represented to me (then being collector of His Majesty's customs at Kingston) in a formal manner, that their business was greatly injured by foreign vessels engaging in the coasting trade of the Province in contravention of the Navigation Laws of the Empire, and required me to interfere in my official character as collector for their protection, and ze far as depended on me to put an end to a practice clearly illegal, and highly detrimental to the shipping interests of the colony.

Under such circumstances it is plain that the only proper course for me to pursue was to consult the laws and to enforce them. Upon reference to the statute 7 & 8 Will. 3, chap. 22, entitled. An Act for preventing frauds, and regulating abuses in the Plantation Trade," I found that foreign vessels were expressly prohibited from carrying cargoes from one British port to another in any of His Majesty's Colonies or Plantations, and by the 4th section of the same statute I found that Governors of Colonies

were required tv take an oath upon entering on the duties of their office, to do their utmost to maintain these laws, and in default of their doing so, were made liable to dismissal from office and the payment of a fine of £1,000 sterling. Notwithstanding the plain and imperative provisions of this statute and others bearing on the same point, I thought it advisable to take the specific instructions of the Government on the subject, and to guard (as far as de-pended on me) against any charge of injustice for enforcing laws of which individuals might alledge ignorance, I decided on giving these instructions when received, all the publicity in my power. I accordingly wrote to the Inspector General requesting him to inform me in what manner I should act in cases of complaint of foreign vessels being engaged in the coasting trade-in answer to which application I received as my guidance the opinion of the Attorney General, to whom the subject had been referred, of which the following is a copy:

"I am of opinion that foreign vessels found engaged in the coasting trade are liable to seizure and
condemnation if laden in, or carrying from, any
one port or place in the Colonies to any other port
or place in the same."

(Signed)

D'ARCY BOULTON,

Att'y General.

Dated 28th April, 1817.

In pursuance of the intention above allude to, I caused this opinion to be inserted for several weeks, at my own expense, in the newspapers published in Kingston for the information of the public.

In the month of June following a complaint was made to me that a schooner, built in the United States owned by a citizen of that country, and resident there, and wholly navigated by aliens and then lying in the harbour of Kingston had, in violation of the laws aftered to, engaged in the coasting trade, by receiving on board and carrying from Burlington Bay at the head of Lake Ontario, to Kingston, a cargo of flour. That it was my imperative duty to notice this complaint and seize the vessel and cargo, will, I take it for granted, be admitted, and that I should have incurred a heavy responsibility and rendered myself liable to immediate dismissal from office for neglecting the instructions that had been sent me, is equally certain. The vessel and cargo was accordingly seized and the circumstance reported to the proper officer.

The master and owner of the vessel, and the gentlemen to whom the flour belonged shortly afterwards, as I am informed, petitioned the Lieut. Governor of the Province, praying restoration of the property seized, alledging ignorance of the law, and stating that they had been misled by the collectors at Burlington Bay, not having apprised them of its existence, and intimating as an additional excuse the very ground which had originally led to the seizure, viz: that foreign vessels had been in the practice of violating the navigation laws with impunity. It does not appear however from any papers that I have seen that the Collector referred to, knew that the vessel in question was a foreign bottom, and owned by a foreigner, as mentioned, although had such been the fact, it would not have altered the question as respected the liability of the vossel to

condemnation, it might have subjected that officer to the responsibility of indemnifying the parties for the injury they had sustained through his misconduct, nothing more.

It is obvious that the Governor could not comply with the prayer of this petition .- First, Because his doing so would be in violation of his oath, and the duty expressly enjoined upon him, by the statute above referred to; and secondly, because it would be an interference of the rights and emoluments of a public officer over which he had no controul, to which he was by law entitled, for the performance of a responsible, disagreeable and hazardous duty, and which he had executed in obedience to instructions from his Government, in a manner leaving no room for censure or complaint. Accordingly upon a reference to the Executive Council, it was declared by that body that, "they would not presume to re"commend any order to the collector of Kingston
"for the actual release of the vessel and cargo," but satisfied that an irregular practice had prevailed " of transporting even public stores from one port "to another in the Province under sanction of the government and its officers." It was recommended that the vessel and cargo should be delivered up to the respective owners upon security being given to the amount of the value of each to answer the event of an information, and that in case of difficulty to the Foreign Master to give such security, that it should be provided by the government, with the assurance that in the event of legal conviction the proportion of the scizure to which the Crown and the person administering the government would be entitled, would not be exacted, leaving only, therefore, the share to which the collector had a claim to be exacted. This report of the Council was never communicated to me (conclusive as it appears to be in favour of my claim) and it is only within the last week while collecting facts for this statement that I for the first time saw it. A letter however was addressed me by the private secretary of the president then administering the government, in which I was briefly directed to give up the vessel and cargo to the respective owners upon their entering into their personal security to answer thr result of the information to be filed by the Crown Officer. This of course was promptly complied with on my part, the vessel was valued at £255 currency—the flour at £364 currency, both items being reduced as low as it was possible to bring them with any regard to reason and truth. The master of the vessel was a stranger, and declared himsel unable to give any security beyond his own Bond. I have never to my recollection seen him since, for the flour I took the bond of William Mitchell, Esq., at that time a wealthy and respectable Merchant in Kingston, but who afterwards died, and as I am told in embarrassed circumstances. This bond (now of no use) is in my possession.

These proceedings having occurred, the information was filed and a trial took place, when the jury, owing to some defect in the proceedings, or from misapprehension of the facts, returned a verdict for the claimant. This verdict, however, was so manifestly contrary to law, and if acquiesed in would have been attended with such evil consequences, that the Attorney General felt himsef bound to move for a new trial, upon which occasion the law and every fact relating to the seizure was brought before the Court of King's Bench, and fully argued; the judg-

ment of the court was afterwards solemnly pronounced, establishing the validity of the seizure, and its liability to condemnation, and as a consequence, setting saide the verdict of the jury, and ordering a new trial. These proceedings are of record in the Court of King's Bench, and of course can at any time be referred to.

Immediately, or very soon after this decision, the owner of the flour (I have been informed) solicited the Government to stay the prosecution, and preferred a memorial to that effect, which was transmitted to England for the consideration of the Home Government. No official, and indeed I may say no direct, communication of the steps at any time taken, was ever made to me I was not asked to consent to any discharge of or delay in the prosecution; nor was I in any manner consulted, or advised with on the subject, notwithstanding the large personal interest I had in the result. If, therefore, delay has occurred in deciding on the claimants petition, it cannot be traced to any fault of mine; in truth, with respect to it, I had no particular interest; the Government had distinctly disavowed any design to interfere with my rights, and had proceeded in the implied recommendation of the Executive Council, that the master of the vessel should be indemnified from public funds in the event of condemnation—the Courts of highest authority had declared the seizure liable to condemnation, and so far the ends of the prosecution were attained—and it is not improbable that it was considered by the Executive unnecessary and inexpedient to incur further expense in the proceeding.

It would, I apprehend, be considered only reasonable that, under the circumstances I should have been immediately credited with my portion of the seizure made—it was my unquestionable and undisputed right, founded upon the express provisions of a British statute, and which no authority short of an Act of Parliament could deprive me of. I do not mean to say that any injustice was intended me, quite the contrary, I believe the delay in the settlement of the matter arose from a desire to be first informed of the decision of the King's government on the claimant's petition, and whether authority would be given to remit the portion of the seizure due to the crown, as recommended by the Council, that the whole matter might in such case be disposed of at once.

In my communications with the late Inspector General, I constantly urged that the matter should be finally disposed so far as related to me—he never in any instance intimated a doubt of my right to credit for one third the value of the seizure—on the contrary always admitted it, as did every other member of the government with whom I had any communication on the subject; and in which opinion, as I shall presently shew, the Legislature for the last seven years tacitly, at least, concurred.

Feeling however, that it was desirable to close discussion on the point, I addressed a letter to Mr. Baby the late Inspector General of public accounts on the 16th June, 1826, calling his attention officially to the subject, and stating, that if Government had decided on abandoning the prosecution, I should then claim indemnity for expenses incurred as well as my portion of the seizure, to this letter I received no

official reply, but was informed by Mr. Baby, that upon enquiry of the then Attorney General, Mr. Robinson, he found that no answer had been received to the claimants petition. In 1826 I was appointed to a judicial situation in the Province when I resigned the office of collector, and when it became necessary to close my public accounts—I accordingly paid up all the balances of public money in my hands, reserving with the concurrence of Mr. Baby, one third the amount at which the seizure was appraised and the expenses incurred in securing it, a statement of which verified on oath accompanies this letter.

From that period to the present, no objection has been raised in any quarter to my retaining this indemnity—legally—equitably—and undeniably my due.—Until last winter a return was made to the Legislature shewing the sum outstanding in my hands, two successive Parliaments have passed away to whom the returns at each session were transmitted. On one or two occasions Mr. Baby of his own suggestion inserted a note at the foot of the returns stating my claim—and committees of the House of Assembly have inquired into the circumstances, and on being informed of them, expressed no sort of disapprobation of the course that had been pursued, and thus tacitly, as I have before stated, approving of it.

Still, however, it was no pleasant thing for me to see my name inserted in the returns annually laid before the Legislature, and I was of course anxious to be relieved from the further responsibility and to receive my quietus as a public accountant; and I accordingly again pressed the subject on the notice of government in January last. Upon enquiry into the subject at that time, you were so fully satisfied of the reasonableness of my claim, that although without the express authority of government you could not grant me a discharge, you thought it but justice that my name should be omitted from the list of persons appearing to be in arrear with the government, and when called upon for explanation by the finance committee you stated your reasons for doing so: without disputing or expressing any opinion on the justice of my claim, the committee objected to the course you had taken upon the ground that "as " the sum arising from the seizure would not have " been at the disposal of the Legislature (seizures " being crown revenue) the indemnity should have " been taken from the crown revenues, and not from " the Provincial funds,"—thus in fact adopting a principle I had all along contended for; in truth, at the time I closed my accounts, as before stated, a sum covering all duties collected by me was paid to the Receiver General; and in distributing the money, this fact ought to have been observed by the Inspec-tor General, Mr. Baby, and a discharge given me for this account, leaving the unsettled balance applicable to the account for seizures, &c .-- and this under any circumstances should now be done.

Upon giving the foregoing statement of facts, the consideration, I have no doubt it will receive, I do not imagine that it will be considered unreasonable in me again most earnestly but respectfully, to urge my claim to a final discharge. The claim I have set up arose, as I have shown, from the performance of an imperative and at the same time unpleasant and responsible duty; with respect to which I had no alter-

native between acting; as I did, and loss of office, and violation of law, in addition to which I may add, that were I now to relinquish my right, I should sustain a direct pecuniary loss to a considerable ex-It is well known that collectors in this Province have no means whatever of rewarding their Deputies and other assistants necessary to a customhouse establishment, except from seizures—and in my case those persons always received the largest proportion of them—it is also proper to observe that there are no public storehouses or wharves for the reception and security of Custom-House seizures.-All these expenses fall on the Collector, and in the present instance amounted to a considerable sum.—Without adverting to circumstances sufficiently well known, I may, I hope be permitted to add, that I am not that officer of Government from whom pecuniary sacrifices should be exacted. And while I disclaim all intention of employing the language of complaint at the delay which has occurred in giving me the benefit of a plain and admitted right-a delay arising from no fault of mine, but from acts of the government over which I had no coutroul, and to which I was in no respect a party; I trust I shall be excused for thus again earnestly preferring the claim to a discharge, which I have endeavoured to show, and I hope have succeeded in showing ought long since to have been granted me.

I have the honour to be, Sir,

Your most obedient humble servant,

C. A. HAGERMAN.

Approved. Inspector General. (Signed)

Copy of a Report of the Executive Council, approved by His Excellency the Lieutenant Governor, on the claim of Christopher Alexander Hagerman, Esquire, late Collector of the Customs at the Port. of Kingston. In Council, 15th January, 1836.

With reference to the accompanying statement of Mr. Hagerman, it is respectfully reported, that his claim upon the government appears to be fully established, and it is therefore recommended that the sum of £234 15 6 be paid to him out of the crown

fund, upon his furnishing a bond conditioned to repay the amount should the claim not be admitted by the Lords Commissioners of His Majesty's Tressury.

It is also recommended, that a copy of Mr. Hagerman's claim, together with this order of Council be transmitted to such Finance Committee of the House of Assembly, as may be appointed, in order that they may not be ignorant of the nature of the claim, and the manner of its adjustment.

JOHN BEIKIE, Cl'k Executive Council.

Know all men by these presents, that I, Christopher Alexander Hagerman, of the City of Toronto, in the Province

Alexander Hagerman, of the City of Toronto, in the Province of Upper Canada, Esquire, am held and firmly bound unto our Sovereign Lord the King, in the sum of four hundred and sixtynine pounds, eleven shillings of lawful meney of the said Province, which sum well and truly to be paid to our said Lord the King, his heirs and successors, I bind myself, my heirs, executors and administrators, firmly by these presents, signed by my hand, and scaled with my seal at Toronto aforesaid, this 17th day of January, in the year of our Lord one thousand eight hundred and thirty-six.

Whereas the said Christopher Alexander Hagerman, as late Collector of the Customs for the port of Kingston, in this Province has advanced a claim on His Majesty's government for the sum of two hundred and thirty-four pounds fifteen shillings and sivpence currency, and whereas the honorable the Executive Council by their report approved of by His Excellency, the Lt. Governor, bearing date the fifteenth day of the present month of January, have declared wat the said claim appears to be fully established, and that therefore the said sum of two hundred and thirty-four pounds fifteen shillings and six-pence, snould be paid thirty-four pounds fifteen shillings and six-pence, snould be paid to him the said Christopher Alexander Hagerman out of the Crown fund—upon the said Christopher Alexander Hagerman executing a bond conditioned to repay the amount, should the claim not be admitted by the Lords Commissioners of Fils Ma-

claim not be admitted by the Lords Commissioners of Ffis Majesty's Treasury.

Now the cendition of this obligation is such, that if the Lords Commissioners of His Majesty's Treasury upon an examination of the elaim of the said Christopher Alexander Hegerman and the report thereon made by the honorable the Executive Council as aforesaid, shall disallow the same, and disect the amount to be paid the said Christopher Alexander Hagerman in pursence of the said report to be refunded by him—if he the said Christopher Alexander Hagerman upon receiving notice of such disallowance of the said claim, shall forthwitherepay the said sum of two hundred and thirty-four pounds fifteen shillings and singence, to His Majesty's Receiver General for Uffper Canada, or to such other person as the Licotemant Governor or person salaninistering the Government of the Province shall appoint to receive the same, then this obligation to be null and void, otherwise, in full force and virtue. same, then had force and virtue,.

To the Honourable the Commissioners Doctors Morrison and Bruce, and the Honourable the Committee appointed upon the subject of Lunatic Asylums, &c.&c.&c.

GENTLEMEN,

In obedience to your instructions, I beg leave respectfully to represent,-

That immediately after the prorogation of the last Session of Parliament, feeling the great importance of the subject and responsibility of the trust reposed in me, I obtained introductions (or introduced myself) upon the recommendation of the resolution of the Honourable the Commons House of Assembly, and the Honourable the Committee for obtaining information, to the Governors and Heads of Departments in many of the adjacent States of the American Union, with a view of facilitating my access to the best sources of information upon the various subjects embraced in that resolution. opinions obtained are chiefly those of men who combine practical skill and experience with critical and extensive observation, and who have been appointed to office respectively on account of their superior knowledge and ability for the situations they occupy. It is true, that the great variety of matter embraced in your instructions, rendered it impossible that so much time and attention should be bestowed upon each subject as its importance required; and this inconvenience was much increased from the great distance between the places where this information could be best obtained. Notwithstanding which, I pressed on without intermission, from one point to another of the Union-passing through the Western, Middle, and Eastern States-visiting the heads of the different departments, and the different institutions, works, and improvements that were to be found in each of these States ;-disregarding my own case; often travelling by night, and in the most expeditious manner, from place to place, that I might have the more time to spend during business or visiting hours, with those from whom I sought information, and from whom I often received valuable reports, or references to books that I obtained at my earliest convenience. I devoted those hours that could be spared, from examinations and calls, to the making notes and memorandums of the various subjects of discussion during the previous day, or in preparing to benefit most, by the readiness of my questions, from those whom I expected to meet the following day. In this manner my whole summer was spent; so that after the prorogation of the last Session, I did not get to visit my own family until late in the Fall; and the extreme pressure of my private business during the very few days I was at home, and the collection of the great mass of useful matter from written and printed reports, works, and books, which I was anxious to refer to the Committee upon the various subjects to which they properly belong, that they might digest them and report to the Honourable the House of Assembly, as they might deem it expedient, has prevented my making an earlier report; but although I have been subjected to great bodily exertion and fatigue, I cannot refrain from remarking, that the generous, disinterested philanthrophy, of many gentlemen in the United States, far exceeded my expectations; especially in the south-western States, among whom, Lieutenant Governor Morehead, acting Governor of the State of Kentucky, interested himself in favour of my mission; introducing me to officers of the Government of that State, and of the United States, by which I was afterwards very materially benefitted, as well as giving me access to the books, reports, and accounts of the States, and furnishing me with printed copies of various reports upon subjects connected with my inquiries. This great and good man was conspicuous in all he did. On the subject of education, he was almost an enthusiast. So sanguine was he in view of its results, that, he considered, by proper attention to that subject, many of the pains and afflictions of this life might be obviated; practical morality and christianity promoted; civil,

political, and religious rights preserved; and the peace, prosperity, and happiness of a nation increased, just in the same ratio as useful practical knowledge is diffused among the people. His humane and generous feelings were evinced to me during a very severe, though fortunately short, attack of the disease incident to those hot climates upon northern constitutions, by his calling upon me daily during my illness, to inquire if I needed any thing, and sending his own physician, Dr. Hall, a very elever practitioner, to attend upon me, which he did faithfully, until I recovered, and without any fee from me. He was also deeply engaged in promoting the diffusion of useful information among the In this State, I witnessed a very convenient apparatus for suspending animation as punishment in the Penitentiary, and as a remedy in the insane Hospital at Lexington, which, when aided by the tranquilizing chair, according to the opinions of professors Dudley and Caldwell of Lexington, and Doctor Theobald, physician to the insanc asylum, was thought to be of eminent service. The kindness of professors Dudley and Caldwell I shall have occasion to acknowledge in other parts of my report-few men have done more for the amelioration of the evils of life and the prosperity of their country; and few men more cheerfully communicate the results of their long experience and ob-I had letters to them from the Rev. Mr. servation than those gentlemen. Peers of Louisville, who had been through the Eastern and Middle States with a commission to obtain information upon colleges and schools, and to whom I was very much indebted for the many valuable documents he furnished me with, as well as his own reports, which will be furnished to the Committee on Education for their consideration in a few days. He very kindly received me at his own house, and gave me an opportunity of witnessing the success of his system of education upon twenty-five boys, between the age of six and twelve, in whom he was endeavouring so to cultivate the intellectual faculties, as to give them the proper controll of their actions over the animal feelings and propensities by nature possessed. But I shall have occasion to refer to this subject again, when speaking of education, and often to acknowledge the kindness of this gentleman to me: he also gave me many letters of introduction to gentlemen in many of the principal cities of the Union, by whom I was kindly received, and aided in my endeavours to promote the objects of my journey. I did not find any mean illiberal jealousies among the members of the different professions, even among the ministers and preachers of different doctrines of religion—all was harmony, good will, and peace to all mankind; or if it was not, I had no cause to think differently. I was introduced to the Rev. Mr. Peers, an Episcopal clergyman, by the Catholic Bishop of Cincinnati, the Right Rev. J. B. Purcell, with whom I had the good fortune to have a short acquaintance: he has extended and exalted views of subjects connected with the general diffusion of literary, moral, and religious instruction among the great mass of the people, to which great object he devotes much of his time, The insane institutions, penitentiaries, and deaf and directs all his energies. and dumb schools, in the western, are not so far advanced in cheapness, convenience, accommodation, or advantageous application, as many of those in the eastern states; although the promoters of them are now beginning to be alive to these subjects throughout this whole country, and will no doubt in a few years have those various institutions established upon systems embracing all the recent improvements made in them, both in Europe and America; for I found that the Government of the different western states send commissioners annually to Great Britain, or the eastern states; and, upon some subjects, to various parts of the continent of Europe, to obtain the best systems and recent improvements in those institutions, and especially upon the subject of education and roads, rail-roads, macadamized roads, and wooden block roads, to which I shall again advert when reporting upon roads; but I must beg your indulgence for wandering so far from the subject matter of this report, and shall endea-

vour to give you a short account of the situation of the insane, and the institutions intended for their benefit in the United States, so far as I have been enabled to collect information.

The improvements recently made in the construction of hospitals for the insane, having reference to their comfort and classification in particular, have been so important, as to change materially the former character of these estab-Such improvements have not been described with sufficient accuracy to convey to others a correct idea of their nature and extent. Under these circumstances, I visited and examined the principal Lunatic Hospitals in the atlantic, middle, and western States, and was politely favoured by their respective officers with minute descriptions of the different buildings, and of such improvements in them as experience has shewn to be necessary. Having examined these hospitals in immediate succession, and ascertained their relative advantages, I very highly approve of and hereby recommend the plan of an asylum for this province, which it is believed will combine all the advantages of the best institutions in America. The general plan is, that of the Massachusett's lunatic hospital, at Worcester. Various alterations taken from other institutions, or suggested by those connected with them, have been made in this plan, all of which, it is believed, will prove of decided advantage.

The structure will consist of a centre building and two wings, all extended upon the same front, and measuring 266 feet. The centre or principal edifice will be 81 feet long, by 45 feet in width, three stories and an attic in height, and ornamented in front with a plain portico, supported by four lonic columns; the wings will extend to the right and left of the centre building. They are each ninety feet six inches in front, by one hundred feet in the rear, thirty-nine feet wide, and three stories high. They recede twenty-four feet from the front line, and are so united to the opposite ends of the centre structure, by one-half their width, that the corresponding half, or 19 feet 6 inches, will fall beyond its rear. This arrangement disconnects half the end of each wing from the rear of the centre building entirely, permitting, by means of a large window, the free circulation of the external air throughout the long wings, and thus securing the more perfect ventillation of separate buildings, while at the same time a free communication by stairways and thorough-fares, is preserved between both the structures.

The centre edifice, together with the wings, is to be built of brick, upon a basement of stone work, 7 feet high. The middle part of the basement will contain the kitchen, baking, washing, ironing, and drying rooms. Thet portion under the wings is designed for the repository of fuel and provision stores; also for workshops, in which certain of the insane may be occasionally employed in

some manual occupation.

The centre part of the establishment will be chiefly appropriated to the officers and domestics of the Institution, and to such patients as may from time to time become convalescent. The front part of the first story will be divided into four rooms of convenient size. They will be occupied by the physician, the apothecary's shop, the library, and as ordinary sitting and dining rooms by the steward and family. The chambers in each story, immediately over the two middle rooms, and the sleeping apartments into which the attic may be subdivided, are intended for the steward's family and for such labourers and domestics as must necessarily be employed about so extensive an establishment. The four lateral apartments remaining in the front of the second and third stories, will be exclusively reserved for the convalescent pa-In the rear part of each story there are yet two rooms, which lie upon a direct line with the long halls in the wings; in these the several classes of patients will partake of their daily meals.

The wings in each story are opened throughout their centre by corridors or long halls, 14 feet wide, both ends of which communicate with the external air, by means of large windows. This admits of the most perfect ventilation.

On each side of these halls are placed the apartments of the insanc. They are eighteen in number, in each story of both the wings. Every room is to be 8 feet wide, by 10 feet deep, in the clear. Each room is to accommodate a single patient, and will be provided with a bed and a permanent seat fixed in the angle of the walls. Each chamber has a door and one large window, with an upper and lower cast iron sash, securely fixed in the frame of the window The upper sash is glazed, the lower one is not. Immediately within the lower one is a wooden sash, also glazed, and corresponding in shape and appearance with the lower cast iron sash. This can be raised up or let down at pleasure, and, without the prison-like appearance of iron bars, this construction of the window insures every advantage of security, neatness and durability, and allows the patient the use and enjoyment of light and air.

Each wing will be heated by two Wakefield furnaces placed in the basements. From these the heated air will be conveyed in flues along the inner walls of the building, and discharged into the corridors of each story, and from thence into every chamber, through an unglazed sash, placed over the door of each apartment. The rooms occupied by the patients will be ventilated by means of small flues passing up through the body of the inner walls, and terminating in the attic story, which is to be further ventilated by open sky lights

in the roof.

By this economical arrangement the air in each story of the wings can be regulated to any desirable point of heat, at all seasons of the year, and the unhappy patient, who is derived of reason, and cannot be trusted with fire, will at all times enjoy an agreeable temperature in perfect security. The dining rooms in the centre building are also to be fitted up with the same security as the patients' rooms in the wings, and when not occupied at meal times, may be used as day rooms by a certain class of harmless patients. These rooms, together with the centre edifice, should also be warmed by means of a large furnace placed in the centre of the basement. If necessary they can occasionally receive a supply of heated air from the apparatus in the wings. Occupying the rear of the first, second and third stories of the centre building; these several apartments are of course situated immediately over a part of the kitchen, in the basement, from which the food for the different classes of patients will be distributed to their several dining rooms, by means of sliding closets to be elevated through an open perpendicular space, by simple machinery for that purpose.

In the medical and moral treatment of the insane, one of the most valuable improvements consists in the judicious separation of the patients into distinct and appropriate classes. This great object should be accomplished in the Lunatic Asylum of this Province in the most perfect manner; each hall in the wings should have a separate stairway, leading into an outer court yard, containing about one third of an acre. Into those yards, each separate class will have ingress and egress as entirely unconnected with others as if they lived in different buildings, at the same time the whole body of the patients being excluded from the centre edifice, the officers of the Institution will be able to regulate all salutary visitations, while they can also protect the miserable inmates

from the idle gaze of a vain and improper curiosity.

Each class of patients will be provided with a convenient bathing room, wash room, and water closet, and the different classes will at all times be under the immediate supervision of regular keepers, who will also be furnished with

convenient and comfortable apartments.

In an establishment of the kind under consideration, a convenient and abundant supply of water will always be indispensible. This will be furnished from large reservoirs placed in the garret of each wing: they will be filled by the force-pumps to be worked by the patients themselves, and the water distributed by the means of small pipes through every part of the building when required for use.

In addition to the main edifice, one small detached building will be required at a future time for the accomodation of violent and noisy patients of each sex.

The site for the asylum should be elevated, commanding an extensive prospect of interesting scenery from which the inmates may look down upon the surrounding country without being too near, so as to be incommoded from the too frequent approach of the imprudent and thoughtless stranger or visiter. It should contain land sufficient to employ the whole number of insane in some interesting and profitable occupation as well as afford each class a large yard entirely separated from the yards of other classes, say fifty acres for buildings, yards, gardens and farm, which at £5 per acre would be £250, the expense of erecting the building as calculated by an experienced architect would be about £10,000, but as labour is one of the largest items of expense, I would suggest whether the labour of the convicts in the Penitentiary might not be employed. advantageously here, as well as in the United States, in the erection of public works; this would afford a saving of estimate £400 or £500, which might be advantageously expended in building work-shops in which the insane who are mechanics might be employed, especially during foul weather, when they would not be advantageously engaged in gardening or farming.

The workmanship of the interior of the edifice is calculated to be plain and substantial, and no more embellishment of the interior than good taste, in

so large a building, would seem to require.

An important measure towards the successful treatment of insanity is the proper location of the Asylum. It should be so situated as to enable the patients, in certain states of disease, to have ready access to objects and scenes that may interest them; and such as are calculated to induce a new train of thought, and consequent change in the operations of the mind. Solitude not only disposes to insanity, but enables the mind, when deranged, to dwell upon the original causes of alienation, and thereby to perpetuate the disease itself. In recent or violent cases of mania, the location is not material, the patients, in such cases, require a more active medical treatment, and need no other accomodations, as to the institution, than safe, commodious and well ventilated But after the acute stage of the disease is past, and the patients are convalescent; or the disease has assumed a chronic form; or in cases of partial derangement, in all which, the treatment will be chiefly moral, such a situation as before named, is found, from the experience of the best institutions to give additional effect to the ordinary occupations and amusements of the patients, in exciting and permanently impressing new ideas upon their

The plan of the Institution is extensive, but not more so than the necessities of the Province will require, in a few years, while at present perhaps only one wing would be required to be finished. As the subject of mental derangement is daily acquiring additional interest and attention, the benefits of this establishment will soon be understood and duly appreciated by the public. The insane are no longer treated as the outcasts of society or considered as unworthy of further regard than to be confined in common jails or poor houses. The diseases are found to be curable, like other disorders of the human system.

A proportion amounting to ninety per cent of recent cases has been actually cured in some of the insane hospitals of the United States, and the patients restored to health, to their friends, and society. In other circumstances, when cures have been found to be impossible, either from the obstinate nature of the malady itself, or from the long continuance of diseased action in the brain, so much improvement is frequently accomplished as to render the subjects of disease comparatively comfortable. But to render the treatment of insanity thus successful, the patients must be entirely separated from their friends and from all objects with which they are familiar. This can only be effected by placing them in institutions for that purpose, and entirely under the control of strangers.

Here, through the influence of mild and gentle means, without violence in any instance, they readily submit to the requisite treatment, and not unfrequently in short periods of time, their minds become tranquil, alienation ceases, and reason is restored.

To promote these desirable effects, in addition to other means, every thing about the asylum must contribute to the comforts of the insane. The rooms and halls must be spacious, well ventilated, and preserved of an agreeable temperature. The patients must be divided into classes according to the grades of their disease, and during convalescence, their accommodations made to corres-

pond as much as possible with those of previous life.

About 120 patients can be accommodated in the edifice herein desc. sed, it may appear large for a new institution, but economy and convenience would recommend its construction at first of sufficient dimensions to answer the end of its establishment for a number of years to come, instead of enlarging it from time to time, as circumstances might require, besides, its general character and design will require it to be spacious.

It is to be a Provincial Institution, into which every member of Society

needing its benefits, can be admitted.

It is not designed for the cure of the ordinary diseases of the body, but "to restore the disjointed or debilitated faculties of a fellow creature to their natural order and offices, and to revive in him the knowledge of himself his family and his God."

I have adopted the language of the Directors of the Insane Asylum of the State of Ohio upon the subject as exactly conveying my view and opinion -these Directors are able and judicious gentlemen and my maxim is, "in the multitude of Council there is safety," the subject of lunacy has been until of late years less perfectly understood than any other complaint known to our country that is at this moment successfully treated, but thank Heaven that the disease of an organ of the mind is no longer considered a crime subjecting the unfortunate subject of it to imprisonment, punishment and chains, and that with the exception of this Colony no other portion of America has their Insane confined in their jails, and I am well satisfied this will not be the situation of these unfortunate persons longer than until their number and present cost of support is known, and the Legislature have time to provide a suitable asylum for their relief.

The extracts from the reports of the Trustees of some of the Insane Asylums will afford you much satisfaction, I am convinced, by shewing the happy success that now so uniformly attends the present treatment of recent cases of lunacy in asylums, where the modern practice prevails, and where the liberal endowment and careful prudent management of the funds, have enabled the Trustees to carry into effect the true spirit and design of these humane institutions; among these, one of the most recent established and best conducted, is that above alluded to at Worcester, which, when completed, (for two new wings are now going forward,) with furniture and every thing complete, will cost about \$75,000. It consists of one centre building 75 feet by 36 feet; two wings 100 feet each by 36; 90 feet front, 100 feet rear, projecting twenty feet back, with two additional wings of 100 feet each, with a hall in each for ventilation and convenience, three stories high above the basement story, which is appropriated for lumber, fuel, &c.

Dr. Woodward's generosity was not confined to me; he afforded the Honourable the Commissioners of the State Lunatic Asylum of the State of Ohio, who, like me, visited the principal institutions of this kind in the United States, every information in his power; and their report to the Legislaturepolitely furnished me by Dr. Awl, one of the Directors—proves the high value they set upon the opinion of Dr. Woodward.

The plan proposed, and which I have the honour of recommending to you, gentlemen, is not precisely similar to any in the United States; it approaches nearest to the one at Worcester of any that is now built, and the alterations made in the plan recommended here, were suggested by the Superintendent of that Institution, Dr. Woodward, a gentleman who combines in himself those ennobling qualifications that so admirably fit him for his situation-firmness of purpose, skill in the business of his profession, with unbounded humanity and philanthropy, never tiring in his assiduity to promote the success of the Institution, or communicate the result of his long practice and experience while filling various situations in the Connecticut Retreat, and as Physician and Superintendent of the Institution over which he at present excroises such unbounded controul. He has been an observer of nature, possessed of a strong enquiring mind, whereby he has been enabled to obtain more practical good from less means, perhaps, than has been obtained for any other institution in America. Those institutions in the large cities of New York and Philadelphia are incomparable, but they have immense funds at their disposal from various sources, and have the advantage of long standing, as has also the Connecticut Retreat, a very superior institution, and happily situated with regard to the surrounding country, on a beautiful elevation in full view of the high road, the Connecticut river, and the city of Hartford, and yet sufficiently distant to preserve the inmates free from inconvenience, growing out of the too near vicinity of a city. Worcester Lunatic Asylum is also delightfully situated in full view of Worcester, and commanding a beautiful prospect of a delightful surrounding country. The Bloomingdale Asylum, situate about a half hour's ride from the noise and bustle of the city of New York, commands a prospect of a beautiful romantic scenery, having the East and North Rivers in full view, and the environs of the city in perspective, when viewed from the top of the building. The style and elegance of the buildings, walks, gardens and pleasure grounds, with the beautiful hedge fences, when observed at a small distance from its location, have more the appearance of a gentleman's country seat or villa, than an Hospital for the insane—a splendid monument of the humanity and philanthropy of the people of the State of New York, who have, besides this institution, two others that are in a prosperous condition. (the one at Hudson, under the superintendance of Doctors Whites, the father and son) proving how much good may be accomplished by individual enterprise when properly directed.

And how gratifying is the thought that the modern practice of the treatment of the insane, renders the recent cases as easily cured, when properly treated, as the ordinary diseases of the climate, and with less expense; for if seventyfive of the hundred may thus be cured—even though the expense of making those comfortable who are incurable, should be greater in an asylum than in the common jails of the District, where they are wretched, and make every body wretched about them, and their prospect of recovery rendered hopeless by their situation and want of proper treatment—yet lessening the number three-fourths, still lessens the expense. It is true, that many of those unfortunate beings still wander about the country, and subsist upon public charity, and thereby the government is not called upon to make provision for them; others are provided for in the jails; (whether according to law or not is not for me to inquire;) but as the provision is made by the local authorities, and in small sums at a time, the amount of the expense is hardly appreciated; yet I have good reason to believe, it is really much more than would be necessary to pay the interest on a sum of money sufficient to erect an asylum and support the inmates, as many of them might be able to contribute something from their means or by their labour towards their own expenses; and how flattering is the thought, that three-fourths of these unfortunate fellow beings may by this means be restored to their friends and to society.

I can only beg your indulgence for the numerous defects you must find in this, while I hope they may be imputed, not to the want of the importance of the subject, but to my want of time and ability to illustrate its advantages more clearly.

I have the honour to be,
Gentlemen,
Your Most Obedient Servant,
CHARLES DUNCOMBE,
Acting Commissioner for obtaining certain information.

APPENDIX TO REPORT.

The Trustees of the State Lunatic Hospital at Worcester, in their second annual report, of December 1834, say:—That the Hospital has been in operation very nearly two years. How far the institution was needed may be learned from the fact, that almost from the first moment of its being opened, the building has been filled with inmates; and during the last year, a large number have applied for admission, for whom no accommodation could be furnished. Two hundred and seventy-two patients in all have been received into the hospital, and one hundred and fifty-four have been discharged; leaving, on the 30th November, one hundred and eighteen.

Very many of the circumstances of a discouraging kind referred to in the last report, have ceased to operate. These circumstances were not merely incident to the commencement of a great undertaking, but were marked peculiarities in this undertaking. They demanded incessant watchfulness, and the constant exercise of the best faculties of all who were employed in the regular duties of the institution. The hospital is now in the train of successful and benign operation, and takes its appropriate rank amongst the noblest charities of the land.

The peculiar character of this institution should always be borne in mind, in forming a judgment of what has been accomplished, and in running a contrast of its results with those of any other institution of the same general character. This hospital is the receptacle of all persons arraigned as criminals, but found, by the proper judicial tribunals, to have committed the offences whilst in a state of insanity. It is the receptacle, also, of all lunatics who are adjudged to be so furiously mad, as to render their continuance at large manifestly dangerous to the peace and safety of the community; and of another class—a large one in all communities—that of pauper lunatics. These circumstances very essentially distinguish this institution as a lunatic hospital from other institutions of the same kind, both at home and abroad, and cannot be kept out of sight without injustice.

The class of incurables now embraces, and probably must always embrace, a large proportion of all the inmates of the hospital. This fact is an important one in reference to the success of the institution. Of the whole number, one hundred and eighteen in the hospital, over seventy belong to this class. Whilst the return of so large a body of our fellow-beings to the bosom and business of society is for the most part hopeless, the State may well console itself with the reflection, that their condition here is very essentially improved. The maniac of the most ferocious character has here been, not indeed cured, but tamed and restored to the comforts and decencies of life. The experiment of this institution has abundantly and happily shewn that there are very few cases of derangement or obliquity of intellect which may not be ameliorated by the kindly influences of humane treatment. In this respect, the bounty of the Commonwealth has not been misplaced.—

The result, in the opinion of the trustees, has entirely exceeded the most sanguine anticipations; and this alone is a consummation which can neither be

weighed nor measured by any pecuniary considerations whatever.

Deeply important as this view of the institution at once becomes to every generous mind, its counterbulancing effect upon the general success of the hospital is not to be overlooked. With so large a proportion of those deemed incurable, the annual average of cures must be sensibly affected; and yet, even in this respect, the trustees believe there is cause for no small degree of satisfaction and gratulation. During the past year, one hundred and nineteen patients have been received into the hospital. Of these fifty-five were old cases, and sixty-four recent ones. In the same period, one hundred and fifteen have been discharged. Of these, forty-nine were old cases, and sixty-six recent ones. Of those discharged, sixty-four were cured, twenty-two improved, sixteen stationary, four idiotic, eight have died, and one has eloped. The cures amount to fifty-five and three-fourths per cent.

By an examination of the tables of fourteen French and twelve English hospitals, only two are found-one English and one French-in which the proportion of cures is a very little larger; and both of these were private institu-tions, where a selection of patients could be made. In five American hospitals, running through a period of more than one hundred years, the proportion of

Of the forty-nine old cases discharged during the year, ten have been cured, sixteen improved, fourteen are stationary, four have died, and one has elopedthe cures amounting to twenty and an half per cent.

Of the sixty-six recent cases, fifty-four have been cured, six improved, two stationary, and four have died-the cures amounting to eighty-two and a quarter per cent.

The average of recoveries in this hospital (551 pr. cent) may very properly contrasted with that of several foreign public hospitals. In thirteen in Great Britain, the average is 35 per cent. In five French hospitals, it is 43 per cent In four in Germany, it is 31 per cent.

The average number of patients in this hospital during the year, has been one hundred and seventeen. Of these, eight have died, which is a proportion of one in fourteen and five-eighths, or 6 4-5 per cent. In French hospitals, where the tables have been examined, the average of deaths is twenty-two per cent ;-

and those of England, twenty-four per cent.

The number of town paupers in the hospitals at the close of the year, was forty-seven, and of state paupers, thirty-two. Eleven have been received during the year by order of the higher courts. Of the two hundred and seventy-two patients that have been in the hospital, one hundred and sixty-three were admitted by judicial authority, and one hundred and nine were private patients: one hundred and sixty-five were males and one hundred and seven females: one hundred and seventeen were recent cases; one hundred and fifty-five, old ones. Of the thirtysix charged with high offences, who have been committed to the hospital since it was opened, eighteen attempted homicide, and nine actually committed the

The public ought to be more deeply impressed than they seem as yet to have been, with the importance of placing all cases of insanity, whilst yet recent, under proper medical treatment. Nearly all patients labouring under recent attacks can, if subject to seasonable appliances, be restored to soundness and The facts already stated in this report concerning the large class of incurables in the hospital, ought to inspire the community with unwonted vigilance. Under the influence of the most humane motives, the legislature have wisely directed, that the trustees may, at their discretion, receive poor patients, whether supported by any town or city, or not, recently attacked by insanity, for a less sum than the actual cost of their support. By a prompt

concurrence with the Legislature in the design of this generous provision, the evils of mental alienation may be brought under easy controul, and the quiet, good order, and happiness of the community, of families, and of individuals, be

essentially subserved and promoted.

Some misconception has arisen in regard to the support of the inmates at the hospital, more particularly of the class of town paupers. The commonwealth having founded this institution, it has been supposed that the intention of the Government was, to provide for the support of all those who were unable to provide for their own. No change, it ought to be explicitly understood, has ever been made in the old laws upon this subject. The trustees, therefore, must continue to be governed by those laws, until the legislature shall direct otherwise.

An experiment to test the benefit of agricultural labour to the inmates, and its advantages to the institution, has been tried the past season, and has resulted most satisfactorily. In addition to the tillage land owned in connection with the hospital, a lot of eight acres in the immediate vicinity, was also hired at an expense, rent and manure included, of seventy dollars. The clear product from this lot, is estimated at about two hundred and fify dollars; the product from all the land cultivated is estimated at about six hundred dollars. Labour is deemed an important means of cure in old cases, and is greatly beneficial to the inmates, affording them employment and recreation, of which they are at all times very desirous. It is believed that an appropriation for additional means of giving occupation to the patients—such as shops for various mecha-

nical and handicraft pursuits, would answer a valuable purpose.

It has already been stated that the Hospital has been constantly full during the past year. For a period of five months, an actual record was kept of the number of applications for admission. The whole number was ninety. three; of these, forty-seven individuals were received, and forty-six, were necessarily rejected for want of room; within the main building, consisting of six extensive galleries for the accommodation of the inmates, it is found impossible to maintain the classification, which is desirable and important. The proportion too, of males to females, being very nearly two to one, renders it necessary to bring the latter together in two of the Galleries, making thereby the classification still more incomplete. Convalescents are compelled to intermingle with the unquiet and excited, and many inconveniences are felt which cause the appliances of art and skill to be less promptly effectual than they would be under other and more favourable regulations. These inconveniences may be remedied, and the general arrangements of the hospital be improved. by the erection of two additional buildings—one for the reception of convale-scents, and the other for the incurable. The effects upon the great objects of the institution would be in the highest degree beneficial, and there would be, in all probability, in consequence of such an arrangement, a sufficient amount of accommodation for an increased number of curable cases.

The trustees refer with great satisfaction to the report of the Superintendent of the hospital, which is herewith communicated, for a large mass of minute details and important information concerning the condition of the Institution, and its inmates. The names of the trustees are as follows: W. B. Calhoun, Alfred Dwight Foster, F. C. Gray, Thomas Kinnicutt, and Thomas A. Green.

It appears by the Report of the President of the New York Hospital and Bloomingdale Asylum for the year 1834, that during that year there have been 1721 patients admitted into the Hospital, who, with 184 remaining there on the 31st December, 1833, make 1905 persons who have received the benefits of that institution during the year last past.

Of that number there have been cured 1266; relieved 69; discharged at their own request, 154; and as improper objects, 32; and there have been discharged as disorderly or have eloped, 46; died 174; and there remained 164 in

the Hospital on the 31st December, 1834.

The above numbers do not include the Insane Patients in the Blooming-dale Asylum, of whom, during the last year, 102 have been admitted, who, with 120 patients remaining in the establishment on the 31st December, 1833, make 222 persons who have received the benefit of the Asylum during the year 1834: of these 165 were old cases, and 57 recent cases, out of which number 51 have been cured, 16 have been discharged improved, 16 others at the request of friends, 20 pauper patients have been removed by the city authorities to Bellevue, 10 have died, 3 have eloped, and 103 remain in the Asylum on the last day of the year 1834.

The proportion of cures affected in the Asylum, whilst in itself it presents a very gratifying result, being 41 out of 57 recent cases, and 10 out of 165 cases of long standing, adds fresh evidence of the importance as stated in former reports, of a very early attention and application of medical and moral treatment to the first access of mental alienation. The great mass of these cases in the Asylum which seem to be without hope, are long neglected cases

of town and city paupers.

The improvement most needed in the Asylum is a separate detached building for violent female patients, similar to the one erected a few years ago for male patients of the same class. This the governors hope to erect during the

present year.

The whole amount of expenditure by this corporation for and during the year 1834, was sixty-three thousand nine hundred and sixty-eight dollars, fifty-five cents. The whole amount of receipts from all sources, was sixty-five five thousand nine hundred and fifty-nine dollars, thirty cents, leaving a balance in favour of this Corporation of nineteen hundred and ninety-dollars, seventy-five cents.

In the above aggregate sums are included the separate accounts of the two establishments under the charge of the corporation, viz. the Hospital in the city of New York, and the Asylum for the insane at Bloomingdale. The separate accounts of those two institutions present the following results for the

year ending December 31st, 1834.

The New York Flospital has received during the year 1834 for the State annuity for the compensation from the United States for the board of sick and disabled seamen, from pay patients for library tickets to medical students, subscriptions of members and articles sold. Thirty-two thousand, three hundred

and forty-seven dollars, forty-one cents.

During the same year there has been paid for the support of the Hospital, repairs medicines, surgical instruments, books, burials, and contingent expenses, the sum of twenty-seven thousand and forty dollars four cents shewing an excess of five thousand three hundred and seven dollars, thirty-seven cents of receipts above expenditures in the last year. Out of this excess the sum of three thousand four hundred and seventy dollars has been applied in aid of the sinking fund of the Bloomingdale Asylum.

During the year 1834 the Bloomingdale Asylum has received from the state annuity, from pay patients, for board, and for articles sold, thirty-three thousand six hundred and eleven dollars eighty nine cents. During the same period there has been paid on account of the establishment, for its sup-

port and the salaries of its physician and officers, and wages of servants, for payment of interest on its debt, and increase of the sinking fund provided for the liquidation of the principal, the sum of thirty-six thousand nine hundred and twenty-eight dollars, fifty-one cents, shewing a balance against the asylum of three thousand three hundred and sixteen dollars, sixty-two cents.

If, however, the sum of three thousand four hundred and seventy dollars applied as herinbefore stated out of the saving of the New York Hospital to the increase of the sinking fund and productively invested, be excluded from the account of expenditures on account of the Asylum there will remain a balance of one hundred and fifty-three dollars, thirty-eight cents, in favour of the Asylum.

The outstanding debts, due the Asylum amount to nine thousand nine hundred and thirty dollars; a considerable amount of this will be collected without difficulty, a part is undoubtedly desperate, and the rest doubtful. The debts of the two latter kinds are chiefly of an old date, and it is confidently believed that the rules for the collection and payment of the dues for board, adopted about two years ago, and now generally adhered to, will prevent hereafter any accumulation of doubtful outstanding debts.

The whole amount of debts due by this corporation on the 31st December, 1834, was one hundred and thirty-seven thousand dollars, being the same sum stated in the last year's report as being the amount borrowed for the purchase of ground and erection of buildings at Bloomingdale several years ago, and on terms which do not place the payment or redemption of the principal at present

within the power of this institution.

The sinking fund which has been provided for the final payment of the debt when due, amounted on the last day of December, 1834, to 48,905 dollars 56 cents invested in stock of the Bank of America, and certificates of the New York Life and Trust Company, exhibiting an increase of the fund of eight

thousand three hundred and twenty-four dollars during the last year.

The system of constant supervision and inspection by committees of the board of the two institutions under its care, now tested and perfected by many years' experience, has been continued to be applied with perfect regularity, and its good effects are to be seen in the continued and gradually increasing comforts and usefulness of the Hospital and Asylum which the Governors trust will show that they have not been careless or unfaithful stewards of the public bounty so liberally bestowed for the relief of the diseased in body and mind.

CONNECTICUT RETREAT.

EXTRACTS FROM THE REPORT OF THE VISITING PHYSICIAN FOR 1834.

There have been during the past year 116 patients in the Retreat, of whom, 70 have been under curative treatment. Of this number, 36 were old cases and 34 recent. Of the chronic cases 11 have recovered being in the ratio of 30 4-9 per cent; and of the recent, 31 have recovered, being in the ratio of 91 1-6 per cent; during the whole of this time almost the whole care of the Institution devolved on Dr. Wm. H. Rockwell, who for a number of years has filled the station of Assistant Physician. Great credit is due to him for the faithful and judicious manner in which he has fulfilled his arduous

The order, neatness, and contentment which have prevailed through the whole establishment, give evidence that the steward and matron have fully sustained their well-earned reputation for a faithful discharge of their duties, and that the conduct of the attendants has been correct and considerate.

Your Committee have not only visited the institution at stated monthly periods, but individuals of their number have frequently called and examined the state of the institution at unexpected times, so that if abuses had existed, they could hardly have escaped detection.

The whole number of patients admitted since the establishment of the Retreat has been 516, of which 253 have been recent cases, and from which number 230 have recovered, a ratio of a little more than 90-9 per cent.

263 old cases, 62 have recovered, a ratio of 27-3 per cent.

TENTH REPORT by the Physician of the Connecticut Retreat for the Insane, of the number of Patients in the Institution, and of the result of their cases for the year ending the 31st March, 1834; Extracted from the Records of the Institution.

NO. 35.

DOCTOR CHARLES DUNCOMBE'S

REPORT

UPON THE SUBJECT OF

EDUCATION,

PARLIAMENT OF UPPER CANADA.

25TH FEBRUARY, 1836.

THROUGH THE COMMISSIONERS

DOCTORS MORRISON AND BRUCE,

APPOINTED BY A RESOLUTION

OF THE

HOUSE OF ASSEMBLY

IN 1935,

TO OBTAIN INFORMATION UPON

THE SUBJECT OF

EDUCATION, &c.

Notice.

DR. C. DUNCOMBE gives notice that he will on Monday next move this House to go into Committee of the Whole to allow him to move for a grant of a sum of money to defray the expense of sending two persons to the United States to obtain information respecting the building and conducting a Lunatic Asylum; any recent improvements in Roads, Canals, Harbors, and Light Houses; Schools and Colleges; Currency, Banks and Finance; Commerce and intercourse with the United States or other countries.

Resolution.

RESOLVED, That there be granted to His Majesty the sum of one hundred and fifty pounds to pay the expense that three commissioners may be put to in obtaining the best information, plans and estimates of a Lunatic Asylum, and such linformation as they may deem necessary relative to the management and good government of such institutions, and also respecting the system and management of Schools and Colleges, and such other matters as are connected with the interest, welfare, and prosperity of this Province; and to Report to this House the result of their labor and investigation, at its next Session, and that Messrs. Drs. C. Duncombe, Morrison and Bruce be commissioners for the said purpose.

COMMETTER ROOM, HOUSE OF ASSEMBLY, (

RESOLVED, That we, two of the Commissioners appointed by a resolution of the Commons House of Assembly, at its late. Session, to obtain information relative to a Lunatic Asylum and ether matters, agree that Doctor Charles Duncombe, one of the Sir Francis Bond HEAR E. C. H.

Commissioners by the said resolution also appointed, should go on any journey to the United States or elsewhere, to obtain such information as is desired by the said resolution.
[Signed.] T. D. M. T. D. MORRISON.

WILLIAM BRUCE.

A Copy of a Letter from the Commissioners to the Honnable the Speaker of the House of Assembly.

TOBONTO, 24TH FFBRUARY, 1836.

Doctors Duncombe, Morrison and Bruce being by a resolution of the Honorable the House of Assembly, appointed commissioners to inquire into " the system & management of schools and colleges," in order to report fully upon the systems of edu-cation pursued in the United States, one of our Commissioners, Dr. Charles Duncombe, was requested and authorised to visit that country, acquire a knowledge of the subject, and report thereon. That Gentleman has done so to our most entire satisfaction, and we have the honor herewith to hand you the result of his arduous labors and minute inquiries, in the documents now presented, viz:—A Report upon Education, accompanied by a Bill for the Regulation of Common Schools in this Province: this being our Second Report.

We have the honor to be, Sir,
Your most obedient humble servants,

T. D. MORRISON

WM. BRUCE.

To the Honorable the Speaker of the Commons House of Assembly.

Letter from Mr. Secretary Joseph, transmitting Lord Glenelg's Despatch, &c. to Dr. Duncombe.

GOVERNMENT HOUSE, TORONTO, 19th March, 1836.

SIR, -I am commanded by the Lieutenant Governor to forward to you the accompanying copy of a Despatch recently received by him from the Secretary of State for the Colonies (7 January) 1836, No. 11.) together with the documents referred to in it as requested in your communication of the 25th of October last, addressed to the late Lieutenant Governor.

I have the honor to be, Sir, Your most obedient, humble servant, J. JOSEPH.

* REPORTS:

Superior Courts of Common Law. Practice of Chancery. Lunatic Asylums. Education.

Charles Duncombe, Esq. M.P.P. Acting Commis'r for obtaining information on various subjects.

[Copy.] No. 11.

Downing-street, 7th January, 1886.

Sir.—I have had the honor to receive Sir. John Colborne: despatch of the 4th November, No. 61, enclosing the copy of a letter from Mr. Duncombe, one of the commissioners appointed by the House of Assembly of Upper Canada to obtain information respecting certain questions of public interest to the Province, and in reply I take the earliest opportunity of transmitting for that Gentleman's assistance copies of the Parliamentary Reports for which he has applied I have, &c.

[Signed.]

GLENEE C.

Lieutenant Governor

REPORT.

To the Honorable the Commissioners appointed to obtain certain information during the recess of Parliament.

Doctors Morrison & Bruce,

GENTLEMEN,

In obedience to your instructions to me at our meeting at the close of the last session of Parliament, I proceeded immediately to the United States, to make observations and collect information in the best manner I could, upon the various subjects which this special committee had been required to investigate, but feeling the importance, if not the absolute necessity, of combining practical skill with extensive and critical observation upon the great variety of subjects entrusted to my care, I obtained introductions to the Governors and heads of the departments in many of the States, and at Washington, to whom I feel myself in duty bound to acknowledge the great obligations I am under to them for their liberal indulgence and kind attendance to my numerous enquiries, for the zeal and philanthropy with which they communicated their own ideas upon the subjects of their particular departments, and furnished me with letters and references to men of science and to reports and recent publications upon those sub-Their names deserve to be jects respectively. recorded and their memories to live in the affections of a grateful public—but the immensity of the number of those persons who have aided my inquiries precludes the possibility of my even naming them; and from the variety and multiplicity of subjects to which my attention was directed by the Resolution of the honorable the House of Assembly at its last session, and by your resolution honoring me with the situation of acting commissioner for procuring information upon certain subjects. I have been unable, as the importance of the subject of education required, to condense and digest the information placed within my reach by the heads of departments and officers of the literary institutions which I visited during my journeying in the Western, Middle, Eastern, and some of the Southern States, where every opportunity was afforded me for accomplishing my object, by the many valuable industrious labourers in the cause of science and literature who aided me in my inquiries as well by their opinions, freely expressed upon the literary institutions of foreign

countries, where many of them had studied, and the honors of which had long been their boast, as by the progress of the same sciences and arts in America, under their own immediate superintendence, as also by books, pamphlets, and reports collected or made by authority of the different Legislatures of the states, by the different literary institutions, or by the philanthropy and enterprise of individuals, generally made by practical men, and after long and careful investigations, both in Europe and America, of the subjects upon which they have practically treated, especially where popular education has been made the subject of legislation.

In this report I have made free use of the information contained in the written and printed documents placed at my disposal, as well as the verbal information afforded me by those gentlemen who have so materially aided me in my pursuits. Upon this point I feel the obligations I am under to many gentlemen in various parts of the Union, and had commenced my report with an account of the information derived from the Rev. Mr. Peers, who had by the authority of the state of Kentucky, travelled, examined, and reported upon the subject of education in several other states to the Legislature of Kentucky, and by expressing my gratitude to Lieutenant Governor Morehead, acting governor of the state, for the philanthropy, zeal, and intelligence with which he freely communicated to me the information I desired upon this and many other subjects, connected with my inquiries; as well as to Professors Dudley and Caldwell of the Transylvanian University, but I found my report would have necessarily extended to an unpardonable length, so as never to have been read; and thereby the object for which this information was desired would have been defeated; I find myself therefore compelled to make such extracts from all the papers and other sources of information as have been placed within my reach as in my humble judgement would best conduce to the object designed—that of placing before the honorable the House of Assembly in as condensed a form as possible, the present state of the literary institutions most worthy of our imitation both in Europe and America.

In doing this I shall endeavour to be as concise as possible, using the opinions and even language of other men where they express my views of the subjects upon which they treat: the books, reports, addresses, and papers from which I have made the most lengthy and important extracts, are the reports and addresses made by the officers and members of Yale

College-of the common school committes Reports of most of the Western, Middle, and Eastern states, especially the cities of Boston, New York, Albany, Philadelphia, Baltimore and Cincinati, as well as from their reports and proceedings upon the subject of their infant schools city free schools, Frammar schools, literary institutes, eclectic institutes, and high schools, as well as monatorial schools, Lancaster schools, Manual Labor schools, primary schools, and writing schools, among which the regulations of the school committee of Boston is worthy of some particular notice—an essay upon female education by Catharine E. discourse on the Philosophy of Discipline in
families, schools, and colleges, delivered before
the Western Institute and College of professional teachers in Cincinnati, Ohio. Inaugeral
addresses delivered at the opening of Morrison
College, Lexington, by the Rev. B. O. Peers,
President of the University. Four annual reports of the proceedings of the Western Insti-

Schools in some parts of Scotland, and by M. Cousin's reports of the schools in Prussia and Germany, and Bulver's observations upon education as a prevention of crime in France, so that when Lord Brougham declared that "the Schoolmaster was abroad" the remark applied with equal truth to some parts of the Continent, and to Scotland as to England. The glimmering of this beacon light was soon seen across the ocean, and lighted up a similar flame in the United States; Commissioner after Commissioner was sent to Scotland and to England by the authority of their State Legislatures to light their lamps at the fountain of science, that the whole continent of America might be ignited by the In all freegovernments the welfare and safety of the government depend upon the national character of the inhabitants, and that national character depends upon their national In the United States, where they devote much time and expense towards the promotion of literature, they are equally destitute of a system of national education with ourselves, and although by their greater exertion to import the improvements made in Great Britain and on the continent, and their numerons attempts at systematising these modern modes of education so as to lay the foundation for a future perfect system of education adapted to the institutions of that country, they have placed themselves in advance of us in their common school system, yet after all their schools seemed to me to be good schools upon bad or imperfect systems; they seem groping in the dark, no instruction in the past to guide the future, no beacon light, no council of wise men to guide them more than we have, upon the subject of common schools; our schools want in character, they want respectability, they want permanency in their character and in their support, their funds should be sufficient to interest all classes of the community in endeavoring to avail themselves of them; but whatever the amount should be it should not be subject to any contingency, as an annual vote of the Legislature; it should be so arranged that all the inhabitants should contribute something towards its continuance, and all those who are benefitted directly by it should pay, in proportion to such benefit a small sum, but quite enough to interest them in the prudent expenditure of their share of the school moneys. hardly know whether I ought not to apologise to you and to the House of Assembly for the length to which this Report is necessarily extended; if it is thought by any that such an apology is required, I refer them to the importance of the subject as a certain, and I trust to all reference to the wants of the world. Thus every

"lovers of learning" as a satisfactory apology; But this I do know, I ought to explain why this report is so imperfect and defective. -It has been principally prepared and drawn up at unseasonable hours, while the whole of the busy nation were at rest, during the constant hurry and extreme pressure of an immense accumulation of unprecedented important Parliamentary business, while I was required to prepare reports upon various other important subjects as the Lunatic Asylum, Ponitentiaries, Prisons and prison discipline, Banks and Currency, and Commerce. I am aware that the subject of this Report is one of hackneyed discussion. The science of education. Nevertheles, the improvements of the present age in this science, and the increased conviction of its paramount importance, as a correlate to others, give it something of the character of novelty; as an old mine which had been supposed to be nearly exhausted suddenly discloses a new vein, richer and purer than any before, so this old subject may present new and promising aspects, and offer up fresh and rich veins of thought and ex-Such indeed is the interest now experiment. cited on this subject as to move the whole literary world. The spirit of reform is abroad, and is reconnoitering the whole field of operation with a vigilance and an energy that declares unequivocally, something must and shall be done. Nay, this work is already commenced, and, as Lord Brougham declares, "the Schoolmaster is abroad" Scotland has taken the lead, England is not far behind, Germany, Prussia, and France follow close in their wake, and enterprising, industrious, ambitious America, has launched her pinnance to contest for the palm with the old world, and in the United States important improvements have been introduced into the different grades of literary institutions. As antiquity is not always perfection, so innovation is not always improvement. While, therefore, we ought to be wholly uninfluenced by unprofitable traditions, however ancient and authoritative, we ought also to be equally guarded against doubtful and hazardous experiments, however specious and imposing. Education should be directed in reference to

two objects; the good of the individual educated, and the good of the world. The course to promote both objects, it is acknowledged, is nearly, if not quite, the same; but as men are too disposed to consider their own a separate interest, and are prompted by selfishness to act in exclusive reference to that interest, the only safe course is to provide for the education of youth in direct desirable object will be secured; for although a fatal error may result from consulting only what appears to the interest of the individual himself, vet he cannot be educated wrong for any of the purposes of life, who is judiciously educated in reference to the public good. Hence in establishing a system of education, reference should be had chiefly to the condition and general interests of the great family of man; and next in importance is fixing upon that system and those principles of organization which are best adapted to the capacities of those who are to be taught, and the materials which it will be able to command in its operations, as teachers and assistants should be carefully noted. Then, having the proposed system, and the means of accomplishing it, in full view, aided by the light of past and existing experiment, it will be less difficult to introduce and establish the inductive system of education in this Province than it has been in any other part of the civilized world where it has been attempted.

I have said that in establishing literary institutions, reference should be had chiefly to the condition and interests of the world. is true, is rather a principle of christianity than of worldly policy. It is founded however, on the true philosophy of our being, and is as much a dictate of individual, as of general interest. It is obviously the leading principle on which every Christian community should act. world has had its infancy, its gradual development of character, its different stages of improvement in the arts and sciences, and its great variations in political governments and national ascendencies. Neither have these changes themselves been uniform, nor always for the better. Instead of a regular advancement of light, "shining more and more unto the perfect day," there has been an alternation, if not of night and day, at least of comparative light and darkness. Itneeds but a single attention to the subject to see that these changes and varieties must require a corresponding modification not only in the system of education, but also in the modes and means of instruction, and also in the course and character of the studies pursued. We must look then upon the world as it now is, and not as it has been. No philanthropist engaged in an enterprise of permanent interest to future generations, is qualified for his work unless he can well as for the present.

intercourse which is maintained between different and distant parts of the earth. This is owing chiefly to the interests of commerce; and is one instance out of many, in which the spirit of enterprise for gain and individual wealth is subservient to the great interests of humanity. The merchant, aided by the great improvements in navigation, and other facilities of intercourse, penetrates every sea, bay, and harbor, and visits almost every clime. With him he takes, at a comparative small expense, travellers of all descriptions; adventurers, men of leisure, and of wealth; as also philosophers and men of seience who note the laws, and character, and literature of the people, and the geography and natural history of the country. From these and other causes the principle parts of the world are frequented by foreigners. In this way intelligence is communicated readily and constantly, and those who are separated from us by half the circumference of the globe become, as it were, our neighbors, and dwell among us. We thus acquire a common bond of interest, by which the different and distant nations are connected together. In consequence of some of almost every nation having visited foreign countries, in consequence of the dispersion of friends and acquaintances for the purposes of commerce, and other objects, in consequence of the investment of property abroad, and from various other causes, numerous connecting links bind distant nations together by a strong association. Thus local prejudices are subsiding, the improvements of one nation are becoming the property of all and the strong national barriers that have so long retarded the progress of civilization and improvement are fast melting down. This bond of union is greatly strengthened by the interests of commerce, for by commerce a mutual check is laid upon the encroachments of nations on each other; and thus a ground of national, as well as of individual intercourse is formed, and the different parts of the great human family are connected by official and national alliances. The general interests of learning, and the mutual alliance of the friends of literature also greatly increase this general union. These, though scattered over the world, form a republic of themselves, and are drawn together by cords that no distance can attenuate, and bound by connexions that no varieties can sever. They make accurate calculations for the future as all drink of the same fountains without jealousy In many respects the and climb up the same intellectual elevations present condition and future prospects of the without envy; for the attainments of each are world differ from all its past history. And here the property of all. True philosophy has in it I will notice, first, the extensive and increasing nothing of party and caste. Its votaries sit together at the feet of their great teacher, the God of Nature humbly and patiently pushing the enquiry "What is truth," and the cureeka of one individual or nation rings round the earth with the rapidity of the winds, and is speedily rechood from every enlightened land in responsive acclamations.

The religious enterprises of the Christi n Church give another striking feature to the character of the present age. The facilities of intercourse already alluded to, connected with other circumstances, have given a great impetus to these enterprises, and the influence of this religion in return adds much to the strength of those increasing ties by which different nations are bound to each other. The first principles of this religion is to count every man a brother. looks abroad through the earth and says, "I am debtor, both to the Greeks and Barbarians, both to the wise and unwise." Its plants of benevolence therefore are bounded by no national lines or distinctions. It recognises a kingdom of a character and extent to comprehend and consolidate all other kingdoms, peoples and tongues; "a kingdom that shall never be destroyed." This kingdom is gaining strength and enlarging its operations; and wherever it goes it spreads the harmonising influences of its own spirit.

To the preceding characteristics of the present age, we may add the peculiar state of the political world. The advancement of political reform; the general movement among the people in different nations to assert their rights and secure their liberties; the increasing light on these subjects, are so much the topics of daily remark and of constant poetical and rhetorical declamation, that I need here only allude to them for the sake of shewing their relation to the varied subjects before us, and for the sake of shewing that in the political as well as in the religious world "the fields are white already for the harvest," yea, "the harvest is great and the skilful labourers are few."

And here before we advance further let it be observed that whether we view the subject by the light of history or by the light of revelation, or whether we consider the energetic character of those principles that are now in operation, we are in every case led to the same conclusion—that the march of the principles alinded to is onward, and if the proper means are used, will continue to be onward till the final renovation of our world.

But what has all this to do with the inductive system of education? Much every way-Education is to be second only to Christianity itself in carrying on this work. By this system and the education of teachers the youthful mind is disciplined, the arts and sciences are improved: the world is enlightened, and above all, by this an army of faithful, intelligent, enterprising, benevolent men are trained up, and sent forth to be leaders in the great enterprises of the day: I speak not now of one profession merely, ministers and merchants, lawyers and physicians, teachers and statesmen, farmers and mechanics. authors and artists, all are wanted in this work. and wanted in greater abundance than can be But they should be men of suitable attainments, and of a proper mould; and these depend much, very much, upon their education.

It has been supposed that there are too many in the learned professions already, and that therefore there are too many who obtain a liberal education. But this opinion is founded upon two errors :- One is that every liberally educated man must be above manual labor, and must therefore enter one of the learned professions: and the other is, that all who do enter those protessions do it and have a right to do it from personal or family interests, and not for public good. _Whereas a liberal education ought not to unfit a man, either in his physical constitution or his feelings, for active business in any honest employment; and neither ought men who enter any of the learned professions, to excuse themselves from labor and privation for the good of the world. There is a great and pernicious error on this subject.

An education has a twofold object, namely, the perfection of the physical, intellectual, and moral powers of man, and the imparting to him a knowledge of the laws of his Each of these parts may be divided into general and particular. Education is general, while it regards its subject merely as a being susceptible of improvement, and capable of receiving knowledge; and particular when its instructions are imparted, to qualify the pupil for some particular station and specific duties in It is plain that a portion of the education of all, especially in its earliest stages, must be general: but it is equally evident that a greater portion must be particular; and this is especially true of that part of education which consists in the imparting of knowledge. Life is 80 short, and man's power of acquiring and otheretaining is so limited, that it would be a vain at-

tempt to aim at making each know everything. Indeed, life is too short to master one science, or to become perfectly acquainted with one protession; and it is therefore much too short to master all, and yet much more too short to know all that can be known, and also to do all that ought to be done. The great object which we propose and recommend in this report upon the inductive system of education, is to remedy the defects of the present system, and prepare the rising generation for the regulation and enjoyment of free, civil, and religious institutions. We think the signs of the times and the present character of the world, demand this.—Hence, now, whatever may have been the state of things heretofore, it is criminal to acquire knowledge merely for the sake of knowledge.—The man must be disciplined and furnished according to the duties that lie before him.

An education should be such as to give energy and enterprise to the mind, and activity to the whole man. This depends, in part, upon the physical constitution. Hence the necessity of preserving a sound state of hodily health. To secure this, temperance and proper exercise are requisite.—But what exercice is best. as a part of a student's education, is still unsettled. Without stopping to discuss that point at large here, in my opinion, the best kind of gymnastics are the exercises of the field and of the The moral shop, in some kind of useful labor. as well as physical effect of such exercises is every way superior to that of others which have been introduced, to say nothing of the addition they make to the wealth of the community; and if such exercises are objected to, because they are deemed by many as derogatory to their character, they ought so much the more to be insisted on. It was never designed that fashion and inclination should give rules for education, but education ought to direct fashion, and regulate the inclination. But whatever may be the mode of doing it, the strictest attention ought to be paid to the health of the student. alone however will not be sufficient; the mind also should be cultivated in direct reference to the object of making the pupil a man of enterprise and activity. Every thing that is calculated to call forth such a spirit should be cherished, and every thing which discourages it should be discountenanced. The student cannot be too much impressed with the idea that to be a mere man of letters is not the way to be the most useful man. We want men who will take the field, and whose souls are fired with a zeal for active duties in the service of the world.

Closely allied to this spirit of enterprise, and eminently productive of it, are the principle and habit of self dependence which should imbue the minds of youth at an early age. Nothing is more important in the formation of an enterprising character than to let the youth early learn his own powers; and in order to this he must be put upon his own resources, and must understand if he is ever any thing he must make himself, and that he has within himself all the means for his own advancement. It is not desirable therefore that institutions should be so richly endowed as to furnish the means of education free of expense to those who are of an age to help themselves; nor is it desirable that any man or any society of men should furnish an entirely gratuitous education to the youth of this Province. All the necessary advantages for educating himself ought to be put within the reach of the young man, and if with these advantages, he cannot do much towards it, he is not worthy of an education. If it be said that self support, in part or in whole, is a tax upon time and a great draw back upon the student's acquirements; I answer that in the general, facts show that such students are in advance of others in knowledge as well as in enterprise, and if they were not, still it is better that they should know less and do more, than that they should know more and do less.

The course above recommended will aid also in forming another trait of character and habit of life which is very important in this miscellaneous and changing world: I mean a facility in passing from one employment to another, and a ready adaptation of feeling to the various duties and changing circumstances of life. The intellectual and corporeal habits of most men are too inflexible, and the transition from one train of thought and from one class of exercises to another, altogether too difficult. They can move in straight lines, and in their old courses, to some purpose, but change their direction and employments, and they become almost useless to the community and to themselves. The amount of public and private loss sustained in this way is very great, and also very unnecessary. In most of these cases the mind might have been so trail ned that like a ship in good trim it would answer to its helm, and adjust itself to its circumstances however variable the winds and the currents in the stormy sea of life.

But of all the effects to be produced upon the mind by a proper course of training, nothing is more important than the spirit of benevolence.

Without the aid of education, even religion itself seems hardly sufficient to make a thorough and an enlightened philanthropist Hence if all the world would now be brought to possess a truly devotional character, they still might not have those enlightened principles of benevolence which are necessary for the general happiness The truth is, from the first dawnof the world. ing of reason to its maturity, mankind are trained each to look on his own things, and not on the things of another. The lessons of the nursery, the general course of domestic training, the policy of common schools, and the rewards and honors of the colleges, all tender to beget and The education foster a criminal selfishness. which leads to such a state of society is radically defective. Is there no way by which this selfish bias of the heart can be lessened, if not prevented? Far be it from me to teach that we are to be indifferent to our own interest. is a kind of benevolence which may look well in theory, but it exists no where else, either in heaven or on earth; either in the bosom of Deity, or in the breast of his holiest creatures. Benevolence, therefore, should be incorporated into every system of education, not as a separate and an independent science, but as the seasoning of all and the final cause of all attainments.

In noticing the tone and character which are to be imparted to the mind by the hand of Education, I have purposely omitted all those principles which are the most commonly insisted on in training the young student, and have touched on those only which are less frequently urged, and which seem, nevertheless, of vital importance to the accomplishment of the proposed object-educating men for the good of the world.

the ancient classicks are briefly these: -Ancient literature ought always to find an honourable place in our colleges and universities. knowledge of the ancient languages were of no other importance than to preserve the purity of the Holy Scriptures, and secure a correct translation of them into other languages, this would of itself keep these languages in credit, and make a critical study of them necessary. - But such is the character of modern literature and of the science, that a few only need devote with the many who can be better employed in ledge in all the countries where it was sought.

of an enlightened and universal philanthropy. other studies. Too much stress is now laid upon a knowledge of the ancient classics. It is still deemed heterodoxy to call any man learned who is not skilled in the Greek and Latin Languages. The tone and character of our present system of education were formed at the revival of letters after the dark ages. But though the causes which led to the present system have passed away, yet by an unprofitable adherence to the traditions of the fathers we must have it still, that what was once necessary to constitute a scholar is still indispensable for the same character. But the state of literature and the character of the sciences, are greatly changed. At the revival of letters in the fifteenth century almost all the learning in the world was locked up in two languages, then out of popular use. Hence to be a scholar it was necessary to be acquainted with Latin and Greek, and with the Roman and Grecian Literature. And indeed at that period the world had so far deteriorated from what it once was, that the only ready way to restore it to its former character was to reclaim the literature that had been buried for ages in the archives of antiquity,-to consult the manuscripts and symbols of ancient learning, and bring forth to light the obscured and forgotten truths of ancient research and labor. It was this which made the change of that day from darkness to light so sudden and glorious. "We behold," said a learned author, speaking of those times "a flood of noon day bursting all at once over every quarter of the horizon, and dissipating the darkness of a thousand The fact was, the world had not to pass through another pupilage without text books or teachers.—It had not to serve another apprenticeship without patterns or masters. In the relics of former times there were rules and patterns and instructions in abundance. As soon therefore as a spirit of inquiry and a thirst for knowledge were excited, a great pro-My views on the importance of the study of portion of the light of antiquity burst at once up on the world .- This was the new sun that shone almost in meridian splendor at its first appearance. It had never been put out, but only obscured by the murky clouds of barbarism from the Scandinavian forests, and eclipsed by the smoke of superstition that went up from the pit of the beast and the false prophet. When this obscuration passed away, the sun of ancient science shoue in its full orbed glory. tainments of antiquity were soon mastered .-The art of Printing, which was invented about themselves to ancient literature in comparison this time, gave a ready circulation to this knowLiterature and science were no longer foreign plants, but had become indigenous in all places where they were cultivated. Neither were the treasures of science long locked up in an ancient and dead language, but were spread out in the vernacular tongue of every enlightened land. Large additions also were constantly made to the original stock; and vast treasures of wisdom and knowledge have been brought to light, which the eye of antiquity never saw, which the ear of the ancients never heard, and of which indeed they had never formed any conception. -Hence the fact now is, and it is a fact that cannot be denied, that there is very little left in the fields of antiquity to be explored. All that is important in ancient science, except what is peculiar to the languages themselves, have not only been clothed in a modern dress, but have been incorporated with, and made constituent parts of modern text-books. Modern literature, therefore, should be counted the great field of literary enterprise and study. If it be necessary that the antiquarian should still make his pilgrimage to the East, and dig after learned hieroglyphics in the ruins of the Acropolis, and in the subterranean depositories of Herculaneum and Pompeii; or if it be necessary, as undoubtedly it is, that some should devote themselves to a critical investigation of the ancient languages,—so let it be; but from such a tedious pilgrimage, and such an endless study the great body of students should be excused, that they may devote themselves more immediately and more effectually to the great and pressing wants of the world. It may, indeed, be proper, that most students who have an opportunity of commencing an education early, and of pursuing it without embarrassment, should obtain some general knowledge of the Greek and Latin languages; especially as there is an age in the developement of the youthful mind, in which language, perhaps, can be pursued to greater advantage than any other study; -and if at that age a good foundation can be laid for a knowledge of etymology, of philology in general, and for a more ready attainment of the modern languages, this would be advantageous to the pupil.

The proper organization of a board of instruction is a matter of great moment, and of difficult attainment. All agree that they should be united among themselves; that they should be men of learning, apt to teach, unimpeachable in their life, gentlemanly and winning in their manners, industrious in their habits, energetic and enterprising in their character, interested

But how to obtain such, how to their duties. keep them such after they are put in place, and how to get rid of them readily if they prove not to be such, are questions that have never been satisfactorily settled. After the greatest precaution, improper persons may be introduced ino the hoard of instruction, who may change the whole system. But it is probable that more failures result from a defective organization in the tenure and emoluments of office, than from the appointment of incompetent officers.

In all literary institutions, should not the faculties for the time being be authorised by law to have a voice in filling vacancies in their board, or in removing an uncomfortable associate, which however is not generally the case in the colleges of the United States, where the want of such a law, and the consequent evils,

are daily loudly complained of.

There is no copartnership whatever that so imperiously requires union and confidence among the partners, as an association for the government and instruction of youth. And yet there are few associations even for the ordinary purposes of life, in which there is not greater precaution used to secure that union and mutual confidence, than in all literary seminaries that are but one advance above common schools. Again, when a person is elected to a seat in a college faculty, it is generally considered to be, at his own option, an appointment for life; except in those strong cases of immorality, or dereliction from official duty which will authorise formal charges and an impeachment. any rate, under existing usages, any attempt to get rid of a president or professor is generally attended, not only with unpleasant consequences, but with serious injury to the institution. The effect therefore is as might be expected; incompetent and inefficient men often hold their offices for years, and not unfrequently for a long life, in the United States; in this way the funds of the institution are wasted, the benevolence of its patrons is abused, the department languishes, the students not only lose their time & money, but what is incomparably worse, there is a gap in their education which is never repaired. Add to these, the reputation of the institution itself sinks, the general literature of the country is depressed, and the world suffers an incalculable loss.

Another evil is, the salary and other rewards for the service of college officers do not depend at all, or in any adequate extent, upon the extent of the services rendered. The salary is fixed and limited. Whether the officer is energetic in their work, and faithful in the performance of and enterprising, or otherwise, whether he gives good satisfaction to his pupils, and draws many to his instructions or not, whether he does all he can to elevate and sustain the character of the institution, or leaves the whole weight and responsibility of its reputation upon others; in short, whether the institution flourishes or declines, his income is the same and his pay is sure.

If an officer should exert himself beyond his associates, or has health and mental energies which enable him to tower above the rest, he has not only no adequate compensation for his services, but he often has the mortification of seeing others in comparative idleness living upon the credit of his labors; under such circumstances it can scarcely be expected that any great enthusiasm would be excited to keep up the credit of a college, or advance the interests of education in the inferior seminaries of learning. If men are actuated by the love of science or are impelled by pure benevolence, neither nor both of these influences can induce them to make extra exertions for the world when the merits of those exertions are consumed by their incompetent or unenterprising associates.

It is probably owing to some or all of these causes, both in England and America, that there is less enterprise in the colleges than out of While the Universities of France, of Germany, and Scotland, have been contributing largely to the literary and scientific wealth of the day, what h s been done for a half century in the Universities of England or America?

They have in some cases abridged, compiled, and translated, but what have they added to the original stock?—Their citizens have enterprise, but, with a few honorable exceptions, they shew it every where else more than in their colleges and Universities. This is not the result of accident, there must be causes; and these causes should be removed. If what we have just been noticing be the causes, the remedy is plain. Human minds need excitements to action, and daily this is evident, not only from experience, but also from the course pursued by the all-wise Governor of the Universe, in the economy of nature, of Providence, and of grace.-He has made it for the interest of man to obey his laws, and to perform painful and laborious duties .-Now the perfection of philosophy is to carry out into all the departments of human life, the economy of God.-In all human enterprises therefore, we should shew our wisdom by doing as God does,-make it for the interest of those employed to be vigorous and faithful,-let their gifts make way for them, so that they shall receive a remuneration to themselves, and produce advantageous influences upon the community, to youth.

commensurate with their talents and exertions. To be more specific in reference to the case before us.-Let the common schools be conducted by those who require and employ them-Let our higher seminaries be equally free-Let our faculties have a voice in the choice of men to fill vacancies in their board—Let suitable provision be made to remove inefficient men from office;-Stated and thorough examinations of the classes should be had under the direction of an impartial examining committee; and the proficiency of the students should be noted in direct reference to the competency of their instructors, as well as to determine the standing of students.-A college corporation ought to have a committee to examine into the standing of their officers of instruction, as regularly as one to audit the account of their Treasurer,-And to do this it is not necessary to examine these officers, their official character will be written on the mind of their pupils, and may be known and read of all men. It has been well said, that he "who cannot put his mark upon a student is not fit to have one." Examine this mark, and by its dimensions and character you will judge of the hand that made it .- Let it therefore be well understood as a condition of office that when a teacher's pupils are deficient he must give place to another.

That each instructer may have the credit and avails of his own labour, let his permanent salary be fixed at a bare competency for his own support, and let all beyond depend upon the general prosperity of the institution, and especially upon the extent and success of his

own labors.

These general principles, if judiciously applied in the first organization of all our Provincial literary institutions, would be a great im-

provement.

Was it not that my report is swelling in size much beyond what I intended it should have been, I should have made some remarks upon the course of study to be pursued in the various classes of common schools, from the infant schools to the first class of those schools as well as to our high schools, District schools. (if continued) Grammar schools, Colleges, and University, comprehending the character and order of the studies, the text books and modes of instruction. But this would lead me into detail that would not be interesting, and I fear prevent the reading of what I deem important, and especially as I have already remarked upon the most important of those points, in my view of the character of the knowledge to be imparted

The government, classification, and graduation | should not labor as much as others? of students.

The government of a well regulated literary seminary is not a monaschy, an aristocracy, or a republic, but it is patriarchal. The nearer it approaches to this character, the more perfect it is.

Like a household, a literary institution should have but one head, and that head should have ability to govern, or he is unfit for his office. this government, it is true, he ought to be assisted by the subordinate officers, but the government itself should be a unit, and receive its direction and influence from a common head.

The government of a seminary of learning, like a household, admits of no interference from A code of statute laws from a board of trustees, for the officers to execute among the students, will never be respected. Such a course, had not custom sanctioned it, would be deemed an insult to the immediate government The student and anoutrage upon its authority. should feel that he is offending against his father and friend, and against the peace and prosperity of the community in which he has a common in-Like a family, the intercourse between a student and the President and Professors should be of an affectionate and familiar character. Faculty meetings before whom the young transgressor is arraigned wth all the sternness of a public prosecution on the one hand, and with all the cunning duplicity of a studied defence on the other, should be avoided.

I cannot feel justified to close my remarks on the subject of Government without giving my decided testimony in favor of a moral and religious influence to aid in the government of This is of paramount importance.-With such an influence government is easy; without it, good government is impossible.

On the subject of classification there has, of late, been much said, and much to the purpose; but there are still different opinions .-The question in dispute is simply this: - Ought scholars to be classed by the year as they now are in most colleges; or ought they to be classed according to their advancement in their respective studies, without reference to time?-The arguments in favor of the latter method, in my opinion, abundantly preponderate. Indeed I know of no plausible argument in favor of the prevailing course except it be the lessening of And this method was the labor of instruction. originally adopted, doubtless, not for the good of the pupil, but for the ease of his instructor. But what reason is there why college teachers | ded into the yearly classification already alluded

schools and academies, as also in primary schools, Teachers labor six and seven hours in the day, but in colleges not half that time, even in term time, and yet the officers have vacation one quarter of the year! Is there any good reason forthis? Let him that enters upon the care and education of youth make up his mind for responsibility and labor, and then he will be prepared to adopt a system of classification which, while it only doubles the duties of the teacher, will increase the advantages of the student tenfold.

Yes I believe in many instances it will add to the student's advantages tenfold. He will not beobliged to hasten over his studies without knowing them, in order to keep up with his class, neither will he be retarded in his progress to accommodate the dull or the feeble. If he loses any time by sickness or necessary absence, or if for want of quickness of apprehension in any particular branch he falls in the rear of his class, he will not, as is the case in most colleges either lose a year for the want of a few weeks or months, or what is more common, and still worse for the student, be dragged on to a disadvantage, and carried through in name, without in fact, knowing the science. In the proposed method of classification, the arbitrary and pernicious distinctions of superior and inferior grades will also be done away; and this will have a favorable bearing in more respects than one; It will open the way for the honorable introduction of a very promising portion of youths into the college classes, who wish the advantages of the college for a course more or less extended in the sciences and modern literature, to the exclusion of the classics, and who, though most of the American Colleges have of late opened their classes for their reception, have not entered them, undoubtedly because they would have to do it under circumstances of inferiority, which American youth cannot readily submit to, and this will always be the case, probably so long as the present mode of classification is kept -But this point will be more fully elucidated in the next topic of discussion, which is the Graduation of Students.

Academic degrees are signs, true or false, of certain literary and scientific attainments.—But according to general usage, the first of these degrees requires a four years course in college, and, nominally at least, a knowledge of the Greek and Latin languages, and ancient literature, and the course to this degree is sub-divi-

The second degree also depends upon time, without even an inquiry into the candidate's literary advancement; so that when the first degree is conferred, the second might be added at once, with the proviso that it should not take effect under three years; and all the purposes of the degree would be answered. These leading features of college and University Constitutions were adopted at Cambridge and Oxford in England at an early period in the revival of learning, and from them the patterns have been furnished for American Institutions. It would be difficult, I think, to give a satisfactory reason at any period for this annual classification, and for making a given period of years an essential qualification for a literary degree; but there certainly was a reason, as we have shewn for making the Greek and Latin an essential part of a college course, and the same reason would require that literary degrees should be conferred on such only as underrtood these But those reasons have passed languages. away, and the whole system is now evidently defective. - The evils are twofold; - First, these degrees are after conferred on the undeserving; and secondly, they are often withheld from those who deserve them.

It is important that the world should know what to depend upon when a man presents a diploma from a literary institution. But it is a notorious fact that as these are now distributed they afford no satisfactory evidence that those who hold them are learned men .- And is this treating the cause of literature with respect, or the world at large with common honesty !- The patrons of learning have in this way lowered themselves and their institutions down to a reproachful level. They respect not their own literary standards and honors, and therefore the world at large will not respect them. These honors have been exposed in the market, and have been struck off, not indeed to the highest bidder but to almost any one who would reside within the college walls and pay the college bills for a given number of years. It is true if the student would get through without much study, he must be skilled in one art—that of deception and lying. One day he must be sickanother time he must mistake his lesson-then again he must over sleep himself by mistake, and the next time get a friend to write his exerthe author is treating upon a part of science easy to be understood, he must appear in recitation room and make a great display in the exhibition of what he knows. - If he does not understand these arts when he enters, he soon gets dented to none who deserve it.

this part of his education, and readily qualifes himself for a degree in all the college arts of deception and falsehood. The fact is, the youth wants the honor of a degree, and is too lazy, or perhaps too dull to obtain the requisite qualifications in the given time; or his father or guardian has determined that his son or ward shall have the honors of a graduate, in either case the object of the boy will be to get on and get thro' without being denied his deploma. And unfortunately this is not difficult. Time having been fixed upon as one of the principal criteria of his advancement, this at length has come to be almost the only requisite, including perhaps what a youth would naturally acquire by being in a literary atmosphere, and mingling with books If he is a little deficient the first and students. year, it is a pity to put him back a whole year and therefore he is allowed to go on; and so he drags himself on, falling in the rear a little more every year, to the last; and now although he could not perhaps, on a fair examination, turn round and re-enter a fresh man, still, as he has gone through his years, and paid his bills, the least that can be done is to give him his degree and let him go, hence scores of uneducated graduates go forth yearly from literary institutions, with their deplomas signed and sealed, and their names splendidly enrolled as admitted ad primum gradum in artibus, in due and ancient form.

By this I do not mean that none get a good education in colleges. The greater portion, perhaps, are well educated. I only mean that many are graduated, and have the testimonials of education who have not the character.

On the other hand, the present principle of conferring degrees excludes from these testimonials all who have not, professedly at least, become acquainted with the ancient classics, whereas if these honors are of any value, they ought to be given to the proficient in modern literature and in the sciences, as well as to the classical scholar. I do not mean to say the same degrees should be given to both classes. If the present degrees are sanctioned and consecrated for particular attainments, I have no desire to see them changed, provided they are not prostituted to confer a deceptive honor on heads "that do not know and will not learn." But I insist that public and official testimonials ought to be given to the mere English scholar. cise for him; and occasionally, especially when In short let the deploma of a College tell the truth and nothing but the truth, respecting the literary and scientific attainments of the graduates, so far as this can be ascertained by a thorough and critical examination, and let it be

The leading principles here proposed, are Nor can I for the life of me comprehend why such as appear to me to be the choice of those practical men who, from long experience and careful and critical observation have recommended, so far as I could comprehend their views; it is true some may be startled at what may seem to them hazardous innovations of old systems, but it should be understood that these principles, though unpractised among us, are not new; most of them have been adopted and successfully practised upon by some of the most flourishing institutions in Europe; and some of them have recently been incorporated into several collegiate institutions in the United States, & are strenuously advocated by many of the most

enlightened men in the world. But was there ever a more auspicious period than the present for literary reform? If I rightly understand the signs of the times, we stand upon the threshold of a new dispensation in the science of education, and especially in the history of common schools, colleges, and universities in The flattering prospects of our this province. being permitted legally to dispose of the school lands of this province, so long dormant—the sale and appropriation of the Clergy Reserves for the purposes of education, and above all by our having control of the other natural resources of the province, we shall be enabled to provide respectably and permanently for the support of literary institutions in every part of the province; while by remodelling the charter of King's College so as to adapt the institution to the present state of the science of education and wishes and wants of the people of this province, and by all our own literary institutions being so constructed as to serve as nurseries from which the youth may be transplanted to an institution where they may grow to maturity and spread out with the increasing improvements of the age, while at the same time they collect into a luminous focus every additional ray that emanates from the sun of science to renovate the tree of knowledge.

With such charming prospects before us, with what alacrity and delight can we approach the subject of education to make liberal, permanent and efficient provision for the education of all the youth of Upper Canada to cause "the blind to see, the deaf to hear, and the dumb to speak" and above all to make certain and extensive provision for the support of schools for teachers and tutoresses, and while upon the subject of "normal schools" I cannot too earnestly recommend the careful and attentive reading of the extracts made from the report of Victor M. Cousin upon that subject; and appended to this report. again. One female institution, at least can be

similar schools for the education of female teachers may not prove equally advantageous to the cause of education and to the happiness and ornament of society. And next, to provide competent female teachers. One of the first objects that need to be attempted in regard to female education, is to secure some method of rendering female institutions permanent in their existence and efficient in perpetuating a regular and systematic course of education. This is secured for the other sex by institutions so endowed that the death or removal of an individual does not hazard their existence or character-They continue year after year, and sometimes for ages, maintaining the same system of laws. government, and course of study. But in regard to female institutions, every thing is ephemeral; because in most cases every thing depends upon the character and enterprise of a single indivi-A school may be at the height of prosperity one week, and the next week entirely Communities seem almost entirely dependent upon chance, both for the character and perpetuity of female schools. If good teachers stray into their bounds, they are fortunate; if poor ones, they have no remedy. the character, the conduct, and the continuance of those who are so extensively to mould the character of the future wives and mothers of this province are almost entirely removed from the control of those most deeply interested.

One method which may tend to remedy the evil is the investment of property in buildings, furniture, and apparatus devoted to this object under the care of a suitable corporate body. It thus becomes the business of certain responsible men that the property thus invested shall secure, the object for which it has been bestowed. But this method alone will not avail, for though the probabilities are greater that endowed institutions will be well sustained, it is often found that they do fail in securing a systematic and perpetuated plan of education. There needs to be added a well devised plan of Government and course of study, together with that division of labor existing in colleges which secures several able instructors to the same institution, and in such a way that the removal of any one teacher does not interrupt the regular system of the institution.

That this can be accomplished in regardate female institutions as well as those for the other sex, is no longer problematical, for it has alread been done; and what has been done can be don-

referred to in which a regular system of government and instruction has been carried on for a course of years, until an adequate number of teachers and pupils has been fitted to perpetuate the system, so that as one teacher after another was called away, others were prepared to take their places; and thus the whole number of teachers, from the principal to the lowest monitor, has been repeatedly changed, and yet the same system and course of study have been preserved, while there is as fair a prospect of future perpetuity as is afforded by most colleges.

Another object to be aimed at in regard to female education is, a remedy for the desultory, irregular, and very superficial course of education now so common in all parts of our Province, and I may add in the neighboring country. When young men are sent to obtain a good aducation, there is some standard of judging of their attainments, there are some data for determining what has been accomplished. regard to females, they are sent first to one school and then to another; they attend a short time to one set of studies and then to another; while every thing is desultory, unsystematic and superficial. Their course of study is varied to suit the notions of parents, or the whims of children, or the convenience of teachers; and if a young lady secures a regular & thorough course of education, it is owing either to the uncommonly good sense and efforts of parents, or to the rare occurrence of finding teachers sufficiently stationary and persevering to effect it

The remedy for this evil (in addition to what is suggested in previous remarks) is to be sought in co-operating efforts among the leading female schools in the Province, to establish a uniform course of education adapted to the character and circumstances of females, to correspond with what is done in colleges for young The propriety of giving titles of honor to distinguish females who complete such a course may and will be questioned. It certainly is in very bad taste, and would provoke needless ridicule and painful notoriety, except to those who propose becoming teachers.—But if the leading female institutions in this province commencing with those in this city, were to combine to establish a regular course of study which should be appropriate and complete, it would prove an honor and advantage to young ladies to have it known that their education was thus secured; and it would also prove an advantage to the schools, as they would thus gain the reputation of sending out uniformly well educated pupils-other schools would gradually adopt the same plan; and thus the evils alluded to,

will, to a great extent, be remedied. These measures would have the same effect on female education as medical and theological schools have upon those professions—they tend to elevate and purify, although they cannot succeed in banishing, all stupidity and empiricism.

Another object to be aimed at in regard to female education is, to introduce into schools such a course of intellectual and moral discipline and such attention to mental and personal habits as shall have a decided influence in fitting a woman for her peculiar duties. What is the most important and peculiar duty of the female sex? It is the physical, intellectual, and moral education of children.—It is the care of the health and the formation of the character of the future citizen.

Woman, whatever are her relations in life is necessarily the guardian of the nursery, the companion of childhood, and the constant model of imitation. It is her hand that first stamps impressions on the immortal spirit that must remain for ever, -and what demands such discretion-such energy-such patience-such tenderness, love and wisdom-such perspicuity to discern—such versality to modify—such efficiency to execute—such firmness to persevere as the government and education of all the various that characters and tempers they meet in the nursery and school room. Woman also is the presiding genius who must regulate all those thousand minutize of domestic business that demand habits of industry, order, neatness, punctuality, and constant care. And it is for such varied duties that woman is to be trained. For this her warm sympathies, her lively imagination, her ready invention, her quick perceptions, all need to be cherished and improved; while at the same time those more foreign habits of patient attention, calm judgment, steady efficiency, and habitual self-control, must be induced and sus-

Is a weak, undiciplined, unregulated mind fitted to encounter the responsibility, weariness, and watching of the nursery—to bear the incessant care and perplexity of governing young children—to accommodate with kindness and patience to the peculiarities and frailties of a husband—to control the indolence, waywardness and neglect of servants, and to regulate all the variety of domestic cares? The superficial accomplishments of former periods were of little avail to fit a woman for such arduous duties, and for this reason it is that as society has advanced in all other improvements the course of female education has been gradually changing, & some portion of that mental discipline once exclusive-

ly reserved for the other sex, is beginning to exert its invigorating influence on the female character both in England and America. At the same time the taste of the age is altered; and instead of the fainting, weeping, vapid, pretty plaything, once the model of female loveliness, those qualities of the head and heart that best qualify a woman for her duties, are demanded and admired.

None will deny the importance of having females properly fitted for their peculiar duties; and yet few are aware how much influence a teacher may exert in accomplishing this object. School is generally considered as a place where children are sent, not to form their habits, opinions and character, but sinply to learn from books, and yet whatever may be the opinion of teachers and parents, children do to a very great extent form their character under influences bearing upon them at school. They are proverbially creatures of imitation and accessible to powerful influences. Six hours every day are spent with teachers whom they usually love and respect, and whose sentiments and opinions in one way or other they constantly discover. They are at the same time associated with companions of all varieties of temper, character and habit. Is it possible that this can exist without involving constant and powerful influences either good or bad? The simple fact that a teacher succeeds in making a child habitually accurate and thorough in all the lessons of school, may induce mental habits that will have a controlling influence through life. If the government of schools be so administered as to induce habits of cheerfulness and implicit obedience, if punctuality, neutness, and order in all school employments are preserved for a course of years it must have some influence in forming useful habits. On the contrary, if a child is tolerated in disobedience and neglect, if school duties are performed in a careless, irregular and defficient manner, pernicious habits may be formed that will operate disastrously through life. It is true that mismanagement and indulgence at home may counteract all the good influences of school, and the faithful charge of parental duty may counteract, to some extent, the bad influences of school; but this does not lessen the force of these considerations.

Nor is the course of study and mental discipline of inferior consequence: the mere committing to memory of the facts; contained in books, is but a small portion of education. Gertain portions of time should be devoted to fitting a woman for her practical duties, such, for example, as needle work. Other pursuits are design-

ed for the cultivation of certain mental faculties such as attention, perseverence and accuracy. for example, is the influence of the study of mathematics, while the conversation and efforts of a teacher, directed to this end, may induce habits of investigation and correct reasoning, not to be secured by any other method. Other pursuits are designed to cultivate the taste and imagination, such as rhetoric, poetry, and other branches of polite literature. Some studies are fitted to form correct moral principles and strengthen religious obligation, such as mental and moral philosophy, the study of the evidences of Christianity, the study of the Bible and of collateral subjects. Other studies are designed to store the mind with useful knowledge, such for example as geography, history, and the na-The proper selection and due tural sciences. proportion of these various pursuits will have a decided influence in forming the mental habits and general character of the pupils.

Another important object in regard to female education is the provision of suitable facilities for instruction, such as are deemed indispensable for the other sex, particularly apparatus and libraries.

The branches now included in a course of education for femalas of the higher circles have increased in the United Statestill nearly as much is attempted as, were it properly taught, is demanded of young men at college, little has been done to secure a corresponding change in regard to the necessary facilities to aid in female instruction.

To teach young men properly in chemistry, natural philosophy, and other branches of science, it is deemed necessary to furnish a teacher for each separate branch who must be prepared by a long previous course of study, who shall devote his exclusive attention to it, and who shall be furnished with apparatus at the expense of thousands of pounds, and to aid both teachers and pupils extensive libraries must be provided at the public expense.

But when the same branches are to be taught to females, one teacher is considered enough to teach a dozen such sciences, and that too without any apparatus, without any qualifying process, and without any library.

If females are to have the same branches included in their education as the other sex, ought there not to be a corresponding change to provide the means for having them properly taughts or are the female sex to be complimented with the intimation that a single teacher, without preparatory education, without apparatus, and without libraries, can teach young ladies what

it requires half a dozen teachers, fitted by a long course of study, and furnished with every facility of books & apparatus to teach young gentlemen. It is true such extensive public endowments are not needed for females as for the other sex, because their progress in many of the sciences never needs to be so extensive; but if these branches are to constitute a part of female education, is not something of this kind demanded from public munificence, that all be not left to the private purse of the teacher, who must furnish it from slender earnings, or remain unsupplied?

But the most important deficiency, and one which is equally felt by both sexes, is the want of a system of moral and religious education at school which shall have a decided influence in forming the character, and regulating the principles and conduct of future life.

When it is asserted that it is of more consequence that woman be educated to be virtuous, useful, and pious, than that they become learned and accomplished, every one assents to the truth of the position. When it is said that it is the most important and most difficult duty of parents and teachers to form the moral character, the principles, and habits of children, no one will dissent. All allow it to be a labor demanding great watchfulness, great wisdom, and constant perseverence and care. For what comfort would parents find in the assurance that their children are intelligent, learned, and accomplished, if all is to be perverted by indolence, vice, and irreligion? and what is the benefit to society, in increasing the power of intellect and learning, if they only add to the evils of contaminating example and ruinous vice?-The necessity of virtuous intelligence in the mass of the community is peculiarly felt in a form of government like ours-a beautiful appendage to the most perfect mixed monarchy, where the people are not held in restraint by physical force, as in despotic governments, but where, if they do not voluntarily submit to the restraints of virtue and religion, they must inevitably run loose to wild For a nation to misrule, anarchy, and crime. be virtuous and religious, the females of that nation must be deeply imbued with these principles; for just as the wives and mothers sink or rise in the scale of virtue, intelligence, and piety the husbands and the sons will rise or fall. These positions scarce any intelligent person will deny, so that it may be set down as one of the current truisms of society that the formation of the moral and religious principles and habits is the most important part of education, even racter and experience, employed with the express

in reference to this life alone. To this is added the profession of all who reverence christianity, that the interests of an immortal state of being are equally suspended on the same results.

But while this is the verbal opinion of society, what is the practical opinion, as exhibited in systems of education, particularly in schools.

We find in all communities a body of persons set apart for the express purpose of communicating knowledge and cultivating the intellect of childhood and youth; at the same time we find both parents and teachers uniting in the feeling that this is all that is required, and that it is not expected that they should attempt anything more. As the care of the intellect is the business given to teachers, we find that some success alway attends these efforts. However dull the child, or incompetent the teacher, at the end of each year it will be found that every child has learned something, and that the memory at least if no other faculty, is to some extent cultivated. Parents and school visitors find that the money employed is not spent entirely in vain, but that it does to some extent secure the object for which it was expended. But if parents or school committees should visit schools with such inquiries as these; - "How many pupils have improved in the government of their temper the past year?"-" How many are more docile and obedient?"-" How many are more strict in regard to veracity, honor, and honesty?"-"How many have improved in a spirit of magnanimity, self-command, and forgiveness of injuries?"-"How many have learned to govern their tongues by the law of charity, so as not to speak evil of others or to propagate scandal ?"-" How many are more regardful of the duties owed to parents and mankind, and obliging to companions? "How many are more mindful of their highest obligations to God?"-and " How many, under the influence of fear and love to him, are practising more and more the self-denying duties of benevolence to all?"

Would not such questions, in most of our schools, awaken surprise, and be deemed irrelevant and almost impertinent, even if addressed to those whose express business it is to educate children.

Why is there this strange discrepancy between the avowed opinions and the practice of society?

Not because the moral and religious education of children is a matter with which teachers cannot profitably employ themselves. None will deny that teachers possessing the requisite chathe moral as well as the intellectual education of their pupils, and allowed sufficient time and opportunity for such duties, could exert a constant and powerful influence over young and plastic minds, placed for six hours each day under their entire control, and what peculiar advantages teachers enjoy, who, unbiassed by the partialities of parental fondness, can observe their charge when thrown into collision with all the various characters that meet in the school-room and play-ground, where often are developed peculiarities of character and temper that escape parental notice and care.

Nor does this strange inconsistency exist because teachers cannot give instruction in all the relative moral and religious duties, nor because they cannot become intimately acquainted with the peculiar temperament, habits, and deficiencies of every child, and point out its dangers and set before it the appropriate motives to excite to virtuous effort.

Nor is it because experience shews that it does no good to convince children of their faults, and to invite them to improvement. Nor is it because teachers cannot with propriety and success bring to bear upon the minds of children, the powerful motives of religious obligation; teaching them the claims of the Bible, the evidences of its authority, the proper mode of gaining a correct and independent knowledge of its contents while they daily appeal to it as the standard of moral rectitude, and employ its solemn sanctions to sustain its precepts.

Nor is it because parents all of them are so pre-eminently well qualified to understand and regulate the varieties of youthful character; a labor demanding such experience, wisdom, energy, perseverence, and self-denial; nor because they have such entire leisure to discharge these duties; nor because they are so entirely free from all liabilities to indolence, excessive indulgence, and blind insensibility to the faults of their children, nor because they always so wisely and so faithfully fulfil all these duties, that they have no need of such co-operating influences, from those whose business it is to aid in the education of children.

Nor, lastly, is it because there is any such essential difference in the religious opinions of the great Christian community that religious and moral instruction cannot be introduced into public schools without encroaching on the peculiarities of those who support them.

Those great principles of religious truth and moral duty in which all agree, are the only ones | whether it shall be by the united or by the sepa-

inderstanding that they are held responsible for which are needed in the moral education of chil

dren at school. All agree that the Bible is the true standard of right and wrong, and the only rule of faith and practice. All agree that the evidences of its divine authority should be understood, and that its contents should be studied.

All agree that the Bible teaches that mankind are in danger of eternal ruin; that all have become sinful, that a way of pardon and salvation has been secured through the atoning sacrifice of the Redeemer; that whenever love to God, and the desire to do his will, is the regulating principle of the mind, men are prepared for Heaven; and that without this character no happiness is to be hoped for in a future state; that no man will ever attain this character without supernatural aid from the Spirit of God; and that such influences are to be sought by prayer and the use of the appropriate means of religious influence; that as the Bible is the standard of rectitude in all moral and relative duties, children are to be educated to understand its precepts and urged by all the motives it presents to obey

There is not one of the largest Christian denominations that would refuse assent to any one of these positions, and these principles are all that need to be employed in forming the moral and religious character of children at school. The point in which these sects differ relate either to forms of church government, or to the rights of the church, or to the philosophy of religion, and these peculiarities never need be introduced into school, but can be taught by parents and religious teachers elsewhere.

But if any religious sect attach such imporportance to their own peculiarities as to fear the influence of religious instruction exerted by those who differ from them on these points, they could institute schools taught by persons of their own sect; and though they might involve some dangers and some evils, yet there would be the counterbalancing good which is often found to he the result of sectarianism, more would be accomplished in a good cause than would have been had no such jealousy existed.

One thing is certain, if religious influences are banished from our provincial system of education, every denomination will be injured in its most vital interests. For one who would be proselyted by a sectarian teacher, ten would be ruined by the vice and irreligion consequent on the subject of moral and religious influences.

Our schools must have these influences; but

rate action of religious sects is a matter of se-

condary consequence.

The reasons for the neglect of moral and religious education at schools are, in the first place, the fact that intellectual superiority has too high a relative estimation in society. do award to genius and knowledge an estimation not rendered to amiable character, true virtue, and sincere piety.

Another reason is that mankind are not aware how much might be effected by teachers, in the most important part of education, were they properly trained for these duties and allowed sufficient time and opportunity for the discharge of them.

Another reason is, that to a very wide extent, teachers are not qualified for such duties,—do not know how to undertake them, and do not understand or feel their obligation on this subject.

And the last reason is, that such are the present systems of education, so many pupils aregiven to the care of one person, and so great a variety of branches are to be taught by a single individual, that in most cases it is utterly impossible for teachers to attempt properly to discharge their most important duty, without so neglecting what parents consider the only business of a teacher as to occasion dissatisfaction and the removal either of teacher or pupils.

Until public sentiment is so changed that teachers shall be educated for their profession, and parents are willing to pay the price for such a division of labor as will give time and opportunity for the discharge of their most sacred duties, it is desirable that conscientious teachers should realize how much is left undone in moral education that might be accomplished.

In regard to education the world is now making experiments such as were never before made. Man is demanding disenthralment alike from physical force and intellectual slavery; and by a slow and secret process one nation after another is advancing in a sure though silent pro-Man is bursting the chains of slavery, and the bonds of intellectual subserviency; and is learning to think, and reason, and act for himself, and the great crisis is hastening on when it shall be decided whether disenthralled intellect and liberty shall voluntarily submit to the laws of virtue and of Heaven, or run wild to insubordination, anarchy, and crime. The great questions pending before the world are simply these:-" Are liberty and intelligence, without men. the restraints of a moral and religious education, a blessing or a curse?"—"Without moral ficult enough to demand the highest exercise

and religious restraints, is it best for man to receive the gift of liberty and intelligence, or to remain coerced by physical force and the restraints of opinions and customs not his own?"

The master-spirits of the age are watching the developments as they rise, and make their records for the instruction of mankind.

And what results are already gained?—In England the experiment has been made by Lord Brougham, and at great expense, knowledge has gone forth with increasing liberty, and all who have witnessed the results are coming to the conviction, that increase of knowledge, without moral and religious influence, is only increase of vice and discontent? And what are the results of the experiment in France?—The statistics of education shew that the best educated departments are the most vicious, and the most ignorant are the freest from vice,—and in that country, where the national representatives once declared that christianity should be banished, and the Bible burnt, and the sabbath annihilated, we now find its most distinguished statesmen and citizens uniting in the public declaration, that moral and religious education must be the foundation of national instruction. tor Cousin, one of the most distinguished philosophers of the age, and appointed by the King of France to examine the various systems of education in Europe has reported as the result of his investigations, that education is a blessing just in proportion as it is founded on moral and religious principles.

Look, again, at Prussia! with its liberal and patriotic monarch, with a system of education unequalled in the records of time, requiring by law that all the children in the nation be sent to school from the first day they are seven years of age till the last day they are fourteen, with a regular course of literary and scientific instruction, instituted for every school, and every teacher required to spend three years in preparing for such duties, while on an average one teacher is furnished for every ten pupils through the province. The effects of merely intellectual culture soon convinced the monarch and his counsellors that moral and religious instruction must be the basis of all their efforts; and now the Bible is placed in every school, and every teacher is required to spend from one to two hours each day in giving and enforcing instruction in all the duties of man toward his creator, towards constituted authorities, and towards his fellow

The object aimed at is one immense and dif-

of every energy and every mode of influence. If Prussia, with her dense population, finds one teacher for every ten children needful, the spareness of population in our wide territories surely demands an equal supply. At this rate thirty thousand teachers are this moment wanted to supply the destitute; and to these must be added every year four thousand simply to meet the increase of population. But if we allow thirty pupils as the average number for every teacher then we need ten thousand teachers for present wants and an annual addition of one thousand for increase of population. And yet what has been done-what is now doing-to meet this enormous demand? While Prussia, for years, has been pouring out her well educated teachers from her forty-five seminaries at the rate of one for every ten pupils; while France is organizing her normal schools in all her departments for the education of her teachers, and while every portion of the United States is alive to the subject of education—what is done in Upper Ca-What patriot—what philanthrophist what christian, does not see that all that is sacred and dear, in home and country, & liberty, and religion, call upon him to awaken every energy and put forth every effort.

Does the heart fail and the courage sink at the magnitude of the work, and the apparent destitution of means? We have the means, we have the power. There is wealth enough. Nothing is wanting but a knowledge of our wants, our duty and our means, and a willing Our difficulties mind in exerting our energies. have been briefly noticed. It is the object of this Report to point out one important measure in the system of means that must be employed.

When we consider the claims of the learned professions, the excitement and profits of commerce, manufactures, agriculture, and the arts; when we consider the aversion of most men to the sedentary, confining, and toilsome duties of teaching and governing young children; when we consider the scanty pittance that is allowed to the majority of teachers; and that few men will enter a business that will not support a family, when there are multitudes of other employments that will afford competence and lead to wealth; it is chimerical to hope that the supply of such immense deficiencies in our national education is to come chiefly from that sex.—It is women, fitted by disposition and habits, and circumstances, for such duties, who, to a very wide extent, must aid in educating the childhood and youth of this province, and therefore it is that employment.—And most happily it is true that as a teacher.

the education necessary to fit a woman to be a teacher is exactly the one that best fits her for that domestic relation she is primarily designed to fill.

But how is this vast undertaking to be accomplished? How can such a multitude of female teachers as are needed be secured and fitted for such duties? The following will shew how it can be done, if those most interested and obli-

gated shall only will to have it done.

Men of patriotism and benevolence can commence by endowing two or three seminaries for female teachers, in the most important stations in the province, while to each of these seminaries shall be attached a model school supported by the children of the place where it is located. In these seminaries can be collected those who have the highest estimate of the value of moral and religious influence, and the most talents and experience for both intellectual and moral education.

When these teachers shall have succeeded in training classes of teachers on the best system their united wisdom can devise, there will be intructors prepared for other seminaries for teachers, to be organized and conducted on the same plan; and thus a regular and sytematic course of education can be disseminated through

the province.

Meantime proper efforts being made by means of the press, the pupil, and influential men employed as agents for this object, the interest of the whole province can be aroused, and every benevolent and every pious female in the province, who has the time and qualifications necessary, can be enlisted to consecrate at least a certain number of years to this object. There is not a village in this province that cannot furnish its one, two, three, and in some cases more laborers for the field.

And as a system of right, moral and religious education gains its appropriate influence, as women are more and more educated to understand and value the importance of their influence in society and their peculiar duties, more young females will pursue their education with the expectation that, unless paramount private duties forbid, they are to employ their time and talents in the duties of a teacher, until they assume the responsibilities of a domestic life: Females will cease to feel that they are educated just to enjoy themselves in future life and realize the obligations imposed by heaven, to live to do good, and, when females are educated as they ought to be, every woman at the close of females must be trained and educated for this her school education will be well qualified to act

The establishment of institutions for the education of female teachers would also most successfully remedy all the difficulties in regard to female education which have been exhibited.— When female teachers are well trained for their profession, a great portion of the higher female schools will be entrusted to their care, and they will be prepared to co-operate in propagating a uniform and thorough system of female education, both intellectual and moral. When such teachers are scattered through the land, they will aid in enlightening the public mind in regard to permanently endowed institutions for females. By this means also essential aid will be rendered in advancing improvements in regard to physical education, in introducing useful exercises, in promoting a national taste for music, and in various other modern improvements.

It is perhaps here worthy of remark that from the reports of the temperance societies, both in Europe and America, seven tenths of all the common drunkards in the world are men who cannot read and write so well as to render these occupations agreeable and amusing to them. The mind of man, ever on the stretch for some active employment or amusement, when uncducated and unable to associate with men of letters, and incapable of reading, and the interest excited by books, by degrees relaxes and becomes almost unconsciously led into intemperance and vice :- as a proof, the fact that not more than 5½ per cent. of the individuals confined in Houses of Correction, Houses of Re fuge, Bridewells, City and State Prisons, and Penitentiaries, have a common education. shall be able to illustrate this fact in my report upon Penitentiaries, which I am preparing as fast as possible, with the little assistance I have. I will, however, here copy one extract from the report of the agent of the Sing Sing State Prison, of last year. The agent says that in the Sing Sing state prison containing 842 prisoners, there, in August last, only fifty had received any hing like an education; - The following is his statement.

"There are at present 812 prisoners;—of these 170 can neither read nor write—34 have never been at school—85 can read, but cannot write—510 can read and write, but most of them very imperfectly—12 had a common education—3 went through college; of the whole number 435 had been habitual drunkards, about one third of whom committed their crimes when actually intoxicated."

The Warden of the Eastern Penitentiary in Pennsylvania says, that in 1834, 219 prisoners in the whole had been received—of these 42

could not read nor write-59 could read but not write-118 could read and write, but 98 of them but very indifferently; leaving only twenty who had received any thing like a common educa-If Legislators are justified in the enactment of laws for the punishment of crime, how much more ought they to be vigilant and active in adopting such measures as will be best calculated to suppress and prevent it; the door is now open, the means are now within their reach, the school funds of the province are about to be made available for purposes of education, and our future greatness depends much upon the first application that is made of these means;then let the honorable the House of Assembly reflect maturely upon the propriety of establish. ing at once one seminary for teachers in the east—one in the centre, and one in the West part of this province—devoted principally to the education and qualification of teachers; and endow not less than one female seminary for the education of female teachers, and allow a portion of the school funds as soon as they are available for the purposes of education, to be set apart expressly for the support, qualification, and education of male and female teachers; one school of this sort will soon be required in every district of this province, and would, I verily believe, contribute more to the advancement of science and literature than the expenditure of much larger sums in the support of common schools or higher institutions of learning, and while I do not recommend the sinecure pension compulsary system of Prussia for adoption in this province, as is seen by the bill accompanying this report, but rely upon the exertions of teachers to secure to themselves continuance in their employment, and by the prudent saving the avails of their earnings, when they become by age or infirmities disqualified from teaching a school they may have the comforts of life secured to them by their former economy and industry; and I am the more explicit upon this point, as I believe that frugality and economy in a money-making country like ours, are virtues that ought to be taught the youth of the land. by the examples of their preceptors as well as their precepts; besides moral instruction is but badly taught by the profligate and intemperate; and I am much inclined to believe that "as is the master so is the child"—then pay your teachers—provide for their qualification and be careful in their examinations and the examinations of their schools.

And perhaps the recent rapidly increased prosperity of the United States, and of the northern, eastern, and middle States in particular,

may be attributed more to the extensive and general diffusion of education through the medium of their common schools and other literary institutions, and the almost entire suppression of the use of distilled spirits among them than to The millions of dollars worth any other causes. of distilled spirits consumed in 1830 over and above the quantity consumed in 1835, shows how much has been saved in that item from the fire that not only burned up itself, but consumed with it time, character, and constitution, and with other expenses amounted altogether to a sum equal to all the revenues collected in the United States during the same period; but in my report upon prisons and prison discipline which I am preparing I shall give such anthority for these opinions, as will be hardly questionable.

In submitting the accompanying bill, I have adopted such parts of the system referred to as are the most popular with those countries where the subject has undergone the most recent and thorough investigation—and while I claim no merit for anything original in the system of education thus attempted to be introduced, or for anything new in the bill by which this improvement is designed to be accomplished, I cannot refrain from remarking that it combines simplicity with precision—clearness with perspicuity—and is adapted in style and language to the capacities of those persons who are most interested in it, and is so clearly explained that the most ordinary mind can, if required, carry any of its provisions into complete effect. It is designed to be a system of common school education, founded upon the wisdom and experience of the past as developed in the reports of the most literary men of the age both in Europe and America. Lord Brougham's elaborate report shows how cheaply and perfectly a large community may be educated, where the work is undertaken in right earnest, and where a proper system is pursued. Mr. Dick, who has brought the system of education in Scotland to far greater perfection than any who had preceded him, illustrates the necessity of interesting parents and guardians in the education of their children, and modes to accomplish the object. Mr. Cousin, in his valuable report upon the Prussian system of education, proves that in absolute monarchies parents must be compelled to educate their children, or they neglect it; and it is contended that the state that has power to punish crimes, has, and of right ought to have, power to prevent it; by educating the children of the empire in science, morality, and virtue. In the

ed to educate the whole people so that mind shall rule, and in fact the energies of the civilized world seem directed to the same great and grand object, the moral and religious education of the whole people as the most effectual method of

By this bill the inhabitants of every township may provide a portion of the funds necessary

may provide a portion of the funds necessary for the support of common schools by a voluntary tax upon their rateable property, and as an inducement to them to raise the funds required, one half of the public school money of each year is to be apportioned among such townships as raise a sum for the support of common schools not exceeding one penny in the pound. provides that each school district shall regulate its own affairs, build a school house, a house for the teacher with such comforts as they may think proper, establish mechanics' shops, or gardening for manual labor schools, by which the industrious may learn science, a trade, and make wages at the same time. It also provides for the education of teachers by establishing four normal schools there for the education of males and one for the education of females,—this has succeeded well in Prussia; why should it not succeed equally well in Canada? The nature & operations of the mind are the same in all countries, and the relations which exist between knowledge and the intellectual and the moral faculties, remain unchanged under every system of education and every form of government, & the practice of obtaining literary and scholastic information, by observation made under the direction of Government, by special commissioners for that purpose, to visit, consult, examine, and report the result of those investigations are not new, but the precedent has been established by the authority of some of the most enlightened countries both in Europe and America. those exertions to correct by observation and comparison the defects and discrepancies of various institutions and systems of education, whether made by order of the Government, or by private philantrophy and enterprise, have been isolated, local and partial, and although their reports contain many important and interesting facts upon the several subjects thus investigated, they rather serve to show the defects in other institutions than lay down any general system of education not equally objectionable, and I must again repeat, the reason why we legislate so badly for the people upon this subject is, there is no instruction in the past.

empire in science, morality, and virtue. In the United States various means have been adopt- the men best qualified for the important subject

by their learning, ability, and independence of political, sectarian, and traditional prejudice, were to meet upon the subject of a general system of education founded upon nature, and adapted to the various capacities of the different sexes of all classes of community, and at all ages, such a system of education might be framed by such a convention after careful investigation and mature reflection, I am satisfied, as would be eminently useful to mankind, teaching by observation and constant practical demonstration on the part of the pupils themselves facilitate the acquirement of knowledge by giving the pupil clear and distinct ideas upon all subjects attempted to be taught him, by presenting every thing he is to learn to as many of his senses as he can approach the subject with thereby lessening the necessity of increasing the number of arbitrary names that must be learned before any familiar association is connected with them, which would serve the cause of literature, humanity, and philanthropy most materially.

I am quite satisfied that without regulations far more extensive than has yet been introduced, a control far more enlightened and constant than has yet been exercised, and fiscal aid far more ample than has yet been afforded, it is vain to expect that the character of our common schools can be truly and permanently improved.

In the United States, so far as I have witnessed and am capable of judging, their common school systems are as defective as our own. They have, according to their public documents, about eighty thousand common school teachers, but very few of whom have made any preparation for their duties; the most of them accidentally assume their office as a temporary employment.

Thus the lame and the lazy, because they will work cheap, are entrusted with the formation of the minds of our youth, who will to a certain extent copy their masters, and although their bodies may not limp, their minds will be both stuggish and deformed. Hence the necessity of having teachers correct gentlemanly persons well prepared for their arduous responsible office, and fit models for the youth of the country to imitate. Schools for the education of teachers should be immediately established and supported out of a fund permanently appropriated for that purpose.

Competent common school teacher inspectors should be appointed to prevent the disqualified from entering into the responsible profession of teaching.

The laxity or ignorance of many of our in- name, or word was needed, and thus the law spectors are the causes of the low and almost guage of the science is taught without exertion.

useless condition of many of our common schools. They have acted upon the principle that a poor school is better than none.—Universal correct education is the only true security of life and property.

In proportion to the aggrandizement of the province, will be the complication of the various branches of public instruction and the importance of the direction which the whole may receive from the hand of government-while the detais are left to the local powers, school dis-Yet from what I have altricts or townships. ready witnessed of the rapid progress of education in some of the states of the Union, especially Kentucky, where the spirit of improvement, as well as the thirst for education, has but just commenced, I am satisfied that there, at least, a new era is forming in science and literature; for while reform is rapidly progressing in arts and sciences as well as constitutional governments, the education of our youth cannot go on the same circuitous route; but a system of educating, furnishing, and liberally paying a sufficient number of competent teachers commensurate with the wants of the people must be adopted and publicly and zealously supported; the situation of "common school teacher" must be rendered respectable and reputed to be an honorable employment that gentlemanly competent persons may seek it as a business for life; which may be done by a critical examination of the teachers and a frequent examination of the schools by public exhibitions of their improvements, and by publishing reports awarding "merit to whom merit is due."

The Inductive system, founded upon nature and supported by facts, is superseding the former abitrary copying system learned from books alone or principally; -by this system children are taught facts from observation and the examination of natural substances, which are presented to as many of the student's senses as are accessible, and number, color, sound, size, touch, form, and ponderosity, become familiar to them as properties of matter, by daily reference to the materials subjected to their examination, and as facts become strongly impressed upon the mind, the number of ideas is increased; they are soon enabled to comprehend the characters of those bodies as they are explained by their instructor, during experiments made by themselves for their analysis or decomposition; at the same time that the language peculiar to that science is learned without much exertion the fact the idea already existing in the mind the name, or word was needed, and thus the lan-

and natural science is taught by observation, not by the recollection of arbitrary names and almost incomprehensible descriptions of ideas obtained only by long and constant application from books, but by the easy and perfect natural channels of the senses, the names connected with a science (in common so difficult to retain) become a part of the ideas equally natural and associated in a plain common sense manner with the ordinary operations of the mind, or the common occurrences of life. What an interesting epoch is this in the history of letters and of science generally! What an era in scholastie erudition, and what ample security for the future will be afforded the people through all such parts of the world in which useful science shall be generally taught—that governments shall be well administered, and popular rights respected and protected. If this reform in science should prevail and be universally adopted, the time will have arrived when ignorance "(satan) shall be bound for a thousand years."

The Rev. Mr. Peers of Louisville, Kentucky, is teaching his pupils the art of self government and self instruction, he does not govern at all by fear-his objection to fear as a governing principle is that it debases and lessens the dignity of man;—but he governs his pupils by cultivating and strengthening the ennobling and elevating faculties and feelings of our natures, strengthening the social virtues, and increasing intellectual enjoyment. How pleasing is the view of his twenty boys, in whose countenances are seen strong marks of manly reflection and thought, with a strong wish to be correct in all their answers to his questions, and desire to please, without one symptom of fear upon that or any other occasion; they are between the ages of six and twelve years, and although they have been under his charge but a few months, he has rendered moral instruction so familiar to their understanding that they enter into the examination of the few passages of scripture daily read and commented upon with interest and good feeling. His first year of instruction is a year of observation and experiment by which to store the minds of his pupils with facts and ideas that may serve as a basis for a superstructure of the most useful kind, not a parrot-like noisy or showy imitation of some eminent literary man, but the knowledge of mind, of thought, and of reflection, tracing effects, to causes and providing to avoid (or support the unavoidable) evil, and embrace and enjoy the blessings of this life as they are presented to us; they are already familiar with the first principles of che-

mistry and mineralogy, and performed without instruction several beautiful experiments, and explained the phenomena as they occurred in a manner not only satisfactory but pleasing know something of botany, geology, and natural history, were (small as they are) entrusted with the management of the very valuable glass furniture of his beautiful and well selected laboratory, his electrifying machine (which cost \$150;) his air pump was of nearly equal value. Though much cheaper furniture might have explained the facts as well as those that are so expensive, yet these, from their dazzling splendor, make a strong impression on the mind; everything being perfect in their construction no failure can deseat any experiment, and the mind has nothing to supply to make up a complete operation, and when another less perfect instrument shall be used by the students, and defects are found, their clear recollection of this and its operation will enable them to supply the defects.

By the "Inductive System," the students collect facts and accumulate ideas from observation, and having a mass of facts, a fund of ideas perfectly familiar and at command, they are prepared for study of such arts and sciences as require the exercise of the reasoning faculties, their laudable ambition is gratified by the certainty of success, and of the rewards most va-

lued by the good and virtuous.

Lord Brougham says—"The schoolmaster is "abroad in the land"—"Mind begins to assume "her place, and ignorance, with her handmaid "vice, must recede before her like darkness be"fore the morning sun, or clouds before the "wind. Blow, blow, breezes blow, rise, rise "resplendent orb, with thy universal vivifying "and darkness dispelling beams—and hasten "the great and the good reform when mind shall "rule."

All of which is most respectfully submitted.

CHARLES DUNCOMBE.

Acting Commissioner for obtaining certain information.

To the Hon. the Commissioners, Doctors Morrison & Bruce.

APPENDIX.

EXTRACT FROM M. COUSIN'S REPORT, AND THE PREFACE TO THE ENGLISH EDITION.

By furnishing a Preface to the American edition of the Report of M. Cousin to the French Government, "On the state of public instruction in Prussia," the publication of which has excited such a lively interest in England as well as in France, I do not think it necessary to eulogize its noble author or the merits of his incomparable work. The fact that M. Cousin, the scholar, the philosopher, and the legislator, has examined and reported by an appointment of the French Government, the workings of that admirable system of instruction adopted by Prussia and Germany, is a sufficient guarantee to make this volume welcomed by every American citizen. Many parts of this system of public instruction are not adapted to the spirit and feelings of the American people, nor to their form of civil government ;-Yet from the results of this great experiment in giving the whole people that kind and degree of instruction which they need, some of the most useful and practical lessons may be obtained. The nature and operation of the mind are the same in all countries, and the relations which exist between knowledge and the intellectual and moral faculties remain unchanged under every system of instruction and every form of Government.

In Prussia, for the last fifty years there has been, from experience and experiment, a constant accumulation of practical knowledge, the evils either of teaching or of legislating, which appeared, have received a remedy, and the highest point of excellence of one age has been made the sterling point of improvement by the age succeeding. mental knowledge is what we want; the reason why we legislate for the education of the people so bally, is, there is no instruction in the past. If full and able reports on the different systems of instruction had been made, there would be a record of practical information which would contain lessons more valuable to the teacher and legislator than all the new projected theories and systems that were ever promulgated. But on the great subject of education there has been no book kept; there is no light in the past to throw its rays into the future; no voice to teach, and no decisions to coun-With us what was experiment fifty years ago is experiment still. That which was conjecture then is uncertainty now. On the subject of education, teachers and nations had but little communication with each other-no exchange of views and sentiments-no mutual aid-each one has toiled alone, and their pratical knowledge has been buried with them.

But M. Cousin has made a full and faithful statement of the works and practical application of the well tried school system of Prussia. The American edition of this work will furnish our legisl, tors, school committees and school teachers, with instruction not only from the highest authority, but also from the most enlightened source. The general circulation of this report will in my opinion greatly improve our organized systems of public instruction, and furnish some of the most useful and practical hims to the guardians and teachers of

The School systems which the several States in this Union, whith the exception of four or five, have devised and adopted are miserable, deficient, and defective. Perhaps the workings of our best systems are such that even these exceptions should not be made. Says a very distinguished jurist and philantrophist; -- "Looking to the models of Germany and

France, no system of public instruction has yet been organized in any of the States, and in none has the appropriate work of legislation been more than commenced. I do not hesitate to avow the belief that without regulations far more extensive than have yet been introduced-a control far more enlightened and constant than has yet been exercised-and fiscal aid far more ample than has yet been afforded, it is vain to expect that the character of our common schools can be truly and permanently improved." In several of the States the "School Fund" is large, but not equally or judiciously distributed. In some of the States, again, these funds are of such a nature, or are so invested, that the annual income is but very small, while in many of the states this fund is so insignificant that it affords but little or no advantage to the schools.

There is some difficulty in fixing the size of the school fund. On this subject legislators and intelligent citizens have professed very different opinions. After having some opportunities for observing the influence of large and small school funds, I will take this opportunity to express my convictions on this

disputed point. The School Fund may be too large, unless it is sufficient to defray the whole expense of the schools. The princely school fund of Connecticut is an injury to her schools. In that state the District Schools are supported till the annual income of the public fund is exhausted-being about six months. school houses are then closed for the remaining part of the year. Now, it is true, that what we get without asking for or praying for, we do not care much about. Personal observation has shewn me that the common schools in Connecticut are sadly neglected. The intelligent and wealthy citzens of this state, (and it is so in many of the other states,) support private schools, and entirely shun and overlook the District School. I do not think that the common schools of Connecticut are as good as the common schools of Massachusetts or New-York. And the cause of this inferiority lies in her large school fund :- It does too much for the people unless it does the whole. But the school fund of Tennessee is too small. Its assistance is not felt, and therefore offers no inducement to the parents for making additional appropriations. Unless the school fund is sufficient to educate the whole people, I think the one which is now distributed in the State of New-York is in size the most judicious. It pays about one-tenth of the whole expence of the schools. This usually is sufficient to make the people support a good school for three months, for unless they do this they cannot draw the public money. When it is left optional with parents whether they educate their children or not, it is desirable to offer such encouragement and assistance that they will feel disposed to do their duty. This New-York does; but without doing the whole there is danger of offering too much assistance, and this Connecticut does. The funds may be so small, again, as to make the people wholly indifferent to the Government aid; and this is the case with Tennessee.

Now, I would recommend, that each state should raise a school fund, sufficient to the entire support of the schoolsthat a suitable school-house and apparatus, with a dwelling house for the teacher, be furnished by the state for each district, and that every school-house be supplied with a wellqualified teacher, who shall receive from the state a suitable compensation. This, I think, is the proper size of a school

The great difficulty is to educate and secure the services of a suitable number of able qualified teachers. I know of nothing in which this Government is so deficient as it is in competent teachers for her elementary schools. The people of the United States employ annually at least eighty thousand Amongst these eighty thousand common school teachers. teachers but a very few have made any preparation for their duties; the most of them accidentally assume this office as an employment. Now the schools will be like their teachers. Hence the necessity of having the teachers well prepared for their arduous responsible office. In Prussia they are prepared in the Normal schools. Similar Institutions to these sho'd be established and supported with us by the State Governments. The State of New York, which employs ten thousand elementary instructors annually, should have ten seminaries for the education of teachers. The labors of teachers on an for the education of teachers. average cannot be expected to continue for a longer term than ten years. At this estimate the State of New York will require one thousand new teachers every year. Each of the ten seminaries might annually graduate one hundred. This provision would sapply our schools with competent instructors. I am happy to state that an arrangement similar to this is about to be made in our state. In a sufficient number of the organized academies there is to be a department for the express purpose of educating teachers for our common schools. The teachers of these departments are to be supported in part by the Regent's fund. This arrangement under the present state of things is thought preferrable to the establishments of separate distinct seminaries. In these departments for the education of teachers the students should become familiar with the branches they will be expected to teach, with the nature and operations of the young and growing intellect, and with the art of school government. Connected with each of these Normal schools (to use the Prussian name) should be a board of instructors, whose duty it should be to examine the students who have finished their studies and are disposed to offer themselves as teachers of common schools. It is sincerely lioned that the guardians of our elementary schools will be much more rigid than they hitherto have been. "In organizing the school system, inspectors were appointed to prevent the disqualified from entering into the responsible profession of teaching. They are to judge what candidates are prepared for instructing, and to admit none but such as are qualified. The lavity and ignorance of many inspectors are the two great causes of the low and useless condition of many of our common schools. They have acted upon the principle that a poor school is better than none, and have given certificates to those who they knew were unqualified. Thus the candidates examination under the board of inspectors is often little else than mere form and ceremony; affording no obstacle to ignorance and immorality, and no measure for the discovery and encouragement of real merit and ability."* The trustees of the Normal Schools may be appointed by the Legislature and constitute the board of inspectors. Every state needs a separate officer of public instruction.

Every state needs a separate officer of public instruction. The minister of public instruction in Prussia gives his whole atention to the school and state of education. But in our state the general superindent of common schools is likewise Secretary of State. This is too much for one officer. There should be nothing to direct the attention of that minister who has the general supervision of the people's education. This public officer should also take the highest rank. In Prussia or in France the minister of instruction ranks with the highest officer of state. But singular as it may seem, in our own country, where education, if possible, is much more important, this is not the case. Several of the states even have never

had any such officer!!!

District libraries should be established.—Every school district should have a library. Merely teaching the people to read will benefit them but very little unless they are furnished with books. From the want of books people are ignorant, and not in this country, generally speaking, from an inability to read. This, perhaps, to those who live in cities and large villages, may seem untrue;—this favored part of our citizens are rather annoyed with the fertility of the press—they have a greater want for time than for books, to read. But it is not so with the inhabitants of the school districts; but very few books reach this numerous class of citizens.—In some places there are town libraries, but even these are not visited by one

person out of fifty in the town—they are too expensive, or too distant, or too elevated for the capacities and tastes of a majority of the people. Whenever these town libraries, however, have been opened, they are well supported. Their history and condition tell us that the people in the country have a disposition to read if they can have the privilege.

If there were libraries in every school district containing a suitable number of books, and of the right class, the country would be more of a reading community than the city; but so few are the works that ever circulate out of the city and villages; that the majority of the people in the country, seldom read anything whatever. The district schools in the State of New-York teach the most of the children in the state how to read, yet but very few in after-life make any use of this power; a great part, in a short time after their school-days are ended, entirely lose the power, or at least so far as to be ashamed to use it. Consequently, with a great part, the time spent in learning to read is lost; and this is not from the want of an inclination to read but from the want of such facilities as district libraries would offer.

These libraries may be recommended by the State Legislature; but it would not, perhaps, be expedient for the Legislature to order them, and then lay a direct tax upon the districts for the necessary funds. If the Legislature by small appropriations should offer some encouragement to these libraries and strongly recommend them, the most of the districts

would obtain them without hesitation or delay.

The District Library may be located in the school house; a suitable room or book case being provided for the books. The teacher of the District School may act as the Librarian; the trustees of the District or the Inspectors of the town may constitute the purchasing committee, or there may be one purchasing committee for the whole state; and this appointed by the Legislature. In the latter case the same harmony might exist with respect to the wishes of the different sects that now exists in the Sunday school union. One dollar a year from each inhabitant in the District would furnish a good library; this collection of books would enlighten the teacher as well as his scholars and employers. Connected with the library, if the inhabitants feel disposed, may be a small apparatus, philosophical and chemical; likewise at leisure and taste may be given a cabinet of minerals, an herbarium, &c.; these collections would excite an interest in the study of natural historya study of great interest and usefulness to the cultivator and the mechanic.

In Prussia and in France a weekly paper and a monthly magazine are published by the government and sent to all the schools. The schools of the United States ask their respective State governments for the same assistance. I do not know that a part of the school fund could be more wisely expended than in defraying the expenses of a weekly paper for each elementary school. This paper should be devoted entirely to the great interest of primary education; it should contain the improvements which are made in education in all parts of the world, the condition and improvement of the schools in the United States-the intellectual and moral state of the country—the number of its schools—and the character and qualifications of their teachers; it should study the human mind and know what is adapted to it, and point out the distinction between a change and an improvement; it should discover and make known the origin of the defects in the present system of instructions; it should ascertain the number of children in the United States who are in school, and the number who have not or do not use the means of education; it should make known the progress which the scholars make, and the amount of knowledge which the children acquire in these primary schools; it should discover the interest which the parents take in the education of their children, and the protection and assistance which literary men give to elementary education; it should convince the people of the necessity of virtue and intelligence in a free government; it should describe the various approved systems of instruction and the forms of school government—the experience of aged teachers in imparting instruction in the elementary branches—the most approved school books and the best method of making the children feel an interest in their studies, and of making the schools pleasant and honorable. These are some of the high and important subjects of a government paper for the use of schools.

To send a copy of this paper to each of the Schools in the State of New York, ten thousand copies would be required.—This number could be published weekly for three thousand dollars a year. One thousand more would edit it, making in the whole an annual expense to the great "Empire State" of only four thousand dellars. I do not think that this amount could be appropriated to a better purpose. An organ like this through which we may speak to our schools is wanted exceedingly.

I will close with a few remarks on the claims of common schools. "The necessity of virtue and intelligence among a free people is always admitted; yet the great majority of our citizens are almost wholly indifferent to the District Schools, —the very sources of a nation's intelligence; for, it is well known, nineteen citizens out of twenty receive all their education in them. In our common schools our nation receives its character and education. Then is not the condition and character of these schools a matter of the highest importance? They have in embryo the future communities of their land: with them the empire and liberty of these States must rise or fall, for they are at once the repositories of freedom and the pillars of the republic. Should not every individual feel the despest interest in their character and condition? Should not the strong arm of Government be thrown around them for a protection? And should not the wisdom of legislation watch over and counsel them with a parental solicitude? To what purpose shall we enact laws unless there is intelligence to perceive their justice—principle to which they can appeal? And what other fountains of intelligence have we for the The learned and whole people but our common schools? wealthy should likewise see that the education of the infant mind is far less expensive to them than the support of the aged criminals,—that the fruitfulness of their minds depends not so much upon the richness of the soil as upon the intelligence of the cultivators, and that the labor of him whose head can help his hands is far more profitable than the service of the ignorant. This more favored part of the community should see likewise that universal education is the only true security of life and property."

The Factory Commission, the Poor Law Commission, and other public and private inquiries have tended more and more to reveal the extent and urgency of our own intellectual and moral wants; while the perfect and harmonious picture of a system of education in full activity among a whole people differing in religion, laws, language, and habits, which Mr. Consin had laid before France, has attracted the attention of enlightened and benevolent men, and has been mentioned with the profound admiration due both to the system and to the author of the report in all the foremost Journals of the country in the pulpit, and in the senate.

These cheering symptoms of a general tendency of the public mind of England towards the subject of national education have been watched with solicitude, and hailed with delight by all who are impressed with its importance; but by none with so much as by Mr. Cousin himself, who, highly as he estimates the approbation of England, will think his reward far higher if the labors he has devoted to his native

country shall turn to the profit of her true and energetic ally in the cause of human improvement.

I have translated this book in the hope that by placing it within the reach of those to whom not only the languages, but the size and price of the original, might prove obstacles, it might excite the notice of the classes most interested in its diffusion. With that hope I have laboured to make it as plain as I could; and though as a translation it can have no other merit, I will not disguise that on this head I am nost anxious to find I have succeeded.—If not, I must plead in my own defence that nothing is so difficult as to find in the language of one country, words expressing the laws, institution, and usages of another.

I offer it to no one as an amusing book; and even while I say I hope I have made it plain, I mean only to the patient reader who will go through it. There is such a coherency of parts, both in the fabric it describes and in the description, that no one will fully understand it who cannot bear the toil of following the author step by step. Portions may be selected which shew the beautiful spirit pervading the whole, and which must, I should think, touch any human heart; but its merit as a piece of legislation—as a a system living and working—can only be appreciated when studied connectedly

and in detail. The reasons that have influenced me (with the author's concurrence) to omit the report on Royal and Ducal Saxony, which forms nearly half of the original volume, are mainly two:-First, the consideration mentioned above, that it was only by making a small and cheap volume that I could accomplish the end I chiefly aimed at; secondly, that the part I have omitted embraces secondary instruction, or the education given in the Gymnasia (i.e. learned or grammar schools) of Saxony, and also still higher department of Universities. M. Cousin was of opinion that it would be well not to divert any portion of public attention from the subject of primary instruction—i. e. that education which is absolutely necessary to the moral and intellectual well-being of the mass This alone is treated of here. If it should of the people. appear that the English public desires to hear more on this matter, I may perhaps, unless it happily fall into better hands prepare, under M. Cousin's direction, a volume on secondary instruction, including what he has already published on the learned schools of Saxony, and adding matter upon which he is at present occupied. But this will depend on the reception given to the present attempt.

Whether it be done or not, I entreat the reader never to lose sight of the fact that what is here laid before him, although having in relation to its special object a substantive completeness, is still only a part of the whole, and that it is as a whole that the national education of Prussia is so peculiarly worthy of admiration and of study. The introductory view of the "general organization" &c. gives the outline of which the first portion alone is, for the present, filled up.

Constituted as the government of this country is, and accustomed as it is to receive its impolses from without (a state of things approved and consecrated by the national ways of thinking) it would be contrary to reason and to experience for it to originate any great changes. This is not recognised either by governor's or governed as any part of its duty;—it is to the public mind therefore that those who desire any change must address themselves.

It is not worth while at the present day to discuss whether or not national education be good. It is possible to imagine a state of society in which the laboring man, submissive and contented under some paternal rule, might dispense with any further light than such as nature, uncorrupted by varied wants and restless competition, might afford him; but if that golden age ever existed, it is manifestly gone,—in this country at least, for ever. Here the press is hotter, the strife keener, the invention more alive, the curiosity more awake, the wants

perhaps in any country since the world began. The men who in their several classes were content to tread step for step in the paths wherein their fathers trod, are gone. ciety is no longer a calm current, but a tossing sea. Reverence for tradition, for authority, is gone. In such a state of things who can deny the absolute necessity for national education?

Supposing however all agreed as to this first point, -how many weighty and difficult questions still remain! many obstacles present themselves to the adoption of that which here stands before us, not in theory and conjecture, but in tried and sur cossful practice ? It may be useful to consider a few of those objections.

And first, as to compulsory education. - The idea to which I have alluded above—that the prime excellence of a Government is to let alone, -is so deeply and universally prevalenthere, that there is little chance of a measure, however beneficient, being popular, which is unquestionably an infringement of liberty. Leaving however the question whether exemption from restraint is of itself the great desideratum for men, we may safely affirm that for the class most deeply interested in the present inquiry-children, no such exemption The real point at isis or can be contemplated or advised. sue is whether the con traint shall be a salutary or a perniciious constraint; a constraint by which their whole future lives are sacrificed to the present interests of the persons who have the disposal of them; or a constraint, the object and tendency of which is to secure to them for life the blessings of physical, "If children," says the moral, and intellectual health. writer of the excellent article in the Foreign Quarterly Review (No. 24) " provided their own education, and could be sensible of its importance to their happiness, it would be a want, and might be left to the natural demand and supply; but as it is provided by the parents and paid for by those who do not profit by its results, it is a duty, and is therefore liable to be neglected."

The interference which government has lately exercised on behalf of the children of the manufacturing population, has, however, settled the question as one of principle; it is no longer anything but a question of degree; for if the right of parents over their children can be invaded for the purpose of securing to children an exemption from one class of evils, it can in averting another; and according to all sound reasoning it ought, if those evils be shewn to be of sufficient magniude, to claim interference. It is irrational to expect that persons who have not had the advantages of education can form any estimate of the nature and extent of those advantages .- " Persons," says the able writer just quoted " of uncultivated and torpid minds, are not aware to what an extent education can raise, enlarge, and stimulate the understanding; in how great a measure it insures a person's happiness, and makes him both independent of the world, and a safe and peaccable member of society." Here and there we find an individual to whom strong sense and a lively curiosity reveal the magnitude of his wants; but a man has already gone beyoud the first rudeness and apathy of ignorance who longs for knowledge. Are, then, the rudeness and apathy of the fathers a reason for transmitting them unaltered to the children? Or, to go higher, are the false notions, the useless acquirements, the imperfect instruction of the ill-educated of the wealthier sort, a reason that because they are satisfied with themselves, an enlightened government should permit the same waste and destruction of moral and intellectual faculties to go on from generation to generation?

To those who are influenced by precedent I am thankful to be enabled to give the following facts, for which I am indebted to a gentleman to whom M. Cousin looks for all the

and wishes more stimulated by an atmosphere of luxury, than | learned acquaintance with the subject, united to ardent zeal, can afford:-

"I have always been astonished that no researches have been made by any German into the antiquity of Schulpflichtigkeit (school obligation, i. e. the obligation of going to school) in the several states of the Empire. - The only work I know that touches on the subject is that of J. K. F. Schlegel · Uber Schulpflichtigkeit and Schulzwang,' (school compulsion) &c. 1834; but this only regards the Hanoverian dominions. From that book I learn that this obligation is at least as old as 1681 in the Principality of Calemberg; as 1689 in that of Celle; as 1663 in the Principality of Hildesheim; as 1752 in the Duchy of Bremen and Verden. From other sources I find that it is at least as old as 1643 in Saxe-Gother; as 1767 in Lippe Detmold; as 1769 in Prussia. It has long been enforced in New England and Connecticut; and for the gentry, Barons, and freeholders of Scotland, there is an Act of the Scottish Parliament compelling them to send their sons to the grammar schools as far back as the fifteenth century,-1466 if I recollect right."

This may serve to correct the erroneous notion prevalent here, (among a host of others on the same subject) that the legal obligation to educate children is a modern invention of the "Military and despotic government" of Prussia. It is desirable that it should be distinctly understood, that though the following report relates to Prussia alone, the provision for popular education is by no means peculiar to that country. It is also common to speak of popular education as entirely the offspring of the reformation, and as if not peculiar to the protestant states, at least carried to a much higher pitch in them than in the catholic states.

"There is," says the high authority whom I have just quoted "no truth in this, in a general sense; and, on a particular comparison, in none of the Catholic states would the people be found so neglected in this respect as in Hesse Castle and even in Hanover, and the Kingdom of Saxony, pre-eminent for classical education, as far behind Bavaria and Austria in popular instruction. The Germans give as an instance of the low state of primary education in Royal Saxeny, (the case is very different in the Duchies) that the places of schoolmasters are there commonly filled by mere candidates of theology. In Scotland we should think this qualification very

The best answer however to those who urge the supposed hardship to parents of being obliged to educate their children is to be found in the supplement at the end of the present volume, published last year, in which it has shewn, from indisputable documents, "that the parents of Prussia actually anticipate the period at which the legal constraint begins; that the number of children attending the public schools in 1831 actually exceeded the whole number of children existing in the Monarchy, between the ages of seven and fourteen, the period prescribed by law, and out of this latter number we have to deduct, all who are educated at home, at private schools, all who are sick, &c.

Another misconception which appears to me common in this country is that the system of national education delineated by M. Cousin, is some new plan or mode of teaching. I have even seen objections made to it in print, on the score of the tyranny of compelling parents to educate children on this or that "method" approved by Government. It might seem sufficient to refer such objections to the book, but unfortunately this process is tedious, and in the mean while the reader who supposes they are acquainted with what they discuss, is misled. Not only (as will be seen in this report) is every parent at full liberty to educate his own children eitheir in his own house, or at a private school, or at the schools provided by the State, but these latter schools are not even assistance in the great cause of education, that profound and bound to any particular books or modes of tuition "in order"

as the law expresses it, "to impose no shackles on the constant onward course of improvement."

The choice of books is left to the masters and the local committees appointed by Government for the immediate superintendance of schools, and consisting chiefly of fathers of families resident in the parish which supports the school.— The conferences of school masters, (which, though voluntary, are encouraged by the Government,) are also for the express purpose of comparing their views and their experience, and thus carrying forward the improvement of the schools. -Whenever a choice of schools is within the reach of parents, that choice is left perfectly free, and on the grand subject of religious difference, it will be seen, that nothing can exceed the anxious care of the Government that the most delicate conscience should not be even alarmed, much less oppressed .-"Masters and Inspectors" says the law, " must most carefully avoid every kind of constraint or annoyance to the children on account of their particular creed," &c.

It has been asserted by some persons with an ignorance, which, if it be sincere, is so shameless that it almost deserves to be confounded with dishonesty, that the tendency of the system recommended by M. Cousin is anti-religious. this every page of the book is an answer. Indeed were I to express a fear on this head, it is that it is far too religious for this country; that the lofty unworldly tone of feeling, the spirit of veneration, the blending of the love of God, and of the good and the beautiful with all the practical business and the amusements of life, is what will hardly be understood here, where religion is so much more disjoined both from the tolls and from the gaieties of life. To me it appears that there is not a line of these enactments, which is not profoundly religigious. Nothing, it is true, is enjoined as to form or creeds; but, as Mr. Cousin truly says, "the whole fabric rests on the sacred basis of Christian love." As the most affecting, and I must say, sublime example of this spirit, I refer my readers—especially the humbler and, as I hope more numerous class of them, to the description of the little schools for training poor schoolmasters in such habits, and with such feelings as shall fit them to be the useful and contented teachers of the humblest cottagers of the most miserable villages.

Here is poverty, to which that of many among our working classes is affluence, and it is hopeless, for no idea is held out of advancement or change—Yet if ever poverty appeared on earth screne, contented, lofty, beneficient, graceful, it is here. Here we see men in the very spring time of life so fur from being made, as we are told men must be made, restless, and envious and discontented, by instruction, taking indigence and obscurity to their hearts for life, raised above their poor neighbours in education, only that they may become the servants of all, and may train the lowliest children in a sense of the dignity of man and the beauty of creation in the love of God and of virtue."

I confess myself almost hopeless of the transplantation of such sentiments hither. Religion is made the theme of the fiercest and most implacable contention, mixed up with newspaper squabbles and with legal discussions; her bright and holy garments are seized and soiled by every angry and ambitious hand.

It seems to me, too, that we are guilty of great inconsistency as to the ends and objects of education. How industriously have not its most able and zealous champions been continually instilling into the mind of the people that education is the way to advancement—that "knowledge is power" that a man cannot "better himself" without some learning! and then we complain, or we fear, that education will set them above their station, disgust them with labour, and make them ambitious, envious, and dissatisfied! we must reap as we sow; we set before their eyes objects the most tempting to the desires of uncultivated men; we urge them onto the acquirement of knowledge by holding out the hope that knowledge will enable

them to grasp these objects; if their minds are corrupted by the nature of the aim, and embittered by the failure which must be the lot of the mass who is to blame?

If instead of nurturing expectations which cannot be fulfilled, and turning the mind on a track which must lead to a sense of continual disappointment, and thence of wrong, we were to hold out to our humble friends the appropriate and attainable, nay, unfailing ends of a good education;—the gently and kindly sympathics; the sense of self-respect, and of the respect of fellow men; the free exercise of the intellectnal faculties; the gratification of a curiosity that "grows by what it feeds on" and yet finds food for ever; the power of regulating the habits and the business of life, so as to extract the greatest possible portion of comfort out of small means; the refining and tranquilizing enjoyment of the beautiful in nature and art, and the kindred perception of the beauty and nobility of virtue; the strengthening consciousness, of duty fulfilled; and to crown all "the peace which posseth all understanding;"-if we directed their aspirations this way, it is probable that we should not have to complain of being disappointed, nor they of being deceived. Who can say that wealth can purchase better things than these? And who can say that they are not within the reach of every man of sound body and mind, who by labor not destructive of either, can procure, for himself and hisfamily, food, clothing and habita-

It is true, the same motives wearing different forms, are presented to all classes. "Learn," that you may "get on," is the motto of English education. The result is answerable. To those who think that result satisfactory, a change in the system, and above all in the spirit of education, holds out no advantages.

There are two or three other points which I would fain recommend to the peculiar attention of the reader. One of the most important is the absolute necessity of securing a constant supply of well trained schoolmasters. Time and experience have, it is to be supposed, nearly removed the illusion of "mutual instruction" as a substitute for the instruction communicated by a mature to an immature mind; as an auxiliary in certain mechanical details, no one disputes its utility. Observation long ago convinced me of the entire truth of the maxim laid down by the Prussian government, and approved by M. Cousin, that "as is the master so is the school." On this subject I cannot refrain from quoting a German writer in whose opinion I fully concur.

"Such schools (the Lancasterian) are undoubtedly of use in countries like France, where almost nothing --- or England where nothing systematic and adequate has been done for the education of the people; but they can never serve but as a temporary shift which cannot be taken as a substitute for edu-cation. They can do no more than give a certain mechanical dexterity in reading, writing, and cyphering. The religious instruction is confined to asoulless learning by rote. Instruction in language, singing, drawing, and in exercise of the intellect, are wholly wanting. The influence of the teacher on the mind and character of the scholar, or his own mental cultivation, are not so much as thought of. Thus then a system of tuition, the lifeless mechanism of which was fifty years ago appreciated in Germany, and laid aside for methods better calculated for the true culture of man, has been adopted hy France, England, &c., with an ardour which betrays total ignorance of the advance of the science of education in Germany. The village schoolmasters of Germany domuch more to form the minds of their pupils than Lancaster and Bell cando; and no German who knows what his country possesses; can recommend a system of teaching which may indeed be of use in harmonizing the lowest mob of England or of France, but where men and christians are to be formed; is defective and ill contrived. $x_i \cdot y_i \cdot y_i$

A system of education is nothing without an unfailing sup-

ply of compount masters. It is the fashion to apply the "free trade" maxims to every thing. Reasons enough present themselves why such maxims are wholly inapplierble to this matter, but there is no room for them here. It may once for all safely be denied that the people can be judges of the quality of teachers us they are of bread er of shoes. To this the hundreds of children in the middle classes whose whole childhood is consumed in experimental wanderings from school to school, and the thousands and ten thousands of the lower, whose parents know little more than the fact that they pass a certain number of hours daily in a given room, can bear witness. The evil is an irrepairable one. Not only is the portion of time consumed in a bad or imperfect school irrecoverably gone, but bad habits of all kinds are acquired which no future education can entirely eradicate. The candid and rational among the less educated classes are glad to be aided by the friendly judgment of their more instructed neighbors on this point; and would, I doubt not, readily admit the advantage of having some better security than their own opinion, or rather conjecture, for the competency of the instructors of their children.

In every country where primary institution has been carried to a height, the necessity of establishments of this kind has been felt. In spite of the length of this preface, I cannot resist the temptation to add the following curious and valuable details on the history of seminaries for teachers, for which I have again to acknowledge my obligations to the learned author of the article on national education which appeared in the Edinburgh Review (No. 116) and which first called the attention af England to Mr. Cousin's report.

It is almost humiliating to have to notice another objection to this scheme of national education,—viz., that it is foreign an objection, which if carried through and acted upon consistently, would render the intercourse between civilized nations absolutely barren. But since there are, it seems, still persons with whom it has weight, it may be well to quote M. Cousin's striking appeal against similar prejudices in Faance.

"National rivalries or antipathies would here be completely out of place. The true greatness of a people does not consist in borrowing nothing from others, but in borrowing from all whatever is good, and in perfecting whatever it appropriate. I am as great an enemy as any one to artificial imitations; but it is mere pusillanimity to reject a thing for no other reason than that it has been thought good by others."

REGULATIONS

OF THE

School Committee of Boston.

According to the City Charter, twelve gentlemen are annually elected, one in each Ward of the City, who, "jointly with the Mayor and Aldermen, constitute the School Committee for said City, and have the care and superintendence of the public schools."

The public schools of this City consist of one Latin Grammar School, one English High School, nine Grammar and Writing Schools, including one for Africans, and sixty-four Primary Schools, including three for Africans; in which instruction is freely given to children of both sexes.

CHAPTER I.

Regulations relating to the Board of the School Committee.

1. At the first meeting in each year which shall be held on an early day, in the mouth of January, the Board shall be organiz-

Organization. \{ ed by appointing a Chairman, a Secretary, a School, consisting of at least seven for the Latin & English High Schools respectively, and of three for each of other schools, a standing committee on books, and a standing committee of reference, with the primary school committee.

2. The Chairman shall preside at the meetings of this Board, shall call any special meetings thereof when he shall deem it ne-

Duties of the Chairman.

Country of the Chairman.

Of the City Government relative to any votes and doings of this body which may have respect to a co-operation with them in the ransaction of business; copies of the same having been duly fur-

nished by the Secretary.

In the absence of the Chairman his place shall be filled, protempore, by the Board.

3. The Secretary shall have charge and custody of the records of the Board and of all papers directed by them to be kept on his files; he shall keep a fair and full record of all the proceedings of the Board, in each case stating the committee; he shall notify the meetings of all committees when requested by their chairman; and shall perform such other duties as may be assigned to him.

4. The visiting or sub committees shall visit their respective schools at least once each quarter of the year, and as much of Duties of visit. I tener as they can make it convenient, for the inger sub com's. I purpose of attending carefully to all the exercise Quarterly Ex. I es of each class; of inspecting the school bill aminations. I and inquiring into the deportment and progress of the pupils, in order to commend good conduct and improvement, and discountenance negligence and vice. It shall be their

of the pupils, in order to commend good conduct and improvement, and discountenance negligence and vice. It shall be their duty to embrace these opportunities to converse freely with the instructors on the affairs of the schools, to elicit from them such occasional suggestions as may be turned to their benefit, to encourage the faithful and deserving instructor in his arduous duties, and to detect and mark delinquencies.

The chairman, or some member of each sub committee, shall make a report in writing at each quarterly meeting to the school committee of their examination and its results, and of several circumstances above specified

Reports. which may have occurred, and of any accommodations or indulgencies they may have granted to any instructor, or any alterations they may have authorised in their particular school. And at each quarterly meeting, the chairman, or any member of each sub committee who may be present, shall be called upon for such report; and in case of omission to make it the school committee shall pass a vote enjoining the sub committee to proceed without delay in the performance of such dury, and shall adjourn to receive their report.

The sub committee shall visit their respective schools at least one week previous to the annual exhibitions to select the candi-Annual exami.) dates for the medals, and shall critically examine

Annual examination for Median Members of the first class for this purpose—dals.

They shall have power to award not exceeding six medals in each school, excepting in the Hawes school, where not more than four, and in the African school, where not more than two shall be awarded to either sex; and it is understood that no scholar who has received a medal shall at any time afterwards be a candidate for another in a school of the same rank. "General scholarship" shall be taken into consideration in the assignment of medals.

The chairman of each sub committee shall return the names of the successful candidates to the Secretary of this Board, at

least three days previous to the day of exhibition.

The sub committees shall give their advice to the instructors on any emergency, and take cognizance of any difficulty which

M

Difficulties in any occur between the justification and the pathe schools. struction of their school. An appeal however to the whole Board is not hereby denied to any citizen.

In case of a vacancy in any school in the place of either of the instructors, the sub committee of the school shall, if they Vacancies a think proper, procure a temporary supply, and ong the interestors.

17. The books used and the studies pursued in all the public schools shall be such and such only, as may be authorized by this board.

Pupils required to have books. 18. No pupils shall be allowed to retain their te have books. less they are furnished with the books and utensils regularly required to be used in the schools respectively, except by permission of the sub committee.

19. There shall be a recess of from five to ten minutes for every pupil, each balf day, that the Rocess. children may not be injured by too long confinement.

20. No pupil shall be allowed to depart before the appointed hours of leaving school, except in case of sickness or some pressing emergency, of which the master shall be judge.

Removal from 21. No pupil shall be admitted to the privileme school to ges of one school who has been expelled from another, or while under the sentence of suspenmother.

Every pupil who shall be transferred from one public school to another of the same rank, shall be the bearer of a certificate from of the same rank the head master of the school he leaves, expresdemanded of him, as a condition of his admission, by the mas-

ter to whom he applies for that purpose. In this case no exami nation of his qualifications shall be required.

Children going from the public grammar and writing schools to the Latin or English High school shall also be the bearer of of superior rank } certificates setting forth character and qualificaadmitted to examination for the standing to which they aspire in those schools respectively.

22. No child shall be admitted into any of the public schools who is not the bearer of a certificate from a physician that he has been vaccinated or otherwise secured against contagion of small pox. This certificate shall not be required of the pupils who go from one public school to another.

23. There shall be two exhibitions of the schools annually, viz :- the first of the boys' schools on the Wednesday next pre-Annual exhibi- ceiling commencement at the University in Cum-Wednesday next preceding the first Monday in November. At the former the Franklin medals, and at the latter the City medals, are to be bestowed.

24. The following holy days and vacations shall be granted alike to all the schools, viz:—Every Wednesday and Saturday Vacatious and lost day, Thanksgiving day, and the remainder of the week; the day of the General Election in January; one day in each year for the general training, when in Boston, the fourth of July; the week beginning on the first Monday in June; the remainder of the week after the exhibition of the schools in August, and the two succeeding weeks, and no other days except by a special vote of this board.

In audition to these, the Latin School and English High School shall be entitled to the three days of public exhibition at Harvard University, and to the week beginning on the second

Monday in June.

CHAPTER III.

Regulations for the English Grammar and Writing Schools.

These Schools are the second in order in the system of public education established in this City. The following are their names, situation, and date of establishment.

- 1713. 1. Elliot School, N. Bennet street. For boys For boys & girls 1717. 2. Adams School, Mason street. 3. Franklin School, Washington st. 4. Mayhew School, Hawkins st. For boys & girls 1785. For boys 1803. For boys & girls 1811. 5. Hawes School, South Boston. For boys & girls 1812. 6. African School, Belknap'st.
- For boys & girls 1819. Boylston School, Fort Hill. 1821. 8. Boudoin School, Derne street. For girls 1822.

9. Hancock School, Hanover st. For girls In these Schools are taught the common branches of an English Education. They are designed to conduct children from the primary schools to such an acquaintance with reading, writing, English grammar, geography, and arithmetic, as shall be sufficient for the ordinary purposes of life. To these schools apply the following regulations in addition to those laid down in the preceding chapter.

1. In each of these schools which is attended exclusively by boys, there shall be a master and an usher in the Grammar De-Number of ing department. In those where females excitasively attend there shall be a master and three
female assistants in each department. In those where boys and girls both attend, the place of one of the ushers shall be supplied by three female assistants.
The Hawes school and the African school are exceptions to

the above rule.

In the Hawes school there shall be a master and one usher, or two female assistants instead of an usber.

In the African school there shall be one master.

2. In every school the grammar master and the writing master shall each have the regulation and control of his particular department, so far as regards the classification, the mode of instruction, and the discipline of his pupils; provided that the regulations of one department do not interfere with those of the other; but in all cases involving the interests of both departments where a difference of opinion or conflict of authority shall arise Head masters. the grammar master shall be the head master of the school, and his decision shall be paramount.

3. Children may be admitted into the grammar and writing Age qualification for admission.

They shall be examined by the head master; but no examination shall be made of those who bring a certificate of recommendation from the primary school committee. In case any application shall be rejected by the

In case any application shall be rejected by the master an appeal may be made to the sub com-Appeal.

mittee of the school.

Time of ad- ters and derangement of the classes, no new pupil shall be admitted into these schools except on the first Monday of every month through the year, unless when transferred from one school to another.

Time of continuance.

5. Boys shall not be permitted to retain their
places in these schools beyond the day of their
next annual exhibition after they shall have arrived at fourteen years of age, unless by special leave from the
sub committee. Girls shall be allowed to attend these schools until the next annual exhibition after they shall have arrived at the age of sixteen.

Attendance in both departm'ts ral or exclusive attention in one department of the school without a special permit from the sub committee.

7. From the first Monday in April to the first Hours of school. Monday in October, annually, the hours for keeping these schools shall be from 8 o'clock, A.M. until 12, and from 2 o'clock, P.M. until 5; and from the first Monday in Octuber to the first Monday in April from 9 to 12, and from 2 to half past four.

8. From the first Monday in April to the first Dismission of Monday in October, the younger children may be dismissed one hour before the regular time of younger chil-dren. closing the morning school.

9. Children belonging to these schools shall be required to be present within five minutes after the hour of opening the same; tardy children shall be received, but not without some notice of their fault.

10. The grammar department of these schools Classes in shall be divided into four classes subject to such grammar de-partment. subdivisions as the master may judge expedient; the books and exercises shall be as follows:

Studies requir'd \ \ \ling \ \ \text{CLASS IV. No. 1.—Emerson's National Spelling Book. 2. Pierpont's Introduction to the -National Reader.

CLASS III. Nos. 1 & 2 continued, and 3 .- Marray's English

Grammar, abridged by Alger.

CLASS II. Nos. 1, 3, continued, and 4.—Pierpont's National Reader. 5. Field's Geography and Atlas. 6. Frosts excercise

in parsing. CLASS I. Nos. 1, 3, 5 continued, and 7.—Pierpont's American First Class Book. 8. Goodrich's History of the United States. 9. Exercises in composition and declamation.

Studies allowed duced at the discretion of the master:

Smellies Philosophy of Natural History, Ware's edition,
Blake's conversations on Natural Philosophy, Worcester's Elements of General History, Parker's Exercises in English composition.

On Monday the children who usually read in the first class book shall instead of it read in the

Studies required by divided into classes according to their preparament.

11. The pupils of the writing department shall be divided into classes according to their preparament.

Studies required by the divided into classes according to their preparament.

1. Emerson's North American Arithmetic, Part 1. burn's first lessons in Arithmetic. 3. Colburn's sequel to First

Lessons. 4. Robinson's Book-keeping.

All the children shall be taught writing and arithmetic daily: and the teachers are required to furnish the pupils copy slins written or from good engravings, or to write the copies themselves in the writing books.

The pupils of the first class shall be taught to make pens.

CHAPTER IV.

Regulations for the English High School.

This School is situated in Pickney street. It was instituted in 1821, with the design of furnishing the young men of this City who are not intended for a collegiate course of study, and who have enjoyed the usual advantages of the other public schools, with the means of completing a good English education to fit them for active life, or qualify them for eminence in private or public stations. Here is given instruction in the elements of mathematics and Natural Philosophy, in History, natural and civil, and in the French language. This institution is furnished with a valuable mathematical and philosophical apparatus for the purpose of experiment and illustration. To this school apply the following regulations in addition to those laid down in chapter II.

1. The instructers in this school shall be, a master, a sub-master, and so many assistants as shall give one instructer to every Number of in- thirty five pupils, provided that no additional astwenty one. It shall be a necessary qualification in all these instructors that they have been educated at some respectable college. In addition to these there shall be a teacher of the French language.

2. No boy shall be admitted as a member of this school under the age of twelve years; and the master shall require of every age of admission candidate for admission previously to examination, a certificate from his parent or guardian that he is of the age required.

time of entrance } 3. Boys shall be examined for admission inte day and Friday next succeeding the exhibition of the school in August.

4. Candidates for admission shall produce from the masters of the schools they last attended, certificates of good moral charac-Qualifications of the and presumed qualifications for admission into this school. It shall however be the duty of the master to examine them in reading, writing, English grammar, modern geography, and Colburn's First Lessons in Arithmetic and Sequel, in which they shall be found to have made satisfactory progress in order to be admitted.

5. The school shall be divided into three classes; and such Classes and sections of these shall be formed as may be found expedient. Each class shall have its ap-Sections. propriate studies assigned it; and to every class and section of the same the master shall be required to give a due proportion of his personal attention.

6. Individuals shall be advanced according to their scholarship. Progress and and no faster, and none shall be permitted to recontinuance in main members of the school longer than three
chools.

years. schools.

7. Each class or section shall occasionally be reviewed incited appropriate studies; and general reviews shall once a quarter be instituted in all the previous Reviews studies.

8. From the first Monday in April to the first Monday in Octions of school tober annually this school shall begin at eight Hours of school o'clock A M and end at 12; and from the first Monday in April, it shall begin at 9 A. M., and end at 12

From the first Monday in April to the first Monday in October it shall begin at 3 P. M. and end at 6; and from the first Monday in October to the first Monday in April it shall begin at haif past 2 P. M. and end at half past 4; except that in the mouths of March and October it shall begin at 3 P. M. and end at 5.

9. Tardiness beyond 5 minutes shall be considered a viola-

Studies required 10. The books and exercises required during the course of instruction in this school are the

Class III—No. 1. Colburn's Intellectual and written Arithmetic,—2. Worcester's ancient and modern geography.—3. Worcester's Elements of general History.—4. Goodrich's History of the United States.—5. Stansbury's Catechism on the constitution of the United States.—6. Reading, grammar, declamation.—7. Composition.—8. Colburn's Algebra.

Class II—Nos. 1. 2. 3. 4. 5. 6. 7. 8. continued,—and 9. Book-beeping by single and double entry.—10. Legendre's Geometry.—11. Natural Philosophy.—12. Paley's Natural Theology, with

Paxton's Illustrations.

Class 1—Nos. 5. 6. 7. 8. 9. 10. 11. 12. continued,—and 13. Paley's Moral Philosophy, Whitaker's edition.—14. Paley's Evidences of Christianity.—15. Practical Mathematics, comprehending navigation, surveying, mensuration, astronomical calculations, &c.; together with the construction and use of mathematical Instruments.—16 A course of experimental lectures on the various branches of natural philosophy.

The several classes shall receive instruction in writing.

The following studies are allowed in the first class if the masside studies allowed ter think proper to introduce them; Smellie's Philosophy of natural History, Ware's edition, Chemistry.—Intellectual Philosophy.—Linear drawing.—Logic.

ADDRESS

07

THE TRUSTEES

OF THE

New England Institution

FOR THE

EDUCATION OF THE BLIND

TO

THE PUBLIC.

It is four years since an act incorporating the Trustees of the new England Asylum for the blind was passed by the Legislature of Massachusetts. Why so much delay has occurred in commencing operations will be duly explained.

The Trustees have now the satisfaction of announcing that their institution has been in actual operation for five months; and that their most sanguine expectations of the capacity of the blind for receiving an education have been fully verified in the progress of the interesting beings under their charge.

But before giving any account of the state of their institution the Trustees neg leave to make some general remarks on the blind; on the light in which they have been held, and the manner in which they have always been treated by their fellow men.

Blindness has been in all ages one of those instruments by which a mysterious Providence has chosen to afflict man; or rather it has not seen fit to extend the blessing of sight to every member of the human family. In every country there exists a large number of human beings who are prevented by the want of sight from engaging with advantage in the pursuits of life, and who are thrown upon the charity of their more favored fellows. And it will be found that the proportion is at all times about the same in the same countries: for not only is the proportion of those who shall be born blind decreed in the statutes of the Governor of the world, but the number of those becoming so by what we call accident, is regulated by laws as infallible and invariable; and it is as little probable that by any accident all mankind should lose their eyes as that by any precaution all should preserve them. Blindness then is one of the evils entailed upon man, and it becomes him to grapple with it and try to diminish its pernicious effect.

The blind may be divided into two classes; those born blind, and those becoming blind by disease or accident: the

latter class being infinitely the most numerous.

The frequency of blindness varies in different climates, and upon different soils; it is most frequent in that part of the temperate zone bordering upon the torrid, and decreases as we approach the poles. It has been ascertained by accurate censuses taken in different countries of Europe, that the number is fearfully great, and that although they are screened from the public eye they exist in almost every town and village. In middle Europe there is one blind person to every 800 inhabitants. In some Austrian provinces it has been accurately ascertained that there is one to every 845 inhabi-Farther North, between the tants; in Zurich, one to 747. 50th and 70th degree of longitude, they exist in smaller proportions; in Denmark are found one to every 1000. In Prussia there are one to every 900. Egypt is the country most afflicted with this evil, and it may be safely calculated that there are about one blind to every 300 seeing persons.

In our own country, no means have been taken to ascertain with exactitude the number of blind; the returns made by some censuses have been ascertained to be very errone-neous; nor is there any reason to suppose that the laws which act on nations under the same latitude in Europa hould be null here: indeed the Trustees have ascertained that in some small towns not exceeding 2000 inhabitants, and where the census gave but one or two blind, there really exist four, five, and six. These unfortunate beings sit and wile their long night of life away, within doors, unseen and unknown by the world; and society would be startled were it told that there exist in its bosom so many of its children who never see the light of heaven: it would hardly credit the assertion that there are more than eight thousand blind persons in these United States; yet such is undoubtedly the case.

The public must be ignorant of this fact; to suppose it is not so, and yet that it had done nothing for so large a class of the afflicted would be an impeachment of its charity and its justice; and the Trustees appeal to it in the full confidence that the ready answer will be "what can be done for them?"

Fellow citizens, much can be done for them; instead of condenning the poor blind man to stand at the corner of a street and ask for charity, or to remain cooped up within the walls of an almshouse, or to sit and mope away his solitary existence among his happier friends alike a burthen to them and himself—you may give to him the means of becoming an enlightened, happy, and useful member of society; you may give him and his fellow blind the means of earning their own live

lihood or at least of of doing much towards it; you may light ! the lamp of knowledge within them, you may enable them to read the scriptures themselves,

"And thus, upon the cychalls of the blind, To pour colestial day."

All this you can do by the establishment of institutions for their education; and it is to demonstrate this fact that this circular is addressed to you. The Trustees do not ask assistance for the Institution alone, but they call upon the public to consider the situation of the blind everywhere, and everywhere to extend to them those benefits which are greater than the most liberal alms that can be bestowed.

This is not a common call, nor is it a common case, for the object proposed differs materially from most charitable establishments: first in that there is no possibility of deception, since no one can doubt or deny the claim which the blind have upon the charity of their more fortunate fellows; and second, that the object is an economical one to the com-It is to take from society so many dead weights that it is proposed to educate the blind and enable them to get their own livelihood : and society ought to consider any capital so invested as a sinking fund for the redemption of its charitable debt: as a provision for preventing the blind from becoming taxes to the community. In proof of his the trustees would try to draw the attention of the public to the different kinds of work which are performed by the blind in the different institutions in Europe; some of which may also be seen at the infant institution under their direction.

That a blind man may become a first rate professor of music; frequent example has taught every one; it remains however for many to be convinced that a blind man may become a good teacher of mathematics, the languages, and almost any science; that he may gain a decent livelihood by the labour of his hands in the fabrication of baskets, mats, mattrasses, twine, &c. &c. To do these things he needs only an apprenticeship in an establishment devoted entirely to this purpose, and pursuing a peculiar plan of education adapted to his wants, and it is in aid of their efforts to establish such an institution that the Trustees call upon their fellow-citizens for

encouragement and support.

It is alike the character and honor of our age, that society is not content with administering charitable aid to the distressed, but that it seeks to strike at the root of the evil and prevent its recurrence; it remains yet for our country to apply this principle to the pauperism of the blind. It is not now the time to discuss the direct and indirect tendency of blindness to produce pauperism; suffice it to say the blind are generally paupers; they have always been so, and the place to seek the blind has always been at the way side begging for alms. Nothing was done for their education until about forty years ago, when the humane Abbe Hauy undertook to educate some blind children in his own house, and his success was so great that the Government of France employed him to establish an institution in Paris. This he did, and it became so interesting an object that he was called by the Emperor of Russia to St. Petersburg, for a similar purpose; and after successfully putting his system into operation there, he laid the foundation of a school for the blind at Berlin .-He invented the method of printing in raised characters made tangible and sensible to the blind; he also constructed maps, musical notes, &c. but left the subject in a very imperfect state at his death.

Similar institutions have been since founded, and are in successful operation in Amsterdam, Vienna, Dresden, London, Edinburgh, Glasgow, Liverpool, and other places, the condition and operation of which have been thus noticed in a report made to the trustees by Dr. S. G. Howe :-

the Governments, and those which owe their foundation and support to the charmable efforts of individuals; the latter are by far more useful than the former.

"There can be no more delightful spectacle than is presented by these establishments, where you may see a hundred young blind persons changed from listless, inactive, helpless beings, into intelligent, active, and happy ones; they run about and pur-sue their different kinds of work with eager industry and sur-prising success: when engaged in intellectual pursuits, the awakened mind is painted in their intelligent countenances; and when the whole unite in sacred music there is a display of deep felt in crest, of fervid zeal, and animating enthusiasm, which I have never seen equalled.

"Ti e proposed end of these different institutions is to give to the blind the means of supporting themselves, and this is effected with

different degrees of success.

"I visited all the principal institutions for the education of the blind in Europe, and found in all much to admire and copy, but

much also to avoid.

"Phose institutions, which are founded and supported by the government, labor under many disadvantages necessarily attendant upon such a connexion ; and it may be said without injustice to the persons employed, that they are obliged to follow such a system, and make such exhibitions as will redound rather to the glory of the state than the good of the pupils. Hence so much of useless parade and show-hence so much time and patience spent upon learning to perform surprising but useless things. Those, on the other hand, which are kept up by individual effort and public benevolence, fall into the error of considering their pupils too much as objects of charity, and of petting and caresssing them too

"The institution for the education of the Blind at Paris, as it is the oldest, and as there is about it more show and paradethan any othe in Europe, has also the reputation of being the best; but if one indiges the tree by its fruit, and not by its flowers and foliage,

this will not be his conclusion.

Its founder and the great benefactor of the Blind, the Abbe Havy, invented and put into practice many contrivences for the education of the blind; and otherwise rendered the institution excellent for the age, and the time it had existed; but as he left it, so it has since remained. It receives, supports, and educates about a handred blind youth; and there being no other in France, it follows that there are only one in 300 of their blind who receive an edu-The great fault in the Parisian Institution is the diversity of employment to which the pupils are put; and the effort made to enable them to perform surprising but useless tricks. degree of intellectual education is given to all, without reference to their distinction in life; and a poor boy who is to get his livelihood by weaving or whip-making, is as well in-tructed in mathematics and polite literature as he who is to pursue a literary carcer. Now, there is no reason why a shoe-maker or a basket-maker should not be well educated; provided he can learn his profession thoroughly, and find the necessary leisure for study. if this would be difficult for a seeing person, how much more is it so for a bland one, who to obtain any degree of excellence in a trade, must apply himself most intensely and most patiently. cessity of this is made apparent by the situation of those youths who come out from the Institution at the end of the seven years passed there; they have devoted five hours per day to mechanical employment, but to so many different ones, that they know but litthe of any. Weaving, whip making, mat and net making and spinning, &c. &c. have so effectually divided their attention, that at the end of the year devoted to learning the one, they have almost entirely forgotten that which they acquired the year before.

" It has however, with all its faults, been productive of great good, and has sent out many pupils who are not only well educated and happy men, but most useful members of society; among others may be cited Mr. Paingeon, the celebrated Professor of mathematics at the University of Angiers. This interesting young blind man came forward as a cand date in the public controversy for the prizes in mathematics at Paris; and after carrying them all off, was named to the professional chair at Angiers.

"There are in Germany five institutions for the education of the blind, which are carried to different degrees of perfection some are under the direction irdeed of men of science, but who are cramped in their exertions by various causes; others however are

"The one at Dresden, for instance, is under the management of a most excellent lady, but whose only merit is extreme kindness to The European institutions for the education of the blind may a most excellent lady, but whose only merit is extreme kindness to be divided into two classes; those established and supported by her interesting charges; the intellectual education of the pupils is almost entirely disregarded, and they are not taught to read or I write: nor am I aware that if she had the disposition, she would have the power of giving them a better intellectual education.

"The institution of Berlin, under the direction of the excellent Professor Zeune, is better managed; but that gentleman cannot carry his views into operation: for instance, he is obliged to employ seeing leachers, because a commissioner wills it, where blind persons in his own opinion might perform the duty infinitely better. How often is it the case that in institutions of various kinds, the practical knowledge and experience of those immediately engaged are overruled by those who look into the subject but once or twice a year, and insist upon directing the whole.

"It may be safely said that none are so well fitted for teaching the blind as the blind themselves; may nore, the blind can become most excellent teachers of seeing persons: I have known a blind person manage a class of twelve seeing boys to perfection; and what was astonishing he had sufficient moral influence over them to keep them in the greates: order and prevent them from playing those tricks which boys will do when their master does not see

"In the Berlin Institution, as always must be the case in well regulated ones, great attention is paid to instructing the blind in mu-sic. Who does not know that the blind generally evince greater capacity and inclination for music than seeing persons; and who can doubt that the blind man who has acquired his knowledge of music scientifically, may teach it scientifically also, and thus fill a useful sphere in society?

"The Institution owes its existence indirectly to the illustrious Hauy who passed through that place on his way to St. Petersburgh whither he was summoned by the Autocrat to establish an lustitution for the education of the blind. This latter however, though founded and encouraged by an Emperor, has falled into decay, while the Berlin establishment is continued almost solely by the philanthropic labors and hearty zeal of a few simple cit zens.

"In the Berlin Institution, though the pupils are taught to read and write, they have very few printed books; and the information is given orally. This arises however from the exp nee of books, and not from any doubt of their utility; in fact Professor Zeune exerts himself to the utmost to increase his library for the blind.

"He prints with types filled with pin points. The pupils are

taught also geography, history, languages, and the mathematical as well as lighter sciences. The time is partly occupied in learning different trades; and on the whole the pupils are as well if not better qualified to make their way in the world as those from the Paris Institution. There are four similar institut ons in Germany, the best of which seems that of Vienna; there is also an excellent one at Zurich, which I did not visit.

"The Institution for Indigent Blind in London is an excellent and most charitable establishment, and productive of great good.

"It is indeed a most delightful sight to see so many blind youth assembled in the workshops, all neatly clad, and with smiling faces busily employed at their different trades; and all earning a large part of their livelihood by their lown labor. Instead of the sol tary helpless being which we so often see, the blind here presents us the speciacle of an active, industrious, and happy youth, who, finding constant occupation in the exercises of his physical powers, and being buoyed by the hope of rendering himself independent of charity, has no time and no inclination for repining at his lot, or for drawing unp easant comparisons between himself and those about

him.
"The Institution in London is intended merely for indigent blind, and their intellectual education is not at all attended to; nor do they occupy themselves about anything but their trades, with the exception of a little music. There seems to be a doubt in the minds of the person who directs the Institution, of the utility of teaching the youths to read themselves by means of raised levers; which is singular enough to one accustomed to see the immense usefulness and pleasure afforded to the blind by the use of these

"The doubt is apt to be raised however only by good men who question the utility of knowledge in any person, beyond the strict demands of his calling. It is said, that they can always have the assistance of a seeing person to read to them; but be ides that the blind cannot always have such a person at their elbow, there is infinitely more pleasure and advantage to be derived from feeling out the letters themselves. They can stop, and go, back, or read over a passage a dozen times, reflect upon it as long as they choose, and refer to it on any occasion.

"In Mathematical studies particularly, where only a few brief problems and rules are given, books printed with raised letters for

the use of the blind are almost indispensably necessary. The advantage, may! the necessity, of printing the Gospel in raised letters for the use of the blind will be apparent to every thinking Christian. There is a large number of our fellow creatures within our reach, who might be supplied with the New Testament at small expense compared with that laid out in sending it among distant heathen.

"It may be said indeed that the blind can hear the Bible read by their friends, while the heathen cannot; but on the other hand let one consider what a precious treasure a copy of the Testament in raised letters would be to a blind man; he would pore over it, read and re-read it, until every word became familiar; and how much greater probability there would be of its producing a good ffect then in the hands of those who have a thousand other things to occupy their thoughts. Then too, let one consider the all-important nature of the study; and how j alous one should be of trusting to aught but the cool decision of his own reason.

"In fine let any prous christian put the case to himself and say whether he could be content with having the scriptures read by unother; whether he could abstain from feasting his eyes on God's sacred pages; or refrain from shutting himself up in his closet

with his maker and his revealed word.

"What his eyes are to him the fingers are to the man deprived of sight, and to the one equally as to the other is solitary reading

and reflection a useful and healthful exercise.

"Nor to the blind alone would the Scriptures printed in raised letters be a precious treasure; there are many people who from weakness or temporary derangement of the organs of sight, would be happy to spare their eyes and lead with their fingers. The acquisition of this faculty is not at all difficult, any person may in three or four days enable himself to feel out very easily the raised

letters and read pretty fast.

"I mentioned in a letter from Europe to your sub-committee, a plan which I had conceived of publishing one of the Evangelists in raised characters; without now detailing on all the methods which I would substitute for those hitherto used. I may say that it is found ed upon the only principle which can possibly obviate the immense inconvenience of bulk and expense, viz. that of contraction, or stenography; a principle which if acted up to may, I am convinced render books for the blind as cheap and as compact as those printed for our use. Whether this system shall substitute tangible for the visible forms of letters, or whether the symbols shall represent sounds is a secondary question.

"The institution at Edmburgh is on the whole the best I saw in Europe, it comes nearer than any other to the attainment of the great object of blind schools, viz. en bling the pupils to support themselves by their own efforts in after life. The establishment is not so showy as that at Paris, nor has it the same means which the latter possesses, and which receives an allowance of 60,000 francs or \$1.000 per annum from government; nor has it printed books for their use, still they receive most excellent education and learn some most useful trades. The mattress and matmaking business are carried on by the pupils with great skill and success, and many are enabled to carn per diem nearly enough for their subsistence. They are mostly day scholars, and receive a sum of money in proportion to the work they do.

"The mat and mattresses which come out of the Institution, and which are entirely the work of the blind, are certainly better made than any others in the city, and command a higher price in the market. The pupils are occupied also in making baskets, which is a clean and pleasant employment, but not altogether so profitable us the others. They display great ingenuty, and finish very fine and difficult pieces of basker work, but it is a branch in which they have less chance of successful competition with seeing persons. Indeed one great fault in the systems generally followed in Europe is the attempt to counterbalance the natural infirmity of the pubit by his ingenuity, his patience, and the excessive nicety of his remaining sanses, and to enable him to compete with seeing persons, in spite of the advantage they have over him. Now this ought not to be the leading principle; on the contrary, taking it for granted that the seeing person ever must have an immense advantage over blind in all hundicraft works what soever, we should seek out for him such employment as least requires the use of cyes.

"There are some occupations, such as knitting, weaving, &c. which a blind person may perform nearly as well as a seeing one, but in the present age the introduction of machinery has superceded in a great measure this kind of labour. In mat making, the blind mun can nearly compete with the secing one, and therefore should it be taught him as a means of making lumself useful, and necessary to others; for after all the efforts of charlable men this unfortunate class will ever be in a precarious situation mutil they [ean become so a cful as to command attention : men are charitable by fits and starts only, but self interest never sleeps; if the blind can appeal to this they are sure of being heard,

"Many of the pupils in the Edinburgh Institution are, as I observed, day scholars; that is, they reside with their friends, and come in to work and study every day, and an allowance is made to them proportioned to the work they do, if this is adequate to their

"I would observe that sufficient attention is not paid to the personal demeanour of the blind, either by their parents or in the public institutions; they contract disagreeable habits, either in posture or in movement; they swing their hands, or work their heads, or reel their bodies; and seem in this way to occupy those moments of void, which seeing persons pass in listlessly gazing about them. They are apt also to be exceedingly awkward and embarrassed in company, and are often very bashful while very vain; all this can be corrected by pursuing the same means as used with seeing children, and by accustoming them to society.

Blind persons can become as well qualified as seeing persons

for many employments which are generally thought beyond their powers, they can teach languages, history, geography, mathematics, and many other sciences, perfectly well; I know not why they should not make the first rate councillors, and think it possible

that they might fill the pulpit both ably and usefully. "I have the pleasure of calling my friend, Monsieur Rodenbach, member of the Belgian Congress, a man who possesses great influence, and who often makes that house ring with original and naive speeches; he is an agreeable orator, and an active business man, and a graceful member of society, and yet has been stone

blind from his childhood.

"I hope that the blind will not have to struggle against unfounded prejudices in our country, yet much do I fear that they will; people are so accustomed to consider the blind as helpless dependents on others, that they will not believe them capable of a high and useful part in society, and when they see one of them, who by uncommon talent struggles and raises his head a little in the world, in spite of the weight by which society would sink him beneath its surface, they regard him as a passing wonder, and draw no inference in favor of his fellows in misforune. That great mathematician and philosopher, the illustrious Saunderson, Professor at Cambridge who deserves a niche in the temple of fame between Newton and Laplace, drew one of his atheistical arguments from the false opinions of men concerning his powers; he said to a clergyman on his death bed, you would fain have me allow the force of your arguments drawn from the wonders of the visible creation, but may it not be that they only seem to you wonderful, for you and other men have always been wondering how I could accomplish many things which seem to me perfectly simple.

"But to return to our notice of the different institutions; that at Edinburgh is certainly superior to any in England, and on the whole is so to that of Paris, and were it now in place I might detal to you many curious and interesting processes for facilitating the education of the blind; the general principle however is to combine intellectual and physical education in such a way as to qualify the blind for the performance of a useful part in the world; and of so storing the mind with knowledge that they may have a

fund within themselves from which to draw in after life.

"The school at Glasgow is a more recent one, and is not yet equal to the one in Edinburgh in the advantages of intellectual ed-

ucation which it offers.

"The Liverpool school is remarkable for the very great degree of attention which is paid to the cultivation of the musical talents of the blind, and for their astonished success in it. An idea may be had of their proficiency from the fact that the product of their

concerts is about \$3500 annually.

"I shall take care to put into the hands of your committee a more detailed notice of the different establishments which I have visited, and I now close by respectfully submitting to you the conclusions at which I have arrived respecting the general manage-

ment of your proposed Institution.

"Keeping steadily in view the principal object, qualifying the blind to act a useful part in society, one ought to adapt his education to the sphere which the pupil will fill; choosing for every one the occupation in which the least possible necessity exists for the use of the eyes.

"Those who are fortunate enough to be above any pecuniary waints; may occupy themselves entirely with the development of their mental faculties, and the acquisition of all kinds of knowledge; alternating their studies only with such mechanical employ-

ments as may be necessary for physical health. I can conceive nothing more delightful than watching and administering to the intellectual wants of a blind person of good parts, as they gradually unfold themselves; and enabling him to wander at will among the fields of fancy and science. Such a person may attain a know. ledge of the classics, of ancient and modern languages, and of almost all kinds of science. There is nothing to prevent his becoming an elegant and accomplished scholar, and of being qualified to a forn society as well as to be a contented and happy being himself. Think of such a person, and compare him with one sitting in intellectual and physical darkness, and say whether it is not worth while persevering in your undertaking.

"In the education of indigent blind children, or of those whose

principal dependence must be on themselves, I should hope that our institution will avoid the extremes into which the French fall on the one hand, and the English on the other. We should depend ent rely neither upon physical nor intellectual education, nor should we lay down any general rule to be observed towards all publis-One ought to be even more observant of the bent of a blind boy's mind and the direction of his talent, than he is in the education of

sceing children.

"Considering handicraft work to be the occupation in which the blind can compete to less advantage with seeing men than any other, it should be resorted to only in the case of those who manifest no decided talent for any thing else. Among twenty blind youth, there will probably be found four who possess a decided milsical talent, this then should be assiduously cultivated, music should be their principal study, and they should devote as much time as possible to it.

"If one or two should exhibit a strong inclination for mathematical studies, or display what may be called the teaching propensity that is the talent for communicating their knowledge, they should have these powers cultivated; they will surely do better by them in

the world than by making baskets or mats.
"The majority whose talents are but ordinary should be taught some mechanical arts, such as mat, basket, or mattrass making and they should make it the chief object of their education to attain an excellence in them. I would not indeed prevent their learning to read and write, or acquiring a store of intellectual knowledge, but it should not be allowed to impede their way in learning their trade.

"I have often wondered, when in workshops of European blind institutions, that they did not have some one reading in the room while the pupils were at work. I do not believe that it would materially take off their attention from their occupation, and if they did not profit much from the reading, they would do so to a certain

degree. "The pupils who are to learn thoroughly any handleraft work. should not have their attention too much distracted by a multiplicity of occupations; it is true that there are some advantages attending the French method of teaching the children a half a dozen trades, as there are advantages attending almost every bad system; but they by no means outweigh the immense disadvantage of the want of that excellence in one trade which can only be acquired by strict and undivided attention to it.

"As the children destined to a trade should not devote too much of their time to intellectual pursuits, so on the other hand those educated for a higher occupation should not be left unacquainted with some mechanical occupations; they cannot have their mental powers always on the stretch, and as they have the same means of amusement as seeing children, they must be provided with some means of getting the necessary exercise and recreation

"This may be obviated by a regular attention to work, and by

introducing many amusements among them.

"I have often observed with a delighted eye the movement of the blind boys in Paris as they leave the institution to go to play seach grasps a cord held by a seeing boy, and follows him rapidly and unhesitatingly through narrow streets until they enter the immedse "Garden of Plants" when quitting the string they run among the trees and fittlic and play together with all the zest and enjoyment of seeing children. They know every tree and shrub, they career it up one alley and down another, they chase, catch, overthrow and knock each other about, exactly like seeing boys; and to judge by their laughing faces, their wild and unrestrained gestures, and their loud and hearty shouts, they partake equally the delightful excitement of boyish play.

"It appears to me very probable that the delicacy of health so often the lot of the blind is owing to the want of proper circulation of the blood; they being much of the time in a state of physical

and mental rest. "We must also adapt our institution to local circumstances, and in our workshops try to produce those articles best adapted for sale in our market. I have no doubt that the profit of work done in this country by the blind will be infinitely greater than in any other, owing to the higher price of labor; and if one cannot make a blind man approach any nearer to the seeing workman in the amount of his gains, yet thanks to Providence, the gains of a laboring man with us are not so stinted that he would starve on their being diminished one quarter."

In submitting to the public this extract of the report of Dr. Howe, the Trustees are aware that they are furnishing to cavillers some opportunity of objecting to their infant establishment, on the ground that it is so difficult, even in Europe, to bring them to that degree of perfection which enables them to pay their own way; but besides that the Trustees are unwilling to suppress any evidence in the case, they are convinced that they can steer clear of many of the difficulties which are to be encountered abroad, and they insist that too much consideration cannot be given to the fact that they will have fewer obstacles to encounter, and more circumstances to favor them than their predecessors. It cannot be that in these United States there exists a parish which would not give a salary to a blind organist in preference to a seeing one, provided they were equally well qualified, yet in Europe this is the case. There is not here this fixed prejudice to struggle with, nor yet the immense obstacle of the low price of labor, which in many parts of Europe is in the direct ratio to the means absolutely necessary for supporting life.

They have too the light and experience which the others did not, and can profit by their experiments, successful and

unsuccessful.

The Trustees are well aware that the advantages of an education cannot be extended to all the blind; and it is in the hope of doing some little good to them that the attention of their relatives is invited to some remarks on the subject of the domestic education of the blind:

"There is a great error prevalent among those who have friends or relations deprived of their sight; and who imagine that too much kindness or too much attention cannot be lavished un-This is entirely a mistake, and it is quite certain that the greatest obstacle to the education of the blind children who are received into the European Institutions, is that their previous treatment has been such as to prevent the developement of their remaining senses.

"Parents absolutely smother the faculties of a blind child in kindnesses; 'the poor dear thing' is blind, say they, 'it cannot feed itself; it is blind,' 'and cannot dress itself;' and if it ventures across the floor alone the anxious mother runs and silently removes every obstacle, instead of teaching it a lesson by letting it run against them , and bye and bye, when she is not near the child it may severely hurt itself by falling over something of

which it never dreamed.

Then the blind are continually addressed in a strain of pity, they are reminded every moment of their misfortune, and taught to believe themselves inferior to their fellows, and burthens upon

society.

Now nothing can be more injurious than such treatment of blind children, and 'It is all important to disseminate' in the community useful knowledge on the subject of infamile and early education; the mother is the most influential teacher in the world; and if few have correctideas of their influence and their duties as teachers of their seeing children, we may say that almost none understand how to act their parts in relation to a blind infant. The compassion of the woman, the affection of the nother, doubly claimed by the misfortune of her infant, grows nto fond doting; and as the anxious bird in the eagerness to warm is shivering nestling may stifle it beneath its feathers, so the mother of the blind child renders it doubly helpless by an excess of solicitude about it; by preventing it from supplying its own wants or putting forth any of its own energies *

"It should be strongly impressed upon the mother of the blind child that she ought to do nothing for it which it can by any pos-sible pains do for itself; she should allow it to roam about where it will; there is no fear of her suffering it to come to any serious

harm; there is no danger that the tendrils of maternal affection should fail to twine about the frail plant, but there is danger that they may encircle it so closely as to stint forever its growth

"It would be useless to quote the immense attainments of many blind persons who have had the advantages of a proper education, or have been endowed with great talents, for such examples would rather tend to discourage many blind than induce them to strive at imitation, but I may notice what I have repeatedly seen; the extraordindry difference between blind youth possessing the same natural advantages but differently treated by their parents. have known young men who could not walk out without a guide, nor occupy themselves in any handicraft work, and who could not even dress or feed themselves; they were mopeing helpless dependents, sitting bowed under the weight of an infirmity, and the conciousness of their inferiority which was recalled at every movement by the officiousness of their friends; they were alike useless to themselves and burdensome to those around them.

"I have known others too without greater natural advantages, who required little more personal attendance than seeing persons, who never were assisted in shaving, or dressing, or feeding themselves, or going about in the neighboring houses; who could go all over a city; nay who could ride on horseback in the counry, and mingle with grace and spirit in the waltz and the other amusements of society. These young men prided themselves in dispensing with the services of those about them as much as possible, and would take quite in high dudgeon any speech of con-

dolence, orany allusions to their inferiority. "In fact blind youth should not be reminded of his inferiority, nor taught to consider himself as inferior to his fellows; it is not only useless but discouraging, and his abilities ought not to be directed to the developement of those of his senses which remain He ought to be made to attend to all his personal wants and comforts, he ought to be left to puzzle and grope out as many things as possible, and to be left rather in perplexity for an hour than receive assistance in the accomplishment of anything And let me say which it is morally impossible for him to do. that they can accomplish many things which to an inattentive observer would seem impossible; it would be hard, for instance, to convince many people that a blind man can by the sound of his voice ascertain whether a table or a sofa had been removed from a room which he had much frequented; that he can tell prefty correctly the age and size of a person from hearing him speak; or that he will correctly judge the character of another from the intonation of his voice in a conversation; that he can attain as much excellence in mathemetical, geographical, astronomical, and other sciences as many seeing persons, and that he can become as good a teacher of music, language, mathemetics, and other sciences, yet all this and more, can he do."

The Trustees have endeavored to base their institution upon broad and scientific principles, and have spared no pains to commence aright. They have procured from France one of the most accomplished young men who have been educated at the Paris Institution for the Blind; a young man whose acquirements in the classics, in history, mathematics, and general knowledge, would do credit to any seeing person of his age. He combines also with this the talent of communicating his knowledge to others.

The Trustees earnestly beg the attention of the public to this fact, which they consider of great importance, viz: the superiority of the blind to seeing persons as teachers of the blind; they agree with Dr. Howe that no person can so well understand and overcome the difficulties which a blind child has to encounter in learning, as one who had to encounter & overcome them himself: "I should consider," says he, "a school for the blind without blind teachers as necessarily im-

perfect."

The Trustees heve also procured from Edinburgh a blind mechanic who teaches different kinds of work, which may now be seen at the institution.

They flatter themselves that they leve already introduced into their institution some important improvements in the method of teaching the blind; as one instance, they would refer to the map at the end of this pamphlet which is a plan entirely new, and unknown in Europe. There the maps are made with infinite pains and expense, by glueing strings onto another map pasted on a board; besides the great expense and necessary clausiness of which, they do not admit of the divisions and the lettering, which are here introduced. A map of this size would cost at Edinburgh, five dollars, and it would weigh three or four pounds; and not have half as many distinctions as this, which costs less than the one hundredth part of that sum.

The trustees deem it unnecessary to go into any particular detail of the method of instruction pursued at their institution, the specimens at the end of this pamphlet, the raised letters, the musical notes, &c. indicate that the touch is the sense upon which the blind depend for the acquirement of their knowledge. Their apparatus is as perfect, to say the least, as that of any other institution, and they confidently hope for success in accomplishing the object proposed by educating the blind.

Fully satisfied as the Trustees were themselves of the capacity of this neglected class for receiving an education, they were determined to prove it by experiment before making a call upon the public; on the return, therefore, of their agent from Europe with the blind teachers, they took seven blind persons from different parts of this State, varying in age from six to twenty years. These children taken at random have now been under instruction nearly five months, and can read correctly with their fingers, books printed for their use; they learn arithmetic faster than the generality of seeing children; they acquire more correct and definite notions of geography from their maps than seeing children can, since they are unassisted by the written names; and their progress is music is decidedly great. In regard to manual labor, some of the pupils can already fabricate mocassins and door mats, which are as strong and durable, and as handsome in appearance as those made and sold in our shops.

Finally, the Trustees considered that they have accomplished the most difficult part of the task in putting their institution into actual operation; they have planted the tree—it depends upon a generous public to water if and rear it; and they will only add, that if there be the slightest hesitation in the mind of any one about the propriety of oncouraging the charity—if there be any one who shall entertain the shadow of a doubt of the utility of their Institution, its doors are open, let him come and see for himself.

REPORT

OF

ACOMMITTEE

OF THE

REGENTS OF THE UNIVERSITY

OF THE

State of New-Fork,

ON THE

EDUCATION OF COMMON SCHOOL TEACHERS.

Presented to the Regents at their annual meeting, on the

8th day of January, 1835, and adopted by them at a subsequent meeting on the 20th of the same month.

AN ACT RELATING TO PUBLIC INSTRUCTION.

Passed 14th March, 1835.

The People of the State of New York, represented in Senate and Assembly, do enact as follows:

§1. The Superintendent of Common Schools shall procure and furnish to each of the school districts in this State, two copies of the Report of a Committee of the Regents of the University on the education of Common School Teachers, presented to the Regents on the eighth day of January last, for the use of said districts.

STATE OF NEW YORK, SECRETARY'S OFFICE.

Albany, 10th April, 1835.

The foregoing is the first section of an Act providing for printing and distributing to the school districts a report therein referred to.

Although the Act does not prescribe the particular manner in which the copies of the report shall be kept for the use of the districts to which they are to be sent, the intention of the Legislature will be best answered by putting them into the hands of the district clerks, who should circulate them for the perusal of the inhabitants, that all may be apprized of the provision made by law for the education of common school teachers.

JOHN A. DIX, Supt. Common Schools.

At the annual meeting of the Regents of the University of the State of New York, held pursuant to the Statute in such case made and provided, at the Senate Chamber in the Capitol, on the Sth day of January, 1835.

PRESENT: THE GOVERNOR, THE LIEUTENANT GOVERNOR.

MR. YOUNG,
MR. KING,
MR. WENDELL,
MR. CAMPPELL
MR. McKOWN

Mr. Dix, from the committee appointed at a special meeting of the Regents of the University, on the 22nd day of May last, to prepare and report a plan for the better education of teachers of common schools, submitted a report, which having been read, was in part considered; the final consideration thereof being posiponed to the next meeting of the Board.

The following is the report as first submitted to, and finally adopted by, the Regents:

REPORT

Of a Committee of the Regents of the University of the State of New York, on the education of common school teachers, presented to the Regents at their annual meeting at the Capitol, in the city of Albany, on the 8th day of January, 1835.

To the Regents of the University:

"At a meeting of the Regents of the University of the state of New York, held on the 22nd day of May, 1834, a certified copy of an Act of the Legislature entitled "An Act concerning the Legislature fund passed May 2d, 1834 was presented to the board and read; and it appearing that the subject matter

of the said act related to the application of part of the income of the literature fund to the education of teachers of common schools, under the direction of the Regents of the University, it was thereupon,

Ordered, That it be referred to Messrs. Dix, Buel, and Graham to prepare and report to the Regents at some future meeting a plan for carrying into practical operation the pro-

visions of the said Act."

In discharging the duty confided to them under the foregoing resolution, the committee have been decity impressed with the importance of the subject. They are satisfied that it will depend much on the measures which may be adopted by the Regents in pursuance of the authority conferred on them by the act of the 2d May last, whether the leading & acknowledged defect in our common schools, the want of competent teachers, shall be remedied, or whether it shall continue to embarrass, as it long has done the efforts of the Legislature and of individuals to carry out our system of popular institution to the great results which it is capable of producing. In its organization, and in the annual contributions which are made to its support, the liberality of the Legislature and of the people on whom the burden principally falls, is in the highest degree creditable to the state; and if the effects of a large expenditure of money, continued for a series of years, have not been as beneficial as might have been anticipated from the amount of the expenditure, the causes are to be found in some defects of the system, for which an early remedy should be provided.

The committee have already said that the principal defect is the want of competent teachers; and the position is indisputable, that without able and well trained teachers no system of instruction can be considered complete. Much may be accomplished by a judicious choice of the subjects of study, and by plans of instruction divested of every thing which is superfluous; but to carry these plans into successful execution, talents and experience are indispensable, and if they are wanting both time and money are misapplied, and the effort which is put forth falls short of its proper and legitimate

effects.

In other countries seminaries for the education of teachers have been deemed an essential part of the system of primary instruction. M. Cousin, in the year 1832, in his report "on the condition of public instruction in some of the provinces of Germany" asserts that "primary instruction is wholly dependent on the primary normal schools," or schools for the education of teachers; and he observes that in France, thirty have been established, "of which twenty are in full operation" forming in each department a great focus of illumination for

the people."

In Prussia, the system of public instruction had an earlier origin, and results far more extensive and beneficial have been obtained. It is more complete in its organization, and more efficient in its practical operation than any similar system, of which we have any knowledge. In the year 1833 that Kingdom had forty-two seminaries for teachers with more than two thousand students, from eight to nine hundred of whom were annually furnished for the primary schools. The vocation of instructor is a public office as woll as a profession. He receives his education almost wholly at the expence of the State; his qualifications to teach are determined by a Board deriving its authority from the Government; his salary cannot beless than a certain sum, which is augmented as occasion requires, and the local authorities are enjoined to raise it as high as possible above the prescribed minimum. Finally, when through age or infirmity he becomes incapable of discharging his duties, he is allowed to retire with a pension for his support. These provisions of law have made the business of teaching highly respectable, and have secured for the primary schools of Prussia a body of men eminently qualified to fulfil the elevated trust confided to them.

It must be confessed that the efficiency of these measures is derived in a great degree from their compulsory character, and that they could only be carried into complete execution by a government having the entire control of the system of public instruction. It was apprehended that the subjection of the system to the discretion of the persons on whose contributions the schools depend for their support, might frequently thwart the government in its measures, and sometimes wholly defeat them. For this reason, purents are required by law to send their children to school, and they are punish-able by fine if they refuse or neglect to do so. For the same reason the principle part of the expenditures necessary to comply with the law in maintaining the primary schools, paying the salaries of teachers, providing school houses with their appurtenances, furniture, books, maps, and apparatus, is paid by property and income in proportion respectively to the amount of each in value, and those on whose contributions the maintainance of the schools depends, are neither allowed to judge of the extent of the provision required for the objects referred to, nor to have any voice in the selection of their teachers, those provided by the state being employed under the direction of an authority independent of them. features of the system are in a great degree irreconcilable with the spirit of our political institutions; but the committee believe that public opinion may be stimulated to a just conception of the importance, of making more ample provision for teachers, and thus supplying a deficiency, apart from which our system of popular instruction would be in equal inefficiency, as it is now superior in extent, in proportion to our population, to any other in the world.

Common school instruction in this state existed a long time upon the foundation of voluntary private contribution, before it was recognized and reduced to a system by public law. The result was to put in requisition the services of large numbers of persons who by long practice had been familiar with the business of teaching; and it is doubtless to be ascribed in no inconsiderable degree to this circumstance, that the necessity of making some provision for the education of teachers was not felt at the time the common school system was established.

Although this important subject had been repeatedly recommended to the attention of the Legislature by several of the Governors of this state, no provision was made by law in conformity to these recommendations, until the year 1827, when an act was passed adding to the capital of the Literature Fund the sum of one hundred and fifty thousand dollars, for the avowed object of promoting the education of teachers. But as the annual income of the Literature Fund has been heretofore distributed among the academics in the tate, without any restriction as to its application, it has in very few instances been devoted to the object in view of the law. Po this remark there are however several exceptions. The St. Lawrence, Oxford and Canandaigus academies have each established a course of lectures and exercises for the preparation of teachers, and such has been their success with a very limited contribution from the public treasury that an augmentation of the means of some of the academies is obviously all that is necessary to render such a course of instruction of inestimable value to the common schools of the state: In the neighbourhood of the St. Lawrence academy, the school dis-tricts are almost entirely supplied with teachers educated at that institution; and so beneficial has been the effect of introducing into the schools a better class of instructors, and more efficient plans of instruction, that the compensation of teachers is already, on an average, from thirty to forty dollars per annum more than it was before the academy had established a department for training them. The influence of these measures upon the public opinion of a small section of the country furnishes the strongest ground of assurance that it is necessary only to extend them in order to produce the same results on a more extensive scale.

It may not be improper to remark that the question of creating separate seminaries for the education of teachers has been repeatedly before the Legislature, but after full examination it was deemed more advantageous to engraft upon the existing academics departments of instruction for the purpose.

This may now be considered the settled policy of the State, and it will therefore be necessary only to inquire in what manner it can best be carried out to its results.

The Act of the 2nd May, 1834, authorises the Regents of the University to distribute the excess of the annual revenue of the Literature fund, or portions of it, over the sum of twelve thousand dollars, "if they shall deem it expedient, to the academies subject to their visitation, or a portion of them" o be expended in educating teachers of common schools; & it is made the duty of the trustees of academies to which any distribution of money shall be made, to apply it to the purpose specified "in such manner and under such regulations as said Regents shall prescribe."

The Regents are therefore entrusted with an unlimited control over such portions of the excess of the revenue of the Literature fund as they may think proper to appropriate to the purposes of the law last quoted; and as this is the first instance in which the contributions of the State to this great object have been accompanied with such a delegation of authority as is necessary to ensure its execution, it appears to the committee that a most important and delicate duty is devolved on them. The first step towards the execution of the plan adopted by the Legislature for the education of common school teachers is now to be taken. We are to lay the foundations of a system which may become an essential part of our plan of common school instruction, and which if properly organized may be the means of remedying existing deficiencies and elevating the standard of education to a grade in some degree commensurate with the high responsibilities which the constitution of this State has cast upon its citizens as incidents of the condition of citizenship. If we are successful, the foundations which will now be laid may hereafter be made to sustain a system adequate to the wants of all the common schools in the State. The point therefore which of all others the committee deem it indispensable to secure, is efficiency in the departments to be created. The funds at the disposal of the Regents being limited in amount, the aim of the committee has been to devise such measures as on a limit-ed scale would be most efficient. The sum in the treasury ed scale would be most efficient. applicable to the object expressed in the resolution is ten thousund and forty dollars and seventy-six cents; and the annual excess of the revenue of the Literature Fund, after distributing twelve thousand dollars to the academies, as required by the Act of the 22nd April, 1834, will amount to about three thousand five hundred dollars. The sum first mentioned is now applicable to the establishment of departments of instruction for common school teachers in the existing academies; but it is obviously too small to admit of a general distribution among them; and if it were adequate to the establishment of a department in each, the annual surplus of revenue applicable to the support of those departments would be too small, when divided among so great a number, to be of any practical addity. It has appeared indispensable to the committee therefore that the academies selected for the purpose should be limited in number. If departments can be established in which even a small number of teachers can be well prepared for the business of instruction, the good effects which would result from the improvements they would introdire into the common schools, would be likely to become so manifest as to lead to more enlarged provisions for the purposo of extending the benefits of the system. The committee therefore, as they have already observed, deem it of the

utmost importance that the department to be organized should be put on such a footing as to ensure efficiency in the extent of the means at the disposal of the Regents: that the end proposed should be to prepare a limited number of well educated teachers, rather than a large number with inferior qualifications. This end must necessarily be attained by selecting for the purpose a limited number of academies. At the same time the public convenience would demand that the number should not be too limited, but that one should be within the reach of every county in the State: although it is manifest that the efficiency of the departments will be in the ratio of the sum expended on their organization, and the amount annually contributed to their support. The least number which could perhaps be selected consistently with the general convenience, would be eight, or one in each Senate District; and the committee are of opinion that eight might be maintained without putting at hazard the great object of rendering them equal to the preparation of well instructed and competent tea-

The committee are aware that the establishment of these departments on the most favorable footing will not remove every difficulty; that there are others inherent in our system of common school instruction which may not be so easily obviated. The inhabitants of school districts have, through the trustees who are elected by their suffrages, the selection of their teacher and the regulation of his wages; and if the state were to prepare a sufficient number of teachers to supply all the districts, there would be no absolute certainty that they would find employment. There would be no probability that they would find, after devoting the best part of their lives to the business of teaching, a provision for them in their old age.

the business of teaching, a provision for them in their old age.

With regard to the first difficulty referred to, it may be safely calculated that the people will, when the good effects of improved modes of teaching are brought directly under their observation, make more liberal contributions to the support of

competent teachers.

With regard to the second, there is good reason to doubt, so far as the public is concerned, whether in the end a provision of law which holds out to any class of men the assurance that they will at all events be employed or supported for life, would be salutary in its effects. The greatest stimulus to improvement is unquestionably the necessity of arduous and unceasing exertion. Places of trust in which the incumbents are permanent, are not, as a general rule, those which are best administered. The efforts of the incumbents are most likely to be fresh and vigorous when they are in danger of being displaced by other individuals of superior qualifications, and when the tenure of office is made to depend on the ability with which its duties are discharged. If therefore the compensation of teachers were equal to that of other employments, the public end would probably be as well answered as by securing to them

an unfailing provision for life.

It would be extremely difficult, even if it were desirable under our institutions, to make the system of public instruction compulsory by subjecting it wholly to the regulation of the government; and it must be admitted that this is the feature of the Prussian system from which it derives its principal efficiency. The occupation of teachers must therefore necessarily be with us somewhat less certain; and it will require stronger persuasives to induce individuals of competent abilities to enter into and pursue it as a permanent vocation. This is an inconvenience for which there is not perhaps a perfect remedy, although it is conceived that it may be in a great degree obviated by the adoption of measures which will secure

to them a better compensation for their services.

Much may undoubtedly be done by providing for the education of a certain number of individuals, and by sending them abroad among the common schools to raise, by the exhibition of the improved methods which they have gained, the standard of education to the level of their own superiority over the

great mass of common school teachers. In this manner the inhabitants of school districts may, and doubtless will; in most cases, be led to make more enlarged and permanent provision for those to whom the instruction of their children is entrusted; and to the adequacy of these provisions the standard of education will acquire and maintain a uniform and certain

The committee then would recommend that one academy in each senate district be selected for the purpose in view, and that the selection be made from those which from their endowments and literary character are most capable of accomplishing it. The object to be attained is public, and the interest of one academy or another cannot properly be taken into consideration with a view to influence the choice which may be made from among them.

Should this recommendation be adopted by the Regents it

will remain only to consider :-

1st. On what principle the funds applicable to the establishment or organization of the departments shall be apportioned to the academies which may be selected for the purpose.

2nd. On what principle and to what extent the annual excess of the revenue of the Literature Fund applicable, to the support of the departments shall be apportioned to the academies in which they may be established.

3rd. What shall be the organization of the departments.

1st. As to the course (or subjects) of study.

2nd. As to the duration of the course.

3rd. As to the necessary books apparatus; -and

4th. What evidence of qualification to teach shall be given to the individuals who may be trained in the departments.

These subjects will now be considered in the order in which they are stated.

Ist. On what principle the funds applicable to the establishment or organization of the departments shall be apportioned to the academies which may be selected for the purpose.

As a general remark, it may be observed in this case as it has been already said in relation to the selection of the academies, that the object in view is public, and that the only legitimate consideration is in what manner it can best be at-Under this view of the subject no embarrassment can arise as to the question of allowing the academies which may be selected to participate in ratio of their respective wants, in the funds to be applied. The departments should all be placed in their organization on the same footing; they should lave the same apparatus, and be provided in all respects with equal facilities for commencing the contemplated course of instruction. It may, and doubtless will, happen that some of the academies will be found in better condition than others for commencing such a course, and to render the departments equally efficient it may be necessary to apportion the funds applicable to their establishment in unequal sums among the academies selected. It will therefore be advisable, after fixing upon the apparatus, maps, &c. which may be required, to ascertain how far the academies are provided with them, and edistribute the funds with reference to the deficiencies which may be found to exist.

The funds now in the treasury applicable to the object amount to \$10,040 76; but of this sum the committee are of opinion that not more than \$4000 should be applied to the stablishment of the departments. The sum of \$500 for each will, it is believed be adequate to the object in most cases; and as some of the academies may not require so large an amount, a surplus may remain and be applied to deficiencies in others or carried to the fund applicable to the annual support of the departments.

If the sum of \$4000 only be appropriated to the establishment of the departments, a surplus of about \$6000 will be left for future uses; and for reasons which will be hereafter explained, it may be important to keep on hand an annual sur-

plus to meet any deficiency in the revenue of the Literature Fund in succeeding years.

2nd. On what principle and to what extent the annual excess of the revenue of the Literature Fund applicable to the support of the departments shall be apportioned to the academies in which they may be established:

If the departments are to be maintained at all, it is necessary that there should be apportioned annually to each of the academies in which they shall be established, in addition to the amount to which these academies will be entitled under the general annual apportionment, a sum as nearly adequate as possible to the support of a competent instructor. The largest sum which can be regularly apportioned to each is four hundred dollars: and it is conceived that each of the academies referred to should receive that sum annually, without re-

ference to the number of pupils in training.

With such a permanent provision the object of the academies will be to render the departments efficient, rather than to secure the greatest possible number of pupils. The rule suggested ought not to be carried to an extreme; and if in the course of time any academy should be found, without good cause, to have failed in promoting the object in view to a reaaonable extent, another should be selected and substituted for it, so that the public munificence may not be expended in If after appropriating to each of the academies the sum above mentioned, a further sum could in any year be safely apportioned to them, the most equitable rule would seem to be to distribute it in proportion to the whole number of pupils in training for common school teachers, and to the aggregate length of time in such year during which they shall have been so trained according to the prescribed plan, It is on a similar principle that the greater part of the revenue of the Literature Fund is now distributed under the general law: and after securing a proper degree of efficiency in the departments to be created, there can be no reason to apprehend inconvenience from stimulating the efforts of those who have the direction of the academies, to augment the number of their pupils, and thus to extend as widely as possible the benefits of the system.

The proposed sum to be apportioned annually as above suggested for the support of instructors in the eight departments is three thousand two hundred dollars; and this is about as much as can be regularly applied to the object. The capital of the Literature Fund amounts to \$262,573 10; and the annual income will not fall short of \$15,500. Of the last mentioned sum \$12,000 must be apportioned to all the academies subject to the visitation of the Regents pursuant to the Act of 22nd April, 1834, to be expended under the direction of the trustees towards paying the salaries of tutors.

Only \$3,500 will therefore remain to be applied annually to the support of the departments for the instruction of common school teachers.

It is true that there will be on hand, after applying \$4000 to the organization of those departments, about \$6000 applicable to their support. But it is to be considered that a large portion of the capital of the Literature Fund consists of bonds and mortgages on which the interest is not always regularly paid, and it is desirable to keep in the treasury a surplus of a few thousand dollars, to meet in future years any deficiency which may grow out of such irregular payment of interest, for it is of the greatest importance that the acadamies in which the departments are established should never be disappointed in the anticipated annual contribution to the support of the instructors of those departments. By the arrangement suggested the contribution will be rendered certain, and should it be deemed safe at any future time to distribute a portion of the surplus on hand, after paying out three thousand two hundred dollars for the support of instructors, such distribution might be made on the principle before suggested, and the amount

Р

so distributed applied to the purchase of books, or to such

other objects as the Regents might designate.

It is also to be observed that under the act of 22d April 1834 applications may be made from other academies for a portion of the excess of the revenue of the find, for the purchase of philosiphical and chemical apparatus &c. And although the Regents have by that act a discretion as to making any application of such excess to the object referred to, it may be desirable in some cases to have funds at command for the purpose. Far this reason also it is important that the whole surplus on hand should not be expended.

3rd. What shall be the organization of the departments.

I. As to the course (or subjects) of Study.

In determining the course of study, the committee have thought it proper to designate as subjects to be taught all which they deem indispensable to be known by a first rate

teacher of a common school.

In fixing a standard of requirement in any pursuit, it is always desirable to raise it as high as possible; for the qualifications of those who follow it will incline to range below and not above the prescribed standard. In this case as the principal object is to influence public opinion by exhibiting the advantages of that practical skill which may be gained by proper training, care should be taken that those who are relied on to exert the influence referred to should be made fully adequate to the task.

In select schools in our cities and large schools, qualifications of a still higher grade than those in contemplation for common school teachers, may be required: but as it is not intended with regard to the latter to dispense with any essential branch, so it is not intended to exact any thing which is not indispensable. If the subjects which they will now proceed to state in their proper order, be taught in such a manner and to such an extent as to be thoroughly understood by the pupils, the committee feel confident that the course will be found equal to the object to be obtained.

It is proper to premise however that no individual should be admitted to the teacher's department until he shall have passed such an examination as is required by the following extract from the ordinance of the Regents of the University to entitle students to be considered scholars in the higher bran-

ches of English Education:

"No students in any such academy shall be considered scholars in the higher branches of English education within the meaning of this ordinance, until they shall, on examination duly made, be found to have attained to such proficiency in the arts of reading and writing, and to have acquired such knowledge of the elementary rules or operations of arithmetic, commonly called notation, addition, subtraction, multiplication and division, as well in their compound as in their simple forms, and as well in vulgar and decimal fractions as in whole numbers, together with such knowledge of the parts of arithmetic commonly called reduction, practice, the single rule of three direct, and simple interest, as is usually acquired in the medium or average grade of common schools in this State. and until they shall also on such examination be found to have studied so much of English grammar as to be able to parse correctly any common prose sentence in the English language and to render into good English the common examples of bad grammar given in Murray's or some other like grammatical exercises, and shall also have studied in the ordinary way some book or treatise in geography equal in extent to the duodecime edition of Moore's, Cumming's, Woodbridge's, or Willett's geography, as now in ordinary use."

SUDJECTS OF STUDY.

1. The English language.

2. Writing and drawing.

3. Arithmetic, mental and written: and book-keeping.

4. Geography and general history combined.

5. The history of the United States.

6. Geometry, Trigonometry, Mensuration and Surveying.7. Natural Philosophy and the Elements of Astronomy.

8. Chemistry and Mineralogy.

9. The Constitution of the United States and Constitution of the State of New York.

10. Select parts of the revised Statutes, and the duties of public officers.

11. Moral and intellectual philosophy.

12. The principles of teaching.

These subjects are not intended to exclude others should the academies think proper to introduce them. The Regents should however, insist that the foregoing be thoroughly studied, and that they be not allowed to give way in any degree to others; nor should any others be required in order to entitle the pupils to the prescribed evidence of qualification.

The committee will now proceed to state some of the most important suggestions which occur to them in relation to the several subjects of study enumerated; not for the purpose of pointing out in every case the whole extent to which the course is expected to be carried, but to designate certain particulars

which they deem most worthy of attention.

The English language.—This branch constitutes the most extensive and perhaps the most important field of instruction for a teacher. Unless the pupil is thoroughy master of his own language, he cannot be a competent instructer. The utmost pains should therefore be taken to give him an accurate knowledge of it; and the proper process of instruction is that which it will be his business to employ in giving instruction to others.

He should be made familiar with the best methods of teaching the alphabet and the steps by which children can be conducted with the greatest facility through the first lessons which the receive. Rules for spelling should also be learned, and their application shewn, particularly in the orthography of compound and derivative words, the plurals of nouns, the inflexions of verbs and the comparison of adjectives; and in these exercises black boards or slates should be used, so that the eye as well as the ear may be made instrumental to the correction of errors.

In reading, the lessons should embrace a just enunciation of sounds as well as words, and a careful regard to distinctness of pronunciation, as well as a proper fulness and modulation of the voice. A clear and correct enunciation is of the highest importance to a teacher whose defects are almost certain to be communicated to his pupils; and it is therefore indispensable that reading with criticisms in orthocpy, accent, emphasis, cadence and punctuation, should constitute a part of the exer-

cises in this branch of study:

The pupil should not only be practised in reading the English language with accuracy and distinctness, but he should be taught to write it correctly. He should be made thoroughly acquainted with its structure and its idiomatic peculiarities. In addition to the ordinary routine of parsing, the principles of universal grammar should be critically discussed, the structure and philosophy of language, should be made the subject of a minute investigation, the offices which are performed by the different words of a sentence, and the rules by which their relations to each other are governed, should be explained until the whole subject is thoroughly understood.

Original composition, and declamatian from the writings of chaste authors, are also an essential part of the course: the first for the purpose of facilitating a correct understanding of the laws of language and the acquisition of a correct style, and the second for the purpose of cultivating a distinct articulation as well as a refined taste. In both, the utmost care should be taken to select subjects on a level with the capacity of the pupil, so that his interest may be kept alive and the mind not tasked beyond its powers; and he should be perpe-

mally cautioned against the error of an affected or artificial manner.Nature is always simple, and for that reason always effective

In the Kinderhook Academy, in which a department for the education of teachers has been recently introduced, a complete course of instruction in the English language has been adopted, embracing the following details:

1. Orthography. Sounds of Letters. Rules for spelling. Spel-

ling Words of doubtful or various orthography.

2. Pronunciation.

3. Etymology. Prefixes. Terminations. Derivations & definitions. Synonymes. Inflexions.

4. Syntax.

5. Prosody, in all its parts.

6. Punctuation. Use of Capitals. Abbreviations.

7. Reading.

8. Composition. Weekly exercises-topics selected with reference to the business of teaching.

9. Extemporaneous speaking—subjects connected with

the business of teaching.

10. Rhetoric. So much of Blan's rhetoric (Mills' edition) as treats of language.

11. History of the language as contained in Johnson's and

Walker's prefaces to their large dictionaries.

Although the committee have not in the course of study designated Rhetoric as a distant branch, they consider it advisable that all the academies in which departments are established should introduce so much as is contained in the above synopsis of the course in the Kinderhook Academy.

Writing and drawing.—Every pupil must be able, before he leaves the institution to write a good hand. For this purs pose he should be made to practice from the beginning of the course, under the personal direction of the tutors, with the best writing materials, and with proper attention to the positions of the body, arm and hand.

For beginners, slates may be used with great advantage, as

suggested in Taylor's District School.

Much may be gained by reducing to writing parts of the prescribed course, if done with attention to the manner in which it is executed: but in all these exercises the tutors should take care to check any appearance of negligence or By a careful attention from the outset to the correct fermation of the letters, and to those circumstances which must concur to enable one to write with freedom, a good style of writing may be acquired without the least difficulty; but it will be almost a hopeless attempt if had habits are contracted before the hand writing is completely formed.

Drawing is only expected to be taught so far as it may be necessary for the purpose of mapping. In learning geograply the pupils should be required to delineate on the black beard the outlines of the general divisions of the curth, the different countries, occeans, rivers, &c., and they should afterwards be practised in similar delineations, executed with care, on paper. In geometry, trigonometry, mensuration, and surveying, linear drawing will be indispensable, and the tutors should study to convert the exercises to the best use.

Arithmetic.—In this branch the pupil must be thoroughly instructed in the four ground rules of arithmetic, as well in their compound as in their simple forms, and as well in vulgar & in decimal fraction as in whole numbers; the single rule of three together with reduction, practice, interest, fellowship, barter, &c. so that the course shall be at least equal in extent to that contained in Daboll's arithmetic. In all the operations performed by the pupils black boards should be used for demonstrations and illustrations, and every lesson should be explained until the pupil comprehends it thoroughly. In nothing is the dependence of one step on another so complete as in the science of numbers; and if the pupil leaves behind him any thing which has described thing which he does not distinctly understand, his progress must always be difficult, and the result of his calculations uncertain. In facilitating a clear perception of abstract num-

bers and quantities, visible illustrations should be liberally employed. Mental aritmetic may also be advantageously resorted to, and indeed may be deemed indispensable as a discipline to the mind. To all these exercises a practical direction should as far as possible be given by selecting as subjects for practice those familiar operations of business with which the pupils must be conversant in after life. the mind may be strengthened by the same process which is storing it with useful information.

A knowledge of arithmetic enters into so many of the common operations of life that it is not only an essential part of the most ordinary education, but it should be so thorough that an application of the rules of the science may be made with ease and certainty. As a mental discipline also the study is of great value; and it should be so conducted as to secure all the benefits which it is capable of producing. The aim should be to make it an exercise of the reasoning faculty, and not, as it has usually been, a mere exertion of memory. A facility in performing the operations of arithmetic may be acquired without a distinct understanding of its principles; but to render sure and easy an advance into the branches of mathematics, for which it is a necessary preparation, a clear and familiar knowledge of principles is indispensable.

Book-Keeping. A simple course of Book-keeping should be taught in every common school, and it is therefore an es-sential part of the course of instruction for a teacher.

The method pursued in the St. Lawrence Academy is perhaps as concise and as likely to be successful as any that could be devised. The system contained in the first part of Preston's Book-keeping is taken as a guide. "The pupil is first taught to rule his book, and is then required to carry his slate to the recitation room ruled in the same manner. For several of the first lessons examples of accounts are taken where the articles delivered are charged directly in the individual's account. The teacher then reads the several charges, which the scholar copies on his slate, and the scholar is required, as an exercise in writing, to transfer the account to his book. The teacher then proceeds with the charges in the short specimen of day-book entries, giving as many at one lesson as the scholar will be able to transfer with care in the allotted time to his day-book. When the several charges are copied into the scholar's day-book, he is required to post his book.

In this manner a sufficient knowledge of book-keeping for ordinary purposes may be readily acquired, and the student may improve as much in permanship as though he had passed

his whole time in writing aften a copy.

Geography and General History .- Geography, to be profitably studied, must be continually explained by maps and the globe. Neither the artificial nor the natural divisions of the earth, nor the proportions which its several parts bear to each other, and to its whole surface, can be readily compre-hended without, having recourse to visible demonstrations. To young pupils there is a difficulty, even with the aid of maps and globes, 'in communicating a distinct conception of the positive or relative magnitude of different countries, or the remoteness of different places from each other. Much depends on minute and patient explanation, especially in that part of geography which treats of the physical divisions of the earth, including continents, peninsulas, islands, oceans, lakes, rivers, mountains, &c.

Physical geography, or that part of the description of the earth, which treats of its natural features, is of great interest and importance; the more so as with it are necessarily interwoven matters which in strictness belong to the department of astronomy. The figure and motions of the earth; the causes of the variation in the length of the days; the seasons; the principles upon which the tropics and polar circles are drawn at their respective distances from the equator; the general features of the earth's surface, embracing a knowledge of the influence of elevation above the sea upon temperature, climate, productions, &c.; a description of volcanoes and earthquakes; the various theories relative to the causes of eruptions and shocks; the atmosphere, winds and their agency in the distribution of heat and moisture, embracing the subject of rain, fogs, dew, hail, &c.; the theories relative to tides; a description of the most remarkable currents in the occean; and all those natural causes by which the condition of the various parts of the earth are influenced, should be briefly, but clearly and carefully explained.

In this branch will also be included a general knowledge of the geological structure of particular regions and their most remarkable productions, animal, mineral and vegetable. In the St. Lawrence academy the whole subject of physical geography is systematically and critically discussed; commencing with the "history of the science and the adaptation of the objects it embraces to awaken interest by their endless diversity," and running through the details of the science in a complete course of seventeen lectures.

With a description of the different countries of the earth, some account of their inhabitants, forms of government and religion, and their general statistics, must also be united. Nor will this suffice to render the view complete. We must not be content to see the earth and its possessors as they are. We must look also at what they have been, through the lights of history. A general idea of the progress of each country from infancy to age, from weakness to power, or from dominion to servitude, should be acquired; their most distinguished men, and some of the most remarkable events which have accompanied their growth and decay, should be pointed out, and a cursory survey of the whole earth in its relations both of time and space, should be taken by the pupil. The undertaking may seem arduous, but it may be executed under judicious direction with much less time than would be supposed necessary to accomplish it. The course of history should be equal to that contained in Tytler's Elements of General History, ancient and modern.

The course in geography should not be less in extent than that contained in Woodbridge and Willard, the volume in general use in the common schools. The course should be accompanied with copious illustrations by lectures and by reference to larger works, so that the pupils may be made familiar with the sources from which they may be able to enrich the instruction they themselves give when may they be-

come instructers.

History of the United States .- The History of the United States is so essential, that it may justly be treated as a distinct branch of study. In this a mere outline is not suf-The pupil should understand, in all its details, the history of his own country. He should begin with its discovery, and first settlement, and trace it through the various stages of its colonial dependence to its emancipation from the control of the mother country. In the character of the men who stood foremost in the contest for independence, the measures of provocation by which they were roused to resistance, the trials through which they passed, the reverses which they sustained, the triumphs which they achieved, and the great political principles which were vindicated by them, these are lessons of instruction not inferior in value to any which can be drawn from the history of any other age or people; and if the mind of every youth can be made familiar with them, and his feelings imbued with the moral which they contain, no better security can be provided against the degeneracy of that unconquerable spirit in which the foundations of our freedom were laid.

Geometry, Trigonometry, Mensuration, and Surveying.—
The committee regret that they cannot refer to any single

work which contains such a course on all these subjects as they deem necessary. The works on each separate subject are in general too extensive for the purpose in view. The course should be altogether practical in its character, and should be divested of every thing superfluous. The principles of geometry and trigonometry, should be so thoroughly understood that their application may be made with facility. The pupils should be able to measure solids as well as surfaces with ease; and they should be made as well acquainted with the rules of surveying and the intruments used for the purpose as to be able to ascertain heights and distances, and determine the contents of a given piece of land with readiness and precision.

As the Committee are unable to refer to any modern work precisely adapted to the course required on all these subjects, they propose to leave the extent of the course at present to the academies, with the single remark that each pupil should have such an acquaintance with each of the specified sub-

jects as is necessary for every practical purpose.

Natural Philosophy and the Elements of Astronomy .-The course in natural philosophy will embrace a clear understanding of the several properties of bodies, gravitation, the laws of motion, simple and compound, the mechanical powers, the mechanical properties of fluids, the mechanical properties of air, the transmission of sound, and optics. Each academy should be furnished with a complete philosophical apparatus, and all the subjects should be taught with full illustrations. A practical direction should, as far as possible, be given to the science, by teaching the proper application of its laws to useful purposes. It is from this course that those who intend to devote themselves to mechanical pursuits may reap the greatest benefits; and it is of the utmost importance to introduce it into the common schools. The first step towards the accomplishment of this object is to prepare instructers competent to teach it; and it is for this reason that it should constitute a particular object of attention.

In connection with natural philosophy there should be a brief course of instruction in the principles of astronomy. The nature and causes of the earth's motions, the planets and their motions, their size and positions in relation to the earth and the sun, their satellites, the cause of eclipses, the variations of the seasons, the length of the days, the causes of heat in summer, &c., should all be made familiar to the pupils. Each academy should be furnished with an orrery, a moveable planisphere, a tide-dial, and a set of globes; and nothing which is capable of being illustrated by apparatus should be taught without illustration.

The same apparatus may be employed for the illustration of subjects connected with physical geography, between which and that part of astronomy which treats of the earth's motions and the effects consequent upon them, there is a very close connexion. In pointing out some of the subjects which belong to the department of physical geography, some of the foregoing have been already enumerated, as the motions of the earth, the seasons, tides, &c. It is indeed not always easy, nor is it always necessary, to assign to each science its exact boundaries: so far as instruction is concerned, the separation of one from another is of no practical importance, so that all the subjects are clearly understood.

Chemistry and Mineralogy.—The course in mineralogy and chemistry is not expected to be carried far. It is intended that each academy shall have a small cabinet of minerals and the pupils should be able to distinguish the different specimens which should be well characterised, and to understand clearly their composition and distinctive properties. Chemistry should be taught in such a manner as to elucidate these distinctions in the mineral kingdom, and to

give a correct knowledge of the properties of the various hodies and substances which are in most common use; and its application to agriculture and the useful arts should be made a prominent subject of instruction. Mineralogy is usually a preliminary of the science of geology; but it is not expected that the latter will constitute a subject of study, excepting so far as is connected with physical geography, which will necessarily embrace some account of the struc-ture of the earth, with a description of the principal classes of rocks and the mineral and metallic substances with which they are found united. One of the most salutary effects of combining with elementary education some knowledge of the foregoing subjects is to guard against the impositions so frequently practised upon the ignorance of the uninformed in the discovery of some unknown and often worthless substance to which an imaginary value is assigned. It is exceedingly desirable to spread correct notions concerning lime-stone, gypsum, and coal, and the ores of iron, lead, copper, &c. The modes of verifying their composition should he made familiar; and it should be understood in what proportions quantity should be combined with quality in order to reward labor.

Those experiments in chemistry, which are merely calculated to produce brilliant effects without subserving a useful purpose should be laid aside, and others of a more practical value substituted for them. The course will necessarily be limited, and it should possess in utility what it lacks in ex-

ent.

In the foregoing branches there may, and doubtless will be felt the want of proper class books, those in general use not being so directly adapted as is desirable to teach the ap-The complication of the sciences to practical purposes. mittee trust that the organization of the departments may lead to the preparation of suitable books on all the subjects in respect to which they may be wanting; and indeed they are encouraged to believe that a work on chemistry will appear at no distant time, the whole aim of which will be to shew the application of the science to the useful arts. these deficiencies shall be supplied, the Regents must trust to the academies to extract from the existing works all which they may deem best suited to the objects of the prescribed course. Nothing perhaps can be better calculated to accomplish these objects than the preparation of lectures on the different subjects of study, taking care to illustrate every thing which is taught by demonstrations and experiments. So far which is taught by demonstrations and experiments. as instruction is carried it should be thorough and clearly un-

The constitution of the United States, and the constitution of the State of New York .- Every citizen, in order to exercise discreetly and intelligently the right of suffrage, upon which questions of constitutional power are frequently dependent, must understand the provisions of the constitution of the United States and the constitution of his own State; and, there cannot perhaps be a better mode of attaining the object than to require each pupil to make a brief analysis of both. With regard to the constitution of the United States, he should be required to specify the qualifications and disabilities of the members of the Senate and House of Representatives, the rights and privileges of each house, the powers of congress, the powers prohibited and reserved to the states, the limitations of the legislative, judicial, and executive authorities, and the manner in which the various officers of the government are respectively chosen or appointed. In short, all the provisions of the original instrument and of the successive amendments which have by virtue of the proper ratifications by the states, become a part of it, should be tho-roughly understood by the pupil. In like manner, he should know the qualifications of the various officers of government in his own state, the several divisions of authority provided by the constitution; the organization of the legislative, judi-

cial, and executive departments; the powers respectfully allotted to them; the rights of the citizens; and for the purpose of impressing strongly on the mind these fundamental principles and provisions of law which every citizen owes it to the public and himself to understand, the pupils should be required to make an analysis of the constitution of New York, which should be carefully examined by the instructer. in pointing out the principal and most important provisions of both instruments so far as they confer power or restrain its exercise, the reasons on which the grant in the one case or the prohibition in the other is founded, should be clearly explained. Questions of disputed right growing out of the provisions of either instrument had better be passed by; but it they are made a subject of comment, the arguments on both sides should be fairly stated. Schools for popular instruction depart from the end of their institution when they are made subservient to the propagation of particular tenets on any subject which is open to a diversity of opinion. In every matter which enters of necessity into the proposed plan, it should be the aim of the instructor to furnish his pupils with all the materials for forming unprejudiced opinions, but to leave their minds free from all bias.

Select parts of the Revised Statutes, and duties of public officers.—A compendious work on the duties of public officers waspublished a few years since at Utica, and it embraces all that the committee deem requisite under this head. It is hardly necessary to add that under a form of government which throws open to all its citizens the avenues to political power, it is important that all should have, in early life, a general knowledge of the duties which they may be called on to discharge, or over the faithful performance of which by others it will be their province, in common with their fel-

low citizens, to exercise a constant supervision.

Appended to the work referred to, there is a short treatise on the domestic relations which may properly be considered as an exposition of the eighth chapter of the second part of the Revised statutes, and is all that is necessary on this particular subject. There is also an article on wills, and another on executors and administrators. It is to be regretted that a work containing the most important principles of civil and criminal jurisprudence, cannot now be referred to as proper to be used for the proposed course. Until such a one shall be prepared, the principals of the academies should be charged with the duty of extracting from the Revised statutes such portions as will shew the particulars necessary to give validity to conveyances, the time limited for commencing suits, the rules relative to fraudulent conveyances and contracts as to goods, chattels, and things in action, and the offences to which penalties are annexed, as contained in chapter 3rd of the 2nd part; Title 2nd chapter 7 of the 2nd part; chapter 4th of the 3rd part, and chapter 1st of the 4th part. should be to extract only such portions of these, chapters as contain some essential fact or principle without which the responsibilities or the rights of the parties interested in the

subject matter would not clearly apprehend.

Moral and intellectual Philosophy.—The laws which should govern all men, both with respect to the investigation of truth and to the discharge of the duties resulting from the relations which they bear to each other and to the author of their existence should be familiar to every teacher, particularly as his own moral character is subject to a periodical examination by the inspectors. A knowledge of these laws is indispensable to those whose province it will be to watch over the developement of the moral and intellectual faculties, and direct them to their proper objects. The study itself is not only valuable as a discipline to the mind, but as a means of acquiring an influence over the minds of others. Although a facility for distinguishing the shades of character which exist in those with whom we are brought into contact, and thus ascertaining how far and how readily they are likely to be

actuated by particular motives, can only be gained by continued experience; our progress may be aided by attending to the principles which enter into the mental constitution of all mankind.

Dr. Abercrombie's treatise entitled "Inquiries concerning the intellectual powers and the investigation of truth," is well adapted to give a clear and correct conception of that part of the subject; and the five firsts books of Paleys" Principles of Moral and Political Philosophy," will suffice for the other part of the course. In general, the subject matter of the latter is more practical, and better calculated to delineate with accuracy "the offices of domestic life" than most of the popular treatises on the same subject; and it has an advantage over them in giving an explanation of some of the obligations resulting from the rights of property, and from contracts with regard to its transfer and use.

The political part of the work, or the sixth book, should not, for various reasons, be made a part of the course. Of these, it is perhaps only necessary to assign a single one,—the obvious objection of making the course too extended.

The family library edition of the former, and several school editions of the latter, have each appended to them a series of questions upon their respective contents for the examination of students.

The principles of teaching.—In this branch instruction must be thorough and copious. It must not be confined simply to the art of teaching, or the most successful methods of communicating knowledge, but it must embrace also those rules of moral government which are as necessary for the regulation of the conduct of the teacher as for the formation of the character of those who are committed to his care.

Although this branch of instruction is mentioned last in the order of subjects, it should in fact run through the whole course. All the other branches should be so taught as to be subservient to the great object of creating a facility for commucicating instruction to others. In teaching the principles of the art it would be desirable to make Hall's Lectures on school keeping a text book; and Abott's Teacher, Taylor's District school, and the Annals of Education, should be used as reading books for the double purpose of improvement in reading the English language, and for becoming familiar with the most improved modes of instruction and the best rules of school government. From the Annals select parts only would be chosen for the purpose.

The pupils in the departments should be practised in all that can devolve on a teacher. It is of the first importance that they should be made, each in turn, to conduct some part of the recitations, to prepare proper questions on the particular subject of study, and to illustrate it by explanations for the purpose of improving their colloquial powers, and thus giving them a facility for explaining whatever they may be required to teach in the future office of instructer. The tutor should then go over the whole ground after them, pointing out their errors or defects, and giving them credit for whatever may appear to merit commendation. In this manner the future teacher will readily acquire a facility for communicating instructiou, which is one of the highest elements.

In all these exercises the language of the pupils should be vatched and criticised, every want of perspicuity pointed out, and a rigid conformity to the true standards of etymology and pronunciation insisted on. At the same time everything artificial or affected in tone or manner should be studionsly avoided; and the pupils should be taught that elocution is always effective in proportion as it is natural and unconstrained.

It has been customary in the examination of teachers with a view to determine their qualifications to ascertain only whether they possess a proper knowledge of the subjects in which they are expected to give instruction. But although this is in

general the only object of inquiry, it is in fact a very erroneous criterion of their ability to teach. The possession of knowledge does not necessarily carry with it the faculty of communicating knowledge to others. It is for this reason that the best methods of imparting instruction should be made a subject of instruction to those who are preparing themselves for the business of teaching. They should know how to command the attention of their pupils, to communicate the results of their own researches and experience in the manner best calculated to make a lasting impression on the mind, to lead their pupils into the habit of examining for themselves instead of being directed at every step of their progress by their instructer, and thus to observe, investigate, and classify objects, to combine the fruits of their observation, and draw conclusions from the facts which they have obtained. Under such a system of instruction and exercise; the mind cannot fail to gain strength, and to acquire that salutary confidence in the result of its own operations which is the best safeguard against the prevalence of error, and against those impositions which are almost necessarily the fruit of imbibing opinions, without a rigid scrutiny into the nature of the foundations on which they rest.

In carrying into execution the plan of instruction about to be established, it should not be for a moment forgotten by those who are charged with this important task, that the object of education is not merely to amass the greatest possible amount of information, but at the same time to develope and discipline the intellectual and moral faculties. It is in van that the stores of knowledge are enlarged if the skill to employ them for useful purposes be not also acquired. At every step the mind should be taught to rely on the exercise of its own powers. The pupils should be required to assign ressons for every position assumed in their various studies, not harely with a view to give them a thorough comprehension of the subject, but for the purpose also of cultivating that habit of critical investigation which is unsatisfied until every part of the subject of inquiry is understood. The result of common school education in most cases is to burden the memory with facts and rules of which the proper practical application is but imperfectly comprehended. This defect is at war with the spirit of the age, which is to probe to its inmost depths every subject of knowledge and to connect the results of our inquiries to useful purposes. Practical usefulness is the great end of intellectual discipline; it should be kept steadily in view by the teacher, and he will soon learn that his lesson when its reason and its object are presented to the mind of his pupil, will arouse an interest which in the absence of this ful understanding of the subject, he would have labered in vain to excite.

In the present condition of our common schools much time is lost and labor misapplied by injudicious systems of instruction; they are fields for collecting facts and details rather than for disciplining the faculties. This radical error should be corrected. Pupils should be made to think for themselves instead of treasuring up merely the results of other men's thoughts. The great instrument of reform will be to make demonstration keep pace with knowledge. Nothing should be left unexplained; nor should any thing be allowed to rest on mere authority, excepting where from the nature of the subject, it admits of no other foundation.

Subjects which are susceptible of demonstration must however not be studied to the neglect of those which are not.

First principles, and certain classes of facts, are of such a nature that the mind can only take notice of them as such without being able to assign the reason of their existence.

Separately, they are proper subjects for the attention and memory; but not for the reasoning powers until they are considered in the relations which they bear to others. They are however the materials on which the mind is to be employed. Nor should it be forgotten that there are mental processes de-

pending wholly on an exercise of memory, which constitute a valuable intellectual discipline. In cultivating the reasoning powers the memory should also be strengthened by habitual exertion, and stored with useful facts. The mind cannot be brought into complete exercise without a systematic discipline of all its faculties.

To almost every species of instruction the inductive method may be applied to great advantage. Nature herself seems to teach that the observation of facts should precede inductions, and that general principles can only be deduced from particular facts. An intelligent instructer will know how to apply the rule and convert it to the most useful purposes.

In determining the proper organization of the departments the committee bave fully considered the question whether the studies and recitations should be distinct from the ordinary academic exercises; and although they are disposed to leave this in some degree to the discretion of the academies, yet they are decidedly of the opinion that convenience coincides with good policy, in requiring that pupils who are in a course, of training for teachers should be taught in connexion with the other students. So far as mental discipline is concerned both classes of pupils require the same mode of training, and to a certain extent the same studies will be pursued. Whenever certain extent the same studies will be pursued. the pecular duties of teachers are the subject of study and examination separate recitations will become necessary; and although an instructer is proposed to be maintained in each of the departments to be organized, this provision should not be deemed to preclude a division of labor, or to devolve on the individual thus supported the task of conducting the pupils in a course of preparation for teaching through all the studies required to be pursued. On the contrary it may be both convenient and profitable to assign recitations in different branches to different teachers, according to their peculiar fitness, and thus bring into the most efficient action the united skill of all. In this respect the Regents must rely on the principal of each academy to make such arrangements as to convert the intellectual force under his control and direction to the best possible use in furthering the great object in view.

The committee cannot forbear to add that the instructers in the academies with which the proposed departments may be connected should labor to impress on the minds of those who may be preparing themselves for the vocation of teaching a deep sense of the responsibility which belongs to it. is in truth no other in which a conscientious and discreet discharge of its appropriate duties can well produce more beneficial or lasting effects. It is from the conduct and precepts of the teacher that the minds committed to his guidance are destined to receive impressions which may accompany the individuals through life, and give a determining cast t) the character. In his demeanor they may read impressive lessons of moderation, forbearance, and self control; from his rules of government they may learn the value of firmness, justice and impartiality; or they may find in exhibitions of petulance, unsteadiness of purpose, and unjust distributions of favor, a license for the indulgence of their own prejudices and passions. Nothing is more vital to the successful government of the teacher and to the execution of his plans of instruction, han a steady self command. The most certain mode of bringng his own authority into contempt is to show that he is not his own master. The moral atmosphere of the school room will be pure or impure according to the conduct and character of him who presides over it. On his example will in no inconsiderable degree depend for good or evil the destiny of numbers whose influence will in turn be felt by the political society in the operations of which they are to take an active part. The teacher should be made to feel so sensibly the importance of his position that it may be continually present to his thoughts, and become the guide and rule of his actions. He should bear perpetually in mind that he is the centre of a little system, which, as time advances, is destined to spread

itself out and carry with it, for the benefit or injury of all which it reaches, the moral influences imparted by himself.

It is equally important that teachess should become acquainted with their own capabilities and inspired with the feeling that they may by their own industry raise their qualifications The discipline of their own faculties should to any standard. not terminate with the close of their course of preparation. The intervals of teaching may be filled up by studies which will not only be a source of constant improvement in their vocation, but which will elevate their own character, enlarge their stock of moral and intellectual power, and render them better qualified for success in any other pursuit in life. In proportion as their ability is increased will be their chances of procuring prominent situations as teachers with adequate compensation. Their qualifications, and the successful results of their labors, will stand so strongly in contrast with those of ordinary teachers as to create a competition among districts which are desirous of obtaining their services, and thus secure a competent provision for their support.

It must be confessed that there is much in the present prospects of those who intend to devote themselves to the business of teaching, which is calculated to produce indiffeencer and to damp exertion. The vocation does not now ensure constant employment, and therefore is not to be relied on as a certain support; nor does it yield rewards at all adequate to its toils and sacrifices. But it is not improbable that more liberal views will prevail in relation to the remuneration of teachers; and it is certain that the most effectual method of bringing about such a change is a course of conduct and an exhibition of skill on their part which will elevate the character of their vocation, and by making the public more sensible of the value of their services, will secure a proportionate increase of compensation. Teachers should feel that without a deep interest in their occupation they cannot bring into opperation the talent required to do themselves justice, and to convince the public of the necessity of a higher standard of education. Time may be necessary to produce upon the public mind the requisite impression; but there is no reason to doubt the result. If in the mean time they lose through the narrow views of their employers, something of the indemnity to which they are entitled for their labors in a most difficult and responsible sphere of action, let them not superadd to this loss a sacrifice of their own reputation by a careless or imperfect discharge of their duties. Let them resolve to gain in character what they may lose in pecuniary profit; and let them be assured that if any thing can succeed in obtaining from the public the justice which they seek, it is a course of generous devotion on their part to the great cause of education. If such a course should fail to win from those on whomthey are now dependent a corresponding return of benefits, it is to be hoped that the time is not far distant when the value of their labors will be better appreciated, and complete justice awarded to them.

II. As to the duration of the course. This is necessarily regulated by the number and extent of the subjects of study. In the Prussian Seminaries, in which the requirements for the teachers of the first grade are about equal in importance to those which the committee have proposed for the departments in question, the term of study is three years; and they are of the opinion that a shorter period would not be sufficient for a strict compliance with the contemplated course. As has already been observed, the object in view is to prepare teachers of the first grade; and every other consideration should give way to this. It should be recommended to the trustees of the acadamies in which the departments may be established, to make the rate of tuition for those who intending good faith to devote themselves to the business of teaching as low as possible; and to regulate the terms of instruction in such a manner that the pupils in the teachers' department who are sufficiently advanced may have an opportunity.

of taking schools during the three winter months. They may by this means earn something to enable them to complete their course of instruction, and at the same time improve themselves by making a practical application of the knowledge which they will have gained during the rest of the year. To accomplish this object it may be nucessary to have only two terms per annum of four months each. The pupils must not only be required to comply with the entire course, but they must understand thoroughly every subject of study before they receive a diploma or certificate of qualification. In this respect the Boards from whom the evidences of qualification are to issue must practise the greatest caution. - Their own and the public interest alike demands it. The system cannot become popular unless it is made equal to its objects. A single individual educated in one of the proposed departments, and going forth to teach with a diploma, but without the requisite moral and intellectual qualifications, would do much to bring the whole system into disrepute. The regents should, therefore insist strongly on the fidelity of the academies to withhold the necessary evidence of qualification to teach from all who are not entirely worthy of it.

The trustees and officers of the academies which may be selected cannot fail to perceive that a most favorable opportunity will be presented to them for elevating the character and extending the reputation of their institutions. Whether they succeed in doing so must depend on the fidelity and zeal with which the prescribed plan of instruction shall be carried into effect. They cannot but perceive also, that if through the want of proper exertions any one of them should fail to give satisfaction, and thus render it incumbent on the regents to transfer the department to some other institution, a duty would devoive on the latter as disagreeable to themselves as it would be prejudicial to the character of the academy, in relation to which its performance would be required.

The committee propose that full reports shall be annually made by the academies with regard to the departments. These reports should contain the name of every person receiving a diploma, and the date on which it was issued, so that a complete register of those who have passed through the prescribed course of training will be on file with the Secretary of the board for any necessary purpose of reference. The reports should also show the condition of the departments as to the number of pupils, the time each has been in training, the books in use, the extent to which each book has been studied, the state of the libraries and apparatus, and in short every thing which is contained in the reports now made to the Regents in relation to other students. They should also exhibit every thing which may be calculated to point out defects and suggest improvements, and they should be accom-panied with such observations as may have occurred to the officers of the academies in carrying into execution the pre-scribed plan. The form of the report need not differ materially from that now used, excepting so far as it may be necessary to embrace new items of information. The form, accompanied with the necessary instructions, would they have supposed, be most properly prepared under the direction of the Secretary of the Regents.

III. As to the necessary books and apparatus. Books. Each academy should be furnished with a library well stored with the best authors on the prescribed subjects of study. The committee propose to leave the selection of the books for further consideration. A list can be made out on consultation with the academies and presented at a future day for the sanction of the Regents. As these books will be wanted for examination and reference, several copies of the same work will be required.

The committee have had under consideration the expediency of designating all the class books which shall be used in the departments to be established, or of leaving them to be selected by the academies: and although they deem it of

great importance to reduce the course of study to the greatest possible precision, they have come to the conclusion that it is better at present to adopt the latter course. The principal consideration by which they have been guided, is the belief that the Regents may, by allowing the academies to make the selection in the first instance, and requiring them to state in their annual reports the books which they have used, and their reasons for preferring one author to others in common use, be furnished with the means of making a selection themselves at a future day, should it become necessary, for the purpose of securing entire uniformity.

At the same time they would suggest that it will in general be found most advantageous to use for the instruction of teachers the books from which they will be required to teach in the common schools. Larger and more copious treatises on all the subjects of instruction will, it is true, be necessary for the course of study in the departments: but the principal use of the latter will be for reference, and for the purpose of more full illustrations than are afforded by the smaller works.

Apparatus. The following list includes all the apparatus and maps which the committee deem necessary at present, with the prices annexed, so far as they can be ascertained:—

The price of the entire apparatus, including maps; for each department, will not much exceed three hundred dollars, so that about two hundred dollars will remain to be appropriated to the purchase of books for each.

The apparatus in contemplation of the committee, and understood to be the best of the kind, is prepared by Brown and Pierce of Boston, and may be procured in the city of

New York.

4th. What evidence of qualification to teach shall be given to the individuals who may be trained in the Departments.

In the Prussian and French Seminaries of teachers different grades of qualification are recognized, and the certificates which the pupils receive on completing their course of preparation are framed according to their respective ability to teach. If the departments about to be established were to be adequate to supply with teachers the districts throughout the State, such a distinction might be desirable. But as the number of teachers will necessarily be limited; and as one of the most important effects to be anticipated and desired from the establishment of these departments is to influence public opinion, and by an exhibition of improved methods of teaching, to correct prevailing errors with regard to the necessity of providing such a compensation for teachers as shallbe in some degree adequate to the value of their services, all the pupils who are in training should be encouraged to complete the posed to be taken by the committee for those who have gone through the entire course is between those who are; and those

must after all rest upon the representation of the officers of the respective academies, they propose to let it issue from the latter, and purport to be what it must be from the necessity of the case. They have drawn a form for a diploma which is hereunto annexed, marked A., and which, from its terms, can only be given to those who have completed the course of instruction prescribed by the Regents, and have passed a sadisfactory examination in all the subjects of study.

The examination should be public, and be made in the presence of the principal and a majority of the trustees of the

The diploma will not of course dispense with the necessity of a certificate from the inspectors of common schools of the town; in order to enable the individual to whom it is given to teach a common school and receive the public money. The existing rule of law in this respect will not be affected. Every individual engaged in instructing a common school must once in each year be examined by the inspectors, and receive a new certificate of qualification. There would be a difficulty in dispensing with this rule, as one of the objects of such a periodical examination is to pass judgment upon the moral character as well as the ability of the individual, who may, by contracting bad habits, become totally unworthy of being entrusted with the education of children. The only advantage therefore which the diploma will give, is the assurance that the individual who holds it has been regularly trained for his

It may often happen that students will not be disposed or able to go through the whole of the prescribed course of instruction for teachers. In this case the principals of the academies should be at liberty to give them a certificate setting forth the particular studies they have pursued, with such opinion of their moral character and their qualifications to teach the branches which they have studied, as they may be considered entitled to. But this certificate should be merely under the signature of the principal, and not under the seal of the institution; for the committee deem it of the utmost importance that no evidence of qualification should be given which can be mistaken for the diploma received by those who have completed the prescribed course. all misapprehension, the committee have prepared and hereunto annexed a form for such a certificate, marked B.

The committee deem it within the scope of the reference to them to designate for the consideration of the Regents the academies with which the proposed departments may, in their opinion be most advantageously connected. They would

herefore respectfully suggest the following, viz.

1st District, Erasmus Hall, Kings county. Montgomery, Orange county. Kinderhook, Columbia county. do.

3rd do. St. Lawrence, St. Lawrence county. 4th do.

Fairfield, Herkimer county. Oxford, Chenango county. 5th do. 6th

Canandaigua, Ontario county. Middlebury, Genesce county do.

In making this selection the committee have been guided is the preferences they have given by one of two considerations: 1st. That the value of the philosophical and chemial apparatus and library was superior to that of others in the district; or 2nd, that by reason of their endowments or their peculiar consideration, the course of education in the acadenies selected would be likely to be least expensive to surdents. The only instances in which they have departed in my degree from this standard are in the 6th and 7th districts. The Oxford academy has a small amount invested in apparaws, &c. and the Canandaigua Academy is in a large village, where the expense of board might be supposed to be greater ban in places of less importance. But each has already a department for the instruction of teachers in full operation; and the endowments of the latter are so ample that the rate of tuition is extremely low, so much so as to compensate for a

somewhat higher standard of expense in the item of board. Upon full consideration, they are of opinion that neither of these academies could be advantageously exchanged for others in the districts in which they respectively lie.

Should the funds at the disposal of the Regents be so awgmented hereafter as to admit of an additional expenditure for the support of the departments, the committee are of opinion that great benefit might be derived from a course of lectures, accompanied with experiments, on Chemistry and Mineralogy, and natural Philosophy and Astronomy, by an individual who would make it his whole business to lecture on these subjects. The pupils in each department might be prepared by the study of the proper text books so as to be ready at a specified time for the lecturer, who would carry his apparatus with him, and who from his familiar knowledge of the subjects could in a course of lectures of not more than one month in duration in each of the academies, give more practical information than could be gained in the ordinary way in a much longer period. The services of an individual of competent talents might undoubtedly be secured for \$1000 per annum, This sum, with what he would be likely to receive from other students not in training for the business of teaching who might wish to attend the lectures, would cover his expenses and afford him an adequate compensation for the service rendered. The time occupied would not exceed eight months, and the lectures would be given during such portions of the year as to leave the individual employed the entire winter to lecture in other institutions. Thus for the sum of \$1000 per annum the students in the eight departments would be carried through the entire course in the subjects which present the greatest difficulty, from the necessity of being taught by individuals familiar with them and with the use of the apparatus by which they require to be illustrated.

With this object might be combined another not less im-The individual thus employed by the Regents might be required to examine into the entire condition of the departments, and report to them all the information which may be necessary to enable them to determine whether the prescribed plan is carried into complete and efficient execu-

As the Regents have not now the means of making this addition to the proposed plan, and as it will not be necessary until, the departments shall have been organized and put fairly in operation, the committee merely suggested it at this time as a subject worthy of future consideration.

In concluding their report the committee beg leave to observe that a matter of so much importance, in which the ground to be occupied is yet untried, many considerations may have escaped their notice which may be disclosed when the proposed plan is put in operation. They do not present it with the confidence that it is perfect, or that experience may not dictate salutary alterations in it, but as the best which, with the lights before them, they have been able after full consideration to devise.

All which is respectfully submitted. Albany 8th January, 1835.

(A.)

DIPLOMA.

The Regents of the University of the State of New York having established in this institution a department for the education of common school teachers.

WE, the President of the Board of Trustees and the Principal, of

Academy, do hereby certify that A. B. of the the in the county of has completed the course of instruction and town of State of passed a satisfactory examination in all the subjects of study prescribed by the Regents for the department; that he has sustained, while at the institution, a good moral character, and that he is fully

qualified to teach a common school of the first grade. In testimony whereof we have herounto affixed our signatures, together with the in the county of snal of the institution at day of this

A. B. President. C. D. Principal.

(\mathbf{B}_{\bullet})

Certificate to be given to students who have not completed the prescribed course of instruction for teachers.

I, the Principal of the that A. B. of the town of day of Academy do horeby certify in the county of

has attended a course of instruction at and State of this institution in the art of unching; that he has sustained a good moral character; and although he has not completed the course of study prescribed by the Regents of the University for common school teachers, he has studied, and is competent to give instruction in the following subjects, viz :-

A. B. Principal.

P. S .- If the individual is not well qualified to give instruction in all the subjects of study, those which he is competent to teach should be specified.

EXTRACTS

FROM THE

ANNUAL REPORT

or THE

SUPERINTENDENT OF COMMON SCHOOLS

State of New-Fort.

FOR THE YEAR 1836.

It appears by the above Report addressed to the Legislature on

the 6th of January, 1836:

1. That there were, on the last day of December, 1834, 10,132 organized school districts in the State, from 9676 of which aunual reports have been made to the Commissioners of Common Schools.

2. In all the districts from which reports have been received, schools have been kept during the year 1834-an average period

of eight months.

- 3. The whole number of children over five and under sixteen years of age, residing, on the last day of December, 1834, in the school districts from which reports have been received, was 543,-085, and the whole number of children who had attended school during the year 1834 in the same districts was 541,401. It is proper to state that the reports from the school districts do not show the whole length of time during which each child has attended school. They show only how long the schools have been kept open, and how many children have received more or less instruction
- 4. The number of children attending the common schools compared with the number of districts from which reports have been received gives an average of about 56 children to each disrict. This is as large a number as can be advantageously attented to by a single teacher. In a few districts two teachers are mployed, but these cases are rare, and the average unmber of hildren annually instructed by each teacher is at least 50. As he whole number of children are not every day in attendance he classes will average something less. Upon the whole the, umber of children in proportion to the number of districts may reconsidered about what it should be.

5. Under any view of the subject it is reasonable to believe that in the common schools, private schools, and academies, the number of children actually receiving instruction is equal to the whole number between five and sixteen years of age.

C. Estimates and Expenditures of the School monies.

By the Reports of the Commissioners of Common Schools it appears that the sum of \$314,749 36 was paid by them to the trustees of school districts in their respective towns in April, The amount of public money expended by the Trustees in the year 1834 for the payment of the wages of teachers was \$312,181 20, of which sum \$100,000 was received from the Common School Fund, \$193,590 28 was levied by raxation on the property of the inhabitants of the several towns and cities in the State, and \$18,620 92 was derived from the local funds belonging to particular towns.

The amount paid during the same period for teachers' wages, besides the above amount of public money, was \$419,878 69, and exceeds by the sum of \$21.741 65 the amount paid for teachers' wages, besides public money in the year 1833. The wholes mount paid for teachers' wages in 1834 was \$732,059 89, except ing a few thousand dollars expended in the city of New York for

school houses, by the public school soc ety.

The whole amount therefore expended for teachers' wages in 1834 exceeds the amount so expended in 1833 by the sum of

\$17,768 92.

7. The actual expense of the common school system may be stated as follows: In this estimate the three first items are estimated on the basis assumed in former reports. The others are drawn from the reports of the Commissioners of Common Schools:

Interest at 6 per cent on \$2,165,200, invested in \$129,912 00 school houses.. Annual expense of books for 541,401 scholars at 50 270,700,00 cents each Fuel for 9,826 school houses at \$10 each..... 98,260 00 Publ c money as appears by the returns..... 312,181 20 Amount paid for teachers wages, beside public mo-419,878 69 ney as appears by the returns.....

Total.....\$1,230,931 89 In this amount the expense of repairing school houses is not in-

cluded.

8. By referring to the accompanying table marked B, it appears that public money amounting to the sum of \$314,769 36 was distributed to the common schools in April, 1835. The amount distributed from the common school fund is \$100,000. The sum requar d by law to be raised on the towns is also \$100,000. By it. ference to the table marked H, it will be perceived that the local funds of the towns have yielded \$18,620 92 The additional sum of \$72,674 6 is raised by law in the city of New York, and the sum of \$1,262 77 in the city of Albany, for common school purposes. Al these sums make an aggregate of \$292,557 75, leaving the balance of \$22,191 61 to be accounted for in order to make up the sum of \$314,769 36 just mentioned. On examination of the reports from the Commissioners of common schools it is manifest that this balance must have been raised by taxation upon the towns, in pursuance of that provision of the Revised Statutes, vol. 1. p. 304, which authorises the inhabitants at their annual town meeting to direct such sum to be raised for the support of common schools as they may deem necessary, not exceeding the amount required by law to be raised in the town for that purpose. The following statement will show the number of towns in each county in which such sum has been raised by a vote of the inhabitonts, it addition to the amount required to be raised by law. In most of the cases the additional sum is equal to the amount received from the common school fund, so that double that amount is actually raised in the towns referred to, and the inhabitants have gone to the extent of the authority conferred on them by law to tax them selves for the support of common schools.

9. Commissioners of Common Schools.

Three persons are appointed under the title of Commissioners of Common Schools at the annual meeting in each town. Their dities are to regulate the boundaries of the school districts within the towns for which they are chosen, to alter existing district, and form new ones when it becomes necessary for the convenience of the inhabitants. They receive from the County Treasurer, with whom it is deposited, the quota of the revenue of the Common School Fund to which the town is entitled, and from the collector. of the town the equal amount raised upon its taxable property; and they apportion these sums among the school districts of the town according to the number of children over five and under sixteen years of age residing in each district;—provided a school has teen years of age residing in each district;—provided a school has been kept in it three mouths by a qualified teacher during the preceding year, and provided also, the school moneys received in the year have been applied to the compensation of such teacher. That receive the annual reports of the trustees of the school districts, and from them prepare a consolidated report setting forth certain particulars specified in the statute to be transmitted to the supermitendant.

10. Inspectors of Common Schools.

Three Inspectors of Common Schools are annually chosen in each town. Their duties are to examine all persons offering themselves as candidates for teaching common schools in the town; to visit all the common schools at least once in each year, and they may "give their advice and direction to the trustees and teachers of such schools as to the government thereof and the course of such schools as to the government thereof and the course of such schools as to the government."

succession to pursue a trace of the state of

sous in each town authorised to act as inspectors.

12. In the examination of a candidate for teaching, if the inspeciors are satisfied that he is qualified with respect to moral character, learning, and ability, they give him a certificate. He is then a qualified teacher for one year, unless his certificate is previously annulled on a re-examination, which the inspectors may require if they deem it necessary. So long as he holds a certificate dated within one year, he may receive the public money as a compensation in whole or in part for, his services. Trustees of school districts may employ a teacher who has not been impacted, or who on examination has not been deemed qualified by the inspectors, but no such teacher can receive any portion of the public money for his wages.

13. All examinations must be made at a regular meeting called for the purpose, and attended by at least three inspectors.

14. It must be manifest on the slightest consideration, that the success of the common school system, so far as concerns the great ends of education, will depend in a higher degree on the inspectors than on any other class of officers connected with its administration. With them it lies to fix the standard of qualification for teachers, and thus to determine the amount of ability which the latter shall bring to their tasks. If the requirements of the inspectors are small, the qualifications of the teachers will as a general rule be slender, and to these the standard of education in the town will gradually conform. In practice, the rule has perhaps been reversed. The inspectors have usually, in granting certificates, been influenced by the state of education in the town, and have thus conformed to an existing standard, instead of establishing a new one of a higher grade. The superintendent has therefore uniformly urged upon the inspectors the inportance of assuming a high standard of qualification, and of equiring all candidates to be tried by it. That this duty is not dways properly discharged is not to be disguised. Inspectors lave sometimes given a certificate of qualification to a teacher or a summer school, and, at the expiration of the term, annulled t upon the ground that he was incompetent to teach a winter school, which is usually attended by a larger proportion of older cholars. This distinction is wholly unauthorised by law, and whenever an opportunity has offered it has been condemned in minted terms. It is no hardship to adopt, in all cases, the ighest standard of requirement. School districts, it is true, are ten of very small pecuniary ability; but in order to entitle a thool district to a share of the income of the Common School and, the Statute demands only that a qualified teacher shall be mually employed for three months. It does not even require lat a school shall be kept by any teacher for a longer period. here is no school district which is not capable of complying ith this rule, even if a teacher of undoubted qualifications were all cases to be required. Inspectors should therefore aim to lvance the standard of requirement for teachers as much as posble. Without their aid opinion may do something, but it is in eir power, by setting up a higher rule of qualification, and enrcing a strict conformity to it in every case, to elevate the chacter of the common schools to a grade which would leave litelse to be desired. As will be seen in another part of this re-nt, ample provision has recently been made by law for the edution of teachers, and the inspectors may, in the manner above

suggested, become in an eminent degree instrumental in secur

ing employment for them.

15. There is another part of their duty of equal importance in its consequences, if it is faithfully and efficiently discharged. They are authorised to give "their advice and direction" "as to the course of studies to be pursued" in the common schools. This is a power involving in its exercise the greatest responsibility: and although it might be limited by a narrow construction of the law to a right to direct the order in which the parricular studies chosen by some other authority should be pursued, it can hardly be taken, when viewed in connection with the other provisions of the statute in relation to the inspectors, in so re-stricted a sense. Indeed the physics "course of studies" in its technical acceptation must be understood as comprehending a particular series of subjects, and the particular order in which they are to be studied. Certain it is that the inspectors in some towns have taken upon themselves to direct the studies to be pursued in the common schools within their jurisdiction; and in one case an application was made to the superintendent to define the limits of their authority, both with respect to the course of studies and the selection of school books; the inspectors having, in the case referred to, given their direction to the teacher in both these points. The matter was not brought before him in the shape of an appeal, and no decision was pronounced upon it: but with the consideration he had given to it he was at the time strongly inclined to a construction of the law in favor of the right of inspectors to direct the leachers of common schools within their jurisdiction as to the particular subjects which should be taught. With regard to the right of the inspectors to direct what class of books shall be studied in the common schools, he would have entertained but little doubt. This is manifestly a larger power than that of determining what subjects of study shall be taught. To direct a particular class book to be used, not only prescribes the subject of which it treats, but includes a specification of the extent to which it shall be studied, and in some degree also, the mode in which it shall be taught—for the manner in which a subject is treated is often the most essential part of the treatise, so far as it is a vehicle of instruction. The power of prescribing class books has not been given in express terms, nor is it perceived that it can be derived by implication from any of the powers delegated by law to the officers concerned in the supervision or management of the common schools. But with respect to subjects of study, the case is entirely different. The languag of the law seems to sanction the construction which gives to the inspectors authority to direct what they shall be; and it is consistent with the other important division of their duties, which includes the examination of teachers, and determines their ability to give instruction in particular branches or subjects. The latter being fixed, the examination would have reference to them, and the standard of requirement be settled according to a just

and uniform rule.

The exercise of the authority to direct teachers as to the subjects of study to be taught, is a very delicate and responsible duty; and, if it be wisely executed, it cannot fail to exert a most beneficial influence upon the common schools. But if the authority of the inspectors were restricted to the mere examination of teachers they might make it highly efficient as an instrument of advancing the standard of education. They might decline to grant a teacher a certificate unless he was qualified to give instruction in the branches or subjects which in their opinion ought to be taught in the common schools. Indeed sach is their duty now; and independently of the obligation of performing it fearlessly and faithfully, there is, as has been already shewn, up hardship in its performance with respect to any of those who

come within the sphere of their authority.

16. Truste;s of School Districts.

In each school district there are anoually chosen three Trustees, whose duty it is to call special meetings of the inhabitants whenever they deem it necessary; to make out all tax lists when taxes are voted by the inhabitants of the district, to build or repair the school house; to provide fuel, or to purchase a lot for a school house; to make out all rate bills (taition, bills) from the lists kept by the teachers; to exempt indigent persons from the payment of their proportion of such, rate bills; to have the custody of the district school house; to contract with and employ all teachers, and to provide for the payment of their wages in the manner already explained under the head of "expenses."

The Trustess of school districts are the immediate representatives of the inhabitants; and as they owe their election to them. they may be considered as controlled by the public opinion of the districts in the discharge of their du y, so far as the law has left them any discretion as to the mauner of performing it. They are charged with the management of the principal internal affairs of the district, and as the inhabitants residing within it pay more than three quarters of all the expenses of the school, the law has virtually deposited with them the control of almost all that concerns it. With respect to the formation of school districts, and the regulation of the boundary, a different principle prevails. The commissioners of common schools, in whom this authority is vested, are town officers; they are chosen by the suffrages of all the electors, and though they may be said to be accountable to all the districts, the voters for town officers being composed substantially of the voters in school districts, they cannot be considered as controlled by the opinion of any particular district, when it is at variance with others in matters connected with the discharge of their duties. The same principle prevails with regard to the election of inspectors. They also are town officers, and the law has very properly confided the duty of pronouncing upon the qualification of teachers, and directing the course of studies to be pursued in the common schools to individuals who, from the manuer in which they are chosen, are not directly accountable to the inhabitants of any particular district. To return to trustees of school districts. Although the law has given them certain powers, the successful exercise of some of these powers must depend on its accordance with the wishes of the inhabitants. Thus the trustees have the absolute right of employing all teachers. But if they were to engage an individual who for any reason was obnoxious to the inhabitants, the latter might refuse to send their children to school, and thus subject the trustees to some embarrassment in providing for the payment of his wages. They might, it is t ue, pay him the public money ; but as this would soon be exhausted, they would be obliged to collect the residue of those persons who send their children to school, and the greater part of the burthen would fail upon the trustees themselves and the few who should favor their views. Under the Prussian system this result could not happen, as all parents are required by law to send their children to school. The spirit of our common school system is to refer almost all matters relating to the districts which are of an internal or domestic character to the it habitants themselves; and from the organization of the districts the powers of the trustees are necessarily exercised, so far as any discretion is admissable, in subor-diration to the opinion of the district. But where the law has prescribed positive rules for their government, those rules are of course to be obeyed, even though such obedience were to conflict with the wishes of the inhabitants.

It is proper to add in this place that at the annual meeting of the inhabitants, of each district, a collector and clerk are chosen

together with the trustees.

The duty of collector is to collect and pay over to the trustees the amount of all tax lists and rate bills delivered to him for that The trustees may, before delivering to him any warrant for the collect on of moneys, require him to give a bond in double the amount of the sum to be collected, conditioned for the faithful execution of his duties,

The daty of the clerk is to keep a record of all the proceedings of the district, to give notice of the time and place for all meetings of the inhabitants, and to keep and preserve all books,

&c. belonging to his office.

Under a law passed at the last session of the Legislature authorising the inhabitants of school districts to purchase district libraries, a librarian may also be chosen at the annual meeting.

17. Inhabitants of School Districts.

In addition to the right of annually choosing officers for their respective districts, the inhabitants have power, by a majority of votes, to designate a site for the district school house, and to lay taxes on the taxable property of the district to purchase a district library and a suitable book case; to purchase or lease a site for a school house, to build, hire, or purchase such school house, to kep it in repair, and to fornish it with necessary fuel and appendages. By the construction given to this part of the statute by the superintendent, the term "appendages" is limited to a few simple articles which are ind spensable to the comfort and health of the pupils, such as a broom, a water pail, a stove, a woodhouse, &c. The inhabitants have no power to tax themselves

excepting for these enumerated objects, and whenever it isdesired to raise money for any other purpose it must be done by

voluntary contribution.

The standard of qualification for voters is so low that scarcely any individual is excluded from the exercise of the right of suffrage in respect to matters concerning the school district in which he resides. If he has been assessed in the town to work on the highway during the year, or the preceding year, he may vote at school district meetings for any authorised object. He has a voice in the choice of district officers, and though wholly desired. tute of property himself, he may contribute to lay a tax on the property of the district. In some cases therefore, property may he taxed for common school purposes against the wishes of inpossessors; but as the objects of taxation are extremely limited, no danger is likely to arise from the abuse of this power. In the case of school houses, always the greatest object of expenditure, there is a further safeguard : no tax exceeding four hundred dollars can be voted for that object, unless the commissioners of common schools of the town certify that a larger sum is necessary. The tax for purchasing libraries is limited to \$20 the first year, and to \$10 per annum for subsequent additions to it; and all other taxes must, from the nature of the objects, be small in

19. The effect of these provisions with respect to taxation in school districts in most cases is that the inhabitants tax themselves liberally for all the authorised objects referred to.

20. There is one particular in which the same praise is not so generally due. It is the case of all others in which a suitable liberulity is most necessary to accomplish the objects of the system. and in which the greatest want of it has heretofore been shown. The school houses are usually comfortable and the physical wants of the scholars are sufficiently provided for. But with respect to their moral and intellectual improvement there is in general a great deficiency. The only material defect in the system is the want of The cause of the defect is an unwillingness competent teachers. The cause of the defect is an unwillingness on the part of the inhabitants to pay such wages as to secure the services of individuals of suitable qualifications. That much of the prevailing apathy on this subject is owing to the want of attention to its importance, will hardly be denied. Our common school system has been but a few years in operation, and it is only recently that it can be considered as having gained a solid founds. tion. In building up and bringing to perfection its external orga-nization, the internal condition of the schools has been in some degree neglected.

21. Public attention has, within the last eight years been more strongly attracted to this part of the system, and in many districts correct views begin to prevail with regard to the impolicy of expending money unprefitably upon incompetent teachers. exertions of individuals to correct erroneous impressions on this subject, the countenance and co-operation of the Legislature have been superadded. By an act passed in the year 1834 the Regents of the University were authorized to appropriate a portion of the income of the Literature fund to the education of teachers. authority was promptly exercised, as will be hereafter seen, and the plan adopted by the Regents has been carried into execution. So long as the wages of teachers were extremely low, men of talents would not devote themselves to the business of teaching, nor could they afford to fit themselves for it by a regular course of preparation. The rate of compensation for teachers is gradually advancing; in some part of the State good wages are paid, and many individuals are preparing themselves for teaching as a permanent vocation. As they find employment, the demand for them will increase; for as the benefits of instruction by a well truined leacher become apparent, the influence of the example will extend to neighbouring districts; and these causes acting reciprocally upon each

other, cannot fail to produce important effects.
22 The L gis ature has done all that can be accomplished by legislat on to promote the cause of common school education, escepting by a resort to compulsory enactments. The spirit of our metituitions is averse to measures of this description. The success of the common school system has been mainly accomplished by rguments addressed to the reason and the interests of the people. Without a radical change of policy, the improvements of which it s susceptable can only be introduced through the influence of the same motives. The superint adem has heretofore expressed the ocket that nothing was wanting but a full view of the subject on the part of the unhabitants of school districts, to bring into the sel-only a better grade of teachers. He has seen parting lookage is confidence in this op it on, although it must be admitted that the change for the better on which it is founded proceeds by very slow

When the measures adopted by the Regents of the University shall have been carried into full effect, a more rapid and general improvement may reasonably be anticipated. These measures will now be briefly considered.

23. Education of Common School Teachers.

In pursuance of the provisions of the act before referred to, bearing date the 2nd of May 1834, and authorising the Regents of the University to apply a part of the income of the Literature Fund to the education of common school teachers, a plan was reported to the Regents for the purpose of carrying into effect the intention of the act on the 8th of January 1835, and adopted at a subsequent meeting of the Board. The outlines of the plan are briefly as fol-

24. An Academy was selected in each of the eight senate districts, and a department engrafted upon it for the education of teachers. To support these departments each Academy received from the Literature Fund a sufficient sum to procure the following

articles of apparatus, viz :-

An Orrery A Numeral Frame and Geometrical Solids.

A pair of Globes. A moveable Planisphere.

A Tide Dial.

An Optical Apparatus. The mechanical powers. A Hydrostatic apparatus. A Pricumatic apparatus. A Chemical apparatus. One hundred specimens of mineralogy.

An electrical machine.

Instruments to teach surveying. A map of the United States.

A map of the State of New York. An Atlas.

A Telescope. A Quadrant.

In addition to this provision, the sum of \$191 was appropriated to enlarge the library of each of the academies in which a de-partment was established. These expenditures were intended merely to put the departments in operation. For their support, each department is to receive annually, to pay the salary of a tutor, the further sum of \$400 from the Literature Fund, which, in addition to the means of the academies, was deemed adequate to the object.

25. The students in the departments are required to be thoroughly instructed in the following branches or subjects :-

1. The English language.

2. Writing and drawing. 3. Arithmetic; mental and written, and Book-keeping.

4. Geography and general history combined.
5. The History of the United States.
6. Geometry, Trigonometry, Mensuration, and Surveying.
7. Natural Philosophy and the Elements of Astronomy.

8. Chemistry and Mineralogy.
9. The Constitution of the United States, and the Constitution of the State of New York.

10. Select parts of the Revised Statutes, and the duties of

11. Moral and Intellectual Philosophy.

12. The principles of Teaching.

To these subjects it is understood to be in contemplation of

the Regents to add Algebra.

26. The term of study is three years, but only eight mouths in each year are devoted to instruction. There is a vacation of four months in winter, to enable the students, many of whom will, it is supposed, need such a resource, to teach a district school, and thus earn something to support them in completing their course of preparation. At the end of the term each student is to be examined publicly, and if he passes a satisfactory examination in all the prescribed subjects of study, he is to receive a diploma under the seal of the academy.

27. The departments were organized in the summer of 1835. and in several of the academies they are already in successful operation. For the purpose of securing entire uniformity in the course of study and the results, the principals of the academies were intended to meet a committee of the Regents of the University in the City of Albany on the 1st of September last, and settle some preliminary arrangements. The meeting was attended by seven of the eight gentlemen, who were several days in

session; the extent to which instruction in each subject of study should be carried was agreed on, and a comparison of opinions was made on every question connected with the management of the departments under their direction. The course has commenced on a uniform plan in all, and it will be carried out in such a manner as to secure uniform results. The influence of a large number of individuals thoroughly trained to the business of teaching, cannot, if they find employment, be otherwise than beneficial; and it may do more than all other causes combined to bring about a salutary reform in the only particular in which the common school system can be considered materially defective. If the liberal provisions of the legislature are not met with a corresponding liberality on the part of the people of the State, the measure adopted by the Regents of the University will be The individuals who shall have prepared themselves for the business of teaching must abendon it unless it yield them a fair remuneration for their services. But on the other hand, if sounder views on this subject shall be found to prevail; if the inhabitants of school districts will but see their true inteest in employing well trained teachers, our common schools will soon bear, in their intellectual condition, and honorable relation to the other parts of the system, and exhibit in all its internal etails, the same order and perfection which prevail in its organization. The provisions of the law have been ample, and it remains only to give an impulse to that affective public opinion which when once moved is sure to bring about the results to which it is directed. To this end the attention of all the friends of education should be turned. The people have the principal control of the system, and their opinions must be influenced. Discussion in almost any shape may promote the object. It attracts the attention of individuals and the public and even though it may not always point to the true remedy, when it has exposed a defect, it can hardly fail to draw out the views of others and shed light on the subject.

28. In passing the law under which departments for the edu-cation of teachers have been established, the Legislature has merely provided for the more complete execution of a design long entertained; so far as respects the employment of the academies for the purpose. The propriety of founding separate institutions upon the model of the seminaries for teachers in Prussia, was for several years a subject for public discussion in this State. It was contended on the one hand that such institutions would be more likely to secure the object in view; and on the other that it might be as effectually and more readily accomplished through the organized academies. By the act of the 13th April, 1827, the avowed object of which was, "to promote the education of teachers," the sum of one hundred and fifty thousand dollars was added to the capital of the Literature Fund, the income of which is appropriated to the support of the academies, subject to the visitation of the Regents of the University. Thus, although the plan of engrafting upon the academies departments for the preparation of teachers may not have been contemplated at that time, yet this measure is to be regarded only as a more complete developement of the design of the

Legislature in passing the act referred to.

29. School District Libraries.

By an act passed at the last Session of the Legislature, the inhabitants of the school districts were authorized to vote a tax not exceeding \$20, to purchase a library for their common use, and such additional sum as should be deemed necessary to procure a They were also authorised to vote a further tax, not exceeding \$10 in any one year, to make additions to the library.

As has been already stated, they were empowered by the same act to choose at the annual meeting of the district a librarian whose duty it should be to take charge of the library and have the care and custody of it under such regulations as the inhabitants of the district should prescribe.

30. The object of this provision has not been in all cases distinctly understood. It was not so much for the benefit of children attending school as for those who have completed their common school education. Its main design was to throw into School Districts and place within the reach of all their inhabitants a collection of good works on subjects calculated to enlarge their understandings and store their minds with useful knowledge. It was believed that such a measure would come strongly in aid of other provisions adopted with a view to the intellectual improvement of the great body of the people, and to point them to the true sources of their respectability and power. Works of a juvenile character would not therefore as a general rule be suited to the purposes of the law. For a more full understanding of the

subject the following extract from the report of the superintendent for the year 1834, in introducing it to the attention of

the Legislature, is subjoined.

"If the inhabitants of School Districts were authorised to lay a tax upon their property for the purpose of purchasing libraries for the use of the District, such a power might, with proper restrictions, become a most efficient instrument in diffusing useful knowledge, and in elevating the intellectual character of the people. A vast amount of useful information might in this manner be collected where it would be easily accessible, and its influence could hardly fail to be in the highest degree salutary by furnishing the means of improvement to those who have finished their common school education, as well as to those who have not. The demand for books would ensure extensive editions of works containing matter judiciously selected at prices which competition would soon reduce to the lowest rate at which they could be furnished. By making the imposition of the tax wholly discreselection of the works under their entire control, the danger of rendering such a provision subservient to the propagation of particular doctrines or opinions, would be effectually guarded against by their watchfulness and intelligence. The power of the inhabitants to lay taxes is restricted to specific objects, and a legislative act would be necessary to enlarge it."

31. The law has already been care

The law has already been carried into effect in numerous instances, and all that is necessary to ensure a much more extensive application of its provisions is a cheap edition of books on useful subjects, and unexceptionable both in their matter and The superintendent has been requested in one instance to make a selection of books for a school district, and in several other cases incidental questions connected with the collection of taxes for this purpose have been brought before him, showing conclusively that the law has already attracted a good deal of attention, although it was very recently passed, and cannot yet

be generally known:

32. General Observations.

Some of the most prominent features of the common school sys. tem have thus been briefly surveyed, and its policy, so far as respects the distribution of power through which it is controlled, has been cursorily examined. It is, emphatically, an institution for the people, and to them has been allotted a large share in its administration. On the zeal with which their task has been performministration. On the zeal with which their task has been performed, and on a degree of importance which they attach to its elevation to a grade commensurate with its high objects, must depend to a very considerable extent the rank they will hold in the political system under which they live, and the part they may take in giving a direction to its movements. If in any country knowledge is power, it is here. The influence of all others is feeble in comparison with it. With us there is no system of entails, or rule of pri no geniture to perpetuate wealth or family distinctions. Wealth

may indeed give its possessor some advantages in society; but on that theatre of exertion where the political condition of men and communities is determined for good or for evil, it is of no account. In this field the contest must be decided by intellectual force; and those whose destinies are involved in the issue should take care that they are not deficient in the prep ration necessary to enable them to maintain their ground against the combinations of more practised and less virtuous competitors. On the part of the people conea and less virtuous competitors. On the part of the people contests for great principles are always deemed to involve, directly or indirectly, their inalienable rights. With what effect can those rights be vindicated without a sufficient degree of information to see how they are in danger of being impaired! How else shall the people amid contending appeals to their understandings and interests, he able to distinguish the true from the false? It is in the terests, be able to distinguish the true from the false? It is in the common schools alone that the knowledge indispensable to their safety can be acquired; for in them a vast majority of the entire population receive all their education. There are few social institutions which have not, at some period in the history of mankind, been made subservient to the purposes of usurpation and tyranny. Schools of a popular character are in lous danger than any other of being perverted to such a use : they have never been made, nor from their nature is it easy to make them, an engine for the disse-mination of principles tending to dissolve the bonds of society, or to subvert the great maxims of human liberty. Literary institutions less popular in their organization may be more easily made the instruments of such abuse. The supervision to which they are subjected is more restricted, and their accountability is not always so direct. But if the common schools are in 100 danger of being approached for sinister objects, there is another which it is equally important to avert. There is danger that they will never answer the ends of their institution, if the teachers, the body of men who are relied on to infuse in them the moral and intellectual improvement which constitutes the vital principle of the whole system—are not fully adequate to the task. Will not those who are the most deeply interested in elevating the standard of education adopt the only measure by which the object can be accomplish-Will they not bring to this subject the practical good sense by which they are distinguished, and see in this, as in all other cases, that even the ends of economy are best answered by employing those who are most skilled in their art? The value of the common school system is universally acknowledged and felt in this State. In this respect public opinion needs no impulse. But it is no more than just to say that the importance of a higher standard of education is not so generally or correctly appreciated. has however made some advances in this particular; and a confident belief is entertained that the liberal provisions of the legislature for the preparation of teachers will meet with such a reception from an enlightened people as to remedy effectually the only material defect in our common school system, and leave nothing to be desired in relation to it, excepting that it may be permanent in its duration.

Having decided that it would be expedient to recommend an immediate distribution of the income of the fund, the committee next proceeded to consider upon what principle this distribution should be made. This was regarded by the committee as a question of some delicacy, and they have given to it the mature deliberation which its importance required. They have also consulted some of the persons most interested in the subject of popular education in this neighborhood, and have taken advantage of the presence of an intelligent citizen of the State of New York to obtain information as to the results of the method adopted in that great and flourishing member of the Union. The information thus obtained has been compared with that afforded by the published accounts of the state of education in foreign countries as far as they could be conveniently consulted, and by such othersources as were accessible to the committee. In answer to their inquiries on these points, the committee were favored by a highly respectable and intelligent, subject of the King of Prussia, now travelling in this country, with a lucil, and at the same time, very sunding exposition of the Prussian system, which has become celebrated throughout the christian world. A copy of this paper is submitted with the present

report. From the best consideration which they have been able to give to the subject, the committee were satisfied that the distribution of the income of the fund should be so regulated as to stimulate the exertions of those who receive it, rather than to relieve them from any portion of the taxes which they now pay for the purpose of education. The amount now raised, though considerable, is not burthensome to the people, and is cheerfully contributed for an object which is generally acknowledged to be of paramount importance. If the effect of the fund were merely to change the form in which this amount is raised, it would be of little or no benefit to the community. If it can be so managed as to increase the amount, and at the same time to improve the methods of applying it, the results will be highly important and may even constitute an epoch in the history of education in this commonwealth.

The act of the last General Court which established the fund, provided that the income should be distributed among the several towns and districts. The committee propose to adopt this provision as the basis of the system of distribution, and with a view to the promotion of the first of the two objects just alluded to, namely

that of making the fund as far as possible an instrument for increusing the amount of money appropriated to the purpose of education they recommend that one half of the income should be distributed to the towns in shares proportioned to their population, and the other half in shares proportioned to the amount of money which they shall raise themselves for the use of schools. On this plan, if of two towns of equal population, say one thousand inhabitants each, one shall raise a thousand dollars for the purpose of education, and the other five hundred dollars, the former will receive two thousand dollars from the income of the fund, and the latter fifteen hundred, or in that proportion. In this way it is hoped and believed that the fund, instead of inducing the people to relax in any degree from the efforts which they now make, will operate as a bounty upon new and still more liberal contributions.

The other of the two objects just alluded to as those to which the fund might be made subservient, namely, the improvement of the methods of applying the money thus raised to the purpose of education, is perhaps even more important than that of increasing its mount. It is thought by some intelligent persons that the amount now annually raised in this commonwealth for the use of schools, and which is calculated at about one million dollars, would, if applied in the best possible manner, be amply sufficient for every useful purpose. Unfortunately the methods of applying t are often very defective. In the construction of the buildings, in the amount and quality of the books and scientific apparatus, and especially in the system of procuring teachers, the committee are persuaded that there is great room for improvement, and they believe that a portion of the proceeds of the fund may be employed with great advantage in endeavoring to promote it.

The last of these points, namely, the method of procuring teachers, is the one which now engages; perhaps more strongly than any other, the attention of the friends of education throughout the christian world. The great superiority of the Prussian system, which, as the committee have before remarked, has become celebrated, is supposed to result from the care bestowed upon this department. In that kingdom a distinct class of schools is appropriated especially to the education of teachers, and the masters of the common schools are all taken from among the persons educated in these seminaries. In the State of New York the same system has been recently adopted in a somewhat different and perhaps less effective form. It is believed by the committee that an appropriation of a portion of the income of the fund to the education of teachers upon some well devised plan would do more for the cause of public instruction in this commonwealth than almost any innovation on the existing institutions that could well be imagined. In consequence of the shortness of the time which they have had at their disposal, and of the amount of other business which has devolved upon them, the committee have not yet had it in their power to mature such a plan, and they respectfully request permission to submit a separate report upon this subject at a future day.

The committee propose, as has been already remarked, to make it a condition of the distribution of the income of the fund that the towns shall maintain efficient school committees, and make regular returns of the state of their schools. It is believed that the operation of the fund in these respects will supersede the necessity of any direct action upon the subjects of the orders referred to the committee as enumerated above, and they accordingly request that they may be discharged from the further consideration of the same.

In pursuance of the views detailed above, the committee beg leave to report a bill providing for the distribution of the income of the School Fund.

For the Committee, (Signed)

A. H. EVERETT

-00-

The following paper was prepared by a gentleman now travelling in this country as commissioner from the King of Prussia, to collect information on the subject of our political and social institutions. It consists of the answers to a series of questions proposed to him by the superintendent of the schools of the State of New York. The source from which it proceeds entitles it to implicit confidence, and although very succinct, it may be read with advantage as a summary of the information contained in the extended and valuable work of Professor Cousin on that subject.

OUTLINE

OF THE

PRUSSIAN SYSTEM OF EDUCATION.

FIRST QUERY.

How are the Seminaries for the education of Teachers supported in Prussia—at the expense of the Government or the Department?

The seminaries for the teachers of primary schools are entirely supported by Government from the general school fund, which has two separate divisions—the Catholic school fund and the Protestant school fund.

The expense of these seminaries belongs to the ordinary annual budget of the Ministry of Public Instruction, which is only subjected to a common visa, but not to an extraordinary scrutinizing revision, if it does not contain new items which were not before introduced into it.

Some of the seminaries have ancient endowments in landed property which contribute to diminish the expense of the Royal Treasury, but the departments have nothing to spend for this part of popular education. In the year 1831 the annual expense for thirty-three seminaries amounted to nearly \$80,000, whereof the Treasury had only to pay about \$60,000.

Tressury had only to pay about \$60,000.

At the beginning of 1833 there were for y-two seminaries in the kingdom with a population of thirteen millions of inhabitants. To each of these seminaries a small elementary school for children of the city is attached, but merely as a means to develope the practical skill of the future teachers. The expense of the seminaries makes nearly the fifteenth part of the entire expense of the primary schools. The expense of the primary schools is borne nearly in such proportions by the state, and by the parishes or rether "communes" consisting of a village or of a city, that the last contributes nineteen-twentieths of the expenditure, and the state only one-twentieth par!.

SECOND QUERY.

Do the pupils who are trained to the business of teaching, psy, while at the seminaries, the expenses of their board and tuition, or are they supported in whole or in part by the state?

The whole expense of the erection of seminaries and of providing them with suitable buildings wherein the professors and the pupils live, as well as with a library, apparatus for instruction, and musical instruments for the exercise of the pupils is borne by the state. As to the board of the pupils, it is paid for by far the greatest proportion of them, and provided for all by the state. There is only a small part of the pupils for whom the magistrates of the places of their nativity and residence, or their relatives make a small annual payment to the treasurer of the seminary.

Those pupils which receive their education and support wholly from the state are legally bound to fill during a certain number of years the situations of schoolmasters to which they are elected, receiving always the annual salary attached to each of these situations. The length of time during which they have to fill in this way some place of schoolmaster offered to them is three years. Should they not choose to accept such an appointment when offered to them, they have to pay to the treasurer of the seminary where they were educated, for each year of instruction \$14 and the whole amount of their board.

Of the forly two seminaries existing first January 1833, twenty-eight were large, with 25 to 100 pupils. The law, which from unavoidable circumstances has not always been observed, prescribed never to have more than sixty or seventy pupils in a seminary. There seminaries were entirely supported from the state or from their own funds. The remaining fourteen seminaries, which may be called branch seminaries, count each or them six to eighteen pupils, sometimes under "superintendence of an experience of clargyman or rector, and mathese the state contributes only a part of their income.

In some of the larger seminaries, the state gives, besides board, a small gratuity to some of the best and most informed pupils, who act as assistant teachers of their younger fellow students.

The number of pupils in these forty-two institutions amounted, at the above mentioned period, to more than two thousand, the number of situations for school masters to about twenty-two thousand, and the number of pupils formed or these situations, annually leaving the seminaries to about eight or nine hundred. The annual vacancies in the situations of school masters amount to about three or four per cent, so that with due allowance for pupils selecting other situations, or retained by bodily infirmities there, there still remains a sufficient number of candidates for such appointments, and

the possibility of making their examinations as rigorous as they

The expenditure of the state for the seminaries amounts annually

to a little more than \$80,000.

THIRD QUERY.

What is the term or duration of the course in the seminaries !

The usual length of the course of education in the seminaries is three years, each year having two terms. In the smaller or branch seminaries forming schoolmasters for the poorest and most thinly inhabited villages the course is limited to two years.

The schoolmasters which have an appointment are sometimes (perhaps every year) assembled at the nearest seminary for the purpose of receiving there during three or four weeks, a term of instruction on methods newly invented in the progress of the art

of leaching.

Besides this, the most distinguished or most active schoolmusters receive from the Consistory of the Province small premiums in uloney or books. The schoolmasters of the circles (nearly equal to one or two townships) have, under the protection of the Government, weekly conferences where they discuss the different methods of instruction, comment on new works on education, keep exact minutes of these transactions, and read their own observations or papers on these subjects.

FOURTH QUERY.

What are the subjects of study in the seminaries!

The age of entering into the Seminaries is between sixteen and eighteen years, and the pupils are free from any service in the army

or in the Militia during time of peace.

The Seminaries wherein no pupil can be received who has not gone through the elementary instruction, or whose morality is subject to the least doubt, are destined to form teachers for the elementary or primary schools, as well as for the middle or citizens' schools, where no instruction in the classical languages is given.

The parts which constitute the course of instruction for such

1. Religion-Biblical history, introductory and commentatory ersons on the Bible, systematic instruction on the religious lid moral duties of man.

2 The German language in an etymological and grammatical point of view .- Exercises in expressing thoughts and reasoning

orally and by writing.

3.—Mathematics.—Arithmetic as well from memory or intellecthat as by putting down the numbers, geometry, stereometry and

4. A knowledge of the world, consisting in an acquaintance with the most important events or objects in history, natural hisnatural philosophy, geography, and cosmography, or physical geo-

5. Musical instruction, consisting in the theory and practice of singing, theory of music, instruction in playing on the violin and

6. Drawing according to the system of Peter Schmid, and penmanship.

7. The theory of education, the theory and practice of teaching and their connexion with religious service, the liturgy.

8. Gymnastic exercises of all kinds.
9. Where it is practicable, theoretical and practical instruction in horticulture, in the cultivation of fruit trees and husbandry. In the country the dwelling house of the schoolmaster has a garden, serving as a nursery and an orchard, for the benefit of the schoolmaster. who resides there, without paying any rent or local taxes, and for the instruction of the village. In latter years the rearing of silk-worms and the propuction of silk has been frequently tried by the schoolmasters in the country, the Government turnishing mulberry trees and other materials.

What is still more important than this complete course of instruction, is the spirit of religious and moral industry and self-denial which pervades the seminaries, continually supported and inculcated by the directors, all highly distinguished men of piety and learning, and by the strict discipline under which the pupils live, with-

out feeling themselves fettered by it.

FIFTH QUERY.

How far is instruction in each subject of study carried? For instance, where does the course of Muthematics terminate, and to what went is geography taught?

The answer to this question may be found already in the pre-

ceding one.

On the whole the schoolmaster is so trained that he may form in connexion with the Rector, even of the remotest village, where the last mentioned is always President ex-officio of the school committee elected by the inhabitants, a central point of religious moral, and intellectual information, sending its beneficent, and cheerful beams through the whole extent of the little community.

This whole system of instruction tends to a religious and more! end, and rests on the sacred basis of christian love. As the most aff cting, and indeed, sublime example of this spirit, I mention the little or branch seminaries for training poor schoolmasters in such habits and with such feelings as shall fit them to be use. ful and contented teachers of the poorest villages. Here tis poverty to which that of the poorest laborers in this coun-Here ! is country is affluence, -and it is hopeless, for to this class of schoolmasters no idea is held out of advancement or change. Yet if ever poverty on earth appeared screne, contented, lofty, bene-ficent, it is here. "Here we see," as the well-informed English translator of Cousin's Report on the state of Public Instruction in Frussia says,-" Here we see men in the very spring-time of life, so fur from being made, as we are told men must be made, restless and envious and d scontented by instruction, taking indigence and obscurity to their hearts for life; raised above their poor neighbors in education, only that they may become the servants of all, and may train the lowliest children in a sense of the dignity of man, and the beauty of creation, in the love of God and virtue.

SIXTH QUERY.

What apparatus is required in the Seminaries? For instance, what in Chemistry, Natural Philosophy, and other branches?

The first thing requisite for the larger seminaries is a house, with ground for gymnastic exercises, for horticulture, and an orchard with fruit trees to teach pomology, &c. attached to it.

Besides this, a library composed principally of works on theology, moral philosophy, the art of teaching and systems of education, historical and geographical compendiums, books on natural history, natural philosophy, husbandry, cultivation of fruits and vegetables rearing of bees and silk worms, the German classics, and musical works and compositions. Farther, a number of musical instruments violins, flutes, pianos, and a large organ.

The apparatus for chemistry and natural philosophy comprises only those instruments which are requisite for those primary branches of both sciences that may be of use to the future schoolmaster, and also a small cabinet of natural history, consisting of

minerals, plants, and animals.

MISCELLANEOUS OBSERVATIONS.

After having answered as satisfactorily as it was possible at the present moment in a situation without access to the official sources of information, the queries proposed to me, I take the liberty to add a few observations on some other points intimately connected with the Prussian system of primary education, and serving perhaps to elucidate my preceding answers.

The compulsory system of primary education, first introduced in 1819 in Prussia existed there as well as in the remainder of Germany in a certain way, some centuries before. This system which has been enforced already by the first settlers in New England. and which was introduced by the Prussian Government in the provinces formerly under the dominion of France, slowly and with due forbrarance, is now hailed by nearly all the inhabitants of the kingdom as the greatest benefit that could be bestowed upon them. This is proved by the following official numbers of the civil intabitants, of the children between the first day of their seventh and the last of their fourteenth year, the ago of school compulsion, and of the primary, middle, and grammar schools with their teachers and pupils. The number of inhabitants was taken by census, and and pupils. The number of inhabitants was taken by census, and the number of children from seven to fourteen years ascertained in the rule well known to political economists, that among 1,000/in-habitants of a country taken on average 429* are from the beginning of the seventh to the end of the fourteenth year.

2,043,030 Number of children from 7 to 14 years We find therefore, though many children are retained by bodily or mental infimities, from visiting the public schools, and though many clatter of the higher classes are educated at home or in private be dury schools, that more children visit the public schools that are legally bound to do it. This arises from the circumstance that many children are sent to school before the prescribed age of six years, or go there after the beginning of the fifteenth year,

proving at the same time the good sense of the population and the value they set upon a religious and moral instruction.

2. It will not be useless to give here a short enumeration of the subjects taugh! in the elementary schools and in the middle schools, the latter being for those who do not pretend to attain the highest degree of perfection in the different trades, commerce, manufacturing business, &c. &c.

ELEMENTARY SCHOOLS.

1. Religious instruction.

2. German language.

3. Elements of Geometry and Drawing. 4. Calculation and practical Arithmetic

5. Elements of Geography, General and Prussian History, and Natural Philosophy.

- *6. Singing. .7. Reading.
- Writing.

49. Gymnastic Exercises. 10. Simple manual lubors, agricultural instruction.

*11. For girls, female work.

MIDDLE SCHOOLS.

1. Religion and Morals. 2. German language, Reading and Composition in style, the German classics.

3. Foreign modern languages.
4. As much Latin as is necessary for the exercise of the mental faculties and the power of jadgment.

5. Complete practical Arithmetic and the Elements of Mathematics. 6. Natural History, Chemistry, and natural Philosphy, to ex-

plain the phenomena of nature. 7. Geography of the Giobe, and its position in the solar system.

8. History, especially of Prussia.

9. Drawing.

10. Writing in the highest perfection.

Singing.

12. Gymnastic exercises.

3. It will, I think, not be thought superfluous, if I close these observations by a list of the best German school books introduced into the Prussian schools. A ser of these, partly for translating, partly for imitating them, would certainly be a useful acquisition for this country, the German's having occupied themselves for many centuries with the different methods of teaching and according to their fundamental principle "as is the master so is the school" always rejecting the Monitorial or Lancastarian system, which can only be useful as an auxilary in certain mechanical details, but which, on account of its lifeless mechanism, ought never to be employed where christians are to be formed.

LOGICAL EXERCISES.

(The Logical Exercises, a kind of instruction peculiar to Germany, consists in devoting an hour or two each day by the tencher to keep up a conversation with his pupils, to impart to them in this

The subjects marked with an asterisk must be taught, even in the poorest village schools, the others can there be dispensed with.

conversation facts relating to history. Natural History, Geography. &c., and by cliciting from their answers and observations relating to such facts, to sharpen their judgment, and to awaken their faculties of thought and reflection. We think these exercises which must be seen to be well understood, next to religious instruction the most important branch of the whole system excluding by its very nature the use of monitors.)

Herewith I close this short paper on the state of primary education in Prussia, which, incomplete as it is, in combination with the fact that regular quarterly returns on all juvenile delinquincles in the kingdom, are sent by the courts of law to the minister of pubstatutions for juvenile delinquents, or houses of reform, none for more than sixty pupils all of the same sex, will give some idea of the subject treated. But I must sell add that all this is only a part of the whole system, and that it is as a whole that the national edu-cation of Prussia is worthy if study and imitation. No work can be better a hapted to give an introductory view of the general organization of this system, than Mr. Cousin's report on the state of Public Instruction in Prussia, printed in the beginning of this year in London.

New York, 12th December, 1834.

Extracts from the works of Miss Lageworth.

To make any progress in the art of education, it must be patiently reduced to an experimental science; we are fully sensible of the extent and difficulty of this undertaking, and we have not the arrogancy to imagine, that we have made any considerable progress in a work which the labours of many generations, may, perhaps, be insufficient to complete; but we lay before the public the result of our experiments and in many instances the experiments themselves.—In pursuing this part of our plan, we have sometimes descended from that elevation of style which the reader might expect in a quarto volume; we have frequently been obliged to re-cord facts concerning children which may seem trifling, and to enter into a minuteness of detail which may appear unnecessary. No anecdotes, however, have been admitted without due deliberation; nothing has been introduced to gratify the idle curiosity of others, or to indulge our own feelings of domestic partiality.

In what we have written upon the radiments of science, we have pursued an opposite plan, so far from attempting to teach them in detail, we refer our readers to the excellent treatises on the different branches of science and on the various faculties of the human mind, which are to be found in every language. - The chapters that we have introduced upon those subjects, are intended mercly as specimens of the manner in which we think young children should be taught. We have found from experience that an early knowledge of the first principles of science may be given in conversa-tion, and may be insensibly acquired from the usual incidents of life; if this knowledge be carefully associated with the technical terms which common use may preserve in the memory, much of the difficulty of subsequent instruction may be avoided.

The sketches we have hazarded upon these subjects, may to some appear too slight and to others too abstruce and tedious. who have explored the vast mines of human knowledge, small specimens appear trifling and contemptible, while the less accustomed eye is somewhat dazzled and confused by the appearance even of a small collection; but to the most enlightened mind, new combinations may be suggested by a new arrangement of materials, and the curiosity and anthusiasm of the inexperienced may be awakened, and excited to accurate and laborious researches.

With respect to what is commonly called the education of the heart we have endeavoured to suggest the easiest means of inducing useful and agreeable habits, well regulated sympathy, and benevolent affections. A witty writer says, "Il est permis d'ennuver en moralites d'ici jusqua Constantinople" unwilling to avail our selves of this permission we have sedulously avoided declamation. and wherever we have been obliged to repeat ancient maxims and common truths we have at least thought it becoming to present them in a new dress.

On religion and politicks we have been silent because we have no ambition to gain partizans or to make proselytes, and because we do not address ourselves exclusively to any sect or to any party. The scrutinizing eye of criticism, in looking over our table of con tents, will also probably observe that there are no chapters on sou rage and chastity. To pretend to teach courage to Britons, would be as ridiculous as unnecessary; and except among those who are exposed to the contagion of foreign manners we may boast of the superior delicacy of our fair country women, a delicacy acquired from domestic example, and confirmed by public apprehation. Our opinions concerning the female character and understanding have been fully detailed in a former publication; and unwilling to fetigue by repetition, we have touched but slightly upon these subjects in our chapters on temper, foinale accomplishments, prudence, and economy.

We have warned our readers not to expect from us any new theory of education; but they need not apprehend that we have written without method, or that we have thrown before them a heap of desultory remarks and experiments which led to no gener ral conclusions, and which tend to the establishment of no useful principles; we assure them that we have worked upon a regular plan, and where we have failed of executing our design, it has not been for want of labor or attention. Convinced that it is the duty and the interest of all who write to enquire into what others have said and thought upon the subject of which they treat, we have examined attentively the works of others, that we might collect whatever knowledge they contain, and that we might neither arrogate inventions which do not belong to us, nor weary the public by repelition. Some useful and ingenious essays may probably have escaped our notice; but we flatter ourselves that our readers will not find reason to accuse us of negligence, as we have pursued with diligent attention every work upon education that has obtained the sanction of time or of public approbation; and the we have never bound ourselves to the letter, we hope we have been faithful to the spirit Without encumbering ourselves with any part of of their authors. their systems which has not been authorized by experience, we have steadily attempted immediately to apply to practice such of their ideas as we have thought useful; but while we have used the thoughts of others, we have been anxious to avoid in an plugiarism; and where-

rer we have borrowed, the debt has carefully been acknowledged.
The first hint of the chapter on Toys was received from Dr. Beddoes; the sketch of an introduction to chemistry for children was given to us by Mr. Lovell Edgeworth; and the rest of the work was resumed from a design formed and began twenty years ago. When a book appears under the name of two authors it is natural to enquire what share belongs to each of them; all that relates to the art of teaching to read in the chapter on tasks, the chapters on grammar and classical literature, geography, chronology, arithmetic, geometry and mechanics, were written by Mrs. Edgeworth and the rest of the book by Mrss Edgeworth. She was encouraged and enabled to write upon this important subject by having for many years before her eyes the conduct of a judicious mother in the education of a large family. The chapter on obedience was written from Mrs. Edgeworth's notes, and was exemplified by her successful practice in the management of her children; the whole manuscript was submitted to her judgment and she revised parts of it in the last stage of a fatal disease.

EXTRACTS

FROM AN ADDRESS TO THE PUBLIC

PARTICULARLY TO THE MEMBERS OF THE

Regislature of New-Fork,

PROPOSING A PLAN FOR IMPROVING

PEMALE LDUCATION

EMMA WILLARD.

ADDRESS, &c.

The object of this address is to convince the public that a reform with respect to female education is necessary; that it cannot be effected by individual exertion, but that it requires the aid of the Legislature: and further by showing the justice, the policy, and

the magnanimity of such an undertaking, to persuade that body to endow a seminary for temales as the communicament of such reformation.

The idea of a college for males will naturally be associated with that of a seminary instituted and endowed by the public; and the absurdity of sending ladies to college may, at first thought, strike every one to whom this subject shall be proposed. I therefore has ten to observe that the seminary here recommended, will be as different from those appropriated to the other sex, as the female character and duties are from the male. The business of the husband is not to waste his endangers in seeking to make his orchard attain the strength and inajesty of his forest, but to rear each to the perfection of its nature.

That the improvement of the female education will be considered by our enlightened citizens as a subject of importance, the liberality with which they part with their property to educate their daughters, is a sufficient evidence; and why should they not when assembled in the Legislature, act in concert to effect a noble object, which, though dear to them individually, cannot be accom-

plished by their anconnected exertions.

If the improvement of the American female character, and that alone, could be effected by public liberality, employed in giving better means of instruction; such improvement of one half of society, and that half, which barbarous and despotic nations have ever degraded, would of itself be an object worthy of the most liberal government on earth; but if the female character be raised, it must inevitably raise that of the other sex; and thus does the plan proposed offer as the object of legislative bounty, to elevate the

whole character of the community.

As evidence that this statement does not exaggerate the female influence in society, our sex need but be considered in the single relation of mothers. In this character, we have the charge of the whole mass of individuals who are to compose the succeeding generation; during that period of youth when the pliant mind takes any direction to which it is steadily guided by a forming hand. How important a power is given by this charge! yet little do too many of my sex know how either to appreciate or improve it. Unprovided with the means of acquiring that knowledge which flows herally to the other sex—having our time of education devoted to frivolous acquirements, how should we understand the nature of the mind, so as to be aware of the importance of those early impressions which we make upon the minds of our children? Or how should we be able to form enlarged and correct views, either of the character to which we ought to mould them, or of the means most proper to form them aright?

Considered in this point of view, were the interests of male education alone to be consulted, that of females becomes of sufficient importance to engage the public attention. Would we rear the human plant to its perfection, we must first fertilize the soil which produces it. If it acquires its first bent and texture upon a barren plain, i will avail comparatively little should it be afterwards

transplanted to a garden.

In the arrangement of my remarks, I shall pursue the following order:-

1st. Treat of the defects of the present mode of female educa-

2nd. Consider the principles by which education should be regulated.

3rd. Sketch a plan of a female seminary.

4th. Show the benefits which society would receive from such

Defects in the present mode of Female Education and their causes.

Civilized sations have long since been convinced that education, as it respects males, will not like trade regulate itself; and hence they have made it a prime object to provide that sex with every thing requisite to facilitate their progress in learning; but female education has been left to the mercy of private adventurers; and the consequence has been, to our sex the same as it would have been to the other, had legislatures left their accommodations and means of instruction, to chance also.

Education cannot prosper in any community, unless from the ordinary motives which actuate the human mind, the best and most cultivated talents of that community can be brought into exercise in that way. Male education flourishes, because from the guardian care of Legislatuces, the presidencies and professorships of our colleges, are some of the highest objects to which the eye of ambition is directed. Not so with female institutions. Preceptresses of these are dependent on their pupils for support, and are

consequently liable to become the victims of their caprice. In such a situation it is not more desirable to be a preceptress than it would to be a parent, invested with the care of children, and responsible for their behaviour, but yet depending upon them for subsistence, and destitute of power to enforce their obedience.

Feminine delicacy requires that girls should be educated chiefly their own sex; this is apparent from considerations, that regard their health and conveniences, the propriety of their dress and

manners, and their domestic accomplishments.

Boarding Schools, therefore, whatever may be their d. feets, forrish the best mode of editection provided for temples.

Concerning these schools, it may be observed.

1st. They are temporary institutions, formed by individuals whose object is present cinclument. But they cannot be expected to be greatly lucrative; therefore the individuals who establish them cannot afford to provide suitable accommodations, as to room. At night the pupils are ir quently crowded in their lodging rooms; and during the day they are generally placed together in one apartment, where there is a beta o geneous mixture of different kinds of business, accompanied with so much noise and confsion as greatly to impede their progress in sti dy.

2nd. As individuals cannot afford to provide su table accommodations as to room, so neither can they allo d I braries and other apparatus necessary to teach properly the vate us bratiches in which

they pretend to instruct.

3. Neither can the individuals who establish these schools offord to provide suitable instruction. It not an frequently happens that one instructress teaches at the same time, and in the some room, tenor twelve different branches. If assistants are provided, such are usually taken as can be procured for a small compensation. True, in our large cities, preceptresses provide their pupils with masters, though at an expense which few can afford-yet none of those masters are responsible for the general proficiency or demeanor of the pupils. Their only responsibility is in the particular branch which they teach; and to a preceptress who probably does not understand herself, and who is therefore incapable of judging whether or not it is well taught.

4. It is impossible that in those schools such systems should be adopted and enforced as are requisite for properly classing the pupris. Institutions for young gentleman are founded by public authority, and are permanent; they are endowed with funds, and their instructors and overseers are invested with authority to make such laws as they shall deem most salutary. From their permanency, their laws and rules are well known. With the r funds they procuce libraries, philosophical apparatus, and other advantages, sole or to what can elsewhere he found; and to enjoy these, ind viduals are placed under their discipline, who would not else be subjected to it. Hence the directors of these institutions can enforce, among other regulations, those which enable them to make a p rfect classification of their students. They regulate their qualifications for entrance, the kind and order of their studies, and the period of their remaining at the seminary. Female schools present the reverse of this. Wanting permanency, and dependent present the reverse of this. Wanting permanency, and dependent on individual patronage, had they the widom to make salutary regulations, they could neither enforce nor purchase compliance: The pupils are irregular in their times of entering and leaving school; and they are of various and dissimilar acquirements. scholar of mature age thinks she has a right to judge for horself respecting what she is to be taught; and the parents of those who are not, coas der that they have the same right to judge for them. Under such disadvantages, a school cannot be classed, except in a very imperfect manner.

yery imperiod manner.

5. It is for the interest of instructors of boarding schools to teach their pupils showy accomplishments rather than those which are sold and useful. Their object in teaching is generally present profit. In order to realise this, they must contrive to give immediate celebrity to their schools. If they arend chiefly to the cultivation of the mind, their work may not be manifest at the first glance; but let the pund return home, laden with fashionable toys, and her young companions filled with envy and astonishment, are never satisfied till they are permitted to share the precious instruction. If it is true, with the turn of the f shion, the toys which they are taught to make will become obsolete; and no benefit remain to them of perhaps the only money that will ever be expended on their education; but the object of the instructress may be accomplished notwithstanding, if that is directed to her own,

rather than her pupil's advantage.

6. As these Schools are private establishments, their preceptresses are not accountable to any other particular persons. Any svoman has a right to open a Senool in any place : and no one,

either from Law or custom, can prevent her. Hence the Publicare liable to be imposed upon, both with respect to the character and acquirements of preceptresses. I am far however from asserting that this is always the case. It has been before observed, that in the present state of things the ordinary motives which actuate the human mind would not induce ladies of the best and most cultivated talents to engage in the business of instructing from choice. But some have done it from necessity, and occasionally an extraordinary f male has occupied herself in instructing because she felt that impulse to be active and isoful which is the characteristic of a vigorous and noble mind; and because she found few avenues to extensive usefulness open to her sex. But if such has been the tact, it has not been the consequence of any system from which a similar result can be expected to rocur with regularly; and it remains true that the public are liable to imposition both with regard to the character and acquirements of preceptresses.

Justances have lately occurred in which women of bad reputation, at a distance from scenes of their former ble, have been entrusted by our unsuspecting citizens with the instruction of their

daughters.

But the moral reputation of individuals is more a matter of public notoriety than their literary attainments; hence society are more liable to be deceived with regard to the acquirements of

instructresses, than with respect to their characters.

Those women however who deceive society as to the advantages which they give their pupils, are not charged with any ill intention. They teach as they were taught, and believe that the public are henefitted by their labors. Acquiring, in their youth, a high value for their own superficial accomplishments, they regard all others as supernumerary, if not unbecoming. Altho, these considerations exculpate individuals, yet they do not diminish the injury which society receives; for they shew that the worst which is to be expected from such instruction is not that pupils will remain ignorant; but that by adopting the views of their teachers they will have their minds barred against future improvement by acquiring a disrelish, if not a contempt, for useful knowledge,

7. Altho, from a want of public support, preceptresses of boarding schools have not the means of enforcing such a system as would lead to a perfect classification of their pupils; and althothey are confined in other respects within narrow limits yet because these establishments are not dependent on any public body within these limits, they have a power far more arbitrary and uncontrolled than is allowed the learned and judicious instructors

of our male seminaries.

They can, st their option, omit their own deties, and excuss cleir pupils from theirs.

They can make absurd and ridiculous regulations.

They can make improper and even wicked exactions of their

Thus the writer has endeavoured to point out the defects of the present made of Female Education, chiefly in order to shew that the great cause of these defects consists in a state of things in which Legislatures, undervaluing the great importance of woman in society, neglect to provide for their education, and suffer it to become the sport of adventurers for fortune, who may be both ignorant and vicious.

Of the principles by which Education should be regulated.

To contemplate the principles which should regulate systems of instruction, and consider how little those principles have been regarded in educating our sex, will show the delects of female education in a still stronger point of light and will also afford a standard by which any plan for its improvement may be mes-

I ducation should seek to bring its subjects to the perfection of their moral, intellectual, and physical nature; in order that they may be of the greatest possible use to themselves and others, or to use a different expression, that they may be the means of the greatest possible happiness of which they are capable, both as to what they enjoy and what they communicate.

Those youth have the surest chance of enjoying and communicating happiness who are best qualified both by internal dispositions and external hab to, to perform with readiness, those duties which their future life will most probably give them occasion to practice.

Studies and employments should therefore be selected, from one

or both of the following considerations; either because they are peculiarly fitted to improve the faculties; or because they are such s the pupil will most probably have occasion to practice in future

These are principles on which systems of male Education are founded, but female Education has not yet been systematized. Change and confusion reign here. Not even is youth considered n our sex, us in the other, a season which should be wholly devoted in our sea, as at the other a season which should be which devoted to improvement. Among families, so rich as to be entirely above labor, the daughters are hurried through the routine of boarding school institution and at an earlier period introduced into the gay world and thenceforth their own object is amusement. Mark the different treatment which the sons of these families receive. While their sisters are gliding through the mazes of the midnight dance they employ the lamp to treasure up for future use the riches of ancient wisdom; or to gather strongth or expansion of mind in exploring the wonderful paths of philosophy. When the youth of the two sexes has been spent so differently, is it strunge or is it nature in fault, if more mature age has brought such a difference of character that our sex have been considered by the other, as the pampered wayward babies of society who must have some rattle put into our hands to keep us from doing mischief to ourselves and

Another difference in the treatment of the sex is made in our country, which though not equally pernicious to society is more. pathetically unjust to our sex. How often have we seen a student who returns from his literary pursuits, finds a sister who was his could in acquirements, while their advantages were equal, of whom he is now ashamed. While his youth was devoted to study, and he was furnished with the means, she without any object of improvement, drudged at home to assist in the support of the father's family, and perhaps to contribute to her brothers subsistance abroad; and now, a being of a lower order, the rustic innocent wonders and weeps at his neglect. Not only has there been a want of system concerning female education, but much of what has been

done has proceeded upon mistaken principles.

One of these is, that, without a regard to the different periods of life, proportionate to their importance the education of females has been too exclusively directed to fit them for displaying to adrantage the charms of youth and beauty.—Tho' it may be proper to adorn this period of life yet it is incomparably more important to prepare for the serious duties of mature years. Tho' well to decorate the blossoms, it is far better to prepare for the harvest in the vegetable creation, nature seems but to sport, when she embellishes the flower, while all her serious cares are directed to perfect the fruit.

Another error is, that it has been made the first object in educating our sex to prepare them to please the other. But reason and religion teach that we too are primary existances; that it is for us to move in the orbit of our duty around the holy centre of perfection, the companions, not the sattelites of men; else instead of shedding around us an influence, that may help to keep them in their proper course, we must accompany them in their

wildest deviations.

I would not be understood to insimuate that we are not, in particular situations, to yield obedience to the other sex. Submission and obedience belong to every being in the universe, except the great master of the whole. Nor is it a degrading peculiarity to our sex to be under human authority. Whenever one class of human beings derive from another the benefits of support and protection, they must pay its equivalent obedience. Thus while we receive these benefits from our parents we are all without distipetion of sex, under their authority; when we receive them from the Government of our country we must obey our rulers; and when our sex take the obligation of marriage, and receive protection and support from the other, it is reasonable that we too should yield obedience. Yet is neither the child or the subject, nor the wife under human authority, but in observance to the di-

Our highest responsibility is to God and our highest interest is to please Him; therefore to secure this interest, should our edu-

cation be directed.

Neither would I be understood to mean that our sex should not seek to make themselves agreeable to the other. The error complained of is that the taste of men whatever it might happen to be has been made a standard for the formation of the Female character. In whatever we do it is of the most importance, that the rule by which we work should be perfect. For if otherwise what is it but to errupon principle! A system of education which leads one class of human beings to consider the approbation of another as their highest object, teaches that the rule of their are at a loss what sciences we ought to learn, but that we have not

conduct should be the will of beings imperfect and erring like themselves, rather than the will of God, which is the only stan. dard of perfection.

Having now considered Female education both in theory and practice, and seen that in its present state it is in fact a thing without form and void" the mind is naturally led to enquire af-

ter a remedy for the evil it has been contemplating.

Can individuals furnish this remedy ? It has heretofore been lest to them and we have seen the consequence. If education is a business which might naturally prosper if left to individual exertion, why have Legislatures intermeddled with it at all? is not, why do they make their daughters illegitimate, and be-

stow all their cares upon their sons.

It is the duty of a Government to do all in its power to promote the present and future prosperity of the nation over which it is placed. This prosperity will depend on the character of its citizens. The characters of these will be formed by their mothers, and it is through the mothers that the Government can control the characters of its future citizens, to form them such as will ensure their country's prosperity. If this is the case, then it is the duty of our present Legislature to begin now to form the characters of the next generation by controling that of the Females, who are to be their mothers, while it is yet with them a season of improvement.

But should the conclusion be almost admitted that our sex too are the legitimate children of the Legislature; and that it is their duty to afford us a share of their paternal bounty; the phantom of a College learned lady would be ready to rise up and destroy every good resolution, which the admission of this truth would naturally

produce in our favor .-

To show that it is not a masculine education that is here recomto afford a definite view of the manner in which a female menution might possess the respectability, permanency and uniformity of operation of those appropriated to males; and yet differ from them, so as to be adapted to that difference of character and duties to which the softer sex should be formed, is the object of the following imperfect

SKETCH OF A FEMALE SEMINARY.

From considering the deficiencies in Boarding Schools much may be learned, with regard to what would be needed, for the prosperity and usefulness of a public seminary for females.

1. There would be needed a building with commodious rooms for lodging and recitation, apartments for the reception of apparatus, and for the accommodation of the domestic department.

2. A library containing books on the various subjects in which

the pupils were to receive instruction; musical instruments, some good paintings to form the taste and serve as models for the execution of those who were to be instructed in that art; maps, globes and a small collection of philosophical apparatus.

3. A judicious Board of trust competent and desirous to promote its interests, would in a female, as in a male literary institution be the corner stone of its prosperity .- On this board it would depend

to provide, 4th. Suitable instruction. This article may be subdivided under four heads.

1. Religious and moral.

2. Literary.

3. Domestic.

4. Ornamental.

1. RELIGIOUS AND MORAL.—A regular attention to religious duties, would, of course be required of the Pupils by the laws of the Institution. The Trustees would be careful to appoint no instructers who would not teach religion and morality, both by their example and by leading the minds of the Pupils to perceive that these constitute the true end of all Education. It would be desirable that the young ladies should spend a part of their Sabbaths in hearing discourses relative to the peculiar duties of their sex. The evidences of Christianity and moral Philosophy would constitute a part of their studies.

2. LITERARY INSTRUCTION .- To make an exact enumeration of thebranches of literature, which might be taught would be impossible, unless the time of the pupils' continuance at the seminary, and the requisites for entrance were previously fixed. Such an enumera-tion would be tedious, nor do I conceive that it would be at all pro-motive of my object. The difficulty complained of is not that we excellent advice with regard to what we should be taught, but no Legislature has provided us the means of instruction. Not, howeyer, to pass lightly over the fundamental part of education, I will mention one or two of the less obvious branches of sejence, which, I conceive should engage the youthful attention of my sex.

It is highly important that fomules should be conversant with those studies which will lead them to understand the operations of the human mind. The chief use to which the philosophy of the mind can be applied, is to regulate education by its rules. The ductile mind of the child is entrusted to the mot er; and she ought to obtain every possible assistance, in acquiring a knowledge of this noble material, on which it is her business to operate, that she may best understand how to mould it to its most excellent form.

Natural Philosophy has not often been faught to our sex. why should we be kept in ignorance of the great machinery of nature, and left to the vulgar notion that nothing is curious but what deviates from her common course? If mothers were acquainted with this science they would communicate very many of its

principles to its children in carly youth.

From the bursting of an egg burried in the fire, I have heard an intelligent mather lead her pratting enquirer to understand the cause of the earthquake. But how often does the mother from ignorance on this subject, give her child the most erroneous and contracted views of the causes of natural phenomena; views, which, though they may afterwards learn to be faise, are yet from the laws of association, ever ready to return, unless the active powers of the mind are continually upon the alert to keep them out. A knowledge of natural philosophy is calculated to heighten the moral taste, by bringing to view the majesty and beauty of order and design; and to enliven piety, by enabling the mind more clearly to perceive throughout, the mainfold works of God, that wisdom, in which he hath made them all.

In some of the sciences proper for our sex, the books written for the other would need alteration; because in some they presuppose more knowledge than female pupils would possess; in others, they have purts not particularly interesting to our sex, and omit subjects immediately relating to their pursuits. There would likewise be needed for a female seminary some works, which I believe are no where extant, such as a systematic treatise on housewifery.

3. Domestic Instruction-Should be considered important in a female semmary. It is the duty of our sex to regulate the internal concerns of every family, and unless they be properly qualified to discharge this duty, whatever may be their literary or ornamental attainments, they cannot be expected to make either good wives, good mothers, or good mistresses of families ; and, if they are none of these they must be bad members of society; for it is by promoting or destroying the confort and prosperity of their own families, that females serve or injure the community.

To superintend the domestic department, there should be a respectable lady, experienced in the best methods of housewifery, and acquainted with propriety of dress and manners. Under her tuition the pupils ought to be placed for a certain length of time every morning. A spirit of next less and order should here be treated as a virtue, and the contrary if excessive and incorrigible, be punished with expulsion. There might be a gradution of employment in the domestic department, according to the length of time the pupils had remained at the institution. The older scholars might then assist the superintendent in instructing the younger, and the whole be so arranged, that each pupil might have advantages to become a good domestic manager by the time she has completed her

This plan would afford a healthy exercise. It would prevent that estrangement from domestic duties, which would be likely to take place in a length of time devoted to study, with those to whom they were previously familiar; and would accustom those to them, who, from ignorance might otherwise put at huzard their own hap-

piness and the prosperity of their families.

These objects might doubtless be effected by a scheme of domestic instruction; and probably others of no inconsiderable importance. It is believed that housewifery might be greatly improved by being taught not only in practice but in theory. Why may it not be reduced to a system as well as other acts?—There are right ways of performing its various operations; and there are reasons why those ways are right; and why may not rules be formed, their reasons collected; and the whole be digested into a system to guide the learner's practice?

It is obvious that theory alone can never make a good artist; and it is equally obvious, that practice unaided by theory, can never correct errors, but must establish them. If I should perform any

proper advantages to learn any. Many writers have given us thing in a wrong manner all my life, and teach my children to perform it in the same manner, will through my life and theirs it would he wrong. Without alteration there can be no improvement; but how are we to alter so as to improve, if we are ignorant of the principles of our act with which we should compare our practice; and by which we should regulate it?

In the present state of things it is not to be expected, that any material improvements in housewifery should be made. There being no uniformity of method prevailing among different houseveryes, of course the communications from one to another are not much more likely to improve the art than a communication between two mechanics of different trades, would be to improve each in his respective occupation. But should a system of principles be philosophically arranged, and taught both in theory and by practice, to a large number of females whose minds were expanded and strengthened by a course of literary instruction, those among them of an lavestighting turn, would, when they commenced house keepers, consider their domestic operations as a series of experiments, which either proved or refuted the system previously taught. They would then converse together like those who practice a common aif, and improve each other by their observations and experiments; and they would also be capable of improving the system by detect ing its errors, and by making additions of new principles and better modes of practice.

4. The ornamental branches which I should recommend for a female seminary, are drawing and painting, elogant penmanship, music and the grace of motion,—Needlework is not here mentioned.-The best style of useful needlework should either be taught in the domestic department or made a qual fication for entrance; and I consider that useful which may contribute to the decoration of a ladies, person, or the convenience and neatness of her family. But the use of the needle for other purposes than these, as it of fords little to assist in the formation of the character, I should regard as a waste of time.

The grace of motion must be learned chiefly from instruction in Other advantages besides that of a graceful carriage, might be derived from such instruction, if the lessons were judiciously timed. Exercise is needful to the health, and recreation to the cheerfulness and contentinent of youth. Female youth could not be allowed to range unrestrained to sock amusement for themselves. If it was entirely prohibited, they would be driven to seek it by stealth, which would lead them to many improprieties of conduct and would have a pernicious effect upon their general character, by inducing a habit of treading forbidden puths, the alternative that remains is to provide them with proper recreation, which, after the confinement of the day, they might enjoy under the eye of their instructors .- Dancing is exactly suited to this purpose as also to that of exercise; for perhaps in no way, can so much healthy exercise be taken in so short a time. It has besides this advantage over other amusements, that it affords nothing to excite the had passions, but on the contrary its effects are to soften the mind, to banish its animosities, and to open is social impressions.

It may be said that dancing would dissipate the attention and estrange it from study .- Balls would, doubtless, have this effect; but let dancing be practised every day, by youth of the same sex without change of place, dress, or company, and under the eye of those, whom they are accustomed to obey, and it would excite no more emotion than any other exercise or amusement, but in degree as it is of itself more pleasant.—But it must ever be a grateful exercise to youth, as it is one, to which nature herself prompts them, at the sound of animating music.

It has been doubted whether painting and music should be taught to young ladies, because much time is requisite to bring them to any considerable degree of perfection, and they are not immediately useful. Though these objections have weight, yet they are founded on too limited a view of the objects of education. They leave out the important consideration of forming the character. I should not consider it an essential point that the music of a lady's piano should rival that of her master's; or that her drawing room should be decorated with her own paintings rather than those of others, but it is the intrinsic advantage which she might derive from the refinement of herself that would induce me to recommend to her an attention to these elegant pursuits. The harmony of sound, has a tendency to produce a correspondent harmony of soul; and that art which obliges us to study nature, in order to imitate her, often enkindles the latent spark of taste. of sensibility for her beauties, till it glows to adoration for their author, and a refined love of all his works.

5. There would be needed for a female, as well as for a male

seminary a system of laws and regulations so arranged that both the instructors, and the pupils would know their duty; and thus the whole business mayo with regularity and uniformity.

The laws of the locitention would be effectly directed to regulate the pupil's qualifications for entrance, the kind and order of their studies, their heliaviour while at the institution, the term alletted for the completion of their studies, the punishments to be inflicted on offenders, and the rewards or honors to be bestowed on the

virtuous and diligent.

The direct rewards or honors used to stimulate the umbition of students in colleges are first, the certificate or diploma, which each receives who passes successfully through the term alloated to his collegiate studies; and secondly the appointments to perform certain parts in public exhibitions, which are bestowed by the faculty, as rewards for superior scholarship. The first of these modes is admissible into a female seminary; the second is not; aspublic speaking forms no part of female education. The want of this mode might, however, be supplied by examinations juditers and scholars, would combine to produce a thorough preparation for these; for neither would have any other public test of the success of their labors. Persons of both sexes would attend. The less entertaining parts might be enlivened by interludes where the pupils in painting and music would display their several improvements. Such examinations would stimulate the instructers to give their scholars more attention, by which the leading facts and principles of their studies would be more clearly understood and better remembered. The ambition excited understood and better remembered. among the pupils would operate without placing the instructors under the necessity of making distinctions among them, which are so apt to be considered as invidious, and which are in our male seminaries, such fruitful sources of disaffection. Perhaps the term allotted for the routine of study at the seminary, might be three years, the pupils probably would not be fitted to enter till about the age of 14. Whether they attended to all or any of the ornamental branches, should be left optional with the parents or guardians. Those who were to be instructed in thein, should be entered for a longer term, but if this was a subject of previous calculation no confusion should arise from it. The routine of calculation no confusion should arise from it. The routine of the avercises being established by the laws of the institution, would be uniform and publicly known, and those who were previously acquainted with the branches first taught, might enter the highest classes; nor would those who entered the lowest be obliged to remain during the three years. Thus the term of remaining at the institution, might be either one, two, three, four or more years; and that without interfering with the regularity and uniformity of its proceedings.

The writer has now given a sketch of her plan. no means expressed all the ideas which occurred to her concerning it; she wished to be as concise as possible, and yet afford conviction that it is practicable to organize a system of Female Education, which shall possess the permanency, uniformity of operation, and respectability of our male institutions; and yet differ from them, so as to be adapted to that difference of character and duties to which early instruction should form the softer

It now remains to enquire more particularly what would be the benefits resulting from such a system.

BENIFITS OF FEMALE SEMINARIES.

In enquiring concerning the benefits of the plan proposed, I shall proceed upon the supposition that female seminaries will be presented throughout our country.

Nor is this altogether a visionary supposition if one seminary should be well organized its advantages would be found so great, that others would soon be instituted, and that sufficient patronage can be found to put one in operation, may be presumed from its reasonableness, and from the public opinion with regard to the present mode of female Education. It is from an intimate acquaintance with those parts of our country, where education is said to flourish most, that the writer has drawn her picture of the present state of female instruction, and she knows, that she is not alone in perceiving or deploring its faults. Her sentiments are shared by many an enlightened parent of a daughter, who has received a boarding school education. Counting on the promise

of her childhood, the Father had anticipated her maturity as combining what is excellent in mind with what is elegant in manners. He spared no expense that education might realize to him, the image of his magination. His daughter returned from her boarding school, improved with fashiounble airs and expert in manufacturing fashionable toys; but in her conversation, he sought in vain for that refined and fertile mind, which he had fondly expected. A ware that his disappointment has its source in a defective education he looks with anxiety on his other daughters whose minds, like lovely buds, are beginning to open. Where shall he find a genial soil in which he may place them to expand? Shall he provide them male instructers? Then the graces of their persons and manners and whatever forms the distinguishing charm of the feminine character, they cannot be expected to acquire. Shall he give them a private Tutoress? She will have been educated at the boarding school, and his daughters will have the faults of its instruction second handed. Such is now the dilemma of many parents; and it is one from which they cannot be extinented by their individual exertions. May not then the only plan which promises to relieve them expect their vigorous support.

Let us new proceed to enquire what benefits would result from

the establishment of female seminaries.

They would constitute a grade of public education superior to any yet known in the history of our sex; and through them, the lower grades of female instruction might be controlled. The influence of public seminaries over these, would operate in two ways; first by requiring certain qualifications for entrance, and secondly by furnishing instructresses initiated in their modes of teaching and imbued with their maxims.

Female seminaries might be expected to have important and happy efects on common schools in general, and in the manner of operating on these would probably place the business of teaching children in hands now nearly useless to society; and take it from those whose services the state wants in many other ways.

That nature designed for our sex the care of children, she has made manifest by mental as well as physical indications. She has given us in a greater degree than men the gentle arts of in-sinuation, to soften their minds and fit them to receive impressions, a greater quickness of invention to vary modes of teaching to different dispositions; and more patience to make repeated efforts. There are many females of ability to whom the business of instructing child en is highly acceptable and who would devote all their facu ties to their occupation. They would have no higher pecuniary object to engage their attention and their reputation as instructors they would consider as important; whereas, whenever able and enterprising men engage in this business they consider it merely as a temporary employment to further some other object, to the attainment of which their best thoughts and calculations are all directed. If then women were properly fitted by instruction, they would be likely to teach children better than the other sex; they could afford to do it cheaper; and those men who would otherwise be engaged in the employment, might be at liberty to add to the wealth of the nation by any of those thousand occupations, form which women are necessarily debarred.

But the females who taught children would have been themsolves instructed either immediately or indirectly by the seminaries. Hence through these the Government might exercise un intimate and most beneficial control over the common schools. Any one who has turned his attention to this subject must be aware that there is great room for improvement in these, both as to the modes of teaching and the things taught, and what me-thod could be devised so likely to effect this improvement, as to prepare by instruction a class of individuals, whose interest, leisure, and natural talents would combine to make them pursue it with ardour. Such a class of individuals would be raised up by female Seminaries. And therefore they would be likely to have highly important and happy effects on common schools.

It is believed that such institutions, would tend to prolong or

perpetuate our excellent Government.

An opinion too generally prevails, that our present form of government though good cannot be permanent, other republicks have failed and the historian and philosopher have told us, that nations are like individuals; that at their birth they receive the seeds of their decline and dissolution. Here deceived by a false analogy, we receive an apt illustration of particular facts, for a general truth.
The existence of nations cannot in strictness be compared with the duration of animate life; for by the operation of physical causes this, after a certain length of time, must cease; but the existence of nations, is prolonged by the succession of one generation

going on in a peaceable manner under a good government till the We must then look to other causes than necessity end of time. for the decline and fall of former republicks. If we could discover these causes and seasonably prevent their operation, than might our latest posterity enjoy the same happy government with which we are blessed; or if but in part, then might the triumphs of tyranny, be delayed, and a few more generations be free.

Permit me then to ask the enlightened politician of my country whether amidst his researches for these causes he cannot discover one, in the neglect which free governments in common with others have shewn, to whatever regarded the formation of the female cha-

In these great Republicks which have fallen off themselves, the less of republican manners and virtues has been the invariable precursor, of their loss of the republican form of government. But is it not in the power of our sex to give society its tone, both as to manners and morals ? And if such is the extent of female influence, it is wonderful that republicks have failed when they calmly suffered that influence to become enlisted in favor of luxuries and follies wholly incompatible with the existence of freedom.

It may be said that the deprivation of morals and manners, can be traced to the introduction of wealth as its cause. But wealth will be introduced; even the iron laws of Lycurgus could not prevent it. Let us then inquire if means may not be devised to prevent its bringing with it the destruction of public virtue, may not these means be found in education ?-In implanting in early youth habits that may counteract the temptations to which, through the influence of wealth, mature age will be exposed? and in giving strength and expansion to the mind, that it may comprehend and prize those principles, which teach the rigid performance of duty I Education it may be said has been tried as a preservative of national purity. But was it applied to every exposed part of the body political For if any part has been left within the pestilential atmosphere of wealth without this preservative, then that part becoming corrupted would communicate the contagion to the whole; and if so then has the experiment whether education may not preserve purity, never yet been fairly tried. Such a part has been left in all former experiments. Females have been exposed to the contagion of wealth without the preservation of a good education, they constitute that part of the body politic least endowed by nature to resist, most to communicate it. Nay not merely have they been left without the defence of a good Education, but their corruption has been accelerated by a bad one. The character of women of rank and wealth has been and in the old governments of Europe now is all that this statement would lead us to expect. Not content with doing nothing to promote their country's welfare, like pampered children they revel in its prosperity, and seatter it to the winds with a wanton profusion; and still worse—they capoison its source by diffusing a contempt for useful labor. To court pleasure their business, within her temple in defiance of the laws of God and man they have erected the idol fashion, and upon her altar they sacrifice, with shameless rites, whatever is sacred to virtue or religion. Not the strongest ties of nature—not even maternal love can restrain them! Like the worshipper of Moloch, the mother while yet yearning over the new born habe, tears it from the bosom which God has swelled with nutrition for its support, and casts it remorseless from her, the victim of her unhallowed devotion.

But while, with an auguished heart, I thus depict the crimes of my sex, let not the other stand by and smile. Reason declares that you are guiltier than we. You are our natural guardians,our brothers our fathers and our rulers. You know that our ductile minds readily take the impressions of Education. Why then have you neglected our Education? Why have you looked with lethargie indifference, on circumstances ruinous to the formation

of our characters, which you might have controlled?

But it may be said the observations here made, cannot be applied to any class of females in our country. True they cannot yet; and if they could it would be useless to make them; for when the families of any country have become thus debased, then is that country so corrupted that nothing but the awful judgments of Heaven can arrest its career of vice. But it cannot be denied that our manners are verging towards those described, and the change, the gradual, has not been slow; already do our daughters listen with surprise when we tell them of the republican simplicity of our mothers. But our manners are not as yet so altered, but that throughout our country they are still marked with republican virtues.

The inquiry to which these remarks have conducted us is this-What is afforded by the plan of female education, here proposed, which may teach or preserve among females of wealthy families,

to another, and there is no physical cause to prevent this succession that purity of manners which is allowed to be so essential to national prosperity, and so necessary to the existence of a republican government.

1. Females by having their understandings cultivated, their reasoning powers developed and strengthened, may be expected to act more from the dictates of reason and less from those of fashion

and enprice.

2. With minds thus strengthened they would be taught systems of morality enforced by the sanctions of religion; and they might be expected to acquire juster and more enlarged views of their

duty and stronger and higher motives to its performance.

3. This plan of education offers all that can be done to preserve female youth from a contempt of useful labor. The pupils would become accustomed to it in conjunction with the high objects of literature, and the elegant pursuits of the fine arts, and it is to be lioped that both from habit and association, they might in future life regard it as respectable.

To this it may be added that if housewifery could be raised to a regular art, and taught upon philosophical principles, it would become a higher and more interesting occupation, and ladies of fortune, like wealthy agriculturists, might find, that to regulate

their business was an agreeable employment.

4. The pupils might be expected to acquire a taste for moral and intellectual pleasures which would buoy them above a passion for show and parade, and which would make them seek to gratily the natural love of superiority by endeavoring to excel others in intrinsic merit rather than in the extrinsic frivolties of dress, furniture,

and equipage.

5. By being enlightened in moral philosophy, and in that which teaches the operations of the mind, females would be enabled to perceive the nature and extent of that influence which they possess over their children, and the obligation which this lays them under to watch the formation of their characters with unceasing vigilance to become their instructors, to devise plans for their improvement, to weed out the vices from their minds, and to implant and foster the virtues. And surely there is that in the maternal bosom which when its pleadings should be aided by education, will overcome the seductions of wealth and fashion, and will lead the mother to seek her happiness in communing with her children and promoting their welfare, rather than in a heartless intercourse with the votaries of pleasure; especially when, with an expanded mind, she extends her views to fiturity, and sees her care to her off-spring rewarded by peace of conscience, the blessings of her family, the prosperity of her country, and finally with everlasting happiness to herself and them.

Phus laudable of jects and employments would be furnished for the great body of females who are not kept by poverty from excesses. But among these as among the other sex, will be found master spirits who must have pre-eminence at whatever price they acquire it. Domestic life cannot hold these because they prefer To leave such without to be infamous, rather than obscure. any various road to eminence, is unsafe to community; for not unfrequently are the secret springs of revolution set in motion by their intrigues. Such aspiring we will regulate by education; we will remove obstructions to the course of literature, which has heretofore been their only honorable way to distinction; and we offer them a new object, worthy of their ambition; to govern and

improve the seminaries for their sex.

In calling on my patriotic countrymen to effect so noble an object, the consuleration of national glory should not be overlooked. Ages have rolled away ;—berbarians have trodden the weaker sex beneath their feet ;-tyranis have robbed us of the present light of heaven, and feight would take its future. Nations, calling themselves polite, have made us the fancied idols of a ridiculous wrship, and we have repaid them with ruin for their folly. But wheres that wise and heroic country which has considered that our rigs are secred, though we cannot defend them? That though a waker, we are an assential part of the body politic, whose corruption or improvement must effect the whole? And which having thus considered has conglet to give us he decade. dered, has sought to give us by education, that rank in the scale of being to which our importance entitles us? History shews not that country. It shows many whose Legislatures have sought to improve their various vegetable productions, and their breed of useful brutes; but none whose public councils have made it an object of their deliberations to improve the character of their women. Yet though History lifts not her finger to such an one, anticipation does—she points to a nation, which, having thrown off the shackles of authority and precedent, shrinks not from schemes of improvement because other nations have never attempted them, but which in its pride of independence, would rather lead than follow in the march of human improvement. A nation wise and magnanimous to plan; enterprising to undertake-and rich in resources to execute. Does not every American exult that this country is his own? And who knows how great and good a race of men may yet arise from the forming hand of mothers, enlightened by the bounty of that beloved country, to defend her liberties, to plan her future improvement, and to raise her to imparalleled glory ?

EXTRACTS FROM PROFESSOR EATON'S WORKS

The Rensselaer Institute may be considered as the common workshop for all Colleges. Acadamies, and other literary and seientific Seminaries of learning. It is truly a school of scientific

manual labor.

1 The most distinctive character in the plan of the school consists in giving the Pupil, the place of teacher in all his exercises. From schools or colleges where the higher branches are might to the common village schools. The teacher always improves himself more than he does his pupils. Being under the necessity of relying upon his own resource, and of making every subject his own, he becomes an adept as a matter of necessity. Taking advantage of this principle, students of Rensselaer Instinite learn, by giving experimental and demonstrative lectures.

2. In every branch of learning the pupil begins with its practical application, and is introduced to a knowledge of elementary principles from time to time, as his progress requires. After vis iting a bleaching factory, he returns to the laboratory and produces clorine gass and experiments upon it, until he is familar with all the elementary principles appertaining to that curious substance. After seeing the process of tanning, he enters the laboratory with most ardeat zeal for a knowledge of the principles upon which the tanner's operations depend.-He can now apply the experiment for making an insoluble precipitate tanning and animal gelatin, also the soapy compound of animal oil and an alkaline carth; &c. After seeing buhr mill-stones consolidated by a gypsum cement, he is anxious to try the experiment of disengaging the water of combination in the gympsum, to absorb the effect of re-absorption. By this method a strong desire to study an elementary principle is excited, by bringing his labors to a point where, he perceives the necessity of it, and its direct application to a useful purpose.

3. Corporeal exercise is not only necessary for the health of students, but for qualifying them for the business of life. When such exercises are chosen by students they are not always judiciously selected. Such exercises as running, jumping, climbing, scuffling and the like, are calculated to detract from that dignity of deportment and carriage, which becomes a man of science. Therefore a system of exercises is adopted at this school, which, while it improves the health, also improves the mind, and ex cludes those vulgarisms, which too often become habitual among students. Such exercises as land-surveying, general engineering, collecting and preserving specimens in botany, mineralogy, zoology, examining work-shops and factories, watching the pro gress of agricultural operations, making experiments upon nutritious matters proper for vegetables, &c. are made the duties of

students as afternoon amusements.

These principles have now been practically applied for nine

years, to the full satisfaction of the patron and trustees.

The learned of both continents seem to have been simultaneously impressed with the importance of a change in the system of education. The common reutine, which has held the human mind in a state of abject servitude for ages, can be no longer toltrated. The aspiring energies of youth had been chained down to a kind of literary bondage, and genius had been jaded and fatigued like a beast of burden. The student spent many years in studying hard names, and a routine of rules, whose applications he was not permitted to know. His ardent curiosity was checked in embryo, and his studies were directed by the rod in early years, and by fines, admonitions, rustications, and expulsions, in his approach to manhood.

A method was loudly demanded which should be adapted to the native curiosity and arder of youth,—a method which should put in requisition all the strong faculties, and which should enli-

ren, not depress, the ardor of genius.

Rosseau's scheme of education, by first awakening and then gratifying curiosity, appeared to be just. That the student should see every branch of human learning practically applied.

and should be presented with the object of each branch at his first entrance upon it, became the general opinion. For example, that in learning land surveying, the student should he first taken into the field and then shewn how to use the compass and chain, then to plot hissurvey and to measure the superficial areas That mathematical rules should be explained to him from time to time as his own progressive operations demanded; but that he should not be made to plud through a discouraging set of abstract rules, ignorant of their uses and of the principles upon which they are founded. Having thus become familiar with the objects of his study, he will pursue with a zeal bordering on enthusiasm, all that part of mathematical studies which is connected with land surveying. In the same manner all the energies of his mind may be successfully excited in the study of mensuration, of astronomy, of natural philosophy, of chemistry, of natural history, and in truth of every department of human learning.

Though all agreed in the object to be effected, there was, and still is, much diversity of opinion respecting the most advisable course to be adopted in detail. A scheme appears eligible on paper, if drawn up by a lively fancy which fails when an application is attempted;—and unfortunately, even the improvement of the youthful mind became a subject of miserly speculation; and many new schools were set up and presented to the public with all the fulsome boasting of patent medicine. These mushroom institutions had a tendency to dampen public zeal, which if rightly directed would most effectually ameliorate the condition of man. But when parents have spent their hundreds at these much famed schools, and have been subject to the distressing reality that their children's stock of useful knowledge was improved but little, and that their morals were often degenerated, they were very naturally disposed to fall back upon the old system of education.

One of the greatest impediments in the way of success is that a great proportion of our best citizens are not aware that the humanmind, like the body, has a limit to its strength, consequently it is an easy task to inculcate a general belief that the school is best which proposes the largest number of studies. As far as this opinion prevails no progress can be made in improving the course of education. This is one of the worst evils of the old schools; the mind is distracted among a multitude of objects and succeeds

in nothing.

It is not pretended that the Rensselaerean plan will correct all the evils complained of, nor that the object proposed is wholly compassed by it, but this school was not set up for the sake of the school itself. Most schools are successful when they obtain patronage, even at the expense of other schools. This school is successful when it causes other schools to improve their mode of instruction so that they may become more useful to the community. The objects of the patron of this school are effected by the successful application of its principles at any place on either continent. Its pupils are now applying its principles from Georgia to Canada; and as far as they succeed, so far this school has prospered in the object of its establishment. That its general object is approved is evident from the fact that the school does not furnish competent instructors sufficient for one-half of the applications received from respectable Villages, Acadamies, &c.

On the 5th of November, 1824, the Honorable Steven Van Rensselaer wrote a letter to the Rev. Dr. Blatchford, requesting him to open this school on the first Monday of January, 1825, and take charge of it as President. In the same letter he appointed Amos Eaton, senior Professor, and Lewis C. Beck, junior Professor. He appointed a Board of Trustees also, with ten articles or orders for the temporary government of the school. In this letter he stated that the school was instituted for the purpose of giving instruction " in the application of science to the com-mon purposes of life," and that his principal object was to "qual-" ify teachers for instructing the sons and daughters of farmers "and mechanics in the application of experimental chemistry, "philosophy, and natural history, to agriculture, domestic econ"omy, the arts and manufactures." He added—"from the trials
"which have been made by persons in my employment during
"the last summer, I am inclined to believe that competent in-" structors may be produced in the school at Troy, who will be " highly useful in diffusing knowledge with its application to the "business of living. It seems to comport better with the habita" of our citizens and the genius of our Government to place the " advantages of useful improvements equally within the reach of

Whether my expectations will be realized or not. I am "willing to hazard the necessary expense of making the real."—In chedience to this request. Dr. Blatchford and Professor Beck devoted much of their attention, and Professor Euton the whole of his time and attention to experiments upon the minds of young men who were above the age of seventeen years. Professor Eaton lins continued his exertions time years; but Dr. Blatchford and Professor Beck have been succeeded by others.

On the 29th December, 1824, the Board of Trustees was called together by the President. At this meeting the name "Rensselaer school" was given to the institution; and at this and two following meetings (March the 11th and June 5th, 1825.) a code of bye-laws was adopted, and Mr. Van Rensselaer's letter was adopt-

ed as the constitution.

The school went into operation on the first Wednesday in Jannary, 1825. After a series of successful trials for about fourteen months it was incorporated.

DUTIES AND EXERCISES OF THE

RENSSELAER INSTITUTE.

CONDENSED FROM THE STATUTES, BY-LAWS, OR-DERS OF THE FACULTY, AND ESTABLISHED USAGES.

DUTIES OF ACTING OFFICERS.

lst. The President, or (if absent from the City of Troy) a resident Vice President, should supervise the whole course of in-struction. He should see that the professors and other teachers perform their respective duties faithfully—that the morals of stu-dents are well guarded and preserved—that no amusements or practices of an immoral tendency be admirted—that a due degree of energy be maintained in all the departments of learning. Finally he is bound by his acceptance, (though it is not a pay office) to keep a watchful eye upon whatever may affect the education and discipline of the institution

2nd. THE PRUDENTIAL COMMITTEE should supervise whatever concerns the conveniencies, the property, and expenses of the They should endeavor to accommodate the school in the use of the library, apparatus, cabinets of specimens, &c.; but so to order their use as to guard against all waste and negligence; and by all reasonable restrictions to preserve the property of the school. They should endeavor to guard against burdening students, parents, and guardians, with unnecessary expenses; they are required by law duly to consider the expediency and in xpediency of establishing a bill of fare, boarding house, where plain board of enumerated articles of food can be had at a very low price. Also to consider the expediency and inexpediency of providing manual Jabor at the various trades in Troy, where students may pay for board for a definite number of hours labor in each afternoon. Finally they are invested with the full powers of the whole board of trustees from one sitting of the board to another. And though they receive no compensation for their services, duly requires of their frequent visits at the school, and frequent and careful examinations into whitever appertains to flieir department.

3rd. HIE SENIOR PROFESSOR AND AGENT .- During the nine years in which the Institution has been in operation, these two offices have been united; though their union is not required by law. The two offices conjoined constitute a kind of executive officer for carrying into operation the commands of the Patron, President, Trustees, and Prudential Commutee. He is always to reside at the institute, and he receives all students into the two departments, and judges of their qualifications for admission; he directs all the immediate teachers, he arranges the students into sections, directs the whole course of studies, and decides in all cases of duty which are not definitely settled by law. But any of his acts may be annulled or varied by the President or resident Vice President. Any teacher or student may appeal to these, his superior officers, from

his decisions.

He directs in the use of the Library, Apparatus, Specimens, -but any student may appeal from his orders to the prodential committee, who are the proper guardians in the use of the property of the institution. He receipts all moneys paid to the school under the signature of the agent for the institute; for which he is obliged to account to the Treasurer when required. The property | tution,

of the Institution being under his charge he has the right and it is his duty to defend it as in cases of private property.

As sonlor professor he is required to give instruction to the teachers and students in every department of learning taught at the Institution; but he is never to be confined to any one division or to one room, -he is to visit every department daily, and make nimself acquainted with the character, talents, and application of each student. He is to give about four lectures each week before all the students of the Institute; and his whole annual course of about one hundred and sixty lectures shall present in regular succession, Mathematics, Rhetoric, Logic, the general principles of national and municipal Law, Geology, Mineralogy, Borany, Zoology, Ghemistry, and Mechanical Piniosophy. All his lectures shall be fully illustrated with mathematical instruments, cited cases, specifical control of the co

inous, apparains, and experiments.
4th. The Junior Professor is to perform all the duties of the senior Professor in case of absonce or sickness, and the prudential committee may make arrangements with him to give instruction

perpetually at the Institution on definite subjects.

5th, An Adjunct Professon is to perform all the duties of the Professorship to which he is attached; and assist in teaching according to the directions of an acting Professor or President.

6th. An Assistant Professor is to assist in teaching as directed by the Profes ors or President. In case of the absence of all his superior officers he shall have the power and perform the duties of Professor.

7th. A SPECIAL ASSISTANT is to perform the duties especially assigned to him until the termination of his appointment, and for the time being is to be obeyed and respected by the students.

8th A Moniton (usually called the officer of the day) is to ring the bell at sun rise and again at 20 minutes. He is to example the bell at sun rise and again at 20 minutes. mine the students at five minutes after the second bell, or get a a teacher to do it; -he is to give the first lecture in his own division—to notify the Professor of his time to lecture and to criticise. He may excuse from lecturing on good reasons—he may give short leave of absonce—he must report all defaulters—he shall ring the bell to convene the students to receive orders for the afternoon at 2 o'clock he shall give the Professor a list of the names of all who go out in the ofternoon, with their respective employments-he shall sweep out all the lecture rooms on the evening of his day, and shall enforce cleanliness in the public rooms -he shall be obeyed and respected for the time being, according to the by-law respecting assistants.

ROUTINE OF EXERCISES.

Subbath morning.—One hour's examination on sacred history.
 Religious Worship.—Every student must attend religious worship on the subbath; but he is not restricted to any denomina-

3. Monday morning.—One hour's examination in moral philosophy and the philosophy of the human mind.
4. Common morning Examination.—On all days excepting Sundays and Mondays, an examination on the subjects of the students' lectures of the preceding day.

5. Forenoon exercises. - After morning examination each student shall give an extemporaneous lecture. These lectures, followed by criticisms, cont mus until one o'clock, P. M., excepting Saturdays.

O. Afterwoon exercises .- Students are to be called together at 2 P. M. dady, and distributed into group's for their respective exercises; an account of their due execution of the duties assigned them has to be reiniered at the next morning examination. The afternoon exercises consist in surveying, engineering, mensuration, taking latitude and longitude, height and distances, collecting and analyzing specimens in mineralogy, geology, and zoologylating water pressure, the power of machinery, &c. But the most important duty is that of preparing next day's lecture.

7. Parliamentary exercises shall be attended one evening in each week. Every student shall conduct himself thereat accord-

ing to our national parliamentary rules.

8. The Library is to be always placed in a reading room to which students may have access from survise to sunset, according to the rules of rotation to be prescribed by the faculty. No ink, or pen which has been dipped in ink, shall be in the limits of the reading room. No book shall be taken out of the library except in case of necessity, to be determined by the oldest member of the faculty present at the institution—and in such case it shall not remain out exceeding six days.

But the oldest Professor may order books out to aid in preparing text books or manuscript note boo s, &c. for the use of the Insti-

9. When a student is giving a lecture, he shall have two auditors at least, to be appointed in rotation, who shall be critically attentive to him. Others who are in the room shall not speak aloud, nor make any disturbance or noise; but they will not be under obligation to listen to the lecture, except to a monitor or teacher.

10. No student shall scuffle nor put his hand on another in sport, nor throw any stone or other missile, nor do any act of violence, nor any ungentlemanly act, within the yard or lot occupied by or

attached to the Institution.

11. No student shall litter or strew over any part of the road, yard, or building, with plants, minerals, or any other thing whatever, which shall give any uncleanly appearance. No minerals shall be carried into any room above the cellar or basement, excepting a single suit for instruction to be neatly put up in cases, and then first to be inspected by the senior Professor; and no student shall ever drive a mail, pag, &c. into any wall, nor attach anything to it, nor sever anything from it, without permission from the

senior Professor.

12. Examination for the Rensselner degrees takes place in October annually, at the end of 24 weeks after the last Wednesday in April. The examiners are appointed by the Patron. They are always selected from among gentlemen of talents and learning who have no connexion with the Institution. No Professor or other Teacher is permitted to give any opinion on the subject of the qualification of any candidate; -and no student ever knows the part on which he is to be examined until he is called on by the examiners. No one can be a candidate unless he has devoted at least one full year to classical learning; and at least 24 weeks to experimental and demonstrative chemistry, mechanical philosophy, natural history, and practical surveying and engineering. This is necessary for the degree of A. B. (r. s.), and another full year is necessary for the degree of A. M. (r. s.)

13. Course of Studies in the Experimental Department. 1. Practical Mathematics, including surveying, engineering, hydraulies, machinery, navigation, latitude and longitude, &c. &c.

from the 3rd Wednesday in November, 12 weeks

2. Discipline in extemporaneous Speaking. The subjects used are rhetoric, logic, geology, applied to physical geography, and

history applied to civil geography, 4 weeks.

3. Natural History, including botany, geology, mineralogy and anology. In this course organic chemistry and vegetable and animal physiology are studied with a full course of experiments with tests, solar microscope, &c. But one week is occupied at the beginning with botany. Each student collects every species in flower within five miles, names and preserves plants, until the first Wednesday in July; but he does this as an afternoon amusement. However he is hereafter to exhibit his collection to the examiners as his own property, and give evidence of his know-ledge of it. From the first Wednesday in July until the commencement of the chemical course, he lectures on vegetable nffinities and philosophy,-from the last Wednesday in April, 12 weeks.

4. Chemistry and Mechanical Philosophy occupy the forenoon of five days in each week for the last 12 weeks of the year, beginning 12 weeks after the last Wednesday in April. Surveying, engineering, collecting and analyzing plants, and preparing for the next day's experiments and lectures occupying the forenoons, 12

weeks.

5. Chemical and Philosophical substances consumed are furnished by the student; also light articles of glass ware, &c .-The Institution farmishes the following articles, only for students.

Lecture rooms sufficient for the plan of education. A reading room containing a choice collection of scientific

books, maps, and globes.

A natural history room, furnished with collections of minerals, fossil relies, plants, animals, a goniometer, balance, blow-pipe,

A Philosophy and Mathematical Room furnished with an airpump, a forcing-pump, barometers, thermometers, pluviometer, solar-microscope, megascope, standing microscope, magic lantern, telescope, lenses convex and concave, mirrors, prisms, electrical machine, galvanic battery electro, magnetic instrument, magnets, sextant, mechanical powers, black boards, hydrostatic beliews, hydrostatic and bydraulic cylinders and tubes, hydrometers, glass pumps. 3 sets of surveying instruments, level, quadrant, and levelling pole.

Three laboratories, one for all simple principles excepting metalloids and metals,—two for the metalloids and metals,—three for analyzing animal waters and soils. These rooms are furnish-

ed with the necessary forges, furnaces, bellows, lead pots, Argand's lamps, common lamps, sufficient coal and oil, tables counters, seats, iron retorts, or gun barrels for gasses, anvils, anvil hammers, cisterns, pipes for conducting gasses from the barrels, gass pistol, iron stand, iron mortar, and mercurial bath. All breakage, waste of mercury or any other injury done to apparatus, is charged to the section using them, unless the individual is known who committed the act.

13. Boarding and Lodging, are taken at any place, in the option of the guardian or student. Price for room and board generally \$2 per week if the student brings his lodging, \$2 25c. if lodging and the washing of bedding is furnished; washing of clothes is uniformly 50 cents for a dozen of pieces. Young persons and other distant students are mostly boarded at the Institute

at the above prices.

ON THE EDUCATION OF THE DEAF AND DUMB.

A great change has taken place in the manner of educating the deaf and dumb in almost every Institution of high character both in Europe & America, and the total is more than a hundred writing articulation and a labial alphabet are at this moment taught and the use of methodical signs is discontinued in the very school in which they had their origin; the Institution of Paris has entirely changed its ground, and articulation is taught in all its classes. Even religious exercises are no longer conducted by signs; but public prayers are daily articulated in presence of the pupils. The course of education has been much improved by bringing it to the test of Philosophical experiment. The aim of the Instructors is to ascertain the moral and intellectual condition of those who are entrusted to their care, previously to all instruc-tion, and by combining with the fruits of their own observation, a critical comprehension of the methods of teaching, devised by the most distinguished Instructors of the deal and dumb, to furnish their pupils, in the shortest practicable period, with the most simple and efficient instrument of intercourse with the world, and of supplying as far as possible the place of that source of information from which they are cut off forever. The great end of their labors is to enable the public to communicate with facility with those among whom he is destined to move; and for this purpose the whole course of instruction, thus far, has been mainly directed to the acquisition of written language. Sign language is so far employed as to teach the meaning of words and the ideas which they represent, but beyond this it is not deemed desirable to continue it. Written language being the only needium through to continue it. which the deaf and dumb can communicate with the world, it is considered important to employ it in all their exercices that they may be familarly acquainted with its use.

There is one improvement in this branch of the art of teaching, based upon the characters of Sicard, now adopted or rather originating in the New York Institution. It is a complete system of grammatical symbols, - a very important auxiliary in the instruction of language. The characters of which it consists denote not merely the different parts of speech; but they likewise undergo systematic modifications corresponding to the inflections of language, and bearing a strong analogy in idea to the modifications of meaning attendant upon those inflections. They exhibit thus, nouns and pronouns in their several cases, adjectives in the different degrees of comparison, and the verb in all its varieties of form, whether as transitive or intransitive, active or passive, past, present or future, affirmative, conditional, hypothetical or imperative, or in the infinitive or principal forms. This system is very readily comprehended by the pupils, it is in fact idea graphic, and the simplicity of its fundamental principles renders it very easily explicable to any person who will devote a few moments to its ex-

From this brief account of its nature its utility is obvious. It is syntax painted to the eye, superceeding the necessity of abstract-rules, always difficult to be remembered and especially so for the deaf and dumb. The essentials of the proposition, the subject and the attribute occupy here, that prominence, which belongs to them. and the relative importance of the direct and indirect complements. are evident to mere inspection. Grammar, in fact, becomes a subject of easy intuition, and hence rules are unnecessary, until the pupil is introduced once more to the same subject as a science.

It is a matter of experience that we are often able to read a language with facility, which we are equally unable to write and to speak. In like manner the deaf and dumb will often comprehend sentences addressed to them, and even narrations of length when they are too little accustomed to use language themselves, to be able to express similar id we in words without some assistance.-The difficulty which they encounter is a difficulty of construction Instead of wasting time in such a case, by explaining at length what is the arrangement of words proper to be employed, the symbols are spread out before the learner, and the difficulty is at once removed. In this process there is nothing arbitrary which the caprice of a particular language has not rendered so; for so far as reason is to be found in the great principles of general grammar for our specific forms of specch, the symbols explain themselves. It is thus that they materially abbreviate the processes of the school room, and afford an equal assistance to the teacher and to the

In another respect they afford a material aid in the instruction of the deaf and dumb to teach language to this class of persons, is to pass through a process similar to that by which we may suppose language to have been originally instituted. The necessity of each new form of speech must be made to appear, before its use can be insisted on. The learner must therefore be led to the real intuition of all those circumstances which render a new form of language desirable, and which constitute the reason of its establishment. This process is necessarily slow, and when it has been once or twice repeated it becomes desirable to possess some simple and intelligible sign, by which it may be distinctly recalled to the mind, without actually retracing its several steps. Such signs are found in the grammatical symbols. These are the brief representatives of those combinations of circumstances which give rise to their corresponding forms of speech. They render easily comprehensible ideas which on account of their complexity, it is difficult for the mind to grasp, so long as it is necessary to consider them in detail. The symbols are also useful in correcting the original com. positions of the pupils. Arbitrary correction is of little utilitychange of phraseology without a reason assigned, is not long re-membered, and if it were, would scarcely be generalized so as to prove of use in any other than a case precisely similar. To point out the place of the error, and cause it to be both discovered and corrected by the pupil himself, is therefore what is desirable. When other means fail for the accomplishment of this object, the placing of the grammatical symbols over the words of the sentence, will often render the error glaring, and the correction immediate.

In fine, the grammatical symbols, may, in some respects, be

In fine, the grainmatical symbols, may, in some respects, be compared to the signs used for the purposes of abreviation in mathematics. They have also an advantage of which the deaf and dumb experience peculiarly the benefit, that they abstract the thoughts entirely from the subject of discourse, and fasten them directly and distinctly upon the principles of construction applicable to the case. In regard to the practicability and advantage of teaching the dumb to speak, the President of the New York Institution thus reports: etitution tijus reports :-

As soon as convenient after my arrival in London, I visited the Institution in Surrey, formerly under the care of Dr. Watson, and now under that of his son. I was received by Mr. Watson with great kindness, and shewn through the building, which is convenient and well adapted to its objects. It contains about 220 pupils; 12 or 14 private pupils a side apart from the others, in Mr. Watson's family. I had an opportunity of witnessing the instruction of the pipils, which very nearly resembles ours, except in two particulars—the use of the double handed alphabet (certainly I tlank not so simple and convenient as that performed with a single hand.) and the reaching of articulation. I made very particular enquiry of Mr. Watson in relation to his views of the expediency of the latter, and found his opinion as the result of his father's, and his experience entirely favorable to its use. I saw and conversed with two men, one of whom had been employed in some subordinate station in the asylum 27 years, and the other a shorter time. They both spoke without much apparent difficulty, and in a voice far more agreeable than I had before heard, one of the tinors, also a deaf mute, appeared to understand me readily by the motion of my lips, only occasionally requiring a repetition of the motion of my lips, only occasionally requiring a repetition of the words. He was kind enough to shew me some of his compositions, which were not only correctly written, but evinced a well diagram d understanding, and a pious heart. His emociation was not materially unpleasant, though by no means so easy and agreeable as that of persons generally, who possess their hearing. But the most gratifying evidence of the practibility of teaching the dash, and dumb to speak, was in the performance of a beautiful book through 12 and 13 years of age, who recited an address which had between 12 and 13 years of age, who recited an address which had summer, and afterw been prepared to be spoken by him at the ensuing annual dinner of southern in winter.

thefriends of the Institution, at which the Duke of Gloucester is to preside. He delivered the whole memoritor in a sweet, pensive tone of voice, in which though there was some monotony, yet ! was actomished at the accuracy of his emphasis and accent, and of the perfect correctness of his memory. Mr. Watson give mean opportunity of witnessing the attempts at speaking of several of the other pupils, more of whom equalled those already mentioned, and some were not capable of uttering any sounds that did not grave unplersanly upon the ear. Upon the enquiry being made by me whether all the pupils were taught to speak, Mr. Watson answered in the negative. The experiment to instruct them is made on all, but from inalconformation of the organs of speech or other causes, it frequently fails, and the attempt is relinquished. It is a remarkable fact, that a pupil of this school, after competing his education, and proving himself a young man of excellent talents and attainments, studied law, and has been admitted to its practice, and promises to be very able and useful in the duties of a cliamber counsel.

As evidence of the extent to which the intellectual faculties of deaf and dumb persons may be carried, a few of the answers of the Parisian pupils are subjoined, to questions of the nature of which they could have had no previous intimation.

When Clerc was asked if he loved the Abbe Sicard, he replied in the following words: " Deprived at birth of the senses of hear. ing, and, by a necessary consequence, of speech, the deaf and dumb were condemned to a most melancholy vegetation, the Abbe de Papec and the Abbe Sicard were born, and these unfortunate per. sons, confided to their regenerating cure, passed from the class of brutes to that of men, whence you may judge how much I must love the Abbe Sicard."

Massien, being once asked the difference between God and nature, replied, "God is the framer, the creator of all things. The first beings all sprang from his divine bosom. He said to the first you shall produce the second; his wishes are laws,-these laws are

"Eternity," he said, " is a day without yesterday or to-morrow."

" Hope is the flower of happiness."

"Gratitude is the memory of the heart."

A Mr. Albert Newsam, an artist, educated by the State of Pensylvania, in the Deaf and Dumb Asylum at Philadelphia, has been complimented by a resolution of the House of Representatives there, for the fine specimens of Lathographic drawing, executed and presented by him to the legislature. And

The following specimen of uncorrected composition, by a lad only 15 years of age, a pupil of the New York Institution will be read with interest.

THE EARTH.

The earth is a globe on which we live. It revolves around the n every year. The earth is round, for the moon shows us that sun every year. during an eclipse the former makes upon the latter a round shadow. The earth turns round its axis once in a day, and the sun attracts it revolving round it. We cannot fall up off the earth, for t attracts us. When a ship comes from down the curve of the earth, we can see its upper sails at first; and when the ship descends the curve towards us, we can see over it whole. The earth draws the moon revolving round it. If the sun did not draw the ear h revolving round it, and if the earth did not attract the moon revolving round it they would fly away.

The people in India think that four great elephants carry the carth on their backs—but they are much mistaken, for how can the dephants stand? Some of the ancients used to think that's great giant carried the earth on his shoulders, but they did not

show on what he could stand.

The Indians in America think that the earth is carried by great turtle on his back.

These people in India and America are ignorant, and do not know the true God, and that he created the world.

There is a star on the north, which is fixed in the sky. called the North Star, when we descend the curve of the ear from the North Star we cannot see it; but when we ascend the

curve to it, we can see it. The northern pole is very severely cold, and there is great ich there in winter, because the sun is not in the part of the sky, near

it for six months; but in the summer there are heat and light of the sun in a day of six months.

The southern pole resembles the northern.
The sun goes from the southern pole towards the northern in the summer, and afterwards returns from the northern pole towards the

DUMB.

By a young gentleman, an assistant in the school at Hartford, in the State of Connecticut, who was four years under instruction and who says of himself: "after four I was cut off entirely from common conversation, and I have no recollection of hearing poetry before that time."

TO A SNOW STORM IN APRIL.

Last lingurer of winter's wrath;
Why fall so thinly, slow and long;
Why tromble on thy atry path
As if aware the deed was wrong—
And why dissolve the monich, when
The curl receives there to her breast?
Say—art thou conscious? I hast thou been
his bitten of holler rest,
Than our low world can bid the share,

And art thou whonce pure spirits are I Why not gasume the ancient frown;
And in its wild and mazy rugo;
Sweep like a mountain terront drown—
With wind and ocenn battle wage?
Awakea up the strife that seems
Asleep, or in confused dreams
Oflangour buried—why not show
Thy power and end it at a blowAnd suffer nature to proceed.
And turn thus forth, & smiling jovene.

Age, thou art sent to any. Farawoll, And give assurpnee that the pride
Of winter is at least to dwell
Where Northern lightnings cooly glide:
To rour upon the channed deep.
And revel 'mang the ley rocks,
Displaced and started from their sleep.
And bounding o'er in thunder sleep.
And bounding o'er in thunder sleep.
And bounding o'er in thunder sleep.
Tho' vain it he—beware!

Then hie away to thy fur home, And bear with thee our wishes best; And when the summer's past and gone. Thou wilt return a welcome guest.

VERSES written on the New-York Institution for the Deaf and Dumb, from the published poems of JAMES NACK.

> of ignorance the former victims, here
> Rise to a nobler and a happier sphere;
> The blessings their unhappy for denied,
> Again by Education are supplied;
> To barst the clouds that wrant the mind in night;
> To gaze on science in her shrine of light,
> When friends beloved in social converse meet,
> To interchange with their communion sweet;
> With warm affections eloquence to tell,
> What fond emotions in the bosom swell;
> These blessings they have found,—nor these alone,
> They know the most sublime that can be known,
> They know the most sublime that can be known,
> They know a God i—to bim their steps are led,
> The path of Everlasting joy to tread,
> Thoir kness are taught to bow his Throne before;
> Their hearts a friend and Father to adore. Of ignorance the former victims, here

Before her God upon the bended knee.
In lervent pray't the cherub infant sees
Her raven hair in tramilous wreaths entwining,
Upon her cheeks careation bed reclining,
While she might seem to the enthusiasts 'eyes
Desconded in her beauty from the skies.
Her lips are muto,—but from her heart a prayer
Ascends to heaven, is heard and answered there:
And would'st thou know what from that heart proceeds?
For those who led her to a God she pleads,
That all the blassings they to her hath giv'n,
May be on earth repaid them, and in Heav'n. Before her God upon the bended knee.

Extracts from a Circular of the New York Institution for the instruction of the Deaf and Dumb.

1835.

BUILDINGS, SITUATION AND ACCOMMODATIONS.

The buildings occupied for the purposes of the Institution, are stuated in the twelfth Ward of the City of New York on a gentle eminence, three and a half miles distant from the City Hall.—The property of the City Hall.— The ground occupied by the main building, with that adjacent to the extent of one acre, is the properly of the Institution. In addition to this, nine acres are held by lease from the City Corporation; of which a part is under cultivation and a part constitutes an extensive lawn, immediately in front of the building; where the male pupils amuse themselves at proper hours, in athletick sports. The whole, taken together, extends along fitteth street from the fourth avenue, on which is constructed the New York and Haar-hem will head the 1600. sem rail-road, to the fifth.

Though situated within the chartered limits of the City, the institution is entirely removed from the vicinity of the dense population. lation; standing isolated, at a distance of more than a mile from the pavements. It constitutes a little community within itself and is as much secluded from intercourse with others, as in any situation it could possibly be.

The main building, in the dimensions of its plan, is one hundred and ten feet by sixty. In elevation it embraces five stories, including the basement, and is surmounted by a square tower or observa

SPECIMENS OF THE POETRY OF THE DEAF AND tory, commanding an extensive and beautiful prospect. Its rooms are spacious and arranged with a due regard to symmetry as well as convenience. The whole centre of the building on each of the three lower floors is occupied by those unartments in which there is occasion for all the pupils to assemble ; as for example, the chapel, the diving room and the school rooms. These common rooms separate the male department, at the eastern extremity from the female at the western. The chief merit of the arrangement consists in its preserving these two departments as fur as relates to the accommodations, amusements, and pursuits of the pupils out of school so independent in every particular, as to constitute of them two separate and distinct communities; while, for the purposes of instruction, intellectual, moral and religious, they may conveniently and speedly be united into one. Each department has it separate flight of stairs extending from the basement to the dormitory on the highest floor, its separate area in the rear, its separate pleasure grounds, and its separate communication with the public road: so that for the ordinary purposes of life, there reno accusion to pass from one to the other.

Beside the principal building in which the pupils with their instructers reside, there is another containing tools and accommodstions for the practice of manual labor, in the attainment of certain selected mechanical arts. This building is of two stories, and, with the wings is 105 feet in length by 25 in width.

INTERNAL ORGANIZATION.

The internal organization of the establishment may be considered as resolving itself into three principal divisions; to wit, domestic economy, government, and education: These are all under the control of the Principal, who is, of course, responsible to the Board of Directors for the manner in which affairs may be administered.

I. Under Domestic Economy may be embraced whatever relates to the physical wants of the pupil. With regard to those it is unnecessary to be specific. It is sufficient to say that the provision made to meet them is perfectly adequate to its object; while the degree of system, which prevails throughout the whole arrangement, renders its operation as imperceptible as it is efficient. One

or two particulars, however, deserve notice.

1.-The Female pupils are under the immediate charge of an experienced Matron, whose careful attention is bestowed as well upon the formation of their manners, as upon suitable provision for the promotion of their comfort and happiness. It is a source of much satisfaction to the Board, that the kindness with which the duties of the Matron have been discharged, has been such as to secure to her the affection of those committed to her care, and lend them to regard her rather as a friend than as a Governess. The knowledge of this fact will do much to remove the solicitude always felt by parents at a distance, especially for their female offspring.

2. A bathing establishment is provided for the pupils, and the

use of it rigidly enforced.

3.-Board is supplied at the immediate expense of the Direc-

4.-The Instructors take their meals at the same tables and at the same hours with their pupils, all the tables are furnished with food of the same description.

5.-Spacious and airy apartments are reserved for the sick, if

such there should be.

II. The GOVERNMENT of the Institution is that of a well ordered family. The principal is regarded as a parent; and this title is not unfrequently applied to him, spontaneously, by the pupils. The immediate administration of government over the males, is committed to the instructers in succession. It is recognized as a fundamental principle, that, to provide against any evil is better than to rectify it after it has occurred; constant supervision is, therefore, exercised over the pupils as well in their liours of relaxation, as in those of study. By this means a more correct deportment is socured on their part, while at the same time the difficulties always cured on their part, while at the same time discussed aways arising out of the multiplicity of standing rules are avoided. No pupil is permitted to leave the Institution unaccompanied, without a written permission. The government of the females when not occupied in the school-room, belongs to the matron. In their sitting room, they are likewise usually accompanied by the sound tress from whem they receive instruction in needle work, and whether the school in t has it in her power to exert over them a beneficial influence. The whole system of government is subject to the constant oversight of the principal.

III. EDUCATION subdivides itself into four departments; the

physical, the mechanical, the intellectual, and the moral and religious. The first two of these are intimately connected.

1. Physical Education, however in the ordinary acceptation of the term, embraces only that which is intended to give clasticity and yigor to the muscular system; to preserve a suitable equilibrium in the development of its powers; to accustom the body to that kind and degree of exposure, observed to be most favorable to strength of constitution, and least propitions of the growth of effeminate habits; to give nature, in short, full and free scope in the formation of the animal man. For this purpose exercise in the open air should be encouraged of such kind as to call into action all the muscles of the body indiscriminately. As great a space of time is daily devoted to this object, as is consistent with proper at tention to the other branches of education, and as its relative im-

portance demands.

2. Mechanical Education, on the other hand, we bout requiring the equal exertion of every portion of the physical system, is a id useful as a species of exercise; while it gives over a certain set of muscles, that degree of command, which, as applied to a particular ait, constitutes skill. It may be said to form a branch of the preceding; to which it bears the same relation, as in the intellectual department, the cultivation of a particular study to mental developement in general. In an institution for the deaf and dumb, the mechanical education of the pupils is of very high importance. Necessitated, as from the nature of things, most of them must be to depend upon the labor of their hands for subsistence we should but half discharge our duty to them, should we suffer them to leave us without some species of knowledge, which could be turned, in this way to immediate account. In the New York Institution a choice is offered between five occupations, viz: Book binding, cabinet-making, tailoring, shoe making, and gardening; the male pupils are engaged in some one of these occupations about four and a half hours duly, under the superintendence of skilful workmen: The female pupils, in the meantime, are employed, under the direction of the seamstress, in sewing, knitting, &c. &c., or, under that of the matron, in light household affairs, with the proper management of which it is essential that they should become acquainted. In this latter branch of industry, the principle of a division of labor is introduced, which is useful, not only as promoting expedition, but also as securing to the pupil the benefits of this kind of experience, and at the same time materially diminishing the burthen.

3. The Intellectual Department of education, if it will not rank in importance with that of morals and religion, requires, at least, the exercises of talent, industry and perseverance, in a higher degree than any other. The difficulty of the task of teaching the deaf and dumb, the intimate connexion of this subject with that of metaphysice, the depth of the speculations to which the investigations of the science has given rise, and the control ely of the opinions which have prevailed in relation to the details of its practice among its professors, are matters of which little is yet generally known in this country. The first and great object in the intellectual education of the deaf and cumb, is of course to impart to them a knewledge of the usual medium of communication among mankind, viz: Alphabetic language and as each a language can have no existence for them, except in a visible form; it is the early and constant effort of the instructors in the New York institution, to induce their pupils to receive words under that form, precisely as those who speak receive articulate sounds, viz. as the immediate signs of ideas. When this object is fully attained, that which is peculiar in the education

of the deaf and dumb is completed.

During that portion of each day which is spent in the School Room the instructer labors to pass over as much ground in the prosecution of his general plan as possible. During the hours of evening study, the same ground is reviewed by the pupil, and made he subject or the material of independent composition. When the pupil is sufficiently advanced in the knowledge of language to be able with the help of some explanation, to pursue common books, some compendium of Geography, history, or Arithmetic is placed in his hands, and he is required like other children to spend his time on a particular portion, and be ready for examination upon it on the following morning. So short a time is allotted to the deaf and dumb, generally, in public Institutions—that is a time so short, when considered in connexion with the amount they have to acquire, and the immense disadvantages under which they labor; that no instructer would be justified in attempting to introduce into the School room, as subjects of regular instruction, any branches of knowledge of a higher order than

theless, loctures are desivered at regular intervals, so arranged as not to interfere with the business of the schools, on select portions of the following subjects:-

- 1. The political, civil, and social relations of man.
- 2. Universal History
- 3. Chemistry, natural philosophy, and astronomy.
 4. Universal Geography.
- 5. Natural History.
- G. The origin, progress, and present state of the useful and ornamental arts.
 - 7. Blography.
 - 8. Book-keeping.

To those courses, it is proposed to add others, as the number of instructors employed by the Institution is incremed.

The institution is now in possession of a considerable library of miscellaneous books; it possesses, also, the largest collection of French, German and English works relating to the art of instructing the deaf and dumb, in its theory and practice, at prosent existing in the United States. It has likewise a small library of juvenile books for the use of the pupils, models for instruction in drawing, and a philosophical apparatus for use in experimental lectures, to which it is from time to time, making addi-

The classes are seven in number, each under the care of the teacher, who remains connected with them, during the whole period allotted to their education. Occasional instances occurring which a pupil is transferred from one class to another. This is always done when the purposes of classification which are to bring together those who are most nearly equal in attainment, or in capacity for improvement, and to make a fair distribution of the inbor of instruction, can thus be more completely answered. It is the duty of the Principal to spend as much time in each of the classes as the nature of the various calls upon his attention will allow. The benefit of his experience becomes thus felt through. The benefit of his experience becomes thus felt, throughout it e Institution An intelligent instructer, though new to the employment, with models of lessons or of processes not only explained to him but actually put to use and exhibited in practice before his eyes, will proceed with a much higher degree of confidence than he could possess, if entirely unassisted. The whole experience of another is, in fact, rendered disposable to him; and this, united with his own observation, cannot but render instruction much more efficient in every class, than could be the case under ary other arrangiment.

4. Religion and Morality are inculcated together, and constitutes single department of Education. No opportunity is suffered to escape, of impressing upon the mind of the pupil, his duty to his Maker, and to his fellow-men; and the word of God is constantly referred to as the basis of every moral procept; we need but speak to the conscience of any human being, to draw from him the admission, at least to himself, that he is a sinner. We need but appeal to his reason, to convince him that he is therefore deserving of punishment. To point out the office of the Mediator, to show the necessity of repentance and trust in him for salvation, is the object always kept in view in the system of Moral and Religi-

ous Education, pursued in this institution.

Morning and Evening Prayers, and religious worship on the sabbath, are conducted in the language of signs.

DIVISION OF TIME.

Such being the general plan of economy, Government and Education in the institution. It only remains, in order to afford a complete idea of its operations, to consider the method which prevails in the division of time, and the succession of employments. The breakfast hour, in winter, is half-past six; in summer half-an-hour carlier—tho hour of rang, six or half-past five. From the table the male pupils, pass under the eye of an instructer, to the shops or gardens. The females are, in the mean time, occupied in demostic employments, sowing, &c. under the direction of the matron and scamstress. At fifteen minutes before nine notice is given to all to prepare for school, very particular attention is liere paid to estab-lished habits of cleanliness of person and neatness of dress; and to prevent the formation of those of an opposite nature. Before the 15 minutes have expired the pupils are all scated in order, in their respective sitting-rooms. From these they are summoned to the chapel; the female pupils first taking their places, and after them. instruction, any branches of knowledge of a higher order than followed by a prayer, in the language of signs; the exercises occuping about a quarter of an hour. The male pupils with their

them the females; passing from story to etery, such of them as belong to classes on the floor above, by opposite flights of states, and entering the school room by opposite doors. At half-past 12 the classes are dismissed. The pupils are then immediately summoned to dinner; after dinner there is an interval for recreation, untill half-past one, when the classes re-assemble. At three the pupils return to the chapel, as they left it; an examination takes place upon the meaning and explanation of the passage explained in the morning, and prayers succeed. The mele pupils then again repair to their mechanical employments, and the females to their When this appropriate occupations. Supper takes place at six. is passed the pupils resort to their sitting rooms, for the ovening. Here the same order is preserved as in a school. At eight o'clock, the very young pupils are sent to bed; the majority retire at about on that which is new and delightful.

teachers, then withdraw to their several school rooms, and after | half past nine; though, occasionally, some of the more advanced are suffered to write or read till a later hour.

The above is generally the winter arrangement. In summer the time is divided somewhat different.

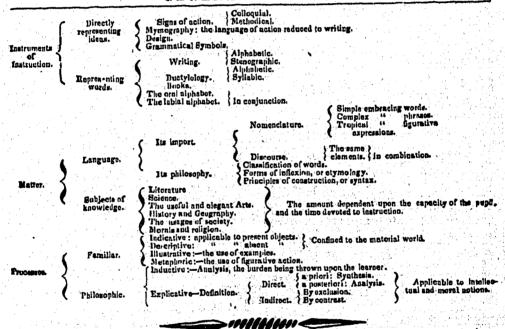

The history of a day in the institution, which has just been given is the history of a week, and of a year.

If there seem to be any thing like monotony in the porpetualire currence of the same circle, it must be remembered that this is the monotony of method, without which, nothing can any where be effectually accomplished. The monctony is tarther, more apparent than real; since it is the body only that retraces, each day, the steps of the preceding; while the mind is presing forward in a line which never returns into itself, and fastening continually up-

Summary of the Art of instructing Deaf and Dumb.

-1100000000

GENERAL SYSTEM.

CONDITIONS OF ADMISSION.

1. Pupils are provided for by the Institution, in all respects, clothing and travelling expenses excepted, at the rate of one hundred and thirty dollars ouch per amoun. Clothing will also be furnished by the Institution if desired, at an additional annual charge of thirty dollars. Payment is required semi-annually in advance.

II. The regular time of admission is at the close of the vacation, which extends from the lifteenth of August to the first of October. No pupil will be received at any other time, except in very extraordinary cases.

Ill. No deduction will be made from the annual charge in conseuence of absence on any account what ver except sickness, nor for the vacation.

IV. Pupils are at liberty to reside during the vacation in the in-

stitution, without extra charge. V. Applicants for admission should be between the ages of ten and 25 years. The institution will not hold itself bound to receive any not embraced within this rule, but may do so at discretion:
VI. Satisfactory security will be required for the punctual pay-

ment of bills and for the suitable clothing of pupils;
VII. Applications from a distance, letters of enquiry, &c. must be addressed post paid, to the Principal of the Institution. The selection of pupils to be supported at the public expense, is made by the Secretary of State at A bany to whom all communications on he subject must be addressed.

VIII. Should objections exist to the admission of any individual the Board reserve to themselves or their officers a discretionary power to reject the application.

The above terms are to be understood as embracing the entire annual expense to which each pupil is subjected, stationary and the necessary school books are furnished by the institution. No extra charge is made, in case of sickness, for medical attendance medi-

cines, or other necessary provisions.
It is suggested to the friends of deaf mute children, that the names of lamiliar objects mov be taught them with comperative case before their admission, and that the possession of such know ledge in any degree materially facilitates their subsequent advance ment. To be able to write an easy hand, or at least to form letters with a pen, is likewise a qualification very desirable. In reference to this subject, it is recommended that the words which considure writing lessons or copies proparatory to admission should be such sa have been previously made intelligible to the learner.

In the case of each pupil entering the institution, it is desirable to obtain written answers to the following questions; particulars tention to this subject is requested.

1. Was the deafness from birth, and owing to some organization stitutional defect; or was it produced by discast or accident; parts if so in what way and at what time?

2. Are there any cases of deafness in the same family, or and any of the ancestors of collateral branches of kindred; a how six when produced?

3: Le the deafness total or partial and have any means been copyed to remove it; and what are the results of such efforts a 4. Have any attemps been made to communicate instruction is the individual acquainted with any trade or art, or with the acquainted

of forming letters with a pen !

b. Is the individual laboring under any hadily infirmity, such as palsy, nervous trembling, or malformation of the limbs, or does he or she show any signs of mental imbecility or idiotey !

6. What are the names, occupation and residence of the Parents? 7. If other of the Parents is dead, has a second connexion been

formed by marriage.

What are the number and names of their children?

The present number of pupils in the New York Institution is 137. In 1834 the number of the deaf and dumb in the United States in a course of education was 466. In 1830, the number of the deaf and dumb in the United States, between the ages of 14 and 25 was 1,905. Whole number of all ages, 6.106

Nors.—The table differs in some of its columns from the official refor the pupils which were at that time connected with the Denf and Dural Institutions in Connecticut, New York, and Pennsylvania, from other

(TRANSLATION.)

Rules of the Royal institution for the Deaf and Dumb at Paris. Beside the government pupils received and maintained at the Royal Institution, either gratuitously, or on the payment of one half, or of two thirds the usual rates; and the two classes of dayscholars founded by the City of Paris, this establishment receives an indefinite number of bunrders of both sexes.

We will not here repeat the admirable effects produced in the education of the Deaf and Dumb, by the process of that art which has been established by the henefactors of the human race.

We will not here repeat that it puts these unfortunates in possession of all religious and moral benefits of which they would, without its aid, have remained entirely deprived; that it introduces them to the bosom of society from which they would have been excluded; that rescuing from a state almost savage, it elevates them to the dignity of man, in giving a spring to the rosson and social affections; so that parents who have culidren afflicted, with this misfortune, would be guilty of the greatest injustice, if they neglected the occasion here offered to them, of affording to those children all the benefits of which they have been deprived.

But it is deemed incumbent on us to communicate to parents that during several years past, the education of the Deaf and Dumb

has received at the Royal institution at Paris, important ameliorations;—The methods of teaching have been improved by experience and new discoveries;—by the better distribution of the pupils, and by the selection and increased number of teachers and ussistants :- finally a decree of the minister of the interior has established a council of improvement composed of savons, the most capable, by their knowledge to advance this art. Besides the essential branches of the Institution, which comprise reading and writing The French Grammar -- Religion -- Ethics -- Arithmetic -- the Elementary principles of Geography and History, there is for the scholars of both sexes, a class of drawing; several workshops have been established for the boys. To shaps for joiners, tailors and shor-makers where the pupils make what is necessary for the catablishment, are now added,—A shop for Turning; A shop for Eagraving; And a shop for manufacturing cabinet ware. In all of which the most finished articles are made.

A new Building on the point of completion is appropriated for the accommodation of others, part cularly for workers in watch-making

book binding, &c.

So that the pupils on leaving the establishment, are prepared to embrace a gainful profession, and experience has shown that they succord even better than other children in those kinds of employ ment, which, as has been selected for them, require extreme at tention of the eye and great precision of hand.

Girls learn all kinds of work proper to the sex, One of the instructreses teaches likewise embroidery to those whose friends

The gerls occupy a separate building, communicating neither with the street nor with the one for the buys, and see none but their parents. They never go out except but to promenade, and then allogether—a large garden serves for recreation.
The food is wholesome, and the situation most salubrious. The

children are surrounded, in health and sickness, with all the atten-

tion which an active and tender solicitude can suggest.

No boarder is admitted, until it is properly certified that he is denf and dumb, and this infirmity verified at his arrival. Norther is any boarder admissible, if he labors under any contagious disease, or epilepsy or without having had the small pox or without having been either inoculated or vaccinated.

There is no entrance as a boarder but between the 15th Oct. and

15th of November.

The price of board is 900 france for boys and 800 for girls; pay-

able quarterly in advance.

Every hoarder whose family does not reside in Paris must have responsible inhabitant of that city to act for his friends-to pay punctually for his board, and who may be resorted to when the necussities of the scholar, or any other circumstance may render it proper.

Baarders may be entered at the age of seven years. In consideration of the price fixed for board, families will incur no expense

for extraordinaries.

It is forbidden that any person connected with the institution, should accept of a gratuity in any shape.

The friends of the children can have, if they wish, every quarter,

certificate of their health and progress.

Subjuned is a list of the clothes which the scholars of either sex must bring with them.

Boys-3 pur sheets-6 napkins-6 pocket handkerchiefi-six coat of grey mixed cloth coller and facings blue-vost and breeches of same-jacket a: d pantaloons of brown stuff, to work in-3 cotton cans, one round hat, 3 pair of shoes, 2 combs I fine, I box, I trunk to lock.

Girls—three pair sheets—6 towels—6 chemises—6 pair of cotton stockings, 4 blue, 2 white—6 pocket handkerchiefs—one hat of black straw, uniform-6 caps-6 night caps-6 white muslin neck handkerchiefs-2 colored do.-1 woolen shawl-2 colored aproxi-1 woolen pertreont-2 colored do.-2 white do-2 whalebone curscis-1 woolen knit under jacket-1 white robe of muslin-3 coldo-2 pair shoer, 2 combs I flue, 1 trunk to lock.

All to be entirely new, and in failure to find these, the parents to pay the value of 250 francs.

ADMINISTRATION OF THE ROYAL INSTITUTION:

The Duke of MONTMONEROL. The Baron DEGERANDO. The Duke of Doubsauville. The Count ALFRIS DE NOAILLES.

GUENEAU DE MUNNY, Physician in ordinary to the King.

The Baron RENDA.

The Abbe BURNIER FONTANEL.

Director-The Abbe PERSER.

Agent-General Biron Kuppler. Physician-The Chevaller ITARD.

N. B. Thu d rector is to be addressed on all subjects about the

instruction and education of the children, and

The Agent General on all matters touching the admission of pupile—the payment of board economical interests, &c.

In the last chapter of a work evincing much learning & research by Remit, Tobins Guyot, Doctor of Laws, the author directs what ought to be avoided and what followed, in legislating about deal

mutes.

He excludes from the class of real deaf and dumb all who are merely hard or dull of hearing; all who have become deat after having enjoyed their licaring for some years; all who are without the ability to speak, though they are able to hear; all who in consequence of disease, are semutimes but not always deaf; and finally, all whose cense of hearing has been restored by art. Having given this negative statement he next offers his posttive definition thus :- They only are deaf mutes who are so from with or from such early infancy that they have never acquired a knowledge of sounds, and have remained deaf forever after. The course quence of which defect is, that they neither speak nor understand those who do speak, nor make any communication of language by the

After various observations he proceeds to the two-fold inquiry 1st. What is the disposition and nature of the uninstructed Deaf Mute? and 2nd, what are those of the educated and instructed? On the first of these questions, he considers the deaf mute as in some respects inferior to a brute; though with this memorable difference that he may be taught to understand and to act, and thus perform functions that solely belong to rational creatures. Of the five senses, lie considers touch, taste and smull as corporeal; while sight and hearing have a particular reference to the mind.

Deaf mutes, when uninstructed, are, he observes, very much prone to imitation; insomuch, that they more resemble apes than men, particularly as they make no distinction between good and bad. They have keen curiosity—are very restle-s—and exceedincly prone to anger-shunning the society of men-prone to sus-

picini-and only learing bodily pain.

His observations on the second query, are briefly these :- Their education is considered as beginning in private, though public instruction is incomparably preferable. The remarks contained in his dissertation refer especially to the latter. Yet with all the information he can be made to acquire, he can only be aided to a certain degree. The absence of hearing restricts necessarily his perfect bilty; because he is deprived or that continual repetition of themselves. tition of things, truths, comparisons, and deductions, which persons having the sense of hearing enjoy. Whence it happens that a large portion of what they have learned sooner slips from the memory than in those who hear, and by repeated hearing, have ideas formed, inculcated, and faithfully retained in the recollection. Though much has been done for their improvement in the schools established over many parts of civilized Europe, such as writing, readiry, and even spelling, it must not be supposed that they equal ven in speech or writing, and however laught or instructed , not wholly lay aside the nature of deaf muter, since he the est defect of hearing remains. Still many of them have gained an acquaintance with the nature of things, of cause and effect, and of the reasons for human actions. They become rational and moral beings-worship the Deity-and are not ignorant of law and right. They love their parents, love those who have conferred benefits on them. They love mankind, good name, and even grow fond of labor. They submit to order, and willingly afford assistance to others. Having become more cultivated, they seek the conversation of others, and delight to make communications of their own

But they retain the vice of curiosity, which, however puerile in them, is, nevertheless, by the trouble it gives to others, not unfrequently the cause of quarrels, the apology and explanation of which is, the ignorance of so many things which those who hear, can so easily and so frequently comprehend as matters withheld from deaf mutes. They accordingly become very impatient, if they to whom they address themselves, do not immediately understand them. Having craved excuse for their excessive cuciosity, he makes an apology for their gnorance of those things which can only be acquired by speech, and by intercourse with those who hear. For rectors, as well as for the transaction of such business as mey

having now become conscious of their imbecility, they readily, yields to the counsels of those who hear. They love to immate them; bus not so much as formerly. They imitate had as well as good with very little discrimination, for although they may have learned to distinguish between good and had, the formation of a just criterions between them is always a work of difficulty, in relation to practice and to persons; points on which they very early errand are decrived.

By the absence of the celestial gift of hearing, the deaf mutes, unless tutored by art, remain ignorant of the Dairy and of divine things, and of all the civit duties of virtue and inorality. They have so little sympathy, that they are not moved by the miseries nor tears of others, but exhibit the semblance of wooden images in the form of man. They are lastful and lecherous; being under less restraint than those win hear from the advice and instruction of parents masters, and others in authority. Yet they have some super-ority as relates to visible objects; though this advantage seems to be but of little use in the main, through the difficulty of communication with those who hear.

The author manifests extensive knowledge of the subject by references to such writers as Heinicke, Esclike, Ernsdorfer, Petschke. Morniz, Reiche, us well as Sicard, Cusur, Bobian, Desmortiers,

Alhoy, Kress and Hard.

The Constitution and By Laws of the Pensylvania Institution for the Deaf and Dumb."

CONSTITUTION.

Anticle let. The title shall be" The Pennsylvania Intitution forthe Deaf and Dumb."

ARTICLE 2ND.

The school shall be located in Philadelphia.

ARTICLE SRP.

The institution shall be supported by the annual subscriptions of its members, by life subscriptions by such aid as the Legislature of the state may be pleased to afford, by donations and legacies, and by the payment for the education of children by the Parents or others who may have the ability so to do. ARTICLE 4TH.

ARTICLE 6TH.

The duties of the other officers shall be such as are implied a their titles, and shall be prescribed in the by-laws.

ARTICLE 7TH.

There shall be a Board of 24 Directors, composed of members of the Institution, who shall annually at the meeting next succeeding their Election, appoint one of their number to act as corresponding recretary of the institution, their other duties shall be such as me be defined by the by-laws. There shall also be a committee of twelve ladies selected annually by the board of Directors, at their first meeting in the month of May, to aid in the management of the establishment, under such provisions as may be from time to time prescribed by the by-laws.

ARTICLE STH. Any person may be a member, who shall sign this constitution and pay a sum not exceeding three dollars per annum, or such gross sum, in lieu thereof, to constitute a member for life, as may be prescribed in the by-laws; provided such sum shall not excee twenty dollars.

ARTICLE 97H. The members of the Institution shall meet annually con the dist Wednesday in May, in the city of Philadelphia, (at such hoorias the Directors may prescribe) for the election of Officers and Directors and Di then laid before them, and to receive the annual report of the Directors. Adjourned and special meetings may be held as shall be provided for by the by-laws.

ARTICLE 10th.

The Association shall have power to make by-laws, as well as to carry into effect the provisions herein contained as to make other rules and regulations consistent herewith.

ARTICLE 11th.

The right of membership may be relinquished, and the resigsation addressed in writing to the board of Directors, shall be sceepted by them provided the member shall have discharged all demands due to the Institution.

ARTICLE 12th.

The funds of the Institution shall be at the disposal and under the management of the Board of Directors; subject, however. so far as relates to that part derived from the life subscriptions, to such restrictions as may be imposed by the by-laws.

ARTICLE 13th.

Amendments or additious may be made to these articles, or to the by-laws which may be made under them, having been first proposed in writing at one meeting and adopted at a succeeding meeting, by two thirds of the members present, there being at least thirty-three members at said meeting, but not otherwise.

BY-LAWS

OF THE

Pennsylvania institution

FOR THE

AND DUMB.

SECTION 1.

The Treasurer shall, annually and previous to entering upon the duties of his office, give to the President in his private, and apt official capacity, in trust for the Institution (or in the event of the institution becoming incorporated, then to the Institution under its corporate title) his bond, with two sureties, who shall be approved of by the board of Directors, in the penal sum of \$4,000, conditioned for the faithful discharge of his duties as

He shall receive and account for all moneys belonging to the Institution, whether they arise from the annual contributions of the members, donations, legacies in cash bequeathed to the Institution, interest that may accrue on investments, or any other

Source whatever. He shall also hold, and be accountable for all evidences of stock or other transferrable property of the Institution, which may be placed in his hands by the Board of Directors, for which he shall give them a receipt in a book to be kept by them for that

purpose. Whenever the cash in his hands shall amount to the sum of one hundred dollars, (or at his option a smaller sum) he shall deposit the same in one of the Banks of this city, in his name as Treasurer, and not in his private capacity, to be drawn therefrom only for the purposes of the Institution.

He shall pay all orders for money drawn on him by order of the Board of Directors, which shall be signed by the President of

end Board, and countersigned by their Secretary.

He shall keep proper books of account, wherein he shall make fairbful entries of all his receipts and expenditures, and shall pre-

erve youchers for all his payments.

He shall exhibit annually (or oftener, if required so to do by the board of directors,) a statement of his accounts, in order that they may be laid before the members of the annual meeting.

He shall keep in a book to be provided for the purpose, an alpha-

Setical list of the names of the members, so arranged, that the annual payments made by the members may be distinctly shewn.

His books of accounts shall be at all times subject to the inspec-tion of the President, Vice Presidents, and any member of the Board of Directors.

SECTION 2.

The Recording Secretary shall transcribe into a book kept by him for that purpose, the constitution, these by-laws, and such other by-laws as may be made from time to time. He shall preserve a record of the proceedings, of the members at their annual or other meetings; he shall keep a list of the names of the members noting the period of their becoming so in a book provided specially for that purpose; and he shall also note down against their names the time when they may cease to be members, either by death, resignation, or otherwise; a copy of which shall be furnish. ed to the Treasurer whenever such cossation of membership may

It shall be the duty of the Recording Secretary to act as Secretary to the board of directors and preserve correct minutes of their transactions, which shall be transcribed into a book kept for that purpose, as well as for recording the proceedings of the annual and

other meetings of the Institution.

He shall give written or printed notices to the members of the board of directors, of the place and time of holding their meetings, and shall also give public untice in two or more of the newspapers of the city, of all proposed general meetings of the Institution, for at least four days previous thereto except the annual meeting, of which not less than ten days previous notice shall be given.

SECTION 3.

The corresponding Secretary shall be charged with the duty of maintaining such correspondence with individuals, or similar, a ciations at a distance as shall be directed by the board of directors or that may arise from the nature of the institution. He shall preserve copies of all letters written by him in the performance of his duties, and cause them to be recorded. He shall also pr serve copies of all communications relative to the objects of the lastitution, whenever their import may be deemed of sufficient interest by the board of directors to warrant it. His records shall be subject at all times to the inspection of the board of directors, or any member of it, and shall also be laid before the general meetings cither at their request or at the board of directors.

SECTION 4.

The board of Directors shall not apply the funds of the Institution for any purpose unconnected with the special objects. Ther shall have power to make laws and regulations for their own go vernment as well as that of the establishment to be placed und their immediate care and supervision. They shall make all contraces in relation thereto, the amount of which shall be binding on the Institution, and paid for out of its funds; provided that in the expend ture of, or making contracts, amounting to \$500 or more

there shall be a majority of the whole board to sanction the same.

It shall be their duty to procure an order book, with marging reference from which all their warrants on the Treasurer shall be taken, which warrants shall be signed by their President, (or president ing officer as the case may be.) and counter signed by their Secretary. They shall hold state ' nectings of their board at such place, as they may determine upon, at least once in every month; they may from time to time examine into the state of the funds of the Institution, and require from the Treasurer a statement of his accounts, whenever they may deem it proper so to do; they shall examine and act upon all bills and accounts exhibited against the Institution, and on finding them correct shall order their payment by a warrant on the Treasurer. It shall be their duty to lay be fore the annual meeting of the Institution, a report of their proceedings for the preceding year, accompanied with an exhibit of the recorpts and expenditures, and a general statement of the funds of the Institution.

SECTION 5.

The duties of the Ladies committee shall be prescribed by the board of Directors.

SECTION 6.

The money arising from the life subscriptions of the members (4) which the Trensurer shall keep a distinct account,) shall be invested ed either in the United States, State, or city Stock.

SECTION 7.

The annual contribution, until otherwise directed by the Institution, shall be two dollars; and the som to be paid in lien thereof, to constitute a member for life; shall be twenty dollars.

SECTION 8.

The annual contributions of the members, shall be considered due from them on the day of the annual meeting in May, and Proble in advance; provided that no person who shall sign the con-

stitution at any period less than three months previous to said day, shall be bound to pay in advance to the day of the first succeeding annual meeting, but to that of the second period after his signing.

SECTION 9.

No person shall be considered a member until he shall have signed the constitution and paid the sum of two dollars, the amount of the first years' contribution, agreeable to the provisions of the seventh section of these by-laws.

SECTION 10.

The officers of the Institution, and the hoard of Directors, shall he elected by ballot, by the members in person, (if not by proxy,) who shall have paid their dues up to the period of the election; the name of each candidate shall be written or printed on the same ticket designating the office intended, and the person having the highest number of votes shall be declared duly elected. Netice shall be given by the recording secretary of the time and place of holding the election, through the medium of one or more of the newspapers, for at least three days previous thereto.

SECTION 11.

Special meetings may be called by the President, the Board of Directors, or at the request of ten members addressed in writing to the President.

SECTION 12.

Any member who shall refuse or neglect to pay the annual contributions for three years successively, shall be deemed as having relinquished his right of membership; a return of all delinquents shall be made by the Treasurer once in every year to the Board of Directors, who shall act thereon as they may deem expedient to enforce payment.

SECTION 13.

Twenty-five members shall constitute a quorum for the transection of the ordinary business of the Institution.

SECTION 14.

In case that any office shall become vacated by resignation or etherwise, such vacancy shall be supplied by the Board of Directors until the next election.

SECTION 15.

The unappropriated funds of the Institution may be invested is stock or deposited in the saving fund Society, by the Board of Directors, whenever they may consider it expedient so to do.

SECTION 16.

All evidences of stock belonging to the Institution, shall be held in the name of the Treasurer, in trust for the Pensylvania Institu-tion for the deaf and dumb, until the association may become incorporated, when they shall be held under the corporate title.

SECTION 17.

A common seal for the use of the Institution shall be devised and procured by the Board of Directors, placed in charge of the Treasurer, and shall be affixed to such papers and documents a shall be ordered by the Association or Board of Directors.

Section 18.

A suitable person may be appointed by the board of Directors, as collector of the annual contributions, &c. whenever it may be deemed necessary.

SECTION 19.

Whenever the funds of the Institution will justify, measures shall be adopted by the board of Directors for commencing the Institution, and relief of those deaf and dumb persons who may apply for the benefits of the Institution.

This is the distribution of instruction in France:-While tha average number of children at school in the United States and different States of Europe in proportion to the number of inha-

bitants, gives this result :-1 Scholar on 4 Inhabitants United States...... Pays de Vaud..... do. do. do. do. Wirtemberg do. do. Prussia..... do. do. Bavaria do. England do. do. Austria.... do. do. do. France....... do. do. Ireland...... do. do. Poland 1 do. do. do.

In connexion with the foregoing, Mr. Bulwer refers to a new and very remarkable work by Mr. Guerry, (Statistique Morals de la France.) and asks what influence instruction has with the following calculations on crime?

Dividing France into five regions on districts, composed each of seventeen departments, and dividing the crimes committed to each of these regions into two classes, i. e. orimes against pro-

							1-

Of all the marvellous calculations, says Mr. Bulwer, ever yet published, this calculation is perhaps the most marvellous; for whatever the basis on which the computation is made, it is not a whit the less wonderful that it should in six successive years give an almost similar result; and this, not in one species of crimenot in one division of France—but in all the divisions of France, and in each distinct class of crime!—Thus maintaining between the different pertions of the Kingdom a particular and almost invariable crimina! ratio (if I may thus express myself,) which none of the many casualties to which human life is subject seem effectually to alter or control.

A difference of this kind cannot be the effect of law, for the law in all parts of France is the same; it cannot be the effect of secident, because it would not, surely, in that case, perpetually recur. What has instruction to do with it—I mean that kind of hostruction on which persons considering these subjects usually found their propositions?

## EDUCATION BILL.

HEREAS, the promotion of the Education of the youth of this Province is indispensible to the domestic and social happiness, to the commercial prosperity and national greatness, and to the pence, welfare, and good government of the same : and whereas the common school system of this Province has not produced the benefits so much desired by the thinking portion of its inhabitants: and wherefore it is expedient to alter, amend, and reduce to one act the several provisions of the same

Re it &c .- That from and after the 1st day of January 1837, there shall be granted to His Majesty annually out of the rates and duties now raised, levied and collected, or hereafter to be raised, levied and collected, to and for the public uses of this Province, and in the hands of the Receiver General unappropriated, for the use of common schools in this Pro-

vince, the sum of fifteen thousand pounds.

And be it &c.—That whenever the permanently available public school fund of this Province, arising death when & from any source whatever, shall amount to ten thou how to be approximately sand pounds per annum, it shall and may be lawful pointed for the G vernor. &c. to appoint under the seal of this Province, a superintendent of common schools, whose duty it shall be among other things to prepare, and submit an annual report to the Legislature, con-

taining:

1. A statement of the condition of the common schools of the province.

2. Estimates and accounts of expenditures of the school monles.

3. Plans for the improvement and management of the common schools — and the batter organization of the common schools — and ... All such matters relating to his office, and to the common schools, as he shall down expedient to communicate.

And he it, \$c.—That in every year, immediately ment and ratio following a year in which a census of the population of apportion— and the common schools, the Superine—ment and ratio following a year in which a census of the population of apportion—ment and ratio following a year in which a census of the population—ment and ratio following a year in which a census of the population of apportion—ment and ratio following a year in which a census of the population—ment and ratio following a year in which a census of the population of apportion—ment and ratio following a year in which a census of the population of apportion—ment and ratio following a year in which a census of the population of apportion—ment and ratio following a year in which a census of the population of apportion—ment and ratio following a year in which a census of the population of apportion—ment and ratio following a year in which a census of the population of apportion—ment and ratio following a year in which a census of the population of apportion—ment and ratio following a year in which are considered in the population of apportion and the population of apportion and the population of apportion and the population of the population of apportion and the population of apportion and the population of apportion and the population of apportion and the population of apportion and the population of apportion and the population of apportion and the population of apportion and the population of apportion and the population of apportion and the population of apportion and the population of apportion and the population of apportion and the population of apportion and the pop of this Province shall have been taken, the Superin-ment. tendent shall apportion the school monies to be annually distributed amongst the several districts of this Province, and the share of each district amongst its respective towns and cities, in the following man-ner: the one moiety thereof shall be apportioned among the several towns and cities of the Province, according to the ratio of the number of children over five and under sixteen years of age, as compared with the population of the whole Province according to the last preceding census, and the other moiety among the several townships in proportion to the amount of school monies raised in the several lownships in this Province, except as is hereinafter pro-

And be it, &c .- That it an increase of the school school moules monies to be dis ributed, shall take place in any other how year than the one immediately following a census, oned. the Superintendent shall apportion such increase amought the several districts, cities, & towns, according to the ratio of the apportionment then in force.

And be it, &c .- That when the census or returns, upon which an apportionment is to be made, shall be defective. so far defective, in respect to any district, city, or town, as to render it impracticable for the Superintendent to ascertain the share of school monies, which ought then to be apportioned to such district, city, or town, he shall ascertain by the best evidence in his power, the facts upon which the ratio of such apportionment shall depend, and shall make the apportionment accordingly

Amil be it &c .- That whenever, in consequence of Proceeding the division of a town or the ejection of a new town when town in any district, the apportionment then in force, shall altered, &c. become unjust, as between two or more towns of such district, the Superintendent shall make a new apportionment of the school monies next to be distributed amongst such towns, ascertaining by the best evidence in his power, the facts upon which the ratio of apportionment as to such towns shall depend.

And be it, &c .- That the superintendent shall certify each apportionment made by him to the Go-

Certificate vernor, and shall give immediate notice thereof to and notice of the clerk of the peace of each district interested apportionment therein, stating the amount of monies apportioned to his district and to each town and city therein, and the time when the same will be payable to the commissioners of such town or to the chamberlain of the city of Toronto.

And be it, &c .- That the superintendent shall pre-Regulations pare suitable forms and regulations for making all reports, and conducting all necessary proceedings under this Act, and shall cause the same, with such instructions as he shall deem necessary and proper, for the better organization and government of common schools, to be transmitted to the officers required to execute the provisions of this Act throughout the Province.

Expenses bow paid.

respecting forms, &c.

And be it, &c .- That all monies reasonably expended by him in the execution of his duties, shall upon due proof, be allowed to him by the Governor, and be paid out of the Treasury.

And be it, &c. - That the sum annually to be dis-

tributed for the encouragement of common schools, of the common shall be paid on the first day of February, in every year, on the Warrant of the Governor, to the Treaschool fund. When paid, surers of the several districts, and the Chamberlain of the city of Toronto.

And be it, &c .- That the Treasurer of each dis-Treasurer to trict, and the Chamberlain of the city of Toronto, apply for and shall apply for and receive the school monies apportioned to their respective districts as soon as the receive. same become payable

To give notice.

And be it, &c .- That each Treasurer receiving such monies, shall give notice in writing, to some one or more of the commissioners of common schools of each town or city in his district, of the amount apportioned to such town or city, and shall hold the same subject to the order of such commissioners.

And be it. &c .- That in case the commissioners of any such city or town, shall not apply for and re-Munice remaising, how ceive such monies, or in case there are no commisdisposed of sioners appointed in the same, before the next receipt of monies apportioned to the district; the monies so remaining with the Treasurer shall be retained by him, and be added to the monies next received by him for distribution from the Superintendent of common schools, and be distributed therewith and

in the same proportion.

And be it, &c .- That whenever the clerk of the Clerk of the peace of any district, shall receive from the supertionment of monies to be distributed in the district, he shall file the same in his office, and transmit a certified copy thereof to the district treasurer, and also to the clerk of each township, to be by him laid before the school commissioners of such township; which sum so apportioned, together with the sum raised in that township by the vote of its qualified voters at their last preceding annual township meeting, shall be apportioned by the said township commissioners among the several school districts of the township as follows: one moiety to be apportioned His duty on to each district, in proportion to its number of receiv's notice to Cach district the ages of five and sixteen exclusive; and the other molety, to be divided among the school districts, in the township improportion to the amount of money actually paid by each district

And be it, &c .- That the commissioners shall cause and require the collector of each town, by Duty of comtheir warrant to him, to pay the monies so added when collected, retaining his fees for collection, to some one or more of the commissioners of common schools in such town for the use of common schools therein, whose receipt therefor, shall be sufficient

towards the Teacher's wages in such district.

evidence of payment.

And be it, &c. That if there shall not be any commissioners of common schools, in such town when the monies are collected, the collector shall

pay the same, retaining his fees for collection, to When monies the district treasurer to be by him apportioned among to be paid to the several cities and towns in the district, and distributed in the manner herein provided."

And be it, &c.—That until a superintendent of

common schools shall, have been appointed, in this Province, it shall be the duty of the Governor, &c. to cause the duties of that office to be executed un- dent's duties, der his superintendence, and all the duties of the pro tem. to be other officers of the several districts, cities, or towns exercised unin this Province, shall be transacted and done be intendence of tween them and the Governor of this Province, in the governor. the same manner us they are by this Act required to be done by them, and to the Superintendent of common schools in this Province.

And be it, &c .- That it shall be the duty of the town clerk of every township, with as little delay as possible after the annual township meeting, to make to give am't of out and transmit to the clerk of the prace for his achool monies district, the amount of money to be raised in his peace, township for the support of common schools, who shall apportion the same, upon the rateable property of such township, in the same manner as the ons, &c. other monies, to be raised and collected in that township shall be apportioned to be collected.

And be it, &c .- That at the township meeting, convened under the authority of an Act passed in the 5th year of the reign of His Majesty William Commissionthe fourth, entitled an . Act to reduce to one Act ers and inspecof Parliament the several laws relative to the ap-tors. pointment and duties of township officers in this Province, except an act passed in the fourth year of the reign of William the Fourth, chapter twelve, entitled wan act to regulate line fences and water courses," and to repeal so much of an act passed in the thirty-third year of the reign of His late Majesty King George the Third, entitled "an act to provide for the nomination and appointment of parish Tobe elected and town officers within this Province," as relates to at the annual town officers within this Province," as relates to town meeting. the office of fence viewers being discharged by over 3 commissions seers of highways and roads, there shall be elected & 3 inspectors in the same manner as other township officers, three persons in each township to be school commissioners of such township, and three persons who shall be school inspectors for the same.

And be it, &c.—That the commissioners of the several townships so chosen, as aforesaid, shall be Commissions annually required to give bonds to the treasurer of to give bonds the district, in double the amount of the sums liable amount, &c. to pass through their hands, during the period of their continuance in office.

And be it, &c .- That it shall be the duty of the Powers and commissioners of commouschools, in each township, duties of com-1. To divide their township into a convenient number missioners.

of School Districts, and to regulate and alter such dis. To divide their tricts as hereinafter provided.

2. To describe and number the School Districts and

to deliver the description and numbers thereof in writted describe ing to the Town Clerk, immediately after the formation amborthe school or alteration thereof. or alteration thereof.

3. To apply for and receive from the District Treas: to apply for and 3. To apply for and receive from the use of common and receive all uroneys apportioned for the use of common and receive all schools in their township, and from the Collector of school menies schools in their township, and though for the same from the district the Township all moneys raised therein for the same the Township an moneys raised therein for the same treasure; and purpose as soon as such moneys shall become payable township collecor be collected.

4. To apportion the school monies received by them on the first Tnesday in April in each year among the to apportion the soveral School Districts, parts of districts, and the od according to neighbourhoods separately set off within their Town the ratio of chiles as follows: one moiety in proportion to the num den over 5 and ber of children residing in each over the age of five and under 16. under that of sixteen years, as the same shall have apouted from the last annual reports of their respective The toos; and the other moiety in proportion to the amount actually paid for teachers wages, during the year, as compared with the whole amount paid in such I ownship for teachers wages during the same period.

Commission monies received and expended by them, during the ers to keep an year for which they shall have been chosen, and shall lay the same before the board of auditors of

their accounts at the annual meeting of such board

in the same year.

And be it or. - That the commissioners of common schools in each township, shall, within fifteen days

Render to after the termination of their respective offices, render encessors all to their successors in office, a just and true account accounts of mo in Writing, of all school monies by them respectively received, before the time of rendering such account, and of the manner in which the same shall have been appropriated and expended by them; and the account so rendered, shall be delivered by such successors in office, to the township clerk, to be filed and recorded

(If any) in his office.

Poy balance. And be it &c. That if on randering such account any balance shall be found remaining in the hands of the commissioners, or any of the in the same shall be immediately paid by him or them, to his or their successors in office, or some one of them.

And be it Se. - I hat if such balance or any part Happropri thereof shall have been appropriated by the commisaccordingly, sioners to any particular school district, part of a district, or separate neighbourhood, and shall remain in their hands for the use thereof, a statement of such apprepriation shall be made in the account so to be rendered, and the balance paid to such successors in office shall be paid over by them according to such

appropriation.

And be it &c .- That every commissioner of common schools, who shall refuse or neglect to render such account as is above r quired, or who shall refuse or neglect to pay over to his successor in office, any balance so found in his hands, or to deliver a statement of the appropriation, if any there be, of such balance, shall for each offence forfait the sum of

twenty live pounds.

And be it of c - That it shall be the duty of such successors in office, to prosecute without delay; in to prosecute. their name of office for the recovery of such forfeiture, and to distribute and pay the montes recovered, in the same manner as other school monies received

And be it oc .- That such successors in office may bring a suit in their name of office, for the recovery with interest of any unpaid balance of school moints that shall appear to have been in the hands of any previous commissioner on leaving his office, either by the accounts rendered by such commissioner or by

other sufficient proof.

And be it oc .- That in case of the death of such commissioner, such suit may be brought against his representatives, and all monics recovered shall be up plied in the same mumer as if they had been paid

over without suit. Corporation.

And te it de .- That the commissioners of common schools in each township shall have the powers and privileges of a corporation, so far as to enable them to take and lod any properly transferred to them for the use of common schools in such township. And be in &c .- That the clerk of the township, by

Clerk of commissioners his right of office, shall be the clerk of the commission-

ers of common schools in each township, and it shall 1. To receive and keep all reports made to the Com-

missioners, from the Trustees of School Districts, and all the books and pape s belonging to the Commissioners, and to file them in his office.

2 To attend all meetings of the Commissioners, and to propare under their direction, all their reports, estimates and apportionments of school money and to record the same and their other proceedings, in a book to be

kept for that purpose.

3. To receive all such communications as may be directed to him by the superintendent of Common Schools, 4 to dispose of the same in the manner directed therein.

4. To transmit to the Clerk of the Peace for the District, all such reports as may be made to such Clerk by

the Commissioners. 5. To call together the Commissioners, upon receiv-

ing notice from the Clork of the Peace that they have not made their annual report, for the purpose of making such report.

And generally to do and execute all such things as bolong to his office, and may be repuired of him by the Commissioners.

And be it of .- That the commissioners of common schools in each township together with the other inspectors elected in their township, shall be the inspectors of com tors of common schools for their township.

And be it co.- That it shall be the duty of the in spectors of common schools in each township or any three of them, at a meeting of the inspectors called teachers. for that purpose, to examine all persons offering themselves as candidates for teaching common schools in such township.

And be it co. That in making such examination it shall be the duty of the inspectors to ascertain the qualifications of the candidate in respect to moral

character, learning and ability.

And be it ofc .- That if the inspectors shall be satisfied in respect to the qualifications of the candidate, they shall deliver to the person so examined, a certificate signed by them, in such form as shall be prescribed by the superintendent of common schools.

And be it of c. That the inspectors, or any three of them may annul any such certificate given by them or their predecessors in office, when they shall think proper, giving at least ten days previous notice in writing, to the teacher holding it, and to the trustees of the district in which he may be employed, of their intention to annul the same.

And be it &c.—That the inspectors, whenever they

shall deem it necessary, muy require a re-examina. tion of all or any of the teachers in their township, for the purpose of ascertaining their qualifications to con-

tinue as such teachers.

And he it dyc.—That the annulling of a certificate shall not disqualify the teacher to whom it was given, until a note in writing thereof, containing the name of the to cher, and the time when his certificate was annualled, shall be made by the inspectors and filed in the office of the clerk of their township.

And be it, ofc .- That where any school district shall be composed of a part of two or more townships, or any school house shall stand on the division line of any two townships; the inspectors of either township may examine into and certify the qualifications of any teacher, offering to teach in such district in the same manner as is provided by the preceding sections of this article; and may also in the same

manner annual the certificate of such teacher.

And be it, Ge:—That it shall be the duty of the inspector to visit all such common schools, within their township as shall be organized according to law, schools. at least once a year, and oftener if they shall deem it necessary

And be it. cfc .- That at such visitation the inspectors shall examine into the state and condition of such schools both as respects the progress of the scholars in learning, and the good order of the schools, and may give their advice and direction to the trustees and leachers of such schools, as to the government thereof, and the course of studies to be pursued therein.

And be it, Gre. That each of the inspectors, by agreement with or direction of the other inspectors, may be assigned to a certain number of school districts, which it shall be his special daty to visit and

inspect. And be it, Go. -That whenever any school district Formation of shall be formed in any township, by the commission school districts ers of common schools, it shall be the duty of some &c. one or more of the commissioners, within twenty days thereafter, to prepare a notice in writing des- Commissions cribing such district, and appointing a time and to give notice place for the first district meeting, and to deliver such notice to a taxable inhabitant of the district.

To pay the wages of such teachers when qualified, out of the monies which shall come into their hands from the commissioners of common schools, so far as such monies shall be sufficient for that purpose; and to collect the residue of such wages, excepting such sums as may have been collected by the teachers from all persons liable therefor.

9. To divide the public monies received by them, whenever autiforised by a vote of their district, into not exceeding four portions for each year; to assign and apply one of such portions to each quarter or term during the such autients. ing which a school shall be kept in such district, for the payment of the teacher's wages during such quarter or term; and to collect the residue of such wages, not paid by the proportion of public money allotted for that purpose, from the persons liable therefor, as above pro-

10. To exempt from the payment of the wages of wachers, such indigent persons within the district, as

they shall think proper.

Il. To cortify such exemptions and deliver the certificate thereof to the clerk of the district; to be kept on file in his office.

12. To ascertain, by examination of the school list kept by such teachers, the number of days for which such person not so exempted shall be liable to pay for instruction, and the amount payable by each person.

13. To make out a rate bill, containing the name of cach person so liable, and the amount for which he is liable; adding thereto five per cent of the sum due from him, for collectors fees; and to annex thereto a warrant for the collection thereof.

14 To doliver such rate bill, with the warrant annex. ed, to the collector of the district, who shall execute the same in like manner with other warrants directed to

him by them.

And be it, &c.—That in making out a tax list, the Taxes how Trustees shall apportion the tax on all the taxable apportioned inhabitants within their district, according to the valuations of the taxable property which shall be owned or possessed by them, at the time of making out the list, within the district, or which being intersected by the boundaries of the district, shall be owned or possessed by them, partly in such district and partly in any adjoining district; but where taxable property shall be owned by one inhabitant and possessed by another, only one of them shall be taxed therefor.

. And be it, ofc .- That any person owning or holding any real property within any school district, who shall improve and occupy the same by his agent or servant, shall, in respect to the liability of such pro. perty to taxation, he considered a taxable inhabitant of such district, in the same manner as if he actu-

ally resided therein.

And be it, &c. That if there shall be any real property within a district, cultivated and improved, but not occupied by a tenant or agent, and the owner of which shall not reside within the district, nor be liable to be taxed for the same in an adjoin-ing district, such owner shall be taxable therefor in the same manner as if he were an inhabitant of the district—but no portion of such property, but such as shall be actually cleared and cultivated, shall be

included in such taxation.

And be it, &c.—That the valuations of taxable valuation how property shall be ascertained as far as possible, from ascertained the last assessment roll of the township; and no person shall be entitled to any reduction in the valuntion of such property as so ascertained, unless he shall give notice of his claim to such reduction, to the trustess of the district before the tax list shall be

made out.

And be it. dec .- That in every case where such reduction shall be duly claimed, and in every case where the valuation of taxable property cannot be ascertained from the last assessment roll of the town ship, the trustees shall ascertain the true value of the property to be taxed, from the best evidence in their power; giving notice to the persons interested, and proceeding in the same manner, as the township assessors are required by law to proceed, in the valuations of taxable property.

And be it, &c.—That every taxable inhabitant of

a district, who shall have been within four years set Exemption in off from any other district, by the commissioners of certain cases common schools, without his consent, and shall, within that period, have actually paid in such other district, under a lawful assessment therein, a district tax for building a school house, shall be exempted by the trustess of the district where he shall reside from the payment of any tax for building a school, house therein.

And be it, cyc.—That every district iax shall be assessed and the tax list thereof be made out by the Time of maturustees, within one mouth after the district meeting king tox list.

in which the tax shall have been voted.

And be it, &c.—That where any district tax for the purpose of purchasing a site for a school house, or for purchasing or building, keeping in repair or furnishing such school house with necessary fuel and tenant against appendages, shall be lawfully assessed and paid by owner, any person, on account of any real property, whereof

he is only tenant-at-will, or for three years, or for a less period of time, such tenant may charge the owner of such real estate with the amount of the tax so paid by him, unless some agreement, to the contrary shall have been made by such tenant.

Puel how pro vided.

And be it, &c .- That when the necessary fuel for the school of any district shall not be provided by means of a tax on the inhabitants of the district, it shall be the duty of every person sending a child to the school to provide his just proportion of such

Proportion bow determin-

And be it, co.- That the proportion of fuel which every person sending children to the school shall be liable to provide, shall be determined by the trustees of the district, according to the number of children sent by each; but such indigent persons as in the judgment of the trustees shall be unable to provide the same, shall be exempted from such liability.

queut.

And be it, oc.- That when any person liable to to furnish and provide fuel, shall omit to provide the same, on nocharge delin- tice from any one of such trustees, it shall be the duty of the trustees to furnish such fuel and to charge the person soin default, the value of, or amount paid for the fuel furnished.

Ib.

And be it, cfc .- That such value or amount may be added to the rate bill of the monies due for instruction, and may be collected therewith and in the came manner; or the trustees may sue for and recover the same in their own names, with costs of suit.

Warrant

And be it, de. - That the warrant annexed to any tax list or rate bill, shall be under the hands & seals of the trustees or a majority of them, and shall command the collector to collect from every person in such tax list and rate bill named, the sum therein set opposite to his name.

Ib.

And be it, &c .- That the warrant annexed to any tax list for the collection of a district tax for erecting or repairing any school house, shall command the collector, in case any person named in such list shall not pay the sum therein set opposite to his name, on demand, to levy the same of his goods and chaitels, in the same manner as on warrants issued to the collectors of townships. And be it, de. - That if the sum or sums of money

renew or sue delinguent.

payable by any person named in such tax list or rate Trustees may bill shall not be paid by him or collected by such warrant within the time therein limited, it shall and may be lawful for the trustees to renew such warrant in respect to such delinquent person; or in case such person shall not reside within their district at the time of making out a tax list or rate bill, or shall not reside therein at the expiration of such warrant, and no goods and chattels can be found therein, whereon to levy the same, the trustees may sue for and recover the same in their name of office.

of trastees.

And be it, de. That if the monies apportioned to a Annual rep't district by the commissioners of common schools shall frenteen. not have been paid, it shall be the duty of the trustees thereof to bring a suit for the recovery of the same, with interest, against the commissioners in whose hands the same shall be, or to pursue such other remedy for the recovery thereof as is or shall be given by law; and the momes when recovered, shall be applied by them in the same manner as if they had been paid without suit.

How made.

And be it, ofe -That the trustees of each district school shall after the first day of January in every year, and on or before the first day of March thereafter, make out and transmit a report in writing to the commissioners of common schools for such town. ship, dated on the first day of January in the year in which it shall be transmitted.

Its contents

And be it, &c .- That every such report signed and certified by a imajority of the trustees making it, shall be delivered to the township clerk and shall specify,

1. The whole time any school has been kept in their district, during the year ending on the day previous to the date of such report, and distinguishing what por-

tion of the time such school has been kept by qualified tenchers.

2. The amount of monies received from the commissinners of common schools during such year, and the manner in which such monics have been expended.

3. The number of children taught in the district dur-

ing such your.

I The number of children residing in the district on the last day of December provious to the making of such report, over the age of five years, and under sixteen years of age, (except Indian children otherwise provided for by law), and the names of the parents or other persons with whom such children shall respectively roside, and the number of children residing within

And be it, Se.-That no teacher shall be deemed a qualified teacher within the meaning of this act, who shall not have received, and shall not then hold a certificate of qualification, dated within one year, from the inspectors of common schools for the township in

which he shall be employed.

And be it, Ge.—That where a school district is District form formed out of two or more adjoining townships, it ed from 2 town shall be the duty of the trustees of such district, to ships, how to make and transmit a report to the commissioners of report common schools for each of the townships out of which such district shall be formed, wi hin the same time and in the same manner, as is required in this act; distinguishing the number of children over the age of five and under sixteen years, residing in each part of a district, which shall be in a different township from the other parts, and the number of children taught, and the amount of school monies received for each part of the district.

And be it. &c. - That where any neighborhood shall Separate be set off by itself, the inhabitants of such separate neighborhoods neighborhood shall annually meet together, and choose how to report one trustee; whose duty it shall be every year, within the time limited for making district reports, to make and transmit a report, in writing, bearing date on the first day of January, of the year in which it shall be transmitted, to the commissioners of common schools of the township from which such neighbourhood shall be set off, specifying the number of children over the age of five and under sixteen years, residing in such neighborhood; the amount of monics received from the commissioners since the date of his last report, and the manner in which the same have been expended.

And be it, &c .- That every trustee of a school district, or separate neighborhood, who shall sign a false false reports. report to the commissioners of common schools of his township, with the intent of causing such commissioners to apportion and pay to his district or neighbourhood a larger sum than its just proportion of the school monies of the township, shall, for each offence, forfrit the sum of six pounds five shillings, and shall also

be deemed guilty of a misdemeanor.

And be it, &c .- That all property now vested in the trustees of any school district, for the use of schools districts; how in the district, or which may be hereafter transferred held. to such trustees for that purpose, shall be held by them as a corporation.

And be it, &c .- That the trusters of each school district shall on the expiration of their offices, render to their successors in office, and to the district, at a destrict meeting, a just and true account, in writing, of all manies received by them respectively, for the use of their district, and of the manner in which the same shall have been expended; which account shall be delivered to the district clerk, and be filed by him.

And he it, &c .- That any balance of such monies to successors. which shall appear from such account to remain in the hands of the trustees, or either of them, at the time of rendering the account, shall immediately be paid to some one or more of their successors in office.

And be it, &c .- That every trustee who shall refuse or neglect to reader such account, or to pay over any for negligence balance so found in hands, shall, for each offence, forfeit the sum of six pounds five sinilings.

And be it, &c .- That it shall be the duty of his cated.

Form of notice for a special district meeting.

To the Clerk of District No .-The Trustees of district No .-- at a meeting held for the purpose, have resolved that a special meeting he called at the school house on the day of 18 at o'clock, noon, of that day, for the purpose of [choosing a collector in place of a A. B. removed, or whatever the object of the meeting may be] and for the transaction of such other business as the meeting may deem necessary.

You will therefore notify each taxable inhabitant of the district, by reading this notice in his hearing, or if he is absent from home, by leaving a copy of it, or so much as relates to the time and place of meeting, at the place of his abode, at least five days before such

meeting Dated at

A. B. C. D. Trustees.

Form of notice for an adjourned District Meeting, to be posted up in the district.

### SCHOOL DISTRICT NOTICE.

Notice is hereby given, that a meeting of the freeholders and in-habitants of this school district, authorised by law to vote therein, will be held at on the day of next [or next [or instant. as the case may be] at o'clock in the noon, pursuant to adjournment.

Dated at school district No. in the township of day of A. D. 18

A. B. District Clerk. N. B.-If it be the annual meeting, it should be so termed in the notice of These notices are to be posted up in four of the most public places in the district, at least five days before the annual, or any other meeting which has been adjourned for more than one month.

Form of minutes to be kept by the District Clerk of proceedings of District Meetings.

At a meeting of the freeholders and inhabitants of school district in the township of , hold pursuant to ad. journment, at on the day of 18 , (or if it be the annual meeting, say, "at an annual meeting of, &c. held pursuant to appointment and public notice, at &c."—or if it be a special meeting, say, "at a special meeting of, &c. called by the trustees of said district, and held pursuant to special notice, at. &c. on the day of, &c.) A. B. was chosen moderator, and C. D. was present as district clerk, (or if the clerk be not present, say E. F. was appointed clerk, pro tem.)

Resolved unanimously, (or by a majority of votes present, as the case may be) here enter the proceedings of the district in the form

of resolutions, and with as much precision and certainty as possible.

Let the minutes of the proceedings always be signed by the Moderator and clerk, in the district book.

### ALTERING SITE OF SCHOOL HOUSE.

In order to change the site of the school house, as provided by

this Act, it is necessary:

1st. To obtain the written consent of a major part of the commissioners of the township, or of each township to which the district belongs

2d. To call a special meeting in the notification of which, the purpass of the moeting shall be stated.

3rd. To obtain the concurrence of two thirds of the qualified voters

of the district, when thus specially called together.

4. To have the vote taken by ayes and nays, and the name of each

person and the vote he gave, taken and recorded.

In taking the vote by ayes and nays, it will be necessary for the clerk to make a list of the names of the voters present, with two columns at the end of the names, one headed "aye," and the other "nay."

To ascertain the ayes and nays, the names are called over, and if the voter is in favor of the motion, a mark is made opposite his name under "aye." If against it, a like mark is made under "nay."

# REPORT

# SELECT COMMITTEE ON PETITION OF DONALD CAMERON.

of Thorah.

The Select Committee to which was referred the petition of Donald Cameron, Esq. of Thorah and Eldon, have enquired into the several matters embraced in the petition, and herewith respectfully submit

the following report:

In 1825, Mr. Cameron applied by memorial to the Lieutenant Governor in Council, stating that he had, at great expense, brought from Scotland to Upper Canada, about seven hundred settlers, and praying that a township on the Grand or Ottawa River might be granted him wherein to locate his followers. Council decided that after Mr. Cameron should have afforded certain items of information, vouchers and certificates, described by them and mentioned in the appendix to this report, he should have the unlocated lands in Eldon and Thorah, whereon to locate his settlers, besides twelve hundred acres of a grant to himself, as a remuneration. It appears that his explanations were highly satisfactory and that the lands were granted him. The appended paper No. 16, were granted him. shows that difficulties afterwards arose between Mr. Cameron and the Governor relative to the manner in which the former ought to have performed his part of the agreement, and that Mr. Smalley of North Gwillimbury was appointed a commissioner to examine and report on the condition of the settlers; which he did, in terms very unfavorable to Mr. Cameron.

Mr. Smalley reported that three hundred and eighty of Mr. Cameron's lots were vacant; but upon reference to the schedule of lots given to Mr. Cameron to locate, we find that that was a larger number than had been given to him, consequently there must have been an error in the instructions given to Mr. Smalley, or he may have misunderstood them. Mr. Cameron brings forward proof that several hundred persons were on the land given him to locate at the time Mr. Smalley found only twenty-nine souls. This is a

great discrepancy.

It appears that one of the results of Mr. Smalley's report was the notice numbered 18 in the appendix; warning the settlers, and giving a list of those whom Mr. Smalley had reported as being on their farms when he visited these townships.

Mr. Cameron considered himself and the locatees harshly and unfairly dealt with by the local government-as Lord Bathurst had directed Sir Peregrine

To the Honorable the Commons House of Assembly : | Maitland in 1823 to assign a convenient tract for the location of the emigrants Mr. Cameron was then about to bring to Canada.

The latter applied to His Majesty by petition, and there were other memorizals sent to England complaining that the Scotch Emigrants had been unjustly and cruelly deprived of their lands, some of which memorials are annexed-(see appendix Nos. 1 & 2.)

The certificates and memorials Nos. 3, 4, 5, 6, 10 12, 13, 14 & 15, contain abundant proofs from settlers magistrates, commissioners of the court of requests and other persons well qualified to judge of the great value of Mr. Cameron's exertions to settle Thorah and Eldon, and afford presumptive proof that he has been far more successful than the report of the Executive Council (No. 16.) seems to indicate.

Mr. Cameron has produced to Your Committee a statement in detail of the expenses he incurred, on the faith of the British Government, which amounts to a large sum, and it does thence appear that he has

been hardly dealt with.

He is desirous that a commission of several respectable and well informed persons should be appointed to inquire fully in the townships as to what has been his conduct—or that such other redress might be afforded him as may be within the means of the govern-

Your Committee cannot undertake to pronounce a judgment on the case submitted for their consideration, because they have been unable to go fully into its merits; but they are decidedly of opinion that Mr. Cameron has shewn good cause why an immediate

and strict investigation should take place.

They would have reported herewith an address calling on the Lieutenant Governor to appoint a commission for the purposes of justice; but calling to mind that His Excellency is surrounded by advisers in whom the country has no confidence, and that he himself is a stranger to Upper Canada & its inhabitants-they can only express their sorrow that in the present state of public affairs the constitutional means by which the House of Assembly can aid in the redress of such alleged grievances as those of which the petitioner complains have been impaired.

SAMUEL LOUNT, Chairman.

Committee Room, House of Assembly, 12th day of April, 1836.

# APPENDIX TO REPORT.

No. 1.

COPY,

To the King's Most Excellent Majesty.

MOST GRACIOUS SOVEREIGN desire to promote the happiness and welfare of all classes jesty's person and government, and approach the Royal

of Your Majesty's faithful and loyal subjects, we the undersigned inhabitants of this province of Upper Canada, Satisfied of Your Majesty's earnest parental, beg to express our unfeigned attachment to Your Majesty's Throne with the confident assurance that our reasonable i wishes will receive the most attentive and candid consideration and that the alarming evils will be effectually averted.

On or about the 20th June 1833, Lord Bathurst directed Major General Sir P. Maitland, K. C. B. to assign to the emigrants going out to Canada with Mr. Donald Cameron, a convenient tract of land for their settlement; the said Donald Cameron presented a petition on the 5th November 1825 to His Excellency Sir P. Maitland, the Lieutenant Governor of Upper Canada, and His Honorable Council praying for a township of land for his followers and himself under the petitioner's direction .- And an order in Council on the 8th of March 1826 was issued for the townships of Thorah and Eldon for Cameron and followers for said Donald Cameron's service for three years at great trouble and expense, respectfully recomending that on account of his great exertions twelve hundred acres should be granted to him by way of remuneration, and that his followers be located in Thorah and Eldon if these townships be entirely open.

Surveyor General's Office York, }
11th March, 1826.

Having received His Excellency the Lieutenant Governor's permission to furnish you with the plans of the townships of Thornh and Eldon. I herewith transmit them to you. I have marked the Crown and Clergy Reserves, and also such lots as have been located on those plans; you can insert and submit the locations you wish to make when the plans are to be returned to me, in order that I may submit them for confirmation. I am Sir,

(Signed)

Your obedient servant, THO'S RIDOUT, Surveyor General.

To DONALD CAMERON, Esq.

In the month of April 1826 Donald Cameron, Esq. proceeded to Thornh and Eldon with a number of men in his employment to open roads in the above townships and neighbourhood, and after the above mentioned Cameron had got the road made, at great expense and much fatigue both of mind and body to himself and some of his locatees and settlers, he brought Thornh and Eldon into value and repute. The most of the tickets were issued and confirmed before the 14th June 1828, and in less than three years and a half from the date of that order in Council of the 8th March 1826 having been made to Donald Cameron, land had risen in value from less than seven pence per acre to, from seven shillings and six pence to twenty shillings currency per acre in Thorah; and from seven shillings and six-pence per acre, shortly after, to twelve shillings and six-pence like currency, in Eldon and in like proportion in the neighbouring townships—and this rise in price on the said lands was chiefly through the means and great exertions of Donald Camwhich can be proved by the inhabitants of the neighbouring townships, as well as by the annexed petitions and certificates. That this was the nexed petitions and certificates. That this was the prosperous state of Thorah and Eldon in the month of June 1829, and although the above Cameron was so much the cause of the prosperity of the above settlement on the 17th of November 1829—the then acting Council appeared to us to be determined to ruin said Cameron and locatees, by trying to deprive them of their grants which had been assured to them by the predeces-Such was sors of the present Gevernor and Council. the cruel treatment that Cameron and the locateess experienced from the acting Council, in this case, for nearly the last four years—that we cannot view them as otherwise than as the ruin of Cameron and locatees, and their poor and helpless families, who thought to have received more justice in Canada. But still we remain in hopesof To Donald Camerion, Esq. .

seeing the day in which the locatees and Cameron shall receive their just due, which cannot be denied them before an upright and unbiassed tribunal, for what Donald Cameron, Esq. and the locatees suffered at the hands of those who we believe are paid to do them justice, and to guard the interests of Your Majesty's faithful people in this country, altho' we consider their conduct to be quite the reverse, and greatly to the injury of many of Your Majesty's dutiful and loyal subjects in this Province for the last 4 years or since they have been in office.

Wherefore Your Petitioners most humbly and earnest-

ly pray, that Your Majesty will order Your Government to protect and see justice done to the locatess and settlers, and Donald Cameron who has done so much good to a large body of your Majesty's subjects in this Province, from the severe proceedings of the above mention-

To this our humble petition, we entreat your Majesty's early consideration and an answer to Donald Cameron, Esq. of Thorah, and as your Majesty's taithful subjects in duty bound will ever pray.

(Signed by) KENNETH CAMPBELL, And 140 others.

THOROLD, 16th June, ? 1834.

(Cory No. 2.)

To the Kings most Excellent Majesty.

Most Gracious Sovereign:

Satisfied of your Majesty's cornest and parental desire to promote the happiness and welfare of all classes of your Majesty's faithful and loyal subjects, we, the undersigned inhabitants of the Townships of Lochiel and Lancaster in the Eastern District and County of Glengarry. Province of Upper Canada, beg leave to express our unfeigned attachment to Your Majesty's person and Royal Family and Government; and we further beg leave to approach the Royal Throne with the confident assurance that our reasonable wishes will receive the most attentive and candid consideration and that the alarming evil will be effectually averted.

On or about the 20th June, 1823, Lord Bathurst directed Major General, Sir Peregrine Maitland, K. C. B. to consign to the emigrants going to Canada with Donald Cameron Esq. a convenient tract of land for their settlement, and said Donald Cameron presented a petition on the 5th November 1825, to his Excellency Sir Peregrine Maitland the Lieutenant Governor of Upper Canada, and his Hon. Council, praying for a Township of land for his followers and himself, under the Petitioners' direction: and an order in Council on the 8th of March 1826 was issued for the townships of Thorah and Eldon, for Cameron and followers-for said Donald Cameron's service for three years at great trouble, and expense, respectfully recommending that on account of his great exertions twelve hundred acres should be granted to him by way of remuneration, and that his followers be located in Thorah and Eldon, if these townships be entirely open.

> Surveyor General's Office York, ? 11th March, 1826.

Having received His Excellency the Lieut, Governor's permission to furnish you with the plans of the town-ships of Thorah and Elden, I herewith transmit them to you .- I have marked the Crown and Clergy Reserves, and also such lots as have been located on those plans.-You can insert and submit the locations you wish to make, when the plans are to be returned to me, in order that I may submit them for confirmation.

I am Sir, Your obedient servant, THO'S RIDOUT, (Signed) Surveyor General.

Notwithstanding Earl Bathurst's answer to the Lieut. John McInnis, Governor and the above order in Council, and His Excellency's order to Donald Cameron, Esq. to locate his followers in Thorah and Eldon for said Cameron's services and great trouble and expense—and afterwards the above mentioned Cameron and some of his followers, raising the townships of Thorah and Eldon from the low value of less than 7d per acre to the present great value, and raising the neighbouring townships in proportion in value and rendering great service to a large body of Your Majesty's dutiful and faithful subjects, the present or acting Council are trying to ruin the said Donald Cameron and a large body of locatees of Thorah and Eldon, by trying to deprive them of their right to the lands granted and assigned to them by Lord Bathurst Your Majesty's former Secretary, and the former Lieutenant Governor and Honorable Council.

Wherefore we Your Petitioners, most humbly and earnestly pray that Your Majesty will order Your Government to protect and see justice done to the locatees and settlers, and Donald Cameron, Esq. who has done so much good to a large body of Your Majesty's subjects in this Province from the unjust proceedings of the above

mentioned Council.

To this our humble petition we entreat Your Majesty's early consideration, and an answer in behalf of the locatees, to Donald Cameron, Esq. of Thorah, and as Your Majesty's faithful subjects are in duty bound, we shall ever pray.

Lancaster, 27th November, 1834.

(No. 3.)

Thorah, 13th July, 1835.

We, the subscribers, do hereby certify that we came to the townships of Thorah and Eldon about eight years ago, and we are well aware that before and when Donald Cameron, Esq. received his grant of land in the above mentioned townships, about nine years ago, the said order or grant of land made to him for his services and heavy outlays might be purchased in the said townships for from 6d. to 9d. currency per acre-and that until the said Donald Cameron caused roads to be opened from Lake Sincoe through the above mentioned townships to the Danford Road in Whithy, a distunce of more than forty miles, besides different other roads for the convemence of said townships and their neighborhood, in consequence of which lands raised in value to from seven shillings and sixpence currency per acre in said and adjoining townships—which took place in about three years after the said Donald Cameron received his grant of land and all this rise in price through the perseverance and means of said Donald Cameron united with his followers and settlers' labor on said roads, notwithstanding the different orders and reports that passed and circulated since the munth of June 18 till October 1830, in the cause of said Donald Cameron and followers, settlers and locatees of said Thorah and Eldon, and the above orders and reports so well calculated to prevent the followers and setters of said Donald Cameron from coming to the said townships, and to mar and did mar the interests of Donald Cam ranand a great many of his locatres and followers, as they were given to understand by the then acting Council and their numerous subalterns who sounded their orders and reports so well that they were to be deprived of their land in Thornh and Eldon notwithstanding their just and lawful claim to it in the acting Council's report of 1830. They stated that there was only 29 persons in Thorah and Eldon appeared to come there with Donald Cameron-This statement is as incorrect as the most part of this Council'sreport -- We do further certify that in the month of October 1830 there was no less than from six hundred and sixty to seven hundred of Donald Cameron's settlers and followers arrived in the said townships.

(No. 4.)

Thorah, 17th August, 1835.

This is to certify, that we, the undersigned, were marred of the lots we received from Donald Cameron, Esq. in Thorah and Eldon, as his followers and settlers, being located to other persons, hotwithstanding that we have been a year and some of us three years previous improving and residing with our families on said lots or half lots, and improved them considerably. This has done us a great injury, as it was the means of bringing us to Toronto (late York) several times, a distance of upwards of 70 miles. This and the like conduct of the acting Council in this case has done much injury to said Donald Cameron, Esquire, and his settlement for the last six or seven years, notwithstanding the great and valuable service he has done to this part of the country and to a large body of His Majesty's subjects therein.

[Signed]

Samuel Cameron,

(No. 5.)

Eldon, 7th June, 1834.

We, the undersigned Commissioners of the Court of Requests, Division No. 8, in the Newcastle district, do hereby certify that we have been acquainted with Donald Cameron. Esq. for the last seven years, during which he has at all times made all possible exertions in his power to promote the settlement of this part of the country, and in improving the roads, &c. &c.; and that we are perfectly aware that his exertions and influence and means, have been of very great service to this part of the country generally.

D. WILLIAMS,
J. FURGASON,
D. CAMERON,
KEN. McCASKULL.

(No. 6.)

We, the Commissioners of the adjoining Division No. 17, of the Home District, do certify, that the above certificate is, to our knowledge, no exaggeration of Mr. Donald Cameron's services, which have been of great benefit to this part.

[Signed]

JOHN E. WHITE, J. P. Com'r C. R. S. M. CAMERON, Com'r C. R. D'N. CAMERON, Com'r C. R. WM. JOHNSON, J. P. & do. FR'S OSBORNE, J. P. & do.

Thorah, Sept. 1834.

(No. 7.)

Thorah, 30th Nov.1829.

We, the undersigned inhabitants of the townships of Thorah and Eldon, bind and oblige ourselves to pay annually, to an eligible Clergyman of the Church of Scotland, for officiating every Sunday in such place of assembly as may be appointed for that purpose, the sum set opposite our respective names, till such time as the same may be liquidated by the aid of Government, the increase of inhabitants, or any other assistance which may accruenthe payment to be made a year after he has actually commenced preaching:—let it be understood the place of worship will be fixed in the most central place that the congregation will deem fit.

(No. 8.)

Copy of a minute in Council made upon the petition of Donald Cameron and other inhabitants of the townships of Thorah and Eldon, praying for a grant of one of the Clergy Reserves or any other convenient lot for the use of the church of Scotland in their neighborhood, as they have subscribed above £80 for the support of a Scotch clergyman.

hir. Cameron will please to select a Lot and ac quaint Mr. Robinson will the number. Lan Feb. P. HOBINGON (Styred) P. HOBINGON

In Council, the 6th February, 1830—Ordered—That it be referred to the Commissioner for Crown Lands, to set apart some vacant lot of 200 acres that may serve for the accommodation of a Minister of the Church of Scotland as prayed for in the petition, and that an application be made to His Majesty's government to sustain a Grant in trust for that purpose.

(No. 9.)

[Copy.] Commissioner of Crown Lands' Office, Turonto, 7th April, 1836.

In reply to your letter of 2d instant. I beg to inform you, that Lot No. 2 in the 1st Con. of Thorah, is vacant—and a memorandum has been entered in my book to reserve it from sale in consequence of its having been selected by you for a Glebe for the Presbyterian congregation of the Kirk of Scotland.

Sir.

Your most obedient Humble servant,

D. CAMERON, Esq.

P. ROBINSON.

(No. 10.)

To His Excellency Sir John Colborne, K. C. B. Lieut.
Governor of Upper Canada: and Commander
of His Mojesty's Forces therein. Go. Go. Go.
We, the undersigned, His Majesty's dutiful and loyal

subjects, inhabitants of Brock, from the long absence of our much esteemed friendDonald Cameron, Esqr., ha a

been constrained to enquire the cause, and being informed he is confined in York Jail to the great damage of our new settlement, humbly pray your Excellency that said Donald Cameron, Esq. be liberated, if it be consistent with the unparallelled laws of our beloved country. Our friend doubtless has his fault, but his unremitting exertions in facilitating the prosperity and settling this part of the country, and his staunch loyalty, must ever have a great influence on the affections of our loyal but little flock.

And as in duty bound your petitioners will ever pray. Brock, 4th April, 1832

(No. 11.)

Donald Cameron, Esq. offered each of us in the year 1826, our choice of 200 acres of land in the township of Thorah, free of all incumbrances for settling and clearing 3 or 4 acres on the same before June 1827-We did not consider it worth while going so far back, for the sake of 200 acres of land, as the said D. Cameron, Esq., only commenced settling Thorah and Eldon in May 1826—We thought the said land would not be of value for a length of time.

(Signed) aca Juix, 1834.

Allen, Neil Patton, John Currie, Russel Wilsou, Thomas McDonald, Francis Elves. George Copland, Dn. Munro.

No. 13.

To His Excellency the Lieut. Governor of Upper Canada Sc. Sc. Sc. in full Council.

We His Majesty's dutiful and loyal subjects, inhabitants of the townships of Thorah and Eidon, are constrained by the most painful necessity to represent to Your Excellency in Council the injury which has been done to this settlement for some time back, particularly for the last three months, by the reports circulated and affoat in York and through the country, as we have reason to believe, by the Hon. Peter Robinson, that many of the locatees of Thorah and Eldon were immediately to be deprived of their land. This disagreeable intelligence has been communicated to us and other parts of the country, by Erad Smally, Esq. who has been sent out we believe by some one of the Council, to inspect these two townships, apparently as a preparatory step for that purpose. These reports, whether true or lalse, seem to have taken their full origin from a letter said to be sent to one of the members of the board, not signed but acted upon in Council of 17th Nov. 1829, and again of March 9th, 1830, complaining of Donald Cameron, Esq. as doing injury to the settlement of Thorah and Eldon.—Had it not been for these reports and this unusual order in Council, apparently brought about by that weak and unfounded document first alluded to, we have reason

to believe our population since the month of May last would have received an addition of at least Two hundred individuals,—we now beg leave to represent to Your Excellency in Council that these reports and this uncommon step attendant upon them, must be the ruin of the settlement, and inevitably that of many persons who might otherwise we believe become since, some of our most valuable inhabitants and members of our community.

We have however the fullest confidence that Your Excellency wish the advice and wisdom of your full Council, will be pleased to see the locatees and inhabitants of Thorah a..d Eldon dealt with as those of other townships in our immediate vicinity, at least as far as the progress of the settlement with Donald Cameron, Esqr's great exertione and heavy outlays in populating this part of the coun-

try merit.

By the annexed certificate of inhabitants of Thorah and Eldon, Your Excellency in Council may in some measure judge how erroneous and unfounded the letter said to be addressed to one of the members of the Council has been, and on the contrary how beneficial the services of Donald Camer on, Esq. have been considered by the subscribers as well as by a former Council—and we therefore trust that Your Excellency in Council will be pleased to give it due attention, and an answer to the foregoing at your earliest convenience through the said Donald Cameron, Esq.

(Signed)

ANGUS McLARREN,

and about 70 others.

No. 15.

Thorah, 18th March, 1630.

To His Excellency Sir John Colborne, K. C. B. cfc. cfc. We the undersigned inhabitants of the townships of Thorah & Eldon, having heard with feelings of the deepest regret that some person or persons unknown have circulated reports detrimental to the character of D. Cameron, Esq. to the Legislative Council-do take the earliest opportunity of contradicting the same—and further unanimously certify that the said Donald Cameron, Esq. has been most unremitting in his exertions for the welfare of these two Townships, and have also to state that he has been parti-cularly active in every thing tending to induce emigrants to come not only to the above mentioned townships, but to the neighbouring parts of the country—besides we are fully sensible of the heavy expenses he has been at in bringing emigrants to this part of the country.

No. 16.

Extract from the Report of the Executive Council on the report of the acting Surveyor General, respecting the town-ships of Thorah and Eldon, 28th Nov. 1831

The Council have had before them the report of the acting Surveyor General respecting the townships of Thorah and Eldon, accompanied by two reports by Arad Smalley, Esq. shewing the result of his personal inspection of those townships recently made by order of Your Excellency for the purpose of ascertaining their present actual condition in regard to settlement and improvement.

And upon a consideration of these documents and a review of the former acts of the government, affecting th townships of Thorah and Eldon, the Council beg leave res pectfully to report:-That on the 12th Nov. 1825, Mr. Donald Cameron, formerly an inhabitant of Lancaster in this Province, prepared a petition to His Excellency Sir Poregrine Maitland, Lieut. Governor, in Council, setting forth that between the years 1821 and 1824, he had brought out from Scotland to this country about 140 families, consisting of upwards of 670 individual, that he had incurred thereby great trouble and expense—that the persons he thus bro't out were then in the county of Glengarry, except a few who removed in Lower Canada—and he prays that a trace who removed in Lower Canada—and he prays that a trace on the Ottawa River, in the District of Bathurst, might be assigned for settlement of his people, and that a might be made to himself individually, in consider on of his exertions. Mr. Cameron at the same time roduced documents containing an assurance from Hi Majesty's

Secretary of State that the persons who might emigrate to Canada under his directions should receive such grants of land as had been made to the Emigrants from Ireland in 1823.

That on the 21st November, 1825-the Council reports upon this petition as follows:-

The board having heard Donald Cameron and examined his petition and documents—find—that a list of the settlers who have, as he asserts, come into the Province through his agency, should be furnished, giving their age, and whether heads of families or single; the correctness of which lists to be certified by two or more Magistrates acquainted with the people and the principal facts.

That a list of those who came out at their own expenses, be furnished; and a list of such as required from Mr.

Cameron assistance, with their acknowledgment of such assistance annexed, under their own hands

And also what private agreement or agreements existed between Mr. Cameron and any or all of the settlers

whom he has brought out.

That Mr. Cameron in consequence of this report, transmitted to Major Hillier, early in February 1826, various papers, for the purpose of proving the facts which the Executive Council in the above report, requested to be established. That in the course of the same month, Mr. Cameron attended the Council, and signified his destre that the townships of Thorah and Eldon might be assigned to his settlers, if the Government should determine favorably upon the prayer of his petition.

That on the 5th March in the same year (1826) the Council having then before them the information which they had exacted, make this second report upon Mr.

Cameron's petition-

Mr. Cameron having complied with what was requested last, giving full satisfaction to the Board that he has been very instrumental in bringing out to this Province upwards of six hundred emigrants, men, women, and children; in which service he has been employed upwards of 3 years at great trouble and expense-respectfully recommend .that on account of his great exertions 1200 acres be granted to him by way of remuneration, and that his followers be located in Eldon and Thorah, if these townships be entirely open, as it is desirable that a few Scotch settters should be placed in the Newcastle and Home Districts, allowing Mr. Cameron one year from the 1st of May to bring his people forward as they are at present engaged in different parts of the Province in labor for the support of their families. The Board would further recommend, that as all these people have arrived in the Province before the usual mode of granting lands was suspended, the heads of families who have five children or apwards be granted 200 acres, and such as are single and have small families be granted 100 acres.

That the 1st day of May, 1827, being the time appointed according to the report within which Mr. Cameron was to place his settlers upon the land reserved for them, he addressed on the 2d of April, 1827, another petition to His Excellency the Lieutenaut Governor in Council, setting forth that several of his followers were then actually settled upon and improving their lands-but that a numher of them being in the employ of Lumber Merchants, who failed during the last season, had in consequence met with disappointments which left them without the means of proceeding and put it out of their power to join laim within the period limited by the Order in Council of the 5th of March, 1826-and he prays such futher time to bring forward the remainder of his people as to liis

Excellency should appear meet.

lipon which petition the period was extended to the

1st of November, 1827.

That on the 6th November, 1827, after that period had actually expired, Mr. Cameron preferred another petition, setting forth that upwards of 150 of his followers had been located in the townships of Thorah and Eldonthat some of them being still employed in the lumber business, and others, owing to the hard times, were yet unble to arrange their affairs so as to enable them to remove—that he had found it impossible to bring the whole Council of the 4th of April last-but that he had reason to believe, that a short time only would be required to bring the rest forward—the whole of the remainder—and prayed for such further extension of time for the comple on of the settlement of said townships as to His Exceller v should appear meet.—Upon which petition the forcible manner in this long and groundless report, as am period by further extended to the 1st day of Jaly, 1828. instrument to ruin the poor people and myself.

(No. 17.)

#### REMARKS BY Mr. CAMERON.

I, Donald Cameron, petitioned in the month of No. vember 1825 for a township of land, and having been exanimed on the 21st of that month, and re-examined in February, and again on the 8th of March, 1826-the Council then finding that my services were of great value to this Province, and a great body of His Majesty's subjects, instead of a township as petitioned for, received all of him by the Order in Council of the 21st of November the vacant lands in the townships of Thorah and Eldon, amounting to 296 lots for my followers and myself (as per statement received from the Surveyor General's office by command of His Excellency the Lieut. Governor) on the 11th March, 1826, delivering up to me the plans to locate whomsoever I wished in the townships of Thorals and Eldon as a remuneration for my services and heavy outlays-at the same time a portion of the township of Thorah was unsurveyed, being considered a swamp by the former Surveyor. The survey of that portion took about 5 lots of the above number to survey it, and about 40 lots more condemned being swampy, thus leaving about 251 lots that I claim for my locatees and myself.

No. 17, Continued.

I being privileged from the 1st May, 1826, to the 1st July, 1828, to bring my people forward, which was to patronage them, that is to say to give location tickets to them according to His Excelledcy's instructions (York. March 11th, 1826) which will plainly show the nature of my authority, and not as the Council would try to make it appear, to place them on the land, which would be so unreasonable.

How could it be possible that I could keep vacant 380 lots out of 251 which I have clearly shewn above is all I claim for my locatees and myself.

I am further astonished at the assertions of the Council in stating that there were only 29 persons that went to the above townships as my settlers previous to September 1830, when they had a petition before them from a subscription made at Thorah in Nov. 1829, which would naturally show the Council that there was about 500 persons of the church of Scotland went to Thora & Eldon before that time of D. Cameron's followers, as well as about half of the above number belonging to the Catholic church went there as Cameron's followers-at the same time this will show that about 700 persons went to Thorah and Eldon as my settlers when the Council would wish to maintain that there was only 29 persons—then stating in the meantime that I of them forward within the time limited by the Order in kept 380 lots vacant when there was but 251 in all that I claim—in which about 700 persons went to settle, which can be proved if required. The above assertion of the Council is like the most part of their report against the locatees and myself—much like the anonymous and unsigned letter which is brought against me in such a

That in January 1829, several persons stating themselves to be located on lots in the Township of Tho-Township, petitioned through Mr. Cameron as their agent, setting forth that they were poor and unable to perform the settlement duty and requesting six month's further time-upon which petition it was ordered that an extension of six months be given to the parties as they seemed to have relied upon Mr. Cameron's knowledge of the circumstance as sufficient inducement; but that strong proofs should have been addiced, and sound the conduct of the Council, the people and mywill be required, upon similar applications in future.

That on the 18th of October 1829, Mr. Cameron signified himself agent for upwards of forty persons; preferred another petition to the government in which it was stated, that those persons had been located in Thorah and Eldon, and had been unable from poverty and sickness to perform the settlement duties; but that they were determined to settle upon their lands as early as they could next summer (1830)-they therefore prayed an extention of time till July 1830.

Upon which petition it was recommended and approved by your Excellency, that with respect to such lands, contrary to right and reason. of the petitioners as had actually gone upon their land and performed any part of the settlement duty, the period should be extended for six months beyond the pledge of indulgence be given.

That on the 23d of November, 1829, another petition was preferred to your Excellency, expressed

That for some months before this time various petitions of individuals had been before the Council, occasioned by difficulties growing out of private transfers and exchanges made by Mr. Cameron of lots in the townships of Thorah and Eldon. That it appeared further to the Council that the most of the lots in these townships being in the names of some persons on the Maps as followers of Mr. Cameron-while it was stated that but a small proportion was in fact occupied or in any manner improved.

### REMARKS BY Mr. CAMERON.

The unfounded assertions of the Council in part, rah, but not alleging that they had actually gone into the may be seen by reference to Document A. and F. and G. as well as many others if required.

I should feel most happy if His Excellency would be pleased to order a commission of six or eight men to proceed to Thorah, one-half named by the above Council or His Excellency, the other half by myself, with power for the above commissioners to name an Umpire, or any other proper mode to investigate or self, in the above cause—this would show an impartial trial.

According to the extract of the Council's report of the 26th November, 1831, would deprive most of the locatees of their lands-but upon reconsideration, the Council (appeared to me) finding themselves wrong or deceived by Mr. Smalley or others, made an Order in Council on the 26th of January, 1834, "That the locatees of Thorah and Eldon should be confirmed in their locations."

That notwithstanding this order of the 26th Jan'y. 1834 and others, purporting that the locatees should be confirmed in their locations, the office still continued to locate to others, and give deeds of the above

time appointed in their tickets: but that with respect to those who have never taken actual possession, no

to be a petition signed by Mr. Cameron as agent for the same persons nearly as were included in the last petition, and praying nearly in the same terms for an extension of time for performing the settlement duties.

# (No. 17 continued.) REMARKS BY MR. CAMERON.

The petitions referred to him by the Council, I have never seen nor heard of before-and if in existence, why did they not show them to me?-& would in a few words say, I believe them to be much like the anonymous paper which they have taken so much pains to notice for the want of better proof, to substantiate their foul and unfounded report against me and the locatees of Thoral and Eldon.

That those circumstances were sufficient to produce, and did produce in the Council a conviction that some examination was necessary, and that the prosperity of the measure was rendered further apparent by an anonymous paper which had been addressed to the Hon, and Rev. Dr. Strachan, one of the members of the council, which represented abuses which ought not to be suffered to exist.

That the council neither assumed a statement contained in that paper to be true nor grounded any acts upon them further than to take occasion in reporting upon the last mentioned petitions of the 23d November, 1829, to make the recommendation contained in their minutes upon that petition which is as follows:-"The council beg to refer to the minutes of council, 17th November, 1829, upon similar petitions from

Mr. Cameron, as containing their opinion in respect to the indulgence proposed to be given.

The council deem it to be their duty to lay before his Excellency, a letter not signed but addressed to one of the members of the board, and complaining of injuries done to the settlement by lots being covered by Mr. Cameron by the names of Locatees who are either imaginary or who have no idea of becoming ac-Without vouching in any degree for the truth of a statement so made, the council deem it tual settlers. proper to recommend that an enquiry into the true No. 17 Continued.

state of the settlement be made by His Excellency's directions in the presence of some of the most respectable inhabitants of the township, and that Mr. Cameron has notice of it, in order that if the complaint made against him be unfair, he may be able to shew it satisfactorily.

That Mr. Cameron was called before the Council, and being informed of the intended inquiry, expressed himself fully satisfied with the course that your Excellency had appointed—Mr. Smalley to make the proREMARKS BY MR. CAMERON.

Had His Excellency's Council sent the commission as he talked of, I believe it would had a good effectinstead of sending Mr. Smalley, (a man so highly recommended by the council) which it seems in this case, cost the country a great deal of money-who never called upon me and whose statements many of which I can prove to be quite false, and according to the Council's report he has perjured himself.

posed examination of Thorah and Eldon-a gentleman of honor and integrity and discretion, and a very old inhabitant of that part of the Province, which lies in the neighborhood of those townships. his report made out at a considerable charge to the government, exhibits the result of a personal inspection of every lot mentioned in the schedules-and that the Council having carefully examined it together with the report of the acting Surveyor General, finds that the agreement entered into by the government with Mr. Cameron has ended in the following consequences.

Mr. Cameron, in March, 1826, at Thorah and Eldon, set apart for his sottlers whom he stated to have arrived in the Province and to be nearly seven hundred in number. They were to have been placed on their

lands by the 1st of May, 1827, and afterwards the period was extended to the 1st July, 1828

In September, 1830, it is found that only sixteen Lots are occupied in Thorah and thirteen in Eldon, by persons appearing to have come there as Mr. Cameron's settlers, but the Council is not satisfied that all or nearly all of these persons were Emigrants brought by Mr. Cameron from Scotland.

In Thorah more than 110 Lots located to Mr. Cameron's settlers are unoccupied, and in Eldon more than 270, making about 380 Lots, which by these occasions in the names of persons who have never yet made

their appearance, has been withheld from grants to actual settlers.

And it is further ascertained by this report that for one lot in Thora and forty one in Eldon, descriptions have been applied for the production of the requisite affidavits proving the performance of settlement duties, when in fact such duties have not been performed, and the government has been imposed upon by palpable

and barefaced forgery.

On a review of the whole matter the Council recommends that none of the lots which, according to the Surveyor General's schedule compiled from Mr. Smalley's report shall appear to have actual occupants upon them shall be in any manner interfered with, unless the respective occupants shall neglect to complete their settlement duties within such a period as your Excellency shall think reasonable; in particular cases this right of each respective occupant however, must of course be subject to further investigations, when there are conflicting claims of others as there appear to be in several cases before the Council, owing principally No. 17 continued.

to the trafficking transactions of Mr. Cameron the agent, whose name is in some way connected with many

on which the settlement duties are either done or have been in great part performed, until 12 months have clapsed from the publication of a notice by government calling upon Mr. Cameron's settlers by name founded like many others. who have been located and have performed the whole or the greater part of the settlement duties, to repair to their lands & become actual residents upon thembut that at the expiration of that period all lots which

shall remain unoccupied by any settler who can show! himself to have emigrated from Scotland under Mr. Cameron's superintendence, shall be considered as vacant and grantable; and that all such settlers are to understand, that notwithstanding their residence, they will forfeit their rights to the lots unless within the said twelve months their settlement duties shall be fully performed.

3rd. That all lots in Thorah and Eldon (excluding reserves) on which settlement duties were not done wholly or in the greatest part, when inspected by Mr. Smalley and on which he found no occupant, shall be

treated as vacant and grantable.

4th. That no locations be granted hereafter to any person as a follower of Mr. Cameron, but that all order in their favor, can obtain lands in the same manner only as other settlers.

5th. That the Attorney General be instructed to proceed against the persons falsely swearing to the performance of settlement duties, and to take measures for their immediate apprehension.

Truly extracted.

JOHN BEIKIE.

REMARKS BY MR. CAMERON.

It seems, as the Council would wish to make it ap-2nd. That no lot be disposed of by the government pear, that I have nothing to do with the lots in Thorah and Eldon; but where they to tell the truth; they would find my name was connected with 251 lots and not as an agent. But this charge of the Council is un-

No. 17 continued. REMARKS BY MR. CAMERON.

Notwithstanding the direct order in Council that no who have neglected hitherto to avail themselves of the locations should be made in my name after the date of this report, I believe on seeing the injustice of the above order, they did grant location tickets in my

> It is most amusing to see in the Council's report a direction to the Attorney General to prosecute for perjury, the people performing the settlement duties in Thorah and Eldon.

> But it appears the Council was wise enough to drop this prosecution, as their honors seem to know the unjustness of their charge against the above.

### No. 18.

Copy of the Advertisement published in the Gazette, by order of the Lieutenans Governor in Council, 1830.

Executive Council office, York, 26 Nov. 1830.

Notice is hereby given by order of his Excollency the Lieutenant Governor in Council, that no Lot in the Townships of Thora and Eldon will be disposed of by the Government on which the settlement duties are either done, or have been in great part performed, until twelve months have elapsed from this date.

That the persons whose names are hereunto annexed, who have been located in the said Townships of Thorah and Eldon as Mr. Donald Cameron's settlers, and who have performed the whole or the greater part of their settlement duties, are hereby called upon to repair to their lands, and become actually resident upon them within twelve months from this date, taking notice, that at the expiration of the said term, all Lots in the said Townships which shall remain unoccupied by any settler who can shew himself to have emigrated from Scotland under Mr. Donald Cameron's superintendance, shall be considered as vacant and grantable And that all such settlers are to understand, that notwithstanding their residence, they will forfeit their right 10 the lot, unless within the said twelve months, their settlement duties shall be fully performed.

(Signed) MARSHALL S. BIDWELL,

Speaker.

Commons House of Assembly, 14th April, 1836.

(No. 1.)

To His Excellency Sir John Colborne, R. C. B. Lieutenant Governor of the Province of Upper Canada, Sec. Sec. Sec. In Council.

The Memorial of Joshua Y. Cozens of Cornwall, in the Province of Upper Canada, Esquire,

MOST RESPECTFULLY SHEWETH:

That your Memerialist was entrusted with private despatches from Mr. Hammond, the British Minister Plenipotentiary to the United States of America in 1791, to Lord Dorchester at Quebec, containing secret information obtained by Colonel Beckwith, who was in Philadelphia for the express purpose of watching the proceedings of the United States Congress, with the idea that the State of Vermont was upon the eve of revolutionizing Lower Canada.

That your Memorialist took charge of despatches from Lord Dorchester to Governor Simcoe whom your Memorialist met in Montreal at the head of his Regiment, the Queen's Rangers, proceeding to Upper Canada, to establish that Colony in the blessed Constitution which it now enjoys, and as Lieutenant Governor thereof.

That your Memorialist had also letters of introduction to Governor Simcoe, from the letters of Mr. Hammond, British Minister, recommending your Memorialist as the son of a tried loyalist, who had rendered important services in behalf of His Majesty's arms during the late war; and that after presenting said despatch and letters Col. Simcon remarked to your Memorialist that he well remembered the great services rendered by your Memorialst's father, by whom he added his life had been preserved when upon a charge against the enemy, forcing across a bridge in New Jersey, the day previous to the business so well known that took place at Pauli.

That Colonel Simcoe requested your Memorialist immediately on his return to Philadelphia, where your Memorialist owned a large property, to dispose of the same and retire into Canada, where, it was promised your Memorialist should be provided for, by being placed in such a situation as his services and

activity merited.

That your Memorialist with his cousin Samuel D. Cozens, son of Captain Daniel Cozens, then on the half-pay of the British Army, arrived at Niagara in June 1793, bearing desparches from Mr. Hammond, the British Minister, and with an open letter from him, in favor of your Memorialist and relative, rocommonding them for advancement, as sons of meritorious British subjects, in whom unbounded confiThat your Memorialist was again favorably received by Governor Simcoe, who promised a grant of 1290 acres of land to each and every of the Cozens's who might become settlers in the Province of Upper Canada, which promise was fulfilled, as will appear by a reference to the Miantes of Council.

That your Memori list was promised to be placed in a public office of profit, but was kept constantly engaged during the period of Governor Sincoe's presiding over the Province, travelling upon secret services to Philadelphia and Quebec, and back and forth between the United States and the Provinces.

That your Memorialist is the person who carried the despatches at different times when General Wayne was expected to attack Upper Canada, and that your Memorialist passed through Wayne's army, on discoveries in disgaise, and at the consequent hazard of his life.

That your Memorialist sold all his property in Philadelphia and repaired to Upper Canada, with its proceeds in eash; and with the consent and persuasion of Governor Sincoe, your Memorialist purchased from Captain Joseph Brant, and Chiefs of the Five Nations Indians, a Township or Tract of Land, situate on the Grand River, being in the District of Gore, the boundaries whereof, are set down and described in the deed thereof, of which a copy is hereto laixed.

That your Memorialist received intelligence from a friend and correspondent in London, that the township of land purchased as above by your Memorialist, might be sold to advantage in London to a Company of Hamburgh Merchants and others, who had thither field on the invasion of their Territory by the French, and who were desirous of emigrating to British America and becoming settlers in Upper Canada.

That your Memorialist consequently empowered a Mr. Samuel Clark, a Morchant going to London on commercial business as his Agent, for the purpose of selling said township of land, as above referred to, upon condition of actual settlement thereon, agreeably to the wishes of Governor Simcoc, who personally assured your Memorialist that to ensure the title which your Memorialist held by deed from Captain Brant as aforesaid being known as fully and completely executed, he Governor Simcoc, would cause a further confirmation of the validity of said deed, there being no Registry offices yet established, to be minde in Council.

That your Memorialist's Agent, said Samuel Clark, returned to America in 1798-9, without effecting a sale, as employed to and instructed by your Memorialist, and left the said original deed of said land from Captain Brant as aforesaid to your Memorialist in London. That the said Clark in 1800 became insolvent, and it was a long time before your Memorialist could ascertain where said Clark had removed to, and resided.

That your Memorialist on hearing of the failure of selling the land aforesaid, and that the original deed and other papers and charts thereof had been left in London, revoked all power which had been given by your Memorialist to said Clark who, your Memorialist learnt had deposited said deed from Brant with the firm of Barrell and Servante, merchants in London, with power to sell the same to settlers.

That your Memorialist-made every possible exertion to regain possession of said deed from Brant so deposited in London, and for that purpose employed a Mr. Joseph B. Henshaw, an important merchant from Liverpool to Boston and New-York, to obtain said deed for your Memorialist by application to Barrell & Servanté, as before named, in London.

That your Memorialist was informed by said Henshaw that after personal application and search in
Lendon, he rould only learn that shortly after the
deed aforesaid had been left with said Barrell & Servante, the firm became insolvent, and that the parties
were deceased; and all that could be known was that
said deed had been pledged, as was supposed at that
time with said firm of Barrell & Servanté, by said
Clark, for a debt incurred by him with them of about
£300 sterling.

That your Memorialist for years made every enquiry his limited means admitted of, in search, by personal applications of correspondents, and by letters directed to London to discover and regain said deed, but without being successful.

That at the time your Momorialist purchased saidland from said. Brant there were not yet any Registry Offices established in the Province, wherein to record deeds of land, but that said deed was regularly, oxecuted and acknowledged before Doctor Kerr (Robert); then Surrogue Judge of the Home District, as will appear from the copy of said deed hereto annexed, which acknowledgment was considered an additional confirmation of the titles or deeds of conveyance,

That your Memorialist paid £500 in specie to said Captain Brant, at the execution of said deed of conveyance, the consideration money therein mentioned; and a further sum subsequently of £500 for which your Memorialist holds Captain Brant's separate receipt.—That your memorialist hegs further to state to your Excellency in Council that he was kept employed in secret services during the Presidency of Mr. Russell, and that such further services were of a nature as follows, that is to say:—

On your Memorialist's arrival in Philadelphia in 1797 with despatches to Mr. Liston, British Minister, your Memorialist was informed by him and Mr. Philadelphia in the Emissaries of Adet, Minister from the French Republic to the United States, and who were denounced by proclamation by General Prescott) was at that most meant in that city, concerting plans, and receiving means from said French Minister, for the purpose of inducing his Britannic Majesty's subjects in Lower Canada to revolt, and thereby to overthrow the Canadian Government.

That your Memorialist was strenuously pressed in the absence of any other person whose fidelity had been tested, to become again the bearer of despatches to Governor Prescott at Quebec, which your Memorialist declined, for the reason that he had already sacrificed four years in like secret services, involving the chances of loss of life, and without receiving the promised rewards or full remuneration for his necessary excessive expenditures—partly drawn from his own private funds; and being then much in arrears by loss of horses and extra expenses defrayed by himself, while thus adventuring hazardously for the good of his Majesty's Government and the British Province of Upper Canada.

That your Memorialist confidently looked forward, however, to the fulfilment of all the promises made him by Governor Sincoe of reward for the duries al-

luded to.

sited in London, and for that purpose employed a That assurances were then given to your Memoriant Joseph B. Henshaw, an important merchant from alist by Mr. Liston, that he would write to Governo-

Prescott to cause your Memorialist to be amply remu- this occasion; and because he may be able personally to nerated for the services by him rendered, of which give a degree of information concerning Adel's emissaries your Memorialist would be furnished with sufficient into Canada." vouchers from the Minister and Consul, to and from whom, your Memorialist had been entrusted with despatches and verbal communications of the vitalest importance to the British American Provinces.

That your Memorialist thereupon resumed the arduous duty-took charge of all commissions and despatches confided to him, twelve hours after said McLean's departure from Philadelphia, and by dint of management, and forced progress by night and by day succeeded in reaching Quebec Twenty Four hours before the arrival there of said Mr. McLean.

That the intelligence then and there imparted by your Memorialist to the ear of the Governor, proved in its results to have been of the greatest consequence to the Government of Lower Canada; having derived such information from that unfortunate person Mc-Lean, by means of an introduction to him in Philadelphia, as by your Memorialist's timely and unwearied exertions, defeated the projects then on foot for the dismemberment of the Colony from its parent government.

That Governor Prescott informed your Memorialist, that he had received a private letter from Mr. Liston, requesting that your Memorialist might be placed in some lucrative office, that might permanently reward your Memorialist and compensate him for the duties he had gone through.

That Governor Prescott observed to your Memorialist that there was no suitable vacancy at the moment at his disposal; but that he would bestow upon your Memorialist a Lieutenantcy without purchase, in a British Regiment which your Memorialist begged to decline accepting, for the reason then plainly and particularly stated, that your Momorialist had by constated, purchased from said Captain Joseph Brant and Five Nations Indians, a large and valuable tract of land, as before alluded to, under prospect of advantageously settling the same, and in doing which (his tunds being exhausted) your Memorialist craved His Excellency Governor Prescott's interest.

That His Excellency Governor Prescott assured your Memorialist that to effect a speedy and unquestionable sale of said lands to actual settlers, he would cause that public confirmation should be made of your Memorialist's deed from Brant and Five Nations, as aforesaid, by virtue of a Mandamus from His Majesty.

That your Memorialist here inserts for the perusal of your Excellency in Council, extracts from letters of official acknowledgement of the receipt at the hands of your Memorialist, of the important despatches, at Quebec, to which your Memorialist has already begged your Excellency's attention as before written.

" General Prescott has directed me to acknowledge the delivery of the important despaches from Mr. Liston in the month of April last, as you think it might be of advantage to you to have an official acknowledgement of this service; His Excellency has therefore authorized me to transcribe the following passage from one of Mr. Liston's letters"-

"I have delayed despatching them from here for some tays, on account of the difficulty of finding a confidential person to whom I could entrust them. The hearer, Mr. The Petition of Nelson Coze soshua Y. Cozens has been employed in preference upon term District of Upper Canada,

(Signed) HERMAN WITINUS RYLAND. Private Secretary.

That your Memorialist trusting with unshaken confidence in the honor of that blessed government, for which your Memorialist's father fought, bled and died; and for which your Memorialist has through two wars fought and bled; (having during the last war been wounded and dett a cripple with a dislocated right shoulder, when at the head of his Company as Captain in 1st Regiment Stormont Militia, during an incursion into the enemy's country, as Volunteers under Col. Scott, of Nis Majesty's 103 d Regt. in 1814) still looks forward to that government, now by your Excellency happily administered, for a ratification of the purchase made by him of said Captain Brant, of the tract of land aforesaid, in the absence of the original deed which would establish your Memorialist's title, and for the absence of which original deed, your Memorialist has herein endeavoured fully, fairly and he trusts most satisfactorily to your Excellency in Conneil to account.

That your Memorialist is the father of twelve children, in the support of which family, under the pain and disability of his wounded right shoulder, your Memorialist has been constrained to call for a part or the earnings as an accountant, of his son Nelson Cozens, who has arrived at the age of maturity, in whose breast your Memorialist takes pride in asserting he early instilled principles of loyalty.

That Your Memorialist having conveyed to his said son Nelson all the right and title to said township or tract of land, purchased as aforesaid from said Capt. Brant, and to Your Memorialist belonging, now therefore humbly prays that Your Excellency in Council will be pleased to grant to Your Memorialist's said son Nelson such confirmation of title to said land, in the absence of said original deed, as Your Memorialist respectfully expresses his feelings of having justly acquired by honorable purchase, in good faith, and in the hope of enjoying the advantages of which legal purchase Your Memorialist was withheld from seeking by application that compensation from His Majesty's Government which Your Memorialist humbly and earnestly conceives due his hard services, and it may be added consequent ill fortune.

That your Memorialist prays your Excellency in Council may, in the event of any part of said land being regranted or disposed of by the Crown, to settlers or others, cause that an equivalent thereto be granted to Your Memorialist's said son Nelson in lieu thereof.

And your Memorialist as in duty bound will ever pray.

(Signed) 1st July, 1834.

[Original filed in Executive Council Office.]

J. Y. COZENS.

(No. 2.)

To His Excellency Sir John Colborne K. C. B. Lieutenant Governor of the Province of Up-S.c. per Canada, Sc. IN COUNCIL.

The Petition of Nelson Cozens, of Cornwall, Eas-

HUMBLY SHEWETH,

That your petitioner is the son of Joshua Y. Cozens of Cornwall aforesaid, whose Memorial to your Excellency in Council is hereto affixed;—has arrived at the age of thirty three years—was honored with an Ensigney in 2nd Reg't. Stormont Militia in 1822, and has for many years been engaged in the occupation and duties of an accountant.

That your Petitioner in consideration of sums of money by him advanced to his father, said J. Y Cozons at various times, to assist in the maintenance of a numerous family, (your Petitioner's sisters and brothers) they being in indigent circumstances; has become invested with all the right and title possessed by your petitioner's father aforesaid, to a certain tract of land, by him purchased from the late Capt. Joseph Brant and the Five Nations Indians, lying upon the Grand River in the District of Gore, described in the Memorial from your petitioner's father, and defined in its boundaries in the accompanying copy of said Brant's Deed to your petitioner's father.

That your petitioner humbly solicits the attention of your Excellency in Council to the circumstances attending the original Deed from said Capt. Brant to your petitioner's father aforesaid as by him detailed in said Memorial, which particular circumstances have extended to this day to prevent your petitioner's father from entering upon said land or making use thereof to

his benefit.

That your petitioner, labouring in the vocation of an accountant as aforesaid, has not been possessed of the means of making personal search in London for the original deed of said land to your petitioners father but has maintained a correspondence thereto relating, during a term of seven years, with persons in England to discover, but without effect, said original Deed.

That your petitioner convinced of the fidelity of the statements set forth by your petitioner's father in his Memorial aforesaid, and impressed with the justice of the claim preferred by him, as well as of that of your petitioner's present solicitations, founded upon said claim, Humbly prays that your Excellency in council will take into consideration the entire facts as embodied in said memorial regarding the original purchase of said land, the subsequent loss of said Deed, and the continued obstacles to the recovery thereof.

That your petitioner humbly prays your Excellency in council will upon satisfactory proof of the honorable mode pursued by your petitioner's father in acquiring said Deed by purchase as aforesaid, of the manner in which said deed was executed and certified, and is now transferred to your petitioner by a quit claim. Deed of said land, cause your petitioner to be put in possession of said tract of land, by such power as your Excellency in council, in confirmation of your petitioner's legal claim may deem proper.

That your petitioner not having the present means of becoming fully acquainted with the actual condition of said lands, begs that your Excellency in council will, in case of said land or part thereof having been reconveyed or disposed of by the Government, grant to your petitioner other lands in lice thereof as an

equivalent.

That your petitioner humbly solicits your Excellency's regard to such passages in your petitioner's and Angus New rethe substitutioner's memorial, as give an outline of the early life of your petitioner's father, as connected with the political history of that period and with the settlement of June 1797 of the Provinces, and of the service in which he one further careid

gaged at the peril of life and sacrifice of time and money, under promises made him by one of your Excellency's distinguished Predecessors, Governor Simone, which service, so rendered by your petitioner's father, tended in a great degree to the happy establishment of that Government over which your Excellency now wisely presides.

That your petitioner, like his father, is firmly attached to the constitution as preserved under your Excellency's guardianship; and that the feeling of loyalty which your petitioner cherishes has associated him in life with such principles and such persons as he respectfully asserts would not dishonor your Excel-

lency's confidence and support.

That your petitioner humbly prays your Excellency, in council may be pleased to take into consideration the various facts herein detailed as combined with those of your petitioner's father in his accompanying memorial, to the end that your petitioner and his father may hope for early relief.

And your petitioner as in duty bound, will ever

(No. 3.)

Eastern District Before me Guy C. Wood, Esquire, one of His Majesty's Justices of the Peace in and for said District, personally appeared Joshua Y. Cozens of the town of Cornwall in the said District, Esquire, and being sworn, deposeth and saith,—That he deponent purchased of Captain Joseph Brant, for himself and as agent for the Five Nations Indians, a certain Township of Land, situated in the Province of Upper Canada, being a part of the tract of land belonging to said Indians, and known by the name of the Grand River Tract in the now District of Gore, in the said Province, and described as follows:—

Beginning at a corner stone adjoining a certain Tract of Land purchased of the said Indians by William Wallace and Isaiah Tiffany, said corner stone being thirty six miles above the forks of said Grand River, and running from thence the different courses of the said Grand River Tract twelve miles squarecontaining 92,160 acres more or less.-And deponent saith that he received a Warrantee Deed written upon purchment for said Township of land, duly executed by the said Joseph Brant with a power of Attorney annexed thereto, signed by the principal chiefs, authorising the said captain Joseph Brant to grant bargain, and sell the same, said Deed bearing date the eighth day of October, 1796. That at the delivery of said Deed, deponent paid to the said Joseph Brant a consideration of Five hundred pounds in specie, in the presence of Robert Kerr Esq., Judge of His Majesty' Surrogate Court for the Home District. and Angus McDonell Esq. Barrister at Law, who were the subscribing witnesses to said Deed of bargain and sale to him deponent, his heirs and assigns forever

of your petitioner's father, as connected with the political history of that period and with the settlement of June 1797, he paid to the said Joseph Brant, a of the Provinces, and of the service in which he enfurther consideration of the sum of Five Hundred

pounds for which he received the said Joseph Brant's that he again went in pursuit of his said agent, Clark, receipt acknowledging said sums of money to be in full of all demands for said Township of Land until he received an acquittance of all claims from government for said Township of land, when deponent was to have paid a further sum of £1000

And deponent further saith that at the time he first bargained with the said Joseph Brant for said Township of land, he deponent was employed in the secret services of Governor Simcoe and informed His Excellency that he could effect a purchase by Deed in that the said Barrell & Servante were both dead .fee simple for said Township of land.

That deponent's object was to bring on fifty settlers from the United States, old Tories, loyalists and

loyalists sons—true British subjects.

And deponent further saith that H is Excellency advised deponent to close the bargain and take the Indian title, and he would confirm it, less 2-7ths—and advised deponent to take his conveyance to Europe,

where it would command a large sum.

And deponent further saith that he empowered a Mr. Samuel Clark of Middleton, State of Connecticut, a British subject, and importing Merchant, to sell said land in Europe, who repaired to London in the year 1797 with said deed,-That after he, Clurk, arrived in London, deponent received a letter informing him that a Mr. Broom, Agent to a company of Merchants in Hamburgh, was in the City of New York, who wished to purchase a large tract of land in America to send out settlers on-that deponent repaired to New York and made a conditional agreement with said Broom for five shillings sterling per acre, for said township of land, if his deponent's agent had not disposed of it on his arrival in London.

That deponent referred Mr. Broom to Governor Simcoe for a confirmation of the Indian title to said

township of land.

That the said Broom and deponent's agent, Clark, waited upon Col. Simcoe who then resided 80 miles from London, who informed them that he was no longer Governor of Upper Canada, and referred them to the Administrator and Council of Upper Canada who would confirm the title by reserving 2-7ths, upon which Mr. Broom advised the said Company to advance the first payment for said township of land-deponent having agreed to receive one-half in cash and merchandise, and the other half in a year; - But deponent's agent, Clark, would not consent, nor give up the papers, saying he could sell the said township for 7s. 6d. per acre. - And deponent further saith, that after his hid Agent had remained in London nearly three years, and had not effected a sale of said township, returned to America; (one of his partners his own husiness.)

That deponent, soon after his arrival, had an interview with his said Agent, who informed him as above stated, and that he had been sadly disappointed in effecting a sale, and had left the deed and papers thereunto belonging with a Mercantile House trading under the firm of Barrell & Servante in London with agent, Clark, shortly afterwards absconded, and cuold not be found by him deponent until the year 1805, when he informed deponent that he had pawned said Brant deed, for £250 sterling.

but could not find him until the year 1818, when he was in a state of stupifaction occasioned by living a tife of inebriety; but obtained such information as to find such a firm as Barrell & Servante.

That in the year 1821 deponent ascertained that the said partners had failed in business soon after the said deed and papers had been placed in their hands, and that their business had been placed in the hands of assignces, but could not learn who the assignces were-And deponent further saith, that being in indigent circutustances was not enabled to go to Europe in search of said deed, having paid his all for said township of fund, and has been obliged to raise a family of twelve children by his daily labor and industry.

That he has continued writing from year to year and every year since the year 1805 endeavouring to find said deed to enable him to lawfully claim and settle his family on said lands; at last has found through a relative of Burrell, that it appears in a ledger of his deceased uncle that deponent's agent, Clarke had left titles to lands in America describing them as follows:
